(1c) PTB *d-pu:k BELLY / VITALS / HOLLOW OBJECT / CAVE

The dental prefix is attested in Ao, Lepcha, and rGyalrong. The Chepang, Magar, and Maru forms show preemption of the initial by this prefix.

Limbu appears to show an **s-** prefix in this root, but this is apparently a reduction of the full syllable **sap**, of still undetermined meaning.

Chinese comparandum

腑 OC ***b'i̯u***, *GSR* #136o; Mand. **fǔ**.

(1e) PTB *wu BELLY / STOMACH / INTESTINE / KIDNEY

Many Loloish languages have slightly different forms for KIDNEY as opposed to STOMACH. For now, we are attributing this to an alternation at the PLB level between ***wu** and ***ru**, e.g. Ahi **i**^{33} **fu**^{55} **zo**^{21} 'kidney' (< ***wu**) vs. **ɣo**^{2} 'intestines' (< ***ru**). Cf. the PLB reconstruction ***rə-ʔu**^{1} (DL:1130).

(1b) PTB *s-la p/t SWEAT

The final consonant of this root seems to be unstable, although the basic variant seems to be the one with -p. Jingpho (and perhaps Phunoi) point to a variant with -t. Bantawa has a form with initial h- and final -k (**hak**), but it is unclear whether it belongs under this etymon.

This root resembles PTB ***s/k-lan** SWEAT (§1.8.1), and for the moment we consider it to be allofamically related to it.

1.3.4. Tangkhulic

Tangkhul	**hup** kha-laŋ	sweat (n.,v.)	Matisoff 1987

1.7.3.1. Jingpho

Jingpho	**salat**	sweat	Marrison 1967
	să[31]lat[31]	sweat (nbp.)	Huang Bufan & Dai Qingxia, eds. 1992:0154.19
	să[31]lat[31]	sweat	Sun Hongkai et al. 1991:277.47
	să[1] lat[31]	sweat	Liu Lu, ed. 1984
	səlat	sweat (n.)	Matisoff 1987

2.4. Kham-Magar-Chepang

Chepang	**hlap**	sweat (n.)	Matisoff 1987
	hləp	sweat	Caughley 1972:2.A.74
	hləp-	sweat (vi.)	Caughley 2000
	hləp.(rə.tiʔ)	sweat (n.)	Caughley 2000
Chepang (Eastern)	**hləp** rə tiʔ	sweat / perspiration	Caughley 1990:8.2.1

(1c) PTB *g-l(y)am SWEAT

1.1.2. Deng

Kaman [Miju]	**lâm**	sweat (n.)	Weidert 1987:363

1.7.1.1. Bodo

(3) PTB *bəw SWEAT

This sparsely attested morpheme apparently only appears as the first morpheme in disyllables.

The Burmish languages have generally devoiced the PTB *voiced series, hence the reconstruction with ***b-**.

1.6. Mru

Mru	**pau**^{2}kywe^{3}	sweat	Luce 1985:T.25
	pau^{2}tjwe^{3}	sweat	Luce 1985:T.25

6.1.1. Burmish

	pui^{51}pu^{51}	sweat	Sun Hongkai et al. 1991:277.42

(4) PTB *s-ŋar SWEAT

This reconstruction is not found in Sun 1993.

This root seems to overlap with PTB ***hur** ≷ ***hwar** ⋈ ***hir** ≷ ***hyar** SWEAT (§3.2.12). The Lhoba form was attributed to the latter in *HPTB*:399, with the initial explained as due to assimilation to the final of the first syllable. Particularly tricky to interpret are the Bokar form with **w-** and the Hill Miri form with **h-**.

1.1.1.1. Western Tani

Bokar	hoŋ-**ŋar**	sweat	Sun 1993b
	ɦoŋ **ŋar**	sweat (nbp.)	Huang Bufan & Dai Qingxia, eds. 1992:0154.24
Bokar Lhoba	ɦoŋ **ŋar**	sweat	Sun Hongkai et al. 1991:277.51; Sun Hongkai *et al.* 1980

1.8.2 Snot/Nasal Mucus

(1) PTB *s-nak SNOT

We set up this root provisionally as being separate from the much better attested PTB ***s-nap** SNOT / NASAL MUCUS (§1.8.2). The Yimchungrü form is included here because of the velar final, despite its anomalous initial.

1.3.1. Central Naga (Ao Group)

Ao (Mongsen: Mangmetong)	**hŋak** sák	phlegm (n.)	Coupe 2007
Yimchungrü	(**^{1}**)**heak**	phlegm	Weidert 1987:641

6.1.1. Burmish

Achang (Lianghe)	**hnak**^{55}	snot	LaPolla 1987:187
	n̥ɑk^{55}	snot	Dai Qingxia & Cui Zhizhao, eds. 1985

(2) PTB *s-nap SNOT / NASAL MUCUS

A few languages have quite similar reflexes, except for a final **-k** instead of **-p**. For the moment, we have assigned these to PTB ***s-nak** SNOT (§1.8.2).

In a couple of languages (Puiron, Kulung), this root has developed the meaning NOSE, although the usual etymon for nose is the allofamically related PTB ***s-na ≷ *s-naːr** NOSE (§1.2.8).

0.1. Tibeto-Burman (previously published reconstructions)

**Tibeto-Burman*	***s-nap**	mucus; snot	Weidert 1987:662; Matisoff 2003a:604; LaPolla 1987:187; Benedict 1972:102

1.8.2.2 Snore

(1) PTB *s-ŋwar SNORE / BREATHE HEAVILY

This root was set up as ***s-ŋor** in *HPTB*:400.

As noted in *HPTB* loc. cit., there is a similar Indo-Aryan etymon (cf. Nepali **ghur-nu**), but this resemblance appears accidental, probably due to the imitative nature of words for snoring.

Chepang **hŋrok naʔ** might be related, but presents problems. Thulung and Khaling **khor-** are perhaps borrowings from Nepali.

There is a possible allofamic relationship between this root and PTB ***s-na ≍ *s-naːr** NOSE (§1.2.8), reminding one of the English "cryptotype" **sm- ≍ sn-** 'action related to the nose or lips'.

Lahu (Black)	**cí**-khî ~ **cí**-ɣî	spittle / saliva	Matisoff 1987

(2) PTB * m/s -tuːk SPIT

STC suggests a connection between this root and PTB ***twak** BITE / CHEW / PECK AT / HOOK ONTO (§6.8), a key form being Karbi **iŋ-tok** 'to spit, dart, peck, bite (as a snake), spittle'. For now, however, we are treating PTB ***twak** BITE / CHEW / PECK AT / HOOK ONTO (§6.8) as a separate etymon.

1.8.3.1 Phlegm

(1) PTB *k(r)a:k PHLEGM / SPUTUM / MUCUS

For evidence of the liquid medial, see e.g. Apatani, Idu, Geman, Bahing, Sunwar, Tamang, and Pattani.

This root is perhaps allofamically related to PTB ***kwak*** COUGH (§1.8.3.3) and/or PTB ***ha(:)k*** HAWK / GAG / CHOKE (§1.3.5.7).

This root is much more widespread than the resemblant PTB ***kan*** PHLEGM / SALIVA (§1.8.3.1) and seems distinct from it.

1.8.3.2 Vomit

(1) PTB *m-p(r)ats VOMIT

This root is not reconstructed in *STC*, but has been reconstructed as **m-pat** in several sources (*LTSR* #124, *GSTC* #26, *HPTB*:330).

A medial ***-r-*** is reconstructed for Proto-Tani and Proto-Karenic, and appears overtly in several other scattered languages (Khezha, Mao, Pattani, Tsangla, Motuo Menba). Final ***-s*** appears instead of ***-t*** in Kanauri and Kiranti languages; in at least two rGyalrongic dialects (Heishui Shashiduo **ka'p^{h}ət**s) and (Maerkang Baiwan Muerji **kamə'p^{h}atz**) a final sequence **-ts** or **-tz** appears, motivating our reconstruction where the stop + sibilant co-occur syntagmatically. Chepang **has** also has final **-s** but the development of a *labial stop to Chepang **h** is not otherwise attested.

The nasal prefix is abundantly attested in Qiangic, rGyalrongic, and Jingpho.

The Chinese comparandum with medial ***-j-*** was originally proposed by Coblin (1986:130).

(3) PTB *ʔaw VOMIT

The Chinese comparandum to the WB form was hesitantly suggested in *STC* n. 491, p. 192.

Since the Chinese form could also mean ‘babble as a child’, it cannot be excluded that this etymon is related to PTB ***ʔur*** MAKE NOISE / HUM / CHAT / BABBLE (§8.5.5).

rGyalrong	tə **ŋkʰor**	vomit (n.)	Dai Qingxia 1989d:3.7.12

(6) PTB *mwa ⪤ *mya-n SPIT / VOMIT

For now, the reflexes with back vowels are deemed to descend from ***mwa***, while those with front vowels are assumed to come from ***mya-n***.

The Jingpho form seems to incorporate the nominalizing suffix ***-n***. See *HPTB*:439-453. According to Dai 1983:515, there is a minimal pair between **mă**^{33} **jen**^{33} ‘tin’ and **mă**^{33} **jẹn**^{33} ‘spit’, with the latter showing constriction of the vowel of the full syllable. The latter form was interpreted in *HPTB*:115 as being due to a glottal prefix, i.e. Pre-Jingpho ***məʔyen***.

Ukhrul	kʰə-mə-**law**	vomit	Mortensen 2012
	kʰə-mə-**lo**	vomit	Mortensen 2012

(9) PTB *m-ruy VOMIT

This root (originally proposed by Weidert 1987:477) is distinct from PTB ***m/s-lwa-k** VOMIT (§1.8.3.2). Several languages have reflexes from both roots, e.g. Mizo **luak** (PTB ***m/s-lwa-k** VOMIT (§1.8.3.2)) and **lùi** from the present root. Some Tamangic languages have apparently developed a **-t** suffix.

1.2. KUKI-CHIN: ***ru(u)y** DRUNK / INTOXICATED / NAUSEATED

**Chin*	***ru(u)y**	DRUNK / INTOXICATED / NAUSEATED	VanBik 2009:932

9.0.1. Old Chinese

Chinese (Old/Mid)	**ʔɛg/ʔăi-**	belch	Karlgren 1957:957b

9.0.3. Modern Chinese

Chinese (Mandarin)	**yɑi**	belch	Karlgren 1957:957b

Chinese comparandum

噫 OC ***ʔɛg**, *GSR* #957b; Mand. **yī**.

This character is also found in the Shi Jing with the interjectory meaning ‘alas, oh’ and the OC reconstruction ***ʔi̱əg** (*GSR* #957b).

1.8.4 Urine/Piss

(1) PTB *g-ts(y)i- $\begin{matrix}\text{t}\\\text{n}\end{matrix}$ URINE / URINATE

This root exemplifies several typical TB allofamic patterns: variation in initial voicing, affricate/spirant alternation, and alternate suffixations.

The notion of URINATE is often conveyed by an OV cognate object construction, lit. “to urinate urine”: e.g. Jingpho **jìt jí**, Nung **tsi tsi**.

Chinese comparandum

The Chinese comparandum has not been reconstructed for Old Chinese. However, its semantic content is such that it might not have appeared in ancient literary sources.

(2) PTB *s-r(y)a-y/s/t LAUGH

This widespread root displays several types of variation. While many languages reflect a **-y-** medial, Lolo-Burmese seems to have metathesized the palatal element to the post-vocalic position (PLB ***ray**^{1}).

A number of Himalayan languages (Written Tibetan, Thebor, Bunan, Magar, Bahing, Khaling, and Nachereng) attest to a dental stop suffix, as do Nung and Idu. An **-s** suffix appears in Written Tibetan and Nachereng, while Bahing shows variation between **-t** and **-s**. It is possible that a sequence of two suffixal elements (**-t-s**) was involved.

An **s-** prefix is reflected in Bunan **sred** < ***s-ryat** and Nachereng **hres**.

(3) PTB *ŋ(y)il LAUGH

The second syllable of Phunoi **ʔi**^{55} **ɲiʔ**^{55}looks like a reflex of this root, but it is isolated in Lolo-Burmese, and the resemblance is probably fortuitous. Similarly, Pa-O Karen **ŋàʔ** might also show an accidental resemblance to this root.

1.9 Reproductive System

MOST of the etyma in this chapter were previously published in *The Tibeto-Burman Reproductive System* (Matisoff 2008).

1.9.1 Egg

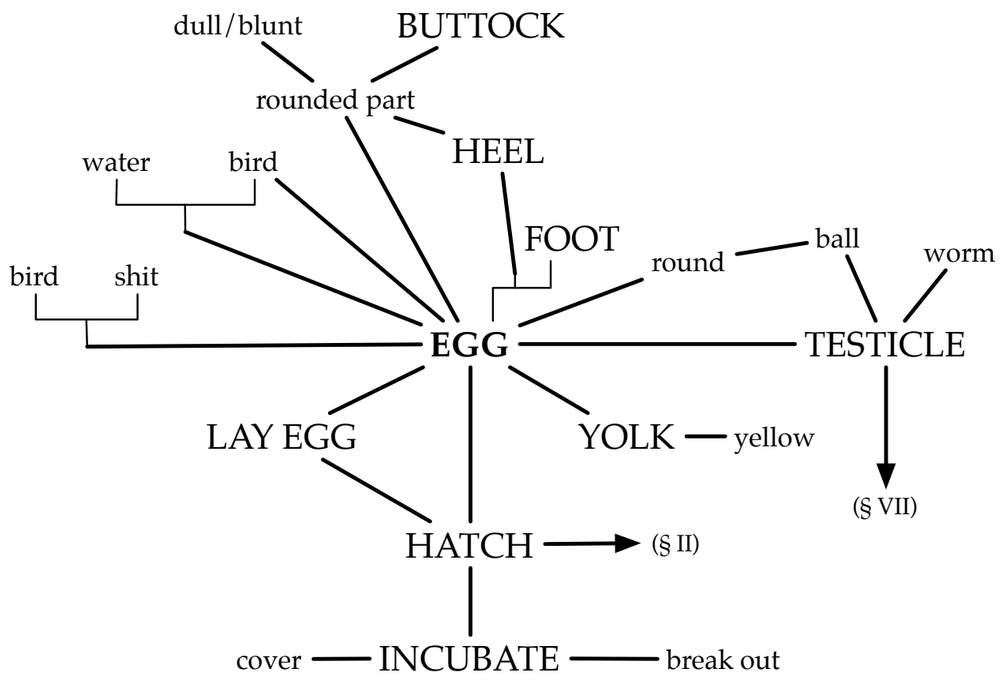

Figure 153: 1.9.1 *Egg*

The English word *yolk* (< OE *geolca*) is an allofam of *yellow* (< OE *geolu*) < PIE ***ghel-** 'shine; shiny object' [*AHD*:2029]. Similarly, TB words for YOLK typically contain a morpheme meaning YELLOW, e.g. Lahu **ɡâʔ-u-ši** 'yolk of hen's egg' < PTB ***k-rak** FOWL / CHICKEN (§2.1.10) + PTB ***ʔu** EGG / BIRD (§1.9.1) + **ši** 'yellow/gold' < PLB ***s-rwəy**[1] ⩙ ***s-rwe**[1] GOLD / YELLOW (§9.4). See *HPTB*:191.

An important associated concept is BIRD, with several distinct roots appearing in compounds for EGG, including PTB ***w(a/u)** BIRD / EGG / WING / FOWL (§1.5.1), PTB ***haːr** BIRD / FOWL / CHICKEN (§2.1.10), PTB ***b(y/r)a** BIRD / BEE (§2.2.4), PTB ***daw** BIRD (§2.1.10), PTB ***s-ŋak** BIRD (§2.2.4). It is sometimes hard to distinguish reflexes of ***wa** and ***haːr**; cf. the first syllable in Wancho **ao-ti**, below. Similarly, it is sometimes hard to distinguish reflexes of ***wa** and ***bya**; cf. the first syllable in Bahing **ʔba-di**.

(1) PTB *pʷu EGG / BIRD / ROUND OBJECT

This is one of over 30 TB etyma showing interchange between ***p-** and ***w-**, including such important roots as AXE, BAMBOO, BELLY, MAN/HUSBAND, PIG, etc. In this volume, see also PTB ***pʷam** WOMB / PLACENTA / BELLY / STOMACH / NEST (§1.9.6). These are reconstructed with ***pw-** clusters in the revised version of *STC* (e.g. ***pak** = ***pwak**; see n. 78, pp. 23-4). I originally preferred to treat the stop component as prefixal (e.g. ***p-wak**), but later abandoned this approach in favor of an "extrusional" interpretation, where the [-w-] is considered to be a mere phonetic perseveration of the preceding stop, e.g. ***pʷak** (see Matisoff 2000a). This extrusion is especially common before the vowel [-a-], but also, as in EGG, occasionally occurs before [-u-]. See also *HPTB*:61-62.

In the following sections, the reflexes of this etymon are presented separately, according to whether they derive from the variant with semivowel (***wu**) or stop (***pu**) initial.

6.2. Naxi

Na (Yongning)	**bv**˩	hatch, to incubate (v.)	Michaud 2006–2009
Naxi (Eastern)	**bv**[31]	sit on egg, incubate	He Jiren & Jiang Zhuyi, eds. 1985
Naxi (Western)	**bv**[31]	sit on egg, incubate	He Jiren & Jiang Zhuyi, eds. 1985
Naxi (Lijiang)	**bv**[31]	hatch	Sun Hongkai et al. 1991:786.28
Naxi	**bv̩**[21]	hatch / incubate (v.)	Huang Bufan & Dai Qingxia, eds. 1992:1326.45
Naxi (Yongning)	**bv**[55]	hatch	Sun Hongkai et al. 1991:786.29

(1a) PTB *ʔu EGG / BIRD

This etymon is closely related to one for BIRD, set up as PTB ***w(a/u)** BIRD / EGG / WING / FOWL (§1.5.1). The original version of *STC* sets up ***wa** for BIRD (*STC* #99), but this is revised to ***(b)wa** (largely because of Bahing **ba** 'fowl') in the indexes (pp. 209, 211). In some languages (e.g. Jingpho and Kadu) a reflex of PTB ***ʔu** EGG / BIRD (§1.9.1) occurs as a prefix in bird-names (**ù-**). Marrison (p. 459) sets up three Proto-Northern Naga allofams for BIRD: ***C-waw**, ***ua**, and ***wa**. It is sometimes difficult to distinguish the reflexes of ***wa** and ***wu**. For example, in the following NE Indian Areal Group forms, the italicized syllables are to be derived from ***wa** ⩙ ***wu** BIRD, with another constituent conveying the meaning EGG: Chang ***ao*kiak**, Chokri **thü*vu*zü**, Konyak ***ao*kiak**, Konyak (Tamlu) ***ʌu*ji**, Ntenyi **a*wüü*-atsü**, Sema ***au*khu**, Tangsa **[1]*vu*[1]ṭʌi**, Tangsa (Moshang) ***wu*di**, Wancho ***ao*-ti/ɔ-ti**, Yacham-Tengsa ***u*-tü**.

These roots have a wide distribution in TB. In Lolo-Burmese (including Jinuo), the root ***wu** is widely attested with the predominant meanings 'egg; lay egg; hatch'. In Bai this root means 'hatch', while in Northern Naga and Qiang (Mawo, Yadu) it generally means 'bird', occurring as the first element in compounds for 'egg' (see below).

[a] Akha **xha** 'animal'.
[b] Hani final **-v** is a tonemark in this transcription.

Chinese comparandum

嫗 OC ***ʔi̱u***, *GSR* #122o 'sit on eggs, incubate, warm (v.) with the body'; Schuessler 2007:590 ***ʔoʔ***; B & S 2011: (***qoʔ***); Mand. **yù** ~ **yǔ**.

(1b) PTB *pu EGG

This morpheme appears in cognate object constructions, e.g. Bengni **pɯ-pɯ pɯ** 'lay an egg', where the last element is the verb. The noun looks reduplicated in Bengni, but Apatani has **pa-pu** 'egg', with apparently distinct components. Similar cognate objects are characteristic of PTB ***ʔu*** EGG / BIRD (§1.9.1), e.g. Lahu **ɔ̀-u u ve** 'lay an egg', where the noun appears with a prefix.

This root may well be related to a morpheme with a more general meaning of BALL / EGG / ROUND OBJECT (PTB ***pu***).

7. KARENIC

Karen (Sgaw/Hinthada)	dɪ̱^{31} **bo̱**^{33}	testicles	DAI Qingxia 1989k:145.1

[a] The first elements in the Bengni, Bokar, Galo, and Tagin forms are either morphemes meaning 'bird' or 'chicken' (cf. Damu **rok-pɯ**, where **rok** clearly < ***k-rak** 'chicken'), or else reduplications of the root.

Chinese comparandum

孵 OC ***p'i̱ôg*** 'to hatch (eggs), incubate' ZJH; not in *GSR* #1233; Li 1971: **(*phjəgw)**; Baxter 1992: **(*ph(r)ju)**; Mand. **fū**.

The earliest attested use of this Chinese character seems to be the Han Dynasty work *Fangyan*. However, it is clearly a later graphic variant of 孚, Mand. **fú**, which is attested writing 'hatch'. Thus although the character may be of later development, the word itself obviously existed at the Old Chinese time period.

Characters with the 孚 phonetic are generally placed in the OC 幽 Yōu rhyme group. However, some members of this phonetic series are found in the Middle Chinese 虞 Yú rhyme, which is not regularly derivable from the OC 幽 Yōu group.

Neither Li nor Baxter specifically discusses the difficulties of reconstructing this set of characters. Baxter (1992:757) does however list a reconstruction for 孚 (square brackets represent irregular development): 孚 **[fú]** < **[phju]** < ***ph(r)ju**. It is treated as an irregular development from the OC 幽 Yōu group into the MC 虞 Yú rhyme. I have therefore provided a parallel reconstruction for 孵 in the systems of Li and Baxter.

Karlgren reconstructs other characters in this phonetic series with ***-ug** (equivalent to the OC 侯 **Hóu** rhyme group), which yields a regular development into MC. However, I have provided a Karlgren-system reconstruction based on the assumption that the word belongs in the 幽 Yōu rhyme group.

The OC-PTB correspondence of finals is regular. PTB ***-u** and ***-əw** phonemically differ only in length, and show identical OC correspondences. In open syllables the long vowel ***-əw** (which could be written /uw/ or /uː/) is more common, and so cognate sets exemplifying this correspondence usually involve that vowel. Examples include 九 'nine' (TB ***d-kəw**, OC ***kjəgw**; Mand. **jiǔ**), 鳩 'dove/pigeon' (TB ***khəw**, OC ***kjəgw**; Mand. **jiū**) and PTB ***r/m-bu** ≷ ***pru** NEST / WOMB / PLACENTA (§1.9.6) (elsewhere in this volume). It is interesting to note that this correspondence seems to be attested only after grave initials.

As for the mismatch in aspiration of the OC and PTB initials, this raises the broader issue of voicing and aspiration within and across Chinese and TB. PTB is reconstructed with a two-way voicing contrast (e.g. ***p** vs. ***b**), while Old Chinese is reconstructed with a three-way voicing and aspiration contrast (e.g. ***p** vs. ***ph** vs. ***b**). Voicing and aspiration correspondences between cognates are notoriously imprecise. This is because of various complex morphological processes, not yet entirely understood, at play in word families on both sides, which can affect voicing and aspiration. On the Chinese side, it has become increasingly clear in recent decades that prefixal elements, such as ***s-** and various nasals, can voice or devoice root initials. (See for example Baxter and Sagart 1998, Sagart 1999, and Gong 2000.) It has also been argued that Chinese aspiration is mostly, or entirely, a secondary feature. (See Schuessler 2007:58ff for a recent articulation of this view.) Similar processes have been observed in various TB languages and posited for PTB. Because not all of these processes are fully understood, and because of the complex history of individual words and word families, it is not always possible to be sure that one is comparing etymological roots, rather than derived forms, in established OC/PTB cognate sets.

For this reason the correspondence of PTB ***p-*** with OC ***ph-***, for the comparison under discussion here, must be considered regular, with the assumption that aspiration in the Chinese form is a secondary development. Similarly, mismatches in voicing or aspiration will not be considered impediments in the proposal of Chinese comparanda for PTB etyma elsewhere in this volume. We assume, ultimately, that PTB voiceless initials correspond to Chinese voiceless initials, and that PTB voiced initials correspond to Chinese voiced initials, and that as our understanding of morphological processes on each side improves, these patterns of correlation will become more evident.
[ZJH]

(1c) PTB *pu BALL / EGG / ROUND OBJECT

These forms are undoubtedly related to those meaning "egg", but have acquired or retained the more general meaning of BALL / SMALL ROUND OBJECT. This morpheme appears in several compound body part terms like "eyeball" and perhaps "head" (cf. PTB ***d-bu-s*** HEAD / CENTER / SENIOR MALE RELATIVE / UNCLE (§1.2.1)). See also the discussion under PTB ***pʷam*** BELLY / STOMACH / WAIST (§1.9.6), where this morpheme occurs as second element in compounds. Also probably reflecting this same etymon is "shoulder" PTB ***baw*** SHOULDER (§1.4.3).

[a] This Balti word is the source of English *polo*!

(2a) PTB *d(w)əy EGG / TESTICLE

Especially in Himalayish and the NE Indian Areal Group, it is often difficult to distinguish ***d(w)əy*** from its probable co-allofam PTB ***d(i/u)l*** EGG / TESTICLE (§1.9.1). Thus, Kulung **wa-di** ("bird + egg") looks like Tangsa (N.Naga) **wu-di**, Karbi **vo-ti**, etc., but other Kiranti languages (e.g. Limbu, Athpare) have reflexes with **-n**, apparently from ***-l***. Kanauri, Lepcha, and Tibetan retain **-l**. For now, we are assigning all Himalayish reflexes of this word-family to ***dil***, though a better Proto-Himalayish reconstruction would be ***di-l***. Similarly, some languages of the NE Indian Areal Group retain overt reflexes of ***-l***, but many have forms with open syllables. Our assignment of some NE Indian forms to PTB ***d(w)əy*** EGG / TESTICLE (§1.9.1) rather than PTB ***d(i/u)l*** EGG / TESTICLE (§1.9.1) remains arbitrary.

Benedict 1939:225 ("Semantic differentiation in Indo-Chinese") analyzed compounds like Lushai (Mizo) **ar-tui** 'egg' as "bird + water". *STC* postulates a connection between ***twəy*** 'egg' (*STC* #168) and a general root ***ti(y)*** 'water; moist' (*STC* #55 and pp. 45, 135, 196). (This latter root should actually be set up as PTB ***m-t(w)əy-n ≍ *m-ti-s*** WATER / FLUID / LIQUID / RIVER / SOAK / SPIT (§1.9.9).[*] The proposed connection between EGG and WATER is complicated by the related forms for EGG with final ***-l***. *STC* (n. 149) admits that Dhimal has different forms for EGG (**tui**) and WATER (**tśi**), and yet a third form in **hna-thi** 'snot'. Elsewhere in *STC* (p. 135, discussing the Karen cognates; and p. 196, in connection with the putative two-tone contrast for PTB), Benedict suggests that the etyma for EGG and WATER do indeed descend from separate allofams, different in both tone and initial at the PTB stage.

There is a further semantic connection between EGG and HEEL (both being smooth and rounded). Cf. Lushai (Mizo) **ar-tui** 'egg' (perhaps "bird-water", **ke-ar-tui** 'heel' ("foot-egg", i.e. "foot-bird-water"). The syllable **-ar-** must be bleached of all avian meaning by the time it gets incorporated into HEEL. See Matisoff 1994 ("How 'dull' can you get?"), which also brings BUTTOCK into the same network of semantic associations as HEEL.

The putative semantic connection between BIRD and WATER is strengthened by compounds of BIRD with other roots for WATER, e.g. < PTB ***r/s/g-wa*** WATER / RAIN (§1.2.6) (Tangkhul **tara** 'water', **har-ra** 'egg' (**har** 'bird'), **hai-ra** 'semen').[*] Less clear, but possibly a parallel formation is Muya **vɑ**^{33} **vɑ**^{55} 'egg' (**vɑ**^{33} 'bird'). Cf. also Maring **wa-yui** 'egg', with the second element < PTB ***rəy*** WATER / LIQUID / BODILY FLUID (§1.9.9).

This root is widely distributed, appearing in the NE Indian Areal Group, Himalayish, Jingpho-Asakian, Karen, and Qiangic (including Tangut), and perhaps in a few Loloish forms (Xide, Nosu) where the initial is palatalized to an affricate.

Seven forms from four Luish [Asakian] languages (Sak Bawtala, Sak Dodem, Ganan, Kadu) cited in Luce 1985 (Chart L) have the confusing gloss 'Penis/Testicles'. Since there are two phonologically similar etyma in this area, ***ti*** EGG/TESTICLE and PTB ***ti-k*** PENIS (§1.9.7), these forms have presented serious problems of analysis, and have been reglossed to mean either 'penis' or 'testicle', but not both. See Etymon Note under PTB ***ti-k***, below.

See *HPTB* ***twəy ≍ *dwəy*** 'water; egg', p. 195.

9.0.1. OLD CHINESE			
Chinese (Old/Mid)	**d'i̱ər/d̂'i**	egg (of an ant)	Karlgren 1957:590m
9.0.3. MODERN CHINESE			
Chinese (Mandarin)	**ch'ï**	egg (of an ant)	Karlgren 1957:590m

[a]Note the reduced Tangut **l-**.
[b][Source Note] Kayan has an irregular onset, i.e. t- instead of d-.
[c]The first element **di̱^{55}** must be the verb, since Karen is a VO language.

Chinese comparandum

蚳 OC ***d'i̱ər** *GSR* #590m, 'ant egg'; Li 1971: **(*drjid)**; Baxter 1992: **(*drjɨj)**; Mand. **chí**.

This rare character does not appear in Li or Baxter. However, reconstruction in either system is not in doubt based on reconstruction of other characters with the same phonetic and identical Middle Chinese pronunciation (e.g. Baxter 1992:750 坻 < **drij** < ***drjɨj** (Mand. **chí**)). But it is worth noting that at least one character with the same phonetic is placed in the 微 Wēi group by Baxter and reconstructed with ***-ij**: 鴟 **tsyhij** < ***thjij** (Mand. **chī**), presumably because it is found rhyming with a 微 Wēi group word (*Shijing* 24.3A). If this character is not simply an exception, then according to Baxter's rhyme group division, characters with the same phonetic are spread across the two rhyme groups. In the absence of rhyming evidence, ***drjij** is also a possible reconstruction for 蚳 in Baxter's system.

Assuming the semantics are not problematic,[*] the correspondences are quite sound. Examples of OC ***-id** (Li 1971) corresponding to TB ***-əy** are numerous, and include 死 OC ***sjid** 'die' (Li), TB ***səy**, Mand. **sǐ**; 四 OC ***sjid** 'four' (Li), TB ***b-ləy**, Mand. **sì**; 屎 OC ***hrjid** 'excrement', TB ***kləy**, Mand. **shǐ**. The TB final ***-i** should not be troubling; we would expect this relatively rare PTB final to correspond to OC in the same way as ***-əy** (in parallel to TB ***-əw** and ***-u**; see the discussion of PTB ***pʷu** EGG / BIRD / ROUND OBJECT (§1.9.1)). On the correspondence of OC medial ***-r-**, see the discussion of 中 under PTB ***(t/d)uŋ ≍ *ts(y)u:ŋ** MIDDLE / CENTER / INSIDE / NAVEL (§1.9.3).
[ZJH]

(2b) PTB *d $\begin{matrix}\text{i}\\\text{u}\end{matrix}$ l EGG / TESTICLE

This etymon is sometimes hard to distinguish from PTB ***d(w)əy** EGG / TESTICLE (§1.9.1), above. It is possible that conflation with an Indo-Aryan root is involved. Jäschke (p. 234) says that WT **thul** is "according to Cunningham a Cashmiri word". The TB cognates are indeed confined to Indospheric branches of TB (NE Indian Areal Group and Himalayish).

Some Himalayish forms for HEEL have an element like **-din-** which look as if they could probably come from this etymon for EGG (see the note on Lushai (Mizo) **ke-ar-tui**): these include Kulung **'dhin-di-ri**, and Thulung and Khaling **din-di-ri**. Yet the suspicious similarity among these forms suggest that they might be loans from Nepali.

This is very likely the same etymon as ***r-tul ≍ *r-til** DULL / BUTTOCK / HEEL / ROUNDED PART (*HPTB* p. 419), cf. WT **rtul-po** 'blunt, dull'; Abor-Miri **ko-dun** 'buttock'; Meithei **mə-thun** 'buttock'; Wancho **chi-dun** 'heel' (**chi** 'foot'); Khözha **šú-dò**; Lisu **khi^{21}du^{21}** 'buttock' (**khi^{21}** 'excrement'); Phunoi **pi^{33}tun^{11}** 'heel'. See Matisoff 1994 ("How 'dull' can you get?"), and the Chinese comparanda, below. The allofam with medial **-i-** is represented by Jingpho **šətīn** 'buttock', **ləthīn** 'heel', and also perhaps by WT ***rtiŋ*-pa** 'heel'.

Benedict apparently had a different theory. He implies a connection between Lushai (Mizo) **til** 'testicle' and Thado **til** 'earthworm; testicle' (cf. also PLB ***di** 'worm' > WB **ti**, Lisu **bi-*di***), which he reconstructs as PTB ***zril** 'worm' (*STC*, n.121, p. 37). Several Chinese comparanda meaning WORM are offered (n.457, p. 171). It must be said, however, that the semantic association between TESTICLE and WORM is a bit obscure.

	ʔba **di**	egg	Michailovsky 1991:55
Thulung	**Di**	egg	Allen 1975
	le koak **ti**	testicle	Allen 1975
	d̪i	egg	Michailovsky 1991:55

[a] Jäschke (p. 234) says that "according to Cunningham [this is] a Cashmiri word".
[b] Note assimilation of the medial consonants in Limbu **thim ba**.
[c] Literally "penis + bird + egg" (cf. Athpare **le wa d̪in** 'testicle').

Chinese comparanda

There are several likely Chinese comparanda (*HPTB*:422, 504), including:

臀 OC ***d'wən**, *GSR* #429b-c 'buttocks'
殿 OC ***tiən**, *GSR* #429d 'rear of an army'
沌 OC ***d'wən**, *GSR* #427h 'confused / stupid'
鈍 OC ***d'wən**, *GSR* #427i 'dull'
頓 OC ***twən**, *GSR* #427j 'worn / dull / spoiled'.
[JAM]

As noted above, if this PTB root is related to ***r-tul** ≍ ***r-til** DULL / BUTTOCK / HEEL / ROUNDED PART, then it can be compared to the following Chinese word family (see Coblin 1986:67-68; Gong 1995 #154; *HPTB*:422, 504):

臀 OC ***d'wən**, *GSR* #429b-c 'buttocks'; Li 1971: ***dən**; Baxter 1992: ***dun**; Mand. **tún**.
殿 OC ***tiən**, *GSR* #429d 'rear of army'; Li 1971: ***tiənh**; Baxter 1992: ***tɨns**; Mand. **diàn**.
沌 OC ***d'wən**, *GSR* #427h 'confused, stupid'; Li 1971: ***dənx**; Baxter 1992: ***dunʔ**; Mand. **dùn**.
鈍 OC ***d'wən**, *GSR* #427i 'dull'; Li 1971: ***dənh**; Baxter 1992: ***duns**; Mand. **dùn**.
頓 OC ***twən**, *GSR* #427j 'worn, dull, spoiled'; Li 1971: ***tənh**; Baxter 1992: ***tuns**; Mand. **dùn**.

The correspondence between PTB ***-l** and OC ***-n** is regular (see Gong 1995 for numerous examples). The initials and vowels also match well. The voicing alternation and suffixation seen in the Chinese word family are typical, although in this case the morphological function is not clear.
[ZJH]

The following comparanda are offered for PTB ***zril** EARTHWORM in *STC* p. 171:

蟺 OC ***d̂i̯ɑn**, *GSR*# 148p; Mand. **shàn**
蚓 OC ***di̯ĕn**, *GSR*# 371c; Mand. **yǐn**
蠕 OC ***di̯ən**, *GSR* #450j; Mand. **yǐn**

[JAM]

蟺 OC ***d̂i̯ɑn**, *GSR* #148p 'earthworm'; Li 1971: ***djanx**; Baxter 1992: ***djanʔ**; Mand. **shàn**.
蚓 OC ***di̯ĕn**, *GSR* #371c 'earthworm'; Li 1971: ***rinx**; Baxter 1992: ***ljinʔ**; Mand. **yǐn**.
蠕 OC ***di̯ən**, *GSR* #450j 'earthworm'; Li 1971: ***rənx ʔ**; Baxter 1992: ***ljɨ/inʔ**; Mand. **yǐn**.

Benedict (*STC* p.37 note 121 and p. 171 note 457) argues that all three Chinese words are related and 'point... to an original initial such as ***zr-**'. These in turn are compared to TB ***zril** 'worm'.* Based on this and a handful of other comparisons, Benedict argues for the following developments from PST to Chinese: ***zr-** > ***źr-** > ***d̂i̯** * varying with ***zr-** > ***zy-** > ***y-** > ***di̯**.

Based on our current understanding of Old Chinese, Benedict's hypothesis is no longer sustainable, at least not in full. *GSR* #148 is a dental series while *GSR* #371 and #450 are lateral series. This and the vowel difference indicate that 蟺 **shàn** is not an allofam of 蚓 **yǐn** and 蠕 **yǐn**.* As for the latter two, the reconstruction in both Li's and Baxter's systems is difficult. The Middle Chinese forms might be descended from either OC ***i** or OC ***ə** (Li)/***ɨ** (Baxter). Li and Baxter agree that *GSR* #371 has main vowel ***i**, but the reconstruction of *GSR* #450 is ambiguous.

Schuessler 2007:574 explicitly relates 蚓 **yǐn** and 蠕 **yǐn**, indicating that they are variant graphs used to write the same morpheme. He reconstructs OC ***lə/inʔ** or ***jə/inʔ**. While various attested binomial forms for 'earthworm' suggest that ***i** is the OC vowel, Min dialect forms point to ***ə**.

As for the initial, it is now generally agreed that it should be ***l** or ***j**, not ***r**.

Looking again at Benedict's comparison with PTB ***zril**, we note that the vowel and coda correspondences are regular. A comparison of PTB ***zr-** with OC ***l-** or ***j-** looks doubtful on phonetic grounds, but cannot be dismissed out of hand. Since ***zr-** is so rare in TB, it is difficult to establish regularity of correspondence.

Whatever the fate of that comparison, Benedict's claim that these Chinese words are ultimately connected to PTB ***d(i/u)l** EGG / TESTICLE (§1.9.1) now seems quite unlikely to be true.
[ZJH]

(3) PTB * m/s -tow EGG

This etymon appears in the NE Indian Areal Group (Idu), Loloish, and Qiangic, and looks safe to set up for PTB. There is evidence for both a nasal (Loloish) and a sibilant (Qiangic) prefix.

* It is in footnote 121 that Benedict seems to relate TB ***zril** to Lushai (Mizo) **til** 'testicles', the TB etymon currently under discussion in this volume.
* *d̂i̯* is mistakenly written *d'i* in *STC*; in Karlgren's reconstruction *d* with an inverted breve above is distinct from *d* followed by an apostrophe, but as far as I can tell Benedict transcribes them identically, perhaps due to typographic limitations.
* Peiros and Starostin 1996 v2:156 set 570 relate Chinese 蟺 **shàn** to Lushai (Mizo) **tāl** 'to struggle, wriggle, writhe'. See also Schuessler 2007:453.

Yi (Dafang)	**ndo^{55}**	egg; lay (egg)	CHEN Shilin *et al.* 1985; CHEN Shilin *et al.* 1985; SUN Hongkai et al. 1991:170.22
Yi (Mile)	i^{33}**ʈho^{33}**	egg	SUN Hongkai et al. 1991:170.25

6.1.2.2. CENTRAL LOLOISH

Ahi	dɑ^{33}**tho^{22}**	testicle	CHEN Kang 1986b:10.3.5
	dɑ^{33} **ʈ'o^{22}**	testicle	LUO Meizhen 1990:10.3.5
	i^{33} **ʈ'o^{22}**	egg (of animal)	LUO Meizhen 1990:10.4.16
	ʈho^{22}	egg	CHEN Kang 1986b:10.4.16

[a] Comparison with other Qiangic forms indicates that the final **-s** in Yadu is a truncated verson of **stə** or **stu**. This apocopation of the vowel of second elements in compounds is characteristic of Qiangic. See Benedict (1983), "Qiang monosyllabization: a third phase in the cycle" (*LTBA* 7.2:113-4).

(4) PTB *dz(y)u EGG

This etymon seems confined mostly to the NE Indian Areal Group, with a likely Himalayish cognate in Kham. The Idu form **e-to-cu** proves that this root is distinct from PTB ***m/s-tow** EGG (§1.9.1).

1.1.2. DENG

[a] [Source Note] louse-egg

(5) PTB * r/l um EGG

This root is attested in the NE Indian Areal Group, Nungish, and perhaps Qiangic, as well as in Himalayish (Hayu, Tshona). The proto-initial seems to have been ***r-**, though some reflexes have **l-**. It is possible that there is a connection with ***s-lum** or ***z-lum** 'round' (*STC* #143).

9.0.1. Old Chinese			
Chinese (Old/Mid)	**lwân/luân:**	egg	Karlgren 1957:179a
Chinese (Old)	**C-ron?**	egg	Baxter 1992:949
	g-ron?	egg	Baxter 1992:557
9.0.3. Modern Chinese			
Chinese (Mandarin)	**luǎn**	egg	Karlgren 1957:179a

Chinese comparandum

卵 OC ***lwân**, *GSR* #179a 'egg; testicle'; Li 1971: ***luanx**; Baxter 1992 #557: ***g-ron?**; Mand. **luǎn**.

In Baxter's system, MC **l-** is always derived from OC ***C-r-**, that is, an initial **r** with a prefixed consonant (to be distinguished from ***Cr-** in which **r** functions as a medial). In other systems, MC **l-** may descend from simple initial ***r-**. Baxter 1992 gives two separate reconstructions for this word: ***g-ron?** (#557) and ***C-ron?** (#949, with ***C** unspecified). There is some reason to suppose that if the prefix ***C-** is to be reconstructed it would be a velar (Baxter 1992:387).

The correspondence between PTB ***r-** and Middle Chinese **l-** is well-attested. Although both the Chinese and PTB forms have a rounded vowel and a nasal final, the correspondences are problematic. No generally accepted OC/PTB cognates show an ***-n**/***-m** correspondence. OC ***ua** (Li 1971) / ***o** (Baxter 1992) generally corresponds to PTB ***o**, not ***u**; for example, 脫 OC ***hluat** 'remove' (Li 1971); PTB ***hlot**; Mand. **tuō**. We would expect PTB rhyme ***-um** to correspond to OC ***-əm** (Li 1971); see examples in Gong 1995.

Gong 1995 #41 compares Chinese 卵, which he reconstructs ***ruanx**, with Written Tibetan **sro-ma** 'nit' (see PTB ***s-row** EGG / NIT (§1.9.1), below), following Benedict 1976:190 ("Sino-Tibetan: another look"). Schuessler 2007:369 makes the same comparison, citing PTB ***(s-)rwa** rather than ***s-row**. For this comparison to hold, a nominalizing ***-n** suffix must be posited for the Chinese form (Schuessler 2007:74-75).
[ZJH]

(6) PTB *si $\begin{matrix}\mathbf{r}\\\mathbf{t}\end{matrix}$ EGG

This root is not widely attested, though identical reflexes occur as the last syllables of compounds in Kaman [Miju] and Hayu. The Tsangla forms in **-r** are of uncertain affiliation, since **-r** and **-t** do not usually cooccur in TB word-families.

(7) PTB * $\begin{matrix}\mathbf{s}\\\mathbf{r}\end{matrix}$ -gwa-ŋ EGG / TESTICLE

This reconstruction has been revised from **s/r-go-ŋ** in TBRS #7.

WT has a doublet with and without the final nasal. It looks as if the nasal-finalled variant is due to assimilation to a following syllable **-ŋa** PTB ***s-ŋa** EGG / HATCH (§1.9.1) in WT, but other languages have a nasal final even before other consonants (Tsangla [Monpa] **khong-lung**, Hayu **kuŋ-luŋ**). This etymon also appears in Qiangic, but some of these forms may be loans from Tibetan. The rGyalrong forms in **-m** are of uncertain affiliation. The **-m** makes them look somewhat like the second syllables of some Monpa Tsangla forms with dental initials, though we are referring these to PTB ***t-lam** EGG / TESTICLE (§1.9.1). This root also occurs in Bai (where it means 'testicle'), in scattered languages of the NE Indian Areal Group, and in Lolo-Burmese.

[a] The first syllable of WT **sgo-pur** 'foreskin (vulg.)' does not appear to descend from this etymon, but seems rather to mean 'door; aperture, outlet'. However, Jäschke does not include this under compounds with **sgo** 'door' (114-6), but rather lists it as a separate head-entry (p. 116). The meaning of the second syllable **-pur** is unclear, though there might be a connection with **ḥp'ur-ba** 'wrap up, envelop'.

[a] Bahing **lɔ** 'stone'.

(8) PTB *s-ŋa EGG / HATCH

This root is confined to Tibetan, where it always seems to occur in binomes after reflexes of PTB ***s/r-gwa-ŋ*** EGG / TESTICLE (§1.9.1). It also appears in Qiangic, although these forms look like loans from Tibetan.

