Symbols and Abbreviations

The following symbols and abbreviations, and others approved for the Système International d'Unités (SI), are used without definition in the following reports by the Divisions of Sport Fish and of Commercial Fisheries: Fishery Manuscripts, Fishery Data Series Reports, Fishery Management Reports, and Special Publications. All others, including deviations from definitions listed below, are noted in the text at first mention, as well as in the titles or footnotes of tables, and in figure or figure captions.

Weights and measures (metric)		General		Measures (fisheries)	
centimeter	cm	Alaska Administrative Code	AAC	fork length	FL
deciliter	dL	all commonly accepted abbreviations	e.g., Mr., Mrs., AM, PM, etc.	mid-eye-to-fork	MEF
gram	g	all commonly accepted professional titles	e.g., Dr., Ph.D., R.N., etc.	mid-eye-to-tail-fork	METF
hectare	ha	at	@	standard length	SL
kilogram	kg	compass directions:		total length	TL
kilometer	km	east	E	Mathematics, statistics	
liter	L	north	N	<i>all standard mathematical signs, symbols and abbreviations</i>	
meter	m	south	S	alternate hypothesis	H _A
milliliter	mL	west	W	base of natural logarithm	e
millimeter	mm	copyright	©	catch per unit effort	CPUE
Weights and measures (English)		corporate suffixes:		coefficient of variation	CV
cubic feet per second	ft ³ /s	Company	Co.	common test statistics	(F, t, χ^2 , etc.)
foot	ft	Corporation	Corp.	confidence interval	CI
gallon	gal	Incorporated	Inc.	correlation coefficient (multiple)	R
inch	in	Limited	Ltd.	correlation coefficient (simple)	r
mile	mi	District of Columbia	D.C.	covariance	cov
nautical mile	nmi	et alii (and others)	et al.	degree (angular)	°
ounce	oz	et cetera (and so forth)	etc.	degrees of freedom	df
pound	lb	exempli gratia (for example)	e.g.	expected value	E

April 2007

The Division of Sport Fish Fishery Management Reports series was established in 1989 for the publication of an overview of Division of Sport Fish management activities and goals in a specific geographic area. Since 2004, the Division of Commercial Fisheries has also used the Fishery Management Report series. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.sf.adfg.state.ak.us/statewide/divreports/html/intersearch.cfm>. This publication has undergone regional peer review.

ABSTRACT

In 2006, the Alaska Department of Fish and Game (ADF&G) operated eight fish counting weirs in the Kodiak Management Area (KMA). Operation of these weirs began in mid-May and continued through September for some weirs. Operation dates of each weir varied depending upon the run timing of salmon populations in the system. Chinook salmon *O. tshawytscha*, sockeye salmon *Oncorhynchus nerka*, coho salmon *O. kisutch*, pink salmon *O. gorbuscha* chum salmon *O. keta*, steelhead *O. mykiss*, and Dolly Varden *Salvelinus malma* were individually counted by field crews using hand-held tallycounters. This escapement data provided the basis for in season management actions regulating the commercial, sport, and subsistence fisheries in the KMA.

A total of 2,938,928 salmon were counted through weirs in the KMA during 2006. This total consisted of 7,473 Chinook, 909,899 sockeye, 34,714 coho, 1,972,122 pink, and 14,720 chum salmon.

A combined total of 7,709,110 salmon were counted by weirs, foot and aerial surveys in the KMA during 2006. The total for the Afognak District was 326,388 consisting of: 4 Chinook, 33,084 Sockeye, 10,400 coho, 282,900 pink and 0 chum salmon. The Northwest Kodiak District was 765,900 consisting of: 0 Chinook, 30,200 sockeye, 0 coho, 693,900 pink and 41,800 chum salmon. The Southwest Kodiak District was 2,208,406 consisting of: 7,218 Chinook, 578,153 sockeye, 18,314 coho, 1,583,298 pink and 21,423 chum salmon. The Alitak District was 1,176,164 consisting of: 245 Chinook, 270,466 sockeye, 5,990 coho, 874,236 pink and 25,227 chum salmon. The Eastside Kodiak District was 1,347,837 consisting of: 0 Chinook, 51,200 sockeye, 9,637 coho, 953,400 pink and 333,600 chum salmon. Northeast Kodiak was 756,254 consisting of: 0 Chinook, 17,734 sockeye, 20,523 coho, 698,638 pink and 19,359 chum salmon. The Mainland District was 1,128,161 consisting of: 0 Chinook, 3,821 sockeye, 0 coho, 778,200 pink and 346,140 chum salmon.

