Plut. Is. et Osir. p. 359 ; Diod. i. 22). It was reported too that neither birds flew over it nor fish approached its shores. (Sencc. Quaest. Nat. iv. 2.) These indeed were the traditions of a remote periox ; since in the time of the Macedonian kings of Aegypt Philae was so much resorted to, partly by pilgrims to the tomb of Osiris, partly by persons on secular errands, that the priests $j$ ritioned Ptolemy Physcon (B. c. 170-117) to prohibit public functionaries at least from coming thither and living at their expense. The obelisk on which this petition was engraved was brought into England by Mr. Bankes, and its hieroglyphics, compared with those of the Rosetta stone, threw great light upon the Aegyptian phonetic alphabet. The islands of Philae were not, however, merely sacerdotal abodes; they were the centres of commerce also between Merrei and Memphis. For the rapids of the cataracts were at most seasons impracticable, and the commodities exchanged between Aegypt and Aethiopia were reciprocally landed and re-embarked at Syene and Philae. The neighbouring granite-quarries attracted hither also a numerous population of miners and stonemasons; and, for the convenience of this trattic, a gallery or road was formed in the rocks along the E. bank of the Nile, portions of which are still extant. Philae is also remarkable for tho singular effects of lirht and shade resulting from its position near the tropic of Cancer. As the sun approaches its northern limit the shadows from the projecting cornices and mouldings of the temples sink lower and lower down the plain surfaces of the walls, until, the sun having reached its highest altitude, the vertical walls are overspread with dark shadows, forming a striking contrast with the fierce light which embathes all surrounding objects. (litter, Erdkunde, vol. i. p. 680, seq.)

The hieroglyphic name of the smaller island is Philak, or boundary. As their southern frontier, the Pharaohs of Acgypt kept there a strong garrison, and, for the same reason, it was a barrack also for Matcedonian and Roman soldiers.

The most conspicuous feature of both islands is their architectural wealth. Monuments of very various eras, extending from the Pharaohs to the Caesars, occupy nearly their whole area. The principal structures, however, lie at the $S$. end of the sinaller island. The most ancient, at present discovered, are the remains of a temple of Athor (Aphrodite), built in the reign of Nectanebus. Tho other ruins are for the most part coeval with the Ptolemaic times, more especially with the reigns of Philadelphus, Epiphanes, and Philometor (b. c. 282 -145), with many traces of Roman work as recent as Clauilius I. (A. D. 41-54). The chief temple in Philae, dedicatod to Ammon-Osiris, was approached from the river through a double colonnade. In front of the propyla were two colnssal lions in granite, behind which stood a pair of obelisks, each 44 feet high. The propyla were pyramidal in form and colossal in dimensions. One stood between the dromos and pronaws, another between the pronaos and the portico, while a sinaller one led into the sekos or adytum. At each corner of the adytum stood a monolithal shrine, the cace of a sacred hawk. Of these shrines one is now in the Louvre, the other in the Museum at Florence. Kight and left of the entrance into the principal court are two small temples or rather chapels, ove of which, dedicated to Athor, is covered with seulptures represcating the birth of P'tolemy l'hilometor, under the figure
of the gal Horus. The story of Osiris is everywhere represented on the walls of this temple, and two of its imer chambers are particularly rich in symbolic imagery. Upon the two great propyla are Greek inscriptions intersected and partially destroyed by Aegyptian figures cut across them. The inscriptions belong to the Macedonian era, and are of carlier date than the sculptures, which were probably inserted during that interval of renascence for the native religion which followed the extinction of the Greek dynasty in Aegy pt. (B.c. 30.) The monuments in both islands indeed attest, beyond any uthers in the Nile-valley, the survival of pure Aegyptian art centuries after the last of the Pharaohs had ceased to reign. Great pains have been taken to mutilate the sculptures of this temple. The work of demolition is attributable, in the first instance, to the zeal of the early Christians, and afterwards to the policy of the Iconoclasts, who curried favour for themselves with the Byzantine court by the destruction of heathen as well as Christian images. The soil of Philse was carefully prepared for the reception of its buildings, - being levelled where it was uneven, and supported by masonry where it was crumbling or insecure. For example, the western wall of the Great Temple, and the corresponding wall of the dromos, are supported by very strong foundations, built below the level of the water, and resting on the granite which in this region forms the bed of the Nile. Here and there steps are hewn out from the wall to facilitate the communication between the temple and the river.

At the S . extremity of the dromos of the Great Temple is a smaller temple, apparently dedicated to Isis; at least the few columns which remain of it are surmounted with the head of that goddess. Its portico consists of twelve columns, four in front and three deep. Their capitals represent various forms and combinations of the palm-branch, the dhoum-leaf, and the lotus-tlower. These, as well as the sculptures on the columns, the ceilings, and the walls, were painted with the most vivid colours, which, owing to the dryness of the climate, have lost little of their original brilliance.

Philao was a scat of the Christian religion as well as of the ancient Acgyptian faith. Ruins of a Christian church are still visible, and more than oue adytum bears traces of having been made to serve at ditferent eras tho purposes of a chapel of Osiris and of Christ. For a more particular account of the architectural remains of Philae we must refer the reader to the works of Dénon, Gau, Rosellini, Russegger, and Hamilton (Aegyptiaca). The latter has minutely described this island - the Loretto of ancient Aegypt. The Greek inscriptions found there are transcribed and elucidated by Letronne.

A little W. of Philae lies a larger island, anciently called Snem or Senmut, but now by the Arabs Beghé. It is very precipitous, and from its most elevatid peak affords a fine view of the Nile, from its smooth surface $S$. of the islands to its plunge over the shelves of rock that form the First Cataract. Philae, Beghei, and another lesser island, divide the river into four principal streams, and N. of them it takes a rapid turn to the W. and then to the N., where the cataruct begins. Beghé, like Philae, was a holy island; its rocks are inscribed with the names and titles of Amunoph III., Rameses the Great, Psammitichus, Apries, and Amasis, torether with memorials of the Macelonian and Roman rulers of Aegypt. Its principal ruins collsist of the propylon aud two
columns of a temple．which was apparently of small dimensions，but of elegant propurtions．Niar them are the fracments of two colossal granite statues， and also an excellent picce of masonry of much later date，having the asprect of an arch belonging to some Greek church or saracen mosque．［W．B．D．］
PHILAEA（фi八aia），a fort on the coast of Cili－ cia，is mentioned only in the Studiasmus Maris Magni（SSs 167，168）．

PHILEAE（Mela，ii．2．§ 5），or PHILIAS（Tab． Peut．；Geog．Rav．iv．6，v．12；фi入éas，Scyinn．v．722； Steph．B．698，who，however，has also the forms фìía and фivéa；фìia，Anon．B．Per．P．Eux．， who aliso says that it was called $\Phi$ Puria，with which nane it is likewise found in Arrian，Per．I．Eux． p．25；comp．Zosim．i．34），a town on the const of Thrace，built by the Byzantines，on a promontory of the same name．It still exists under the slightly altered appellation of Fillea or Filine［T．H．D．］
phileros．［Mygdonia．］
PHILIA（ $\Phi$ iaia ákpa，l＇tol．iii．11．§4），a pro－ montory on the coast of Thrace， 310 stadia SE．of Salmydessus（Kara Burnu ？），with a town of the same name．
［T．H．D．］
 otos），a city of Macedonia，which took its name from its founder，Philip，the father of Alexander．Origin－ ally，it had been called Cremides（Kpqvídss，Strab． vii．p． 331 ；Appian，B．C．iv． 105,107 ；Steph．B．s．v． \＄i人ixтot），or the＂Place of Fountains，＂from the numerous streams in which the Angites takes its surce．Near Crenides were the priur ipal mines of gold in a hill called according to Appian（l．c．） Dionysi Collis（ $\lambda$ ódos $\Delta$ iovógou），probably the same moantain as that where the Satrae possessed an oracle of Dionysus interpreted by the Bessi． （Hernd．vii．111．）Crenides does not appear to have belonged to the Thasians in early times， although it was under their doninion in the 105th Olympiad（b．c．360）．When Philip of Macedin pot posisession of the mines，he worked them with so much success，that they yielded 1000 talents a year，although previously they had not leen very productive．（Diodor．xvi．4－8．）The old city was enlarged by Philip，after the capture of Am－
phipmis，Pydma，and Potidaen，and fortified to pro－ teet his frontier arainst the Thracian mountaineers． On the plain of Philippi，between Haemus and Pangacus，the last battle was lost by the republicans of Rome．Appian（l．c．）has given a clear descrip－ tion of Philippi，and the position on which Cassius and Brutus encamped．The town was situated on a steep hill，bordered to the N ．by the forests through which the Cassian army advanced，－to the S．by a marsh，beyond which was the sea，to the E．by the passes of the Sapaci and Corpili，and to the W．by the great phains of Myrcinus，Drabescus， and the Strymon，which were $\mathbf{3 5 0}$ stadia in length． Not far from Philippi，was the hill of Dionysus， containing the gold mines called Asyla；and 18 stadia from the town，were two other heights． 8 stadia asunder ；on the one to the N．Brutus pitched his camp，and Cassius on that to the S． Brutus was protected on his right by rocky bills， and the left of Cassius by a marsh．The river Gangas or Gangites flowed along the front，and the sea was in the rear．The camps of the two leaders， although separate，were enclosed within a common entrenchment，and midway between them was the pass，which led like a gate from Europe to Asia． The galleys were at Neapolis， 70 stadia distant，and the commissariat in Thasos，distant 100 stadia． Dion Cassius（xlvii．35）adds，that Plilippi was near Pangaeus and Syinbolum，and that Syinbolum， which was between Philippi and Neapolis，was so called because it connected Pangaeus with another mountain stretching inland；which indentities it with the ridge which stretches from Prairista to Kavála，separating the bay of Kavala from the plain of Philippi．The Pylae，therefore，could be no other than the pass over that mountain behind Kavala．M．Antonius took up his pasition on the right，opposite to that of Cassius，at a distance of 8 stadia from the enemy．Octavius Caesar was opposed to Bratus on the＂left hand of the even field．＂ Here，in the autumn of в．c．42，in the first engage－ ment，Brutus was successful against Octavius， while Antonius had the advantage over Cassius． Brutus，incompetent to maintain the discipline of his troops，was furced to fight again；and in an engagement which took place on the same ground， twenty days afterwards，the Republic perished． Regarding the battle a curions mistake was re－ peated by the Roman writers（Manil．i．908；Ovid， Met．xv．824；Flor．iv．42；Lucan，i．680，rii． 854，ix．271；Juv．viii．242），who represented it as fonght on the same ground as Pharsalia，－a mistake which may have arisen from the ambiguity in the lines of Virgil（Georg．i．490），and favoured by the fact of the double engagement at Pbilippi．（Meri－ vale，Hist．of Roman Empire，vol．iii．p．214．） Augustus afterwards presented it with the privileges of＂a colonia，＂with the name＂Col．Jul．Aug．Philip．＂ （Orelli，Inscr．512，3658，3746，4064；and on coins；Rasche，vol．iii．pt．2．p．1120），and con－ ferred upon it the＂Jus Italicum．＂（Dion Cass．li． 4．）It was here，in his second missionary journey， that St．Paul，accompanied by Silas，came into con－ tact with the itinerant traders in popular superstitions （Acts，xvi．12－40）；and the city was again visited by the Apostle on his departure from Greece．（Acts， xx．6．）The Gospel obtained a home in Europe here，for the first time；and in the autumn of $\mathrm{A} . \mathrm{D}$ ． 62，its great teacher，from his prison，under the walls of Nerv＇s pralace，sent a letter of grateful acknow－ ledgment to Lis Mawedouian converts．Philippi was
on the Egnatian road， 33 M．P．from Amphipolis， and 21 M．P．from Acontisma．（Itin．Anton．； Itin．Hierosol．）The Theodosian Table presents two roads from Philippi to Heracleia Sintica．One of the roals passed round the $N$ ．side of the lake Cercinitis，measuring $55 \mathrm{M} . \mathrm{P}$ ．，the other took the S ．side of the lake，and measured $52 \mathrm{M} . \mathrm{P}$ ． When Macedonia was divided into two provinces by Theodosius the Younger，Philippi became the ecclesiastical head of Macedonia Prima（Neale， Hist．of East．Church，vol．i．p．92），and is men－ tioned in the Handbook of Hierocles．

The site，where there are considerable remains of antiquity，is still known to the Greeks by its ancient name；by the Turks the place is called Felibedjik． For coins of Philippi，see Eckhel，vol．ii．p．75．（Leake， Northern Greece，vol．iii．pp．215－223．）［E．B．J．］

COIN OF PHILIPPI．
PHILIPPI PROM．（ $\Phi$ 人 $\boldsymbol{\lambda}$ iñou áxpa，Stadiasm． § 8．5），a headland on the coast of the Great Syrtis， identical with the Hippt Prom．of Ptolemy（iv． 3. § 14），and with the remarkable projection of high cliff into the sea，on which are traces of a strong fortress，at Ràs Bergavâd．Beechey（Expedition to the N．Coast of Africa，p．188）identities this cliff， which be calls Bengervoid，with Euphrantas ；but this is a mistake，as is shown by Barth（Wander－ ungen，p．367），who refers the station Ad Turbem （ ${ }^{\prime}$ eut．Tab．）to this headland．
［E．B．J．］
PHILIPPO＇POLIS．1．（\＄ı $\lambda \iota \pi \pi \delta \pi 0 \lambda \iota s$, Ptol．iii． 11．§ 12 ；Polyb．v．100；Steph．B．s．v．），a town of Thrace，founded by Philip of Macedon，on the site of a previously existing town，called Eumulpias or Poneropolis．（Amm．Marc．xxvi．10．§4；Plin．iv． 11. s．18．）From its situation on a hill with three peaks or summits，it was also called Trimontiun． （Plin．Lc．；Ptol．l．c．）It lay on the SE．side of the Hebrus．The Thracians，however，regained possession of it（Polyb．l．c．；Liv．xxxix．53），and it remained in their hands till they were subdued by the Romans．Its size may be inferred from the fact of the Goths having slaughtered 100,000 persons in it（Amm．Marc． $\mathbf{x x x i} .5 . \S 17$ ），though doubtless many persons from the environs had taken refuge there．The assumption that it likewise bore the name of Hadrianopolis，rests only on an interpolation in Ptoleny．It is still called Philippopoli，and con－ tinnes to be one of the most considerable towns of Thrace．（Tac．Ann．iii．38；Itin．Ant．p．136； Hierocl．p．635．）
［T．H．D．］
2．A city of Arabia，near Bostra，founded by the Roman emperor Philippus，who reigned A．1． $244-$ 249 ，and who was a native of Bostra．（Aurel．Vict． de Cues． 28 ；Cedrenus，p．257，ed．Paris．，vol．i．p． 451，ed．Bomn；Zonar．xii．19．）Some writers suppose that Philippopolis was only a later name of Bostra， and it must be admitted that the words of Cedrenus and Zonaras are ambiguous；but they are mentioned as two different places in the Councils．（Labbei， Concil．vol．viii pp．644，675；Wesseling，ad Hiervel． p．722．）

## Philisti＇ni．［Patafertina．］

PHLLOBOEO＇TUS（ $\Phi$ inotoiatós），a fertile
woody hill in the plain of Elateia in Phocis，at the foot of which there was water．（Plut．Sull．16．） This description，according to Leake，agrees with the remarkable insulated conical height between Bissikéni and the Cephissus．（Northern Greece， vol．ii．p．194．）

PHILOCALEIA（ $\Phi$ inood $\lambda \epsilon i a$ ），a town on the coast of Pontus Cappadocius， 90 stadia to the east of Argyria，and 100 to the west of Coralla．（Ar． rian，Peripl Pont Eux．p．17；Anonym．Peripl． P．E．p． 13 ；Plin．vi．4．）Cramer（Asis Minor， i．p．283）is inclined to identify it with the modern Helehou，about balf－way between Kercsoun and Trebizond，while Hamilton（Rescarches，i．p．254） sceks its site near the promontory of Kara Bouroun， where a large river falls into the sea，which is more in accordance with Pliny＇s words．
［L．S．］
入ıov：Eth．Фiлoun入tús，Philomeliensis），a town in the south－eastern part of Phrygia，which perhaps derived its name from the number of nightingales found in the district．It was situsted in a plain not far from the borders of Lycaonia，on the great road from Synnada to Iconium．（Cic．ad Fam．iii．8，xv． 4；Strab．xiv．p．663，comp．with xii．p． 577 ；Ptol． v．2．§ 25；Steph．B．s．v．）Philomelium belongel to the conventus of Synnada（Plin．v．25），and is mentioned in later times as belonging to Pisidia （Hierocl．p．672；Ptol．l．c．），the Pisidians in their pronunciation changing its name into Philomede or Philomene．（Procop．Hist．Arc．18．）The town is often alluded to by the Byzantine historians in the wars of the Greek emperors with the sultans of Iconium．（Anna Comn．p．473；Procop．L．c．； Nicet．Ann．p．264．）Col．Leake（ A sia Minor，p．59） believes that the place was situated near the modern Ilgun；but it is more probable that we have to look for its site at Akshehr，where ruins and inscriptions attest the existence of an ancient town．（Hamilton， Researches，i．p．4i2，ii．p．184；Arundell，Dis－ coveries，i．p．282，foll．）
［L．S．］
 Steph．B．s．v．；Plin．vi．29．s． 33 ；$\Phi$ inoot $\bar{p}$ as $\lambda_{1}-$ $\mu \not \nu \nu$ ，Ptol．iv．5．§ 14；$\Phi$ in $\omega$ т $p$ is，Apollod．ap．Stoph． B．s．v．；Eth．$\Phi$（ $\lambda \omega \boldsymbol{\omega} \epsilon \rho(\tau \eta s)$ ，a town in Upper Aegypt in the country of the Truglodytae，on the Arabian Gulf，near Myos－Honnus．It was named after a sister of Ptolemy Philadelphus，and was founded by Sa － tyrus，who was sent by Ptolemy to explore the country of the Troglodytae．（Strab．L．c．；see Mei－ neke，ad Steph．B．l．c．）

2．（Eth．фi入cot＇pios），a city in Coele－Syria on the lake of Tiberias．（Steph．B．8．v．；Polyb． $\mathbf{\nabla}$ ． 70．）Stephanus says that in consequence of the
 and in Polybins it is written $\Phi$ iлorepia．

Philote＇ria．［Phllotera，No．2．］
PHILYRE＇IS（\＄invpmis），an island off the coast of Pontus，in the Euxine．It must have been situ－ ated near Cape Zephyrium，opposite the district in－ habited by the Philyres，from which，in all proba－ bility，it derived its name．（Apollon．Rhod．ii． 1231 ； comp．Amm．Marc．xxii．8；Dionys．Per．766； Steph．B．s．v．Фídupes．）Hamilton（Researches，i． p．261）identifies it with the small rocky island 2 miles west of Cape Zefreh，and between it and the island of Kerasonule Ada．
［L．S．］
PHINNI（фiphot）．［Fennl．］
PHINO＇POLIS（фıvóru入ıs，Ptol．iii．11．§4； Strab．vii．p．319），a maritime Wwn of Thrace，not far from the junction of the Bosporus with the

Eaxine, and close to the town of Phileae. It has been variously identified with Inimakale, Mauromolo, and Derkus. (Mela, ii. 2; Plin. iv. 11. s. 18, 7. 32. s. 43.)
[T. H.D.]
PHI'NTIAS (фurtlas : Eth. Phintiensis: Alicala), a city on the S. coast of Sicily, situated at the mouth of the river Himera, about midway between Agrigentum and Gela. It was not an ancient city, but was founded about 280 b. c. by Phintias, tyrant of Agrigentum, who bestowed on it his own name, and laid it out on a great scale, with its walls, temples, and agora. He then peopled it with the inhabitants of Gela, which he atterly destroyed, compelling the whole population to migrate to his newly fonded city. (Diod. xxii. 2, p. 495.) Phintias, however, never rose to a degree of importance at all to be compared to that of Gela: it is mentioned in the First Punic War (b.c. 249) as affording shelter to a Roman fleet, which was, however, attacked in the roadstead by that of the Carthaginians, and many of the ships sunk. (Diod. xxiv. 1, p. 508.) Cicero also alludes to it as a seaport, carrying on a considerable export trade in corn. (Cic. Verr. iii. 83.) But in Strabo's time it seems to have fallen into the same state of decay with the other cities on the $S$. coast of Sicily, as he does not mention it among the few exceptions. (Strab. vi. p. 272.) Pliny, indeed, notices the Phintienses (or Phthinthienses as the name is written in some MSS.) among the stipendiary towns of Sicily; and its name is found also in Ptolemy (who writes it $\Phi$ Otveia); bat it is strange that both these writers reckon it among the inland towns of Sicily, though its maritime position is clearly attested both by Diodorus and Cicero. The Antonine Itinerary also gives a place called "Plintis," doubtless a corruption of Phintias, which it places on the road from Agrigentum along the coast towards Syracuse, at the distance of 23 miles from the former city. (Itin. Ant. p. 95.) This distance agrees tolerably well with that from Girgenti to Alicata, though somewhat below the truth; and it seems probable that the latter city, which is a place of some trade, though its harbour is a mere roadstead, occupies the site of the ancient Phintias. There is indeed no doubt, from existing remains on the hill immediately above Alicata, that the site was occupied in ancient times; and, though these have been regarded by local antiqnarians as the ruins of Gela, there is little doubt of the correctness of the opinion adranced by Cluverius, that that city is to be placed on the site of Terranova, and the vestiges which remain at Alicata are those of Phintias. (Cluver. Sicil. pp. 200, 214. See also the artirle Gela.) The remains themselves are of little interest. [E. H. B.]

PHINTON or PHINTONIS INSULA ( $\Phi$ ivtouvos rinoos, Ptol.), a small island in the strait between Sardinia and Corsica, mentioned both by Pliny and Ptolemy. It is probably the one now called the Isola della Maddalena, the most considerable of the group 80 situated. (Plin. iii. 6. s. 13; Ptol. iii. 3. § 8.)
[E. H. B.]
PHLA ( $\Phi \lambda d$ ), an island in the lake Tritunis in the interior of Libya (Herod. iv. 178), which Stephanus B., copying from Herodotus, calls an island in Aegypt, confounding it with the island of Philae in the Nile.

## PHLEGRA. [Pallene.]

PHLEGRAEI CAMPI. [CAMPANIA, p. 491, a.]
 \$naria), an independent city in the north-eastern
part of Peloponnesus, whose territory was bounied on the N. by Sicyonia, on the W. by Arcadia, on the E. by Cleonae, and on the S. by Argolis. This territory is a small valley about 900 feet above the level of the sea, surrounded by mountains, from which streams flow down on every side, joining the river Asopus in the middle of the plain. The mountain in the southern part of the plain, from which the principal source of the Asopus springs, was called Carneates (Kapvedrचs) in antiquity, now Polýfengo. (Strab. viii. p. 382.) The territory of Phlius was celebrated in antiquity for its wine. (Athen. i. p. 27, d.) According to Strabo (viii. p. 382), the ancient capital of the country was Araethyrea ('ApatOupéa) on Mt. Celosse, which city is mentioned by Homer (Il. ii. 571); but the inhabitants suhsequently deserted it and built Phlius at the distance of 30 stadia Pausanias (ii. 12. §§ 4, 5), however, does not speak of any migration, but says that the ancient capital was named Arantia ('Apavria), from its founder A:as, an autochthon, that it was afterwards called Araethyrea from a daughter of Aras, and that it finally received the name of Phlius, from Phlias, a son of Ceisus and grandson of Temenus. The name of Arantia was retained in the time of Pausanias in the hill Arantinus, on which the city stood. Hence the statement of grammarians that both Arantia and Araethyrea were ancient names of Phlins. (Steph. B. s. vv. Фגıoūs, 'Apavtía; Schol. ad Apoll. Rhod i. 115.) According to Stephanus B. (s. v. \$入ıôs) Phlius derived its name from Dionysus and Chthonophyle. Plalius was subsequently conquered by Dorians under Rhegnidas, who came from Sicyon. Some of the inhabitants migrated to Samos, others to Clazomenae; among the settlers at Samos was Hippasns, from whom Pythagoras derived bis descent. (Paus. ii. 13. § 1, seq.) Like most of the other Doric states, Phlius was governed by an aristocracy, though it was for a time subject to a tyrant Leon, a contemporary of Pythagoras. (Diog. Laërt. i. 12, viii. 8; Cic. Tusc. v. 3.) Phlius sent 200 soldiers to Thermopylae (Herod. vii. 202), and 1000 to Plataea (ix. 28). During the whole of the Peloponnesian War it remained faithful to Sparta and hostile to Argos. (Thuc. v. 57, seq., vi. 105.) But before в. c. 393 a change seems to have taken place in the government, for in that year we find some of the citizens in exile who professed to be the friends of the Lacedaemonians. The Phliasians, however, still continued faithful to Sparta, and received a severe defeat from Iphicrates in the year already mentioned. So much were they weakened by this blow that they were obliged to admit a Lacedaemonian garrison within their walls, which they had been unwilling to do before, lest their allies should restore the exiles. But the Lacedaemonians did not betray the confidence placed in them, and quitted the city without making any change in the government. (Xen. Hell. iv. 4. § 15, seq.) Ten years afterwards (B. C. 383) the exiles induced the Spartan government to espouse their cause; and with the fate of Mantineia before their eyes, the Phliasians thought it more prudent to comply with the request of the Spartans, and received the exiles. (Xen. Hell. г. 2. § 8, seq.) But disputes arising between the returned exiles and those who were in possession of the government, the former again appealed to Sparta, and Agesilaus was sent with an army in B. c. 380 to reduce the city. At this period Phlins contained $\mathbf{5 0 0 0}$ citizens. Agesilaus laid siege to the city, which held out for a year and cight months.

It was at length obliged to surrender through failure of provisions in B. C. 379; and Agesilaus appointed a council of 100 members (half from the exiles and lualf from the besieged), with powers of life and death over the citizens, and authorised to frame a new constitution. (Xen. Hell. v. 3. § 10, seq.; Plut. Ages. 24; Diod. xv. 20.) From this time the Phliasians remained faithful to Sparta throughout the whole of the Theban War, though they had to suffer mach from the devastation of their territory by their hostile neighbours. The Argives occupied and fortified Tricaranum above Phlius, and the Sicyonians Thyamia on the Sicyonian frontier. (Xen. İell. vii. 2. § 1.) In B. c. 368 the city was nearly taken by the exiles, who no doubt belonged to the democratical party, and had been driven into exile after the capture of the city by Agesilaus. In this year a body of Arcadians and Eleians, who were marching through Nemea to join Eparminondas at the Isthmus, were persuaded by the Phliasian exiles to assist them in carturing the city. During the night the exiles stole to the foot of the Acropolis; and in the morning when the scouts stationed by the citizens on the hill Tricaranum announced that the enemy were in sight, the exiles seized the opportunity to scale the Acropolis, of which they obtained possession. They were, however, repulsed in their attempt to force their way into the town, and were eventually obliged to abandon the citadel also. The Arcadians and Argives were at the same time repulsed from the walls. (Xen. Hell. vii. 2. §§ 5-9.) In the following year Phlius was exposed to a still more formidable attack from the Theban commander at Sicyon, assisted by Euphron, tyrant of that city. The main body of the army descended from Tricaranum to the Heraeum which stood at the foot of the mountain, in order to ravage the Phliasian plain. At the same time a detachment of Sicyonians and l'eilenians were posted NE. of the Acrupolis before the Corinthian gate, to hinder the Phliasians from attacking them in their rear. But the main body of the troops was repulsed; and being unable to join the detachment of Sicyonians and I'allenians in consequence of a ravine (фapá $\boldsymbol{\gamma}$ ), the Phliasians attacked and defeated them with loss. (Xen. Hell. rii. 2. § 11, seq.)

After the death of Alexander, Phlius, like many of the other Peloponnesian cities, became subject to tyrants; but upon the organisation of the Achaean League by Aratus, Cleonymus, who was then tyrant of Phlius, voluntarily resigned his power, and the city joined the league. (Polyb. ii. 44.)

Phlius is celebrated in the history of literature as the birthplace of Pratinas, the inventor of the Satyric drama, and who contended with Aeschylus for the prize at Athens. In the agora of Pblius was the tomb of Aristias, the son of Pratinus. (Paus. ii. 13. § 6.)

Pausanias says that on the Acropolis of Phlius was a temple of Hebe or Ganymeda, in a cypress grove, which enjoyed the right of asyluin. (Comp. Strab. viii. p. 382.) There was also a temple of Demeter on the Acropolis. On descending from the citadel there stood on the right a temple of Asclepius, and below it the theatre and another temple of Demeter. In the agora there were also other public buildings. (Paus. ii. 13. § 3, seq.) The principal place at present in the Phliasia is the village of St. George, situated at the southern foot of Tricaranum, a mountain with three summits, which bounds the plain to the NE. The ruins of Phlius
are situated three quarters of an hour further west, on one of the spars of Tricaranam, abque the right bank of the Asopus. They are of considerable extent, but present little more than foundations. On the south-western slope of the height stands the church of our Lady of the Hill (Havaria 'Paxteotiova), from which the whole spot is now called ' $\sigma$ тir 'Paxudiuacay. It probably occupies the site of the temple of Asclepius. Ross found here the remsins of several Doric pillars. Five stadia from the town on the Asopus are some ruins, which Ross considers to be those of Celeae (Ke入cai), where Demeter was ซंorshipped. (Paus. ii. 14. § 1.) Leake supposed Phlius to be represented by some ruins on the western side of the mountain, now called Polyfengo; but these are more correctly assigned by Ross to the ancient city of Araethyrea; and their distance from those already described corresponds to the $\mathbf{3 0}$ stadia which, according to Strabo, was the distance from Araethyres to Phlius.

On M. Tricaranum are the remains of a small Hellenic fortress called Paledkastron, which is probably the fortress erected by the Argives on this mountain. (Xen. Helh vii. 2. §§ 1, 5, 11, 13; Dem. Megal. p. 206; Harpocrat. s. v. Tpuxdpavor; Steph. B. 8. ©. Tpucapaya.) Thyamia, which the Sicyonians fortified, as already narrated (Xen. Hell. vii. 2. § 1), is placed by Ross on the lofty hill of Spirio, the northern prolongation of Tricaranum, between the villages Strindinga and Skrapdni; on the summit are the remains of a large round tower, probably built by the Franks or Byzantines. In the sonthern part of the Phliasia is the Dioscurion ( $\Delta$ lorkolpiov), which is mentioned only by Polybius (iv. 67, 68, 73), and which lay on the road from Corinth over the mountain Apelauron into the Stymphalia. (Leake, Morea, vol. iii. p. 339, seq.; Russ, Reisen im Peloponnes, p. 25, seq.; Curtius, Peloponnesos, vol. ii. p. 470, seq.)

PHLYGO'NIUM ( $\Phi$ 入u $\gamma \delta \nu \iota \nu$ ), a city of Phocis, of unknown site, destroyed at the end of the Phocian War. (laus. x. 3. § 2; Steph. B. s. v.) I'liny calls it Phlygone, and erroneously represents it as a city of Buevtia (iv. 7. s. 12).

PHOCAEA (\$ẃкaia: Eth. \$aкаиєús or $\Phi \omega$ kace's). the most northern of the lonian cities in Asia linor, was situated on a peninsula, between the Sinus Cymseus and the Sinus Hennaeus, and at a distance of 200 stadia from Smyrna. (Strab. xiv. p. 632; Plin. v. 31 : Pomp. Mela, i. 17.) It was said to have been founded by enigrants from 1 'hocis, under the guidance of two Athenian chiefs, Philogenes and Damon. (Strab. l. c. p. 633 ; Paus. vii. 3. § 5.) The first settlers did not conquer the territory, but receired it as a gift from the Cumaeans. The town, bowever, did not become a member of the Ionian confederacy until it placed princes of the -ine of Codrus at the head of the government. It had two excellent harbours, Naustathinus and Lampter, and before the entrance into them was situated the ittle island of Baccheion, which was adorned with temples and splendid buildings (Liv. xaxviii. 22); and owing to this favourable position, and the enterprising spirit of its inhabitants, the town soon rose to great eminence among the maritine cities of the ancient world. Herodotus (i. 163, Scc.) states that the Phocaeans were the first Greeks who undertook Jistant voyages, and made theinselves acquainted with the cossts of the Adriatic, and the Tyrrinenian and lberian sess; and that they were the first to visit Tartessus. Arganthonius, king of the Tartessians, became so attached to them as to try to prevail upon them to quit Ionia and settle in his own dominions; but on their declining this, he gave them a large sum of money to furtify their own city against the Persians. The Phocaeans accordingly surrounded their city by a wall of several stadia in circumierence, and of a very solid construction. In the war of Cyrus, Phocaea was one of the first towns that was besieged by the army of Cyrus, under the command of Harpagus. When called upon to surrender, the Phocaeans, conscious of being unable to resist the enemy much longer, asked and obtained a trace of one day, pretending that they would consider his proposal. But in the interval they embarked with their wives and children and their most valuable effects, and sailed to Chios. There they endeavoured by parchase to obtain possession of the group of islands called Oenussae, and belonging to the Chians; but their request being refused, they resolved to sail to Corsica, where twenty years before these occurrences they had planted the colouy of Alalia. Befure setting out they landed at Phocaes and put the Persian garrison to the sword. They then bound themselves by a solemn oath to ahandon their native country; nevertheless, however, one half of their number, unable to overcome their feelings, remained behind. The rest priceeded to Corsica, where they were kindly received by their colunists. Soon they became formidable to the aeightoaring nations by their piracy and depredations, so that the Tyrrhenians and Carthacrinians united to destroy their power. The Phocaeans succeeded indeed in defeating their enemies, but their loss was so great that they despaired of being able to continue the contest, and procteded to Rhegium, in the south of Italy. Not long after their arrival there, they were induced to settle at kilae: or Velia, in Locania, which, in the course of time, becime a Boarishing wwa Among the numerous columies of
the Phocacans the most important was Massilla or Marseilles, in the south of France, and the most western Mafnaca, in Hispania Baetica. After the emigration of half the population, Phocaca continued to exist under the Persian dominion; but was greatly reduced in its commerce and prosperity, as we may infer from the fact that it furnished only three ships to the fleet of the revolted Ionians at the battle of Lade; but their commander was nevertheless the ablest man ainong the Ionians. (Herod. vi. 1117.) After these events Phocaea is little mentioned (Thucyd. i. 13, viii. 31 ; Hom. Lymm. i. 35 ; Scylax, p. 37); but some centuries later, in the war of the Romans against Antiochus, when Phocaea was besieged by a Koman fleet, Livy (xxxvii. 31) describes the place as follows:-"The town is situated in the inmost recess of a bay; its shape is oblong, and its walls enclose a space of 2500 paces; they afterwards unite so as to forn a narrower wedge: this they themselves call Lampter, and it is about 1200 paces in breadth. A tongue of land running out into the sea a distance of 1000 paces, divides the bay nearly into two equal parts, and forms on each side of the narrow isthmus a very safe port. The one towards the south was called Naustathmus, from its being ublo to contain a great number of ships, the other was situated close to the Lampter." On that occasion the town was taken by the Romana, after a desperate resistance, and given up to plunder by the practor Aemilius, though the inhabitants had voluntarily opened their gates. The town with its territory, however, was restored to the inhabitants by Aemilius. (Liv. l. c. 32; Polyb. xxii. 27, comp. v. 77, xxi. 4; Liv. xxxviii. 39.) At a still later period the lhocaeans offended the Romans by supporting the cause of Aristonicus, tho claimant of the throne of Pergamum; and they would have been severely punished had not the inhabitants of Massilia interceded in their behalf. (Justin, sxxvii. 1, x liii. 3; Strab. p. 646.) The existence of Phocaea can be traced throughout the imperial period from coins, which extend down to the time of the Philips, and even through the period of the Lower Einpire. (Hierocl. p. 661.) From Michacl Ducas (Ann. p. 89) we learn that a new town was built not far from the ancient city by sume Genoese, in A. D. 1421 . This latter, situated on the isthmus mentioned by Livy, not far from the ruins of the ancient city, is the place now called Foggia Nova: the ruins bear the name of Palaeo Foggia (Cbandler, Travels, p. 96 ; Arundell, Seven Churches, p. 294; Hamilton, Kesearches, ii. p. 4; Eckhel, Doctr. Num. ii. p. 53, \&c.; Rasche, Lex. Rei N'mm iii. 2, p. 1225, \&c.; Sestini, p. 83; Thisquen, Phocaica, Bonn, 1842, 8vo.)

Another town of the same name in the peninsnla of Mount Mycale, in Caria, is mentioned by Stephanus B. (s. v.).

COLX OF PHOCAEA.

## PHOCEAE. [Leontini, p. 159, b.]

## PHO'CICUM. [Phocts.]

PHOCIS ( $\dot{\eta}$ Факis: Eth. Факєús, Phocensis), 2 small country in centril Greece, bounded on the $\mathbf{N}$. by Donis, on the NE: and E. by the Lucri Epicnemidii and Upuntii, ou the SE. by Bucotia, on the W. by the

Ozolian Locrians, and on the S. by the Corinthian gulf. The Phocians at one period of their history possessed a sea-port, Daphnus, on the Euboean sca, intervening between the Locri Epicnemidii and Opuntii (Strab. x. pp. 424, 425.) Phocis is a mountainous country. The greater part of it is occupied by the lofty and rugged range of Parnassus, the lower portion of which, named Cirphis, descends to the Corinthian gulf between Cirrha and Anticyra: below Cirphis was the fertile valley of Crissa, extending to the Corinthian gulf. On the NE. and E. were the Locrian mountains, lofty and difficult of access on the side of the Epicnemidii, but less precipitous on the side of the Opuntii. [Locris.] Between Mount Parnassus and the Locrian mountains flowed the river Cephissus, which empties itself into the lake Copais in Boentia. [Boeotia, p. 410, seq.] In the valley of the Cephissus are some narrow but fertile plains. The only other rivers in Phocis, besides the Cephissus and its tributaries, are the Pleistus, flowing by Delphi [Delphi], and the Heracleius, flowing into the Corinthian gulf near Bulis. [Bulis.]

Phocis is said to have been originally inhabited by several of those tribes who formed the population of Greece before the appearance of the Hellenes. Among the earliest inhabitants we find mention of Leleges (Dicaearch. p. 5), Thracians (Strab. ix. p. 401 ; Thuc. ii. 29 ; comp. Paus. i. 41. §8), and Hyantes. (Strab. l. c.) The aboriginal inhabitants were conquered by the Phlegyae from Orchomenus. (Paus. viii. 4. §4, x. 4. § 1.) The country around Tithores and Delphi is said to have been first called Phocis from Pbocus, a son of Ornytion, and grandson of Sisyphus of Corinth; and the name is said to have been afterwards extended to the whole conntry from Phocus, a son of Aeacus, who arrived there not long afterwards. (Paus. ii. 29. § 3, x. 1. § 1.) This statement would seem to show that the Phocians were believed to be a mixed Aeolic and Achaean race, as Sisyphus was one of the Acolic heroes, and Aeacus one of the Achaean. In the Trojan War the inhabitants appear under the name of Yhocians, and were led against Troy by Schedius and Epistrophus, the sons of Iphitus. (Hom. Il. ii. 517.)

Phocis owes its chief importance in history to the celebrated oracle at Delphi, which originally belonged to the Phocians. But after the Dorians had obtained possession of the temple, they disowned their connection with the Phocians; and in historical times a violent antipathy existed between the Phocians and Delphians. [Delphi, p. 762.]

The Phocians proper dwelt chiefly in small towns situated apon either side of the Cephissus. They formed an ancient confederation, which assembled in a building named Pbocicum, near Daulis. (Paus. x. 5. § 1.) They maintained their independence against the Thessalians, who made several attempts to subdue them before the Persian War, and upon one occasion they inflicted a severe loss upon the Thessalians near Hyampolis. (Herod. viii. 27, seq.; Paus. x. 1.) When Xerxes invaded Greece, the Thessalians were able to wreak their vengeance upon their ancient enemies. They conducted the Persian arny into Phocis, and twelve of the Phocian cities were destroyed by the invaders. The inhabitants had previously escaped to the summits of Parnassus or across the mountains into the territory of the Locri Ozolae. (Herod. viii. 32, seq.) Some of the Phucians were subsequently compelled to serve in the aring of Mardunius, but those who had taken refuge
on Mit. Parnassus sallied from their fastnesses and annoyed the Persian army. (Herod. ix. 17, 31; Paus. x. 1. § 11.)

It has been already remarked that the oracle at Delphi originally belonged to the Phocians. The latter, though dispossessed by the Delphians, had never relinquished their claims to it. In B. C. 450 the oracle was again in their possession; the Lacedaemonians sent an army to deprive them of it and restore it to the Delphians; but apon the retrent of their furces, the Athenians marched into Phocis, and handed over the temple to the Phocians. (Thuc. i. 112.) In the Peloponnesian War the Phocians were zealous allies of the Athenians. (Comp. Thuc. iii. 95.) In the treaty of Nicias (в. C. 421), however, it was expressly stipulated that the Delphians should be independent of the Phocians (Thuc. v. 18); and from this time the temple continued in the undis. puted possession of the Delphians till the Sacred War. After the battle of Leuctra (b. c. 371 ), the Phocians became subject to the Thebans. (Xen. Hell. vi. 5. § 23.) After the death of Epaminondas they deserted the Theban alliance; and the Thebans, in revenge, induced the Amphictyonic Council to sentence the Phocians to pay a heavy fine on the pretext of their having cultivated the Cirrbaean plain, b. c. 357. Upon their refusal to pay this fine, the Amphictyonic Council consecrated the Phocian territory to Apollo, as Cirrha had been treated two centuries before. Thereapon the Phocians prepared for resistance, and were persuaded by Philomelus, one of their chief citizens, to seize the temple at Delphi, and appropriate its treasures to their own defence. Hence arose the celebrated Sacred or Phocian War, which is narrated in all histories of Greece. When the war was at length brought to a conclusion by the aid of Philip, the Amphictyonic Council wreaked its vengeance upon the wretched Phocians. It was decreed that all the towns of Phocis, twenty-two in number, with the exception of Abae, should be destroyed, and the inhabitants scattered into villages, containing not more than fifty houses each ; and that they should replace by yearly instalments of fifty talents the treasures they had taken from the temple. The two votes, which they had bad in the Amphictyonic Council, were taken away from them and given to, Philip. (Diod. xvi. 60; Paus. x. 3; Dem. de Fals. Leg. p. 385.) The Phocians subsequently rebuilt several of their cities with the assistance of the Athenians and their old enemies the Thebans, who had joined the Atheuians in their opposition to Philip. The Phocians fought on the side of Grecian independence at the battle of Chacroneis and in the Lamiac war; and at a later period they resisted the Gauls, when they attempted to plunder the temple at Delphi. (Paus. x. 3. § 3.)
The chief town in Phocis, excepting Delrint, was Elateia, situated upon the lef bank of the Cephissus, on the highroad from Locris to Boeotia, in the natural march of an army from Thermopylae into central Greece. Next in importance was Abae, also to the left of the Cephissus, upon the Breotian frontier, celebrated for its ancient oracle of Apollo. The other towns of Phocis may be enumersted in the following order. Left of the Cephissus from N. to S. Drymaka, Erochus, Tithroniem, Thitaea, Hyampolis. Right of the Cephissus, and between this river and Mount Parnassus, Lilaea, Charadra, Ampilicaea, ledon, Nion, which was supplauted by Tithorea [sce Nion], Parapotamil.

PHOCUSAE.
Between Parnassus and the Boentian frontier, Daulis, Panopets, Trachis. On Mount Parnassus, Lycorela, Drlphi, Crissa, Anemoreia, Cyparigsts. West of Parnassus, and in the neighbourbond of the Corinthian gulf from N. to S., Cirrha, the port-town of Crissa and Delphi, Cirphis, Medeon, Echedameia, Anticyra, Ambrysus, Marathes, Stiris, Phlygonifm, Bulis with its port Mrcnus. (Dodwell, Classical Tour, vol. i. p. 155, seq.; Leake, Northern Greece, vol. ii. p. 69, seq.)

CON OF PHOCIS.
PHOCU'SAE, PHUCUSSAE (\$anovizau, Ptol. iv. $5 . \S 75$; Фокоüббal, Athen. i. p. 30, d. ; Hesych. s. v.; Steph. B.), islands lying off Zephyrium in Marmarica (Marsa Labeit), which the Coast-describer (Stadiasm. § 20) calls Delphines. [E.B. J.] PHOEBA'TAE, PHOEBA'TIS. [DASSAREtar.]

## PHOE'BIA. [BUPHIA.]

PHOENI'CE (\$oivikn), a city of Chaonia in Epeirus, situated a little inland north of Buthrotum (Strab. vii. p. 324), upon a river, the ancient name of which is not recorded. It is described by Polybius, in b.c. 230, as the strongest, most powerful, and richest of the cities of Epeirus. (Polyb. ii. 5, 8.) In that year it was captured by a party of Illyrians, 2sisted by some Gallic mercenaries; and the Epiruts, who had marched to the rescue of the place, were surprised by a sally of the Illyrians from the city, and put to the rout with great slaughter. (Polyb. Le.) Phoenice continued to be an important city, and it was here that a treaty of peace was negotiated between Philip and the Romans towards the close of the Second Punic War, b. c. 204. (Liv. xxix. 12; Polyb. xxvi. 27.) Phoenice appears to have escaped the fate of the other Epeirot cities, when they were destroyed by order of the senate, through the influence of Charops, one of its citizens. (Polyb. xxxii. 22.) It is mentioned by Ptolemy (iii. 14. § 7) and Hierocles (p. 652), and was restored by Justinian. (Procop. de Aedif. iv. 1.) Procopius says that it was situated in a low spot, surrounded by marshes, and that Justinian built a citadel upon a neighhooring hill. The remains of the ancient city are found upon a hill which still bears the name of Finiki. "Tbe entire hill was surrounded by Hellenic walls. At the south-eastern extremity was the citadel, 200 yards in length, some of the walls of which are still extant, from 12 to 20 feet in height. . . . . About the middle of the height is the emplaceinent of a very large theatre, the only remains of which are a small piece of rough wall, which encircled the back of the upper seats; at the bottom, in the place of the scene, is a small circular foundatinn, apparently that of a town of a later date. Between it and the north-western end of the citadel are the remains of a Roman construction, built in courses of tiles." (Leake Northern Greece, vol. i. p. 66.)

PHOENI'CIA, a country on the coast of Syria, brunded on the $\mathbf{E}$. by Dlount Lebainon.

## I. Namk.

Its Greek name was фoivikn (Hom. Od. iv. 83; Herod. iii. 5; Thacyd. ii. 69; Strab. p. 756; Ptol. v. 15. § 21, \&c.), which in the best Latin writers is literally rendered Phoenice (Cic. Acad. ii. 20; Tac. H. v. 6; Mela, i. 12; Plin. v. 13, \&c.), and in later authors Phoenicia (Serv. ad Virg. Aen. i. 446; Mart. Capell. vi. 219, \&c.), and once in a suspected passage of Cicero. (Fin. iv. 20.) The latter forin has, however, prevailed among the moderns. By the Phoenicians themselves, and by the Israelites, their land was called Canaan, or Chna; an appellation which embraced the whole district between the river Jordan and the Mediterranean. In Genesis the name of Canaan occurs only as that of a person, and the country is described as "the land of Canaan." In the tenth chapter of that book the following tribes are mentioned; the Arvadites, Sinites, Arkites, and Zemarites, whose sites may be identified with Aradus, Sinna, Arca, and Simyra; whilst the name of Sidon, described as the firsthorn of Canaan, marks one of the most important of the Phoenician towns. The abbreviated form Chna ( $\mathrm{X} \nu \hat{a}$ ) occurs in a fragment of Hecataeus (Fragm. Histor. Graec. p. 17, Paris, 1841), and in Stephanus Byzantinus (s. v.) : and the translation of Sanconiatho by Philo, quited by Eusebius (Praep. Erang. i. p. 87, ed. Gaisford) records the change of this appellation into Phoenix. The Septnagint frequently renders the Hebrew Canaan and Canaanite by Phoenicia and Phoenician. In Hebrew, Chna or Canann signifies a low or flat land, from $\bar{y}$," to be low," in allusion to the low land of the coast. Its Greek name \$oivi $\xi$ has been variously deduced from the bruther of Cadmus, from the palm-tree, from the purple or blood-red dye. фoivos, which formed the staple of Phoenician commerce, and from the Red Sea, or Mare Erythraeum, where the Phoenicians are supposed to have originally dwelt. (Steph. B. 8. v. ; Sil. Ital. i. 89 ; Hesych. s. v. фouv $\boldsymbol{\text { p }}$; Ach. Tatius. ii. 4 ; Strab. i. p. 42, \&cc.) Of all these etymologies the second is the most probable, as it accords with the practice of antiquity in many other instances.

## II. Physical Geography.

The boundaries of Phoenicia are not very clearly laid down in ancient writers. The Mediterranean sea on the W. and Lebanon on the E. form natural limits; but on the N. and S. they are variously fixed. According to Herodotus the N. boundary of Phoenicia was the bay of Myriandrus, whilst on the S. it terminated a little below Mount Carmel, or where the territory of Judaea touched the sea (iii. 5, iv. 38. rii. 89). Strabo makes it extend from Orthosia on the N., to Pelusium in Egypt on the S. (xvi. pp. 753, 756). But Phnenicia, considered as a political confederation, neither reached so far N. as the boundary of Herodotus, nor so far S. as that of Strabo. Myriandrus was indeed inhabited by Phoenicians; but it appears to have been only a colony, and was separated from Phoenicia, properly so called, by an intervening tract of the Syrian coast. (Xenoph. Anab. i. 4. § 6.) The more accurate boundaries of Phoenicia, and which will be adopted here, are those laid down by Pliny (v. 17), which include it between Aradus on the $N$., and the river Chorseas or Crocodilon on the S. The same limits are given in Ptolemy (v. 15. § 4), except
that he makes the river Elcutherus the N. boundary, and does not mention Aradus, which lay a little to the N . of that stream. There can be no question, however, that Aradus belonged to Phoenicia. So, too, at the southern extremity, the town of Dora was unquestionably Phoenician, whilst Caesarea, the first town S. of the Chorsens, belonged to Palestine.
Phoenicia, as thus defined, lies between lat. $32^{\circ}$ $38^{\prime}$ and $34^{\circ} 52^{\prime}$ N., and long. $35-36^{\circ} \mathrm{E}$. It forms a narrow slip of land about 120 miles in length, and seldom more, but frequently less, than 12 milcs broad. The range of Libanus, which skirts the greater part of its eastern side, throws out spurs which form promontories on the coast, the most remarkable of which are Theu-prusopon (àtoú$\pi \rho \delta \sigma \omega \pi \pi=\nu)$ between the towns of Trieris and Botrys, and the Promontorium Album between Tyre and Ecdippa. Farther to the S. Mount Carmel forms another bold promontory. The whole of Phocnicia presents a succession of hills and valleys, and is traversed by numerous small rivers which descend from the mountains and render it well watered and fruitful. The coast-line trends in a south-westerly direction; so that whilst its northern extremity lies nearly under long. $36^{\circ}$, its southern one is about under $35^{\circ}$. Aradus, its most northerly town, lies on an island of the same name, between 2 and 3 miles from the mainland, and nearly opposite to the southern extremity of Mount Bargylus. On the coast over against it lay Antaradus. From this point to Tripolis the coast forms an extensivo bay, into which several rivers fall, the principal being the Elentherus (Nahr-el-Kebir), which flows through the valley between Mount Bargylus and Libanus. To the N. of the Eleutherus lie the towns of Simyra and Marathus; to the S . the principal town before arriving at Tripolis was Orthosia, close to the seashore. Tripolis stands on a promontory about half a mile broad, and running a mile into the sea. It is washed by a little river now called El-Kadisha, "the holy." Tripolis derived its name from being the federal town of the three leading Phoenician cities, Tyre, Sidon, and Aradus, each of which had here its separate quarter. To the S. of Tripolis the country rises into chalk hills, which press so closely on the sea as to leave no room for cultivation, and scarcely even for a road, and which form the bold promontory already mentioned of Theaprosopon. (Ras-as-Shekah.) The chief towns of this district are Calamos and Trieris. To the S. of Theuprosopon the hills recede a little from the sea, but at a distance of between 20 and 30 miles form another lofty promontory called Climax (Ras Walta Sillan), from the circumstance that the steepness of the cliffs rendered it necessary to ent steps in them. Along this tract several rivers descend into the sea, the principal of which is the Adouis (Nahr-el-Ibrahim). The chief towns are Botrys, 7 miles S. of Theuprosopon, and Byblus, a little S. of the Adonis. Palai-byblus lay still further S., but its site is unknown. Aphaca, noted for its licentions worship of Veuns, was seated in the interior, at the source of the river Adonis in Libanus. The promontory of Climax formed the N. point of the bay, now called Kesmun, the S. extremity of which, at a distance of abont 12 miles, is formed by the beadland Ras-en-Nahr-el-Kelb, on which the town of Berytus formerly stoxd. At about the middle of this bas the river Lycus (Nahr-el-Kelb) discharges itselt into the sea through a narrow chasm the
nearly perpendicular cliffs of which are 200 feet in height. At the eastem extremity of the valley of the Lycus rises the Gebel-el-Sannin, the hishest summit of Libanus. The southern side of this valley is enclosed by steep and almost inaccessible cliffs, up the face of which traces of a road are still visible, made probably by the Egyptians during their wars in Palestine. A lower and broader road of more gradual ascent was constructed by the emperor M. Aurelias. To the S. of this spot, the plain between Libanus and the sea at Berytus is of greater length than in any other part of Phoenicia. The land, which consists of gentle undulations, is very fertile, and produces orange and mulberry trees in abundance. This plain extends sonthwards as far as the river Tamyras, a distance of about 10 miles. Berytus (Beirout) is washed by the river Magoras. From the headland on which it stands the most projecting point in Phoenicia - the coast again forms a long curve down to Sidon. On this part of the coast stand the towns of Platanos and Porphyrium. A little to the N . of Platanus is tho river Tamyras (Damour), already mentioned, and between Porphyrium and Sidon the river Bostrenus (Autaleh). To the S. of the Tamyras the country again becomes raged and barren, and the hills press closely upon the sea. The narrow plain of the Bostrenus, however, abont 2 miles broad, is of the highest fertility, and produces the finest fruits in Syria. Sidon stands on a small promentory about 2 miles S. of the Bostrenus. From Sidon a plain extends to a distance of about 8 miles S ., as far as Sarepta, the Zarepthah of the Book of Kings ( 1 Kings, xpii. 9), which stands on an eminence near the sca. From Sarepta to Tyre is about 20 miles. Nine miles to the N . of Tyre the site of the ancient Ornithonopolis is smpposed to be marked by a place called Adnon or Adloun. At this place the plain, which had expanded after passing Sarepta, ngain contracts to about 2 miles, and runs along the coast in gentle undulations to Tyre, where it expands to a width of about 5 miles. The hills which bound it are, however, of no great height, and are cultivated to the sammit. At about 5 miles N. of Tyre this plain is crossed by the river Kasimieh, supposed to be the ancient Leontes, the most considerable of Phoenicia, and the only one which makes its way through the barrier of the mountains. It rises in the valley of Bekaa, between Libunus and Antilibanus, at a height of 4000 feet above the level of the 'sea. The upper part of its course, in which it is. known by the name of El-Litani, is consequently precipitous and romantic, till it forces its way through the defiles at the southern extremity of Libanas. Sudden and violent gusts of wind frequently rush down its valley, rendering the navigation of this part of the coast very dangerous. From Tyre, the site of which will be found described under its proper head, the cosst runs in a westerly direction for a distance of about 8 miles, to the Promontorium Album (Ras-el-Abiad), before mentioned,-a bluff headland consisting of white perpendicular cliffs 300 feet high. The road from Tyre to its summit seems originally to have consisted of a series of steps, whence it was called Climax Tyriorum, or the Tyrian stairease; but subsequently a ruad was laboriously cut through the rock, it is said, by Alexander the Great. From this promontory the cosst proceeds in a straight and almost southerly direction to I'tolemais or Acco (Acre), a distance of between 20 and 30 miles. About midray lay

PIIOENICIA

Eedippa, now Zeb, the Achzib of Scripture (Josh. xix. 29), regarded by the Jews after the captivity as the northern boundary of Judaca. Ptulemais stands on the right bank of the river Belus (Naaman), but at a little distance from it. To the SE. a fertile plain stretches itself out as far as the hills of Galilee. From Ptclemais the coast forms a decp bay, about 8 miles across, the further extremity of which is formed by the pmonontory of Carmel. It is now called the bay or gulf of Khaifa. The bold and lofty headland of Carmel is only a continuation or spur of the mountain of the same name, a range of no great height, from 1200 to 1500 feet, which runs for 18 miles in a direction from SE. to NW., gradually sinking as it approuches the coast. A convent near the cape or promontory is about 582 feet above the sea. On its NE. side flows the Kishon of Scripture, which, when not swollen by rains, is a small stream finding its way through the sand into the sea. Towards the bay the sides of Carmel are steep and rugged, but on the south they slope gently and are more fertile. Carmel was celebrated in Hebrew song for its beauty and fertility ; and thongh its orchards and vineyards no longer exist, the richness of the soil is still marked by the profasion of its shrubs and the lusuriance of its wild-fluwers. From the promontory of Carmel the coast gradually sinks, and at its lowest point stands Dora, a town celebrated in ancient times for the manufacture of the Phoenician purple. Beyond this point we shall not pursue the description of the coast ; for although between Dora and Ligypt some towns are found which were inhabited by Phoenicians, yet in their geographical distribution they belong more properly to l'alestine.

That part of the Mediterramean which washed the coast of Phoenicia was called by the Greeks
 Jálagaa (Dion. Per. v. 117), and by the Latins Mare Phoenicium. (Plin. v. 13, ix. 12, \&c.) Its southern portion, as far as Sidon, is afficted by the currents which carry the alluvial soil brought down by the Nile to the eastward; so that towns which were once maritime are now become inland, and the famous harbours of Tyre and Sidon are nearly choked with sand.

The climate of Phoenicia is tempered by the vicinity of Lebanon, which is capped with snow daring the greater part of the year, and retains it in its ravines even during the heats of summer. (Tac. Hist. v. 6.) Hence the temperature is much lower than might be expected from the latitude. At Beirout, which lies in the centre of Phoenicia, the usual summer heat is about $90^{\circ}$ Fahrenheit, whilst the winter temperature is rarely lower than $50^{\circ}$. In the mountains, however, the winter is severe, and heavy falls of snow take place. The rainy season commences towards the end of October, or beginning of November, from which time till March there are considerable falls of rain or snow. From May till October rain is very unusual.

As Phoenicia, though small in extent, is, from its onfiguration and natural features, subject to a great variety of climate, so its vegetable proluctions are necessarily very varions. The sides of Lebanon are clothed with pines. firs, and cypress, hesides its farfamed cedars. The lowlands produce corn of all sorts, peaches, pomegranates, grapes, orauges, citrous, figs, dates, and other frnits. It also yields sugar, onton. tobacco, and silk. The whole country is subject to earthquakes, the effect of volcanic agency;
from which canse, as well as from the action of the currents alrealy mentioned, buth Tyre and Sidor have suffered changes which render them no longet to be recognised from ancient descriptions. In some places the coast has been depressed by earthquakes, and at the mouth of the river lycus are traces of submerged quarries. (Berton, Topogr. de Tyr. p. 54.) In like manner, the lake Cendevia, at the foot of Cannel, in which Pliny (v. 17) descrilus the river Belus as rising, has now disappeared; though Shaw (Trav. ii. 33) mentions some pools near its source. The geological structure of Phoenicia is recent, and consists of chalk and sandstone, the bigher mountains being formed of the Jura limestone. The only metal found is iron, which necurs in considerable quantities in the hills above Bcirout. In the sandstone of the same district, bituminous wood and brown coal are found, but in small quantities and impregnated with sulphur.

## III. Ethnological Relations of the Phoenicians.

The Phoenicians were called by the Grecks фoiviкes (Hom. Od. iv. 84; Herod. i. 1; Thucyd i. 8, \&c.), and by the Romans Pherices (Cic. N.II. ii. 41 ; Mela, i. 12 ; Plin. v. 13,8 c.). They were a branch of the great Semitic or Aramaean race. The Siriptures give no intimation that they were not indigenous; and when the Hebrews settled in Canaan, Sidon and Tyre were already flourishing cities. (Josh. xix. 28, 29.) By classing, however, the Phoenicians, or Canaanites, among the descendants of Ham (Genesis, x. 15), the Scriptures imply an immigration. The reason of this classification, was probably their colour, the darkness of their complexion indicating a southern origin; yet their i:mguage, a safer criterion, marks them, as we have said, for a semitic race. This, though not strictly identical with the Hebrew, was the nearest allied tc it of all the Semitic tongues. St. Jerome (Comm. in Jer. xxv. 21) and St. Augustine (Tract. 15 in Erang. Joun.) testify that the Punic languace resembled the llebrew. The same affinity is observable in Punic words preserved in Greek and Ruman writers; as in the Poenulus of Plautus, especially since the improvement of the text by the collation of Mai. The similarity is also evinced by bilingual inscriptions discovered at Athens, where many Phoenicians were settled, as will be related in the sequel. But perhaps one of the most remarkable provfs is the inscription on the Carthaginian tablet discovered at Marseilles in 1845. of which 74 words, out of 94 , occur in the Old Testament.

Profane writers describe the Phoenicians as immigrants from the borders of the Persian Gulf. Thus Herolotus (i. 1, vii. 89) asserts that they originally dwelt on the Erythraean sea; an appellation which, in his language, as well as in that of other ancient writers, embraces not only the present Ked Sea, but also the Persian Gulf and Indian Ocean. To the same purpose is the testimony of Strabo (xvi. p. 7(fi), who alds that there were in the Persian Gulf tvo islands, Tyrus and Aradus, the inhatitants of which had temples resmbling those of the Phoenicians, and who claimed the likenamed islands on the coast of the Mediterranean as their colonies. Hecren (Rescarches, vol. ii. p. 56, Eng. trans.), who admits that traces of Phoenician workmanship and buildings have lately been discurered in these islands, reverses the parentige, and
makes them to be colonies of their more celebrated namesakes, in opposition to the testimony of Strabo, and without producing any counter anthority. The isle of Tylus or Tyrus is likewise mentioned by Pliny (vi. 32). The account given by Justin is in harmony with these authorities (xviii. 3). He describes the Tyrians as having been disturbed in their native seats by an earthquake, and as migrating thence, first to what he calls the "Assyrian lake," and subsequently to the shores of the Mediterranean. A recent writer (Kenrick, Phoenicia, p. 47) takes this Assyrian lake to have been Gennesaret or the Dead Sea, as there was no other co!lection of waters in S. Assyria to which the term could be applied. This would have formed a natural resting-place in the journey of the emigrants. It must not, however, be concealed, that the account of these writer3 has boen rejected by several very eminent authors, as Bochart, Hengstenberg, Heeren, Niebuhr, and others, and more recently by Movers, a writer who has paid great attention to Phoenician history, and who has discussed this question at considerable length. (Die Phönizicr, vol. ii. pt. i. pp. 23-62.) His principal arguments are, that the Phoenician traditions, which go back to the primitive chaos, represent even the gods, as well as the inveution of all the arts of life, as indigenous; that the Scriptures, whose testimony is preferable, both on account of its antiquity, and because it arose out of the bosom of the people themselves, make no mention of any such immigration, though at that time its memory could not have been obliterated had it really occusred, and though it would have served the purpose of the Jews to represent the Canaanites as intruders; and that the name of the people, being derived from the character of the land, as well as the appellations of different tribes, such as the Gibli at Byblus, the Sidonians at Sidon, \&cc., mark them as indigenous. But it may be observed, that the Phoenician traditions rest on the equivocal authority of the pretended Sanconiatho, and come to us in so questionable a shape that they may evidently be made to serve any purpose. Thus Movers himself quotes a passage from Sanconiatho (vol. ii. pt. i. p. 28), to the effect that the Tyrians invented shipbuilding, because it directly contradicts the statement that they were the descendants of a sea-faring people on the shores of the Persian Gulf; although be had previously cited the same passage (vol. i. p. 143) in proof of the Euhemerism of Philo-Sanconiatho, who, it is there said, attributed the invention of navigation to the Cabiri merely because the Phoenician mariners considered thernselves as sailing under the protection of their deities. Can such testimony be compared with that of the "loyalhearted and truthful Herodotus," as Movers characterises him (vol. i. pt. ii. p. 134), who, be it observed, also founds his account on the traditions of the Phoenicians ( $\omega$ s autol $\lambda$ 'foovat, vii. 89), and who could have had no possible interest in misrepresenting them? Nor could the natural vanity of the Phuenicians have found any gratification in misleading him on this point, since the tradition lessened, rather than enhanced, the splendour of their origin. The testimony of the Scriptures on the subject is merely negatioe; nor, were it otherwise, could they be taken as a certain guide in ethnological inquiries. They were not written with that view, and we have already adverted to a discrepancy in their treatment of this subject. The question, however, is too long to be fully discassed in this place. We have inerely
adverted to some of the principal heads, and they who wish to pursue the inquiry further are referred to the passage in Mover's work already indicated, and to Mr. Kenrick's Phoenicia (chap. iii.).

## IV. History.

Oar knowledge of Phoenician history is only fragmentary. Its native records, both literary and monumental, have almost utterly perished; and we are thus reduced to gather from scattered notices in the Old Testament and in the Greek and Roman authors, and sometimes to supply by inference, the annals of a country which stands the second in point of antiquity, which for some thousands of years played a considerable part in the world, and to which Europe owes the germs of her civilisation.

If we accept the authority of Herodotus, the Phoenicians must have appeared upon the coasts of the Mediterranean at least twenty-seven or twentyeight centuries before the birth of Clrist. In order to ascertain the age of Hercules, respecting which the Egyptian chronology differed very widely from the Greek, that conscientious bistorian resolved to inquire for himself, and accordingly sailed to Tyre, where he had heard that there was a fanous temple of Hercules. It was, therefore, expressly for the purpose of settling a chronological point that he was at the trouble of making this voyage, and it is natural to suppose that be did not adopt the information which he received from the priests without some examination. From these he learned that the temple had existed 2300 years, and that it was coeral with the foundation of Tyre (ii. 43, 44). Now, as Herodotus flourished about the middle of the fifth century before our aera, it follows that Tyre must have been founded abont 2750 years B. C. The high antiquity of this date is undoabtedly startling, and on that account has been rejected by several critics and historians. Yet it does not appear why it should be regarded as altogether improbable. The chronology of the Jews is carried back more than 2000 years B. C. ; yet the Jewish Scriptures uniformly intimate the much higher, and indeed immemorable, antiquity of the Canaanites. Again, if we look at Egypt, this aera would fall under the 14th dynasty of its kings* (2750-2631 в. c.), who had had an historical existence, and to whom many conquests are attributed before this period. This dynasty was followed by that of the Hyksos, who were probably Canaanites, and are described by Manetho as skilled in the art of war, and of fortifying camps and cities. (Sync. pp. 113,114 ; Schol. in Plator. Tim. vol. vii. p . 288, ed. Tauchn.)

If Sidon was older than Tyre, and its mothercity, as it claimed to be, this would add aome difficulty to the question, by carrying back the chronology to a still higher period. But even this objection cannot be regarded as futal to the date assigned to Tyre. Cities at so short a distance might easily have been planted by one another within a very brief space of time from their origin; and the contest between them in ancient times for priority, not only shows that the question was a very ambiguous one, but also leads to the inference that the difference in their dates could not have been very great. The weight of ancient evidence on either side of the question is pretty nearly balanced. Ou

* This is the date assigned by Movers ; but by some authorities it is pluced later.
one side it is alleged that Sidon is styled in Scripture the eldest born of Canaan (Gen. xlix. 13), whilst Tyre is not mentioned till the invasion of Palestine by the Israelites. (Josh. xix. 29.) But in the former passage there is nothing to connect the person with the city ; and the second argument is at best only negative. It is further urged that the name of Tyre does nut once occur in Homer, though the Sidonians are frequently mentioned; and in one passage (Od. xiii. 285) Sidonia is used as the general name of Phoenicia This, hovever, only shows that, in the time of Homer, Sidonia was the leading city, and does not prove that it was founded befure Tyre. The same remark may be applied to the silence of Scripture. That Tyre was in existence, and must have been a flourishing city in the time of Homer, is unquestionable; since, as will be seen further on, she founded the colony of Gadeira, or Cadiz, not long after the Trojan War; and many years of commercial prosperity must have elapsed before she could have planted so distant a possession. Poets, who are not bound to tistorical accuracy, will often ase one name in preference to another merely because it is more sonorous, or for some similar reason; and Strabo (xvi. p. 756), in commenting ufon this very circumstance of Homer's silence, observes that it was unly the poets who glorified Sidon, whilst the Phoenician colonists, both in Africa and Spain, gave the preference to Tyre. This passage has been cited in proof of Strabo's own decision in favour of Sidon; but, from the ambiguous wording of it, nothing certain can be concluded. Movers (ii. pt. i. p. 118) even construes it in favour of Tyre; but it must be confessed that the opposite view is rather strengthened by another passage (i. p. 40) in which Strabo calls Sidon the metropolis of the Phoenicians ( $\tau \hbar \nu \nu \eta \tau \rho \delta \pi=\lambda \iota \nu$ aivt $\omega \nu$ ). On the other hand, it may be remarked, that all the most ancient Phoenician traditions relate to Tyre, and not to Sidon ; that Tyre is called $\mu a \tau$ épa фotvixur by Meleager the epigrammatist (Anth. Graec. vii. 428. 13), who lived before the time of Strabo; that an inscription to the same effect is found on a min of Antiochus IV., B. c. 175-164 (Gesen. Mon. Phoer. i. 262); and that the later Roman and Greek writers seem unanimously to have regarded the claim of Tyre to superior antiquity as preferable. Thus the emperor Hadrian settled the ancient dispute in favour of that city (Suidas, e.v. Maìos Túpios), and other testimonies will be found in Orosius (iii. 16), Ulpian (Dig. tit. xxv.), and Eanapius (o. Porphyr. p. 7, ed. Wytt.) It may also be remarked that if the Pboenicians came from the Persian Gulf, the name of Tyre shows that it must have been one of their earliest settlements on the Mediterranean. This dispute, however, was not confined to Tyre and Sidon, and Byblus and Berytus also claimed to be regarded as the oldest of the Phoenician cities.

But however this may be, it seems certain that the latest of the Phoenician settlements in Syria, which was, perhaps, Hamath or Epiphania on the Orontes, preceded the conquest of Canaan by the Jews, which event is usually placed in the year 1450 b.c. The expedition of Joshua into Canaan is one of the earliest events known in the history of the Phoenicians. In order to oppose his progress, the king of Hazor arganised a confederacy of the Canaanite states. (Josh. ii. 10.) But the allies were orerthrown with great slaughter. Hazor was taken and deatrojed, and the territory of the convoln 11 .
federate kings, with the exception of a few fortresses, fell into the power of the Israclites. The defeated host was pursued as far as Sidon; but neither that nor any other town of Phuenicia, properly so called, fell into the hands of the Jews, nor on the whole does the expedition of Joshua seem to hare had much effect on its political condition. Yet there was a constant succession of hostilities between the Phoenicians and some of the Jewish tribes; and in the book of Judges (x. 12) we find the Sidonians mentioned among the oppressors of Israel.

Sidon, then, must have early risen to be a powerful kingdom, as may indeed be also inferred from the Homeric poems, in which its trade and manufactures are frequently alluded to. Yet a year before the capture of Troy, the Sidonians were defeated by the king of Ascalon, and they were obliged to take refuge-or at all events a great proportion of them -at Tyre. (Justin, xviii. 3.) We are ignorant how this conquest was effected. The name of Ascalon probably represents the whole pentapolis of Philistia; and we know that shortly after this event the Philistines were powerful enough to reduce the xingdom of Israel to the condition of a tributary, and to retain it as such till the time of David. Justin, in the passage just cited, speaks of Tyre as founded by the Sidonians (condiderunt) on this occasion. This expression, however, by no means implies a first foundation, since in the next chapter he again uses the same word to denote the restoration of Tyre by Alexander the Great. It has been already said, as will appear at greater length in the account of the Phoenician colonies, that Tyre must have been a city of considerable importance before this period. The account of Justin is corroborated by Josephus, who, in allusion no doubt to the same event, places the foundation of Tyre 240 years before that of Solomon's temple. (Ant. viii. 3.) If Justin followed the computation of the Parian marble, the fall of Troy took place in the year 1209 в. c.; and if the disputed date of Solumon's temple be fixed at 969 в. c., the aera adopted by Movers (Phön. ii. pt. i. p. 149), then $969+240=1209$. Josephus,
 dwelling in," and could no more have meant the original foundation of Tyre than Justin, since that city is mentioned in the Old Testament as in existence two centuries and a half before the building of the temple.

From the period of the Sidonian migration, Tyre must be regarded as the head of the Phoenician nation. During the headship of Sidon, the history of Phoenicia is mythical. Phoenix, who is represented as the father of Cadmus and Europa, is a mere personification of the country; Belus, the first king, is the god Baal; and Agenor, the reputed founder both of Tyre and Sidon, is nothing but a Greek epithet, perhaps of Hercules. The history of Tyre also, befi re the age of Solomon, is unconnected. Solomon's relations with Hiram, king of Tyre, led Josephus to search the Tyrian histories of Dias and Menander. Hiram sacceeded Abibal; and from this time to the foundation of Carthage there is a regular succession of dates and reigns.

Tyre was in fact a double city, the original town being on the continent, and the new one on an island about half a mile from the shore. When the latter was founded, the original city obtained the name of Palae-Tyrus, or Old Tyre. The island, however, was probably used as a naval station from the very earliest times, and as a place consecrated to the
worship of the national deities Astarte, Belus, and particularly Melcarth, or the Tyrian Hercules. According to Justin, indeed, the oldest temple of Hercules was in Palae-Tyrus (xi. 10; comp. Curt. iv. 2); but this mesertion may have been made by the Tyrians in order to evade the request of Alezander, who wished to gain an entrance into their island city under pretence of sacrificing to that deity.

Hiram succeeded to the crown of Tyre a little before the building of Solomon's temple (в. с. 969). He added to and improved the new city, and by means of substructions oven gained space enough to build a large square or place, the eurychorus. He maintained friendly relations with king David, which were confirmed by commerce and by intermarriages. Hiram furnished the Jewish monarch with cedarwood and workmen to construct his palace, as well as materials for his proposed temple, the building of which, however, was reserved for his son. The Phoenicians, on the other hand, imported the corm and oil of Judah. Under the reign of Solomon this intercourse was cemented by a formal treaty of commerce, by which that monarch engaged to furnish yearly 20,000 cors of wheat*, and the like quantity of oil, for the use of Hiram's household, while Hiram, in return, supplied Solomon with workmen to cut and prepare the wood for his temple, and others skifful in working metal and stone, in engraving, dyeing, and manufacturing fine linen. Solomon also ceded to Tyre a district in Galilee containing twenty towns. (1 Kings, ix. 13; Joseph. Ant. viii. 5.) In these transactions we perceive the relations of a commercial and an agricultural people; bat Hiram was also of great assistance to Solomon in his maritime and commercial enterprises, and his searches after the gold of Ophir, when his victories over the Edomites had given him the command of the Aelanitic, or eastern, gulf of the Red Sea. The pilots and mariners for these voyages were fumished by Hiram. Except, however, in connection with the Israelites, wo know little concerning the reign of this monarch. He appears to bave undertaken an expedition against Citium in Cyprus, probably a revolted colony of the Phoenicians, and to hare established a festival in honour of Melcarth, or Hercules. (Joseph. Lc.) By his great works at Tyre he entailed an enormons expense upon the people; and his splendid reign, which lasted thirty-four years, was followed at no great interval by political troubles. His dynasty was continued for seven years in the person of his son Baleazar, or Baleastartus, and nine years in that of his grandson Abdastartus. The latter was put to death by the four sons of his nurse, the eldest of whom usurped the supreme power for a space of twelve years. This revolution is connected by Movers (ii. pt. i. p. 342) with the account of the servile insurrection at Tyre given by Justin (xviii. 3), who, however, with his usual neglect of chronology, has placed it a great deal too late. This interregnum, which, according to the account adopted, was a complete reign of terror, was terminated by a counterrevolution. The usurper, whose name is not mentioned, either died or was deposed, and the line of Hiram was restored in the person of Astartus,-the Strato of Justin,-a son of Baleastartus. This prince reigned twelve years, and was succeeded by his brother Astarymus, or Aserymus, who ruled nine years. The latter was murdered by another brother, Phales, who after reigning a few months was in turn assas-

[^26]sinated by Ithobaal, a priest of Astarta. Ithobeal is the Ethbaal of Scripture, father of Jezebel, the wife of Ahab, who endeavoured to restore the worship of Baal and Ashtoreth in the kingdom of her husband. ( 1 Kings, xvi. 31.) In the reign of Itohbal Phoenicia was visited with a remarkable drought, which also prevailed in Judaea in the time of Abab. (Joseph. Ant. viii. 13. § 2; 1 Kings, c. xvii. 7.) We know nothing further of Ithobaal's reign, except that he founded Botrys, on the coast N. of Sidon, and Auza in Numidia. (Joseph. viii. 7, 13. § 2.) He reigned thirty-two years, and was the founder of a new $d y-$ nasty. Badezor, bis son, succeeded to the throne, and after a reign of six years was followed by Matteu, or Mutto, who ruled for thirty-two years. The reign of his successor, Pygmalion, brings as into contact with classical history and tradition, through the foundation of Carthage by his sister Elisa, or Dido, which took place not long after his accession. Probably, however, this was only a second foundation, as in the case of Tyre itself. The whole story, which indicates a struggle between an aristocratical and sacerdotal party and the monarchical power, has been obscared by mythical traditions and the embellishments of poets; but it need not be repeated here, as it will be found in the Dictionary of Biography and Mythology, z. v. Dido.

Pygmalion occupied the throne forty-seven years, and after his reign there is a gap in the history of Tyre. When we can next trace the Phoenicians in the Scriptures, we find them at war with Israel. The prophet Joel, who flourished about the beginning of the eighth century B. c., bitterly complains of the outrages committed by Tyre and Sidon on the coasts of Judsea, and his complaints are repeated by Amos, a conternporary prophet. This was the chief period of the maritime ascendency of the Phoenicians, and their main offence seems to bave been the carrying off of youths and maidens and selling them into slarery. Towards the end of the same century we find Isaiah prophesying the destruction of Tyre. It was about this period that the Assyrians began to grasp at the countries towards the west, and to seek an establishment on the sea-board of the Dediterranean; a policy which was continued by the succeeding empires of the Babylonians, Medes, and Persians. The expedition of Shalmaneser, who, after reducing the kingdom of Israel, turned his arms against Phoenicia, is recorded by Josepbns from the history of Menander. (Ant. ix. 14.) After overranning the whole of Phoenicia, he retired withont attempting any permanent conquest. He seems to bave been assisted by several Phoenician cities, as Sidon, Ace, and even Palae-Tyras, which were oppressed by the domination of Elulacus, king of Tyre. These cities furnished him with sixty ships for a second attempt apon Tyre: but this fleet was defeated by the Tyrians with only twenty vesseis. Shalmaneser blockaded them on the land side for a space of five years, and prevented them from having any fresh water except what they could preserve in tanks. How this blockade ended we are not informed, but it was probably fruitless. We have no further accounts of Elulaeus, except that he had reduced to obedience the revolted town of Citium in Cyprus preriously to this invasion. After his reign another long gap occurs in the history of Phoenicia, or rather of Tyre, its head. This silence would seem to indicate that it was enjoying the blessings of peace, and consequently increasing in prosperity. The Phoenician alliance was courted
by the Ebyptian mooarchs, and an extensive commerce appeans to have been carried on with the port of Nancratis The next wars in which we find the Phoenicians engaged were with the Babylonians; though the sccount of Berosus, that Nabopalassar, who reigned towards the end of the seventh century B. C., held Phoenicia in sabjection, and that his son Nebuchadnezzar reduced it when in a state of revolt: must be regarded as doubtful. At all events, however, it appears to have been in alliance with the Chaldeans at this period; since we find it related that Apries, king of Egypt, when at war with that nation, conquered Cyprus and Phoenicia. (Herod. ii. 161 ; Diod. i. 68.) When Nebuchadnezzar ascended the throne, we find that, after quelling a revolt of the Jews and reducing Jerusalem (b. c. 587), he marched into Phoenicia, took Sidon apparently by assault, with dreadful carnage, and proceeded to invest Tyre. (Erekiel, xxvi.) For an account of this siege, one of the most memorable in ancient history, we are again indebted to Josephus (x. 11), who extracted it from Trrian annals. It is eaid to have lasted thirteen years. Another Ithobaal was at this time king of Tyre. The description of the siege by Ezekiel would seem to apply to Palae-Tyrus, though it is probable that insular Tyre was also attempted. (Grote, Hist. of Grace, iii. p. 355, note.) The result of the siege is by no means clear. Berosus, indeed, affirms ( $a p$. Joseph. a. Apion. i. 20) that Nebuchadnezzar subdaed all Syria and Phoenicia; but there is no evidence of an assanlt upon Tyre, and the words of Ezekiel (xxix. 17) seem to imply that the siege was unsuccessful. The same dynasty continued to reign. Ithobaal was succeeded by Baal ; and the subsequent changes in the government indicate internal revalution, bat not subjection to a foreign power. The kings were superseded by judges or coffetes, and after a few years the royal line appears to have been restored; but whether by the spontaneous act of the Tyrians, or by compulsion of the Babylonians, is a disputed point.

Ezekiel's description of Tyre at the breaking out of the Babylonian war exhibits it as the head of the Phoenicinn states. Sidon and Aradus are represented as fornishing soldiers and mariners, and the artisans of Byblus as working in its dockjards. (Ezek rxvii. 8, 9,11.) But that war was a severe blow to the power of the Tyrians, which now began to decline. Cyprus was wrested from them by Amasis, king of Egypt, though a branch of the regal family of Tyre appears to have retained the sovereignty of Salamis for some generations. (Herod. v. 104 ; Ieocr. Evag. p. 79. 1, 2, 28.) Merbalus was succoeded by his brother Eiramus, or Hiram, during whose reign Cyrus conquered Babylon ( 538 в. c.). When the latter monarch permitted the Jews to rebuild Jerasalem, we find Tyre and Sidon again assisting in the work (Ezra, iii. 7), a proof that their commerce was still ill a flourishing state. Xenophon (Cyropaed. i. 1. § 8) represents Cyrus as roling over Phoenicia as well as Cypras and Egypt; and though this is not confirmed by any collateral proof, they must at all events have very soon submitted to his son Cambyses. (Herod. iii. 19.) The relations with Persia seem, however, to have been those of a voluntary alliance rather than of a forced subjection; since, though the Phoenicians ausisted Cambyses against the Egyptians, they refosed to serve against their colonists the Carthaginians. Their fleet was of great assistance to the

PHOENICIA.
Persians, and enabled Darius to make himself master of the islands off the coast of Asia Minor. (Thucyd. i. 16 ; Plat. Menex. c. 9.) Phoenicia, with Palestine and Cyprus, formed the fifth of the twenty nomes into which the empire of Darius was divided. (Herod. iii. 91.) These nomes were, in fact, satrapies; but it does not appear that they interfered with the constitutions of the several countries in which they were established; at all events native princes continued to reign in Phoenicia. Although Sidon became a royal Persian residence, it still had its native king, and so also had Tyre. (Herod. viii. 67.) When Darius was meditating his expedition against Greece, Sidon supplied two triremes and a storeship to enable Democedes to explore the coasts. (Ib. iii. 136.) Subsequently the Phoenicians provided the Persians with a fleet wherewith to reduce not only the revolted Ionian cities, but even their own former colony of Cyprus. In the last of these enterprises they were defeated by the Ionian fleet (lb. v. 108, 112); but they were the chief means of reducing the island of Miletus (lb. vi. 6), by the defeat which they inflicted on the Ionians off Lade. (Ib. c. 14.) After the subjugation of the Asiatic islands, the Phoenician fleet proceeded to the Thracian Chersonese, where they captured Metiochus, the sor of Miltiades (Ib. c. 41), and subsequently appear to have scoured the Aegean and to have ravaged the coasts of Boeotia. (Ib. c. 118.) They assisted Xerxes in his expedition against Greece, and along with the Egyptians constructed the bridge of boats across the Hellespont. (Ib. vii. 34.) They helped to make the canal over the isthmus of Mount Athos, in which, as well as in other engineering works, they displayed a skill much superior to that of the other nations emploged. (Ib. c. 23.) In the naval review of Xerxes in the Hellespont they carried off the prize from all competitors by the excellence of their ships and the skill of their mariners; whilst among the Phoenicians themselves the Sidonians were far the most distinguished (Ib. cc. 44, 96), and it was in a vessel belonging to the latter people that Xerxes embarked to conduct the review. (Ib, c. 100.) The Phoenician ships composed nearly half of the fleet which Xerxes had collected; yet at the battle of Artemisium they do not appear to have played so distinguished a part as the Egyptians. (lb. viii. 17.) When routed by the Athenians at Salamis they complained to Xerxes, who sat overlooking the battle on his silver-footed throne, that their ships had been treacherously sunk by the Ionians. Just at this instant, however, extraordinary skill and valour were displayed by a Samothracian vessel, and the Great King, charging the Phoenicians with having falsely accused the Ionians in order to screen their own cowardice and ill-conduct, caused many of them to be beheaded. (lb. c. 90.) At the battle of the Eurymedion (b. c. 466), the Phoenician fleet was totally defeated by the Athenians under Cimon, on which occasion 100 of their vessels were captured (Diod. xi. 62), or according to Thucydides (i. 100) 200, who, however, is probably alluding to the whole number of their fleet. Subsequently the Athenians obtained such naval superiority that we find them carrying on maritime operations on the coast of Phoenicia itself; though in their unfortunate expedition to Egypt fifty of their triremes were almost entirely destroyed by the Phoenicians. (Thucyd. i. 109.) This disgrace was wiped out by the Athenians under Anaxicrates in a great victory gained over
the Phoenicians off Salamis in Cypras, B. ©. 449, when 100 of their ships were taken, many sunk, and the remnant parsued to their own harbours. (Ib. c. 112.) A cessation of hostilities now ensued between the Greeks and Persians. The Phoenician nary continued to be employed by the latter, but was no l.nger exposed to the attacks of the Athenians. In b.c. 411 the Phoenicians prepared a fleet of 147 vessels, to assist the Spartans against Athens ; but after advancing as far as Aspendus in Pamphylia it was suddenly recalled, either because the demonstration was a mere ruse on the part of Tissaphernes, or that the Phoenicians were obliged to defend their own coast, now threatened by the Egyptians. (Thucyd. viii. 87, 108 ; Diod. xiii. 38, 46.) They next appear as the auxiliaries of the Athenians against the Spartans, who had gained the naval supremacy by the battle of Aegospotani, a preponderance which had changed the former policy of Persia: The allied fleet was led by Conon and Pharnabazus, and after the defeat of the Spartans the Phoenician seamen were employed in rebuilding the walls of Athens. (Diod. xiv. 81 ; Nep. Con. c. 4.) These events led to a more intimate con. nection between Phoenicia and Athens; Phoenician traders appear to have settled in that city, where three Phuenician inscriptions have been discovered of the date apparently of about $380 \mathrm{~B} . \mathrm{c}$. (Gesen. Mon. Pun. i. 111.) A few years later, a decree was passed by the Athenian senate, establishing a proxenia between Strato, king of Sidon, and the Athenians; whilst an immunity from the usual burthens imposed on aliens was granted to Sidonians settling at Athens. (Böckh, Corp. Inscr. i. 126.) About the same time we find the Phoenicians, as the subjects of Persia, engaged in a disastrous war with Evagoras, prince of Sulamis in Cyprus, who ravaged their coasts, and, according to Isocrates (Evag. p. 201) and Diodorus (xiv. 98, 110, xv. 2), captured even Tyre itself. But in 386 b.c. Eragoras was defeated in a great naval engagement, and subsequently became a tributary of Persia. (Ib. xv. 9.) During all this period Sidon appears to have been the most wealthy and prosperuns of the Phoenician cities. (Ib. xvi. 41.) The next important event in the history of the Phoenicians is their revolt from Persia, which ended in a disastrous manner. Sidon had been oppressed by the satraps and generals of Artaxerxes Ochus; and in a general assembly of the Phoenicians at Tripolis, in B.c. 352, it was resolved to throw off the Persian yoke. The royal residence at Sidon was destruyed and the Persians massacred. The Phoenicians then fortitied Sidon, and invited Nectanebus, king of Egypt, to assist them. In the following year Ochus made great preparations to quell this revolt, and particularly to punish Sidon; when Tennes, king of that city, alarmed at the fate which menaced him, treacherously negotiated to betray it to the Persians. He inveigled 100 of the leading citizens into the eneny's camp, where they were put to death, and then persuaded the Egyptian mercenaries to admit the Persians into the city. Tbe Sidonians, who had burnt their fleet in order to prevent any escape from the common danger, being thus reduced to despair, shat themselves up with their wives and children, and set fire to their houses. Including slaves, 40,000 persons are said to have perished on this occasion. Tennes, however, suffered the merited reward of his treavon, and was either put to death by Ochus or committed suicide. This calamity
was a great, but not a fatal, blow to the prosperity of Sidon, which even to a much later period retained a considerable portion of her opulence. (Diod. xvi. 41, sqq.; Mela, i. 12.)

The cruelty of the Perians left a lasting remembrance, and was not wholly unrequited. When about twenty years afterwards Alexander entered Phoenicia, Sidon hastened to open her gates to him. The defeat of Darius at Issus, B. c. 333. opened the whole coast of Phoenicia to the Greeks. On his march Alexander was met by Strato, son of Gerostratus, king of Aradus, who surrendered that island to him, as well as some towns on the mainland. As he proceeded southwards he receired the submission of Byblus, and entered Sidon at the invitation of the inhabitants. He deposed Strato, their king, a vassal of the Persians; and Abdolonimus, who was related to Strato, but who at that time followed the humble occupation of a gardener in the suburbs of the city, was nominated to the racant thmne by Alexander's general Hephacstion. (Curt. iv. 4.) The Tyrians now sent an einbassy, professing submission to the Macedunians, but without any real design of giving up their city. (Arrian, ii. 15.) It was inpossible, however, for Alexander to proceed on his intended expedition, whilst so important a place lay in his rear, at best a doubtful friend, and, in case of reverses, soon, perhaps, to become a declared enemy. With a dissimulation equal to that of the Tyrians, he sought to gain possession of their town by requesting permission to enter and sacrifice to Hercules, the prugenitor of the royal race of Macedon, as well as the tutelary god of Tyre. But the Tyrians perceiving his design, directed him to another temple of Hercules at Palae-Tyrus, where he might sacrifice in all liberty and with still greater effect, as the fane, they asserted, was more ancient and venerable than that of the new city in the island. Alexander, however, still hankered after the latter, and made preparations for besieging the new town. (Arrian, ii. 15, 16 ; Curt. iv. 7, seq.) The means by which he succeeded in reducing Tyre will be found described in another place. [TYrus.] It will suffice here to say, that by means of a causeway, and after a seven months' siege, the city of merchant princes yielded to the arms of Alexander, who was assisted in the enterprise by the ships of Sidon, Byblus, and Aradus. The city was burnt, and nost of the inhabitants either killed or soid into slavery. Alexander repeopled it, principally, perhaps, with Carians, who seem to have been intimately connected with the Phoenicians, since we find Caria called Phoenice by Corinna and Bacribylides. (Athen. iv. p. 174.) After the battle of Arbela, Alexander incorporated Phoenicia, Syria and Cilicia into one province. With the true commercial spirit the Phoenicians availed themselves of his conquests to extend their trade, and their merchants, following the track of the Macedonian army, carried home myrrh and nard from the deserts of Gedrosia. (Arrian, vi. 22, Indic. 18.) Alexander erpploged them to man the ships which were to saif down the Hydaspes to the Indian Ocean, as well as to build the vessels which were conveged overland to Thapsacus on the Euphrates, with the view of descending to Babylon. (1b.) By these means he intended to colonise the islands and coasts of the Persian Gulf; but his schemes were frustrated by his death, b. c. $3 \div 3$. After that event Ptolemy, to whom Egypt had fallen, annexed Phoenicia, together with Syria and Palestive, to his kingdom.
(Diod. xiv. 43.) But in the year 315 b. c. Antigonns, returning victorious from Babylonia, easily expelled the garrisons of Ptolemy from all the Phoenician towns except Tyre, where he experienced an obstinate resistance. Eighteen years had sufficed to restore it in a considerable degree to its ancient wealth and power ; and although the mole still remained it was almost as impregnable as before, and was not reduced till after a siege of fifteen months. From this period down to near the end of the third century b. C. there was an almost constant succession of struggles for the possession of Phoenicia between the Ptolemies on one side and the Seleucidae on the other. Ptolemy Euergetes succeeded in reducing it, and it was held by him and his son Philopator down to the year 218 в.c.; when Antiochus the Great, taking advantage of the indolent and sensual character of the latter, and the consequent disorders of his administration, undertook its recovery. Tyre and Ace were surrendered to him by the treachery of Theodotus, the lieutenant of Philopator, and the Egyptian army and fleet were defeated and driven to take refuge at Sidon. In the following year, however, Philopator defeated Antiochus at Raphia near the frontiers of Egypt, and regained possession of Phuenicia and Syria, which he retained till his death, в. c. 205. The reign of his infant son agsin tempted the ambition of Antiochus. He succeeded in reducing Phoenicia, and after repulsing an attempt of the Egyptians to regain it in B.c. 198, firmly established his dominion, and bequeathed it to his sons.