[a] The first syllable of WT **sgo-pur** 'foreskin (vulg.)' does not appear to descend from this etymon, but seems rather to mean 'door; aperture, outlet'. However, Jäschke does not include this under compounds with **sgo** 'door' (114-6), but rather lists it as a separate head-entry (p. 116). The meaning of the second syllable **-pur** is unclear, though there might be a connection with **ḥp'ur-ba** 'wrap up, envelop'.

(9) PTB *t-lam EGG / TESTICLE

This root is attested in Himalayish (including Tsangla), Abor-Miri-Dafla, and also perhaps in Chang Naga. The Lepcha and rGyalrong forms are good evidence for prefixal **t-**, which seems to have preempted the root-initial in all the other forms.

[a] According to Mainwaring/Grünwedel 1898:164, **t'yeṅ** means 'the chief or most precious part', as in **să-bŭr t'yeṅ** 'the musk bag or gland of the musk-deer'.
[b] Lepcha **pot** 'fruit, ball'.

(10) PTB *k $\begin{matrix}\text{r}\\\text{w}\end{matrix}$ ak EGG / TESTICLE

This etymon appears in only a few NE Indian Areal Group and Himalayish languages. Thulung reflects medial ***-w-*** rather than ***-r-***. This root is quite distinct from the coincidentally nearly homophonous etymon PTB ***k-rak*** FOWL / CHICKEN (§2.1.10) (cf. Bokar **po-rok** 'chicken', WB **krak** 'id.'), despite the fact that many languages have an association between 'chicken' and 'penis' (cf. Spanish *polla* 1. 'chicken' 2. [*Slang*] 'penis').

(11) PTB *p^{w}um EGG / SIT ON EGGS / HATCH / TESTICLE

This well-attested etymon occurs in the NE Indian Areal Group, Himalayish, Jingpho, and Nungic, with a variety of ovoid meanings.

The Hill Miri and Sunwar forms reflect a variant ***pup***, perhaps to be explained in terms of assimilation to the initial.

A couple of other Himalayish languages, Magar and Manang (Prakaa), seem to reflect still another variant, ***puŋ***. The zero (**ʔ-**) initial in Chepang is unexplained.

It is not clear whether this root is to be related to PTB ***p^{w}u*** EGG / BIRD / ROUND OBJECT (§1.9.1).

6.1.2.2. Central Loloish			
Lahu (Black)	**phɛ**⁵³	hatch	Sun Hongkai et al. 1991:786.33 [a]

[a]This Lahu form in **-ɛ** shows the regular reflex of the ***-um** rhyme, but the meaning is basically ‘release, come forth’ rather than ‘cover, incubate’. The same seems to be true of the Bwe form (**phɛ-tha**). For now we include them here, however.

(12) PTB * p/b ay BREAK OUT / BREAK OFF / HATCH

The basic meaning of this etymon seems to be ‘break out’. It is reconstructed in *STC* #254 as ***be ~ *pe** ‘broken; break’, though the present reconstruction with ***-ay** seems preferable.

The Mizo form with final glottal stop suggests a secondary allofam with the **-s** suffix.

(13) PTB *s-mu HATCH / BROOD ON EGGS / SIT ON

This root is most abundantly attested in Loloish, with likely cognates in Galo, Bodo-Garo, and Chepang. The very-low tone in Lahu **mū** (Matisoff 1988, *The Dictionary of Lahu*, p. 1005), as well as the Lalo form **ʔmò**, point to a Proto-Loloish ***ʔ-** prefix, ultimately from prefixal ***s-**.

The constriction in Yi Mojiang is perhaps due to the ***ʔ-** prefix.

Sani [Nyi]	**mɣ**⁵⁵	sit on (eggs) (fuluan) (v.)	Ma Xueliang 1989:309.1

(14) PKir *gli m/p BROOD / INCUBATE (eggs)

This root is attested mainly in Himalayish. The Jinuo and Bola forms also look related, though more evidence is needed to establish this etymon for Lolo-Burmese.

2.3.3. Central Kiranti			
Dumi	**gɨm** nɨ	brood (eggs)	Driem 1993
Khaling	**glam**-ne	brood (hens) (v.)	Hale 1973:03b.16

Jinuo (Baya/Banai)	**kʰlɔ**⁴⁴	lay egg	Dai Qingxia 1989h:2468

(15) PTB * p/b uk HATCH (egg)

This etymon, which appears quite distinct from PTB ***pu** EGG (§1.9.1), seems to be confined to Himalayish. It is perhaps to be identified with PTB ***(p/b)(i/u)k** BORN / GIVE BIRTH (§1.9.2).

The cognacy of the Ao and Tangkhul forms remains speculative.

1.3.1. Central Naga (Ao Group)			
Ao (Chungli)	**-mùk**	hatch (v.)	Temsunungsang 2009:6
1.3.4. Tangkhulic			
Tangkhul	**huk**	hatch	Bhat 1969:90
2.3.4. Western Kiranti			
Sunwar	**’pu:k**-cā	hatch (v.)	Hale 1973:03b.17
2.4. Kham-Magar-Chepang			
Chepang	**bhyuk**-	hatch (egg) (vi.)	Caughley 2000
	bhyuk.sā	hatch (v.)	Hale 1973:03b.17
	bʰyuk-sa	hatch	Caughley 1972:3.B.17

(16) TGTM *du BROOD / INCUBATE (eggs)

This root, like TGTM ***naŋ** BROOD / INCUBATE (eggs) (§1.9.1), seems confined to the Tamang-Gurung-Thakali branch of Himalayish.

2.1.4. Tamangish			
**TGTM*	*ᴬ**du:**	brood	Mazaudon 1994:514
Tamang (Sahu)	’nakca **Tʰo**-pa	hatch (v.)	Taylor *et al.* 1972:14.17
Thakali	**tun**-la	brood (hens) (v.)	Hale 1973:03b.16
Thakali (Tukche)	**tuh**-lɔ	brood	Hari 1971:3.B.16
	³**tu**-lə	brood	Mazaudon 1994:514

(17) PTB *ʔa HATCH / LAY EGG

This beautifully minimalist root (minimal both from the point of view of its phonological shape and the paucity of languages in which it is attested) seems unimpeachable, occurring both in the NE Indian Areal Group and Loloish with exactly the same meaning.

This root was first reconstructed in Matisoff 1997, “Primary and secondary laryngeal initials in Tibeto-Burman”.

1.1.2. Deng			
Darang [Taraon]	**ɑ**⁵³	lay (egg)	Sun Hongkai et al. 1991:785.49
Idu	ɑŋ⁵⁵**ɑ**⁵⁵	hatch	Sun Hongkai et al. 1991:786.50
	ɑ⁵⁵	lay (egg)	Sun Hongkai et al. 1991:785.50
6.1.2.1. Northern Loloish			
Nusu (Central)	ʔu⁵⁵ **ɑ**⁵⁵	lay (egg)	Sun Hongkai & Liu Lu, eds. 1986
Nusu (Bijiang)	ʔu⁵⁵**ɑ**⁵⁵	lay (egg)	Sun Hongkai et al. 1991:785.45

(18) TGTM *naŋ BROOD / INCUBATE (eggs)

This root, like TGTM ***du**, is confined to the Tamang-Gurung-Thakali branch of Himalayish. It may well be related to PTB ***naŋ** GIVE BIRTH (§1.9.2), below.

2.1.4. Tamangish

**TGTM*	*^{Bh}**naŋ**	press down/brood	Mazaudon 1994:576
Gurung (Ghachok)	naqga **nõq** ba	brood	Glover 1972:3.B.16
Gurung	nāqgā **nọq** bā	brood (hens) (v.)	Hale 1973:03b.16

Thakali (Tukche)	cɔhcɔ **naŋ**-lɔ	hatch	Hari 1971:3.B.17

(19) PTB *s-row EGG / NIT

This etymon is set up in *STC* #278 (and note 201), where the Tibetan, Jingpho, and rGyalrong forms are cited.

Possibly to be compared with this etymon is Chinese 卵 (Mand. **luǎn**) 'ovum; egg; spawn', perhaps with the collective ***-n*** suffix. See note under PTB ***(r/l)um*** EGG (§1.9.1) for an alternative etymology.

1.9.2 Birth

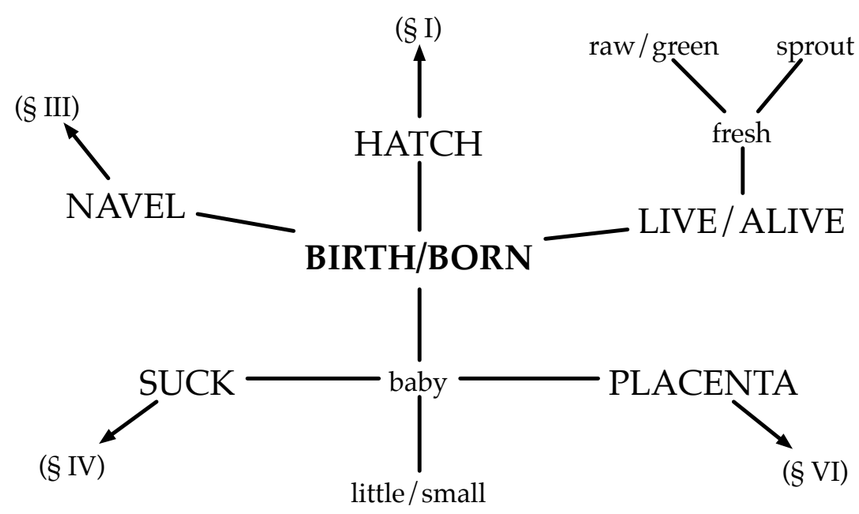

Figure 154: 1.9.2 *Birth*

(1) PTB *braŋ BORN / BIRTH

This well-attested root occurs in the NE Indian Areal Group, Himalayish, and Lolo-Burmese, and probably in Karenic and Qiangic as well. It is reconstructed in *STC* #135, which only lists the WT and Lushai (Mizo) forms. The Jingpho forms **pràt**, **šəpràt** 'bear, give birth' do not belong in this set, since **-ŋ ≍ -t** is not an established pattern of variation in TB word-families.[*]

The Himalayish forms with high vowels (Tamangic **-u/-i**, Pattani **-i**) are tentatively assigned to this etymon.

0.1. Tibeto-Burman (previously published reconstructions)

Karen (Sgaw/Yue)	o̱^{31} **p^{h}lɛ^{31}**	birth, give (v.)	Dai Qingxia 1989j:2320

[a] This etymon is mistakenly reconstructed as Proto-Loloish ***baw^{3}** in Bradley 1979 (DB-PL) #597, on the basis of WB **paw** 'to appear'.

(2) PTB *hu BORN / BIRTH / REAR

This excellent root, with a relatively rare laryngeal proto-initial, appears in the NE Indian Areal Group, Lolo-Burmese, and Qiangic, with a range of meanings including 'be pregnant'; 'give birth'; 'bring up, rear (a child)'; 'nourish, feed', covering the whole range of parental responsibility from conception to childhood. It is reconstructed in Matisoff 1985, 'God and the Sino-Tibetan copula' (note 69, p. 38) and in Matisoff 1988, *The Dictionary of Lahu* (p. 1071), and discussed in the context of TB laryngeal-initial etyma in general in Matisoff 1997 "Primary and secondary laryngeal initials in TB" (section 5.3).

0.1. Tibeto-Burman (previously published reconstructions)

**Tibeto-Burman*	***hu**	rear (offspring) / raise (to maturity) / nourish	Matisoff 2003a:593

9. Sinitic

Chinese (GSR #)	**1044a**	good	Baxter & Sagart 2011:1021
	1044a	love, like (v.)	Baxter & Sagart 2011:1023

9.0.1. Old Chinese

Chinese (Old)	**q**^{hs}**u**ʔ	good	Baxter & Sagart 2011:1021
	q^{hs}**u**ʔ-s	love, like (v.)	Baxter & Sagart 2011:1023
	xu(ʔ)s	love (v.)	Baxter 1992:737b
	xuʔ	good	Baxter 1992:1566

9.0.2. Middle Chinese

Chinese (Middle)	**xawH**	love, like (v.)	Baxter & Sagart 2011:1023
	xawX	good	Baxter & Sagart 2011:1021

9.0.3. Modern Chinese

Chinese (Mandarin)	**hǎo**	good	Baxter & Sagart 2011:1021
	hào	love, like (v.)	Baxter & Sagart 2011:1023

[a]The nasalization in some of the Lisu forms is due to rhinoglottophilia. See Matisoff 1975 ("Rhinoglottophilia").

Chinese comparanda

好 OC ***χôg**, *GSR* #1044a 'good' ≍ 'love, like'[*]; Li 1971: ***həgwx**/***həgwh**; Baxter 1992: ***xu**ʔ/ ***xu(ʔ)s** (737); Mand. **hǎo** 'good' ≍ **hào** 'love, like'.

The word for 'love, like' is a putative form derived from 'good' through ***-s** suffixation. This presents some semantic difficulty for the OC-PTB comparison, since the basic meaning of the PTB root is closer to that of the derived Chinese transitive verb.

Corroborated as it is by other etyma (e.g. PTB ***p**^{w}**u** EGG / BIRD / ROUND OBJECT (§1.9.1), PTB ***r/m-bu** ≍ ***pru** NEST / WOMB / PLACENTA (§1.9.6)), the correspondence TB ***-u** with OC ***-əgw** (Li)/***-u** (Baxter) is well attested. The initial correspondence is difficult to evaluate because there are so few proposed cognates involving words with OC ***h-** (Li)/***x-** (Baxter) or PTB ***h-**. Of these several (such as Gong 1995 #142 comparing OC 鼾 ***xan** 'snore' (Mand. **hān**) to PTB ***hal** 'snore') are clearly onomatopoetic. In other cases Gong has derived OC ***x-** from earlier ***skh-**, facilitating comparison with Written Tibetan forms having initial velars (see Gong 2000). Nevertheless, there is no specific reason to doubt the validity of the initial correspondence.
[ZJH]

畜 OC ***χi̯ôk**, *GSR* #1018a 'raise (animals); bring up; cultivate'; Schuessler 2007:194 ***huks**; B & S 2011: ***q**^{h}**uk-s**; Mand. **xù**.
畜 OC ***t̂'i̯ôk**, *GSR* #1018a 'livestock; (domesticated animal'; Schuessler 2007:194 ***rhuk**; B & S 2011: ***q**^{h}**‹r›uk**; Mand. **chù**.

(3) PTB *ʔ-bu ≍ *pu BORN / BIRTH / BUD / BLOOM

The basic meaning of this root seems to be 'bloom, open up (as a flower), bud', thence 'give birth'. It is reconstructed in *STC* #260 as 'open, bud', with reflexes offered from WT, Nung, Jingpho, WB, and Karbi. The semantic connection between this root for 'open, bloom' and 'bear a child' was first suggested by W. T. French (1983:455), who reconstructs Proto-Northern Naga ***ʔ-bəw**. *STC* reconstructs both voiceless-initial and voiced-initial allofams (***bu** ≍ ***pu**), which we can now interpret as reflecting a simplex/causative opposition ('bloom' vs. 'cause to bud' [i.e. 'give birth']). A PLB reconstruction ***ʔpu**^{2} (equivalent to ***ʔbu**^{2}) is given in Matisoff 1988, *The Dictionary of Lahu* (p. 831), with the glottalization inferred from the very-low tone of the Lahu reflex **pū**. This reinforces French's PNN reconstruction with ***ʔ-**, as does the *a-chung* [ḥ] in the WT reflex (**ḥbu**). The Phom form **bəʔ** cited by French (*loc. cit.*) has been reanalyzed as belonging under PTB ***(p/b)(i/u)k** BORN / GIVE BIRTH (§1.9.2) [q.v.].

(4) PTB *s-kya-y BORN / GIVE BIRTH

This newly established root seems quite solid. The Barish forms (esp. Dimasa, Kokborok) point to a diphthongal prototype, while most Loloish (including Jinuo) and Qiangic forms seem to reflect a monophthong. (***-a** > **-i** is a common Qiangic development.) The Himalayish evidence is mixed: Bantawa has **-a**, but WT and Pattani have **-e** (presumably from ***-ay**). There is evidence from Bahing for alternation between voiced and voiceless initial stops, reflecting a distinction between simplex ('be born') vs. causative ('give birth').

1.7.1.1. Bodo

Dimasa	ha **dźai**	birth, give	Benedict 1972:65n206
	ha **jai**	birth, give	Marrison 1967

(6) PTB *mun GIVE BIRTH / CONCEIVE / CREATE

This root is reconstructed for Proto-Kiranti by Michailovsky (1991). The Burmese form definitely appears cognate. It is possible that this etymon should be reconstructed with the PTB rhyme ***-ul**, as suggested by apparently parallel examples: PTB ***s/r-mul ⩤ *s-mil ⩤ *s-myal** HAIR / FUR / FEATHER (§1.6.1) (> WB **mwê**); PTB ***s-b/m-ru:l** SNAKE (§2.1.6.1) (> WB **mrwe**).

2.3. Kiranti			
**Kiranti*	***mun-**	created (be v.)	Michailovsky 1991:39

Nusu (Central)	**p^{h}uɔ^{ɹ53}**	birth, give	Sun Hongkai & Liu Lu, eds. 1986
7. Karenic			
Pa-O	**phwā**	birth, give (humans only); born, be	Solnit 1989; Solnit 1989

[a] Zaiwa (1984) treats the labial stop in this etymon as a prefix, so that it reflects an immediate prototype ***wa**.

(8) PTB *g-sow REAR / BEAR (child)

The WT form is the key to this reconstruction, although no other Himalayish cognates have been found so far. This etymon seems to be widespread in Loloish, with probable reflexes also in Northeast India, Nungish (Dulong), and Qiangic (Muya).

1.1.1.2. Eastern Tani			
Milang	miu-**cu**-ma	birth of a boy	Tayeng 1976
	or-mi **cu**-ma	birth of a girl	Tayeng 1976

[a] Yi **a^{33}ŋa^{55}** ‘child’ (cf. PTB ***m/s-ŋa-y** SMALL / INFERIOR / OFFSPRING (§1.9.2)).

6.2. NAXI

Naxi (Yongning)	**dʐu**^{13}	birth, give	SUN Hongkai et al. 1991:774.29
Naxi (Eastern)	**tɕu**^{31}	birth, give	HE Jiren & JIANG Zhuyi, eds. 1985

Chinese comparandum

Comment: Cf. 夙 **sù**, comparandum for PTB ***s(y)u-ŋ/k*** WAKE UP / MORNING / CLEAR-HEADED / SOBER UP (§1.1.4).

(9) PTB *naŋ GIVE BIRTH

This root is attested in a few widely separated languages: Kaman [Miju], Guiqiong (Qiangic), and Tujia. It is perhaps to be related to TGTM ***naŋ*** BROOD / INCUBATE (eggs) (§1.9.1), but seems quite distinct from PTB ***b-na*** BEAR A CHILD / BORN (§1.9.2).

1.1.2. DENG

Kaman [Miju]	xɑ^{31}**nɑŋ**^{55}	birth, give to; birth, give to (piglets) (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1620.23; HUANG Bufan & DAI Qingxia, eds. 1992:1717.23
	xɑ^{31}**nɑŋ**^{55}	birth, give	SUN Hongkai et al. 1991:774.48

1.4. MEITHEI

Meithei	ə **ŋaŋ** pok pə	birth, give (v.)	Singh 1991:10.4.15 [a]
	ə **ŋaŋ** u nə bə	birth, give (v.)	Singh 1991:10.4.15

3.2. QIANGIC

Guiqiong	(e^{55}le^{55}tsə^{33}) **nɑ̃**^{31}	birth, give to (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1620.16
	(pha^{55}tsi^{55}tsi^{55}) **nɔ̃**^{31}	birth, give to (piglets) (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1717.16
	nɔ̃^{35}	birth, give	SUN Hongkai 1991e; SUN Hongkai et al. 1991:774.17

5. TUJIA

Tujia	**nũ**^{55}	birth, give	CHEN Kang 1986c:10.4.15
Tujia (Northern)	**nũ**^{55}	birth, give (to child)	TIAN Desheng & HE Tianzhen, et al., eds. 1986

[a] Meithei **ə ŋaŋ** 'child' (cf. Lhoba **aŋaː**, Yi (Dafang) **a**^{33}**ŋa**^{55}, as well as set PTB ***m/s-ŋa-y*** SMALL / INFERIOR / OFFSPRING (§1.9.2)).

(10) PTB * p b i u k BORN / GIVE BIRTH

This root may well be related to PTB ***(p/b)uk*** HATCH (egg) (§1.9.1).

1.1.1.1. WESTERN TANI

Bengni	(kuː) **bɯŋ**	birth, give	Sun 1993b [a]

1.3.1. CENTRAL NAGA (AO GROUP): ***puk*** SPRING FORTH / ORIGINATE / BE BORN

**Central Naga*	***puk**	SPRING FORTH / ORIGINATE / BE BORN	Bruhn 2014a:III.260
Ao (Chungli)	a^{3}-**puk**^{3}	originate, spring forth (v.)	Bruhn 2014a:III.260
Lotha Naga	**pok**^{2}-	be born (v.)	Bruhn 2014a:III.260
	pok	birth, give (v.)	Marrison 1967
	pok cho	born	Murry *et al.* 1978:11

1.4. MEITHEI

Meithei	**pok**	birth, give	Marrison 1967
	ə ŋaŋ **pok** pə	birth, give (v.)	Singh 1991:10.4.15 [b]

1.7.2.2. KONYAK-CHANG

Chang	**puk**	birth, give	Marrison 1967
Phom	**büh**	birth, give	Marrison 1967
	bəʔ	birth, give (v.)	French 1983:455 [c]
	bɯʔ^{33}	give birth	Burling & Amon Phom 1998

2.1.2. BODIC

Tsangla (Motuo)	**phok**	bloom	SUN Hongkai et al. 1991:789.7
	p^{h}ek^{55}	birth, give (of an animal) (v.)	ZHANG Jichuan, ed. 1986

2.3.2. SOUTHERN KIRANTI

Bantawa	**puk**-	birth, give (medical) (v.)	Rai *et al.* 1984:59
Chamling	**puk**-(a)	birth, give (animal) (v.)	Winter 1985:29

2.3.3. CENTRAL KIRANTI

Dumi	**bɨk** nɨ	birth, give (of non-humans) (v.)	Driem 1993

6.1.1. BURMISH

Hpun (Northern)	ăsă **phóʔ**	birth, give	Henderson 1986 [d]

[a] Bengni **-ŋ** is unexplained.
[b] Meithei **ə ŋaŋ** 'child' (cf. Lhoba **aŋaː**, Yi (Dafang) **a**^{33}**ŋa**^{55}, as well as set PTB ***m/s-ŋa-y*** SMALL / INFERIOR / OFFSPRING (§1.9.2)).
[c] W.T. French (1983:455) assigned Phom **bəʔ** to PNN ***ʔ-bəw***; see PTB ***ʔ-bu*** ≍ ***pu*** BORN / BIRTH / BUD / BLOOM (§1.9.2).
[d] **ăsă** means "child".

(11) PTB *wat GIVE BIRTH

This splendid little root is well-established in Himalayish (Chepang, Dumi), with likely cognates in Barish (Lalung) and Karenic.

1.7.1.1. BODO

Lalung [Tiwa]	ha je **o** sa	birth, give (v.)	Balawan 1965:27

2.3.1. EASTERN KIRANTI

Limbu	ku-hiŋ **wEt**	alive	Michailovsky 1989b

2.3.3. CENTRAL KIRANTI

Dumi	**waːt** nɨ	bear (children, offspring); yean, calve, whelp (v.)	Driem 1993

2.4. KHAM-MAGAR-CHEPANG

Chepang	coʔ **ʔo**.sa	birth, give (animals?) (v.)	Hale 1973:03b.46
	coʔ-**ʔo**-sa	birth, give	Caughley 1972:3.B.46
	ʔot-sa	birth, give	Caughley 1972:2.B.2. 11.
	ʔum **ʔot**.sā	lay egg (v.)	Hale 1973:03b.14
Chepang (Eastern)	coʔ **ʔot** naʔ	birth, give	Caughley 1990:10.4.15

7. KARENIC

Karen (Sgaw/Hinthada)	**o̲**^{31} p^{h}lɛ^{31} a^{31} p^{h}o^{55}	birth, give (v.)	DAI Qingxia 1989k:2320
Karen (Sgaw/Yue)	**o̲**^{31} p^{h}lɛ^{31}	birth, give (v.)	DAI Qingxia 1989j:2320

(12) PTB *ra GIVE BIRTH

This etymon is so far attested only in Tangkhulic and Burmish (Bola, Maru).

1.3.4. TANGKHULIC: ***ra*** BORN

**Tangkhulic*	****ra***	born (be v.)	Mortensen 2012:317
Huishu	kə-pə-**re**	born (be v.)	Mortensen 2012:BodyParts.133
Tangkhul	pha **ra**	birth, give	Marrison 1967
Ukhrul	kə-p^{h}ə-**ra**	born; give birth to a child (be v.)	Mortensen 2012

6.1.1. BURMISH

Bola	**ɣa**^{35}	birth, give (v.)	DAI Qingxia 1989g:2227
Bola (Luxi)	**ɣa**^{35}	birth, give to (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1620.32
Langsu (Luxi)	**ɣɔ**^{55}	birth, give to; birth, give to (piglets) (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1620.31; HUANG Bufan & DAI Qingxia, eds. 1992:1717.31
Maru [Langsu]	**ɣɔ**^{55}	birth, give	DAI Qingxia 1989l:10.4.15; SUN Hongkai et al. 1991:774.43

(13) PTB *sut GIVE BIRTH

This etymon is worth setting up, even though it only occurs for sure in two widely separated languages, one Himalayish (Yakha) and one Burmish (Lashi). The affiliation of the Karen form is uncertain, though it possibly reflects an allofam ***sit***.

2.3.1. EASTERN KIRANTI

Yakha	**sut** keːri	birth, give	Kohn 1990:10.4.15

6.1.1. BURMISH

Lashi	**suːt**^{55}	birth, give	DAI Qingxia 1989m:10.4.15
Leqi (Luxi)	**suːt**^{55}	birth, give to (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1620.33

7. KARENIC

Karen (Sgaw/Yue)	**si̲ʔ**^{55} sa^{31}	birth, give (v.)	DAI Qingxia 1989j:2320.1

(14) PTB * k g ak BORN / BREATH / LIFE

This root has so far been discovered only in Tangkhulic, Lepcha, and Kiranti (Thulung). The Thulung allofams with voiced vs. voiceless initials reflect a simplex/causative distinction: 'be born' (with **g-**) / 'give birth' (with **k-**).

1.3.4. TANGKHULIC: ***k^{h}ak*** BREATH

**Tangkhulic*	****k^{h}ak***	breath	Mortensen 2012:552
Huishu	ʔa-**k^{h}oʔ**	breath	Mortensen 2012:BodyParts.272
Kachai	ʔa-**k^{h}ak**	breath	Mortensen 2012:BodyParts.254
Tangkhul	**khak**	breath; life; breathe	Marrison 1967; Matisoff 1987
	khak-kasui	breath / life	Matisoff 1987
	khak-khā	breath / life	Matisoff 1987
	khək	breath	Bhat 1969:85
Tusom	ʔə-**k^{h}a**	breath	Mortensen 2012:BodyParts.265
Ukhrul	**k^{h}ak**-suj	breath	Mortensen 2012
	ʔa-**k^{h}ak**	breath	Mortensen 2012
	ʔa-**k^{h}ɐk**	breath	Mortensen 2012

2.1.3. LEPCHA

Lepcha	**gek**	born (be v.)	Plaisier 2007

2.3.4. WESTERN KIRANTI

Thulung	**gəks**-	born, be	Allen 1975
	gək siu ma	childbirth, woman in	Allen 1975
	kəks-	birth, give	Allen 1975

(15) IA *yaN GIVE BIRTH

This is an Indo-Aryan root, borrowed into several TB languages of Nepal. Cf. Nepali **jan-ma** 'birth', **jan-manu** 'be born'.

2.1.4. TAMANGISH

Chantyal	nani **yã**-wã	birth, give	Noonan *et al.* 1992:10.4.15
Tamang (Sahu)	'kola **yaŋ**-pa	birth, give (v.)	Taylor *et al.* 1972:13.B.11.a
	nah **'yahm**-pa	conceive (become pregnant) (v.)	Taylor *et al.* 1972:13.B.12

X.1. NON-TB

Nepali	**jan** manu	born, be (v.)	Hale 1973:02b2.11

(16) PTB * m s -ŋa-y SMALL / INFERIOR / OFFSPRING

This etymon has a range of meanings from 'small' to 'child' to 'give birth'. Most reflexes descend from a diphthongal prototype in ***-ay***, but occasionally from monophthongal ***-a*** (e.g. Yi Dafang **a**^{33} **ŋa**^{55} [see ***g-sow*** above], and Bokar Lhoba **a-ŋaː**), so that this is a good candidate for a putative PTB palatal suffix, one of the functions of which is to mark diminutives. See Matisoff 1995 and DL:783-784.

Chinese 兒 'child' (Mand. **ér**) is a plausible comparandum.

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

**Tibeto-Burman*	****ŋay***	small; inferior; offspring	Matisoff 1985a:111; Matisoff 2003a:606; LaPolla 1987:211 [a]

9.0.1. Old Chinese			
Chinese (Old)	**ngje**	child; son	Baxter 1992:1452; Baxter 1992:352
	ŋe	child	Baxter & Sagart 2011:635

[a] Meithei **-ŋ** perhaps result of assimilation to the syllable initial.

Chinese comparandum

兒 OC ***ńi̱ĕg**, *GSR* #873a-d 'child'; Li 1971: ***ngrjig**; Baxter 1992 #1452: ***ngje**; Mand. **ér**.

In Li's system, ***-rj-** is reconstructed to account for the palatalization of the velar initial in Middle Chinese. This palatalizing medial is no longer accepted by most scholars today. In Baxter's system, medial ***-r-** blocks palatalization, and must be omitted.

The TB/Chinese correspondences look good. We would expect ***a** vocalism in Chinese, but ***i** (Li) / ***e** (Baxter) could be the result of an original ***a** fusing irregularly with the palatal suffix. As seen in PTB ***s-tay** NAVEL / ABDOMEN / CENTER / SELF (§1.9.3) and PTB ***ŋ-(w)aːy** COPULATE / MAKE LOVE / LOVE / GENTLE (§1.9.8)), TB ***-ay** may correspond to OC ***-əd** (Li) / ***-i̱j** (Baxter), and there is some evidence that OC ***-ig** (Li) / ***-e** (Baxter) also can correspond to this same TB final. Consider, for example, 'crab' (*STC* #51), TB ***d-kay**, which is likely cognate to 蟹 OC ***grigx** 'crab' (Li), Mand **xiè** (see *STC* p. 166, *GSR* #861d).

Schuessler (2007:225) believes that this is an area word, with connections to forms in Austroasiatic and Miao-Yao.
[ZJH]

(17) PTB *kruŋ LIVE / ALIVE / BORN / GIVE BIRTH / GREEN / SPROUT

This root is reconstructed in *STC* #382, which cites the WT, Jingpho, Bodo, and Dimasa forms. The Bai and Lolo-Burmese forms look cognate, but the relationship of the Jinuo form to this set is uncertain. The semantic range of this etymon, which extends from the notion of birth to that of sprouting, greenness, freshness, is parallelled by another root PTB ***s-riŋ ⩵ *s-r(y)aŋ** LIVE / ALIVE / GREEN / RAW / GIVE BIRTH (§1.9.2) (q.v.).

(18) PTB *s-riŋ ⩵ *s-r(y)aŋ LIVE / ALIVE / GREEN / RAW / GIVE BIRTH

This etymon constitutes a large set in *STC* (#404), where it was originally reconstructed with ***-a-** ⩵ ***-i-** variation at the PTB level: ***s-riŋ** ⩵ ***s-raŋ**. Benedict later changed the reconstruction to ***śriŋ** (n. 252, n.128), explaining the **-a-** in WB **hraŋ** as being 'conditioned by the initial cluster'. I find this revision unconvincing, and prefer to posit vocalic variation at the proto-level. (This is similar to the ***-ya-** ⩵* **-i-** variation found in several roots, notably EYE and PHEASANT. See *STC* pp. 84-5, *VSTB* pp. 40-1.) There is an excellent Chinese comparandum, 生, reconstructed in *GSR* #812a-d as OC ***sĕng**/MC **ṣɒng**; Mand. **shēng**. But here too Karlgren notes an irregular vocalic development from OC to MC (one would have expected MC **ṣɛng**). The semantic fit between the TB forms and Chinese is extraordinarily good.

This root is perhaps to be reconstructed ***tsiŋ** at the PLB level (cf. Lahu **chê**).

9.0.2. MIDDLE CHINESE			
Chinese (Middle)	**ṣɐng**	live, life, bear, be born	Coblin 1986:104
	ṣ̥ɒŋ	live / bear / be born / fresh (e.g. greens) (v.)	CHOU Fa-kao 1972:812a-d

[a] The cognacy of these two Phunoi forms is uncertain, but **ce**^{11} ⪤ **ca**^{33} perhaps reflects *-**iŋ** ⪤ *-**aŋ**.

Chinese comparandum

生 OC ***sěng** *GSR* #812a, 'live; bear, born; fresh'; Li 1971: ***sring**; Baxter 1992 #130: ***srjeng**; Mand. **shēng**.

For the reconstruction of ***-j-** in Baxter's system, see Baxter 1992:580-581. The development to Middle Chinese is regular in Baxter's system, while it is irregular in Li's system.

This is a long-recognized cognate (see e.g. *STC* #404). The Chinese initial and coda correspond to the Tibeto-Burman. In Li's reconstruction, the main vowel ***i** is also a perfect match for the TB vowel. Baxter's OC system does not permit a final ***-ing** reconstruction. Baxter postulates developments ***-ing** > ***-in** and ***-ing** > ***-eng** (depending on dialect) predating the Old Chinese period (1992:299,563). In this case the comparative evidence points to ***-ing** > ***-eng**, and Baxter's reconstruction is also a perfect match for the Tibeto-Burman.

Other Chinese members of the word family (such as 青 'green; color of living things', Mand. **qīng**) apparently reflect PST allofams with vowel ***a** and/or lacking medial ***r**. See Schuessler (2007:431, 459-460) for tables comparing Chinese and Tibeto-Burman allofams.

= =

性 姓 生 蒼

Schuessler (2007:76, 460) further argues that this etymon derives from PST ***sri** 'to be, exist'.
[ZJH]

A better match for TO BE / EXIST is PTB ***s-ri-t** ⪤ ***s-rut** BE / EXIST / COPULA (§1.1.2.3), [JAM]

(19) PKC *hriŋ-I, *hrin-II BEAR (child) / GIVE BIRTH

1.9.3 Navel

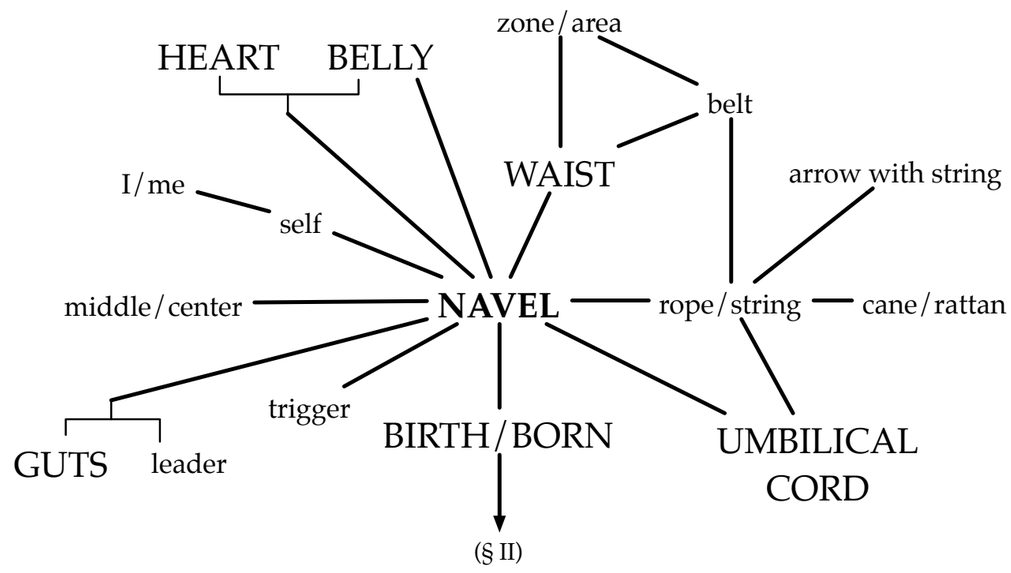

Figure 155: 1.9.3 *Navel*

(1) PTB * $^{m}_{s}$ -la(:)y ⩙ *s-tay NAVEL

A root ***la:y** is set up in *STC* #287 with the meaning MIDDLE/CENTER, on the basis of WB **ălai** and Lushai (Mizo) **lai**.[*] Elsewhere, *STC* presents two additional roots: ***s-tay** 'navel' (*STC* #299), based on WT **lte-ba**, Jingpho **dài ~ šədāi**, Garo **ste**; and ***tay** 'self' (*STC* #284), based on Jingpho **dāi** (also **dāidāi**) and Lushai (Mizo) **tei**. Yet Benedict himself implies by a cross-reference (p. 65) that these latter two roots are really one and the same. I wish to go a step further to claim that all three *STC* roots (#284, #287, #299) are co-allofamic.

The interchange of **l-** with dental stops occurs in several other TB roots, including TONGUE and ARROW (and this phenomenon is known from other language families as well, notably Indo-European, where by coincidence TONGUE is also one of the best examples (cf. Latin *lingua* vs. pGmc **tuŋgōn-*), alongside TEAR (cf. Latin *lacrima* vs. pGmc **tahr-* ⩙ **tagr-*), BROTHER-IN-LAW (cf. Latin *lēvir* vs. Lithuanian *dieverìs*), etc.[*]

There is strong evidence for both a nasal and a sibilant prefix with this root (occasionally with both together, as in the Ashö Sandoway form **ă'hmlai**[1] 'navel' < ***s-m-la:y**). However, the appearance of a cluster like **tl-** in TB words for SELF or NAVEL does not by itself indicate the co-allofamy of the stop and lateral prototypes, since **tl-** is frequently the reflex of ***sl-** (especially in Kuki-Chin and other languages of the NE Indian Areal Group), so that these forms could be referred directly to ***s-la:y**. See the Lakher (Mara), Miju, Bantawa, and Kham forms below.

In forms like Ao **[2]tɯ [2]pɯ [2]la**, Rengma **[1]a [2]bvɯ [3]li**, it might be plausible to treat the second syllables like dimidiations (syllabizations) of the labial prefix ***bV-** ⩙ ***mV-**, since in that position many other languages have elements with unstressed vowels (transcribed **pə-**, **mə-**, **pü-**, etc.). On the other hand, when the quality of the vowel in such a syllable is clearly [**u**], it seems preferable to analyze this element as descending from PTB ***d-pu:k** BELLY / VITALS / HOLLOW OBJECT / CAVE (§1.7.6) or PTB ***pwa(ŋ/n)** BELLY / CENTER (§1.7.6). This is especially clear in Himalayish: cf. the Bantawa and Kham reflexes.

Both the lateral- and stop-initialled variants of this etymon are widely attested in TB. In the following sections, the reflexes are divided between the two allofams.

The semantic scope of this etymon is already quite broad, but I would like to claim that there is also a genuine phonosemantic connection with a root meaning BELT / ZONE / WAIST (see below).

There is an interesting Dumi compound **sa: khil tɨm** 'navel' composed of **sa: khil** 'viscera, guts' < **khil** 'feces', plus **tɨm** 'head, leader': i.e. the navel is viewed in Dumi as the leader of the intestines. See van Driem 1993:415.

See *HPTB* ***la:y** ⩙ ***m/s-ta:y**, pp. 52, 210.

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

**Tibeto-Burman*	***la:y** ⩙ **s-tay**	navel / middle / center	Matisoff 2003a:599
	***m/s-ta:y**	belt / zone / waist	Matisoff 2003a:615

(1a) PTB * $^{m}_{s}$ -la(:)y NAVEL / CENTER / SELF

Reflexes of this allofam occur in the NE Indian Areal Group, Himalayish, and Lolo-Burmese, as well as in Tujia.

The initial nasals of the Bodo-Garo forms are presumably due to prefix preemption.

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

**Tibeto-Burman*	***la:y**	navel; middle, center	Weidert 1987:214; Matisoff 1985a:062; Benedict 1972:287
1.1.1.2. EASTERN TANI			
Padam-Mishing [Abor-Miri]	**ai**	self	Matisoff 1985a:071 [a]

[a] For now we are including this Abor-Miri form for 'self' with zero-initial in this set, along with several zero-initial forms meaning 'I/me' from Naga languages. One can imagine a scenario whereby the ***s-l** cluster became a voiceless lateral ***hl-**, thence a plain ***h-**, then zero. (Such was the fate, e.g. of the voiceless PLB resonants ***hl-**, ***hr-**, ***hy-**, which all became **h-** in Lahu. Cf. also the Tangkhul reflexes in **h-**.)

[*] This root, widespread in Chin languages, is also used in an ethno-geographical sense. The glossonym *Lai* is used broadly for a group of languages in the *central* subdivision of the Chin area in Burma, and more narrowly for the language of Hakha, its most important town.

[*] See Matisoff 2013 ("The dinguist's dilemma"). See also the discussion in *HPTB*, pp. 50-53.

6.1.2.2. CENTRAL LOLOISH

Lahu (Black)	khâʔ-**le**	trigger of crossbow (n.)	Matisoff 1988a:p.369 [c]
	khâʔ-**le**	trigger of crossbow	Matisoff 1985a:062
	le	trigger	Matisoff 1985a:062
	nâʔ-**le**	trigger (n.)	Matisoff 1988a:p.751
	nâʔ-**le**	trigger of gun	Matisoff 1985a:062

[a] Nasal initials in Bodo **máy** presumably due to prefixal preemption.

[b] For Bantawa **tl-**, cf. Lakher [Mara] and Miju forms with similar reflexes of PTB ***m/s-la(ː)y** NAVEL / CENTER / SELF (§1.9.3).

[c] The trigger is, as it were, the navel of a gun or crossbow. See Matisoff 1988, *The Dictionary of Lahu*, p. 1373.

(1b) PTB *s-tay NAVEL / ABDOMEN / CENTER / SELF

I regard this root as a co-allofam of PTB ***m/s-la(ː)y** NAVEL / CENTER / SELF (§1.9.3). Both *STC* #299 ***s-tay** 'navel' and *STC* #284 ***tay** 'self' are to be subsumed under this stop-initialled allofam. Reflexes occur widely in TB: NE Indian Areal Group, Himalayish, Jingpho, Karenic, Qiangic (including Tangut), Bai, and Tujia, as well as occasionally in Loloish.

A comparison with Chinese 臍 OC ***dz'iər**, *GSR* #593f; Mand. **qí**, perhaps < ***s-tay** via ****zday**, has been suggested several times, including by Weidert (1987) #843. However, it seems clear that this root is related rather to PTB ***s-daːy** WAIST / BELT / ZONE / FLAT EXPANSE (§1.4.6), so that the true Chinese cognate is 帶 OC ***tûd**, *GSR* #315a 'girdle, sash; carry at the girdle'; Mand. **dài** (the modern word also means 'zone; area', e.g. 熱帶 **rèdài** 'torrid zone').

Note the near homophony between the Jingpho words for 'heart' (**sin^{31} tai^{33}**) and 'navel' (**^{1}šə^{2}dai**), undoubtedly due to the widespread metaphorical extension of both of these concepts to CENTER, MOST IMPORTANT PART.

Written Tibetan has acquired a lateral prefix with this root.

See *GSTC* #62 and #71, and *HPTB* pp. 52, 208, 217.

9.0.1. OLD CHINESE			
Chinese (Old/Mid)	**dz’iər**/dz’iei	navel	Karlgren 1957:593f
Chinese (Old)	**dz‘iei**	navel	Weidert 1987:843
	dz‘ier	middle / navel	Luce 1985:Y.14
9.0.3. MODERN CHINESE			
Chinese (Mandarin)	**ts’i**	navel	Karlgren 1957:593f

[a] The sibilant prefix might be a reduction of PTB ***sya*** ‘flesh; animal’. This prefix occurs productively with body parts in a number of other TB languages (e.g. Nung **sərö** ‘bone’, WT **skra** ‘hair’, Dimasa **salai** ‘tongue’, WT **snabs** ‘snot’, etc.).

[b] The **lt-** cluster in the WT form looks like a metathesized version of the **tl-** cluster found in Kham, Bantawa, Lakher (Mara), and Miju (PTB ***m/s-la(:)y*** NAVEL / CENTER / SELF (§1.9.3)), further justifying the treatment of ***s-lay*** and ***s-tay*** as co-allofams of the same etymon.

[c] K. P. Malla (p.c. 2007) analyzes this form as consisting of **te** ‘navel’, **pu** ‘seed, round thing’, **ca** (preferably **chaa**) ‘DIMINUTIVE; child’. Newar **chaa** appears in compounds like **ma-chaa** ‘a child’ and **khi-chaa** ‘a dog’.

Chinese comparanda

臍 OC ***dz’iər***, *GSR* #593f ‘navel’; Li 1971: ***dziəd***; Baxter 1992: ***dzɨj***; Mand. **qí**.