Key words: salmon, Chinook, sockeye, coho, pink, chum, escapement, weir, Kodiak, indexed, KMA, ADF&G

INTRODUCTION

Weir counts are critical for the management of commercial salmon fisheries. Escapement information provides the basis for ensuring biological integrity, and is the foundation for inseason management actions that regulate commercial, sport, and subsistence harvest of salmon. If weir counts are not available, aerial surveys are used to estimate the salmon escapement and to manage the fisheries. Five species of Pacific salmon are enumerated: Chinook *O. tshawytscha*, sockeye *Oncorhynchus nerka*, coho *O. kisutch*, pink *O. gorbuscha*, and chum salmon *O. keta*, as well as steelhead trout *O. mykiss* and Dolly Varden *Salvelinus malma*.

From 1997 to 2006 the number of weirs operating each year in the Kodiak Management Area (KMA) has fluctuated due to funding. New weirs are occasionally installed on systems to address specific stocks of concern. A total of eight weirs were operated in 2006 (Table 1) at Karluk River, Ayakulik River, Dog Salmon Creek, Frazer Fish Pass, Upper Station (Olga Creek), Litnik (Afognak River), Buskin River, and the outlet of Lake Louise (Table 1; Figure 1).

Operation of these weirs typically occurs from mid-May or early June and continues into August or late September, depending upon the run timing of salmon populations into a particular system (Table 2). Fish are individually counted using hand-held counters. Occasionally, estimates of escapement are required when the integrity of the weir is compromised from events such as high water or bear activity. These estimates are derived from foot surveys or extrapolations based on visual observations and daily escapements before and/or after the disturbance of the weir's integrity. Foot and aerial surveys are also used to estimate escapement before the weir is installed or after it is removed.

Most weirs operated in the KMA are funded and operated by Alaska Department of Fish and Game (ADF&G), Division of Commercial Fisheries (CFD). The Kodiak Regional Aquaculture Association (KRAA) provides funding to assist with the operation of some weir projects through

a cooperative agreement with ADF&G. The ADF&G Division of Sport Fish (SFD) funds the Buskin River and Lake Louise weirs.

This report is intended to be used as a reference document for escapement data that have been collected during the past 10 years. This report provides the reader with data only. Discussion and analysis are not included in this document. The reader should note that years not listed in the 10-year escapement tables indicate that the weir was not installed that year. This report contains all KMA weir escapement counts that occurred and were recorded in 2006, and provides total weir escapements for 2006 and each of the previous nine years for each system. The locations and brief descriptions of each weir are included to help familiarize the reader with the various systems. This report also includes KMA peak indexed escapement counts for 2006. Peak indexed escapement is the highest daily aerial or foot survey count for each system.

WEIR OPERATION

Well built and adequately manned weirs permit relatively accurate identification and enumeration of adult salmon during their upstream spawning migration. Fish weirs are man-made structures that span the width of a river to allow the assessment of the upstream migration of fish. In the KMA, weirs are made from a framework of wooden tripods (weighted with sandbags or large rocks), timbers, and a boardwalk. Aluminum panels, made of one-inch pipe spaced one inch apart, are placed on the upstream side of the weir framework creating a barrier to fish migration. Weirs are monitored throughout the day for salmon accumulating on the downstream side of the weir. Gates in the weir are then opened and fish are identified and counted by species as they traverse the weir and travel upstream in their migration to spawning grounds. See the 2006 KMA weir operational plan (Spalinger 2006) for detailed weir operations on specific systems.

KODIAK MANAGEMENT AREA WEIRS

KARLUK RIVER

The Karluk weir is approximately 101 m (330') long and is located about 1.3 km (0.8 mi) upstream of the confluence of Karluk River and Karluk Lagoon on the southwest side of Kodiak Island (Figure 1). The weir was first constructed in 1921 at its current location and was operated annually at this location until 1941. The weir was moved to “the portage,” approximately 12.9 km (8 mi) down river from the Karluk Lake outlet from 1942 to 1945. Between 1946 and 1975 it was operated at the outlet of Karluk Lake. It was re-established at its present location in 1976. The weir is operated by two to four CFD employees from mid-May to late September. SFD

employees assist with weir operations during the Chinook salmon run from mid-May until approximately July 15. Daily and Cumulative Escapement counts by species for 2006 are listed in Table 3, and escapement counts by species from 1997 to 2006 are presented in Tables 4 through 10. The Karluk system has two distinct runs of sockeye salmon; the early run prior to and including 15 July, and the late run occurring post 15 July.

