We introduce **PhoWhisper**, a novel series of foundation models for automatic speech recognition. PhoWhisper's robustness is achieved through fine-tuning the model on a diverse range of accents. Our experimental study demonstrates the state-of-the-art performance of PhoWhisper on benchmark Vietnamese datasets. We have open-sourced PhoWhisper at <https://github.com/VinAIRResearch/PhoWhisper>

INTRODUCTION

Automatic speech recognition (ASR) technology is often referred to as speech-to-text. As experienced significant advancements (Baevs et al., 2018; Barrault et al., 2020; Prasad et al., 2021), ASR's applicability across a wide range of applications is the state-of-the-art. ASR models (Radford et al., 2022) have become extremely popular, being widely used in both academia and industry.

In this paper, we present an empirical study exploring ASR for Vietnamese. Specifically, we further fine-tune the multilingual ASR model on a large-scale Vietnamese dataset that includes a diverse array of Vietnamese accents from different regions. Our results show a fine-tuned model that we name PhoWhisper. Our empirical results demonstrate the state-of-the-art performance of PhoWhisper, outperforming the previous best baselines on the Vietnamese Common Voice (IO-LP) and LP-AS test sets.

The publicly released PhoWhisper weights can be used with transformers (Vaswani et al., 2020) and openai-whisper (Radford et al., 2022). The open-source PhoWhisper can serve as a strong baseline for future Vietnamese ASR research and applications.

PHO WHISPER

Our PhoWhisper consists of several models including PhoWhisper_{tiny}, PhoWhisper_{base}, PhoWhisper_{small}, PhoWhisper_{medium}, and PhoWhisper_{large} using the same architecture of the multilingual models (PhoWhisper_{tiny}, PhoWhisper_{base}, PhoWhisper_{small}, PhoWhisper_{medium}, and PhoWhisper_{large} respectively).

Table 1. Data statistics

Dataset	Training size (hours)	Validation size (hours)	Test size (hours)	#syllables in training set (min max average)
CM	~100	~10	~10	~100 ~1000 ~200
IO	~100	~10	~10	~100 ~1000 ~200
LP-AS	~100	~10	~10	~100 ~1000 ~200
LP-AS	~100	~10	~10	~100 ~1000 ~200
Our private data	~100	~10	~10	~100 ~1000 ~200
total	~100	~10	~10	~100 ~1000 ~200

We fine-tune our models on a large-scale Vietnamese training set consisting of 100 hours of audio collected from four different resources including CMV-Vietnamese part of the Common Voice