The initial correspondence of OC ***dz-*** to PTB ***s-t-*** could be explained by metathesis, as discussed in Bodman 1969[*]. Baxter 1992:229-30 allows for the general developments ***St-*** > **ts-** and ***Sd-*** > **dz-**, where ***S*** is a metathesizing prefix. This prefix is usually reconstructed when phonetic series evidence suggests an original stop initial. Within *GSR* #593, however, there is no evidence for original dental stops. Nevertheless, Schuessler 2007:421 admits the possibility, suggesting possible pre-Old Chinese forms ***dz(l)əi*** < ***s-d(l)əi***.

On the apparent mismatch between the voiceless PTB initial and the voiced OC initial, see the discussion under PTB ***pu*** EGG (§1.9.1).

For a discussion of the correspondence between OC ***-ɨj*** and TB ***-ay***, see PTB ***ŋ-(w)a:y*** COPULATE / MAKE LOVE / LOVE / GENTLE (§1.9.8).
[ZJH]

There also seems to be a phonosemantic connection between the stop-initialled allofam ***s-tay*** and a PTB root ***ta:y*** meaning BELT/ZONE/WAIST, first reconstructed in Matisoff 1985a (*GSTC* #95) on the basis of WT **sde** ‘part, portion (e.g. of a country), province, district, territory, zone’, Lahu **de** ‘belt of land between the high rain-forest and the plains; large expanse of terrain’, Luquan Lolo **nt[h]e[11]** ‘plain, flat expanse’, Lushai (Mizo) **tai** ‘waist’, Karbi **daykha** ‘middle, intermediate’. This implies that WT **lte-ba** ‘navel’ is a co-allofam of WT **sde** ‘zone’.

A very likely Chinese comparandum is 帶 OC ***tûd*** ‘girdle, sash’, Mand. **dài** ‘belt, zone’. For the semantics, cf. Eng. *zone* < Gk. *zōnē* ‘girdle’ < PIE ***yōs-nā*** (***yōs*** ‘to gird’).
[JAM]

帶 OC ***tûd***, *GSR* #315a ‘belt, sash’; Li 1971: ***tadh***; Baxter 1992:753 ***tats***; Mand. **dài**.

This word is reconstructed with a final stop by both Baxter and Li. As Schuessler (2007:72) notes, there is reason to think that some of the words reconstructed by Baxter in ***-ts*** should be revised to ***-s***. 帶 is one of the words that Schuessler so revises, supporting the comparison made here (Schuessler 2007:203).

The comparison of PTB ***-ay*** with either OC ***-as*** or ***-ats*** is still problematic, as I know of no other examples of such a correspondence. It must be noted, however, that a regular pattern of correspondence between OC and PTB ***-ay*** has not yet emerged. The most commonly attested correspondences are with OC ***-aj*** or ***-ɨj*** on the one hand (as with 臍, above), and OC ***-e*** on the other (see PTB ***m/s-ŋa-y*** SMALL / INFERIOR / OFFSPRING (§1.9.2)).
[ZJH]

(2) PTB *kyak NAVEL / UMBILICAL CORD / ROPE

This root is abundantly attested in Lolo-Burmese and in Qiangic. It is reconstructed as PLB ***ʔkyak*** in *LTSR* #58, with the meaning ROPE/STRING; *LTSR* also tentatively assigns several forms for NAVEL to this etymon.

There are two Chinese candidates for relationship to this etymon: 弋 ***dɨ̣ək/ɨ̣ək***, *GSR* #918a-b ‘shoot with arrow with string attached; such an arrow’ ⩤ 繳 OC ***t̂ɨ̣ak/tśɨ̣ak***, *GSR* #1258e [OC form not cited in *GSR*] ‘string attached to arrow’. *STC* (p. 176) attempts to relate these Chinese words to PTB ***b-la*** ‘arrow’ [*STC* #449], via a hypothetical intermediate form ****pl̥ak***. I consider this to be far-fetched phonologically and unsatisfying semantically. The semantic association between an umbilical cord and an arrow with string attached is irresistible. The metaphor is still alive today, e.g. in spacecraft, where the lifeline attaching a space-walking astronaut to the mother ship is commonly called an *umbilical cord*. For more discussion of these Chinese words, see ZJH’s note below.

See *HPTB*, pp. 318, 319.

9.0.1. OLD CHINESE			
Chinese (Old/Mid)	îi̯ak/tśi̯ɑk	string attached to arrow	CHOU Fa-kao 1972:1258e

[a] The Sani forms **tɕhe[33]tʂɒ[33]**, **tɕhe[44]tʂɑ[33]**, **tɕʰe[33] tʂɑ[33]** are puzzling, since either syllable is a plausible reflex of this root. Perhaps two Sani variants have developed, one (with aspirated initial) < ***kyak**, meaning 'navel'; and the other (with unaspirated initial) < ***gyak**, meaning 'cord'.

Chinese comparanda

弋 OC ***diə̯ək** *GSR* #918a, 'shoot arrow (with string attached)'; Li 1971: ***rək**; Baxter 1992 #467: ***ljɨk**; Mand. **yì**.

There is considerable disagreement about the reconstruction of words with MC initial **j-** which appear in phonetic series with words having dental initials. While Karlgren's ***d-** (*GSR*) is no longer accepted, variations of ***r-**, ***l-**, and ***j-** are proposed by a number of scholars.

This Chinese word does not appear to be directly cognate to the PTB form, as there is no evidence of a velar initial. Gong (2001) revives Benedict's (*STC* p. 176) comparison with PTB ***b-la** 'arrow', reconstructing OC ***blək**, with the regular development ***bl-** > ***l-**. Gong's system would also admit the possibility of reconstructing ***glək**.

A more likely candidate for cognacy is 繳 (Mand. **zhuó**); see below.

Cf. 射 OC ***mljaks** Baxter 1992 #1357, 1393, 'shoot with bow' (Mand. **shè**), with revision of ***L-** to ***ml-**. This may also be etymologically related to 弋 and/or PTB ***b-la**.

繳 OC (see below), *GSR* #1258e 'string attached to arrow'; Li 1971: **(*krjakw?)** Baxter: **(*kjewk?)**; Mand. **zhuó**.

This character has two Middle Chinese readings, one with velar initial and no coda, and one with palatal initial and velar coda. Based on internal Chinese evidence, the Old Chinese reconstruction cannot be determined with certainty. Karlgren placed this word in series #1258, which is not a phonetic series at all but a collection of words that Karlgren deemed unreconstructible for lack of evidence. Other characters that appear to have the same phonetic element appear in *GSR* #1162, all of which are reconstructed as open syllables with velar initial.

The character 激 'dam up and cause (water) to rush up' (Mand. **jī**), found in *GSR* #1162 and apparently sharing a phonetic element with 繳 **zhuó**, is reconstructed ***kewk** by Baxter 1992 and ***kiakw** by Li 1971, suggesting that in Baxter's system, 繳 should be reconstructed ***kjewk** and ***kewʔ** to account for the two Middle Chinese pronunciations. An ***a** vocalism in Baxter's system cannot be completely discounted, but it would make it difficult to explain the subsequent palatalization of the initial velar in one of the Middle Chinese forms.

All of the possible Old Chinese reconstructions present problems in terms of the Chinese/PTB vowel correspondence. Old Chinese coda ***-kw** (Li)/***-wk** (Baxter) regularly corresponds to TB rounded vowels.

Given the difficulty of determining the Old Chinese reconstruction of 繳, this proposed cognate set must be considered tentative.
[ZJH]

(3) PTB *du NAVEL / UMBILICAL CORD

The stronghold of this etymon is Lolo-Burmese (including Jinuo), but cognates also occur in the NE Indian Areal Group, Himalayish, and Tujia.

The second syllable of the Kaman [Miju] form **pɑ[31] tɯ[31] lɑi[55]** is probably just a reflex of the ***s-** prefix in PTB ***m/s-la(:)y** NAVEL / CENTER / SELF (§1.9.3), above. See the note on Kaman [Miju] **tlái** under that etymon.

Chinese comparandum

肚 OC ***d’o** ‘stomach’; *GSR*: not in #62; Li 1971: ***dagx**; Baxter 1992: ***laʔ** or ***daʔ**; Mand. **dù**.

There is also a variant with a voiceless initial, meaning ‘animal stomach used as food’. *GSR* #62 is reconstructed as a lateral-initial series by Baxter, but since the character is not attested until late, it is possible that this word had a dental initial, and that the character used to write it was created after the change ***l-** > ***d-** had taken place, making 土 ***hlaʔ** > ***thaʔ**, Mand. **tǔ** a suitable phonetic element.

The difficulty with this comparison lies in the vowel, as we would expect to find PTB ***a** corresponding with OC ***a**, as in Chinese 吾 ‘first person pronoun’ ***ngag** (Li)/***nga** (Baxter), Mand. **wú** and PTB ***ŋa** (*STC* #406); and Chinese 魚 ‘fish’ ***ngjag** (Li)/***ng(r)ja** (Baxter), Mand. **yú** and PTB ***ŋya** (*STC* #189). [ZJH]

(4) PTB *nin NAVEL

This relatively rare root appears in the NE Indian Areal Group, Himalayish, and Nungish. It is quite possible that it is related to PTB ***s/k-niŋ** BRAIN / HEART / MIND (§1.7.1), *STC* #367. The Dulong compounds look as if they could mean “belly-heart”, although the usual Dulong word for ‘heart’ is **ɹɯ**^{31} **mɔ̆ʔ**^{55}. Cf. also Meithei **puk-ning** ‘heart’ (Marrison 1967:120), where BELLY + HEART apparently means ‘heart’, not ‘navel’.

The second element of the Tani binome PTani ***kri-ni** NAVEL (§1.9.3) looks as if it might be related to this root.

(5) PTB * t/d uŋ ⋉ *ts(y)uːŋ MIDDLE / CENTER / INSIDE / NAVEL

This etymon was originally set up as ***tsyuːŋ** in *STC* #390, on the basis of Lushai (Mizo), Bodo, and Dimasa forms. Benedict later revised this to ***tuːŋ** (*STC* n. 63, p.17), and specifically banished WT **gźuŋ** as probably not cognate. This reconstruction was also adopted in *HPTB* pp. 287, 310. It seems clear that the most ancient version of this root had a simple or palatalized dental stop, as witnessed by the certain Chinese cognate 中 *GSR* #1007a-e **ti̯ông/t̂i̯ung** ‘middle’ (see below). From an early date, however, many languages developed a sibilant or affricate initial before this medial vowel **-u-**, in a manner reminiscent of a phenomenon in modern Japanese, where the phonemic syllable /tu/ has come to be pronounced [tsɯ]. The same variation between stop and (af)fricate initials before **-u-** is to be found in ‘mortar’ PTB ***(t)sum**, with most reflexes pointing unambiguously to PTB ***tsum** (e.g. WB **chum**, Lahu **chɛ**, Lushai (Mizo) **sum**), while Jingpho **thùm** reflects ***tum**. See also PTB ***(t)sum** NAVEL (§1.9.3).

For convenience I am here assigning the reflexes of this etymon into two allofamic roots, according to whether they have retained a stop initial (PTB ***(t/d)uŋ** ⋉ ***(t/d)waŋ**) or have undergone initial frication (PTB ***ts(y)uːŋ**).

The semantic range of this word-family includes the notion of CENTER (as does the phonologically unrelated root PTB ***m/s-la(:)y** NAVEL / CENTER / SELF (§1.9.3) [q.v.]).

The ***-u-** ⋉ ***-wa-** variation posited for this root is paralleled in several other etyma, e.g. PTB ***nu-(ŋ/k)** ⋉ ***nwa-(ŋ/k)** HORN (§1.2.2), PTB ***tuk** ⋉ ***twak** HEAD / SKULL / NECK (§1.4.2), and PTB ***s-kyuːr** ⋉ ***s-kywaːr** SOUR / BE ACID (§7.1.4). (See *HPTB*:513-514.) This variation parallels the ***-i-** ⋉ ***-ya-** alternation found in a number of roots, notably PTB ***s-myak** ⋉ ***s-mik** EYE (§1.2.6).

(5a) PTB * t/d uŋ ⋉ * t/d waŋ MIDDLE / NAVEL

To this more conservative allofam we assign reflexes with dental stop initials.

9.0.3. Modern Chinese			
Chinese (Mandarin)	**jong** jian	middle	Sun 1985b:485

[a] Bisu **sa** probably means “flesh” (cf. PTB ***sya-n** FLESH / MEAT / GAME ANIMAL (§1.1.1)).

[b] Bisu **sàj** is a borrowing from Thai **săaj** ‘cord, string’. This morpheme, interestingly enough, occurs in reduced form in the Thai word for ‘navel’, **sədɨɨ** (cf. Li Fang Kuei 1977:92).

Chinese comparandum

中 OC ***ti̯ông**[*], *GSR* #1007a-e ‘middle, center’; Li 1971: ***trjəngw**; Baxter 1992:477, 1641: ***k-ljung**; Mand. **zhōng**.

There are at least two competing etymologies for this Chinese word, one relating it to Tibetan **gźung** ‘middle, midst’ (e.g. Bodman 1980:123 set 240, Coblin 1986:53) and the other the one proposed here (e.g. *STC* p. 182).

Baxter (1992:525) follows Bodman, reconstructing ***k-l-** rather than ***trj-** to match Tibetan **gźung** and to explain the use of the character as a sound gloss for 宫 ***k(r)jung**, Mand. **gōng** in the Eastern Han.

The original comparison in *STC* seemed suspect because of the irregular correspondence between the stop initial in Chinese and the sibilant initial in Tibeto-Burman, but the revised PTB etymon makes a good match. If we consider the possibility of reconstructing ***r-tjung**, as proposed in Handel 1998, then there is no mismatch in the medial.

For another example of the same final correspondence, cf. PTB ***(g/k)uŋ** HOLE / ORIFICE / INNER PART (§3.2.7) 孔, Mand. **kǒng**.
[ZJH]

(5b) PTB *ts(y)uːŋ NAVEL / CENTER

[*] *HPTB* pp. 287, 310 incorrectly cites *GSR*’s reconstruction as ***ti̯əŋ**. This was corrected in L. Sagart’s review of *HPTB* (2006:217) to ***t̂i̯uŋ**, which is also incorrect: this is Karlgren’s MC form. [JAM]

[b][Source Note] stomach-inside-intestines ?

(6) PTB *(t)sum NAVEL

This root is virtually confined to Himalayish. The Konyak form with initial **h-** is also probably related. Note the two Thulung forms, which may be co-allofams; **theom** seems to fit better phonologically, despite the semantic divergence.

1.7.2.2. Konyak-Chang

Konyak	**hum** bo	navel	Marrison 1967

[a]For Bantawa **tl-**, cf. Lakher [Mara] and Miju forms with similar reflexes of PTB ***m/s-la(ː)y** NAVEL / CENTER / SELF (§1.9.3).

(7) PTB *bryam ≍ *brim NAVEL / UMBILICAL CORD

This etymon is mostly confined to Himalayish, though there is an excellent Moyon cognate. The initial labial stop may be a reduction of one of several etyma for ‘belly’ that begin with a labial (probably PTB ***d-puːk** BELLY / VITALS / HOLLOW OBJECT / CAVE (§1.7.6)), as illustrated by the disyllabic Moyon doublet and the Lepcha form, so that this root should perhaps be reconstructed ***b-ryam ≍ *b-rim**.

This etymon seems to be quite independent from PTB ***bliŋ** STRING / THREAD / CORD (§5.11.6).

7. Karenic

Bwe	ʔdí-**phlɔ́**	navel	Weidert 1987:843

(9) NEIA *koy NAVEL

This root has only been discovered in two NE Indian Areal Group languages of Manipur, Meithei and Puiron, but the semantic and phonological correspondence is perfect. However, since Meithei (also known as Manipuri) is the dominant TB language of Manipur, the Puiron form may well be borrowed from it.

1.3.3. Zeme Group

Puiron	**koi**	navel	Marrison 1967

1.4. Meithei

Meithei	**khôi**	navel	Matisoff 1987
	khoi dou	navel	Marrison 1967

(10) PTB *zu CORD / UMBILICAL CORD / NAVEL

This root is of restricted distribution, but the Lepcha form certainly looks related to the Meluri and Tangkhul ones, which might be enough to set it up for PTB.

1.3.1. Central Naga (Ao Group)

Lotha Naga	ō **zó**	navel, place below	Acharya 1975
	o **zu**	rope (n.)	Marrison 1967

Chinese comparandum

(繫 'rope, tether, bind'; B & S 2011: ***t‹r›ip***; Mand. **zhí**.)

(13) PTB *rey ≍ *s-rwi(y) OBSCURE INTERNAL CHANNEL / CORD / STRING / CREEPER / CANE / RATTAN

The basic meaning of this etymon seems to be 'cord, string'. It also appears in a large number of compounds referring to "OICC's" (obscure internal channels and connections), such as NERVE, VEIN, MUSCLE, SINEW. In addition it appears in compounds for UMBILICAL CORD, thence by extension to NAVEL itself. For the concept of "OICC's", see *VSTB* pp. 184-5.

STC sets up two roots with the meaning 'cane, rattan', *STC* #478 ***rey*** and *STC* #201 ***s-rwi(y)***, which I am collapsing into a single set. The meaning of this etymon ranges from 'string, cord' to 'OICC' to the specific plants 'cane, rattan'.

Several Himalayish forms which look superficially as if they descend from this morpheme are actually loans from Sanskrit *nālī* ~ *nāḍī* 'any tubular vessel or vein of the body' (Monier-Williams:537): Sunwar **nā:ri** 'nerve', Newar **hi *nu(li)*** 'blood vessel; vein; artery' (**hi** 'blood' < PTB ***s-hywəy***),* Bahing **sā:*ti*** 'vein, blood vessel', Bantawa **tshum-bu*ri*** 'umbilical cord', Khaling **'sö ri** 'nerve'. A couple of Barish forms, Bodo **na-ri** and Lalung **na-ti** 'navel' (Balawan 1965:42), are also probably borrowings from this Sanskrit word, despite the semantic difference. Note that **r** and **t/d** are frequently confused in Barish languages. (Cf. the language name *Bodo* ~ *Boro*).

[a]Lalung **-b** represents an unreleased (not truly voiced) stop.

(1b) PTB *m-ts(y) $^{u}_{i}$ p SUCK / KISS / BREAST / MILK

Many forms descending from this etymon have voiced initials, a fact which we might capture by setting up a separate allofam ***m-dz(y)up ≍ *m-dz(y)ip***. Some of these cases can be ascribed to the influence of the nasal prefix. However, since there is so much variation in voicing even within a single subgroup, we have chosen to group all the reflexes under the prototype with voiceless root initial.

This widespread etymon is set up as ***dzo:p*** in *STC* #69, on the basis of forms from four Barish and Kuki-Chin languages: (Barish) Dimasa **dźop** and (Kuki-Chin) Lushai (Mizo) **fo:p**, Thado **tsop**, and Siyin **tuop** 'suck; kiss'. (Cf. also Kom Rem **məǰop**, Tiddim **to:p**, and Lai Chin **doop**.) However, the rhymes ***-op** and ***-o:p** are extremely rare in TB, with virtually no other examples (see *HPTB*, pp. 381-2), and it seems preferable to consider these forms with **-o(:)-** vocalism to reflect a localized secondary development. (On the other hand, there is a parallel form in NW rGyalrong **kants^{h}rop**, alongside Ma'erkang rGyalrong **kɑ mə scçup**.) The vast majority of the reflexes point to a high proto-vowel, either ***-u-*** or ***-i-***. The alternation between these two vowels is especially frequent in the environment of labial consonants, and indeed this is one of the best attested patterns of variation in TB, as well as in Chinese. (See *VSTB* pp. 41-2, *HPTB* pp. 493-505. See also PTB ***m-pup ≍ *pip*** KISS / SUCK / SUCKLE (§1.9.4) and PTB ***(t)s(i/u)p*** NEST / WOMB / SCROTUM (§1.9.6), below.) Several languages show internal variation between these vowels (e.g. Dimasa **dźop** 'suck' ≍ **sep** 'milk'; Tiddim **te:p**^{1} 'suck' ≍ **to:p**^{1} 'kiss').

The nasal prefix ***m-*** has been added to the reconstruction since it occurs in many languages of the NE Indian Areal Group (e.g. Sema **mtsü**, Ao Mongsen **mechep**, Kom Rem **məǰop**, Moyon **njúp**, etc.), as well as in Qiangic (e.g. Ergong **ndʑip**^{53}, Namuyi **ntshu**^{53}), and WT **ḥjib(s)-pa**, where *a-chung* "ḥ" is interpreted as a nasal prefix (see *HPTB* pp. 115-6).

Reflexes of the allofam with ***-u-*** vocalism are presented in PTB ***m-ts(y)(u/i)p*** SUCK / KISS / BREAST / MILK (§1.9.4), and those from the ***-i-*** variant in PTB ***m-ts(y)(u/i)p*** SUCK / KISS / BREAST / MILK (§1.9.4).

I also recognize an opened-syllable allofam ***dz(y)əw* MILK/BREAST**, treated separately below PTB ***dzy(ə/o)w*** SUCK / KISS / BREAST / MILK (§1.9.4).

A few languages show secondary variants with final stops other than ***-p***. Jingpho has a doublet, one with the expected **-p** (**tšùp** 'suck, kiss, absorb'), and one that reflects final ***-k*** (**tšúʔ** 'breast'; **-ʔ** is the regular Jg. reflex of ***-k***). Similar forms appear in several other languages: Sherpa (Helambu) **chuk pekin** 'kiss', Tamang (Sahu) **cyok-pa** 'kiss', Lashi **tʃu̱:k**^{55} 'nurse; suckle', Bisu **tʃhɔ̀k** 'suck'. All these languages seem to have doublets with both **-p** and **-k**. WB has an aberrant form with a final dental (**cut** 'suck'), paralleled by Dulong **tsut**^{55} 'suckle' and Tamang (Sahu) **nyeh *c^{h}uT* Tai' ti-pa**.[*]

For other etyma with similar variation in final position, cf. PTB ***m-pup ≍ *pip*** KISS / SUCK / SUCKLE (§1.9.4) and PTB ***(t)s(i/u)p*** NEST / WOMB / SCROTUM (§1.9.6).

The semantic connection between SUCK and KISS is paralleled by the vulgar English expression *suck face* for 'kiss'.

There is a possible Chinese comparison, 噬 (Mand. **cǎn, zǎn**); this character has two OC readings, ***ts'əm*** 'have in the mouth' and ***tsəp*** 'bite; sting and suck (as a mosquito)' [*GSR* #660f, #660o]; see also Coblin 1986:144. TB also shows some variation between final stop and nasal in this etymon: cf. Sunwar **cim-cā** 'milk a cow' ≍ **yup-** 'suck'; Tsangla (Motuo) **jum** 'suck (milk)' ≍ **tɕup**^{55} **a**^{55} 'kiss'. The final nasal in the Milang form **ɟim-ma** seems clearly to be due to assimilation of the initial to the suffix. See the discussion by ZJH, below.

An undoubtedly related root (not in *STC* or *HPTB*) is PTB ***(t)sy(i/u)p ≍ *(t)swap*** SQUEEZE / WRING / CRUMPLE (§9.5), the semantic connection being the squeezing action required to express milk from a breast or udder. See DL:557-8.

	^{12}a^{12}**tš̯ɐp**	kiss / suck (v.,v.)	Weidert 1987:1144
Konyak	**hüp**	suck	Marrison 1967
	həp	suck (v.)	French 1983:561
	jep	kiss	Marrison 1967
	jep	kiss (v.)	French 1983:561
Konyak (Tamlu)	**jup**	suck / kiss (v.)	Weidert 1987:1114
Phom	**jüp**	kiss	Marrison 1967
	jəp	kiss (v.)	French 1983:561

1.7.3.1. Jingpho

Jingpho	chu, **chyup**	suck	Marrison 1967
	chup	kiss	Marrison 1967
	chyup	suck, as through a straw	Hanson 1906:92
	tʃu̲p^{31}	suck up, absorb	Dai Qingxia *et al.* 1983:98
	^{1}**tšup**	suck (v.)	Weidert 1987:1114
	^{1}**tšup**	kiss / suck (v.,v.)	Weidert 1987:1144
	ʃup^{31}	milk (v.)	Sun Hongkai et al. 1991:611.47

1.7.3.2. Asakian

Ganan	**tsup^{3}**	suck (v.)	Luce 1985:L.294
	tsɔ^{4}	suck (v.)	Luce 1985:L.294
Kadu (Kantu)	**soʔ^{1}**	suck (v.)	Luce 1985:L.294
	s‘up^{1}	suck (v.)	Luce 1985:L.294
Sak (Dodem)	**su^{3}**	suck (v.)	Luce 1985:L.294
	tsôʔ^{2}	suck (v.)	Luce 1985:L.294
Sak (Bawtala)	**tsô^{4}**	suck (v.)	Luce 1985:L.294

2.1.1. Western Himalayish

Pattani [Manchati]	cug **tʃ^{h}i**	suckle, suck (v.)	Sharma 1982
	cəpu	kiss (n.)	Sharma 1982
	cəpu rənḍri	kiss (v.)	Sharma 1982
	tsip tsi	suck	Sharma 1991b:5.4.5
	Tùn **ḍẓi**	nurse / suckle (v.)	Sharma 1991b:5.4.6

2.1.2. Bodic

Baima	pɛ^{53} **tɕi^{13}**	kiss (v.)	Sun Hongkai 1991a:3.9.5
Bumthang	**zip**	suck (v.)	Weidert 1987:664
Kurtöp	**džip**	suck (v.)	Weidert 1987:664
Tsangla (Motuo)	**jum**	suck (milk)	Sun Hongkai *et al.* 1980 [a]
	tɕup^{55} a^{55}	kiss	Zhang Jichuan, ed. 1986
	tɕup ʔa	kiss	Sun Hongkai *et al.* 1980
Tshona (Mama)	**ʤip^{13}**	suck (milk)	Sun Hongkai *et al.* 1980
	ʔo^{55} **ʧ^{h}ɔp^{53}**	kiss	Sun Hongkai *et al.* 1980
Cuona Menba	**dzip^{35}** pa^{53}	suck (v.)	Huang Bufan & Dai Qingxia, eds. 1992:1648.06

2.1.2.1. Tibetan

Dzongkha	**džup**	suck (v.)	Weidert 1987:664
Tibetan (Sherpa:Helambu)	**jip** ken	suck	Bishop 1989:5.4.5
	jip ken	nurse / suckle (v.)	Bishop 1989:5.4.6
Spiti	**jip** ce	suck	Bodh 1991:5.4.5
Tibetan (Written)	**’jibs**	suck (v.)	Michailovsky 1991:171
	’jibs-pa	suck	Marrison 1967
	bźibs	suck (v.)	Weidert 1987:664
	bzip	suck (v.)	Weidert 1987:664
	ɦidʑib	suck (v.)	Huang Bufan & Dai Qingxia, eds. 1992:1648.01
	ɦijib(s)-pa	suck (v.)	Weidert 1987:664

2.1.4. Tamangish

Tamang (Bagmati)	**’sip**	suck (v.)	Weidert 1987:664
Tamang (Risiangku)	^{3}**sip**	suck (milk, fingers) (v.)	Mazaudon 1991:5.4.5

[a] The final nasal in this form is unexplained, but is perhaps due to assimilation to a now-lost suffix with nasal initial (cf. Milang **ɟim-ma**).

2.2. Newar

Newar	**cup**-ā na-ye	kissed (”eat a kiss”) (be v.)	Malla 2007
	cup ā-nala	kissed (he kissed) (v.)	Hale 1973:10b1.51
	cup pa nɔ	kiss (”have a kiss”) (v.)	Shakya & Hargreaves 1989:3.9.5

2.3.1. Eastern Kiranti

Limbu	**tsup** mEtt-	kiss (v.)	Michailovsky 1989b
Yakha	**cup** pa cok ma	kiss	Kohn 1990:3.9.5

2.3.2. Southern Kiranti

Bantawa	**chUp**	suck up	Rai 1985
	cup ma	kiss	Rai 1985

2.3.3. Central Kiranti

**Dum-Thu-Kha*	***chip-**	suck (v.)	Michailovsky 1991:171
Khaling	**cūp** mū-ne	kiss (v.)	Hale 1973:10b1.51

2.3.4. Western Kiranti

Sunwar	**cim**-cā	milk a cow (v.)	Hale 1973:03b.41
Thulung	**chip-**	suck (marrow); suck (marrow), to encroach (on another’s land) (v.)	Michailovsky 1991:171; Allen 1975

2.4. Kham-Magar-Chepang

Magar	**cip**-ke	milk a cow (v.)	Hale 1973:03b.41

3.1. Tangut

Tangut [Xixia]	**ndǐuɦ**	kiss / suck	Nishida 1964:255-122
	Tǐu̯	suckle / breastfeed / nourish	Nishida 1964:7-145

3.2. Qiangic

Ersu	**tsʅ^{55}**	nurse / suckle	Sun Hongkai 1991d

9.0.2. MIDDLE CHINESE			
Chinese (Middle)	**tsəp**	sting and suck (sc. mosquito)	Coblin 1986:144

[a] Lahu **cú**, despite its non-checked tone synchronically, reflects a PLB prototype with final stop, ***ʔjup**; the high-rising tone is the result of "glottal dissimilation", which occurred in pre-Lahu syllables that had both a *glottalized initial and a *final stop (which was reduced to **-ʔ** in Lahu). For a detailed account of this phenomenon, see Matisoff 1970, 1972a #73b.

[b] Literally "breast-head".

Chinese comparandum

嚼 OC ***ts'əm/tsəp**, *GSR* #660f, 660o 'have in mouth; bite; sting'; Li 1971: **(*tshəm/p)**; Baxter 1992: **(*tshɨm/p)**; B & S 2011: ***ts^{ʕ}əp {ts^{ʕ} [ə] p}**; Mand. **cǎn**, **zǎn**.

Neither Li nor Baxter (1992) reconstructs this word. As Baxter notes (1992:555), this phonetic series presents unusual difficulties for OC reconstruction. Baxter reconstructs some words with ***o** and others with ***i/ɨ**.

It is not clear why Karlgren lists the character twice in *GSR* #660. At *GSR* #660f he reconstructs ***ts'əm** for the meaning 'have in mouth' and ***tsəp** for the meaning 'bite', while at *GSR* #660o he reconstructs ***tsəp** meaning 'sting and suck'. Karlgren's usual practice in *GSR* is to group multiple readings of a single character together, listing that character only once.

On the apparent mismatch between the voiceless PTB initial and the voiced OC initial, see the discussion under PTB ***pu** EGG (§1.9.1).

Vowel correspondences between OC and PTB before labial codas are difficult to pin down. In Li's system, OC ***-ə-** regularly corresponds to TB ***-u-** and/or ***-i-**. Examples include 三 OC ***səm** 'three', PTB ***gsum**, Mand. **sān**; 入 OC ***njəp** 'enter/sink', PTB ***nup ≍ *nip**, Mand. **rù**; and 寢 OC ***tshjəm** 'sleep', WT **gzim**, Mand. **qǐn** (Coblin 1986:134). Using Baxter's system, however, where six vowels (as opposed to just ***a**, ***ə** in Li's system) occur before bilabial consonants, correspondences are less regular. This is in part because in many cases there is ambiguity in the reconstruction of vowels before bilabial codas in his system. At the present state of our knowledge, the proposed cognate set is viable. [ZJH]

[a] These Jingpho forms are transcribed as if they were open syllables in Hanson (and sources which recopied his data), but they really have a final glottal stop **-ʔ** (< ***-k**), as noted in ZMYYC and other more modern sources.

[b] Final consonant in Sahu **c^{h}uT** evidently due to assimilation to the initial of the following syllable.

(1e) PTB *dzy $^{ə}_{o}$ w SUCK / KISS / BREAST / MILK

This root frequently occurs reduplicated, for obvious hypocoristic reasons, occasionally with voicing of the second reduplicate (cf. the Lalung form). This root is allofamically connected to PTB ***m-ts(y)(u/i)p** SUCK / KISS / BREAST / MILK (§1.9.4). It is sometimes difficult to distinguish reflexes of the various allofams, especially in branches like Loloish that have reduced final consonantism. Many languages have allofamic doublets in any case.

6.1.2.3. Southern Loloish

Akha	a◡ **coeˇ**	breast; milk	Lewis 1968:50
Hani (Dazhai)	a^{31} **tɕ^{h}u**^{55}	breast; milk	Li Yongsui & Wang Ersong, eds. 1986; Li Yongsui & Wang Ersong, eds. 1986
	a^{31}**tɕhu**^{55}	breast; milk	Sun Hongkai et al. 1991:259.31; Sun Hongkai et al. 1991:281.31
Hani (Gelanghe)	a^{31} **tɕ^{h}ø**^{55}	milk	Li Yongsui & Wang Ersong, eds. 1986
	a^{31} **tɕ^{h}ø**^{55} bɛ̱^{33}	breast	Li Yongsui & Wang Ersong, eds. 1986
Côông [Phunoi]	lɑ̃^{55} **cu**^{11} ɲi?^{55}	suck	Bradley 1977
Sangkong	loŋ^{33} **tɕhø**^{55}	breast milk	Li Yongsui 1991

[a] Karbi **chethè** is defined as 'life, breath, stature; pipe' in Walker 1925:31, as in **chethè ari** 'larynx, windpipe'. Thus this form seems to mean 'breast-pipe'. For reasons of space, this semantic association is not diagrammed in the chart at the beginning of this chapter.

[b] Tsangla (Motuo) **tɕ^{h}u ra** is a loanword from Tibetan, referring to a kind of dried cheese (cf. Bokar Lhoba **tɕu rə**).

[c] WT **bʑo** is the future form of the verb, whose principal parts are **ḥjo-ba** (Pres.). **bźos** (Perf.), **bźo** (Fut.), **ḥjos** (Impv.) (see, Jäschke 1881/1958:179).

[d] These WT forms reflect the allofam ***dzyow*** (see, *HPTB*:224, 382).

[e] Note the secondary final velar, the regular Maru reflex of the rhyme ***-əw***. See note under PTB ***s-nəw*** BREAST / MILK / SUCK (§1.9.4).

(2) PTB *s-nəw(-) BREAST / MILK / SUCK

This root is reconstructed as ***nəw*** in *STC* #419, on the basis of forms from WT, Tsangla, WB, and Lushai (Mizo). (The rhyme ***-əw*** in *STC* is equivalent to Benedict's earlier reconstruction ***-uw***.) The ***s-*** in our reconstruction is reflected in the voiceless nasals in Kuki-Chin and Barish languages (including the Lushai (Mizo) form **hnu-te** cited in *STC* #419), the **tă-** prefix in Awa Khumi, and directly in Thanphum **ʃə̆nũ**^{5} and WT **snun-pa** 'suckle'.

This root has been frequently combined with dental and velar suffixal elements, both nasals and stops. The reflexes are presented in the following sections according to the particular allofam they represent: the unsuffixed root ***s-nəw*** in PTB ***s-nəw***; forms with dental suffixes (***s-nəwt***, ***s-nəwn***) in PTB ***s-nəw(t/n)***; and forms with velar suffixes (***s-nəwk***, ***s-nəwŋ***) in PTB ***s-nəw(k/ŋ)***.

This etymon is very widely distributed in ST, appearing in Chinese, the NE Indian Areal Group, Himalayish, Lolo-Burmese, Karenic, and Qiangic (including Tangut). Many languages have reduplicated forms (e.g. Ergong **nu-nu**), as is to be expected in such a hypocoristic concept as BREAST.

Somewhat similar phonologically is the root ***s-nye-n***, which is here treated as a separate etymon, below PTB ***s-nya-n***.

(2a) PTB *s-nəw BREAST / MILK / SUCK

Despite the phonological similarity of the Newar forms **nu gɔr** (Dolakhali) and **nu gɔ:** (Kathmandu) 'heart' to other Himalayish reflexes of this etymon, K. P. Malla denies their cognacy.

In fact, the semantic connection, between BREAST (of female) and HEART has yet to be demonstrated for Tibeto-Burman.

6.1.2. LOLOISH			
**Loloish*	***no**[3]	milk; breast	Weidert 1987:327; Bradley 1979b:119B; Bradley 1979b:155B

[a] Chantyal **-ye** 'GENITIVE'; **kepal** 'head', loan from Nepali.

[b] Muya **nɯ**[33] likely derived from PTB ***s-nəw*** BREAST / MILK / SUCK (§1.9.4), since PTB ***-əw*** most often becomes Muya **-ɯ**, e.g. 'steal' PTB ***r-kəw*** > WT **rku**, WB **khûi**, Muya **kɯ**[55]; 'sky' PTB ***r-məw*** > WT **rmu-ba** 'fog', WB **mûi(gh)**, Muya **mɯ**[55].

[a] Final period is in original.

[b] Maru final **-k** is secondary; **-uk** is the regular Maru reflex of ***-əw***, as first noted in the original version of *STC* (p. 60 in the published version, 1972) and for the first time in print by Burling 1966 (*Language* 42.3). Thus this form is not to be referred to the stop-finalled allofam PTB ***s-nəw(k/ŋ)*** BREAST / MILK (§1.9.4). Burling's correct observation about the secondariness of the velar stop in the Maru rhyme **-uk** (which is paralleled by the secondary **-t** in Maru **-it** < PTB ***-əy**), was attacked by Roy Andrew Miller "Once again, the Maru final stops" (1968 paper presented at ICSTLL #1, Yale University). This attack was in turn refuted in *STC*, in the new note 193 (added in 1972).

[c] Maru **ɣək**[31] < PLB ***rəy**[1] 'water; liquid' (PTB ***rəy*** WATER / LIQUID / BODILY FLUID (§1.9.9)). Final ***-əy*** regularly becomes **-it** in the Maru dialect described in Burling 1966. The unreleased final stop evidently sounds more like a velar in the dialect recorded by Dai Qingxia, who transcribes this rhyme as "**-ək**".

	ngjaengH	go to meet	Baxter & Sagart 2011:3521
	ńźju:	nipple, milk, suckle	Coblin 1986:48

9.0.3. Modern Chinese

Chinese (Mandarin)	**naai**	milk	Sun 1985b:486
	yíng	go to meet	Baxter & Sagart 2011:3513
	yìng	go to meet	Baxter & Sagart 2011:3521

[a] Gazhuo **-u** has been completely swallowed up by the nasal initial in **ŋ^{33}**, a phenomenon which is typical of Loloish: e.g. the Lahu phonemic syllable /**mu**/ is pronounced as a syllabic labiodental nasal [m̩] (see Matisoff 1973, *The Grammar of Lahu*, pp. 3-4).

Chinese comparandum

乳 OC ***ńi̱u**, *GSR* #135a 'breast'; Li 1971: ***njugx**; Baxter 1992: ***njoʔ**; Mand. **rǔ**.

This is a long-recognized cognate (see Shafer IST 1966:38; *STC* p. 184; Bodman 1980:171 #444; Coblin 1986:48; Gong 1995 #16, #70; Schuessler 2007:446).

The correspondence of TB final ***-əw** (or ***-u**) to OC ***-ug** (Li)/***-o** (Baxter) is regular. For example:

頭 OC ***dug** 'head'; (Li)/***do**; Baxter, TB ***d-bu**; Mand. **tóu**
霧 OC ***mjugh** 'fog'; (Li)/***m(r)jos** (Baxter); TB ***r-məw**; Mand. **wù**
寇 OC ***khugs** 'steal', (Li)/***kh(r)os** (Baxter), TB ***r-kəw**; Mand. **kòu**.

This TB final also corresponds to OC ***-əgw** (Li)/***-u** (Baxter), as seen in #1733.

7. Karenic: ***náun'** BREAST

**Karen*	***náun'***	breast	Jones 1961:23 [d]
**Karen (TP)*	***náun'***	breast	Jones 1961:23
Pwo (Bassein)	**núʔ**	breast	Weidert 1987:926

[a] Despite the final dental nasal in Milang **ɲun-**, it is assigned to PTB ***s-nəw(k/ŋ)*** BREAST / MILK (§1.9.4) because of the doublet with **ɲuŋ**.

[b] This Manang form proves the independence of etyma PTB ***s-nəw(k/ŋ)*** BREAST / MILK (§1.9.4) (**nyog^{1}**) and PTB ***s-nya-n*** BREAST / MILK / SUCK (§1.9.4) (**nyɛː^{4}**).

[c] This form is rather arbitrarily assigned to this set, rather than to PTB ***s-nəw(t/n)*** BREAST / MILK / SUCK (§1.9.4).

[d] These Karenic forms are assigned to this set because of the final glottal stop in Weidert's Pwo (Bassein) form.

(3) PTB *s-nya-n BREAST / MILK / SUCK

This etymon, which frequently occurs reduplicated, may have a hypocoristic (baby-talk) flavor. It is sometimes difficult to distinguish reflexes of this etymon from those of PTB ***s-nəw** BREAST / MILK / SUCK (§1.9.4), which also often appear reduplicated. Particularly problematic are the Qiangic forms, many of which have front vowels, but which after much vacillation I have finally assigned to PTB ***s-nəw** BREAST / MILK / SUCK (§1.9.4) instead of to the present set. Both PTB ***s-nəw(-)** BREAST / MILK / SUCK (§1.9.4) and PTB ***s-nya-n** BREAST / MILK / SUCK (§1.9.4) occasionally take a nasal suffix, which further complicates the picture (cf. the *Tamang, Chepang, Hayu, and Pa-O forms, below).

A couple of Himalayish languages (Gurung, Thakali) have a velar initial, which appears to be a secondary development from the palatal nasal ***ny-**. A pair of other forms with voiceless nasals (Lushai [Mizo], E. Chepang) reflect the ***s-** prefix.

[a] Final consonant in Sahu **c[h]uT** evidently due to assimilation to the initial of the following syllable.
[b] Literally "breast-head".

Chinese comparandum

嬭 OC ***niər**, *GSR* #359d-f 'mother; breasts, milk'; Schuessler 2007:395 ***nêʔ**; Mand. **nǎi**.

(4) PTB *pa BREAST / NIPPLE / MILK

This root appears mostly in Lolo-Burmese, Qiangic, and Baic. It frequently occurs reduplicated, and its simple phonological shape makes it likely that it is hypocoristic in origin. (The same may be said for PTB ***mam** BREAST (§1.9.4), below.) Some Lolo-Burmese and Bai forms have been recorded with vowel constriction, but it is not yet clear whether these reflect an allofam with final stop.

(5) PTB *m-pup ≍ *pip KISS / SUCK / SUCKLE

This etymon displays the same ***-u-** ≍ ***-i-** variation found with PTB ***m-ts(y)(u/i)p** SUCK / KISS / BREAST / MILK (§1.9.4), as well as a similar variation in the position of articulation of the final stop: compare Bengni **mu:-pup**, Rongmei **ka-pút**, and Sunwar **'pu:k pu 'pā-cā**. Weidert 1987 (#651, #1017) sets up "Kuki-Naga-Chin" ***m-but**, and J. Sun 1993 reconstructs Proto-Tani ***pup ≍ *puk**, but in TB generally **-p** seems to be the most widespread final consonant.

The two labials (initial and final) in this root have an imitative flavor, apparently mimicking the labial activity involved in sucking and kissing.

This allofam with **-u-** vocalism is more common, and so far it is only before this variant that the nasal prefix is attested. This prefix should be set up for PTB as a whole, since it occurs in Himalayish (Bunan) **a mbok də ca** and Qiangic (rGyalrong) **kəwu nəpok**, as well as widely in Naga languages. This variant frequently occurs in compounds after reflexes of PTB ***m-ʔum ≍ *mum** HOLD IN MOUTH / CHEW / EAT / KISS (§1.9.4), below (e.g. Milang **mum-pup-ma**), and this may in fact be the source of the prefixal ***m-** in my reconstruction.

The allofam **pip** has so far only been found in Himalayish.

Some reflexes show final **-t** or **-k**. For similar variability of the final consonant, see PTB ***m-ts(y)(u/i)p** SUCK / KISS / BREAST / MILK (§1.9.4), PTB ***dzyut** SUCK / KISS / BREAST / MILK (§1.9.4), PTB ***tsyuk ≍ *dzyuk** SUCK / KISS / BREAST / MILK (§1.9.4). The variation in position of articulation of the final consonant seems clearly to have been caused by the influence of suffixal material. Cf. the consonantal sequences across morpheme boundary in forms like Bantawa **phïpt-** and Chamling **pips-**, which seem to lie behind forms like Limbu **pi:tt-**, where the labial final has been assimilated to an earlier dental suffix. Note also the variation between final stop and nasal in Thulung.

[a] Note the internal Bantawa vocalic variation between **-ï-** and **-ü-**.

(6) PTB *m-bawŋ BREAST / MILK

This root is solidly attested in the NE Indian Areal Group. There is also an excellent match between the Kaman reflex and the reconstructed Tangut form, on the basis of which we set up a nasal prefix for the etymon. W.T. French (1983:490-1) suggests that this root shows an association in Northern Naga between BREAST and FLOWER ("flower" = tree + breast).

(7) PTB *mam BREAST

This root is evidently hypocoristic in origin (see also PTB ***pa** BREAST / NIPPLE / MILK (§1.9.4), above), and in fact is practically identical to the Indo-European root **mā-* 'mother; breast' (> e.g. Latin *mamma*), of which the *American Heritage Dictionary* (1981:1527) says "An imitative root derived from the child's cry for the breast (a linguistic universal found in many of the world's languages, often in reduplicated form)." The final nasal in this etymon might have arisen through the reduction of an earlier reduplicated form ***ma-ma** (as in Ao, Sangtam, and Bunan).