Notwithstanding these struggles, Tyre appears to have still enjoyed a considerable share of commercial prosperity, in which, however, she had now to encounter a formidable rival in Alexandria At first, indeed, that city did not much interfere with her prosperity; but the foundation of Berenice on the Red Sea by Ptolemy Philadelphns, the making of a road between that place and Coptos, and the reopening of the canal which connected the gulf of Sucz with the Pelusiac branch of the Nile (Strab. p. 781) inflicted a severe blow upon her commerce, and converted Alexandria into the chief emporium for the products of the East.
The civil wars of the Seleacidae, and the sufferings which they entailed, induced the Syrians and Phnenicians to place themselves under the protection of Tigranes, king of Arnenia, in the year 83 в. c. (Justin, xl. 1 ; Appian, Syr. 48.) Ace, or Ptolemais, was the only city which, at the instigation of Selene, queen of Antigonus, refused to open its gates to Tigranes. That monarch held Phoenicia during fourteen years, when the Seleucidae regained it for a short time in consequence of the victories of Lucullus. Four years later Pompey reduced all Syria to the condition of a Roman province. During the civil wars of Rome, Phoenicia was the scene of many struggles between the Roman generals. Just previously to the battle of Philippi, Cassius divided Syris into several small principalities, which be sold to the highest bidders; and in this way Tyre had again a king called Marion. Antony presented the whole country between Egypt and the river Eleutherus to Cleupatra, but, in spite of her intreaties to the contrary, secured Tyre and Sidon in their ancient freedom. (Joseph. Ant. xv. 4. § 1.) But when Augustus risited the East, B. c. 20, he deprived them of their liberties. (Dion Cass. liv. 7.)
Although the Roman dominion put an end to the political existence of Tyre and Sidon, they retained
their manufactures and commerce for a considerable period. Mela, who probably wrote during the reign of Claudius, characterises Sidon as "adhuc opulenta" (i. 12); and Pling, at about the same periol, adverts to the staple trade of Tyre as being still in a flourishing condition (" nunc omnis ejus nobilitas conchylio atque purpura constat," v. 17). At the instance of the rhetorician Paulus, Hadrian, as we have already mentioned, granted to Tyre the title of metropolis. It was the residence of a proconsul, and the chief naval station on the coast of Syria. During the contest of Septimius Severus and Pescennius Niger for imperial power, A. D.193, Berytus favoured the cause of Niger, Tyre that of Septimius; in consequence of which, it was taken and burnt by the light Mauritanian troops of Niger, who committed great slaughter. (Herodian, iii. 9. § 10.) Severus, after his success, recruited the population of Tyre from the third legion, and, as a reward for its attachment, bestowed on it the Jus Italicum and the title of colony. (Ulpian, Dig. Leg. de Cens. tit. 15; Eckhel, vol. iii. p. 387.) In the time of St. Jerome, towards the end of the fourth century, it was still the first commercial city of the East (Comm. ad Ezek. xxvi. 7, xxvii. 2); and after the destruction of Berytus by an earthquake in the reign of Justinian, it monopolised the manufacture of imperial purple, which it had previously shared with that city. Beyond this period it is not necessary to pursue the histury of Phoenicia. We shall only add that Tyre continued to Hourish under the mild dominion of the caliphs, and that, in spite of all the violence which it suffered from the crusaders, its prosperity was not utterly annihilated till the conquest of Syria by the Ottoman Turks, A. D. 1516 ; a result, however, to which the discovery of the New World, and of a route to Asia by the Cape of Good Hope, likewise contributed.

## V. Political Constitution.

Phoenicia consisted of several small independent kingdoms, or rather cities, which were sometimes united with and sometimes opposed to one another, just as we find Canaan described at the time when it was invaded by the Israelites. (Strab. xvi. p. 754 ; Joshua, x.) We have but little information respecting the constitution of these kingdoms. The throne was commonly hereditary, but the people seem to have possessed a right of election. (Justin, xviii. 4.) The chief priests exercised great power, and were next in rank to the king. Thus Sicharbas, or Sichaeus, chief priest of the temple of Hercules, was the husband of Dido, and consequently the brother-in-law of king Pygmalion. There seems also to have been a powerful aristoeracy, but on what it was founded is unknown. Thus a body of nobles, who are called senators, accompanied the emigration of Dido. (Justin, l.c.) During the interregnum at Tyre after the servile insurrection, the government was carried on by elective magistrates, called judges or snffetes. (Joseph. c. Ap. i. 21.) This institution also obtained at Gades and Carthage, and probably in all the western colonies of Tyre. (Liv. xxviii. 37; comp. Movers, ii. pt. i. p. 534.) Kings existed in Phoenicia down to the time of Alexander the Great. (Arrian, ii. 24.) The federal constitution of Phoonicia resembled a Grecian begemony: either Tyro or Sidon was always at the head, though Aralus and Byblus likewise had kings. During the earliest period of its history, Sidon appears to have been the leading city ; but after its capture by the king

PHOENICIA.
of Ascalon, and the emigration of its inbabitants, as already related, Tyre became dominant, and retained the supremacy till the Persian conquest. Confederations among the Phoenician cities for some common object were frequent, and are mentioned by Joshua as early as the time of Moses (xi.). Subsequently, the great council of the Phoenicians asserabled on these occasions at Tripolis (Diod. xvi. 41), where, as we have already said, the three leading towns, Sidon, Tyre, and Aradus, had each its separate quarter; from which circamstance, the town derived its name. Aradus, however, does not appear to have obtained this privilege till a late period of Phoenician history, as in the time of Ezekiel it was subordinate to Tyre (xxvii. 8, sqq.) ; and Byblus, though it had its own king, and is sometimes mentioned as furnishing mariners, seems never to have had a voice in the confederate councils. The popalation of Phoenicia consisted in great part of slaves. Its military force, as might be supposed from the nature of the country, was chiefly naval; and in order to defend themselves from the attacks of the Assyrians and Persians, the Phoenicians were compelled to employ mercenary troops, who were perhaps mostly Africans. (Diod. L c.; Ezekiel, xxvii.)

## VI. Religion.

The nature of the Phoenician religion can only be gathered from incidental allusions in the Greek and Roman writers, and in the Scriptures. A few coins and idols have been found in Cyprus, bat connected only with the local Phoenician religion in that island. The most systematic account will be found in the Praeparatio Evangclica of Eusebins, where there are extracts from Sanconiatho, professed to have been translated into Greek by Philo of Byblus. It would be too long to enter here into his fanciful cosmogony, which was of an atheistic nature, and was characterised chiefly by a personification of the elements. From the wind Kol-pia, and Baau, his wife, were produced Aeon and Protogonus, the first mortals. These had three sons, Light, Fire, and Flame, who produced a race of giants from whom the mountains were named, - as Casius, Libanus, Antilibanus and Brathy, - and who with their descendants discovered the various arts of life. In later times a human origin was assigned to the gods, that is, they were regarded as deitied men; and this new theology was absurdly gratted on the old cosmogony. Eliun and his wife Beruth are their progenitors, who dwelt near Byblus. From Eliun descends Ouranos (Heaven), who weds his sister Ge (Earth), and has by her four sons, Illus (or Cronos), Betutus, Dagon, and Atlas ; and three daughters, Astarte, Rhea, and Dione. Cronos, grown to man's estate, deposes his fathor, and puts to death his own son Sadid, and one of his daughters. Ouranos, returning from banishment, is treacherously put to death by Cronos, who afterwards travels about the world, establishing Athena in Attica and making Taut king of Egypt. (Kenrick, Phoen. p. 295.)

Baal and Ashtaroth, the two chief divinities of Phoenicim, were the sun and moon. The name of Baal was applied to Phoenician kings, and Belus is the first king of Assyria and Pboenicia. At a later period Baal became a distinct supreme God, and the sun obtained a separate worship ( 2 Kings, xxiii. 5). As the supreme god, the Greeks and Kornans identified him with their Zuas, or Jupiter, and not with Apollo. Bel or Baal was also identified with the planet Saturn. We find his name prefixed to that of other

## PHOENICIA.

deities, as Baal-Phegor, the god of licentionsness, Baal-Zobub, the god of flies, 8 cc ; as well as to that of many places in which he had temples, as BaalGad, Baul-Hamon, \&c. Groves on elevated places were dedicated to his worship, and haman victims were sometimes offered to him as well as to Moloch. (Jerem. xix. 4, 5.) He was worshipped with fanatical rites, his votaries crying aloud, and cutting themselves with knives and lancets. Ashtaroth or Astarte, the principal female divinity, was identified by the Greeks and Romans sometimes with Juno, sometimes with Venus, though properly and originally she represented the moon. The principal seat of her worship was Sidon. She was symbolised by a heifer, or a figure with a heifer's head, and horns resembling the crescent moon. The name of Astarte was Phoenician (Ps. Lacian, de Dea Syr. c. 4); but she does not appear with that appellation in the early Greek writers, who regard Aphrodite, or Venus Urania, as the principal Phoenician goddess. Herodotus (i. 105,131, iii. 8 ) says that her worship was transferred from Ascalon, its oldest seat, to Cyprus and Cythera, and identifies ber with the Babylonian Mylitta, the character of whose worship was unequivocal. Her orginal image or symbol, like that of many of the oldest deities, was a conical stone, as in the case of the Paphian Venus (Tac. H. ii. 3.; Max. Tyr. Dics. 38), of the Cybele of Pessinus (Liv. xxix. 11), and others. In Cyprus her worship degenerated into licentiousness, but the Cyprian coins bear the primitive image of the conical stone. In Carthage, on the contrary, she appeared as a virgin, with martial attributes, and was worshipped with severe rites. She must be distinguished from Atargatis, or Derceto, who had also a temple at Ascalon, and was represented as half woman, half fish. It is characteristic of the religion of the Phoenicians, that though they adored false gods, they were not so much idolaters as the Egyptians, Greeks, and Romans, since their temples had either no representation of the deity, or only a rude symbol. The worship of Astarte seems to have been first corrupted at Babylon. Adonis, who had been wounded by the boar on Lebanon, was worshipped at Aphaca, about 7 miles E. of Byblus, near the source of the stream which bears his name, and which was said to be annually reddened with his blood. (Zosim. i. 58; Ps. Lucian, de Dea Syr. c. 9.) By the Phoenicians Adonis was also regarded as the sun, and his death typified the winter. His rites at Aphaca, when abolished by Constantine, were polluted with every species of abomination. (Euseb. V. Const. iii. 55.)

Cronos, or Saturn, is said by the Greek and Latin writers to have been one of the principal Phoenician deities, but it is not easy to identify him. Human victims formed the most striking feature of his worship; bat he was an epicure difficult to please, and the most acceptable offering was an only child. (Porphyr. do Abs. ii. 56; Euseb. Lawd. Const. i. 4.) His image was of bronze (Diod. xu. 14), and, according to the description of Diodurus, resembled that of Moloch or Milcom, the god of the Ammonites; bat human sacrifices were offered to several Phoenician deities.

The gods hitherto described were common to all the Phoenicians; Melkarth*, whose name literally

[^27]denotes "king of the city," was peculiar to the Tyrians. He appears in Greek mythology under the slightly altered appellation of Melicertes. Cicero (N. D. iii. 16) calls the Tyrian Hercules the sou of Jupiter and Asteria, that is of Baal and Ashtaroth. There was a festival at Tyre called "The Awakening of Hercules," which seems connected with his character as a sun-god. (Joseph. Ant. viii. 3.) In his temple at Gades there was no image, and his symbol was an ever-burning fire.

Another Phoenician deity was Dagon, who had a fish's tail, and seems to have been identical with the Oannes of Babylonia.

The Phoenician goddess Onca was identified by the Greeks with Athena. One of the gates of Thebes was named after her, and she was also worshipped at Corinth. (Euphor. ap. Steph. Byz. s. v.; Hesych. e. v.; Tzetz. ad Lycoph. Cass. 658.) It is eren probable that the Athena Polias of Athens was derived from Thebes. The Palladium of Troy was also of Phoenician origin.

As might be expected among a maritime people, the Phoenicians had several marine deities, as Poseidon, Nereus, and Poutus. Poseidon was worshipped at Berytus, and a marine Jupiter at Sidon. The present deities of navigation were, however, the Cabiri, the seat of whose worship was also at Berytus, and whose images, under the name of Pataeci, were placed on the prows of Phoenician ships. (Herod. iii. 37.) They were the sons of Hephaestos, or the Egyptian Phta, and were represented as ridiculous little pigmaic figures. By the Greeks and Romans they were identified with their Anaces, Lares, and Penates. Aesculapius, who was identified with the air, was their brother, and also had a temple at Berytus. (Paus. vii. 23. § 6.)

We know but little of the religious rites and sacred festivities of the Phoenicians. They practised circamcision, which they learned from the Egpytians; bat, owing to their intercourse with the Greeks, the rite does not seem to have been very strictly observed. (Herod. ii. 104; Aristoph. Av. 504.) We are unable to trace their speculative opinions; but, as far as can be observed, they seem to have been material and atheistic, and, like the other Semitic nations, the Phoenicians had no idea of a fature state of existence.

## Vil Manners, Literature, and Art.

The commercial habits of the Phoenicians did not impair their warlike spirit, and Chariton (vii. 2) representa the Tyrians as ambitious of military glory. Their repatation for wisdom and enterprise peeps out in the jealous and often ironical bitterness with which they are spoken of by Hebrew writers. Their wealth and power was envied by their neighbours, who made use of their services, and abused them in return. (Ezek. xxxviii. 2, 12; Isaiah, 1xiii. 18.) The Greeks expressed their opinion of Phoenician subtlety by the proverb Eúpot mpos \$olcuras (Snid.), which may be rendered by our "Set a thief to catch a thief;" and their reputation for veracity was marked by the saying $\psi \in \hat{U} \sigma \mu a$ \$ouviruxdr, "a Phoenician lie." (Strab. iii. p. 170.) But a successful commercial nation is always liable to impatations of this description. In common, and sometimes in confusion, with Syria, Pboenicia was denounced by the Romans for the corruption of its morals, and as the nursery of mountebanks and masicians. (Hor. Sat. i. 2. 1; Juv. iii. 62, viii. 159 ; Athen. 2v. 53.) The mimes of Tyre and Berytus
were renowned far and wide. (Exp. toth Mundi; Hudson, Geogr. Min. iii. p. 6.)

Ancient authority almost unanimously attributes the invention of an alphabet to the Phoenicians. Lucan (Phars. iii. 220) ascribes the use of writing to them before the invention of the papyras in Egypt. The Phoenician Cadmus was reputed to bave introduced the use of writing among the Ionians; and Herodotus says that he saw the Cadmean letters at Thebes. (Herod. v. 58, 59; Plin. vii. 57 ; Diod. v. 24; Tac. Ann. xi. 14; Mela, i. 12, \&ce.) The inscriptions found in Thera and Melos exhibit the oldest forms of Greek letters hitherto discovered; and these islands were colonised by Phoenicians. No inscriptions have been found in Phoenicia itself; but from several discovered in Phoenician colonies - none of which, however, are older than the fourth century B. C.the Phoenician alphabet is seen to consist, like the Hebrew, of twenty-two letters. It was probably more scanty at first, since the Greek alphabet, which was borrowed from it, consisted originally of only sixteen letters (Plin. l. c.); and, according to Irenaeus (adv. Haeres. ii. 41), the old Hebrew alphabet had ouly fifteen. The use of hieroglyphics in Egypt was, in all probability, older. (Tac. $\boldsymbol{L}^{\text {c.) }}$ ) The connection of this Phonetic system with the Pboenician alphabet cannot be traced with any certainty; yet it is probable that the latter is only a more simple and practical adaptation of it. The names of the Phoenician letters denote some natural object, as aleph, an ox, beth, a house, daleth, a door, \&c., whence it has been conjectured that the figures of these objects were taken to represent the sounds of the respective letters; but the resemblance of the forms is rather fanciful.

Babylonian bricks, inscribed with Phoenician characters, have long been known, and indicate the residence of Phoeuiciaus at Babylon. In the recent discoveries at Nineveh other bricks have been found with inscriptions both in the Phoenician and cuneiform character. Phoenician inscriptions have also been discovered in Egypt, bat in an Aramaean dialect. (Gesen. Mon. Phoen. lib. ii. c. 9.) The purest examples of the Phoenician alphabet are found in the inscriptions of Malta, Athens, Cyprus, and Sardinia, and on the coins of Phoenicia and Sicily.

The original literature of the Phoenicians has wholly perished, and even in Greek translations but little has been preserved. Their earliest works seem to have been chiefly of a philosophical and theological nature. Of their two oldest writers, Sanchoniatho and Mochus, or Moschus, of Sidon, accounts will be found in the Dictionary of Biography and My. thology, as well as a discussion of the question respecting the genuineness of the remains attributed to the former; on which subject the reader may also consult Lobeck (Aglaophamus, ii. p. 1264, sqq.), Orelli (Sarchoniathonis Fragm. p. xiii. sqq.), Creazer (Symbolik, pt. i. p. 110, 3rd edit.), Movers (Die Phönizier, i. p. 120, sqq.; and in the Jahrbücher für Theologie u. chriotl. Philosopkie, 1836, vol. vii. pt. i.), and Kenrick (Phoenicia, ch. xi.). Later Phoenician writers are known only under Greek names, as Theodotus, Hypsicrates, Philostratus, \&ec., and blend Greek legends with their native authorities. We learn from Josephus (c. Apion. i. 17) that there were at Tyre public rocords, very carefully kept, and extending through a long series of years, upon which the later histories seem to have been founded; but unfortanately these have all perished. Thus we are deprived of the
annals of one of the oldest and most remarkable people of antiquity; and, by a perverse fate, the inventors of letters have been deprived of that benefit which their discovery has bestowed on other, and often less distinguished, nations which have borrowed it.

The arithmetical system of the Phoenicians resembled that of the Egyptians. The units were marked by simple strokes, whilst 10 was denoted either by a horizontal line or by a semicircle; 20 by the letter N ; and 100 had also a special mark, with strokes for the units denoting additional hundreds. (Gesen. Mon. Phoen. i. J. c. 6.) Their weights and measures were nearly the same as those of the Jews.

The Phoenicians, and more particularly the Si donians, excelled in the glyptic and plastic arts. Their drinking vessels, of gold and silver, are frequently mentioned in Homer: as the silver vase which Achilles proposed as the reward of the victor in the funeral games in honour of Patroclus (Iliad, xxiii. 743), and the bowl given to Telemachus by Menelaus. (Od. iv. 618 ; comp. Strab. xvi. p. 757.) The Phoenicians probably also manufactured fictile and glass vases; but the origin of the vases called Phoenician, found in Southern Italy, rests on no certain anthority. They particularly excelled in works in bronze. Thus the pillars which they cast for Solomon's temple were 18 cubits in height and 12 in circumference, with capitals 5 cubits high. From the nature of their country their architecture must have consisted more of wood than of stone; but they must have attained to great art in the preparation of the materials, since those designed for the temple of Solomon required no further labour, bat only to be put together, when they arrived at Jerusalem. The internal decorations were carvings in olive-wood, codar, and gold. The Phoenicians do not appear to have excelled in sculpture. This was probably owing to the nature of their religion. Their idols were not, like those of Greece and Rome, elaborate representations of the human form, bat mere rude and shapeless stones called Baetuli; and frequently their temples were entirely empty. Figures of the Phoenician Venus, but of very rude sculpture, have, however, been found in Cyprus. The Phoenicians brought to great perfection the art of carring and inlaying in ivory, and the manufacture of jewellery and female ornaments, which proved of such irresistible attraction to the Grecian and Jewish women, as may be seen in the story of Eumaens in Homer (Od. xv. 415), and in the indignant denunciations of Isaiah (iii. 19). They likewise excelled in the art of engraving gems. (2 Chron. ii. 14.) Music is said to have been an invention of the Sidonians (Sanchoniath. p. 32, ed. Orell.), and a peculiar sort of cithara was called $\lambda$ upoфoivic. (Athen. iv. 183.)

## Vill. Manufactures, Commerce, and Navigation.

The staple manufacture of Phoenicia was the celebrated purpie dye; but it was not a monopoly. Ezekiel (xxvii. 7) characterises the purple dye as coming from Greece; and Egypt and Arabia also manufactured it, but of vegetable materials. The peculiarity of the Phoeniciun article was that it was obtained from fish of the genera buccinum and murex, which were almost peculiar to the Pboenician coast, and which even there were found in perfection only on the rocky part hetween the Tyrian Climax and the promontory of Carmel. The liquor is con-
tained in a little vein or canal which follows the spiral line of these mollases, and yields but a very small drop. The fluid, which is extracted with a pointed instrument, is of a yellowish white, or cream colour, and smells like garlic. If applied to linen, cotton, or wool, and exposed to a strong light, it successively becomes green, blue, red, and deep purple ; and when washed in soap and water a bright and permanent crimson is produced. The buccinum, which is so named from its trampet shape, is found on rocks near the shore, bat the murex must be dredged in deep water. The latter, in its general form, resembles the buccinum, bat is rougher and more spinous. The Helix ianthina, also found on the Phoenician coast, yields a similar fluid. The superiority of the Tyrian purple was owing to the abundance and quality of the fish, and probably also to some chemical secret. The best accounts of these fish will be found in Aristotle ( $\boldsymbol{H}$. Anim. lib. r.) and Pliny (ix. 61. s. 62) ; and especially in a paper of Reaumur in the Mémoires de l'Academie des Sciences, 1711; and of the manafacture of the purple in Amati, De Restitutione Purpurarum, and Don Michaele Rusa, Dissertazione delle Porpore e delle Materie Vestiarie presso gli Antichi. The trade seems to have been confined to Tyre, though the poets speak of Sidonian purple. (Ovid, Tr.iv. 2. 27.) Tyre, under the Romans, had the exclusive privilege of manufacturing the imperial purple, and decrees were promulgated prohibiting its use by all except magistrates. (Flav. Vopisc. Aurel. c. 45 ; Suet. Nero, 32.) The manafacture seems to have flourished till the capture of Constantinople by the Turks.

As Tyre was famed for its purple, so Sidon was renowned for its glass, which was made from the fine sand on the coast near Mount Carmel. Pliny (xxxvi. 65) describes its discovery as accidental. Some merchants who had arrived on this coast with a cargo of natron, employed some lumps of it, instead of stones, to prop up their cauldron; and the natron being melted by the beat of the fire, produced a stream of glass on the sand. It is prubable, however, that the art was derived from Egypt, where it flourished in very ancient times. The Sidonians made use of the blowpipe, the lathe or wheel, and the graver. They also cast glass mirrors, and were probably acquainted with the art of imitating precious stones by means of glass. (Plin. l.c.) The Phoenicians were also famous for the manufactare of cloth, fine linen, and embroidered robes, as we see in the description of those brought from Sidon by Paris ( $\pi$ éñot rau-
 and in Scriptaral allusions. (2 Chrom. ii. 14, \&ce.) Phoenicia was likewise celebrated for its perfumes. (Juv. viii. 159 ; Plin. xi. 3. s. 2.)

Assyria and Egypt, as well as Phoenicia, had reached a high pitch of civilisation, jet the geographical position of the former, and the habits and policy of the latter, prevented them from communicating it. On the Phoenicians, therefure, devolved the beneficent task of civilising mankind by means of commerce, for which their maritime situation on the borders of Europe and Asia admirably fitted them. Their original occapation was that of mere carriers of the prodnce and manufactures of Assyria and Egypt (Herod. i. 1); but their maritime superiority led them to combine with it the profession of piracy, which in that age was not regarded as disgraceful. (Thucyd. i. 5 ; Hum. Od. Xr. 415. 8c.) They were especially nuted as slave-dealers. (Herod.

PHOENICIA.
ii. 54 ; Hom. Od. xiv. 285.) The importation of cloths, trinkets, \&c., in Phoenician ships, is constantly alluded to in the Homeric poems; but the Phoenicians are as constantly described as a crafty deceitful race, who were ever bent on entrapping the unwary. (IL. vi. 290, axiii. 743, \&c.) It would be absurd, huwever, to suppose that they were always fraadulent in their dealings. Ezekiel (axvii.) draws a glowing picture of their commerce and of the splendour of their vessels. From his description we may gather the following particulars. The trade of the Phoenicians with the Erythraean sea, comprised spices, myrrh, frankincense, precious stones, and gold-sund. The coast of Africa S. of Bab-elsfambeb produced frankincense and spices superior to thuse of Arabia. The cotton garments mentioned by the prophet were probably Indian fabrics, and the "bright iron" Indian steel. Ezekiel mentions only linen as forming their trade with Eeypt, but we know that they also drew their supplies of corn from thence. (Isaiah, xxiii. 3.) In return for these commodities, the Phoenicians supplied the Egyptians with wine, with asphalt for their embalmments, and probably with incense for their temples. (Herod. iii. 6; Diod. xix. 99.) Their traftic with Syria and Mesopotamia, hesides the indigenous products of those countries, probably included Indian articles, which came by that route. Babylon, which is called by Ezekiel (xvii. 4) a city of merchants, must have been a place of great trade, and besides the traffic which it carried on by means of its canal communication with the Tigris, had manufactures of its own, especially embruideries. With Nineveh also, while it tlourished, the Phoenicians must have had an extensive commerce. The neighbouring Judaea furnished them with wheat, grape-honey, oil, and balm; and from the pastoral nations of Arabia they procured sheep and goats. Proceeding to more northern regions, we find Damascus supplying them with white wool and the precious wine of Helbon. Armenia and the countries bordering on the southern and eastern shores of the Euxine - the modern Georgia and Circassia-furnished horses, mules, and slaves; also copper and the tunny fish. Phoenicia had undoubtedly great commercial intercourse with Greece, as is evident from the fact that the Grecian namies fur the principal objects of oriental commerce, especially spices and perfunnes, were derived from the Phoenicians. (Herod. iii. 111.) In the time of Socrates a Phoenician vessel seems regularly to have visited the Peiraeeus. (Xenoph. Oecon. c. 8.) Tarshish, or Tartessus, the modern Andalusia, was the source whence the Phoenicians derived their silver, iron, tin, and lead. Silver was so abundant in this country that they substituted it for the masses of lead which served as anchors. At a later periou thes procured their tin from Britain. They appear also to have traded on the NW. coast of Atrica as far as Sevegal, as well as to the Fortunate lslands, or Canaries. They must also, of course, have carried on a great trade with their many colonies, which there will be occasion to enumerate in the following section. It is remarkable that Ezekiel always describes the nations as bringing their wares to the Phoenicians, and the latter are not mentioned as going forth to fetch them. The caravan trade nust at that time have been in the hands of the nornad Syrian and Arabian tribes by whom the Phoenicians were surrounded, and the business of the latter consisted in distributing by voyages to the various coasto of the Mediterranean the articles

PHOENICIA.
which has thas been brought to them overland. (Hervd. i. 1.) At a later period, however, they seem to have themselves engaged in the cararan trade, and we have already mentioned their journeys in the track of Alexander. Their pedlars, or retail dealers, probably traversed Syria and Palestine from the earliest times. (Proverbs, xxxi. 24 ; Isaiah, xxiii. 8.) In some foreign towns the Phoenicians had factories, or settlements for the purposes of trade. Thus the Tyrians had a fish-market at Jerusalem (Nehemiah, xiii. 16), chiefly perhaps for the salted tunnies which they brought from the Euxine. They had also a settlement at Memphis (Herod. ii. 112), and, after the close of the wars between the Greeks and Persians, at Athens, as already related, as well as in other places.

In their original seats on the Persian Gulf the Phoenicians used only rafts (Plin. vii. 57) ; but on the coasts of the Mediterranean they constructed regular vessels. In their early voyages, which cumbined piracy with trade, they probably emplojed the penteconter, a long and swift vessel of 50 oars. (Comp. Herod. i. 163.) The trireme, or ship of war, and gaulos, or tub-like merchantman adapted for stowage, which took its name frum a milk-pail, were later inventions. (lbid. iii. 136.) The excellent arrangements of a Phoenician vessel are described in a passage of Xenophon before cited. (Oecon. 8 ; cf. Heliodor. v. 18 ; Isaiah, ii. 16.) We have already described the Pataeci, or figure-heads of their vessels. The Phoenicians were the first to steer by observation of the stars (Plin. vii. 56 ; Manil. i. 297, sqq.) ; and could thus venture out to sea whilst the Greeks and Romans were still creeping along the coast. Astronomy indeed had been previously studied by the Egyptians and Babylonians, but the Phoenicians were the first who applied arithmetic to it, and thus made it practically useful. (Strab. xvi. 757.) Herodotus (iv. 42) relates a story that, at the instance of Neco, king of Egypt, a Phoenician vessel circumnavigated Africa, setting off from the Red Sea and returning by the Mediterranean; and though the father of history doubted the account himself, yet the details which he gives are in themselves so probable, and the assertion of the circumnavigators that they had the sun on their right hand, or to the N . of them, as must really have boen the case, is so unlikely to have been invented, that there seems to be no good reason for doubting the achievement. (Comp. Rennell, Geogr. of Herodotus, p. 682, sqq. ; Grote, Hist. of Greece, iii. pp. 377, sqq.)

## IX. Colontes.

The foundation of colonies forms so marked a feature in Phoenician history, that it is necessary to give a general sketch of the colonial system of the Phoenicians, although an account of each settlement appears under its proper head. Their position made them a commercial and maritime people, and the nature of their country, which would not admit of a great increase of inhabitants, led them to plant colonies. Before the rise of the maritime power of the Greeks they had the command of the sea for many centuries, and their colonisation thus proceeded without interruption. Their settlements, like those of the Greeks, were of the true nature of colonies, and not, like the Roman system, mere military occupations ; that is, a portion of the population migrated to and settled in these distant possessions. Hence they resembled oar own colonies in America or

Australia, as distinguished from our occupation of India. A modern writer has, with much erudition avd ingenuity, endeavoured to trace the progress of Phoenician colonisation from the threefold cycle of ancient myths respecting the wanderings of Bel or Baal - the Cronos of the Greeks, and patron god of Byblus and Berytus; of Astarte or Io (VenusUrania), who was especially worshipped at Sidon; and of Melcarth or the Tyrian Hercules. (Movers, Phoen. vol. ii. pt. ii. ch. 2.) With these myths are combined the legends of the rape of Europa, of the wanderings of Cadmus and Harmonia, of Helen, Dido, \&c. That some portion of historical truth may lie at the bottom of these myths can hardly be disputed; but a critical discussion of them would require more space than can be here devoted to the sabject, and we must therefore content ourselves with giving a short sketch of what seems to be the most probable march of Phoenician colonisation.

Cyprus, which lay within sight of Phoenicia, was probably one of the first places colonised thence. Its name of Chittim, mentioned in Genesis (x.), is preserved in that of Citium, its chief town. (Cic. Fin. iv. 20.) Paphos and Palaepaphos, at the SW. extremity of the island, and Golgos, near the SE. point, were the chief seats of the worship of Venus-Urania, the propagation of which marked the progress of Phoenician colonisation. The origin of the colony is likewise shown by the legend of the conquest of Cyprus by Belus, king of Sidon (-" tum Belus opimum Vastabat Cyprum, et victor ditione tenebat," Virg. Aen. i. 621, et ib. Serv.), who was the reputed founder of Citium, Lapathus, and other Cyprian towns. (Alex. Ephes. in Stephan. v. ^árच $\boldsymbol{\theta}$ os.) A great many Phoenician inscriptions have been found in this island. Hence the Phrenicians seem to have proceeded to the coast of Asia Minor, the islands of the Greek Archipelago, and the coast of Greece itself. Phoenician myths and traditions are interwoven with the earliest history of Greece, and long precede the Trojan War. Such are the legends of Agenor in Cilicia, of Earopa in Rhodes and Crete, of Cadmus in Thasos, Boeotia, Eaboea and Thera. Rhodes seems to have been early visited by the Phoenicians; and, if it did not actually become their colony, there are at least numerous traces that they were once predominant in the island. It is mentioned in Genesis ( $\mathbf{x} .4$ ) in connection with Citium and Tartessus. (Comp. Epiphan. adv. Haeres. 30. 25, and Movers, vol. ii. pt. ii. p. 248, note 127.) Conon, a writer who flourished in the Augustan period, mentions that the Heliades, the ruling dynasty in Rhodes, were expelled by the Phoenicians (Fab. 47, ap. Phot. p. 187), and numerous other traditions testify their occupation of the island. Traces of the Phoenicians may also be found in Crete, though they are fainter there than at Rhodes. It is the scene of the myth of Earopa, the Sidonian Astarte; and the towns of Itanos, which also bore the name of Araden (Steph. B. 8.v. 'Itavós; Hierocl. § 11 ; Acts, xxvii. 12), Lebena, and Phoonice, were reputed to have been founded by them. We learn from Thucydides (i. 8) that the greater part of the Cyclades were colonised by Phoenicians. There are traces of them in Cilicia, Lycia, and Caria. We hare already alluded to their intimate connection with the last-named country, and Thacydides, in the passage just cited, mixes the Carians and Phoenicians together. Chios and Samos are also connected with the Phoenicians by ancient myths; and at Tenedos, Melicertes, worshipped with
the sacrifice of infants, is the Tyrian Meclarth, also called Palaemon by the Greeks. (Lycophr. Cass. 229.) There are traces of Phoenician colonies in Bithynia, but not more eastward in the Euxine, though it cannot be doubted that their royages extended farther. Mythological analogies indicate their presence in Imbros and Lemnos, and there are distinct historical evidences of their settlements in the neighbouring island of Thasos. Herodotus had himself beheld the gigantic traces of their mining operations there, in which they appeared to hare turned a whole mountain upside-down (vi. 47). The fable ran, that they had come thither in search of Europa. (Id. ii. 44.) They had also settlements for the purposes of mining at Mount Pangaens, on the opposite coast of Thrace. (Plin. vii. 57; Strab. xiv. p. 680.) According to Strabo (x. p. 447), Cadmus and his Arabs once dwelt at Chalcis in Euboea, having crossed over from Boeotia. Of the settlement of the Phoenicians in the latter country, there is historical testimony, to whatever credibility the legend of Cadmus may be entitled. (Herod. v. 57). The name of "Oyka, or Onca, by which Minerva was worshipped at Thebes, and which was also given to one of the city gates, was pare Phoenician. (Euphor. ap Steph. B. z. v.: cf. Pansan. ix. 12.) From Thebes the Cadineans were expelled by the Argives, and retired among the Enchelees, an Illyrian people (Herod. v. 61); and Illyrius, a son of Cadmus and Harmonia, was said to have given name to their country. (Apollod. iii. 5. § 4.) The Paphians, the ancient inhabitants of Cephallenia, were the reputed descendants of Cadmus. (Odyss. 1v. 426.)

To colonise Sicily required bolder navigation; bat with the instinct of a commercial and maritime people, the Phoenicians seized its promontories and adjacent isles for the purpose of trading with the natives. (Thucyd. vi. 2.) Subsequently, however, they were gradually driven form their possessions by the growing power of the Greek colonies in that island, and were ultimately confined to its NW. corner (Ib.), which was the nearest point to Carthage. Daedalus, an epithet of Hephaestos, the father of the Phoenician Cabiri, is represented as flying from Crete to Sicily. (Diod. iv. 77.) The Venus of Mount Eryz was probably of Phoenician origin from the veneration paid to her by the Carthaginians. (Aelian, H. An iv. 2; Athen. ix. p. 934.) An inscription found at Segesta mentions a priestess of Venos-Urania, which was the Phoenician Venus. (Rhein. Mus. vol. iv. p. 91.) There is some difficulty, however, with regard to the temples of this deity, from the attempts which have frequently been made to connect them with the wanderings of the Trojans after the capture of their city. Thus Dionysius of Halicarnassus (Ant. R. i. 20) attributes the temple of Venus at Cythera to Aeneas, whilst by Herodotus (i. 105) it is assigned to the Phoenicians. The migration of the latter to the western side of Sicily must have taken place after the year $736 \mathrm{~B} . \mathrm{c}$., the date of the arrival of the Greek colonists. There are no traces of the Phoenicians in Italy, but the islands between Sicily and Africa seem to have been occupied by them. Diodorus (v. 12) mentions Melite, or Malla, as a Phoenician colony. In later times, however, it was occupied by the Carthaginians, so that here, as in the rest of these islands, it is difficult to distingaish whether the antiquities belong to them, or to the Phoenicians. Farther westward we may track the
latter in Sardinia, where Claudian (Bell. Gild. 520) mentions Caralis as founded by the Tyrians, in contradistinction to Sulci, founded by the Carthaginians. And the coins of Aebusus (Ivica) seem to denote the occupation of it by the Phoenicians, since they have amblems of the Cabiriac worship.

The very early intercourse between Phoenicia and the south of Spain is attested by the mention of Tarshish, or Tartessus, in the 10 th chap. of Genesis. To the same purport is the legend of the expedition of Hercules against Chrysaor, the father of Geryon, which was of course naval, and which sailed from Crete. (Herod. iv. 8; Diod. iv. 17, sqq. v. 17, \&c.) The account of Diodorus leads as to conclude that this was an earlier colony than some of the intermediately situated ones. The Phoenicians bad no doubt carried on a commercial intercourse with Tarteasus long before the foundation of Gadeira or Codiz. The date of the latter event can be ascertained with very remarkable accuracy. Velleius Paterculus (i. 2) informs us that it was founded a few years before Utica; and from Aristotle (de Mirab. Ausculf. c. 146) we learn that Utica was founded 287 years before Carthage. Now as the latter city must have been founded at least 800 years b. C., it follows that Gadeira must have been built about eleven centuries before our aera. The temple of Hercules, or Melcarth, at this place retained, even down to the time of Silius Italicus, the primitive rites of Phoenician worship; the fane had no image, and the only visible symbol of a god was an ever-burning fire ; the ministering priests were barefonted and clad in linen, and the entrance of women and swine was prohibited. (Punic. iii. 22, seq.) Long before this period, however, it had ceased to be a Phoenician colony; for the Phocaeans who sailed to Tartessus in the time of Cyrus, about $556 \mathrm{~B} . \mathrm{c}$., foand it an independent state, governed by its own king Arganthonius. (Herod. i. 163.) Many other towns were doubtless founded in the S. of Spain by the Phoenicians; but the subsequent occupation of the country by the Carthaginians renders it difficult to determine which were Punic and which genaine Phoenician. It is probable, however, that those in which the worship of Hercules, or of the Cabiri, can be traced, as Carteia, Malaca, Sexti, \&cc., were of Tyrian foundation. To this early and long continued connection with Phoenicia we may perhaps ascribe that superior civilisation and immemorable use of writing which Strabo (iii. 139) observed among the Turduli and Turdetani.

Farther in the Atlantic, it is possible that the Phoenicians may have had settlements in the Cassiterides, or tin districts on the coast of Cornwall and the Scilly Islands; and that northwards they may have extended their voyages as far as the Baltic in search of amber. [Britarnicae Ins. Vol. I. p. 433, seq.] (Comp. Heeren, Researches, grc. ii. pp. 53,68.) But these points rest principally on conjecture. There are more decided traces of Phoenician occupation on the NW. or Atlantic cosast of Africa. Abyla, like Calpe, was one of the Pillars of Hercules, and his temple at Lixus in Mauretania was said to be older even than that at Gadeira. (Plin. xix. 4. 8. 22.) Tinge was founded by Antaeus, with whom Hercules is fabled to bave combated (Mela, i. 5; Strab.iii. p. 140); and the Sinus Emporicus ( $\kappa$ ó人aros 'Epropuxds, Strab. xvii. 827), on the W. coast of Mauretania, seems to have been so named from the commercial settlements of the Phoenicians. Cerne
was the limit of their voyages on this coast; but the situation of Cerne is still a subject of discussion. [Cekne.]

With regard to their colonies on the N. or Mediterranean coast of Africa, Strabo (i. p. 48) tells us that the Phoenicians occupied the middle parts of Africa soon after the Trojan War, and they were probably acquainted with it much sooner. Their earliest recorded settlement was Itace, or Utica, on the western extremity of what was afterwards called the gulf of Carthage, the date of which has been already mentioned. Pliny (xvi. 79) relates that the cedar beams of the temple of Apollo at Utica had lasted since its foundation, 1178 years before his time; and as Pliny wrote about 78 years after the birth of Christ, this aneedote corroborates the date before assigned to the foundation of Gades and Utica. The Phoenicians also founded other towns on this coast, as Hippo, Hadrumetum, Leptis, \&c. (Sall. Jug. c. 19), and especially Carthage, on which it is unnecessary to expatiate here. [Carthago.]

The principal modern works on Phoenicis are, Bochart's Geographia Sacra, a performance of unbounded learning, but the conclasions of which, from the defective state of critical and ethnographical science at the time when it was written, cannot always be accepted; Gesenius, Monumenta Phoenicia; Movers, article Phönizien, in Ersch and Gruber's Encyclopädie, and especially his work Die Phönizier, of which two volumes are pablished, but which is still incomplete; and Mr. Kenrick's Phoenicia, 8 vo . London, 1855, to which the compiler of this article is mach indebted The reader may also consult with advantage Hengstenberg, De Rebus Tyriorum, Berlin, 1832, and Beiträge zur Einleitung in das Alle Testament ; Heeren, Historical Researches, ghc. $^{\text {ch }}$ vol. ii. Oxford, 1833; Grote, History of Greece, vol. iii. ch. 18; Forbiger, Handbuch der alten Geographie, vol. ii. p. 659, sqq.; Russegger, Reisen; Burckhardt, Syria; Robinson, Biblical Researches, \&cc.
[T. H. D.]
PHOENI'CE. [PHILA.]
PHOENI'CIS. [Medron, No. 3.]
PHOENI'CIUS MONS. [Boeotia, p. 412, a.] PHOENI'CUS (Фotrikoûs). 1. A port of Ionia, at the foot of Mount Mimas. (Thucyd. viii. 34.) Livy (xxxvi. 45) notices it in his account of the naval operations of the Romans and their allies against Antiochus (comp. Steph. B. s. v.); but its identification is not easy, Leake (Asia Minor, p. 263) regarding it as the same as the modern port of Tshesme, and Hamilton (Researches, ii. p. 5) as the port of Egri-Limen.
2. A port of Lycia, a little to the east of Patara; it was scarcely 2 miles distant from the latter place, and surrounded on all sides by high cliffs. In the war against Antiochus a Roman fleet took its station there with a view of taking Patara. (Liv. xexvii. 16.) Beaufort (Karamania, p. 7) observes that Livy's description answers accurately to the bay of Kalamaki. As to Mount Phoenicus in Lycia, see Olympus, Vol. II. p. 480.
[L. S.]
PHOENI'CUS. [PHycus]
PHOENI'CUS (థoıviooùs $\lambda$ i $\mu \eta \nu$, Strab. xvii. p. 799 ; Ptol. iv. 5. § 7 ; Stadiasm. \& 12), a harbour of Marmarica, off which there were the two islands Didymae, which must not be confounded with those which Ptolemy (iv. 5. § 76) places off the Chersonesus Parva on the coast of Aegypt. Its position must be sought betwean Paigeus (nyijeus,

Strab. Le.; Ptol. l.c.; Stadiasm. l.c.), which is identified with Râs Tanhub, and Râs-al-Kanaïs. [E.B.J.]
 harbour of Messenia, IV. of the promontory Acritas, and in front of the islands of Oenussae. It seems to be the inlet of the sea opposite the E. end of the island Skhiza, which island is called by the Italians Capri, or Cabrera. (Paus. iv. 34. § 12; Leake, Morea, vol. i. p. 434.)
2. A harbour in the island of Cythera. [Vol. I. p. 738, b.]

## PHOENICU'SA. [Aeoliae Insulae.]

PHOENIX (\$oiv $\xi$ ). 1. A river of Malis, flowing into the Asopus, S. of the latter, and at the distance of 15 stadia from Thermopylae. (Herod. vii. 198; Strab. ix. p. 428; Leake, Nu'thern Greece, vol. ii. p. 32.)
2. A river of Thessaly. flowing into the Apidanus. (Vibius Sequest. p. 16; Plin. iv. 8. s. 15; Lucan, vi. 374 ; Leake, Northern Greece, vol. iv. p. 515.)
3. A small river of Achaia [Vol. I. p. 13, b.]

PHOETEIAE. [Phytia.]
PHOEZON. [Mantineia, p. 264, e.]
PHOLEGANDROS ( $\Phi o \lambda e ́ \gamma a \nu \delta \rho o s, ~ S t r a b . ~ x . ~ p . ~ . ~$ 484, seq. : Steph. B. s. v.; фолíkavסpos or $\Phi \in \lambda d$ кауброs, Ptol. iii. 15. § 31 : Eth. Фолєүdvסpios, Фo grean sea, and one of the smaller of the Cyclades, lying between Melos and Sicinos. It was said to have derived its name from a son of Minos. (Steph. B. s.v.) It was called the iron Pholegandros by Aratus, on account of its ruggedness, but it is more fertile and better caltivated than this epithet would lead one to suppose. The modern town stands upon the site of the ancient city, of which there are only a few remains, upon the northern side of the island. (Ross, Reisen auf den Griech. Inseln, vol. i. p. 146.)

## PHO'LOE. [Elis, p. 817.] <br> PHO'RBIA. [Myconos.]

PHOTICE (\$ootıkf), a city in Epeirus, mentioned only by later writers, was restored by Justinian. Procopius says that it originally stood in a marshy situation, and that Justinian built a citadel upon a neighboaring height. It is identified by Velá, in the ancient Molossis, which now gives title to a bishop, but there are no Hellenic remains at this place. (Procop. iv. 1; Hierocl. p. 652, with Wesseling's note; Leake, Northern Greece, vol. iv. p. 96.)

PHRA (\$pd, Isidor. Mans. Parth. c. 16), a town in Ariana, mentioned by Isidorus in his brief summary of the principal stations between Mesopotamia and Arachosia. There cau be little doubt that this place corresponds with the Ferrah or Furrah of modern times (Wilson, Ariana, p. 153), on the river called the Ferrah-rud. Ritter (viii. p. 120) has supposed that this is the same place which Ptolemy mentions by the name of Pharazana, in Drangiana (vi. Y9. § 5); and Droysen (ii. p. 610) imagines that it is the same as the Phrada of Stephanus B., which was also a city of Drangiana. Both conjectures are probable.

PHRAATA ( $\tau$ dे $\Phi$ pdata, Appian. Parth. pp. 80 99, ed. Schw.; חpdaбтa, Dion Cass. xlix. 25 ;
 in ancient Media, which seems to have served as a winter residence for the Parthian kings, and at the saine time as a stronghold in the case of need. Its position is doubtful. Forbiger imacines that it is the same as the citadel described by Strabo, under the name of Vera (xi. p. 523); and there seems some
ground for supposing that it is really the same place. If the name Phrasta be the correct one, it is likely that it derived its name from Phraates. (Plut. Anton. c. 38.) (See Rawlinson On the Atrapatenian Ecbatana, R. Geog. Journ. vol. x. part 1, 1840.)
[V.]

## PHRAGANDAE. [MaEdi.]

PHREATA (фpéa $\alpha$ ), that is, the Wells, a place in the district of Garsauritis in Cappadocia. (Ptol. v. 6. § 14.) The name is an indication of the fact noticed by ancient writers, that the country had a scanty supply of water. (Wesseling, ad Hierocl. p. 700.)
[L.S.]
PHRI'CIUM (\$piкıov), a mountain of Locris, above Thermopylue. (Strab. xiii. pp. 582, 621; Steph. B. s. $\boldsymbol{v .}$ )

## PHRICONIS. [Crmer.]

PHRIXA ( $\Phi \rho\{\xi$, Paus. et alii ; $\Phi \rho\{\xi a s$, Herod. iv. 148: Eth $\Phi \rho \stackrel{\xi}{ }$ aios), a town of Triphylia in Elis, situated upon the left bank of the Alpheius, at the distance of 30 stadia from Olympia. (Strab. viii. p. 343; Steph. B. s. v.) It was founded by the Minyae (Herod. l.c.), and its name was derived from Phaestus. (Steph. B. s. v. Mdкıotos.) Phriza is rarely mentioned in history; but it shared the fate of the other Triphylian cities. (Comp. Xen. Hell. iii. 2. § 30; Pulyb. iv. 77, 80.) Its position is determined by Pausanias, who says that it was situated upon a pointed hill, opposite the Leucanias, a tributary of the Alpheias, and at a ford of the latter river. (Paus. vi. 21. § 6.) This pointed hill is now called Paleofinaro, and is a conspicuous object from both sides of the river, whence the city received the name of Phaestus in later times. (Steph. B. s. v фauбTós.) The city was in ruins in the time of Pausanias, who mentions there a temple of Athens Cydonia. Upon the summit of the hill there are still remains of Hellenic walls. (Leake, Morea, vol. ii. p. 210; Boblaye, Récherches qic. p. 136 ; Ross, Reisen im Peloponnes, p. 108; Curtius, Peloponnesos, vol. ii. p. 90.)

PHRIXUS ( $\Phi \rho i(\xi) s)$, a tribatary of the Erasinus, in the Argeia. [Argos, p. 201, a.]

PHRUDIS. [Frudis.]
PHRURI ( $\Phi \rho 0$ ûpor), a Scythian people in Serica, described as cannibals. (Plin. vi. 17. s. 20; Dionys. Per. 752, and Eustath. ad loc.)

PHRY'GIA (\$puyia: Eth. Фpíyes. Phryges), one of the most important provinces of Asia Minor. Its inhabitants, the Phrygians, are to us among the most obscure in antiquity, at least so far as their origin and nationality are concerned. Still, however, there are many indications which seem calculated to lead us to definite conclusions. Some regard them as a Thracian tribe (Briges or Bryges), who had iminigrated into Asia; others consider them to have been Armenians; and others, again, to have been a mixed nuce. Their Thracian origin is mentioned by Strabo (vii. p. 295, x. p. 471 ) and Steplanus B. (s. v); and Herodotus (vii. 73) mentions a Macedonian tradition, according to which the Phrygians, undicr the name of Briges, were the neighbours of the Macedonians before they migrated into Asia. This migration, according to Xanthus (ap. Strab. xiv. p. 680), took place after the Trojan War, and according to Conon (ap. Phot. Cod. p. 130, ed. Bekk.) 90 years before that war, under king Midas. These statements, however, can hardly refer to an original migration of the Phrygians from Europe into Asia, but the migration spoken of by these authors seems to refer rather to the return to Asia of a portion of
the nation settled in Asia; for the Phrygians are not only repeatedly spoken of in the Homeric poems (Il. ii. 862, iii. 185, x. 431, xvi. 717, xxiv. 535), but are generally admitted to be one of the most ancient nations in Asia Minor (see the story in Heroi. ii. 2), whence they, or rather a portion of them, must at one time hare migrated into Europe; so that in our traditions the account of their migrations has been reversed, as in many other cases. The gengraphical position of the Phrygians points to the highlands of Armenia as the land of their first abode, and the relationship between the Phrygians and Armenians is attested by some singular coincidences. In the army of Xerxes these two nations appear under one cominander and using the same armour; and Herodotus (vii. 73) adds the remark that the Armenians were the descendants of the Phrygians. Eudoxus (ap. Steph. B. s. v. 'Aphevía, and Eustath. ad Düm. Per. 694 ) mentions the same circumstance, and moreover alludes to a similarity in the languages of the two peoples. Both are said to have lived in subterraneous habitations (Vitruv. ii. 1; Xenoph. Anab. iv. 5. § 25 ; Diod. xiv. 28); and the names of buth, lastly, are used as synonyms. (Anecd Graec. Oron. iv. p. 257, ed. Cramer.) Under these circumstances it is impossible not to carne to the conclusion that the Phrygians were Armenians; thougli bere, again, the account of their migrution has been reversed, the Armenians not being descended from the Phrygians, but the Phrygians from the Armenians. The time when they dexcended from the Armenian highlands cannot be determined, and unquestionably belongs to the remotest ages, for the Phrygians are described as the most ancient inhabitants of Asia Minor. (Paus, i. 14. §2; Claudian, in Eutrop. ii. 251, \&c.; Appulei. Metam. xi. p. 762, ed. Oud.) The Phrygian legends of a great flood, connected with king Annacus or Nannacus, also are very significant. This king resided at Iconium, the must eastern city of Phrygia; and after his death, at the age of 300 years, a great flowd overwhelmed the country, as had been foretold by an ancient oracle. (Zosim. vi. 10 ; Suid. s. v. Návraxos; Steph. B. s. v. 'Iкóviov; comp. Ov. Met. viii. 620, \&c.) Phrygia is said to have first risen out of the flood, and the ark and Mount Ararat are mentioned in connection with the Phrygian town of Celaenae. After this the Phrygians are said to have been the first to adopt idolatry. (Orac. Sibyll. i. $196,262,266$, vii. $12-15$.) The influence of the Old Testament apon these traditions is unmistakable, but the identity of the Phrygians ard Armenians is thereby nevertheless confirmed. Another arguinent in favour of our supposition may be derired from the architectural remains which have been discovered in modern times, and are scarcely noticed at all by the ancient writers. Vitruvius (ii. 1) remarks, that the Phrygians hollowed out the natural hills of their country, and formed in them pessages and rooms for habitations, so far as the nature of the hills permitted. This statement is most fully confirmed by modern travellers, who have found such habitations cut into rocks in almost all parts of the Asiatic peninsula. (Hamilton, Researches, ii. p. 250, 288 ; Texier, Description de I Asie Mizewre, i. p. 210, who describes an immense town thus formed out of the natural rock.) A few of these architectural monuments are adorned with inscriptions in Phrygian. (Texier and Steuart, $A$ Description of sume ancient Domuments with Inscriptions still existing in Lydia and Phrygia,

Inndon, 1842.) These inscriptions must be of Phrygian origin, as is attested by such proper names as Midas, Ates, Aregastes, and others, which occur in them, though some have unsuccessfully attempted to make out that they are Greek. The impression which these stupendous works, and above all the rock-city, make upon the beholder, is that he has before hin works executed by human hands at a most remote period, not, as Vitruvius intimates, because there wis a want of timber, but because the first robust inlabitants thought it safest and most convenient to construct such habitations for themselves. They do not contain the slightest trace of a resemblance with Greek or Roman structures; but while we assert this, it cannot be denied, on the other hand, that they display a striking resemblance to those structures which in Greece we are in the habit of calling Pelasgian or Cyclopian, whence Texier designates the above mentioned rock-city (near Boghaglietu, between the Halys and Iris) by the name of a Pelasgian city. (Comp. Hamilton, Rescarches, i. Pp. 48, 490, ii. pp. 226, \&c., 209.) Even the lion gate of Mycenae reappears in several places. (Ainsworth, Travels and Researches, ii. p. 58; Leake, Asia Minor, p. 28.) These facts throw a surprising light apon the legend about the migration of the Phrygian Pelops into Argolis, and the tombs of the Phrygians in Peloponnesus, mentioned by Athenaeus (xiv. p. 625). But yet much remains to be done by more systematic exploration of the countries in Asia Minor, and by the interpretation of their monuments. One conclusion, however, can even now be arrived at, viz. that there must have been a time when the race of the Phrygians formed, if not the sole population of Asia Minor, at least by far the most important, bordering in the east on their kinsmen, the Armenians, and in the southeast on tribes of the Semitic race. This conclusion is supported by many facts derived from ancient writers. Independently of several Greek and Trojan legends referring to the southern coasts of Asia Minor, the name of the Phrygian mountain Olympus also occurs in Cilicia and Lycia; the north of Bithynia was in earlier times called Bebrycia, and the town of Otroia on the Ascanian lake reminds as of the Phrygian chief Otreus. (Hom. Il. iii. 186.) In the west of Asia Minor, the conntry about Mount Sipylus was once occupied by Phrygians (Strab. xii. p. 571 ); the Trojan Thebe also bore the name Dygdonia, which is synonymous with Phrygia (Strab. xiii. p. 588); Mygdonians are mentioned in the neighbourhood of Miletus (Aelian, V. H. viii. 5); and Polyaenus (Strateg. viii. 37) relates that the Bebryces, in conjunction with the Phocaeans, carried on war against the neighbouring barbarians.

From all this we infer that Trojans, Mysians, Maeonians, Mygdonians, and Dolionians were all branches of the great Phrygian race. In the Iliad the Trojans and Phrygians appear in the closest relation, for Hecuba is a Phrygian princess (xvi. 718), Priam is the ally of the Phrygians against the Amazons (iii. 184, \&cc.), the name Hector is said to be Phrygian (Hesych. s. v. Dapeios), and the names Paris and Scamandrius seem likewise to be Phrygian for the Greek Alexander and Astyanax. It is also well known that both the Greek and Roman poets use the names Trojan and Phrygian as synonyms. From the Homeric hymn on Aphrodite (113) it might be inferred that Trojans and Phrygians spoke different languages; but that passage is equally clear, if it is taken as alluding
only to a dialectic difference. Now as the Trians throughout the Homeric poems appear as a peopis akin to the Greeks, and are even called Hellenes by Dionysius of Halicarnassus (Ant. Rom. i. 61), it follows that the Phrygians also must have been related to the Greeks. This, again, is further supported by direct evidence; for, looking apart from the tradition about Pelops, which we have already alluded to, king Midas is said to have been the first of all foreigners to have dedicated, about the middle of the eighth century в. C., a present to the Delphic oracle (Herod. i. 14); and Plato (Cratyl. p. 410) mentious several words which were common to the Greek and Phrygian langaages. (Comp. Jablonski, Opera, vol. iii. p. 64, \&cc. ed. Te Water.); and, lastly, the Armenian language itself is now proved to be akin to the Greek. (Schroeder, Thesaur. Ling. Arm. p. 51.) The radical identity of the Phrygians, Trojans, and Greeks being thus established, we shall proceed to show that many other Asiatic nations belonged to the same stock. The name of the Mygdonians, as already observed, is often used synonymously with that of the Phrygians (Paus. $x$. 27. § 1), and in Homer (IL. iii. 186) the leader of the Phrygians is called Mygdon. According to Stephanus B. (8. v. Muyסovia), lastly, Mygdonia was the name of a district in Great Phrygia, as well as of a part of Macedonia. The Doliones, who extended westward as far as the Aesepus, were separated from the Mygdonians by the river Rhyndacus. (Strab. xiv. p. 681 ; Schol. ad Apollon. Rhod. i. 936, 943, 1115.) At a later time they disappear from history, their name being absorbed by that of the Phrygians. The Mysians are easily recognisable as a Phrygian people, both from their history and the country they inhabited. They, too, are called Thracians, and their language is said to have been a mixture of Phrygian and Lydian (Strab. xii. p. 572), and Mysians and Phrygians were so intermingled that their frontiers could scarcely be distinguished. (Strab. xii. p. 564 ; Eustath. ad Hom. Il. ii. 862, ad Diongs. Per. 810; Suid. s. v. où $\delta$ èv $\ddagger \tau \tau o v) ~ A s$. to the Maeonians, see Lydia. The tribes of Asia Minor, which are usually designated by the name Pelasgians, thus unquestionably were branches of the great Phrygian stock, and the whole of the western part of the peninsula was thus inhabited by a variety of tribes all belonging to the same family. But the Phrygians also extended into Europe, where their chief seats were in the central parts of Emathia (Herod. viii. 138; comp. Strab. xiv. p. 680.) There we meet with Phrygians, or with a modification of their name, Brygians, in all directions. Mardonius, on his expedition against Greece, met Brygians in Thrace. (Herod. vi. 45; Steph. B. 8. v. Bpúkau; Plin. iv. 18, where we have probably to read Brycae for Brysae.) The Phrygian population of Thrace is strongly attested by the fact that many names of places were common to Thrace and Troas. (Strab. xiii. p. 590; comp. Thucyd. ii. 99; Suid. s. v. $\Theta d-$ $\mu \nu p i s ;$ Solin. 15; Tzetz. Chil. iii. 812.) Traces of Phrygians also occur in Chalcidice. (Lycoph. 1404: Steph. B. s. v. Kpovois.) Further south they appear about Mount Oeta and even in Attica. (Thucyd. ii. 22 ; Strab. xiii. p. 621 ; Steph. B. s. v. Фpuria and Фpintov; Eustath. ad Dionys. Per. 810.) Mount Olympus, also, was perhaps only a repretition of the Phrygian name. In the west of Edessa in Macedonia, about lake Lychnidus, we meet with Bryges (Strab. vii. pp. 326, 327 ; Steph. B. s. v. Bpúk), and in the same vicinity we have the towns of Brygion,

Brygias, and Mutatio Brucida. (Steph. B. a w.; It. Hieros. p. 607.) The westernmost traces of Brygians we find about Dyrrhachium. (Strab. L.c.; Appian, Bell. Civ. ii. 39; Scymn. 433, 436.) It is difficult to determine how far Phrygian tribes extended northward. The country beyond the eastern part of Mount Haemus seems to have been occupied at all times by Thracians; but Phrygians extended very far north on both sides of Mount Scardas, for Pannonia and Moesia seem to be only different forms for Paeonia and Mybia; and the Breucao on the Savus also betray their origin by their name. It is possible also that the Dardani were Phrygians, and descendants of the Teucrians in Troas; at least they are clearly distinguished from the Illyrians. (Polyb. ii. 6.) Strabo, lastly, connects the Illyrian Henetes with those of Asia Minor who are mentioned by Homer ( 11 ii. 852), and even the Dalmatians are in one passage described as Armenians and Phrygians. (Cramer, Anecd. Graec. Ox. iii. p. 257.) If we sum up the results thus obtained, we find that at one time the Phrygians constituted the main body of the population of the greater part of Thrace, Macedonia, and Illyricum. Allusions to their migrations into these countries are not wanting, for, independently of the traditions about the migrations of the Teucrians and Mysians (Herod. v. 13, vii. 20; Strab. Fragm. 37 ; Lycophr. 741, \&c.), we have the account of the migration of Midas to the plains of Emathia, which evidently refers to the same great event. (Athen. xv. p. 603; Lycoph. 1397, \&cc.)

The great commotions which took place in Asia and Eurupe after the Trojan War were most unfortunate for the Phrygians. In Europe the Illyrians pressed southwards, and from the north-east the ScythoThracian tribes pushed forward and occupied almost all the country east of the river Axius; Hellenic colonies were established on the coasts, while the rising state of the Macedonians drove the Phrygians from Emathia. (Syncell. pp. 198, 261 ; Justin, viii. 1.) Under sach circumstances, it cannot surprise us to find that the great nation of the Phrygians disappeared from Europe, where the Paeonians and Pannonians were their only remnants. It is probable that at that time many of them migrated back to Asia, an event dated by Xanthus ninety years before the Trojan War. It must have been about the same time that Lesser Mysia and Lesser Pbrygia were formed in Asia, which is expressed by Strabo (xii. pp. 565, 571, 572, xiii. p. 586) in his statement that the Phrygians and Mysians conquered the ruler of the country, and took possession of Troas and the neighbouring coantries.

But in Asia Minor, toc, misfortunes came upor the Phrygians from all quarters. From the southeast the Semitic tribes advanced further and further; Diodorus (ii. 2, \&c.) represents Phrygia as sabdued even by Ninus; but it is an historical fact that the Syrian Cappadocians forced themselves between the Armenians and Phrygians, and thus separated them. (Herod. i. 72, v. 49, vii. 72.) Strabo also (xii. p. 559) speaks of structures of Semiramis in Pontus. The whole of the south coast of Asia Minor, as far as Caria, received a Semitic population at a very early period; and the ancient Phrygian or Pelasgian people were in some parts reduced to the condition of Helots. (Athen. iv. p. 271.) The latest of these Syrophoenician immigrants seem to have been the Lydians [LYDIA], whose struggles with the Mysians are expressly mentioned. (Strab. xiii. p. 612; Scylax, p. 36.) This victorious progress of the

Semitic races exercised the greatest influence apon the Phrygians; for not only was their political importance weakened, but their national independence was lost, and their language and religion were so deeply affected that it is scarcely possible to separate the foreign elements from what is original and indigenous. In the north also the Phrygians were hard pressed, for the same Thracians who had driven them out of Europe, also invaded Asia; for although Homer does not distinctly mention Thracians in Asia, yet, in the historical ages, they occupied the whole const from the Hellespont to Heracleia, under the names of Thyni, Bithyni, and Mariandyni. (Comp. Herod. vii. 75.) The conflicts between the ancient Phrygians and the Thracians are alluded to in several legends. Thus king Midas killed bimself when the Treres ravaged Asia Minor as far as Paphlagonia and Cilicia (Strab. i. p. 61); the Mariandyni are described as engaged in a war against the Mysians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apollod. i. 9. § 23, ii. 5. § 9 ; Apolion. Rhod. ii. 752, 780, 786, with the Schol: Tzetz. ChiL iii. 808, \&c.) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, according to others, only five years, and which is assigned to the beginning of the ninth century в. c., is probably connected with that age in which the Phrygians were engaged in perpetual wars (Diod. vii. 13; Syncell p. 181); and it may have been about the same time that Phrygians from the Scamander and from Troy migrated to Sicily. (Paus. v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the cnast of Asia Minor counteracted the spreading influence of the Semitic race; bat still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the peninsula, and Croesus incorporated them with his own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are ${ }^{2}$ already distinguished (Xenoph. Cyrop. i. 5. § 3, vi. 2. § 10 , vii. 4. § 16 , viii. 6. § 7), the former being governed by a satrap (ii. 1. §5), and the latter, also called Phrygia on the Hellespont, by a king. (vii. 4. §8).

After haring thns reached the period of authentic history, we are enabled to turn our attention to the condition of the Phrygians, and the country which they nitimately inhabited. As to the name Phryges, of which Bryges, Briges, Breuci, Bebryces, and Berecynthae are only different forms, we are informed by Hesychius (s. v. Bpires) that in the language of the kindred Lydians (that is, Maeonians) it signified "freemen." The nution bearing this name appears throughout of a very peaceable disposition, and anable to resist fureign impressions and influences. None of their many traditions and legends points to a warlike or heroic period in their history, bat all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordius. After the conquest of their country by Persia, the Phrygians are generally mentioned only with contempt, and the Phrygian names Midas and Manes were given to slaves. (Cic. p. Flucc. 27; Curt. vi. 11 ; Strab. vii. p. 304.) But their civilisation increased in consequence of their peaceful disposition. Agriculture was their chief occupation; and whoever killed an ox or stole agricultaral implements was put to death. (Nicol. Lamasc. p. 148, ed. Orelli.) Gordius, their king, is
said to have been called from the plough to the throne. (Arrian, Anab. ii. 3. § 1 ; Justin, xii. 7.) Pliny (vii. 6) calls the biga an invertion of the Phrygians. Great care also was bestowed upon the cultivation of the vine; and commerce flourished among them in the very earliest times, as we must infer from their well-built towns mentioned by Homer (IL. iii. 400). The foundation of all their great towns, which were at the same time commercial emporia, belongs to the mythical ages, as, e. g., Pessinus, Gordium, Celaenae, and Apamea. The religions ideas of the Phrygians are of great interest and importance, and appear to have exercised a greater influence upon the mythology of the Greeks than is commonly supposed, for many a mysterious tradition or legend current among the Greeks must be traced to Phrygia, and can be explained only by a reference to that country. Truly Phrygian divinities were Cybele (Rhea or Agdistis), and Sabazius, the Phrygian name for Dionysus. (Strab. x. p. $470,8 \mathrm{sc}$.) With the worship of these deities were connected the celebrated orgiastic rites, accompanied by wild music and dances, which were subsequently introduced among the Greeks. Other less important divinities of Phrygian origin were Olympus, Hyagnis, Lityerses, and Marsyas. It also deserves to be noticed that the Phrygians never took or exacted an oath. (Nicol. Damasc. p. 148.) But all that we hear of the religion of the Phrygians during the historical times appears to show that it was a mixture of their own original form of worship, with the less pure rites introduced by the Syro-Phoenician tribes.

The once extensive territory inhabited by the Phrygians, had been limited, as was observed above, at the time of the Persian dominion, to Lesser Phiygin, on the Hellespont, and Greater Phiycin. It is almost impossible accurately to define the boundaries of the former; according to Scylax ( p . 35; comp. Pomp. Mela, i. 19) it extended along the coast of the Hellespont from the river Cius to Sestus; but it certainly embraced Troas likewise, for Ptolemy marks the two countries as identical. Towards the interior of the peninsula the boundaries are not known at all, but politically as a province it bordered in the east on Bithynia and Great Phrygia, and in the south on Lydia. Great Phirygia formed the central country of Asia Minor, extending from east to west about 40 geographical miles, and from south to north about 35. It was bounded in the north by Bithynia and Paphlagonia, and in the east by Cappadocia and Lycaonia, the river Halys forming the boundary. (Herod. r. 52.) The southern frontier towards Pisidia and Cilicia was formed by Mount Taurus; in the west Mounts Tmolus and Messogis extend to the western extremity of Mount Taurus; but it is almost impossible to define the boundary line towards Mysia, Iydia, and Caria, the nationalities not being distinctly marked, and the Romans having intentionally obliterated the ancient landmarks. (Strab. xii. p. 564, xiii. p. 629.) The most important part in the north of Phrygia was the fertile valley of the Sangarius, where Phrygians lived in the time of Homer (IL. iii. 187, xvi. 719), and where some of their most important cities were situated. Iconium, the easternmost city of Phrygia, was situated in a fertile district; but the country to the north-west of it, with the salt lake Tatta, was barren and cold, forming a high plateau, which was only fit for pasture, and suffered from frequent droughts. The southern portion of Pbrygia, surrounded by Mount Taurus, a
branch of it turning to the north-west, and by the mountains containing the sources of the Maeander. bore the surname Parorios; it was a table-land, but, to judge from the many towns it contained, it cannot have been as barren as the northern platean. In the west Phrygia comprised the upper valley of the Maeander, and it is there that we find the most beantiful and most populous parts of Phrygia; but that district was much exposed to earthquakes in consequence of the volcanic nature of the district, which is attested by the hot-springs of Hierapolis, and the Plutonium, from which suffocating exhalations were sent forth. (Claudian, in Eutrop. ii. 270, \&cc. ; Strab. xii. pp. 578, \&cc., 629, \&c.; Herod. vii. 30; Vitruv. viii. 3.)

Phrygia was a country rich in every kind of produce. Its mountains seem to hare furnished gold; for that metal plays an important part in the legends of Midas, and several of the Phrygian rivers are called "auriferi." (Claudian, l. c. 258.) Phrygian marble, especially the species found near Synnada, was very celebrated. (Strab. xii. p. 579 ; Paus. i. 18. § 8, \&cc. ; Ov. Fast. v. 529 ; Stat. Silv. i. 5. 36.) The extensive cultivation of the vine is clear from the worship of Dionysus (Sabazius), and Homer (IL. iii. 184) also gives to the country the attribute $\alpha_{\mu} \mu \pi \in \lambda \delta \epsilon \sigma \sigma a$. The parts most distinguished for their excellent wine, bowever, were subsequently separated from Phrygia and added to neighbouring provinces. But Phrygia was most distinguished for its sheep and the fineness of their wool (Strab. xii. p. 578). King Amyntas is said to have kept no less than 300 flocks of sheep on the barren table-land, whence we must infer that sheep-breeding was carried on there on a very large scale. (Comp. Suid. s. v. \$pvriav $\langle\rho i \omega v$; Aristoph. Av. 493 ; Strab. l. c. p. 568.)

When Alexander had overthrown the Persian power in Asia Minor, he assigned Great Phrygia to Antigonus, B. c. 333 (Arrian, Anab. i. 29); and during the first division of Alexander's empire that general retained Phrygia, to which were added Lycia and Pamphylia, while Leonnatus obtained Lesser Phrygia. (Dexipp. ap. Phot. p. 64; Curt. x. 10 ; Diod. xviii. 3 ; Justin, xiii. 4.) In the beginning of в. c. 321, Perdiccas assigned Greater Phrygia, and probably also the Lesser, to Eumenes (Justin, xiii. 6; Corn. Nep. Eum. 3); but in the new division of Triparadisus Antigonus recovered his former provinces, and Arrhidaeus obtained Lesser Phrygia, which, bowever, was taken from him by Antigonus as early as в.c. 319 . (Diod. xviii. 39, xix. 51, 52, 75; Arrian, ap. Phot. p. 72.) After the death of Antigouus, in B. c. 301, Lesser Phrygia fell into the hands of Lysimachus, and Great Phrygia into those of Seleucns (Appian, Syr. 55), who, after conquering Lysimachas, in B. C. 282, united the two Phrygias with the Syrian empire. (Appian, Syr. 62 ; Justin, xvii. 2 ; Memnon, Hist. Heracl. 9.) Soon two other kingdoms, Bithynia and Pergannum, were formed in the vicinity of Phrygia, and the Gauls or Galatae, the most dangernus enemy of the Asiatics, took permanent passession of the northeastern part of Pbrygia, the valley of the Sangarius. Thus was formed Galatia, which in our maps separates Greater Phrygia from Paphlagonia and Bithynis; and the ancient towns of Gordium, Ancyra, and Pessinus now became the seats of the Gauls. To the east also Phrygia lost a portion of its territory, for Lycaonia was extended so far westward as to embrace the whole of the above mentioned barren
platean. (Strab. xiv. p. 663.) It is not impossible that Attalus I. of Pergamum may have taken possession of Lesser Phrygia as early as B. c. 240, when he had gained a decisive victory over the Gauls, seeing that the Trocmi, one of their tribes, had dwelt on the Hellespont (Liv. xxxviii. 16): but his dominion was soon after reduced by the Syrian kings to its original dimensions, that is, the comutry between the Sinus Elaeus and the bay of Adramyttium. However, after the defeat of Antiochus in the battle of Magnesia, in B. C. 191, Eumenes IL. of Pergamam obtained from the Romans the greater part of Asia Minor and with it both the Phrygias. (Strab. xiii. p. 624 ; Liv. xxxvii. 54, Sce.) Eumenes on that occasion also acquired another district, which hal been in the possession of Prasias, king of Bithynia. Livy (xxxviii. 39) calls that district Mysia, but it must have been the same country as the Phrygin Epictetus of Strabo (xii. pp. 563, 564, $571,575,576$ ). But Strabo is certainly mistaken in regarding Phrygia Epictetus as identical with Lesser Phrygia on the Hellespont, the former, according to his own showing, nowhere touching the sea (p. 564), but being situated south of Mount Olympus (p. 575), and being bounded in the north and partly in the west also by Bithynia (p. 563). The same conclusion must be drawn from the situations of the towns of Azani, Midaeum, and Dorylaeum, which be himself assigns to Phrygia Epictetus (p. 576), and which Ptolemy also mentions as Phrygian towns. These facts clearly show bow confused Strabo's ideas about those countries were. The fact of Livy calling the district Mysia is easily accounted for, since the names Phrygia and Mysia are often confounded, and the town of Cadi is sometimes called Mysian, though, according to Strabo, it belonged to Phrygia Epictetus. It was therefore unquestionably this part of Phrygia about which Eumenes of Pergamum was at war with Prusias, and which by the decision of the Romans was handed over to the Pergamenian king, and hence obtained the name of Phrygia Epictetus, that is, "the acquired in addition to." (Polyb. Excerpt. de Legat. 128, 129, 135, 136; Liv. xxxix. 51 ; Strab. p. 563.) After the death of Attalus III., B. c. 133, all Phrygia with the rest of the kingdom of Pergamam fell into the hands of the Romans. A few years later, when the kingdom of Pergamum became a Roman prorince, Phrygia was given to Mithridates V. of Pontus (Just. xxxviii. 1; Appian, Bell. Mithr. 57), but after his death in B. C. 120 it was taken from his son and successor, Mithridates VI., and declared free. (Appian, l.c.) This freedom, however, was not calculated to promote the interests of the Phrygians, who gradually lost their importance. The Rumans afterwards divided the country into jurisdictiones, bat without any regard to tribes or natural boundaries. (Strab. xiii. p. 629; Plin. v. 29.) In B. c. 88 the districts of Ladiceia, Apameia, and Synnada seem to have been added to the province of Cilicia. (Cic. in Verr. i. 17, 37.) But this arrangement was not lasting, for afterwards we find those three districts us a part of the province of Asia, and then again as a part of Cilicia, until in B. c. 49 they appear to have become permanently united with Asia. The east and south of Phrygia, however, especially the towns of Apollonia, Antiocheia, and Philomeliurn, did not belong to the province of Asia. In the new division of the empire made in the 4th century A. D., Phrygia larorios was added to the prorince of Pisidia, and a district on the Maeander to Caria.

The remaining part of Phrygia was then divided into l＇hrygia Salutaris，comprising the eastern part with Synnads for its capital，and Phrygia Pacatiana （sometimes also called Capatiana），which comprised the western part down to the frontiers of Caria． （Notit．Imp．c．2；Hierocl．pp．664，676；Constant． Porph．de Them．i．1；Ducas，p． 42 ；see the ex－ cellent article Phrygia in Pauly＇s Realencyclopaedie， by O．Abel ；Cramer，Asia M／inor，ii．p．1，\＆c．； Niebuhr，Leck on Anc．Hist．i．p．83，\＆c．，ii．p． 382．）

Phthia，phthio＇tis．［Thessalia．］
PHTHIRA（ $\Phi \theta i \rho a$, Steph．B．s．$v$ ；written $\phi \theta i \rho$ in Meineke＇s edition of Stephanus），a mountain in Catia，inhabited by the Phthires，is evidently the same as the $\$ \theta$ elp $\hat{\omega}$ y bpos of Homer（1l．ii．868）， which，according to Hecataeus，was identical with Mt．Latmus，but which others supposed to be the saine as Mt．Grius，running parallel to Mt．Latmus． （Nitrab．xiv．p．635．）
PHTHIRO＇PHAGI（ $\Phi 9 \epsilon!\rho o \phi d \gamma o t$ ），ie．＂lice－ e．ters，＂a Scythian people，so called from their filth and dirt（arò tov̂ aúxuoû nal toû rivov，Strab．xi． p．449）．Some modern writers endeavour to derive their name from $\phi \theta e i p$ ，the fruit of the mizus or fir－ tree，which served as their food（Ritter，Vorhalle， p．549），but there can be no doubt，from the expla－ nation of Strabo，of the sense in which the word was understood in antiquity．This savage people is variously placed by different writers．According to Strabo they inhabited the monntains of Cancasus （Strab．xi．pp．492，499），and according to other writers different parts of the colasts of the Black Sea．（Arrian，Per．P．Eux．p．18；Mela，i．18； Plin vi．4．）Ptolemy places them in Asiatic Sar－ matia beyond the Kha（v．9．§ 17）．According to Piiny（vi 4）they were strbsequently called Salue． The Budini are also said to have ate lice（ $\phi \theta \in[\rho 0-$ трayéouti，Herod．iv．109）．

PHTHUTH（ $\$ \theta o u ́ \theta$, Ptol．iv． $1 . \S 3$ ；Фoútทs，Jos． Antiq．i．6．§ 2；Fut，Plin．v．1），a river of Maure－ tania，which has been identified with the Wady Ten－ sif．In the ethnugraphic table of Genesis（x．6）， I＇hut is reckoned among the sons of Ham．This im－ mediate descent of Phat（a name which is generally admitted to indicate Mauretana）from Ham indi－ cates，like their Greek name，the depth of colour which distinguished the Mauretanians．In Ezekiel （xxvii．10）the men of Phut are represented as serving in the Tyrian armies（comp． $\mathbf{x x x} \mathbf{5}$ ，xxxviii． 5）；as also in Jeremiah（xlvi．9）they are sum－ moned to the bosts of Aegypt；and in Nahum （iii．9）they are the helpers of Nineveh．（Winer， Rcaleörterbuch，s．0．；Kenrick，Phoenicia，pp．137， 277．）
［E．B．J．］
PHUNDU＇SI（\＄ouvסoviaot）．a tribe mentioned by Ptolemy（ii．11．§ 12）as inhabiting the Chersonesus Cimbrica in the north of Germany，and dwelling north of the Cobandi and Chali．Zeuss（Die Deut－ schen，p．152），without satisfactory reasons，regards them as the same with the Sedusii mentioned by Caesar（B．G．i．31，37，51．）
［L．S．］
PHURGISATIS（Фoupyıaatis），a town in the sooth of Germany，mentioned only by Ptolemy（i． 11．§ 30）；it was situated in the country of the vol． 11.

Quadi，and Wilhelm（Germanien，p．230）believes that it existed in Moravia，in the neighbourhood of Znaim．
［L．S．］
PHUSIPARA（\＄ovoirdoa），a town of the dis－ trict of Melitene in Armenia Minor，betwpen Ciniacs and Eusemara，is mentioned only by Ptolemy（v． 7. § i）．
［L．S．］
PHYCUS（фикои̂s，Strab．viii．p．363，xvii．p． 837：Ptol．iv．4．§ 5 ：Plin．จ．5）．the mast northerly point of the Libyan coast， 2800 stadia from Taenarum（ 350 M．P．，Plin．l．c．），and 125 M．P．from Crete．（Plin．l．c．）Cato touched at this point in Africa after leaving Crete，but the natives refused to receive his ships．（Lucan，ix． 40．）Synesius，who has given in his letters（ $\mathrm{E} \cdot \mathrm{p}$ ． 51，100，114，129）several particulars about this spot，states that it was dangerous to live here because of the stagnant waters，and their fetid exhalations．It had a harbour situated to the $W$ ．，which is confirmed by the Coast－describer（Stadiasm．§53，where it is by an error called Phoenicus）．Scylax（ $p .46$ ）placed the gardens and lake of the Hesperides near this beadland， now Râs－al－Razat or Râs Sem，where Smyth（Medi－ terranean，p．455）marks the coast bold and steep， rising gradually to Cyrene．（Pacho，Voyage，p． 169 ：Barth，Wanderungen，p．498．）［E．B．J．］
 town of Phthiotis in Thessaly，one of the places subject to Protesilaus，and frequently mentioned in the Homeric poems．（Il．ii．695，xiii．696，xv．335， Od．xi．290；comp．A poll．Rhod．i．45；Steph．B． 8．v．）It contained a temple of Protesilaus．（Pind． Isthm．i．84．）Pliny erroneously calls it a town of Magnesia（iv．9．s．16）．Strabo describes it as standing between Pharsalus and Phthiotic Thebes， at the distance of about 100 stadia from the latter （ix．pp．433，435）．Leake places it at about 40 minutes from Ghidek，in the descent from a pass， where there are remains of an ancient town．The situation near the entrance of a pass is well suited to the name of Phylace．（Leake，Nurthern Greece， vol．iv．pp．332，364．）

2．A town of Mulossis in Epeirus，of uncertain site．（Liv．xlv．26．）

3．A place in Arcadia，upon the－frontiers of Tegea und Laconia，where the Alpheius rises．（Paus． viii．54．§ 1．）

4．A town of Pieria in Macedonia（Ptol．iii． 13. § 40），the inhabitants of which are mentioned by Pliny under the name of Phylacari（iv．10．s．17）．

PHYLACEIUM（Фu入aкeioy or Пuлakaiov），a town of western Phrygia，at a short distance from Themisonium．（Ptol．v．2．§ 26 ；Tab．Peut．； Googr．Rav．i．18，where it is called Filaction．） The Phrygian tribe of the \＄u入axívoiot，mentioned by Ptolemy（v．2．§ 27），undoubtedly derived its name from this place．
$\left[\begin{array}{ll}L_{0} & \text { S．}\end{array}\right]$
PHYLE．［ATTICA，p．329，b．］
PHYLLEIUM，PHYLLUS．［Asterium．］
PHYLLIS（Фu入入is），a district of Thrace in the neighbourhoxd of Mt．Pangaeus，bounded by the An－ gites on the W．and by the Strymon on the S ． （Herod．vii． 113 ；Steph．B．s．v．）

PHYRITES，a small tributary of the Caystras， having its origin in the western branch of Mount Tmolus，and flowing in a southern direction through the Pegasean marsh（Stagnum Pegaseam），dis－ charges itself into the Caystrus some distance above Ephesus．（Plin．v．31．）
［L．S．］

## PHYSCA，PHYSCUS．［EordaEa．］ <br> PHYSCELLA．［Galrisues．］

## PICENUM.

PIIYSCUS ( $\Phi$ úrkos: Eth. \$uakeús), a town of Caria, in the territory of the Rhodians, situated on the coast, with a harbour and a grove sacred to Leto. (Strab. xiv. p. 652; Stadiasm. Mar. Mag. § 245 ; Ptol. v. 2. § 11, where it is called фой possible to suppose that this Physcus was the porttown of Mylasa (Strab. xiv. p.659); we must rather assume that Passala, the port of Mylasa, also bore the name of Physcus. Our Physcus was the ordinary landing-place for vessels sailing from Rhodes to Asia Minor. (Strab. xiv. p 663; comp. Steph. B. s. v.) This harbour, now ralled Marmorice, and a part of it Physco, is one of the finest in the world, and in 1801 Lord Nelson's fleet anchored here, before the battle ef the Nile.

PHYSCUS, a tributary of the Tigris. [Tiaris.]
PHYTEUM (фútєov, Pol. v. 7; \$úтаıov, Steph. B. s. v.: Gavala), a town of Aetolia, probably on the northern shore of the lake Trichonis. (Leake, Northern Greece, vol. i. p. 155.)

PHY'TIA or PHOETEIAE (థuria, Thac. iii. 106 ; Фоıтєiaı, Pol. iv. 63 ; Фоıтlat, Steph. B. s. v.: Eth. \$oıticús, фoítios, \$oitıd̀, -âvos: Porta), a town in the interior of Acarnania, situated on a height W. of Stratus, and strongly fortified. It lay on the road from Stratus to Medeon and Limnaea. After the time of Alexander the Great it fell into the hands of the Aetolians, together with the other towns in the W. of Acarnania. It was taken by Philip in his expedition against Aetolia in B. c. 219 ; but the Aetolians, doubtless, obtained possession of it again, either before or after the conquest of Philip by the Romans. It is mentioned as one of the towns of Acarnania in a Greek inscription found at Punta, the site of Actium, the date of which is probably prior to the time of Augustus. In this inscription the ethnic form фootidy occurs, which is analogous
 (Thuc., Pol., U. cc. : Böckh, Corpus Inscript., No. 1793; Leake, Northern Grecce, vol. iii. p. 574, seq.)

PI'ALA ( $n i(a \lambda a)$, a town in the interior of Pontus Galaticus, mentioned only by Ptolemy (v. 6. § 9).
[L. S.]
 a town of Serica, from which the people Pialae (Пid入au or חıádoai), dwelling as far as the river Oechardus, derived their name. (Ptol. vi. 16. § 4.) In some MSS. of Pliny (vi. 17. s. 19) the Pialae are mentioned as a penple in Scythia intra Imaum; but Sillig rexds Psacao.

PialaE. [Piala.]
PIA'LIA (Mca入ía), a town of Histiaeotis in Thessaly, at the foot of Mt. Cercetium, probably represented by the Hellenic remains either at Sklátina or Ardhim. (Steph. B. s. v.; Leake, Northern Creece, vol. iv. p. 529.)
 people of Moesia Inferior, adjoining its southern or Thracian boundary.
[T.H.D.]
PICARIA. [Dalmatta.]
PICE'NSII (Пucívawt, P'tol. iii. 9. § 2), a people scated in the NE. part of Moesia Superior, on the river Timarus.
[T.H.D.]

## PICENTES. [Picenum.] <br> PICE'NTIA. [Picentini.]

PICENTI'NI(Пuкevtivol, Ptol.; Пíxeytes, Strab.), a tribe or people of Central Italy, settled in the southern part of Campania, adjoining the frontiers of Lucania. Their name obviously indicates a cluse connection with the inhabitants of Picenum on the
opposite side of the Italian peninsula; and this is explained by Strabo, who tells us that they were in fact a portion of that people who had been transported by the Romans from their original abodes to the shores of the Tyrrhenian sea. (Strab. v. p. 251.) The period of this transfer is not mentioned, bat it in all probability took place on or shortly after the conquest of Picenum by the Romans, B. C. 268. During the Second Punic War, the Picentini espoused the cause of Hannibal, for which conduct they were sererely punished after the close of the war, being, like the Lucanians and Brattians, prohibited from military service, and employed for the inferior daties of public messengers and couriers. They were at the same time compelled to abandon their chief town, which bore the name of Picentia, and to disperso themselves in the villages and hamlets of the surrounding country. (Strab. L c.) The more effectually to hold them in check, the Romans in b.c. 194 founded in their territory the colony of Salernum, which quickly rose to be a flourishing town, and the chief place of the surrounding district (Strab. Le.; Liv. xxxiv. 45 ; Vell. Pat. i. 15). Picentia, however, did not cease to exist: Florns indeed appears to date its destruction only from the period of the Social War (Flor. iii. 18); but even long after this it is mentioned as a town both by Mela and Pliny, and its name is still found in the Tabula as late as the 4th century. (Mel. ii. 4. § 9; Plin. iii. 5. s. 9; Tab. Peut.) The name of Vicensa is still borne by a hamlet on the road from Salerno to Eboli, and the stream on which it is situated is still called the Vicentino; but it is probable that the ancient city was situated rather more inland. (Romanelli, vol. iii. p. 610; Zannoni, Carta del Regno di Napoli.)

The boundaries of the Picentini are clearly marked both by Strabo and Pliny. They occupied the southern slope of the ridge of mountains which eeparates the gulf of Posidonia from that of Naples, extending froin the promontory of Minerva to the mouth of the Silarus. Ptolemy alone extends their confines across the range in question as far as the mouth of the Sarnus, and includes Surrentum among their towns. (Ptol. iii. 1. § 7.) Bat there is little doubt that this is inaccurate.

The name of Picentini is generally confined by geographers to the petty people in question, that of Picentes being given to the people of Picenam on the Adriatic. But it is doubtful how far this distinction was observed in ancient times. Picentinus is ased as an adjective form for "belonging to Picenum" both by Pompey (ap. Cic. ad Att. viii. 12, c.) and Tacitus (Hist. iv. 63); while Strabo uses חukevtivo for the people of Picenum, and ninevtes for those in Campania. The latter are indeed so seldom mentioned that we can hardly determine what was the general usage in regard to them. [E. H. B.]

