

Euston – Glasgow Route Guide

Glasgow, Scotland's largest city and seaport and home of a quarter of its population, Glasgow has an ecclesiastical history dating back to the 4th century. Its growth as an industrial centre began in the late 18th century based on cotton spinning and weaving.

The ascent to Beattock Summit is one of the most difficult on any railway in Britain.

Lockerbie One of the last Border clashes between rival feudal families took place here in 1593 when the Johnstones defeated the Maxwells.

The Border between England and Scotland is marked by the River Sark, which the train crosses North of Carlisle.

Carlisle The "Border City" was in Roman times a chief military establishment.

Lancaster This 'fort on the Lune' used to be a Roman settlement and the station was designed to blend with the castle, on a hill to the east.

Carnforth To the west is Steamtown railway museum, the largest main line steam locomotive depot in Britain.

Warrington on the River Mersey is an important industrial centre with tanneries, breweries, chemical plants and engineering works. South of the town the railway crosses the Manchester Ship Canal.

Stafford A County town and now an industrial centre, Stafford is also the birthplace of Izaak Walton, writer and angler.

Tamworth Here the train passes under the Bristol-Birmingham-Sheffield main line.

Nuneaton was named after a Benedictine nunnery, now in ruins, founded in the days of King Stephen.

Wolverton One of British Rail's principal carriage works is on the west side of the line. Britain's first trunk motorway, the M1, parallels the line for three miles.

London Euston The original station opened in 1837 and was completely rebuilt in 1968. Its Travel Centre provides comprehensive information and reservation services, while Travellers Fare dispenses full meals, light snacks and drinks.

Motherwell's growth as an industrial town followed the construction of the railways which linked it with Glasgow.

Carstairs The line to Edinburgh diverges to the east.

To reach Shap summit, 916 ft., the railway climbs at 1 in 75 for over four miles. The scenery in the upper Lune is the finest between Euston and the Border.

Oxenholme Windermere, England's largest lake, may be reached by the branch line, from here, as may Kendal, in the valley to the west.

Preston Here the railway crosses the River Ribble, which is tidal to this point. Connecting trains serve the towns of East Lancashire.

Wigan Food processing and engineering have largely superseded the cotton and mining industries from which this town grew.

Crewe Although this town developed around the famous railway works, other industries are now also well established.

Lichfield The three-spired cathedral may be seen to the west. Samuel Johnson, the writer, was born here.

Rugby Renowned for its association with Tom Brown's Schooldays, and for the ball game which bears its name, Rugby is now important for electrical engineering.

Bletchley The new city of Milton Keynes is developing in this area, and will have a population of about 200,000 by 1990. A new station has been built about 3 miles north of Bletchley.

Leighton Buzzard The tall spire of All Saints' Church can be seen to the east of the line.

Berkhamsted The ruins of a Norman castle can be seen on the east side.

Watford has been a market town since medieval days. It is now a dormitory town for London and an important centre for printing and paper-making.

The shape of travel to come

 **InterCity APT**

First Class Coach

Second Class Coach

Buffet Bar

The Advanced Passenger Train, APT for short, is British Rail's most modern train. These electric expresses will run Mondays to Fridays between Glasgow and London – 401 miles in 4¼ hours – the fastest ever between these two cities.

Departure and arrival times are shown below –

0700	Glasgow Central	↑	2045
0713	Motherwell		2030
0901	Preston		1837
1115	London Euston	↓	1630

Your Train Facilities

First and Second Class seats providing a high standard of comfort. Initially accommodation is confined to the six coaches at the northern end of the train (nearest to the barrier on departure from Glasgow and furthest from the barrier on departure from London).

There are full restaurant and buffet services available to all passengers. A trolley service is also provided in the second class portion of the train.

Light luggage can be placed on the overhead racks or between and under the seats. The guard's van has adequate space for the storage of bulky luggage.

Seat Reservation and Tickets

All seats are reservable and early booking is strongly advised. Standing is not permitted. Any unreserved seats will be allocated by the issue of free boarding cards, obtainable from the APT office during the hour before departure.

Most types of tickets are valid and remember there is no supplementary charge for travel by this new exciting train.

Design Features

The unique feature of the APT is the tilt mechanism enabling curves to be negotiated at very high speeds without loss of passenger comfort.

Considerable weight saving has also been effected by using articulated coaches of aluminium construction resulting in lower power consumption – most important with today's need to conserve energy.

External sliding doors are fitted giving easy entry and exit with luggage. These doors are operated by the passenger at the push of a button although the guard maintains overall control.

The specially designed toilets may be used even when the train is at a station.

The Future

British Rail hopes to build a fleet of Inter-City APT's for the main electrified services from Euston to Glasgow, Liverpool, Manchester, North West England and the West Midlands.

If the Government give authority these services could be running by the late 1980's.

We would like you to enjoy your journey by APT. Any comments you may care to make will be appreciated.