There is a phonologically similar but apparently unrelated root PTB ***m-ʔum ≋ *mum** HOLD IN MOUTH / CHEW / EAT / KISS (§1.9.4), below.

(8) PTB *s(y)awk BREAST / SUCK / DRINK

This root is quite widespread, and covers a broad semantic range, from BREAST to SUCK to DRINK (any liquid). By a relatively recent extension of meaning, this root is also used for SMOKE (tobacco), and thence for TOBACCO itself (as in Lahu).*

There is a promising Chinese comparandum 欶, Mand. **shuò** proposed by Coblin (1986:144). In Matisoff 1970 (#57) I suggested that WB **sok** (also transcribable as **sauk**) 'drink, smoke' and Lahu **šú** 'tobacco' were cognate. I still believe that to be correct, even though in Matisoff 1988:1192 (*The Dictionary of Lahu*) I entertained an alternative comparison with WB **hrup** 'snuff up; sniff; sip; sup'. It now looks as if WB **hrup** might be related rather to Chinese 呷 (OC ***hrap**, Mand. **xiā**) 'to drink in with a sucking movement', cited in Coblin 1986:43. This seems preferable semantically and phonologically to Coblin's comparison of the Chinese form to WB **hap** 'bite at' < PTB ***hap** [*STC* #89].

9.0.1. Old Chinese

Chinese (Old)	**sruk**	suck / drink	Coblin 1986:144

9.0.2. Middle Chinese

Chinese (Middle)	**ṣåk**	suck, inhale	Coblin 1986:144

Chinese comparanda

欶 OC ***sŭk**, *GSR* #1222o 'suck'; Li 1971: ***sruk**; Baxter 1992: ***srok**; Mand. **shuò**.

Gong 1995 #279 reconstructed ***rsuk**. In Li's system another possibility is ***sthruk**, by analogy with 束 'bundle', Mand. **shù** which is reconstructed ***sthjuk** to account for the presence in this series of 諫 / 促 'urge on', Mand. **cù** < ***tshjuk**. Schuessler 1987:567 reconstructed 束 **shù** 'bundle' as ***?-juk** to indicate that the initial is uncertain, and in 2007:473 suggests a pre-Old Chinese form ***C-sok**.

This comparison is made in Coblin 1986:144.

The vowel correspondence is problematic. OC ***-uk** (Li)/***-ok** (Baxter) normally corresponds to PTB ***-uk**, as in 曲 'bend/crooked', PTB ***guk**~***kuk**, OC ***khjuk** (Li)/***kh(r)jok** (Baxter), Mand **qū, qǔ**. [ZJH]

呷 OC ***χap** (not in *GSR* #629), 'to drink with a sucking movement'; Li 1971: ***hrap**; Baxter 1992: ***xrap**; Mand. **xiā**.

The Middle Chinese vocalism dictates an Old Chinese reconstruction with medial ***-r-**, but Schuessler 2007:526 has ***hap**, arguing that the MC vocalism may be due to "sound symbolism or archaistic colloquialism". This enables him to make a comparison with PTB ***hap** [*STC* #89] as well as with Austroasiatic forms of similar shape.

Matisoff's proposal that 呷 **xiā** is instead cognate to WB **hrup** 'snuff up; sniff; sip; sup' provides a better match for Chinese ***-r-**, but the vocalism is problematic. We would expect a Burmese cognate in **-ap** < PTB ***-ap**. Of course, given the likelihood of sound symbolism in words with these semantics, irregular correspondences are to be expected. It is therefore not an easy matter to decide if Chinese 呷 **xiā** is better compared to PTB ***hap** or WB **hrup**, or if the similarity of phonological shape is not due to cognacy at all. [ZJH]

(9) PTB *s-lwaŋ BREAST

This root appears mainly in Southern Loloish. It is reconstructed as PLB ***loŋ**^{2} in Bradley 1979, #119A. The putative Womatu (Kuki-Chin) cognate with voiceless lateral leads me to reconstruct this etymon as ***s-loŋ** at the PTB level. This etymon bears some resemblance to ***b-raŋ** CHEST, but we are keeping them separate for now, despite the similarity between, e.g. WB **raŋ-pat** 'chest' and Bisu **lɔŋ-pét** 'breast', where the second syllables are both assigned to PTB ***b(y)at** BREAST / CHEST (§1.9.4).

(10) PTB *wa SUCKLE / MILK / BREAST

This etymon is particularly well attested in Himalayish. Most of the NE Indian Areal Group forms (especially those with **-ma** as final syllable) look like loans from Tibetan. The root also occurs in Baic. There are several possible explanations for the final **-m** in certain Himalayish forms (Bantawa, Chamling, Hayu), as well as the nasalization in Bai **ũ** 'nurse; suckle': (a) they could be due to rhinoglottophilia* because of the zero or glottal-stop initial; (b) they could have arisen by assimilatory epenthesis to the initial **p-** of the following syllable; or (c) they could have been metanalyzed from the initial of the second syllable of the binome ***o-ma**, which might originally have been borrowed from Tibetan as a unit before being reduced to a single syllable in the new Bantawa/Chamling compounds. The development of ***wa** > WT **o** is regular, e.g. ***swa** TOOTH > WB **swâ**/WT **so**; ***g-lwat** ≷ ***s-lwat** LOOSEN / FREE > WB **lwat/hlwat** ≷ **kywat/khywat**/WT **glod-pa** ≷ **hlod-pa**.

This root appears principally in Himalayish and contiguous languages of the NE Indian Areal Group, but also in Bai, so that it must be set up for PTB.

	ũ^{33}	nurse / suckle (v.)	Zhao Yansun 1990:5.4.6

(11) PTB *kwam BREAST / MILK

This root has so far been identified only in a few languages of the NE Indian Areal Group, though there is a possible Dumi (Himalayish) cognate. Several languages (Kom Rem, Meithei, Moyon) have compounds where this root occurs as second element, after a syllable **səŋ-/sʌŋ-**. This latter element bears a resemblance to PTB ***syaŋ** VAGINA / CLITORIS (§1.9.5), below.

This root was reconstructed as ***kom** in TBRS: #64.

1.2.4. "Old Kuki"

Kom Rem	səŋ **k^{h}om**	milk	Toba & Kom 1991:5.4.3	
Moyon	sʌŋ **ŋom**	milk	Kosha 1990:5.4.3	*a*

1.4. Meithei

Meithei	**khom**	breast; udder (of cow, goat); milk	Singh 1991:5.4; Singh 1991:5.4.2,5.4.3; Marrison 1967	
	khôm	breast milk	Matisoff 1987	
	khom khaynə bə	wean	Singh 1991:5.4.7	*b*

2.3.3. Central Kiranti

Dumi	di dhi **kwam**	nipples (human)	Driem 1993

[a] Note assimilation of the medial consonants.
[b] Meithei **khaynə** 'to part, to separate'.

(12) PTB *b(y)at BREAST / CHEST

The semantic range of this etymon is similar to that of English 'breast'; i.e. it can refer to the general thoracic area (like 'chest'), or specifically to a woman's mammary gland. In Southern Loloish this root typically occurs after PTB ***s-lwaŋ** BREAST (§1.9.4) [q.v.]. The phonological resemblance of this root to PTB ***b(y)at** VAGINA (§1.9.5) [q.v.] seems entirely fortuitous.

1.1.2. Deng

Naxi (Eastern)	ɑ^{13}**pv**^{33}	chest (of body)	He Jiren & Jiang Zhuyi, eds. 1985

(13) PTB *tsyir ≷ *tsyu:r WRING / SQUEEZE

This etymon is set up as ***tsyur** (= ***tśur**) in *STC* #188 with the proto-gloss SQUEEZE/WRING, on the basis of the Bahing, Bunan, Hakha, and Kanauri forms, the latter glossed as 'to milk'. There does not seem to be any allofamic connection between this root and PTB ***dzy(ə/o)w** SUCK / KISS / BREAST / MILK (§1.9.4).

0.1. Tibeto-Burman (previously published reconstructions)

3.2. Qiangic			
Qiang (Mawo)	**stir**	wring (e.g. wet cloth)	Sun Hongkai et al. 1991:554.8

(14) PQ *s-lu MILK

This root so far seems to be confined to Qiangic (including Tangut). The ***s-*** prefix is reconstructed on the basis of the voiceless liquids in Ergong, NW rGyalrong, and (Sofronov's) Tangut. The aspirated dental stops in Ergong and NW rGyalrong appear to be secondary "extrusions" of the previous liquids. There is no apparent connection with PTB ***s-lwaŋ*** BREAST (§1.9.4), which always means BREAST, not MILK.

3.1. Tangut			
Tangut [Xixia]	**lhi̯u**^{1}	milk	Sofronov c1978
	ȥi̯u^{2}	milk	Sofronov c1978

	dut.say?	nipple	Caughley 1990:5.4.1

[a] Lit. "milk-container"; Newar **pwala** 'round object, container'.

[b] According to K. P. Malla (p.c. 2007), the basic meaning of this form is 'breast', although it is also used euphemistically for 'vagina'. He is doubtful that the same word is used for all three glosses.

(16) PTB * $\begin{matrix}\mathbf{m}\\\mathbf{s}\end{matrix}$ **-tuŋ DRINK / SUCKLE**

This widespread etymon is attested all over TB (NE Indian Areal Group, Himalayish, Lolo-Burmese, Qiangic). It comprises both a simplex and a causative variant, i.e. DRINK (with underlying nasal prefix) vs. GIVE TO DRINK (with underlying ***s-*** prefix), and by extension SMOKE (tobacco) vs. GIVE TO SMOKE. (Cf. Japanese *tabako wo nomu* 'smoke ("drink") tobacco'.)

The nasal prefix is clearly reflected in Himalayish (Baima, Amdo Tibetan), Qiangic (Namuyi, Tangut), and Loloish (e.g. Yi Dafang, Luquan, Nasu, Xide), sometimes with an actual nasal segment, sometimes more indirectly (as in Lahu **dɔ̀**, where the voiced initial is a reliable reflex of PLB *prenasalization).

There is a phonologically excellent Chinese comparandum with the meaning MILK: 湩 [*GSR* 1188c]. See below.

Loloish has a simplex/causative alternation in this root: cf. Lahu **dɔ̀** 'drink' ⨯ tɔ 'give to drink'.

9.0.1. Old Chinese

Chinese (Old/Mid)	**tḭung/tḭwong-**	milk	Karlgren 1957:1188c
	tung/tung-	milk	Karlgren 1957:1188c

9.0.3. Modern Chinese

Chinese (Mandarin)	**tung**	milk	Karlgren 1957:1188c

Chinese comparandum

潼 OC ***tḭung/*tung**, *GSR* #1188c 'milk'; Li 1971: ***tjungh/*tungh**; Baxter 1992: ***tjongs/*tongs**; Mand. **dòng ~ zhòng**.

The correspondences are a perfect match. OC ***u** (Li)/***o** (Baxter) regularly corresponds to PTB ***u** before velar codas.

However, there is a competing etymology suggesting that this word is an early borrowing from a Central Asian language (Pulleyblank 1962:250ff). This etymology is supported by the fact that this is not the ordinary Chinese word for 'milk'; early glosses define it as 'milk (of cows and mares)'. The Chinese themselves did not drink such milk, so it would not be surprising if this word were borrowed from nomadic peoples.
[ZJH]

(17) PKir *pil MILK (v.) / SQUEEZE / PRESS OUT

This etymon has so far been identified only in Himalayish.

2.1.1. Western Himalayish

Bunan	**pel** tsi	milk	Sharma 1991a:5.4.3

2.3.1. Eastern Kiranti

2.4. Kham-Magar-Chepang

Kham	**pi:**-nyā	milk a cow (v.)	Hale 1973:03b.41

(18) PTani *bruŋ SUCK

This root is set up for "Proto-Tani" (part of the traditional "Mirish" or "Abor-Miri-Dafla" group) by Jackson T. Sun (1993). The possible Kanauri cognate suggests that it might actually be more widely distributed in TB.

1.1.1. Tani

**Tani*	***bruŋ**	suck	Sun 1993a:406

(19) PTB *m-ʔum ⩙ *mum HOLD IN MOUTH / CHEW / EAT / KISS

This root frequently occurs in compounds in Northeast Indian languages before PTB ***m-pup ⩙ *pip** KISS / SUCK / SUCKLE (§1.9.4) (e.g. Milang **mum-pup**). In fact several of the forms treated under PTB ***m-pup ⩙ *pip** as having prefixal ***mV-** (e.g. Angami **me^{31}bo^{11}**) might be better analyzed as compounds with ***mum** as the first constituent.

STC reconstructs a root ***um** (#108), later changed to ***(m)-u·m** 'hold in the mouth/mouthful' on the basis of a group of zero/glottal stop-initialled forms like WT **(ʔ)um** and the prefixed Jingpho form **məūm**. These have been combined with a group of NE India forms meaning 'kiss' to form the present set.

Chinese (Old)	**ʔəmx**	hold in the mouth	Coblin 1986:95
9.0.2. Middle Chinese			
Chinese (Middle)	**ʔəm:**	hold in the mouth	Coblin 1986:95

[a] The first syllable of this form looks like PTB ***mam** BREAST (§1.9.4), but the gloss 'kiss' shows that it belongs in PTB ***m-ʔum** ≍ ***mum** HOLD IN MOUTH / CHEW / EAT / KISS (§1.9.4).

[b] The Lushai (Mizo) and Lai forms with voiceless nasals reflect a variant with the ***s-** prefix.

[c] Mzieme **mam** looks like PTB ***mam** BREAST (§1.9.4), but the gloss 'kiss' shows that it belongs here.

Chinese comparanda

A Chinese comparandum was recognized already in *STC* #181 as 唵 ***ʔəm**, Mand. **ǎn**. This form does not occur in *GSR* #614, but is to be found in Karlgren 1923 (*Analytic Dictionary*, set #238, p. 96). [JAM]

唵 **ǎn** 'hold in the mouth, put in the mouth'

GSR: not in *GSR* #614 Karlgren: ***·əm** Li: ***·əm** Baxter: ***ʔɨ/umʔ**

In Baxter's system the vowel cannot be determined from the Middle Chinese vocalism, and in this case there is also insufficient rhyming or phonetic-series evidence.

The correspondence between OC ***ə** (Li)/***ɨ/u** (Baxter) and PTB ***u** before labials is regular. See under PTB ***m-ts(y)(u/i)p** SUCK / KISS / BREAST / MILK (§1.9.4) for examples. [ZJH]

(20) PTB *dum KISS / SUCK

This root is firmly established for the NE Indian Areal Group, with cognates in the Northern Naga and Barish subgroups. There are also convincing but so far isolated cognates in Himalayish (Chepang) and Loloish (Nesu).

Nesu	**du**[21]	kiss (v.)	Chen Kang 1986b:3.9.5

(21) PTB * $\begin{matrix}\mathbf{p}\\\mathbf{b}\end{matrix}$ **i ROUNDED PART / NIPPLE / FOREHEAD / SHOULDER**

This root typically occurs as the last syllable in compounds for such bodyparts as CHEST / BREAST, SHOULDER, FIST, FOREHEAD, and BUTTOCK (cf. Lahu **ni-ma-qa-pɨ**, **làʔ-qá-pɨ**, **làʔ-chîʔ-pɨ**, **nā-qā-pɨ**, and **qhê-qhɔ-pɨ**, respectively).

Hayu **phi** and the Jinuo forms with aspirated initials may descend from a separate root, especially since these morphemes do not occur as the final member in compounds.

This etymon resembles, but seems distinct from, PTB ***pu** BALL / EGG / ROUND OBJECT (§1.9.1), which also refers to a variety of rounded body parts. It is sometimes difficult to distinguish these two roots in Lolo-Burmese, perhaps due to insufficient phonemicization in the sources.

Naxi (Yongning)	n̥u^{31}**bi**^{33}	breast	SUN Hongkai et al. 1991:259.29

[a] This form is also cited in DL:852 as **pè-pɨ** 'crop of bird; (human) breast, chest'. It is co-allofamic with **pè-pì(-qu)** 'chicken's breast' (cf. also **pè-qu** 'goiter').

[b] The trigraph **-rgh** was described by Fraser as representing "the sound of involuntary retching", and seems to have represented the high central vowel **ɨ**.

(22) PTB * p/b rat BREAK / WEAN

Jingpho **pràt**, **šə pràt** 'bear, give birth' are probably to be assigned to this etymon, the semantic connection being the separation of the child from the mother.

See ***brat** ⪤ ***prat** 'cut apart, cut open', *HPTB*:330,334.

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

6.1. LOLO-BURMESE			
**Lolo-Burmese*	***(ʔ-)brat** ⪤ **C_{VD}-prat**	cut (open)	Matisoff 1985a:027
	*C-**prat**^{L} ⪤ ʔ-**brat**^{L}	cut apart / cut into	Matisoff 2003a:585
6.1.1. BURMISH			
Burmese (Written)	nui' **phrat**	wean	Matisoff 1993
	phjɑt^{4}	cut off / sever (transitive) (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1341.26
	phrat	cut (with knife) (v.)	Marrison 1967
	phrat	cut something in two (causative); cut in two	Matisoff 1985a:027; Benedict 1976a; LaPolla 1987:169
	phrɑt^{4}	cut (paper, cloth)	HUANG Bufan & DAI Qingxia, eds. 1992:1167.26
	pjɑt^{4}	cut off / sever (intransitive) (v.)	HUANG Bufan & DAI Qingxia, eds. 1992:1341.26
	prat	cut in two (simplex); cut in two (be v.)	Matisoff 1985a:027; Benedict 1976a
6.1.2.2. CENTRAL LOLOISH			
Lahu (Black)	**pèʔ**	split, crack, get cracked	Matisoff 1988a:1072
	phèʔ	cut open; perform a surgical operation	Matisoff 1985a:027 [a]
	phʌ^{54}	cut open (fish)	SUN Hongkai et al. 1991:636.33

[a] The Lahu expression **cú phâʔ** means 'to wean', but the second syllable descends from PLB ***pak** 'take apart; dismantle; separate from' (*LTSR* #64), not from ***prat**. (The regular Lahu reflex of ***-at** is **-eʔ**.)

Chinese comparanda

別 OC ***pi̯ɑt**, *GSR* #292a 'divide, separate'; Li 1971: ***pjiat**; Baxter 1992: ***prjat**; Mand. **bié**.

There is a related Chinese word with voiced initial, *GSR* ***b'i̯ɑt** (*ibid.*), also written 別, meaning 'to be different'. This voicing alternation is a common Old Chinese morphological process seen in transitive/intransitive verb pairs. Although the TB etymon also has a voicing alternation, this is likely to be an independent phenomenon.

The Chinese and PTB forms correspond perfectly. This cognate set has been proposed by Gong (1995 #209). Gong 2001 reconstructs the intransitive Chinese verb as ***N-brjat** > ***brjat** and the transitive counterpart as ***s-brjat** > ***s-prjat** > ***prjat**.

列 OC ***li̯ɑt**, *GSR* #291a 'divide, distribute, arrange, rank'; Li 1971: ***ljat**; Baxter 1992: ***C-rjat**; Mand. **liè**.

裂 OC ***li̯ɑt**, *GSR* #291f 'tear asunder, divide'; Li 1971: ***ljat**; Baxter 1992: ***C-rjat**; Mand. **liè**.

These two homophonous Chinese words are clearly related. Gong (2001) relates 裂 **liè** to the two words written with 別 **bié**, while Schuessler (2007:167) says that 別 **bié** is probably cognate to 列 **liè**.[*] Gong reconstructs 裂 **liè** as ***brjat** > ***rjat**, treating it as the root from which the two words written with 別 **bié** are derived.

On Baxter's ***C-r-**, see the discussion under PTB ***(r/l)um** EGG (§1.9.1). The relationship to 別 **bié** suggests that in Baxter's reconstruction the consonant represented by ***C** would most likely be reconstructed as ***b**.

[ZJH]

[*] Schuessler gives the Baxter system reconstruction of 別 as ***prjet**. While this is a possible reconstruction, ***prjat** is more likely given the word-family connections.

(23) PKC *θoop KISS / SUCK

This root is perhaps to be assigned to PTB ***s-rup** SNUFF UP / SIP / SUCK (§6.6).

1.9.5 Vagina

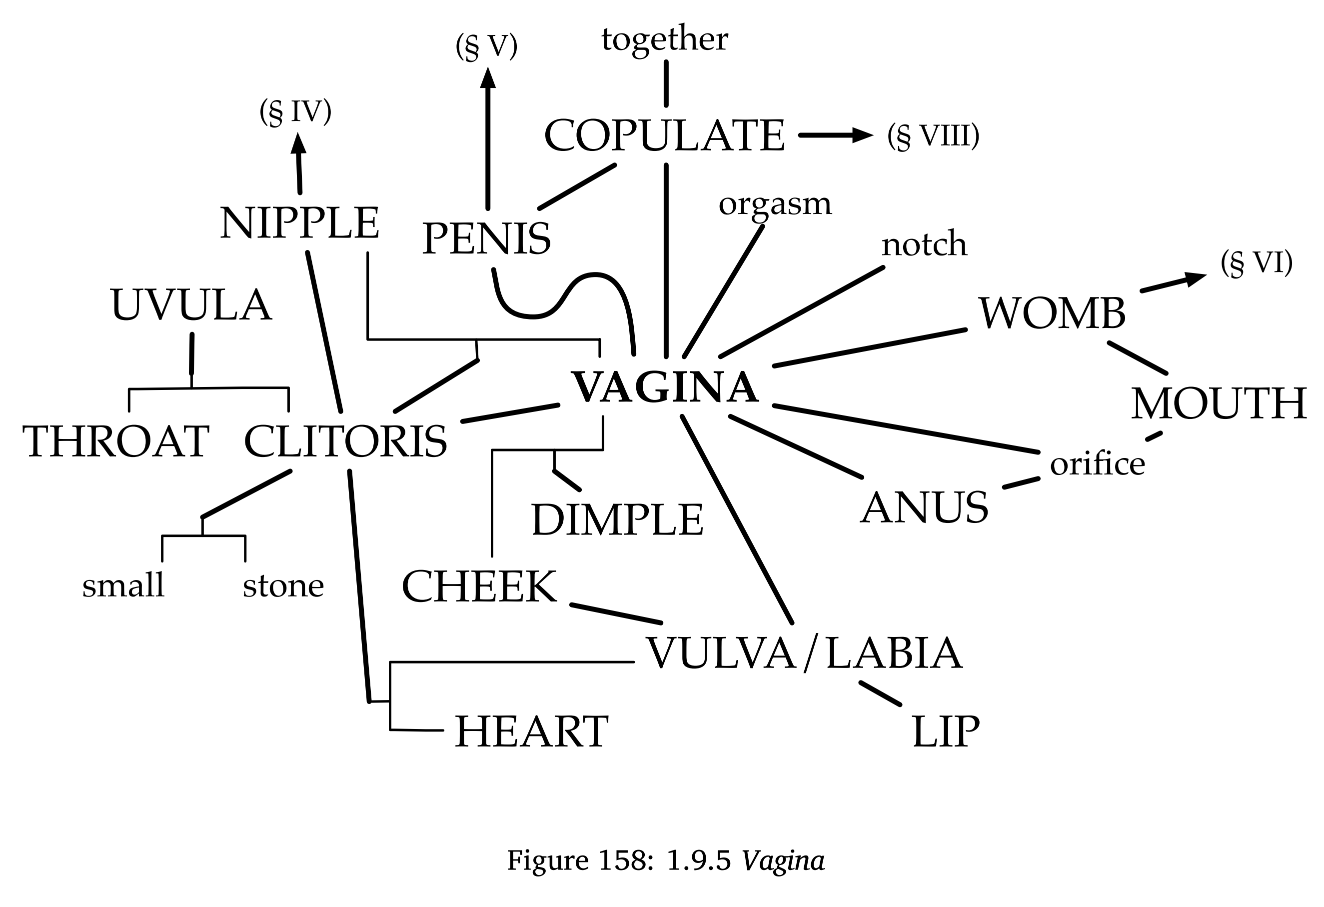

Figure 158: 1.9.5 *Vagina*

ETYMA for VAGINA and PENIS show frequent interchange and/or phonological similarity, by a phenomenon felicitously dubbed "genital flipflop" by Benedict.[*] The roots where this interchange is most evident include: PTB ***s-tu** VAGINA / VULVA (§1.9.5) : PTB ***k-tu-k** PENIS (§1.9.7); PTB ***li-n** VAGINA (§1.9.5) : PTB ***m-ley** ⪤ ***m-li** PENIS (§1.9.7); PTB ***s/m-ti** CLITORIS / VAGINA (§1.9.5) : PTB ***ti-k** PENIS (§1.9.7); NEIA ***mo** VAGINA (§1.9.5) : PTB ***maːk** PENIS / MALE / SON-IN-LAW. This relationship is indicated by a *yin-yang* curve in the semantic diagram.

ROOTS for VAGINA also show interchange with etyma for MOUTH. See especially PTB ***dzyuk** ⪤ ***tsyuk** VULVA (§1.9.5); PTB ***si(ŋ/k)** MOUTH / LIP (§1.9.5); and PTB ***tsyin** VAGINA / CLITORIS / MOUTH / LIP (§1.9.5).

There is also an association between VAGINA and ANUS (see, e.g. PTB ***huŋ** HOLE (§1.9.5) and PTB ***kwar** HOLE / ORIFICE / INNARDS (§3.2.7)).

AN association between CLITORIS and UVULA is shown by Mizo **daŋ-mɔn** 'uvula', literally "palate-clitoris". See *VSTB*, p. 67.

WE are not including roots for FEMALE/WOMAN in this chapter, since they seem quite independent of etyma for the "female organs". (Apparent exceptions are a few forms from rGyalrong, e.g. NW rGyalrong **tə stə** 'female' < PTB ***s-tu** VAGINA / VULVA (§1.9.5); but these may be misglossed.) On the other hand, words for MALE do frequently interchange with words for the male genitals; some of these etyma are accordingly discussed in Chapter 1.9.7 below.

(1) PTB *s-tu VAGINA / VULVA

This is by far the best-attested root for VAGINA in TB, with reflexes in the NE Indian Areal Group, Himalayish, Lolo-Burmese, Karenic, and Qiangic. While most of the supporting forms point to a prefixal ***s-** plus ***t-** root-initial, a few reflexes seem to have undergone metathesis, e.g. Hayu **pep-tshu**, Lakher (Mara) ^{3}**tshu**, etc.

[*] Benedict 1979, "A note on Karen genital flipflop" (*LTBA* 5.1:21-24); 1981 "A further (unexpurgated) note on Karen genital flipflop" (*LTBA* 6.1:103); 1991 "Genital flipflop: a Chinese note" (*LTBA* 14.1:143-6).

Some of the reflexes are transcribed with high front vowel **-i** instead of **-u**, but this fronting seems to be secondary. Compare, e.g. the Abor-Miri, Apatani, and Galo forms; or the Chepang, Dumi, and Bantawa reflexes, etc.

[a] For the front vowel in Dumi **diʔ**, cf. the variously transcribed Bantawa forms, probably actually with [ɨ].
[b] Ahi **ni^{21}** is the same as the first syllable of Ahi **ni^{21} tɕi^{22}** 'lip'.

Chinese comparandum

Comment: Cf. comparanda for PTB ***tuk ≍ *(t/d)wa(k/ŋ)** MEET (§6.13), in particular the etyma 屬 **zhǔ** and 屬 **shǔ**.

(2) PTB *dzyuk ≍ *tsyuk VULVA / VAGINA / MOUTH / LIP

(2a) PTB *dzyuk ≍ *tsyuk VULVA

This etymon ranges semantically between VAGINA/VULVA and MOUTH/LIP. Reflexes with the latter meanings are assembled separately below as PTB ***tsyuk** MOUTH / LIP (§1.9.5). Another root with similar semantic range is PTB ***si(ŋ/k)** VAGINA (§1.9.5) [q.v.].

This etymon is well-attested in Burmish, with good-looking but scattered cognates in Loloish, the NE Indian Areal Group, and Himalayish. It seems best to reconstruct this root with a palatal (rather than dental) affricate, as demonstrated in Matisoff 1969 (cf. the discussion in *STC*, n. 178 (p. 53)). Some reflexes of this etymon are cited in Bauer's far-ranging article (Bauer, R. 1991. "Sino-Tibetan *vulva", *LTBA* 14.1:147-172).

See TBRS #77, #77a, #77b.

Nasu	**tʂo̲**^{21} pi̲^{21}	vagina	Chen Kang 1986b:10.4.1

(2b) PTB *tsyuk MOUTH / LIP

This is undoubtedly the same etymon as PTB ***dzyuk** ⩙ ***tsyuk** VULVA (§1.9.5), with obvious semantic connections. Reflexes with meanings like MOUTH or LIP have so far been found in the NE Indian Areal Group (including Barish [Atong] and the outlying Sulung language), Himalayish (including Bodic [Tshona] and Kiranti), and Burmese (which has homophonous forms with both the VAGINA and MOUTH meanings).

1.1. "North Assam"

Sulung [Puroik]	**ɕək**^{33}	mouth	Sun Hongkai 1993; Sun Hongkai et al. 1991:242.52

1.7.1.3. Koch

Atong	ku-**cuk**	mouth	Matisoff 1987

2.1.2. Bodic

Tshona (Wenlang)	**tɕ^{h}uŋ**^{55} min^{55}	lip	Lu Shaozun, ed. 1986

2.3. Kiranti

**Kiranti*	***cok** siŋ	lip	Michailovsky 1991:108 [a]

2.3.3. Central Kiranti

Dumi	kəm **tsok** si	lips (human); mouth (buccal cavity) and lips; beak, bill,	Driem 1993; Driem 1993
	tsok si	lip	Michailovsky 1991:108; Driem 1993

6.1.1. Burmish

Burmese (Written)	ʔa-**cok**	bottom of mouth	Matisoff 1987

[a] Kiranti **cok siŋ** demonstrates the independence of PTB ***tsyuk** MOUTH / LIP (§1.9.5) from PTB ***si(ŋ/k)** MOUTH / LIP (§1.9.5).

(3) PTB *si ŋ/k VAGINA

This etymon is also best attested in Himalayish, with some support from the NE Indian Areal Group, and perhaps from Qiangic.

For the moment it seems best to keep this set of forms distinct from PTB ***si(ŋ/k)** MOUTH / LIP (§1.9.5). In spite of the plausible phonosemantic association between these etyma, the reflexes are different in languages like Garo (Bangladesh), Kokborok, Bahing, Bantawa, and Chepang [qq.v.].

Evidence for a final velar consonant comes from Barish (especially Lalung), Hayu, and Kanauri.

Complicating the picture is the fact that in some languages the putative cognate is an open syllable that occurs as the second element of compounds with PTB ***pu** VAGINA (§1.9.5) or PTB ***b(y)at** VAGINA (§1.9.5). In such forms, it is possible that the second syllable may actually represent PTB ***sey** FRUIT / ROSE / ROUND OBJECT (§1.2.6). (Cf. e.g. Bantawa **si** 'bear fruit', Newar **maa-si** 'vagina; breast; milk', **si** 'morpheme in fruit names', Lahu **cha-ši** 'vagina'.)

1.7.1.1. Bodo

Kokborok	**ši**-paʔ	vagina	Tripuri & Jurafsky 1988
Lalung [Tiwa]	**she?**	vagina	Balawan 1965:63

2.3.2. Southern Kiranti

Bantawa	phu **ci**	vagina; vulva; vagina (baby talk)	Rai 1985; Rai *et al.* 1984:60
	phu **ci** dhü	vagina	Rai *et al.* 1984:60

2.3.4. Western Kiranti

Bahing	pi-**si**	vagina	Matisoff 1987
Hayu	pu-**tsing**	vagina	Matisoff 1987 [b]

2.4. Kham-Magar-Chepang

Kham	ti **si:**	clitoris	Watters & Watters 1989

3.2. Qiangic

Qiang (Yadu)	p^{h}o **ʂ**	vagina	Dai Qingxia 1989q:146 [c]

[a] Notice the reduction of the vowel to zero in Kanauri **ts**.

[b] Note the variation between final velar nasal and zero-final in the Hayu forms. See also the similar Hayu reflexes of PTB ***si(ŋ/k)** MOUTH / LIP (§1.9.5).

[c] Qiang **ʂ** looks like the fused initial consonant of the second syllable of an original compound, descended from PTB ***si(ŋ/k)** VAGINA (§1.9.5). Fusion of compounds into monosyllables is a striking characteristic of the Qiangic languages (e.g. Benedict 1983, "Qiang monosyllabization: a third phase in the cycle", *LTBA* 7.2:113-4).

(4) PTB *si ŋ/k MOUTH / LIP

This etymon is best attested in Himalayish, with some support also from the NE Indian Areal Group and Asakian, and perhaps Qiangic and/or WB. The reflexes have either simple sibilant or affricate initials. I presume the proto-initial to have been ***s-**, in view of the natural tendency to develop secondary affrication before **-i-**.

It is very possible that this etymon belongs together with PTB ***si(ŋ/k)** VAGINA (§1.9.5), in a single word-family, in view of the similar semantic range of PTB ***dzyuk** ⩙ ***tsyuk** VULVA / VAGINA / MOUTH / LIP (§1.9.5).

A particularly interesting form is Newar **mhu tu si**, where **mhu tu** means 'mouth', and **si** means 'corner (of the mouth)'. The basic meaning of **si** is 'border, margin, bank', as in **khu-si** 'riverbank', **mi-kha-pu-si** 'eyebrow' (K. P. Malla, p.c.). Thus Newar **si** has nothing to do with the present etymon.

This etymon seems quite distinct from TGTM ***suŋ** MOUTH (§1.3.1), which so far has been attested only in Himalayish.

1.1.1.2. Eastern Tani

Milang	caŋ-**ci**	mouth	Tayeng 1976
	caŋ-**ci**-ci-ma	spit	Tayeng 1976
	cip-pa	beak / bill	Tayeng 1976 [a]

[a] Note assimilation of the medial consonants.

Langsu (Luxi)	**tʃɛʔ**^{55}	narrow (adj.)	Huang Bufan & Dai Qingxia, eds. 1992:0977.31

[a] Ersu **sɻ**^{55} **mpha**^{55} 'mouth'; **ndzo**^{55} **pi**^{55} 'skin'.

(5) PTB *tsyin VAGINA / CLITORIS / MOUTH / LIP

This etymon, with final dental nasal, seems so far to be relatively rare; yet its occurrence in widely separated languages like Jingpho, Meithei, and Chepang require us to set it up for PTB. Like PTB ***dzyuk** ⩙ ***tsyuk** VULVA / VAGINA / MOUTH / LIP (§1.9.5), PTB ***si(ŋ/k)** MOUTH / LIP (§1.9.5), PTB ***si(ŋ/k)** VAGINA (§1.9.5), the semantic range of the present etymon includes both VAGINA and MOUTH/LIP; but all of these etyma, despite their phonosemantic similarity, may well be independent.

1.4. Meithei

Meithei	**chim** ban	lip	Marrison 1967 [a]
	chin	mouth	Marrison 1967
	chin bân	lip	Matisoff 1987

	jìn-mūn	female pubic hair	Matisoff 1987; Matisoff 1987
	jìn-sìn	nymphae clitoris	Matisoff 1987 [b]
	jìn-tī	labia pudenda	Matisoff 1987

2.4. Kham-Magar-Chepang

Chepang (Eastern)	**cin**	clitoris	Caughley 1990:10.4.4

[a] Note the optional assimilation of the medial consonants.

[b] Literally "heart of vulva".

(6) PTB *b(y)at VAGINA

This root is quite widely distributed in TB, appearing in the NE Indian Areal Group, Himalayish, Lolo-Burmese (including Jinuo), and Bai. It was reconstructed as PLB ***b(y)et** in Matisoff 1972b #5 (*The Loloish Tonal Split Revisited*) and *HPTB* p. 375, but that has been revised here to ***b(y)at** to accommodate those reflexes that have **-a-** vocalism (e.g. WB, Kokborok, Bunan). Bradley's (1979) PLB reconstruction without medial glide, ***bat**, does not account for certain Loloish reflexes with front vowels (e.g. Lahu **cha-pè?**, since the regular Lahu reflex of ***-at** is **-e?**). Bauer 1991 (*LTBA* 14.1) treats this etymon as part of a binome ***dzu(k)-byet** (see PTB ***dzyuk** ⩙ ***tsyuk** VULVA (§1.9.5) for the first element), and adduces parallels in Hmong-Mien languages and Chinese. Benedict (1990) hypothesizes a "Proto-Austro-Kadai" binome ***tu-pi** (for the first element see PTB ***s-tu** VAGINA / VULVA (§1.9.5)). These freewheeling proposals remain to be evaluated by future generations. There does not seem to be any connection between this etymon and PTB ***pu** VAGINA (§1.9.5), which is confined mostly to Himalayish, and whose reflexes have back vowels.

The Bai forms listed below may well be loans from Chinese.

K. P. Malla suggests that the first syllable of Newar (Dolakhali) **pi-ci** 'vagina' really means 'breast' (see Kathmandu Newar **pi-si** 'breast' under PTB ***(p/b)i** ROUNDED PART / NIPPLE / FOREHEAD / SHOULDER (§1.9.4) above), but can be used euphemistically to mean 'vagina'. In the other Himalayish forms cited here, however, this morpheme does definitely seem to mean 'vagina'.

Limbu	__hi__-rā	vulva	Matisoff 1987; Matisoff 1985a:184 [a]
	__hi__-rā-hong	vagina	Matisoff 1987; Matisoff 1985a:184
	__hi__-rā-mu-rik	female pubic hair	Matisoff 1987
	__hi__ ra	vagina	Michailovsky 1989b

[a]The semantic association VAGINA ⟷ love has not been noted elsewhere, but the phonological fit of this form with the present etymon is perfect.
[b]Tamang ^{1}__pit__ is of key importance in establishing the __-t__ final for Himalayish.
[c]This is an antonymic compound meaning literally “vagina-penis”.
[d]Ahi __ni__^{21} is the same as the first syllable of Ahi __ni__^{21} __tɕi__^{22} ‘lip’.

Chinese comparandum

According to H. Stimson 1966,* the taboo word 屄 (Mand. **bī**) does not appear in dictionaries until the 17th century. Benedict 1988* posits OC ***b’iĕt**, underlying such modern dialect forms as Hakka **piet**^{8} and Min Kienyang (建陽) **pie**^{7}. This Chinese word may well be the source of the Baic and some of the Loloish forms listed above.
[JAM]

Chinese dialect forms of this word point to both open and closed-syllable ancestral forms, for example Schuessler 2007:161 notes Amoy (= Xiamen) **tsi**^{A1}**-pai**^{A2}. This suggests early Chinese variants ***pe** and ***pet**, the latter of which corresponds well to PTB ***byat**. (For the correspondence between OC ***e** and PTB ***ya**, cf. /\ OC ***pret** (Baxter) ‘eight’, PTB ***b-ryat**, Mand. **bā**. However Schuessler believes that this word is derived from ‘to open’ (PST ***pe**), with the addition of ***-t** marking “nouns of naturally occurring objects”. See Schuessler 2007:161, 414. This hypothesis could also explain the etymology of the PTB etymon under discussion here.
[ZJH]

(7) PTB * h k ay VAGINA

This root seems fairly well attested, although it shows an unusual alternation between initial ***k-** and ***h-**, which is perhaps paralleled in PTB ***r-ka** EARTH / GROUND / SOIL (§3.2.11) and PTB ***r-kəw** ⩤ ***hu** STEAL (§6.21). See Matisoff 1997* and *HPTB* p. 57.

1.3.4. TANGKHULIC: ***haj** VAGINA			
*Tangkhulic	*__haj__	vagina	Mortensen 2012:385
Tangkhul	__hai__ khur	vulva	Matisoff 1987
	__hai__ ra	semen	Matisoff 1987 [a]

[a]Tangkhul **hai ra** certainly looks like a case of “genital flipflop”, i.e. semen is viewed as “vagina-semen”, since that is its destination.

*Hugh Stimson, “A tabu word in the Peking dialect” (*Language* 42.2:285-294). Cited in Bauer 1991:150.
*Untitled manuscript circulated as a handout at ICSTLL #21, Lund, Sweden.
*“Primary and secondary laryngeal initials in Tibeto-Burman.”

	__hay__(-khur)	vulva	Matisoff 1985a:184

Limbu	__hi__-rā	vulva	Matisoff 1987; Matisoff 1985a:184 [a]
	__hi__-rā-hong	vagina	Matisoff 1987; Matisoff 1985a:184
	__hi__-rā-mu-rik	female pubic hair	Matisoff 1987
	__hi__ ra	vagina	Michailovsky 1989b

[a]The first syllable **hi-** is a lookalike of the vulgar Siamese word **hĭi**.

(8) PTB *tsya VAGINA / COPULATE

This etymon is so far sparsely attested, with the best putative cognates occurring in Loloish (Lahu, Jinuo), Chin (Lakher [Mara]), and perhaps West Himalayish (Pattani).

1.2.3. MARAIC			
Lakher [Mara]	__cha__ nô-tao	copulate	Matisoff 1987
	__cha__-ku	copulate	Matisoff 1987

	__cha__-mâ	labia	Matisoff 1987
	__cha__-ɣì	vaginal secretion	Matisoff 1987

[a]Pattani **tsa** bears a resemblance to PTB ***tsaŋ** CLITORIS (§1.9.5), but the usual Pattani reflex of ***-aŋ** is **-aŋ** (e.g. **hraŋ** ‘horse’ < PTB ***s/m-raŋ** HORSE (§2.1.7) ***s-raŋ**; ***maŋ-api** ‘dream’ < PTB ***s/r-ma(ŋ/k)** DREAM (§1.1.4.2) ***maŋ**).
[b]The analysis of Kham **ca** is tentative.

(9) PTB *li-n VAGINA

This root is confined mostly to Karenic, with possible cognates in the NE Indian Areal Group and Himalayish. The Lotha form with nasal prefix makes this root look very much like PTB ***m-ley** ⩤ ***m-li** PENIS (§1.9.7), suggesting that this might be yet another example of “genital flipflop” (see Benedict 1979, *LTBA* 5.1). For the moment, the final nasal in some Karenic forms is regarded as suffixal.

(10) PTB *pu VAGINA

This root appears mostly in Himalayish, with a possible cognate from Qiangic. The second syllable of Karbi **mak-phu** ‘mons Veneris’ seems unrelated. In view of the gloss it probably means something like ‘swelling; protuberance’. It bears a resemblance to other reflexes of the well-attested root ***bwam** ⩤ ***pwam** PLUMP / SWOLLEN (*STC* #172; *HPTB* pp. 249, 252, 341, 518).

2.1.4. TAMANGISH			
Chantyal	ku __pu__	vagina	Noonan *et al.* 1992:10.4.1
	ku __pu__-ye gala	vulva / labia	Noonan *et al.* 1992:10.4.2 [a]
2.3.2. SOUTHERN KIRANTI			
Bantawa	__phu__ ci	vagina; vulva; vagina (baby talk)	Rai 1985; Rai *et al.* 1984:60
	__phu__ ci dhü	vagina	Rai *et al.* 1984:60
	__phu__ ri	vagina	Rai 1985

Hayu	__pu__-tsing	vagina	Matisoff 1987
2.4. KHAM-MAGAR-CHEPANG			
Kham	__pə__ re:	vagina	Watters & Watters 1989
3.2. QIANGIC			
Qiang (Yadu)	__p^{h}o__ ʂ	vagina	DAI Qingxia 1989q:146 [b]

[a]Chantyal **gala** ‘cheek’; **-ye** GENITIVE. Lit. “vagina’s cheeks”.
[b]Qiang **ʂ** looks like the fused initial consonant of the second syllable of an original compound, descended from PTB ***si(ŋ/k)** VAGINA (§1.9.5). Fusion of compounds into monosyllables is a striking characteristic of the Qiangic languages (e.g. Benedict 1983, “Qiang monosyllabization: a third phase in the cycle”, *LTBA* 7.2:113-4).

(11) NEIA *mo VAGINA

This root is confined strictly to the Naga languages with the meaning VAGINA. Several of the reflexes in this set resemble forms that have been assigned to PTB ***ma:k** SON-IN-LAW / GENITALS / PENIS / MALE / VAGINA (§1.9.7) [q.v.], a root which also has several reflexes that mean 'vagina'.

1.3.2. ANGAMI-POCHURI GROUP

Angami Naga	^{5}u^{2}**mie**	vagina	Weidert 1987:474	[ab]
Angami (Kohima)	(u) **mie^{31}**	vagina	Nienu 1990a:10.4.1	
	(u) **mie^{31}** mia^{55}	female pubic hair	Nienu 1990a:10.4.5

Mao	^{2}o^{5}**mo**	vagina	Weidert 1987:474	
Rengma (Southern)	^{5}a^{1}**mo**	vagina	Weidert 1987:474	
Sema [Sumi]	^{1}a^{1}**mo**	vagina	Weidert 1987:474	

1.3.3. ZEME GROUP

Liangmei	ka-**mo**	vagina	Weidert 1987:474
Rongmei / Nruanghmei	**mæ̀u**	vagina	Weidert 1987:474
Zeme	^{1}pe^{5}**mu**	vagina	Weidert 1987:474

[a]Angami **^{5}u** is a general body-part prefix.