PICENTI'NUM, a place in Pannonia, on the left bank of the Savus, on the road from Siscis to Sirmium. (It. Ant. p. 260.) It is possible that some ancirnt remains now called Kula may mark the site of the ancient Picentinuin.
[L. S.]
IICE'NUM ( $\dot{\eta}$ Пukevtion, Pol., Strab.: Eth. חıкevtivoı, Strab.; חuknvol, Ptol.; Picentes, Cic, Varr., Plin., \&c., but sometimes also Picentini and Piceni), a province or region of Central Italy, extending along the coast of the Adriatic from the mouth of the Aesis to that of the Matrinus, and inland as far as the central ridge of the Apennines. It was thus bounded on the W. by the Umbrians and Sabines, on the S. by the Vestini, and on the N. by

PICENUM.
PICENUM.
the temtory occupied by the Galli Senones, which was afterwards incorporated into the province of Umbria. The latter district seems to have been at one time regarded as rather belonging to Picenum. Thus Polsbius includes the "Gallicus Ager" in Picenum; and Livy even describes the colony of Ariminum as founded "in Piceno." (Pol. ii. 21; Liv. Epit. xv.) But the boundaries of Picenum were definitely established, as above stated, in the time of Augustus, according to whose division it constitated the Fifth Revion of Italy. (Plin. iii. 13. 8. 18; Strab. v. p. 240.) The district thus bounded forms a tract of about 80 gengraphical miles ( 800 stadia, Strab. v. p. 241) in length, with an average breadth of from 30 to 40 miles. The southern part of the territory thus limited was inhabited by a tribe called the Prabtutil, who appear to have been to sorne extent a different people from the Pi centes: bence Pliny gives to this district the name of Kegio Praetutiana; and Livy more than once notices the Praetutianus Ager, as if it were distinct from the Picenus Ager. (Plin. l. c.; Liv. xxii. 9, xsvii. 43.) The narrow strip between the rivers Vomanus and Matrinus, called the Ager Hadrianus, seems to have also been regarded as in some degree a separate district (Plin. l.c.; Liv. xxii. 9); but both these tracts were generally comprised by geographers as mere subdivisions of Picenum in the more extensive sense.

Very little is known of the history of the Picentes; but ancient writers seem to have generally agreed in asigning them a Sabine origin; tradition reported that they were a colony sent out from the parent cuntry in consequence of a vow, or what was called a sacred spring ; and that their name was derived from a Woodpecker (picus), the bird sacred to Mars, which was said to have guided the emigrants on their march. (Strab. v. p. 240; Plin. iii. 13. 8. 18; Fest. v. Picena, p. 212.) Silius Italicus, on the other hand, derives it from the name of Picus, the Italian divinity, whom he represents as the founder of Asculum (Sil. Ital. viii. 439-445); but this is in substance only another form of the same legend. That writer represients the region as previonsly possessed by the Pelasgians; no mention of these is found in any other author, but Pliny speaks of Siculians and Liburnians as having had settlements on this coast, especially in the Praetutian district, where Truentum was said still to preserve traces of a Liburnian colony (Plin. l.c.); while the foundation of Numana and Ancona, further to the $\mathrm{N}_{\text {, }}$ was ascribed to the Siculi. (1b.) We have no means of estimating the value of these statements; but it seems not improbable that in the last instance there was a confusion with the colony of Siciluen Grecks which was established at a much later period at Ancona [Ancona.] This settlement, which was founded about 380 в. c., by a body of Syracusan exiles who had fled from the tyranny of Diunysias (Strab. v. p. 241), was the only Greck colony in this part of Italy; and its foundation is the only fact transmitted to us concerning the history of Picenum previous to the time when it was brought into contact with the power of Rome. The Picentes appear to have stood aloof from the long protracted contests of the Romans with their Samuite neighbours; but their proximity to the Gauls caused the Romans to court their alliance; and a treaty concluded between the two nations in B. C. 299 seems to bave been faithfully observed until after the Senubes had ceased to be formidable. (Liv. x. 10.)

The Picentes reaped the edvantages of this long peace in the prosperity of their country, which bocame one of the most populous districts in Italy, so that according to Pliny it contained a population of 360,000 citizens at the time of the Roman conquest. (Plin. l. c.) Nevertheless they seem to have offered but little resistance to the Roman arms, and were reduced by the consuls Sempronius Sophus and Appius Clandius in a single campaign, в. c. 268. (Flor. i. 19; Liv. Epit. xv; Oros. iv. 4; Eutrop. ii. 16.) The causes which led to the war are unknown; but the fact that the Picentes and Sallentines were at this time the only two nations of Italy that remained unsubdued is quite sufficient to explain it.

From this time the Picentes lapsed into the ordinary condition of the subject allies of Rome; and though their territory is repeatedly mentioned as suffiering from the ravages of the Second Punic War (Pol. iii. 86; Liv. xxii. 9, xxvii. 43), the name of the people does not again occur in history till the great outbreak of the nations of Italy in the Social War, b.c. 90. In that memorable contest the Picentes bore a prominent part. It was at Asculum, which scems to have been always regarded as their capital, that open hostilities first broke out; the massacre of the proconsul Q. Servilius and his legate Fonteins in that city having, as it were, given the signal of the general insurrection. (Appian, B. C. i. 38; Liv. Epit. Ixxii; Vell. Pat. ii. 15 ; Diod. $x x \geq r i i . ~ 2$. The first attempt of Cn. Pompeius Strabo to reduce Asculum was repulsed with loss; and it was with difficulty that that general could maintain his footing in Picenum while the other Roman armies were occopied in hostilities with the Marsi, Peligni, and other nations nearer Rome. It was not till the second year of the war that, having obtained a decisive victory over the allies, he was enabled to resume the offensive. Even then the Picentine general Judacilius maintained a long struggle against Pompeius, which was at length terminated by the surrender of Asculum, and this seems to have been followed by the submission of the rest of the Picentes, в. c. 89. (Appian, B. C. i. 47, 48; Liv. Epit. Ixxiv., Ixxvi; Orus. v. 18; Flor. iii. 18.) There can be no doubt that they were at this time admitted, like the rest of the Italian allies, to the Roman franchise.
Picenum was occupied almost without opposition by Caesar at the commencement of the Civil War, B. C. 49 (Caes. B. C. i. 11-15), the inhabitants having universally declared in his favour, and thus compelled the officers of Pompey to withdraw from Auximum and Asculum, which they had occupied with strong garrisons. In the civil war between Vitellius and Vespasian A. D. 69, it was occupied in like manner without resistance by the forces of the latter. (Tac. Hist. iii. 42.) Picenum appears to have continued to be a flourishing province of Italy throughout the period of the Roman Eimpire; and though Pliny speaks of it as having much fallen off in population compared to carlier times (" quondam uberrimae multitudinis," Plin. iii. 13. s. 18), it still contained a large number of towns, and many of thene preserved their consideration down to a late period. It is probable that its proximity to Ravenna contributed to its prosperity during the latter ages of the Empire, after that city had becone the habitual residence of the emperors of the West. Under Augustus, Picenum became the Fifth Region of Italy (Plin. 2.c.), but at a later period we find it combined for administrative purposes with the district
called Flaminia, ard the two together constitnted a province which comprised all the strip of Umbria along the coast of the Adriatic, as well as the territory of the Sabines, Vestini, Peligni, and Marsi. Hence we find the Liber Coloniarum including the whole of this extensive district under the name of Picenum, and enumerating not only Alba and Nursia, but even Nomentum, Fidenae, and Tibur, among the "civitates Piceui." (Lib. Colon. p. 252-259.) But this arrangement did not last long. Flaninia and Valeria were again separated from Picenum, and that province was subdivided into two: the one called " Picenuin suburbicarium," or simply Picenum, which was the original district of that name, corresponding to the Fifth Region of Augustus: while the name of "Picenum Annonarium" was given to the tract from the Aesis to the Rubicon, which had been originally known as the "Gallicus Ager," and in the days of Augnstus was comprised under the name of Umbria (Lib. Colon. pp 225-227; Mommsen, Die Lib. Col. pp. 208-214; Notit. Dign. ii. pp. 64, 65 ; Bücking, ad Not. pp. 432, 443; P. Diac. ii. 19.)

In the wars between the Goths and the generals of Justinian, Picenum repeatedly became the immediate theatre of hostilities. Auximum in particular, which was at this time the chief city or capital of the province, was regarded as one of the most important fortresses in Italy, and withstood for a long time the arms of Belisarius. (Procop. B. G. ii. 10, 23-27.) After the expulsion of the Goths, Picenum became one of the provinces of the exarchate of Ravenna, and as such continued subject to the Greek emperurs until the firial downfal of the exarchs. It was at this period that arose the geographical designation of the Pentapolis, for a province which comprised the greater part of Picenum, together with the maritime district of Umbria as far as Ariminum. The province of this name was one of those bestowed on the see of Rome by king Pepin after the defeat of the Lombard king Astolphus (A.d. 754), and has ever since continued to form part of the States of the Church.

Picenum is a district of great fertility and beanty. Extending in a broad band of nearly unif,rm width from the central ranges of the Apemines, which form its boundary on the W., and which here attain their greatest elevation in the Monte Corno and Monti d.lla Sibilla, it slopes gradually from thence to the sea; the greater part of this space being occupied by great hills, the underfalls of the mure lofty Apennines, which in their more elevated regions are cluthed with extensive forests, while the lower slopes produce abundance of fruit-trees and olives, as well as good wine and corn. (Strab. v. p. 240 ; Liv. xxii. 9.) both Horace and Juvenal extol the excellence of its apples, and Pliny tells us its olives were among the chnicest in Italy. (IIrr. Sat. ii. 3. 272, 4. 70: Jur. xi. 72 ; Plin. xv. 3. s. 4.) The whole district is furrowed by numerous streams, which, descending with great rapidity from the lofty ranges of the Ap-nnines, partake much of a torrent-like character, but nevertheless serve to irrigate the whole country, which is thus rendered one of the pleasantest in Italy. These streams parsue nearly parallel courses, the direct distance from their sources to the sea in no case much exceeding 40 miles. They are, proceeding from S. to N., as follows : (1) The Matrinus, now called La Piomba, a small stream which formed the southern limit of Picenum, separating it from the territory of the Vestini; (2) the Vomanus, still
called the Vomano, which separated the district of Adria from that of the Prnetutii; (3) the Batinus, now called the Tordino, but sometimes also the T'romtino, which flows by Teramo (Interamna); (4) the Truentus (Tronto), the most considerable of all these streams, which flows under the walls of Ascoli (Asculum); (5) the Tinna. still called the Tenna; (6) the Flesor, now the Chienti; (7) the Potrantia, still called the Potenza; (8) the Misio or Misics, now known as the Musone. These last names are known ouly from the Tabula: on the other hand I'liny mentions a stream called Albcla, to which are added in some MSS. the names of Suinus and Helvinus. All these are placed apparently between the river Truentus and the town of Cupra Maritimn ; but besides the uncertainty of the reading, the whole description of this region in Pling is so confused that it is very unsafe to rely upon his order of enumeration. The Albula cannot be identified with any certainty, bat may perhaps be the stream now called the Salinello, and the other two names are probably mere corruptions. 9. The Aesis (Esino), a much more considerable stream, flowing into the sea between Ancona and Sena Gallica, formed the boundary which separated Picenum from Umbria.

The towns of Picenum are numerous, and, from the accounts of the populousness of the country in early times, were probably many of them once considerable, but few have any historical celebrity. Those on the sea-coast (priceeding as before from S. to N.) were: (1) Mathinum, at the mouth of the river of the same name, serving as the port of Alria (Stmb. v. p. 241); (2) Castrum Novum, at the mouth of the Batinus, near Giulia Nuova; (3) Castrla Truentinum of Truentum, at the mouth of the river of the same name ; (4) Cupra Makitima, at Le Grotte a Mare, about 3 miles N. of S. Benedetto; (5) Castrum Firmanum, now Porto di Fermo, at the mouth of the little river Leta; (6) Potentia (Sta Maria a Potenza), at the mouth of the river of the same name; (i) Numana, still called Umana, at the southern extremity of the mountain headland called Monte Comero; and (8) Ancona, at the northern end of the same promontory. This last was by far the most important of the maritime towns of Picenum, and the only one that possessed a port worthy of the name: with this exception all the most important cities of the region were situated inland, on hills of considerable eleration, and thus enjoyed the advantage of strong $\mathrm{p}^{\text {m- }}$ sitions as fortresses. The most important of these were Auximum (Osimo), about 12 miles S. of Ancona; Cingulum (Cingoli), in a very lofty situation, between the valleys of the Aesis and Puientia; Firmum (Fermo), on a hill about 6 miles from the sea; Asculum (Ascoli), the ancient capital of Picenum, in a very strong situation on the river Truentus, abont 22 miles from its mouth; Interamina (Teramo), the chief city of the Praetutii; and Aphia (Atri), almost close to the southern frontier of licenum. The minor towns in the interior wers Berbgra, which may perhaps be placed at Civitella di Tronto, not far from Ascoli; Cupra Montana, so called to distinguish it from the maritime city of the same name, supposed to have occupied the site of Ripatransone; Clisana, at S. Elpidio a Mare, about 4 miles from the sea, and a little to the N. of Fermo; Novina, probally at Monte di Nove, near Montalto; Falema (Fallerone), in the upper valley of the Tima; Leas Salvia (Lrbiaglia) and Tonenti-
xcm (Tulentino), on opposite sides of the valley of the Flusor (Chienti); Seittempeda (S. Sererino), in the apper valley of the Potenza; Treia, on the left bank of the same stream, near the modern town of Treja; and Ricina, on its right bank, not far from Macerata. The site of Pacsulae (Pausulani, Plin.) is fixed by Holstenius at Monte dell' Olmo, and that of Pollentin (Pollentini, Id.) at Monte Melone, all in the same neighbourhood: but these lust identifications are merely conjectural.

Picenum was traversed by a line of highroad, which followed the line of the coast from Ancona to Aternum, where it united with the Via Valeria; while its more direct communications with Rome were secured by the Via Salaria, which crossed the Apennines direct from Interocres by Falacrinum to Asculum, and thence to the Adriatic. Further to the north, also, a branch of the Via Flaminia, quitting the main line of that great road at Nuceria, crossed the central ridge of the Apennines by Prolaqueum to Septempeda in the valley of the Potentia, and thence rroceded by Treia and Auximum to Ancona. Besides these more important lines of road, the Tabula notices two cross lines : the one leading from Auximum by Ricina and Urbs Salvia to Asculum ; the other from Asculum to Firmum, and its port Castellum Firmanum. The extremely hilly and broken character of the country renders the determination of distances along these lines of road very uncertain; and the whole district is given in the Tabula in so confused a manner that little reliance can be placed on its authority.

## PICTAVI. [Pictones.]

PICTI. The names of the Picti and Scoti appear only in late writers, by whom they are spoken of as two allied people. The Picts seem to have been identical with the ancient Caledonians ("Caldonumaliorumque Pictorum, silvae et paludes," Eumen. Pan. vi. 7), and dwelt N. of the Firth of Forth (Becia, H. Fccl i. 1). Ammianus Marcellinus reprevents the Picti as divided, in the time of the emperor Constans, into two tribes, the Dicalidunae and Vecturiones, and as committing fearful ravages in conjunction with the Attacotti and Scotti (xxvii. 8. §4.) Tbeir ethnological relations have been already discussed [Britannicae Insulae, Vol. I. p. 438]. The name of Picti, or painted, is commonly sapposed to be derived from their custom of painting their bodies, and would thus be only a transLation of the British word Brith, signifying anything painted, and which, according to Camden (Gen. Descr. p. xxivi.), is the root of the name Briton. Such an etyunulugy favours the notion that the licts were an indigenous race; but on this point nothing proitive can be affirmed. (Comp. Amm. Marc. xx. 1, uri. 4: Beda, H. Eccl. iii. 4, v. 21.) [T.H.D.]

PI'CTONES (n(xcoves), and, at a later period, Pictavi, were a Gallic nation, south of the Loire and on the coast of the Atlantic. Ptolemy (ii. 7. §6) places them in Celtogalatia Aquitania, and inentions two of their towns, Limonum or Lemonum (Poitiers) and Ratiatum. "They occupy"" he says, "the most northern parts of Aquitania, those on the river (Liger), and on the sea." Strabo (iv. pp. 190, 191) makes the Loire the boundary between the Namnetes and the Pictones. South of the Pictavi he places the Santones, who extend to the Garome.
The Pictones are mentioned by Caesar. He got ships from them for his war against the Veneti (B. G. iii. 11). The Pictones joined Vercingetorix in B. C. 52, when be was raising all Gallia against,

Caesar. In b.c. 51 C. Caninius, a legatus of Caesar, marched into the country of the Pictones to relieve Lemonum, which was besieged by Dumnacus (B. G. viii. 26). [Lemonum.]

Lucan (i. 436) says that the Pictones were "immunes," or paid no taxes to the Romans:-
" Pictones immunes subigunt sua rura."
His authority is not worth much; and besides that, this verse and the four verses which fillow are probably spurious. (Nutes in Uudendorp's edition of Lucan.)

The territory of the Pictones was bounded on the east by the Turones and Bituriges Cubi. It corresponded to the diocese of Poitiers. [G. L.]

PICTO'NIUM PROMONTO'RIUM, as it is nuw generally written, bat in Ptolemy (ii. 7. § 1) Pec-
 coast of Gallia Aquitania, between the mouth of the river which he names Canentelus [Carantoncs] and the port Secor or Sicor. It is impossible to determine what point of land is Pectonium. D'Anville supposes it to be L'Aiguillon near the inouth of the Sicre Niortaise; and Gossellin takes it to be La Pointe de Buisvinet.
[G. L.]
PIDA ( 1 i $\delta \alpha$ ), a town in Pontus Galaticus, on the road leading from Amasia to Neocaesarein. (Ptol. r. 6. § 9 ; Tab. Peut., where it is called Pidae.)
[L.S.]
PIENGI'TAE ( $\quad 1 \epsilon \gamma$ rital, Ptol. iii. 5. § 20), a people in Eurnpean Sarmatia, supposed by Schafarik to be the inhabitants of the river Piena, which falls into the Pripjat near Pinsk (Slauische Alterthümer, vol. i. p. 207.)

Pl'ERA. [Cikition] -
PI'ERES (Пifpes), a Thracian people, occupying the narrow strip of plain land, or low hill, between the mouths of the I'eneius and the Haliacmon, at the foot of the great woody steeps of Olympus. (Thuc. ii. 99; Strab. vii. p. 331, Fr. 22, ix. p. 410; Liv. sliv. 9.) This district, which, under the name of Pieria or Pieris (Miepia, Miepls), is mentioned in the Homeric poems ( $/ l$. xiv. 225), was, according to legend, the birthplace of the Nuses (Hesiod. Theog. 53) and of Orpheus, the father of song. (Apoll. Argon. i. 23.) When this worship was introduced into Boeotia, the names of the mountains, grots, and springs with which this poetic religion was connected, were transferred from the $\mathbf{N}$. to the S. Afterwards the Pieres were expelled from their original seats, and driven to the N . beycnd the Strymon and Mount Pangaeus, where they formed a new settlement. (Herod. vii. 112; Thuc. l. c.) The boundaries which historians and geographers give to this province vary. In the systematic geography of Ptolemy (iii. 13. § 15) the name is given to the extent of coast between the mouths of the I.adiis and the Haliacmou. Pieria was buunded on the W. from the contiguous district of the Thessalian P'errhaebia by the great chain of Olympus. An offihoct from Olympus advances along the Pierian plain, in a NW. direction, as far as the ravine of the Haliacmon, where the mountains are separated by that chasm in the great eastern' ridge of Northern Greece from the portion of it anciently called Bermius. The highest summit of the Pierian range called Pierus Mons (Plin. iv. 15; comp. Pausan. iz. 29.§ 3;工. 13. §5) rises about 8 miles to the N. of Vlakholivadho, and is a conspicuous object in all the country to the E. It would seem that there was a city called Pierla (Hıepla: Éth. Пıepaút $\eta \mathrm{s}$, Hıe-

## PINDUS.

pitns, Hteped́s, Steph. B.; Suid. s. v. Kplicov), which may be represented by a "tumulus," overgrown with trees upon the extremity of the ridge of Andreotissa, where it ends in a point between Dium and Pydna, the other two chief cities of Pieria. Beyond Pydna was a considerable forest, called "Pieria Silva" (Liv. xliv. 43), which may have furnished the Pierian pitch, which had such a high reputation. (Herod. iv. 195; Plin. xiv. 25.) The road from Pella to Larissa in Thessaly passed through Pietia [Macedonia, Vol.II. p. 237, a.], and was probably the route which the consul Q. Marcius Philippus pursued in the third and fourth years of the Persic War. (Liv. xliv. 1-10; Leake, Northern Greece, vol. iii. pp. 177, 210, 337, 413, 446.) [E. B. J.]

PIE'RIA (Ilepía). 1. A district in Macedonia. [Pieres.]
2. A district in Syria; a name given by the Macedonians to the northern cosst of Syria, on the right bank of the Orontes. The principal mountain in this district, and which was a southern branch of the Amanus, was also called Pieria (Strab. xvi. pp. 749, 751 ; Ptol. v. 15. § 8.) The chief town was Seleuceia, which is frequently distinguished from other towns of the same name by the addition of iv Hicpla, especiully on coins. (Eckhel, vol. iii. p. 324; Cic. ad Att. xi. 20.)

Pie'Ria. [Gierium.]
PIE'RIUM. [Cierium.]
PIGU'NTIA. [Dalmatia.]
PILORUS (n(Acopos, Herod. vii. 122; Steph. B.), a town of Sithonia in Macedonia, upon the Singitic gulf, between Sane and Cape Ampelus, which probably occupied Vurvuri, or one of the harbours adjacent to it on the N. (Leake, Northern Greece, vol. iii. p. 153.)
[E. B. J.]
PIMOLISA ( $\Pi \mu \omega \lambda_{1} \sigma a$ ), a fort in the western part of Pontus, on the river Halys. (Steph. B. s. v.) In Strabu's time (xii. p. 562, where it is called Pimolison) the fortress was destroyed, but the district on both sides of the river was still called Pimolisene.
[L.S.]
PIMPLEIA ( $\Pi$ i $\mu \pi \boldsymbol{\pi} \boldsymbol{\epsilon} / a$, Strab. ix. p. 410; Apollon. i. 23; Lycophr. 273), a place in Pieria, where Orpheus was said to have been born, and from which the Muses obtained their epithet of $\Pi \mu \mu \pi \lambda \eta i \delta \in s$ and $\Pi 1 \mu \pi \lambda \eta$ : dסes among the Alexandrian poets. (Orph. Fragm. 46; "Pimplea dulcis," Horat. Carm. i. 26. 9 ; Stat. Silv. i. 4. 26.) Leake (Northern Greece, vol. iii. p. 422) identified it with the elevated situation of Litókhoro and its commanding prospect.
[E. B. J.]
PIMPRAMA ( $\Pi$ ! $\mu \pi \rho \alpha \mu \alpha$, Arrian, Anab. v. 22), a place which appears to have been the capital of the tribe of Adraistae, a nation mentioned by Arrian as existing about a day's journey from the Hydraotes (Iraivati). The name has an Indian form and sound, but has not, so far as we know, been identified with any existing place.
[V.]
PINAKA (cd Mivapa: Eth. Hivapev́s). 1. A large city of Lycia, at the foot of Mount Cragus, and not far from the western bank of the river Xanthus, where the Lycian hero Pandarus was worshipped. (Strab. xiv. 665; Steph. B. 8. v.; Arrian, Anib. i. 24; Plin. v. 25; Ptol. v. 3. §5; Hierocl. p. 684.) This city, though it is not often mentioned by ancient writers, appears, from its vast and beautiful ruins, to have been, as Strabo asserts, one of the largest towns of the country. According to the Lycian history of Menecrates, quoted by Stephanus Byz. (8. v. 'Aptóuanoos), the town was a culuny of

Xanthus, and originally bore the name of Artymne sus, afterwards changed into Pinara, which, in the Lycian language, signified a round hill, the town being situated on such an eminence. Its ruins were discovered by Sir Charles Fellows, near the modern village of Minara. "From amidst the ancient city," he says (Lycia, p. 139), "rises a singular round rocky cliff (the pinara of the Lycians), litorally specked all over with tombs." Bencath this cliff lie the ruins of the extensive and splendiul city The theatre is in a very perfect state; all the seats are remaining, with the slanting sides towards the proscenium, as well as several of its doorways. The walls and several of the buildings are of the Cyclopian style, with massive gateways, furmed of three immense stones. The tombs are innumerable, and the inscriptions are in the Lycian characters, but Greek also occurs often on the same tombs. Some of these rock-tombs are adorned with fine and rich sculptures. (See the plate in Fellows facing p. 141.)
2. A town of Cilicia (Plin. v. 22), perhaps the same as the one mentioned by Ptolemy (v. 15. § 12) as situated in Pieria, a district of Syria; though it should be observed that Pliny ( v .19 ) mentions the Pinaritae as a people in Coelesyria. [L. S.]

## PINARUS. [Isscs.]

PINDASUS, a mountain in the sonth of Mysis, a branch of Mount Temnus, stretching towards the Sinus Elaeus, and containing the sources of the river Cetius. (Plin. v. 33.) [L. S.]

PINDENISSUS (Eth. Pindenissitae), a town of the Eleathero-Cilices, situated upon a commanding height of Mt. Amanus, which was taken by Cicero, when he was governor of Cilicia, after a siege of fifty-seven days. (Cic. ad Att. v. 20, ad Fam. ii. 10, xv. 4.)

PINDUS (חivסos, Herod. i. 56, vii. 129; Strab. ix. pp. 428, 430, et alii), a long and lofty range of mountains in Northern Greece, running from north to south about midway between the Ionian and Aegaean seas, and forning the back-bone of the country, like the Apennines of the Italian peninsula. It is in fact a continuation of the same range which issues from the Balkan Mountains, and it takes the name of Pindus where it first intersects the northern boundary of Hellas Proper at the 40th degree of latitude. Pindus forms the boundary between Thessaly and Epeirus. In its northern part it is called Lacmon or Lacmus, and bere the five principal rivers of Northern Greece rise, the Haliacmon, Peneius, Achelous, Arachthus, and Aous. [Lacmon.] To that part of the range $S$. of Lacmon the name of Cercetium was given. (Kєpкéтıov, Steph. B. я. v. Hıa入la; Kepкeтtiotoy 8pos, Ptol. iii. 13. § 19 ; Liv. $2 \times x$ ii. 14 ; Plin. iv. 8. s. 15.) Mount Cercetium is probably the main ridge of Khussiú ; and one of the principal passes froin Epeirus into Thessaly lay across this mountain. (Leake, Northern Greece, vol. iv. pp. 528, 589.) Still further south, at the 39th degree of intitude, a point in the range of Pindus is called Tymphrestus (Tu $\mu \phi \rho \eta \sigma \tau \delta s$, Strab. ix. p. 433), now Velúkhi; and from it branch off the two chains of Othrys and Octa, the former running nearly due east, and the latter more towards the south-east. $\mathbf{A}$ little $\mathbf{S}$. of Tymphrestus the range of Pindus divides into two branches, and no longer bears the same name. [See Vol. I. p. 1012.]

PINDUS (nludos), one of the towns of the tetrapolis of Doris, situated upon a river of the same

PINETUS.
name, whica flows into the Cephissus near Lilaea. [Doris.] It was also called Acyphas ('Acúфas), as we learn from Strabo and from Theopompus (ap. Steph. B. \& v. 'Acipas). In one passage Strabo says thast Pindus lay above Erineus, and in another he places it in the district of Oetaen ; it is, therefore, probable that the town stood in the upper part of the valley, near the sources of the river in the mountain. (Strab. ix. pp. 427, 434 ; Scymn. Ch. 591 ; Schol. ad Pind. Pyth. i. 121; Mel. ii. 3 ; Plin. iv. 7. s. 13; Leake, Northern Greece, vol. ii. p. 92.)

PINE'TUS (Hímpos, Ptol. ii. 6. § 39), a town of Lusitania, on the road from Bracara to Asturica (Itin. Ant. p. 422). Ptolemy places it between the Darius and the Minius, and consequently in the territory of the Gallaeci; but, according to the Itinerary, it mast have lain S . of the former river. Variously identified with Pinheh, Pinheira, and Mirandella.
[T. H. D.]
PINGUS, a river of Upper Moesia, in the territory of the Dardani. (Plin. iii. 26. s. 29.) It was probably an affluent of the Margus, and is commonly identified with the Ypek.
[T. H. D.]
PINNA (חirva: Eth. Pinnensis: Civita di Penne), a city of the Vestini, situated on the eastern slope of the Apennines, about 15 miles from the sea It is noticed both by Pliny and Ptolemy, as well as by Silius Italicus, among the cities of the Vestini, and seems to have been a municipal town of importance ; but the only mention of its name in history is during the Social War, when its inhabitants distinguished themselves by their fidelity to Kome, and withstood all the efforts of the Italian allies to shake their constancy. (Diod. xxxvii. Exc. Vales. p. 612, Exc. Vat. p. 120.) The circumstances are evidently misrepresented by Valerius Maximus (v. 4. § 7). Numerous inscriptions attest its local consideration; and it appears to have received a colony, or at least an accession of citizens, under Augustus. (Plin. iii. 12. s. 17 ; Ptol. iii. 1. § 59 ; Lib. Colon. pp. 227, 257 ; Sil. Ital. viii. 517; Inscr. ap. Komasell; vol. iii. pp. 252, 253 ; Mommsen, Inscr. R.N. p. 327.) Vitruvius also notices it as having sone mineral waters in its neighbourhood, which resembled those at Cutiliae (viii. 3. § 5). It early became an episcopal see, a dignity which it still retains; and the modern city undoubtedly occupies the same site with the ancient one. Some remains of ancient buildings are extant, but they are of little impurtance. The name of Pinna is found in the Tabule, where it is marked as a place of importance; but the distances annexed are confused and errodeous.
[E. H. B.]
PI'NTIA (Mirria, Ptol. ii. 6. § 50). 1. A town of the Vaccaei in Hispania Tarraconensis, and according to the Itinerary ( $p$. 443), on the road from Asturica to Caesaraugusta. It is usually identified with Valladolid (Mariana, x 7; Nonius, Hisp. c. 56; Ukert, vol. ii. pt. 1. p. 432).
2. A town of the Callaïci Lucenses in Hispania Tarraconensis, between Libunca and Caroninm. (Ptwl. ii. 6. § 23.)
[T. H. D.]
Pintua'ria ins. [Fortumatae Insulaz.]
PION (Iliay), a hill in the neighbourhood of Ephesus, at the foot of which that city was situated. (l'aus. vii. 5. § 5 ; Plin. v. 31 ; Strah. xiv. p. 633, where it is called Prion.)
[L.S.]
PIONIA (Hovia: Eth. Pionita), a town in the interior of Mysia, on the river Satnioeis, to the northwest of Antandrus, and to the north-east of Gar-
gara. (Strab. xiii. p. 610.) Under the Roman dominion it belonged to the jurisdiction of Adramyttium (Plin. v. 32). and in the ecclesiastical notices it appears as a bishopric of the Hellespontine province. (Hierocl. p. 663; Sestini, p. 75.) [L. S.]
piraeeds or peiraeeds. [Athenak, p. 306.]

PIRAEUM or PEIRAEUM, in Corinthia [ $p$. 685, b.].

PIRAEUS or PEIRAEUS, in Corinthia [p. 685, a.].

PIRATHON (\$apa日ん́v, Jaseph., LXX.), a town in the land of Ephraim, and in the mount of the Amalekites, to which Abdon, one of the judges of Israel, belonged, and where he was buried. (Judges, xii. 13, 15.) It was repaired and fortified by Bacchides, in his campaign against the Jews (1 Macc. ix. 50; Joseph. Ant. xiii. 1. § 3.)

PIRE'NE or PEIRE'NE FONS. [Corinthus, p. 680, b.]

PIRE'SIAE. [Asterium.]
PIRUS or PEIRUS. [Achain, p. 13, b.]
PIRUSTAE (Пиоốттa, Ptol. ii. 17. §8; חetpoùgrat, Strab. vii. p. 314), a people of Illyria, whom the Romans declared free of taxes, because they assisted the latter in subduing Gentius. (Liv. x/v. 26.) Strabo (l.c.) calls them a Pannonian people. Respecting the position of the Pirustae on the northern frontier of Dassaretia, see Vol. I. p. 755, b.
 in Peloponnesus, was in the most ancient times the capital of an independent district, called Pisatis ( $\grave{\eta} \Pi \iota \sigma a \hat{\tau} เ s)$, which subsequently formed part of the territory of Elis. It was celebrated in mythology as the residence of Oenomaus and Pelops, and was the head of a confederacy of eight states, of which, besides Pisa, the folluwing names are recorded:Salmone, Heracleia, Harpinna, Cycesium, and Dyspontium. (Strab. viii. p. 356, seq.) Pisa had originally the presidency of the Olympic festival, but was deprived of this privilege by the Eleians. The Pisatans, however, made many attempts to recover it; and the history of their wars with the Eleians, which were at last terminated by the destruction of Pisa in b. c. 572, is narrated elsewhere. [Elis, Vol. I. p. 818, b.] Although Pisa ceased to exist as a city from this time, the Pisatans, in conjunction with the Arcadians, celebrated the 104th Olympic festival, s. c. 364. [See Vol. I. p. 819, b.] Pisa was said to have been founded by an eponymous hero, Pisus, the son of Perieres, and grandson of Aeolus (Paus. vi. 22. § 2); but others derived its name from a fountain Pisa. (Strab. viii. p. 356; Eustath. ad Dionys. Per. 409.) Modern writers connect its name with Mioos. a low marshy ground, or with חi $\sigma \sigma \alpha$, the name of the black fir or pinetree. So completely was Pisa destmyed by the Eleians, that the fact of its having existed was a disputed point in the time of Strabo (L c.); and Pausanias found its site converted into a vineyard (vi. 22. § 1). Its situation, however, was perfectly well known to Pindar and Herodotus. Pindar frequently identifies it with Olympia (e.g. Ol. ii. 3); and Herodotus refers to Pisa and Olyinpia as the same point in computing the distance from the altar of the twelve gods at Athens (ii. 7). Pisa appears from Pausanias to hare occupied a position between Harpinna and Olympia, which were only 20 stadia asunder (Lucian, de Mort. Peregr. 35); and the Scholiast on Pindar (OL. xi. 51) says that Yisa was only 6 studia from Olympia. It must therefore be
placed a little east of Olympia, and its acropolis probibly occupied a height on the western side of the rivulet of Mirika, lear its junction with the Alpheius. Strabo (l.c.) says that it lay between the mountains Olympus and Ossa, which can only have been heights on different sides of the river. See its position marked in the map in Vol. II. p. 477. (Leake, Morea, vol. ii. p. 211, Peloponnesiaca, p. 6; Mure, Tour in Greece, vol. ii. p. 283; Curtius, Peloponnesos, vol. ii. p. 51.)
 Lycophr.: Eth. Pisanus: Pisa), an important city of Etruria, situated on the N. bank of the river Arnus, a few miles from its mouth. All authors agree in representing it as a very ancient city, but the accounts of its early history are very confused and uncertain. The identity of its name with that of the city of Elis naturally led to the supposition that the one was derived from the other; and hence the foundation of the Italian Pisae was ascribed by some authors to Pelops himself (Plin. iii. 5. s. 8), while others assigned it to a bonly of settlers from the Peloponnesian Pisa who had accompanied Nestor to Troy, and on their return wandered to this part of Italy. (Strab. v. p. 222; Serv. ad Aen. x. 179.) Eleius, the reputed founder of Metapontum, was, according to some writers, that of Pisae also. (Serv. l. c.) The Elean, or Alphean, origin of the city is generally adopted by the Roman picts. (Virg. Aen. x. 179; Claudian, B. Gild. 483; Rutil. Itin. i. 565.) Cato, bowever, followed a different tradition, and represented the city as founded by the Etruscans under Tarchon, though the site was previously possessed by a people called the Teutanes, who spoke a Greek dialect. (Cato, ap. Serv. l. c.) Virgil also calls it distinctly an Etruscan city, though be derives its more remote origin from Elis; and the tradition reported by Cato seems to prove at least that it was one of the cities of which the Etruscans claimed to be the founders, and which must therefore have been at one period a genuine Etruscan city. On the other hand, Dionysius mentions it among the cities founded or occupied by the Pelasgi in conjunction with the Aborigines (Dionys. i. 20); and there seems to be some reason to regard it as one of the early Pelasgic settlements on the coast of Etruria, which fell at a later period under the power of the Etruscans.

We know almost nothing of Pisac as an Etruscan city, nor are there any remains of this period of its history. But Strabo still found vestiges of its past greatness, and the tradition of its foundation by Tarchon seems to point to it as one of the principal cities of Etruria. Its inhabitants were trained to arms by frequent contests with their neighbours the Ligurians, white they appear to have been one of the principal maritime powers among the Etruscans, and, like mosit of their countrymen, combined the pursuits of commerce and pirary. (Strab. v. p. 223.) We have no acconit of the perioxl at which it became a dependency of Rome; but the first historical mention of its name is in B. c. 225 , when the consul C. Atilius landed there with two legions from Sardinia, with which he shortly after attacked and deferted the Gaulish army near Telamon. (l'ol. ii. 27.) It is clear therefire that Pisae was at this time already in alliance with Kome, and probably on the same forting as the other dependent allies of the republic. Its port seems to have been much frequented, and became a favourite $p^{\text {xint }}$ of departure for the Buman flects and armies whuse destinativn
was Grul, Spain, or Liguria. Thus it was fron thence that the consul P. Scipio sailed to Massilia at the outbreak of the Second Punic Wur (b.c. 218), and thither also that he returned on finding that Hannibal had already crossed the Alps. (Pul. iii. 43, 56; Liv. xxi. 39.) The long-continued wars of the Romans with the Ligurians added greatly to the importance of Pisae, which becaine the frontier town of the Roman power, and the customary headquarters of the generals appointed to carry on the war. (Liv. xxxiii. 43, xxxv. 22, xl. 1, sce.) It was not, however, exempt from the evil consequences incident to such a position. In B. c. 193 it was suddenly attacked and besieged by an army of 40,000 Ligurians, and with difficulty rescued by the arrival of the consul Minucius (Liv. xxxv. 3); and on several other occasions the Ligurians laid waste its territory. Hence in b. c. 180 the Pisans themselves invited the Ronnans to establish a colony in their territory, which was accordingly carried out, the colunists oltaining Latin rights. (Liv. $\mathbf{x}$. 43.) From this time we hear but little of Pisae; its colunial condition becane merged, like that of the other " coloniae Latinae," in that of a municipiun by virtue of the Lex Julia (Fest. v. Municipiom): but it seems to have received a fresh colony under Augustus, as we find it bearing the colonial title in a celebrated inscription which records the funeral honours paid by the mayistrates and senate of Piaae to the deceased grandchildren of Angustus, C. and L. Caesar. (Orell. Inscr. 642, 643.) It is here terned "Colonia Obsequens Julia Pisana:" Phiny also gives it the title of a colony (Plin. iii. 5. s. 8), and there seems no doubt that it was at this period one of the most flourishing towns of Etruria. Strabo speaks of it as carrying on a considerable trade in timber and marble from the neighbouring mountains, which were sent to Rome to be employed there as building materials. Its territory was also very fertile, and produced the fine kind of wheat called siligo, as well as excellent wine. (Strab. v. p. 223; Plin. xiv. 3. s. 4, xviii. 9. s. 20.) We have no account of the fortunes of Pisae daring the deelining period of the Roman empire, but during the Gothic wars of Narses it is still mentioned as a place of importance (Agath. B. G. i. 11), and in the middle ages rose rapidly to be one of the most flourishing commercial cities of Italy.

There is no doubt that the ancient city stood on the same site with the modern $I$ iso, but natural causes have produced such great changes in the locality, that it would be difficult to recognise the site as described by Strabo, were not the identity of the molern and ancient cities fully extablished. That author (as well as Rutilius and other writers) describes the ancient city as situated at the conHuenee of the rivers Arnus and Auser (Serchio), and distant only 20 stadia ( $2 \frac{1}{2}$ miles) from the sea. (Strab. v. p. 222; Plin. iii. 8. s. 14; Rutil. Itin. i. 565-570.) At the present day it is more than 6 miles from the sea, while the Serchio does not flow into the $A r m$ at all, but has a separate channel to the sea, the two rivers being separated by a tract of 5 or 6 miles in width, formed partly by the accumulation of alluvial soil from the rivers, partly by the sand heajed up by the sea. There are no remains of the Etruscan city visible; it is probablo that all such, if they still exist, are buried to a considerable depth by the alluvisl soil. The oaly vestiges of Roman antiquity which remain are "some mean traces of baths, and two marhlo columns with
composite capitals, probably belonging to the vestibule of a temple of the age of the Antonines, now embedded in the wall of the ruined church of S . Felice." (Dennis, Etruria, vol. ii. p. 89.) But uumerous sarcophagi of Roman date, some of them of very superior workmanship, and some fragments of statues are preserved in the Campo Santo, as well as numerous inscriptions, of which the most interesting are those already alluded to, recording the honours paid by the colony to the deceased grandsons of Augastus. These have been published with a learned and elaborate cominentary by Cardinal Noris (Cenolaphia Pisana, fol. Venet. 1681): as well as by Gori (Inscript. Etruriae, vol. ii. p. 10, \&c.), and more recently by Haubold (Monumenta Legalia, p. 179) and Orelli (l. c.).

The Maritime Itinerary mentions the Portus Pisances as distinct from Pisae itself, from which it was no less than 9 miles distant. (Itin. Marit. p. 501.) Rutilius also describes the port of Pisae, which was in his day still much frequented and the scene of an active commerce, as at some distance from the city itself. (Kutil. Itin. i. 531-540, 558 -565, ii. 12.) But the exact site has been a subject of much controversy. Cluverius and other writers placed it at the month of the Arno, while Mannert and Mr. Dennis would transfer it to the now celebrated port of Leghorn or Livorno. But this latter port is distant 10 miles from the mouth of the Arno, and 14 from Pisa, which does not agree with the distance given in the Maritime Itinerary; while the mouth of the Arno is too near Pisa, and it is unlikely that the entrance of the river could ever have been available as a harbour. Rutilius also describes the port (without any mention of the river) as formed only by a natural bank of sea-weed, which afforded shelter to the vessels that rode at anchor within it. Much the most probable view is that advocated by a local writer (Targioni Tuzzetti), that the ancient Portus Pisanus was situated at a point between the mouth of the Arno and Leghorn, but considerably nearer the latter city, near an old church of St. Stefano. The distance of this spot agrees with that of the Itinerary, and it is certain from mediaeval documents that the Porto Pisano, which in the midule ages served as the port of Pisa, when it was a great and powerful republic, was situated somewhere in this neighbourhood. (Targioni Tozzetti, Viaggi in Tascana, vol. ii. pp. 225-240, 378-420; Zumpt, ad Rutil. i. 527.) Roman remains have also been found on the spot, and some ruins, which may very well be those of the villa called Triturrita, described by Rutilius as adjoining the port, desigmated in the Tabula as Turrita. (Rutil. Itin. i. 527; Tab. Peut.) There is every probability that the Porto Pisano of the middle ages occupied the same site with the Koman Portus Pisanus, which is mentioned by P . Diaconus as still in use under the Lombard kings, and again by a Frankish chronicler in the days of Charlernagne (P. Diac. Hist. Lang. vi. 61 ; Amoin. Rer. Franc. iv. 9); and there is no douit that the medizeral port was quite distinct from Lirorno. The latter city, which is now one of the most important trading places in Italy, was in the 13th century an obscure village, and did not rise to consideration till after the destruction of the Porto Pisano. But it seems probable that it was occasionally used even in ancient times, and is the Labso noticed by Cicero (ad Q Fr. ii. 6) as a seaport near Pisae. It bas been supposed also to be already meutioned by Zosi-
mus ( $\mathbf{v} .20$ ) under the name of Liburnum; but there is really no authority for this, or for the names of Portus Liburni, and Portus Herculis Liburni employed by modern writers on ancient geography. The Antonine Itinerary, however, gives a station "Ad Herculem," which, as it is placed 12 miles from Pisae, could not have been far from Leghorn. (Itin. Ant. p. 293.)

Pliny alludes to the existence of warm springs in the territory of Pisae (ii. 103. s. 106). These are evidently the same now called the Bagni diS. Giuliano, situsted about 4 miles from the city, at the foot of the detached group of Apennines, which divide the territory of Pisa from that of Lucca. [E.H.B.]

PISA'NUS PORTUS. [PIsAE.]
PISA'TIS. [Pisa.]
PISAVAE, in Gallia Narbonensis, is placed in the Table at the distance of aviii. from Aquae Sextiae ( $A i x$ ), and on a road leading towards Glanum (St. Remi). The place is supposed to be in the district of Pelissane; and it has accordingly been conjectured that the name in the Table should be Pisanae. Koman remains have been dug up in the district of Pelissane near the chapel of St. Jean de Bernasse. There are traces of the old Roman ruad near Aix, and it is said that two Roman milestones are atill there. (D'Anville, Notice, $\&$ c.; Statistique du Départ. des Bouches du Rhine, quoted by Ukert, Gallien, p. 436.)
[G. L.]
PISAURUM (IItavipov: Eth. Pisaurensis: Pesaro), a considerable town of Umbria, situated on the coast of the Adriatic, between Fanum Fortunae (Fano) and Ariminum (Rimini). It was on the line of the Via Flaminia, 24 miles from Ariminum (Itin. Ant. p. 126), at the mouth of the small river Yisaurus, from which it in all probability derived its name. (P'lin. iii. 14. s. 19.) This is now called the Foglia. The site of Pisaurum, together with all the adjoining country, had been originally included in the territory of the Galli Senones; but we have no account of the existence of a Gaulish town of the name, and the first mention of Pisarum in history is that of the foundation of a Roman colony there. This took place in B. c. 184, simultaneously with that of Potentia in Picenum, so that the same triumvirs were charged with the settlement of both colonies. The settlers received 6 jugera each, and enjoyed the full rights of Roman citizens. (Liv. xxxix. 44 ; Vell. Pat. i. 15 ; Madvig, de Colon. pp. 253, 286.) A few years later we hear of the construction there of some public works, ander the direction of the Roman censors (Liv. xli. 27); but with this exception, we bear little of the new colony. It seems, however, to have certainly been a prosperous place, and one of the most considerable towns in this part of Italy. Hence, it was one of the places which Caesar hastened to occupy with his advanced cohorts as suon as he had passed the Rubicon, b. c. 49. (Caes. B. C. i. 11, 12 ; Cic. ad Fam. xvi. 12.) It is also repeatedly alluded to by Cicero as a flourishing town (Cic. pro Sest. 4, Phil. xiii. 12); hence it is impossible that the expression of Catullus, who calls it "moribunda sedes Pisauri" (Carm. 81. 3), can refer to the condition of the town itself. It would scem that its climate was reputed unhealthy, though this is not the case at the present day. Pisaurum received a fresh body of military colonists, which were settled there by M. Antonius; but suffered severely from an earthquake, which seems to have destroyed a great part of the town, just before the battle of

## PISCENAE．

Actium，B．c．31．（Plut．Ant．60．）It appears， however，to have been restored，and peopled with fresh colonists by Augustus，for we find it bearing in inscriptions the titles of＂Colonia Julia Felix ；＂ and though Pliny does not give it the title of a colony，its possession of that rank under the Empire is abondantly proved by inscriptions．（Plin．ii． 14. 8． 19 ；Orell．Inscr．81，3143，3698，4069，4084．） From the same authority we learn that it was a place of some trade，and that vessels were built there，so that it had a＂Collegium Fabrorum Na－ valium．＂（Ib．4084．）The port was undoubtedly formed by the mouth of the river，which still affords a harbour for small vessels．Its position on the great Flaminian Way also doubtless secured to Pisaurum a certain share of prosperity as long as the Roman empire continued；but it was always inferior to the neighbouring Fanum Fortunae．（Mel． ii．4．§ 5 ；Ptol．iii．1．§ 22 ；Itin．Ant pp．100， 126 ；Itin．Hier．p． 615 ；Tab．Peut．）

During the Gothic Wars Pisauram was destroyed by Vitiges，but partially restored by Belisarius （Procop．B．G．iii．11）；and rose again to prosperity under the exarchate of Ravenna，and became one of the cities of the Pentapolis．（Geogr．Rav．iv． 31 ； P．Diac．Hist．Lang．ii．19．）The modern city of Pesaro is still a flourishing place；but has no ro－ mains of antiquity，except numerous inscriptions， which have been collected and published with a learned commentary by the Abate Olivieri．（Mar－ mora Pisaurensia，fol．Pisaur．1738．）［E．H．B．］

PISCENAE，enumerated by Pliny（iii．4．s．5） among the Oppida Latina of Gallia Narbonensis．It is generally assumed to be represented by Pesenas in the district of Agatha（Agde）near the Arauris （Herault）．Pliny（viii．48．s．73）speaks of a wool that was grown about Piscenae，which was more like hair than wool．
［G．L ］
PISGAH．［Nebo．］
PISIDA，a municipium and station on the Ro－ man road running along the coast－line of Syrtica， 20 M．P．from Gypsaria Taberna（Dahman），and 30 M．P．from Villa Magna（Kelah）．（Itin．Anton．； Peut．Tab．）Ptolemy has a harbour，Pisindôn
 which is represented by the harbour of Bareka or Brega．（Barth，Wauderungen，p．271．）［F．B．J．］

PISI＇DIA（ $\boldsymbol{\eta}$ Пı $\sigma \iota \delta u \times \boldsymbol{y}$ ：Eth．Пıбiסau，Yisidae），a province in the south of Asia Minor，which was in the carlier times always regarded as a part of Phry－ gia or Pamphylia，but was constituted a separate province in the division of the Roman empire made by Constantine the Great．It bordered in the east on Issuria and Cilicia，in the south on Pamphylia， in the west on Lycia，Caria，and Phrygia，and in the north on Plirggia Parorios；but it is almost impossible to mark the exact boundary lines，espe－ cially in the north and north－west，as the northern parts of Pisidia are often treated as parts of Phry－ gia，to which they originally belonged，and from which they are sometimes called Pbrygia Pisidica，or $\Phi \rho u-$ fia $\pi \rho d s$ Hıcioiav；but Amyntas separated them from Phrygia and united them with Pisidia．（Strab． xii．p．570，\＆c．；Ptol．v．5．§§ 4，8；Dionys．Per． 858，\＆cc．；Plin．v． 24 ；Hierocl．pp．662，\＆cc．，679， \＆ec．）The country，which was rough and moun－ tainous，though it contained several fertile valleys and plains，which admitted of the cultivation of olives（Strab．l．c．），was divided into several dis－ tricts，with separate names．The south－western district bordering on Lycia was called Milyas，and
another adjoining it bore the name of Cabalia．The mountains traversing Pisidia consist of ramifications of Mount Taurus，proceeding from Mount Cadmus in Phrygia，in a south－eastern direction，and assam－ ing in the neighbourhood of Termissus the name of Sardemisus（Pomp．Mel．i． 14 ；Plin．v．26），and on the borders of Milyas that of Climax．（Polyb．v． 72；Strab．xiv．p．666．）These mountains contain the sources of the rivers Catarrhactes and Cestras， which flow through Pisidia and Pamphylia into the bay of Pamphylia．The principal products of Pi sidia were salt，the root iris，from which perfumes were manufactured，and the wine of Amblada，which was much recommended by ancient physicians． （Plin．xii．55，xxi．19，xxxi．39；Strabo．xii．p． 570．）Pisidia also contained several lakes，some of which are assigned to Phrygia or，Lycaonia，e．g． Coralis and Trogitis（Strab．xii．p．568），the great salt lake Ascania，and Pusgusa or Pungusa，which is mentioned only by Byzantine writers．（Nicet．Chrom． 1．p．50；Cinnam．Hist．ii．8．）
The inhabitants of Pisidia must in a great mea－ sure have belonged to the same stock as the Phrygians，but were greatly mixed with Cilicians and Isaurians．They are said to have at first been called Solyıni（Steph．B．s．v．）；they were warlike and free mountaineers who inhabited those parts from very remote times，and were looked upon by the Greeks as barbarians．They were never subdued by neighbouring nations，but frequently harassed the adjoining countries by predatory inroads．（Xenoph． Anab．i．1．§ 11，ii．1．§ 4，\＆ce．；Strab．ii．p．130， xii．p．569，xiv．pp．670，678；Liv．xxv．13．）Even the Romans were scarcely able to subdue these people，protected as they were by their mountains and rarines．After the defeat of Antiochus，Pisidia was，with the rest of Asia，given to Eumenes，but had to be conquered by the Romans themselres，and then formed the beginning of what subsequently came to be the province of Cilicia，to which，about B．c．88，the three Phrygian districts of Laodiceia， Apameia，and Synnada，were added．（Liv．Fpit 77； Cic．in Verr．i．17，38．）Still，however，the Romans never established a garrison or planted a colony in the interior；and even the submission of．the towns seems to have consisted mainly in their paying tribute to their ralers．The principal towns of Pisidia were，Antiocheia，Sagalassus，Ter－ missus，Selae，Pednellissus，Cibyra，Ofnoanda， and Bubon．The mountainous parts of Pisidia are now inhabited by the Karamanians，a wild and rapacious people，whence the country is little visited by travellers，and consequently little known；but Pisidia in general corresponds to that portion of Asia Minor comprised within the government of Isbarteh．
［L．S．］
PISILIS（IIloi入ıs），a small town of Caria，be－ tween Calinda and Caunus，of uncertain site．（Strab． xiv．p．651．）
［L．S．］
PISINGARA or PINSIGARA（Hioirrdpa or Huvorrdpa），a town of uncertain site in Armenia Minor．（Ptol．v．7．§ 4．）
［L．S．］

PISSAEUM（Hıб⿱艹aiov），a town of Pelagonia in Epeirus，the exact site of which is unknown．（Po－ lyb．v．108；Steph．B．s．v．）

PISSANTI＇NI．［Dassarktae］
PISTU＇RIA（Hıбтapia：E＇ch．Pistoriensis ：Pis－
woja), a town of Etruria, situated in the northern part of that province at the foot of the Apennines, and on the direct road from Florentia to Luca, at the distance of 25 miles from each of those cities. (Itin. Ant. p. 284.) We have no account of it as an Etruscan town, nor has it any remains which belong to that people: under the Roonans it seems to have been an ordinary municipal town of no great importance. (Plin. iii. 5. s. 8 ; Ptol. iii. 1. $\S 48$; Itim. Ant. l.c.) Its name is known in history onls in connection with the final defeat of Catiline, b. c. 62. That general had assembled his forces in the neighbourhood of Faesulae: bat on learning the discovery and failure of the conspiracy at Rume, ho drew them off into the territory of Pistoria (in agrum Pistoriensem), with the view of making his escape across the Apennines into Cisalpine Gaul. But finding his retreat on that side cut off by Metellus Celer, while he was closely pressed by the consul C. Antonius in his rear, he suddenly turned apon the latter and gave him battle, but was cut to pieces with the whole of his remaining forces. (Sallust. Cat. 57.) From this narrative it appears that the battle must have been fought in the mountains on the confines of the Pistorian territory, which apparently adjoined that of Faesulae; bat we have no more precise clue to its locality. Pistoria is mentioned by Aminianus Marcellinus, at a late period of the Roman Empire, as one of the municipal towns of the district called Tuscia Annonaria (Amm. Marc. xxvii. 3. § 1); but it seems to have never been a place of much consideration in anclent times, and first rose to importance in the middle ages. Pistoja is now a considerable town, and the see of a bishop.
[E. Н. B.]
PISTYRUS (חíorvpos), a city and lake in Thrace, which the army of Xerxes passed after crossing the Nestus. (Herod. vii. 109.) The lake is described by Herodotus as 30 stadia in circumference, full of fish, and exceedingly salt. The town is called by Stephanus B. Pistirus or Bistirus (s. vv. Miotupos, Biotipos). Others have the furm Pisteira. (Nioтєipa, Harpocrat. p. 124. 11 ; Schol. ad Aesch. Pers. 2.)
 Cilicia, between Celenderis and Seleucia, 45 stadia to the west of Cape Crauni, and to the right of the island of Crambusa. (Stodiasm. Mar. Mag. §§ 172, 173.)
[L. S.]
PISYE or PITYE (חıofm, Mírum: Eth. חıouhris, Metutirns), a town of Caria, of which the site is unknown. (Steph. B. e. v.; Constant. de Them. i. 14, p. 38, ed. Bonn.)

PITAIUM (Plin. v. 29 ; Merdou $\pi$ odiss : Eth. Mitaeús, Steph. B. s. v.), a town of Caria, of uncertain site.

PITANE (Hirdvn: Eth. חitavaios), an ancient city on the coast of Aeolis in Asia Minor, was situsted near the mouth of the river Evenus on the bay of Elaea. It was one of the eleven ancient Aeolian settlements, and possessed considerable cornmercial advantages in having two harbours. (Herod. i. 149 ; Scylux, p. 37 ; Strab. xiii. pp. 581, 607, 614.) It was the birthplace of the academic philosopher Arcesilaus, and in the reign of Titus it suffered severely from an earthquake. (Oros. vii. 12; comp. Ptol. v. 2. § 5; Steph. B. s. v.; Plin. v. 32, xxxv. 49; Ov. Met. rii. 357.) The town is still mentioned in Hierocles, and its site is universally identified with the modern Tchankeli or Sanderli. Pliny (L.c.) mentions in its viciuity a river Canaius, which
is not noticed by any other writer; but it may poos sibly be the river Pitanes, spoken of by Ptolemy (iii. 2. § 3), and which seems to derive its name from the tuwn of Pitane.
[L. S.]

## PITANE. [Sparta.] <br> PITHECUSAE INSULAE. [Aenaria.] <br> PITHOM. [Patumos.]

PITINUM (Torre di Pitino), a town of the Vestini, known only from the Tabula Peutingeriana, which places it on a line of road from Interocrea (Antrodoco) to Aveia. But the stations on each side of it, Prifernum and Eruli, are both unknown, and the distances probably corrupt. Hence, this itinerary affurds us no real clue to its position. But Holstenius has pointed out that the name is retained by the Torre di Pitino, about 2 miles N. of Aquila, and has also shown that in the middle aqes Pitinum still subsisted as a city, and was an episcopal see. (Tab. Peut.; Holsten. Not. ad Cluver. p. 139; Romanelli, vol. iii. p. 280). [E. H. B.]

PITULUM (Pitulanus: Piolo), a town of Unbria, mentioned only by Pliny (iii. 14. s. 19), who enumerates among the towns of that region the " Pitulani, cognomine Pisuertes et alii Mergentini." Both names are otherwise unknown, but according to Cluverius there is a village called Pivlo in the Apennines between Camerino and Matilica, which probably retains the name of one or the other. (Cluver. Ital. p. 614.)
[E. H. B.]
PITYEIA (Mıтúela : Eth. Mitueús), a town of Mysia, on the coast of the Propontis, between Parium and Priapus. It is mentioned even in the time of Homer. (Il. ii. 829 ; comp. Apollon. Rhod. i. 933; Strab. xiii. 588; Steph. B. s. v.) It is said to have derived its name from the firs which grew there in abundance, and is generally identified with the modern Shamelik.
[L. S.]
PITYO'DES (חırudorns), a small island in the Propontis off the coast of Bithynia, near Cape Hyris, and 110 stadia to the north of Cape Acritas. (Plin. v. 44 ; Steph. B. e. v. Hotiovaбas, who speaks of several islands of this name, which is the same as Meruadects.) The island is probably the one now called Bojuk Ada, where Pocicke (vol. iii. p. 147) found remains of an ancient town.
[L. S.]
PITYONE'SOS, a small island in the Saronic gulf, lying between Aegina and the coast of Epidaurus, and distant 6 miles from the latter. (Plin. iv. 12. s. 19.)

PITYUS (Hirvoûs: Pitsunda), a Greek town in Asiatic Sarmatia, on the north-eastern coast of the Black Sea, N. of Dioecurias, from which it was distant 360 stadia according to Artemidorus, and 350 according to Arrian. The real distance, however, is underrated by these writers; for from $C$. Iskuria (Dioscurias) to Pitsumda is not less than 400 stadia in a straight line. (Artemidor. ap. Strab. xi. p. 496 ; Arrian, Per. P. Eux. p. 18.) Artemidorus described it as the great Pityus, and Pliny as an "oppidam opalentissimom;" but between the time of Artemidorus and Pliny it was destroyed by the Heniochi (Plin. vi. 5), whence Arrian mentions it only as a place for anchorage, and the name does not occur at all in Ptolemy. The town was afterwards rebuilt by the Romans, and is described by Zosimus (i. 32), in the history of Gallienus, as a fortress surrounded with a very great wall, and having a most excellent harbour. (Comp. Procop. B. Goth. iv. p. 473, ed. Bonn ; comp. C. Müller, ad Arriam l.c. ap. Geogr. Graec. Min. vol. i. p. 392.)

PITYU'SA (Hıтwí̃a or Ilituoū̃ $\sigma \alpha$ a contr. of

## PlaACENTIA.

Mitudecoa), literally, "abounding in pine-treas." 1. An island off the promontory Scyllaeum, or Buc phals, in Troezenia in Argolis. (l'aus. ii. 34. § 8.) Pling mentions (iv. 12. s. 19) an island Pityusa in the Argolic gulf, but from the order in which it occurs in Pliny, it would seem to be a different island from the preceding.
2. One of the Demonnesi in the Propontis, according to Hesychius (s. v.). [Demonnesi.]

PITYU'SAE (Пıтvov̂aaı or חıtvov̄ $\sigma \sigma a \iota$, Strab. iii. p. 167; Ptol. ii. 6. § 77). two islands on the S. coast of Spain, 700 stadia, or nearly 100 miles from Dianium (Plin. iii. 5. s. 11 ; Liv. xxviii. 37). Their position is thus defined by Diodorus (v. 17): they are three nights' and days' sail from the Columns of Hercules, one day's sail from Iberia, and one day and night from Libya; whilst, according to the Itinerary (p. 511), they were 300 stadia from the Baleares, and 400 from Carthago Spartaria, or Carthagena. The larger of the two islands was called Ebusus ("Ebuavos, Ptol. L.c.), the smaller Ophiusa ('Oфıoṽб⿱a, Ib.): and as they are only separated by a narrow strait, and as Ophiusa, from its small size, was unimportant, they are sometimes confounded together as one island by the ancients (Diod. v. 16; Liv. l.c.; Dioscor. i. 92, \&c.) Their name of Pityusue was derived, like that of many other ancient places, from the abundance of pinetrees which grew upon them. They were 46 miles in extent. Diodorus (l. c.) compares Ebusus with Corcyra for size ; and according to Strabo (l. c.) it was 400 stadia in circumference, and of about equal length and breadth. It was hilly in some parts, and not very fruitful, prodacing but little oil and wine; but its figs were good, and it afforded excellent pasturage. Snakes and noxious animals were not found upon it, whilst, on the contrary, the smaller island abounded in serpents to such a degree that it seems to have taken its name from them (Plin. iii. 14, xv. 21, xxxp. 59, \&c.; Mela, ii. 7; Avien. Descr. Orb. 621, \&c.). The chief town, also named Ebusus, which lay on the SE. side of the island, was a civitas fuederata, and had a mint. (Kamus, Cat. Num. vet. Gruec. et Lat. Mus. Keg. Daniae, i. p. 13.) It was a well-built city with a good harbour, and was the resort of many barbarians and foreigners, especially Phoenicians. (Strab., Mela, Diod., U. cc.) The larger island is now Iviza, the smaller, Formentara. [T. H. D.]

PLACEN'TIA (плакemtia: Eth. Placentinus: Piacenza), a city of Gallia Cispadana, situated near the S. bank of the Padus, just below the point where it receives the waters of the Trebia. It was on the Via Aemilia, of which it originally formed the termination, that road being in the first instance carried from Ariminum toPlacentia; and was 40 miles distant from Parma. We have no account of the existence of a town on the spot previous to the establishment of the Roman colony, which was settled there in B. c. 219 , after the great Gaulish war, at the same time with Cremona. (Liv. Epit. xx; Vell. Pat. i. 14 ; Pol. iii. 40; Ascon. in Pison. p. 3.) It consisted of not less than 6000 colonists, with Latin rights. But the new colony was scarcely founded, and its walls hardly completed, when the news of the approach of Hannibal produced a general rising of the neighbouring Gauls, the Boians and Insubrians, who attacked Placentia, ravaged its territory, and drove many of the colonists to take refuge at Mutina; but were unable to effect anything against the city itself, which was still in the hauds of the Romans
in the following year, and became the head-quarters of the army of Scipio both before and after the hattle of the Trebia. (Pol. iii. 40, 66; Liv. xvi. 25, 56, 59, 63; Appian, Hann. 5, 7.) At a later period of the same war, in b. c. 209, Placentia was one of the colonies which proved fuithful to Rome at its greatest need, and came forward readily to furnish its quota of supplies for the war, when tweive of the older colonies fuiled in doing so. (Liv. $\mathbf{x x v i i}$ 10.) Shortly after this it withstood the arms of Hasdrubal, who was induced to lay siege to it, after he had crossed the Alps and descended into Cisalpine Gaul, and by so doing lost a great deal of valuable time. Aiter a protracted siege he was compelled to abandon the enterprise, and continue his march into Italy, leaving Placentia behind him. (Id. xxvii. 39, 43.) A few years later it was less fortunate, having been taken by surprise by the sudden insurrection of the Gauls in B. c. 200, who plundered and burnt the town, and carried off the greater part of the inhabitants into captivity. (Id. xxxi. 10.) After the victory of the consinl L. Furius, about 2000 of the prisoners taken on this occasion were restored to the colony; and a few years afterwards L. Valerius Flaccus, who wintered at Cremona and Placentia, restored and repaired as far as possible all the losies they had suffered during the war. (Id. xxxi. 21, xxxiv, 22.) But they were still exposed to the ravages of the Gauls and Ligurians; and in B. c. 193 their territory was laid waste by the latter up to the very gates of the city. (Id. xxxiv. 56.) Hence we cannot wonder to find them, in B. c. 190, complaining of a deficieury of settlers, to remedy which the senate decreed that a fresh body of 3000 families should be settled at each of the old colonies of Placentia and Cremona, while new ones should be established in the district of the Boii. (Id. $x \times x$ vii. 46, 47.) A few years later the consul M. Aemilius, having completed the subjection of the Ligurians, constructed the celebrated road, which was ever after known by his nane, from Ariminum to Placentia (Id. xxxix. 2); and from this time the security and tranquillity enjoyed by this part of Italy caused it to rise rapidly to a state of great prosperity. In this there can be no doubt that Placentia fully shared; but we hear little of it daring the Roman Republic, though it appears to have been certainly one of the principal towns of Cispadane Gaul. In the civil war of Marius and Sulla, a battle was fought near Placentia, in which the partisans of Carbo were defeated by Lucullus, the general of Sulla, B. c. 82 (Appian, B. C. i. 92); and in that between Caesar and Pompey, B. c. 49, it was at Placentia that a mutiny broke out among the troops of the former, which at one time assumed a very formidable aspect, and was only quelled by the personal firmuess and authority of the dictator. (Appian, B. C. ii. 47; Dion Cass. xli. 26.) Placentia, indeed, seems to have been at this period one of the places commonly selected as the head-quarters of Roman troops in this part of Italy. (Cic. ad Att. vi. 9.) It was arain the scene of a somewhat similar mutiny of the legions of Augustus during the Perusian War, b. c. 41. (Dion Cass. slviii. 10.)

Cicero notices Placentia towards the close of the republican period as a municipium: its colonial rank must have been merged in the ordiuary municipal condition in consequence of the Lex Julia, b. c. 90. (Cic. in Jison. 23; Fest. s. v. Municipium.) But under the Enppire it reappears as 3

## PLACIA.

plataea.
colony, both Pliny and Tacitns giving it that title (Plin. iii. 15. s. 20; Tac. Hist. ii. 19): it had probably received a fresh colony under Augustus. We learn from Tacitus (l.c.) that it was one of the most flourishing and populous cities of the district of Gallia Cispadana; and though of no natural strength, being situated in an open phain, it was well fortified. For this reason it was occupied in A. d. 69 by Spurinna, one of the generals of Otho, and saccessfully defended by him aqainst Caecina, the general of Vitellius, who had crossed the Padus, and laid siece to Placentia, but was compelled to abandon it and withdraw to Cremona. (Tac. Hist. ii. 1723.) During the as-aults of Caecina, the amphitheatre, which is said to have been the largest provincial edifice of the kind in Italy, and was situated withuut the walls, was accidentally burnt. (lb. 21.) From this time we meet with no further mention of Placentia in history till the reign of Aurelian, when that emperor sustained a great defeat from the Marcomanni, under its walls. (Vopisc. Aurel. 21.) But the city still continued to be one of the mast considerable places on the line of the Via Aemilia; and though it is noticed by St. Ambruse. twards the close of the fourth century, as sharing in the desolation that had then befallen the whole of this once flourishing province (Ambros. S.p. 39), it survived all the ravages of the barbarians; and even after the fall of the Western Empire was still 2 comparatively flourishing town. It was there that Orestes, the father of the unhappy Augustulus, was put to death by Odoacer, in A. D. 476. (I. Diac. Hist. Miscell. xvi. p. 558.) Procopius also mentions it during the Gothic wars as a strong fortress and the chief city of the province of Aemilia It was only taken by Totila, in A.d. 546, by famine. (Procop. B. G. iii. 13, 17.) Considerably later it is still noticed by P. Diaconus among the "opulent cities" of Aemilia (Hist. Lang. ii. 18); a position which it preserved throughout the middle aces. At the present day it is still a flouristing and populous place, with about $30,000 \mathrm{in}$ habitants, thou:h partially eclipsed by the superior importance to which Parma has attained since it became the capiial of the reigning dukes. There are no remains of antiquity.

Placentia was undoubtedly indebted for its prosperity and impertance in ancient times, as well as in the middle ayes, to its advantagenus situation for the navigation of the Po. Strabo (v. p. 215) speaks of the navigation from thence to Ravenna, as if the river first began to be navigable from Placentia downwards; but this is not quite correct. The city itself lay at a short distance from the river; but it had an emporium or port on the stream itself, probatly at its confluence with the Trebia, which was iteelf a considerable town. This was taken and plundered by Hannibal in B. C. 218. (Liv. xxi. 57 : Tac. Hist. ii. 19.)

It has been already mentioned that the Via Aemilia, as originally constructed, led from Ariminum to Placentia, a distance of 178 miles. It was afterwards continued from the latter city to Dertona, from whence a branch proceeded across the Apennines to Genoa (Strab. v. p. 17); while another line was carried from Placentia across the Padus direct to Mediolanum, a distance of $\mathbf{4 0}$ miles; and thas communicated with the whole of Gallia Transyadaıa. (Itin. Ant. pp. 98, 127, 288; Itin. Hier. P. 616; Tab. Peut.) [E. H. B.]

PLA'CIA (חגaxiŋ: Eth. חлaxıavós), an ancient

Pelasgian town in Mysia Olympene, at the foot of Mount Olympus, and on the east of Cyzicus. Th place seems to have decayed or to have been de stroyed at an early time, as it is not mentioned by later writers. (Herod. i. 57 ; Scylax, p. 35; Dionys Hal. i. p 23: Steph. B. s. v. пла́кл.) [L. S.]
PLACUS (Пла́коs), a woody mountain of Mysia, at the foot of which Thebe is said to have been situated in the Iliad (vi. 397, 425, xxii. 479); but Strabo (xiii. p. 614) was unable to learn anything about such a mountain in that neighbourhond. [See Pelecas.?
[L. S.]
PIAGIA'RIA. [Lusitania.]
Plana'Ria ins. [Fortinatafe Insulafe]
Plana'sia. [Lerina; Leron.]
PLANA'SIA (nidaváia: Pianosa), a small island in the Tyrrhenian sea, about 10 miles SW . of Ilva ( $E(b a)$, and nearly 40 from the nearest point on the coast of Etruria. It is about 3 miles long by $2 \frac{1}{2}$ in width, anid is low and Hat, from whence probably it derived its name. (Plin. iii. 6. s. 12 ; 1'tol. iii. 1. § 79; Itin. Marit. p. 513.) The Maritime Itinerary reckons it 90 stadia from Ilva, while Pliny calls the same distance 38 miles; but this is evidently a mistake for its distance from the mainland. It is remarkable that Pliny mentions Planaria and Planasia as if they were two distinct isiands, enumerating the one before and the other after Ilva; but it is certain that the two names are only forms of the same, and both refer to the same island. (Cluver. Ital. p. 504 ; Harduin. Not. ad Plin. l. c.) In Varro's time it seems to have belonged to M. Piso, who kept large fiocks of peacocks there in a wild state. (Varr. R. R. iii. 6.) It was subsequenily used as a place of banishment, and among others it was there that Postumus Agrippa, the grandson of Augustus, spent the last years of his life in exile. (Tac. Ann. i. 3, 5; Dion Cass. Iv. 32 ; Suet. Arg. 65.) Some ruins of Roman buildings still remain in the island : and its quarrics of granite seem to have been certainly worked in ancient times. It is now inhabited only by a few fishermen.
[E. H. B.]
PLANE'SIA (חגar $\quad$ бia, Strab. iii. p. 159), an island in the Sinus Illicitanus, on the SE. coast of Hispania Tarraconensis, now Isola Plana. [T.H.D.]

I'latafa. [Platea.]
PlataEA or PlataEAE (IIddraia, Hom. Herod.; Indaratai, Thac. Strab. Paus., \&ec. : Eth. Плataitús, Plataeensis), an ancient city of Boeotia, was situated upon the frontiers of Attica at the foot of Nit. Cithaeron, and between that mountain and the river Ascopus, which divided its territory from that of Thebes. (Strab.ix. p.41I.) The two cities were about 61 miles apart by the read, but the direct distance was little more than 5 geographical miles. According to the Thebans Plataea was founded by them (Thuc. iii. 61); but Pausanias represents the Plataeans as indigenous, and according to their own account they derived their name from Plataea, a daughter of Asopus. (Paus. ix. 1. § 1.) Plataea is mentioned in Homer among the other Boeotian cities. (Il. ii. 504.) In B. c. 519 Plataea, nnwilling to subinit to the supremacy of Thebes, and unable to resist her powerful neighbour with her own unaided resources, formed a clase alliance with Athens, to which she continued faithful during the whole of her subsequent history. (Herod. vi. 108; Thuc. iii. 68.) She sent 1000 men to the assistance of Athens at Marathon, and shared in the glories of that victory. (Herod. l.c.) The Platacans also fought at Artemisium, but were

## PLATAEA.

not present at Salamis, as they had to leave the fleet in order to remove their families and property from the city, in consequence of the approach of the Persian army. (Herod. viii. 44.) Upon the arrival of the Persians shortly afterwards their city was burnt to the ground. (Herod. viii. 50.) In the following year (в. с. 479) their territory was the scene of the memorable battle, which delivered Greece from the Persian invaders. The history of this battle illustrates so completely the topography of the Plataean territory, that it is necessary to give an account of the different positions taken by the contending forces (See accompanying Map). Mardonius proceeded from Attica into Boeotia across Mount Parnes by the pass of Deceleia, and took up a position on the bank of the Asopus, where he caused a fortified camp to be constructed of 10 stadia square. The situation was well selected, since he had the friendly city of Thebes in his rear, and was thus in no danger of falling short of provisions. (Herod. ix. 15.) The Grecian army crossed over from Attica by Mt. Cithaeron; but as Pausanias did not choose to expose his troops to the attacks of the Persian cavalry on the plain, he stationed them on the slopes of the mountain, near Erythrae, where the ground was rugged and uneven. (See Map, First Position.) This position did not, however, altogether preserve them ; but, in an attack made by the Persian cavalry, a body of 300 Athenians repulsed them, and killed their leader Masistius. This success encouraged Pausanias to

## PlataEA.

descend into the territory of Plataea, more especially as it was better supplied with water than his present position. Marching from Erythrae in a westerly position along the roots of Mt. Cithaeron, and passing by Hysiae, he drew up his army along the right bank of the Asopus, partly upon hills of no great height and partly upon a lofty plain, the right wing being near the fountain Gargaphia, and the left near the chapel of the Plataean hero Androcrates. (Herod. ix. 25-30.) Mardonius drew up his army opposite to them on the other side of the Asopus. (See Map, Second Position.) The two armies remained in this position for some days, neither party being willing to begin the attack. The Persians assailed the Greeks at a distance with their missiles, and prevented them altogether from watering at the Asopus. Meantime the Persian cavalry intercepted the convoys of provisions proceeding to the Grecian camp, and on one occasion drove away the Lacedaemonians, who occupied the right wing from the fountain Gargaphia, and succeeded in choking it up. This fountain had been of late the only watering-place of the Greeks; and as their ground was now untenable, Pausanias resolved to retreat in the night to a place called the Island ( $\nu \hat{\eta} \sigma o s$ ), abont 10 stadia in the rear of their present position, and halfway between the latter and the town of Plataea. The spot selected, improperly called an island, was, in fact, a level meadow, comprised between two branches of the river Oeroë, which, rising from distinct sources in Mt. Cithaeron,

and ranning for some space nearly parallel with one another, at length unite and flow in a westerly direction into the gulf of Corinth. (Herox. ix. 51.) The nature of the ground would thus afford to the Greeks abundance of water, and protection from the enemy's cavalry. The retreat, however, though for so short a distance, was effected in disorder and confusion. The Greek centre, chiefly composed of Megarians and Corinthians, probably fearing that the island would not afford them sufficient protection against the enemy's cavalry, did not halt till they reached the temple of Hera, which was in front of the town of Plataea The Lacedaemonians on the right wing were delayed till the day began to dawn, by the obstinacy of Amompharetus, and then began to march across the hills which separated them from the island. The Athenians on the left wing began their march at the same time, and got round the hills to the plain on the other side on their way to the island. After marching 10 stadia, Pausanias halted on the bank of the Molveis, at a place called Agrinpius, where stood a temple of the Eleusinian Demeter. Here be was joined by Amompharetus, and here he had to sustain the attack of the Yerians, who had rushed across the Asopus and up the hill after the retreating foe. As soon as Pausanias was overtaken by the Persians, he sent to the Athenians to entreat them to hasten to his aid; but the coming ap of the Boeotians prevented them from doing so. Accordingly the Lacedaemonians and Tegeatans had to encounter the Persians alone without any assistance from the other Greeks, and to them alone belongs the glory of the victory. The Persians were defeated with great slaughter, nor did they stop in their flight till they had again crossed the Asopus and reached their fortified camp. The Thebans also were repulsed by the Athenians, but they retreated in grod order to Thebes, heing covered by their cavalry from the pursuit of the Athenians. The Greek centre, which was nearly 10 stadia distant, had no share in the battle; but hearing that the Lacedsemonians were gaining the victory, they hastened to the scene of action, and, coming up in confasion, as mary as 600 were cut to pieces by the Theban force. Meantime the Lacedaemonians pursued the Perrians to the fortifed camp, which, however, they were unable to take until the Athenians, more skilled in that species of warfare, came to their assistance. The barricades were then carried, and a dreasful carnage ensued. With the exception of 40,1000 who retreated with Artabazus, only 3000 of the original 300,000 are said to have escaped. (Herod. ix. 50-70.) On the topography of this batte, see Leake, Northern Greece, vol. ii. p. 335, seq.; Grote, History of Greece, vol. v. p. 212, seq.
As this signal victory had been gained on the soil of Plataea, its citizens received especial honour and remards from the confederate Greeks. Not only was the large sum of 80 talents granted to them, which they employed in erecting a temple to Athena, but they were charged with the duty of rendering every year religions honours to the tombs of the warriors who had fallen in the battle, and of celebrating every five years the festival of the Eleatheria in commennoration of the deliverunce of the Greeks from the Persian yoke. The festival was sacred to Zeus Eleotherins, to whom a temple was now erected at Plateea. In return for these services Pausanias and the other Greeks swore to guarantee the independence and inviolability of the city and its territory (Thuc. ii. 11; Plut Arict c. 19-21; Strab. ix. p. 412;

Pans. ix. 2. § 4; for further details see Dict. of Ant. art. Elesutheria.)

Plateea was of course now rebnilt, and its inhabitants continued unmolested till the commencement of the Peloponnesian War. In the spring of B. c. 431, before any actual declaration of war, a party of 300 Thebans attempted to surprise Plataca. They were admitted within the walls in the night time by an oligarchical party of the citizens; but the Plataeans soon recovered from their surprise, and put to death 180 of the assailants. (Thuc. ii. $\mathbf{1}, \mathrm{seq}$.) In the third year of the war (b. c. 429) the Pelopornessian army under the command of Archidamus laid siege to Plataea. This siege is one of the most memorable in the annals of Grecian warfare, and has been narrated at great length by Thucydides. The Platreans had previously deposited at Athens their old men, women, and children; and the garrison of the city cunsisted of only 400 citizens and 80 Athenians, together with 110 women to manage their household affairs. Yet this small force set at defiance the whole army of the Peloponnesians, who, after many fruitless attempts to take the city by assault, converted the siege into a blockade, and raised a circumvallation ronnd the city, consisting of two parallel walls, 16 feet asunder, with a ditch on either side. In the second year of the blockade 212 of the besieged daring a tempestuons winter's night succeeded in scaling the walls of circumvallation and reaching Athens in safety. In the conrse of the ensuing summer (B. c. 427) the remainder of the garrison were obliged, through failure of provisions, to surrender to the Peloponnesians. They were all put to death; and all the private buildings rased to the ground by the Thebans, who with the materials erected a sort of vast barrack round the temple of Hera, both for the accommodation of visitors, and to serve as an abode for thowe to whom they let out the land. A new temple, of 100 feet
 the Thebans in honour of Hera. (Thuc. ii. 71, seq., iii. 20 , seq., 52, seq., 68 .)

The surviving Plataeans were kindly received by the Athenians. They would appear even before this time to have enjoyed the right of citizenship at
 63). The exact nature of this citizenship is ancertain; but that it was not the full citizenship, posessed by Athenian citizens, appears from a line of Aristophanes, who speaks of certain slaves, who had been engnged in sea-fights, being made Plataeans
 Ran. 706 : comp. Schol. ad Aristoph. Ram. 33 ; Bückh, Public Econ. of Athens, p. 262, 2nd ed.). Diodorus, in relating their retarn to Athens at a subsequent time, says (xr. 46) that they received the icoooicreia; bat that some of them at any rate enjoyed nearly the full privileges of Athenian citizens appears from the decree of the people quoted by Demosthenes (c. Neaer. p. 1380). On the whole subject, see Hermann, Staatsalterth, § 117.

In b.c. 420 the Athenians gave the Plataeans the town of Scione as a residence. (Thuc. v. 32; Isocr. Paneg. § 109; Diodor. xii. 76.) At the close of the Peluponnesian War, they were compelled to evacuate Scione (Plut. Lysand. 14), and again found a hospitable welcome at Athens. Here they were living at the time of the peace of Antalcidns (B. c. 387), which guaranteed the autonomy of the Grecian cities; and the Lacedsemonians, who were now anxious to hamble the power of Thebes, took ad-
vantage of it to restore the Plataeans to their natire city. (Paus. ix. 1. § 4 ; Isocrat. Platnic. § 13, seq.) But the Plataeans did not long retain pmssession of their city, for in B. c. 372 it was surprised by the Thebans and again destroyed. The Platacans were compelled once inore to seek refuge at Athens. (Paus. ix. 1. §§5-8; Diodor. xv. 46.) The wrongs done to the Plataeans by Thebes are set forth in a speech of Isocrates, entitled Plataicus, which was perhaps actually delivered at this time by a Plataean speaker before the public assembly at Athens. (Grote's Greece, vol. x. p. 220.) After the battle of Chaeroneia (b. C. 338) the Plataeans were once more restored to their city by Philip. (Paus. ix. 1. § 8, iv. 27. § 11.) It was shortly after this time that Plataea was visited by Dicaearchus, who calls the Platueans 'A0ŋvaiot Bow they have nothing to say for themselves, except that they are colonists of the Athenians, and that the battle between the Greeks and the Persians took place near their town. (Descript. Graec. p. 14, Hudson.)

After its restoration by Philip, the city continued to be inhabited till the latest times. It was visited by Pausanias, who mentions three temples, one of Hera, another of Athena Areia, and a third of Demeter Fileusinia. Pausanias speaks of only one temple of Hera, which he describes as situated within the city, and worthy of admiration on account of its magnitude and of the offerings with which it was alorned (ix. 2. §7). This was apparently the temple built by the Thebans after the destruction of Plataca. (Thuc. iii. 68.) It is probable that the old temple of Hera mentioned by Herodotus, and which he describes as outside the city (ix. 52), was no longer repaired after the crection of the new one, and had disappeared before the visit of Prusanias. The temple of Athena A'reia was built according to Pausanias (ix. 4. § 1) out of a share of the spoils of Marathon, but according to Plutarch (Arist. 20) with the 80 talents out of the sporils of Plataea, as mentioned abuve. The temple was adorned with pictures by Polygnotus and Onates, and with a statue of the goddess by l'leidias. Of the temple of Demeter Eleusinia we have no details, but it was prebably erected in consequence of the battle having been fought near a temple of Demeter Eleusinia at Argiopius. (Herod. ix. 57.) The temple of Zeus Eleutherius (Strab. ix. p. 412) seems to have been reduced in the time of Pausanias to an altar and a statue. It was situated outside the city. (Paus. ix. 2. §§ 5-7.)

Ilataes is mentioned in the sixth century by Hierocles (p. 645, Wesscling) among the cities of Berotia; and its walls were restored by Justinian. (1'rocop. de Aedif. iv. 2.)

The rains of Platicea are situated near the small village of Kobhla. The circuit of the walls may still be traced in great part. They are about two miles and a half in circumference; but this was the size of the city restored by Philip, for not only is the earlier eity, before its destruction by the Thebans, described by Thucydides (ii. 77) as small, but we find at the southern extremity of the existing remains more ancient masonry than in any other part of the ruins. Hence Leake supproses that the ancient city was confined to this part. He observes that " the masonry in general, both of the Acropolis and of the town, has the appearance of not being so old as the time of the battle. The greater part is of the fourth order, but mixed with portions of a
less regular kind, and with some pieces of polygonal masoury. The Acropolis, if an interior inclosure can be so called, which is not on the highest part of the site, is constructed in part of stones which have evidently been taken from earlier buildings. The towers of this citadel are so formed as to present flanks to the inner as well as to the outer face of the intermediate walls, whereas the town walls have towers, like those of the Turks, open to the interior. Above the southern wall of the city are foundations of a third inclosure; which is evidently more ancient than the rest, and is probably the only part as old as the Persian War, when it may have been the Acropolis of the Plataea of that age. It surrounds a rocky height, and terminates to the $S$. in an accute angle, which is only separated by a level of a few yards from the foot of the great rocky slope of Cithaeron. This inclosure is in a situation higher than any other part of the ancient site, and higher than the village of Kojkhla, from which it is 500 yands distant to the E. Its walls are traceable on the eastern side along a torrent, a branch of the Ö̈rue, nearly as far as the south eastern angle of the main inclosure of the city. In a church within this apper inclosure are some fragments of an inscribed marble." (Northern Greece, vol. ii. p. 325.) (Compare Friexterich, Specimen Rerum Plataic. Berol. 1841 ; Münscher, Diss. de Rebus Platacens. 1841.)

coin of platafa.

## PLATAMO'DES. [Mfssenia, p. 341, b.]

PLATANISTAS. [Sparta.]
PLATANISTON (חп tain in Messenia, near Corone. (Paus. iv. 34. § 4.) [Cohonk.]
2. A river of Arcadia, and a tributary of the Neda, flowing westward of Lycosura, which it was necessary to cross in going to Phigalia. (Paus. viii. 39. § 1 ; Leake, Morea, vol. ii. p. 10.)

PLATANISTUS (nגaraviotous). 1. The northern promontory of Cythera. (Paus. iii. 23. § 1.)
2. Another name of Macistus or Macistum, a town of Triphylia in Elis. [Macistus.]

PLATA'NIUS (חגatávios), a river of Boeotia, flowing by Corscia into the sea. [Corseia.]

PLA'TANUS (Inaravous), according to the Stadiasmus ( $\S \S 178,179$ ), a coast-town of Cilicia Aspera, 350 stadia west of Anemurium. This distance is incorrect. Beaufort remarks that "beiween the plain of Selinti and the promontory of Ancmur, a distance of 30 miles, the ridge of bare rocky hills forming the coast is interrupted but twice by narrow valleys, which conduct the mountain torrents to the sea. The first of these is Kharadra; the other is halfway between that place and Anamur." The latter, therefore, seems the site of Platanus, that is, about $\mathbf{1 5 0}$ stadia from Anemurium. The whole of that rocky district, which was very dangerous to navigators, seems to have derived the name of Platanistus (Strab. xiv. p. 669) from I'latanus. (Leake, Asia Minor, p. 200). [I. S.]

PLA'TANUS (חגdтavos, Polyb. v. 68 ; Steph.B. 8. v. Плa兀ávך; Joseph. Ant. xvi. 11. § $1:$ Eth. Inaatavcís), a town of Phoenicia, described by Jospphus (l.c.) as a villaye of the Sidonians, and situated upon a fass between Mount Lebanon and
the ses. (Robinson, Biblical Researches, vol. iii. p. 433.$)$
 lect. ; Herod. iv. 151, 153, 156, 169 ; \$латeiau, Seyl. p. 46; חлaralaı, חлareia, Steph. B.; Stadiasm. § 41), an island off the shores of Libya, and on the side not far removed from the W. limits of Aegypt, where for two years in the seventh century B. C. the Theracan colunists settled before they founded Cyrene. It has been identified with the island of Bomba or Bhoerda in the Gulf of Bomba. The island Aedonin ('Andovia, 'Andovis, Ptol. iv. 5. § 75), which Scylax (l. c.) and the Coast-describer (Lc.) couple with Platea, may then be referred to the small island Seal off the harbour of Batrachus; unless it be assumed that there is some mistake in our present charts, and that Aedonia or Aedonis and Platea be two different names for the same island. (Pacho, Voyage dans la Marmarique, p. 52; Barth, Wanderungen, pp. 506, 548.)
[E. B. J.]
PLAVIS (Piare), one of the most considerable rivers of Venetia, which has its sources in the Julian Alps, flows by the walls of Belluno (Belunum), and falls into the Adriatic sea between Venice and Caorle. Though one of the largest rivers in this part of Italy, it is unaccountably omitted by Pliny (iii. 18. s. 22). who mentions the much smaller streams of the Silis and Liquentia on each side of it ; and its name is not found in any author earlier than Paulus Diaconus and the Gergrapher of Ravenna. (P. Diac. ii. 12; Geogr. Rav. iv. 36.)
[E. H. B.]
 a place mentioned by Strabo, in the NW. part of India, in the state which he calls Bandobane, on the river Choas pes (now Attok).
[V.]
PLEGRA (חл'́rpa), a town in the interior of Paphlagonia. (Ptol. v. 4. § 5.)
[L. S.]
PLEIAE (IIतeia), a town of Laconia, mentioned by Livy (xxxv. 27) as the place where Nabis pitched his camp in в.c. 192, must have been situated in the plain of Leuce, which lay between Acriae and Asopus. [Leccae-] The name of the place occurs in an inscription (Bückh, Inscr. no. 1444). From its position it would appear to be the same as the тaлask кcó $\boldsymbol{\mu} \boldsymbol{\eta}$ of Pausanias (iii. 22. § 6), in which passage Curtius suggests that we might perhaps read

## PLEISTUS. [DELPHi.]

PLEMMY'RIUM. [SYRACUSAE.]
PLERA, a town of A pulia, situated on the branch of the Via Appia which led from Venusia direct to Tarentum. It is supposed to be represented by the modern Gravina. (Itin. Ant. p. 121 ; Holsten. Not. ad Clav. p. 281.) The name is written in many MISS. Blera.
[E.H. B.]
PLERAEI (пतлpaîot), a penpie of Illyricum, who lived upon the banks of the Narc, according to Strabo (vii. p. 315, seq.). Stephanus B. places them in Epeirus (s. v. пІлараїo).

