

Oilseeds: World Markets and Trade

U.S. Soybean Meal Exports Forecast at Consecutive Records in 2022/23 and 2023/24

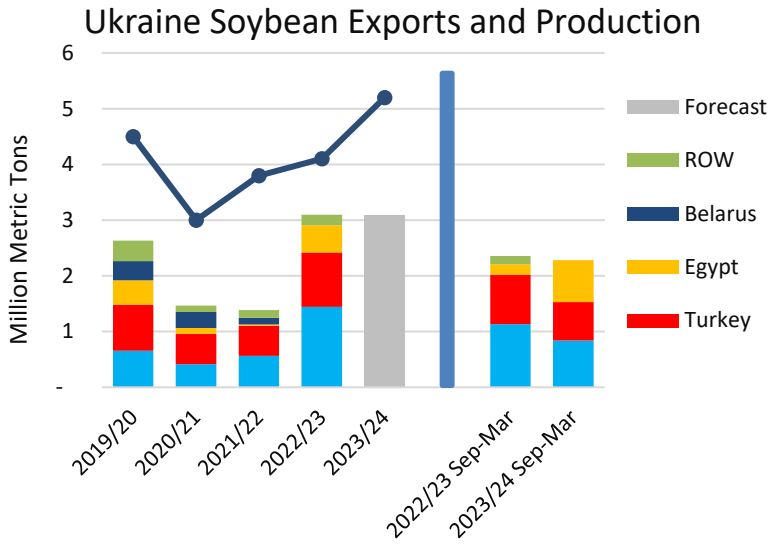

U.S. soybean meal exports hit record levels in 2022/23, reaching 13.3 million tons. This record came amid a drought in Argentina, often the world’s largest soybean meal exporter, resulting in other major soybean producers like Brazil and the United States stepping in as alternative suppliers. Another major contributor to the record was rising U.S. domestic demand for feedstock oils used in biomass-based diesel production. U.S. soybean crush reached record levels to supply high soybean oil demand, leaving the United States flush with meal and well-positioned to make up for production shortfalls in Argentina.

U.S. soybean meal was exported to a diverse set of countries in 2022/23, reaching both new markets and new heights in traditional markets. Norway and Madagascar each imported near-zero U.S. soybeans until 2021/22, and both rose substantially in 2022/23. U.S. exports to Kuwait, Grenada, and Saint Lucia also set records in 2022/23. While none of the top ten U.S. soybean meal markets set all-time record imports, a few – the European Union, Venezuela, and Morocco – reached their highest in over 5 years.

In 2023/24, U.S. soybean meal exports are forecast to reach another record at 14.3 million tons. Year-to-date (Oct-Feb) exports are at 6.7 million tons, 25 percent higher than the same period last year. Many markets have continued to significantly grow imports of U.S. soybean meal. All the top ten U.S. soybean meal markets are ahead of last year’s pace and many markets are significantly higher. Among these are Vietnam (103 percent higher than last year), the Philippines (43 percent), Guatemala (42 percent), the European Union (37 percent), and Venezuela (36 percent).

Surging Ukraine Soybean Production and Exports Boost Market Share in MENA Region

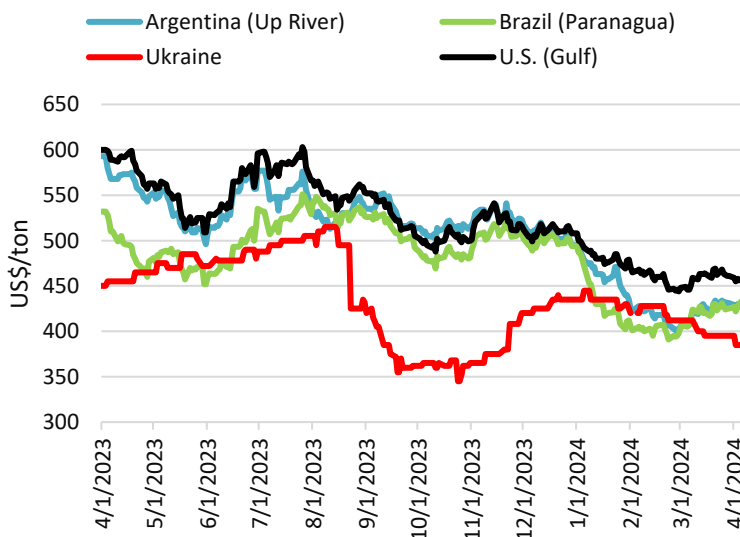

Source: Trade Data Monitor, LLC and Agricensus.

