Reed Warbler. Spring (26-IV).

EURASIAN REED WARBLER (*Acrocephalus scirpaceus*)

IDENTIFICATION

13-14 cm. Brown plumage, with rufous tinge on rump; whitish underparts with pale throat; brown tail; rusty underwing coverts; pale brown legs; with bristles near the base of bill.

Reed Warbler. Pattern of underwing coverts and bristles near the base of bill.

SIMILAR SPECIES

Similar to **Great Reed Warbler**, which is bigger (16-20 mm). **Savi's Warbler** lacks bristles near the base of bill. **Melodious Warbler** has yellow underwing coverts.

Great Reed Warbler.

Savi's Warbler

Melodious Warbler

SEXING

Plumage of both sexes alike.

AGEING

3 age groups can be recognized:

Juvenile with fresh plumage (check flight and tail feathers); iris dark grey; legs grey bluish; black spots on tongue.

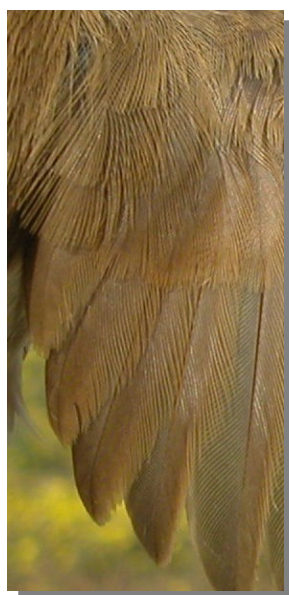

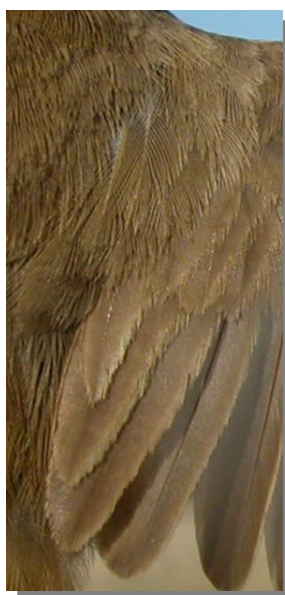

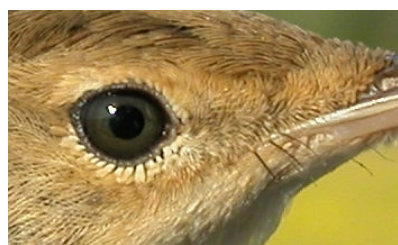

2nd year only in some birds with brown-olive iris.

Adult in autumn with worn plumage; iris brown or reddish-brown; pale brown legs; tongue without black spots.

In **spring**, after **prebreeding** moult, ageing is not possible using plumage pattern.

Reed Warbler. Ageing. Wear of tertials: left adult; right juvenile.

MOULT

Partial **postbreeding** and **postjuvenile** moults, including body feathers and lesser and median wing coverts; sometimes also some greater coverts and the central pair of tail feathers. Both age classes have a complete **prebreeding** moult in wintering sites.

Reed Warbler. Extent of postbreeding and postjuvenile moults.

PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

STATUS IN ARAGON

Summer visitor. Widely distributed throughout the Region in marshlands and irrigated fields.

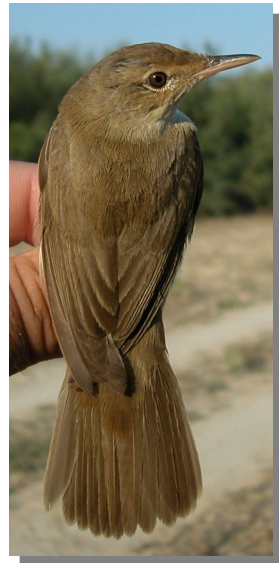

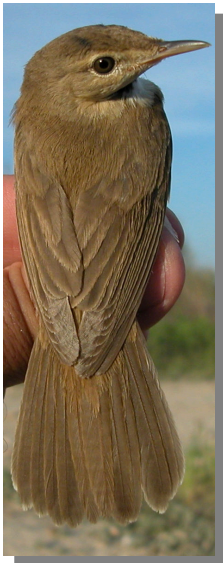

Reed Warbler. Autumn. Adult (28-VIII).

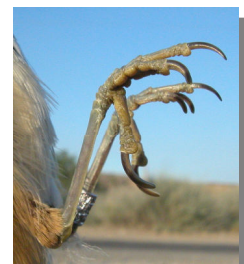

Reed Warbler. Autumn. Juvenile (25-VII).