PLESTI'NLA. [MArsi.]
PLEUMO'XII, a Gallic people who were under the dominion of the Nervii (Caes. B. G. v. 39). Nothing more is known of them. The name is not quite certain, for there are variations in the MSS. It is clear that they were somewhere in Gallia and pear the Nervii, as we may infer.
[G. L.]
 Theupovés's, Steph. B. a.v., Pleuronius), the name of two cities in Aetolia, the territory of which was called Plearonia. (Strab. 1. p. 465 ; Auson. Epitaph. 10.) vol. 1. 1.
 p. 451), was situated in the plain between the Achelous and the Evenus, W. of Calydon, at the foot of Mount Curium, from which the Curetes are said to have derived their name. Pleuron and Calydon were the two chief towns of Aetolia in the heroic age, and are said by Strabo (x. p. 450) to have been the ancient ornament ( $\pi \rho \delta \sigma \chi \eta \mu a$ ) of Greece. Pleuron was originally a town of the Curetes, and its inhabitants were engaged in frequent wars with the Actolians of the neighbouring town of Calydon. The Curetes, whose attack apon Calydon is mentioned in an episode of the lhiad (ix. 529), appear to have been the inhabitants of Plearon. At the time of the Trojan War, however, Pleuron was an Aetolian city, and its inhabitants sailed against Troy under the command of the Aetolian chief Thoas, the son (not the grandson) of Oeneus. (Hom. Il. ii. 639, comp. xiii. 217, xiv. 116.) Ephorus related that the Curetes were expelled from Pleuronia, which was formerly called Curetis, by Aeolians (ap. Strab. x. p. 465); and this tradition may also be traced in the statement of Thucydides (iii. 102) that the district, called Calydon and Pleuron in the time of the Peloponnesian War, formerly bore the name of Aeolis. Since Pleuron appears as an Aetolian city in the later period of the heroic age, it is represented in some traditions as such from the beginning. Hence it is said to have derived its name from Pleuron, a son of Aetolus; and at the very time that some legends represent it as the capital of the Curetes, and engaged in war with Oeneus, king of Calydon, others supprose it to have been governed by the Aetolian Thestius, the brother of Oeneus. Thestius was also represented as a descendant of Pleuron; and hence Pleuron had an heroum or a chapel at Sparta, as being the ancestor of Leda, the daughter of Thestius. But there are all kinds of variations in these traditions. Thus we find in Sophocles Oeneus, and not Thestius, represented as king of Pleuron. (Apollod. i. 7. § 7; Paus. iii. 14. § 8; Soph. Trach. 7.) One of the tragedies of Phrynichus, the subject of which appears to have been the death of Meleager, the son of Oeneus, was entitled חौєvpávich, or the "Pleuronian Women;" and hence it is not improbsble that Phrynichus, as well as Sophocles, represented Oeneus as king of Plenron. (Paus. x. 31. § 4.) Pleuron is rarely mentioned in the historical period. It was abandoned by its inhabitants, says Stralo, in consequence of the ravages of Demetrius, the Aetolian, a surname probably given to Dernetrius II., king of Macedonia (who reigned B. c. 239 -229), to distinguish him from Demetrius Poliurcetes. (Strab. 8. p. 451.) The inhabitants now built the town of
2. New Pleuron ( $\grave{\eta}$ vewtépa חideupóv), which was situated at the foot of Mt. Aracynthus. Shortly before the destraction of Corinth (B.C. 146), we find Pleuron, which was then a member of the Achaean League, petitioning the Romans to be dissevered from it. (Paus. vii. 11. § 3.) Leake supposes, on satisfactory grounds, the site of New Pleuron to be represented by the ruins called $\tau \delta$ Kdotpon tins Kuplas Eiphuns, or the Castle of Lady Irene about one hour's ride from Mesolonghi. These ruins occupy the broad summit of one of the steep and rugged heights of Mt. Zygos (the ancient Aracynthus), which bound the plain of Mesolonghi to the nurth. Leake says that the walls were about a mile in circumference, but Mure and Dodwell describe the circuit as nearly two milest The most remarkable

PLINTHINE．
remains within the ruined walls are a theatre about 100 feet in diameter，and above it a cistern， 100 feet long， 70 broad，and 14 deep，excavated on three sides in the rock，and on the fourth constructed of masonry．In the acropolis Leake discovered some remains of Doric shafts of white marble，which he conjectures to have belonged to the temple of Athena， of which Dicaearchus speaks（1．55）；but the teinple mentioned by Dicaearchus must have been at Old Pleuron，since Dicaearchus was a contem－ porary of Aristotle and Theophrastus，and could not have been alive at the time of the foundation of New Plenron．Dodwell，who visited the ruins of this city，erroneously maintains that they are those of Oeniadae，which were，however，situated among the marshes on the other side of the Achelous．Leake places Old Pleuron further south，at a site called Ghyfto－kastro，on the edge of the plain of Meso－ lomghi，where there are a few Hellenic remains． （Leake，Northern Greece，vol．i．p．115，seq．，vol． iii．p．539；Dodwell，Tour through Greece，vol．i． p．96，seq．；Mure，Tour in Greece，vol．i．p．140， seq．）

PLINTHINE（ח入ıข日ivn，Strab．xvii．p．799； Ptol．iv．5．§ 8；Steph．B．8．v．），the frontier town of Aegypt towards Libya．It stood at the head of the Plinthinetic bay，in latitude $29^{\circ} 40^{\prime} \mathrm{N}$ ．，just within the Mareotic nome，but beyond the limits of the Delta proper．There are no remains enabling us to determine the exact site of this town；but it can－ not have been far from Taposiris（Abousir），of which the ruins are still visible about 2.5 miles W ．of Alexandreia．An inferior kind of wine was pro－ duced in this region of Aegypt；and Hellanicus（ Fr ． 155）says that the people of Plinthine originally discovered the virtues of the grape．（Athen．i． p．34．）
［W．B．D．］
 $\kappa \delta \lambda \pi o s$, Herod．ii．6），the westernmost of the Medi－ terranean harbours of Aegypt．It was indeed little more than a roadstead，and was expused to the $\mathbf{N}$ ． and NW．winds．W．of the Sinus Plinthineticus began the Regio Marmarica．
［W．B．D．］
PLISTIA（Prestia），a town of the Samnites， mentioned only by Livy（ix．21，22）in a manner that affords but little clue to its prosition．It was besieged by the Samnites in B．c． 315 ，with the view of drawing off the Romans from the sige of Saticula： they failed in this object，but male themselves masters of llistia．The site is probably indicated by a village still called Prestiu，about 4 miles from Sta Agata dei Goti，at the foot of the Monte Ta－ burno．
［E．H．B．］
PLISTUS．［Drlpht．］
PLITENDUS，a town of Phrygia on the river Alander，which is probably a brauch of the San－ garius．（Liv．$x \times x$ viii．15．）

PLITHANA（ $\tau \dot{\alpha}$ mititava，Arrian，Per．Mar． Erythr．p．29，Huds．，p．294，ed．C．Müller，who reads Hai日ava），an important emporium in the Dachinabades in India，from which many onyx stones were exported．It is called by Ptolemy（vii．1．§ 82） Baethana（Bai日ava），the royal residence of Siro－ ptolemaeus．In Pracrit it is also called Paithana，in Sanscrit Prathisthana；it is the modern town of Pythan，or Pultanah upon the river Godaveri． （Vincent，Voyage of Nearchus，vol．ii．p．412；Las－ sen，Ind．Alterth．vol．i．p．177；C．Müler，ad Gcogr．Graec．Min．vol．i．p．294．）

PLOTHELA．［ATrica，p．330，b．］

## PODOCA．

PLOTINO＇POLIS（Incoort dmodis，Ptol．iii． 11. § 13），a town of Thrace，on the road from Trajan－ opolis to Hadrianopolis，and connected with Heraclea by a by－road．（Itin．Ant．pp．175，322．）Ac－ cording to the Itinerary，it was 21 miles distant from Hadrianopolis．It was probably founded by Trajan at the same time with Trajanopolis，and named after his consort Plotina．It was restored by Justinian．（Procop，Aed．iv．11．）Variously identified with Dsjisr－Erkene，Bludin，and Demw－ tica；but Pococke（iii．c．4）thinks that the ruins near U＇zun Kiupri belong to it．
［T．H．D．］
 small island on the S．coast of Spain，probably that off C．St．Martin．
［T．H．D．］

## PlUVIa＇lia．［Fortunatae Insulae．］

PLUVINA，a town of Pelagonia，to which the consul Sulpicius retired in his campaign against Philip，в．c．200．（Liv．xxxi．39．）Its pasition must be looked for in one of the valleys watered by the Erigon and its branches．
［E．B．J．］

## PNigeUS．［Phoenicus．］

POCRI＇NIUM，in Gallia，a name which appears in the Table on a route from Aquae Bornonis（Bour－ bon IArchambault）to Augustodunuin（Autun）． D＇Anville fiuds a place named Perrigni，on the right bank of the Loire，E．by S．of Bourbon l＇Archam－ buult，and he thinks that both the name and the dis－ tance agree well enough with the Table．A French writer，cited by Ukert（Gallien，p．467），places Pocrinium $1 \frac{1}{2}$ leagues from Perrigny，near the vil－ lage La Brosse，where old ruins have been found； and the place is called in old documents Pont Ber－ nuchon on the Loire．
［G．L．］
PODALAEA（ Побa入aía，Побa入入ía，Поба入io， or Moठdлєia：Eth．Пoठa入єẃrns），a town of Lycia， situated in the neighbourhood of Limyra（Steph．B． s．v．）；but according to Ptolemy（v．3．§ i）not far from the sources of the Xanthus in the north of Lycia．（Comp．Plin．v．28；Hierocl．p．683．）Sir C．Fellows（Lycia，p．232，\＆c．）luoks for its site further east towards Mount Solyma，where remains of au ancient town（Cyclopian walls and rock－tombs） near Almalec，are still found，and are known by the name of Eishi Hissar，i．e．old town．
［L．S．］
PODANDUS（חlo 0 anóos，Basil．Ep．74，75；It． Antom．p．145；ì Moठevסós，Const．Porphyr．de Them．i．p．19，Bonn：חodavócés，Const．Porphyr． Vit．Basil．c．36；Opodands，It．Hieros．p．578），a town of Cappadocia distant 16 Roman miles from Faustinopolis，according to the Antonine Itinerary （l．c．），but 23 according to the Jerusalem Itinerary （l．c．）．It was situated near the Pylae Ciliciae．It is frequently mentioned by the Byzantine writers， and is said to have taken its name from a small stream which flowed near it．（Constant．Porphyr． Vit．Basil．c．36；Cedren．p．575；Joann．Scylitz． pp．829，844．）It is described by Baxil as a inost miserable place．＂Figure to yourself，＂he says，＂a Laconian Ceada，a Charonium breathing forth pes－ tilential vapours；you will then have an idea of the wretchedness of Podandus．＂（Ep．74．）It is still called Podend．（Cramer，Asia Minor，vol．ii．p． 134．）
 § 14 ；Поסoúk $\eta$ ，Peripl．Mar．Erythr．c．60），a place near the coast of Malabar，not far from the Cierry river．According to Bohlen（Ind．vol．i．p．26），the name is a corruption of Podukeri（the new town）－ （Comp．also Ritter，vol．v．p．516．）It is not unlikely that the name hiss been preserved in the
present Pomicherry（written in the Tamil language Preluchchery）．Ptuletny mentions another phace of the same name in the northern part of the island of Tapmbane（rii．4．§ 10 ）．

POECILA＇SIUM，POECILASSUS（Пoぃкıd $\sigma \iota o$ ， Ptol．iii．15．§3；Пoıкi入aббos，Stadism．Magni Mar． p．299，ed．Hoffmann），a town on the S．const of Crete， placed by Ptolemy E．of Tarrha，between this place and the promontory Hermaea；but in the Stadiasmus W．of Tarrla，between this place and Syia， 60 stadia frum the former and 50 from the latter．It is pro－ bably represented by the ruins near Tripeté，situated between the places mentioned in the Stadiasmus． （Pashley，Crete，vol．ii．p．264．）

POECILE（ Пook（ $\lambda \eta$ ），a rock on the coast of Ci － licia，near the mouth of the Calycadnus，and on the east of Cape Sarpedon，across which a flight of steps cut in the rock led from Cape Zephyrinm to Seleuceia． （Strab．xiv．p．670；Stuliasm．Mar．M．§ 161．） Its distance of 40 stadia from the Calycadnus will place it about Pershendi．Instead of any steps in the rock，Beaufort here found extensive ruins of a walled town，with temples，arcades，aqueducts，and tombs，built round a small level，which had some appearance of having once been a harbour with a narrow opening to the sea．An inscription copied by Beaufort from a tablet over the eastern gate of the ruins accounts for the omission of any notice of this town by Strabo and others；for the inscription states it to have been entirely built by Fluranius， archon of the eparchia of Isauria，in the reigns of Valentinian，Valens，and Gratian．
［L．S．］
POFCILUM（Покi入ov，l’aus．i．37．§ 8），a mountain in Attica，on the Sacred Way．［See Vol． I．p．328，a．］

POEDICULI．［Prucetir．］
 by Ptolemy（ii．14．§ 3）as situated in the south－ east of Noricum；it is commonly identified with the monlern Adelsberg，on the river Poigk．［L．S．］
POEEESSA．［Cros］
POEMANE＇NUS（Ho $\mu a \nu \eta \nu \delta s$ ），a town in the south of Cyzicus，and on the south－west of lake Aphnitis，which is mentioned only by very late authors．It belonged to the territory of Cyzicus， was well fortified，and possessed a celebrated temple of Asclepins．（Steph．B．s．v．חoıudvıvov ；Nicet． Chon．Chron．p． 296 ；Concil．Constant．III．p． 501 ；Concil．Nicaen．II．p． 572 ；Hierncl．p．662， where it is called Poemanentus．）Its inhabitants are called Poemaneni（ Пouavqvoi，Plin．v．32）．Ha－ milton（Researches，ii．p．108，\＆ce．）identifies it with the modern Maniyas，near the lake bearing the same name．
［L．S．］
poEni．［Carthago．］
POENI＇NAE ALPES．［Alpes，p．108，a．］
POETO＇VIO．［PETOVIo．］
POGON．［Troezen．］
POLA（חó入a：Eth．Mo＾d́ns：Pola），one of the principal towns of Istria，situated near the S ． extremity of that peninsula，on a landlocked bas， forming an excellent port，which was called the Sinus Polaticus．（Mel．ii．3．§ 13．）According to a tradition mentioned by several ancient authors，its formdation was ascribed to a band of Colchians，who had come hither in pursuit of Modea，and afterwards settled in the country．（Strab．i．p．46，v．p．216； Plin．iii．19．s． 23 ；Mel．l．c．；Tzetz．ad Lycepher． 102y．）It is impossible to explain the origin of this tale，which is already mentioned by Callimachus （ap．Strab．l．c．）；but it may be received as proving
that the city was cons：dered as an ancient one，and certainly existed before the Roman comquest of Istria in B．c．177，though its name is not mentioned on that occasion．It was undoubtedly the advantages of its excellent port that attracted the attention of the Romans，and led Augustus to establish a colony there，to which he gave the name of Pietas Julia． （Mel．L．c．；Plin．iii．19．s．23．）Several of the still existing remains prove that he at the same time adorned it with public edifices；and there is no doubt that under the Roman Empire it became a considerable and flourishing town，and，next to Tergeste（Trieste），the most important city of Istria． （Strab．l．c．；Ptol．iii．1．§ 27 ；Gruter，Inscr． p．263．7，p．360．1，p．432．8．）It is mentioned in history as the place where Crispus，the eldest son of Constantine the Great，was put to death by order of his father；and again，in A．D．354，the Caesar Gallus underwent the saine fate there by order of Constantius．（Ammian．Marc．xiv．11．）After the fall of the Roman Empire in the West it continued to be a place of importance，and in A．D． 544 it was there that Belisarius assembled the fleet and army with which he was preparing to cross over to Ra－ venna．（Procop．B．G．iii．10．）It probably partook of the prosperity which was enjoyed by all Istria during the period that Ravenna became the seat of empire，and which was continued throughout the period of the Exarchate；we learn from the Itineraries that it was connected by a road along the coast with Tergeste，from which it was 77 miles distant，while the direct communication by sea with Iadera（Zara） seems to have been in frequent use，though the passage was 4.50 stadia，or 56 Roman miles．（Itin． Ant．pp．271，496．）

Pola is remarkable for the importance and pre－ servation of its ancient remains．Of these by far the most important is the amphitheatre，one of the most interesting structures of the kind still extant， and remarkable especially for the circumstance that the external circumference，usually the part which has suffered the most．is in this case almost entirely perfect．It is built on the slope of a hill，so that on the E．side it has only one row of arcades，while on the opposite side，facing the bay，it has a double tier， with an additional story above．It is 436 English feet in length by 346 in breadth，so that it exceeds in size the amphitheatre of Nismes，though considerably smaller than that at Verona．But its position and the preservation of its more architectural portions render it far more striking in aspect than either of them．Considerable remains of a theatre were also preserved down to the 17th century，but were destroyed in 1636，in order to make use of the ma－ terials in the construction of the citadel．There still remain two temples；one of which was dedicated to Rome and Augustus，and though of small size，is of very elegant design and execution，corresponding to the Augustan age，at which period it was un－ donbtedly erected．It has thence become a favourite model for study with Italian architects from the time of Palladio downwards．The other，which was consecrated to Diana，is in less complete preservation， and has been converted into a moxdern hatitation． Besides these，the Porta Aurea，a kind of triumphal arch，but erected by a private individual of the name of Sergius，now forms the $S$ ．gate of the city． Another gate，and several portions of the ancient walls are also preserved．The whole of these monin－ ments are built of the hard white limestone of the country，closely approrching to marble，which adds

## POLITORIUM.

much to their effect. Dante speaks of the environs of Pola, as in his time remarkable for the numerous sarcophagi and ancient tombs with which they were almost wholly occupied. These have now disappeared. (Dante, Inf. ix. 13.)

The antiquities of Pola have been repeatedly described, and illustrated with figures; among others, in the fourth volume of Stuart and Revett's Athens, fol. Lond. 1816, and in the Voyage Pittoresque de CIstric et de la Dalmatie, fol. Paris, 1802; also in Allason's Antiquities of Pola, fol., Lond. 1819.

The harbour of Pola is completely landlocked, so as to have the appearance of a small basin-shaped lake, communicating by a narrow channel with the sea. Off its entrance lies a group of small islands called the Isole Brioni, which are probably those called by Pliny Cissa and Pullaria. (Plin. iii. 26. s. 30.) The southernmost promontory of Istria, about 10 miles distant from Pola, derived from it the name of Polaticum Promontorium. It is now called Capo Promontore.
[E. H. B.]
POLEMO'NIUM (Ho入є $\mu \omega^{\nu} เ o \nu$ ), a town on the coast of Pontus, at the mouth of the sinall river Sidenus, 10 stadia from Phadisane, and 130 from Cape Iasonium. (Arrian, Peripl. p. 16 ; Anonym. Peripl. p. 11, \&c.; Ptol. v. 6. § 4 ; Steph. B. s. v.) Pliny (vi. 4) places the town 120 Roman miles from Amisus, which seems to be tos great a distance. (Comp. Amm. Marc. xxii. 8; Hierocl. p. 702, where it is erroneously called To入є $\mu \dot{b} \boldsymbol{v i o v}$; Tab. Peuting.) Neither Strabo nor any writer before him mentions this town, and it is therefore generally believed that it was built on the site of the town of Side, which is not noticed by any writer after Strabo. Its name intimates that it was fuunded, or at all events was named, after one Polemon, perhaps the one who was made king of that part of Pontus, about B. c. 36, by M. Antonius. It had a harbour, and seems to have in the course of time become a place of considerable importance, as the part of Pontus in which it was situated received from it the name of Pontus Polemoniacus. The town was situated on the western bank of the Sidenus, where its existence is still attested by the ruins of an octagon church, and the remains of a massive wall; but the ancient name of the place is preserved by the village of Poulcman, on the opposite side of the river. (Hamilton, Researches, vol. i. f. 270.)
[L.S.]
POLICHNA ( $\quad$ o $\lambda i ́ \chi \nu a$ ). 1. A town of Laconia, mentioned only by lolybius (iv. 36), is placed by Leake in the interior of the country on the eastern slope of Mt. Parnun at Réonda ( $\tau$ à Péonta), where, among the ruins of a fortified town of the lower empire, are some remains of Hellenic walls. (Leake, Peloponnesiuca, p. 364.)
2. A town in the NW. of Messenia on the road from Andania to Dorium and Cyparissia. (Yaus. iv. 33. § 6.) [Dorium.]
3. A town of Megaris, mentioned only in a line of Homer, quoted by Strabo, for which the Athenians substituted another to prove that Lalamis at the time of the Trojan War was a dependency of Athens. (Strab. ix. p. 394.)
4. (Eth. Пodixvitns), a town of Crete, whose territory bordered upon that of Cydonia. (Thuc. ii. 85.) In B. c. 429 the Athenians assisted the inhatitants of Polichna in making war upon the Cydonians. (Thuc. l.c.) Herodotus also mentions the Podichnitae, and says that this people and the I'raessii were the only people in Crete who did not join the uther Cretaus in the expedition against

Camicus in Sicily in order to revenge the death of Minus (vii. 170; Steph. B. s. v.). Cramer (Ancient Greece, vol. iii. p. 380) supposes the ruins at I'ólis S. of Armyro to be those of Polichna, which Pashiey, however, regards as those of Lappa or Lampa (Crete, vol. i. p. 83.)
POLICHNE ( $\Pi_{0 \lambda i} \chi \nu \eta$ ), a small town in the apper valley of the Aesepus in Troas (Strab. xiii. p. 60.3; Plin. v. 32 ; Steph. B. s. v. ; Hierocl. p. 662.) Respecting a place bearing the same name near Clazomenae, see Clazomevar.
[L.S.]
POLIMA'RTIUM (Bomarzo), a town of Etruris, not far from the right bank of the Tiber, and ahout 12 miles E. of Viterbo. The name is not found in any writer earlier than Paulus Diaconns (Hist. Lang. iv. 8), and there is therefore no evidence of its antiquity: but it is certain that there existed an ancient Etruscan city about 2 miles N. of the present village of Bomarzo. Some ruins and other slight vestiges of ancient buildings still remain, and nume rous sepulchres have been discovered, some of which have yielded various objects of interest. One of them is adorned with paintings in the Fitruscan style, but apparently not of early date. (Ikennis's Etraria, vol. i. p. 214-226.)
[E. H. B.]
POLIS (Hodis), a village of the Hyaea in Locris Ozolis, which Leake supposes occupied the site of Karútes, where he found an inscription. (Thac. iii. 101 ; Leake, Northern Greece, vol. ii. p. 620.)

POLISMA ( $\Pi$ $\delta \lambda \iota \sigma \mu a$ ), a small place on the river Simoeis in Troas, was originally called Polion; but it was situated in an unsuitable locality, and moon decayed. (Strab. siii. p. 601.) [L. S.]
 Steph. B.), an ancient city of Latium, destroyed at a very early period of the Roman history. The account of its capture and destruction by Ancus Marcius comprises indeed all we know concerning it ; for the statement cited from Cato (Serv. ad Aen. v. 5E4), which ascribed its foundation to Polites, the son of Priam, is evidently a mere etynological fiction. According to Livy and Dionysins, it was a city of the Prisci Latini, and was the first which was attacked by the Roman king, who made himself master of it with little difficulty, and transported the inhabitants to Rome, where be settled them upon the Aventine. But the Latins having soon after recolonised the deserted city, Ancus attacked it again, and having taken it a second time, entirely destruyed it, that it might not for the future affurd a shelter to his enemies. (Liv. i. 33 ; Dionys, iii. $37,38,43$.) The destruction appears to have been comple:e, for the name of Politorium never again occurs, except in Pling's list of the cities of Latium that were utterly extinct. (Plin. iii. 5. s. 9.) lts site is corsequently involved in the greatest cbscurity ; the only clue we have is the circumstance that it appears in the above narrative associated with Tellenae, which is equally uncertain, and with Ficana, the position of which at Dragoncello, on the Via Ostiensis, may be considered as well established. [Ficana.] Nibby would place Politorium at a sput called La Torretta near 1ecimo, on the Vis Laurentina; while Gell considers the remains of an ancient city that have been discovered at a place called La Giostra, on the right of the Via Appia, about a mile and a half from Fiorano and 10 miles from Kome, as those of Politorium There can be no doubt that the ruins at La Gioslra - consisting of considerable fragments of walls, built in a very massive and ancient stgle, aud enclosing a iong and
narrow space, bordered by precipitous banks - are those of an ancient Latin city; but whether they mark the site of Politorium, as supposed by Gell, or of Tellenae, as suggested by Nibby and adopted by Abeken, we are wholly without the means of determining. (Gell, Top. of Rome, p. 280 ; Nibby, IVintorni, vol. ii. p. 571, vol. iii. p. 146-152; Abeken, Wittel Italien, p. 69.) The ruins at La Giostra are more fully noticed under the article Tellenae.
[E. H. B.]
POLLE'NTIA. 1. ( Пod入єrтia: Eth. Pollentınus. Polenza), a city of Liguria, situated in the interior of that province, at the northern foot of the Apennines, near the confluence of the Stura and Tanaro. It was about 7 miles W. of Alba Yompeia. It was probably a Ligurian town befure the Roman conquest, and inciuded in the territory of the Statielli ; but we do not meet with its name in history until near the close of the Roman republic, when it appears as a town of importance. In b. c. 43, M. Antonins, after his defcat at Mutina, withdrew to Vada Sabata, intending to proceed into Transalpine Gaul; but this being opposed by his troops, he was compelled to recross the Apennines, with the view of seizing on Pollentia; in which he was, howerer, anticipated by Decimus Brutus, who had occupied the city with five cohorts. (Cic. ad Fam xi. 13.) Under the Roman Eirpire, Pollentia is mentioned by Pliny annong the "nobilia oppida" which adarned the tract of Liguria between the Apennines and the Padus. (Plin. iii. 5. 8. 7.) It had considerable manufactures of pottery, and the wool produced in its territory enjoyed great reputation, having a natural dark colour. (Plin. viii. 48. s. 73, xxuv. 12. s. 46 ; Sil. Ital. viii. 597 ; Martial, riv. 157.) It is incidentally mentioned as a municipal town under the reign of Tiberius, having been severely punished by that emperor for a tumult that occurred in its forum. (Suet. Tib. 37.) But its name is chiefly noted in history as the scene of a great battle fought between Stilicho and the Goths ander Alaric, in A.D. 403. The circumstances of this battle are very imperfectly known to us, and even its event is varionsly related; for while Claudian celebrates it as a glorious triumph, Orosius describes it as a dubious success, and Cassiodorus and Jornandes boldly claim the victory for the Goths. (Claudian, B. Get. 580-647; Prudent. in Symmach. ii. 696-749; Oros. vii. 37 ; Prosper. Chron. p. 190 ; Cassiod. Chron. p. 450 ; Jornand. Get. 30.) But it seems certain that it was attended with great slanghter on both sides, and that it led to a temporary retreat of the Gothic king. No subsequent mention is found of it, and we have no account of the circumstances of its decay or destruction; but the name does not reappear in the middle ages, and the modern Pollenza is a poor village. Considerable remains of the ancient city may still be traced, though in a very decayed condition; they include the traces of a theatre, an amphitheatre, a temple, and other buildings; and various inscriptions have also been discovered on the spot, thus confirming the evidence of its ancient prosperity and importance. (Millin, Voyage en ficmont, fic. vol. ii. p. 55.) The ruins are situated two miles from the modern town of Cherasco, but on the left bank of the Tanaro.
2. A town of Picenum mentioned only by Pliny, who among the "populi" of that region, enumerates the Pollentini, whom he unites with the Urbs Salvia in a manner that seems to prove the two commu-
nities to have been united into one. (Urlesalvia Pollentini, Plin. iii. 14. s. 18.) The Urbs Saivia, now Urbisnglia, is well known; and the site of Pullentia must be sought in its immediate neighbourhood. Holstenius places it at Monte $\mathbf{M} /$ elone, on a hill on the left bank of the Chienti between Macerata and Tolentino, about 3 miles fom Urbisaglia on the opposite side of the valley. (Holsten. Not. ad Cluv. p. 138.)
[.E. H. B.]
POLLE'NTLA. [Balfares.]
POLLUSCA or POLUSCA (Полои́gка: Eth. Полибкадо́s, Polluscinus: Casal della Mandria), a city of Latium, which appears in the early history of Rome inseparably connected with Longula and Corioli. Thus, in B. c. 493, we find the three places enumerated in succession as reduced by the arms of Postumus Cominius; and again in B. c. 488 all three were recovered by the Volscians under the command of Coriolanus. (Liv. ii. 33, 39; Dionys. vi. 91, viii. 36.) No subsequent mention of Pollusca occurs, except that its name is found in Pliny, among the cities of Latium of which all trace bad disappesred. (Plin. iii. 5. s. 9.) As its name is there given among the places which had once shared in the sacrifices on the Alban Mount, it is probable that it was originally a Latin city, and had fallen into the hands of the Volscians; whence it is called, when first noticed in history, a Volscian city. Livy, indeed, appears to regard Longula and Pollusca as belonging to the Volsci Antiates, and therefore at that time mere dependencies of Antium. The position of Pollusca, as well as that of Longula, must be in great measure matter of conjecture, but the site suggested by Nibby, on a hill adjoining the Osteriu di Civita, about 22 miles from Kome, on the road to Porto d'Anzo, has at least a plausible clain to that distinction. The hill in question which is included in the farm of the Casal della Mandria, stands just at the bifurcation of the two roads that lead to Porto d' Anzo and to Conca: it was noticed by Sir W. Gell as the probable site of an ancient town, and suggested as one of those which might be selected for Corioli : if we place the latter city at Monte Giove, the site more generally adopted, Pollusca may very well have been at the Osteria di Cività; but the point is one which can never be determined with certainty. (Gell, Top of Rme, p. 183; Nibby, Dintorni, vol. i. p. 402; Abeken, Mittel Italien p. 72.)
[E. H. B.]
POLTYOBRIA. [Aenus.]
POLYAEGUS (Honúaryos), a desert island in the Aegacan sea, near Melos. (Ptol. iii. 15. § 28 ; Plin. iv. 12. s. 23; Mela. ii. 7.) It is either Polybos, or perhaps Antimelos with its wild goats. (Koss, Reisen auf den Griech. Inseln, vol. iii. p. 26.)

POLYANTHES. [Amantia.]
POLYANUS (Modúayos) a mountain in Epeirus mentioned by Strabo (rii. p. 327) along with Tomarus.

POLY'BOTUS (Moגú6otos), a place in the west of Phrygia Major, a little to the south-enst of Synnada, is mentioned only by Hierocles (p. 677) and a few Byzantine writers (Procop. Hist. Arc. 18; Anna Comnen. p. 324; Concil. Nicaen. ii. p. 358), who, however, do not give the name correctly, but call it Polybatus or Polygotus. Col. Leake (Asia Min. p. 53) identifics the site of Polybotus with the modern Bulucudun, which he regards as only a Turkish corruption of the ancient name.
[L.S.]
POLY'GIUM, a place on the south coast of Gallia, mentioned in the Ora Maritima of Avienus (v.611):
" Tenuisque censu civitas Polygium est, Tum Mansa vicus oppidumque Naustalo." There is nothing to say about a place for whose site there is no sufficient evidence. Menard supposed it to be Bourigues on the Etang de Tau. The name seems to be Greek, and the place may be one of the Massaliot settlements on this coast. [Naustalo].
[G. L.]
 606, 616; Polymedia, Plin. v. 30. s. 32), a small place in Mysia, between the promontory Lectum and Assus, and at the distance of 40 stadia from the former.

POLYRRHE'NIA (По入u $\overline{\rho \eta \nu i \alpha, ~ P t o l . i i i . ~ 17 . § ~ 10 ; ~}$

 v. 50 ; Polyrrhenium, Plin. iv. 12. s. 20 : Eth. Полv $\rho \rho \eta^{\prime} \nu 10 s$, Polyb. iv. 53, 55 ; Strab. x. p. 479), a town in the NW. of Crete, whose territory occupied the whole western extremity of the island, extending from N. to S. (Scylax, p. 18.) Strabo describes it as lying W. of Cydonia, at the distance of 30 stadia from the sea, and 60 from Phalasarna, and as containing a temple of Dictynna. He adds that the l'olyrrhenians formerly dwelt in villages, and that they were collected into one place by the Achaeans and Lacedaemonians, who built a strong city looking towards the south. (Strab. x. p. 479.) In the civil wars in Crete in the time of the Achacan League, B. c. 219, the Polyrrhenians, who had been subject allies of Cnossus, deserted the latter, and assisted the Lyctians against that city. They also sent auxiliary troops to the assistance of the Achaeans, because the Gnossians had supported the Aetolians. (Polyb. iv. 53, 55.) The ruins of Polyrrhenia, called Palaeikistro, near Kisamo-Kastéli, exhibit the remains of the ancient walls, from 10 to 18 fett high. (Pashley, Crete, vol. ii. p. 46, seq.)

POLYTIME'TUS. [Oxia Palus.]
POME'TIA. [Suessa Pometia.]
 Cass.: Eth. Пo $\begin{gathered}\text { пौtavos, Pompeianus: Pompeii), an }\end{gathered}$ ancient city of Campania, situated on the coast of the beautiful gulf called the Crater or Bay of Naples, at the mouth of the river Sarnus (Sarno), and immediately at the foot of Mount Vesuvius. It was intermediate between Herculaneum and Stabiae. (Strab. v. p. 247 ; Pliny, iii. 5. s. 9 ; Mela, ii. 4. § 9.) All accounts agree in representing it as a very ancient city: a tradition recorded by Solinus ( $2 . \S 5$ ) ascribed its foundation to Hercules; but Dionysius, who expressly notices him as the founder of Herculancum, says nothing of Pompeii (Dionys. i. 44). Strabo says it was first occupied by the Oscans, subsequently by the Tyrrhenians (Etruscans) and Pelasgians, and aftervards by the Samnites (Strab. b.c.). It continued in the hands of these last, that is, of the branch of the nation who had assumed the name of Campanians [Campania], till it passed under the government of Rome. It is probable that it became from an early period a flourishing town, owing to its mivantageous situation at the mouth of the Sarnus, which rendered it the port of Nola, Nuceria, and all the rich plain watered by that river. (Strab. l.c.) But we meet with no mention of its name in history previous to the Roman conquest of Campania. In к. $\mathbf{c} .310$ it is mentioned for the first time, when a homan fleet under P. Cornelius touched there, and the troops on buard procceded from thence to ravage the territory of Nuceria. (Liv. ix. 38.) No sub-

## POMPEII.

sequent notice of it occurs till the outbreak of the Social War (b. c. 91), in which it appears to have taken a prominent part, as the Pompeiani are mentioned by Appian apart from the other Campanians, in enumerating the nations that joined in the insurrection. (Appian, B. C. i. 39.) In the second year of the war (B. c. 89) Pompeii was still in the hands of the insurgents, and it was not till after repeated engagements that L. Sulla, having defeated the Samnite forces under L. Cluentius, and forced them to take refuge within the walls of Nola, was able to form the siege of Pompeii. (Appian, ib. 50; Oros. v. 18 : Vell. Pat. ii. 16.) The result of this is nowhere mentioned. It is certain that the town altimately fell into the hands of Sulla; but whether by force or a capitulation we are not informed ; the latter is, however, the most probable, as it escaped the fate of Stabiae, and its inhabitants were admitted to the Roman franchise, though they lost a part of their territory, in which a military colony was established by the dictator, under the guidance and patronage of his relation, P. Sulla. (Cic. pro Sull. 21 ; Zumpt, de Colon. Pp. 254,468 .) Before the close of the Repablic, Pompeii became, in common with 50 many other maritime towns of Campania, a favonrite resort of the Roman nobles, many of whom had villas in its immediate neighbourhood. Among others, Cicero had a villa there, which he frequently mentions under the name of "Pompeianum," and which appears to have been a considerable establishment, and one of his favourite residences. (Cic. Acad. ii. 3, ad Att. i. 20, ad Farn. vii. 3, xii. 20.) Under the Empire it continued to be resorted to for the same purposes. Seneca praises the pleasantness of its situation, and we learn both from him and Tacitus that it was a populous and flourishing tuwn ("celebre oppidum," Tac. Ansexv. 22 ; Sen. Nat. Qu. vi. 1). In addition to the colons which it received (as already mentioned) under Sulla, and which is alluded to in an inscription as "Colonis Veneria Cornelia " (Mommsen, Inscr. R. N. 2201), it seemis to have received a colony at some later period, probably under Augustus (thongh it is not termed a colony by Pliny), as it bears that title in several inscriptions (Monmsen, l. c. 2230-2234).
In the reign of Nero (A. D. 59) a tumult took place in the amphitheatre of Pompeii, arising out of a dispute between the citizens and the newly-settled colonists of Nuceria, which ended in a conflict in which many persons were killed and wounded. The Pompeians were punished for this outbreak by the prohibition of all gladiatorial and theatrical exhibitions for ten years. (Tac. Ann. xir. 17.) Only four years after, the city suffered severely from an earthquake, which took place on the 5th of February, A. D. 63. The expressions both of Seneca and Tacitus would lead us to suppose that it was in great part utterly destroyed; and we learn from existing evidence that the damage done was unquestionably very great, the public buildings especially having suffered most severely. (Sen. Nat. Qu. vi. 1; Tac. Ann. xr. 22.) The city had hardly recovered from this c:ilamity, when it met with one far greater; being totally overwhelmed by the famous eruption of Vesuvius in A. D. 79, which buried Pompeii, as well as Herculaneum, under a dense hed of ashes and cinders. The loss of life in the former city was the greater, because the inhabitants were assembled in the theatre at the time when the catastrophe tork place. (Diun Cass. Ixvi. 23.) The younger Pliny, in his celebrated letters describing the eruption (Ep. vi. 16, 20), does not even notice the destruction of Pompeii or Her-

## POMPEII.

POMPEII.
culaneum ; but his attention is directed principally to the circumstances of his uncle's death and the phenomena which he had himself witnessed.

From this time the name of Pompeii disappears from history. It is not noticed by Ptolemy; and it is certain that the city was never rebuilt. But the name is again found in the Tabula; and it thus appears that a small place must have again arisen on the site, or, more probably, in the neighbourhood, of the buried city. But all trace of Pompeii was subsequently lost; and in the middle ages its very site was entirely forgotten, so that even the learned and diligent Cluverius was unable to fix it with certainty, and was led to place it at Scafuti on the Sarno, about 2 miles E. of its true position. This difficulty arose, in great measure, from the great physical changes produced by the catastrophe of A.D. 79, which diverted the course of the Sarno, so that it now flows at some distance from Pompeii, - and at the same time pushed forward the line of the coast, so that the city is now above a mile distant from the sea, which in ancient times undoubtedly bathed its walls.

There is no reason to suppose that Pompeii in ancient times ever rose above the rank of a secondrate provincial town; but the re-discovery of its buried remains in the last century has given a celebrity to its name exceeding that of the greatest cities. The circumstances of its destruction were peculiarly favourable to the preservation of its remains. It was not overthrown by a torrent of lava, but simply buried by a vast accumulation of volcanic sand, ashes, and cinders (called by the Italians lapilli), which forms a mass of a very light, dry, and porous character. At the same time, it is almost certain that the present accumulation of this volcanic deposit (which is in most places 15 feet in depth) did not take place at once, but was formed by successive eruptions; and there is little doubt that the ruins were searched and the most valuable objects removed
soon after the catastrophe took place. This seems to be proved by the small number of objects of intrinsic value (such as gold and silver plate) that have been discovered, as well as by the fact that comparatively few skeletons have been found, though it appears certain, from the expressions of Dion Cassius, that great numbers of the inhabitants perished; nor have any of these been found in the theatre, where it is probable that the greatest loss of life occurred.
It was not till 1748 that an accidental discovery drew attention to the remains of Pompeii; and in 1755 regular excavations on the site were first commenced by the Neapolitan government, which have been carried on ever since, though with frequent intervals and interruptions. It is impossible for us here even to attempt to give any account of the results of these excavations and the endless variety of interesting remains that have been brought to light. We shall confine ourselves to those points which bear more immediately on the topography and character of the town of Pompeii, rather than on the general habits, life, and manners of ancient times. More detailed accounts of the remains, and the numerous objects which have been discovered in the course of the excavations, especially the works of art, will be found in the great work of Mazois (Les Ruines de Pompeii, continued by Gan, 4 vols. fol., Paris, 1812-1838), and in the two works of Sir W. Gell (Pompeiana, 1st series, 2 vols. 8 ro. Lond. 1824 ; 2nd series, 2 vols. 8vo. 1830); also in the little work published by the Society of Useful Knowledge (Pompeii, 2 vols. 12mo. 1831). A recent French publication by Breton (Pompeia, 8vo. Paris, 1855), also gives a good account of the whole progress and results of the discoveries (including the most recent excavations) in a moderate compass and inexpensive form. The still more recent work of Overbeck (8vo. Leipzic, 1856), of which the first part only has yet appeared contains an excellent compendium of the whole sub-

12. Sticet of the Tombs.

## POMPEII.

ject, with especial attention to the works of art discovered.

The area occupied by the ancient city was an irregular oval, about 2 miles in circumference. It was surrounded by a wall, which is still preserved round the whole of the city, except on the side towards the sea, where no traces of it have been found, and it seems certain that it had been pulled down in ancient times to allow for the extension of houses and other buildings down to the water's edge. The wall itself is in many places much ruined, as well as the towers that flank it, and though this may be in part owing to the earthquake of 63 , as well as the eruption of 79 , it is probable that the defences of the town had before that time
been allowed to fall into decay, and perhaps even intentionally dismantled after the Social War. There were seven gates, the most considerable and ornamental of which was that which formed the entrance to the city by the high road from Herculaneum: the others have been called respectively the gate of Vesurius, the gate of Capua, the gate of Nola, the gate of the Sarnus, the gate of Stabiae, and the gate of the Theatres. The entrances to the town from the side of the sea had ceased to be gates, there being no longer any walls on that side. All these names are of course modern, but are convenient in assisting us to describe the city. The walls were strengthened with an Agger or rampart, faced with masomry, and having a parapet or outer

wall on its external front : they were forther fortitied at intervals with square towers, which in some parts occor regularly at about 100 yards from each other, in other parts are added much more sparingly. These towers seem to have been subsequent additions to the original walls, being of a different and less solid style of construction. The walls themselves are very solidly built of large blocks of travertine, in horizontal courses, but presenting considerable irregularities of construction: the upper part is more regularly finished, and consists of peperino. But both walls and towers are in many places patched with coarser masonry and reticulated work; thus showing that they had been frequently repaired, and at distant intervals of time.

The general plan of the city is very regular, and the greater part of the streets run in straight lines: bat the principal line of street, which runs from the gate of Herculaneum to the Forum, is an exception, being ifregular and crooked as well as very narrow. Though it must undoubtedly have been one of the chief thoroughfares of the city, and the line followed by the high road from Capua, Neapolis, and Rome itself, it does not exceed 12 or 14 feet in width, including the raised trottoirs or footpaths on each side, so that the carriageway could only have admitted the passage of one vehicle at a time. Some of the other streets are broader; but few of them exceed 20 feet in width, and the widest yet found is only about 30 . They are uniformly paved with large polygonal blocks of hard lava or basalt, in the same manner as were the streets of ancient Rume, and the Via Appia, and other great highways in this part of Italy. The principal street, already noticed, was crossed, a little before it reached the Foram, by a long straight line of street which, presing by the temple of Fortune, led direct to the gate of Nola. In the angle formed by the two stond the public baths or Thermae, and between these and the temple of Fortune a short broad street led direct to the Forum, of which it seems to have formed the principal entrance. From the Forun: two other parallel streets struck off in an easterly direction, which have been followed till they cross antilier main line of street that leads from the gate of Vesuvius directly across the city to the gate aijoining the theatres. This last line crosses the street already noticed, lealing from the gate of Nola westward, and the two divide the whole city into frur quarters, though of irregular size. Great part of the city (especially the SE. quarter) has not yet been explored, but recent excavations, by following the line of these main streets, have clearly shown its general plan, and the regularity with which the minor streets branched off at intervals in parallel lines. There is also little doubt that the part of the city already excavated is the most important, as it includes the Forum, with the public buildings adjoining to it, the theatres, amphitheatre, \&cc.

The Forum was situated in the SW. quarter of the city, and was distant about 400 yards from the gate of Herculaneam. As was commonly the case in ancient times, it was surrounded by the principal public buildings, and was evidently the centre of the life and movement of the city. The extent of it was not, however, great; the actual open space (exclusive of the porticoes which surrounded it) did not exceed 160 yards in length by 35 in breadth, and a part of this space was occupied by the temple of Jupiter. It was surrounded on three sides by a Grecian-Doric portico or colonnade, which appears
to have been surmounted by a gallery or upter story, though no part of this is now preserved. It would seem that this portico had replaced an older arcade on the eastern side of the Forum, a portion of which still remains, so that this alteration was not yet completed when the catastrophe touk place. At the north end of the Forum, and projecting out into the open area, are the remains of an edifice which must have been much the most magnificent of any in the city. It is commonly known, with at least a plansible foundation, as the temple of Jupiter; others dispute its being a temple at all, and have called it the Senaculum, or place of meeting of the local senate. It was raised on a podium or base of considerable elevation, and had a portico of six Corinthian columns in front, which, according to Sir W. Gell, are nearly as large as those in the portico of St. Paal's. From the state in which it was found it seems certain that this edifice (in common with most of the public buildings at Pompeii) had been overthrown by the earthquake of 63, or, at least, so much damaged that it was necessary to restore, and in great part rebuild it, and that this process was still incomplete at the time of its final destruction. At the NE. angle of the Forum, adjoining the temple of Jupiter, stood an arch which appears to have been of a triumphal character, though now deprived of all its ocmaments: it was the principal entrance to the Forum, and the only one by which it was accessible to carriages of any description. On the E. side of the Forum were four edifices, all unquestionably of a public character, though we are much in doubt as to their objects and destination. The first (towards the N.) is generally known as the Pantheon, from its having contained an altar in the centre, with twelve pedestals placed in a circle round it, which are supposed to have supported statues of the twelve chiet gods. But no traces have been found of these, and the general plan and arrangement of the building are wholly unlike those of an ordinary temple. A more plansible conjecture is, that it was consecrated to Augustus, and contained a small temple or aedicula in honour of that emperor, while the court and surrounding edifices were appropriated to the service of his priests, the Augustales, who are mentioned in many inscriptions as existing at Pompeii. Next to this building is one which is commonly regarded as the Curia or Senaculum; it had a portico of fluted columns of white marble, which ranged with those of the general portico that surrounded the Forum. South of this again is a building which was certainly a temple, though it is impossible now to say to what divinity it was consecrated; it is commonly called the Temple of Mercury, and is of small size and very irregular form. Between this and the street known as the Street of the Silversmiths, which issued from the Yorum near its SE. angle, was a large building which, as we learn from an inscription still existing, was erected by a female priestess named Eumachia. It consists of a large and spacious area (about 130 feet by 65) surrounded by a colonnade, and haring a raised platform at the end with a senicircular recess similar to that usually found in a Basilica. But though in this case the founder of the edifice is known, its purpose is still completely obscure. It is commonly called the Chalcidicum, but it is pro. bable that that term (which is found in the inscription above noticed) desiguates only a part of the edifice, not the whole building.

of justice, in which the tribunals held their sittings. The western side of the Forum was principally ocenpied by a Basilica, and a large temple, which is commonly called (though without any authority) the Temple of Venus. The former is the largest
building in Pompeii; it is of an oblong form, 220 feet in length by 80 in breadth, and abutted endwise on the Forum, from which it was entered by a vestibule with five doorways. The roof was supported by a peristyle of 28 Ionic columns of large size, but built of brick, coated with stucco. There is a raised tribunal at the further end, but no apse, which is usually found in buildings of this class. Numerous inscriptions were found scratched on the walls of this edifice, one of which is interesting, as it gives the date of the consulship of M. Lepidus and Q. Catulus (в. с. 78), and thus proves the building to have been erected before that time. Between this edifice and the temple is a street of greater width than usual, which extends from the Forum in a westerly direction, and probably communicated with the port. The Temple of Venus, on the N. side of this street, was an extensive building consisting of a peripteral
temple with a small cella, elevated on a podium or basement, surrounded by a much more extensive portico, and the whole again enclosed by a wall, forming the peribolus or sacred enclosure. All parts of the building are profusely decorated with painting. The temple itself is Corinthian, but the columns of the portico seem to have been originally Doric, though afterwards clumsily transformed into Corinthian, or rather an awkward imitation of Corinthian. This is only one among many instances found at Pompeii of very defective architecture, as well as of the frequent changes which the buildings of the city had undergone, and which were still in progress when the city itself was destroyed. The buildings at the NW. corner of the Forum are devoid of architectural character, and seem to have served as the public granaries and prisons.

TEMPLE OF VENUS.
(The Forum and Temple of Jupiter in the background.)

The open area of the Forum was paved, like that of Rome, with broad slabs of a kind of marble, thus showing that it was never designed for the traffic of any kind of vehicles. It is moreover probable that the whole space, including the porticoes which surrounded it, could be closed at night, or whenever it was required, by iron gates at the several entrances. It was adorned with numerous statues, the pedestals of which still remain : they are all of white marble, but the statues themselves have uniformly disappeared. It is probable either that they had not been re-erected during the process of restoration which the Forum was undergoing, or that they had been searched for and carried off by excavations soon after the destruction of the city.

The remaining public buildings of the city may be more briefly described. Besides the temples which surrounded the Forum, the remains of four others have been discovered; three of which are situated in the immediate vicinity of the theatres, a quarter which appears to have had more of architectural ornament than any other part of the city, except the Forum. Of these the most interesting is one which stood a little to the SW. of the great theatre, near the wall of the city, and which is evidently much more ancient than any of the other temples at Pompeii: it is of the Doric order and of pure Greek style, but of very ancient character, much resembling that of Neptune at Paestum and the oldest temples at Selinus. Unfortunately only the basement and a few capitals and other architectural fragments remain.

It is commonly called the Temple of Hercules, but it is obvious that such a name is purely conjectural. It stood in an open area of considerable extent, and of a triangular form, surrounded on two sides by porticoes: but this area, which is commonly called a Forum, has been evidently constructed at a much later period, and with no reference to the temple, which is placed very awkwardly in relation to it. Another temple in the same quarter of the town, immediately adjoining the great theatre, is interesting because we learn with certainty from an inscription that it was consecrated to Isis, and had been rebuilt by N. Popidius Celsinus "from the foundations " after its overthrow in the great earthquake of A. D. 63. It is of a good style of architecture, but built chiefly of brick covered with stucco (only the capitals and shafts of the columns being of a soft stone), and is of small size. Like most of the temples at Pompeii, it consists of a cella, raised on an elevated podium, and surrounded externally by a more extensive portico. Adjoining this temple was another, the smallest yet found at Pompeii, and in no way remarkable. It has been variously called the temple of Aescalapins, and that of Jupiter and Juno.

The only temple which remains to be noticed is one situated about 60 yards N . of the Forum at the angle formed by the long main street leading to the gate of Nola, with a short broad street which led from it direct to the Forum. This was the Temple of Fortune, as we learn from an inscription
and was erected by a certain M. Tullins, a citizen and maristrate of Pompeii, who has been supposed to be of the family of Cicero; but the absence of the cognomen renders this highly improbable. The epithet of Fortuna Augusta shows that the temple and its inscription are not earlier than the time of Augustus. It is much in ruins, having probably suffered severely from the earthquake of 63 ; and has little architectural effect.

Pompeii possessed two Theatres and an Amphitheatre. The former were situated, as seems to have been usual in Greek towns, close together; the larger one being intended and allapted for theatrical performances properly so called; the smaller one serving as an Odeum, or theatre for music. Both are unquestionably of Roman date: the larger one was erected (as we learn from an inscription found in it) by two members of the same family, M. Holconius Rufus and M. Holconius Celer, both of whom appear to have held high civil offices in the municipal government of Pompeii. The period of its construction may probably be referred to the reign of Augustus. The smaller theatre seems to be of earlier date, and was erected at the public expense under the direction of the Duumviri or chief magistrates of the city. The large Theatre is to a considerable extent excavated out of the side of a hill, on the slope of which it was situated, thus saving a considerable amount of the expense of construction. But the exterior was still surrounded by a wall, a part of which always rose above the surface of the soil, so that it is singular it should not have long before led to the discovery of the buried city. Its internal dispovition and arrangements, without exactly coinciding with the rules laid down by Vitruvius, approach sufficiently near to them to show that it was constructed on the Roman, and not the Greek model. Its architect (as we learn from an inscription) was a freedman of the name of M. Artorius Primus. It seems to have been almost wholly cased or lined with marble, but the greater part of this, as well as the other decorations of the building, has been carried away by former excavations, probably made soon after the catastrophe. The interior diameter of the building is 223 feet: it had 29 rows of seats, divided into three storics by galleries or praecinctiones, and was capable of containing about 5000 spectators. The smaller Theatre, which communicated with the larger by a covered portico on the level of the orchestra, was not above a fourth of the size of the other, being adapted to receive only about 1500 spectators. We leain from an inscription that it was covered or permanently roofed in, a rare thing with ancient theatres, and doubtless owing to its small size. Its chief architectural peculiarity is that the seats are cut off by the walls at the two sides, so that it is only the lower seats of the caven, of which the semicircle is complete.

Adjoining the two theatres, and arranged so as to have a direct communication with both, is a large quadrangular court or area ( 183 feet long by 148 wide), surrounded on ali sides by a Doric portico. Its destination is very uncertain, it has been called a provision market (Forum Nundinarium); but is more generally regarded as having served for the barracks or quarters of the soldiers. Perhaps a more plausible conjecture is that it was a barrack, not of soldiers but of gladiators. On the W. of this, as well as of the great theatre, was the triangular area or forum already noticed, in which the Greek temple was situated. The opening
of this on the $N$., where it communicated with the street, was ornamented by a portico or Propylaeum composed of eight Ionic columns of very elegant style, but consisting of the common volcanic tufo, cased with stucco.

The Amphitheatre is situated at the distance of above 500 yards from the Theatres, at the extreme SE. angle of the city. It offers no very remarkable differences from other edifices of the same kind; its dimensions ( 430 feet by 335) are not such as to place it in the first rank even of provincial structures of the class; and from being in great part excavated out of the soil, it has not the imposing architectural character of the amphitheatres of Verona, Nemansus, or Pola. It had 24 rows of seats, and about 20,000 feet of sitting-room, so that it was adapted to receive at least 10,000 spectators. From one of the inscriptions found in it, it appears that it was built, or at least commenced, by two local magistrates, named C. Quinctius Valgus and M. Porcins, after the establishment of the colony under Augustus, and probably in the reign of that emperor.

The only public building which remains to be noticed is that of the Thermae or Baths, which were situated in the neighbourhood of the Forum, adjoining the short street which led into it from the Temple of Fortune. They have no pretence to vie with the magnificent suites of buildings which bore the name of Thermae at Rome, and in some other great cities; but are interesting as containing a complete suite of all apartments really required for bathing, and from their good preservation throw much light upon all similar remains. The details of their construction and arrangement are fully given in the Dictionary of Antiquities [art. Balneaf], as well as in the works specially devoted to Pompeii.

It is impossible here to enter into any details concerning the results of the excavations in regard to the private dwellings at Pompeii, though these are, in many respects, the most interesting, from the light they have thrown upon the domestic life of the ancient inhabitants, their manners and usages, as well as from the artistic beauty and variety of the objects discovered. A few words on the, general character of the houses and other private buildings of Pompeii are all that our space will admit of. As these are almost the only remains of a similar kind that have been preserved to us, it must be borne in mind that they can hardly be regarded as representing in their purity the arrangements either of the Greek or Roman mode of building. On the one hand Pompeii, though strongly tinctured with Greek civilisation, was not a Greek city; on the other hand, though there is no doubt that the houses at Pompeii present much more the Roman plan and arrangement than that of the Greeks, we must not conclude that they represent them in all respects. We know, at least, that Rome itself was built in many respects in a very different manner. Cicero, in a wellknown passage, contrasts the narrow streets, the lofty houses, and irregular construction of the capital with the broad streets and regular arrangement of Capua, resulting from its position in a level plain; and it is clear that, in some respects, Pompeii more resembled the capital of Campania than the imperial city. Its streets indeed (ns already stated) were narrow, but with few exceptions straight and regular, and the honses were certainly low, seldom exceeding two stories in height; and even of these the upper story seems to have consisted

POMPEII.
POMPEII.
only of inferior rooms, a kind of garrets, probably serving for the sleeping-rooms of slaves, and in some cases of the females of the family. From the mode of destruction of the city the upper stories have indeed been almost uniformly totally destroyed; but this circumstance itself, as well as the few traces which occasionally remsin, seems to prove that they were built wholly of wood, and could never have formed an important part of the houses. It is only on the W. side of the city, where the ground slopes steeply towards the sea, that houses are found which consisted of three stories or more. Externally the houses had little or nothing of an ornamental character; not a single instance has been found of a portico before a private house; and towards the street they presented either dead walls, with here and there a few small and scanty openings as windows, or ranges of shops, tor the most part low and mean in character, even when they occupied (as was often the case) the front of dwellings of a superior description. The interior of the houses of the more wealthy class was arranged apparently on the same model as those at Rome: its disposition is given in detail in the Dictionary of Antiquities under the article Domus where a plan is given of the House of Pansa, one of the most extensive and complete of those found at Pompeii. In this case the singie house with its garden and appurtenances, including as usual several shops, occupied the whole of an insula or the space bounded by four streets or alleys: but this was unusual; in most cases each insula comprised several houses even where they were of a better description, and must have been the residence of persons of some wealth. Among the most remarkable of these may be mentioned the dwellings known as the House of Sallust, that of the Tragic Poet, of Castor and Pollux, of the Labyrinth, \&c. The work of Dr. Overbeck (above cited) gives a very interesting series of these houses, selected so as to afford examples of every description of house, from the humblest dwelling, consisting of only two rooms, to the richly decorated and spacious mansions of Sallust and Pansa.

The style of decoration of these houses presents a very general uniformity of character. The walls are almost invariably ornamented with painting, the
atrium and peristyle being decorated with columns; but these are composed only of a soft and coarse stone (volcanic tufo) covered with stucco. The prodigal use of marble, both for columns and slabs to encrust the walls, which had become so general at Rome under the first emperors, apparently not having yet found its way to Pompeii. The floors are generally enriched with mosaics, some of which possess a very high degree of merit as works of art. The most beautiful yet discovered adorned the house known as the House of the Faun, from a bronze statue of a dancing Faun which was also found in it. The illustrations to Gell's Pompeiana (2nd series, Lond. 1835) will convey to the reader a sufficient idea of the number and variety of the artistic decorations of the private houses at Pompeii; though sereral of the most richly ornamented have been discovered since the date of its publication.

Outside the gate leading to Herculaneum, in a kind of suburb, stands a house of a different description, being a suburban villa of considerable extent, and adapted to have been the abode of a person of considerable wealth. From the greater space at command this villa comprises much that is not found in the houses within the town; among others a large court or garden (Xystus), a complete suite of private baths, \&c. The remains of this villa are of much value and interest for comparison with the numerous ruins which occur elsewhere of similar buildings, often on a much more extensive scale, but in a far less perfect state of preservation; as well as for assisting us to understand the descriptions given by Pliny and Vitruvius of similar structures, with their numerous appurtenances. (For the details of their arrangements the reader is referred to the article Villa, in the Dictionary of Antiquities, and to the work on Pompeii, Lond. 1832, vol. ii. ch. 11.) Between this villa and the gate of the city are the remains of another villa, said to be on a larger scale and more richly decorated than the one just described; but its ruins, which were excavated in 1764, were filled up again, and are not now visible. It has been called, though without the slightest authority, the Villa of Cicero. The one still extant is commonly known as the Villa of Arrius Diomedes, but for no other reason than that

STREKT OF THE TOMBS.
a sepulchre bearing that name was discovered near its entrance; a very slight argument, where almost the whole street is bordered with tombs. In fact, the approach to the gate of Herculancum is bounded on both sides by rows of tombs or sepulchral monuments, extending with only occasional interruptions for above 400 yards. Many of them are on a very considerable scale, buth of size and architectural character; and though they cannot vie with the enormous mausolea which border in a similar manner the line of the Via Appia near Rome, they derive additional interest from the perfect state of preservation in which they remain ; and the Street of the Tombs, as it is coinmonly called, is perhaps one of the most interesting scenes at Pompeii. The monuments are for the most part those of persons who had held macistracies, or other offices, in the city of Pompeii, and in many cases the site was assigned them by public authority. It is therefore probable that this place of sepulture, immedistely outside the gate and on one of the principal approaches to the city, was regarded as peculiarly honourable.

Besides the tombs and the two villas already noticed, there have been found the remains of shops and small houses outside the gate of Herculaneuin, and there would appear to have been on this side of the city a considerable suburb. This is supposed to be the one designated in the sepulchral inscription of M. Arrius Diomedes as the "Pagus Augustus Felix Suburbanus." We have as yet no evidence of the existence of any suburbs outside the other gates. It is evident that any estimate of the population of Pompeii must be very vague and uncertain ; but still from our accurate knowledge of the space it occupied, as well as the character of the houses, we may arrive at something like an approximation, and it seems certain that the population of the town itself conld not have exceeded about 20,000 persons. This is in accordance with the st:atements of ancient writers, none of whom would lead us to regard Pompeii as having been more than a second or third rate provincial town.

The inscriptions found at Pompeii, which are often incorrectly given in the ordinary works on the subject, are carefully edited by Monnmsen, in his Inscriptiones Regni Neapolitani (pp. 112-122). These do not, however, include a class of much interest, and peculiar to Pompeii, the inscriptions of a temporary kind which were rudely painted on the walls, or scratched on the plaster of the houses and public buildings. It is remarkable that several of these are in the Oscan dialect, and seem to prove that the use of that ancient language must have continued down to a much later period than is commonly supposed. [Osci]. But the public or official use of the Oscan seems to have ceased after the Social War, and the numerous inscriptions of a public character which belong to the are of Augustus and his successors are uniformly in the Latin langrage.
[E. H. B.]
POMPE'II PRAESI'DIUM (Tab. Peut.; l'ompeii, Itin. Ant. p. 134 ; Ipompei, Itin. IIeros. p.566), a place in Moesia Superior, between Horreum Margi and Naissus, identified either with Kaschnia (Reichard) or Boulovan (Lapie).

POMPEIO'POLIS (Поцжŋเoúmo入ıs), a town of Paphlagonia, on the southern bank of the river Amnias, a tributary of the Halys (Strab. xii. p. 562 ; Steph. B. s. v.). Its name seems to indicate that it was founded by Pompey the Great. In the Itinerarics it is marked as 27 miles from Sinope; accord-

POMPTINAE PALUDES.
ing to which its site may be looked for in the valley of the Amniss, about the modern Tash Kupri, where Captain Kinneir (p. 286) found some ancient remains. In the vicinity of the place was a great mine of the mineral called Sandarach. (Strab. l. c.) Pompeiopolis is often referred to by late writers as an episcopal see of Paphlagonia (Socrat. ii. 39, \&cc.; Hierocl. p. 695 ; Constant. Porph. de Them. i. 7 ; Justinian, Novell. xxix. 1; Tab. Peuting.).

The name Pompeiopolis was borne temporarily by several towns, such as Sols in Cilicia, Amisus and Eupatoria in Cappadocia, as well as by Pompeion in Tarraconensian Spain.
[L.S.]
PO'MPELO (Полжє $\boldsymbol{\lambda}^{\prime} \boldsymbol{\nu}$, Ptol. ii. 6. § 67 ; Strab. iii. p. 161, who makes the name equivalent to חomхทเómo入1s), the chief town of the Vascones in Hispania Tarraconensis, on the road from Asturica to Burdigala (Itin. Ant. p. 455), and a civitas stipendiaria in the jurisdiction of Caesamugusta. (Plin. iii. 3. s. 4.) Now Pamplona. [T. H. D.]

POMPONIA'NA. Pliny (iii. 5) says that Pomponiana is the same as Mese, the middle island of the Stuechades or Isles $d^{\prime}$ Hières [Stofchadres], which lie close to the French coast east of Toulon. D'Anville, following the Maritime Itinerary, which places Pomponiana between Telo (Toulon) and Heracleia Caccabaria [Heracleia], thinks that Pomponiana is the peninsula of Giens, which is opposite to the western point of Prote (Porqueroles), the most western of the Stuechades. He remarks that the part of Giens which is on the land side is almost covered by a lagune, from which there are channels to the sea on both sides, so that the peninsula may be considered as an island.
[G. L.]
POMPONIA'NIS PORTUS. [PoRTUS PomPONIANIS.]

POMPTI'NAE PALU'DES (тd Поцктiva Ẽ $\lambda_{\eta}$ : Puludi Pontine) was the name given to the extensive tract of marshy ground in the $\mathbf{S}$. of Latium at the foot of the Volscian mountains, extending from the neighbourhood of Cisterna to the sea at Terraciun They occupy a space of about 30 miles in length by 7 or 8 in breadth : and are separated from the sea on the W. by a broad tract of sandy plain, covered with forest, which is also perfectly level, and intermixed with marshy spots, and pools or lagoons of stagnant water, 80 that it is almost as unhealthy as the regular marsh, and the whole tract is often comprised under the name of the Pontine Marshes. The extremely low level of this whole tract. affording scarcely any natural outfall for the waters which descend into it from the Volscian mountains, together with the accumulation of sand along the seashore from Astura to the Circeith promontory, readily accounts for the formation of these extensive marshes; and there can be no doubt that the whole of this low alluvial tract is of very recent oricin compared with the rest of the aljoining mainland. Still there is the strongest rason from physical considerations to reject the notion very generally entertained by the Romans, and adopted by Pling, that the whole of this accumulation had taken place within the period of historical recond. This idea seems indeed to have arisen in the first instance from the assumption that the Mons Circeius was the island of Circe mentioned by Homer, and was therefore in the time of that poet really an island in the midst of the oren sea. [Cimceits Mons.] But it is far more strange that Pliny should assert, on the authority of Theophrastus, that the accumulation had taken place in great jart since the
time of that writer; though Theophrastus himself tells us distinctly that the island was in his days united to the mainland by the accumulated deposits of certain rivers. (Theophr. H. P. v. 8. § 3; Plin. iii. 5. s. 9.) Another tradition, preserved to us also by Pliny ( $l$ c.). but wholly at variance with the last, asserted that the tract then covered by marshes, and rendered uninhabitable by them, had formerly been occupied by no less than 24 (or, according to some MSS., 33) cities. But no trace of this fact, which he cites from Mucianus, an author contemporary with himself, is to be found in any earlier writer; and not even the name of one of these supposed cities has been preserved; there can therefore be little doubt that the whole story has arisen from some misconception.

The Pomptine Marshes are generally represented as deriving their name from the city of Suessa Pometia, which appears to have been situated somewhere on their borders, though we have no clue to its precise position. [Suessa Pometia]. The "Pomptinus ager," which is repeatedly mentioned by Livy, and which was cultivated with corn, and part of it portioned out in lots to Roman colonists (Liv. ii. 34, iv. 25, vi. 5, 21) was probably rather the district bordering on the marshes than the actual swampy tract, which does not appear to have been ever effectually reclaimed; though a very moderate amount of industry must at any time have sufficed to bring into cultivation considerable portions of the adjoining plain. As early, however, as the gear 312 в. c. the Appian Way appears to have been carried through the midst of the marshes (Liv. ix. 29; Diod. xx. 36), and a canal conducted along with it from Forum Appii to Tarracina, which became also much resorted to as a mode of traffic. [Via Appia.] The institution of the Pomptine tribe in B. c. 358, and of the Ufentine tribe in 8. c. 318 (Liv. vii. 15, ix. 20), would seem also to point to the existence of a considerable population in the neighbourhood at least of the Pomptine Marshes; but still we have unequivocal testimuny of the continued existence of the marshes themselves in all periods of antiquity. (Sil. Ital. viii. 380; Strab. v. p. 233, \&c.)

The very circumstance that the plain is bordered throughout by a chain of considerable and populous towns situated on the mountain frunt, while not one is recorded as existing in the plain itself, is a sufficient proof that the latter was in great part uninhabitable.

The actual marshes are formed principally by the stagnation of the waters of two streams, the Amasenus and the Ufens, both rising in the Volscian mountains. (Strab. v. p. 233.) Of these the latter was the most considerable, and appears to have been regarded as the principal stream of which the Amasenus was only a tributary. The Utens is described as a slow and sluggish stream; and Silius Italicus, amplifying the hints of Virgil, draws a dreary picture of its waters, black with mud, winding their slow way through the pestiferous Yomptine plains. (Virg. Aen vii. 801; Sil. Ital. viii. 379-382; Claudian. Prol. et Ol. Cons. 257.) But, besides these, several minor streams either flow down from the Volscian mountains, or rise immediately at their foot in copious springs of clear water, as is commonly the case with all limestone mountains. The Nympharus, which rises at the fort of the hill at Norba, is the most remarkable instance of this. Thus the whole mass of waters, the stay-
nation of which gives rise to these marshes, is very considerable; and it is only by carrying these off in artiticial channels to the sea that any real progress can be made in the drainage of the district.

Various attempts were made in ancient times to drain the Pontine Marshes. The first of these was in b. c. 160, by the consul Cornelius Cethegus, which, according to the brief notice trunsmitted to us, would seem to have been for a time successful (Liv. Epit. xlvi.); but it is probable that the result attained was in reality but a partial one; and we find them relapsing into their former state before the close of the Republic, so that the drainage of the Pontine Marshes is noticed among the great public works projected by the dictator Caesar, which he did not live to execute. (Suet. Ches. 44; Plut. Cues. 58; Dion Cass. xliv. 5.) It would appear that on this occasion also some progress was made with the works, so that a considerable extent of land was reclaimed for cultiration, which N. Antonius proposed to divide among the poorer Roman citizens. (Dion Cass. xlv. 9.) Horace alludes to a similar work as having been accomplished by Augustus (Hor. Art. Poet. 65; Schol. Crug. ad loc.); but we find no mention of this elsewhere, and may therefore probably conclude that no great success attended his efforts. Juvenal allades to the Pontine Marshes as in his time a favourite resort of robbers and highwaymen (Juv. iii. 307); a sufficient proof that the district was one thinly inhabited. The enterprise seems to have been resumed by Trajan in comnection with his restoration of the Appian Way thruagh the same district (Dion Cass. lxviii. 15); but we have no particular account of his works, though inscriptions confirm the account given by Dion Cassius of his renovation of the highroad. The next seriuus attempt we hear of to drain this marshy tract was that under Theodoric, which is recorded both by Cassiodorus and by an inscription still extant at Terracina. (Cassiodor. Var. ii. 32, 33; Gruter, Inscr. p. 152. 8.) But in the period that followed the works naturally fell into decay, and the whole tract relapsed into an uninhabitable state, which continued till the close of the middle ages. Nor was it till quite modern times that any important works were undertaken with a view to reclain it. Pope Pius VI. was the first to reopen the line of the Appian Way, which had been abandoned for centuries, and restore at the same time the canal by its side, extending from Treponti to Terracina. This canal takes the place of that which existed in the time of Horace and Strabo, and formed the customary mode of transit for travellers proceeding from Furum Appii to Tarracina. (Hor. Sut. i. 5. $10-24$; Strab. v. p. 233; Lucan, iii. 85.) It is evidently the same which is called by Procopius (B.G.i.11) the Decennovium, a name which could only be applied to an artificial cut or canal, though that author terms it a river. The " nineteen miles" indicated by the name commenced from Tripontium (Treponti), from whence the canal was carried in a straight line to within 3 miles of Tarracina. It was this portion of the road which, as we learn from an inscription, was restored by Trujan; and the canal was doubtless constructed or restored at the same time. Hence Cassiodorus applies the name of "Decennovii paludes" to the whole tract of the Pontine Marshes. (Cassiod. Var ii. 32, 33.)

The Saturae Palus, mentioned both by Virgil and Silius Italicus in comection with the river

Ufens (Virg. Aen. vii. 801 ; Sil. Ital. viii. 380), most have been situated in the district of the Pontine Marshes, and was probably merely the name of some portion of the swamps included under that more general designation.

The line of the Appian Way was carried in a perfectly straight line through the Pontine Marshes from the station Sub Lanuvin, at the foot of the Alban Hills, to within a short distance of Tarracina. The stations along its course and the distances are differently given in the Itineraries; but they may all be readily determined with the assistance of inscriptions and Roman milestones still existing. At the beginning of the marshes, or rather in the level tract immediately adjoining them, was the station of Tres Tabernae, distant 17 miles from Aricia, at point where a branch road from Antium fell into the Appian Way. The site of this was fixed by the Abbe Chaupy and other writers at a place called Ie Castelle, 2 miles on the Roman side of Cisterna; but there seems no reason to reject the distances given in the Antonine ltinerary, which would place it 5 miles further from Rome, or 3 miles beyond Cisterna, where some ruins still remain, referred by Chaupy to the station Ad Sponsas of the Jerusalem Itinerary, but which would suit equally well for those of Tres Tabernae. [Tres Tabernae.] Six miles from this spot, and just 39 miles from Kome (as shown by a milestone still remaining there), is a place still called Torre di Treponti, marking the site of Trepontium, the spot from whence the canal of the Decennorium commenced, and from which therefore the 19 miles from which it derived its name were measured. Four miles further on considerable remains mark the site of Fonem Aprif, which in the Augustan age was a busy and thriving town; but in the fourth century had sunk to a mere Mutatio or post station. The Antonine Itinerary gives the distance from Rome to Forum Appii at 43 miles, which is exactly correct; from thence to Tarracina it reckons 18 miles; the Jerusalem Itinerary makes the distance 19 miles, and gives an intermediate station called Ad Medias (Paludes), which was 9 miles from Forum Appii and 10 from Tarracina. The site of this is still marked by a spot called Torre di Mesa, where a striking Roman monument still remains; but the real distance from Foram Appii is only 8 miles, which coincides with the Antonine Itinerary. (Itin. Ant. p. 107 ; Itin. Hier. p. 611.) The whole of this part of the road has been carefully examined and described by the Abbe Chaupy (Découverte de la Maison d Horace, vol. iii. pp. 382-452); and the distances discussed and corrected by Westphal, (Köm. Kampagne, pp. 67-70). [E. H. B.]

PONS AENI, or, as it is called in the Peuting. Table, Ad Aenum, was a frontier fort in Vindelicia on the river Aenus, and was garrisoned by a detachment of cavalry. (It. Ant. pp. 236, 257; Not. Jmp.) It is commonly believed that its site is now marked by the village of Pfüzen, which in the middle ages bore the name of Pontana; but Muchar (Noricum, i. p. 285) identifies it with Ennsdorf near Kraiburg.
[L. S.]
PONS AERA'RIUS, in Gallia Narbonensis, is placed in the Jerusalem Itin. on the road from Nemausus (Nimes) to Arelate (Arles), at the distance of xii. from Nemausus and viii. from Arelate. The Antonine Itin. marks xix. from Nemausus to Arelate in one distance. The road must therefore have been straight between these two places. D'Anville
fixes the Pons at Bellegarde, where there is a bridge over a canal which comes from the Rhone at Ugernum (Beaucaire) and extends to Aigues Mortes. This canal separates the old dioceses of Nimes and Arles, and probably divided the territories of Nemausus and Arelate. D'Anville conjectures that the name Aerarius may be owing to the fact that a toll was paid at the bridge, which was a common practice in the Roman period. (Dig. 19. tit. 2. s. 60. § 8: " Redemptor ejus pontis portorium ab eo exigebat.")
[G. L.]
PONS ALUTI, a town in Dacia on the road from Egeta to Apula, near Robesti, below Strassburg. (Tab. Peut.)
PONS ARGENTEUS [Argenteus.]
PONS AUFIDI. [AuFIDUs.]
PONS AUGUSTI (Tab. Peut.), a town in Dacia, on the road from Tiviscum to Sarmategte (usually called Zarmizegethusa), identified by Mannert with the Zeugma (Zeī $\mu$ a, Ptol. iii. 8. § 10) of Ptolemy, and placed near Bonizar at the passage over the river Bistra; by others near Margg. (Ukert, vol. iii. pt. ii. p. 616.)

PONS AURE'OLI (Pontirolo), a place on the highroad from Mediolanum to Bergonnum, where that road crossed the river Addua (Adda) by a bridge. It is mentioned as a station by the Jerusalem Itinerary, which places it 20 M. P. from Mediolanum and 13 from Bergomum. (Itin. Hier. p. 558.) It derived its name from the circumstance that it was here that the usurper Aureolus was defeated in a pitched battle by the emperor Gallienus, and compelled to take refuge within the walls of Milan, A. D. 268. (Vict. Caes. 33. Epit. 33.) After the death of Aureolus, who was put to death by the soldiers of Claudius, he was buried by order of that emperor close to the bridge, which ever after retained the name of Aureolus. (Treb. Poll. Trig. Tyr. 10.)
[E. H. B.]
PONS CAMPA'NUS, a bridge on the Via Appia, by which that celebrated road crossed the little river Savo, a short distance from its mouth. It was 3 miles distant from Sinuessa (erroneously given as 9 in the Jerusalem Itinerary), and evidently derived its name from its being the froutier between Campania and Latium, in the more extended sense of the latter name. It is mentioned by Pliny (xiv. 6. s. 8.), as well as the Itineraries (Tab. Peut.; Itim Hier. p. 611); and Horace tells us that Maecenas and his companions halted for the night in a villa adjoining it, on their journey from Rome to Brandusium. (Hor. Sat. i. 5. 45.)
[E. H. B.]
PONS DUBIS, in Gallia, a bridge over the Dubis (Doubs), is marked in the Table on the road from Cabillonum (Chálon) to Vesontio (Besançon), and xiv. from Cabillonum. D'Anville supposes that the site may be a place called Ponloux, where it is said that when the water in the Doubs is low, the remains of an old bridge are visible at which several roals met. (Ukert, Gallien, p. 501.)
[G. L.]
PONS MANSUETI'NA or PONS SOCIO'RUM, a place in Pannonia, on the road leading from Sopianae to Jovia; but no further particulars are known. (It. Ant. pp. 264, 267.)
[L. S.]
PONS MI'LVIUS, or MU'LVIUS (Ponte Molle), a bridge on the Via Flaminia, by which that raad erossed the Tiber just about 2 miles from the gate of Rome called the Porta Flaminia. It is probable that a bridge existed on the spot at an early period, and there must certainly have been one from the time when the Via Flaminia was constructed. The first

PONS MOSSAE.
mention of the name in history occurs in the Second Punic War, when Livy tells us that the Roman people poured ont in a continuous stream as far as the Milvian Bridge to meet the messengers who brought the tidings of the defeat of Hasdrubal. B. c. 207. (Liv. $1 x$ vii. 51). Hence, when Aurelius Victor reckons it among the works constructed by Aemilius Scaurus in his censorship (b. c. 110), it is evident that this can refer only to its rebuilding or restoration. (Vict. de Vir. Illustr. 72.) It is very possible that there was no stone bridge before that time. At the time of the conspiracy of Catiline, the Milvian Bridge was selected as the place where the ambassadors of the Allobmges were arrested by the orders of Cicero. (Sall. Cat. 45 ; Cic. in Cat. iii. 5.) It is probable that under the Empire, if not earlier, a suburb extended along the Via Flaminia as far as the Milvian Bridge. Hence we are told that it was the point from which Caesar (among his other gigantic schemes) proposed to divert the cuarse of the Tiber, so as to carry it further from the city (Cic. ad Att. xiii. 33): and again, the emperor Gallienus is said to have proposed to extend the Flaminian portico as far as the Milvian Bridge. (Treb. Poll. Gallien. 18.) In the reign of Nero the neishbourhood of the bridge was occupied by low taverns, which were mach resorted to for purpuses of debauchery. (Tac. Ann. xiii. 47.) Its proximity to Rome, to which it was the principal approach from the N., rendered the Milvian Bridge a point of importance during civil wars. Hence it is repeatedly mentioned by Tacitus during those which followed the death of Nero (Tac. Hist. i. 87, ii. 89, iii. 82): and acain, in A. D. 193, it was there that Didius Julimus was defeated by Severus (Eutrop. viii. 17 ; Vict. Caes. 19). At a later period, also, it witnessed the defeat of Maxentias by Constantine (A. $\mathbf{d} .312$ ), when the usurper himself perished in the Tiber. (Vict. Caes. 40; Eutrop. x. 4 ; Zosim. ii. 16.) Its military importance was recognised also in the Gothic Wars, when it was occupied by Vitiges during the siege of Rome, in A. D. 537; and again, in 547, when Totila destroyed all the other bridges in the neighbourhood of Rome, he spared the Diilvian alone. (Procop. B. G. i. 19, iii. 24.) The present bridge is in great part of modern construction, but the foundations and principal piers are ancient.

PONS MOSAE in northern Gallis is ment bs Tacitus (Hist iv. 66), but there is nothing said to show where this bridge was. A Roman road ran from Aduatuca (Tongern) across the Mosa (Maas) past Juliacum (Juliers) to Colonia (Cologne). It is very probable that the Pons Mosae was on this route, and that it was at Maastricht. The termination tricht is a corruption of the Roman word Trajectum. [Trajectum.]
[G. L.]
PONS NA'RTIAE. [Gallaecta, p. 934, b.]
PONS NE'RVIAE. [Gallaecla, p. 934, b.]
PONS NOMENTA'NUS. [Nomentum.]
PONS SALA'RIUS (Ponte Sabara), a bridge on
the Via Salaria where that highroad crossed the Anio (Teverone) about $2 \frac{1}{2}$ miles from Rome. From its position this is certainly the bridge meant by Livy under the name of Pons Anienis, on which the single combat of Manlius Torquatus with the Gaul is described as taking place. (Liv. vii. 9.) The name is not again mentioned in history, but we learn from an inscription still remaining that the present bridge was constructed by Narses, in the room of the more ancient one which had been destroyed by Totila

VOL. 11.

PONTES TESSENII.
in A. D. 547, when he broke up the siege of Rome and withdrew to Tibur. (Procop. B. G. iii. 24; Nibby, Dintorni, vol. ii. p. 594.) [E. H. B.]

PONS SARAVI, a bridge over the Saravus (Sarre) in Gallia on the road from Divodurum (Metz) to Argentoratum (Strassburg). The Table marks 10 from Decem-pari (Dienze) to Tabernae (Saverne). Though the distances are not quite correct, it is clear that Saarburg on the Sarre must be the Pons Saravi; and it cannot be Saarbrück on the Saar, for Saarbrick is more than 30 miles north of Saarburg, and quite out of the way. This is an instance in which a hasty conclusion has been derived solely from the sameness of name. [G. L.]

PONS SCALDIS, or bridge over the Schelde in North Gallia, is placed both by the Table and the Antonine Itin. on the road from Turnacum (Tournai) to Bagacum (Bavai). There is a place on the Schelde named Escaut-pont between Valenciennes and Condé which may represent the Pons. [G.L.]

PONS SERVI'LII. [Ileyricum, Vol. II. p. 36, b.]

PONS TILURI, a station on the road from Sirmium to Sulona, in the interior of Dalmatia. (Itin Anton.; Tilurium, Peut. Tab.; Geogr. Rav. iv. 16.) It may be identified with the passage of the river Cettina or Tsettina (Tilurus), at Trigl, with the opposite height of Gardun, where there are vestiges of a Roman town, which was probably the colony of Aequem (Aikoùon có入., 1'tol. ii. 16 (1i). § 11 ; Itin. Antion. ; Peut. Tab.; Orelli, Inscr. 502), where an inscription has been found commemorating the restoration of the bridge under the name of Pons Hipri,-a Graccised form of the Latin name of the twwn, which was sometinies speit as Equum. (Wilkinson, Datmatia, vol. i. p. 238; Neigebaur, Die Sud-Slaven, p. 178.) [E. B. J.]

PONS UCASI, a tuwn of Thrace, near the Dacian border. (Itin. Ant. p. 567.) [T. H. D.]

PONS ZITHA, a station on the Roman road running along the coast-line of Syrtica, and a municipium. (Itin. Antow. ; Geogr. Rav.) In the Peutinger Table it is wrongly called Liha. Barth (Wanderungen, p. 263) has fixed its site at the promontory opposite to Meninx, where he found remains of a stone bridge or mole connecting the mainland with the island of the Lotophagi. [E.B.J.]

PONTEM, AD, a town of Britain, on the road from Londiniom to Lindum (Jtin. Ant. p. 477), identified by Camden (p. 560) with Paunton on the Witham, in Lincolnshore, where a great many Roman coins and antiquities have been discovered. Others take it to have been Farndon, near Smuthwell, in Nottinghamshire.
[T. H. D.]
PONTES, in North Gallis, is placed in the Ant. Itin. on a road from Samarobriva ( $A$ miens) to Gesoriacum (Botologne): it is 36 M. P. from Samarobriva to Pontes, and 39 M. I. from Pontes to Gesoriacum. The Table, which marks a road between Samarobrira and Gesoriacum, does not place Pontes on it, but it has anotier place, named Duroicoregum, supposed to be Douriers on the Authie. D'Anville concludes that Pontes is Ponches on the Authie, at which place we arrive by following the traces of the old road which still exists under the name of Chaussée de Brunéhaut.
[G. L.]
PONTES, a Roman station in the territory of the Atrebates, seated on the Thames, on the rund from Calleva (Silciester) to Londinium (Itin. Ant. p 478). It was at or near Ohd Windaor. [T. H. B:]

PONTES TESSE'NII (Diessen) a place in

Vindelicia, on the road from Amber to Parthanum. (It. Ant. p. 275 ; comp. Muchar, Noricum, i. p. 284.)
[L. S.]
PO NTIA or PÓNTIAE (Movtia: Ponza), an island in the Tyrrhenian sea, situated off the coast of Italy, nearly opposite to the Circeian promontory. It is the most considerable of a group of three small islands, now collectively known as the Isole di Ponza; the ancient names of which were, Paimaria, now Palmaruola, the most westerly of the three, Pontia in the centre, and Sinonia (Zannone) to the NE. (Plin. iii. 6. s. 12 ; Mel. ii. 7. § 18.) They are all of volcanic origin, like the Pithecusae (Aenaria and Proclyta), nearer the coast of Campania, and the island of Pandataria (now called Vandotena), about midway between the two groups. Strabo places Pontia about 250 stadia from the mainland (v. p. 233), which is nearly about the truth, if reckoned (as he does) from the coast near Caicta; but the distance from the Circeian promontory does not exceed 16 geog. miles or 160 stadia. We have no account of Pontia previous to the settlement of a Roman colony there in в. c. 313, except that it had been already inhabited by the Volscians. (Liv. ix. 28 ; Diodor. xix. 101.) The colonisation of an island at this distance from the mainland offers a complete anomaly in the Roman system of settlements, of which we have no explanation; and this is the more remarkable, because it was not, like most of the maritime colonies, a "colonia maritima civium," but was a Colonia Latina. (Liv. $x \times v i i .10$.$) Its insular situation preserved it$ from the ravages of war, and hence it was one of the eighteen which during the most trying period of the Second Punic War displayed its zeal and fidelity. to the Roman senate, when twelve of the Latin colonies had set a contrary example. (lbid.) Strabo speaks of it as in his time a well peopled island (v. p. 233). Under the Roman Empire it became, as well as the neighbouring Pandataria, a common place of confinement for state prisoners. Among others, it was here that Nero, the eldest son of Germanicus, was put to death by order of Tiberius. (Suet. Tib. 5t, Cal. 15.)

The island of Ponza is about 5 miles long, bat very narrow, and indented by irregular bays, so that in some places it is only a few hundred yards across. The two minor islands of the group, Palmaruola and Zannone, are at the present day uninhabited. Varro notices Palmaria and Pontia, as well as Pandataria, as frequented by great flocks of turtle doves and quails, which halted there on their annual migrations to and from the coast of Italy. (Varr. R. R. iii. 5. § 7.)
[E. H. B.]
PO'NTIAE (Hóvtcau ขทิoot, Scyl. p. 46), three islands off the coast of the Greater Syrtis. Prolemy (iv. 3. § 36 ; comp. Stadiasm. §§ 72-75) calls these Misynus, Pontia, and Gaea. They may be identified with the recfs of Ghara. (Beechey, Expedition to the N. Coast of Africa, p. 238, App. p. x.; Smyth, Mediterranean, p. 455.)
[E.B. J.] PONTI'NUS [Argos, p. 201, a.]
PONTUS (IBbyos), a large country in the northeast of Asia Minor, which derived its name from its being on the coast of the Pontus Euxinus, extending from the frontiers of Colchis in the east, to the river Halys in the west. In the earlier times the country does not appear to have bome any general appellatim, but the various parts were desiguated by names derived from the different tribes by which they were iuhabited. Xenophon (Anab.v. 6. § 15) is the first
ancient author who uses Pontus as the name of the country. Pontus formed a long and narrow tract of coast country from the river Phasis to the Halys, but in the western part it extended somewhat further south or inland. When its limits were finally fixed, it bordered in the west on Paphlagonia, where the Halys formed the boundary ; in the South on Galatia, Capprdocia, and Annenia Minor, the Antitaurus and Mount Paryadres being the boundaries; and in the east on Colchis and Armenia, from which it was separated by the river Phasis. Pontus thos embraced the modern pashaliks of Trebizond and Sixas. Although the country was surrounded by lofty mountains, which also sent their ramifications into Pontus itself, the plains on the coast, and especially the western parts, were extremely fertile (Strab. xii. p. 548), and produced excellent froit, such as cherries, apples, pears, various kinds of grain, olives, timber, aconite, \&c. (Strab. xii. p. 545, \&c.; Theophrast. Hist. Plant. iv. 5, viii. 4, Sc., ix. 16, xix. 17; Plin. xiv. 19.) The country abounded in game (Strab. xii. p. 548), and among the animals bees are especially mentioned, and honey and wax formed important articles of commerce. (Xenoph. Anab. iv. 8. §§ 16, 20 ; Dioscor. ii. 103 ; Plin. $1 \times 1$. 45; Strab. iii. p. 163.) The mineral wealth of the country consisted chiefly in iron (Xenoph. Anab. r. 4. § 1; Strab. xii. p. 549; Steph. B. s. v. Xdлubes ; Pliny vii. 57) and salt. The chief mountains of Pontus are the Paryadres, and on the east of it the Scoedises, two ranges of Antitaurus, which they connect with Mount Caucasus. The Paryadres sends two branches, Lithirus and Ophlimus, to the north, which form the eastern boundary of the plain of Phanaroea. Another mountain which terninates in a promontory 100 stadia to the west of Trapezus was called the Oros Hieron (Anonym. PeripL p. 13; Apollon. Rhod. ii. 1015, with Schol.), and Teches is a mountain mentioned in the south-east of Trapezus. The promontories formed by these mountains, if we proceed from west to east, are: the Heracleium, Iasonium, and Zephyrium. These projecting headlands form the bays of Amisus and Cotyora. The mountains in the south contain the sources of numerous streams and rivers, such as the Halys, Lycastus, Chadisius, Iris, Scylax, Lycus, Thermodon, Beris, Thoaris, Oenius, Phigamus, Sidenus, Genethes, Melanthius, Pharmathenus, Hyssus, Ophis, Ascurus, Adienus, Zagatis, Prytanis, Pyxitex, Archabis, Apsarus, Acampis, Bathys, Acinasis, Isix, Mogrus, and the Phasis. The only lake in Pontus noticed by the ancients is the Stiphune Palus, in the west, north of the river Scylax.