[b]The vowel of Angami **^{2}mie** seems an unlikely reflex of ***-o** (< NEIA ***mo** VAGINA (§1.9.5)); yet the alternative of assigning this form to PTB ***ma:k** SON-IN-LAW / GENITALS / PENIS / MALE / VAGINA (§1.9.7) seems no better, since the regular Angami reflex of ***-ak** seems to be **-o** (e.g. WEAVE ***dak** > Ang. **do**; ANT ***-rwak** > Ang. **cho**).

(12) PTB *tsyum VAGINA / COPULATE

This etymon has been found in a few Himalayish languages (Bantawa, Lepcha, Tamang, and perhaps Newar), as well as in the NE Indian Areal Group. The basic meaning seems to be 'come together'. There is a perfect fit between the Karbi and Lepcha forms. The analysis of the Karbi form is as follows: **i** 'sleep' + **rap** 'befriend; be together' (see PTB ***lyap** ≍ ***rap** COPULATE / LOVE (§1.9.6)) + **chom** 'suffix indicating action performed together' (Walker 1925:37).

1.3.4. TANGKHULIC

Tangkhul	kha ŋa **shām**	copulate	Matisoff 1987

1.5. MIKIR [KARBI]

Mikir [Karbi]	i rap-**chom**	copulate	Matisoff 1987

2.1.3. LEPCHA

Lepcha	**ch'o**	harmonize; be congruous with	Mainwaring 1898:92	
	ch'o da	lie together	Mainwaring 1898:92	[a]
	ch'om	have carnal connection with women	Mainwaring 1898:92	

2.1.4. TAMANGISH

Tamang (Risiangku)	^{2}**tsjum** ʈu	vagina, vulva (n.)	Mazaudon 1991:10.4.4
Tamang (Sahu)	^{2}**cjum**-ʈ̊u	vagina	Matisoff 1987

2.2. NEWAR

Newar (Dolakhali)	**cũ**	vagina / breast / milk	Genetti 1990b	[b]

2.3.2. SOUTHERN KIRANTI

Bantawa	sen **com**	vagina	Rai 1985

[a]Lepcha **da** is a reflexive morpheme (cf. Lahu **dàʔ** < PTB ***m-dak**). See *HPTB* pp. 318, 320.

[b]Although Newar **cũ** resembles reflexes of PTB ***dzy(ə/o)w** SUCK / KISS / BREAST / MILK (§1.9.4), the nasalization of the vowel leads me to include it in the present set.

(13) PTB *wyan VAGINA

This is a speculative root, occurring only in Karbi, Tangut, and Bai.

1.5. MIKIR [KARBI]

Mikir [Karbi]	**ven**-the	vagina	Matisoff 1987	
	wen the	vagina	Grüssner 1979:217	

3.1. TANGUT

Tangut [Xixia]	tɪ **wẹ^{1}**	vagina?	Sofronov c1978	[a]

8. BAI

Bai (Jianchuan)	pi̱^{44} **ʔuĩ^{33}**	vagina	ZHAO Yansun 1990:10.4.1

[a]According to M. V. Sofronov 1978 there is some doubt as to the exact meaning of the Tangut graph he reconstructs here.

(14) PTB *syaŋ VAGINA / CLITORIS

This root, though so far sparsely attested, seems certainly to occur in three separate branches of TB: NE Indian Areal Group (Meithei), Himalayish (Bantawa), and Lolo-Burmese (Ugong), and perhaps in Baic as well.

1.4. MEITHEI

Meithei	**seŋ** bi	clitoris	Singh 1991:10.4.4

2.3.2. SOUTHERN KIRANTI

8. BAI

Bai (Jianchuan)	pi̱^{44} ɕĩ^{55} **tɯ̱^{21}**	clitoris	ZHAO Yansun 1990:10.4.4

[a]The final labial stop is unexplained.

[b]According to Burling (1992), the literal meaning of this word is "small stone"; it can also refer to the smaller of the two grindstones in a ricemill.

[c]According to M. V. Sofronov 1978 there is some doubt as to the exact meaning of the Tangut graph he reconstructs here.

(17) PTB *huŋ HOLE

This root has so far been uncovered only in a few widely separated languages, which paradoxically seems to assure that it can be reconstructed for PTB. The basic meaning seems to be HOLE/ORIFICE, which is the gloss of the Limbu cognate syllable in isolation.

This root may be allofamically related to PTB ***(g/k)uŋ** HOLE / ORIFICE / INNER PART (§3.2.7).

The Karbi form **kehot** 'glans penis' is not related to this root; the morpheme **hot** is glossed as 'niche, groove' in Walker 1925, p. 57. Cf. Lahu **nī-qhèʔ** 'penis', where the second syllable means 'notch (as a stick); chip; break off a piece'. The semantic association lies evidently in the notched appearance of the glans.

2.3. Kiranti: ***hoŋ** HOLE

2.3.1. EASTERN KIRANTI

Ugong	**ḥoŋ**-dŭŋ-yɛ́	placenta	Bradley 1993

(18) PKir *rik PUBIC HAIR

This curious etymon has so far been found only in a couple of Kiranti languages, Limbu and Hayu. The meaning seems to be specifically PUBIC HAIR (of either sex). It seems to bear no relationship to any etymon reconstructed with the general meaning BODY HAIR. It is included in this section for convenience, since Limbu **hi-rā-mu-rik** contains VAGINA as its first element.

2.3.1. EASTERN KIRANTI

Limbu	hi-rā-mu-**rik**	female pubic hair	Matisoff 1987
	le mu **rik**	hair (pubic)	Matisoff 1987

1.9.6 Womb

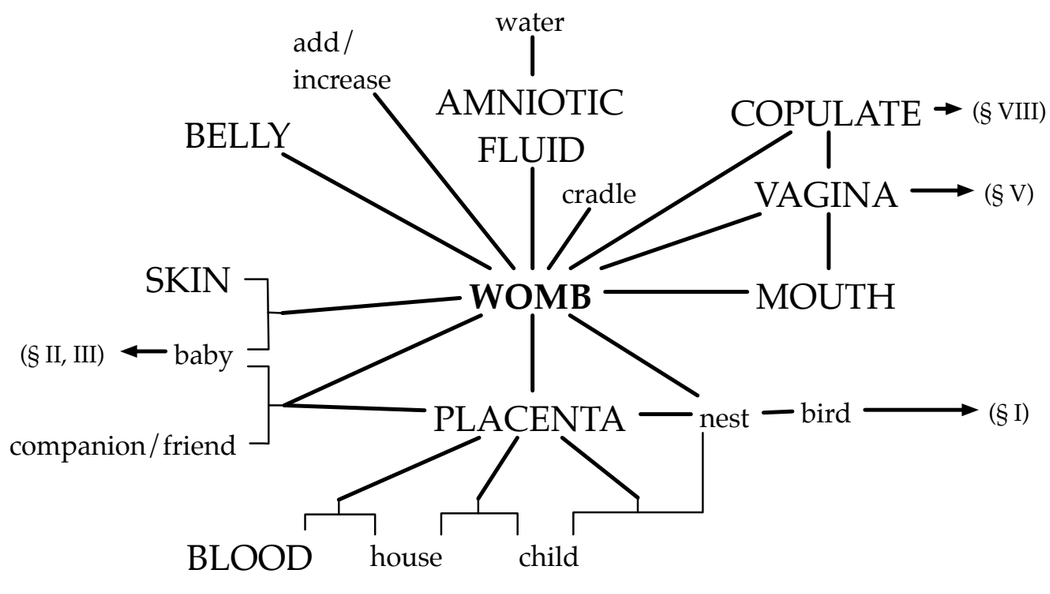

Figure 159: 1.9.6 *Womb*

WORDS for WOMB or PLACENTA are frequently associated with notions of NEST, HOUSE, or BELLY. A slightly different metaphor is exemplified by Kanauri **chaŋ khŭl**, lit. "child skin", with the second element < PTB ***kur** ≍ ***kwar** SKIN (§1.6.5).

(1) PTB *s-b-rum WOMB / PLACENTA

This etymon is not reconstructed in *STC*, but appears in *VSTB* pp. 225-6 and Matisoff 1983* #52.

This root occurs in the NE Indian Areal Group, Himalayish, and perhaps Lolo-Burmese (Ugong). There are possible Chinese comparanda (below). WT shows variation between **-r-** and **-l-**. The **b-** has been treated as a prefix and dropped everywhere but in WT and Chinese. For a similar doubly prefixed form set up for PTB, cf. ***s-b-rul** SNAKE. WT **hlums** reflects an alternant ***s-lum**. This ***s-** prefix seems to have preempted the initial consonant in Tsangla **shum**, **wak tsa ṣum** 'placenta'.

We now consider this etymon to be independent of PTB ***s-lam** WOMB / PLACENTA (§1.9.6), even though they were treated as allofams in *VSTB* and Matisoff 1983.

*"Translucent insights: a look at Proto-Sino-Tibetan through Gordon H. Luce's *Comparative Wordlist*." *BSOAS* 46.3:462-76.

9.0.3. MODERN CHINESE			
Chinese (Mandarin)	fàn	casting mold	Baxter & Sagart 2011:662

[a]The word-family relationship between WT **rum** 'womb' and **sbrum-pa** 'pregnant' was already recognized by W. Simon (1975:250).

[b]The credit for recognizing the cognacy of this Chinese word with forms in Tibetan belongs to G.H. Luce (1981). See Matisoff 1983 #52. The labial initial is paralleled in WT **sbrum-pa** 'pregnant'.

Chinese comparanda

Luce 1981 ("A Comparative Word-List of Old Burmese, Chinese, and Tibetan") compares this root with 範 OC ***b'i̱wăm**, Mand. **fàn**, glossed by him as 'mould, matrix'. See Matisoff 1983: #52 ("Transclucent insights"). For the semantic connection, cf. Latin and English *matrix* 'womb; a situation or surrounding substance in which something originates', ult. < *mater* 'mother'.

範 OC ***b'i̱wăm**, *GSR* #626d 'mould; rule, law'; Li 1971: ***bjamx**; Baxter 1992: **(*bjamʔ / *b(r)jomʔ)**; Mand. **fàn**.

Baxter does not reconstruct this word. There are several possible reconstructions in his system, as indicated above. The Chinese word 範 may be related to 凡 'general rule, pattern', Mand. **fán** and 法 'law, model', Mand. **fǎ**, reconstructed ***b(r)jom** and ***pjap** respectively by Baxter.
[ZJH]

妊 OC ***ńi̱əm**, *GSR* #667i 'pregnant'; Li 1971: ***njəmh**; Baxter 1992: ***nji̱ms**; Mand. **rèn**.

Gong (1995 #368) proposed that this Chinese word was cognate to WT **sbrum** < ***smrum**. However, the vowel and initial correspondences are not regular, and the comparison is not found in Gong's later publications. Schuessler 2007:441 treats 妊 **rèn** 'pregnant' as an internal Chinese derivation from 任 **rèn** 'carry on the shoulder, to load'.
[ZJH]

(2) PTB *s-lam WOMB / PLACENTA

This etymon is now considered be a separate etymon from the phonologically similar root PTB ***s-b-rum** WOMB / PLACENTA (§1.9.6). See *VSTB* pp. 224-227; TBRS #97; *HPTB* p. 250.

[a]Lahu **-o** is the regular reflex of PTB and PLB ***-am**.

(3) PTB *pʷam WOMB / PLACENTA / BELLY / STOMACH / NEST

The most general form of this complex word family is reconstructed as PTB ***s-bʷa(m/p)** SWELL / SWOLLEN / FAT / THICK / ROUNDED PART (§1.1.5.2).

Like PTB ***pʷu** EGG / BIRD / ROUND OBJECT (§1.9.1), some of the reflexes of ***pʷam** have initial **w-** PTB ***wam**, while others have an initial labial stop or derivative thereof PTB ***pam**. All these forms meaning 'womb / placenta / nest / belly' clearly represent the same etymon as ***p-wam** BELLY, presented separately as PTB ***pʷam**. A further group of forms with nasal initials PTB ***mam** may also be brought into this word family. Finally, there is a strong likelihood that PTB ***s-lam** WOMB / PLACENTA (§1.9.6) is also allofamically related.

Some languages (e.g. Jingpho, Lashi, Zaiwa) show internal variation between stop and semivowel. The semantic association between WOMB and BELLY is too obvious to belabor. *Belly* was used frequently in early Mod. Eng. to mean WOMB: "As yet my wife hath not laid her belly" (*Plumpton Correspondence* 1549-50); "My belly did not blab, so I was still a Mayde" (William Warner, *Albion's England*, 1592); "Why, she may plead her belly at worst" (John Gay, *The Beggar's Opera*, 1728).[*]

Still another related form is PTB ***pum** BODY / BELLY (§1.1.1), found especially in Kuki-Chin, with a meaning which goes beyond the visceral / gastric area to cover the whole body.

Cf. also PTB ***pwa(ŋ/n)** BELLY / CENTER (§1.7.6).

(3a) PTB *wam BELLY / WOMB / PLACENTA / NEST

2.3. KIRANTI			
*BSDTK	*wam	placenta	Michailovsky 1991:139

(3d) PTB *mam WOMB / PLACENTA / NEST

This etymon probably also stands in an allofamic relationship with PTB ***pʷam** WOMB / PLACENTA / BELLY / STOMACH / NEST (§1.9.6), in view of the identical rhymes that they share. Perhaps these forms with initial **m-** descend from fusions with the bodypart prefix ***mi-** (< ***mi-n** 'person') PPC ***r-mi(y)-n** PERSON / MAN (§4.4.1), i.e. ***mi-wam** or ***mi-pam**.

1.1.1. Tani: ***mam** PLACENTA			
**Tani*	***mam**	placenta	Sun 1993a:295
1.1.1.1. Western Tani			
Bengni	nɯ-**mam**	placenta; fontanel	Sun 1993a; Sun 1993b
Bokar	nə **ma**	placenta (n.)	Huang Bufan & Dai Qingxia, eds. 1992:0119.24
	nə-**mam**	placenta; womb	Sun 1993a; Sun 1993b

Padam-Mishing [Abor-Miri]	a **mam**	placenta	Matisoff 1987
	mam-ruk	womb	Matisoff 1987
2.1.2. Bodic			
Tshona (Mama)	**nam¹³** naŋ⁵⁵	placenta	Sun Hongkai *et al.* 1980
2.3.2. Southern Kiranti			
Bantawa	**mon**	placenta	Matisoff 1987 [a]
2.3.4. Western Kiranti			
Hayu	tsat-**nom**-ri	placenta; womb	Matisoff 1987; Matisoff 1987 [b]
2.4. Kham-Magar-Chepang			
Magar	**mim**	nest (n.)	Hale 1973:03a.013

[a] Bantawa **mon** apparently shows dissimilation of the second nasal.
[b] Hayu **-nom-** seems to show dissimilation of the first nasal (cf. Tshona (Mama) **nam¹³**; contrast Bantawa).

(4) PTB * b/p a(:)y WOMB / PLACENTA / PREGNANT

This root has been identified in the NE Indian Areal Group and Himalayish. The reconstructed rhyme ***-ay** is directly reflected by the Mru, Tiddim, Mizo, and Chepang reflexes, and indirectly by Written Tibetan and Karbi **-e**, which are also the regular reflexes of ***-ay**. See Matisoff 1985a #140 and *HPTB* pp. 206-219 for many corroborative cognate sets. The Lakher (Mara) word for 'add; increase' is tentatively included in this set, since the same association between WOMB/PLACENTA and ADD/INCREASE is found in PTB ***tsat** WOMB / PLACENTA / NEST (§1.9.6).

0.1. Tibeto-Burman (previously published reconstructions)

2.4. Kham-Magar-Chepang			
Chepang (Eastern)	**payʔ**	placenta	Caughley 1990:10.4.11

[a] Batang **khõ⁵⁵** probably means 'house' (cf. WT **khaŋ-pa** 'house').

(5) PTB * m/l -ŋal WOMB / PLACENTA

This etymon is well-represented in Himalayish (with the ***m-** prefix in WT) and in Qiangic (with a lateral prefix in Ergong and rGyalrong). The root-initial ***ŋ-** has become **n-** in several languages.

The first syllables of Meithei **naw phəm** 'placenta' and Tangkhul **nao-pam** 'womb' are apparently not cognate, since ***-al** > Meithei **-al** or **-an** (cf. ***m-kal** ≍ ***s-gal** SMALL OF BACK > Meithei **nam-gal** ~ **nam-gan**) and > Tangkhul **-ay** (cf. ***ba:l** FILTH / EXCREMENT > Tangkhul **páy**). S. Imoba 2004 (*Manipuri to English Dictionary*, p. 202) records **-naw** 'small, little', **naw-wà** 'baby', **nawsum** 'cradle', and **nawpu-bə** 'gestation, pregnancy'.

(6) PTB *tsat WOMB / PLACENTA / NEST

This root is well distributed among the subgroups of TB, with strong (though rather scattered) cognates in the NE Indian Areal Group, Himalayish, Lolo-Burmese, Jingpho, and Karenic. The basic meaning of this etymon may be 'add, increase; breed, bear young', since that is the meaning of the free Jingpho verb **jàt** (Hanson, p. 206; Dai Qingxia et al. 1983:345), as well as of the Thulung form.

(7) PTB * $\begin{matrix} \mathbf{r} \\ \mathbf{m} \end{matrix}$ -bu ≍ *pru NEST / WOMB / PLACENTA

This etymon is quite widely distributed, appearing in the NE Indian Areal Group, Lolo-Burmese, Jingpho, Nungic, Qiangic, and Karenic, with a key Himalayish cognate in Written Tibetan.

There is a good Chinese comparandum, 胞 *GSR* #1113b (see below).

The root shows metathetic variants, with the ***r-*** treated either as a prefix (***r-bu**; cf. the Aimol, Kom Rem, and Moyon reflexes) or as a post-initial glide (***pru**; cf. the WT reflex). This is similar to PTB ***r-ku ≍ *kru** NEST / UTERUS / AMNIOTIC SAC (§1.9.6), below. It also shows variation in the voicing of the initial consonant, both in TB and in Chinese (*GSR* gives two OC readings, ***pộg** and ***p'ộg**).

In passing, *STC* (p. 102) gives a few forms meaning NEST from Kuki-Chin languages, without offering any reconstruction. See also PTB ***bu** CHILD (§4.2.11), quite distinct from the present etymon.

	prəgw	womb	Coblin 1986:161
9.0.2. MIDDLE CHINESE			
Chinese (Middle)	**pau**	womb	Coblin 1986:161
	phau	womb	Coblin 1986:161
9.0.3. MODERN CHINESE			
Chinese (Mandarin)	**pɑo**	womb	Karlgren 1957:1113b
	pʻɑo	womb	Karlgren 1957:1113b

[a] Hakha Lai **θ** is from suffixal ***-t** (see *STC* pp. 102-3).

[a] Gazhuo **pao³³** evidently a loan from Chinese (cf. Mandarin 胞 bāo).
[b] Cf. Gazhuo **pao³³** 'placenta'.

Chinese comparandum

胞 OC ***pộg**, *GSR* #1113b 'womb'; Li 1971: ***prəgw**; Baxter 1992: ***pru**; Mand. **bāo**.

This cognate set is in Bodman 1980:142 #310, Coblin 1986:161, Gong 1995 #61, and Schuessler 2007:157.

The regular correspondence between OC final ***-əgw** (Li), ***-u** (Baxter) and TB ***-əw** (or ***-u**) is well-attested. Examples include:

九 'nine' TB ***d-kəw**; OC ***kjəgw** (Li) / ***kʷjuʔ** (Baxter)
鳩 'dove/pigeon' TB ***khəw**, OC ***kjəgw** (Li) / ***k(r)ju** (Baxter); Mand **jiū**

also, PTB ***pu** EGG (§1.9.1) (elsewhere in this volume).

The TB final also corresponds to OC ***-ug** (Li) / ***-o** (Baxter), as seen in PTB ***s-nəw** BREAST / MILK / SUCK (§1.9.4).
[ZJH]

(8) PTB *tsaŋ NEST / WOMB / PLACENTA

This root seems solidly established for Himalayish, where it means mostly NEST, but sometimes CRADLE, CAGE, or WOMB. However, many of these forms may be loans from Tibetan. The etymon also clearly appears in Lolo-Burmese, where it means WOMB/PLACENTA, and in at least one Qiangic language (Queyu), where it means NEST.

(9) PTB *r-ku ⩙ *kru NEST / UTERUS / AMNIOTIC SAC

This root is set up on slender but rather convincing evidence, if we are willing to admit relationship via metathesis between Angami forms with **kr-**, and Qiangic forms with **ɹaq-**. (For another etymon that shows a similar metathesis of prefixal and medial **-r-**, cf. PTB ***r/m-bu ⩙ *pru** NEST / WOMB / PLACENTA (§1.9.6), above. The semantic scope of the Qiangic forms extends to AMNIOTIC SAC. In many TB languages, as in English, the amniotic fluid is referred to simply by the word for WATER (cf. Eng. “Her water broke”), e.g. Maru **ɣək**^{31} ‘water; amniotic fluid’ (< PTB ***rəy** WATER / LIQUID / BODILY FLUID (§1.9.9), below), Baima **ʃuɛ**^{35} ‘amniotic fluid’ (< Chinese; cf. Mand. 水 **shuǐ** ‘water’).

(10) PTB *tsyul ⩙ *tsywal WOMB / PLACENTA / UMBILICAL CORD

Some reflexes of this etymon have simple sibilant initials (e.g. Paangkhua **sùul**, Kham **sal**), while some have dental or palatal affricates, others have dental stops (e.g. Matupi and Maru) or even prefixed affricates (e.g. Pumi **stʃuɑ**^{55}). The vocalism of the reflexes ranges from **-u-** to **-wa-** to **-o-** to **-a-**. Semantically, this etymon varies in meaning from WOMB/PLACENTA to NEST and UMBILICAL CORD. This etymon is found throughout Chin and sporadically elsewhere in the NE Indian Areal Group (Mru); it also appears in Himalayish (often with the meaning UMBILICAL CORD and with **-a-** vocalism), and is also solidly attested in Qiangic. Inclusion of the Bai form is speculative.

2.1.2.1. Tibetan

Tibetan (Written)	**śa**-ma	placenta, afterbirth	Jäschke 1881:556 [d]

[a] It is not clear what phonetic feature Luce was attempting to transcribe with his symbol <**s’**> (e.g. in Hakha, Hwalngau, Khualsim, Tiddim, and Zotung); a Hakha consultant in Berkeley pronounces this word with what sounds like an ordinary [**s**]. In general, PTB ***s-** > Proto-Chin ***t(h)-**, while PTB ***ts-** > Proto-Chin ***s-**.

[b] Contra Löffler 1966, I do not assign the Lushai (Mizo) and Mru forms to PTB ***s-tu** VAGINA / VULVA (§1.9.5).

[c] Luce gives another Zotung form **ʃuɯ**^{1} for WOMB that I include under PTB ***(t)s(i/u)p** NEST / WOMB / SCROTUM (§1.9.6).

[d] The cognacy of WT **śa** is not certain, since WT does preserve final ***-l**. The first syllable is homophonous with **śa** (< PTB ***sya-n** FLESH / MEAT / GAME ANIMAL (§1.1.1)), though Jäschke (p.556) does not include it under that lemma, evidently considering it to be a separate morpheme. The Newar form **sa:** ‘placenta’ apparently means “house”, but Newar **swạ** ‘nest’ seems to be a genuine reflex of ***tsywal**.

8. Bai

Bai (Bijiang)	tso^{55}**tshe**^{ɪ42}	nest	Sun Hongkai et al. 1991:368.37

[a] Lepcha **bam-tyól** ‘concubine’ (Mainwaring 1898, p. 255).

[b] This Lepcha syllable **-t’or** may in fact descend from a separate etymon than Lepcha **-tyól** (cf. Karbi **tar** ‘nest’).

[c] Lepcha **tă-a’yŭ** ‘female’.

[d] Qiangic shows evidence both for a nasal prefix (Ergong **mdʐo**, Ersu **xuɑi**^{55}**ntʂhɛ**^{55}) and prefixal ***s-** (Pumi Jinghua **stʃuɑ**^{55}).

(11) PTB *twaŋ NEST / WOMB

This sparsely attested and speculative etymon rests on the Jingpho, Nungic, and Tujia forms. Apparently distinct is Bahing **dzok-** ‘nest’. The WB form “**thok**” cited in ZMYYC #368 appears to be spurious.

6.1.1. Burmish

Marma	hŋaʔ **táŋ**	nest (lit. bird-nest)	Huziwara Keisuke 2008:318

(12) PTB *(t)s $\begin{matrix}\text{i}\\\text{u}\end{matrix}$ p NEST / WOMB / SCROTUM

This etymon displays the most pervasive variational pattern in TB vowels, between ***-u-** and ***-i-** (see Wolfenden 1929:114-5, *STC* pp. 80-4, *VSTB* pp. 41-2, *HPTB* pp. 493-505).[*] It is well distributed, occurring widely in the NE Indian Areal Group (but not in Chin), with convincing cognates in Himalayish, Jingpho, and Qiangic. The Burmish cognates point to different final consonants: WB has **-k**, while Achang and Zaiwa have **-t**. W.T. French (1983:526) suggests an etymology (which appears fanciful), deriving this root from a compound ***sa-yip** ANIMAL + SLEEP (< PTB ***sya-n** FLESH / MEAT / GAME ANIMAL (§1.1.1) and PTB ***s-y(i/u)p** SLEEP (§1.1.4.1)).

[a]This etymon is tentatively set up for PTB on rather shaky evidence: several forms from Loloish, and a single putative cognate from Qiangic (rGyalrong).

(13) PTB *kʷəy NEST / WOMB / PLACENTA

Besides Lolo-Burmese, where it is widely attested (even in Jinuo), this etymon has solid reflexes in Qiangic (Shixing) and Bai. The suggested NE Indian Areal Group cognate (in Mao) is uncertain; this form might better be assigned to PTB ***r-ku ≍ *kru** NEST / UTERUS / AMNIOTIC SAC (§1.9.6) (above), like Angami **kru**. This root was reconstructed for PLB in Matisoff 1978b:6 ("Mpi and Lolo-Burmese microlinguistics"); cf. also Matisoff 1988a:917-8. This is a good example of the development of *labiovelar initials into Lahu labials, as also in DOG (PTB ***kʷəy** > Lahu **phî**); see also *STC* n. 83 (p. 26). Note the doublets in Hani (Khatu) and Naxi (Lijiang); the Naxi forms clearly show alternative labial and velar reflexes of the complex *labiovelar initial. Compounds for WOMB/PLACENTA typically have the structure CHILD + NEST. Compounds for SCROTUM have the structure TESTICLE + NEST.

8. BAI

Bai (Dali)	tso[44]**khv**[31]	nest	SUN Hongkai et al. 1991:368.35
Bai (Jianchuan)	**khv**[31]	nest	SUN Hongkai et al. 1991:368.36

[a]Lahu **phɨ** occurs in many other Lahu compounds, including **á-thɔ-phɨ** 'scabbard; sheath' ("knife-nest"), **ú-gê-phɨ** 'pillow-case', **khá-cè-phɨ** 'quiver for arrows', **yì?-phɨ** 'bed' ("sleep-nest"), **lì?-phɨ** 'envelope', etc.

[b]Note the alternation between velar and labial initials, not surprising in view of the proto-labiovelar ***kʷ-** reconstructed for this root.

Chinese comparandum

窠 'burrow, nest'; *GSR*: not in #351; Li 1971: **(*khwar)**; Baxter 1992: **(*kʷhaj)**; Mand. **kē**.

This character is not in *GSR* and is not reconstructed by either Li or Baxter. Based on its phonetic element and its Middle Chinese reading, however, its OC reconstruction is not in doubt. The word occurs in the *Shuowen Jiezi*, attesting to its existence in the first century AD. The *Shuowen* entry reads 空也。從穴。果聲。一曰鳥巢也。在樹曰巢。在穴曰窠。 ("Empty. [The character is formed] from [semantic element] 穴 and 果 is the phonetic. Another meaning is bird's nest. When in a tree it is called **cháo**, in a cave it is called **kē**.") The element 果 depicts an object in a tree and is part of the pictograph in 巢, Mand. **cháo** 'nest'. In 窠 it may be serving as a semantic as well as a phonetic element.

The connection with PTB was proposed by Handel (1998). It establishes a correspondence between PTB labiovelar initials and Chinese labiovelar initials. The vowel correspondence, however, is problematic, since PTB final ***əy** usually corresponds to OC ***-id** (Li)/***-əj** (Baxter); see the examples under the discussion for PTB ***d(w)əy** EGG / TESTICLE (§1.9.1).
[ZJH]

(14) PTB *k-yaŋ UTERUS / PLACENTA / CRADLE / NEST

This etymon is firmly reconstructible for PTB on the basis of the excellent fit between the Himalayish and Lolo-Burmese cognates. The velar prefix is reconstructed to accommodate the WB and Pa-O forms, as well as a group of Himalayish forms that mean CRADLE. For a similar association with CRADLE see PTB ***tsaŋ** NEST / WOMB / PLACENTA (§1.9.6), below.

7. KARENIC			
Pa-O	pò **khròŋ**	uterus	Solnit 1989

[a] There is a homophonous WB word **ʔəkhyâŋ** 'one who is connected with another', cognate to Lahu **ɔ̀-chɔ̂** 'friend' (*HPTB* p. 265). it is possible that there is a genuine semantic assocation between these two WB words, with the placenta conceived of as the "child's friend".

(15) PTB *s-nwat ⩵ *s-nut MOUTH / VESSEL / WOMB

This reconstruction replaces ***s-not ⩵ *s-nut** (*HPTB*:381) and ***s-not** (*STC*:144-145, 150).

The variational pattern adduced here between medial ***-wa-** and ***-u-** parallels the better known alternation between ***-ya-** and ***-i-** to be found in etyma like PTB ***s-myak ⩵ *s-mik** EYE (§1.2.6). We cannot assume a single prototype ***s-nwat**, since that would have yielded WB **hnwat**.

This etymon is widely distributed with the meaning MOUTH in Burmish and Karenic, with good-looking cognates in Qiangic (Pumi) and Bai. The Tibetan cognate gives a clue to its more general meaning of VESSEL; the expression **snod drug** 'the six vessels' refers in traditional Tibetan anatomy to the gall-bladder, stomach, small and large intestines, urinary bladder, and uterus (in females) or spermatic vessels (in males) (see Jäschke 1881/1958, p. 319). The Tibetan compound **bu-snod**, literally "child-vessel", refers specifically to the womb. See *STC* (pp. 144, 145, 150) for references to the Burmese, Karen, and Tibetan cognates.

The Burmish (see especially Lashi) forms bear a strong surface resemblance to Siamese **nùat** (< Proto-Tai ***hn-**) 'beard', suggesting that this is a loan from Burmish into SW Tai. This word is not widely distributed in Tai. "Except Tay (a Central Tai dialect) nuôt D1L this word seems restricted to the SW dialects" (Li Fang Kuei 1977:116). The Northern and Central Tai dialects generally have forms descending from Proto-Tai ***mum** (*HCT* pp. 72-73), which bears an apparently coincidental resemblance to PTB ***mum** CHIN / BEARD (§1.6.1).

Chinese comparandum

須 / 鬚 OC ***sɨ̨u**, *GSR* #133a-c, d 'beard'; Schuessler 2007:544 ***sno**; B & S 2011: ***s.no** ; Mand. **xū**.

(16) PTB *k-y $\begin{matrix}\text{i}\\\text{u}\end{matrix}$ m HOUSE

This etymon is extremely widespread in TB with the meaning HOUSE (see *STC* #53). It appears as second element in compounds meaning WOMB / PLACENTA, where the first element means CHILD.

This root shows vocalic variation between ***-u-** and ***-i-**. Some languages have reflexes with initial velar stop, but others (e.g. Lushai [Mizo], WB) point to a variant beginning with **y-** or **i-**; that is, some languages have treated the velar as a prefix.

(17) PTB *lyap ⩙ *rap COPULATE / LOVE

This etymon is attested in the NE Indian Areal Group and Himalayish, with a possible cognate in Loloish (Bisu). The initial shows variation between **l-** and **r-**. This root seems to be quite distinct from PTB ***la*** COPULATE / LOVE (§1.9.8), below. The final **-t** in the Tangkhul forms is unexplained. See TBRS 151.

1.1.2. DENG			
Darang [Taraon]	**lyeb**-ga:	copulate	Matisoff 1987
1.3.4. TANGKHULIC			
Tangkhul	kha ŋa **rāt**	copulate	Matisoff 1987
	rat	copulate	Bhat 1969:86
1.5. MIKIR [KARBI]			
Mikir [Karbi]	do **rap rap**	copulate	Matisoff 1987 [a]
	i **rap**-chom	copulate	Matisoff 1987
	i **rap-rap**	copulate	Matisoff 1987
2.1.1. WESTERN HIMALAYISH			
Pattani [Manchati]	sem **lep** i	love (v.)	Sharma 1982
2.4. KHAM-MAGAR-CHEPANG			
Chepang	**rāp**-sā	love (v.)	Hale 1973:10b1.52
	rap-sa	love	Caughley 1972:10.B.1.52
Magar	**ro**-ke	love (n.)	Hale 1973:10a.01
	ro-ke	love (v.)	Hale 1973:10b1.52
6.1.2.3. SOUTHERN LOLOISH			
Bisu	aŋ **làp** ʔmbā	genitals	Beaudouin 1988:14

[a]The basic meaning of Karbi **rap** is 'to befriend; to be together'. It occurs as an auxiliary after other verbs (e.g. **do** 'be; exist', **i** 'sleep'), meaning 'to V together'.

(18) NEIA * p/b wam LOVE / DESIRE / COPULATE

This root is solidly attested in the NE Indian Areal Group (Chin [Lai], Naga [Lotha, Phom] and Meithei), but so far it has not been discovered anywhere else.

1.2.2. CENTRAL CHIN			
Lai (Falam)	**pom**	copulate, make love	Matisoff 1987:D.Van Bik

1.9.7 Penis

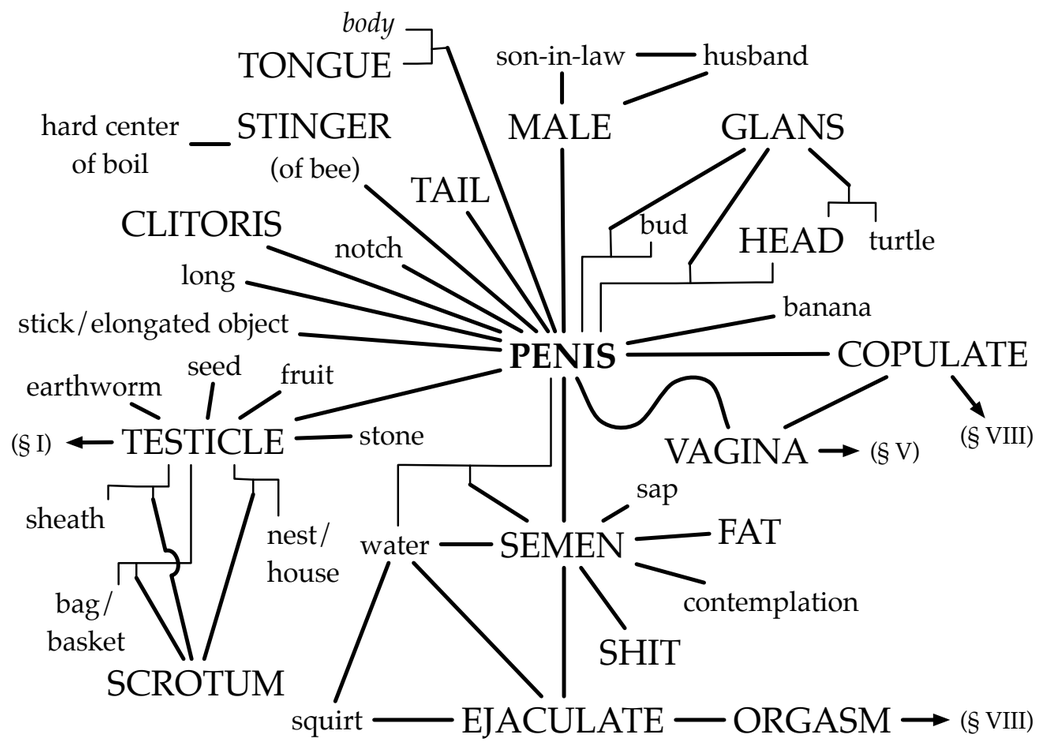

Figure 160: 1.9.7 *Penis*

THE various components of the male genitalia show semantic associations with a number of other bodyparts, as well as with a wide range of objects in other semantic fields. Some of these associations are widespread or universal in the world's languages; others seem more idiosyncratic to ST or the SEA'n linguistic area.

Among the universal semantic associations we may list the following:

(1) PENIS ⟷ TAIL: The English word *penis* itself is from Lat. *pēnis* 'tail' (cf. also Fr. *queue* < Lat. *cauda* 'tail'), among countless other examples. The widespread TB etymon for TAIL PTB ***r-may ⩙ *m-ray*** ***may ⩙ *mey ⩙ *mi*** (cf. also Chinese 尾 OC ***mi̱wər***) has similar associations, e.g. Jingpho **mài**, **ǹ-mài** 'tail; a euphemistic name for the male private parts' (Hanson 1906/1954, p. 400).

(2) PENIS ⟷ BANANA: This connection is made explicitly in Kokborok **tʰa-li** (see PTB ***m-ley ⩙ *m-li*** PENIS (§1.9.7) below) and in Newar **mwā-e** 'banana; penis'.

(3) GLANS PENIS ⟷ PENIS + HEAD: This is a universal association (cf. WT **mje-mgo**; Lahu **nī-ó-qō**; Lisu (Northern) **ɔ^{55}dy^{33}** 'head', **hɔ̃^{21}ɔ^{55}dy^{33}** 'penis'; Yakha **tu khəruk** 'head', **li: go: u tu kəruk** 'glans'; Qiang (Mawo) **qạ pætʂ** 'head', **li qạ pætʂ** 'glans'; Eng. *dick-head*).

(4) TESTICLE ⟷ EGG: This is also a universal association (cf. e.g. Russian *jajtsy* 'eggs; testicles', Hebrew *beytsim* 'id.'). The same etymon may have some reflexes meaning EGG and others meaning TESTICLE. Several TB etyma showing this association have been treated above under EGG (Chapter 1.9.1); others will be treated below in this chapter. Alternatively a language may have a compound word for TESTICLE of the structure PENIS + EGG.

(5) TESTICLE ⟷ FRUIT / BALL / ROUNDED OBJECT: TB compounds for TESTICLE frequently take the form PENIS + FRUIT/ROUND OBJECT, e.g. Lahu **nī-šī** 'testicle' (2nd syll. < PTB ***sey*** FRUIT / ROSE / ROUND OBJECT (§1.2.6)).[*]

Cf. also Newar **kwaa-si** 'testicles' (lit. "hot-fruit"), reminiscent of the vulgar English simile "hot as balls".

(6) TESTICLE ⟷ STONE: Also a widespread association in the world's languages, including archaic English slang. In TB, cf. formations like Monpa **khong-lung** 'testicle' (**lung** 'stone').

(7) SCROTUM ⟷ BASKET / BAG / POUCH / NEST: This obvious association occurs in Lat. *scrōtum* < *scrautum* 'leather pouch for arrows', and is also found in TB, e.g. Lahu **nī-sī-phɨ** 'scrotum', **phɨ** 'nest; receptacle' < PTB ***k^{w}əy*** NEST / WOMB / PLACENTA (§1.9.6). Cf. also PTB ***s-blwaŋ*** SCROTUM / POUCH / MALE (of animals) (§1.9.7), PTB ***ʔip ⩙ *ʔi:t*** BAG / SCROTUM (§1.9.7).

(8) SEMEN ⟷ PENIS + LIQUID: Cf. Nesu **le̱r^{33} ʐɻ^{21}** and Noesu **ɬu^{55}ʐi^{21}**, where the second element < PTB ***rəy*** WATER / LIQUID / BODILY FLUID (§1.9.9), and WB **lî-rañ**.

SEMANTIC associations that seem more peculiar to the SEA'n linguistic area include the following:

(9) PENIS ⟷ VAGINA: Many etyma have some reflexes which refer to the male organ, but others which refer to the female counterpart, a phenomenon that has been dubbed 'genital flipflop' (see chapter note under VAGINA). Etyma like this should perhaps be assigned the gender-neutral gloss GENITALS at the proto-level. Several have been treated under VAGINA (Chapter 1.9.5, above); others will be treated below in this chapter.

(10) PENIS ⟷ BODY + TONGUE: Cf. Garo **maŋ-sre** 'penis' < PTB ***s-maŋ*** BODY / CORPSE (§1.1.6.1) + PTB ***s/m-l(y)a-t *s-lya* TONGUE**. This form was cited in Benedict 1979:24.

(11) TESTICLE ⟷ SEED: Cf. WB **lî-ce'**, lit. "penis-seed".

(12) GLANS ⟷ NOTCH: Cf. WB **lî-thac** 'corona glandis', lit. "penis-notch", and Lahu **nī-qhɛ̀?** 'penis', where the second syllable means 'notch (as a stick); chip; break off a piece'.

(13) GLANS ⟷ BUD: Cf. WB **lî-ŋum** 'glans', lit. "penis-bud".

(14) GLANS ⟷ TURTLE: While Latin *glāns* means 'acorn', Mandarin **guī-tóu** 'glans penis' means literally "turtle-head". (For obvious reasons, this formation is especially appropriate for the uncircumcised organ.) The data is so far insufficient to establish whether this same metaphor occurs in TB languages.

(15) SEMEN ⟷ SHIT: A few languages associate semen with SHIT / BODY DIRT / EXCRETION. Cf. Lahu **nī-qhê** "penis-shit", Chepang **təyŋ-kli?** 'id.', and Bantawa **lü-khü-wa** (**khü** 'stool, excreta'). In Jingpho **ne^{31}khji^{55}**, however, this combination of morphemes means SMEGMA.

(16) SEMEN ⟷ FAT: Cf. Lahu **nī-chu** 'semen' (lit. "penis-fat").

Few monomorphemic etyma are reconstructible for SEMEN, with three possibilities offered below in Chapter 1.9.9: PTB ***(r/w)a*** SEMEN (§1.9.9), PTB ***ŋya*** SEMEN (§1.9.9), and PKC ***(ɓ/p)oo*** SPERM / SEMEN (§1.9.9).

Words for FORESKIN/PREPUCE, naturally enough, are compounds of PENIS + SKIN (see Chapter 1.6.5).

Expressions for COPULATE frequently involve PENIS plus a verb. See Chapter 1.9.8.

(1) PTB *m- l/n ey ⩙ *m-li PENIS

This is by far the most widely attested etymon for PENIS in TB, occurring in the NE Indian Areal Group, Himalayish, Lolo-Burmese (including Jinuo), and Qiangic. (See *STC* #262, which cites reflexes from the first three of these groups.) The nasal prefix is well-established, appearing e.g. in WT and other Himalayish languages. This prefix has caused nasalization of the root-initial lateral in several languages (e.g. Meithei and Jingpho), or even driven out or "preempted" the root-initial entirely (as in Chang Naga or Lahu). Those forms which have developed a secondary nasal root-initial are presented separately below as set PTB ***m-ney*** PENIS (§1.9.7). A couple of Loloish languages (Lalo, Lisu) have reflexes in **h-**. It is possible that these point to an alternant with sibilant prefix, ***s-ley*** (as is reflected more directly in Phunoi **hle^{11}** and Lepcha **săli**). Several Loloish languages (Lalo, Lipho, Lolopho, Nesu, Sani/Nyi) have words for PENIS and TESTICLE with initial **d-**. Since it is true that there is much interplay between **l-** and **d-** in ST,[*] and it is also the case that palatalized labial initials are sometimes dentalized in Loloish languages like Sani,[*] it might seem reasonable to assign these reflexes in **d-** to ***m-ley*** if we posit an intermediate palatalized prototype like ***myey***. However, Lalo has forms with both **d-** and **h-** (**de^{33}se^{21}** 'testicle', **he^{21}** 'penis'), which suggests that two separate etyma are involved. I am therefore assigning the reflexes in **d-** to PTB ***ti-k*** PENIS (§1.9.7), below.

Several languages have forms that resemble reflexes of this etymon, but which are really loans from Indo-Aryan (cf. Skt. *lingam*): WB ***lin*-khu'** 'scrotum', Kanauri **liṅ** 'penis (polite)'.

[*]Note that TESTICLE ⟷ NUT is not characteristic of SEA, since languages in this region generally lack a word for NUT distinct from FRUIT. Cf. Chinese 果 (Mand. **guǒ**), used equally well for FRUIT (more specifically 水果 Mand. **shuǐguǒ** "water-fruit") and NUT, e.g. 開心果 Mand. **kāixīnguǒ** 'pistachio' (lit. "open-heart-fruit").

[*]See the note under PTB ***m/s-la(:)y ⩙ *s-tay*** NAVEL (§1.9.3), above.

[*]E.g. PTB/PLB ***my-*** > Sani **n-** (e.g. PTB ***s-myak ⩙ *s-mik*** EYE (§1.2.6) > Sa. **ne^{44}**); ***by-*** > Sani **dl-** (e.g. PTB ***b(y/r)a *bya*** BEE > Sa. **dla-ma**); ***py-*** > Sa. **tl-** (e.g. PTB ***(p/b)yam*** FLY (v.) (§6.7.5) > Sa. **tlö**); see *STC*, n. 93, p. 29.