AYAKULIK RIVER

The Ayakulik weir is approximately 35 m (120') long and is located about 1.3 km (0.8 mi) upstream from the outlet of the Ayakulik River into the Shelikof Strait, on the southwest side of Kodiak Island (Figure 1). Ayakulik River weir was originally constructed in 1929 at the outlet of Red Lake and operated at that location until 1969. The weir has been at its current location since 1970. The weir is operated by two CFD employees from late May to early September, with SFD

assistance through mid-July. Daily and cumulative escapement counts by species for 2006 are listed in Table 11, and escapement counts by species from 1997 to 2006 are presented in Tables 12 through 18.

DOG SALMON CREEK

The Dog Salmon weir consists of three weirs, 38 m (125'), 41 m (135'), and 8 m (25') in length, on the three lower forks of the Dog Salmon Creek, 0.5 km (0.3 mi) upstream of their outlets into Olga Bay on the south end of Kodiak Island (Figure 1). The Dog Salmon Creek drains Frazer Lake. First constructed in 1983, the weirs are usually operated by two CFD employees from early June to early September. Daily and cumulative escapement counts by species for 2006 are listed in Table 19, and escapement counts by species from 1997 to 2006 are presented in Tables

20 through 26.

FRAZER FISH PASS

The Frazer fish pass consists of a diversion weir and a series of "fish ladders" which allow salmon to ascend a barrier falls approximately 9 m (30') tall, located near the outlet of Frazer Lake on the Dog Salmon Creek at the south end of Kodiak Island (Figure 1). Counts are made at the upstream portion of the fish pass. Constructed in 1962 to accommodate sockeye salmon stocks introduced in 1951, the fish pass is operated by two KRAA funded CFD employees from mid-May to

mid-August. Frazer Lake sockeye salmon are first counted through the Dog Salmon Creek weirs to manage commercial fisheries in the Alitak District in a timelier manner. The salmon are then counted again as they exit the fish pass to ensure a sustainable population reaches Frazer Lake. Daily and cumulative escapement counts by species for 2006 are listed in Table 27, and escapement counts by species from 1997 to 2006 are presented in Tables 28 through 30.

UPPER STATION (OLGA CREEK)

The Upper Station weir is approximately 11 m (35') long and is located near the outlet of Olga Creek draining into upper Olga Bay on the south end of Kodiak Island (Figure 1). The weir was first constructed in 1929 just above the lagoon, approximately 0.23 km (0.14 mi) upstream of its current location, and was operated there until 1969. From

1969 to 1992 the weir was operated near the outlet of lower South Olga Lake, then moved to its current location in 1993. The weir is operated by two CFD employees from late May to mid-September. The Upper Station system has two distinct runs of sockeye salmon; the early run occurring prior to and including 15 July, and the late run occurring post 15 July. Daily and cumulative escapement counts by species for 2006 are listed in Table 31, and escapement counts by species from 1997 to 2006 are presented in Tables 32 through 38.

LITNIK RIVER

The Litnik weir is approximately 27 m (88') long and is located about 0.8 km (0.5 mi) above the outlet of the Afognak River, which flows into Afognak Bay, on the south end of Afognak Island (Figure 1). A weir was first constructed in 1921 at a site located approximately 0.64 km (0.4 mi) below the outlet of Afognak Lake, where intermittent weir counts occurred up to 1978, then annually until 1985. In 1986 it was

moved to its current location and has been operated there since. The Litnik weir is operated by two CFD employees from late May to mid-September. Daily and cumulative escapement counts by species for 2006 are listed in Table 39, and escapement counts by species from 1997 to 2006 are presented in Tables 40 through 46.