Pontus was inhabited by a considerable number of different tribes, whose ethnological relations are either entirely unknown or extremely otscure. The most important among them, if we proceed from west to east, are: the Leucosyri, Tibareni, Chalybes, Mosinoect, Heptacometar, Dribae, Bechires, Byzkres, Colchi, Macrones, Marts, Taochl, and Phasianl. Some of these tribes were wild and savage to the last degree, especially those of the interior; bat on the coast Greek colonies continued to be extablished ever since the middle of the 7 th century b. c., and rose to great power and prusperity, spreading Greek culture and civilisation amund them.

As to the history of the country, tradition stated that it had been conquered by Ninns, the founder of the Assyrian empire (Diod. ii. 2); after the time of Cyrus the Great it certainly was, at least nominally,
nnder the dominion of Persia (Hernd. iii. 94, vii. 77, \&cc.), and was governed by hereditary satraps belonging to the royal family of Persia. In the time of Xenophon, the tribes of Yontus governed by native chiefs seem to have still enjoved a high degree of inderendence. Bat in B.c. 363, in the reign of Artaxerxes II., Ariobarzanes subdued several of the lontian tribes, and thereby laid the foundation of an independent kingdom in those parts. (Diod. xv. 90.) He was succeeded in B. c. 337 by Mithridates II., who reigned till b.c. 302, and who, by skilful!y availing himself of the circumstances of the times during the struggles among the saccessors of Alexander, considerably enlarged his kingdom. After him the throne was occupied by Mithridates III., from B. c. 302 to 266; Ariobarzanes III., from B. C. 266 probably till 240 . The chronology of this and the following kings, Mithridates IV., Pharnaces I., and Mithridates V., is very uncertain. Under Mithndates VI., from B. c. 120 to 63, the kingdom of Pontus attained the height of its extent and power, but his wars with the Romans led to its subjugation and dismemberment. Pompey, the conqueror of Mithridates, in B. c. 65 annexed the vestern part of Pontus as far as Ischicopolis and the frontiers of Cappadocia to Bithynia (Dion Cass. siii. 45 ; Strab. xii. pp. 541, 543 ; Vell. Pat. ii. 38: Liv. Epit. 102), and gave away the remaining parts to some of the chiefs or princes in the adjoining countries. A portion of the country betwees the Iris and Halys was given to the Galatian Deiotarus, which was henceforth called Pontus Galaticus (Strab. xii. p. 547 ; Dion Cass. xli. 63, xlii. 45 ; Ptol. v. 6. §§ 3, 9.) The Colchians and other tribus in the south-east of the Euxine received a king of their own in the person of Aristarchus. (Appian, Mithrid. 114; Eutrop. vi. 14.) Pharnaces II., the treacherous son of Mithridates, received the Crimea and some adjoining districts as an independent kingdom under the name of Bosporus (Appinn, Mithrid. 110, \&c.); and the central part, from the Iris to Pharnacia, was subsequently given by M. Antonius to Polemon, the son of Pharnaces, and wns henceforth designated by the name of Pontus Polemoniacus (Ptol. v. 6. $\S \S 4,10$; Eutrop. vii. 9; Aurel. Vict. de Caes. 15), which it retained afterwards, even when it had become incorporated with the Roman empire. The eastern part, which had likewise been ceded to Pulemon, was transferred by his widow Pythodoris to king Archelaus of Cap. padocis, who married her, and was thenceforth called Pontus Cappadocius. In Pontus Polemoniacus, Pythodoris was succeeded by her son Polemon II., who resigned his kingdom into the hands of the emperor Nero (Suet. Ner. 18; Eutrop. rii. 14). Pontus was then made a Roman province, A.D. 63, under the name of Pontus Polemoniacus, the administration of which was sometimes combined with that of Galatia. In the new arrangements under Constantine, the prorince was again divided into two parts; the couth-western one, which had borne the name of Pontus Galaticus, was called Helenopontus, in hoDour of the emperor's mother Helena ; and the eastern portion, to which Pontus Cappadocius was added, retained the name of Pontus Polemoniacus. (Norell. 1xviii. 1; Hierocl. p. 702.) Besides these provincial divisions, there also exist a number of names of smalier separate districts, such as Gazeronitis, Saramesf, Themiscyra, Sidene; and in the interiot Phazemonitis, Pimolisenf, Diacopene, Chllocome, Daximonitis, Zeletis, Ximene, and

Megalopolitis. These, as well as the most important towns, Amisus, Polemonitim, Cotyora, Pharnacia, Cerasls, Traprzus, Apsarles, Cabira, Gaziura, Zela, Comana Pontica, Neocarsarela, Sebastia, Themiscyra, Phazemon \&c., are described in separate articles. [L.S.]

PONTUS EUXINUS. [Euxinus Pontus.]
POPULI or POPOLI, a small place in the west of Pannonia, on the road from Jovia to Aquaviva, south of the river Dravas (It. Hieros. p. 561; Gengr. Rav. ir. 19; Tab. Peuting.) [L. S.]

POPULO'NIUM or POPULO'NIA (Похлفעเov: Eth. Populoniensis: Populonia), an ancient city of Etruria, situated on the sea-coast, nearly opposite the island of Ilva (Elba), and about 5 miles N. of the modern city of Piombino. It stood on a lofty hill, rising abruptly from the sea, and forming the northern extremity of the detached and almost insulated promontory, the southern end of which is occupied by the modern town of Piombino. This promontory (the Потлашıov akpov of Ptolemy) is separated from the hills in the interior by a strip of flat marshy ground, about 5 miles in width, which in ancient times was occupied in great measure by lagunes or paduli; so that its position is nearly analogous to that of the still more striking Monte Argentaro. The Maritime Itinerary places it 30 miles S. of the Vada Volaterrana, which is just about the truth (Itin. Marit. p. 501). Strabo says it was the only one of the ancient Etruscan cities which was situated on the sea-shore (Strab. v. p. 223), and the remark is repeated by Pliny: thus apparently excluding Coss as well as P'yrgi and other smaller places from that designation. It is probable at least that Yopulonium was the most considerable of the maritime cities of Etruria; but there are no grounds for regarding it as one of the Twelve Cities of the League, or as ever rivalling in importance the great cities of the interior. Virgil indeed represents it as one of the Etruscan cities which sent forces to the assistance of Aeneas (Aen. x. 172), a statement that seems to prove his belief in its antiquity; but other accounts represented it as a colony of Volaterrae, and therefore of comparatively recent date. Servius tells us that it was first founded by the Corsicans, from whom it was afterwards wrested by the Volaterrans; and distinctly represents it as of later date than the twelve chief cities of Etruria. (Serv. ad Aen. l.c.) It probably derived its chief prosperity from its connection with the neighbouring island of Ilva, the iron produced in the latter being all conveyed to Populonium to be smelted, and thence exported to other regions. (Strab. l. c.; Pseud. Arist. de Mirab. 95; Varr. ap Serv. ad Aen. x. 174.) Hence, in B. c. 205, when Scipio was fitting out his fleet for Africa, and the Etruscan cities came forward with their voluntary contributions, the Populonians undertook to supply him with iron. (Liv. xxviii. 45.) This is the first occasion on which the name is mentioned in history; a few years later (b. c. 202) we are told that the consul Claudius Nero, on his voyage to Sardinia, took refuge with his fleet in the port of Populonium from the violence of a storm. (Id. xxx. 39). No further mention of it occurs in history; but we learn from Strabo that it sustained a siege from the furces of Sulla at the same time with Volaterrae, and it appears to have never recovered the blow it then received; for in the time of that geographer the city itself was alinost desolate, only the temples and a few houses remaiwing. The purt, however, was still

POPULONIUM.
frequented, and a town had grown up around it at the foot of the hill. (Strab. v. p. 233.) Its name is still mentioned as an existing town by all the other geographers, and Ptolemy especially notices the city as well as promontory of Populonium (Mel. ii. 4. § 9 ; Plin. iii. 5. s. 8; Ptol. iii. 1. § 4); but this is the last evidence of its existence; and before the close of the Western Empire it had fallen into complete decay. It is described by Rutilius at the begiming of the fifth century as entirely desolate, nothing remaining bat fragments of its massive walls and the fallen rains of other edifices. Gregory the Great also describes it towards the close of the sixth century as in a state of complete decay, though retaining an episcopal see; but at a later period of the middle ages a feudal castle was erected on the site, which, with the few adjacent houses, still bears the nane of Populonia, and is a conspicuous object from a distance. (Rutil. Itin. i. 401-414; Gregor. Ep. ap. Cluver. Ital. p. 514.)

The only Etruscan remains now existing at Pepulonium (with the exception of a few tombs of no interest) are those of the ancient walls, which may be traced in fragments all round the brow of the hill, throughout the entire circuit of the city. This did not exceed a mile and a half in circumference; it was of an irregular form, adapted to the requirements of the ground. The walls are constructed of rude masses of stone, arranged, like those of Volterra, in horizontal layers, but with littl: regularity ; they are not, however, nearly so gigantic in character as those of Volterra, Fiesole, or Cortona. Within the circuit of the walls are to be seen some vaulted chambers, six in a row (which have been erroneously called an amphitheatre) a mosaic pavement, and some reservoirs of water, all unquestionably of Roman date. (Dennis's Etruria, vol. ii. p. 236-238.)

On the highest point of the hill, in the days of Rutilius, stood a lonely watch-tower, serving at the kame time as a beacon for ships. (Rutil. Itin. i. 407.) It was from this point that, according to Strabo, the view comprised not only Corsica (which is visible from many points of the mainland), but Sardinia also. (Strab. l. c.) But this last assertion, though it has been repeated by many writers, is certainly erroneous, as, even if the distance were nut too great, the nearer inonntains of Elba would effectually conceal those of Sardinia from the view. (Dennis, vol. ii. p. 239.)

We learn from the Tabula that there were hot springs in the territory of Populonium, which had given rise to a bathing-place called the Aquas Porulonlae (Tab. Peut.). These were evidently the same now known as Le Caldane, at the foot of Canpiglia, about 6 miles from Populoniun, which have been identified by some writers with the "aquae calidae ad Vetulonios" mentioned by Pliny (ii. 10. 8. 106); but there is no authority for placing Vetulonia in this neighbourbood. (Dennis, vol. ii. p. 225.) [Vetulonia.]

Populonium was the only city of Etruria which had a silver coinage of its own, of a very peculiar style, the reverse being generally quite plain, without type or legend, and not incuse or indented, as on the earliest Greek coins. The ordinary type is a Gorgon's head or mask, similar to that on many Etruscan monuments. The copper coins give the Etruscan name of the city "Pupluna" at fullMrnirna. It is not improbable (as snggested by Millingen) that the Populonians derised the art of

## PORPHYRIS.

coinage from the Phocaeans of Corsica; but there is certainly no ground for admitting the existence of a Phocaean coluny at Populonium itself. (Millingen, Numism. de lAnc. Italie, p. 163; Eckhel, Num. Vet. Anecd. pp. 10-18.)
[L. H. B.]

## COIN OF POPULONTUM.

PORCIFERA (Polcerena), a river of Liguria, flowing into the sea abnat 2 miles W. of Genua The name is written Porcifera by Pliny (iii. 5. s. 7), the only one of the gengraphers who mentions it; but in a curious inscription found near Genoo, it is variously written porcobera and procobera. [Genva.]
[E. H. B.]
 $\sigma \in \lambda \eta \nu i t \eta s)$, the chief of the Hecatonnesi, a group of small islands lying between Lesbos and the coast of Asia. It contained a town of the same name (Scylax, p. 36, Hudson; Strab. xiii. p. 618; Steph. B. 8. v.). Strabo says (l.c.) that some, in order to avoid the dirty allusion presented by this name, called it Poroselene (Пopooe入t $\dagger \eta \eta$ ), which is the form employed hy Ptolemy (v. 2. § 5), Pliny (v. 31. s. 38), and Aelian (N. An. ii. 6). At a still later time the name was changed into Proselene, under which form the town appears as a bishop's see. (Hierocl. p. 686; Concil. Chaloed. p. 530.)

## CON OF PORDOBELENE.

## PORINAS. [Pheneus.]

POROSELE'NE. [Pordoskleme.]
PORPHY'REON (Порфире́шy: Eth. Порфиреब́vios, Пopфupewvitns), a city of Phoenicia, mentioned by Scylax (p. 42, Hudson) between Berytus and Sidon, and marked in the Jerusalem Itinerary (where it is written Parphirion, p. 583, Wesselink) as 8 Roman miles N. of Berytus. Procopius calls it a village upon the coast. (Hist. Arc. c. 30, p. 164, Bonn.) It is mentioned by Polybius (v. 68), from whose narrative we learn that it was in the neighbourhood of Platanus. [Pilatanus.] Hence it seems to be correctly placed at the Khann Neby Iunas, where Pococke relates (rol. ii. p. 432) that he saw some broken pillars, a Corinthian capital, and ruins on each side of a mountain torrent. In the side of the mountain, at the back of the Khin, there are extensive excavated tombs, evidently once belonging to an ancient city. The Crusaders regarded Haifa as the ancient Porphyreon; but there is no uuthority that a city of this name ever stood in the bay of 'Akka. Justinian built a church of the Virgin at Porphyreon (Procop. de Aedif. v. 9, p. 328); and it was a place of sufficient importance to be made a bishopric under the metropolitan of Tyre. (Robinson, Biblical Researches, vol. iii. p. 432.)

PO'RPHYRIS. [Nisyrus.]

## PORPHYRITES MONS.

PORPHYRI"TES MONS (Порфupitns $8 p o s$, Ptol. iv. $5 . \$ 27$ ), a long but not very lofty range of mountains which ran along the western shore of the Arabian Sea, nearly from lat. $26^{\circ}$ to $27^{\circ} \mathrm{N}$. Towards the sea its sides were abrupt, although occasionally scooped into serviceable harbours, e. g. the Portus Albus and Philoteras. On the land side it sloped more gradually, breaking, however, the eastern desert with numerous bluffs and ridges, and sending forth its spars as far as Tentyra and Antaeopolis $\mathbf{S}$. and N . respectively.
[W. B. D. 1
PO'RSLLLAE, another name for Maximinianopolis [Maximinianopotis.]

PORTA AUGUSTA (IIópta Aüyoúgta, Ptol. ii. 6. §50), a town of the Vaccaei, in Hispania Tarraconensis; perhaps Torquemada. [T. H. D.]

PORTHMUS ( $n \delta \rho \theta \mu o s$ ), a harbour in Euboea, belonging to Eretria, described by Demosthenes as opposite to Attica, is the modern Porto Bifalo, immediately opposite to Rhamnus, in the narrowest part of the Euboean channel, where the breadth is only two miles. It was destroyed by Philip, atter expelling the Eretrians; but its advantageous position close to the coast of Attica gave it importance for many centuries afterwards. (Dem. Phil. iii. pp. 119, 125, iv. p. 133, de Cor. p. 248 ; Plin. iv. 12. s. 21 ; Hierocl. p. 645; Harpocrat. Phot. Suid. s.v. חopo 0 оs: Leake, Northern Greece, vol. ii. p. 435.)

PORTUS ABUCINI, is mentioned in the Notitia of the Gallic provinces as a place in "Provincia Baxima Sequanorum." It appears to be Port-surSaine. The district about Port was once called Yasus Portisiorum, whence the modern name Le Portois.
[G. L.]
PORTUS ACHAEORUM, a harbour in European Sarmatia, upon the coast of the Euxine, and upon the strip of land called the Dromos Achilleos. (Plin. iv. 12. 8. 26.) [See Vol. I. p. 20, a.]

PORTUS AEMINES, on the south coast of Gallia, is mentioned in the Maritime Itin. It is supposed to be near the sunall island Embies. (likert, Gallien, p. 428.)
[G. L.]
PORTUS AEPATIACI, is mentioned in the Notitia Imperii as being in Belgica Secunda: "Tribunus militum Nerviorum portu Aepatiaci." It is uncertain what place is meant. D'Anville (Notice, frc.) has an article on it. [G. L.]

PORTUS AGASUS. [Garganus.]
PORTUS ALBURNUS. [Alburnus Mons.]
PORTUS ARGOUS. [Ilva.]
PORTUS ARTABROHUM. [Artabrordm Portus.]
PORTUS AUGUSTI. [OstIA.]
PORTUS COSANUS. [Cosa.]
PORTUS DELPHINI (Plin. iii. 5. s. 7 ; Delphinis, Itin. Ant. p. 293), a small port on the coast of Liguria, still called Porto Fino, situated at the SE. extremity of a great mountain promontory, which projects into the sea between Genoa and Sestri, and forms one of the most striking natural features of this part of the Ligurian corst. [E.H.B.]

PORTUS ERICIS. [Luna.]
portus garnae. [Garganus.]
PORTUS HANNIBA'LIS, a town on the S. coast of Lusitania, not far from Lacobrigg (Mela, iii. 1; Isid. Or. xv.9), near Albor, where there are traces of Punic ruins. (Florez, Esp.S. xiv. p. 211.) [T.H.D.]

PORTLS HERCULIS. [Cosa.]
PORTUS HERCULIS LIBURNI. [Prate]
PORTUS HERCULIS MONOECI. [Monotctes.]

PORTUS VENERIS.
661
PORTUS ITIUS. [Itics.]
PORTUS JULIUS. [Lucrinus Lacus.]
PORTUS LUNAE. [Luna.]
PORTUS MagnUS. [Magnus Portivs.]
PORTUS MAURITII. [Liguria, p. 187.]
PORTUS OLIVULA. [Nicaea.]
PORTUS PISANUS. [Pisaf.]
PORTUS POMPONIANIS, of the Maritime Itin., seems to be one of the bays formed by the Pomponiana Peninsula, and either that on the east side or that on the west side of the peninsula of Giens. The name Pomponianis Portus seems to confirm D'Anville's opinion about Pomponiana [PompoNLANA].
[G. L.]
PORTUS SYMBOLON. [Symbolon Portus.]
PORTUS TELAMONIS. [TELamo.]
PORTUS TRAJANI. [Ostia.]
PORTUS VENERIS (Port Vendre), on the south coast of France near the borders of Spain. The passage about Portus Veneris in Mela (ii. 5) is thus (ed. Is. Vossius): "Tum inter Pyrenaci promuntoria Portus Veneris insignis fano." The words "insignis fano" are a correction of Vossius without any authority, which he has substituted for the words of the best MS., "in sinu salso." Port Vendre is in France, near Collioure, a few miles south of the mouth of the Tech.

Ptolemy (ii. 10. § 2) fixes the boundary of Narbonensis at the promontory on which stood the Aphrodisium or temple of Venus. Pliny (iii. 3) in his description of Hispania Citerior, after mentioning Emporiae (Ampurias), says: "Flumen Tichis. Ab eo Pyrenaea Venus in latere promontorii altero xl. M." This river Tichis is the river which is near the site of Emporiae (Ampurias) in Spain. D'Anville concludes that the promontorium of Pliny is the Promontorium Pyrenaeum of the Table, the modern Cap Creux, which projects into the Mediterranean. This would be a fit place for the temple, for it was an ancient practice to build temples on bold headlands. But Pliny says "on the other," that is on the Gallic side of the promontorium ; and the distance of $\mathbf{x l}$. M.P. from the river of Ampurias brings us to the position of Pert Vendre. Accordingly D'Anville concludes that the temple of Venus was near the port of Venus; and this would seem likely enough. This temple is apparently mentioned by Stephanus (8. y. 'Aфpoठiテuds); and certainly by Strabo (iv. p. 178), who makes the coast of the Narbonensis extend from the Var to the temple of the Pyrenaean Venus, the boundary between Narbonensis and Iberia; but others, he adds, make the Tropaea Pompeii the boundary of Iberia and Celtica. The Tropaea Pompeii were in a pass of the Pyrences not far from the coast. In this passage Strabo simply says that the temple of the Pyrenaean Venus was fixed as the boundary of Gallia and Hispania by some geographers, but this passage does not tell us where the temple is; and the distances which he gives in the same place (iv. p. 178) will not settle the question. But in another passage (iv. p. 181) he makes the Galaticus Sinus extend from a point 100 stadia from Massilia "to the Aphrodisium, the promontory of Pyrane." It is plain that his promontory of Pyrene is Cap Creux, for this is a marked natural limit of the Gallic bay on the west; and he also places the temple there. Cap Creux is a natural boundary between Gallia and Hispania, and we may conclude that it was the ancient coast boundary. We know that Cervaria, which is south of Portus Veneris aud
north of Cap Creux, is in Gallia [Cervaria]. It appears then that there is no authority for placing this temple of Venus at Portus Veneris except the passage of Pliny, which leads to this conclusion, if the distance $x \mathrm{l}$. is right. The passage of Mela has been corrupted by Vossins. It is even doubtful if "inter Pyrenaei promuntoria" is the true reading. Some editions have " in Pyrenaei promuntorio," but if that reading is right, the promuntorium of Mela is not Cap Creux.
[G. L.]
 Thuc. iv. 129; Posidium, Liv. xliv. 11), the SW. cape of Pallene, probably so called from a temple to Poseidon, which still retains its name vulgarly pronounced Posidhi. (Leake, Northern Greece, vol. iii. p. 156.) Müller (Geog. Graec. Min vol. i. p. 52) identifies it with the Thrambeis of Scylax (p. 26; comp. $\Theta \in \rho d \mu 6 \omega$, Herod. vii. 123; Өра́ $\mu 6$ ) : Eth. Өра $\mu-$ Goúvios, Steph. B.; Lycophr. 1405), which Leake and Kiepert place near the Canastraeum Prom.; but as Scylax interposes Scione between them, Thrambeis corresponds better with Posidhi. [E. B. J.]

POSI'DIUM or POSEI'DIUM (Пogeíiov), the name of several promontories sacred to Poseidon.
I. In Europe. 1. A promontory on the coast of Lucania, opposite to the little island of Leucosia, from which it is still called Punta della Licosa. [Leucosia.]

2 The SW. cape of Pallene in Macedouia, also called Poseidonium. [Poseidonium.]
3. A promontory in Chaonia in Epeirus, between Onchesmus and Buthrotum, opprsite the NE. of Corcyra (Strab. vii. p. 324; Ptol. iii. 14. §4; Leake, Northern Greece, vol. i. p. 92.)
4. A promontory in Thessaly, in the district Phthiotis, described by Strabo as lying between the Maliac and Pagasaean gulfs, is the promontory closing the Pagasaean gulf on the $S$. It is called Zelasium by Livy, now C. Stacros (Strab. vii. p. 330, Fr. 32; Ptol. iii. 13. § 17 ; Liv. $x \times x$ i. 46; Leake, Northern Groece, vol. iv. p. 351).

POSI'DIUM or POSEI'DIUM ( $\Pi \sigma \sigma \epsilon i 8 \circ 0 \nu$ ). II. In Asia. 1. The easternmost promontory of the island of Samos. (Strab. xiv. p. 637.)
2. A promontory on the eastern coast of the island of Chios (Strab. xiv. p. 644; Ptol. v. 2. § 30), now called Cape Helene.
3. A promontory of Bithynia, at the northern extremity of the bay of Cios or Myrleia, forming the termination of Mount Arganthonius, is now called Cape Bozburun, in the Sca of Marmora. (Ptol. v. 1. §4; Marcian, p. 70; Scylax, p. 35, where it is called simply àкратһpiov toù Kıavoù кб́лтоv.)
4. A promontory on the coast of Cilicia, 7 stadia to the west of the town of Mandane, is now called C. Kizliman. (Stadiasm. Mar. Magn. § 175.)
5. A promontory on the south-west coast of Caria, south of Miletus, to the territory of which it belonged. It furms the northern extremity of the Lasian bay, and also contained a small town of the same name. (Polyb. xvi. 1; Strab. xiv. pp. 632, 651, 658; Plin. v. 31 ; Pomp. Mela, i. 17 : Stadiasm. Mar. Mayn. §§ 273, 275, 276.) Its modern name is C. Baba or del Arbora.
[L.S.]
6. A promontory in Arabia, on the eastern side of the entrance of the gulf of Heroopolis, where was a grove of palm-trees, and an altar to Poseidon, which was erected by Aristun, whom one of the Ptolemies had sent to explore the Arabian gulf. This promontory is now called Ris Mohammed. (Artemid. ap. Strab. avi. p. 776; Diod. iii. 42.) Strabo, or
his copyist, erroneously says that it lies within the Aelanitic recess. (See the notes of Groskurd and Kramer.)
7. A promontory in Arabia, E. of the Straits of the Red Sea (Bab-el-Manieb, Ptol. vi. 7. §8), which must not be confounded with No. $\epsilon_{\text {, as some }}$ modern writers have done.
8. A town on the coast of Syria, in the district Cassiotis, lying S. of Mt. Casius. There are still remains of this town at Posseda. (Strab. xvi. pp. 751,753 ; Ptol. v. $15 . \S 3$; Plin. v. 20. s. 18.)
POSIDONIA, POSIDONLATES SINUS. [PAEstum.]

POSTU'MIA or POSTUMIIA'NA CASTRA. a fortress in Hispania Baetica, seated on a hill near the river Sulsum (Hirt. B. Hisp. 8); probably the modern Salado, between Osuña and Anteqsera. (Mariana, iii. 2; Florez, Esp. S. x. p. 150, xii. p. 14.)
[T. H. D.]
PO'TAMI (Потано!), a fort on the north-eastern part of the coast of Paphlagonia, with a harbour for small craft. According to Arrian (Periph P. E. p. 15) it was 150 stadia to the NE. of Stephane, but according to others only 120. (Marcian, p. 72; Anonym. Peripl P. E. p. 7, who places it 100 stadia to the SW. of Cape Syrias.) [L.S.]
POTA'MIA (Motapia), a district in the SW. of Paphlagonia mentioned by Strabo (xii. p. 562), but without defining its extent or limits. [L.S.]

PO'TAMUS, or PO'TAMI. [ATtica, p. 331, b.]
PO'TANA (חठ́тava, Agatharch. de Mar. Erythr.
§ 104, ed Paris, 1855), a place mentioned by Agatharchides, which Alexander the Great founded at the mouth of the Indus. Diodorus calls it חodravas (iii. 46). It has been suspected, with some reason, that the name in both of these authors is an error for Pattala (the present Tatta), which is spoken of in similiar terms by Arrian (Anab. v. 4, vi. 17, Indic. c. 2) and by Pliny (ii. 75). On the other hand, the name may readily be conceived as a Graecism fur Patan, a common Indian word for a town or city.

POTE'NTIA. 1. (Потertia: Eth. Potentinus: Stc Maria a Potenza), a town of Picenum, situated on the coast of the Adriatic, at the mouth of the river of the same name, still called the Potenza, and 18 miles S. of Ancona. We have no means of determining whether or not there was an ancient town on the spot previous to the Roman conquest of Picenum ; but in B. c. 184 a Roman colony was settled there, at the same time with that at Pisaurum in Umbria. (Liv. xxxix. 44; Vell. Pat. i. 15. The older editions of Livy have Pollentia, but there seems no doubt that the true reading is Potentia.) It was, as well as the latter, a "culonia civium," but does not seem to have ever risen to $s$ position of inportance; and with the exception of an incidental notice in Cicero of an earthyuake that occurred in its territory (Cic. de Harusp. Kesp. 28), no mention of its name is found in history. It is, however, mentioned by all the geographers as one of the towns of Picenum, and at a later period its name is still found in the Itineraries. (Strab. v. p 241; Mel. ii. 4. § 6 ; Plin. iii. 13. s. 18 ; Ptol. iii. $1 . \S 21$; Itin. Ant. pp. 101, 313 ; Tab. Peut.) From the Liber Coloniarum we learn that it had receired a fresh body of colonists, though it is nncertain at what period (Lib. Colow. pp 226, 257); but there is no evidence of its baving retained the rank of a colony under the Roman Einpire. (Lumpt, de Col p. 336). It became an

PRAENESTE．
episcopal see in the early ages of Christianity；and the time of its decay or destruction seems to be un－ known ；but the site is now wholly deserted．Con－ siderable remains of the ancient city were still visi－ ble in the time of Holstenius in the plain on the right bank of the Potenza，near its mouth；and the name is still retained by an ancient church and abbey called Sta Maria a Potenza，about a mile from the Porto di Recanuti．（Holsten．Not．ad Clurer．p．134．）

2．（חocerría，Ptol．：Eth．Potentinus：Potenza）， a city of the interior of Lucania，situated in the valles of the Casuentus or Basiento，not far from its source，and above 60 miles from the gulf of Tarentum．No mention of it occurs in history，and though it is noticed by Pliny，Ptolemy，and the Liber Coloniarum，among the municipal towns of Lucania，we have no indication of its superior im－ portance．But from the numerous inscriptions dis－ covered there，it is evident that it was，under the Rornan empire，a flourishing municipal town，and must at that period have been one of the most con－ siderable in Lucania，the towns of that province having for the most part fallen into great decay． The Itineraries give us two lines of road pussing through Potentia，the one from Venusia southwards towards Grumentum and Nerulum，the other from Salernum and the valley of the Silarus，which appears to have been continued in the direction of Tarentum． （Plin．iii．11．s．15；Ptol．iii．1．§ 7G；Lib．Col． p．209；Itin．Ant．p．104；Tab．Peut．；Mommsen I．R．N．pp．23，24．）The modern city of Potenza is the capital of the Basilicata，a province which comprises the greater part of the ancient Lucania： it dues not occupy precisely the site of the ancient town，the remains of which are visible at a place called La Murata，in the valley below the modern city．（Romanelli，vol．i．p．435．）［E．H．B．］

POTHERELS，a river of Crete mentioned by Vitruvius（i．4），is identified by some with the Ca－ tarrhactes of Ptolemy．［Catarrhactes．］

POTIDAEA．［Cassandrfia．］
 town in Aetolia Epictetus，on the borders of Locris， and one day＇s march from Oeneön．（Thuc．iii．96； Liv．Ixriii． 1 ；Steph．B．s．v．）

POTNIAE（Пठтviat：Eth．Пotvieús，fem．Пot－ vads），a village of Boeotia，on the road from Thebes to Plataea，distant 10 stadia from the former city． It was in ruins in the time of Pausanias，and con－ tained a grove sacred to Demeter and Cora（Proser－ pine）．Potnise is celebrated in mythology as the residence of Glaucus，who was torn to pieces by his infuriated mares．（Xen．Hell．v．4．§ 51 ；Paus．ix． 8．§今 1，3；Steph．B．s．v．；Plin．axv．8．s．53； Virg．Georg．iii． 268 ；Ov．Ibis， 557 ；Dict．of Biogr．art．Glaucus．）According to Strabo（p． 412）some authorities regarded Potuitie as the Hy － pothebee of Homer（Il．ii．505）．Gell places Potniae in the neighbourhood of the modern village of Taki． （Gell，Itinerary，p．110；comp．Leake，Northern Greece，vol．ii．p．323．）

PRAASPA．［Phranta．］
PRA＇CTIUS（Прaktios），a small river in the north of Troas，flowing from Mount Ida，and dis－ charging itself into the Hellespont a little below Percote．（Hom．Il．ii．835；Strab．xiii．p．590； Arrian，Anab．i．12．§ 6．）Some identify it with the modern Borgas，and others with the Muskakoi－ Su．
［L．S．］

PRAENESTE（חрqiveotos，Strab．Appian；

Mpalveate，Dion Cass．：Eth．Mpaıveбтivos，or Праıvєбтท⿱亠䒑𧰨s，Praenestinus：Palestrina），one of the most ancient，as well as in early times one of the most powerful and important，of the ci－ ties of Latium．It was situated on a projecting point or spur of the Apennines，directly oppo－ site to the Alban Hills，and nearly due E．of Rome，from which it was distant 23 miles． （Strab．v．p．238；Itin．Ant．p．302；Westphal， Römische Kampagne，p．106．）Various mythical tales were current in ancient times as to its founder and origin．Of these，that adupted by Virgil as－ cribed its foundation to Caeculus，a reputed son of Vulcan（Virg．Aen．vii．678）；and this，we learn from Solinus，was the tradition preserved by the Praenestines themselves（Solin．2．§ 9）．Another tradition，obviously of Greek origin，derived its name and foundation from Praenestus，a son of Latinus，the offispring of Ulysses and Circe（Steph． B．s．v．；Solin．l．c．）．Strabo also calls it a Greek city，and tells us that it was previously called Пoגvat＇́фavos（Strab．v．p．238）．Another form of the same name name is given by Pliny（iii．5．s．9）， who tells us its original name was Stephane．And finally，as if to complete the series of contradictions， its name is found in the lists of the reputed colonies of Alba，the foundation of whicb is ascribed to Latinus Silvius（Vict．Orig．Gent．Rom．17；Diod．vii．ap． Euseb．Arm．p．185）．But there seems no doubt that the earlier traditions were those which assigned it a more ancient and independent origin．The first mention of its name in history is in the list of the cities of the Latin League，as given by Diony－ sius，and there can be no doubt of its having formed an important member of that confederacy．（Dionys． v．61．）But as early as B．c．499，according to Livy，it quitted the cause of the confederates and joined the Romans，an event which that historian places just before the battle of Regillus．（Liv．ii． 19．）Whether its separation from the rest of the Latins was permanent or not，we have no inform－ ation；but on the next occasion when the name of Praeneste occurs，it was still in alliance with Rome， and suffered in consequence from the ravages of the Aequians and Volscians，b．c． 462 （Liv．iii．8）． The capture of Rome by the Gauls seems，however， to have introduced a change in the relations of the two cities．Shortly after that event（b．c．383）the Praenestines are mentioned as making hostile in－ cursions into the territories of the Gabians and Labicans：the Romans at first treated this breach of faith with neglect，apparently from unwillingness to provoke so powerful an enemy；but the next year， the Praenestines having sent an army to the support of the revolted colonists of Velitrae，war was for－ mally declared against them．The Praenestines now joined their former enemies the Volscians，and，in conjunction with them，took by storm the Ruman colony of Satricum．（Liv．vi．21，22．）The next year the Volscians were defeated in a great battle by Camillus，but no mention is made of the Irae－ nestines as taking part in it．The following season， however（в．C．380），they levied a large army，and taking advantage of the domestic dissensions at Rome，which impeded the levving of troops，they advanced to the very gates of the city．From thence they withdrew to the banks of the Allia，where they were attacked and defeated by T．Quintius Cincis－ natus，who had been named in all haste dictator． So complete was their rout that they not only fled in confusion to the very gates of Prameste，but

Cincinnatus, following up his advantage, reduced eight towns which were subject to Praeneste by force of arms, and compelled the city itself to submission (Liv. vi. 26-29). There can be little doubt that the statement of Liry which represents this as an unqualified surrender (deditio) is one of the exaggerations so common in the early Roman history, but the inscription noticed by him, which was placed by Cincinnatus under the statue of Jupiter Imperator, certainly seems to have claimed the capture of Praeneste itself as well as its dependent towns. (Fest. s. v. Trientem. p. 363.)

Yet the very next year the Praenestines were again in arms, and stimulated the other Latin cities against Rome. (Liv. vi. 30.) With this exception we hear no more of them for some time; but a notice which occurs in Diodorus that they concluded a truce with Rome in b. c. 351, shows that they were still acting an independent part, and kept aloof from the other Latins. (Diod. xvi. 45.) It is, however, certain that they took a prominent part in the great Latin War of b. c. 340. In the second year of that war they sent forces to the assistance of the Podani, and, though defeated by the consul Aemilius, they continued the contest the next year together with the Tiburtines; and it was the final defeat of their combined forces by Camillus at Pedum (в. с. 338) that eventually terminated the straggle. (Liv. viii. 12-14.) In the peace which ensued, the Praenestines, as well as their neighbours of Tibur, were punished by the loss of a part of their territory, but in other respects their position remained unchanged: they did not, like the other cities of Latium, receive the Roman franchise, but continued to subsist as a nominally independent state, in alliance with the powerful republic. They furnished like the other "socii" their quota of troops on their own separate account, and the Praenestine auxiliaries are mentioned in several instances as forming a separate body. Even in the time of Polybius it was one of the places which retained the Jus Exilii, and could afford shelter to persons banished from Rone. (Pol. vi. 14.)

On the arrival of Pyrrhus in Italy the fidelity of the Praenestines seems to have been suspected, and the Romans compelled them to deliver hostages. (Zonar. viii. 3.) Shortly afterwards Praeneste was the point from whence that monarch turned back on his adrance to Rome. There is no probability that he took the town. Eutropius says merely that he advanced to Praeneste; and the expression of Florus that he lonked down upon Rome from the citadel of Praeneste is probably only a rhetorical flourish of that inaccurate writer. (Flor. ii. 18 ; Eutrop. ii. 12.) In the Second Punic War a body of Praenestine troops distinguished themselves by their gallant defence of Casilinum against Hannibal, and though ultimately compelled to surrender, they were rewarded for their valour and fidelity by the Roman senate, while the lighest honours were paid them in their native city. (Liv. xxiii. 19, 20.) It is remarkable that thes refused to accept the offer of the Roman franchise; and the Praenestives in general retained their independent position till the period of the Social War, when they received the Ruman franchise together with the other allies. (Appian, B. C. i. 65.)

In the civil wars of Marius and Sulla, Praeneste bore an important part. It was occupied by Cinna when he was driven from Rome in 1. c. 87 (Appian, B. C. i. 65) and appears to have continued in the
hands of the Marian party till b.c. 82 , when it afforded a shelter to the younger Marius with the remains of his army, after his defeat by Sulla at Sacriportus. The natural strength of the city had been greatly increased by new fortifications, so that Sulla abandoned all idea of reducing it by force of arms, and was content to draw lines of circumvallation round it, and trust to the slower process of a blockade, the command of which he entrusted to Lucretius Ofella, while he himself carried on operations in the field against the other leaders of the Marian party. Repeated attempts were made by these geserals to relieve Praeneste, but without effect; and at length, after the great battle at the Colline Gate and the defeat of the Samnite general Pontius Telesinus, the inhabitants opened their gates to Ofella. Marius, despairing of safety, after a vain attempt to escape by a subterranean passage, put an end to his own life. (Appian, B. C.i. 8794 ; Plut. Mar. 46, Sull. 28, 29, 32 ; Vell. Pat. ii. 26, 27 ; Liv. Epit. Ixxrvii., lxxaviii.) The city itself was severely punished ; all the citizens without distinction were put to the aword, and the town given up to plunder; its fortifications were dismantled, and a military colony settled by Sulla in possession of its territory. (Appian, l.c.; Lucan, ii. 194 ; Strab. v. p. 239 ; Flor. iii. 21.) The town seems to have been at this time transferred from the bill to the plain beneath, and the temple of Fortune with its appurtenances so extended and enlarged as to occupy a great part of the site of the ancient city. (Nibby, Dintormi, vol. ii. p. 481 ; but see Bormann, Alt. Lat. Chorogr. p. 207, note 429.)

But the citadel still remained, and the natural strength of the position rendered Praeneste always a place of importance as a stronghold. Hence, we find it mentioned as one of the points which Catiline was desirous to occupy, but which had been studiously guarded by Cicero (Cic. in Cat i. 3); and at a later period L. Antonius retired thither in b. c. 41, on the first outbreak of his dispute with Octa. vian, and from thence endeavoured to dictate terms to his rival at Rome. Fulvia, the wife of M. Antonius took refuge there at the saine time. (Appian, B. C. v. 21, 23, 29.) From this time we hear but little of Praeneste in history ; it is probable from the terms in which it is spoken of both by Strabo and Appian, that it never recovered the blow inflicted on its prosperity by Sulla (Strab. l.c.; Appian, B. C. i. 94); but the new colony established at that time rose again into a flourishing and considerable town. Its proximity to Rome and its elevated and healthy situation made it a favourite resort of the Romans during the summer, and the poets of the first century of the Empire abound in allusions to it as a cool and pleasant place of suburban retirement. (Juv. iii. 190, xiv. 88 ; Martial, x. 30. 7; Stat. Silv. iv. 2. 15; Plin. Fp. v. 6. § 45 ; Flor. i. 11.) Among others it was much frequented by Augustus himself, and was a favourite place of retirement of Horace. (Suet. Aug. 72 ; Hor. Carm. iii. 4. 23, Ep. i. 2. 1.) Tiberius also recovered there from a dangerous attack of illness (Gell. N. A. xvi. 13) ; and Hadrian built a villa there, which, though not comparable to his celebrated villa at Tibur, was apparently on an extensive scale. It was there that the emperor M. Aurelius was residing when he lost his son Annius Verus, a child of seven years old. (Jul. Capit. M. Ant. 21.)
l'rueneste appears to have always retained its
colonial rank and condition. Cicero mentions it by the title of a Colonia (Cic. in Cat. i. 3); and though neither Pliny nor the Liber Coloniarum give it that appellation, its colonial dignity under the Empire is abundantly attested by numerous inscriptions. (Zumpt, de Colon. p. 254 ; Lib. Colon. p. 236 ; Orell. Inecr. 1831, 305I, \&c.) A. Gellius indeed has a story that the Praenestines applied to Tiberius as a favour to be changed from a coluny into a Municipium ; but if their request was really granted, as he asserts, the change could have lasted for but a short time. (Gell. N. A. xvi. 13 ; Zumpt, l. c.)

We find scarcely any mention of Praeneste towards the decline of the Western Empire, nor does its name figure in the Gothic wars which followed : but it appears again under the Lombard kings, and bears a conspicnons part in the middle ages. At this period it was commonly known as the Civitas Praenestina, and it is this form of the name-which is already found in an inscription of A.D. 408 (Orell. Inscr. 105)-that has been gradually corrupted into its modern appellation of Palestrina.

The modern city is built almost entirely upon the site and gigantic substructions of the teinple of Fortane, which, after its restoration and enlargement by Sulla, occupied the whole of the lower slope of the hill. the summit of which was crowned by the ancient citadel. This hill, which is of very considerable elevation (being not less than 2400 feet above the sea, and mure than 1200 above its immediate base), projects like a great buttress or bastion from the angle of the Apennines towards the Alban Hills, so that it looks down upon and seems to command the whole of the Campagna around Rome. It is this position, combined with the great strength of the citadel arising from the eleration and steepness of the hill on which it stands, that rendered Praeneste a position of such importance. The site of the ancient citadel, on the summit of the hill, is now occupied by a castle of the middle ages called Castel S. Pietro: but a considerable part of the ancient walls still remains, constructed in a very massive style of polygonal blocks of limestone; and two irregular lines of wall of similar construction descend from thence to the lower town, which they evidently served to connect with the citadel above. The lower, or modern town, rises in a somewhat pyramidal manner on successive terraces, supported by walls or facings of polygonal masonry, nearly resembling that of the walls of the city. There can be no doubt that these successive stages or terraces at one time belonged to the temple of Fortune; but it is probable that they are of mach older date than the time of Sulla, and previously formed part of the ancient city, the streets of which may have occupied these lines of terraces in the same manner as those of the modern town do at the present day. There are in all five successive terraces, the highest of which was crowned by the temple of Fortune properly so called,-a circular building with a vaulted roof, the rains of which remained till the end of the 13th century, when they were dextroyed by Pope Boniface VIII. Below this was a hemicycle, or semicircular building, with a portico, the plan of which may be still traced; and on one of the inferior terraces there still remains a mosaic, celebrated as one of the most perfect and interesting in existence. Various attempts have been made to restore the plan and elevation of the temple, an edifice wholly unlike any other of its kind; but they are all to a great extent
conjectural. A detailed account of the existing remains, and of all that can be traced of the plan and arrangement, will be found in Nibby. (Dirtorni, rol. ii. p. 494-510.)

The celebrity of the shrine or sanctuary of Furtune at Praeneste is attested by many ancient writers (Ovid, Fast. vi. 61 ; Sil. Ital. viii. 366 ; Lucan, ii. 194 ; Strab. v. p. 238), and there is no doubt that it derived its origin from an early period. Cicero, who speaks of the temple in his time as one of great antiquity as well as splendour, gives us a legend derived from the records of the Praenestines concerning its foundation, and the institution of the oracle known as the Sortes Praenestinae, which was closely associated with the worship of Fortune. (Cic. de Div. ii. 41.) So celebrated was this mode of divination that not only Romans of distinction, but even foreign potentates, are mentioned as consulting them (Val. Max. i. 3. § 1; Liv. xiv. 44; Propert. iii. 24. 3); and though Cicero treats them with contempt, as in his day obtaining credit only with the vulgar, we are told by Suetunius that Tiberius was deterred by religious scruples from interfering with them, and Domitian consulted them every year. Alexander Severus also appears, on one occasion at least, to have done the same. (Suet. Tib. 63, Domit. 15; Lamprid. Alex. Sev. 4.) Numerous inscriptions also prove that they continued to be frequently consulted till a late period of the Empire, and it was not till after the establishment of Christianity that the custom fell altogether into disuse. (Inscr. ap. Bormann, pp. 212, 213; Orelli, Inscr. 1756-1759.) The Praenestine goddess seems to have been specially known by the name of Fortuna Primigenia, and her worship was closely associated with that of the infant Jupiter. (Cic. de Div. L. c.; Inscr. ut sup.) Another title under which Jupiter was specially worshipped at Praeneste was that of Jupiter Imperator, and the statue of the deity at Kome which bore that appellation was considered to have been brought from Praeneste (Liv. vi. 29).

The other ancient remains which have been discovered at Palestrina belong to the later city or the colony of Sulla, and are situated in the plain at some distance from the foot of the hill. Among these are the extensive ruins of the villa or palace of the emperors, which appears to have been built by Hadrian about A. D. 134. They resemble much in their general style those of his villa at Tiroli, but are much inferior in preservation as well as in extent. Near them is an old church still called Sta Maria della Villa.

It was not far from this spot that were discovered in 1773 the fragments of a Roman calendar, supposed to be the same which was arranged by the grammarian Verrius Flaccus, and set up by him in the forum of Praeneste. (Suet. Gramm. 17.) They are commonly called the Fasti Praenestini, and have been repeatedly published, first by Foggini (fol. Romae, 1779), with an elaborate commentary; and again as an appendix to the edition of Suetonius by Wolf ( 4 vols. 8vo. Lips. 1802); also in Orelli (Inscr. vol. ii. p. 379, \&c.). Notwithstanding this evidence, it is improbable that the forum of Praeneste was so far from the foot of the hill, and its site is more probably indicated by the discovery of a number of pedestals with honorary inscriptions, at a spot near the SW. angle of the modern city. These inscriptions range over a period from the reign of Tiberius to the fifth century, thus
tending to prove the continued importance of Praeneste throughout the period of the Roman Empire. (Nibby, vol. ii. pp. 513-515; Foggini, l.c. pp. v.viii.) Other inscriptions mention the existence of a theatre and an amphitheatre, a portico and curia, and a spoliarium; but no remains of any of these edifices can be traced. (Gruter, Inscr. p. 132; Orelli, Inscr. 2532; Bormann, note 434.)

The celebrated grammarian Verrius Flaccus, already mentioned, was probably a native of Praeneste, as was also the well-known author Aelianus, who, though he wrote in Greek, was a Roman citizen by birth. (Suid. s. v. Aidavos). The family of the Anicii also, so illustrious under the Empire, seems to have derived its origin from Praeneste, as a Q. Anicius is mentioned by Pliny as a magistrate of that city as early as B. c. 304. (Plin. xxxiii. 1. 8. 6.) It is probable also that in Livy (xxiii. 19) we should read M. Anicius for Manicius. It is remarkable that the Praenestines appear to have had certain dialectic peculiarities which distinguished them from the other Latins; these are more than once alluded to by Plautus, as well as by later grammarians. (Plaut. Trinum. iii. 1. 8, Truc. iii. 2. 23; Quintil. Inst. i. 5. § 56 ; Fest. s. v. Nephrendis, Id. s. v. Tongere.)

The territory of Praeneste was noted for the excellence of its nuts, which are noticed by Cato. (R. K. 8, 143 ; Plin. xvii. 13. s. 21 ; Naevius, ap. Macroh. Sat. iii. 18). Hence the Praenestines themselves seem to have been nicknamed Nuculae; though another explanation of the term is given by Festus, who derives it from the walnuts (nuces) with which the Praenestine garrison of Casilinum is said to have been fed. (Cic. de Or. ii. 62; Fest. s.v. Nuculae.) Pliny also mentions the roses of Praeneste as among the most celebrated in Italy; and its wine is noticed by Athenaeus, though it was apparently not one of the choicest kinds. (Plin. xxi. 4. s. 10; Athen. i. p. 26, f.)

It is evident from the narrative of Livy (vi. 29) that Praeneste in the days of its independence, like Tibur, had a considerable territory, with at least eight smaller towns as its dependencies; but the names of none of these are preserved to us, and we are wholly unable to fix the limits of its territory.

The name of Via Praenestina was given to the road which, proceeding from Rome through Gabii direct to Praeneste, from thence rejoined the Via Latina at the station near Anagnia. It will be considered in detail in the article Via Praenestina.
[E. H. B.]
PRAE'NETUS (Mpaivetos), a town on the cuast of Bithynia, on the north side of Mount Arganthonius, and at the soathern entrance of the Sinus Astacenus. It was situated 28 Roman miles to the north-west of Nicaea; and Stephanus B., who calls it Móvektos, states that it was founded by the Phoenicians. If this be true, it would be a very ancient place, which can scarcely be conceived, as it is mentioned only by very late writers. (Pallad. Vit. Chrys. p. 75; Socrat. vi. 16; Hierocl. p. 691, where it is called Princtus; Tab. Peuting., where it is written Pronetios.) According to Cedrenus (p. 457), it was destroyed by an earthquake. Its site seems to answer to that of Debrende.
[L.S.]
PRAESI'DIUM, the name of several fortified places established by the Romans.

1. In Lusitania, on the Douro. (Itin. Ant. p. 428.)
2. In Baetica, on the road from the mouth of the Anas to Emerita (Ib. 43]); thought by some to be S. Lucar de Guadiana.
3. In Gallaecia, not far from the Douro. (Ib. 422.)
4. In Britannia Romana, in the territory of the Cornavii (Not. Imp.), supposed to be Warwick. (Camden, p. 602.)
[T. H. D.]
PRAESI'DIUM, a military post on the Greater Syrtis, between Tagulae or Tugalae (Kasr-el-Atech) and Ad Turrem. (Peut Tab.) The result of Barth's (Wanderwngen, Pp. 372-377) laborions researches apon the ancient topography of the Great Syrtis, is to place this station at Jehudia, whern there are remains of antiquity.
[E. B. J.]
PRAESIDIUM. [Tarichiae.]
PRAESI'DIUM POMPEII. [Pomprit Prazsidium.]
PRAESII. [Praslaca.]
PRAESTI (Curt. ix. 8. § 11), a people of the Panjab, who were conquered by Alezander the Great. Their king is stated by Cortius to have been named Oxycanus. He would seem to have been the same ruler who is called by Strabo Por. ticanus (xv. p. 701). His name, however, occurs in Arrian. (Anab. vi. 16.) As Curtius calls the Praesti a purely Indian nation, it is not unlikely, from the resemblance of the names, that they formed the western portion of the great empire of the Prasii.. [Prastaca.]
[V.]
PRAESUS, or PRASUS (חpaioos; in the MSS. of Strabo Пlpẫos, but in inscriptions חpaî̃os, Bückh, Inscr. vol. ii. p. 1102: Eth. Прaícos, more rarely Прauбtés, Steph. B. 8. v.), a town in Crete, belonging to the Eteocretes, and containing the temple of the Dictaean Zens, for Mt. Dicte was in the territory of Praesus. (Strab. x. pp. 475, 478.) There is a difficulty in the passage of Strabo, describing the position of this town. He first says (p. 478) that Praesus bordered upon the territory of Leben, and was distant 70 stadia from the sea, and 180 from Gortyn; and he next speaks of Praesus as lying between the promontories Samonium and Chersonesus, at the distance of 60 stadia from the sea. It is evident that these are two different places, as a town, whose territory was contiguous to that of Leben, must have been situated in the southern part of the island; while the other town, between the promontories of Samonium and Chersonesus, must have been at the eastern end. The latter is the town of the Eteocretes, possessing the temple of the Dictaean Zeus, and the Praesus usually known in history : the former is supposed by Mr. Pashley (Crete, vol. i. p. 289, seq.) to be a false reading for Priansus, a town mentioned in coins and inscriptions, which he accordingly places on the southern coast between Bienna and Leben. In this he is followed by Kiepert. But Böckh thinks (Inser. vol. ii. p. 405) that חupavoos, or Mplayoos was the primitive form of the name, from which חpaívos, or Прiauoos (a form in Steph. B. s. v.), and subsequently Mpāбos, were derived, just as in the Aeolic dialect $\pi d \nu \sigma a$ became raĩ $\sigma$, and in the Attic dialect $\approx \hat{a} \sigma a$ Kramer (ad Strab. L. c.) adopts the opinion of Bückh. Upon the whole we must leave uncertain what town was intended by Strabo in the former of the abovomentioned passages.

The territory of Praesus extended across the island to either sea. (Scylax, p. 18, Huds.) It is suid to have been the only place in Creto, with the exception of Polichna, that did not take part in the
expedition against Camicus in Sicily, in order to avenge the death of Minos (Herod. vii. 170). It was destroyed by the inhabitants of Hierapytna. (Strab. x. p. 479.) Agathocles, the Babylonian, related that the Praesii were accustomed to sacrifice swine before marriage. (Athen. ix. p. 37.6.) The ruins of Praesus are still called Praesis. (Pashley, Crete, vol. i. p. 290, seq.; Höck, Kreta, vol. i. p. $413, \mathrm{seq}$.)

COIN OF PRAESUS OR PRLANSUS.
Praetória augusta. [Augusta Praetoria.]

PRAETO'RIUM. There were places of this name in Gallia, Hispania, and in other countries which the Romans occupied. A Praetorium is the residence of a praetor and the seat of the supreme court. The word was also used to signify a magnificent palatial building. The Table marks a Praetorium in Gallia, on a road from Augustoritum (Limoges). At the Praetorium the road divides, one branch going to Augustonemetum (Clermont Ferrand in the Auvergne) and the other to Avaricum (Bourges). It is not possible to fix the site of this Praetorium.
[G. L.]
PRAETO'RIUM. 1. A town in the territory of the Lacetani, in the NE. of Hispania Tarraconensis, and on the road from Tarraco, in Gaul, to Barcino. (Itin. Ant. p. 398.) Usually identified with La Roca, where there are still considerable Roman remains. (Marca, Hisp. ii. 20.)
2. (Hetovapía, Ptol. ii. 3. §17), a place in the most N. part of Britannia Romana, in the territory of the Parisi, whence there was a separate road from the Roman Wall to Eboracum (Itin. Ant. pp. 464, 466.) It is supposed by Camden (p. 871) to be Beverley in Yorkshire ; by others it has been variously identified with Patrington, Hebberstow, Hornsea, Kingston, and Flamborough. Some writers distinguish the $\mathrm{Pe}-$ tuaria of Ptolemy from the Praetorium of the Itinerary; and Gale (Itin. p. 24) identifies the former place with Auldby on the Derweart. [T.H.D.]

PRAETO'RIUM, AD (Прaıт́́pıov), a place in Upper Pannonia, south of the Savus, on the road from Siscia to Sirmium. (Tab. Peuting.; Ptol. ii. 15. §6.) It was probably a place where a court of justice was held for the inhabitants of the surrounding district, or it contained an imperial palace where the emperors put up when travelling in that country.
[L. S.]
PRAETO'RIUM AGRIPPI'NAE. This Praetorium appears in the Table, and is distinguished by the representation of a large building. D'Anville conjectures that it may have taken its name from Agrippina, the daughter of Germanicus and the roother of Nero, who gave her name to the Colonia Agriprinensis (Cologne). The Praetorium is placed above Lugdunum Batavorum (Leiden) at the distance of 11. D'Anville concludes that it is Roomburg near Leiden, where it is said that many Roman

PRASIACA.
antiquities have been found. (Ukert, Gallien, p. 533.)
[G. L.]
PRAETO'RIUM LATOVICO'RUM, a place in Upper Pannonia, on the site now occupied by Neustädte, on the river Gurk. (It. Ant. p. 259; Tab. Peuting., called simply Praetorium.) [L. S.]

PRAETU'TII (Прaıтoúrtiot, Ptol.: Eth. Прatтetciavos, Pol.; Praetutianus), a tribe of Central Italy, who occupied a district of Picenum, bounded by the river Vomanus on the S. and apparently by the stream called by Pliny the Albula on the N. This last cannot be identified with certainty, and the text of Pliny is probably corrupt as well as confused. He appears to place the Albula N. of the Truentus; but it is certain that the Praetatii did not extend as far to the N . as the latter river, and it is probable that the stream now called the Salinello was their northern limit. We have no account of the origin of the Praetutii, or their relation to the Picentes, from whom they seem to have been regarded as to some extent a distinct people, though more frequently included under the one general appellation. The " Ager Praetutianus" is mentioned by Livy and Polybius, as well as by Pliny, as a well-known district, and Ptolemy even distinguishes it altogether from Picenum, in which, however, it was certainly generally comprised. (Pol. iii. 88; Liv. xxii. 9, xxvii. 43 ; Plin. iii. 13. s. 18 ; Ptol. iii. 1. § 58.) But the name seems to have continued in general use, and became corrupted in the middle ages into Prutium and Aprutium, from whence the modern name of Abruzzo (now applied to all the northernmost provinces of the kingdom of Napley) is generally thought to be derived. (Blondi Flavii, Italia Illustrata, p. 394.) The chief city of the Praetutii was Interamna, called for distinction's sake Praetutiana, which under the name of Teramo is still the chief town of one of the provinces of the Abruzzi. Ptolemy also assigns to them the town of Beregra. (Ptol. l. c.) Pliny mentions the "Ager Palmensis" in close connection with the Praetutii ("Ager Praetutianus Palmensisque," Plin. l.c.); but this appears to have been only a small district, which was celebrated, as was the Praetutian region generally, for the excellence of its wines. (Plin. xiv. 6. s. 8; Dioscor. v. 19 ; Sil. Ital. xv. 568.) [E. H. B.]

PRAS (Прâs: Eth. Пpdurtєs), a town of Phthiotis in Thessaly, a little S. of Pharsalus. For its position see Narthacium. (Xen. Hell. iv. 3. § 9, Ages. 2. § 5; Steph. B. s. v.)

PRASIACA (Прабъaк $\dagger$, Ptol. vii. 1. § 53), a very extensive and rich district in the centre of Hindostan, along the banks of the Ganges and the Sona, whose chief town was the celebrated Palibothra. The name of its inhabitants, which is written with slight differences in different authors, is most correctly given as Prasii by Strabo (xv. p. 702, 703), and by Pliny (vi. 19. s. 22), who states that their king supported daily no less than 150,000 foot, 30,000 horse, and 9000 elephants. Diodorus calls them Praesii (xvii. 93), as does also Plutarch. (Alex. 62.) In Curtius again they occur under the form of Pharrasii (ix. 2. § 3). It was to the king of the Prasii, Sandrocottus (Chandragupta), that the famous mission of Megasthenes by Seleucus took place. (Plin. l. c.; Curt. ix. 2; Appian, Syr. 55; Plut. Alex. 62; Justin, xv. 4.) All anthors concur in stating that this was one of the largest of the Indian empires, and extended through the richest part of India, from the Ganges to the Panjab. There can be no doubt that Prasii is a Graecised form for

## PRIENE.

the Sanscrit Prachinas (meaning the dwellers in the east). (Bohlen, Alte Indien, i. p. 33: Ritter, Erdkunde, vol. v. p. 460.)
[V.]
PRA'SIAE or BRA'SIAE (חpartal, Thuc. Strab. Aristoph. ; Hpaola, Scyl. p. 17; Ptol. iii. 17. § 10: Bpaбial, Paus.: Eth. Bpa⿱ıdents, Paus.; Прaбıєús, Steph. B.), a town on the eastern coast of Laconia, described by Pausanias as the farthest of the Eleu-thero-Laconian places on this part of the coast, and as distant 200 stadia by sea from Cyplianta. (Paus. iii. 24. § 3.) Scylax (L.c.) speaks of it as a city and a harbour. The name of the town was derived by the inlabitants from the noise of the waves (Bpá(etv). It was burnt by the Athenians in the second year of the Peloponnesian War, B. c. 430. (Thuc. ii. 56; Aristoph. Pac. 242.) Also in B. c. 414 the Athenians, in conjunction with the Argives, ravaged the coast near Prasiae. (Thuc. vi. 105.) In the Macedonian period Prasiae, with other Laconian towns on this coast, passed into the hands of the Argives (Yolyb. iv. 36); whence Strabo calls it one of the Argive towns (viii. p. 368), though in another passage he says that it belonged at an earlier period to the Lacedaemonians (viii. p. 374). It was restored to Laconia by Augustus, who made it one of the Eleuthero-Laconian towns. (Paus. iii. 21. § 7, iii. 24. § 3.) Among the curiosities of Prasiae Pausanias mentions a cave where Ino nursed Dionysus; a temple of Asclepius and another of Achilles, and a small promontory upon which stood four brazen figures not more than a foot in height. (Paus. iii. 24. ŞS 4, 5.) Leake places Prasiae at St. Andrew in the Thyreatis; but it more probably stood at Tyro, which is the site assigned to it by Boblaye, Russ, and Curtius. (Leake, Morea, vol. ii. p. 484 : Boblaye, Kécherches, 8c. p. 102 ; Ross, Reisen in Peloponnes, p. 165: Curtius, Peloponnesos, vol. ii. p. 306. [See Vol. I. pp. 727, b., 729, a.]

PRASIAE, a demus in Attica. [Vol. I. p. 33I, b.]
PRASIAS LACUS. [Cercintitis.]
prasil. [Praslaca.]
 vii. 4. §4), a gulf which Pulemy places on the SW. side of the island of Taprobane or Ceylon. No such gulf can now be traced upon the outline of this island; and there would seem to be some confusion between the gulf and a sea to which the geographer gives the same name of חрaródins, and which he makes extend along the parallel between the island of Menuthias (Zanzibar f) and the Gulf of Siam (vii. 2. § 1).
[V.]
PRASUM PROMONTORIUM (חрббоу аккроrinpıov, Ptol. i. 7. § 2, seq., vii. 3. §6), or the C. of Leeks, was a headland in the region S. of Meroe, to which the ancient geugraphers gave the appellation of Barbarica. The position of Prusum is unknown; for it is impossible to identify Prasum, the Green Promontory, with Cape Delgudo, i. e. Cape Slender, which, as the name implies, is a mere line upon the water. Neither is it certain that Prasum, although a lofty rock, was a portion of the mainland at all, inasmuch as the coist of Zingebar, where l'asum is probably to be found, is distinguished alike for the verdure of its projections and the bright green islands that stretch along and beyond them. Moreover, Agathen:erus (p. 57 ) and Marcianus Heracleota (ap. Ifulsom, (icig. Min. i. p. 12) mention a sea in this recion called, from its colour, Prasules, the Green. The cuast and islands of

Zingebar derive their rich verdant appearance from the prevalence of the bombyx or cottwn-tree. All that is known of Prasum is that it was 100 or 150 miles S . of the headland of Hhapta, lat. $4^{\circ} \mathrm{S}$., and a station for that obscure but active and remanerating trade which Aegypt under the Ptolemies and the Caesurs carried on with the eastern emporia of Africa. (Cooley, Claudius Ptolemy and the Nile, pp. 88-90.)
[W.B.D.]
Prasus. [Praesus.]
PRECIA'NI, a people of Aquitania, who surrendered to P. Crassus, Caesar's legatus in b.c. 56. We know nothing about them, and even the name is uncertain, for the MSS. write it in several different ways. (Caes. B. G. iii. 27.) [G. L.]

PRE'LIUS LACUS, a lake mentioned only by Cicero ( pro Mil. 27), and in a manner that affords no indication of its position. But it is probable that it is the same which is called Lacus Aprilis in the Itineraries, and apparently Prilis by Pliny [Aprilis Lacus], the modern Lago di Castiglione, on tho coast of Etruria. (Cluver. Ital. p. 474.) [E.H.B.]

## PREMNIS. [Primis.]

PREPESINTHUS ( $\Pi \rho \in \pi \in \sigma \iota \nu \theta \circ s$ ), an island in the Acgaean sea, one of the smaller Cyclades, lying between Oliaros and Siphnos. (Strab. x. p. 485; Plin. iv. 12. 8. 22.)

PRIA. [Gallarcta, p. 934, b.]
PRIANSUS. [Praesur.]
PRIANTAE, a people of Thrace, on the Hebras. (Plin. iv. 11. s. 18.) Forbiger (vol. iii. p. 1076) conjectures that they may have inhabited the Bpiavtixh mentioned by Herodotus (vii. 108). [T. H. D.]

PRIA'PI PORTUS (IIpidxtous $\lambda_{1 \mu} \mu \nu \nu$, Ptol. vii. 4. § 3), a port which Ptolemy places on the NW. side of the island of Taprobane (Ceylon). Mannert imagines that it is represented by the present Nogombo. The name may not unnaturally have arisen from the Greeks having noticed at this place the prevalence of the Lingam or Phallic worship. [V.]

PRIA'PUS (Прíanos: Eth. Прıampoós), a town of Mysia on the Propontis, situated on a headland on the spur of Mount Pityus. Some said that it was a colony of Miletus, and others regarded it as a settlement of Cyzicus: it derived its name from its worship of the god Priapus. It had a good harbour, and ruled over a territory which produced good wine. (Strab. xiii. p. 587 ; Thucyd. viii. 107; Pomp. Mela, i. 19; Plin. iv. 24, v. 40; Steph. B. s. v.; Geogr. Rav. ii. 18, v. 19 ; Arrian, Anab. i. 12. § 7.) Ruins of Priapus still exist near Karaboa. (Richter, Wallfahrten, p. 425; Rasche, Lex. Num. iv. 1. p. 51.)
 an Ionian city, near the coast of Caria, on the southeastern slope of Mount Mycale, and on a little river called Gaeson, or Gaesus. It had originally been situated on the sea-coast, and had two ports, one of which could be closed (Scylax, p. 37), and a small fleet (Herod. vi. 6); but at the time when Strabo wrote (xii. p. 579) it was at a distance of $\mathbf{4 0}$ stadia from the sea, in consequence of the great alluvial deposits of the Macander at its mouth. It was believed to have been originally founded by Aepytus, a son of Neleus, but received afterwards additional colonists under a Boeotian Philotas, whence it was by some called Cadme. (Strab. xiv. pp. 633, 636; Prus. vii. 2. § 7; Eustath. ad Ihionys. 825: Diog. Laeirt. i. 5. 2.) But notwithstanding this admixture of Bueutians, Pricne was one of the twelve lomian cities (Herod. i. 142; Aelian, V. H. viii. 5; Vitruv.
iv．1），and took a prominent part in the religions solemnities at the Panionia．（Strab．xiv．p．639．）It was the native place of the philosopher Bias，one of the seren sayes．The following are the chief cir－ cumstances knיwn of its history．It was conquered by the Ledian king Ardys（Herod．i．15），and when Croesus was overpowered by Cyrus，Priene also was forced with the other Greek towns to submit to the Penians．（Hernd．i．142．）It seems to have been during this period that Priene was very ill－used by a Persian Tabules and Hiero，one of its own citizens． （Paus．l．c．）After this the town，which seems to lave more and more lost its importance，was a sub－ ject of contention between the Milesians and Samians， when the former，on being defeated，applied for as－ sistance to Athens．（Thucyd．i．115．）The town contained a temple of Athena，with a very ancient statue of the goddess．（Paus．vii．5．§ 3；comp． Polyb．xxxiii．12；Plin．v．31．）There still exist very beautiful remains of Priene near the Turkish village of Samsoon；its site is described by Chandler （Travels．p．200，\＆cc．）as follows：＂It was seated on the side of the mountain，flat beneath flat，in gradation to the edge of the plain．The areas are levelled，and the communication is preserved by steps cut in the slopes．The whole circuit of the wall of the city is standing，besides several portions within it worthy of admiration for their solidity and beauty．＂Among these remains of the interior are the ruins of the temple of Athena，which are figured in the Ionian Antipuities，p．13，\＆c．（Comp．Leake， Asia Minor，pp．239，352；Fellows，Asia Min． p．268，\＆c．；Rasche，Lex．Num．iv．1．p．55； Eckhel，Doctr．Rei Num．vol．ii．．p．536．）［L．S． 7

## CONS OF PRIENE．

PRIFERNUM，a town of the Vestini，mentioned woly in the Tabula，which places it 12 miles from Pitinum，the same distance from Amiternum，and 7 miles from Aveia．（Tab．Peut．）But the roads in this district are given in so confused a manner， that notwithstanding these data it is impossilhe $t \omega$ fix its site with any certainty．It is placed by Romanelli（vol．iii．p．283）in the neighbour－ hood of Assergio，but this is little more than con－ jecture．
［E．H．B．］
PRIMIS MAGNA and PARVA（Прíms $\mu \dot{\gamma} \boldsymbol{\gamma} a \lambda \eta$ ， Mifucs $\mu$ uxpd，Ptol．iv．7．§ 19），the names of two towns in Aethiopia，situated upon the extreme or rizht bank of the Nile．Primis Magna，called simply Primis by Pliny（iv．29．s．35），and Prem－ nis（ $\Pi$ p $\bar{\eta} \mu \nu 1$ ）by Strabo（xvii．p．820），was taken by the Roman commander Petronius in the reign of Augustus．After taking Premnis，which is de－ scribed as a strong place，the Roman commander adranced against Napata．（Strab．l．c．）Ptolemy places it beyond Napata and just above Meroé． Hence it is identified with Ibrim．（Comp．Kenrick， Ancient Egypt，vol．ii．p．464．）
PRIMU＇POLIS（חрimoúnoגıs，Concil．Chalced． pp．127，240；falsely Tpıцои́то入ıs，Hierocl．p．682， and Пpiauoúrodis，Concil．Ephes．p．528），a town in Pamphylia，the later name of Aspendus．（See Hesseling，ad Hierocl．p．682．）

PRINASSUS（IIpivaб大ós：Fth．חpivacocís）， a town in Caria，of uncertain site，taken by Philip V．，king of Macedonia，and known also by its coing （Polyb．xvi．11；Steph．B．s．v．；Sestini，p．89； Cramer，Asia Minor，vol．ii．p．217．）

PRINOESSA，an island off the coast of Leucas， in Acarnania，mentioned only by Pliny（iv．12．s． 19）．

PRINUS．［Mantineia，p．264．］
PRION（ $\Pi$ pi $\omega \nu$ ），a mountain in the island of Cos，which is about 2760 feet high．（Plin．v．36．） From a scholion（ad Theocrit．vii．45）it might be inferred that Oromedon was another name for Mount Prion；but according to another ancient com－ mentator Oromedon was either a surname of some divinity，or the name of some wealthy and power－ ful man．
［L．S．］
PRION（IIplay），a＇river in Arabia．［Prionotes．］
PRIO＇NOTUS MONS（ITpićvorov bpos），a moun－ tain in the southern part of Arabia，in the territory of the Adramitae，identified by Forster with Ras Broom，a headland forming the termination of a mountain chain and jutting out prominently into the ocean in long． $49^{\circ}$ ，about 35 miles NE．of Mughda．Prion was a river flowing into the sea near this promontory．（Ptol．vi．7．§§ 10， 13 ； Forster，Arabia，vol．ii．p．204，seq．）

PRISTA（При⿱宀th，Ptol．iii．10．§ 10，where， however，some read Tiptort；called in the Itin．Ant． p．222，Sexantaprista；in the Not．Imp．Sexaginta Prista；and in Procnpius，de Aed．iv．11，p．307， ＇ $\mathrm{E} \xi \in \nu \tau d \pi \rho \iota \sigma \tau a)$ ，a place in Muesia Inferior，on the Danube，the station of the 5th cohort of the 1st Legio Ital．Identified with Rutschuck．［T．H．D．］

PRIVERNUM（חpovípvov：Eth．Privernas－ātis： Fiperno Vecchio），an ancient and important city of the Volscians，afterwards included，with the rest of the territory of that people，in Latium，in the more extended sense of the name．It was situated in the Volscian mountains，or Monti Lepini；but not，like Setia and Norba，on the front towards the plain of the Pontine Marshes，but at some distance further back，in the valley of the Amasenus．Virgil repre－ sents it as an ancient city of the Volscians，and the residence of Metabus，the father of Camilla（Aen．xi． 540）；and there is no reason to doubt that it was originally a city of that people．Its name is not indeed mentioned during any of the earlier wars of the Volscians against Rome；but on these occasions the name of the people is generally given collectively， and the brunt of the war naturally fell upon thase cities which more immediately adjoined the frontiers of Latium．When the name of Privernum first ap－ pears in history it is as a city of considerable power and importance，holding an independent position，and able not only to engage in，but to sustain，a war against Rome single－handed．In B．c． 358 the Pri－ vernates drew upon themselves the hostility of Rome by plundering the lands of the Roman colonists who had been recently settled in the Pontine Plains．The next year they were attacked by the consul C．Mar－ cius，their forces defeated in the field，and they them－ selves cempelled to submit（Liv．vii．15，16）．But though their submission is represented as an uncon－ ditional surrender（deditio），they certainly con－ tinued to form an independent and even powerful state，and only a few years afterwards again ventured to attack the Roman colonies of Norba and Setia， for which they were speedily punished by the consul C．Plautias ：their city is said to have been taken， and two－thirds of their territory forfeited．（ld．vii．

42, viii. 1.) This whs soon after divided among the Reman plebeians. (Id. viii. 11.) They do not appear to have taken any part in the general war of the Latins and Campanians against Rome; but in b. c. 327 the Privernates again took up arms singlehanded, with only the assistance of a few of the Fundani. Notwithstanding this, the war was deemed of sufficient importance to employ two consular armies; and it was not till after a long siege that Privernum was reduced by C. Plautius, the consul of the following year. The walls of the city were destroyed, and the leaders of the defection severely punished; but the rest of the people were admitted to the Roman citizenship.-probably, however, in the first instance without the right of suffrage, though this also must have been granted them in the year b. c. 316, when the Ufentine tribe was constituted, of which Privernum was the chief town. (Liv. viii. 19-21, ix. 20; Fast Capit.; Val. Max. vi. 2. § 1; Festus, s. v. Ufentina; Niebuhr, vol. iii. p. 176.) According to Festus (p. 233) it became a Praefectura; but notwithstanding this subordinate condition (which was perhaps confined to the short period before it attained the full franchise), it seems to hare been a flourishing municipal town under the Roraan government. Its territory was one of those which the agrarian law of Servilins Rullus proposed to assign to the Roman populace (Cic. de Leg. Agr. ii. 25); but though it escaped upon this occasion, it subsequently received a military colony (Lib. Colon. p. 236). The period of this is ancertain: according to Zumpt (de Colon. p. 401) it probably did not take place till the reign of Trajan. In inscriptions it bears the title of a colony; though others term it a municipinm ; and neither Pliny nor Ptolemy assign it the rank of a colony. (Plin. iii. 5. s. 9; Ptol. iii. 1. § 63; Zumpt, l.c.) It was noted, as well as the neighbouring Setia, for the excellence of its wine (Plin. xiv. 6. s. 8); but we hear little of Privernum under the Roman Empire, and have no subsequent account of its fate. From its secluded position, no mention occurs of it in the Itineraries. The ruins of the ancient city, which according to Cluverius are considerable, are situated about 2 miles $N$. of the modern Piperno, on the site still called Piperno Vecchio. The period or occasion of the abandonment of the ancient site is unknown; but it is certainly erroneous to connect it with a great earthquake which is alluded to by Cicero as taking place at Privernum (Cic. de Itiv. i.43). On that occasion, we are told, the earth sank down to a great depth, - a phenomenon which may have given rise to a remarkable chasm or cavity still visible in the neighbourhood of Piperno. The ancient city was more probably deserted in consequence of the ravages of the Saracens in the tenth century, from which all this part of Latium suffered severely (Rampoldi, Corografia d Italia, vol. iii. p. 258), and the inhabitants sought refuge in more elevated and secure positions, such as that of the modern town of Piperno.

## PROBALINTHUS. [Marathon.

PROBA'TIA. [Bueotia. p. 412, b.]
PROCERASTIS, the more ancient name of Chalceion, according to Pling (v. 32. s. 43).

PRO'CHYTA (Поохútท: Procida), a small island off the coast of Campania, situated between Cape Misenum (trom which it is distant less than 3 miles) and the larger island of Aenaria or Jschia. In common with the later it is of volcanic formstion, and appears to have been subject in ancient times to frequent earthquakes. Pling and Strabo
even tell us that it was a mere fragment broken off from the neighbouring island of Aenaria by one of the violent conrulsions of nature to which it was subject. But this statement certainly has no historical foundation, any more than another, also recorded by Pliny, that both islands had been thrown up by volcanic action from beneath the sea. Such an event, however true as a geological inference, must have long preceded the historical era. (Strab. i. p. 60, ii. p. 123, v. pp. 248, 258; Plin. ii. 88.) The same phenomena led the puets to associate Prochyta with Aenaria or Inarime, in connection with the fable of the giant Typhoeus [Aenarial; and Silins Italicus even assigned it a giant of its own, Mimas. (Virg. Aen ix. 715 ; Sil Ital. viii 542, xii. 147 ; Ovid. Met. xiv. 89.)

Virgil's epithet of "Prochyta alta" is less appropriate than usual, - the island, though girt with perpendicular cliffs, being flat and low, as compared either with Ischia or the neighbouring headland of Misenum. There does not appear to bave been any town on the island in ancient times. Statius (Silv. ii. 276) terms it a rugged island, and Juvenal (Sat. iii. 5) speaks of it as a wretched and lonely place of residence. At the present day, on the contrary, it is one of the most fertile and flourishing spots in the Neapolitan dominions, its whole area being cultivated like a garden and supporting a population of 4000 inhabitants. It is distant hetween 2 and 3 miles from Cape Misenum, but only abrut a mile and a half from the nearest point of the mainland, which is now known as the Monte di Procida.
[E. H. B.]
 oos in Zosim. i. 30, and Hierocl. p. 662), an island in the western part of the Propontis, between Priapus and Cyzicus, and not, as Strabo (xini. p. 589) has it, between Parium and Priapus. The island was particularly celebrated for its rich marble quarries, which supplied most of the neighbouring towns, and especially Cyzicus, with the materials for their public buildings; the palace of Mausolus, also, was built of this marble, which was white intermixed with black streaks. (Vitruv. ii. 8.) The island contained in its south-western part a town of the same name, of which Aristeas, the poet of the Arimaspeia, was a native. (Herod. iv. 14; comp. Scylax, p. 35; Strab. Lc.) This town, which was a colony of the Milesians (Strab. xii. p. 587), was burnt by a Phoenician fleet, acting under the orders of king Darius. (Herod. vi. 33.) Strabo distinguishes between old and new Proconnesus; and Scylax. besides Proconnesus, notices another island called Elaphonesus, with a good harbour. Pliny (v. 44) and the Scholiast on Apollonius Rhodius (ii. 278) consider Elaphonesus only as another name for Proconnesus; but Elaphonesus was unquestionably a distinct island, situated a little to the south of Proconnesus. The inhabitants of Cyzicus, at a time which we cannot ascertain, forced the Proconnesians to dwell together with them, and transferred the statue of the goduess Dindymene to their own city. (l'aus. viii. 46. § 2.) The island of Proconnesus is mentioned as a bishopric in the ecclesiastical historians and the acts of the Council of Chalcedon. The celebrity of its marble quarries has changed its ancient name into. Mermere or Marmora; whence the whole of the Propontis is now called the Sea of Marnora. Respecting same autonomous coins of Proconnesus, see Sestini, $\mathrm{M} / \mathrm{com}$ Vet. p. 75.
[L.S.]
PROERNA (חp $\delta$ ¢pva), a town of Phthiotis, in

Thessaly (Strab. ix. p. 434), which Stephanas B. writes Proarna (Прoápva), and calls by mistake a town of the Malians. In B. c. 191 Proerna, which had been taken by Antiochus, was recovered by the consul Acilius. (Liv. xxavi. 14.) We learn from this passage of Livy that Proerna stood between Pharsalus and Thaumaci, and it is accordingly placed by Leake at Ghynekokastro. (Northern Greece, vol. i. p. 459.)

PROLA'QUEUM (Pioraco), a village or station on the branch of the Via Flaminia which crossed the Apennines from Nuceria (Nocera) to Septempeda (S. Severino). It was situated at the foot of the pass on the E. side of the mountains, and evidently derived its name from its being at the outflow of a amall lake which discharges its waters into the Potenza. Cluverius speaks of the lake as still existing in his time: it is not marked on modern maps, but the village of Pioraco still preserves the traces of the ancient name. The Itinerary reckons $16 \mathrm{M} . \mathrm{P}$. from Nuceria to Prolaqueum, and 15 from thence to Septempeda. (Itim. Ant. p. 312; Cluver. Ital. p 614.) [E. H. B.]
PROMONA (IIpónova, Appian, Illyr. 12, 2-5 -28; Peut. Tab.; Geogr. Rav. iv. 16), a town of the Liburni, situsted on a hill, and, in addition to its natural defences strongly fortified. Octavianus, in the campaign of $\mathbf{B} . \mathbf{c} 34$, surrounded it and the adjacent rocky heights with a wall for the space of 40 sialia, and defeating Tentimus, who had come to its relief, forced an entrance into the town, and obliged the enemy to evacuate the citadel. There is every resson to believe that Promona stood on the skirts of the craggy hills, which, with the neighbouring district, now bear the name of Promincs. As the Pentinger Table places it on the road from Burnum to Salons, it must be looked for on the SW. side of the mountain of Promina, in the direction of Dernis. (Wilkinson. Dalmatia, vol. i. p. 206.) [B B. J.]

PRONAEA. [NEmESA.]
PRONI, PRONNI, or PRONE'SLS (Ipobvot, Pol.; Прогаion, Thuc.; Прслӣбos, Strab.), one of the four towns of Cephallenia, situated upon the south eastern coast. Together with the other towns of Cephallenis it joined the Athenian alliance in B. C. 431. (Thuc. ii. 30.) It is described by Pulybius as a small fortress; but it was so difficult to hesiege that Philip did not venture to attack it, but sailed against Pale. (Pol. T. 3.) [Pale.] Livy, in his account of the surrender of Cephallenia to the Romans in B. C. 189, speaks of the Nesiotae, Cranii, Palenses, and Samaei. Now as we know that Proni was one of the four towns of Cephallenia, it is probable that Nesiotae is a false reading for Pronesiotae, which would be the ethnic form of Pronesus, the name of the town in Strabo (x. p. 455). Proni or Pronesus was one of the three towns which continued to exist in the island after the destruction of Same. (Comp. Plin. iv. 12. 8. 19.) The remains of Proni are found not far above the shore of Liménia, a harbour about 3 miles to the borthward of C. Kapis (Leake, Northern Greece, vol. iii. p. 66.)

## PROPHTHA'SIA. [Drangiana.]

PROI'ONTIS (Iротоитis: Sea of Marmora), the sea between Thrace and Asis Minor, forming an intermediate ses between the Aegean and the Euxine, with the latter of which it communicates through the narrow strait of the Thracian Bosporus, and with the former through the Hellespont. Its ancient name Propontis describes it as "the sea be-
fore the entrance of the Pontus " or Euxine; while its modern name is derived from the island of A/arnura, the ancient Proconnesus, near the western entrance of the ses. (Appul. de Mund. p. 6; Steph. B. s. ©. Iporovrls.) The first authors who mention the Propontis under this name are Aeschylus (Pers. 876), Herodotus (iv. 85), and Scylax (pp. 28, 35); and Herodotus seems even to have made an accurate measurement of this sea, of which he states the length, to be 1400 stadia, and the breadth 500 . Later writers such as Strabo (ii. p. 125) and Agathemerus (ii. 14), abandoning the correct view of their predecessor, state that the breadth of the Propontis is almost equal to its length, althourh, assuming the Propontis to extend as far as Byzantium, they include in its length a portion of the Thracian Bosporus. Modern geographers reckon about 120 miles from one strait to the other, while the greatest breadth of the Prupontis from the European to the Asiatic coast does not exceed 40 miles. The form of the Propontis would be nearly oval, were it not that in its south-eastern part Mt. Arganthonius with the promontory of Poseidion forms two deep bays, that of Astacus [Sinus Astacenus] and that of Cius [Cianus Sinus]. The most important cities on the coasts of the Propontis are : Perinthus, Selymbria, Byzantium, Chalcedon, Astacus, Cius, and Cyzicus. In the south-west there are several islands, as Proconnfsus, Ophicsi, and Alons: at the eastern extremity, south of Chalcedon, there is a group of small islands callet Demonnesi, while one small island, Besbicus, is situated in front of the bay of Cius. (Comp. Polyb.iv.39, 42 ; Strab. xii. p. 574, xiii. pp. 563, 583; Ptol. v. 2. § 1, vii. 5. § 3, viii. 11. § 2, 17. § 2; Agath. i. 13; Dionys. Per. 137; Pomp. Mela, i. 1, 3, 19, ii. 2, 7 ; Plin. iv. 24, v. 40; Kruse, Ueber Herodots Ausmessung des Pontus Euxinus, gc., Breslau, 1820.)
[L.S.]
 town of Aetolia, between the Achelous and the Evenus, is said to have been founded by the Aeolians when they removed from the Homeric Pylene higher up into the country. [PYlene.] Proschium also laid claim to high antiquity, since it possessed a shrine said to have been dedicated by Hercules to his cupbearer Cyathus, whom he had unintentionally slain. It is clear, from a narrative of Thucydides, that Proschium lay west of Calydon and Pleuron, and at no great distance from the Achelons. Leake places it on the western part of Mt. Zygos (the ancient Aracynthus), near the monastery of St. George between A natoliko and Anghelokastro. (Strab. x. p. 451 ; Athen. 2. p. 411 , a. ; Thuc. iii. 102, 106 ; Steph. B. 8. v.; Leake, Northern Greece, vol. i. p. 119.)

PROSEIS. [ARCADIA, p. 192, b. No. 7.]
PROSOLENE. [PORDOSELENE.]
PROSPALTA. [ATTICA, p. 332, a.]
PROSYMNA (חрóбvuva: Eth. חpoovuvaios, Steph. B. 8. v.), an ancient town in the Argeia, in whose territory the celebrated Heraeam, or temple of Hera, stood. (Strab. viii. p. 373). Statius gives it the epithet "celsa" (Theb. iv. 44). Pausanias (ii. 17. \& 2) mentions only a district of this name. (Leake, Peloponnesiaca, pp. 264, 269.) [See Vol. I. pp. 206, 207.]

PROTA (Прڤтa), one of a group of small islands in the east of the Propontis, not far from Chalcedon. (Steph. B. 8. v. Xa入кítıs.) Its distance from Chal citis was 40 stadia, and it is said still to bear the name of Prote.
[L.S.]

## PROVINCLA．

PROTE（ $\Pi \rho \omega \dot{\sigma} \eta \eta$ ）．1．An island off the western coast of Messenia．［See Vol．II．p．342，b．］

2．One of the Stoechades off the southern coast of Gail．［Storchadrs．］

PROTUNICA，a place in Bithynia，on the road from Nicaea to Ancyra．（Itim Hieros．p．573．）It is possibly the same place as Protomacrae（חpooroud－ кpaı）mentioned by Ptolemy（v．1．§ 13）．［L．S．］

PROVI＇NCIA．The part of Gallia which bordered on Italy and was bounded on the south by the Medi－ terranean was Gallia Provincia（Caes．B．G．i．19）， a term by which Caesar sometines distinguishes this part of Gallia from the rest，which be calls ＂omnis Gallia＂（B．G．i．1）or＂tota Gallia＂（B．G． vii．66）．The Provincia in Caesar＇s time was bounded on the north by the Rhone from the western extremity of the Lacus Lemannus（Lake of Geneva）to the junction of the Rhone and the Safne．Genera，which belonged to the Allobroges，was the furthest town in that direction［Genevi］．Along the southern side of the Lake of Geneva the limit was the boundary between the Allobroges who were in the Provincia and the Nantuates who were not．（B．G．iii．6．） The Alps were the eastern boundary．Ocelum ［Ocelum］was in the Citerior Provincia or Gallia Cisalpina，and the country of the Vocontii was in the Ulterior Provincia or in the Provincia Gallia （B．G．i．10）．On the west the Mons Cevenna （Cévennes）southward from the latitude of Lugdunum． （Lyon）was the boundary．The Volcae Arecomici were within the Provincia，and also the towns of Narbo（Narbonne），Carcaso（Carcassone），and To－ losa（Toulouse），as we see from a passage in Caesar （B．G．iii．20）．Part of the Ruteni，called Provin－ ciales（B．G．vii．7），were in the Provincia；and also the Helvii，who were separated from the Arverni by the Cevenna（B．G．vii．8）．The Ruteni who were not in the Provincia，the Gabali，Nitiobriges，and Cadurci bordered on it on the west．

The Roman troops were in this country during the Second Punic War when Hannibal was on his road to Italy；but the Romans first got a footing there through the people of Massilia，who called for their help b．c．154．－In B．c． 122 the Romans made a settlement，Aquas Sextiae（Aix），which we may consider to be the commencement of their occupation of the country east of the Rhone．［Gallia，Vol．I． p．953．］The conquest of the Salyes and Vocontii， and of the Allobroges，gave the Romans all the country on the east side of the Rhone．The settle－ ment of Narbo（Narbonne）in B．c．118，near the border of Spain and in a position which gave easy access to the basin of the Garonne，secured the Ro－ man dominion on the west side of the Rhone as far as the Pyrenees．But the Romans had many a bloody battle to fight before they were safe on Gallic ground． The captare of Tolosa（Toulouse）in the country of the Volcae Tectosages by the consul Q．Servilins Caepio（b．о．106）extended the limits of the Pro－ vincia as far as this rich town．（Dion Cass．Fr．97， \＆cc．）But the Roman dominion was not safe even in B．c．58，when the proconsul Caesar received Gallia as one of his provinces．His subjugation of all Gallia finally secured the Romans on that side．［Vol．I．p． 954，scc．］

In the division of all Gallia by Augustus the Provincia retained its limits pretty nearly：and it was from this time generally called Narbonensis Provincia， and sometimes Gallia Braccata．The names which occur in the Greek writers are：Ke入tora入atia Nap－ bav $\quad$ бia（Ptol．ii．10．§ 1），$\dot{\eta}$ Nap6wvitis，「aлaria
 There is no doubt that the name Braccata or Bra cata is derived from the dress of the Galli（＂eos hic sagatos bracatosque versari，＂Cic．pro Fonteio，c．15）， and the word＂braca＂is Celtic．

Strabo（iv．p．178）says that the form of the Narbonensis resembles that of a parallelogram ；but his comparison is of no use，and it is founded on an erroneons notion of the position of the Pyrenees． ［Vol．I．p．949．］Ptolemy determines the eastern boundary of the Provincia by the west side of the Alps，from Mons Adulas（perhaps Mont St．Gothard） to the mouth of the Varus（Var），which separated Narbonensis from Italia．Part of the sonthern boundary was formed by that part of the Pyrenees which extended from the boundary of Aquitania to the promontory on the Mediterranean where the temple of Venas stood，by which Ptolemy means Cap Creux［Portus Veneris］．The rest of the southern boundary was the sea，from the Aphrodisinm to the mouth of the Var．The western boundary remained as it was in the time of Caesar，as it seems； for Carcaso and Tolosa are placed in Narbonensis by Ptolemy and Pliny（iii．c．4）．Ptolemy places Lugdnnum or Convenae，which is on the Garonne and near the Pyrenees，within the limits of Aquitania， and he mentions no place in Aquitania east of Lug－ danum［Convenak］．East of the Convenae and at the foot of the Pyrenees were the Consorani，part of whom were probably in Aquitania and part in Narbonensis［Consorani］．The western boundary of Narbonensis therefore ran from the Pyrenees northwards，und passed west of Toulouse．Perhaps it was continued northwards to the Tarnis（Tarn）． We cannot determine the point where the Cévennes became the boundary ；but if part of the Rateni were still in the Narbonensis，the boundary may have run along the Tarn to the Cévennes and the Mons Le－ sura，one of the highest points of the range（Las Lozère）．From the Lozere northwards the mountain country borders the Rhone as far as Lagdunum， which was not in Narbonensis．The northern bound－ ary of Narbonensis ran along the Rhone from Lug－ dunum to Geneva at the west end of the Leman lake．Pliny mentions the Gebenna（Cebenns）and the Jura as northern boundaries of the Provincia； but his notion of the direction of the Jura was not exact，though it is true that the range touches a part of the northern boundary．Ptolemy makes the Adulas the southern linit of the eastern boundary of Belgica （ii．9．§5）；and Adulas is also the northern limit of the eastern boundary of Narbonensis．The sonthern boundary of Belgica from the Adulas westward was the northern boundary of Narbonensis．It is difficult to say whether the geographer is making a boundary of his own or following an administrative division； but we may certainly conclude that the Narbonensis contained the upper valley of the Rhone（the Valais）， for the Bernese Alps which form the northern side of this great valley are a natural boundary，and the Helvetii were not in the Valais［Helvetir］．We may conclude then that the Seduni，Veragri，and Nantuates，who were not within the Provincia as defined by Caesar，were within the limits of the Narbonensis．One of the common roads to Italy was from Octodurus（Martigny in the Valais） over the Alpis Pennina（Great St．Bernard）．The Narbonensis is thus a natural division comprehend－ ing the upper valley of the Rhone，the Leman lake and the countries south of it to the Alps，the country on the south side of the Rhone from the lake to

Lyon, and the country south of Lyom. The part of the Provincia south of Lyon is a valley between the Alps on the east and the Cevennes on the west, which becomes wider as we advance south. On the east side the luwer Alps and the Alpine valless cover a larye part of the country. On the west, the Ce rennes and the lower ranges connected with them le:ve a very narmo tract between the Rhone and the mountains till we come to the latitude of Avignon and Nimes. The southern part of the Rhone valley between Massilia and the Pyrenees contains a large extent of leve! country. The southern part of this great valley is more Italian than Gallic in position, climate, and products. The Khone, which cuts it into two parts, bas numerous branches which join it from the Alps ; but the mountain streams which flow into it from the Cécennes are few [Rhodanus].
The rivers of the Provincia west of the Rhone flow from the Cevennes and from the Pyrences into the Hediterranean. They are all comparatively small. The Classias of Avienus is probably the Caulazon, so far as we can conclude from the name ; the Ledus is the Lez. which flows by Montpellier; the Arauris (Herault) flows past Agathe (Agde); the Libria or Liria may be the Lieron [Libria]; the Obris or Orbis (Orbe); the Narbo or Atax (Aude), which passes Narbonne; the Ruscino or Tetis (Tet), and the Tichis (Teck), which enters the Mediterranean a few miles north of Portus Veneris (Port Vendre). Hetreen the Var and the Rhone there are very few streams, for the form of the surface is such that nearly all the drainage runs into the Rhone. There is the Argenteus (Argens), and a few insignificant atrearns between the Argenteus and the delta of the Rhorie.