(1a) PTB *m-ley ⩙ *m-li PENIS

There is apparently a slight variation in the rhyme of this etymon between ***-ey*** and ***-i***, although the reflexes of these two rhymes are not distinguishable for many TB languages at present. *STC* (#262 and note 197) recognizes "vowel gradation" in this root, assigning Kanauri **kut-li**, Bahing **bli**, WB **lî**, Garo **ri-gaŋ**, and Dimasa **li** to PTB ***li**, but WT **mdźe** to ***m-ley**. For convenience, we are grouping all the reflexes of this etymon with lateral initials together in PTB ***m-ley ⩙ *m-li**, regardless of the precise proto-rhyme to which they may eventually be assigned.

See also *HPTB* ***m-ley ⩙ *m-li**, pp. 47, 49, 153, 219, 509.

6.1.2.2. Central Loloish

Jinuo (Baya/Banai)	**li^{55}** tsɻ^{33}	testicles	Dai Qingxia 1989h:145
Lisu	**h'aw^{5}**	penis	Bradley 1979b:122; Matisoff 1985a:049
Lisu (Northern)	**hɔ̃^{21}**ɔ^{55}dy^{33}	glans penis	Bradley 1994
Lisu (Central)	**h'aw^{5}**	penis	Fraser 1922
Lisu (Northern)	**la^{55}**fu^{33}	testicle (N.)	Bradley 1994

6.1.2.3. Southern Loloish

Akha	beuˆ **leuˆ**	penis (polite)	Lewis 1989 [f]
Bisu	**hlè**	penis	Bradley 1979b [g]
	hlə̆ ʔu^{33}	testicles	Bradley 1979b
	lè thɛ	penis	Beaudouin 1988:15
	lè ʔu	testicles	Beaudouin 1988:15
Mpi	tɕhɑ^{2}**lɑʔ^{4}**	penis	Bradley 1979b [h]

[a] This is an antonymic compound meaning literally "vagina-penis".
[b] Note the reduced Tangut **l-**.
[c] Qiang (Mawo) **qə̯ pætʂ** 'head'.
[d] WB **ŋum** 'flower bud'.
[e] Note the reduction to schwa in WB **lə**.
[f] The stopped tone in the second syllable is unexplained. Note, however, the final **-q** in some Qiang forms, such as Qiang (Mawo) **liq** 'penis'.
[g] The voiceless lateral in Bisu **hlè** reflects an ***s-*** prefix (cf. Lepcha **săli**).
[h] According to Bradley (1979:304-5), this form coexists with Mpi **ne^{2}**; see PTB ***m-ney*** PENIS (§1.9.7).

(1b) PTB *m-ney PENIS

This etymon is obviously an allofam of PTB ***m-ley ⩙ *m-li*** PENIS (§1.9.7). The reflexes in this set arose through assimilation of the lateral root-initial to the nasal prefix. In some cases (e.g. Jingpho, Meithei) the prefix still co-occurs with the secondary nasal root-initial. In other languages (e.g. Lahu) the prefix has disappeared as such, after supplanting the original root-initial ("prefix preemption").* This allofam occurs in Jingpho, and is widely attested in Lolo-Burmese; there are also a few scattered reflexes in languages of the NE Indian Areal Group (Chang, Meithei, Mru).

	ní kɔŋ	penis hole	Bradley 1993	
	ní wŭŋ	semen	Bradley 1993:10.3.7	

[a] Literally "penis-head".
[b] Lahu **qhɛ̀ʔ** 'to be notched'; probably so called because of the notched appearance of the corona glandis.
[c] According to Bradley (1979:304-5), this form coexists with Mpi **tɕhɑ**^{2}**lɑʔ**^{4}; see PTB ***m-ley ⪤ *m-li**.

(2) PTB *m-yaŋ PENIS / TESTICLE / STINGER (of bee)

This etymon has so far been uncovered almost exclusively in the NE Indian Areal Group, where it is widely attested. The Lailenpi and Lotha forms point to a prototype with nasal prefix, ***N-yaŋ**. Many of the daughter languages have developed initial **z-** in this etymon. In several languages, the meaning of this word extends to 'stinger of bee', which perhaps is the original meaning. For the stinging semantics, cf. vulgar English *prick*.

An excellent extra-NE Indian candidate for cognacy is Jingpho **rāŋ** 'to be concupiscent; to be driven by sexual desires; to burn with lust' (Hanson 1906/1954:564), recorded as **ʒaŋ**^{33} in Dai, et al. 1983:684, where it is glossed 性冲动 'sexual impulse'. See the compound **ne**^{31} **ʒaŋ**^{33} 'sexually potent male', under PTB ***m-ney** PENIS (§1.9.7), above.

1.7.3.1. Jingpho				
Jingpho	ne^{31}**ʒaŋ**^{33}	sexually potent male (n.)	Dai Qingxia *et al.* 1983	

[a] Milang **ɲ-** looks like a fusion of the nasal prefix plus the root-initial **y-**.
[b] Note the denasalization before a voiceless stop of Womatu **yak**^{1} (< PTB ***m-yaŋ** PENIS / TESTICLE / STINGER (of bee) (§1.9.7)).

[a] Tangkhul **kui** is homophonous with **kui** 'head', though this seems to be fortuitous, since **shaŋ kui** does not mean 'glans'.

(3a) PTB *k-tu-k PENIS

This root, which has allofams both with and without a final velar stop, is found in several different subgroups of TB: NE Indian Areal Group, Himalayish, Asakian, Qiangic (including Xixia), and Baic. It has so far not been discovered in Lolo-Burmese or Karenic.

This root resembles PTB ***tsu** PENIS (§1.9.7). The possibility that these two etyma might be one and the same is reinforced by the natural tendency of /**t**/ to become affricated before /**u**/, as witnessed by Japanese, where /**tu**/ is realized as [tsɯ].

This etymon also bears a perhaps accidental resemblance to PTB ***s-tu** VAGINA / VULVA (§1.9.5).

An apparently prefixal **k-** is attested in Kham and Spiti. Cf. also the Tangut binome **khĭu̯ thu**.

1.1.1.2. Eastern Tani				
Damu	mak-**tuk**	penis	Sun 1993b

Newar (Dolakhali)	**tuk** la	penis	Genetti 1990b	
2.4. Kham-Magar-Chepang				
Kham	**katu**	penis; penis (child's)	Watters & Watters 1989; Watters & Watters 1989	
3.1. Tangut				
Tangut [Xixia]	khĭu̯ **thu**	penis	Dai Qingxia 1989e:10.3.1	
	thu^{2}	penis	Sofronov c1978	
	Tu	penis	Nishida 1964:269-052	
3.3.1. rGyalrong				
rGyalrong (Northern)	tə sk^{h}ər **dok**	testicle	Sun Hongkai 1991k:10.3.5	
8. Bai				
Bai (Jianchuan)	**tu**^{33}	penis	Zhao Yansun 1990:10.3.1	
	tu^{33} tɯ̱^{21} po̱^{21} k^{h}o^{33}	glans penis	Zhao Yansun 1990:10.3.2	b

[a] A Lalung subtlety should be noted: the first elements of **tu-dar** 'penis' and **tu ki ku-thi** 'testicle' are to be assigned to PTB ***k-tu-k** PENIS (§1.9.7); on the other hand, the first element of Lalung **tu-di** 'egg' is from PTB ***daw** BIRD (§2.1.10) 'bird'. This is somewhat confusing, since PTB ***d(w)əy** EGG / TESTICLE (§1.9.1) sometimes means 'testicle' rather than 'egg'.
[b] Bai **tɯ̱**^{21} **po̱**^{21} 'head'.

(3b) PTB *tsu PENIS

This allofam is only shakily attested. The Spiti and Ergong forms look parallel, and it is possible that the latter is a borrowing from a western Tibetan dialect (no similar form has been uncovered in Written Tibetan). The fit between the Hayu form and the others is excellent.

1.3.1. Central Naga (Ao Group)			
Ao (Chungli)	^{2}ta^{3}**tsɯ**^{3}tšaŋ	testicle	Weidert 1987:617a
2.1.2.1. Tibetan

3.3. rGyalrongic			
Ergong (Daofu)	pə **tsə**	penis	Dai Qingxia 1989b:10.3.1

(4) PTB *ti-k PENIS

This etymon is well-attested in Karenic and apparently also in Lolo-Burmese (see note above under PTB ***m-ley ⪤ *m-li** PENIS (§1.9.7)), with scattered but good-looking cognates in the NE Indian Areal Group (Meithei), Himalayish, and Asakian (Jingpho-Asakian).

In Chart L (Sak-Luish Group) of Luce 1985, under the confusing gloss "Penis/Testicles", two forms are given from Bawtala Sak, one from Dodem Sak, two from Ganan, and two from Kadu (Kantu). Where two forms are given from the same language, separated by a semicolon, I have assumed that the first one means 'penis' and the second one 'testicles', and have reglossed them accordingly. Under this interpretation, some syllables are assigned to the present root; while others, phonologically quite similar, are taken to mean 'testicle', and are assigned to PTB ***d(w)əy** EGG / TESTICLE (§1.9.1), above [q.v.].

Rather arbitrarily, I assign reflexes with stop initials to this root and those with fricated or palatalized initials to PTB ***dzi** PENIS (§1.9.7).

Like the previous etymology PTB ***k-tu-k** PENIS (§1.9.7), some reflexes of this root have a final **-k**.

The resemblance to English *dick* appears entirely accidental.

1.4. Meithei

2.1.2.1. Tibetan				
Tibetan (Written)	**t'ig**-le	semen virile; contemplation	Matisoff 1987	a
2.1.3. Lepcha				
Lepcha	**t'ik**-ṅak	glans penis	Mainwaring 1898:151	

[a] This curious form receives four glosses in Jäschke, p. 231: (1) 'spot (as on a leopard)'; (2) 'zero, naught'; (3) '*semen virile*'; (4) 'contemplation'. Jäschke remarks that the last two senses are "mystically connected with each other" in Buddhist thought. (The sense of 'naught' seems like a recent extension of 'spot', since a small zero looks like a dot.) On *a priori* semantic grounds, another WT word, **t'igs-pa** 'drop (of liquid)' also looks like it might be related; but in other Himalayish languages similar forms have no liquid associations, e.g. Bunan **tig-pa** 'testicle' and Lepcha **t'ik** 'penis'. It looks as if 'spot/zero' and 'semen/contemplation' are mere homophones.

(5) PTB *dzi PENIS

This etymon seems solid enough, though it has a rather strange distribution, occurring in scattered languages of the Himalayish, Lolo-Burmese (including Jinuo), and Asakian groups, as well as in the unclassified Tujia. There is not yet enough evidence to decide whether to reconstruct either a *voiced or *voiceless initial, or both *voiced and *voiceless allofams.

This root looks as if it might stand in an allofamic relationship with PTB ***ti-k*** PENIS (§1.9.7). Note, however, that the reflexes of PTB ***ti-k*** and the present root are quite different in Nesu and Sani.

(6) PTB *m-bay PENIS

On the basis of the data so far available, this etymon has a fairly wide though scattered distribution, with reflexes in a single Himalayish language (Hayu), a few closely related Loloish languages (Noesu, Nosu, Nusu), and a couple of Qiangic languages (rGyalrong and Xixia). It is noteworthy that the nasal prefix is overtly attested in Hayu, rGyalrong, and Xixia, so that it may confidently be set up for PTB. This etymon is quite distinct from the most widely attested root for PENIS with nasal prefix, PTB ***m-ley*** ⩙ ***m-li*** PENIS (§1.9.7) above, as proven e.g. by the Hayu reflexes: ***m-ley*** > Hayu **mli**, ***m-be*** > Hayu **-(m)be**.

Noesu	**be**^{33}	penis	CHEN Kang 1986b:10.3.1
Nosu	**be**^{33}	penis	CHEN Kang 1986b:10.3.1
Nusu (Central/Zhizhiluo)	**bɯ**^{55}	penis	DAI Qingxia 1989o:141.

[a] The relationship between the apparent Hayu doublet, **-pɪ** and **-(m)be**, is not clear.

(7) PTB *pwat PENIS

This etymon is of very restricted distribution, occurring only in the Jingpho-Asakian group. It appears unrelated to the equally restricted etymon PTB ***pwak***. A Lepcha form **tălam-pót** 'testicles' is not to be brought in here, since the last element (**pót**, **a-pót**) means 'fruit; ball', and recurs in other bodypart compounds like **nyen-pót** 'woman's breast; cow's udder' and **anyor-pót** 'dewlap'.

This etymon was reconstructed as ***pot*** TBRS: #120.

1.7.3.1. JINGPHO

Jingpho	ne^{31}**pọt**^{31}	penis shaft (n.)	DAI Qingxia *et al.* 1983

1.7.3.2. ASAKIAN

Ganan	**kăpɔ**^{3} ti^{1}	testicles	Luce 1985:L.149
	kăpɔ^{1} **pɔ?** krɔʔ^{4}	penis	Luce 1985:L.149
Kadu (Kantu)	**kăpɔt**^{3} ti^{1}	testicles	Luce 1985:L.149

(8) PTB *pwak SCROTUM

This root has only been found in a few languages, two Himalayish (Dumi, Tamang) and one Qiangic (rGyalrong), though the phonological and semantic fit among them is excellent. See TBRS #121.

There is a probably fortuitous resemblance between this root and PTB ***pwat*** PENIS (§1.9.7).

This root was reconstructed as ***pok*** in TBRS: #121.

2.1.4. TAMANGISH

Tamang (Risiangku)	^{4}**pak** si	testicle (n.)	Mazaudon 1991:10.3.5

2.3.3. CENTRAL KIRANTI

Dumi	**phok** sɨ	scrotum	Driem 1993

3.3.1. RGYALRONG

rGyalrong (Eastern)	tə rgo **pok** cço	scrotum	SUN Hongkai 1991j:10.3.4

(9) PTB *tyaŋ PENIS / CLITORIS / LONG

This etymon has been discovered in Himalayish (Chepang and Lepcha) and the NE Indian Areal Group (Karbi). A pair of superficially resemblant forms must be banished from this etymon:

Garo **go'l-teng** 'penis' is analyzed by Burling as STICK + LONG. The gloss of **go'l** or **gol dik** as 'stick' is confirmed in K. W. Momin's *English-Achikku Dictionary* (n.d.:227). I have no independent evidence that **teng** means 'long' in Garo, although several other NE Indian Areal Group languages have similar forms with that meaning: Khoirao **ka tang ba**, Liangmei **ka-theŋ-bu**, Maram **tang**, Karbi **ke ding**, Rengma **ka thong**, Tangkhul **ka sang**, etc.

Lepcha **tălam t'yeṅ** 'testicle' must also be rejected. According to Mainwaring/Grünwedel (1898:164), the second element **t'yeṅ** actually means 'the chief or most precious part', as in **să-bŭr t'yeṅ** 'the musk bag or gland of the musk-deer'. The true Lepcha cognate is probably the first syllable of **čeṅ pă-tiṅ**.

1.5. MIKIR [KARBI]

Mikir [Karbi]	ing **teng**	clitoris	Matisoff 1987

2.1.3. LEPCHA

Lepcha	**čeṅ** pă-tiṅ	penis	Matisoff 1987	[a]

2.4. KHAM-MAGAR-CHEPANG

Chepang	**təiŋ**	penis	Weidert 1987:617a
Chepang (Eastern)	**təyŋ**	genitalia; pudenda (male); penis	Caughley 1990:10.1; Caughley 1990:10.3.1
	təyŋ kliʔ	semen	Caughley 1990:10.3.7
	təyŋ ta laŋ	glans penis	Caughley 1990:10.3.2
	təyŋ thyo reŋ	foreskin	Caughley 1990:10.3.3
	təŋ	penis	Caughley 1990:10.3.1

[a] Lepcha **pă-tiṅ**, seems to mean 'small stick, switch' (Mainwaring, pp. 127-8).

(10) PTB *ma:k SON-IN-LAW / GENITALS / PENIS / MALE / VAGINA

This etymon seems basically to belong in masculine semantic space, since most TB reflexes mean PENIS. The likely Chinese comparandum 牡, Mand. **mǔ**, means MALE (of certain birds and animals; see below), and this sense also occurs in TB (see Taraon **mau-a**, below), implying that MALE is the more original meaning.

Benedict 1979[*] suggests a connection with PTB ***ma:k*** (better ***s-ma:k***) 'son-in-law' [*STC* #324; *HPTB* p. 325]: cf. WT **mag-pa**, Lepcha **myok**, Dhimal **hma-wa**, Miri **mak-bo** ~ **mag-bo**, Jingpho **dà-má?**, WB **səmak**, Lahu **ɔ̀-má-pā**, Lushai [Mizo] **ma:k-pa**. The long vowel is supported by the Mizo form, and the ***s-*** prefix is evidenced indirectly by Lepcha (where **-y-** < ***s-**), and directly by Dhimal and WB. This ***s-*** prefix is in turn undoubtedly a reduction of PTB ***za*** SON / CHILD.

Nevertheless, this root has undergone an enantiodromic shift or "genital flipflop" to mean VAGINA in both Karbi and (probably) Newar (neither of these forms was cited in Benedict 1979), so that it was evidently reinterpreted in some areas as 'genitals (of either sex)'. This makes one wonder whether the root NEIA ***mo*** VAGINA (§1.9.5), reconstructed on the basis of forms from Naga languages, might also be somehow related to the present etymon.

Chinese comparandum

A likely Chinese comparandum has been suggested by Benedict 1979, pp. 22-23 and n. 36: 牡 OC ***môg**/***mə̣u** [irreg.], *GSR* #1063a 'male (quadruped)'; Li 1971: ***məgwx**; Baxter 1992: ***m(r)juʔ**; Mand. **mǔ** [JAM].

The Middle Chinese reflex of this word has irregular vocalism: ***mə̣u**. This accounts for the discrepancy between Baxter's reconstruction (with medial ***-j-**) and Li's (without medial ***-j-**). The presence of ***-j-** in Baxter's form accounts regularly for vocalic development, but the medial itself must then be assumed to drop irregularly in Middle Chinese.

The proposed connection to PTB ***maːk** presents some difficulties. The Chinese vocalism would normally correspond to a rounded PTB vowel. (See examples in Gong 1995 #61-69.) Although those open syllables in OC reconstructed with ***-g** by Karlgren and Li sometimes correspond to syllables with coda ***-k** in PTB, more generally we find OC ***-k** corresponding to PTB ***-k** and open syllables corresponding to open syllables.

Schuessler 2007:391 argues that the Chinese word is related to Austroasiatic forms meaning 'male ani-

mal’.
[ZJH]

(11) PTB *s-nyak ≍ *s-nik PENIS / COPULATE

This root seems basically to mean PENIS, with extensions into the meaning COPULATE. Some reflexes resemble those of PTB ***m-ney** PENIS (§1.9.7), although Jingpho has distinct reflexes of both: **mənè ~ mənyè** ‘penis’ vs. **nè? ~ nyè?** ‘copulate’. Evidence for the ***s-** prefix is to be found in Lakher (Mara), Kom Rem, and Moyon.

Some likely reflexes have initial laterals, rather than nasals. Most of the Tani forms cited in J. Sun 1993:131 have labial rather than dental nasal clusters, but it seems more plausible to assign them to this etymon than to any other.

In *GSTC* #172, I compared the Lakher (Mara) and Jingpho forms, but offered no reconstruction.

1.1. “North Assam”

	nik ma	copulate (v.)	Weidert 1987:155
	nik t-	copulate with (v.)	Michailovsky 1989b

2.3.3. Central Kiranti

Khaling	le-**ne**	copulate	Matisoff 1987

2.4. Kham-Magar-Chepang

Chepang (Eastern)	luʔ **naʔ**	copulate	Caughley 1990:10.2
Kham	**neːh**-nya	copulate	Watters & Watters 1989:2.B.2.13
	neːh-nyā	copulate	Matisoff 1987
	neːʱ-nyā	copulate (v.)	Weidert 1987:155

[a]This Proto-Tani form also resembles PTB ***ma:k** SON-IN-LAW / GENITALS / PENIS / MALE / VAGINA (§1.9.7), so its precise affiliation remains uncertain.

[b]The *Jinghpo-Chinese Dictionary* (Dai, et al. 1983:566) cites the form **ne^{31}** ‘性交 [have sexual congress]’ with no final glottal stop, making it look identical to the word for ‘penis’.

[c]The first syllable of this form resembles the second syllable of Kham **or-’kal** ‘penis’. However, according to Mainwaring/Grünwedel 1898:53, the morpheme **gar** actually means ‘curved, crooked at one end, bent’.

[d]According to K. P. Malla (p.c. 2007), Newar **-ku** serves as a classifier for “a piece with some magnitude in girth or depth”.

(12) PTB *$\begin{matrix}\textbf{b}\\\textbf{m}\end{matrix}$-laŋ PENIS / MALE / HUSBAND

This etymon has been identified in Himalayish, Jingpho, and Qiangic, though more support from the latter group would be welcome. The PTB root initial is taken to have been a *lateral, with both a labial nasal and a labial stop prefix attested.

According to K. P. Malla, the second syllable of Newar **mi jõ** ‘male’ is from Skt. *jana-* ‘man’, not from the present root. The first syllable is from the widespread TB morpheme PPC ***r-mi(y)-n** PERSON / MAN (§4.4.1).

J. Sun 1993:131 reconstructs Proto-Tani ***mrak**, but the forms he cites are better assigned to PTB ***s-nyak ≍ *s-nik** PENIS / COPULATE (§1.9.7), above.

This root seems distinct from PTB ***la** MALE (§1.9.7).

Also to be brought into this etymon is WB **lâŋ**, which (as suggested in Matisoff 1995:52-3 [“Sino-Tibetan palatal suffixes revisited”]) is to be compared with Chinese 郎 (Mand. **láng**) [WHB ***C-rāŋ**], now meaning ‘young man; bridegroom; clf. for sons’. This word is glossed only as ‘place name (Tso); double roof, one roof above the other’ in *GSR* #735r. However, it would be rash to infer that the synchronic meaning did not exist at all in spoken OC.

See the remarks by Handel, below.

1.1.1.2. Eastern Tani

Padam [Abor]	mi-**long**	husband; masculine suffix	Benedict 1941/2008:129
Mishing [Miri]	mil-**bong**	husband	Benedict 1941/2008:129 [a]

1.1.2. Deng

Darang [Taraon]	**mlõ**	penis	Matisoff 1987

1.3.3. Zeme Group

Liangmei	ka-**lɛ̃**	penis	Weidert 1987:142

1.7.3.1. Jingpho

Jingpho	ne^{31}**laŋ^{33}**	penis (n.)	Dai Qingxia *et al.* 1983

2.1.2. Bodic

Tsangla	**long**	penis	Das Gupta 1968:67
Tsangla (Central)	**long**	penis (m.)	Egli-Roduner 1987:34 3

2.1.3. Lepcha

Lepcha	tyang-mo **long**	male elephant	Benedict 1941/2008:137

2.1.4. Tamangish

Manang (Gyaru)	**byɯŋ^{2}**	male	Nagano 1984:147

3.2. Qiangic

Mɯya [Minyak]	**ʁo^{35}**	male	Sun Hongkai 1991h:10.3

3.3.1. rGyalrong

rGyalrong (NW)	tə **ʁʐa**	male	Sun Hongkai 1991l:10.3

6.1.1. Burmish

Burmese (Written)	**laṅ**	husband	Marrison 1967
	lâŋ	husband	Benedict 1976a; Benedict 1976a
	laŋ^{2}	husband (n.)	Huang Bufan & Dai Qingxia, eds. 1992:0247.26
	laŋ^{2}	husband	Sun Hongkai et al. 1991:337.39

[a]Benedict 1941/2008:129 observes that this form “appears to be metathesized”, implying an earlier form **mi-b-long**.

Chinese comparandum

郎 OC ***lâng**, *GSR* #735r ‘husband, young man’ ; Li 1971: ***lang**; Baxter 1992: ***C-rang**; Mand. **láng**.

The meaning ‘husband, young man’ is not attested until quite late. It appears to be derived from the basic sense ‘veranda or corridor (of a palace or mansion)’ via ‘official (doing duty there)’, making it an improbable cognate to PTB roots meaning ‘male’, cf. Schuessler 2007:344.* Furthermore, nearly all scholars are now in agreement that Middle Chinese **l-** derives from earlier ***r-**, and does not normally correspond to PTB ***l-**.
[ZJH]

(13) PTB *gaŋ PENIS / MALE

This etymon has solid reflexes in the NE Indian Areal Group (Garo, Karbi) and Himalayish (Lepcha, Manchati). Several Chinese comparanda suggest themselves: 雄 OC ***gi̯ŭŋ**, *GSR* #887l ‘male’; Mand. **xióng**, and/or 犅 OC ***kâng**, *GSR* #697f-g, ‘bull’; Mand. **gāng**. A less plausible comparison is with 公 OC ***kung**, *GSR* #1173a-f ‘father; prince’; Mand **gōng** (although Karlgren notes that ‘some of these forms seem to suggest a phallic interpretation’). *STC* (n. 488, p. 190) suggests comparing this last Chinese morpheme to TB forms like Rawang **əkhaŋ** ‘grandfather’; WB **pha’-khaŋ** ‘father’, **mi’-khaŋ** ‘mother’, **khaŋ-pwân** ‘spouse’, and **khaŋ-bhya** ‘sir; madam’. It seems unlikely, however, that this group of forms has anything specifically to do with maleness; it seems rather to have been an honorific appellation for an elder or respected relative of either sex.

1.5. Mikir [Karbi]

Mikir [Karbi]	chò-**kàng**	penis	Grüssner 1979:69

1.7.1.2. Garo

Garo	ri-**gaŋ**	penis	Matisoff 1987; Matisoff 1985a:049; Benedict 1972:262
Garo (Bangladesh)	ri-**gong**	penis	Burling 1992

2.1.1. Western Himalayish

Pattani [Manchati]	**gàŋ** mì	male	Sharma 1991b:10.3

2.1.3. Lepcha

Lepcha	suṅ-**gaṅ**	penis	Matisoff 1987

9. Sinitic

Chinese (Hanzi)	雄	male	Baxter & Sagart 2011:3176
Chinese (GSR #)	**887l**	male	Baxter & Sagart 2011:3176

9.0.1. Old Chinese

Chinese (Old/Mid)	**gi̯ŭŋ/ji̯ung**	male	Karlgren 1957:887l
Chinese (Old)	**wjiŋ**	male of birds and small animals	Baxter 1992:1348
	ɢʷəŋ {[ɢ]ʷəŋ}	male	Baxter & Sagart 2011:3176

9.0.2. Middle Chinese

Chinese (Middle)	**hjuwng**	male	Baxter & Sagart 2011:3176

9.0.3. Modern Chinese

Chinese (Mandarin)	**xióng**	male	Baxter & Sagart 2011:3176

Chinese comparanda

雄 OC ***gi̯ŭŋ**, *GSR* #887l ‘male’; Li 1971: ***gwjəng**; Baxter 1992 #1348: ***wjiŋ**; Mand. **xióng**.

This proposed cognate is doubtful. The OC labialized initial plus schwa vocalism would normally correspond to a rounded vowel in PTB.
[ZJH]

犅 OC ***kâng**, *GSR* #697f-g ‘bull’; Li 1971: ***kang**; Baxter 1992: ***kang**; Mand. **gāng**.

The proposed cognacy works phonetically, but one must also note a competing etymology with equally persuasive semantics that relates this Chinese word to WT **glang** ‘cow, elephant’. (Gong 1995 and 2001 instead relate WT **glang** to OC ‘elephant’ 象 ***gljangx** > ***ljangx**.)

Schuessler (2007:251) suggests that 犅 may come from earlier ***klaŋ**, and posits a relationship with Mru **klaŋ** ‘male’ and Lushai (Mizo) **tlaŋ** ‘male’, as well as with WT **glang**. He proposes a PTB root ***laŋ** with animal prefix ***s-** or ***k-**.*

Note the parallel etymology with a homophonous member of the same phonetic series 岡 ‘ridge’ (Mand. **gāng**), which has been compared to WT **sgang** ‘hill, spur’ and WB **khang** ‘strip of high ground’ (see for example Coblin 1986:94-2).*
[ZJH]

(14) PTB *s-kyu MALE / PENIS

This etymon is represented by convincing cognates in Himalayish (Bunan, Kanauri) and Qiangic (rGyalrong, Xixia), though it is so far sparsely represented in TB as a whole.

1.3.1. Central Naga (Ao Group)

Ao (Mongsen: Mangmetong)	[tə]-**ku**	penis (n.)	Coupe 2007

1.3.4. Tangkhulic

Tangkhul	shaŋ **kui**	penis	Matisoff 1987 [a]

2.1.1. Western Himalayish

Bunan	**khyua**	male	Sharma 1991a:10.3
Kanauri	**skyo**	male	Sharma 1988:37,41

2.4. Kham-Magar-Chepang

Chepang (Eastern)	**goyʔ** coʔ	male	Caughley 1990:10.3

3.1. Tangut

Tangut [Xixia]	**khǐu̯** thu	penis	Dai Qingxia 1989e:10.3.1
	khi̯u^{2}	penis	Sofronov c1978
	kǐuɦ	penis	Nishida 1964:269-052

[a]The second syllable is homophonous with Tangkhul **kui** ‘head’, though this seems to be fortuitous, since the form does not mean ‘glans’.

*Schuessler suggests that WB **laŋ** ‘husband’ is actually a loan from Chinese, though this seems unlikely in view of the paucity of Chinese loanwords in Burmese. [JAM]

*See the previous etymon PTB ***b/m-laŋ** PENIS / MALE / HUSBAND (§1.9.7).

*See also *HPTB*:266, 303. [JAM]

3.3.1. rGyalrong				
rGyalrong (Northern)	tə **sku**	penis	Sun Hongkai 1991k:10.3.1	

(15) PTB *səw-t TESTICLES / PENIS / VIRILITY / SEMEN

This etymon is firmly established in Lolo-Burmese (Burmese itself has reflexes of both the stopped and non-stopped allofams) and Jingpho. The first syllable of Kham **zuh-ri:** 'testicle' is probably to be assigned to PTB ***dz(y)u** EGG (§1.9.1) rather than to the present root, in view of the 2nd syllable of the compound **'ba-zu-ri:** '(non-human) egg', where the first syllable means 'bird'. Palaychi (Karenic) **shóq** 'penis' seems unrelated.

The semantic center of the root seems to be VIRILITY. It occurs especially in compounds for intact (as opposed to castrated) male animals, with extensions into SEMEN, TESTICLES, and PENIS. This root was reconstructed for PLB in Matisoff 1988a:1225.

1.3.2. Angami-Pochuri Group				
Khezha	'è **sò**	penis	Yabu 1994:10.3.1	
Sema [Sumi]	aphi-**zü**	semen / sperm	Achumi 1998a:10.3.7	
1.7.3.1. Jingpho				
Jingpho	ne-**zu**	semen	Matisoff 1987	
	ne^{31}**tsu**^{33}	semen (n.)	Dai Qingxia *et al.* 1983	
	zū	semen	Matisoff 1987; Matisoff 1974:83	
	ə **zu**	semen	Matisoff 1987	
4. Nungic				
Rawang	ŋan^{31} **ʃɯ**^{31}	bull	LaPolla 2003:301	
6.1. Lolo-Burmese				
**Lolo-Burmese*	***səw**^{1}/^{2}	testicles / virility	Matisoff 2003a:612	
6.1.1. Burmish				
Burmese (Written)	**sui**	penis; penis (of animals)	Matisoff 1987; Benedict 1976a	[a]
	sut	semen	Matisoff 1987; Benedict 1976a	
	ʔə **sûi**	testicle	Matisoff 1987	
6.1.2.2. Central Loloish				
Lahu (Black)	g̈âʔ-phu-**šɔ̄**	uncastrated cock	Matisoff 1988a:1225	
	í-mû-**šɔ̄**	stallion	Matisoff 1988a:1225	
	nû-**šɔ̄**	bull	Matisoff 1988a:1225	
	nû-ɔ̀-pā-**šɔ̄**	bull	Matisoff 1987	
	vàʔ-**šɔ̄**	uncastrated boar	Matisoff 1988a:1225	
	ɔ̀-pā-**šɔ̄**	intact male animal	Matisoff 1988a:1225	
	ɔ̀-phu-**šɔ̄**	intact male	Matisoff 1987	
	ɔ̀-**šɔ̄**-tɔ̂	castrated animal	Matisoff 1987	
Lisu (Central)	ɲi^{21}**ʃɿ**^{55}	bull kept for stud	Bradley 1994	

[a] This form goes back to PLB Tone *1. It is the allofam **sûi** (< PLB Tone *2) which is directly cognate to Lahu **šɔ̄**.

(16) PTB *r-lik TESTICLE / EGG / PENIS

This etymon was already set up in Matisoff 1972a #170 as PLB ***r-lek**, on the basis of a single Loloish form (Akha) and WT **rlig-pa**. It is solidly attested in Himalayish, with possible cognates in Xixia and the NE Indian Areal Group (esp. Karbi).

0.1. Tibeto-Burman (previously published reconstructions)

[a] The relationship of Kanauri **liṭ** 'egg' to **lik pā** 'penis (polite)' is uncertain.
[b] WT **ṡubs** 'case, covering, sheath'.

(17) PTB *syan TESTICLE / EGG

This etymon is still not well established, with only scattered reflexes in Himalayish, Lolo-Burmese, Karenic, and Baic. The final nasal is reconstructed on the basis of the vowel nasalization in some Bai dialects.

2.1.5. Dhimal				
Dhimal	**syeq**, **syeq** guli	testicle	King 1994	
2.3.4. Western Kiranti

	sẽ^{42}	egg	Sun Hongkai et al. 1991:170.36	

[a] It is possible that Hayu **se:** is rather < PTB ***sey** FRUIT / ROSE / ROUND OBJECT (§1.2.6).

(18) PTB *s-blwaŋ SCROTUM / POUCH / MALE (of animals)

This root has only been identified in three languages (Darang, Lepcha, and Bai), though the semantic and phonological fit is good among them. The basic meaning of the etymon is 'purse, small pouch' (cf. French *la bourse* 'purse; stock market', *les bourses* 'testicles'). The resemblance to PTB ***b/m-laŋ** PENIS / MALE / HUSBAND (§1.9.7) is due to chance.

1.1.2. Deng			
Darang [Taraon]	sã: **brã**	scrotum	Matisoff 1987; Matisoff 1987

(19) PTB *s-mu SEED / TESTICLE / ROUND OBJECT

This etymon appears to be confined to the NE Indian Areal Group and Monpa (Mama Tshona), with the basic meaning 'ball; round object', appearing in such transparent compounds as Lushai (Mizo) **mit-mu** 'eyeball' and **til-mu** 'testicle'. Several Loloish forms also seem to be related.

1.2. Kuki-Chin: ***muu** SEED

(20) PTB *dzəy SEED / TESTICLE / ROUND OBJECT

The basic meaning of this etymon seems to be SEED, with extensions into SMALL ROUND OBJECT, and thence to TESTICLE.

This morpheme frequently occurs as the last syllable in words for EYE, as does the semantically similar root PTB ***sey** FRUIT / ROSE / ROUND OBJECT (§1.2.6).

PTB ***dzəy** SEED / TESTICLE / ROUND OBJECT (§1.9.7) is quite distinct from PTB ***sey** FRUIT / ROSE / ROUND OBJECT (§1.2.6), as witness the WB forms **sî** 'fruit' vs. **ə-ce'** 'seed'.

(21) PTB *ka BALL / EGG / TESTICLE / EYEBALL

This root seems basically to have meant 'ball', with natural extensions to EGG / TESTICLE and EYEBALL. A number of Himalayish compounds meaning PENIS have similar-looking morphemes (e.g. Baima ***kha^{13}*** **ndzɻ^{53}**, Bunan/Manchati ***kha*-ṭa**, Tamang **mlĕ-*ka***) though the semantic development BALL → TESTICLE → PENIS is improbable, and these syllables must be assumed to reflect a separate etymon.

The Newar form **kwaa-si** does not belong in this set. According to K. P. Malla, it means literally "hot-fruits" (**si** < PTB ***sey** FRUIT / ROSE / ROUND OBJECT (§1.2.6)). The true Newar cognate is represented by the second syllable of **mi-kha** 'eyeball', below.

(22) PTB *kuk POUCH / BASKET / SCROTUM

This root was reconstructed as meaning 'bag; basket; receptacle' in *STC* #393. It seems to refer often to a pannier, or hanging basket for transporting goods on an animal's back.

0.1. Tibeto-Burman (previously published reconstructions)			
**Tibeto-Burman*	***kuk**	basket; pouch; pouch, little bag	Matisoff 2003a:597; LaPolla 1987:3; Benedict 1972:393

Qiang (Longxi)	pá **kù**	large basket	Evans 1999:870

[a] Lepcha **kóm** 'silver; money'.

(23) PTB *ʔip ≍ *ʔi:t BAG / SCROTUM

This etymon is firmly attested in the NE Indian Areal Group and Burmese, and may be confidently set up for PTB. The basic meaning seems to be 'bag, pouch'. The variation between final **-p** and **-t** is unexplained, but is paralleled in a number of other roots with high front vowels. Cf., e.g., Lai Chin **ʔit** 'sleep', from PTB ***s-y(i/u)p** SLEEP (§1.1.4.1), and Mizo **mit** 'eye', from PTB ***s-mik** EYE (§1.2.6).

0.1. Tibeto-Burman (previously published reconstructions)

(24) PTB *la MALE

This etymon is very well attested in the NE Indian Areal Group, Lolo-Burmese, and Jingpho, with possible cognates also in Himalayish. *STC* (p. 96) recognizes a 'masculine suffix' ***-la**, "used with words for animals (in Tsangla, Digaro, Nung, Kachin, Burmese-Lolo, Konyak, Garo-Bodo, Mikir, and Meithei)".

Strangely enough, there is a homophonous root PTB ***la(:)** FEMALE / DAUGHTER (§1.9.12) with the antonymous meaning FEMALE / DAUGHTER. Cf. Benedict 1981, 1991.

[a] This word is not to be found in the dictionaries of Judson 1893/1953/1966 or Bernot 1978-92.

(25) PTB *m- t/d un FOREPART / FORESKIN

This root has the general meaning of FOREPART. In combination with etyma for TOOTH it means FRONT TOOTH/INCISOR. In combination with SKIN it can mean FORESKIN (cf. WT **mdun-lpags**). The Lepcha form requires special comment (see note).

1.2.4. "Old Kuki"			
Kom Rem	kə **tu** hə	tooth (incisor)	Toba & Kom 1991:3.10.1
2.1.1. Western Himalayish

[a] Cf. Clark (1911:660): "**SONGZANG-LIZANG**, all kinds of seeds, fruits, grains, nuts or berries. All kinds of little trees, brush, sprouts, shrubs, etc."

1.9.8 Copulate

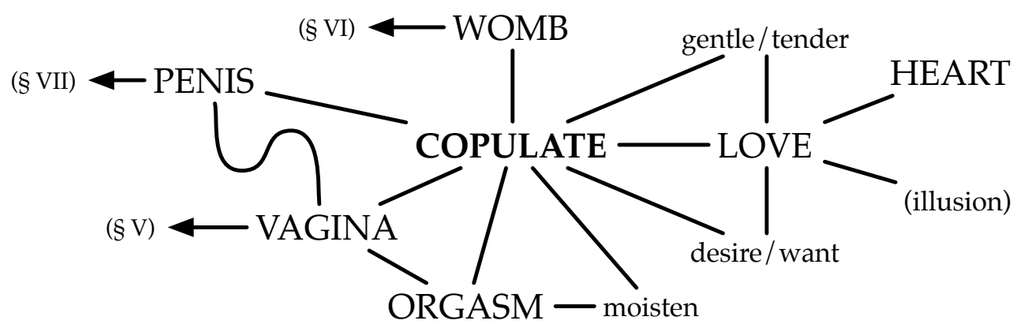

Figure 161: 1.9.8 *Copulate*

IT should come as no surprise that verbs meaning COPULATE are closely associated with notions of LOVE and DESIRE. Most etyma in this chapter have a semantic range which encompasses both the physical act of love and its emotional concomitant. At least one root makes an overt connection between COPULATE and PENIS (cf. PTB ***s-nyak** ≍ ***s-nik** PENIS / COPULATE (§1.9.7), above). Innumerable euphemisms for the act of sexual congress occur, but most of these are best treated in a separate study devoted to verbs. Typical verbs extended to a sexual sense include: PUSH (Karbi **dòy** 'push', **che-dōy** 'copulate'); DO (Jingpho **dī** 'do, make, form, fashion; be guilty of illicit intercourse'); MEET (Jingpho **khrúm** 'meet, converge; have sexual intercourse'), etc.

(1) PTB *ŋ-(w)a:y COPULATE / MAKE LOVE / LOVE / GENTLE

This root is well-attested in TB, occurring in the NE Indian Areal Group, Lolo-Burmese, Jingpho, Karenic, and Baic. There is an excellent Chinese comparandum, 愛 'love' [*GSR* 508a]. *STC* (pp. 150, 192) compares Proto-Karen ***ʔai** to the Chinese word, but does not cite any other TB forms. In Matisoff 1985a (*GSTC*) #126, I reconstructed PTB ***ŋ-(w)ay**, on the basis of forms from Jingpho, Tiddim, Lushai (Mizo), and Tangkhul. Another set of forms, reconstructed separately in *STC* #315 as ***ŋoy**, with the gloss GENTLE / QUIET / MODERATE, I believe to be allofamically related to the present etymon (see *GSTC* #92).

There is a look-alike in Proto-Tai: ***ŋaay**^{B2} 'easy' (*HCT*:204) > Siamese **ŋâay**.

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

**Tibeto-Burman*	***ŋ-(w)ay**	love; make love	Matisoff 1985a:126; LaPolla 1987:206 [a]

Chinese (Old/Mid)	**əd/ə̂i**	love	CHOU Fa-kao 1972:508a
Chinese (Old)	**əd**	love	Matisoff 1985a:126
	ʔɨts	love / grudge	Baxter 1992:1160
	ʔɨts	love / grudge (v.)	Baxter 1992:337

9.0.2. MIDDLE CHINESE

Chinese (Middle)	**ə̂i**	love	Matisoff 1985a:126

Chinese comparandum

愛 OC ***ʔəd**, *GSR* #508a 'love'; Li 1971: *·**ədh**; Baxter 1992 #337: ***ʔɨts**; Mand. **ài**.

The Chinese form most closely resembles the Karen form **ʔai**. Because we expect OC ***ʔ-** to correspond to PTB ***Ø-** and OC ***ŋ-** to correspond to PTB ***ŋ-**, the Chinese form must be assumed to relate to a PTB allofam lacking initial ***ŋ-**.

Baxter reconstructs ***ʔɨts**, but a reconstruction of ***ʔɨjs** is also possible, as rhyming evidence does not definitvely indicate the presence of a stop coda.

The correspondence between TB final ***-ay** and OC final ***-əd** (Li), ***-ɨj** (Baxter) is attested, for example in the word for 'tail', TB ***r-may**; 尾 OC ***mjədx** (Li); ***mjɨjʔ** (Baxter); Mand. **wěi**. Elsewhere in this volume, PTB ***s-tay** NAVEL / ABDOMEN / CENTER / SELF (§1.9.3) offers additional support for this correspondence.
[ZJH]

(2) PTB * r m d s -ga COPULATE / LOVE / WANT

This etymon is extremely well attested, occurring in the NE Indian Areal Group, Himalayish, Lolo-Burmese, Nungish, Qiangic, and probably Baic. Its range of meanings extends from WANT/DESIRE to LOVE to COPULATE. This root is notable for the large number of prefixes that it has acquired in various branches of TB: ***r-** (in Qiangic [rGyalrong, Ergong] and Amdo Tibetan); ***N-** (in Loloish and perhaps Meluri); ***d-** (in Written Tibetan), and ***s-** (in Qiangic [Pumi]).

This etymon has been grammaticalized in Lahu, where it now functions as a desiderative particle, e.g. **qay gâ** 'want to go', **dɔ̀ gâ** 'want to drink', etc. See Matisoff 1988a:399-400.

We have tentatively grouped Loloish forms with initial velar stops with those with initial labial or velar nasals, assuming that the former descend from the unprefixed root while the latter show preemption of the root initial by the nasal prefix.

	ɲo̱^{33}	want / need (v.)	Huang Bufan & Dai Qingxia, eds. 1992:1755.48

(3) PTB *m-dza-k LOVE

This etymon was reconstructed as PTB ***m-dza** in *STC* #67, on the basis of forms from Written Tibetan, Jingpho, and Written Burmese (with a note that the Jingpho form actually ends in glottal stop, so that it "may be distinct"). There is in fact ample reason to set up both open-syllabled and stop-finalled allofams for this root: ***m-dza** ⋉ ***m-dzak**. The latter allofam is attested not only in Jingpho, but in Yi Nanhua (note the constricted vowel), and directly in NW rGyalrong (Qiangic group). The nasal prefix is directly reflected in WT, Yi (Dafang), and Jingpho.

The Hayu form has apparently acquired the -n suffix.

(4) PTB *kri k/ŋ LOVE / COPULATE

This root is well attested in the NE Indian Areal Group and Burmish, with an excellent cognate in Written Tibetan. The correspondence of WT **-ig** to WB **-ac** is perfectly regular. (Cf. *HPTB* pp. 343-348). The Maring form points to an allofam with final nasal.