BUSKIN RIVER

The Buskin weir is approximately 38 m (125') long and was first constructed in 1985 approximately 1.6 km (1 mi) above the outlet of the Buskin River, which flows into Chiniak Bay, on the northeast side of Kodiak Island (Figure 1). In 1990, a 33 m (109') weir was constructed at the outlet of Buskin Lake, approximately 6.4 km (4 mi) above the lower weir site. This location was chosen to avoid the frequent washouts that occurred at the lower site so a more accurate sockeye salmon

count could be made from mid May through late July. The weir is moved annually from the upper site to the lower site in late July or early August to obtain an accurate coho salmon count. Two SFD employees operate the weir from mid-May to early October. Escapement counts for 2006 are listed in Table 47, and escapements by species from 1997 to 2006 are presented in Tables 48 through 54.

LAKE LOUISE

The Lake Louise weir is 9 m (30') long and is located approximately 0.8 km (.5 mi.) above the confluence of the Buskin River and the tributary creek draining Lake Louise (Figure 1). A weir was used in the 1970s and 1980s for estimating out migrating juvenile salmon abundance, and a Dolly Varden mark-recapture study in 1992. Since 2002, the Lake Louise weir has been operated from approximately June 1 through August 15 by two SFD employees who are also responsible for the operation and maintenance of the Buskin River weir. Daily and cumulative escapement counts by species for 2006 are listed in Table 55, and escapement counts by species from 1997 to 2006 can be found in Table 56 through 58.

WEIRS NOT OPERATED IN 2006

The following weirs have operated for at least one year since 1997; however, they were not operated in 2006. Escapement data for these systems can be found in other reports of this series (Kuriscak 2004; Spalinger et al. 2005; Spalinger 2006).

MALINA CREEK

The Malina weir was located at the outlet of Malina Creek, which flows into the Shelikof Strait, on the southwest end of Afognak Island (Figure 1). The weir was funded by KRAA and operated from 1993 to 2001. The operation of Malina weir was discontinued after 2001 due to budget reduction by KRAA.

PAULS BAY

The Pauls Bay weir was located at the outlet of Pauls Lake, approximately 0.2 km (0.13 mi) above Pauls Bay on the north end of Afognak Island (Figure 1). A weir was first constructed at this location in 1983. From 1978 to 1982 sockeye salmon counts were made from a fish ladder on Laura Creek, which flows into Pauls Lake. The Pauls Bay weir was typically operated by two KRAA funded CFD employees from early June to mid-September.

SALTERY RIVER

The Saltery weir was located about 0.4 km (0.25 mi.) below the outlet of Saltery Lake on the northeast side of Kodiak Island (Figure 1). It was operated at this location from 1988 to 2003. A weir was first installed in 1985 and during the first three years of operation it was placed in various locations closer to the lagoon. These sites were abandoned due to problems with an unstable and shifting riverbed. One CFD employee operated the weir from early June to early August. KRAA employees operated the weir through mid-September.

AKALURA RIVER

The Akalura weir was located about 1.3 km (0.8 mi) upstream from the confluence of the Akalura Creek and Akalura Lagoon in Olga Bay on the south end of Kodiak Island (Figure 1). First constructed in 1923, this weir has not been operated on a consistent annual basis. It was operated by one to two CFD employees from late May to late September.

LITTLE KITOI RIVER

The Little Kitoi weir was located at the outlet of Little Kitoi Lake on the east side of Afognak Island. It was situated above a 27 m (87') long fish pass that originates in Little Kitoi Bay and rises approximately 2 m (8') to Little Kitoi Lake (Figure 1). The weir was in operation from 1993 to 1997 as part of a sockeye salmon development project. Escapement was monitored by a single KRAA funded CFD employee from mid-May to late August, and the fish pass was maintained cooperatively between KRAA and ADF&G.

BIG BAY

The Big Bay weir was located at the head of Big Bay on the west side of Shuyak Island (Figure 1). First constructed in 1988, the weir was operated by ADF&G CFD employees, volunteers and employees of the Department of Natural Resources (DNR) Division of State Parks from early August to mid-September. CFD provided weir materials and logistical support. The Big Bay weir was not operated in 1997, 1999, 2003-2006.

BEAR CREEK

The Bear Creek weir was located near the head of Carry Inlet on the north end of Shuyak Island (Figure 1). The weir was first constructed in 1986, and was operated by the same crew that oversees the Big Bay weir. In 1998, 2003, 2004, 2005 and 2006 the weir was not operated.