The extreme western part of the Provincia comprehends a portion of the basin of the Garonne, for Toudouse is on this river. The valley of the Aude between the Cevennes and the Pyrenees forms an easy approach from the Mediterranean to the waters of the Guronne and to the Atlantic,-a circumstance wiich facilitated the commerce between the Mediterranean and the Atlantic, and made this a commercial ronte at a very early period. [Narbo.]

The coast from the Pyrenaeum Promontorium to a point a few miles south of Massilia forms a great bay called the Gallicus Sinus: it is generally flat, and in mariy places it is lined by marshes and lakes. This part of the coast contains the Delta of the Rhone. East of Massilia the country is billy and dry. The port of Massilia is naturally a poor place. East of it is the port of Telo Martius (Toulon), and a few other ports of little value. Mela's remark (ii. 5) is true: "On the shore of the Provincia there are wome places with some names; but there are few cities, because there are few ports and all the coast is exposed to the Auiter and the Africus." There are a few small islands along the eastern coast, the S:oechades, Planavia, Leron, and other rocky islets. The dimensions of the Provincia, according to Agrippa's measurement, are said to be $270 \mathrm{M} . \mathrm{P}$. in length and $248 \mathrm{M} . \mathrm{P}$. in breadth. But we neither knuw how the measures were taken, nor whether the nambers in Pliny's text (iii. 4) are correct. However we learn that this, like many other parts of the ernpire, was surveyed and measured under Agrippa's orders.

The length of the coast of Narbonensis is above 250 iniles. The direct distance from Toulouse to the mouth of the Var is near 300 miles; and from the jourtion of the Rhone and the Saune, the direct
distance to the sea measured along a meridian is about 180 miles. But these measures give only an imperfect idea of the area of the country, because the outline is irregular. Strabo (iv. pp. 178, 179) has preserved a measurement which has followed a Roman road from the Pyrenees to the Var. The distance from the temple of Aphrodite at the Pyrences to Narbo is 63 Roman miles; thence to Nemansus 88; from Nemausus through Ugernum and Tarasco to the warm springs called Sextiae (Aquae Sextiae), which are near Massilia, 53; and thence to Antipolis and to the Varus, 73 ; the whole making 277 miles. Some reckon, be says, from the Aphrodisium to the Varus 2600 stadia, and sonse add 200 more, for they do not agree about the distance. Two thousand six hundred stadia are 325 Roman miles. When Strabo wrote, the distance along the road from Narbo to the Var was not measured, or he did not know it. The other great road which he describes is a ruad through the Vocontii and the territory of Cottius : " As far as Ugernum and Tarasco the road from Nemausus is the same as the route just described; but from Tarasco to the borders of the Vocontii over the Druentia and through Caballio (Cavaillon on the Lurance) is 63 miles; and again, from Caballio to the other limit of the Vocontii toward the land of Cottius to the village Epebrodunum (Embrodunum, Embrun) is 99 miles; then 99 more through the village Brigantium (Briançon) and Scincomagus and the passage of the Alpes (the pass of Mont Genevre) to Ocelum [Ocelum], the limit of the land of Cottius; the country from Seincomagus is reckoned a part of Italy, and from there to Ocelum is 27 miles." He says in another place (iv. p. 187) that this roud through the Vocontii is the shorter, but though the other road along the Massilintic const and the Ligurian territory is longer, the passes over the hills into Italy are easier, for the mountains in those parts sink lower.

These were the two great roads in the Prorincia. There was a rnad in the west from Narbo throurh Carcaso to Tulosa. There was also a road from Arelate (Arles) at the bifurcation of the Rhone northward on the east side of the Rhone, through Avenio, Aransio, Valentia, and Vienna (lienne), to Lugdunum: this was one of Agrippa's roads(Strab.iv. p. 208). There was no road on the opposite side of the river, or no great road, the land on that side not being well adapted for the construction of a road. There were other roads over the Alps. There was a road from Lugdunum and Vienna up the valley of the Isara (Isere) to the Alpis Graia (Little St. Bernard), which in the time of Augnstus was much used (Strab. iv. p. 208); and there wis the road from Augusta Praetoria (Aosta) in Italy over the Great St. Bernard to Octodurus (Martigny) and Pennilacus, at the east end of the Lake of Geneva; and thence into the country of the Helvetii.

Within the limits of Narbonensis there is every variety of surface and climate, Alpine mountains and Alpine valleys, sterile rocky tracts and fertile plains, winter for nine months in the year and summer for as many months. Pliny says of it: "Agrorum cultu, virorum morumque dignatione, amplitudine opum, nulli proviuciarum postferenda breviterque Italia verias quam provincia." (Pling, iii. 4.) The climate is only mild in the south part and in the lowlands. As we descend the Khone a difference is felt. About Arausio (Orange) the olive appears, a tree that marks a warm climate. "All

X $\mathbf{x}$
the Narbonitis," says Strabo, "has the same natural products as Italia; but as we milvance towards the north and the Cemmenon (Cévernes), the land planted with the olive and the fig terminates, but all the other things are grown. The grape also does not ripen well as we advance further north" (iv. p. 178). Strabo's remark about the olive is true. As we advance from Nimes by the great road to Clermont Ferrand in the Auvergne, we ascend gradually in a north-west direction to a rocky country well planted with vines, mulberry trees, and olives. After proceeding a few miles further the olives suddenly disappear, a sign that we have passed the limits of the temperature which they require. The country is now an irregular plateau, rocky and sterile, but in parts well planted with mulberries and vines; and there is a little wheat. Before descending to Andusia (Anduse), which is deep sunk in a gorge of the Vardo (Gardon), a few more olives are seen, but these are the last. We are approaching the rugged Cécennes.

The native population of the Provincia were Aquitani, Celtae, and Ligures. The Aquitani were in the parts along the base of the Pyrenees. The Ligures in the historical period occupied the south-east part of the Provincia, north and east of Marseille, and it is probable that they were once on the west side of the Rhone also. The Greeks were on the coast, east and west of the city of Massilia [Massilia]. After the country was reduced to the form of a Provincia, the Italians flocked to the Provincia to make money. They were petty dealers (mercatores), bankers, and money-lenders (negotiatores), sheep-feelers, agriculturists, and traders. (Cic. pro P. Quintio, c. 3, pro M. Fonteio, c. 5.) The wine of Italy was imported into the Provincia in Cicero's time, and a duty was levied on it, if not at the port, at least in its transit through the country (pro Fonteio, c. 9). Cicero sneeringly says, "We Romans are the most just of men, for we do not allow the Transalpine nations to plant the olive and the vine, in order that our olive plantations and vineyards may be worth more" (de Re Publica, iii. 9). It does not appear from Cicero when this selfish order was made. But the vine is a native of Narbonensis, and the Greeks made wine, as we might safely assume, and they sold it to the Galli. Posidonius, whom Cicero knew, and who had travelled in the country, says that the rich Galli bought Italian wine and wine from the Massaliots. (Posidonius, ap. Athen. ir. p. 152.) If any of the Galli got this wine, the Galli of the Provincia would have it.

This favourite province of the Romans was full of large cities, which under the Empire were ornamented with works both splendid and useful, amphitheatres, temples, theatres, and aqueducts. Many of these buildings have perished, but the magnificent monuments at Arles and Nimes, and the less striking remains in other cities, show what this country was under Roman dominion.

The tribes or peoples within the limits of the Provincia are very numerous. Pliny has a long list. On the west side of the Rhone at the foot of the Pyrenees were the Consorani and Sordones or Sordi. North of them were the Volcae Tectosages, whose capital was Tolosa; and the Ruteni Provinciales. The Volcae Arecomici occupied the country east of the Tectorages and extended to the Rhone. The position of the Tasconi, a small people mentioned by Pliny, is only a matter of corjecture [Tasconi]. North of the Arecomici unly one people is men-
tioned between the Ceivennes and the Rhone, the Helvii [Helvir]. The Ardèche (a mountain stream from the Cévennes) flows through their country into the Rhone. It was by the valley of the Ardeeche that Caesar got over the Ceivennes into the country of the Arverni through the snow in the depth of winter (B. G. vii. 8). He could go no other way, for he tells us that he went through the terntory of the Helvii.

East of the Rhone the tribes were very namerous for the surface is larger and full of valleys. It has been already observed that the Seduni, Veragri, and Nantuates must have been included in the Narbonensis of Augustus. The Allobroges occupied the country south-west of Geneva, to the Isere and the Rhone. Pliny's list of names in the Provincia comprises all Ptoleny's, with some slight variations, except the Commoni, Elicoci, and Sentii. Some of the names in Pliny are probably corrupt, and nothing is known about some of the peoples. The following are the principal peoples south of the Nantuates and Allobroges: the Centrones, Graioceli, Medulli, Caturiges, Tricorii, Segovellauni, Tricastini, Cavares, Vocontii, Vulgientes, Bodiontici, and Albici, all of them north of the Druentia or its branches. South of them were the Salyes or Sallurii, the neighbours of Massilia; the Suetri, Oxybii, Deciates, and the Nerusi, who were separated from Italy by the Var.
[G.L.]
PRUSA ( $\Pi$ poûбa: Eth. Mpougaeís), generally
 distinguish it from another place of the same name, was situated at the northern foot of Mount Olympus, in Mysia. Pliny (v. 43) states that the town was built by Hannibal during his stay with Prasias, which can only mean that it was built by Prasias, whose name it bears, on the advice of Hannibal. According to the common text of Strabo (xii. p. 564), it was founded by one Prusias, who waged war against Croesus, for whom Stephanus B. (s. v.) substitutes Cyrus. As no such Prusias is known in the age of Croesus or Cyrus, various conjectures have been made upon the passage of Strabo, but without success. At all events, it is acknowledged by Dion Chrysostomus (Orat. sliii. p. 585), who was a native of the town, that it was neither very ancient nor very large. It was, however, as Strabo remarks. well governed, continued to flourish under the Roman emperors (Plin. Epist. x. 85), and was celebrated for its warm baths, which still exist, and bore the name of the "royal waters." (Athen. ii. p. 43; Steph. B. 8. v. Ófpua). Under the Greek emperors it suffered much during the wars against the Turks (Nicet. Chon. pp. 186, 389); when at last it fell into their hands, it was for a time the capital of their empire under the name of Brusa or Broussa, which it still bears, for it still is one of the most flourishing towns in Asia Minor. (Browne's Travels in Walpole's Turkey, vol. ii. p. 108; Sestini, 3on. Vet. p. 70; Hamilton, Researches, i. p. 71, \&c.)

Prolemy (v. 1. § 13) and Pliny (v. 43) mention a town of the same name on the river Hyppius or Hypius, in Bithynia, which, accurding to Memnon (cc. 29, 42, 49), had formerly been called Cierus (Kiepos), and had belonged to the territory of Heracleia, but had been taken by Prusias, who changed its name. But there seems to be some confusion here between Cierus and Cius, the latter of which is known to have received the name of Prusiss from the king of that name. (Strab. xii. pp. 563, 566.)
[L.S.]

## PRYMNESIA

PSOPHIS.

PRYMNE'SIA or PRYMNE'SUS (חpuppnala,
 central Phrygia (Ptol. v. 2. § 24 ; Hierocl. p. 677 ; Conc. Chaloed. p. 673.) Pococke (Travels, iii. c. 15) found an inscription containing the name of this town near Afiom Cara-hissar. Leake (Asia Minor, p. 55) shows that the inscription does not refer to Prymnesia, but to some person whose name ended in menneas. No inference, therefore, can be drawn from it as to the site of that town. Franz (Fanf Inochriften, p.5) has proved, by incontrovertible arguments from other inscriptions, that Prymnesis must have been situnted at Seid-el-Ghazi, between Eski-Shehr and Coniah, where a few remains of an ancient Greek town still exist. (Leake, Asia Minnr, p. 21.)
[L. S.]
PRITTANIS (Mpúravis), a small river in the east of Pontus, which has its sources in the Moschici Moutes, and flows by the town of Abgabes. (Arrian, Peripl P. E. p. 7; Anonym. Peripl. P. E. p. 15, where it is called Prytanes.) It is perhaps the same river as that called by Scylax (p. 32) Pordanis.
[L. S.]
PSACUM (Yáxov), a promontory on the NW. coast of Crete, forming the termination of Mt. Tityrus, now called C. Spada. (Ptol. iii. 15. § 8.)
pSamathus. [Taenarum.]
PSAPHIS. [ATTICA, p. 330, a.]
PSEBO'A or PSEBO ( $\Psi \in 6$ ćáa, Strab. xvii. p. 822 : Te6e, Steph. B. s. v.), the modern Tsana, one of the enormons lakes S. of Meroë, which feed the principal tributaries of the Nile. The 10th parallel of N. latitude nearly bisects the lake Pseboa. According to Stephanus, it was five days' journey from Aethiopia, i.e. from Axume. In the centre of the lake was a populous island -a depôt of the ivory trade, and frequented also by the hunters of the Hippopotamas, the hides of which animal were exported to Aegypt, and employed as coverings for shields. On the E. and S. the lake was encompassed by lofty mountains, which abounded in mineral wealth (Theophrast. de Lapid. p. 695, ed. Schneider), and whose periodical torrents, according to Agatharchides (c. 5. ap. Hudson, Geogr. Min.) proured their waters over the plains of the Trogbodytes.
[W. B. D.]
PSELCIS (Te入xis, Strab. xvi. p. 820; Itin. Anton p. 162; Yé̀Xıs, Aristid. Aegin. p. 512), was a town of the region Dodecaschoenus situated on the left bank of the Nile. Originally Pselcis was little more than a suburb of the older Aethiopian town Tachompso; but it speedily outgrew its parent, so that in process of time Tachompso was denominated Contra-Pselcis. In B. C. 23 the Aethiopian nation, alarmed by the approach of the Romans to their frontier, harassed the neighboarhood of Philae and Syene, and it became necessary to repel their incursions. C. Petronius, accordingly, who had succeeded Aelius Gallus in the government of Aegypt, undertook to drive them back, and Pselcis was one of the towns which submitted to him. (Strab. L.c.; Dion Cass. liv. 5.) So long as the Romans maintained their hoid on Nurthern Aethiopia, Pselcis was the permanent headquarters of a troop of German horse. The modern bamlet of Dakech occupies a portion of the site of the ancient Pselcis.
[W. B. D.]
PSE'SSII, or PSESSI ( $\Psi$ tбनtot, Ptol. v. 9. § 17 ; Tnoбol, Apollod. ap. Steph. B. s. v.; in Plin. vi. 7, the old editions have Psesii, but Sillig reads Psessi; it appears from an inscription that Psessi is the
correct form, Inser. in Jahn's Jahrbücher, vol. xxxvi. p. 225), a people in Sarmatia Asiatica, placed by Ptolemy between the lake Maeotis and the Hippici Diontes after the Siraceni.

PSEUDOCE'LIS ( $\Psi \in u \delta o \kappa \pi \lambda 1 s$ ), a town of the Elisari in Arabia Felix, identified by some modern writers with Mochha. (Ptol. vi. 7. § 7.)

PSEUDOPENIAS. [HESPERIDKS.]
 vii. 1. $\S \$ 8,33,83,85,86)$, a stream of western India, which Ptolemy describes as flowing from Nit. Bettigo near Coimbatore to the sea near Mnziris (Mangalor). It cannot with certainty be identified with any existing river, especially as along that coast, between lat. $10^{\circ}$ and $15^{\circ}$, there are a great number of streams which, flowing but a short distance from mountains which approach the sea are little better than torrents.
[V.]
PSILE, a small island, forming one of a cluster, off the coast of Ionia, opposite to Clazomenae. (Plin. v. 31. 8. 38.)

PSILLIS ( $\Psi$ i $\lambda \lambda 1 s$ ), a amall river on the coast of Phrygia, flowing into the Euxine between Artane and Calpe, and affording at its mouth a good road for small vessels. (Strab. xii. p. 543; Ptol. v. 1. § 5; Anonym. Peripl. P. E. p. 2; Plin. vi. 1 ; Arrian, Peripl. P. E. p. 13, where it is called Psilis; Marician, p. 69, where it is written Psillius; comp. Steph. B. s. v. 'Aбкауía.)
[L. S.]
PSOPHIS ( $\Psi \propto \phi i s: E t h . \Psi \propto \phi i \delta 10 s$ ), a city in the NW. extremity of Arcadia, bounded on the N. by Arcadia, and on the W. by Elis. It was a very ancient place. It is said to have been originally called Erymanthus, and its territory to have been ravaged by the Erymanthian boar. (Paus. viii. 24. § 2; Hecat. ap. Steph. B. s. v. $\Psi \omega \downarrow$ is ; Apollod. ii. 5. § 4.) It afterwards received the name of Phegia or Phegeia ( $\Phi$ ryia, $\Phi \neq \gamma \epsilon i a$ ), apparently from the oaks ( $\phi \eta \gamma 0$ ), which are still found upon the site of the town; though the ancients, as asual, derived the name from an eponymous founder, Phegeus. (Steph. B. s. vv. $\Phi \boldsymbol{r} \boldsymbol{\gamma} \epsilon i a, \Psi \boldsymbol{\Psi} \omega \phi$ is ; Paus. l.c.) It was called Psophis by Echephron and Promachus, sons of Hercules, who are said to have come from Sicily and given to the town this name after their mother Psophis. (Paus. l.c.) Psophis, while still called Phegia, was celebrated as the residence of Alcmaeon, who fled thither from Argos, after slaying his inother, and married Alphesiboea, the danghter of Phegeus. (Paus. viii. 24. § 8; Dict. of Biogr. s. v. Alcmaeon.) In consequence of their connection with Alcmaeon, the Psophidii took part in the second expedition against Thehes, and refused to join the other Greeks in the Trojan War. (Paus. viii. 24. § 10.)

Psophis is rarely mentioned in history. In B. C. 219 it was in possession of the Eleians, and was taken by Pbilip, king of Macedonia, who was then in alliance with the Achreans. In narrating this event Pulybius gives an accurate description of the town. "Psophis," he says," is confessedly an ancient foundation of the Arcadians in the district Azanis. It is situated in the central parts of Peloponnesus, but in the western corner of Arcadia, and adjoining the Achaeans dwelling furthest towards the west. It also overhangs conveniently the country of the Eleians, with whom the city was then in close alliance. Philip marched thither in three days from Caphyae, and encamped apon the hills opposite to the city, where he could safely have a view of the whole city and the surrounding places. When the king observed the strength of the place, he was at a

PSOPHIS.
loss what to do. On the western side of the town there is a rapid torrent, impassable during the greater part of the winter, and which, rushing down from the mountains, makes the city exceedingly strong and inaccessible, in consequence of the size of the ravine which it has gradually formed. On the eastern side flows the Erymanthus, a large and impetuous river, concerning which there are so many stories. As the western torrent joins the Erymanthus on the southern side of the city, its three sides are surrounded by rivers, and rendered secure in the manner described. On the remaining side towards the north a strong hill hangs over, surrounded by a wall, and serving the purpose of a well-placed citadel. The town itself also is provided with walls, remarkable for their size and construction." (Polyb. iv. 70.) From this description it is evident that the Erymanthus on the eastern side of the city is the river of Sopots; and that the western torrent, which we learn from Pansanias (viii. 24. §3) bore the name of Aroanius, is the river of Ghermotzina. About 300 feet below the junction of these rivers the united stream is joined by a third, smaller than the other two, called the river of Lopesi or Skupi, which rises on the frontiers of Cleitor, near Seirae. From these three rivers the place is now called Tripotamo. The banks of the Erymanthus and the Aroanius are precipitous, but not very high; and between them and the stcep summit of the hill upon which the town stood there is a small space of level or gentlyrising ground. The summit is a sharp ridge, sending forth two roots, one of which descends nearly to the angle of junction of the two streams, the other almost to the bank of the Erymanthus at the eastern extremity of the city. (Leake, Morea, vol. ii. p. 242.)

Philip, in his attack upon Psophis, crossed the bridge over the Erymanthus, which was probably in the same position as the modern bridge, and then drew up his men in the narrow space between the river and the walls. While the Macedonians were attempting to scale the walls in three separate parties, the Eleians made a sally from a gate in the upper part of the town. They were, however, driven back by the Cretans in Philip's army, who followed the fugitives into the town. Euripidas and the garrison then retreated into the citadel, and shortly afterwards sarrendered to Philip. (Polyb. iv. 71, 72.)

Pausanias saw at Psophis a ruined temple of Aphrodite Erycina, heroa of Promachus and Echephron, the tomb of Alcmaeon, and near the Erymanthus a temple sacred to that stream. (Paus. viii. 24. § 7.) Leake also noticed a part of a theatre, not mentioned by Pausanias, on the side of the hill towards the Aroanius. Nine hundred feet above the junction of the two rivers, and near the walls on the bank of the Erymanthus, Leake also found some remains of a public building, 96 feet in length, below which there is a source of water in the bank. He conjectures that they may be the remains of the temple of Erymanthus.

Psophis was about 2 miles in circumference. The town-walls followed the crest of the ridge to the northward and the bank above the two rivers on the opposite side ; and they are traceable nearly throughout the entire circuit of the place. On the northeastern side of the town, which is the only part not protected by the two rivers or by the precipices at the back of the hill, there was a double inclosure. Leake could not trace the inclosure of the citadel.

At the distance of 30 stadia from Psophis was

## PSYLLI.

Seirae ( $\Sigma \in t \rho a i$ ), which Pausanias describes as the bonndary of the Psophidii and Cleitorii (viii. 23. § 9, 24. § 3). On the road from Psophis to Thelpu-a lay Tropaea, upon the left bank of the Ladon, near which was the grove Aphrodisium, after which came a column with an ancient inscription upon it, marking the boundaries of Psophis and Thelpusa. (Leake, Morea, vol. ii. p. 240, seq.; Boblaye, Récherches, g'c. p. 158 ; Curtius, Peloponnesos, vol. i. p. 384, seq.)

PSYCHIUM ( $\Psi$ íd $_{\text {olov, }}$ Steph. B. s. v.; Ptol. iii. 17. § 4; ¥ú $\chi \in a$, Stadiasm. Mar. Magn. p. 298, Hoffinann: Eth. $\Psi u \chi$ Ités), a town on the south coast of Crete, placed by Ptolemy between the mouths of the rivers Massalia and Electra, and by the Stadiasmus 12 stadia to the west of Sulia, a distance which agrees very well with the situation of Kastri. (Pashley, Crete, vol. i. p. 304.)

PSYCHRUS ( $\Psi u \chi \rho o ́ s$ ), a small river in the east of Pontas, forming the boundary between the tribes of the Colchi and Sanni. (Arrian, Peripl. P. E. p. 6; Anonym. Peripl. P. E. p. 14.) [L. S.]
 Herod. iv. 173 ; Strab. ii. p. 131, xiii. p. 588, xvii. pp. 814, 838 ; Plin. v. 4 , vii. 2, viii. 38 , xi. 30 , xxv. 76, xxviii. 6; Aelian, Nat. An. vi. 33), a people on the shores of the Greater Syrtis, who bordered on the Nasamones, occupying that part of the shores of Sórt which lies between Aulad Sliman and Aulad Naim. According to Herodotus (L.c.) they sallied forth against Notos, or the S. wind, and were buried in the sands which were raised by the offended wind. Their country was afterwards occupied by the Nasamones.

The story gives a vivid picture of those seas of sand, unbathed by dew or rain, when the fine dustlike particles, rising through the rarefied air, roll up in dark oppressive clouds. They were supposed by the ancients to have a secret art enabling them to secure themselves from the poison of serpents, like the "Háwee," or snake jugglers of Cairo. (Wilkinson, Ancient Egyptians, vol. v. p. 241 ; Lane, Modern Egyptians, vol. ii. p. 214; Quatremère, Mém. sur l'Egypte, vol. i. pp. 203-211.) Cato
brought some of these people in his train when be fed the way into the depths of the de－ert which skirts the Lesser Syrtis（Plut．Cat．Min． 56 ；Lucan， ix．891）；and Octavius made use of the services of these poison－suckers，it was said，in order to restore his viction，Cleopatra，to life．（Dion Cass．li．14； comp．Lucan，ix．925．）
［E．B．J．］
PSI＇LLIUM（ $\Psi \dot{\prime} \lambda \lambda \lambda o v, \Psi u ́ \lambda \lambda \in i o v$ ，or $\Psi i \lambda \lambda a)$ ，a fortified emporium on the coast of Bithynia，between Crenides and Tium．（Ptol．v．1．§ 7；Arrian， Periph P．E．14：Anonym．Peripl．P．E．p． 5 ； Marcian．p．70；Steph．B．8．v．Yú̀入a；Tab．Peut－ ing．erroneously calls it Scylleum．）
［L．S．］
ISYKA（ $\boldsymbol{\Psi} v p a$ ）．a small island in the Aegean sea，to the north－west of Chios，at a distance of 50 stadia from Cape Melaenae in Chios，and having only 40 stadia in circumference．It was a lofty， rocky island，and contained on its south east coast a small town of the same name．（Strab．xiv．p．645； Piin．v．36：Steph．B．8．v．；Hom．Od．iii．171．） Its modern name is Ipsara．
［L．S．］
PSYTTALEIA（ $\Psi u \tau t a ́ \lambda e r a)$ a small island off the Attic coast between Peiraeens and Salamis．For details see Salamis．

PTANDARIS or PTANDARA，a place in Cap－ padocia on the south－west of Arabissus（It．Ant． pp．178，180，210，212，\＆c．，where we sometimes read the ablative Ptandari，and sometimes Ptan－ daris．）
［L．S．］
PTA＇RENUS（Hiápevos，Arrian，Ind．c．4），a small tributary of the Cpper Indus，which flows into that river a little above Peshistar．Lassen con－ jectures that it is the present Burrindu．（Lassen， Hap of Anc．India．）

PTE＇LEA，an ancient name of Ephesus．（Plin． จ．29．в．31．）

PTE＇LEOS（חte入tcos），a small lake in Mysia， near Ophrynium on the coast of the Hellesyont （Herod．rii．42；Strab．xiii p．595；Schol．ad Ptol．『．2．§ 3．）
［L．S．］
YTE：LEUM．1．（Птe入єóv ：Eth．Птe入eát $\eta \mathrm{S}$ ， Пteגeoveros，Пte入ecús），a town of Thessaly，on the oruth－restern side of Phthiotis，and near the en－ trance of the Sinus Pagasaeus．It stood between Antron and Halos，and was distant from the latter 110 stadia，according to Artemidorus．（Strab．ix． p．433．）It is mentioned by Homer as governed by Protesilaus，to whom the neighbouring town of Antron also belonged．（IL ii．697．）In b．c．192， Anticchus landed at Pteleum in order to carry on the war against the Romans in Greece（Liv．xxsv． 43）．In в．c．171，the town，having been deserted by its inhabitants，was destroyed by the consul Licinius．（Liv．xlii．67．）It seems never to have recovered from this destruction，as Pliny speaks of Pteleum ouly as a forest（＂nemus Pteleon，＂Plin． iv．8．s．15）．The form Pteleos is used by Lucan （vi．352）and Mela（ii．3）．Pteleum stood near the modern village of Pleleo，or Ftelio，upon 2 prakel hill crowned by the remains of a town and castle of the middle ages，called Old Ftélio．On its side is a large marsh，which，as Leake observes， was probably in the more flourishing ages of Greece a rich and productive meadow，and hence the epithet of $\lambda \in \chi \in \pi$ oinv，which Homer（l．c．）has applied to Pteleum．（Leake，Northern Greece，vol．i．p．341， se．f．）
2．A town of Triphylia，in Elis，belonging to Nestor（Hrn．Il．ii．594），is said by Strabo to have been a colony from the Thessalian P＇telcum．This town had disappeared in Strabo＇s time；but its un－
inhabited woody site was still called Pteleasimum． （Strab．viii．pp．349，350．）

3．A furtress in the territory of Frythrae，in Itnia．（Thuc．viii．24，31．）Pliny（v．29．s．31） mentions Pteleon，Helos，and Dorium as near Eryth－ rae，but those places are confused by Pliny with the Triphylian towns in Homer（l．c．）．

PTE＇RIA（ пtepla），the name of a town and dis－ trict in Cappradocia，mentioned only by Herodutus（i． 76），who relates that a great battle was fought in this district hetween Cyrus and Croesus．Stephanas B．mentions Pteriuin，a town of the Medes，and Pteria，a town of Sinope（s．v．Mrépiov）．

PTEROS，one of four islands－the other three being Labatanis，Coboris，and Sambracate－lying off the coast of the Sabaci in Arabia，and corre－ sponding in number，and the last of the four in name，with the Sohar islands．（Plin．vi．28．s．32； Forster，Arabia，vol．ii．p．230．）

PTOLEDERMA（Пто入є $\delta ¢ \rho \mu a)$ ，a town of the Eutresii，in Arcadia，which was deserted in conse－ quence of the removal of its inhabitants to Megalo－ polis．（Paus．viii．27．§ 3．）

PTOLEMA＇IS．1．（Птo八emats Ptol．iv．5．§ 57），a small town of the Arsinoite nome in Middle Aegypt．It was situated between Heracleopolis Magna and Arsinoë，near the point of junction be－ tween the Balir Jusef and the Nile．The modern village of EL－Lahum occupies a portion of the site of the Arsinoite Ptolemais．
 i．8．§ 1, iv．7．§ 7 ，viii．16．§ 10 ；Птодє Strab．xvii．pp．768－76；Agatharch．ap．Phot． pp．457－459，ed．Bekker；Ptolemais Epitheras，Plin． vi．29．s．34），was originally an Aethiopian village situated on the southern skirts of the forest which extended from the S．side of the Troglodytic Bere－ nice to lat． $17^{\circ} \mathrm{N}$ ．Its convenient situation on the coast of the Red Sea and in the heart of the region where elephants abounded induced Ptolemy Phila－ delphas（B．c．282－246）to occupy，enlarge，and fortify the village，which thenceforward was named Ptolemais after its second founder．Philadelphus， indeed，before be colonised this outpost of his king－ dom，used every effort to persuade the Aethiopian hunters［Elephantophagi］to abstain from the flesh of these animals，or to reserve a portion at least of them for the royal stables．But they re－ jected his offers，replying that for the kingdom of Aegypt they would not forego the pleasure of hunt－ ing and eating elephants．Hitherto the Aegyptians had imported these animals from Asia，the Asiatic breed being stronger and larger than the African． But the supply was precarious：the cost of import－ ation was great；and the Aethiopian forests afforded an ample supply buth for war and the royal house－ hold．As the depott of the elephant trade，including that also in bides and ivory，Ptolemais attained a high degree of prosperity，and ranked among the principal cities of Aethiopia．From its market it is probable that Carthage also derived its supply of elephants，since about the period of Philadelphus＇ reign the Carthaginians employed these animals more frequently in war．（Liv．xvii．Epit．；Florus，ii． 2．§ 28．）Ptolemais had，properly speaking，no harbour， and the Aegyptian vessels were compelled to run up to Berenice whenever the N．or E．winds prevailed： in the present day the Red Sea coast at this point is approachable only by boats．The roadstead of I＇to－ lemais，however，was partially sheltered from the f．． winds by an island covered with olive－trees．In its
neighbourhood the freshwater lake Monoleus afforded it a good supply of water and fish．The shell of the true land－tortoise was found at Ptolemais：it is described by Agatharchides（ap．Geogr．Minor．p．40， Hudson；Peripl．Mar．Erythr．p．17）as covered with small lozenge－shaped plates，of the whiteness of the pearl－oyster．To ancient geographers the position of Ptolemais was of great importance，being one of the points from which their computations of latitude were made．Modern geographers，how－ ever，are not agreed as to the degree in which it should be placed，some identifying it with Bas－ Assiz，opposite the island of Wellesley，while others （Vincent，Voyage of Nearchus，vol．ii．p．92）pre－ fer a more southerly site，near the port of Mirza－ Mombarrik．（Comp．Dlannert，vol．x．1．p．48， seq．）
 5．§ 56 ；Пто入є $\mu$ аïx $\pi \delta \lambda ı s$ Strab．xvii．p．813）， a city of Upper Aegypt，NW．of Abydus，and situ－ ated on the western side of the Nile．It can hardly be regarded，however，as an Aegyptian city，its population and civil institutions being almost exclu－ sively Greek，and its importance derived entirely from the favour of the Ptolemies．The ruins of Ptolemais Hermii are supposed to be at the modern hamlet of Mensich．（Champollion， $\boldsymbol{l}$ Egypte，vol．i． p．253，seq．）
［W．B．D．］
PTOLEMA＇TS（HTo入 $\epsilon \mu a t s$ ），a small town on the coast of Pamphylia，between the river Melas and the town of Coracesium，is mentioned only by Strabo（xiv． p．667）．Leake（Asia Minor，p．197）conjectures that Ptolemais did not stand upon the coast，as it is not mentioned in the Stadiasmus，bat occupied per－ haps the situation of the modern town of Alara， where is a river，and upon its banks a steep hill crowned with a Turkish custle．（Comp．Richter， Wallfahrten，p．334．）

PURA．［Gedrosia．］
PURPURA＇RIAE INS．，islands off the coast of Mauretania，which are said to have been discovered by Juba（Plin．vi．37），who established there a manufactory of parple．If his description of them as being $625 \mathrm{M} . \mathrm{P}$ ．from the Fortunate Islands be received，they cannot be，as D＇Anville supposed． Lanzerote or Fuente Ventura，the two nearest of the Canaries to the African continent．Still greater difficulties exist in supposing them to be Madeira and Porto Santo，which are too remoto from Jubais kingdom to be the seat of a mannfacture of purple carried on by him．Lelewel（Endechungen der Carthager und Griechem，p．140）considers them to be the islands of Lanzarote Sta Clara，with the smaller ones of Graciosa and Alegranza．（Kenrick， Phoenicia，p． 229 ；Humboldt，Cosmos，rol．ii．p． 129，trans．）
［E．B．J．］
PUTE＇OLI（Mouted入ot，Ptol．Dion Cass，Mo－ riodou Strab．，Act．Apost．：Eth．Puteolanus：Foz－ zuoli），a maritime city of Campania situated on the northern shore of the Sinus Cumanus or Crater and on the east side of the smaller bay known as the Sinus Baianus．It was originally a Greek city of the name of Dicararchia（ $\Delta$ inalapxia，Strab．；Aı－ кauapXela，Steph．B．：Eth．DıкaıapXéus and Duкau－ apXe（Tns，Steph．），and was a colony of the neighbour－ ing Cumae，to which it served as a port．（Strab．v． p．245．）There can be little doubt of the accuracy of this statement，but Stephanus of Byzantium and Eusebins ascribe its foundation to a colony from Samos；and it is not improbable that in this as in many similar instances，the colony from Cumae was reinforced by a fresh baud of emigrants from Samos（Steph．B．8．v．Horlodot；Euseb．ii．p 129，ed．

Scal.). The date assigned to this Samian colony by Eusebius is as late as B. c. 521. No mention occurs of Dicsearchis in history previous to the conquest of Cumse by the Campanians: from its serving as the port of Cumse it could probably never have taken any active or independent part; but there seems no doubt that it must have become a populons and flourishing town. The name of Dicaearchia continued to be applied to it by Greek writers long after it had assumed the new appellation of Puteoli. (Diod. iv. 22, v. 13, \&c.)

The period of this change is uncertain. It is generally said that the Romans bestowed on it the new name when they established their colony there; but there seems good reason to believe that it was considerably more ancient. The name of Puteoli is applied to the city by Livy during the Second Punic War (Liv. xxiv. 7), and there is much probability that the coins with the Oscan inscription "Phistlus," sometimes Graecised into Phistelia, belong to Puteoli during the period previous to the Roman colony. ( Millingen, Numism. de l'Anc. Italic, p. 201; FriedJänder, Oskische Münzen, p. 29.) According to the Boman writers the name of Puteoli was derived either from the stench arising from the numerous sulphareous springs in the neighbourhood, or (with mure probability) from the wells (putei) or sources of a volcanic nature with which it abounded. (Varro, L. L. v. 25; Fest. s. v. Puteoli; Plin. xxxi. 2; Strab. V. p. 245 ; Steph. B. 8. o. Hurío入or)

The first mention of Puteoli in history is during the Second Punic War, when it was fortified by Q. Fabius by order of the senate, and protected by a strong garrison to secure it from the attempts of Hannibal, z. c. 215. That general, indeed, in the following season made an attempt, though without success, to make himself master of the city, the possession of its port being an object of the greatest importance to him. (Liv. xxiv. 7, 12, 13.) Livy. speaks of Puteoli as having first become frequented as a port in consequence of the war; and though this is not strictly correct, as we know that it was frequented long before under the name of Dicaearchia, it is probable that it then first rose to the high degree of commercial importance which it subsequently retained under the Romans. Thus in B. c. 212 it became the principal port where the supplies of corn fron Etruria and Sardinia were landed for the use of the Roman army that was besieging Capua (Liv. xxv. 22); and the next year it was from thence that Claudius Nero embarked with two legions for Spain. (Id. xxvi. 17.) Towards the close of the war also (b.c. 203) it was at Puteoli that the Carthaginian ambassadors landed, on their way to Rome. (Id. 1xx. 22.) It was doubtless the growing innportance of Puteoli as a commercial emporium that led the Romans to establish a colony there in R. C. 194 (Liv. xxxiv. 45; Vell. Pat. i. 15): the date is confirmed by a remarkable inscription of B. c. 105 (Mommsen, Inscr. R. N. 2458), and it seems to have becone before the close of the Repablic, as it continued under the Empire, one of the most considerable places of trade in Italy. From its being the first really good port on the south of Rome (for Antium could never deserve that epithet) it became in a manrer the port of the imperial city, although distant from it not less than 150 miles. Nist only did travellers coming from the East to Pume frequently land at Puteoli and proceed from thence bf land to the city, as in the well-known instances of St. Paul (Act. Apost. xxviii. 13) and

Cicero on his return to Rome from his quaestorship in Sicily (Cic. pro Planc. 26), but the same course was pursued with the greater part of the merchandise brought from the East, especially with the costly wares sent from Alexandria, and even the supplies of corn from the same quarter. (Strab. xvii. p. 793; Suet. Aug. 98; Senec. Ep. 77.) Strabo speaks of Puteoli as one of the most important trading cities of his time (v. p. 245), and it is evident from the expressions of Seneca (l. c.) that this had not fallen off in the days of Nero. The trade with Alexandria indeed, important as it was, was only one branch of its extensive commerce. Among other things the iron of Ilva, after being smelted at Popnlonium, was brought to Puteoli (Diod. v. 13): and the city carried on also a great trade with the Turdetanians in the south of Spain, as well as with Africa. (Strab. iii. p. 145.) We learn also from an inscription still extant, that its trade with Tyre was of such importance that the Tyrians had a regular factory there (Boeckh, C. I. no. 5853); and another inscription mentions a number of merchants from Berytus as resident there. (Mominsen, I. R. N. 2488.) Indeed there seems no doubt that it was under the Roman Empire one of the greatest-if not the greatest-emporiums of foreign trade in all Italy For this advantage it was in a great measure indebted to the excellence of its port, which, besides being naturally well sheltered, was further protected by an extensive mole or pier thrown out into the bay and supported on stone piles with arches between them. Hence Seneca speaks of the population of Puteoli assembling on this mole (in pilis) to watch for the arrival of the ships from Alexandria. (Sen. Ep. 77.) Putecli had peculiar facilities for the construction of this and similar works, from the excellent quality of its volcanic sand, which formed a mortar or cement of the greatest hardness and durability, and wholly proof against the influence of the sea-water. (Strab. v. p. 245; Plin. xxxv. 13. s. 47.) This kind of cement is still known by the name of Pozzolana.

It was from the extremity of the mole of Pateoli that Caligula carried his celebrated bridge across the bay to the opposite shores at Baiae. (Suet. Cal. 19, 32; Dion Cass. lix. 17; Joseph. Ant. xix. 1. § 1.) It is scarcely necessary to observe that this bridge was merely a temporary structure [Baiaz], and the remains still visible at Pozzuoli which are popularly known as the Bridge of Caligula are in fact the piles or piers of the mole of Puteoli. The construction of this mole is generally ascribed to Augustus, without sufficient authority; bat it is probable that it dates from at least as early a period: and we learn that there were in his time extensive docks (navalia) at Puteoli, in which the hage ships that had been employed in bringing the obelisks from Egypt were preserved,-a sufficient proof of the magnitude of these establishments. (Plin. xxxvi. 9. 8. 14.) Another proof of the importance of Puteoli is the fact that Claudius established there, as well as at Ostia, a coloort of troops to guard the city against fire, in the same manner as was done at Rome (Suet. Claud. 25). In A. D. 95 Domitian constructed a new line of road leading direct to Puteoli from Sinuessa, where it quitted the Appian Way. (Dion Cass. Lxvii. 14; Stat. Silv. iv. 3.) Previous to that time its communication with Rome must have been by way of Capua, to which a branch road (not given in the Itineraries) led direct from 1'nteoli.

## PUTEOLI.

Puteoli certainly continued to enjoy under the Empire the rank of a colony. (Plin. iii. 5. s. 9; Orell. Inscr. 1694, 3697, \&c.) In addition to the original "colonia civium" settled there, as already mentioned, in B. c. 194, it appears to have received a fresh colony under Sulla (Val. Max. ix. 3. § 8 ; Plut. Sull. 37 ; Zumpt, de Colon. p. 260), and certainly was again colonised by Augustus. (Lib. Col. p. 236.) The inhabitants had, as we learn from Cicero (Phil. ii. 41), warmly espoused the cause of Brutus and Cassius after the death of Caesar, which may have been one reasion why Augustus sought to secure so important a point with a culony of veterans. But, as was often the case, the old inhabitants seem to have continued apart from the colonists, with separate municipal rights, and it was not till the reign of Nero that these also obtained admission into the colony. (Tac. Ann. xiv. 27.) In A. D. 69 the Puteolani zcalously espoused the cause of Vespasian (Tac. Hist. iii. 67), and it was probably in consequence of this that the city afterwards assumed the bonorary title of "Culonia Flavia Augusta Puteoli," by which we find it designated in inscriptions. (Orell. Inscr. 3698; Zumpt, l. c. p. 395; Mummsen, 2492, 2493.) It is not improbable, however, that it may at the same time have received a fresh accession of colonists.

In addition to its commercial importance, Puteoli, or rather its immediate neighbourhood, became, before the close of the Republic, a favourite resort of the Roman nobility, in common with Baiae and the whole of this beautiful district. Thus Cicero, as we learn from himself, had a villa there, to which he gave the name of Academia, but which he more often mentions merely as his Puteolanum. (Cic. de Fat. 1, ad Att. i. 4, xir. 7, xv. 1, \&c.) It passed after his death into the hands of Antistius Vetus, and the outbreak of a thermal spring there became the occasion of a well-known epigram, which has been preserved to us by Pliny. (Plin. axxi. 2. 8. 3.) This villa was situated between Puteoli and the lake Avernus; it was subsequentls chosen as the place of burial of the emperor Hadrian. (Spart. Hadr. 25.)

We hear little of Puteoli in history during the later periods of the Roman Empire, but there is every reason to suppose that it continued to be a flourishing and populous town. Its mole and port were repaired by Antoninus Pius (Mommsen, Inscr. 2490), aud numerous inscriptions have been found there, some of which belong to a late period, and attest the continued importance of the city down to the reign of Honorius. (Momusen, 2494-2500.) But it shared to the full extent in the calamities of the declining empire: it was taken and plundered loy Alaric in A. D. 410, and again by Genseric in 455, and by Totila in $\mathbf{5 4 5}$. Nor did it ever recover these repeated disasters. After having for some time been almost deserted, it partially revived in the middle ages; but again suffered severely, buth from the ravaces of war and from the volcanic eruptions of the Solfatara in 1198, and of the Monte Nuovo in 1538. At the present day Pozzuoli, though retaining its episcopal see, and abrout 8000 inhabitants, is a poor place, and suffers severely from malaria in summer.

It, however, retains many remains of its ancient greatness. Among these one of the most conspicuous is the amphitheatre, on the hill behind the town, which is of considerable size, being larger than that at Pompeii, and calculated to be capable
of containing 25,000 spectators. It is in good preservation, and, having been recently excavated and cleared out, affords in many respects a good specimen of such structures. It derives additional interest from being more than once alluded to by ancient writers. Thus Suetonius mentions that Augustus presided at games there, and it was in consequence of an insult offered to a senator on that occasion that the emperor passed a law assigning distinct seats to the senatorial order. (Suet. Aug. 44.) It was there also that Nero entertained Tiridates, king of Armenia, with magnificent shows both of gladiators and combats of wild beasts. (Dion Cass. Ixiii. 3.) Near the amphitheatre are some ruins, commonly known as the temple of Diana, but which more probably belonged to a range of thermae or baths; as well as several piscinas or reservoirs for water on a great scale, some of which are supposed to have been connected with the service of the amphitheatre. Near them are the remains of an aqueduct, intended for the supply of the city, which seems to have been a brunch of that which led to Misenum. In the city itself the modern cathedral is in great part constructed out of the remains of a Roman temple, which, as we learn from an inscription on the architrave, was dedicated to Augustus by L. Calpurnius. From another inscription we learn that the architect was L. Cocceius Auctus, evidently the same who is mentioned by Strabo as having been employed by Agrippa to construct the tunnel at Posilipo. (Mommsen, J.R.N. 2484, 2485; Strab. v. p. 245.) The masonry is of white marble, and there still remain six beautiful Corinthian columns of the same material.
Much more celebrated than these are the remains of a building commonly known as the temple of Serapis or Serapeum. The interest which attaches to these is, bowever, more of a scientific than antiquarian character, from the evidence they afford of repeated changes in the level of the soil on which they stand. (Lyell, Principles of Geology, 8th ed. p. 489, \&c. ; Daubeny On Volcanves, p. 206.) The edifice is one of a peculiar character, and the received attribution is very doubtful. Recent researches have rendered it more probable that it was a building connected with the mineral spring which rises within it, and was adapted both for purposes of worship and for the medical use of the source in question. The general plan is that of a large quadrangular atrium or court, surrounded internally by a portico of 48 columns, with chambers at the sides, and a circular temple in the centre. Not far from the temple of Serapis are the ruins of two other buildings, both of them now under water: the one of which is commonly known as the temple of Neptune, the other as the temple of the Nymphs; but there is no real foundation for either name. We know, however, from Cicero that there was a temple of Neptune at Puteoli, as might naturally be expected at so frequented a seaport. and that its portico fronted the bay. (Cic. Acad. ii. 25.) The remains of the ancient mole have been already mentioned; there are now portions of 16 piers remaining, 13 of which are still visible above water.

On the coast proceeding from Pozzuoli towards the Lucrine lake (or rather on the ancient cliff which rises above the low line of const) are some ruins callid (with at least more probability than in most similar cases) those of the villa of Cicero, which was certainly, as we learn from Pliny, situated between Puteoli and the Lucrine lake. (Plin. $x \times x i .2$ 2. s. 3.)

PUTEOLANUS SINUS.
About a mile from Pozzuoli to the NE., on a hill between the tuwn and the Layo $d^{\prime}$ Angano, is the reriarkable spot now called the Solfittara, and in ancient times known as the Forcm Vulcani ('Hфaíotov d $\gamma$ upa, Strab.). It is evidently the crater of an extinct volcano, retaining only so much of its former activity as to emit constantly sulphureous gases in corisiderable quantity, the deposit of which forms large accumulations of sulphur. It is well described by Strabo, in whose time it would seem to have been rather more active than at present, as well as in a more poetical style by Petronius (Cinrm. B. Civ. 67-75); and is noticed also by Lucilius, who justly points to the quantity of sulphur produced, as an evidence of igneous action, thoogh long extinct. (Strab. v. p. 246; Lucil. Aetr. 431.) It does not seem to have ever broken out into more violent action, in ancient, any more than in modern, times; but in the middle ages on one occasion (in 1198) it broke into a violent eraption; and a stream of trachytic lava. which has flowed from the crater in a SE. direction, is probably the result of this outburst. The effect of the sulphareous exhalations on the soil of the surrounding hills is visible for some distance, and imparts to thrin a peculiar whiteness of aspect, whence they were called the Leccogaei Corles. (Plin. xviii. 11. s. 29, xxxp. 15. s. 50.) Pliny also mentions in connection with them some mineral springs, to which be gives the name of Lfucogaei Fontres. (Id. xusi. 2. s. 8.) They are probably those now known as the Pisciarelli.

There were two ancient roads leading from Puteoli, the one to Capua, the other to Neapolis. Buth of them may still be distinctly traced, and were bordered, for some distance after they quitted the city, with ranges of toinbs similar to those found outside the gate of Pompeii, though of course in less perfect preservation. They are nevertheless in many reepects of much interest. Pliny mertions the raad (which he calls a Via Consularis) that led frum Puteoli to Capua; it was the tract on the left of this towards Cumue that was the district properly called the Campi Labobini, or Laboriae, distinguished eren above the rest of Campania for its surpassing fertility. (Plin. xviii.11. s. 29.) Concenning the toporaphy of Puteoli and ruins still remaining at Puzzwli, see Mazzella, Situs et Antiquitus P'utechrrum in Graevius and Burnann's Thesaurus, vol ix. part iv.; Rumanelli, Viagyio a Pozzuoli, 8vo. Naples, 1817; and Jorio, Guila di Puazuoli, 8 8o. Naples, 1830.
[E. H. B.]
PUTEOLA'NUS SINUS. [Crater.]
PUTI'UT, a station in Africa Proper, 12 M . P. from Neapolis (Nabel) (Itin. Antom.; Peut. Tab.), which has been identified by Barth (Wanderungen, pa 142, 143) with Mámámât. Sir G. Temple (Excursions, vol. ii. p. 10) considers it to be Slagul ( Ecaroúd, I'wl. iv. 3. §9), because of the two inscriptions with "Civitas Siagitana," which Slaw found at Hamamát. (Trav. p. 169.) [E. B. J.]

PYCNUS (Пuкvós, Ptol. iii. 17. § 8), a river on the N. crast of Crete, a little W. of Cydoniu.

PYDABAS. [Atityras.]
PYDNA (חúdra, Scyl. p. 26; Scymn. Ch. 626; Ptol. iii. 13. § 15; Steph. B.; Plin. iv. 17), a town which originally stood on the coast of Pieria, in the Thermaic gulf. Themistocles was conducted by iwo Macedonian guides across the mountains, and found a merchant ship about to sail for Asia. (Thuc. ii. 137.) Pydna was blockaded by the Athenians,

PYLAEA
who, after prosecuting the siege in vain, concluded a convention with Perdiccas. (Thuc. i.61.) It was taken b. c. 411 by Archelaus, who removed its site 20 stadia from the sea. (Diculor. xiii. 49.) Afterwards it was gained for Athens by Timotheus; but in the two first years of the disastrous Sucial War (358-356), Pydna, about the exchange of which for Amphipolis there had been a secret negotiation, was betrayed to Philip by a party of traitors in the town. (Demosth. adv. Leptinem, p. 476. § 71. Olynth. i. p. 10. § 5, Olynth. ii. p. 19. § 6 ; Ulpian, ad loc.; Theopompus, Fr. 189, ed Didot.) Several Athenian citizens were taken in Pydna, and sold into slavery, whom Demosthenes ransomed from his own funds. (Plut. Vit. X. Orator. p. 851, vol. ix. p. 381, ed. Reiske.) Towards the close of the year b.c. 316, Olympias retired to Pydna, where she was besieged by Cassander, and taken prisoner by him. (Diodor. xix. 49; Polyaen. iv. 11. § 3.) In the spring of в.c. 169, Perseus abandoning Dium, retreated before the consul Q. Marcius Philippus to Pydna. (Liv. xliv. 6.). After again occupying the strong line of the Enipeus, Perseus, in consequence of the dexterous flank movement of P. Scipio Nasica, was compelled to fall back upon Pydna. On the 22nd of June, b. c. 168 (an eclipse fixes the date, Clinton, F. H. vol. iii. p. 82), the fate of the Macedonian monarchy was decided in a plain near the town, which was traversed by a small river, and bordered by heights affiording a convenient retreat and shelter to the light infantry, while the plain alone contained the level ground necessary for the phalanx. (Liv. xliv. $32-46$; Plut. Aemil. 13-23.) The Epitomiser of Strabo and a Schuliast upon Demosthenes (Olynth. i. p. 10) assert that the Kítpos of their time was the same place as Pydna; but their authority is of no great weight, and Colonel Leake (Northern Greece, vol. iii. Pp. 429-435) has shown that the ancient site is better represented by Ayan, where there are Hellenic remains, and, on the slope towards the sea, two "tumuli," probably monuments of the battle. Kitro, it may be supposed, rose upon the decay of Pydna and Methone, be: ween which it lies. For autunomous coins of Pydna, see Eckhel. vol. ii. p. 76.
[E. B. J.]
PYINNAE or PYDNA (núdvau), a small town on the coast of Lycia, between the river Xanthus and Cape Hieron. (Stadiasm. M. Magni, p. 221.) It is probably the same place as the one called by Ptolemy (v. 3. s 5) Cydna, and which he places at the foot of Mount Cragus, where ruins of an ancient town were observed by Beaufort. (Leake, Asia Minor, p. 182.)
[L. S.]
PY'GELA or PHY'GELA (חú $\boldsymbol{\epsilon} \boldsymbol{\lambda} a$, ф'́ $\gamma \in \lambda a$ : Eth. חuyencús), a small town on the coast of the Caystrian bay, a little to the south of Ephesus, was said to have been founded by Agamemnon, and to have been peopled with the remnants of his army; it contained a temple of Artemis Munschia. (Xenoph. Hellen. i. 2. § 2; Strab. xiv. p. 639; Steph. B. s. v.; Harpocrat. 8. v.; Plin. v. 31 ; Scylax. p. 37 ; Pomp. Mela, i. 17; Liv. xxxvii. 1.) Dioscorides (v. 12) commends the wine of this town, which is still celebrated. Chandler (Travels, p. 176) observed its remains on a hill between Ephesus and Scala Nova. (Comp. Leake, Asia Minor, p. 261.) [L. S.]

PYLAE. [Theibmorylae.]
PYLAE CILICIAE. [Cilicia.]
PYLAE SYRIAE. [Amanides; Issus.]
PYLAEA (Пu入aía), a suburb of Delphi, and
the place of meeting of the Amphictyonic Council ［Delhi，p．767，b．］

PYLE＇NE（Пu入rivn：Eth．חu入rivos），an ancient town of Aetolia，between the Achelous and the Evenus， mentioned in the Homeric catalogue of the Grecian ships，is placed by Pliny on the Corinthian gulf．It would therefore seem to have existed in later times； although Strabo says that the Aeolians，having re－ moved Pylene higher up，changed its name into Proschium．The site of Pylene is ancertain．（Hom． Il．ii． 639 ；Plin．iv． 3 ；scopulosa Pylene，Stat． Theb．iv．102；Steph．B．s．v．）

PYLON（Пu入ஸ́v），a town on the Via Egnatia， being the frontier town of Illyria and Macedonia． （Strab．vii．p．323．）It is not mentioned in the Itineraries．

PYLO＇RUS，a town in Crete，S．of Gortyn，now Plöra．（Plin．iv．12．8．20；Pashley，Crete，vol．i． p．295．）

PYLUS（núdos：Eth．núdios），the name of three towns on the western coast of Peloponnesus．

1．A town in hollow Elis，described by Pausanias as situated upon the mountain road leading from Elis to Olympia，and at the place where the Ladon flows into the Peneius（vi．22．§ 5）．Strabo，in a corrupt passage，assigns to it the same situation， and places．it in the neighbourhood of Scollium or

 6o入îs］Пúגos фंкeito，Strab．viii．p．338）．Pausa－ nias（l．c．）says that it was 80 stadia from Elis． Diodorus（xiv．17）gives 70 stadia as the distance， and Pliny（iv．5．s．6） 12 Roman miles．According to the previous description，Pylus should probably be identified with the rains at Agrapidho－khóri，situated on a commanding position in the angle formed by the junction of the Peneius and Ladon．This site is distant 7 geographical miles from Elis，which suffi－ ciently agrees with the 80 stadia of Pausanias． Leake，however，places Pylus further S．，at the ruins at Kulogli，mainly on the ground that they are not 80 far removed from the road between Elis and Olympia． But the fact of the ruins at Ayrápidho－khóri being at the junction of the Peneius and Ladon seems de－ cisive in favour of that position ；and we may sup－ pose that a road ran up the valley of the Peneius to the junction of the two rivers，and then took a bend to the right into the valley of the Ladon．（Leake， Northern Greece，vol．ii．p．228，Peloponnesiaca， p． 219 ；Boblaye，Récherches，grc．p． 122 ；Curtius， Peloponnesos，vol．ii．p．39．）The Eleian Pylus is said to have been built by the Pylon，son of Cleson of Megara，who founded the Messenian Pylus，and who，apon being expelled from the latter place by Peleus，settled at the Eleian Pylos．（Paus．iv． 36. § 1, vi．22．§5．）Pyluswas said to have been destroyed by Hercules，and to have been afterwards restored by the Eleians ；but the story of its destruction by Hercules more properly belongs to the Messenian Pylus．Its inhabitants asserted that it was the town which Homer had in view when he asserted that the Alpheius flowed through their territory（A入фetov̂， z̈ $\sigma \tau^{\prime}$ єúpù péti Пu入icov dià raíns，Il．v．545）．On the position of the Homeric Pylus we shall speak presently；and we only observe bere，that this claim was admitted by Pausanias（vi．22．§ 6），though its absurdity had been previously pointed out by Strabo （viii．p．350，seq．）．Like the other Eleian towns， P＇ylus is rarely mentioned in history．In B．c． 402 it was taken by the Spartans，in their invasion of the territory of Elis（Diod．xiv．17）；and in B．c． 366
it is mentioned as the place where the democratical exiles from Elis planted themselves in order to carry on war against the latter city．（Xen．Hell．vii． 4. § 16．）Pausanias saw only the ruins of Pylus（vi． 22．§ 5），and it would appear to have been deserted long previously．

2．A town in Triphylia，mentioned only by Strabo， and surnamed by him Tpıфu入ıaúós，＇Apкaסıкós，and Ae $\boldsymbol{\pi} \epsilon$ atıods．He describes it as situated 30 stadia from the sea，on the rivers Mamathus and Arcadicns， west of the mountain Minthe and north of Lepreum （viii．p．344）．Upon the conquest of the Triphylian towns by the Eleians，Pylus was annexed to Lepreum （viii．p． 355 ；comp．pp．339，343，344）．Leake observes that the village Tjorbadji，on the western extremity of Mount Minthe，at the fork of two branches of the river of Ai Sidhero，seems to agree in every respect with Strabo＇s description of this town．（Peloponnesiaca，p．109．）

3．A town in Messenia，situated apon the pro－ montory Coryphasium，which forms the northern termination of the bay of Navarino．According to Thucydides it was distant 400 stadia from Sparta （Thuc．iv．3），and according to Pausanias（v． 36. § 1） $\mathbf{1 0 0}$ stadia from Methone．It was one of the last places which beld out against the Spartans in the Second Messenian War，upon the conclasion of which the inhabitants emigrated to Cyllene，and from thence，with the other Messenians，to Sicily．（Pans iv．18．§ 1，iv．23．§ 1．）From that tine its bame never occurs in history till the seventh year of the Peloponnesian War，B．c．424，when Demosthenes， the Athenian commander，erected a fort upon the promontory，which was then uninhabited and called by the Spartans Coryphasium（Kopupdoiov），though it was known by the Athenians to be the site of the ancient Pylus．（Thuc．iv．3．）The erection of this fort led to one of the most memorable events in the Peloponnesian War．Thucydides has given a minute account of the topography of the district，which， though clear and consistent with itself，does not co－ incide，in all points，with the existing locality． Thucydides describes the harbour，of which the pro－ montory Coryphasiam formed the northern termina－ tion，as fronted and protected by the island Sphac－ teria，which stretched along the coast，learing only two narrow entrances to the harbour，－the one at the northern end，opposite to Cory phasinm，being only wide enough to admit two triremes abreast，and the other at the southern end wide enough for eight or nine triremes．The island was about 15 stadia in width，covered with wood，uninhabited and untrodden． （Thac．iv．8．）Pausamias also says that the island Sphacteria lies before the harbour of Pylus like Rheneia before the anchorage of Delos（v．36．§ 6）． It is almost certain that the fortress erected by the Athenians stood on the site of the ruins of a fortress of the middle ages，called Paleó－Avarino， which has been changed into Nararino by the habit of using the accusative case，cis $\tau \boldsymbol{y}$＇Abapivov，and by attaching the final $\nu$ of the article to the sub－ stantive．The distances of 400 stadia from Sparta and 100 stadia from Methone，given respectively by Thucydides and Pausanias，are the correct distances of Old Navarino from those two ancient sites． （Leake，Peloponnesiaca，p．191．）Sphacteria（ （qak－ tnpia）is now called Sphayia，a name which it also bore in antiquity．（ C фaria，Strab．viii．p． 359 ； Plat．Menex．p．242；al इфayia，Xen．Hell．vi． 2. § 31 ；tres Sphagiae，Plin．iv．12．8．25．）The fol－ lowing description will be rendered clearer by the
two accompanying maps, of which the former contains the whole locality, and the latter the fortress of Old Navarino and its immediate neighbourhood on a larger scale.

MAP OF THE BAY OF PYLUS.
A. Sphacteria (Sphagia).
B. Pylus on the promontory Coryphasium (Old Navaríno).
C. The modern Navarino.

D D. Bay of Pylus (Bay of Navarino).
The chief discrepancy between the account of Thucydides and the existing state of the coast is found in the width of the two entrances into the bay of Navarino, the northern entrance being about 150 yards wide, and the southern not less than between 1300 and 1400 yards; whereas Thucydides states the former admitted only two triremes abreast, and the latter only eight or nine. Therefore not only is the actual width of the two entrances very much greater than is stated by Thucydides, but this width is not in the proportion of the number of triremes; they are not as 8 or 9 to 2 , but as 17 to 2 . To explain this difficulty Col. Leake supposes that Thucydides was misinformed respecting the breadth of the entrances to the harbour. But to this a satisfactory reply is given by Dr. Arnold, that not only could no common false estimate of distances have mistaken a passage of nearly 1400 yards in width for one so narrow as to admit only eight or nine ships abreast, but still less could it have been supposed possible to choke up such a passage by a continuous line of ships, lying broadside to broadside, which Thucydides tells us the Lacedaemonian commanders intended to do. Moreover the northern entrance has now a shoal or bar of sand lying across it, on which there are not more than 18 inches of water; whereas the narrative of Thucydides implies that there was sufficient depth of water for triremes to sail in unobstructed. The length of

17 stadia, which Thucydides ascribes to Sphacteria, does not agree with the actual length of Sphagia, which is 25 stadia. Lastly Thucydides, speaking of the bay of Pylus, calls it " $a$ harbour of con-

MAP OF PYLUS AND ITS mmedLate NEIGHBOURHOOD.
A. Pylus (Old Navaríno).
B. Sphacteria (Sphagia).
C. Lagoon of Osmyn-Aga.
D. Port of Voidhó-Kiliu.
E. Bay of Pylus (Bay of Navarino).
a. Cave of Hermes.
b. Small channel connecting the lagoon of OsmynAga with the Bay of Navarino.
siderable magnitude" ( $\lambda \iota \mu \epsilon ́ \nu \iota$ ŏ $\nu \tau \iota$ oủ $\sigma \mu \kappa \rho \hat{\varphi})$; an expression which seems strange to be applied to the spacious Bay of Navarino, which was not only the largest harbour in Greece, but perfectly unlike the ordinary harbours of the Greeks, which were always closed artificially at the mouth by projecting moles when they were not sufficiently land-locked by nature.

Irf consequence of these difficulties Dr. Arnold raised the doubt whether the island now called Sphagia be really the same as the ancient Sphacteria, and whether the Bay of Navarino be the real harbour of Pylus. He started the hypothesis that the peninsula, on which the ruins of Old Navarino stand, is the ancient island of Sphacteria converted into a peninsula by an accumulation of sand at either side; and that the lagoon of Osmyn-Aga on its eastern side was the real harbour of Pylus, into which there was an opening on the north, at the port of Voidhó-Kiliá, capable of admitting two triremes abreast, and another at the south, where there is still a narrow opening, by which eight or nine triremes may have entered the lagoon from the
great harbour of Navarino. Upon this hypothesis Col. Leake observes, that in itself it is perfectly admissible, inasmuch as there is scarcely a sitnation in Greece on the low coasts, near the mouths of rivers, where, by the operation of waters salt or fresh, or both united, some change has not taken place since the times of ancient history; and that in the present instance, therefore, there is no great difficulty in imagining that the lagoon may be an ancient harbour converted into a lagoon by an accumulation of sand which has separated it from the sea. But, among the many difficulties which beset this hypothesis, there are two which seem quite fatal to it; one of which has been stated by Mr. Grote and the other by Col. Leake. The former writer remarks that, if the peninsula of Old Navarino was the real ancient Sphacteria, it must have been a second istand situated to the northward of Sphagia; and that, consequently, there must have been two islands close together and near the scene. This, as Mr. Grote observes, is quite inconsistent with the narrative of Thucydides, which presupposes that there was only one island -Sphacteria, without any other near or adjoining to it. Thus the Athenian fleet under Eurymedon, on first arriving, was obliged to go back some distance to the island of Prote, because the island of Sphacteria was full of Lacedaemonian hoplites (Thnc. iv. 13); whereas, if the hypothesis of Dr. Arnold were admitted, there would have been nothing to prevent them from landing on Sphagia itself. It is true that Xenophon (Hell. vi. 2. §3) speaks of $\sum$ мqayiat in the plural, and that Pliny (iv. 12.s. 25) mentions "tres Sphagiae;" but two of them appear to have been mere rocks. The objection of Col. Leake is still more fatal to Dr. Arnold's hypothesis. He calls attention to the fact that the French Commission observed that the walls of the castle of Old Navarino stand in many parts on Hellenic foundations, and that in some places three courses of the ancient work remain, consisting of a kind of masonry which seems greatly to resemble that of Messene. Besides these remains of middle Hellenic antiquity, some foundations are traced of a more ancient inclosure at the northern end of the peninsula, with a descent to the little harbour of VoidhóKiliá by means of steps cut in the rock. Remains of walls of early date are to be seen likewise towards the southern extremity of the hill, among which is a tumulus; -all tending to prove that the entire peninsula of Navarino was occupied at a remute period of history by an ancient city. This peninsula could not, therefore, have been the ancient Sphacteria, which never contained any ancient town. The only way of reconciling the account of Thucydides with the present state of the coast is to suppose, with Mr. Grote and Curtius, that a great change has taken place in the two passages which separate Spllagia from the mainland since the time of Thucydides. The mainiland to the south of Navarino must have been much nearer than it is now to the southern portion of Sphagia, while the northern passage also must have been both narrower and clearer. (Lcake, Morca, vol. i. p. 401, seq., Peloponnesiuca, p. 190, seq.; Arnold, Appendix to Thucydides, vol. ii. p. 400, seq.; Grote, Greece, vol. vi. p. 427, seq.; Curtius, Peloponnesos, vol. ii. p. 173, seq.; Bublaye, Récherches, p. 113; Erpedition Scientifique de la Moree, vol. i. pl. vii.)

It is unnecessary to relate here the events which fullowed the erection of the Athenian fort at Pylus,
and which terminated with the capture of the Spartans in the island of Sphacteria, as they are given in every Grecian history. The following extract from Col. Leake illustrates the description of Thucydides in the most satisfactory manner: "The level and source of water in the middle where the Lacedaemonians encamped, - the summit at the northern end to which they retired, - the landingplaces on the western side, to which the Heluts brought provisions, - are all perfectly recognisable. Of the fort, of loose and rude construction on the summit, it is not to be expected that any remains should now exist; but there are some ruins of a signal-tower of a later age on the same site. The summit is a pile of rough rocks ending in a peak; it slopes gradually to the shore on every side, except to the harbour, where the cliffs are perpendicular, though here just above the water there is a small slope capable of admitting the passage of a body of men active in climbing among rocks and difficult places. By this pass it is probable the Messenians came upon the rear of the Lacedaemonians on the summit; for just at the southern termination of the pass there is a passage through the cliffs which border the greater part of the eastern shore of the island, so that by this opening, and along the pass under the rocks to the northward of it, the Messenians had the means of passing unseen from the centre of the island to the rear of the Lacedaemonians on the summit. Though this hill slopes gradually from its rocky peak to the shore on every side except towards the harbour, it does not admit of a landing at its foot, except in the calmest weather; nor is it easily assailed on any side by land, on account of the rugedness of the summit, except by the means to which the Messenians resorted; so that the words of Thucydides respecting

 extremity of the island is rocky, steep, and difficult of access, and forms a separate hill; in every other part the ground slopes from the cliffs on the side of the harbour to the western shore, which, though rocky, is low ; so that when the weather is calm it is more easy in face of an opponent to land, and to make way into the islund on that side than on the eastern shore, where the cliffs admit of an easy access only in two places, one towards the northern end, the other in the middle of the island, where an opening in the cliffs leads immediately into the most level part of it; exactly in the opening stands a small church of the I'anaghia. There are also two small creeks adjacent to each other, near the southern end of the eastern side of the island, opposite to Neikastro: near these creeks there is a well. The principal source of water is towards the middle of the island, at an excaration in the rock 20 feet deep, which seems to be more natural than artificial; for below a shallow surface of woil, in which there is a circular peristomium of modern masonry, the excaration in the rock is irrogular and slauting. In one or two places there are groves of high bushes, and there are low shrubs in every part of it. It often happens, as it did in the seventh summer of the Peloponnesian war, that a fire, occurring accidentally or of intention, clears the face of the island during the droughts of that season: the northern hill exhibits at this moment recent marks of a similar contlagration." (Morca, vol. i. 408, seq.)
The peninsula of Coryphasium is a precipice on
the eastem side or towards the lagoon；while on the western side or towards the open sea it slopes gra－ dually，particularly on the SW．，where Demosthenes succeeded in preventing the landing of Brasidas and the Lacedaemonians．The promontory is higher at the northern end．Below the ruined fortress at the nurthern end there is a fine cavern，called Voidho＇ Kiliá（Boiod－koi入ıá），＂the ox＇s belly，＂which gives name to the small circular port immediately below it，which has been already spoken of．This cavern is 60 feet long， 40 wide，and 40 high，having a roof like a Gothic arch．The entrance is triangular， 30 feet long and 12 high；at the top of the cavern there is an opening in the surface of the hill above． This cave was，according to the Peloponnesian tra－ dition，the one into which the infant Hermes drove the cattle he had stolen from Apollo．It is men－ tioned in the Homeric hymn to Hermes as situated upon the sea－side（v．341）；but in Antoninus Li－ beralis（c．23）it is expressly said to have been at Coryphavium．In Ovid（Met．ii．684）Mercury is represinted as beholding from Mt．Cyllene the un－ guarded cattle proceeding into the fields of Pylus．
The bay of Voidhó－Kilic is separated by a low semicircular ridge of sand from the large shallow lagmon of Osmyn－Aga．As neither Thucydides nor Pausanias says a word about this lagoon，which now forms so striking a feature in the topography of this district，we may confidently conclade，with Leake， that it is of recent formation．The peninsula must， in that case，have been surrounded with a sandy plain，as Pausanias describes it；and accordingly， if we suppose this to have been the site of the Homeric Pylns，the epithet $\eta_{\mu}$ aOders，which the poet constantly gives to it，would be perfectly ap－ plicable．

The Athenians did not surrender their fortress at Pylus to the Laceduemonians in accordance with the treaty made in B．c． 421 （Thuc．v．35），but retained possession of it for fifteen years，and only last it towards the close of the Peloponnesian War． （Diod．x：ii．64．）On the restoration of the Mes－ senians to their country by Epaminondas，Pylus scain appeass in history．The remains of the walls already described belong to this period．On more than one occasion there was a dispute between the Bewenians and Achaeans respecting the possession of this place．（Liv．xxvii．30；Polyb．xviii．25．） It mas risited by Pausanias，who saw there a temple of Athena Coryphasia，the so－named house of Nestor， containing a picture of him，his tomb，and a cavern said to have been the stable of the oxen of Neleus and Nestor．He describes the latter as within the city；which must therefore have extended nearly to the northern end of the promontory，as this cave is evidently the one described above．（Paus．v．36．） There are imperiad coins of this city bearing the epigraph nuxiov，belonging to the time of Severus． （Ecinhel，vol．ii．p．277．）It would appear from Leake that the restored city was also called Cory－ phasium，since he says that＂at the time of the Achaean League there was a town of Coryphasium， as we learn from a coin，which shows that Cory－ phasiuin was a member of that confederacy．＂（Pe－ loponnesiaca，p．191．）

The modern name Avarino，corrupted，as already said，into Nararino，is probably due to the Avars， who settled there in the sixth century of the Chris－ tian era．The mediaeval castle was built by the widow of the Frankish chieftain William de la Bixhe．Her descendants sought a more convenient
place for their residence，and erected on the southern side of the harbour the Neókastro or modern Na－ varino．It commanded the southern end of the harbour，which became more and more important as the northern entrance became choked up．Con－ taining，as it does，the best harbour in the Pelopon－ nesus，Nacarino constantly appears in modern his－ tory．It was taken by the Turks in 1500 ．In 1685 it was wrested from them by the Venetian commander Morosini，and remained in the hands of the Venctians till 1715．In more recent times it is memorable by the great battle fought in its bay，on the 20th of October，1827，between the Turkish fleet and the combined flects of England，France， and Russia．（Curtius，Peloponnesos，vol．ii．p．181．）

It remains to speak of the site of the Homeric Pylos．According to a generally received tradition， Neleus，the son of Poseidon，migrated from lolcos in Thessaly，and founded on the west coast of Peloponnesus a kingdom extending westward as far as that of the Atridae，and northward as far as the Alpheius，or even beyond this river．Neleus incurred the indignation of Hercules for refusing to purify him after the murder of his son Iphitus． The hero took Pylus and killed Neleus，together with eleven of his twelve sons．But his surviving son Nestor upheld the fame of his house，and，after distinguishing himself by bis exploits in youth and manhood，accompanied in his old age the Greci：an chiefs in their expedition against Troy．Upon the invasion of Peloponnesus by the Dorians，three gene－ rations after Nestor，the Neleids quitted P＇ylus and removed to Athens，where they obtained the kingly power．The situation of this Pylus－the חúdos N $\eta \lambda$ tionos，as it was called－was a subject of much di－pute among the Grecian geogiaphers and gram－ matians．Strabo（viii．p．339）quotes a proverbial verse，in which three towns of this name were mentioned－
 à入入os，－
of which the former half－－＂E $\sigma \tau$ Пú入os $\pi \rho \delta$ חúdoro－was at least as old as the time of Aristo－ phanes，when Pylus became famous by the capture of the Spartans at Sphacteria．（Aristoph．Equit． 1059．）The claims of the Eleian Pylus to be the city of Nestor may be safely set on one side；and the choice lies between the towns in Triphylia and Messenia．The ancients usually decided in favcur of the Messenian Pylos．This is the opinion of Pausanias（iv．36），who unhesitatingly places the city of Nestor on the promontory of Coryphasium， although，as we have already seen，he agrees with the people of Elis that Humer，in describing the Alpheius as flowing through the land of the Pylians（Il．v．545），had a view to the Eleian city． （Paus．vi．22．§6．）It is however，much more probable that the＂land of the Pylians＂was used by the poet to signify the whole kingdom of the Neleian Pylus，since he describes both Thryoessa on the Alpheius and the cities on the Messenian gulf as the extreme or frontier places of Pylus．（ $\Theta \rho$ u－

 In this sense these expressions were understood by Strabo（viii．pp．337，350）．It is curious that Pausanias，who paid so much attention to Homeric antiquities，does not even allude to the existence of the Triphylian Pylus．Pindar calls Nestor＂the Messenian old man．＂（Pyth．vi．35．）Isorrates
mentions Messenia as his birthplace (Panath. § 72); and Pherecydes (ap. Schol. ad Hom. Od. xi. 289) and Eustathius (ad Od. iii. p. 1454) describes the Messenian Pylus as the city founded by Peleus. This was also the opinion of Diodorus (xv. 66), and of many others. In opposition to their views, Strabo, following the opinion of the 'Oипрıќттєро, argues at great length that the Triphylian Elis was the city of Nestor. (Strab. viii. pp. 339, seq., 348, seq.) He maintains that the description of the Alpheius flowing through the land of the Pylians (IL. v. 545), which, as we have already seen, was the only argument which the Eleians could adduce for their claim, is applicable to the Triphylian Pylus; whereas the poet's mention of Nestor's exploits against the Epeisns (Il. xi. 670, seq.) is fatal to the supposition of the Messenian city being his residence. Nestor is described as making an incursion into the country of the Epeians, and retarning thence with a large quantity of cattle, which he safely lodges by night in the Neleian city. The third day the Epeians, having collected their forces on the Alpheius, Nestor marched forth from Pylus, and at the end of the first day halted at the Minyeius (subsequently called the Anigrus), where he pussed the night; starting from thence on the following morning, he arrived at the Alpheius at noon. Strabo argues that neither of these events could have taken place if Nestor had marched from so distant a city as the one at Coryphasium, while they might easily have happened if the Neleian city had been situated at the Triphylian Pglus. Again he argues from the Odyssey that the Neleid Pylus could not have been on the sea-const, since Teiemachus, after he had disembarked at the temple of Poseidon and had proceeded to Pylus, sent a courier to his ship to fetch his companions (Od. iii. 423); and on his return from Sparta to Pylos, he desired Pisistratus to turn off to the sea-side, that he might immediately embark, as he wished not to be detained in the city by Nestor. (Od. xv. 199, seq.) These arguments, as well as others, adduced by Strabo, have convinced K. O. Müller (Orchomenos, p. 357, seq.), Thirlwall (Hist. of Greece, vol. i. p. 96), and several modern scholars; but Leake, Curtius, and others have adhered, with much greater probability, to the more common view of antiquity, that the Neleian Pylus was situated at Coryphasium. It has been shown that Pylus was frequently used by Homer to signify the Neleid kingdom, and not simply the city, as indeed Strabo himself had admitted when arguing against the claims of the Eleian Pylus. Moreover, even if it should be admitted that the account of Nestor's exploits against the Epeians agrees better with the claim of the Triphylian Pylus, yet the narrative of the journeys of Telemachus is entirely opposed to this claim. Telemachus in going from Pylus to Sparta drove his horses thither, without changing them, in two days, stopping the first night at Pherae ( $O d$. iii. 485); and he returned from Sparta to Pylus in the same manner. (Od. xv. 182, seq.) Now the Messenian Pylus, Pherae, and Sparta, lie in a direct line, the distance from Pylus to Pherae being about 35 miles by the road, and from Pherae to Sparta about 28 miles. On the other hand, the road from the Triphylian Pylus to Sparta would have been bs the valley of the Alpheius into that of the Eurotas; whereas Pherae would have been out of the way, and the distance to it would have been much more than a day's journey. Besides which,
the position of the Messenian Pylus, the most striking upon the whole western coast of Pelopunnesus, was far more likely to have attracted the Thessalian wanderers from Iolcos, the worshippers of the god Poseidon, than a site which was neither strong by nature nor near the coast.

But although we may conclude that the Messenian Pylus was the city of Nestor, it may admit of doubt whether the city itself existed on the promontory Coryphasium from the earliest times. The Greeks rarely built a city in the earliest period immediately upon the coast, and still more rarely chose a site so badly supplied with water as Coryphasium, of which the Athenians experienced the inconvenience when they defended it in the Peloponnesian War. There seems much probability in the account of Strabo (viii. p. 359) that the ancient Messenian Pylus was situated at the foot of Mt. Aegaleos, and that upon its destruction some of its inhabitants settled at Coryphasiam. If then we suppose the city of Nestor to have stood a little way inland, and Coryphasium to have heen its port-town, the narrative of Telemachus' return becomes perfectly clear. Not wishing to lesse time at the royal residence, he drives straight to the port and goes quietly on board. Hence, one of Strabo's most serious objections to the Messenian Pylus disappears. Strabo was justified in seeking for a separate site for the city and the port, but he seems to have forgotten the existence of the Old Pylus inland, which he had himself mentioned. (Leake, Morea, vol. i. p. 416, seq.; Curtius, Peloponnesos, vol. ii. p. 174, seq.)

PYRAEI, a people in Illyria (Plin. iii. 23. s. 26 ; Mela, ii. 3. § 12), perhaps the same as the Pleraci of Strabo. [Pleraki.]

## PYRA'MIA. [Angos, p. 202, a.]

PY'RAMUS (חúpauos), one of the great rivers of Asia Minor, which has its sources in Cataonia near the town of Arabissus. (Strab. i. p. 53, xir. p. 675.) For a time it passes under ground, but then comes forward again as a navigable river, and forces its way through a glen of Mount Tauras, which in some parts is so narrow that a dog can leap across it. (Strab. xii. p. 536.) Its course, which until then had been south, now turns to the south-west, and reaches the sea at Mallus in Cilicia. This river is deep and rapid (Tzetz. ad Lycoph. 440); its average breadth was 1 stadium (Xenoph. Anab. i. 4. § 1), but it carried with it such a quantity of mud, that, according to an ancient oracle, its deposits were one day to reach the island of Cyprus, and thus unite it with the mainland. (Strab. L c.; Eastath. ad Dionys. 867.) Stephanus B. (8. v.) states that formerly this river had been called Lencosyrus. (Comp. Scylax, p. 40; Ptol. v. 8. §4; Plin. v. 22; Pomp. Mela, i. 13; Cartius, iii. 7; Arrian, Anab. ii. 5. § 8.) Its modern name is Seihun or Jechun.
[L. S.]
PYRANTHUS (חúpaveos: Eth. Пupávacos), a small town in Crete, near Gortyn, probably the modern Pyrathi. (Steph. B. s. v. ; Pashley, Crete, vol. i. p. 291.)

 in Thessaly, mentioned by Homer along with Phylace and Iton, and described by him as חúppavor ávec$\mu \dot{\epsilon} \in \nu \tau a, \Delta \eta$ й $\mu \boldsymbol{\eta}$ роs $\tau \epsilon ́ \mu \epsilon \nu o s$. (Il. ii. 695.) Pyrasus was situated on the Pagasacan gulf, at the distance of 20 stadia from Thebes, and possessed a good harbour (evidícvos, Strab. ix. p. 435). It had disappeared in the time of Strabo. Its name was
superseded by that of Demetioium, derived from the temple of Demeter, spoken of by Homer, and which Strabo describes as distant two stadia from Pyrisus Demetriam is mentioned as a town of Phthiotis by Scylax (p. 24, Hudson), Livy (xxviii. 6), Stephanus B. (8. v. $\Delta \eta \mu \eta \tau \rho i o v)$, and Mela (ii. 3). Leake places Pyrasus at Koikhina, where there are vestiges of an ancient town, consisting of wrought quadrangular blocks, together with many smailer fragnents, and an oblong height with a flat summit, partly if not wholly artificial. He also states that at Kokkina there is a circular basin full of water near the shore, which was once probably a small harbour, since there are traces of a mole not far from it. The exact site of the temple was probably at a spot, 5 minutes short of Kokkina, where exist many stones and some hewn blocks. (Leake. Northern Greece, vol. iv. p. 366.)
 i. 15. § 2, viii. 4. § 2 ; Strab. ii. p. 71, iii. p. 161, \&cc.; Polyb. iii. 34), called also Pyrenaeus Mons (Mela, ii. 5 ; Plin. iii. 3. s. 4, \&cc.), Pyrenaeus Saltus (Liv. xxi. 23, \&c.; Plin. iv. 19. s. 33), Pyrenaeum Jagum (Mela, iii. 1), and M. Pyrene (Huphivn, Strab. ii. p. 160, \&c.; Sil. Ital. iii. 417; Aus. Epp. xxv. 51), the lofty chain of mountains which divides Spain fro:n Gaal. It was fabled to derive its name from the Greek word $\pi \hat{v} \rho$. fire, frum a great conflagration which, through the neglect of some shepherds. destroyed its woods, and melted the ore of its mines, so that the brooks ran with molten silver. (Strab. iii. p. 147; Diod. v. 25; Arist. Mir. Aws. 88; Sen. Q. N. 1.) Silius Italicus (l. c.) derives its name from Pyrene, a daughter of the king of the Bebryces; but its true etymology is probably from the Celtic word byrin or bryn, signifying a mountain. (Cf. Astruc. Mém. de I'Hist. Nat. de Languedoc, iii. 2.) Herodotus seems to have had some obscure intelligence respecting the Pyrenees, as he mentions (ii. 33), a place called Pyrene, near which the Ister had its source. Strabo (iii. pp. 137, 161) erroneously describes the chain as running from S. to N.; but its true direction, namely, from SE. to NW., is given by Pliny (iv. 20. s. 34), and Marcian (Heracl. p. 38). According to Diodorus ( r .35 ) it is 3000 stadia in lengit ; according to Justin (xiiv. 1) 600 Roman miles. After the Alps, and the mountains of Sarmatia, the Pyrenees were esteemed the highest mountains in Europe (Agathem. ii. 9, p. 47; Eustath. ad Dionys. 338; Diod. L. c.), whence they are sometimes described by the poets as covered with eternal snow. (Lucan. iv. 84 , seq.) On the side of Gaul they are steep, ragged, and bare; whilst on the Spanish side they descend gradually to the plain, are thickly wooded, and intersected with delicions valleys. (Strab. iii. p. 161.) Their western prolongation along the Mare Cantabricum, was called "Saltus Vasconum," which derived its name from the Vascones, who dixelt there. (Plin. iv. 20. s. 34.) This portion now bears the names of Sierra de Orcamo, S. de Augana and S. Sejos. Still firther W. was Mons Vinnias or Vindius (Oúívoıov apos, Ptol. vii. 1. § 21 ; Flor. iv. 12), which formed the boundary between the Cantabri and Astures. The Pyrenees form several promontories, both in the Mediterranean sea and the Atlantic ocean. (Strab. ii. p. 120, iii. p. 160, iv. p. 176, \&cc.; Mela, ii. 5; Sil. It. iii. 4.17, sm .) They were rich in mines of gold, silver, iron and lead (Strab. iii. p. 146; Plin. L. c.), and contained extensive forests, as well as the sources of the

Garumna, the Iberus, and a number of smaller rivers. (Strab. L.c., and iv. p 182.) Only three roads over them were known to the Romans; the most westerly, by Carasae (now Garis), not far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the Bulusoa by Fuenterabia; the most easterly, which was also the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now Junquera) ; and one which lay between these two, leading from Caesaraugusta to Benearnum (now Barege). (Itin. Ant. pp. 390, 452, 455 ; Strab. iii. p. 160 ; Liv. xxi. 23, \&c.) Respecting the present condition of the Pyrenees, the reader may consult Miñano, Diccionario, vii. p. 38, seq.; Huber, Shizzen aus Spanien. Gött. 1833; and Ford, Handbook of Spain, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer watering-places and sensual, the Spanish side is rude, sarage, and Iberian, the lair of the smucgler and wild bird and beast."
[T. H. D.]
PYRENAEI PORTUS. [Indigetrs]
PYRE'NES PROMÓNTO'RIUM. [HIBPanta, Vol. I. p. 1084.]

PY'RETUS (nuperos), called by the Scythians nópata, described by Herodotus (iv. 48) as a large river of Scythia, flowing in an easterly direction and falling into the Danube. The modern Pruth.