1.1.1.1. Western Tani			
Apatani	**kì**	love	Sun 1993b
1.3. "Naga" Areal Group			
Maring	**karing**	love (v.)	Marrison 1967

	tʃi̱t^{55}tap^{21}	love / like	Huang Bufan & Dai Qingxia, eds. 1992:1126.30

[a] Jäschke (p. 61) notes that this word is "the usual, not exactly obscene, yet not euphemistic term for it". It also has the non-sexual meanings 'cohere, stick together' and 'be cloudy, overcast (of the sky)'.

(5) PTB *ləw-k COPULATE

This etymon is fairly well attested in TB as a whole, especially in Himalayish and Chin, but also in Lolo-Burmese (Burmese), and Qiangic (rGyalrong). Judging from the Burmese gloss in Judson 1893/1966, it seems to be connected with the notion of piercing or penetrating.

The allofam with final **-k** is attested not only in the Form-II of verbs in several Chin languages, but also in Chepang. The Form-I of Chin verbs, as well as the Kiranti and Burmese forms, reflect the open-syllable allofam.

	lûi	pierce in coitus (vulg.)	Benedict 1976a
6.1.2.3. Southern Loloish			
Akha	a̬ **loe̬**	penis	Matisoff 1987 [b]

[a] Khaling has **-e** where other Kiranti languages have **-u** in at least two other roots: COME/BRING DOWN Hayu **ju(t)-**, Bahing **ju(t)-**, Kulung **yuw-**, **yutt-**; but Khaling **ye(n)-**. STEAL Hayu **khu(t)-**, Bahing **ku(s)-**, Thulung **khu-**, Kulung **kuss-**; but Khaling **khe-**. See Michailovsky 1991, *Proto-Kiranti*, pp. 15, 34.

[b] This Akha reflex is to be referred to the present etymon, rather than to PTB ***m-ley** ⋉ ***m-li** PENIS (§1.9.7), since Akha **-oe** is the regular reflex of PTB ***-əw** (e.g. STEAL ***r-kəw** > Akha **k'oe̬** ; WEEP ***ŋəw** > Ak. **ngoeˇ**). For the Akha reflex of PLB ***r-lik** 'testicle', see **leh̬**, above PTB ***r-lik** TESTICLE / EGG / PENIS (§1.9.7). See also the note on Akha **beuˆ leuˆ** 'penis (polite)', above PTB ***m-ley** ⋉ ***m-li** PENIS (§1.9.7).

(6) PTB *duk ⋉ *tu LOVE / DESIRE / WANT

This etymon is well-attested in the NE Indian Areal Group, with good-looking cognates in Himalayish and Loloish. Two allofams should be reconstructed, one with and one without final ***-k**. The Idu and Loloish forms point to an allofam with *voiceless initial, while the Moyon form reflects an evidently secondary nasal prefix.

1.1.2. Deng			
Idu	we^{55}**thu**^{55}	love	Sun Hongkai et al. 1991:719.50
	wu **tʰu** wu ga	love	Pulu 1978

6.1.2.2. Central Loloish			
Lahu (Black)	cha **thû**	feel sexual desire (woman); lubricate	Matisoff 1988a:681
	nī **thû**	have an erection; be aroused	Matisoff 1988a:681; Matisoff 1988a:769
	thû	feel sexual desire; be horny (man or woman) (be v.)	Matisoff 1987

(7) PTB *ywa COPULATE

This root was reconstructed for Proto-Tani by J. Sun (1993), but seems to have a wider distribution, both elsewhere in the NE Indian Areal Group (Konyak) and in Himalayish. The Konyak, Baima, and Spiti compounds look like they all have the same morphemic structure, with PTB ***yaŋ** LOVE / DESIRE / COPULATE (§1.9.8) [see below] as their second element.

1.1.1. Tani: ***yo** COPULATE			
**Tani*	***jo**	copulate	Sun 1993a:81
1.1.1.1. Western Tani			

Apatani	**í**	copulate	Sun 1993b
Bengni	**ju**	copulate	Sun 1993a
Bokar	**jo**	copulate	Sun 1993a
	jo-ra:	have sex	Sun 1993b
Galo	a **ya**-nam	love (v.)	Das Gupta 1963
1.1.1.2. Eastern Tani			
Padam-Mishing [Abor-Miri]	**jo**	copulate	Sun 1993a
	yo	copulate	Matisoff 1987
	yo-shu	copulate	Matisoff 1987 [a]
Damu	**jo:**	have sex	Sun 1993b
1.7.2.2. Konyak-Chang			
Konyak	**ya** yiang	love (v.)	Marrison 1967
2.1.2. Bodic			
Baima	**ʒɔ**[13] iɔ[13]	copulate (v.)	Sun Hongkai 1991a:10.2 [b]
2.1.2.1. Tibetan			
Spiti	**jo** je	copulate	Bodh 1991:10.2

[a] Abor-Miri **-shu** 'REFLEXIVE'.

[b] The binomial roots Spiti **jo je** 'copulate' and Konyak **ya yiang** 'love (v.)' suggest that Baima **ʒɔ**[13] belongs with PTB ***ywa** COPULATE (§1.9.8), while **iɔ**[13] descends rather from PTB ***yaŋ** LOVE / DESIRE / COPULATE (§1.9.8).

(8) PTB *yaŋ LOVE / DESIRE / COPULATE

This etymon is fairly well established, occurring in the NE Indian Areal Group, Baic, and Himalayish. This root is independent of PTB ***ywa** COPULATE (§1.9.8) above, with which it occurs in binomes (Konyak, Baima, Spiti). There is a longshot Chinese comparandum, 癢 OC ***zi̱aŋ** 'itch', *GSR* #732r, Mand. **yǎŋ**, though the semantic association is doubtful.

The root PTB ***ywa** COPULATE (§1.9.8) strongly resembles the present etymon, but the Konyak binome **ya yiang** seems to show that the roots are independent of each other.

1. NE Indian Areal Group			
Miji	luŋ-**ʒaŋ**	love; be kind to (adj.)	Simon 1979
1.1.1.1. Western Tani			
Bokar	a-**jaŋ**	love; genial, kind, gentle (loving); like	Sun 1993b; Sun 1993b; Huang Bufan & Dai Qingxia, eds. 1992:1126.24
1.1.1.2. Eastern Tani			
Milang	a-**yan**-ma	love; dear (beloved)	Tayeng 1976; Tayeng 1976
	a-**yan**-myaŋ-pok-ɟak-ke	sympathize	Tayeng 1976
	a **yan**-cu-pok-ma	pity	Tayeng 1976
	a **yan**-ma	beloved; loving	Tayeng 1976; Tayeng 1976
	a **yan**-ma-nu	beneficient deity	Tayeng 1976
	a **yan**-ɲi-ka	pious	Tayeng 1976
	a **yan**-ɟak-ce	kind	Tayeng 1976
1.3.3. Zeme Group			
Khoirao	nri **ye**	love (v.)	Marrison 1967
1.7.2.2. Konyak-Chang			
Konyak	ya **yiang**	love (v.)	Marrison 1967
2.1.2. Bodic			
Baima	ʒɔ[13] **iɔ**[13]	copulate (v.)	Sun Hongkai 1991a:10.2 [a]
Tsangla (Motuo)	**jaŋ**	want	Sun Hongkai et al. 1991:674.7
Tshona (Wenlang)	**ʑiŋ**[35]	love	Lu Shaozun, ed. 1986
2.1.2.1. Tibetan			
Spiti	jo **je**	copulate	Bodh 1991:10.2
8. Bai			
Bai (Jianchuan)	**jæ̃**[44]	copulate (v.)	Zhao Yansun 1990:10.2

[a] The binomial roots Spiti **jo je** 'copulate' and Konyak **ya yiang** 'love (v.)' suggest that Baima **ʒɔ**[13] belongs with PTB ***ywa** COPULATE (§1.9.8), while **iɔ**[13] descends rather from PTB ***yaŋ** LOVE / DESIRE / COPULATE (§1.9.8).

Chinese comparandum

癢 'itch' ⪤ 痒 'disease', OC ***zi̱aŋ**, *GSR* #732i,732r; Li 1971: ***rang(x)**; Baxter 1992: ***(l)jang(ʔ)**; Mand. **yǎng** 'itch', **yáng** 'disease'.

Setting aside the question of semantics, this is a plausible comparison.

For other members of this phonetic series, Baxter reconstructs ***z(l)ang**, ***k(l)ang** and ***kh(l)ang**. The presence of medial ***-l-** ties the pronunciation of these words together; but the medial is given in parentheses because it does not affect subsequent development and Baxter is probably doubtful about its presence. Li's initial ***r-** has been revised to ***l-** by most scholars. Handel 1998 and Schuessler 2007 both reconstruct initial ***j-** in this situation.

This proposal parallels the comparison of Chinese 羊 ***jang** 'sheep' (Mand. **yáng**) with PTB ***g-yaŋ**. [ZJH]

(9) PTB *m-brel COPULATE / CONNECT

The basic meaning of this etymon seems to be 'hang together; cohere; be connected; come together; meet, join' (see the range of meanings in WT, Jäschke p. 402). It is attested chiefly in Himalayish, with apparently excellent Qiangic cognates. The nasal prefix is reflected by the WT a-chung (**ḥ-**), and directly by the Northern rGyalrong form. It is of course quite possible that the rGyalrong and Ergong forms are borrowings from Tibetan.

2.1.2.1. Tibetan			
Tibetan (Written)	**ḥbrel**-ba	copulate / join / be connected	Matisoff 1987
2.1.4. Tamangish

[a] Gurung **prxe-ba** is cited in Noonan's (1999) *Chantyal Dictionary and Texts* under 'have sex'.

(10) PTB *m-ba $\begin{matrix}\mathbf{k}\\\mathbf{ŋ}\end{matrix}$ COPULATE / LOVE / WOMB

This etymon, which seems to cover quite an unusual semantic range, including COPULATE / LOVE, and WOMB / NEST, is fairly broadly distributed, with likely reflexes in the NE Indian Areal Group, Himalayish, Loloish, and Tangut (Xixia). Allofams with final velar stop and final velar nasal both occur. The nasal prefix is directly attested in Moyon, Bisu, and Tangut.

1.1. "North Assam"			
Sulung [Puroik]	a[33]**pak**[11]	love	Sun Hongkai et al. 1991:719.52
1.1.1.1. Western Tani

	poʔ[4] muŋʔ[1]	womb	Srinuan Duanghom 1976

(11) NEIA * $\begin{matrix}\mathbf{k}\\\mathbf{h}\end{matrix}$ uŋ LOVE / COPULATE

This root has been found only in the NE Indian Areal Group, where it shows variation between initial **k-** and **h-**. (This variation is paralleled in a number of other etyma, including PTB ***(h/k)ay** VAGINA (§1.9.5); see the note under that reconstruction, Chapter 1.9.5 above.) The final **-n** in the Konyak and Bodo forms is unexplained.*

1.3.3. Zeme Group			
Liangmei	**kung**	love (v.)	Marrison 1967
Puiron	**kung**	love (v.)	Marrison 1967
Zeme	**hung**	love (v.)	Marrison 1967

1.7.1.1. Bodo			
Bodo	**kón**	copulate	Matisoff 1987
1.7.2.2. Konyak-Chang			
Konyak	**kün**	love (v.)	Marrison 1967

(12) PTB *(t)si COPULATE / LOVE

This root has scattered but good-looking reflexes in the NE Indian Areal Group (Maram, Meithei), Himalayish (Kanauri, Manchati), Loloish (Ahi, Nesu), Nungish (Dulong), Qiangic (Muya), and Tujia. Most reflexes have a simple sibilant fricative initial, but the Loloish and Tujia forms have affricates. There does not seem to be any connection with PTB ***ti-k** PENIS (§1.9.7) or PTB ***dzi** PENIS (§1.9.7).

1.3.3. Zeme Group			
Maram	a lung **si**	love (v.)	Marrison 1967
1.4. Meithei			
Meithei	nung **si**	love (v.)	Marrison 1967
2.1.1. Western Himalayish			
Kanauri	go **s̱hi**	copulate	Matisoff 1987
	tsŭk **s̱hi**	copulate	Matisoff 1987
Pattani [Manchati]	lhù **ṣi**	copulate	Sharma 1991b:10.2
3.2. Qiangic			
Muya	**si**[33]**si**[53] nɐ[33]βə[33]	like / love (v.)	Huang Bufan & Dai Qingxia, eds. 1992:1714.15
Muya [Minyak]	**si**[33]**si**[55]	love	Sun Hongkai et al. 1991:719.15
4. Nungic			
Trung [Dulong]	ŋi[55]**ɕi**[31]	love	Sun Hongkai et al. 1991:719.46
Trung [Dulong] (Dulonghe)	ŋi[55] **śi**[31]	love	LaPolla 1987:206

Tujia	a[35]**tshi**[55]	love	Sun Hongkai et al. 1991:719.38
Tujia (Southern)	ʔa[21]**tshi**[21]	love	Tian Desheng & He Tianzhen, et al., eds. 1986
6.1.2.1. Northern Loloish			
Nesu	**tɕɪ**[33]	copulate (v.)	Chen Kang 1986b:10.2
6.1.2.2. Central Loloish			
Ahi	**tʂhɛ**[33]	copulate	Chen Kang 1986b:10.2

(13) PTB *la COPULATE / LOVE

This root was set up in TBRS 154, but several of the supporting forms from Tamangic were spurious (p.c., M. Mazaudon, 2014). For the correct analysis of Gurung (Ghachok) **mrĩ la baq** 'copulate', see TGTM ***mriŋ** WIFE (§4.7.4).

The only remaining support for this etymon is furnished by Tangkhul and Dumi, but these two forms are also subject to reevaluation.

This shaky root seems quite distinct from PTB ***lyap** ⪤ ***rap** COPULATE / LOVE (§1.9.6).

1.3.4. Tangkhulic			
Tangkhul	kha **lā**	copulate	Matisoff 1987
2.3.3. Central Kiranti			
Dumi	**la** li kha	love	Driem 1993

(14) PTB *saw LOVE

This promising root, of limited distribution, has been found in the NE Indian Areal Group, with an apparent cognate in Himalayish (Chepang). Some reflexes have **-a**, others have a back vowel (**-u** or **-o**); the rhyme is reconstructed as ***-aw** on the testimony of Dimasa.

1.1.1.1. Western Tani			
Apatani	hen-**sú**	love	Sun 1993b
	hén-**su**-nɯ	love	Sun 1993b
1.3.2. Angami-Pochuri Group			
Rengma	**so**	love (v.)	Marrison 1967
1.3.3. Zeme Group			
Liangmei	lung **sa**	love (v.)	Marrison 1967
1.5. Mikir [Karbi]			
Mikir [Karbi]	jin **so**	love (v.)	Marrison 1967

* It is remotely possible that these two forms are related to the second Karbi syllable **hon**, from a separate root ***kon** ⪤ ***hon**.

1.7.1.1. Bodo

Dimasa	kha **sao**	love (v.)	Marrison 1967

1.7.2.2. Konyak-Chang

Chang	**sa** nou	love (v.)	Marrison 1967

2.4. Kham-Magar-Chepang

Chepang	rāp-**sā**	love (v.)	Hale 1973:10b1.52
	rap-**sa**	love	Caughley 1972:10.B.1.52

(15) PTk *wot COPULATE

1.3.4. Tangkhulic

**Tangkhulic*	***wot**	copulate	Mortensen 2012:709
Huishu	kə-kə-**woʔ**	copulate / have intercourse (v.)	Mortensen 2012:BodyParts.302
Tusom	kə-k-**we**	copulate / have intercourse (v.)	Mortensen 2012:BodyParts.295

1.9.9 Body Fluids

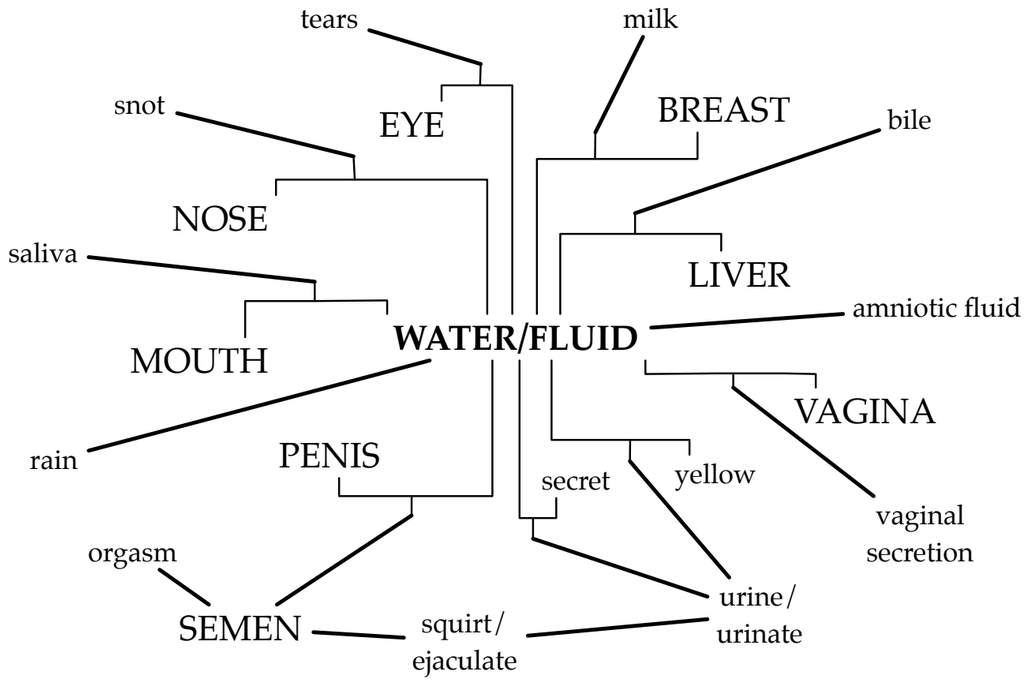

Figure 162: 1.9.9 *Body Fluids*

In Sino-Tibetan languages, the words for the various liquids produced by or contained in the body tend to be transparent compounds where the last element is a morpheme meaning 'water; liquid'.* Of the many body fluids,* only a few relate directly to the reproductive system (AMNIOTIC FLUID, MILK, SEMEN, VAGINAL SECRETIONS). In this chapter, however, in order to illustrate the scope of the various ST roots for WATER, I include a generous sampling of compounds referring to non-reproductive body fluids.*

(1) PTB * $\begin{matrix}\mathbf{r}\\\mathbf{w}\end{matrix}$ **a SEMEN**

There is no single widespread root for SEMEN to be reconstructed for PTB, though several promising local candidates are attested here and there. Many forms for this concept are euphemistic (e.g. words that otherwise simply mean 'water'); many others are compounds of the structure PENIS + WATER (e.g. Tangkhul **shaŋ-ra**). Other "sementic" associations include SEMEN ⟷ SAP (Akha **aˇ dzi˳** means both [Lewis p.35]); SEMEN ⟷ SHIT (Lahu **nī-qhê**); SEMEN ⟷ FAT (Lahu **nī-chu**); SEMEN ⟷ CONTEMPLATION (WT **t'ig-le** [Jäschke p. 231]). The present root appears in the NE Indian Areal Group, Himalayish, and Qiangic.

1.3.4. Tangkhulic

Tangkhul	hai **ra**	semen	Matisoff 1987	[a]
	pha̱ **ra**	semen	Matisoff 1987	
	shaŋ **ra**	semen	Matisoff 1987	

1.7.1.1. Bodo

Bodo	pe **da**	semen	Matisoff 1987	[b]

2.3.1. Eastern Kiranti

Belhare	**la** lik	semen, sperm	Bickel 1995
Limbu	le **wā**	semen	Matisoff 1987

2.3.2. Southern Kiranti

Bantawa	lü-khü-**wa**	semen	Rai *et al.* 1984:47
	lU khU **wa**	semen	Rai 1985

2.3.3. Central Kiranti

Dumi	ro**: rɨ**	semen, sperm, seed	Driem 1993	[c]

2.3.4. Western Kiranti

Thulung	**la** sa	semen	Allen 1975

3.1. Tangut

Tangut [Xixia]	rĭɑr **rĭe**	semen	Dai Qingxia 1989e:10.3.7

3.2. Qiangic

Qiang (Mawo)	**ʁliə**[1]	semen	Sun 1986

[a] Lit. "vagina-semen". This certainly looks like a case of "genital flipflop", i.e. semen is viewed as "vagina-semen", since that is its destination.

[b] The **-d-** in Bodo **da** is a plausible intervocalic reflex of ***-r-**. The name of this language itself is often transcribed as "Boro". See Bhat 1968.

[c] Dumi **ro: rɨ** looks exactly parallel to Tangut **rĭɑr rĭe**.

(2) PTB *ŋya SEMEN

This root has so far been found only in a few Himalayish languages.

2.1.1. Western Himalayish

Pattani [Manchati]	**ñya** ri	semen	Sharma 1991b:10.3.7
	ñya ri hut si	ejaculate (v.)	Sharma 1991b:10.3.8

2.1.4. Tamangish

Tamang (Risiangku)	[1]**ŋja**	semen (n.)	Mazaudon 1991:10.3.7
Tamang (Sahu)	[1]**ŋja**	semen	Matisoff 1987

2.3.1. Eastern Kiranti

Limbu	**yā** rimbā	semen	Matisoff 1987

(3) PKC * $\begin{matrix}\mathbf{ɓ}\\\mathbf{p}\end{matrix}$ **oo SPERM / SEMEN**

This etymon has so far been found only in a few Kuki-Chin languages.

* Exceptions are BLOOD, URINE, SWEAT, and sometimes BILE, which are usually monosyllabic words.

* That is, AMNIOTIC FLUID, BILE, BLOOD, MILK, PHLEGM, PUS, SALIVA, SEMEN, SNOT, SWEAT, TEARS, VAGINAL SECRETIONS.

* The numerous roots for water (over ten at last count) in the STEDT database merit a separate study. Words for WATER seldom seem to be used by themselves in ST languages to mean URINE, unlike e.g. English, where *make water* is a common euphemism for 'urinate'; for an exception see the WT form **č'u** below.

1.2. Kuki-Chin

**Chin*	***ɓoo ≍ poo**	SPERM / SEMEN	VanBik 2009:47

1.2.1.1. Northern Chin

Kuki-Chin	**bo** tui	semen / sperm	Haokip 1998:10.3.7
	bo tui pot	ejaculate (v.)	Haokip 1998:10.3.8
Paite	**bo**	sperm	VanBik 2009:47
Tiddim	**bo:**[1] (tui[1])	semen	VanBik 2009:47; Bhaskararao 1996:107

1.2.1.2. Southern Plains Chin

Khumi	**bó**	sperm	VanBik 2009:47

1.2.2. Central Chin

Lai (Hakha)	**bŏo**	sperm	VanBik 2009:47
Lushai [Mizo]	**baw**	semen	Matisoff 1987
	bâw	semen, seminal fluid	VanBik 2009:47
	baw	semen	Bhaskararao 1996:107

1.2.3. Maraic

Lakher [Mara]	**pū** tí	sperm	VanBik 2009:47

1.2.4. "Old Kuki"

Kom Rem	ə **bo**	semen	Toba & Kom 1991:10.3.7
Moyon	jʌŋ **bów**	semen	Kosha 1990:10.3.7
	jʌŋ **bów** isòwʔ	ejaculate (v.)	Kosha 1990:10.3.8

(4) PL *ʔ-bik SQUIRT / EJACULATE

This is only one of a large number of verbs than can be used to mean EJACULATE.* This particular root has so far been identified only in a couple of Loloish languages. In Ahi it means specifically 'eject semen', while the Lahu cognate is used to mean 'squirt urine'. Although this etymon had a *stopped final in Proto-Loloish (as indicated by the Ahi constriction and the Lahu high-rising tone), it was not reconstructed in Matisoff 1972a.

6.1.2. Loloish

Lolopho	**ẕi̱**[31] **p̱i̱**[55] **ʂo**[31]	urinate (v.)	Dai Qingxia 1989n:9.7.2

6.1.2.1. Northern Loloish

Gazhuo	**pi**[35]	piss; pee; urinate (v.)	Dai Qingxia 1989c:9.7.2; Huang Bufan & Dai Qingxia, eds. 1992:1596.47

6.1.2.2. Central Loloish

Ahi	**p̱i̱**[55]	ejaculate (v.)	Luo Meizhen 1990:10.3.8
Lahu (Black)	jɨ̂ **pí** ve	urinate (v.)	Matisoff 1988a:p. 582
	jɨ̂ **pí**	urinate ("squirt urine")	Matisoff 1988a:818
	pí	spurt; squirt out	Matisoff 1988a:818

(5) PTB *tsyu WATER / LIQUID / BODY FLUID

The Na and Qiangic forms with affricate initials are assigned to this root, even though their vocalism seems closer to PTB ***rəy** WATER / LIQUID / BODILY FLUID (§1.9.9).

1.3.1. Central Naga (Ao Group): ***a-tʃə** WATER

**Central Naga*	*a-**tʃə**	WATER	Bruhn 2014a:III.097

Chinese comparandum

斗 OC ***tu** ~ ***t̂i̯u**, *GSR* #116a 'ladle (n); name of a constellation (i.e. 'big dipper')'; Coblin 86:101 ST ***tyuɣ** > OC ***tugx** ~ ***tjugx**; Schuessler 2007:627-8 ***tɒʔ** ~ ***toʔ**; B & S 2011: ***tˤoʔ** ~ ***toʔ**; Mand. **dǒu** ~ **zhǔ**.
注 OC ***ti̯u** ~ ***t̂i̯u**, *GSR* #129c 'conduct (water); be led to, flow to; be touched by; apply'; Coblin 86:101 ST ***tyuɣ** > OC ***tjugh** ~ ***trjugh**; Schuessler 2007:627-8 ***toh** ~ ***troh**; B & S 2011: ***tro-s {tro(ʔ)-s}**; Mand. **zhù**.

(6) PTB *m-t(w)əy-n ⪤ *m-ti-s WATER / FLUID / LIQUID / RIVER / SOAK / SPIT

This is a rather complex word family in which all three dental suffixes /**-t, -s, -n**/ are attested. Reflexes include Kanauri **this** 'wet', Jingpho **mədìt** 'moisten sthg; wet, damp', Lalo **tíq** 'steep, soak', Kanauri **ti** 'water', Jingpho **mədī** 'moist, damp, wet', Lahu **dì** 'moisten due to sexual excitement (of a woman), ejaculate (of a man)'. The nasal prefix is reflected directly in Jingpho, and indirectly by the voiced Lahu initial.

Note the Kanauri form **thiss**, where the **-s** perhaps reflects the source of the **-t** to be found in other languages.

There is sometimes confusion between this root and PTB ***d(w)əy** EGG / TESTICLE (§1.9.1), as in compounds of BIRD + WATER > EGG. Note the Kom Rem forms **mit ɣətui** 'eyeball' and **nəi tui** 'amniotic fluid', where the second element definitely means 'egg' in the former, but 'liquid' in the latter.

This root seems certainly to underlie PTB ***twəy** FLOW / SUPPURATE (§6.6), which shows a semantic extension towards the notion of flowing, as from a wound.

See *STC* #55 and Matisoff 1988a p. 705. *STC* #55, #167, and #168 should be combined as one root.

See *HPTB* ***twəy**, p. 194; ***twəy** ⪤ ***dwəy**, p. 195; ***twəy-n**, p. 451; ***ti(y)**, pp. 193, 194, 471; ***m-ti-s**, pp. 434, 351.

There are several likely Chinese comparanda, the best of which is probably 涕 OC ***t'iər** 'weep, tears', *GSR* #591m. In Mandarin, this word now means either 'tears' or 'snot' (**tì**). Cf. also 水 OC ***śi̯wər** 'water' *GSR* #576a-e, Mand. **shǔi**, and 川 'river' Mand. **chuān**, the latter pointing to an allofam with a nasal final: ***m-twəy-n**.

This root seems independent of PKC ***ɗaay** DEW (§3.2.1).

Cf. also PTB ***b-ləy-k** TEARS (§1.2.6.7).

	thidx	tears / snot	Coblin 1986:146
9.0.2. Middle Chinese			
Chinese (Middle)	**thejH**	mucus from the nose	Baxter & Sagart 2011:2762
	thejH	tears (n.)	Baxter & Sagart 2011:2763
	thejX	tears (n.)	Baxter & Sagart 2011:2765
	thiei-	tears / snot	Coblin 1986:146
	thiei:	tears, snot (especially that which flows during weeping)	Coblin 1986:146
9.0.3. Modern Chinese			
Chinese (Mandarin)	bí **tì**	snivel, mucus; snot	Evans *et al.* 1991; Matisoff 1987
	tì	mucus from the nose	Baxter & Sagart 2011:2762
	tì	tears (n.)	Baxter & Sagart 2011:2763; Baxter & Sagart 2011:2765
	t'i	mucus from the nose; weep, tears	Karlgren 1957:551f; Karlgren 1957:591m
	yi	mucus from the nose	Karlgren 1957:551f

[a]The second syllable of the Bai (Bijiang) form **vĩ[33] ɕui[33]** is an obvious loan from Chinese (cf. Mand. **shuǐ**), although the other Bai forms listed seem to reflect the present etymon.

Chinese comparanda

涕 OC ***t'iər***, *GSR* #591m 'weep, tears'; Li 1971: **(*thidx)**; Baxter 1992:792 ***thij?***; Mand. **tì**.

The Middle Chinese reading would permit an Old Chinese reconstruction in either the OC 脂 Zhī rhyme group (***-id*** (Li)/***-ij*** (Baxter)) or the OC 微 Wēi rhyme group (***-əd*** (Li)/***-ij*** (Baxter)). Li does not reconstruct this word, but he assigns other words in *GSR* #591 to the 脂 Zhī group. Words in *GSR* #591 are reconstructed some with one vowel, some with the other by Baxter (see 1992:457ff for an explanation), but 涕 is reconstructed with ***-ij*** because it rhymes unambiguously with a number of 脂 Zhī group words in *Shījīng* #203. Still, it is possible that in Baxter's system the word goes back to earlier ***thɨj?***, with vowel fronting occurring early in the dialect on which the *Shījīng* poem was based. Baxter proposes just such a development for other words in the phonetic series.

If the OC vowel is reconstructed as ***i***, the vowel correspondence with the proposed TB cognate is regular (see PTB ***d(w)əy*** EGG / TESTICLE (§1.9.1) for examples). A 微 Wēi group reconstruction of ***-əd*** (Li)/***-ɨj*** (Baxter) does not jeopardize the comparison, but this Chinese rhyme seems to correspond to TB ***-ay*** more often than to TB ***-əy***. It may be that the correspondence with ***-ay*** is regular while that with ***-əy*** is irregular but not uncommon. See PTB ***s-tay*** NAVEL / ABDOMEN / CENTER / SELF (§1.9.3) and PTB ***ŋ-(w)a:y*** COPULATE / MAKE LOVE / LOVE / GENTLE (§1.9.8), but note also 'hungry' 飢 OC ***krjɨj*** (Baxter), TB ***b-kri-(n/s)***; Mand. **jī**.

On the aspiration mismatch in the initials, see the discussion under PTB ***pu*** EGG (§1.9.1).
[ZJH]

水 OC ***śi̯wər***, *GSR* #576a-e 'water, river'; Li 1971: –; Baxter 1992 #1239: ***h [l] juj?***; Mand. **shuǐ**.

Gong 1995 #133 reconstructs ***hljədx*** and compares to WT **chu** 'water, brook, river', presumably assuming that the latter derives from an earlier form with a lateral initial. The comparison is, however, not tenable given the reconstruction of the PTB root PTB ***tsyu*** WATER / LIQUID / BODY FLUID (§1.9.9).

This Chinese word is most likely related to PTB ***lwi(y)*** 'flow, stream' (see *STC* #210), as proposed by Coblin (1986:158) and discussed in Handel (1998). A relationship with PTB ***m-t(w)əy-n*** ≍ ***m-ti-s*** WATER / FLUID / LIQUID / RIVER / SOAK / SPIT (§1.9.9) seems unlikely because of the mismatch of initial consonants.
[ZJH]

川 OC ***t'i̯wən***, *GSR* #462a 'river'; Li 1971: ***thjiən ?***; Baxter 1992 #1126: ***KHju/on***; Mand. **chuān**.

The reconstruction of this Chinese word is problematic. As Karlgren (*GSR* #462a) notes, the Middle Chinese form is probably irregular. The Old Chinese rhyme group is uncertain, which is why Baxter gives two possibilities for the vowel. Baxter's capital ***KH*** indicates a velar initial that palatalized irregularly in the development of Middle Chinese. Handel (1998) reconstructs ***khlun*** and Schuessler (2007:195) ***k-hlun***, because *GSR* #462 looks like a lateral series. Schuessler further suggests that the Chinese word is related to PTB ***klu:ŋ*** 'river / valley', which has areal connections with Austroasiatic and Tai. However, this does not explain the ***-n*** coda in Chinese.

The proposed PTB comparison in this volume depends on an Old Chinese reconstruction like Li's with a dental initial, which in Baxter's system would look like ***thjun***. However, the vowel correspondence is still irregular, and the comparison further requires positing an ***-n*** suffix not found in Tibeto-Burman.
[ZJH]

Maru [Langsu]	nuk[55] **ɣək[31]**	milk	Dai Qingxia 1989l:5.4.3 [b]

[a]Cf. Muya **tɕɯ[53]** 'water' (ZMYYC #10), assigned to PTB ***tsyu*** WATER / LIQUID / BODY FLUID (§1.9.9).

[b]Maru **ɣək[31]** < PLB ***rəy[1]** 'water; liquid' (PTB ***rəy*** WATER / LIQUID / BODILY FLUID (§1.9.9)). Final ***-əy*** regularly becomes ***-it*** in the Maru dialect described in Burling 1966. The unreleased final stop evidently sounds more like a velar in the dialect recorded by Dai Qingxia, who transcribes this rhyme as "***-ək***".

Naxi	**lo**^{21}	valley (n.)	Huang Bufan & Dai Qingxia, eds. 1992:0025.45

[a] “While the cited forms all mean ‘soup’, this PT root has a more general meaning ‘thick liquid’ and appears also in such words as ‘honey’, ‘tears’, ‘resin’, and ‘mucus’. Cf. Mikir **a-lang** ‘juice’. Cf. PTB ***laŋ*** ‘water, river, valley’ (Prof. Matisoff, p.c.)” Sun 1993a: 120.

[a] Bisu **pɛ khà** ‘liver’ (cf. Garo **bi-ka** ‘liver’).

Chinese comparandum

The primary comparandum here is:

浪 OC ***lâng***, *GSR* #735k ‘name of a river’; B & S 2011: ***r^{ˤ}aŋ {* [r]^{ˤ}aŋ}***; Mand. **(làng)**.

The entry for 浪 **làng** in 說文 Shuō Wén says simply ”滄浪河南入江”, where 滄浪河 **Cánglàng Hé** is the name of a river, purportedly in Central China. Early on, 浪 appears in other toponyms as well, e.g. 莊浪 **Zhuānglàng**, a county in Gansu prov., 康浪 **Kānglàng**, a river in Shandong prov. At the very least, we are justified in treating 浪 as a hydronym in the above cases; however, we would further argue that 浪 was originally a more general, Sinitic term for ‘river, stream, flow’. A useful analogy can be found in European toponyms such as Aberdour (Scotland), Durance (France), Dora (Italy), which may not immediately appear to be related to each other, but all of which are posited as deriving from a Celtic element ***dur**, a generic term for ‘water’.

Also attested early on for 浪 is the meaning ‘excessive, dissolute’, cited by Karlgren in *GSR* #735k, but as a separate etymon. Likewise, the meaning ‘wave, breaker’ the usual hydrologic sense of 浪 in Modern Chinese, may be a separate development; it is not cited in *GSR* #735, and is apparently not attested earlier than MC.
[SPB]

1.9.10 Genitals/Pudenda

(1) PTB *m-tsan MARK / BADGE / GENITALS

The rGyalrong form is likely to be a borrowing from Tibetan.

The putative semantic connection between Kuki-Chin GENERATION / ERA and the Tibetan form rests on the idea that a particular generation is marked by a certain characteristic.

1.2. Kuki-Chin: ***tshan** GENERATION / ERA

1.9.12 Female

(1) PTB *mi FEMALE / GIRL / FEMININE SUFFIX

This etymon evidently took a sibilant prefix in various languages (cf. Daofu **sme**, Ergong **smɛ ŋa**), which seems to have arisen as a reduction of PTB ***za-n** CHILD (§4.2.11). Cf. binomes like Lahu **yâ-mî** 'daughter'.

Chinese comparandum

GSR #40 (not)

(3) PTB * k / m -na MOTHER / FEMALE

The velar prefix is attested in Jingpho.

The present root seems to overlap somewhat with PTB ***nya-ŋ/k*** WOMAN (§1.9.12) and PTB ***n(y)u*** FEMALE / MOTHER (§1.9.12), and further microlinguistic work will be necessary to separate them out.

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

(6) PTB *la(:) FEMALE / DAUGHTER

This root occurs in several sub-branches of the NE Indian areal group.

Strangely enough, there is a homophonous root PTB ***la*** MALE (§1.9.7) with the antonymous meaning MALE. Cf. Benedict 1981, 1991.

(8) PTB *nya- $\begin{matrix}\textbf{ŋ}\\\textbf{k}\end{matrix}$ WOMAN

There is evidently an allofam with final velar, reflected by WT **nyag-mo** ‘woman’ and Chinese 孃 / 娘 ‘lady, woman, mother’, OC **nia̱ng** (not in *GSR* #730); AD 541 reconstructs **nia̱ng** for MC.

HPTB:173 errs in relating Chinese 女 both to the present root and to PTB ***k/m-na*** MOTHER / FEMALE (§1.9.12). In addition, a wrong *GSR* citation is given under ***nya***.

In any case, there seems to be considerable overlap among this root, PTB ***k/m-na*** MOTHER / FEMALE (§1.9.12), and PTB ***n(y)u*** FEMALE / MOTHER (§1.9.12), and further work will be needed to clarify their interrelationship.

0.1. Tibeto-Burman (previously published reconstructions)

**Tibeto-Burman*	***nya**	woman	Matisoff 2003a:605
2.1.2.1. Tibetan			
Tibetan (Written)	**nya**-ma	mistress of the house, housewife (n.)	Jäschke 1881:184
	nyag-mo	woman	Matisoff 2003a:174

[a] [Source Note] /tso[2]-lo[3]-u?[3]/ ?

Damu	**buŋ-ka**	mouse	Sun 1993b

(3) PTB *s-$\begin{matrix}\mathbf{l}\\\mathbf{r}\end{matrix}e\begin{matrix}\mathbf{y}\\\mathbf{ŋ}\end{matrix}$ SQUIRREL / WEASEL

The unusual ***-y** ≍ ***-ŋ** alternation in coda may also be interpreted as an instance of a nasal suffix (***s-ley-N** ≍ ***s-rey-N**), although such a suffix is usually reconstructed for the dental point of articulation.

The first syllable of the Kuki-Chin binomes is obviously from a general root for rodents, PTB ***b-yəw-n** RAT / RABBIT / HARE (§2.1.1).

0.1. Tibeto-Burman (previously published reconstructions)

6.1.2. Loloish			
*Loloish	*pi[2]	bamboo rat	Bradley 1979b:33

(5) PTB *b-yəw-n RAT / RABBIT / HARE

A suffixal element **-n** appears in several languages, including WB, Jingpho, Galo, and Chinese, interpreted as a collective suffix in *STC* (notes 103, 284).

A closely similar root, ***bwəy***, has been reconstructed with the meaning ‘bamboo rat’ #2186 (*STC* #173), so that it is often quite difficult to assign a particular reflex to one or the other.

There are two Chinese comparanda, one with an open syllable (鼠 ‘mouse, rat’ OC ***śi̱o***) and one with the final collective suffix ***-n*** (‘hare’ OC ***tsi̱wən ≍ *ts‘i̱wən***).

Ergong (Danba)	**ɮi**	tiger	SUN Hongkai et al. 1991:124.14

6.1. LOLO-BURMESE: ***(k-)la** TIGER [b] [c]

**Lolo-Burmese*	***(k-)la**	tiger	Benedict 1972:177n472
	***(k-)lɑ**	tiger	CHOU Fa-kao 1972:57b-e

6.1.1. BURMISH

[a] French says, "Cf. Burmese-Lolo (***k-)la** (> WB **kyà**), which Benedict identifies as "ultimately a loan from Austro-Asiatic ***k(u)la**" (*STC* 177-178, n.472); the Khasi is **u-kla** (Robinson). This is probably also the source of the NN form, with the development of medial **-y-** < ***-l-** paralleled in Burmese, and NN ***C-** < PTB ***s-** 'animal prefix' " (1983: 569).

[b] Old Burmese **klâ** developed into later Written Burmese **kyâ**, which is the source of modern Burmic forms with affricated initials.

[c] There is a Chinese comparandum 虎 (*GSR* 57b-e **xo**, revised to **xlo** in *STC*:107, 178).

2.1.4 Lagomorphs

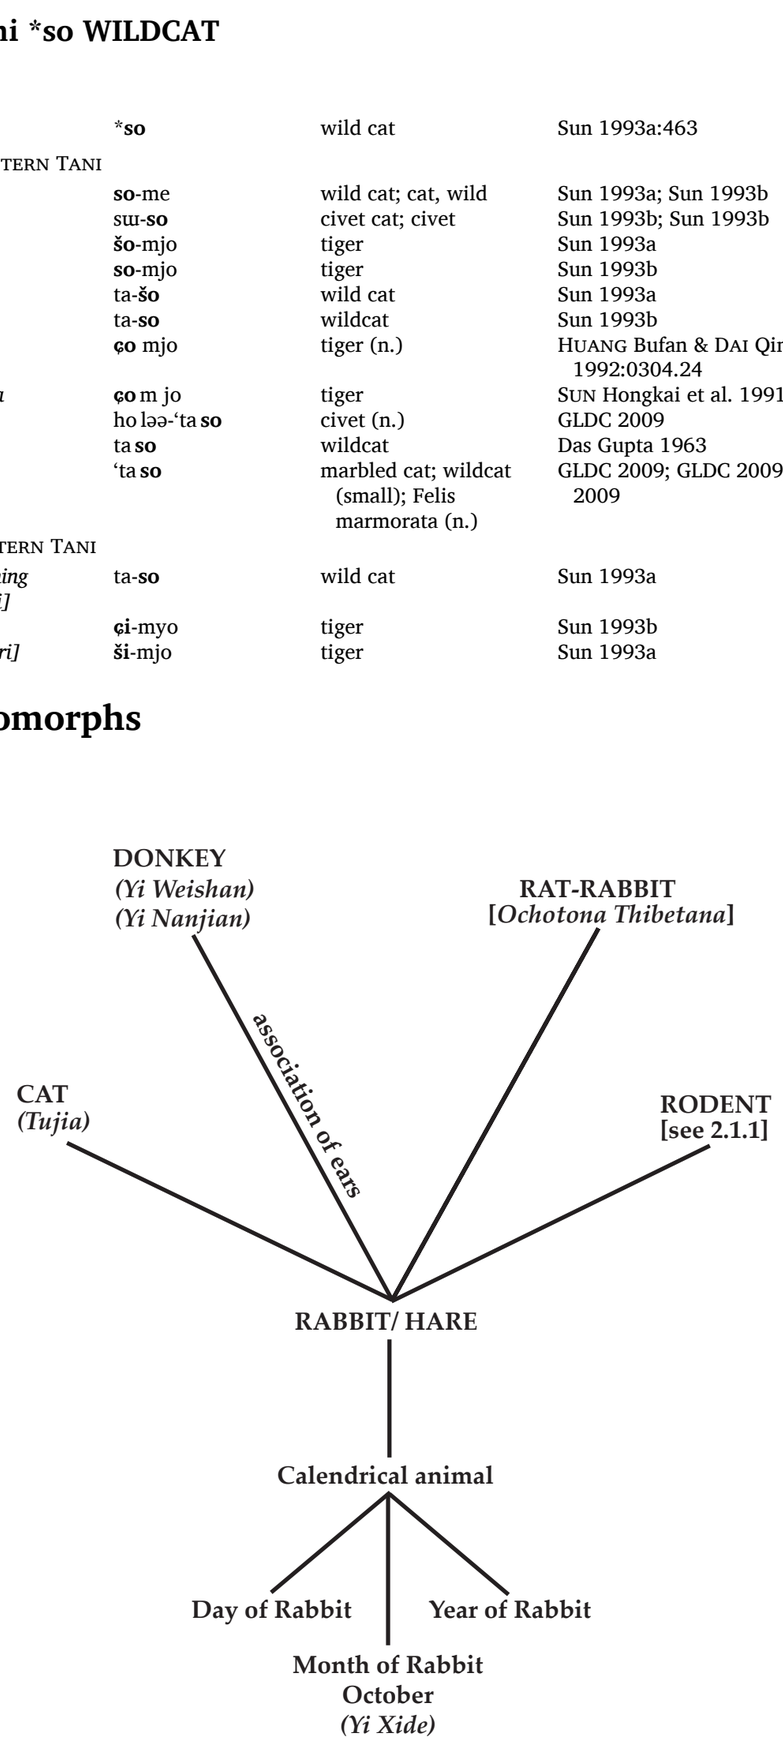

Figure 166: 2.1.4 *Lagomorphs*

(1a) PTB *tow-la RABBIT / HARE

This binome, used both for the actual animal and as a sign of the zodiac, is here set up for convenience as a PTB etymon, but it seems really to be a borrowing from Chinese to languages in several different areas of the Sinosphere. It apparently is derived from a compound meaning RABBIT-DONKEY, the point of comparison being the long ears of both species. Cf. Chinese 兔 **tù** 'rabbit', 驢 **lyú** 'donkey', and 騾 **luó** 'mule'. Some forms in TB languages are more recently borrowings from the Mandarin binome **tùzi**, with the suffixal morpheme 子 **zi** as second element.