LITTLE RIVER

The Little River weir was located at the outlet of Little River Lake on the Spiridon Peninsula on the west side of Kodiak Island (Figure 1). The weir was first constructed in 2001 for a three-year study to validate aerial survey and video count accuracy with actual weir counts. The weir was operated by two U.S. Fish and Wildlife Service (USFWS) employees from late May through July.

INDEXED PEAK ESCAPEMENTS

Peak indexed escapement for sockeye, chum and coho salmon is simply the highest daily aerial or foot survey count for each system for each year. For pink salmon, peak indexed escapement of each stream surveyed is estimated as the larger of either the highest daily survey count or the sum of two counts which are 30 or more days apart. This is done to compensate for the longer stream life of pink salmon. Expansion of aerial or foot survey counts to estimate total run strength can be accomplished by various methods, and is done postseason by research staff. All escapement values in past Annual Management Reports are total counts from weirs plus peak index counts, and this document follows that methodology in Tables 59 through 66.

ACKNOWLEDGMENTS

Sincere gratitude is extended to all of the seasonal weir camp employees throughout the past ten years who have enumerated the escapements that support this document. Appreciation is also extended to the dedicated Westward Region Finfish Management staff, and office staff for coordinating, supporting and documenting this effort. Thanks also to Lucinda Neel for her publication expertise and to reviewers Matt Foster, Mark Stichert and James Jackson.

Totals			7,473	909,899	34,714	1,972,122	14,720	2,938,928

^a Counts include postweir estimates of 40,000 sockeye and 7,000 coho salmon.

^b Counts include postweir estimates of 1,700 sockeye, 120,000 pink and 70 coho salmon.

^c Counts include postweir estimates of 1,350 sockeye, 73,000 pink and 500 coho salmon.

^d Fish counted at the Frazer Lake Fishpass were initially counted at the Dog Salmon weir and are not included in totals.

^e Counts include postweir estimates of 100 sockeye and 25 coho salmon.

^f Buskin weir is moved annually from the upper site to the lower site in late July or early August to obtain an accurate coho salmon count.

^a The Buskin weir is moved annually from the Lake to the Lower River for an accurate coho salmon count. This year the Buskin River had many high water problems and the weir had to be taken out and put in several times.

^a Weir removed 25 September

^b Weir removed 25 September.

^c Weir removed 26 September.

^d Weir removed 23 September. Included 50 upstream steelhead included as a post weir estimate 25 September.

^e Weir removed 24 September.

^f Weir removed 18 September.

^g Weir removed 28 September.

^h Weir removed 28 September. Included 100 upstream steelhead as a post weir estimate.

ⁱ Weir removed 6 October.

^j Refer to Table 3

Table 4.-Karluk River cumulative escapement counts for Chinook salmon by year and average, 1997-2006.

^a Weir fish tight 12 June at 1200 hours.

^b Includes an estimate of 30,000 pink, 200 sockeye and 50 coho due to hole in boat gate.

^c Pulled weir at 1200 hours.

^d Includes post weir estimate of 120,000 pink, 1,700 sockeye and 70 coho.

Table 12.-Ayakulik River cumulative escapement counts for Chinook salmon by year and average, 1997 - 2006.

^a Weir fish tight 18 May at 1600 hours..

^b Includes an estimate of 500 sockeye due to hole in weir.

^c Pulled weir at 1300 hours. Includes post weir estimate of 65,000 pink, 1,200 sockeye and 250 coho.

^d Post weir estimate 150,000 sockeye, 8,000 pink, 250 coho.

^a Weir fish tight at 1400 hours.

^b Includes an estimate of 1,100 sockeye due to high water.

^c Weir fish tight. No counts due to high, murky water.

^d Weir moved to bridge from Lake. Weir fish tight at 2000 hours.

^e Pulled weir at 0930 hours. Includes an estimate of 413 coho.

^f Includes an estimate of 409 coho.

^g Weir fish tight at 1200 hours. Pulled weir at 2100 hours due to high water.

^h Includes an estimate of 402 coho.

ⁱ Includes an estimate of 399 coho.

^j Includes an estimate of 988 coho.

^k Weir fish tight at 1130 hours.

^l Pulled weir at 1700 hours. Includes an estimate of 430 coho.