PYBGI (Hípyou: Eth. Pyrgensis: Santa Severa), a city on the coast of Etruria, situated between Alsium and Castrum Novam, and distant 34 miles from Rome .(Itin. Ant. p. 290.) It was rather more than 6 miles ( 50 stadia) from Caere, of which it served as the port (Strab. v. p. 226), but it is probable that it was not originally designed for that purpose, but grew up in the first instance around the temple of Eileithyia, for which it continued to be celebrated at a much later period. (Strab. L c.; Diod. xv. 14.) The foundation of this temple is expressly ascribed to the Pelasgians, and the pure Greek form of the name certainly tends to corroborate this statement. It is probable that both Pyrgi and the neighbouring Caere were originally Pelasgian settlements, and that this was the cause of the close connection between the two, which led to Pyrgi ultimately passing into the condition of a dependency on the more powerful city of the interior. Virgil calls it an ancient city (Pyrgi veteres, Aen. x. 184), and represents it as one of the Tuscan cities that sent assistance to Aeneas. But the only mention of Pyrgi in history during the period of Etruscan independence is in B. c. 384. when the treasures of its temple attracted the crpidity of Dionysius of Syracuse, who made a piratical descent upon the coast of Etruria, and, landing his troops at Pyrgi in the night, surprised and plundered the temple, from which he is said to have carried off spoils to the value of 1000 talents. (Diod. xv. 14; Strab. v. p. 226: Arist. Oecon. ii. 21 ; Polynen. v. 2. 21.) The amount of the booty seems incredible, but the temple was certainly very wealthy : and it would seem that the people of Pyrgi had given some excuse for the aggression, by themselves taking an active part in the piracies carried on at this period by the Etruscans in general. Servius, indeed, represents it as bearing the chicf part in those depredations; but this may prubably be an exaggeration. (Serv. ad Aen. x. 184.) It
could never have been a large town, and appears under the Romans to have sunk into comparative insignificance. It is indeed noticed by Livy, together with Fregenae and Castrum Novum, as one of the maritime colonies which in в.c. 191 contended in vain for exemption from military levies (Liv. xxxvi. 3); but we have no account of the time at which the colony was established there, nor does any subsequent mention of it occur in that capacity. Its name is mentioned by all the geographers among the towns on the coast of Etruria; but Strabo terms it only a small town (rodixviov), and Servius calls it in his time merely a fort (castellum), which would agree well with the character of the remains. (Strab. v. p. 225; Mel. ii. 4; Plin. iii. 5. s. 1 ; Ptol. iii. 1. § 4; Martial, xii. 2; Serv. ad Aen. l.c.) But in the time of Rutilius it bad altogether sunk into decay, and its site was occupied only by a large villa. (Rutil. Jtin. i. 223.) No subsequent notice of it is fonnd until it reappears in the middle ages under the title of Santa Serera.

The Itineraries vary much in the distances they assign between Pyrgi and the other stations on the coast; but they agree in placing it between Alsium and Catrum Novum: and this circumstance, compled with the distance of 50 stadia from Caere, given by Strabo, leaves no doubt that it is correctly identified with Sla Severa. (Strab. v. p. 226; Itin. Ant. pp. 290, 301 ; Itin. Marit. p. 498; Tab. Peut.) The site of the fortress of that uame is unquestionably that of an ancient city. The walls of the present castle, which is of mediaeval date, are based on foundations of very ancient character, being constructed of polygonal blocks of stone of large size, neatly fitted together without ceinent, in the same manner as the walls of Cosa and Saturnia. The line of these foundations, which are undoubtedly those of the walls of the ancient city, may be traced throughout their whole extent. enclosing a quadrangular space of about half a mile in circuit, abutting on the sea. Some remains of Koman walls of later date occur at the extremities on the sea-coast; but no remains have been found of the celebrated temple which was probably situated within the enclosure; nor are there any traces of the ancient port, which must have been wholly artificial, there being no natural inlet or harbour. (Canina, in the Ann. dell Inst. Arch. 1840. pp. 35-44; Dennis, Etruria, vol. ii. pp. 11-16.) The goddess to whom the temple was dedicated is called by Strabo Eileithyia, but several other writers call her Leucothea (Arist. l. c.; Polyaen. l. c.), who was identified with the Nater Matuta of the Romans. There is no douht that the same deity is meant by both appellations. (Gerhard, Gottheiten der Etrusker, pp. 9, 25.)
[E. H. B.]
PYRGUS or PYRGI. 1. (חúfyos, Her. Polyb.; Пúpyoi, Strab., Steph. B. 8. v.: Eth. Пupyitns), the most southerly town of Triphylia in Elis, at the mouth of the river Neda, upon the Messenian frontier (Strab. viii. p. 348), and hence described by Stephanus B. (s. v.) as a Messenian town. It was one of the settlements of the Minyae. (Herod. iv. 148.) It opened its gates to Philip in the Social War. (Polyb. iv. 77, 80.) Leake places Pyrgi at some ancient remains upon the right bank of the Neda, not far from its mouth. (Morea, vol. i. p. 57, vol. ii. p. 207.)
2. A town in hollow Elis in a district named Perippia, which Polybius mentions in conjunction with Lasion. (Polyb. v. 102 ; comp. Liv. xxvii. 32.)

PYRNUS (חúpvos: Eth. חúpvios), a toxn of Caria, of uncertain site. (Steph. B. 8. v.; P'in. v. 28. s. 29.)

PYROGERI, a penple dwelling on the Hebrus in Thrace. mentioned by Pliny, iv. ll. s. 18. [T.H.D.]

PYRRHA (חúg̀ja: Eih. Mup̧aios). 1. A town on the coast of the deep bay on the west of the island of Lesbos, which had so narrow an en:rance that it was called the Euripus of Pyrrha. It was situated at a distance of 80 stadia from Mytilene and 100 from Cape Malea. (Athen. iii. p. 88; Strab. xiii. p. 617.) In the Lesbian revolt the town sided with Mytilene, but was reconquered by Paches. (Thuc. iii. 18, 25, 35; comp. Scylax, p. 36; Steph. B. 8. v.) In Strabo's time the town no loncer existed, but the suburbs and port were still inhabited. Pliny (v. 39) reports that Pyrrha had been swallowed up by the sea. The bay of Pyrrha is now called Caloni.
2. A small town on the Maeander, opposite to Miletus; it was 50 stadia distant from the mouth of the river. (Strab. xiv. p. 636; Plin. v. 29; Schol. ad Ptol. v. 2. § 5.)
[L. S.]
PYRRHA ( $\Pi u \dot{p} \rho \rho a$ ), a promontory of Thessaly, now C. Ankistri, in the Pagassean gulf, forming the northern boundary of the district Phthiotis, and near which were the two islets of Pyrrha and Dencalion. (Strab. ix. p. 435; Leake, Northern Greece. vol. iv. pp. 359, 360, 371.)

PYRRHE'UM. [Ambracia, p. 120, a.]
PYRRHI CASTRA (núppod $\chi$ doak). 1. A fortress in the N. of Laconia, was probably at or near the junction of the Oenus and Eurotas, and is supposed to have been so named from having been the place of encampment of Pyrrhus, when he invaded Laconia in в. c. 272. (Polyb. v. 19 ; Liv. xxxv. 27 ; Leake, Peloponnesiaca, p. 345.)
2. In Greek llyria [Vol. I. p. 563, a.]

PY'RRHICHUS (חúpṕxos), a town of Laconia, situated about the centre of the promontory ending in Cape Taenarum, and distant 40 stadia from the riser Scyras. According to some it derived its name from Pyrrhus, the son of Achilles, according :o others from Pyrrhicus, one of the Curetes. Silenus was also said to have been brought up here. It contained temples of Artemis Astrateia and of Apollo Amazonius, - the two surnames referring to the tradition that the Amazons did not proceed further than this place. There was also a well in the agora The ruins of this town have been discovered by the French Commission near the village of Kavalo, where they found the well of which Pausanias speaks, the torso of a female statue, the remains of baths, and several Roman ruins. Leake observes that the distance of 40 stadia from the Scyras to Pyrrhichus must be measured, not from the mouth of that river, as Boblaye proposes, but from near its sources Augustus made Pyrrhichus one of the EleutheroLaconian towns (1'aus. iii. 21. § 7, iii. 25. §§ 1-3; Boblaye, Récherches, g'c. p. 88; Leake, Peloponnesiaca. p. 174 ; Curtius, Peloponnesos, vol. ii. p. 276.)

PYRRUM. [Peritur.]
PYRUSTAE (Пupov̂otai), according to Strabo (vii. p. 314), a tribe of Pannonia, but undonbtedly the same people as the Illyrian Pirustar. [L. S.]

PY'THIUM (חútiov), a town of Perrhaebia in Thessaly, situated at the foot of Mount Olympus, and forming a Tripolis with the two neighbouring towns of Azorus and Doliche. Pythium derived its name from a temple of Apollo Pythius situated on one of the summits of Olympus, as we leain from an

PYTHO.
QLADRATAE.
68. 9
epigram of Xeinagoras, a Greek mathematician, who measured the height of Olympus from these parts (ap. Plat Aemil. Paul. 15). Games were also celebrated here in honour of Apollo. (Steph. B. s. . חúdiov.) Pythium commanded an impurtant pass across Mount Olympus. This pass and that of Tempe are the only two leading from Macedonia into the north-east of Thessaly. Leake therefore places Pythium on the angle of the plain between Kokkinoplo and Licádhi, though no remains of the ancient town have been discovered there. (Liv. xlii. 53: Plut., Steph. B., U. cc.: Ptol. iii. 13. § 42; Leake, Nirthern Greece, vol. iii. p. 341 , seq.)

## PYTHO. [DElphi.]

PYTHO'POLIS. [Divtherolis.]
PYXIRATES. [EUPhratrs.]
PYXITES ( $\Pi \nu \xi i \tau \eta s$ ), a small river in the east of Pontus, emptying itself into the Fuxine 60 stadia on the north-east of Prytanis. (Plin. vi. 4; A: rian, Peripl P. E. p. 6; Anonym. Peripl. P. E. p. 15.) It is possibly the same as the Cissa mentioned by Ptolemy (v. 6. § 6), and is commonly identifed with the modern Vitzeh.
[L.S.]
PYXUS. [BUxentum.]

## Q.

## QUACERNI. [Querqcerni.]

QUADI (Kouáoor), a great German tribe in the south-east of Bohemia, in Moravia and Hungary, between Mons Gabreta, the Hercynian and Sarmatian mountains, and the Danube. (Tac. Germ. 42, Ann. xii. 29, Hist. iii. 5, 21 ; Ptol. ii. 11. § 25; Plin. iv. 25.) They were surmounded on the north-west by the Marcomanni, with whom they were always closely connected, on the north by the Gothini and Osi, on the east by the Jazyges Metanantae, and on the south by the Pannonians. It in not known when they came to occnpy that country, but it seems probable that they arrived there about the same time when the Marcomanni established themselves in Bohemia. At the time when the Mareomannian king Maroboduus and his successor Ca:nalda, on being driven from their kingdom, implured the protection of the Rumans, the latter in A. D. 19 assigned to them and their companions in exile the districts between the rivers Marus and Cusus, and appointed Vannius, a Quadian. king of the territory (Tac. Ann. ii. 63; Plin. iv. 25). This new kingdom of the Quadi, after the expulsion of Vannius, was divided between his nephews Vangio and Sido, who, however, continued to keep up a good onderstanding with the Romans. (Tac. Ann. xii. 29, 30.) Tacitus (Germ. L.c.) says that down to his own time the Marcomanni and Quadi had been prserned by kings of the house of Maroboduus, but that then foreigners ruled over them, though the power of these rulers was dependent on that of the Ronnan emperors. At a later time the Quadi took an active part in the war of the Marcomanni against the Rurnans, and once nearly annihilated the whole army of M. Aurelius, which was saved only by a sudden ternest. (Dion Cass. Ixxi. 8). Notwithstanding the peace then concluded with them, they still continued in harass the Romans by renewed acts of hostility, and the emperor was obliged, for the protection of his own dominions, to erect several forts both in and around their kingdom, in consequence of which the people were nearly driven to abandon their country. (Dion Cass. Ixxi. 11, 13, 20.) In vol. It.
A. D. 180 the emperor Commodus renewed the peace with them (Dion Cass. Ixxii. 2; Lamprid. Com. 3; Herodian, i. 6), but they still continued their inrads into the Roman empire (Eutrop. ix. 9; Vopisc. Aurel. 18; Amm. Marc. xvii. 12, xxix. 6). Towards the end of the fourth century the Quadi entirely disappear from history; they had probably migrated westward with the Suevi, for Quadi are mentioned among the Suevi in Spain. (Hieron. Ep. 9.) According to Ammianus Marcellinus (xvii. 1थ) the Quadi resembled in many respects the Sarmartians, for they used long spears and a coat of mail consisting of linen envered with thin plates of horn; they had in war generally three swift borses for every man, to enable him to change them, and were on the whole better as skirmishers than in an open battle in the field. Ptolemy ( Lc. . mentions a considerable number of towns in their country, such as Eburodunnm, Meliodunum, Caridorgis, Medoslanium, \&e.; the Celtic names of which suggest that those districts previous to the arrival of the Quadi had been inhabited by Celts, who were either subdued by them or had become amalgamated with them. The name Quadi itself seems to be connected with the Celtic word col, cold, or coad, that is, a wood or forest, an etymology which receives support from the fact that Strabo (vii. p. 290), the first ancient author that notices them, mentions them under the name of Kб́doovo. Tacitus evidently regards thern as Germans, but Latham (ad Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilheln, Germanien, p. 223, fol.)
[L.S.]
QUADIA'TES. In the inscription on the arch of Suss, published by Maffei, there is a list of the Alpine peoples who were under the dominion of Cottius. The first name is the Seguvii, and the last is the Quadiates. There is nothing that enables us to fix the position of the Quadiates.

Pliny (iii. 4) mentions a people in Gallia Narbonensis under the namie of Quariates. After naming the Oxybii and Linganni [Lingauni], he adds: "Super quos Suetri, Quariates, Adunicates." The valley of Queiras on the left bank of the Durance, below Briancon, and a little above Embrum, is supposed to represent the position of the Quariates. D'Anville conjectures that the Quadiates of the inscription may be the same as the Quariates, for the $\mathbf{r}$ of the inscription, if it is not very clear, may have been taken for a $D$; or the complete name may have been Qnadriates, the name of Queiras in old records being Quadriatium.
[G. L.]
QUADRA'TÁ (sc. Castra). 1. A Roman fort in Upper Pannonia, on the river Savas, between the towns of Noviodunum and Siscia. (It. Ant. pp. 260, 274; Geogr. Rav. iv. 19 ; Tab. Peut.) No remains appear to be extant, and the site accordingly is anknown.
2. A fort in Upper Pannonia, on the road hetween Arrabona and Carnuntum, not far from the banks of the Danube. (It. Ant. p. 247.) Muchar (Noricum, p. 264) identifies it with a place between Ovar and Oroszvar, now occupied by a large farm of Count Zitsi.
[L. S.]
QUADRA'TAE, a village or station in Gallia Cisalpina, on the road from Augusta Taurinorom to Ticinum. The Itineraries place it 22 or 23 miles from the former city and 16 or 19 from Rigomagus (Itin. Ant. pp. 340, 356; Itin. Hier. p. 557); but the latter station is itself of ancertain site. Quadratue must have been situated between Chicanso
and Crescentino, near the confluence of the Dora Baltea with the Po; but the exact site has not been determined. Though the name is not mentioned by any of the geographers, it would seem to have been in the later ages of the Empire a place or station of importance, as we learn from the Notitia that a body of troops (Sarmatae Gentiles) was permanently stationed there. (Notit. Lign. vol. ii. p. 121.)
[E. H. B.]
QUADRIBU'RGIUM. Ammianus Marcellinns (xviii. 2) mentions Quadriburgium among the fortresses on the Rhine which Julian repaired : "Civitates occupatae sunt septem. Castra Herculis, Quadriburgium, Tricesimae, Novesium, Bonna, Antunnacum et Bingio." There is however some corruption in the passage (note of Lindenbrog). The places seem to be mentioned in order from north to south. D'Anville conjectures that Quadriburgium is the same place as Burginatium [Burginaricm], following Cluver and Alting. (Ukert, Gallien, p. 528.) Other geographers conjecture solely from the resemblance of name that it may be Qualburg, not far from Cleve, which appears to have been a Roman place, for Roman coins and inscriptions have been found there.
[G. L.]
QUARIA'TES. [QUADLATES.]
QUARQUERNI, a people in Istria, of uncertain site. (Plin. iii. 19. s. 23.)

QUARQUERNI. [Querquerni.]
QUARTENSIS LOCUS, a place mentioned in the Not. Imp. as under the command of the governor of Belgica Secunda: "Praefectus classis Sainbricae in loco Quartensi sive Hornensi." The place seems to be Quarte on the Sambre, which keeps the ancient name. The word Quarte indicates a distance of iv. from some principal place, it being usual for chief towns to reckon distances along the roads which led from them to the limits of their territory. This principal place to which Quartensis belonged was Bagacum (Barai), and the distance from Quarte to Bavai is four Gallic leagues. The great Roman road from Durocortorum (Reims) to Bavai passed by Quarte. "Quartensis" is the adjective of a form "Quartus" or "Quarta," and Quarta occurs in an old record of the year 1125, "Altare de Quarta supra Sambram," which is the church of Quarte.
[G. L.]
QUERQUERNI (Plin. iii. 3. s. 4; Quarquerni, Inscr. ap. Gruter, p. 245. 2; Quacerni, Kоvакєрро', Ptol. ii. 6. §47), a people in the NW. of Hispania Tarraconensis, a subulivision of the Gallaeci Bracarii.

QUERQUE'TULA (Eth. Querquetulanus; Kop. кotounavós, Dionys.), an ancient city of Latium, mentioned only by Pliny among the populi Albenses. or extinct communities of Latium, and by Dionysius among the the Latin cities which constituted the league against Rome. (Illin. iii. 5. s. 9; Dionys.v. 61.) Neither passage affords the slightest clue to its position, and the name is not elsewhere mentioned; indeed, it seems certain that the place was not in existence at a later period. It is undoubtedly erroneous to connect (as Gell has done) the name of the Porta Querquetulana at Rome with this city (Becker, Hundbuch, vol. i. p. 170); and we are absolutely in the dark as to its position. It has been placed by Gell and Nibby at a place called Corcoilo, about 3 miles NE. of Gabii and the same distance from Hadrian's villa near Tivoli; but this is a mere conjecture. (Gell, Top. of Rome; p. 369; Nibby, Dintorni, vol. ii. p. 668.)
[E. H. B.]

## RABBATH-MOAB.

## QUINDA. [Anazarbes.]

QUINTA'NAE or AD QUINTA'NAS, a station on the Via Labicana or Latina, 15 miles from Rome, and at the foot of the hill occupied by the ancient city of Labicum, now La Colonna, from which it was about a mile distant. (Itin. Ant. p. 304 ; Gell, Top. of Rome, p. 5.) Under the Roman Empire it became the site of a village or suburb of Labicum, the inhabitants of which assumed the name of Lavicani Quintanenses. [LAвісем.]
[E.H. B.]
QUINTIA'NA CASTRA, $a$ fort in the east of Vindelicia, not far from the banks of the Danube, between Batava Castra and Augustana Castra. Its garrison consisted of a troop of Rhatian honemen. (It. Ant. p. 249; Notit. Imp., where it is called Quartana Castra ; comp. Eugipp. Vit S. Severini, 15, 27.) Muchar (Noricum, p. 285) identifies its site with that of the modern village of Künzen.

> [L.S.]

QUIZA (Koúi̧a, also Boúǐ̧a, Ptol. iv. 2. § 3), a place on the coast of Mauretania Caesariensis, called by Ptolemy a colonia, and in the Antonine Itinerary a municipium, but in Pliny designated as "Quiza Xenitana preregrinorum oppidum." It was situated between Portus Magnus and Arsenaria, at the distance of 40 stadia from either. It is the modern Giza near Oran. (Ptol. Lc. ; It. Ant. p. 13; Plin v. 2 ; Mela, i. 6.)

## R.*

RAAMAH. [Rhegma.]
RAAMSES ('Pa $1 \in \sigma \sigma \hat{\eta}$, L.XX., Exod. i. 11, xii. 37; Numb. xxxiii. 3, 5), was, according to D'Anville (Mém sur l'Egypte, p. 72), identical with Heroopolis in the Delta; but according to other writers (Jablonsky, Opusc. ii. p. 136; Winer, Bibl. Realwörterbuch, vol. ii. p. 351) the same as Heliopolis in the same division of Aegypt. [W.B.D.]

RABBATH-AMMON. [Phladelphia.]
RABBATH-MOAB, a town in the cuuntry of Moab, stated by Stephanus, who is followed by Reland, Raumer, Winer, and ather moderns, to be identical with Ar of Moab, the classical Areopolis. This identitication is almost certainly erroneous; and indeed it is very doubtful whether a Ribbath did exist at all in the country of Moab All the notices of such a name in the Bible are identified with Rabbath-Ammon, except in Joshua ( xiii. 25), where Aroer is said to be "before Rabbah," which may possibly be Rabbath-Ammon, and certainly cannot, in the absence of other ancient evidence, be admitted to prove the existerice of a Rabbath in Moab. There is, however, some evidence that such a town may have existed in that country, in the modern site of Rabba, marked in Zimmerman's map absout halfway between Kercuk (Kir of Moab) and the Mojeb (Arnon), and by him identified with Areopolis, which last, however, was certainly identical with Ar of Moab, and lay further north, on the south bank of the Arnon, and in the extreme border of Moab (Numb. xxi. 15, xxii. 36). [Areurolis.] Rabbu is placed by Burckhardt 3 bours north of Kerak (Syria, p. 377), and is doubtless the site noticed in Abulfeda's T'abula Syriue as Rabbath and Mab (90). Irby and Mangles

* For those articles not found under Ra-, Re-, Ri-, Scc., see Rha-, Ree-, Rhi-, \&c.

RAGAE.
RAMATHA.
691
passed it two hours north of Keral. "The ruins," they say, "are situated on an eminence, and present nothing of interest, except two old ruined Roman temples and some tombs. The whole circuit of the town does not seem to have exceeded a mile, which is a small extent for a city that was the capital of Moab, and which bore such a high-sounding Greek name." (Journal. June 5, p. 457.) They must not be held resporsible for the double error involved in the last cited words, regarding the etymology of the name Areopolis, and its identity with Rabbath, which are almont universal.
[G. W.]
RAGAE. [Rhagas.]
RAGANDO or RAGINDO, a town in the southeast of Noricum, on the great road leading from Celeis to Poetovium, between the rivers Sarus and Dravus. (It. Ant. p. 129; It. Hieros. p. 561 ; Tab. Peut.) Muchar (Noricum, p. 240) looks for its site near Mount Studenitz; but other gengraphers entertain different opiuions, and nothing certain can be said.
[L. S.]
RAGAU ('Payav̂, Isidor. Stathm. Parth. § 13), a town mentioned by Isidorus in the district of Parthis called Apararctene. It is probably the same place as the Ragaea of Ptolemy ('Payaia, ri. 5. §4). It is not clear whether there exist at present any remains of this town. but it must have been situated to the E. of Nishipur, between that town and Herát.
[V.]
pagirava. [Rapava.]
RAMAH ('Paud). 1. A city of the tribe of Benjamin, mentioned with Gibeon and Beeroth (Jask. x viii. 25), and elsewhere with Bethel, as in or near Mount Ephraim. (Judjes, iv. 5.) From xix. 13 of Judges it would appear to have been not far north of Jerusalem, and lying near to Gibeah of Berjamin. Being a border city between the kingdorns of Israel and Judah, it was furtified by Baasha king of Israel, "that he might not suffer any to go out or come in to Asa, king of Judal." (1 Kings, xv. 17, comp. xii. 27.) It is placed by Eusebius 6 miles north of Jerusalem, over against Bethel ( Omomash a. r.), and by S. Jerome 7 miles from Jerualem near Gabaa, and was a small village in his day. (Comment. in Hos. cap. v., in Sophon. cap. i.) Josephus places it 40 stadia from Jerusaiem. (Ant. viii. 12. §3.) Its site is still marked by the miserable village of Er-Rám, situated on a bill on the east of the Nablus road, 2 hours porth of Jerusalem, and half an hour west of Jeba', the ancient Gibeah. Its eituation is very commanding, and it retuins a few scattered relics of its ancient importance. (Robinson, Bill. Res. vol. ii. pp. 31.5, 316.)
2. See also Ramatha and Ramoth. [G. W.]

RAMATH-LEHI, or simply LEHI (translated in LXX. 'Avaipegis olaybvos), where Samson slew the Piulistines with the jaw-bone of an ass. (Judges, vv.14-19.) The name Ramleh appears so like an abbreviation or contraction - perhaps a corruption -of this name, that it may well be identitied as the scene of this slaughter. And here probably was the Harnah in the Thamnitic toparchy in which Easebius and S. Jerome found the Ramathaim Soplimen of Samuel, and the Arimathaes of the Evangelists, which they place near to Lydda in the plain. (S. Matth. $x \times v i i .57$; S. Mark. xv. 42; S. Luke, usiii. 50: S. John, xix. 38, 'Apıma日aía; Eusebius, Omomash s.v. Armatha Sophim ; S. Jerome, Epitaph. Paulae, p. 6i3.) Dr. Kobinson, indeed, controverts all these pusitions; bat his arguments cannot
prevail against the admitted facts, " that a place called Ramathem or Ramatha did anciently exist in this region, somewhere not far distant from I.ydia" (Bibl. Res. vol. iii. p. 40), and that no other place can be found answering to this description but Ramleh, which has been regarded from very early times as the place in question. The facts of Ramleh having been built by Suliman, son of the khalif Abd-el-Melik, after the destruction of Lydda in the early part of the 8th century, and that the Arabic name si,nifies "the sand," will not seriously militate against the hypotheses with those who consider the great probability that the khalif would fix on on ancient, but perhaps neglected, site for his new town, and the common practice of the Arabs to modify the ancient names, to which they would attach no ineaning. to similar sounds intelligible to them, and in this instance certainly not less appropriate than the ancient name; although the situation of the town " on a broad low swell in the sandy though fertile plain," would satisfy the condition required by its presumed ancient designation. (Bibl. Res. vol. iii. p. 25-43.) It may be questioned whether the nomus of Kamathem, mentioned with those of Apheirema and Lydda, as taken from Samaritis and added to Judaca ( 1 Maccab. xi. 34; Josephus, Ant. 2. § 3, 4. § 9), derived its name from this or from one of the other Ramahs, in Benjamin. [G. W.]

RAMATHA ('Pa $\mu a 8 d$ ), the form in which Josephus represents the name of Samuel's native city, Ramathaim Sophim (LXX. 'Apha日alı $\Sigma(\phi d)$ of Mount Ephraim (1 Sam. i. 1), perhape identical with Ramah, where was his ordinary residence (vii. 17, riii. 4, rix. 18-24, xxv. 1), but distinct from the Ramah above named. Ancient tradition has fixed this city at Neby Samecil, i. e. "The Prophet Samuel," a village situated on a very high and commanding hill, two hours to the NNW. of Jerusalem, where the place of his sepulture is shown. Eusebius and S. Jerome, however, found it in the western plain, near Lydda (Onomast. e. v. Armatha Sophim; see Ramati-Lehi). Dr. Robinson has stated his objections to the identification of Ramathain Sophim with Neby Samwil, and has endeavoured to fix the former much further to the south, on the hill called Sóba, a little to the south of the Jaffa road, about 3 hours from Jeru:alem; while Mr. Wolcott has carried it as far south as the ricinity of Hebron. (Robinson. Bibl. Res. vol. ii. pp. 139144, 330-334, Bibl Sacra, vol. i. pp. 44-52.) These objections are based on the hypothesis that the incidents attending Saul's unction to the kingdom, narrated in 1 Sam. ix. x., took place in Ramah of Samuel, of which, however, there is no evidence; and his difficulty would press almost with equal weight on Sóba, as the direct route from Sóba to Gibeah (Jeba') wonld certainly not have conducted Saul by Rachel's sepulchre. Neither can the district of Mount Ephraim be extended so far south. Indeed, this last seems to be the strongest objection to Neby Samuil, and suggests a site further north, perhaps Kam-Ullah, in the same parallel of latitude as the other Ramab and Bethel, which were certainly in Mount Ephraim. (Judges, iv. 5.) On the other hand, the name Ramah, signifying "a height," is so remarkably applicable to Nely Samvil, which is evidently the site of an ancient town, which could not, as Dr. Robinson suggests, have been Mizpah, that it would be difficult to find a position better suited to Ramathain Sophim than that which tradition has assigned it. [MizPar.] [G. W.]

Y Y 2

RAMATHAIM-ZOPHIM. [RABMTHA.]
RAMBA'ClA ('Pa 6 6aria, Arrian, Anab. vi. 21), a village of the Oritae, the first which was taken by Alexander the Great in his march westwards from the Indus. There can be no certainty as to its exact position, but the conjecture of Vincent seems well grounded that it is either the Ram-nagar or the Ram-gur of the Ayin Akbarí. (Vincent, Voyage of Nearchus, vol. i. p. 185.)
[V.]
RAME, a place in Gallia Narbonensis. which the Itins. fix on the road between Embrodunum (Embrun) and Brigantium (Briançon). D'Anville says that there is a place called Rame on this road near the Durance, on the same side as Embrun and Briançon, and at a point where a torrent named Biesse juins the Durance.
[G. L.]
RAMISTA or REMISTA, a place in Upper Pannonia, on the rad running aiong the river Sarus to Siscia (It. Mieros. p. 561; Geogr. Rav. iv. 19: Tab. Peut.) Its site has not yet been ascertained with certainty.
[L. S.]
RAMOTH, identical in signification with Ram and Ramah, equivalent in Hebrew to "an eminence," and bence a generic name for towns situated on remarkable heights, as so many in Palestine were. Beaides those above named [Ramah; Ramatha] was a Ramah in the tribe of Asher, not far from Tyre; and another in Naphthali (Josh. xix. 29, 36) in the north and a Ramath in the tribe of Simeon, appropriately called " Ramath of the Soath" (ver. 8.), to which David sent a share of the spoils of Ziklag ( 1 Sam. xxx. 27), and yet a Ramoth in Issachar, assigned to the Levites of the family of Gershom. (1 Chron. vi. 74.) More important than the furegoing was-
 city of the tribe of Gad, assigned as a city of refuge, first by Muses and subsequently by Jushua. (Deut. iv. 43; Josh. xx. 8, 'Ap $\quad$ úb日.) It was also a Levitical city of the family of Merari. (Josh. xxi. 38.) The Syrians took it from Ahab, who lost his life in seeking to recover it. (1 Kings, xx:ii.) Eusebius places it 15 miles west of Philadelphia (Onomast. s. v., where S . Jerome erroneously reads east: Reland, p. 966), in the Peraea, near the river Jabok. Its site is uncertain, and has not been recovered in modern times.
[G. W.]
RANILUM, a town in the interior of Thrace. (Tab. Peut.)
[T. H. D.]
RAPHANAEA ('Paфavaia), a maritine town of Syria, only once named by Jo-ephus, who states that the Sabbatic river flowed between Arcaea and Raphanaea. (B.J. vii. 5. § 1.) [Sabbaticus.]
[G. W.]
RAPHIA ('Paфla, 'Pd́фєıa), a maritime city in the extreme south of Palestine, between Gaza and Rhinocorura, a day's march from both, reckoned by Josephus, Polybius, and others, as the first city of Syria. (Joseph. B. J. iv. 11. § 5; Polyb. v. 80.) It was taken from the Egyptians by Alezander Jannaeus, and held by the Jews for some time. It was one of the ruined and depopulated cities restored by Gabinius. (Ant. xiii. $13 . \S 3,15$. § 4, xiv. 5. § 3.) It is mentioned also by Strabo (xvi. p. 759) and in the Itinerary of Antoninus, bet ween the abovenamed towns. Coins of Raphia still exist, and it was represented by its bishop in the council of Ephesns, and in those of Constantinople, A. D. 536 and 553. (Reland, s.v.pp. 967, 968; Le Quien, Oriens Christianus, vol. iii. pp. 629,630.) It was in the neighbourhood of this city that a great battle was fought

## RATIATUM.

between Ptolemy Philopator and Antiochus the Great, in which the latter was ronted with immense loss. (3 Maccab. i. 2; Polyb. v. 80, \&c.: Hieron. ad Dan. cap. xi.) Its site is still marked by the name Refah, and two ancient granite columns in situ, with several prostrate fragments, the remains apparently of a temple of considerable magnitude. (Irby and Mancles' Journal, October 8.) [G. W.]

RAPPIA'NA, a town on the river Margus in Miesia Superior, now Alexinitza. (Itin. Hieros p. 566.)
[T. H. D.]
RaI'RAUA ('Pdxpava, Marcian, Peripl. ii. § 32, ed. Müller), a small place on the coast of Gedroxia, between the river Arabis and the Portus Mulierum. It is probably the same as that called by Ptolengy Ragirava ('Paripaua, vi. 21. § 2). It may be doubted whether it can now be recognised, unless indeed the name has been preserved in that of Arabat, a bay in the immediate neighbourhood. (See Müller, ad Arrian. Indic. § 26.)
[V.]
RARA'PIA (Itin. Ant. p. 426, where the reading varies between Scalacia, Serapia, Sarapia. and Rarapia), a town of Lusitania, on the road from Oisonoba to Ebora, and 95 miles N. of the former place; now Ferreira. (Comp. Florez. Esp. Sagr. xiv. p. 202.)
[T. H. D.]
RARASSA ('Papdofa or 'Hpápara, Ptol. vii. 1. § 50), a place which Ptolemy calls the metropolis of the Caspeiraci in India intra Gangem. Its exact situation cannot be determined; but there can be no doubt that it was in Western India, not far from the Viulya Ms. Lassen places it a little S. of Ajmir.
[V.]
RA'SENA. [Etruria, pp. 855. 859.)
RATAE (Itin. Ant. pp. 477, 479: 'Pd́ce, Ptol. ii. 3. § 20, where some read 'Pdyc), a town of the Coritani in the interior of Britannia Romana, and on the road from London to Lincoln. It is called Ratecorion in the Geogr. Rav. (v. 31). Camden (p. 537) identifies it with Leicester. [T. H. D.]

RATA'NEUM (Plin. iii. 22. 8. 26; 'Paiturov, Dion Cass. Ivi. 11), a town of Dalmatia, which was burnt by its inhabitants, when it was taken by Germanicus in the reign of Augustus. (Dion Cass. l. c.)

Ratia'riA ('Putiapia, Procop. de Aed. iv. 6, p. 290 ; 'Parıapía Muō̂v, Ptol. iii. 9 § 4, viii. 11. § 5 ; 'Pa§apía, Hierocl. p. 655; 'Patnpia, Theophylact. i. 8; Ratiaris, Geogr. Kav. iv. 7), a considerable town in Moesia Superior on the Danube, and the head-quarters of a Roman legion; according to the Itinerary (p. 219), the Leg. xiv. Gemina, according to the Not. Imp. (c. 30). the Leg. xin. Gemina. It was also the station of a fleet on the Danube (ivid). Usually identified with Arzar-Palanca. [T.H.D.]

RATIA'TLM ('Patiatov), a town of the Pictones (Ptol. ii. 7.§ 6). Ptolemy mentions it before Limonum, and places it north of Limonum, and further west. Some editions of Ptolemy place Ratiatum in the territory of the Lemovices, but this is a mistake. In the records of a council held at Orleans in A.d. 511, the bishop of the Pictavi signs himself "de civitate Ratiatica." The name was preserved in that of the Pagus Ratiatensis, from which comes the modern name of Pays de Retz. Gregory of Tours speaks of Ratiatum as "infra terminum Pictavoram qui adjacet civitati Namneticae." The district of Retz was taken from the diocese of Poitiers and attached to the dioce:e of Nantes in the time of Charles the Bald. Belley (Mem. de liAcad. des Inscript. tom. xix. p. 729) fixes Ratiatum at the site of the two churches of St. Pierre and St. ( $1 p$.
pertume de Retz, which are near Machecorll and on the Tent, a small river in the department of $L a$ Vendée. The Tenu enters the sea near Bourgneuf, opposite to the Isle Noirmoutier (D'Anville, Notice, Gc.; Ukert, Gallien, p. 393).
[G. L.]

## RATOMAGUS. [Rotomagus.]

RAUDA ('Paída, Ptol. ii. 6. §50), a town of the Vaccaei in Hispania Tarraconensis, on the road from Asturica to Caesar Augusta (Itin. Ant. p. 440), now Roa, on the Douro. (Comp. Florez. Esp. Sagr. vii. p. 274.)
[T. H. D.]

## RaU'dil Campi. [Campi Raudir.]

Ravenna ('Paov́evza, Strab.; 'Pá $6 \in \nu v a$, Ptol. et al.: Eth. Ravennas -atis: Ravenna), one of the must important cities of Gallia Cispadana, situated a short distance from the sea-coast, at the southern extremity of the extensive range of marshes and lagunes, which occupied the whole coast of Venetia from thence to Altinum. (Strab. v. p. 213; Itin. Ant. p. 126.) It was 33 miles N. of Ariminuin. Though included within the limits of Cisalpine Gaul, according to the divisions established in the days of Strabo and Pliny, it does not appear to have ever been a Gauligh city. Strabo tells us that it was a Thessalian colony, which probably meant that it was a Pelasgic settlement, and was connected with the traditions that ascribed to the Pelasgi the foundation of the neighbouring city of Spina. [Spina.] Bat they subsequently, according to the same writer, received a body of Uinbrian colunists, in order to maintain themselves against the growing power of the Etruscans, and thus became an Umbrian city, to which people they continued to belong till they passed under the Roman government. (Strab. ₹. pp. 214, 217.) Pliny, on the other hand, calls it a Sabine city, - a strange statement, which we are wholly unable to explain. (Plin. iii. 15. 6. 20.) It seems probable that it was really an Uubrian settlement, and retained its national character, though surrounded by the Lingonian Gauls, until it received a Roman colony. No mention of the name is found in history till a late period of the Puman Republic, but it appears to have been then aiready a place of some consequence. In B. c. 82, during the civil wars of Marius and Sulla, it was occapied by Metellus, the lieutenant of the latter, who made it the point of departure from whence be carried on his operations. (Appian, B. C. i. 89.) Acrain it was one of the places which was frequently visitad by Caesar during his command in Gaul, for the purpose of raising levies, and communicating with his friends at Rome (Cic. ad Att. rii. 1, ad Fam. i. 9, viii. 1); and just before the outbreak of the Civil War it was there that he established his head-quarters; from whence he carried on negotiations with the senate, and from whence he ultimately set out on his march to Ariminum. (Id. ib. ii. 32; Caes. B. C. i. 5; Suet. Caes. 30; Appian, B. C. ii. 32.) Its name again figures repeatedly in the civil wars between Antony and Octavian, especially during the war of Perusia (Appian, B. C. iii. 42, 97, v. 33, 50, \&c.); and it is evident that it was already become one of the most important towns in this part of Cisalpine Gaul.
It is uncertain at what period Ravenna received a Roman colony. Strabo speaks of it as having in his time, as well as Ariminum, received a body of Reman colonists (v. p. 217); but the date is not mentioned, and it certainly did not, like Ariminum, pass into the condition of a regular Colonia, numerous inscriptions being extaut which give it the title

RAVENNA.
693
of a Manicipium. It is probable that the settlement alluded to by Strabo took place under Augustus, and it is certain that it was to that emperor that Ravenna was indebted for the importance which it subsequently enjoyed during the whole period of the Roman Empire. The situation of the city was very peculiar. It was surrounded on all sides by marshes, or rather lagunes, analogous to those which now surround the city of Venice, and was built, like that city, actually in the water, so that its honses and edifices were wholly constructed on piles, and it was intersected in all directions by canals, which were crossed either by bridges or ferries. The lagunes had a direct communication with the sea, so that the canals were scoured every day by the flux and reflux of the tides, - a circumstance to which Strabo attributes, no doubt with justice, the healthiness of the city, which must otherwise have been uninhabitable from malaria. (Strab. v. p. 213; Jornand. Get. 29 ; Sidon. Apoll. Epist. i. 5 ; Procop. B. G. i. 1; Claudian, de VI. Cons. Hon. 495.) The old city had a small port at the mouth of the river Bedesis, mentioned by Pliny as flowing under its walls (Plin. iii. 15. s. 20) ; but Augustus, having determined to make it the permanent station of his fleet in the Adriatic, constructed a new and spacious port, which is said to have been capable of containing 250 ships of war (Jornand. l.c.), and was furnished with a celebrated Pharos or lighthouse to mark its entrance. (Plin. xxxvi. 12. s. 18.) This port was near 3 miles distant from the old city, with which it was connected by a long causeway: a considerable town rapidly grew up around it, which came to be known by the name of Portcs Classis or simply Classis; while between the two, but nearer to the city, there arose another suburb, scarcely less extensive, which bore the name of Caesarea. (Jornand. l.c.; Sidon. Apoll. l. c.; Procop. B. G. ii. 29; Geogr. Rav. iv. 31.) In addition to these works Augustus constructed a canal, called from him the Fossa Augusta, by which a part of the waters of the Padus were carried in a deep artificial channel under the very walls of Ravenna and had their outlet at the port of Classis. (Plin. iii. 16. s. 20; Jornand. l. c.)

From this time Ravenna continued to be the permanent station of the Roman fleet which was destined to guard the Adriatic or Upper Sea, as Misenum was of that on the Lower (Tac. Ann. iv. 5, Hist. ii. 100, iii. 6, 40; Suet. Aug. 49 ; Veget. de R. Mil. v. 1 ; Not. Digm. ii. p. 118); and it rose rapidly into one of the most considerable cities of Italy. For the same reason it became an important military pnst, and was often selected by the emperors as their head-quarters, from which to watch or oppose the advance of their enemies into ltaly. In A. D. 193 it was occupied by Severus in his march upon Ronne against Didius Julian (Spartian, Did. Jul. 6 ; Dion Cass. lxxiii. 17) : and in 238 it was there that Pupienus was engaged in assembling an army to oppose the advance of Maximin when he received the news of the death of that emperor before Aquileia. (Herndian, viii. 6, 7; Capit. Maximin. 24, 25, Max. et Balb. 11, 12.) Its strong and secluded position also caused it to be selected as a frequent place of confinement for prisoners of distinction, such as the son of the German chieftain Arminius, and Maroboduus, chief of the Suevi. (Tac. Ann. i. 58, ii. 63; Suet. Tib. 20.) The same circumstances at a later period led to its selection by the feeble and timid Honorius as the place of his
residence: his example was followed by his successors; and from the year 404, when Honorins first established himself there, to the close of the Westers. Empire, Ravenna continued to be the permanent imperial residence and the place from whence all the laws and rescripts of the emperors were dated. (Jornand. Get. 29 ; Gibbon, c. 30.) Even before this period we are told that it was a very rich and populous city, as well as of great strength (Zosim. ii. 10): it was the capital of Picenum (as that name was then used) and the residence of the Consularis or govenor of that province. (Orell. Inscr. 3649; Böcking, ad Not. Dign. ii. pp. 359, 443.) But the establishment of the imperial court there naturally added greatly to its prosperity and splendour, while its inaccessible situation preserved it from the calamities which at this period laid waste so many cities of Italy. Yet Ravenna as a place of residence must always have had great disadvantages. Sidonius Apollinaris, who visited it late in the fifth centary, complains especially of the want of fresh water, us well as the muddiness of the canals, the swarms of guats, and the croaking of frogs. (Sidon. Apoll. Ep. i. 5, 8.) Martial, at a much earlier period, also alludes to the scarcity of fresh water, which he jestingly asserts was so dear that a cistern was a more valuable property than a vineyard. (Martial, iii. 56,57 .)

After the fall of the Western Einpire Ravenna continued to be the capital of the Gothic kings. Odoacer, who had taken refuge there after repeated defeats by Theodoric, held out for near three years, but was at length compelied to surrender. (Jornand. Get. 57 ; Cassiod. Chron. p. 649.) Theodoric himself established his residence there, and his example was followed by his successors, until, in 539, Vitiges was ufter a long siege compelled by famine to surrender the city to Belisarius. (Procop. B. G. ii. 28.29.) It now became the residence of the governors who ruled a part of Italy in the name of the Byzantine emperors, with the title of exarchs, whence the whole of this province came to be known as the Exarchate of Ravenna. The Byzantine governors were in a state of frequent hostility with the Lombard kings, and were gradually stripped of a large portion of their dominions; but Ravenna itself defied their arms for more than two centuries. It was besieged by Lintprand about 750, and its important suburb of Classis totally destroyed (P. Diac. vi. 49) ; but it was not till the reign of his successor Astolphus that Ravenna itself fell into the hands of the Lombards. But the exact date, as well as the circumstances of its final conquest, are uncertain. (Gibbon, c. 49.)

The situation of Ravenna at the present day presents no resemblance to that described by ancient writers. Yet there is no doubt that the modern city occupies the same site with the ancient one, and that the clange is wholly due to natural causes. The accumulation of alluvial deposits, brought down by the rivers and driven back by the waves and tides, has gradually tilled up the lagunes that surrounded and canals that intersected the city; and the modern Ravenna stands in a flat and fertile plain, at a distance of 4 miles from the sea, from which it is separated by a broad sandy tract, covered in great part with a beautiful forest of stone pines. Though Ravenna is one of the most interesting places in Italy for its mediaeval and early Christian antiquities, it presents few remains of the Roman period, and those for the most part belong to the
declining years of the Empire. A triamphal arch, known by the name of Porta Aurea, was destroyed in 1585: it stood near the modern gate called Porta Adriana. Several of the ancient basilicas date from the Roman period; as does also the sepulchral chapel containing the tomb of Galla Placidia, the sister of Honorius, and mother of Valentinian III. A portion of the palace of Theodoric still remains in its original state, and the mausoleum of that monarch, just without the walls, is a monument of remarkable character, though stripped of its external ornaments. An ancient brsilica, still called $S$. Apollinare in Classe, about 3 miles from the southern gate of the city, preserves the memory and marks the site of the ancient port and suburb of Classis; while another basilica, which subsisted down to the year 1553, bore the name of $S$. Lorenzo in Cesarea : and thus indicated the site of that important suburb. It stood about a quarter of a mile from the south gate of the city, between the walls and the bridge now called Ponte Nuoco. This bridge crosses the united streams of the Ronco and Mcntone, two amall rivers which previously held separate courses to the sea, but were united into one and confined within an artificial channel by Clement XII. in 1736. The Ronco, which ia the southernmost of the two, is probably the same with the Bedesis of Pliny; indeed Cluverius says that it was in his time still called Bedeso. Hence the Montone must be identified with the Vitis of the same author. The Anemo, which he places next in order, is clearly the same now called the Amone or Lamone, which flows under the walls of Faenza. (Plin. iii. 15. s. 20; Cluver. Ital. p. 300.)
The natural causes which have produced thees changes in the situation and environs of Ravenna were undoubtedly in operation from an early period. Already in the fifth century the original port constructed by Augustus was completely filled up, and occupied by orchards. (Jornand. Get. 29.) But Ravenna at that period had still a much frequented port, where the fleets of Belisarius and Narses could ride at anchor. The port of Classis itself is now separated from the sea by a strip of sandy and marshy plain about 2 miles broad, the greater part of which is occupied by a forest. of stone pines, which extends for many miles along the seacoast both to the S . and N. of Kavenna. The existence of this remarkable strip of forest is attested as early as the fifth century, the name of Pineta being already found in Jornandes, who tells us that Theodoric encamped there when he besieged Odoacer in Ravenna (Jornand. 57.) But it is probable that it has extended its boundaries and shifted its position as the land has gradually gained upon the sea.

The territory of Ravenna was always fortile, except the sandy strip adjoining the sea, and produced abundance of wine of good quality, but it was remarked that the vines quickly decayed. (Strab. $\mathbf{v}$. p. 214; Plin. xiv. 2. s. 4.) Its gardens also are noticed by Pliny as growing the finest asparagus, while the adjoining sea was noted for the excellence of its turbot. (Plin. ix. 54. 8. 79, xix. 4. \& 19.)
[E. H. B.]
RAVIUS ('Paobios, Ptol. ii. 2. § 4), a river on the W. coast of Hibernia, according to Camden (p. 1385) the Trobis. Others identify it with the Guebara
[T. H. D.]
RALIRACI, or RAURICI ('PaupLkoi). The form Raurici appears in I'tolemy (ii. 9. § 18), in Pliny (iv.
17), and in some inscriptions. Ptolemy mentions two towns of the Rauraci, Rauricorum Augusta and Argentovaria [Augusta Rauracorum; ArgenTarin]. Augusta is Augst near Bile, in the Swiss Canton of Baile, and Argentovaria may be Artzenkeim. The pasition of these places helps us to form a measure of the extent of the territory of the Rauraci, which may have nearly coincided with the bishupric of Balle.

The Rauraci joined the Helvetii in their emigration, b. c. 58. [Helvetil.]
[G. L.]
RALRANUM, in Gallia, is placed by the Table and the Antonine Itin. on a direct road from Medi.)lanum Santonum (Saintes) to Limonum (Poitiers). It is Raurana in the Table, but the name Kauranam occurs in a letter of Paulinus to Ausonius (E.p. IV. ad Auson. v. 249), who places it "Pictonicis in arvis." The place is Rom or Raum, near Chenay, nearly due south of Poitiers. (D'Anville, Nutice. ©c.; Ukert, Gallien, p. 392.) [G. L.]

RALRARIS. [Arauris.]
REA'TE ('Ped'te, Strab.; 'Pedros, Dionys. : Eth. 'Pearivos, Reatinus: Ricti), an ancient city of the Sabines, and one of the most corsiderable that beleniced to that people. It was situated on the Via Salaria, 48 miles from Rome (Itin. Ant. p. 306). and on the banks of the river Velinus. All writers agree in representing it as a very ancient city: according to one account, quoted by Dionysius from Zenodotus of Troezen, it was one of the original abujes of the Umbrians, from which they were expelled by the Pelasgi ; but Cato represented it as one of the first places occupied by the Sabines when they descended from the neighbourhood of Amiternum, their original abode. (Dionys. ii. 49.) Whatever authority Cato may have had for this statement, there seems no reason to doubt that it was substantiolly true. The fertile valley in which Reate was situated lay in the natural route of migration for a people descending from the highlands of the central Apeonines : and there is no doubt that both Reate and its neighbourhood were in historical times occupied by the Sabines. It was this migration of the Sabines that led to the expulsion of the Aborigines, who, according to Dionysius, previousls occupied this part of Italy, and whose ancient metropulis, Lista, was only 24 stadia from Reate. (Dionys. i. 14, ii. 49.) Silius Italicus appears to derive its name from Rhea, and calls it consecrated to the Mother of the Gods; but this is probably a mere pretical fancy. (Sil. Ital. viii. 415.) No mention of Reate occurs in history before the period when the Sabines had been subjected to the Roman rule, and admitted to the Roman Franchise (b. c. 290); bat its name is more than once incidentally noticed during the Second Punic War. In e. c. 211 Hannibal passed under its walls during his retreat from Kome, or, according to Coelius, during his advance apon that city (Liv. xxvi. 11); and in B. c. 205 the Reatini are specially mentioned as coming forward, in common with the other Sabines, to furnish volunteers to the armament of Scipio. (Id. xxviii. 45.) We are wholly ignorant of the reasons why it was reduced to the subordinate condition of a Praefectora, under which title it is repeatedly mentioned by Cicero, but we learn from the great orator himself, ander whose especial patronage the inhabitants were placed, that it was a flourishing and inportant town. (Cic. in Cat. iii. 2, pro Scaur. 2. § 27, de Nat Leor. ii. 2.) Under the Empire it certainly obthined the ordinary municipal privileges, and had
its own magistrates (Zumpt, de Col. pp. 98, 188 ; Gruter, Inscr. p. 354. 3, \&cc.): under Vespasian it received a considerable number of veteran soldiers as colonists, but did not obtain the rank or title of a Colonia. (Lib. Col. p. 257 ; Orell. Inscr. 3685 ; Gruter, Inscr. p. 538. 2 ; \&c.)

The territory of Reate included the whole of the lower valley of the Velinus, as far as the falls of that river; one of the most fertile, as well as beautiful, districts of Italy, whence it is called by Cicero the Reatine Tempe (ad Att. iv. 15.) But the peculiar natural character of this district was the means of involving the citizens in frequent disputes with their neighbours of Interamna. (Varr. R. R. iii. 2. § 3.) The valley of the Velinus below Reate, where the river ennerges from the narrow mountain valley through which it has hitherto flowed, and receives at the same time the waters of the Salto and $T u$ rano, both of them considerable streams, expends into a broad plain, not less than 5 or 6 miles in breadth, and almost perfectly level; so that the waters of the Velinus itself, and those of the smaller streams that flow into it, have a tendency to stagnate and form marshes, while in other places they give rise to a series of small lakes, remarkable for their picturesque beauty. The largest of these, now known as the Lago di Pie di Lugo, seems to have been the one designated in ancient times as the Lacus Velinus ; while the fertile plains which extended from Reate to its banks were known as the Rosei or more properly Roseae Campi, termed by Virgil the "Rosea rura Velini." (Virg. Aen. vii. 712; Cic. ad Att. iv. 15 ; Varro, R. R. i. 7. § 10, ii. 1. § 16 , iii. 2. § 10 ; Plin. xvii. 4. в. 3.) But this broad and level valley is at an elevation of near 1000 feet above that of the Nar, into which it pours its waters by an abrupt descent, a few miles above Interanna (Terni); and the stream of the Velinas must always have constituted in this part a natural cascade. Those waters, however, are so strongly impregnated with carbonate of lime, that they are continually forming an extensive deposit of travertine, and thus tending to block up their own chan. nel. The consequence was, that unless their course was artificially regulated, and their channel kept clear, the valley of the Velinus was inundated, while on the other hand, if these waters were carried off too rapidly into the Nar, the valley of that river and the territory of Interamna suffered the same fate. The first attempt to regulate the course of the Velinus artificially, of which we have any account, was made by M'. Curius Dentatus, after his conquest of the Sabines, when he carried off its waters by a deep cut througb the brow of the hill overlooking the Nar, and thus gave rise to the celebrated cascade now known as the Falls of Terni. (Cic. ad Att. iv. 15; Serv. ad Aer. vii. 712.) From the expressions of Cicero it would appear that the Lacus Velinus, previous to this time, occupied a much larger extent, and that a considerable part of the valley was then first reclaimed for cultivation.

But the expedient thus resorted to did not fully accomplish its object. In the time of Cicero (b. C. 54) fresh disputes arose between the citizens of Reate and those of Interamna ; and the former appealed to the grest orator himself as their patron, who pleaded their cause before the arbiters appointed by the Roman senate. On this occasion he visited Reate in person, and inspected the lakes and the channels of the Velinus. (Cic. pro Scaur, 2. § 27, ad $A t t$. iv. 15.) The result of the arbitration is
unknown : but in the reign of Tiberius the Reatines had to contend against a more formidable danger, arising from the project which had been suggested of blocking up the outlet of the Lacus Velinus altogether; a measure which, as they justly complained, would undoubtedly have inundated the whole valley. (Tac. Ann. i. 79.) Similar disputes and difficulties again arose in the middle ages ; and in A.D. 1400 a new channel was opened for the waters of the Velinus, which has continued in use ever since.

No other mention occurs of Reate under the Roman Empire; but inscriptions attest its continued municipal importance : its name is found in the Itineraries (Itin. Ant. p. 306), and it early became the see of a bishop, which it has continued ever since. Throughout the middle ages it was, as it still continues to be, the capital of the surrounding country. No ancient remains are now visible at Rieti.

The territory of Reate was famous in ancient times for its breed of mules and asses; the latter were particularly celebrated, and are said to have been sometimes sold for a price as high as 300,000 or even 400,000 sesterces (Varr. R.R. ii. 8. § 3 ; Plin. viii. 43. s. 68), though it is difficult not to suppose some error in these numbers. Hence, $Q$. Axius, a friend of Varro, who had a villa on the Lacus Velinus, and extensive possessions in the Reatine territory, is introduced by Varro in his dialogues De Re Rustica, as discoursing on the subject of breeding horses, mules, and asses. (Varr. R. R. ii. 1. §8; Strab. v. p. 228.) It was at the villa of this Q. Axius that Cicero lodged when he visited Reate. (Cic. ad Att. iv. 15.) The Septem Aquak, mentioned by him in the same passage, and alluded to also by Dionysius (i. 14), were evidently some springs or sources, which supplied one of the small lakes in the valley of the Velinus. [E. H. B.]

RECHIUS. [Bolbe.]
REDINTUINUM ('Pedivtoúvov), a town in the northern part of the country occupied by the Marcomanni (Bohemia), is mentioned only by Ptolemy (ii. 11. § 29). Some geographers regard it as having occupied the site of the modern Prague, and others identify it with Horziez; but nothing certain can be said about the inatter.
[L.S.]
RE'DONES ('Phסoves, 'Pytסoves), in the Celtogalatia Lugdunensis of Ptolemy (ii. 8. § 12), are placed by him west of the Senones and along the Liger. Their capital is Condate (Rennes). But the Redones were not on the Loire. Pliny (iv. 18) enumerates the Rhedones among the peoples of Gallia Lugdunensis: "Diablindi, Rhedones, Turones." After the bloody fight on the Sambre (B. c. 57) Caesar sent P. Crassus with a single legion into the country of the Veneti, Redones, and other Celtic tribes between the Seine and the Loire, all of whom submitted. (B. G. ii. 34.) Caesar here enumerates the Redones among the maritime states whose territory extends to the ocean. In B. c. 52 the Redones with their neighbours sent a contingent to attack Caesar during the siege of Alesia. In this passage also (B. G. vii. 75), the Redones are enumerated among the statey bordering on the ocoan, which in the Celtic language were called the Armoric States. D'Anville supposes that their territory extended beyond the limits of the diocese of Rennes into the dioceses of St. Malo and Dol. Their chief town, Rernes, is the capital of the department of Ille-et-Vilaine.
[G. L.]
REGANUM, a northern tributary of the Damube,
the modern Regen in Bavaria, is noticed only once. (Geogr. Rav. iv. 25.)
[L. S.]
RE'GIA ('Pyria, Ptol. ii. 2. § 10). 1. A place in the interior of Hibernia, no doubt so named by the Romans from its being a royal residence, the proper name of which was unknown to them. It was perhaps seated on the river Culmore, in the neighbourhood of Omagh.
2. ('ET'́pa 'Pjrla, Ptol. l.c.), another place of the same description, conjectured to have been on the river Dur.
3. Regia Carissa. [Carisa.] [T. H.D.]

REGIA'NA (called by Ptol. ii. 4. § 13, 'Phyuva; comp. Geogr. Rav. iv. 44, and Regina, Plin. iii. 3), a town of Baetica, on the road from Hipsalis to Emerita (Itin. Ant. p. 415.) Usually identified with Puebla de la Reyma, where there are Roman remains.
[T. H. D.]
REGIA'NUM ('Pryiavov, Ptol. iii. 10. § 10), a place on the Danube in Moesia Inferior. It is probably the same place as the Augusta of the Itinerary (p. 220; comp. Tab. Peut.) and the Aíyoüбrov of Procopius (de Aed. iv. 6); in which case it may be identified with Cotoszlin at the confluence of the Ogristul and Damube.
T. H. D.]

REGILLUM ('Pfri入入ov), a town of the Subines mentioned by several ancient writers as the place of residence of Atta or Attius Clansus, who migrated to Rome about B. C. 505, with a large body of clients and followers, where he adopted the name of Appius Claudius and became the founder of the Claudian tribe and family. (Liv. ii. 16; Dionys. v. 40 ; Suet. Tib. 1; Serr. ad Aen. vii. 706.) About 60 years afterwards C. Claudius, the uncle of the decemvir Appius Clandius, withdrew into retirement to Regillum, as the native place of his forefathers (" antiquain in patriam," Liv. iii. 58; Dionys. xi. 15). The name is not noticed on any other occasion, nor is it found in any of the geographers, and we are wholly without a clne to its pasition. [E. H. B.]

REGILLUS LACUS ( $\boldsymbol{\eta}{ }^{\prime} \mathrm{P} \eta \gamma(\lambda \lambda \eta \lambda i \mu \nu \eta$, Dionys. : Lago di Cormufelle), a small lake in Latium, at the foot of the Tusculan hills, celebrated for the great battle between the Romans and the Latins under C. Mamilius, in B. c. 496. (Liv. ii. 19; Diunys vi. 3; Cic. de Nat. 1). ii. 2, iii. 5; Plin. xxxiii. 2. s. 11 ; Val. Max. i. 8. § 1 ; Vict. Vir. Ill. 16; Flor. i. 11.) Hardly any event in the early Roman listory has been more disguised by poetical embellishment and fiction than the battle of Regiilus, and it is impossible to decide what amount of historical character may be attached to it: but there is no reason to doubt the existence of the lake, which was assigned as the scene of the combat. It is expressly described by Livy as situnted in the territory of Tusculum ("ad lacum Regillum in agro Tasculano," Liv. ii. 19) ; and this seems decisive against the identification of it with the small lake called Il Laghetto di Sta Prassede, about a mile to the N. of La Colonna; for this lake must have been in the territory of Labicum, if that cits be correctly placed at La colonna [Labicum], and at all events could hardly have been in that of Tusculum. Moreover, the site of this lake being close to the Via Labicana would more probably have been indicated by some reference to that high-road than by the vague phrase " in agro Tusculano." A mach more plausible suggestion is that of Gell, that it occupied the site of a volcanic crater, now drained of its waters, but which was certainly once occupied by a lake, at a place called Cornufelle, at the toot of the bill on whicis
stands the modern town of Frascati. This crater, which resembles that of Gabii on a much smaller scale, being not more than half a mile in diameter, was drained by an artificial emissary as late as the 17th century: but its existence seems to have been unknown to Cluverius and other early writers, who adopted the lake or pool near La Colomna for the Lake Regillus, on the express ground that there was no other in that neighbourhood. (Cluver. Ital. p. 946; Nibby, Dintorni, vol. iii. pp. 8-10; Gell, Top. of Rome, pp. 186, 371.) Extensive remains of a Ruman villa and baths may be traced on the ridge which bounds the crater, and an ancient road from Tuscalum to Labicum or Gabii passed close by it, so that the site must certainly lave been one well known in ancient times.
[E. H. B.]
REGINA. [Eigginus; Regiana.]
REGINEA, in Gallia Lugdumensis, is placed in the Table on a road from Condate (Rennes). The first station is Fanum Martis, and the next is Reginea, 39 Gallic leagues from Condate. D'Anville tixes Reginea at Eirquies on the coast, between S. Brienc and S. Malo. [Fancm Martis.] [G. L.]

REGINUM, a town in the northern part of Vindelicia. on the southern bank of the Danube, on the nod leading to Vindobona. This town, the modern Ratisbon, or Regensburg, is not mentioned by the Roman historians, but it was nevertheless an important frontier fortress, and, as we learn from inscriptions, was successively the station of the 1st, 3rd, and 4th Italian legions, and of a detachment of cavalry, the Ala II. Valeria. The town appears to have also been of great commercial importance, and th have contained among its inhabitants many Ro. man families of distinction. (It. Ant. p. 250; Tab. Peut, where it is called Castra Reyina: comp. Hayser, Ler Oberdonaukreis Bayerns, iii. p. 38, \&c.)
[L. S.]
IEGGIO, a town of Thrace on the river Bathynias, and not far from Constantinople (Itin. Hieros. p. 570), with a roadstead, and handsome country houses. (Agath. v. p. 146; comp. Procop. de Aed. iv. 8 : Theophan. p. 196.) Now KoutschukTzechekmetsche.
[T. H. D.]
REGIS VILLA ('Pryıбoúı入入a, Strab.), a place on the cosast of Etruria, which, according to Strabo, derised its name from its having been the restdence of the Pelasgic king or chief Maleas, who ruled over the neighbouring Pelasgi in this part of Etruria. (Strab. v. p. 225.) Nune of the other gevgraphers mentions the locality; but Strabo places it between Coks and Graviscae; and it is therefore in all proba. bility the same place which is called in the Maritime Itinerary Regar. and is placed 3 miles S . of the river Armenta (fiora) and 12 miles from Graviscae. (Itin. Harit. p. 499.) The site is now marked only by some projecting rocks called Le Murelle. (Dennis's Etruria, vol. i. p. 398; Westplal, Ann. d. Inst. 1830, p. 30.)
[E. H. B.]
REGISTLS or RESISTUS. [Bisanthe.]
RE'GIUM LE'PIDI or RE'GIUM LE'PIDUM
 EUh. Regiensis: Reggio), sometimes also called simply Leconm, a town of Gailia Cispadana, situated on the Via Aemilia, between Mutina and Parma, at the distance of 17 miles from the former and 18 from the latter city. (Itin. Ant. pp. 99, 127; Strab. v. p. 216.) We have no account of its foundation or oricin ; but the name would raise a presumption that it was founded, or at least settled and enlarged, by Aemilius Lepidus when he constracted the Aemi-
lian Way ; and this is confirned by a passage of Festus, from which it appears that it was originally called Forum Lepidi. (Fest. s. v. Rhegium, p. 270.) The origin of the appellation of Regium, which completely superseded the former name, is unknown. It did not become a colony like the neighbouring cities of Mutina and Parma, and evidently never rose to the same degree of opulence and prosperity as those cities, but became, nevertheless, a flourishing municipal town. It is repeatedly mentioned during the civil war with M. Antonius, both before and after the battle of Mutina (Cic. ad Fam. xi. 9, xii. 5) ; and at a somewhat earlier period it was there that M. Brutus, the father of the murderer of Caesar, was put to death by Pompey in B. c. 79. (Oros. v. 22; Plut. Pomp. 16.) Its name scarcely occurs in history during the Roman Empire ; but its municipal consideration is attested by inscriptions, and it is mentioned by all the geographers among the towns on the Via Aemilia, though ranked by Strabo with those of the second class. (Strab. v. p. 216; Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; Orell. Inscr. 3983, 4133 ; Tac. Hist. ii. 50 : Phlegon, Macrob. 1.) Ptulemy alone gives it the title of a Colonia, which is probably a mistake ; it was certainly not such in the time of Pliny, nor is it so designated in any extant inscription. Zumpt, however, supposes that it may have received a colony under Trajan or Hadrian. (Zumpt, de Colon. p. 403.) St. Ambroee notices Regium as well as Placentia and Mutina among the cities which had fallen into great decay before the close of the fourth century. (Ainbros. Ep. 39.) It was not long before this that an attempt had been made by the emperor Gratian to repair the desolation of this part of Italy by settling a body of Gothic captives in the territory of Regium, Parma, and the neighbouring cities. (Ammian. xxxi. 9. § 4.) The continued existence of Regium at a late period is proved by the Itineraries and Tabula (Itin. Ant. pp. 283, 287; Itin. Hier. p. 616; Tab. Peut.), and it is mentioned long after the fall of the Western Empire by Paulus Diaconus among the "locupletes urbes" of Aemilia. (P. Diac. Hist. Lang. ii. 18.) In the iniddle ages it rose to a great degree of prosperity, and Reggio is still a considerable town with about 16000 inhabitants. Its episcopal see dates from the fifth century.

The tract called the Camipi Macri, celebrated for the excellence of its wool, was apparently included in the territory of Regium Lepidum. [E. H. B.]

REGNI ('Pîpvoc, Ptol. ii. 3. § 28), a people on the S. coast of Britannia Romana, seated between the Cantii on the E. and the Belgae on the W, in the modern counties of Surrey and Sussex. Their chief town was Noviomagas. (Comp. Camdern, p. 179.)
[T. H. D.]
REGNUM, a town of the Belgae in the S. of Britannia Romana, and seemingly a place of some importance, since there was a particular road to it. (Itin. Ant. p. 477.) Camden (p. 133) identifies it with Ringnoood in Hampshire. Horsley, on the contrary (p. 441), conjectures it to have been Chichester; but, though Roman antiquities have been found at Chichester, its situation does not suit the distances given in the Itinerary. [T. H. D.]

REGU'LBIUM, a town of the Cantii on the E. coast of Britannia Romana, now Reculver. (Not. Imp.; comp. Camden, p. 236.)
[T. H. D.].
REHOB ('Poẃs, al.'Pad6, al. 'Ep $\subset$ '́'), a town in the tribe of Asher, occupied by the Canamites. (Josh. xix. 28 ; Judy. i. 31.) A secoud city of the

REHOBOTH.
same name is reckoned among the 22 cities of the saine tribe (Josh. xix. 30); but neither of these can be identified with the Rhoob ('Pow̄5) noticed by Eusebius, 4 miles distant from Scythopolis. [G.W.]

REHOBOTH (translated eijpuxwpla in LSX.), one of the wells dug by Isaac in the country of Gerar, - after Esek (contention) and Sitnah (hatred), - for which the herdsmen did not strive: so he called it Rehoboth: "And he said, For now the Lord hath made room for us, and we shall be fruitful in the land." (Gen. xxvi. 18, 20-22.) There was a town in the vicinity of the well, the traces of which were recovered, with the well itself, by Mr. Kowlands, in 1843. "About a quarter of an hour beyond Sebata, we came to the remains of what must have been a very well-built city, called now Rohébel. This is undoubtedly the ancient Rehoboth, where Abraham, and afterwards Isaac, digged a well. This lies, as Rehoboth did, in the land of Gerar. Outside the walls of the city is an ancient well of living and good water called Bir-Rohébeh. This most probably is the site, if not the well itself, digged by Isaac." (Willians's Holy City, vol. i. Appendix, i. p. 465.)
[G. W.]
REII APOLLINA'RES (Riez), in Gallia Narbonensis. Among the Opp.da Latina of Gallia Narbonensis, or those which had the Latinitas, Pliny (iii. c. 4) enunerates "Alebece Reiorum Apollinarium." The old reading, "Alebeceriorum Apollinarium," is a blunder made by joining two words together, which has been corrected from the better MSS., from the inscription col reior. apollinar., and from the Table, which has Reis Apollinaris. The place may have taken its name froru a temple of Apollo built after the town became Roman. The name Alebece may be corrupt, or it may be a variation of the form Albici or Albioeci. [Albici.] As Pling calls the place an Oppidum Latinum, we might suppose that it was made a Colunia after his time, but the name Col. Jul. Aug. Apollinar. Reior., which appears in an inscription, shows it to have been a colony of Augustus.

Riez is in the arrondissement of Digne in the department of Easses Alpes. There are four columns standing near the town, which may be the remains of a teinple. The bases and the capitals are marble: the shafts are a very hard granite, and about 18 feet high. There is also a small circular building consisting of eight columns resting on a basement, but it has been spoiled by modern hands. There now stands in it a rectangular altar of one block of white marble, which bears an inscription to the Mother of the Gods and the Great Goddess. At Riez there have been discovered an enormous quantity of fragments of granite columns; and it is said that there have been a circus and a theatre in the town. (Guide du Voyageur, Richard et Hocquart, p. ;92.)
[G. L.]
REMESIA'NA ('Pe $\mu \in \sigma\left\{\begin{array}{l}\text { a } \\ \text { a, }\end{array}\right.$ Hierocl. p. 654 ; called Romesiana in Tab. Peut. and in Geogr. Rav. iv. 7; 'Poumolaya in Prucopius, de Aed. iv. 1, p. 268, ed. Bonn), a town of Moesia Superior, between Naissus and Serdica. (Itin. Ant. p. 135.) Now Mustapha Pulanca.
[T. H. D.]
REMETODIA (called Remetodion in Geogr. Rav. iv. 7), a place in Muesia Superior on the Danube. (Tab. Peut.)
[T. H. D.]
REMI ('P $\eta \mu 0$ ), a people of Gallia Belgica (Ptol. ii. 9. § 12) along the Sequana (Seine). Their capital was Durocortorum (Reims). This is Ptoleury's description (ii. 9. § 12).

## REPHAIM VALLIS.

Caesar (B. G. ii. 3) says that the Remi were the nearest to the Celtae of all the Belgae, and he makes the Sequana and Matrona (Marne) the boundary between the Belgae and the Celtae. The Suessiones were the neighbours of the Remi. (B.G.ii. 12.) When Caesar had entered the country of the Remi from the south (в. c. 57), he came to the Axona (Aisne), which he says is on the borders of the Remi. Eight miles from the Aisne and worth of it was Bibrax, a town of the Remi. The Remi then extended as far north as the $A$ isne, and beyond it. Their capital, Durocortorum, is between the Aisme and the Marne.

When the Belgae in the beginning of в. c. 57 were collecting their forces to attack Caesar, the Remi were traitors to their country. They sabmitted to the Roman proconsul and offered to supply him with corn, to give hostages, to receive him in their towns and to help him against the rest of the Belgae and the Germans with all their power. (B. G. ii. 3.) The Suessiones who were in political union with the Remi joined the Belgae. When the great meeting of the Gallic states was held at Bibracte in B. c. 52 to raise troops to attack Caesar at Alesia, the Remi did not come, and they continued faithfal to Caesar. When Caesar entered Gallia in b. c. 58, the Aedui and the Sequani were the leading nations; but when the Sequani were humbled, the Kemi took their place, and those nations that did not like to attach themselves to the political party of the Aedui, joined the Remi. Thus the Aedui were the first of the Gallic political communities and the Remi were the second. (Caes. B. G. vi. 12.) Even the Carnutes, a Celtic people, had attached themselves to the Remi. (B.G. vi. 4.) Caesar rewarded the fidelity of the Remi by placing the Suessiones in dependence on them (viii. 6).

Pliny (iv. 17) mentions the Remi as one of the Foederati Populi of Belgica. When Strabo wrote (p. 194) the Remi were a penple in great favour with the Romans, and their city Durocortorum was the occusional residence of the Roman governors. [DUROCORTORUM.]

Lucan (Pharsal. i. 424) has a line on the Remi:-

## " Qptimus excusso Leucus Rhemusque lacerto."

But the military skill of the Remi is otherwise unknown. They were a cunning people, who looked after themselves and betrayed their neighbours.
[G. L.]
REPANDUNUM, a town of the Coritani in Britannia Romana, probably Repton in Derbyshire. (Not. Imp.: Cainden, p. 586.)
[T. H. D.]
REPHAIM VALLIS ( $\gamma \boldsymbol{\gamma}$ 'Paфatv, 'Euek 'Paфatv,
 valley mentioned in the north border of the tribe of Judah, the south of Benjamin (Josh. xv. 8, xviii. 18), in the vicinity of Jerusalem. It is translated "the valley of the giants" in the authorised version, except in 2 Sam. v. 18, 22, where we find that the valley of Rephaim was a favourite camping ground for the Philistines, soon after David had got possession of the stronghold of Sion ; and in Isaiah, xrii. 5, where it is represented as a fruitful corn-bearing tract of land, well answering to the wide valley, or rather plain, immediately south of the valley of Hinnom, traversed by the Bethlehem road, which is commonly identified by travellers as the "valley of the giants," although Eusebius places it in Benjamin (Onomast s. v.).

It evidently derived its name from the Rephaim，a family of the Amalekites（Gen．xiv．5）settled in Ashteroth Karnaim，supposed by Reland to be of the race of the Gephyraei，who came with Cadmus frmm Phoenicia to Greece．（Herod．v．57；Reland， Palaest．p．141，comp．pp．79，355．）The Philistines who are said to have encamped there may have bequeathed their name to the valley．［G．W．］

KEPHIDIM（＇Paфiбeiv），the eleventh encamp－ ment of the Israelites after leaving Egypt，the next before Sinai，＂where was no water for the people to drink．＂（Numb．xxxiii．14．）Moses was accord－ inglv instructed to smite the rock in Horeb，which yielded a supply for the needs of the people，from whone murnurings the place was named Massah and Meribah．Here also it was that the Israelites first eucountered the Amalekites，whom they dis－ comfited ；and here Moses received his father－in－law Jethrm．（Exod．xvii．）Its position，Dr．Robinson surmises，must have been at some point in Wady－esh－ Stitilh，not far from the skirts of Horeb（which he takes to be the name of the mountain district），and alout a day＇s march from the particular mountain of Sinai．Such a spot exists where Wady－esh－ Sheikh issues from the high central granite cliffs； which locality is more fully described by Burck－ harit，and Dr．Wilson，who agrees in the identiti－ cation，and names the range of rocky mountains Watciyah．He says that＂water from the rock in Horeb could easily flow to this place．＂（Rubinson， Bib．Res．vol．i．pp．178，179；Burckhardt，Travels in Syria．frc．p． 488 ；Wilson，Lands of the Bible， vol．i．p．254．）Dr．Lepsius controverts this posi－ tion and proposes El－Hessue，only a mile distant from the consent－mountain of Pharán，as the Ruphidin（＝＂the resting－place ${ }^{"}$ ）of the Exodus． This is at the foot of Gebel Serbal，which he regards as the mountain of the law，and finds the stream opened by Dloses＂in the clear－running and well－ flavoured spring of Wádi Fïrán，which irrigates the fertile soil of EL－Heasue，and causes it to exhibit all the riches of the gardens of Farín for the space of half a mile．＂（Lepsius，A Tour from Thebes to the Peninsula of Sinai，pp．74－82．）［G．W．］
RERIGO＇NIUM（＇Pepıroviov，Ptol．ii．3．§ 7），a town of the Novantae in the province of Valentia in the SW．part of Britannia Barbara，which seems to hare been seated at the S ．extremity of the Sinus Rerigonius（Joch Ryan）near Stanraer．Camden identifies it with Baryeny（p．1203）．［T．H．D．］
RERIGONIUS SINUS（＇Pepizúvios cú入тоs，Ptol． iii 3．§ 1），a bay in the country of the Novantae， 50 named from the town of Rerigonium（q．v．）． Now Loch Kyan，furmed by the Mull of Galloncay． （Horsley，p．375．）
Rtisaina．［Rhesaena．］
RESAPHA al．REZEPH（＇P $\eta \sigma \alpha \dot{\alpha} \phi$ ），a city of Syria，reckoned by Ptolemy to the district of Pal－ myrene（v．15．§ 24），the Risapa of the Peutinger Tables， 21 miles from Sure；probably identical with the Rossafat of Abulfeda（Tab．Syr．p．119），which he places near Raklia，not quite a day＇s journey from the Euphrates．It is supposed to be identical with the Rezeph of Scripture（＇Pa申ts，LXX．），taken by Neunacherib，king of Assyria，as he boasts in his insalting letter to Hezekiah．（2 Kings．xix．12．） It has been identified with Sergiopolis，apparently without sufficient reason．（Mannert，Geographie con Syrrien，p．413．）
［G．W．］
RtLUDIGNI，a German tribe on the right bank of the river Albis，and north of the Longobardi，
which may have derived its name from its inhabiting a marshy district，or from reed or ried．（Tac． Germ．40．）Various conjectures have been hazarded about their exact abodes and their name，which some have wished to change into Reudingi or Deuringi，so as to identify them with the later Thuringi；but all is uncertain．
［L．S．］
REVESSIO（＇Púefor），in Gallia，is the city of the Vellavi，or Velauni，as the name is written in Ptolemy（ii．7．§ 20）．Revessio is the name of the place in the Tiable．In the Not．Provinc．it is written Civitas Vellavorum．Mabillon has shown that the place called Civitas Vetula in the middle ares is S．Paulien or Paulhan，and the Civitas Vetula is suppesed to be the ancient capital of the Vellavi．S．Paulien is in the department of Haute Loire．north of Le Puy．
［G．L．］
KHA（＇Pâ тотанór，Ptol．v．9．§§ 12，17，19，21， vi．14．§§ 1，4；Amm．Marc．xxii．8．§ 28 ：＇Pôs， Agathem．ii．10：Volga）a river of Asiatic Sar－ matia，which according to Ptolemy（l．c．），the earliest geographer who had any accurate know－ ledge of this longest of European streams，had its twin suurces in the E．and W．extremities of the Hyperborean mountains，and discharged itself into the Hyrcanian sea．The affluents which Ptolemy （vi．14．§4）describes as falling into it from the Rhymmici Montes，and which must not be con－ founded with the river Rhymmus［Riymmus］，are the great accession made to the waters of the Volja by the Kama in the government of Kasan． Ammianus Marcellinus（l．c．）says that its banks were covered with the plant which bore the same name as the river－the＂rha＂or＂rheon＂ of Dioscorides（ $\rho \hat{a}, \beta \bar{\eta} o v$, iii．11）and＂rhacoma＂ of Pliny（xxvii．105），or officinal rhubarb．（Comp． Pereira，Mat．Med．vol．ii．pt．1．p．1343．） The old reading Rha in the text of Pomponius Mela（iii．5．§ 4）has been shown by Tzschucke （ad loc．）to be a mistake of the earlier editors，for which he substitutes Casius，a river of Albania． The Oarus（＂Oapos，Herod．iv．123，124），where， according to the story of the Scythian expedition， the erection of eight fortresses was supposed to mark the extreme point of the march of Dareins， has been identified by Klaproth，and Schafarik （Slav．Alt．vol．i．p．499）－who mentions that in the language of some tribes the Volga is still called＂Rhau＂－with that river．［E．B．J．］

RHAABE＇NI（＇Paa6nvoi），a people of Arabia Deserta，next to the Agabeni，who were on the con－ fines of Arabia Felix．（Ptol．v．19．§ 2．）Above them were the Masani；the Orcheni lay between them and the NW．extremity of the Persian Gulf． Mr．Forster justly remarks that＂the description of Ptolemy rather indicates the direction，than detines the positions，of these several tribes．＂（Geog．of Arabia，vol．ii．p．238．）
［G．W．j
RHA＇BDIUM（＇Pd88ıov，Procop．B．P．ii．19， de Aedif．ii．4），a strongly fortified beight，in an inaccessible part of Mesopotamia，two days＇journey from Dara in the direction of Persia．The works were placed on the brow of very steep rocks which overlook the surrounding country．Justinian added additional works to it．It has not been identified with any modern place．
［V．］

## RHACALA＇NI．［Roxolans．］

RHACATAE（＇Рак⿱㇒木⿴囗⿱一一儿立），a German tribe men－ tioned by Ptolemy（ii．11．§ 26）as occupying， together with the Teracatriae，the country on the south of the Quadi，on the frontiers of Pannonia；
but nothing further is known abuat either of tiem.

RHACOTIS. [AIEXANDREIA, p. 95.]
RHAEBA ('Pal6a, Ptol. ii. 2. § 10), a town in the interior of Hibernia, according to Camden (p. 1357) Rheban in Queen's County.
[T. H. D.]
RhaEDESTUS. [Bisanthe.]
RHAE"TEAE ('Paıtéal), a place in the Arcadian district of Cynuria, at the contluence of the Gortynius and Alpheius. (Paus. viii. 28. § 3.)
RHAETIA ('Pautia). The name of this country, as well as of its inhabitants, appears in ancient inscriptions invariably without the $h$, as Raetia and Raeti, while the MSS. of Latin authors commonly have the forms Rhaetia and Rhaeti,-a circumstance which goes far to show that the more correct spelling is without the $h$. Rhaetia was essentially an Alpine country, bordering in the north on Vindelicia, in the west on the territory inhabited by the Helvetii, in the south on the chain of the Alps from Mons Adula to Mons Ocra, which separated Rhaetia from Italy, and in the east on Noricum and Venetia; hence it comprised the modern Grisons, the Tyrol, and some of the northern parts of Lombardy. This country and its inhabitants did not attract much attention in ancient times until the reign of Augustus, who determined to reduce the Alpine tribes which had until then maintained their independence in the mountains. After a struggle of many years Rhaetia and several adjoining districts were conquered by Drusus and Tiberius, B. c. 15. Rhaetia, within the boundaries above described, seems then to have been constituted as a distinct prorince (Suet. Aug. 21 ; Vell. Pat. ii. 39; Liv. Epit. 136 ; Aurel. Vict. Epit. 1). Vindelicia, in the north of Rhaetia, must at that time likewise have been a separate province; but towards the end of the first century A. D. the two provinces appear united as one, under the name of Rhaetia, which accordingly, in this latter sense, extended in the north as far as the Danube and the Limes. At a still later period, in or shortly before the reign of Constantine, the two provinces were again divided, and ancient Rhaetia received the name Rhaetia Prima, its capital being called Curia Rhaetorum (Chur); while Vindelicia was called Rhaetia Secunda. The exact boundary line between the two is not accurately defined by the ancients, but it is highly probable that the Alpine chain extending from the Lake af Constance to the rirer Inn was the natural line of demarcation; it should, however, be observed that Ptolemy (ii. 12) includes under the name of Rhatia all the country west of the river Licus as far as the sources of the Danubius aud Phenus, while he applies the name of Vindelicia to the territory between the Licus and Oenus.

Ancient Khaetia or Rhaetis Proper was throughout an Alpine country, being traversed by the Alpes Rhaeticae and Mons Adula. It contained the sources of nearly all the Alpine rivers watering the north of Italy, such as the Addua, Sarius, Olbius, Cleusis, Mincius, and others; but the chief rivers of Khaetia itself were the Athesis with its tributary the Isargus (or Ilargus), and the Aenus or Oenus. The magnificent valleys formed by these rivers were fertile and well adapted to agricultural pursuits; but the inhabitants depended mainly upon their flocks (Strab. vii. p. 316). The chief produce of the valleys was wine, which was not at all inferior to that grown in Italy ; so that Augustus was particularly partial to it (Strab. iv. p. 206; Plin. xiv. 3, 5, 8; Virg. Georg. ii. 96 ; Colum. nii. 2 ; Marti:d, xiv. $1(10$; Suct. Aug. 77).

Besides this Rhaetia produced abundance of wax, noney, pitch, and cheese, in which considerable courmerce was carried on.

The ancient inhabitants of Rhaetia have in modern times attracted more than ordinary attention from their supposed connection with the ancient Etruscans. They are first mentioned by Polybius (xxxiv. 10; comp. Strab. iv. p. 204, vii. pp. 292, 313). According to tradition the Khaetians were Etruscans who had originally inhabited the plains of Lomberdy, but were compelled by the invading Gauls to quit their country and take refuge in the Alps, whereby they were cut off from their kinsmen, who remained in Italy and finally established themselves in Etrurin. (Justin, xx. 5; Plin. iii. 24; Steph. B. s. v. 'Pauroi.) This tradition derives some support from the fact recorded by Dionysius of Halicarnassus (i. 24) that the Etruscans in Etruria called themselves Rasena, which is believed to be only another form of the name Rhaeti. A decision of this question is the more difficult because at the time when the Romans conquered Rhaetia the bulk of its inhabitants were Celts, which in the course of a few centuries became entirely Romanised. But, assuming that the Rhseti were a branch of the Etruscan nation, it is not very likely that on the invasion of Italy by the Ganls they should have gone back to the Alps across which they had come into Italy; it seems much more probable to ruppose that the Etruscans in the Alps were a remnant of the nation left behind there at the tine when the Etruscans originally migrated into Italy. But, however this may be, the anxiety to obtain a key to the mysterious langaage of the Etruscans has led modern inquirers to search for it in the monntains and valleys of ancient Rhactia; for they reasonably assumed that, although the great body of the population in the time of Augustus consisted of Celts, who soon after their subjugation adopted the language of the conquerors, there may still exist some traces of its original inhabitants in the names of places, and even in the language of ordinary life. In the districts where the nation has remained purest, as in the valley of Enyadino and in the Grödnerthal, the language spoken at present is a corruption of Latin, the Romaunsh as it is called, intermixed with some Celtic and Gern:an elements, and a few words which are believed to be neither Celtic, nor German, nor Latin, and are therefure considered to be Etruscar. Several names of places also bear a strong resemblance to thuse of places in Etruria; and, lastly, a few ancient monuments have been discovered which are in some respects like those of Etruria. The first who, after many broad and unfounded assertions had been made, undertook a thorough investigation of these points, was L. Steub, who published the results of his inquiries in a work Uber die Urbeccolner Raetiens und ihren Zusammenhang mit den Etruskern, Munich, 1843, 8vo. A few years ago another scholar, Dr. W. Freund, during a residence in Rhaetia collected a vast number of facts, well calculated to throw light upon this obscure subject, but the results of his investigations bave not yet been published.

As to the history of the ancient Bliaetians, it has already been intimated that they became known 10 the Romans in the second century b. c. They were a wild, cunning, and rapacious mountain penyle, who indulged their propensity to rob and plunder even at the time when they were subject to Rome, and when their rulers had made a great road throuch their country into Noricum (Dion Cass. liv. 2\%;

Hor. Carm. iv. 14. 15). Like all mountaineers, they cherished great love of freedom, and fought aqainst the Romans with rage and despair, as we learn from Florus (iv. 12), who states that the Rhaetian women, who also took part in the war, after having spent their arrows, threw their own children in the faces of the Romans. Still, however, they were obliged to yield, and in B. C. 15 they were finally subdued, and their country was mado a Roman province. During the later period of the Empire their territory was almost entirely depopulated : but it somewhat recovered at the time when the Ostrogoths, under Theoduric, took possession of the country, and placed its administration into the hands of a Dax (Euipp. Vit. S. Severini, 29; Cassind. Var. iv. 4). After the death of Theoduric, the Bioioarii spread over Rhaetia and Noricum, and the river Licus became the boundary between the Alpmanni in Vindelicia, and the Boicarii in Rhaetia. (Egin. Vit. Carol. M. 11.) The more important among the various tribes mentioned in Rhaetia, such as the Lepontif, Viberi, Calucones, Vennones, Sarunetes, Isarci, Brixentes, Genauni, Thidestinl, and Euganei, are discussed in separate articies. Tridentum was the most important among tile few towns of the country; the others are known almost exclusively through the Itineraries, two roads having been made through Rhaetia by the Rumans, the one leading from Augusta Vindelicorum to Comum, and the other from the same town to Verona; Paulus Diaconus, however, mentions a few towns of the interior which were not situated on these high-roads, such as the town of Masa. winich was destroyed in the eighth century by the fall of a mountain, and the site of which is now occupied by the town of Meran.
[I. S.]
RHAGAE ('Payal, Arrian, Anab. iii. 30; Strab.
 Steph. B. e. v.: 'Pdrata, Ptol. vi. 5. § 4; Rhages, Tobit, i. 14: Eth. 'Parqubs), a great town of Media Magna. the capital of the province of Rhagiana, which is first known to us in history as the place to which the Jewish exiles were sent. (Tobit, i. 14, iv. 20, ix. 2.) It was situated in the eartern part of the country tuwards Parthia, one day's journey from the Pylae Caspiae (Arrian, Anab. iii. 20) and 10 days' march from Ecbatana (Hamadún). The name of the place is stated by Strabo to have been derived from the frequent earthquakes to which it bad been subject, but this is contrary to all probability (Strab. xi. p. 514); he adds, also, that, like many other places in the neighbourhood, it had been built (or rather rebuilt) by the Greeks ( p . 524). In later times it appears to have been rebuilt by Seleucus Nicator, who called it Europus. (Strab. l. c.) Still later it appears to have been a;ain rebuilt by one of the house of Arsaces, who named it in consequence Arsacia. (Strab. l. c.; Steph. B. s. 0.) In mudern times the ancient name has returned; and the ruins of Rhey. which have been visited and described by many travellers, no doubt represent the site of the ancient Rhagae. (Ker Porter, Travels, vol. i. p. 358.) Pliny mentions a town of Parthia, which he calls Apameia Rhagiane (vi. 14. § 17). Some geographers have contended that this is the same as Rhagae; but the inference is rather that it is not.

Mhagia'Na. [Rhagae.]
RHAMAE, a town in the interior of Thrace. (Itin. Hieros. p. 568.)

