introduce the show and hand over to different guest

**3** *Boo to a Goose Theatre's show was used to educate and inform young audiences about the solar system while the accompanying activity sheets explained to teachers, parents and carers how to view the great conjunction.*

(Julian Hoad, Another Planet design)

Steven Rieder and Chris Brunt, together with Hatchell and Bate, prepared the telescope set-up and acquired back-up

head and Mills led the development of a script to be used on the night, while Morrell worked tirelessly to ensure the broadcast could transition smoothly between different

a few seconds between delivery and broadcast (figure 2).

## Community engagement

as beneficial to our event, providing us with methods of

technique (the five current Squilometre neighbourhoods in Devon represent around 20000 citizens). Interwoven

this up during the coronavirus pandemic) and, as such,

artist (and specialist in immersive, educational theatre) Boo to a Goose Theatre to redevelop their *Space Cats* duction (figure 3). This Arts Council-funded sensory play,

50th anniversary of the Apollo 11 Moon landing and had

4 The city-centre shopfront display on Sidwell Street, Exeter, helped to promote the community engagement activities and advertise the live broadcast of the great conjunction. (Julian Hoad)

ship belonging to female rocket scientist Prof. Agena B Armstrong and fly off to the Moon. Mills and I consulted with Boo to a Goose Theatre to include information about *Space Cats*

Julian Hoad and Anna Matthews designed accompanying

(figure 4). This idea developed into a week-long dynamic 16–23 December. Bespoke videos and infographic post were created by Interwoven associate artist Dom Lee.

enjoy significant footfall throughout the period of the five minutes. This was no doubt helped by Exeter remain

Interwoven and by PRISM Exeter (an LGBTQ+ STEM network). The former was organized as an in-person event targeted at residents of Exeter’s Burnthouse Lane

binoculars on 20 December. For most attendees, this was about the solar system and astronomy. PRISM Exeter held at Exeter’s LGBTQ+ community. Attendees were guided local LGBTQ+ astronomers about what was happening

### The main event

an email delivered to more than 8400 people, who had

broadcast attained a peak concurrent viewing figure of

BBC and Al Jazeera; and it being listed as one of six

saturn-webcasts). During our live broadcast, PhD student

delivered live. Messages in the YouTube chat peaked at 63

### AUTHOR

Dr Claire Davies is a research fellow in the Astrophysics Group, University of Exeter, and founder of PRISM Exeter

### ACKNOWLEDGEMENTS

The Great Conjunction live broadcast and associated activities were devised by: members of the **University of Exeter Astrophysics Group** – Matthew Bate, Chris Brunt, Claire Davies, Jenny Hatchell, Adrien Houge, Sabastiaan Krijt, Nathan Mayne, Sam Morrell, Steven Rieder, Federica Rescigno and Stephen Thomson; **Exeter Science Centre** directors – Alice Mills and Natalie Whitehead; and **Interwoven Productions CIC** – Marie Cassidy, Mark Cassidy, Julian Hoad, Dom Lee, Anna Matthews and Jojo Spinks. The *Space Cats* and shopfront installation elements were supported by funds awarded by the Institute of Physics South West branch and Resolute Photonics Ltd to Interwoven Productions CIC. PRISM Exeter’s activities throughout 2020 were supported by a Diversity in Science Grant awarded by the Biochemical Society to Dr Claire Davies