Soybean production in Ukraine is export driven, and with crush not expanding during the Russia invasion, exportable supplies have been on the rise. Production has recovered to pre-war levels as soybeans remain profitable. Growing output and exports during the war allowed Ukraine to emerge as a significant player on the soybean export market, especially in the Middle East and North Africa (MENA) region. Ukraine captured market share from several traditional suppliers, including the United States.

In 2023/24, Ukraine soybean exports are projected to reach a new record of 3.1 million tons. Similar to the last marketing year, the key markets include the European Union, Turkey, and Egypt. Last year, Ukraine soybean exports to Egypt reached nearly 488,000 tons. This marketing year, September-March shipments to Egypt tripled to nearly 755,000 tons. Meanwhile, September-February shipments from the United States to Egypt were only 388,000 tons, a 45-percent decline compared to the same period last year. Ukraine has also boosted the market share in Turkey, with shipments estimated at nearly 690,000 tons during September-March. As a result, U.S. exports to Turkey have fallen 20 percent to 132,000 tons during the same period.

Soybean Export Prices

Ukraine remains an attractive soybean supplier to Europe and MENA with export prices significantly below elsewhere. A geographic location near major soybean importers, a stagnant domestic crush, and low export prices are the key factors supporting Ukraine's surging soybean exports. Despite the current challenges from the war, Ukraine and its partners continue making significant efforts to overcome logistical issues and set up alternative export routes after the Black Sea Grain Initiative expired.

OVERVIEW FOR 2023/24

The global oilseeds production forecast is slightly lowered this month on a decrease in South Africa soybean production more than offsetting an increase in Paraguay soybean production. Global oilseeds trade is marginally down on lower U.S. soybean and Canada rapeseed exports despite higher Paraguay soybean trade. Although U.S. soybean ending stocks are higher, global ending stocks are down approximately 800,000 tons due to a decrease in Russia and Canada soybean stocks. Oilseed crush is slightly higher on raised Ukraine sunflowerseed and Canada rapeseed crush offsetting lower global soybean crush. Meal trade rose aligned with higher production of sunflowerseed and rapeseed meal. Ending oil stocks are up on an increase in palm oil stocks in Indonesia and European Union soybean oil offsetting rapeseed oil stock declines. While soybean oil production was lowered slightly, total vegetable oil production grew on higher sunflowerseed oil production in Ukraine and rapeseed oil in Canada.

The projected U.S. season-average farm price for soybeans is down 20 cents to \$12.55 per bushel.

EXPORT PRICES

Soybean prices trended up during the month of March on a lower CONAB soybean crop projection for Brazil and slower farmer selling in Brazil. Despite the increase in prices, Brazil is still the most competitive soybeans exporter. In contrast, soybean meal prices slightly declined on increased supplies in the United States and South America.

Vegetable oils prices increased across the board last month mainly driven by market concerns of lower palm oil supplies. Soybean oil prices in Brazil and Argentina and sunflowerseed oil prices in Ukraine followed the increase in palm oil. During the month of March, palm oil prices rallied \$100/ton while soybean oil prices in South America increased only \$77. The price spread between Malaysian palm oil and Argentina soybean oil jumped from \$42 at the beginning of March to \$68 in April. Palm oil became the most expensive vegetable oil in the global market (excluding U.S. soybean oil, used mainly domestically). Sunflowerseed oil continues to be the cheapest vegetable oil on the global market.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