The same semantic association between DONKEY and RABBIT is to be found in PTB ***(b/g)waŋ** DONKEY / ASS / RABBIT (§2.1.7), and has been well-attested in Indo-Aryan; see IA ***kharāyō** HARE / RABBIT (§2.1.4) and IA ***khara-gośa** HARE / RABBIT (§2.1.4).

This morpheme was evidently borrowed into Qiangic before the "brightening" of earlier ***a** to Qiangic **i** took place.

The Tujia forms **mao^{3} tao^{2}** and **mau^{21} tho^{55} li^{55}** look as if they have incorporated Mandarin **māo** 'cat', with the tertium comparationis this time being the whiskers common to both species. On the other hand, the Achang word for 'donkey', **m̥ʐaŋ^{31} mau^{31} ɲiʔ^{31}**, where the first syllable definitely means HORSE, has the same cat-like morpheme as the second syllable.

In Nungish, Bai, Lisu, and several Yi dialects, the words for DONKEY seem to be compounds consisting of this binome as first element followed by a root meaning HORSE, even though the independent words for 'horse' in these languages are somewhat different.

In Lalo (Western Loloish), the present binome means both 'rabbit' and 'donkey'. The fuller form, **haq-thoq-loq**, literally "rat-rabbit" disambiguates the word in favor of RABBIT. Alternatively, this Lalo compound might refer to a different species, the pika, as in Northern Lisu **hæ̃^{35} thɔʔ^{21} la^{33}** 'Tibetan pika'.

In short, there seems to have been a good deal of interplay, not to say confusion, among morphemes referring to several different animal species. See the semantic diagrams.

(3) IA *khara-gośa HARE / RABBIT

From Bengali **kharagōśa**, borrowed from Persian **xar-guš** 'hare' (lit. 'donkey-ear').

1.7.1.1. BODO			
Kokborok	**k^{h}ɔr-ga**	rabbit	Tripuri & Jurafsky 1988
1.7.1.2. GARO			
Garo (Bangladesh)	**kor-gus**	rabbit (n.)	Burling 2003:4.419-II:idx

(4) IA *kharāyō HARE / RABBIT

The basic meaning of this root in Indo-Aryan was 'donkey' (**khara-**), with the word for the formerly exotic lagomorph 'rabbit' expressed by the Old Indo-Aryan compound **kharabhaka-** (lit. 'long-eared like a donkey') (Turner 1966). Tibeto-Burman languages have borrowed this IA etymon in both senses. Cf. Nepali **kharāyō** 'rabbit' (Schmidt 1993), the source of Newar **kharāyo**, as opposed to the meaning 'donkey' in many other TB languages.

The Guiqiong forms look like IA + Chinese hybrids. Cf. CH ***luózi** MULE (§2.1.4).

[b] [Source Note] calque (Evans 1999).

Chinese comparandum

龍 OC ***liu̯ŋ***, *GSR* #1193a-e 'dragon'; Gong 2001:24 ***m-bruŋ** / ***m-bruk**; B & S 2011: ***mə-roŋ {[mə]-roŋ}***; Mand. ***lóng***.
隆 OC ***gliu̯ôŋ***, *GSR* #1015f 'thunder, sound of thunder'; Schuessler 2007:363 ***ruŋ***; B & S 2011: ***ruŋ {[r]uŋ}***; Mand. ***lóng***.
雹 OC ***b'ộk***, *GSR* #1113n 'hail'; B & S 2011: ***C.bˤruk {C.[b]ˤruk}***; Mand. ***báo***.

Gong 2001:24 and *HPTB* #585 compare the current etymon, PTB ***m-bru(ŋ/k)*** 'dragon; rain', with Chinese 龍 ***lóng*** 'dragon'. Both these etyma may be allofamic with 雹 ***báo*** 'hail', as suggested by the latter's reconstruction as ***C.bˤruk*** in B & S 2011.

9.0.1. OLD CHINESE			
Chinese (Old/Mid)	**li̯ɑp/li̯ə̆p**	turtle (kind of)	Karlgren 1957:637e

Chinese comparandum

獵 OC ***li̯ɑp**, *GSR* #637e; Mand. **liè**.

Citations of 獵 'tortoise; turtle' are seen in 爾雅 Er Ya and 周禮 Zhou Li. While it doesn't affect the validity of the comparandum, we should point out that the character 獵 most often represents a different etymon in OC, i.e. 'to hunt (prey)' (*GSR* #637e); this is the only commonly recognized sense of 獵 **liè** in modern standard Chinese. Karlgren (*GSR* #637e) notes that 獵 **liè**, when used to mean 'turtle', is a phonetic loan for another character, now obsolete, perhaps attested as the Zhou dynasty pictograph shown in *GSR* #637b. [SPB]

(2) PTB *t $\begin{matrix}\mathbf{u}\\\mathbf{i}\end{matrix}$ k FROG

Note that the ***-u-*** ⩤ ***-i-*** variation occurs within Tani, as well as across different subgroups.

R.S. Cook (p.c., 2002) has noted the similarity of these forms to the reflexes of PTB ***s-di:k*** SCORPION / CRAB / SHRIMP (§2.2.6), another 'verminous / venomous species'.

	shiah **maa** (imp)	dismount (a horse) (imp)	Sun 1985b:665
	shiah **maa** (pf)	dismount (a horse) (pf)	Sun 1985b:666

Chinese comparandum

馬 OC ***må**, *GSR* #40a-e 'horse'; Schuessler 2007:373 ***mrâʔ**; B & S 2011: **mˤraʔ**; Mand. **mǎ**.

Cf. discussion in Schuessler 2007:32-33 regarding incompatibility between TB final **-*ŋ** and OC final **-*ʔ** in certain OC tone ***B** words.

(2) PTB *r-ta HORSE

This root, perhaps of extra-TB origin, seems to be centered in Tibetan dialects, from which it has apparently been borrowed by other languages in the Tibetosphere.

1.1.1.1. WESTERN TANI

Bengni	ga-**taː**	donkey	Sun 1993b

(3) PTB * $\begin{matrix}\textbf{b}\\\textbf{g}\end{matrix}$ **waŋ DONKEY / ASS / RABBIT**

The obvious semantic connection between DONKEY and RABBIT is the length of the ears in both species. Chundra Cathcart points out that the same semantic association exists in Iranian, e.g. Modern Persian **xar-goš** "hare, rabbit, literally 'donkey-ears'". See IA ***kharāyō*** HARE / RABBIT (§2.1.4) and IA ***khara-gośa*** HARE / RABBIT (§2.1.4).

For the same DONKEY-RABBIT association, see PTB ***tow-la*** RABBIT / HARE (§2.1.4).

In many languages, the word for 'rabbit' is a binome with the first syllable meaning 'mountain, wild' < PTB ***ri*** MOUNTAIN (§3.2.5).

In several languages (the Deng group, Cuona, Lhasa Tibetan, and Dulong/Trung), the second syllable of these binomes begins with a velar rather than a labial. It is possible that this points to a *labiovelar onset to this syllable. However, it is at least equally possible that a separate morpheme is involved.

The doublet in Caodeng rGyalrong **poŋ-luʔ** 'donkey' and **re-waŋ** 'rabbit' is some evidence for the medial ***-wa-*** in the reconstruction.

[a] Vowel length is reconstructed at the PLB level because of WB **chit**, since the short rhyme ***-it** developed into WB **-ac** (thus merging with PLB ***-ik**).

It is necessary to reconstruct a voiced prefix at the PLB level to account for the low stopped tone in Loloish. This was symbolized by the arbitrary element **V-** in *LTSR*, but perhaps the LOW tone is an indirect reflection of a much earlier ***r-** prefix found in Tibetan.

[b] [Source Note] [*TSR* 27].

[c] Lit. "goat-beard" (cf. English 'goatee', for a similar semantic association between goats and facial hair).

	ra lu	sheep (general) (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0274.12
Ergong (Danba)	tshɛ **ɣi**	goat / sheep (generic)	SUN Hongkai et al. 1991:116.14
	ɣi	sheep	SUN Hongkai et al. 1991:118.14
4. NUNGIC			
Dulong	**ɹɑ**^{55}	flock (of sheep) (clf.)	HUANG Bufan & DAI Qingxia, eds. 1992:0867.20
6.1.2.2. CENTRAL LOLOISH			
Lisu (Central)	a^{3}-**raw**^{3}	sheep	Fraser 1922
	a^{3}-**raw**^{3} mū^{3}	fleece (sheep's wool); wool (sheep's)	Fraser 1922; Fraser 1922
Lisu (Northern)	**rɔ**^{44}	sheep; goat (in the calendrical cycle) (N.)	Bradley 1994

[a] Lepcha **să-ro** is the origin of English *serao* or *serow* 'wild mountain goat'.

Chinese comparandum

羌 OC ***d'i̯o**, *GSR* #84f 'five month-old lamb'; Schuessler 2007:627 ***draʔ**; Mand. **zhù**.

(8) PKC *sha-thaar MOUNTAIN GOAT / GOAT ANTELOPE / SEROW

The Chepang forms possibly indicate that this root is attested beyond Kuki-Chin

1.2. KUKI-CHIN			
**Chin*	*sha-**thaar**	ANTELOPE / GOAT (wild) / SEROW	VanBik 2009:372
1.2.1.1. NORTHERN CHIN			
Tiddim	sa^{1} **thak**^{1}	wild goat	Bhaskararao 1996:1499; VanBik 2009:372
1.2.2. CENTRAL CHIN			
Lai (Hakha)	sa-**thâar**	antelope, wild goat	VanBik 2009:372
Lushai [Mizo]	**sà-tháar**	name of a species of wild goat, a serow (n.)	VanBik 2009:372
	sa-thar	wild goat	Bhaskararao 1996:1499
1.2.3. MARAIC			
Lakher [Mara]	sāw-**záw**	ibex	VanBik 2009:1208
1.6. MRU			
Mru	(ŋə) **yàʔ**	goat (wild)(1)	Weidert 1987:151
1.7.2.2. KONYAK-CHANG			
Phom	mʌy^{31}**yaʔ**^{33}	mountain goat	Burling & Amon Phom 1998
1.7.3.1. JINGPHO			
Jingpho	^{3}**ya**	goat (wild)(1)	Weidert 1987:151; Weidert 1987:63
2.4. KHAM-MAGAR-CHEPANG			
Chepang	**yoʔ**.syaʔ	Serow, a goat-antelope; animal (sp.), Serow or Goat Antelope (large) (n.)	Caughley 2000; Caughley 2000
6.1.2. LOLOISH			
**Loloish*	*ʔ-**ya**^{2}	goat (wild)(1)	Weidert 1987:314
6.1.2.2. CENTRAL LOLOISH			
Lahu	**hâ**	goat (wild)(1)	Weidert 1987:314 [a]
Lisu	**hyà**	goat (wild)(1)	Weidert 1987:314
7. KARENIC: ***jaj**^{A} SEROW, MOUNTAIN GOAT			
**Karen*	***jaj**^{A}	serow, mountain goat	Luangthongkum 2013:249
Bwe	**ji**^{33}	serow, mountain goat	Luangthongkum 2013:249
Kayah	**je**^{11}	serow, mountain goat	Luangthongkum 2013:249
Kayan	**jai**^{33}	serow, mountain goat	Luangthongkum 2013:249
Kayan (Pekon)	**zạ̀**	mountain goat, serow (N.)	Manson 2010
Kayaw	**ji**^{33}	serow, mountain goat	Luangthongkum 2013:249
Pa-O (Northern)	**jai**^{33}	serow, mountain goat	Luangthongkum 2013:249

[a] This is evidently a loan into Lahu; the high falling tone is anomalous, since it does not occur after /h/ in native words. Furthermore, the rhyme ***-ya** should yield Lahu **-ɛ**.

(9) PTB *hya MOUNTAIN GOAT / GOAT ANTELOPE / SEROW

1.1.1.1. WESTERN TANI

	sha **gu**	sheep	Marrison 1967
2.2. Newar			
Newar	du **gu**	billy goat (n.)	Hale 1973:03a.037
	du **gu**-cā	kid-(diminutive) (goat) (n.)	Hale 1973:03a.039
	du **ku**	goat (male, uncastrated)	Genetti 1990a
3.2. Qiangic			
Qiang (Taoping)	**χgy**^{33}	sheep	Sun Hongkai et al. 1991:118.9
Zhaba (Daofu County)	**gu**^{55}	sheep (n.)	Huang Bufan & Dai Qingxia, eds. 1992:0275.14
	gu^{55} mə^{55}	sheepfold / pen (sheep) (n.)	Huang Bufan & Dai Qingxia, eds. 1992:0506.14
	tɕhɛ^{13}**gu**^{13}	sheep (general) (n.)	Huang Bufan & Dai Qingxia, eds. 1992:0274.14

(13) PNN *C-ruan SHEEP / GOAT

1.3.3. Zeme Group			
Mzieme	meu **rün**	sheep	Marrison 1967
1.7.2. Northern Naga/Konyakian			
**Northern Naga*	***Ç̣-ruan**	goat	French 1983:496
1.7.2.2. Konyak-Chang			
Chang	**luan**	goat; sheep	Marrison 1967; Marrison 1967
	min ke **luan**	sheep	Marrison 1967
Wancho	**roan**	goat	Marrison 1967

(14) PCN *san SHEEP

According to Clark 1911, Ao (Chungli) **san** is frequently pronounced **sain**. Temsunungsang 2009 posits an underlying form **sajin**.

The rime in **san** is unusual for Sangtam, indicating a possible borrowing.

1.3.1. Central Naga (Ao Group)			
Ao (Chungli)	**san**	sheep	Marrison 1967
	sàn̄ [sàjīn]/[sàĩn]	sheep	Temsunungsang 2009:1a
Ao (Mongsen)	**sàn̄** [sàjīn]/[sàĩn]	sheep	Temsunungsang 2009:1a
Lotha Naga	**tsháṇ** sə̀	wool	Acharya 1975
Sangtam	**san**	sheep	Marrison 1967

(15) PTB *nyu GOAT

The Meluri, Konyak, and Mao forms end in **-i**. It is still unclear whether they belong with the other forms which have a high back vowel. The final **n** in the Ntenyi forms is also unexplained.

1.3.2. Angami-Pochuri Group			
Mao	o **nghi** to	goat	Marrison 1967
Meluri	a **nyi** ni	goat	Marrison 1967
Ntenyi	a **nyün nyün**	goat	Marrison 1967
	kha **nyün nyün**	sheep	Marrison 1967
Rengma	ta **nyü**	sheep	Marrison 1967
	te **nü**	goat	Marrison 1967
Sema [Sumi]	a **nyeh**	goat	Marrison 1967
1.7.2.2. Konyak-Chang			
Konyak	**nyi**	sheep	Marrison 1967
3.2. Qiangic

(20) PTani *b(r)en TAKIN (Budorcas taxicolor)

The takin (/ˈ**tɑːkɪn**/; *Budorcas taxicolor*; Tibetan: □□□□, Wylie: ra rgya), also called cattle chamois or gnu goat, is a goat-antelope found in the eastern Himalayas. Mitochondrial research shows the takin is related to sheep; its similarity to the muskox is an example of convergent evolution. The takin is the national animal of Bhutan. [*]

6.1.1. BURMISH				
Achang (Longchuan)	**ŋ̍u**ʔ^{55}	monkey (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0308.28	

[a]This is a root where some of the reflexes point to a unitary cluster of ***m** + **y**, while others have evidently treated the ***m-** as a prefix, yielding forms with initial **y-**.

[b]Although *STC* sets up this root with ***-r-**, the evidence favors the reconstruction of ***-y-**. The only evidence for ***-r-** offered in *STC* is Bahing **moro** and the Intha dialect of Burmese (**mrok** ~ **mlok**) (see also Sunwar and Jirel **moro**). These Himalayish forms bear some resemblance to Nepali **mākul**, though they show no trace of a velar.

[c]This allofam, poorly attested, was reconstructed in *HPTB*:39 on the basis of Bisu **mjò**, since plain nasals generally developed into Bisu stops.

(9) PDeng *m $\begin{matrix}\text{i}\\\text{u}\end{matrix}$ N MONKEY

This root is confined to a few languages of the Deng group. All three nasals are attested in final position, motivating the reconstruction with a neutral capital ***-N**. The variation between medial **-i-** and **-u-** is a well-established TB pattern.

(2) PTB *daw BIRD

STC p.192 expressed uncertainty about the rhyme of this etymon, saying it was either ***-aw** or ***-ow**. *STC* and *HPTB* p. 227 wrongly assumed that this root was confined to Bodo-Garo.

STC loc. cit. suggested an association with Proto-Kuki-Chin ***m-tsow** FLY (n.).

9.0.1. Old Chinese			
Chinese (Old/Mid)	**tiog/tieu**	bird	Chou Fa-kao 1972:1116a
	tiôg/tieu:	bird	Karlgren 1957:1116a
9.0.3. Modern Chinese			
Chinese (Mandarin)	**niǎo**-zǔi	beak / bill	Sun 1985b:52

Chinese comparandum

鳥 OC ***tiôg***, *GSR* #1116a ‘bird’; Schuessler 2007:401 ***tiû?***; Mand. **niǎo**.
雕/鵰 OC ***tiôg***, *GSR* #1083t-u ‘eagle’; B & S 2011: ***t^{ʂ}iw***; Mand. **diāo**.

The irregular initial **n-** in the Mandarin pronunciation **niǎo** for the word 鳥 BIRD (Karlgren called it “quite a riddle,” *GSR* #1116a) is usually attributed to pernicious homophony with a dental stop initial word meaning PENIS.

[a] Laze forms like **læ˥** bear a certain resemblance to Naxi forms with zero initial, but it would be speculative to assign them either to the present root or to PTB ***k-rak** FOWL / CHICKEN (§2.1.10).

Chinese comparandum

鵪 OC ***ʔɑn***, *GSR* #146g ‘quail’; Schuessler 2007:556 ***ʔrâns***; B & S 2011: ***ʔ^{ʂ}‹r›ar-s {ʔ^{ʂ}‹r›a [r] -s}***; Mand. **yàn**.
鶉 OC ***ʔɑn***, *GSR* #146i ‘quail’; Schuessler 2007:556 ***ʔrâns***; Mand. **yàn**.

(4) PTB *kak CHICKEN

It is possible that this root is actually an allofam of ***k-rak**, with pre-emption by the prefix, although there is little evidence of any rhotic element, with the possible exception of the Nungish forms with retroflex **ɖ**.

(6) PTB *ŋa-n GOOSE

STC (e.g., pp. 99, 158) considers the final **-n** in this root to originally have been a "collective suffix," since wild geese tend to fly in large flocks.

[a] [Source Note] Proto-Monic: *tyaaŋ, Proto-Mon: *caiɲ (Diffloth, 1984)

(12) PLB *bay$_{2}$ DUCK

WB **bhâi** (< Tone *2); Lahu **á-pè** (< Tone *1); Mpi **tɕa^{2}pe?^{4}** seems to reflect a prototype with final stop. The unusual WB initial (Bradley #53a reconstructs **ʔ-b**) adds to the impression that this is a loanword, and in fact a Southeast Asian areal etymon. Cf. PTai ***pet***. Benedict reconstructs Proto Austro-Tai ***bets*** (1975a, p. 276).

This root appears primarily in Lolo-Burmese, with perhaps a couple of scattered borrowings in Qiangic.

Other areal words for DUCK that have been borrowed into TB are Indo-Aryan IA ***battakh*** DUCK (§2.1.10), Nepali IA ***hāṣ*** DUCK (§2.1.10), and Mandarin CH ***yāzi*** DUCK (§2.1.10).

(13) IA *battakh DUCK

This word is ultimately from Arabic **batṯax**, from which it was borrowed into many Indo-Aryan languages, and from there into TB. This disyllabic root has been monosyllabized in various ways in TB languages, but has sometimes survived as a disyllable.

Other areal words for DUCK that have been borrowed into TB are Nepali IA ***hāṣ*** DUCK (§2.1.10), Mandarin CH ***yāzi*** DUCK (§2.1.10), and Austro-Tai PLB ***bay$^{1/2}$*** DUCK (§2.1.10).

2.1.11 Canine

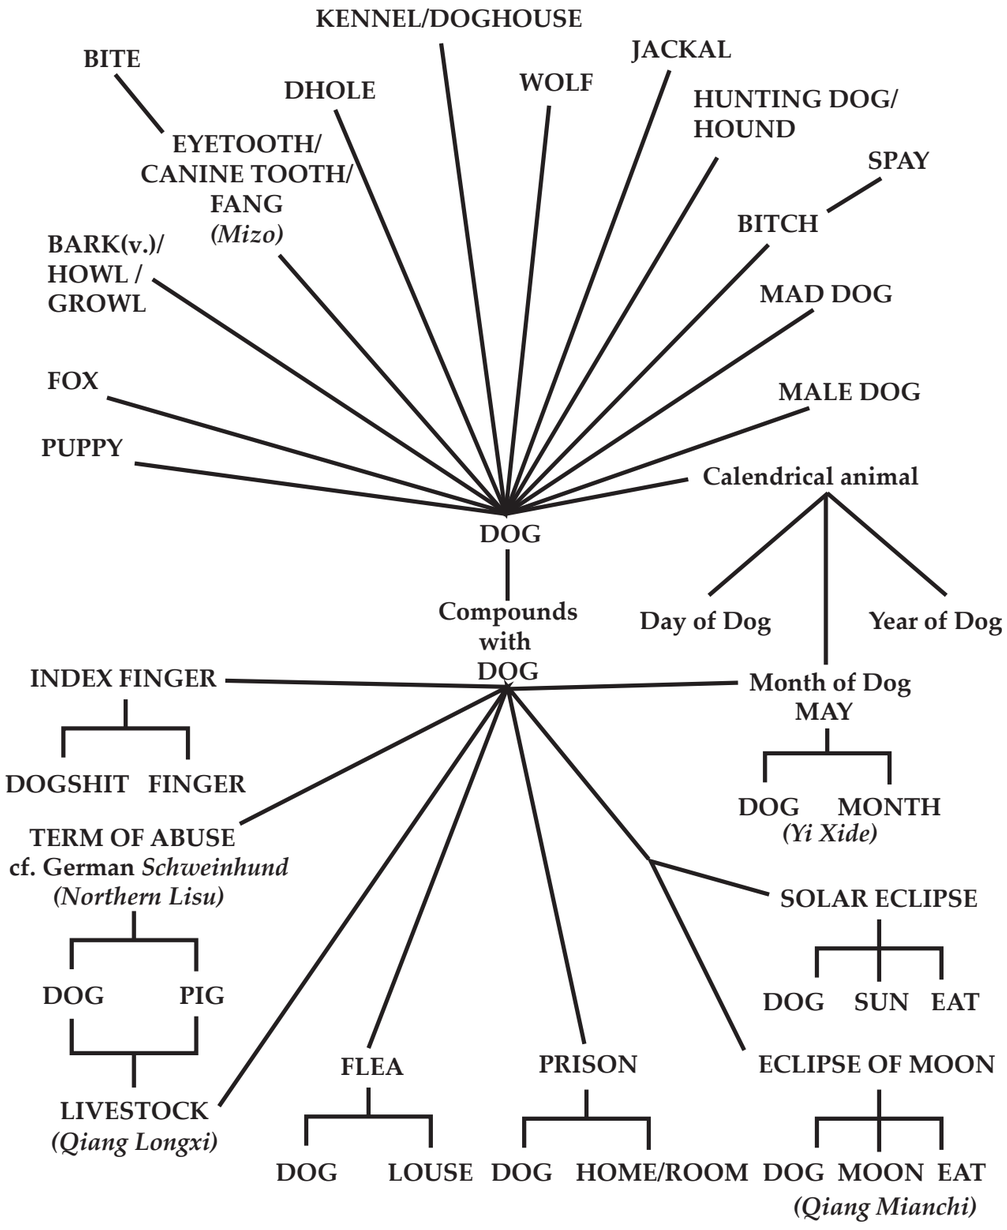

Figure 174: 2.1.11 *Canine*

(1) PTB *d-k^{w}əy-n DOG

Interesting reflexes of this etymon with labiovelar initial include the labial-initial Lahu form, the dental-initial Karenic forms, and the zero-initial Chin forms, the last two of which indicate that the velar-initial was sometimes treated as a prefix.

The nasal suffix is reconstructed on the basis of the Chinese comparandum.

9.0.1. OLD CHINESE

Chinese (Old/Mid)	**ku**/kạu	dog	CHOU Fa-kao 1972:108d
	ku/kạu:	dog	Karlgren 1957:108d
	k'iwən/k'iwɛn	dog	CHOU Fa-kao 1972:479a-d
	k'iwən/k'iwen:	dog	Karlgren 1957:479a-d
Chinese (Old)	**k'i̯wən**	dog	Matisoff 1983:14
	ku	dog	Matisoff 1983:14
	k^{w}hi/enʔ	dog	Baxter 1992:374

9.0.3. MODERN CHINESE

Chinese (Mandarin)	**quǎn**-yá	tooth (canine); tooth (fang)	Sun 1985b:118; Sun 1985b:243

Chinese comparandum

Two Chinese forms are considered to descend from this etymon:

狗 OC ***ku**, *GSR* #108d; B & S 2011: ***Cə.k^{ʕ}roʔ {Cə.[k]^{ʕ}roʔ}**; Mand. **gǒu**
犬 OC ***k'iwən**, *GSR* #479a-d; B & S 2011: ***k^{whʕ}enʔ {[k]^{whʕ}[e] [n]ʔ}**; Mand. **quǎn**.

OC ***ku** reflects the unsuffixed root, while OC ***k'iwən** bears the "collective" nasal suffix.

(2) PTB *na DOG

2.1.4. TAMANGISH

Chantyal	**na** ku-ye swa	eyetooth / canine tooth / fang	Noonan *et al.* 1992:3.10.3

	khɤ^{21}**na^{44}**hɤ^{33}	mangy dog (curse for dog, also a dog disease)	Bradley 1994
Lisu	ɑ^{55}**nɑ^{31}**; khɯ^{31}	dog	SUN Hongkai et al. 1991:119.27

8. BAI

Bai (Jianchuan)	**nɑ̲^{21}**	wolf (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0324.48

(3) PTB *s-k-ywal WILD DOG / JACKAL / DHOLE / WOLF

This PTB root was borrowed into Indo-Aryan at an early date; cf. Sanskrit **śṛgāla-**. Later on, such an Indic form was borrowed into many TB languages, especially in Nepal. This is an excellent example of a "backloan": TB > IA > TB. See "Toward a Eurasian Bestiary", part II: JACKAL in Sino-Tibetan and Indo-European (Matisoff 2010).

0.1. TIBETO-BURMAN (PREVIOUSLY PUBLISHED RECONSTRUCTIONS)

**Tibeto-Burman*	*__kywal__	jackal; wolf; dhole; wild dog	Matisoff 1985a:017; Matisoff 2003a:598

1.1.2. DENG

Kaman [Miju]	**kɑl^{33}**	fox	SUN Hongkai et al. 1991:132.48
	kɑl^{55}	wolf; fox (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0324.23; HUANG Bufan & DAI Qingxia, eds. 1992:0325.23

[a] Root-initial ***k-** in PTB ***d-k^{w}əy-n** DOG (§2.1.11) reanalyzed as prefix, then replaced by **t(h)-** (cf. Karen **thọ̲^{55}** < PTB ***p^{w}ak** PIG (§2.1.12)).

[b] The second element in the Karenic compounds for FOX / WOLF seem to derive from PTB ***m-l(e/ə)y** EARTH / COUNTRY / GROUND / MUD / SOIL (§3.2.11).

	kɑl[55]	wolf	Sun Hongkai et al. 1991:130.48

Hani (Khatu)	**hú**	bark (of dogs)	Hansson 1989:521

(5) PTB *zu $\begin{matrix}\text{k}\\\text{ŋ}\end{matrix}$ BARK (v.)

The relationship of the Loloish forms to this root is somewhat speculative. The Barish reflexes point to a variant with final velar nasal.

2.1.12 Porcine

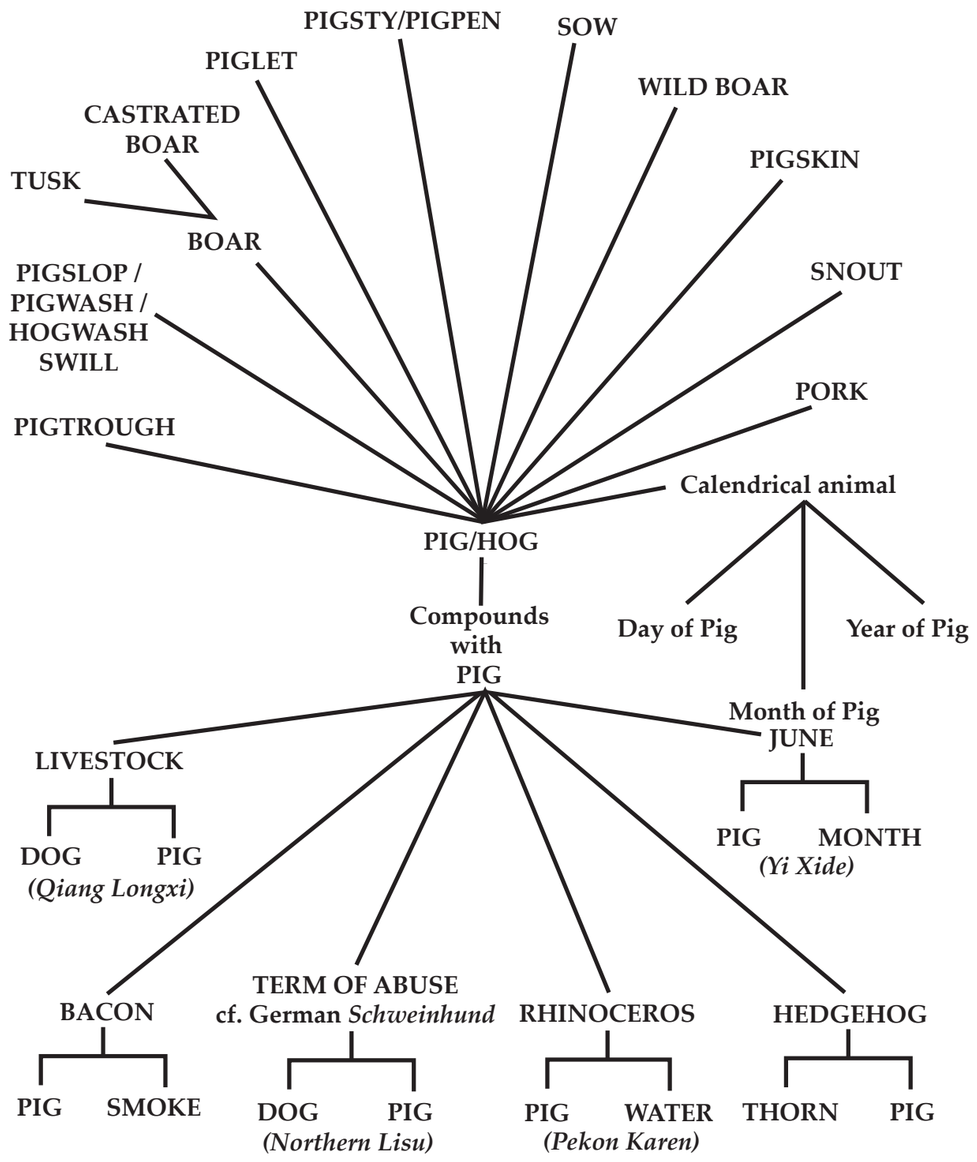

Figure 175: 2.1.12 *Porcine*

(1) PTB *p^{w}ak PIG

This etymon is a prime example of the alternation between labial stop and semi-vowel, motivating the reconstruction of an "extrusional" proto-cluster **p^{w}**. Cf. Matisoff 2000, "An extrusional approach to *p-/w- variation in Sino-Tibetan." Language and Linguistics (Taipei) 1.2:135-186.

Several Tibetan dialects (e.g. Alike, Amdo Zeku, Xiahe) have developed initial **h-** in this word; some Naga languages have gone further, and have zero-initial. The development of ***p-** to **h-** is also characteristic of Japanese; Irish **aithir** from PIE **pətér** has gone the whole way from **p-** to zero.

	phak pā	hog (n.)	Hale 1973:03a.041

[a] Lotha **-roʔ** means 'small', so this is actually 'piglet'.

[b] The apparently strange Angami initial **r-** seems to have developed from an earlier labiodental **w-** or **v-** (cf. Chokri **thü-vo**).

[a] It is difficult to say whether Bodic forms like Tsangla **phak** are truly cognate to Tibetan **phag**, or rather loans from it.

(3) PTani *ra WILD BOAR

This may well be a loan from Indo-Aryan (cf. Sanskrit *varāha-*).

1.1.1. TANI

**Tani*	***ra**	wild boar	Sun 1993a:462

1.1.1.1. WESTERN TANI

[a] These Karenic forms reflect a secondary dental prefix (cf. the anomalous Karenic forms for PTB ***d-kʷəy-n** DOG (§2.1.11)).
[b] The second element in the Karenic word for WILD BOAR is from PTB ***m-l(e/ə)y** EARTH / COUNTRY / GROUND / MUD / SOIL (§3.2.11).
[c] Kayan **myə̰ɨ** most likely ‘forest’, not ‘grass’, as the author recognizes it in **tʰwî myə̰** ‘wild dog’ and **sʰə́ɨ myə̰ɨ** ‘wild chicken’.
[d] Pa-O **khɔ̀k** likely a borrowing from Burmese **khauk** ‘skin’. Pa-O has glottal stop as the regular reflex of all proto-Karen final stops. Pa-O final oral stops occur largely (though not entirely) in loans from Shan and Burmese.
[e] The initial dentals in these Baic forms are similar to the first element in Tamangic and Karenic, suggesting a prefixal dental, something like ***d-wak**.

2.2.2 Cervidae

(1) PTB *tswat ANTELOPE / SAMBAR DEER

As indicated in *HPTB* p. 380, it is sometimes quite difficult to distinguish the Loloish reflexes of the present root from those of PTB ***d-kəy** BARKING DEER / DEER (§2.2.2). For now, we are assigning most forms with front vowels to PTB ***d-kəy** BARKING DEER / DEER (§2.2.2) and most of the others to PTB ***tswat** ANTELOPE / SAMBAR DEER (§2.2.2).

The sambar (or sambhur) deer is a large species, *Cervus unicolor*.

(3) PTB *d-kəy BARKING DEER / DEER

As indicated in *HPTB* p. 380, it is sometimes quite difficult to distinguish the Loloish reflexes of the present root from those of PTB ***tswat** ANTELOPE / SAMBAR DEER (§2.2.2). For now, we are assigning most forms with front vowels to PTB ***d-kəy** BARKING DEER / DEER (§2.2.2) and most of the others to PTB ***tswat** ANTELOPE / SAMBAR DEER (§2.2.2).

The barking deer is a small species (*Cervulus muntjac*), renowned as the best eating in the jungle.

The first syllable of the Kuki-Chin binome reflects PTB ***sya-n** FLESH / MEAT / GAME ANIMAL (§1.1.1).

Sorbung	ʔə-**wám**	bear (Selenarctos thibetanus)	Mortensen & Keogh 2011:Animals.061

1.3.1. CENTRAL NAGA (AO GROUP)

Ao (Chungli)	**shim**	bear (animal)	Marrison 1967
Ao (Mongsen: Longchang)	i **rem**	bear (animal)	Marrison 1967
Ao (Mongsen: Mangmetong)	i **ɹəm**	bear (n.)	Coupe 2007
Lotha Naga	se **van**	bear (n.)	Bruhn 2014b
	se **va**	bear (animal)	Marrison 1967
	se **van**	bear	Murry *et al.* 1978:9
	sē **váṇ**	bear	Acharya 1975

1.3.2. ANGAMI-POCHURI GROUP

Khezha	^{1}e^{2}**we**	bear (n.)	Weidert 1987:210
Mao	o **vu**	bear (animal)	Marrison 1967
	^{2}o^{1}**vu**	bear (n.)	Weidert 1987:210
Meluri	a **wi**	bear (animal)	Marrison 1967
Ntenyi	te **gwe**	bear (animal)	Marrison 1967
Sema [Sumi]	a **va**	bear (animal)	Marrison 1967

1.3.3. ZEME GROUP

Khoirao	cha **wom**	bear (animal)	Marrison 1967
Liangmei	chah **wam**	bear (animal)	Marrison 1967
Maram	sa **hom**	bear (animal)	Marrison 1967

1.3.4. TANGKHULIC: ***him** BEAR, ***ŋom** BEAR

**Tangkhulic*	***him**	bear	Mortensen 2012:658
	***ŋom**	bear	Mortensen 2012:444
Huishu	ʔa-**hɐm**	bear, Tibetan/Himalayan bear (Selenarctos thibetanus)	Mortensen 2012:Animals.061
Kachai	ci-**him**	Tibetan / Himalayan bear (Selenarctos thibetanus)	Mortensen 2012:Animals.060
	tɕi-**him**	bear	Mortensen 2012
Tangkhul	si **ngom**	bear (animal)	Marrison 1967
	^{1}si^{2}**ŋom**	bear (n.)	Weidert 1987:210
	^{1}si^{1}**ŋom**	bear (n.)	Weidert 1987:210
Tusom	sə-**ŋõ**	bear	Mortensen 2012:Animals.061
Ukhrul	ʃi-**ŋom**	bear	Mortensen 2012

1.5. MIKIR [KARBI]

Mikir [Karbi]	(thok-)**wam**	bear (n.)	Benedict 1972:461
	thok-**vám**	bear (n.)	Weidert 1987:210
	thok-**võm(ʔ)**	bear (n.)	Weidert 1987:210
	thok **vam**	bear (animal)	Marrison 1967

1.7.3.1. JINGPHO

Jingpho	lə **wap**	bear (n.)	Benedict 1972:461

2.1.1. WESTERN HIMALAYISH

Kanauri	**hom**	bear (n.)	Bailey 1911; Benedict 1972:461
Thebor	**hom**	bear (n.)	Benedict 1972:461
	hom	bear	Coblin 1986:40

2.1.2. BODIC

Bumthang	**wam**	bear (n.)	Weidert 1987:718
Kaike	**wom**	bear (n.)	Hale 1973:03a.062
Kurtöp	**dom**	bear (n.)	Weidert 1987:718
Tsangla (Motuo)	**om**^{55}ɕa^{55}	bear	ZHANG Jichuan, ed. 1986
	ʔom ɕa	bear (n.)	SUN Hongkai et al. 1991:125.7
Tsangla (Tilang)	**om**-sha	bear	ZHANG Jichuan, ed. 1986
Tshona (Wenlang)	**wom**^{35}	bear (n.)	LU Shaozun, ed. 1986
Tshona (Mama)	**ɔm**^{13}	bear (n.)	SUN Hongkai et al. 1991:125.6
Motuo Menba	**ʔom** ɕa	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.07
Tashigang	**ʔom**-ša	bear (n.)	Weidert 1987:718
Cuona Menba	**ɔm**^{35}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.06

2.1.2.1. TIBETAN

Dzongkha	**d$^{\text{n}}$om:**	bear (n.)	Weidert 1987:718
Tibetan (Alike)	**tom**	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.05
Tibetan (Amdo:Bla-brang)	**tom**	bear (n.)	SUN Hongkai et al. 1991:125.4
Tibetan (Amdo:Zeku)	**tom**	bear (brown); bear (n.)	Sun 1985a:54; SUN Hongkai et al. 1991:125.5
Tibetan (Jirel)	**thom**	bear (n.)	Hale 1973:03a.062
Tibetan (Khams:Dege)	**toŋ**^{13}	bear (n.)	SUN Hongkai et al. 1991:125.3
Tibetan (Lhasa)	**thom**^{13} (**tom**^{13})	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.02
	thom^{15}	bear (n.)	SUN Hongkai et al. 1991:125.2
Tibetan (Sherpa)	**'tom**	bear (n.)	Hale 1973:03a.062
Tibetan (Written)	**dom**	bear (n.)	Weidert 1987:718
	dom	bear (animal); bear (brown)	Marrison 1967; Jäschke 1881
	dom	bear; bear (brown) (n.)	Matisoff 1983:20; Sun 1985c:54; Benedict 1972:461; HUANG Bufan & DAI Qingxia, eds. 1992:0311.01
	dom	bear	Coblin 1986:40
	dom	bear (n.)	SUN Hongkai et al. 1991:125.1
	dóm-bu	dog (sp. of black) resembling a bear; cub (bear)	Jäschke 1881:259; Jäschke 1881:259
Tibetan (Xiahe)	**tom**	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.04

2.1.3. LEPCHA

Lepcha	sə **tum**	wolf	Benedict 1972:461

2.1.4. TAMANGISH

Tamang (Bagmati)	**tɑwɑm**	bear (n.)	Weidert 1987:718
Tamang (Sahu)	**tāwām**	bear (small red) (n.)	Hale 1973:03a.062
	tawam	small, red bear	Taylor *et al.* 1972:3.62
Thakali	**tom**	bear (n.)	Hale 1973:03a.062
Thakali (Tukche)	**tom**	bear	Hari 1971:3.A.62
	$^{\text{H}}$**tom**	bear	Mazaudon 1994:442

2.3.4. WESTERN KIRANTI

Bahing	**wam**	bear (n.)	Benedict 1972:461
	wam	bear	Coblin 1986:40
Sunwar	**wạ:**	bear (n.)	Hale 1973:03a.062

2.4. KHAM-MAGAR-CHEPANG

Chepang	bhə.li.**yom**	Himalayan Black Bear; Himalayan Black bear (n.)	Caughley 2000; Caughley 2000
	siŋʔ.tyamh.**yom**	Sloth bear; Sloth-bear (n.)	Caughley 2000; Caughley 2000
	tok.ci.**yom**	bear (ch); woman (met.) (n.)	Caughley 2000
	yom	bear (n.)	Hale 1973:03a.062; Weidert 1987:3; Caughley 2000
	yom	bear	Caughley 1972:3.A.62
	yom.bonʔ	vine (sp.), with thorns like a bear's claw - cut to get drinking water (n.)	Caughley 2000

3.2. QIANGIC

Muya	re^{33}**we**^{55}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.15
Muya [Minyak]	ʐɐ̯^{35}**we**^{55}	bear (n.)	SUN Hongkai et al. 1991:125.15
Namuyi	**vu**^{55}	bear (n.)	SUN Hongkai et al. 1991:125.19; HUANG Bufan & DAI Qingxia, eds. 1992:0311.46
Pumi (Lanping)	**uẽ**^{55}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.09
Pumi (Qinghua)	**uə̃**^{55}	bear (n.)	SUN Hongkai et al. 1991:125.11
Queyu (Yajiang) [Zhaba]	**wua**^{35}	bear (n.)	SUN Hongkai et al. 1991:125.16
Queyu (Xinlong)	**wɐr**^{13}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.13

3.3. RGYALRONGIC

Daofu	**dəm**	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.12
Ergong (Danba)	**wo**	bear (n.)	SUN Hongkai et al. 1991:125.14

3.3.1. RGYALRONG

rGyalrong (Maerkang Bola (B))	**tu33 wam33**	bear	Nagano & Prins 2013:1474
rGyalrong	**twǒm**	bear (n.)	Benedict 1972:461
	twǒm	bear	Coblin 1986:40
rGyalrong (Maerkang)	**təwɑm**	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.11
rGyalrong	**towam**	Himalayan bear	Nagano 1997:6.1
rGBenzhen	**tə-wamʔ**	bear (black)	Sun 1997b
Shili	**tom**	bear (black)	Sun 1997c

6.1. LOLO-BURMESE: ***d-wam**$^{1/2}$ BEAR

**Lolo-Burmese*	***d-wam**$^{1/2}$	bear (n.)	Matisoff 2003a:618
	***wam**^{1}	bear (n.)	Weidert 1987:210

6.1.1. BURMISH

Achang (Longchuan)	**ɔm**^{55}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.28; SUN Hongkai et al. 1991:125.41
Achang (Xiandao)	**om**^{55}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.29
Bola (Luxi)	**vɛ̃**^{55}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.32
Burmese (Rangoon)	**wũ**^{22}	bear (n.)	HUANG Bufan & DAI Qingxia, eds. 1992:0311.27

(10) PTB *g-la ŋ / k FALCON, VULTURE, EAGLE, KITE, HAWK, BIRD OF PREY

This root seems certainly to be an old loanword from Mon-Khmer. For details, see *STC* p. 72, n. 225. It has also been borrowed into Chinese and Hmong-Mien. See *HPTB* p. 263.

Both Karenic and Jingpho have binomes of the form **laŋ** + **da**, the latter element of obscure origin.

(17) PTB *m-dwaŋ PEACOCK

This morpheme frequently occurs as the second element in compounds beginning with PTB ***w(a/u)** BIRD / EGG / WING / FOWL (§1.5.1). This first element varies from an unreduced form of the shape **wa** and a prefixized version **u-**.

Besides the normal initial reflex with dental stop, this etymon shows a puzzling variation among **h-**, **y-**, and **w-**, which remains to be explained.