HHAMANil'TAE. 1. ('Pquavitai, Strab. xvi. p.
782), supposed by Mr. Fonster to lee identical with the Rhabanitae of Ptolemy ('Pa6avicaí, vi. 7. § 24), whom that gengrapher places under Mount Climax. He says "their common position, north of Mount Climax, concurs with the resemblance of the two names to argue the identity" (Geog. of Arabia, vol. i. p. 68, note) ; but it is by no means clear that the Rhamanitae lay near Mount Climax. All that Strabo says of them is, that Marsiaba, the limit of the expedition of Aelius Gallus, the siece of which he was forced to raise for want of water, lay in the country of the Rhamanitae; but nothing in geography is more difficult to determine than the situation of that town. [Marsyaba.]
2. A people of the same name is mentioned by Pliny, as existing on the Persian Gulf, identical with the Auariti of Ptolemy and the Eplmaranitae.
[G. W.]
RHAMIDAVA. [Dacta. p. 744, b.]
RHAMNUS. 1. ('Pa 1 voūs, oìvtos: Eth. 'Pa vov́aıos, fem. 'Paplovaía, 'Pa $\mu \nu o v a i s)$, a demus of Attica, belonging to the tribe Aeantis (Steph. B., Harpocr., Suid., s. v.), which derived its name from a thick prickly slirab, which still grows upon the
 The town stood upon the eastern coast of Attica, at the distance of 60 stadia from Marathon, and upon the road leading from the latter town to Oropus. (Paus. i. 33. § 2.) It is described by Scylax ( $p$. 21) as a fortified place; and it appears from a decree in Demosthenes (pro Cor. p. 238, Reiske) to have been regarded as one of the chief fortresses in Attica. It was still in existence in the time of Pliny ("Rhamnus pagus, locus Marathon,"iv. 7.s.11). Rhamnus was the birthplace of the orator Antipho [Dict. of Biogr. s. v.]; but it was chicfly celebrated in antiquity on account of its worship of Nemesis, who was hence called by the Latin prets Rhamnusia virgo and Rhamnusia dea. (Catull. Ixvi. 71 ; Cland. B. Get. 631 : Ov. Meh. iii. 406, Trist. v. 8. 9; Stat. Silv. iii. 5. § 5.) The temple of the goddess w:ts at a short distance from the town. (Paus.l.c.; comp. Strab. ix. p. 399.) It contained a celebrated statue of Nemesis, which, according to Pausanias, was the work of Pheidias, and was made by him out of a block of Parian marble, which the Persians had brought with them for the construction of a trophy. The statue was of colossal size, 10 cubits in height (Hesych. s. v.; Zenob. Prov. v. 82), and on its basis were several figures in relief. Other writers say that the statue was the work of Agoracritns of Parus, a disciple of Pheidias. (Strab. ix. p. 396; Plin. xxxvi. 5. s. 4. § 17, Sillig.) It was however a common opinion that Pheidias was the real author of the statue, but that he gave up the honour of the work to his favourite disciple. (Suid. s. v.; Zenob. l. c.; Tzetz. Chil. vii. 960.) Rhamnus stood in a small plain, 3 miles in length, which, like that of Marathon, was shut out from the rest of Attica by surrounding mountains. The town itself was situated upon a rocky peninsula. surmunded by the sea for two-thirds of its circumference, and connected by a narmw ridge with the mountains, which closely approach it on the land side. It is now called Ovrió-Kastro. ('O6pıb-Kaбтpo, a corruption of 'E6paubv-Kaotpov, Jews'-Castle, a name frequently applied in Greece to the ruins of Hellenic fortresses.) It was about half a mile in circuit, and its remains are considerable. The principal gate was situated upon the narrow ridge already mentioned, and is still preserved; and adjuining it is the southern wall,
about 20 feet in height. At the head of a narrow glen, which leads to the principal gate, stand the ruins of the temple of Nemesis upon a large artificial platform, supported by a wall of pure white marble. But we find upon this platform, which formed the $\tau \boldsymbol{f} \mu \in \nu=s$ or sacred enclosure, the remains of two temples, which are almost contiguous, and nearly though not quite parallel to each other. The larger building was a peripteral hexastyle, 71 feet long and 33 broad, with 12 columns on the side, and with a pronaus, cella, and posticum in the usual manner. The smaller temple was 31 feet long by 21 feet broad, and consisted only of a cella, with a portico containing two Doric columns in antis. Among the ruins of the larger temple are some fragments of a colossal statue, corresponding in size with that of the Rhamnusian Nemesis; but these fragments were made of Attic marble, and not of Parian stone as stated by Pausanias. It is, however, not improbable, as Leake has remarked, that the story of the block of stone brought by the Persians was a vulgar fable, or an invention of the priests of Nemesis by which Pausanias was deceived. Among the ruins of the smaller temple was found a fragment, wanting the head and shoulders, of a statue of the human size in the archaic style of the Aeginetan school. This statue is now in the British Museum. Judging from this statue, as well as from the diminutive size and ruder architecture of the smaller temple, the latter appears to have been the more ancient of the two. Hence it has been inferred that the smaller temple was anterior to the Persian War, and was destroyed by the Persians just before the battle of Marathon; and that the larger temple was erected in honour of the goddess, who had taken vengeance upon the insolence of the barbarians for outraging her worship. In front of the smaller temple are two chairs ( $\ddagger \rho \rho \delta 0$ ) of white marble, upon one of which is the inseription $\mathbf{N} \in \mu \in \sigma \in t$
 ミ'́áctparos à' $^{\prime} \theta \eta \kappa \in \nu$, which has led some to suppose that the smaller temple was dedicated to Themis. But it is more probable that both temples were dedicated to Nemenis, and that the smaller temple was in ruins before the larger was erected. A difficulty, however, arises about the time of the destruction of the smaller temple, from the fact that the forms of the letters and the long vowels in the inscriptions upon the chairs clearly show that those inscriptions belong to an era long subsequent to the battle of Marathon. Wordsworth considers it ridiculous to suppose that these chairs were dedicated in this temple after its destruction, and hence conjectures that the temple was destroyed towards the close of the Peloponnesian War by the Persian allies of Sparta. (Leake, Demi of Attica, p. 105, seq.. 2nd ed., Northern Greece, vol. ii. p. 434, seq.: Wordsworth, Athens ard Attica, p. 34, seq.; Unediled Antiquities of Attica, c. vi. p. 41 , seq.)
2. A harbour on the W. coast of Crete near the promontory Chersonesus. (Ptol. iii. 17. § 2.) Pling, on the contrary, places it in the interior of the island (iv. 12. s. 20).
mhapsil aETHIOLES. [Rharta.]
RHAPTA ( $\tau$ ' 'Ратт , Pwl.i. $9 . \S 1,14 . \S 4$; Peripl. Mar. Erythr. p. 10), was, according to the author of the Yeriplus, the most distant station of the Arabian trade with Aegypt, Acthiopia, and the purts of the Red Sea. Its correct lat. is $15^{\prime} 5^{\prime \prime}$. The name is derived from the peculiar boats in use there. These are termed by the natives dows
(daú), and, like the modern boats of Pata on the Mozambique coast, were frequently of 100 or 150 tons burden. But whether vessels of this size or merely canoes, all the craft at this part of the E . coast of Africa were formed of the hollowed trunks of trees and joined together by cords made of the filbres of the cocos instead of iron or wooden pins, and hence the Greeks gave them, and the harbour which they principally frequented, the name of "the sewed" ( $\tau$ d partá). Ptoleny speaks (i. 17. § 7, iv. 7. § 28, vii. 3. § 6, i. 17. § 12, \&c.) of a promontory Rhaptum, a river Rhaptus, and a tribe of Aethiopians named Rinapsin. All these may probably be referred to the immediate neighbourhood of the town Rhapta. since the emporium was doubtless the most striking object to the caravans trading there and to the Greek merchants accompanying the caravans. The promontory was one of the numerous bluffs or headlands that give to this portion of the E. coast of Africa the appearance of a saw, the shore-line being everywhere indented with sharp and short projections. The river was one of the many streams which are broad inland, but whose mouths, being barred with sand or coral reefs, are narrow and difficult to be discovered. This portion of the coast, indeed, from lat. $2^{\circ} \mathrm{S}$. to the month of the Govind, the modern appellation of the Rhaptus of Ptolemy and the Periplus. is bordered by coral reefs and islands, e.g. the Itundas and Jubah islands,-generally a league or even less from the mainland. Some of these islands are of considerable height; and throngh severul of them are arched apertures large enough to admit the passage of a boat. As the shore itself also is formed of a coral conglomerate, containing shells, madrepore, and sand, it is evident that there has been a gradual rising of the land and corresponding subsidence of the sea. The reefs also which have been formed on the main shore have affected materially the course of the rivers, - barring the mouths of many, among them the Rhaptus, and compelling others, e. g. the Webbé, to run obliquely in a direction parallel to the coast. Another result of the reefs has been that many rivers having no or insufficient outlets into the sen, have become marshes or shallow lakes; and, consequently, streams that in Ptolemy's age were correctly described as running into the ocean, are now meres severed from it by sand and ridges of coral.

Rhapta seems, from the account in the Periplus, to have been, not so much the name of a single town, as a generic term for numerous villages inhabited by the builders of the "seamed boats." These were probably situated nearly opposite the modern island of Pata; and whether it implies one or many places, Rhapta certainly was on the const of Azania. The Rhapsii Aethiopes are described in the Yeriplus as men of lofty stature; and in fact the natives of E. Africa, at the present day, are generally taller than the Arabs. Each village had its chief, but there was a principal shiekh or chicf to whom all were subject. This division into petty communities under a general head also still subists. In the first century B. c. the Rhapsii were held in subjection by the shiekh and people of Muza, whence came ships with Arab masters, and pilots who understood the language of the Rhapsii and were connected with them by intermarriage. The Arabs brought to Rhapta spear-heads, axes, knives, buttons, and beads; sometimes also wine and wheaten bread, not so much indeed for barter, as for presents to the

Rhapsian chiefs．From Rhapta they exported ivory （inferior to that of Adulis），tortoise－shell（the next best in quality to that of India），rhinoceros－horn， and nauplius（a shell probably used in dyeing）． These commercial features are nearly repeated at the present day in this region．The African still builds and mans the ship；the Arab is the navigator and supercargo．The ivory is still of inferior qua－ lity，being for the most part found in the woods， damaged by rain，or collected from animals drowned by the overflow of the rivers at the equinoxes．The hawksbill turtle is still captured in the neighbour－ hood of the river Govind，and on the shore opposite the island of Pata．（See Vincent，Voyage of Nearchus，vol．ii．pp．169－183；Cooley，Claudius Ptolemy and the Nile，pp．68－72．）［W．B．D．］

［L．S．］
RHEDONES．［Redones．］
RHE＇GIUM（＇P＇グүov：Eth．＇P $\eta$ रivos，Rheginus： Reggio），an important city of Magna Graecia，situ－ ated near the southern end of the Bruttian peninsula， on the E．side of the Sicilian straits，and almost directly opposite to Messana in Sicily．The distance between the two cities，in a direct line，is only about 6 geog ．miles，and the distance from Rhegium to the
nearest point of the island is somewhat less．There is no doubt that it was a Greek colony，and we have no account of any settlement previously existing on the site ；but the spot is said to have been marked by the tomb of Jocastus，one of the sons of Aeolus， （Heraclid．Polit．25．）The foundation of Rhegium is universally ascribed to the Chalcidians，who had， in a year of famine，consecrated a tenth part of their citizens to Apollo：and these，under the direction of the oracle at Delphi，proceeded to Rhegium，whither they were also invited by their Chalcidic brethren， who were already established at Zancle on the oppo－ site side of the strait．（Strab．vi．p．257；Heraclid． l．c．；Diod．xiv．40；Thuc．vi．4；Scymn．Ch．311．） With these Chalcidians were also united a body of Messenian exiles，who had been driven from their country at the beginning of the First Messenian War，and had established themselves for a time at Macistus．They were apparently not numerous，as Rhegium always continued to be considered a Chal－ cidic city；but they comprised many of the chief families in the new colony；so that，according to Strabo，the presiding magistrates of the city were always taken from among these Messenian citizens， down to the time of Anaxilas，who himself belonged to this dominant caste．（Strab．vi．p． 257 ；Paus．iv． 23．§ 6；Thuc．vi．4；Heraclid．l．c．1．）The date of the foundation of Rhegium is uncertain；the state－ ments just mentioned，which connect it with the First Messenian War would carry it back as far as the 8th century b．c．；but they leave the precise period uncertain．Pausanias considers it as founded after the end of the war，while Antiochus，who is cited by Strabo，seems to refer it to the beginning； but his expressions are not decisive，as we do not know how long the exiles may have remained at Macistus；and it is probable，on the whole，that we may consider it as taking place shortly after the close of the war，and therefore before $720 \mathrm{~B} . \mathrm{c}$ ． （Paus．l．c．；Antioch．ap．Strab．l．c．）．In this case it was probably the most ancient of all the Greek colonies in this part of Italy．Various etymologies of the name of Rheginm are given by ancient authors； the oue generally received，and adopted by Aeschylus （ap．Strab．l．c．），was that which derived it from the bursting asunder of the coasts of Sicily and Italy， which was generally ascribed to an earthquake． （Diod．iv．85；Justin．iv．1，\＆c．）Others absurdly connected it with the Latin regium（Strab．l．c．）， while Heraclides gives a totally different story，which derived the name from that of an indigenous hero． （Heraclid．Polit．25．）

There seems no doubt that Rhegium rose rapidly to be a flourishing and prosperous city ；but we know almost nothing of its history previous to the time of Anaxilas．The constitution，as we learn from He－ raclides，was aristocratic，the management of affairs resting wholly with a council or body of 1000 of the principal and wealthiest citizens．After the legis－ lation of Charondas at Catana，his laws were adopted by the Rhegians as well as by the other Chalcidic cities of Sicily．（Heraclid．l．c．；Arist．Pol．ii．12， v．12．）The Rhegians are mentioned as affording shelter to the fugitive Phocaeans，who had been driven from Corsica，previous to the foundation of Velia．（Herod．i．166，167．）According to Strabo they extended their dominion over many of the adjoining towns，but these could only have been small places，as we do not hear of any colonies of importance founded by the Rhegians；and their ter－ ritory extended only as far as the Halex on the E．，
where they adjoined the Locrian territory, while the Locrian colonies of Medina and Hipponium prevented their extension on the $\mathbf{N}$. Indeed, from the position of Rhegiun it seems to have always maintained closer relations with Sicily, and taken more part in the politics of that island than in those of the other Greek cities in Italy. Between the Rhegians and Locrians, hurrever, there appears to have been a constant spirit of enmity, which might be readily expected between two rival cities, such near neighbours, and belonging to different races. (Thuc.iv. 1,24.)

Rhegium appears to have participated largely in the politicul changes introduced by the Pythagoreans, and even becane, for a short time after the death of Pythagoras, the head-guarters of his sect (lambl. Vit. Pyth. 33, 130, 251); but the changes then introduced do not seem to have been permanent.

It was ander the reign of Anaxilas that Rheginm first rose to a degree of power far greater than it had previously attained. We have no account of the circumstances attending the eleration of that despot to power, an event which took place, according to Diodorus, in B. C. 494 (Diod. xi. 48); but we know that he belonged to one of the ancient Messenian families, and to the oligarchy which had previously ruled the state. (Strab. vi. p. 257 ; Paus. iv. 23. § 6; Arist. Pol. v. 12; Thuc. vi. 4.) Hence, when he made himself master of Zancle on the opposite side of the straits, he gave to that city the name of Messana, by which it was ever afterwards known. [Messana.] Anaxilas continued for some years ruler of both these cities, and thus was undisputed master of the Sicilian straits: still further to strengthen himself in this sovereignty, he fortified the rocky promontory of Scyllacum, and established a naval station there to guard the straits against the Tyrrhenian pirates. (Strab. vi. p. 257.) He meditated also the destruction of the neighbouring city of Locri, the perpetual rival and enemy of Rhegium, but was prevented from carrying out his purpose by the intervention of Hieron of Syracuse, who espoused the canse of the Locrians, and whose enmity Anaxilas did not choose to provoke. (Schol. ad Pind. Pyth. ii. 34.) One of his daughters was, indeed, married to the Syracusan despot, whose friendship he seems to have sought assiduously to cultivate.

Anaxilas enjoyed the reputation of one of the mildest and most equitable of the Sicilian rulers (Justin. iv. 2), and it is probable that Rhegium enjoyed great prosperity under his government. At his deatb, in B. c. 476, it passed without opposition under the rule of his two sons; but the government was administered during their minority by their gaardian Micythus, who reigned over both Rhegium and Messana for nine years with exemplary justice and moderation, and at the end of that time gave up the sovereignty into the hands of the two sons of Anaxilas. (Diod. xi. 48, 66: Herod. vii. 170; Justin. iv. 2: Macrob. Sat. i. 11.) These, however, did not hold it long: they were expelled in B.c. 461, the revolutions which at that time agitated the cities of Sicily having apparently extended to Rhegium also. (Dind. xi. 76.)

The government of Micythus was marked by one great disaster: in b. c. 473, the Rhegians, having sent an auxiliary force of 3000 men to assist the Tarentines ngainst the Iapygians, shared in the great defeat which they sustained on that occasion [Pabentum]; but the statcment of Diodorus that
the barbarians not only pursued the fugitives to th:e gates of Rhegium, but actually made themselves masters of the city, may be safely rejected as ineredible. (Diod. xi. 52; Herod. vii. 170; Grote's Hist of Greece, vol. r. p. 319.) A story told by Justin, that the Rhegians being agitated by domestic dissensions, a body of mercenaries, who were called in by one of the parties, drove out their opponents, ard then made themselves masters of the city by a general massacre of the remaining citizens (Justin, iv. 3). must be placed (if at all) shortly after the expulsion of the sons of Anaxilas; but the whole story has a very apocryphal air; it is not noticed by any other writer, and it is certain that the old Chalcidic citizens continued in possession of Rhegium down to a much later period.
We have very little iniormation as to the history of Rhegiun during the period which followed the expulsion of the despots; but it seems to have retained its liberty, in common with the neichbouring cities of Sicily, till it fell under the yoke of Dionysius. In b. c. 427, when the Athenians sent a fleet under Laches and Charoeades to support the Leontines against Syracuse, the Rhegians espoused the causo of the Chalcidic cities of Sicily, and not only allowed their city to be made the head-quarters of the Athenian flect, but themselves furnished a considerable auxiliary force. They were in consequence engaged in continual hostilities with the Locrians. (Divd. xii. 54 ; Thuc. iii. 86, iv. 1, 24, 25.) Bat they pursued a different course on occasion of the great Athenian expedition to Sicily in B.c. 415, when they refused to take any part in the contest; and they appear to have persevered in this neutrality to the end. (Diod. xiii. 3: Thuc. vi. 44, vii. 1,58 .)

It was not long after this that the increasing power of Dionysius of Syracuse, who had destroyed in succession the chief Chalcidic cities of Sicily, became a subject of alarm to the Rhegians; and in B. c. 399 they fitted out a fleet of 50 triremes, and an army of 6000 foot and 600 horse, to make war upon the despot. But the Messenians, who at first made common cause with them, having quickly abandoned the alliance, they were compelled to desist from the enterprise, and made peace with Dionysius. (Diod. xiv. 40.) The latter, who was meditating a great war with Carthage, was desirous to secure the friendship of the Rhegians; but his proposals of a matrimonial alliance were rejected with scorn; he in consequence concluded such an alliance with the Locrians, and became from this time the implacable enemy of the Rhegians. (Ib. 44, 107.) It was from hostility to the latter that he a fer years later (b.c. 394), after the destruction of Messana by the Carthaginians, restored and fortified that city, as a past to command the straits, and from which to carry on his enterprises in Southern Italy. The Rhegians in vain sought to forestal him; they made an unsuccessful attack upon Messana, and were foiled in their atteinpt to establish a colony of Naxians at Mrlae. as a post of offence against the Messenians. ( Ib .87 .) The next year-Dionysius, in his turn, made a sudden attack on Rhegium itself, but did not succeed in surprising the city; and after ravaging its territory, was compelled to draw off his forces. (Ib.90.) But in B.C. 390 he resumed the design on a larger scale, and laid regular siege to the city with a force of 20,000 foot, 1000 horse, and a fleet of 120 triremes. The Rhegians, however, opposed a vigorous resistance: the fleet of Dionysins suffered severely from a storm, and the approach of winter at length compelied him

RHEGIUM.
RIIEGIUM.
705
to abandon the siege. (Ib.100.) The next year (b.c. 389) his great victory over the confederate forces of the Italiot Greeks at the river Helorus left him at liberty to pmsecute his designs against Rhegium without opposition: the Rhegians in vain endearoured to avert the danger by sabmitting to $a$ tribute of 300 talents, and by surrendering all their ships, 70 in namber. By these conce.siuns they obtained only a precarions truce, which Dionysius found a pretext fur breaking the very uext year, and laid siege to the city with all his forces. The Rhegians, under the command of a general named Phyton, made a desperate resistance, and were enabled to prolong their defence for eleven months, but were at length compeiled to surrender, after having suffered the utmost extremities of famine (B.c. 387). The surviving inhabitants were sold as slaves, their general Phyton put to an ignominions death, and the city itself totally destroved. (Diod. xiv. 106-108, 111, 112; Strab. vi. p. 258; Pseud.-Arist. Oecon. ii. 21.)

There is no doubt that Rhegium never fully recovered this great calamity; but so important a site could not long remain unoccupied. The younger Dionysius partially restored the city, to which he gare the name of Phoebias, but the old name soon again prevailed. (Strab. l.c.) It was occupied with a garrison by the despot, but in B.c. 351 it was besieged and taken by the Syracusan commanders Leptines and Callippus, the garrison driven out, and the citizens restored to independence. (Diod. xvi. 45.) Hence they were, a few years later (в. c. 345), among the foremost to promise their assistance to Timoleon, who halted at Rhegium on his way to Sicily, and from thence, eluding the vigilance of the Carthaginians by a stratagem, crossed over to Tauromenium. (Diod. xvi. 66, 68; Plut. Timol. 9, 10.) From this time we hear no more of Rhegium, till the arrival of Pyrrhus in Italy (B. c. 280), when it again became the scene of a memorable catastrophe. The Rhegians on that occasion, viewing with apprehension the progress of the king of Epirus, and distrusting the Carthaginians, had recourse to the Roman alliance, and received into their city as a garrison, a body of Campanian troops, 4000 in number, under the command of an officer named Decius. But these troops had not been long in posseesion of the city when they were tempted to follow the example of their countrymen, the Mamertines, on the other side of the strait; and they took advantage of an alleged attempt at defection on the part of the Rhegians, to make a promiscuous massacre of the male citizens, while they reduced the women aod children to slavery, and established themselves in the sole occupation of the town. (Pol. i. 7; Oros. ir. 3; Appian, Samnit. iii. 9 ; Diod. xxii. Exc. $\boldsymbol{H}$. p. 494, Exc. Vales, P. 562 ; Dion Cass. Fr. 40. 7; Strab. v. p. 258.) The Romans were unable to ponish thein for this act of treachery so long as they were occupied with the war against Pyrrhus; and the Campanians for sonie years continued to reap the benefit of their crime. But as soon as Pyrrhus had finally withdrawn from Italy, the Romans turned their arms against their rebellious soldiers; and in B. c. 270, being actively supported by Hieron of Scracuse, the consul Genucius succeeded in reducing Rhegium by force, though not till after a long siege. Great part of the Campanians perished in the defence; the rest were executed by order of the Roman people. (Pol. i. 6, 7; Oros. iv. 3; Dionys. Fr. Mai. xix. 1, xx. 7.)
vor. 1.

Rhegium was now restored to the survivors of its former inhabitants (Pol. i. 7; Liv. xxxi. 31; Appian, l. c.); but it mast have suffered severely, and dues not seem to have again recorered its former prosperity. Its name is hardly mentioned daring the First Punic War, but in the second the citizens distinguished themselves by their fidelity to the Roman cause, and repeated attempts of Hannibal to make bimself master of the city were uniformly repnlsed. (Liv. xxiii. 30, xxiv. 1. xxvi. 12, xxix. 6.) From this time the name of Rhegium is rarely mentioned in history under the Roman Republic; but we learn from sereral incidental notices that it continued to enjoy its own laws and nominal liberty as a "foederata civitas," though bound, in common with other cities in the same condition, to furnish an auxiliary naval contingertt as often as required. (Liv. xxxi. 31, xxxv. 16, xxxvi. 42.) It was not till after the Social War that the Rhegians, like the other Greek cities of Italy, passed into the condition of Roman citizens, and Rhegium itself became a Roman Municipium. (Cic. Verr. iv. 60, Phil i. 3, pro Arch. 3.) Shortly before this (в. с. 91) the city had suffered severely from an earthquake, whick had destroyed a large part of it (Strab. ri. p. 258; Jul. Obseq. 114); but it seems to have, in great measure, recovered from this calamity, and is men tioned by Appian towards the close of the Republic as one of the eighteen flourishing cities of Italy, which were promised by the Triumvirs to their veterans as a reward for their services. (Appian, B.C. iv. 3.) Rhegium, however, had the goud fortune to escape on this occasion by the personal favour of Octavian (Ib. 86); and during the war which followed between him and Sextus Pompeius, B. c. 38-36, it became one of the most important posts, which was often made by Octavian the headquarters both of his fleet and army. (Strab. vi. p. 258; Appian, B. C. v. 81, 84; Dion Cass. xlviii. 18,47.) To reward the Rhegians for their services on this occasion. Augustus increased the population, which was in a declining state, by the addition of a body of new colonists; but the old inhabitants were not expelled, nor did the city assume the title of a Colonia, though it adopted, in gratitude to Augustus, the name of Rhegium Julium. (Strab. l.c.; Ptol. iii. 1. §9; Orell. Inscr. 3838.) In the time of Strabo it was a populous and flourishing place, and was one of the few cities which, like Neapolis and Tarentum, still preserved some remains of its Greek civilisation. (Strab. vi. pp. 253, 259.) Traces of this may be observed also in inscriptions, some of which, of the period of the Roman Empire, present a curious mixture of Greek and Latin, while others have the names of Roman magistrates, though the inscriptions themselves are in Greek. (Morisani, Inscr. Reginae, 4to. Neap. 1770, pp. 83, 126, \&c. ; Boeckh, C. I. 5760-5768.)
Its favourable situation and its importance, as commanding the passage of the Sicilian straits, preserved Rhegium from falling into the same state of decay as many other cities in the south of Italy. It continued to exist as a considerable city throughout the period of the Roman Empire (Plin. iii. 5. s. 10; Ptol. l. c. ; Itin. Ant pp. 112, 115, 490), and was the termination of the great highway which led through the southern peninsula of Italy, and formed the customary mode of communication with Sicily. In A. d. 410 Rhegium became the limit of the progress of Alaric, who after the capture of Rome advanced through Campania, Lucania,
and Bruttium, laying waste those provinces on his march, and made himself master of Rhegium, from whence he tried to cross over into Sicily, but, being frustrated in this attempt, retraced his steps as far as Consentia, where he died. (Hist. Miscell. xiii. p. 535.) Somewhat later it is described by Cassiodorus as still a flourishing place (Var. xii. 14), and was still one of the chief cities of Bruttium in the days of Paulus Diaconus. (Hist. Lang. ii. 17.) Daring the Gothic wars after the fall of the Western Empire, Rhegiun bears a considerable part, and was a strong fortress, but it was taken by Totila in A.D. 549, previous to his expedition to Sicily. (Procop. B. G. i. 8, iii. 18, 37, 38.) It subsequently fell again into the bands of the Greek emperors, and continued subject to them, with the exception of a short period when it was occupied by the Saracens, until it passed under the dominion of Robert Guiscard in A. D. 1060. The modern city of Reggio is still a considerable place, with a population of about 10,000 souls, and is the capital of the province of Calabria Ultra; but it has suffered severely in modern times from earthquakes, having been almost entirely destroyed in 1783, and again in great part overthrown in 1841. It has no remains of antiquity, except a few inscriptions, but numerous coins, urns, mosaics, and other ancient relics have been brought to light by excavations.

Rhegium was celebrated in antiquity as the birthplace of the lyric poet Ibycus, as well as that of Lycus the historian, the father of Lycophron. (Suid. s. v. ${ }^{*}$ "1evoos ; Id.s. $v$. ^úкos.) It gave birth also to the celebrated sculptor Pythagoras (Diog. Laërt. viii. 1. § 47; Paus. vi. 4. §4); and to several of the minor Pythagorean philosophers, whose names are enumerated by Iamblichus (Vit. Pyth. 267), but none of these are of much note. Its territory was fertile, and noted for the excellence of its wines, which were especially esteemed for their salubrity. (Athen. i. p. 26.) Cassiodorus describes it as well adapted for vines and olives, but not suited to corn. (Var. xii. 14.) Another production in which it excelled was its breed of mules, so that Anaxilas the despot was repeatedly victor at the Olympic games with the chariot drawn by mules ( $\dot{\alpha} \pi \dot{\eta} \nu \eta$ ), and his son Leophron obtained the same distinction. One of these victories was celebrated by Simonides. (Heraclid. Polit. 25 ; Athen. i. p. 3 ; Pollux, Onomast. v. 75. )

Rhegium itself was, as alrendy mentioned, the ternination of the line of high road which traversed the whole length of Southern Italy from Capua to the Sicilian strait, and was first constructed by the praetor Popilius in B. c. 134. (Orell. Inscr. 3308; Mommsen, Inscr. R. N. 6276; Ritschel, Mon. Epigr. pp. 11, 12.) But the most frequented place of passage for crossing the strait to Messana was, in ancient as well as in modern times, not at Rhegium it eelf, but at a spot about 9 miles further N., which was marked by a column, and thence known by the name of Columna Rhegina. (Itin. Ant. pp. 98, 106, 111 ; Plin. iii. 5. s. $10 ;{ }^{\dagger}{ }^{'} \mathrm{P} \eta \gamma{ }^{\prime}(\nu \omega \nu \quad \sigma \tau u \lambda i s$, Strab. v. p. 257.) The distance of this from Rhegium is given both by Pliny and Strabo at $12 \frac{1}{2}$ miles or 100 stadia, and the latter places it only 6 stadia from the promontory of Caenys or Punta del Pezzo. It mnst therefore have been situated in the neighbourhood of the modern village of Villa San Giovanni, which is still the most usual place of passage. But the distance from Rhegium is overstated by both geographers, the Punta del Pezzo itself being less
than 10 miles from Reggio. On the other hand the inscription of La Polla (Forum Popilii) gives the distance from the place of passage, which it designates as "Ad Statuam," at only 6 miles. (Mommsen, Inscr. R.N. 6276.) Yet it is probable that the spot meant is really the same in both cases, as from the strong current in the straits the place of embarkation must always have been nearly the same.

RHENUS ('P $\hat{\eta}$ yos), one of the largest rivers in Europe, is not so long as the Danube, but as a commercial channel it is the first of European rivers, and as a political boundary it has been both in ancient and modern times the most important frontier in Europe. The Rhine rises in the mountains which belong to the group of the St. Gothard in Switzerland, about $46^{\circ} 30^{\prime} \mathrm{N}$. lat. There are three branches. The Vorder-Rhein and the Mittel-Rhein meet at Dissentis, which is only a few miles from their respective sources. The united stream has an east by north course to Reichenau, where it is joined by the Hinter-Rhein. At Chur (Curia), which is below the junction of the Hinter-Rhein, the river becomes navigable and has a general northern course to the Bodensee or Lake of Constanz, the Lacus Brigantinus or Venetus. This lake consists of two parts, of which the western part or Untersee, is about 30 feet lower than the chief part, called the Lake of Constanz. The course of the Rhine from the Untersee is westward, and it is navigable as far as the falls of Schafficuusen, which are not mentioned by any of the ancient geographers. It is interrupted by a smaller fall at Laufenburg, and there is a rapid near Rheinfclden, 10 miles below Laufenburg. The course is still west to

Barle (Basilia), where the Rhine is abont 800 feet ab we the sea, and here we may fix the termination of the Upper Khine. The drainage of all that part of Switzerland which lies north of the Lake of Gencra and the Bernese Alps is carried to the Rhine by the Aar, which joins it on the left bank at Coblenz, one of the Roman Confluentes.

From Basle the Rhine has a general north course to Bonn, where it enters the low country which forms a part of the great plain of Northern Europe. This may be called the Middle Rhine. In this part of its course the river receives few streams on the left bank. The chief river is the Mosel (Mosella), which juins it at Coblenz (Confluentes). On the right bank it is joined by the Nechiar (Nicer), the Main (Muenus), which joins it at Mainz (Moguntiacnm), and the Lahn (Laugana), which joins it at Niederlahnstein.

Below Bonn the river has still a general north course past Cologne (Colonia Agrippinensis) as far as Wesed, where it is joined on the right bank by the Lippe (Luppia), and higher up by the Roer or Ruhr (hura). Between Cologne and Wesel it is joined on the west side by the Erft. From Wesel its course is NW. and then west to Pannerden in the kingdom of the Netherlands. At Pannerden it divides into two branches, of which the southern is called the Wual (Vuhalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Maus (Misa). The Maas itself divides several times after its junction with the Waal. The main branch is joined on the right side by the Leck. a branch which comes from the Rhine Proper at Wyck by Inurstede, and flows past Ritterdam into the North Secu.

The Rhine, which was divided at Pannerden, rons north to Arnheim (Arenacuin), above which town it communicates with the Yssel at Doesburg by a chaonel which is supposed to be the Forss Drusiana, the canal of Drusus. [Fievo Lacts.] The Yssel runs north from Doesburg to the Zuider Zee, which it enters on the east side below the town of Kampen. The Rhine runs westward from Arnheim, and at Wyck by Duurstede, as already said, sends off the branch called the Leck, which joins the Maas. The Rhine divides again at Etrecht (Trajectum) : one branch called the Vecht rans northward into the Zuider Zee; the other, the Rhine, or Old Rhine, continues its course with diminished volume, and passing by Leiden enters the North Sea at Katwoyck. The whole course of the Rhine is estimated at about 950 miles.

The delta of the Rhine lies between the Yssel, which flows into the Zuider Zee, and the Mans, if we look at it simply as determined by mere boundaries. But all this surface is not allurial ground, for the eastern part of the province of Utrecht and that part of Guelderland which is between the Phine, the Zuider Zee, and the Yssel contains small elerations which are not alluvial.

This description of the Rhine is necessary in order to understand what the ancient writers have said of it.

The first description of the Rhine that we possess from any grod authority is Caesar's, though he had nut seen much of it. He says (B.G. iv. 15) that it rises in the Alpine regions of the Lepontii, and puses in a long course along the boundaries of the Nantnates, Helvetii, Sequani, Mediomatrici, Triboci, and Treviri, in a rapid course. The name Nantuates
is corrupt [Nantuates]. If we make the limits of the Treviri extend nearly to the Netherlands or the commencement of the low country, Caesar has shown pretty clearly the place where the Rhine enters the great plain. On approaching the ocean, he says, it forms many islands, and enters the rea by several mouths (capita). He knew that the Rhine divided into two main branches near the sea: and he says that one of the branches named the Vahalis (Waal) joined the Mosa (1/aas), and formed the Insula Batavorum [Batavoncm Insulat. He speaks of the rapidity of the river, and its brealth and depth in that part where he built his wooden bridge over it. (B.G. iv. 17.) He made the bridge between Coblenz and Andernach, higher up than the place where the river enters the low country. He crossed the Rhine a second time by a bridge which he constructed a little higher up than the first bridge. (B. G. vi. 9.)

Those persons, and Caesar of course, who said that the Rhine had more than two outlets were criticised by Asinius Pollio (Strab. iv. p. 192) ; and Virgil (Aen. viii. 724, Rhenique bicornis) follows Pollio's authority. But if the Mosa divided as it does now, Caesar was right and Pollio was wrong.

Strabo, who had some other authorities for his description of the Mhine besides Caesar, and perhaps hesides Caesar and Pollio, does not admit Pollio's statement of the Rhine having a course of 6000 stadia; and yet Pollio's estimate is much below the truth. Strato says that the length of the river in a right line is not much above one-half of Pollio's estimate, and that if we add 1000 stadia for the windings, that will be enough. This assertion and his argument founded on the rapidity of the stream, show that he knew nothing of the great circuit that the Rhine makes between its source and Basle. He knew, however, that it flowed north, but unluckily he supposed the Seine also to flow north. He also made the great mistake of affirming that the county of Kint may be seen from the mouths of the Rhine. He says that the Rhine had several sources, and he places them in the Adulas, a part of the Alps. In the same mountain mass he places the source of the Aduas, or Addua (Adda), which flows south into the lake Larius (Lago di Como). [Addva.]

The most difficult question about the Phine is the outlets. When Pliny and Tacitus wrote, Drusus the brother of Tiberius had been on the lower Rhine, and also Germanicus, the son of Drusus, and other Roman commanders. Pliny (iv. 14) speaks of the Rhenus and the Mosa as two distinct rivers. In another passage (iv. 15) he says that the Rhine has three outlets: the western. named Helium, flows into the Mosa; the most northerly, named Flevum, flows into the lakes (Zuider Zee); and the middle branch, which is of moderate size, retains the name Rhenus. He supposed that there were islands in the Khine between the Helium and the Flevum: and the Batavorum Insula, in which were the Camninefates also, is one of them. He also places between these two branches the islands of the Frisii, Chanci, Frisiabones, Sturii, and Marsacii. The Flevum of Hliny corresponds to the Flevo of Mela [Flevo Laces], who mentions this branch and only another, which he ralls the Rhenus, which corresponds to Pliny's Rinenus. Mela mentions no other outlets. He considered the third to be the Mosa, we may suppose, if he knew anything about it

Tacitus (Ann. ii. 6) observes that the Rhine $2 \% 2$

RIIENUS.
divides into two bramches at the head of the Batavorum Insula. The branch which flows along the German bank keeps its name and its rapid course to the Ocean. The branch which flows on the Gallic bank is broader and less rapid: this is the Vahalis (Wual), which flows into the Mosa., (Hist. v. 23.) [Batavorim Insula.] He knows only two outlets of the Rhine, and one of them is through the Moss. The Khine, as he calls the eastern branch, is the boundary between Gallia and Germania. East of this eastern branch he places the Frisii (Ann. iv. 72); and herein he agrees with Pliny, who places them between the Middle Rhine and the Flevam. Accordingly the Rhenus of Tacitus is the Khenus of Mela and Pliny.

This third branch of the Rhine seems to be that which Tacitus calls the work of Drusus (Ann. ii. 6), and which Seutonias (Claudius, c. 1) mentions without saying where it was: "Drusus trans Rhenum fossas novi et immensi operis effecit, quate nunc adhuc Drusinae vocantur." Germanicus in his expedition azainst the northern Germans (Tac. Ann. ii. 6), ordered his fleet to assemble at the Butavorum Insula, whence it sailed through the Fossa Drusiana, and the lakes into the Ocean and to the river Amisia (Ems). This course was probably taken to avoid the navigation along the sea-coast of Holland. On a former occasion Germanicus had taken the same course (Ann. i. 60), and his father Drusus had done the same.

Ptolemy (ii. 9. §4), who wrote after Tacitus and Pliny, is acquainted with three outlets of the Khine. He places tirst the outlet of the Mosa in $24^{\circ} 40^{\prime}$ long., $53^{\circ} 20^{\circ}$ lat. He then comes to the Batavi and to Lugdunum, which town he places in $26^{\circ} 30^{\prime}$ long., $53^{\circ} 20^{\prime}$ lat. The western mouth of the Rhine is in $26^{\circ} 45^{\prime}$ long., $53^{\circ} 20^{\prime}$ lat. The middle mouth is in $27^{\circ}$ long., $53^{\circ} 30^{\prime}$ lat.; and the eastern in $28^{\circ}$ long., $54^{\circ}$ lat. His absolute numbers are incorrect, and they may be relatively incorrect also. His western outlet is a little east of Lugdunum, and this should be the Old Rhine or Rhine Proper. The middle mouth is further east, and the eastern mouth further east still. The eastern mouth may be the Yssel, but it is difficult to say what Ptolemy's middle mouth is. Gosselin supposes that Ptolemy's western mouth may have been about Zandwoord. He further supposes that the Middle Mouth according to his measures was about the latitude of Bakkum, about 4 leagues above Zandwoord, and he adds that this mouth was not known to those writers who preceded Ptoleny, and we may conjecture that it was little used, and was the first of the outlets that ceased to be navigable. The third month he supposes to correspond to the passage of the Vlie. But nothing can be more vague and unsatisfactory than this explanation, founded on Ptoleny's measurements and pure conjecture. So much as this is plain. Ptolemy dues not reckon the Moss as one of the outlets of the Rhine, as the Koman writers do; and he makes three outlets besides the outlet of the Mosa.

This country of swamps, rivers, and forests through which the Lower Rhine flowed has certainly undergone great changes since the Roman period, owing to the Hoods of the Khine and the inundations of the sea, and it is very difticult, perhaps impossible, to make the ancient descriptions agree with the moxlern localities. Still it was a fixed opinion that the Rhine divided into two great branches, as Cresar says, and this was the division of the Rhine from

## RHENUS.

the Wanl at Pannerden, or wherever it may have been in former times. One of the great outlets was that which we call the Maas that flows by Rotterdam: the other was the Rhine Proper that entered the sea near Leilen, and it was the stream from Pannerden to Leiden that formed the boundary between Gallia and Germania. (Servius, ad Aeneid viii. 727.) Ptolemy places all his three outlets in Gallia, and it is the eastern mouth which he makes the boundary between Roman Gallia and Great Germania (ii. 11.§1). If his eastern mouth is the Yssel, he makes this river from Arnheim to the outlet of the Yssel the eastern limit of Roman Gallia in his time. This may be so, but it was not so that Pliny and Tacitus understwod the boundary. Whatever chances may have taken place in the Delta of the Rhine, D'Anville's conclusion is just, when he says that we can explain the ancient condition of the places sufficiently to make it agree with the statements of the ancient authors.

The floods of the Rhine have been kept in their limits by embankments of earth which begin at Wesel, in the Prussian province of Düsseldorf, and extend along the Rhine and its branches to the seaThe Romans began these works. In the time of Nero, Pompeius Paullinus, to keep his soldiers employed, finished an embankment ("agger") on the Rhine which Drusus had begun sisty-three years before. (Tac. Ann. xiii. 53.) It has sometimes been supposed that this "agger" is the "moles" which Civilis broke down in the war which he carried on against the Romans on the Lower Rhine. (Tac. Hist v. 19.) The consequence of throwing down this " moles" was to leave neariy dry the channel between the Batavorum Insula and Germania, which channel is the Proper Rhine. The effect of throwing down the "moles" was the same as if the river had been driven back ("relut abacto amne"). This could not have been effected by destroying an embankment; but if the "moles" of Drusus was a dike which projected into the river for the parpose of preventing most of the water from going down the Waal, and for maintaining the cliannel of the Rhine on the north side of the Batavorum Insula, we can understand why Civilis destroyed and why Drusus had constructed it. Drasus constructed it to keep the channel full on the north side of the Batavorum Insula, and to maintain this as a frontier against the Germans ; and so we have another proof that the Rhine Proper or the Middle Rhine was the buundary between Gallia and Germania in this part, as every passage of Tacitus shows in which he speaks of it. Civilis destroyed the " moles" to stop the Romans in their pursuit of him ; for they were on the south side of the island, and had no boats there to make a bridge with. Ukert onderstands it so, and he is probably right.

Another great Roman work in the Delta of the Rhine was the canal of Corbulo. The Riman conquerors left durable monuments of their dominion in all the countries which they invaded, even in the watery regions of the Rhine, where they had to fight with floods, with the tempests of the ocean, and a warlike people whose bome was in the marshes and furests.

The Rhine was the great frontier of the Romans against the German tribes. All the cities on the west or Gallic side, from Leiden to Basle, were either of their foundation or were strengthened and fortitied by them. In the time of Tiberius eight legious guarded the frontier of the Rhine.

RHENUS.
This article may be read with the articles Batavorum Insula, Flevo Lacus, Fossa Corbulonis, Mosa, Mosella, and Gallia Transalpina.
(D'Anville, Notice, ffc., "Rhenus"; Penny Cyclopaedia, art. "Rhine"; and Ukert, Gallien,-who has collected all the ancient and many modern authorities.)
[G. L.]
RHENUS (Reno), a river of Gallia Cispadana, and one of the sonthern tributaries of the Padus. (Plin. iii. 16. s. 20.) It flowed within about a mile of the walls of Bononia (Bologna), on the W. side of the city, and is celebrated in history on account of the interview between Antony, Octavian, and Lepidus, which is generally believed to have taken place in a small island formed by its waters. [Bononia.] It has its sources in the Apennines nearly 50 miles above Bologna, and is a considerable stream, though called by Silius Italicus " parrus," to distinguish it from its far greater namesake, the Rhine. (Sil. Ital. viii. 599.) In the time of Pliny it is probable that it discharged its waters into the principal channel of the Padus, but at the present day they are turned aside into an artificial channel before reaching that river, and are thus carried into the arm now known as the Po di Primaro. Hence the month of that branch of the Po is now called the Foce del Reno. Pliny tells us that the reeds which grew on the banks of the Rhenus were superior to all others for making arrows. (Plin. xvi. 36. s. 65.)
[E. H. B.]
RHESAENA ('Pé $\sigma \alpha \iota \nu a$, Ptol. v. 18. § 13; 'P'́ $\sigma \iota \nu a$, Steph. B. s. v. ; Amm. Marc. xxxii. 5 ; Ressaina, Tab. Peut.; Rasin, Notit. Imp.: Eth. 'Pє $\boldsymbol{\text { Ivár }} \boldsymbol{\eta}$ s, Steph. B. s. v.), a town of considerable importance at the northern extremity of Mesopotamia ; it was situated near the sources of the Chaboras (Khabir), on the great road which led from Carrhae to Nicephorium, about 88 miles from Nisibis and 40 from Dara. (Procop. B. P. ii. 19, de Aedif. ii. 2.) It was near this town that Gordian the Younger fell in a battle with the Persians. (Amm. Marc. l. c.) A coin exists of the emperor Decius, bearing the legend CEII. KOA. PHCAINHCISN., which may in all probability be referred to this town. In the Notit. Imp. the place is subject to the government of the Dux Osrhoenae (Notit. Dign. ed. Böcking, i. p. 400), and a bishop of Resaina is mentioned among those who subscribed their names at the Council of Nicaea. Under Theodosius, the town appears to have been partially rebuilt, and to have received the title of Theodosiopolis. (Hierocl. p. 793.) There can be no doubt that it is at present represented by Ras-al-Ain, a considerable entrepôt of commerce in the province of Diarbekr. It was nearly destroyed by the troops of Timúr, in A. D. 1393. (D'Herbelot, Dict. Orient. i. p. 140, iii. p. 112 ; Niebubr, ii. p. 390.)
[v.]

COIN OF RHESAENA.
RHETICO, a mountain of Germany, mentioned only by Pomp. Mela (iii. 3), along with Mount Taunus. As no particulars are stated it is impos-

RHINOCORURA.
709
sible to identify it, and German writers are so divided in their opinions that some take Rhetico to be the name of the Siebengebirge, near Bonn, while others identify it with a mountain in the Tirol. [L.S.]

RHIDAGUS (Curt. vi. 4. § 7), a river of $\mathrm{Hyr}-$ cania, which flows from the mountains NW. to the Caspian. Alexander crossed it on his march in pursuit of Dareius. It appears to be the same as the Choatres of Ammianus (xxiii. 24), and may perhaps be represented by the present Adjisu. [V.]
RHINOCORU'RA or RHINOCOLU'RA ('PIvoкб́роира, Polyb. Ptol. Joseph.; 'Pıvoкб́גovpo, Strab.: Eth. 'Рıрокоираípos, 'Pıvoкoupoupitns), a maritime city on the confines of Egypt and Palestine, and consequently reckoned sometimes to one country, sometimes to the other. Strabo, going south, reckons Gaza, Raphia, Rhinocolura (xvi. p. 759); Polybius, going north, reckons it to Egypt, calling Raphia the first city of Coelesyria (v. 80). Ptolemy also reckons it to Egypt, and places it in the district of Cassiotis (iv. 5. § 12), between Ostracine and Anthedon. The Itinerarium Antonini (p. 151) places it xxii. M.P. south of Rafia, and the same distance north of Ostracena. The following curious account of its origin and name is given by Diodorus Siculus. Actisanes, king of Aethiopia, having conquered Egypt, with a view to the suppression of crime in his newly-acquired dominion, collected together all the suspected thieves in the country, and, after judicial conviction, cut off their noses and sent them to colonise a city which he had built for them on the extremity of the desert, called, from their mishap, Rhinocolura (quasi pivos кó入oupo: =curti, al. $\beta$. кєí$\rho a \sigma \theta a l)$, situated on the confines of Egypt and Syria, near the shore; and from its situation destitute of nearly all the necessaries of life. The soil around it was salt, and the small supply of well water within the walls was bitter. Necessity, the mother of invention, led the inhabitants to adopt the following novel expedient for their sustenance. They collected a quantity of reeds, and, splitting them very fine, they wove them into nets, which they stretched for many stadia along the sea-shore, and so snared large quantities of quails as they came in vast flights from the sea (i. 60). Strabo copies this account of its origin (l.c.); Seneca ascribes the act to a Persian king, and assigns the city to Syria (de Ira, iii. 20). Strabo (xvi. p. 781) mentions it as having been the great emporium of Indian and Arabian merchandise, which was discharged at Leuce Come, on the eastern coast of the Red Sea, whence it was conveyed, viâ Petra, to Rhinocolura, and thence dispersed to all quarters. In his day, however, the tide of commerce flowed chiefly down the Nile to Alexandria. The name occurs in Josephns, but unconnected with any important event. It is known to the ancient ecclesiastical writers as the division between the possessions of the sons of Noah. S. Jerome states that the "River of Egypt" flowed between this city and Pelusium (Reland, Palaest. pp. 285, 286, 969-972); and in one passage the LXX. translate " the River of Egypt" by Rhinocorura. (Isaiah, xxvii. 12.) It is remarkable that this penal colony, founded for mutilated convicts, should have become fruitful in saints; and its worthy and exemplary bishop Melas, in the time of the Arian persecution, who was succeeded by his brother Solon, became the founder of a succession of religious men, which, according to the testimony of Sozomen, continued to his time. (Hist. Eccles. vii. 31.) Rhinocorura is now El-Arish, as the z z 3

River of Ezypt is Wady-el-Arish. The village is situated on an eminence about half a mile from the sea, and is for the most part enclosed within a wall of considerable thickness. There are some Roman rains, such as marble columns, \&c., and a very fine well of good water. (Irby and Mangles, Travels, p. 174, October 7.)

RHIPE. [Evispe.]
RHIPAEI MUNTES ( $\tau$ d 'Pıtaia ü $\rho \eta$ ), a name applied by Grecian fancy to a mountain chain whose peaks rose to the N . of the known world. It is probably connected with the word $\rho, \pi a l$, or the chill rushing blasts of Bopéas, the mountain wind or "tramontana" of the Greek Archipelago, which was conceived to issue from the caverns of this mountain range. Hence arose the notion of the happiness of thuse living beyond these mountains the only place exempt from the northern blasts. In fact they appear in this form of 'Pinal, in Alcman (Fragm. p. 80, ed. Welcker), a lyric poet of the 7th century b. c., who is the first to mention them. The contemporary writers Damhstes of Sigeum (ap). Steph. B. s. v. ' $\mathrm{r} \pi \in \rho \mathcal{S} \delta_{t} \in 0$ ) and Hellanicus of Lesboss (ap. Clem. Alex. Strom. i. p. 305) agree in their statements in placing beyond the fabled tribes of the N. the Rhipazan mountains from which the north wind blows, and on the other side of these, on the sea-coast, the Hyperboreans. The legends connected with this imagined range of mountains lingered for a long period in Grecian literature, as may be seen from the statements of Hecataeus of Abdera (ap. delian. H. A. xi. 1) and Aristotle (Met. i. 13; comp. Soph. Oed. Col. 1248; S'chol. ad loc.; Strab. vii. Pp. 295, 299.) Herodotus knows nothing of the Rhipaean mountains or the Alps, though the positive geography of the N. begins with him. It would be an idle inquiry to identify the Rhipaean range with any actual chain. As the knowledge of the Greeks advanced, the geographical "mythus" was moved further and further to the N . till it reached the 48 th degree of latitude N . of the Maentic lake and the Caspian, between the Don, the Volga, and the Jaik, where Europe and Asia melt as it were into each other in wide | lains or steppes. These " mountains of the winds" fullowed in the train of the meteorological " mythus" of the Hyperboreans which wandered with Heracles far to the W. Geographical discovery embrodied the picture which the imagination had formed. Poseidonius (ap. Athen. vi. p. 223, d.) seems to have considered this range to be the Alps. The Roman puets, borrowing from the Greeks, made the Rhipaean chain the extreme limit to the N. (Virg. Georg. i. 240; Propert. i. 6. 3; Sil. It. xi. 459); and Lucan (iii. 273) places the sources of the Tanais in this chain. (Comp. Mela, i. 19. § 18 ; Plin. iv. 24 ; Amm. Dlarc. xxii. 8. § 38 ; Prucop. B. G. iv. 6; Sid. Apmll. ii. 343; Jornand. Get. 16; Oros. i. 2.) In the earlier writers the form is Ripaci, but with Pliny and those who followed him the $p$ becomes aspirated. In the geography of Ptolemy (iii. 5. §§ 15, 19) and Marcian (Peripl. §39, ed. Didot) the Rhipacan chain appears to be that gently rising ground which divides the rivers which flow into the Baltic from those which run to the Euxine.
[E. B. J.]
Rhllsl'la ('Pıotia), a place in Upper lamonia, of uncertain site (Ptol. ii. 15. § 4 ; Orelli, Inscript. n. 4991), though it is comnonly identified nith Czur. (SClö̈nwisner, Antiquitates Saburiae, p. 41.)
[L. S.]
hilithymin ('Pi $\theta \cup \mu \nu a$ ), a town of Crete, which
is mentioned by Ptolemy (iii. 17. § 7) and Pling (iv. 20) as the first town on the N. coast to the E. of Amphimalla, and is spoken of as a Cretan city by Steph. B., in whose text its name is written Rhithyimnia ('Pı日vuvía: Eth. 'Pı日uuvid́rns, 'Pıtúpvios). It is also alluded to by Lycophron (76). The modern Rhithymnos or Retimo retains the name of the ancient city upon the site of which it stands. Eckhel (Numi Vet. A necdoti, p. 155; comp. Rasche, vol. iv. pt. i. p. 1024) first assigned to Rhithyminas its ancient coins; maritime emblems are found on them. (Pashles, Crete, vol. i. p. 101.) [E. B. J.]

COIN OF RHITHYBLA.
RIIIUM ('Piov). 1. A promontory in Achaia [Vol.I. p. 13, a.]
2. A town in Messenia, in the Thuriate galf, and also the name of one of the five divisions into which Cresphontes is said to have divided Messenia. (Strab. viii. pp. 360, 361.) Strabo describes Rhium as over against Taenarnm (à $\pi \epsilon \nu a v t i o n ~ T a u y a ́ p o v), ~$ which is not a very accurate expression, as hardly any place on the western coast, except the vicinity of Cape Acritas, is in sight from Tacnarum. (Leake, Morea, vol. i. p. 459.)

Rhilusiava. [Riusiava.]
RHIZANA ('Pi(̧́va, Ptol. vi. 21. § 2; 'Pi¢ava, Marcian, Peripl. i. § 33, ed. Miiller), a town on the coast of Gedrosia, in the immediate neighbourhood of the most western mouth of the Indus. The differences letween Ptolemy and Marcian with regard to distances do not seem here reconcileable. [V.]

RHIZE'NIA ('Pı(ŋvia, Steph. B. s. v.), a town of Crete of which nothing is known; there is an "eparkha" now called Rhizó-kastron, but it is a mere guess to identify it with this. [E.B. J.]

RHIZIUS ('Pigios), a small coast river of Pontus, between the Iris and Acampsis, still bearing the name of Rizeh. (Arrian, Peripl P. E. p. 7 ; Anonym. Peripl. P. E. p. 12.) [L. S.]

KHIZON ('Pijcov, Polyb. ii. 11; Strab. vii. p. 316 ; Liv. xlv. 26; Steph. B. s. v.; 'Pifáva, Ptol. ii. 17. § 12 ; Rhizinium, Plin. iii. 26; Rucimum, (ieogr. Lav. v. 14; ad Zizio [ad Rhisio?], Peut. Tab.), a town of Dalmatia, situated upon a gulf which bore the name of Rimzonicus Sinus ('Pigovikds колatos, Strab. vii. pp. 314, 316; Ptol. ii. 17. §5). Teuta, the llyrian queen, took refuge in this her last stronghold, and obtained peace upon the conqueror's terms. Scylax ( p .9 ) has a river Khizus ('Pı̧ō̆s, comp. Polyb.l.c.; Philo, ap. Steph. B. s. v. Boutón), but this can be no other than the Bocche di Cuttaro, celebrated for its grand scenery, which gives this gulf with its six mouths the appearance of an inland lake, and hence the mistake of Scylas, and Polybius, who says that Rhizon was at a distance from the sca. In Risano, standing on rising ground at the extremity of a beautiful bay that runs to the $N$. from Perasto, are remains of the Roman colony. A Mosaic parement and coins have been found there. Near Risano is a cavern from which a torrent rums in winter, and falls into the bay, but it is not known whether this be the Dalmatian cavern mentioned by Pliny (ii. 44). It is here that Cadmus is said to
have retired among the Encloclecs. (Scylax, l. c.) Whether the Phoenicians had reached the E. shore of the Adriatic does not appear, but it could only be from traces of Phoenician settlements that this term was assigned to his wanderings. (Wilkinson. Lalmatia, vol. i. p. 381; Neigebaur, Lie Sïd-Slaven, p. 30.)
[E. B. J.]

## RHIZONICUS SINUS. [Rhizon.]

RHIZO'PHAGI AETHIOP'ES ('Pı §oфáyot, Diodor. iii. 23 ; Strab. xvii. p. 770, seq. ; Ptol. iv. 8. § 29), one of the numerous tribes of Aethiopia, whom the Greeks named after the diet peculiar to them. The root-eating Aethiopians dwelt above Meroe, on either bank of the Astaboras (Tacazze), and derived their principal sustenance from a kind of cake or polenta. made from the reeds and bulrushes that covered that alluvial region. The roots were first scrupulously cleansed, then powdered between stones, and the pulp thus obtained was dried in the sun. The Rhizoph:yg are described as a mild and harmless race, living in amity with their neightours, and, probably because they had nothing to lose, unmolested by them. Their only foes were liens, who sometimes committed the greatest haroc among this unarmed race; and their best friends, according to Diodorus (comp. Agatharch. ap. Hudson, Geog. Graec. Min. p. 37), were a species of gnat, or more probably gadtly, Which at the summer solstice ( $\dot{v} \pi \dot{\delta} \tau \dot{\eta} \nu \dot{\alpha} \nu a \tau o \lambda \dot{\eta} \nu$ rov̂ auroेs) assailed the lions in such numbers, that they fled from the marshes, and permitted the Rhizophagi to recruit their losses. The site of this ocscure tribe probably corresponds with that of the Shihos (Bruce, Travels, vol. iii. pp. 69-72), who now oocupy the southern part of the territory of Taka or A tbara, on the upper Tacazzé. [W. B. D.]

RHIZUS ('PiSois), a port-town of Pontus, at the mouth of the river Rhizius, about $\mathbf{1 2 0}$ stadia to the east of the river Calus, and 30 stadia west of the month of the Ascurus. In the time of Procopius (Bell. Goth. iv. 2) the place had risen to considerable importance, so that Justinian surrounded it with strong fortifications. The Table mentions on its site a place under the name of Reila. which is probably only a corruption of the right name, which still exists in the form of Rizeh, though the place is also called Irrish. (Comp. Procop. de Aed. iii. 4; Ptol. v. 6. § 6.)
[L. S.]
RHIZUS ('Pigoüs: Eth. PıSoúytios), a town of Magnesia in Thessaly, whose inhabitants were tramsported to Demetrias upon the foundation of the latter city. (Strab. ix. pp. 436, 443; Steph. B. s. v.; Plin. ir. 9. s. 16.) We learn from Scylax (p. 24) that Rhizus was outside the Pagasaean gulf upon the exterior shore; but its exact position is uncertain. Leake places it at the ruins eastward of Nekhori (Northern Grcece, vol. iv. p. 383).
BHOCCA ('Póккa), a town of Crete, where there was a temple to Artemis Rhoccae: (Aelian, N. A. xii. 22). Pococke (vol.ii. p. 247) found remains at the village which still bears the name of Rhokka, to the S. of the ancient Methymna; and there can be little doubt but that this is the site of Rhocca, which, as is shown by Aelian (N. A. xiv. 20), was near Methymna (Häck, Kreta, vol. i. p. 391; Pashley, Crete, vol. ii. p. 41 .)
[E. B. J.]
RHODA or RIIODUS ('Póon, Steph. B. s. v.; Rheda, Mela, ii. 6; Liv. xxxiv. 8; 'Púסos, Strab. xiv. p. 654; Eustath. ad Lion. Per. 504; called by Ptol. ii. 6. \$ 20, 'Puofinoncs, where we should probably read 'Póó $\eta \pi \delta \lambda i s$ ), a Greek emporium on the cuast of the Indigetae in Hispania Tarraconensis,
founded according to Strabo (l.c.) by the Rhodians, and subsequently taken possession of by the Massiliots. It is the modern Rosas; but tradition says that the old town lay towards the headland at San Pedro de Roda. (Ford, Handbook of Spain, p. 249 ; comp. Meurs. Rhod i. 28; Marca, Hisp. ii. 18; Martin, Hist. des Gaules, p. 218; Florez, Med. iii. p. 114: Mionnet. i. p. 148.) [T. H. D.]

RHO'DANUS ('Podavós: Rhöne). The Rhone rises in Switzerland, in a glacier west of the pass of St. Gothard and south of the Gallenstock, a mountain above 12,000 feet high. It has a general course, first SW., then W. by S. as far as Martigny, the Octodurus of Caesar (B. G. iii. 1). The course from Martigny to the Lake of Geneva forms nearly a right angle with the course of the river above Martigny. The length of the valley through which the Rhone flows to the Lake of Geneva is above 90 miles. This long valley called Wallis, or the Vallais, is bounded by the highest Alpine ranges: on the north by the Bernese Alps, which contain the largest continuous mass of snow and ice in the Swiss mountains, and on the south by the Lepontian and Pennine Alps. The Lake of Geneva, the Lacus Lemannus of the Romans [Lemanus], which receives the Rhone at its eastern extremity, is more than 1200 feet above the surface of the Mediterranean.

The Lake of Geneva lies in the form of a crescent between Switzerland and Savoy. The convex part of the crescent which forms the north side is above 50 miles in length; the concave or southern side is less than 50 miles in length. The widest part, which is about the middle, is $\mathbf{8}$ or 9 miles. The greatest depth, which is near some high cliffs on the south coast, is stated variously by different authorities, some making it as much as 1000 feet. The Khone enters the lake at the east end a muddy stream, and the water flows out clear at the western extremity past Geneva, an ancient city of the Aliobroges. [Geneva.]

Below Geneva the Rhone runs in a rapid course and in a SW. direction past Fort IEcluse. Fort lEcluse is at the point described by Caesar (B. G. i. 9) where the Jura overhangs the course of the Khone. [Helvetir.] The river then runs south past Seyssel, and making a bend turns north again, and flowing in an irregular western course to Lyon (Lugdunum) is joined there by the Saine, the ancient Arar [Arar; Lugdunum]. The length of the course of the Rhone from the Lahe of Geneva to Lyon is about 130 miles. The Saône, as Caesar says, is a slow river, but the current is seen very plainly under the bridges in Lyon. The Rhone is a rapid stream, and violent when it is swelled by the rains and the waters from the Alpine regions.

From Lyon the Rhone flows in a general southern course. The direct distance is about 150 miles from Lyon to Arles (Arelate) where the river divides into two large branches which include the isle of Carmague. The whole course of the Rhone from the ice-fields of Switzerland to the low shores of the Mediterranean is above 500 miles.

The valley of the Rhone below Lyon is narrow on the west bank as far as the junction of the Ardéche, and it is bounded by bigh, bare, and rocky heights. Some of the hill slones are planted with vines. All the rivers which flow into the Rhone from the highlands on the west are small: they are the Ardéche, Cėze, Gardon (Vardo), and some smaller streams. The left bank of the Rhone from

Lyon downwards is generally flat, but there are several parts where the rocks rise right above the water, and in these places the railway from Lyon to Marseills is cut in the rocks close to the river. At St. Andeol, a small town on the west bank above the Ardeche, the plain country begins on the west side of the Rhone. On the east side the hills are seen in the distance. From one of the middle-age towers built on the amphitheatre of Arles, there is a view of the great plain which lies all round that city to the north, west, and east, and stretches sonthward to the coast of the Mediterranean. The two large affluents of the Rhone on the east side are the Isere (Isara) and the Durance (Druentia).

The Rhone was earlier known to the Greeks and Romaus than any other of the large rivers of Western Europe. The oldest notices of this river must have come from the Phocaeans and the Greeks of Massilia. What Avienus has collected from some source (Or. Marit. 623-690) is unintelligible. Pliny (iii. 4) very absurdly derives the name Rhodanus from a town which he names Rhoda; but the name Rhodanus is older than any city, and, like the naines of other European rivers, it is one of the oldest memorials that we have of the languages of the West. Polybius (iii. 47) supposed that the Rhone rose further east than it does, but he knew that it flowed down a long valley ( $\alpha \dot{u} \lambda \omega \boldsymbol{\omega}$ ) to the west, though he does not mention the Lake of Geneva. Ptolemy (ii. 10), the latest of the classical geographers, had no exact notion of the sources of the Rhone, though the Romans long before his time must have known where to look for them. He makes the sources of the Arar come from the Alps, by which the Jura is meant, and in this statement and what he says of the course of the Arar and Dubis he may have fullowed Strabo (iv. p. 186), as it has been supposed. The blunders about the sources of this river are singular. Mela (iii. 3) mentions the Danubius and Rhodanus among the rivers of Germany; and in another passage he says that it rises not far from the sources of the Ister and the Rhenus (ii. 5).

There is much difference in the statements about the number of the months of the Rhone. Timaeus, quoted by Strabo (p. 183), says that there were five outlets, for which Polybius reproves Timaeus, and says there were only two. Polybius (iii. 41) names the eastern branch the Massaliotic. Artemidoras, as cited by Strabo, made five mouths. Strabo does not state how many he supposed that there were. He says that above the mouths of the Rhone, not far from the sea, is a lake called Stomalimne, which some make one of the outlets of the Rhone, and those particularly do who enumerate seven outlets of the river. But he shows that this was a mistaken opinion. Caesar built ships at Arelate when he was going to besiege Massilia, and be brought them down the river to that city, and by the eastern branch, as we may assume.

The Rhone was navigated by the people on its banks at the time when Hannibal with his army came to cross it, and much earlier. Polybius is the parliest extant writer who has given us any precise information about this river. Hannibal (B. c. 218) crossed it at a point above the division of the stream, and of course higher than Arles, for we assume that the bifurcution was not higher than that city in his time, if it ever was. (Pulyb. iii. 43.) He probably crossed the river at Beuncaire and below the junction of the Gardon. He then marched northwards on the east side of the river to the $\ln$ -
sula. [Insula Allobrogum.] Much has been written on this passage of Polybius and on Livy (xxi.), who also describes the same passage. (The March of IIAnnibal from the Rhone to the Alps, by H. L. Long, Esq., 1831 ; Ukert, Gallien, p. 561, \&cc.; and the modern writers quoted by each.)

Pliny (iii. 4)enumerates three mouths of the Rhone. He calls the two smaller "Libyca" (if the reading is right): one of these is the Hispaniense os, which we may assume to be the nearest to Spain; the other is Metapinum, and the third and largest is the Mavsaliot. Some modern maps represent threo mouths of the river. Ptolemy (ii. 10) mentions only a western and an eastern mouth, and he makes a mistake in placing the Fussae Marianae [Fossare Marianar] west of the western mouth. The channels of the Rhone below Arles may have been changed in some parts, even in historical periods, and the bed of the river above Arles has not always been where it is now. But there is no evidence for any great changes in the river's course since the time when Polybius wrote, though it is certain that the alluvium brought down the river must have enlarged the Delta of the Rhone.

The canal of Marius, which was on the east side of the eastern outlet of the Rhone, is described under Fossa Mariana; and the stony plain is described under Lapidit Campt.
[G. L.]
RHODANU'SIA. Pliny (iii. 4) mentions Rhoda in Gallia Narbonensis as a colony of the Rhodii He places it on the coast east of Agathe (Agde), and says that it gave the name to the Rhodanos. [Rhodanus.] Hieronymus, in his Prologue to the Second Epistle to the Galatians, copies Pliny. This may be the place which Stephanus (s. v. 'Podavovola) names Rhodanusia, and calls "a city in Massalia;" by which the Massiliotic territory must be meant. The passage in Strabo (iv. p. 180) тiv $\delta \&$ 'Pbov 'A ra日ìv тois, in which be intends to speak of one of the Massiliotic settlements, is corrupt. Casaubon (Comment. in Strab. p. 83) sometimes thought that
 Groskurd (Strab. Transl. i. p. 310) thinks that Pliny has called this place Rhoda because be confounded it with Rhode or Rhodus in Iberia, which he dops not mention. He observes that Scymnus (v. 208), Stephanus, and Sidonius Apollinaris (i 5) rightly name it Rhodanusia; and he has no doubt that Strabo wrote it so. But it is by no means certain that Strabo did write it so. Groskurd's argument is this: there never was a town Rhoda in Gallia, and Strabo mentions the lberian Rhode or Rhodus. Since then Strabo is acquainted with both places, he has not made a mistake like Pliny; rather must we with Vossius (Note on Mela, ii. 6) alter the corrupt 'Pónv into 'Pooavouciay; and Koray is mistaken in rejecting 'Ponv altogether as not genuine. We know nothing of this Gallic Rhode or Rhodanusia. The place is gone and has left no trace.
[G. L.]

## RHODE. [Rhodanusia.]

RHODE FLUVIUS. [SAgaris.]
RHO'DIA ('Poסía: Eth. 'Podiévs), a town of Lycia, situated in the mountains on the north of Corydallus. (Steph. B. s. v.; Ptol. v. 3. § 6; Phot. Cod.176.) At the time when Col. Leake wrote his work on Asis Minor ( $p$. 186) the site of this town was not yet ascertained, and Sir C. Fellows did not examine the district; bat the inscriptions which have since been found fix its site at the place now called Eiski Hissar. (Spratt aud Forbes, Tra-
vels in Lycia, i. pp. 166, 181.) The town had a temple of Asclepius, and its citizens are not called, as Stephanus Byz. asserts, 'Podıés, but 'Poठıamoגítau or 'Poঠioто入ital, whence it appears that Pliny (v. 28) correctly calls the town Rhodiopolis. A plan of the numerous remains of this town is given by Spratt, according to whom it was not surrounded by walls: the theatre stands nearly in the centre, and is small, having a diameter of only 136 feet; but many of the seats remain, and the tasement of the proscenium is perfect. In the front of it is a terrace, with seats along the parapet. Remains of churches show that the place was inhabited in Christian times. There are also traces of an aqueduct. The town being situated on a lofty eminence, commands an extensive southern prospect.

## RHODIO'RUM REGIO. [Peraka.]

RHO'DIUS ('P $\delta \delta i o s$ ), a river of Troas, having its sonrces in Mount Ida, a little above the town of Astyra; it flows in a north-western direction, and after passing by Astyra and Cremaste, discharges itself into the Hellespont between Dardanus and Abydus. (Hom. IL xii. 20, xx. 215; Hesiod, Theog. 341; Strab. sii. p. 554, siii. pp. 595, 603; Plin. v. 33.) Strabo (xiii. p. 595) states that some regarded the Rhodius as a tributary of the Aesepus; but they must have been mistaken, as the river is mentioned on the coins of Dardanus. (Sestini, Geog. Numis. p. 39.) Pliny (l.c.) states that this ancient river po longer existed; and some modern writers identify it with the Pydius mentioned by Thucydides (viii. 106; comp. Hesych. and Phavorin. s. v. חúdiov). Richter (Wallfahrten, p. 457) describes its present condition as that of a brook flowing into the Dardurelles by many mouths and marshes. [L. S.]

RHO'DOPE ('Po86 $\pi \eta$, Herod. vi. 49; Thuc. ii. 96 ; Polvb. xxxiv. 19; Strab. iv. p. 208, vii. pp. 313, 329,331 ; Mela, ii. 2. § 2; Plin. iii. 29, iv. 5. s. 17 ; Amm. Marc. xxi. 10. § 3; Malchus, ap. Exc. de Leg. Rom p. 90), a mountain chain forming the W. continuation of Haemus, and the frontier between Thrace and Macedonia, of which little more is known than the name. On its desolate heights, the lurking places of the fierce Satrae, was the great sanctuary and oracle of the Thracian Dionysus. As the Strymon took its sources in Rhodope (Strab. viii. p. 331) the high ridges round Dúpnitza and Ghiustendigl mast be assigned to Rhodope, which may roughly be said to belong to the central of the three continuous chains, which under the name of the Despoto Dagh branches out to the S. of the Balkan (Haemus) at about $23^{\circ}$ E. kong.
[E.B.J.]
RHODU'NTIA ('Poóourria: Eth. 'Poסoúvtios), a fortress on Mt. Callidromus, defending one of the passes to Thermopylae. (Strab. ix. p. 428; Liv. uxxi. 16, 19; Steph. B. s. v.; Leake, Northern Greece, vol. ii. pp. 10, 62, 64.)

RHODUS ('Poסos: Eth. 'Pbסıos: Rhodes), one of the chief islands of the Aegean. or more properly of that part of the Aegean which is called the Carpathian sea, about 9 or 10 miles from the coast of Caria. In the earliest times it is said to have borne the names of Ophiussa (Steph. B. s. v. 'Pódos), Stadia, Telchinis (Strab. xvi. p. 653), Asteria, Aethraea, Trinacria, Corymbia, Poieesza, Atabyria, Macaria, and Oloëssa. (Plin. v. 36.) It extends from sonth to north, and is 920 stadia in circumfrrence (Strab. xiv. p. 605), or, according to Pliny, 125 Roman miles, though others reduced it to 103. The island is traversed from north to south by a
chain of mountains, the highest point of which was called Atabyris or Atabyrion, and the towns were all situated on the coast. Mount Atabyris is $\mathbf{4 5 6 0}$ feet above the level of the sea, and on the top of it stood a temple of Zeus Atabyrius. Rhodes was believed to have at one time risen out of the sea, and the Telchines, its most ancient inhabitants, are said to have immigrated from Crete. (Pind. Olymp. vii. 23, \&c.; Plin. ii. 87 ; Aristid. Orat. xliii. p. 653, ed. Dind.; Strab. l.c.; Diod. v. 55.) The Telchines, about whom many fabulons stories are related, are said to have been nine in number, and their sister Halia or Amphitrite became by Poseidon the mother of six sons and one daughter, Rhodos, from which in the end the island received the name it still bears. Others, however, with better reason, derive the name Rhodus from pósov, a rose, for the rose appears as a symbol on coins of the island, so that Rhodus would be "the island of Roses." (Eckhel, vol. ii. p. 602; Sestini, Num. Vet. p. 382.) These most ancient and fabulous Telchines are said to have perished or been driven from the island during an inundation, and Helios then created a new race of inhabitants, who were called after him Heliadae; they were seven in number, and became ancestors of seven tribes, which partly peopled Rhodus itself and partly emigrated to Lesbos, Cos, Caria, and Egypt. The Heliadae are said to have greatly distinguished themselves by the progress they made in the sciences of astronomy and navigation. (Pind. l. c. 160, \&c.; Diod. v. 56; Conon, Narrat. 47; Strab. xiv. p. 654.) After this various immigrations from foreign countries are mentioned: Egyptians under Danaus, Phoenicinns under Cadmus, Thessalians and Carians, are each said to have furnished their contingent to the population of Rhodes. Whatever we may think of these alleged inmigrations, they can have but little affected the national character of the Rhodians, which in fact did not become fixed until a branch of the Doric race took possession of the island, after which event the Doric character of its inhabitants became thorouglily established. Some Dorians or Heracleidae appear to have been settled there as early as the Trojan War, for the Heracleid Tlepolemus is described as having sailed to Troy with nine ships. (Il. ii. 653; Diod. iv. 58, v. 59 ; Apollod. ii. 8. § 2.) After the Trojan War Aethaemenes, a Heracleid from Argos, led other settlers to Rhodus. (Strab. xiv. p 653; Diod. xv. 59; Apollod. iii. 2. § 1 ; comp. Thuc. vii. 57 ; Aristid. Orat. xliv. p. 839.) After this time the Rhodians quietly developed the resources of their island, and rose to great prosperity and aftluence.

The three most ancient towns of the island were Lindus, Lalysus, and Camirus, which were believed to have been founded by three grandsons of the Heliad Ochimus bearing the same names, or, according to others, by the Heracleid Tlepolemus. (Diod. iv. 58, v. 57.) These three towns, together with Cos, Cnidus, and Halicarnassus, formed what was called the Doric hexapolis, which had its common sanctuary on the Triopian headland on the coast of Caria, Apollo being the tutelary deity of the confederation. (Herod. i. 144.) The rapid progress made by the Rhndian towns at a comparatively early period is sufficiently attested by their colonies in the distant countries of the west. Thus they founded settlements in the Balearic islands, Rhode on the coast of Spain, Parthenope, Salapia, Siris, and Sybaris in Italy, and Gela in

Sicily; while the countries nearer home were not neglected, for Soli in Cilicia, and Gagae and Corydalla in Lycia, were likewise Rhodian colonies. But notwithstanding this early application to navigation and commerce, for which Rhodes is so almirably situated between the three ancient continents, the Hhodians were not ranked with the great naritime powers of Greece. Herodotus speaks of them only as forming a part of the Doric confederacy, nor does Thucydides mention their island more frequently. The Khexlians, in fact, did not attain to any political eminence among the states of Greece until about B. c. 408 , when the three ancient towns conjointly built the city of Rhodes at the northern extremity of the island, and raised it to the rank of a capital. During the first period of the Pe loponnesian War the towns of Rhodes paid tribute to Athens, and were reluctantly compelled to serve against Syracuse and Gela in Sicily (Thuc. vii. 57) ; but in b. c. 412 they joined the Peloponnesians. The popular party being favourable to Athens, soon afterwards attempted a reaction, but it was crushed (Diod. xiii. 38,45 ). In в. c. 396 , however, when Conon appeared with his fleet in the waters of Rhodes, the Rhodians again embraced the cause of Athens (Diod. xiv. 79; Paus. vi. 7. § 6); but the democracy which was now established was ill managed, and did not last long; and as early as B. c. 390 , the exiled aristocrats, with the assistance of Sparta, recovered their former ascendancy. (Aristot. Polit. v. 4. 2; Xenoph. Hellen. iv. 8.§ 20. \&c.; Dicd. xiv. 97.) The fear of Sparta's growing power once more threw Rhodes into the hands of the Athenians, but soon after the battle of Leuctra a change again took place; at least the Thebans, in B. c. 364 , were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and By zantium over to their own side. During the Social War, from b. c. 357 to 355, the Rhodians were arrayed against Athens, being instigated by the dynast of Caria and his successor Artemisia. But as they became alarmed by the growing power of the Carian dynasty, they solicited the protection of Athens through the eloquence of Demosthenes. (Demos. de Libert. Rhodior.) The form of government throughout this period was oligarchical, which accounts for the insolent conduct of Hegesilochus, as described in Athenaeus (x. p. 444). Rhodes furnished Darius, the last king of Persia. with one of his bravest and ablest generals in the person of Memnon, who, if he had had the sole direction of affairs, might have checked the victorious career of Alexander, and saved the Persian empire. But as it was, Rhodes, like the rest of Greece, lost its independence, and received a Macedonian carrison (Curt. iv. 5). The expulsion of this garrison after the death of Alexander was the beginning of a glorions epoch in the history of Rhodes; for during the wars against the successors of Alexander, and especially during the memorable siege of the city of Rhodes by Demetrius Poliorcetes, the Rhodians gained the highest esteem and regard from all the surrounding princes and nations. During the period which then followed, down to the overthrow of the Macedonian monarchy, Rhodus, which kept up friendly relations with Rome, acted a very prominent part, and extended its dominion over a portion of the opposite coants of Caria and Lycia-a territory which is hence often called the Mepaia $\tau \bar{\omega} \nu$ 'Podial [Pemata] and over several of the neighbouring islands, such as Casus, Carpathus, Tclos, and Cbalce. After the
defeat of Persens the Romans deprived the Rhodians of a great amount of territory and power, under the pretest that they had supported Macedonia; but the anger of Rome was propitiated, and in the war against Mithridates the Rholians defended themselves manfully against the Pontian king. During the civil war between Caesar and Yompey they sided with the former, and their adherence to him led them, after his death, to resist Cassins; but the republican, after defeating them in a naval engagement, entered the city of Rhodes by force, and having put to death the leaders of the hostile party, carried off all the public property, even the offerings and ornaments of the temples (Appian, Bell. Cir. iv. 72: Plut. Brut. 30; Dion Cass. xlvii. 32). This calamity in в. C. 42 broke the power of the Rhodians, but it still remained one of the great seats of learning. Tiberins, before his accession to the imperial throne, resided at Rhodes for several years. The emperor Claudius deprived it of all political independence (Dion Cass. Ix. 24); but although he afterwards restored its liberty. it was at all times a very precarious possession, being taken away and given back as circumstances or the caprices of the emperors suggested (Tac. Ann. xii. 58 ; comp. Suet. Vesp. 8; Eatrop. vii. 13). In the arrangements of Constantine, Rhodus, like other islands, belonged to the Provincia Insularum, of which it was the metropolis (Hierncles, p. 685, \&c.). During the middle ages it continued to enjoy a considerable degree of prosperity, and was the last place in Western Asia that yielded to the Mohammedans.

The great prosperity which the Rhodians enjoved during the hest period of their history was owing in the first place to their extensive navigation and commerce, and in the second to their political institutions. In respect to the former they were particularly favoured by the situation of their island, and during the Macedonian and Roman periods no Greek state conld rival them in the extent and organisation of their conmerce; their sailors were regarded as the best, and their laws relating to navigation were thought models worthy of being adopted by the Romans. The form of government of the Rhodians was indeed founded upon a popular basis, but their democracy was tempered by an admixture of oligarchy. Such at least we find it during the Macedonian period, at a time when the ancient Doric institutions had given way to a form of government more suited to the actual circumstances. (Strab. xii. p. 575, xiv. p. 652; Cic. de Re Publ. i. 31 : Dion Chrys. Orat. $\mathbf{x x x i .}$; Aristid. Orat. xliv. p. 831.) The sovereign power belonged to the assembly of the people, which had the final decision of everything; but nothing was brought before it which had not previously been discassed by the senate or Bount. (Polyb. xvi. 35, xxiii. 3, xxvii. 6, xxviii. 15, xxix. 5; Cic. de Re Publ. iii. 35.) The executive was in the hands of two magistrates called $\pi \rho u)^{2} \boldsymbol{v e c s}$, each of whom gorernex for six months in the year as eponymus. Next to these, the admirals (vavapxot) possessed the most extensive power. Other officers are mentioned in inscriptions, but their character and functions are often very uncertain. The Rhodian constitution had its safest foundation in the character and habits of the people, who, although the vicinity of Asia had a considerable influence and created a love of splendour and luxury, yet preserved many of their ancient Doric peculiarities, such as earnestness, perseverance, valcur, and patriotism, combined with an
active zeal for literature, philosophy, and art. The intellectual activity maintained itself in Rhodes long after it had died away in most other parts of Greece.

The island of Rhodes, which appears even in the earliest traditions as extremely wealthy (Hom. Il. ii. 670; Pind. Olymp. vii. 49; Philostr. Imag. ii. 27 ), is in many parts indeed rough and rocky, especially the coast near the city of Rhodes, and the district about Lindus, but on the whole it was extremely fertile: its wine, dried raisins and figs, were much esteemed, and its saffron, vil, marble, achate, sponges, and fish, are often spoken of. The most important productions of Rhodian industry were ships, arms, and military engines. Besides the places already mentioned, the ancients notice Ixia and Mnasyrium, two forts in the south, and a place called Achaia.

By far the most important place was the city of Rhodus at the north-eastern extremity of the island. It was built in B. C 408 upon a regular plan formed by the architect Hippodamus, the same who built the walls of Peiraceus. (Strab. xiv. p. 654 ; Diod. xix. 45, xx. 83; Harpocrat. s.v.; 'I $\pi \pi о \delta \alpha \mu \epsilon \neq$.) It was constructed in the form of an amphitheatre rising from the coast, and was protected by strong walls and towers, while nature provided it with two excellent harbours. The acropolis rose at the southwestern extremity, and on the slope of it was the theatre. According to Strabo, Rhodus surpassed all other cities for the beauty and convenience of its ports, streets, walls, and public edifices, all of which were adorned with a profusion of works of art both in painting and sculpture. The principal statues were in the temple of Dionysus and the gymnasium; but the most extraordinary statue, which is described as one of the seven wonders of the ancient world, was the brazen statue of Helios, commonly called the Colossus of Rhodes. It was the work of Chares of Lindus, who employed upon its execution twelve years. It cost 300 talents, and was 70 cubits in height: its gigantic size may be inferred from the fact that few men were able to encompass one of its thumbs with their arms. (Plin. ixxiv. 18; Strab. l.c.) The Colossus stood at the entrance of one of the ports, but the statement that it stood astride over the entrance, and that the largest ships could sail between its legs, is in all probability a mere fable. It was overthrown by an earthquake, 56 years after its erection, that is, in B. C. 224, or according to others a few years later. Ptolemy promised the Rhodians, among other things, 3000 talents for its restoration (Polyb. v. 89), but it is said not to have been attempted in consequence of an oracle (Strab. l.c.). Later authorities, however, speak of it as standing erect; the emperor Commodus is said to have ordered his own bust to be put upon it; and Cedrenus relates that a king of the Saracens sold the fragments to a merchant who employed upwards of 900 camels to carry them away. Notwithstanding the great splendour of the city, the number of its inhabitants does not appear to hare been very great, for during the siege of Demetrius Poliorcetes no more than 6000 citizens capable of bearing arms are mentioned. (Diod. xx. 84.) But Rhodus has nevertheless produced many men of eminence in philosophy and literature, such as Panaetius, Stratocles, Andronicus, Eudemus, Hieronymus, Peisander, Simmias, and Aristides ; while Poseidonius, Dionysius Thrax, and Apollonius, surnamed the Rhodian, resided in the island for a
considerable time. The present town of Rhodes contains very few remains of the ancient Greek city. (Comp. P. D. Paulsen, Descriptio Rhodi Maced. Aetate, Göttingen, 1818 ; H. Rost, Rhodus, ein Hist. Arch. Fragment, Altona, 1823; Th. Menge, Vorgeschichte von Rhodus, Cöln, 1827 ; Rottier, Descript. des Monuments de Rhodes, Bruxelles, 1828; Ross, Reisen auf den Griech. Inseln, iii. pp. $70-113$, which contains a good account of the middle-age history and the present condition of the island and city with maps and plans; Sestini, Mon. Vet. p. 91.)
[L. S.]

## COIN OF RHODUS.

RHODUSSA, an island off the southern coast of Caria, near the entrance of the port of Panormus. (Plin. v. 35 ; Stadiasm. Mar. Mag. p. 248, where the name is written 'Pomovera.) It is marked in modern charts by the name of Limosa or Karagash.
[L. S.]
RHODUSSAE, a group of small islands in the Propontis, south of Pityussa, is mentioned only by Pliny (v. 44).
[L. S.]
RHOE ('Pon), a place on the coast of Bithynia, 20 stadia to the east of Calpe, on a steep promontory, contained a road fit only for small vessels. (Arrian, Peripl. P. E. p. 13; Anonym. Peripl. P. E. p. 3.)
[L. S.]
RHOETACES. [Albania, p. 89, b.]
RHOETEUM ( $\tau$ ' 'Poíteiov or 'Poítıò đкрод), a promontory, or rather a rocky headland, running out in several points in Mysia or Troas, at the entrance of the Hellespont, north of Ilion; it contained a small town of the same name situated on an eminence. The place is very often mentioned by the ancients. (Herod. vii. 43 ; Scylax, p. 35 ; Strab. xiii. p. 595 ; Steph. B. s. v.; Pomp. Mela, i. 18 ; Plin. v. 33 ; Thucyd. iv. 52, viii. 101 ; Apollon. Rhod. i. 929; Tryphiod. 216 ; Virg. Aen. vi. 595 ; Liv. xxxvii. 37.) The promontory is now called Intepeh, and the site of the ancient town is believed to be occupied by Paleo Castro, near the village of It-ghelmes. (Richter, Wallfahrten, p. 475 ; Leake, Asia Minor, p. 275.)
[L. S.]
RHOGANA ('Pó ${ }^{2} \alpha \nu a$, Ptol. vi. 8. § 7; Marcian, Peripl. i. § 28, ed. Müller), a small place on the coast of Carmania, between the promontories of Carpella and Alambater. It is perhaps the same place as the Gogana of Arrian. [Gogana.] [V.]

RHOGANDA'NI ('Po ${ }^{2}$ andavoí, Ptol. vii. 4. § 9), a tribe of ancient Ceylon, at the southern end of the island. Ptolemy mentions that in this part of the island were the best pastures for the elephants, which is the case, too, at the present time. [V.]

RHOGE ('Póvr), an island off the coast of Lycia, not far from the entrance of the Phoenicus Portus. (Plin. v. 35; Steph. B. s. v.; Stadiasm. Mar. Mag. $\S \S 217,218$, where it is called Rhope, 'Pón ${ }^{\prime}$.)
[L.S.]
 river of ancient Persis, which flows into the Persian

## RHYNDACUS

Gulf in lat. $29^{\circ} 20^{\prime}$, long. $48^{\circ} 25^{\prime}$ E. It was little better than a torrent, and is now doubtless marked by the present Bender-rik. Ptoleny (vi. 4. § 2) and Ammianus (xxiii. 6) call it Khogomanis ('Poyouduts), and Marcianus (Peripl. i. § 24, ed Müller) Rhogomanius ('Poroudvcos). (Vincent, vol. i. p. 401: Thevenot, v. p. 535.)
[V.]
RHOSCOPUS ('Poбко́тоиs), a place on the coast of Pamphylia, near the mouth of the Cestrus, is mentioned only in the Stadiasmus ( $\$ \S$ 199, 200).
[L. S.]
RHOSOLOGIACUM or RHOSOLOGIA ('Poбodoyia), a small place in the country of the Tectosages in Galatia, on the road from Ancyra to Caesareia Mazaca, not far from the river Halys. (It. Ant. pp. 143, 206 ; Ptol. v. 4. §8, where some read 'Opoбoдoүla or 'Opoбo入ayıaкóv; It. Hieros. p. 575, where it is called Rosolodiacum.) [L.S.] RHOSUS. [Issus.]
RHOXOLA'NI. [Roxolanl.]
RHUANA ('Poudıa al. 'PáBava Baбìictov), an inland town of Arabia, placed by Ptolemy (ri. 7. § 33) in long. $87^{\circ}$, lat. $22^{\circ}$. Apparently not far distant from the SW. bay of the Persian Gulf, and on the river Lar.
[G. W.]
RHUBON, RHUDON ('Poúfavos $\mathrm{Ix}^{6}$., Ptol. iii. 5. § 2: 'Pouठஸ̄vos \$xk., Marcian. Heracl. Peripl. § 39, ed. Müller), a river of European Sarmatia which took its source in the Alani Montes and discharged itself into the Venedicus Sinus. Schafarik (Slav. Alt. vol. i. p. 497) has identified it with the Dünu, which, taking a direction generally W., falls into the Gulf of Riga below Fort Dünamunde, after a course of 655 miles. This same ethnologist connects the mythic Eridanus, and the trees that wept amber, with the Rludun of Marcian (Rhubon appears to be a corrupted form), which Sabinus, a commentator upon Virgil, A. D. 1544, calls Rhodanus. The amber could be brought by land, or by water from the coasts where it was collected to the Duina, and thence by boats conveyed to the Borysthenes and the coasts of the Euxine. The name "Eri-danus," closely connected with Rhodanus, is composed of the words "Rha" and "Don," roots which, in several of the In-do-European languages, signify "water," "river," as for instance in "Rha," the old name for the Volga, and Danubius, Tanais, Danapris, Danastris, and the like.
[E. B. J.]
KHUBRICATUS ('Poufpiкatos, Ptol. iv. 3. §5), a river of Numidia, the same as the Ubus of the Peut. Tab., which flowed 5 M. P. to the E. of Hippo Regius, now called the Seibouse (Barth, Wanderungen. p. 70).
[E. B. J.]
RHU'DIAE or RU'DIAE ('Povoía, Ptol.; 'Pcodial, Strab.: Eth. Rudinus: Rugge), an ancient city of the Salentines, in the interior of the Roman province of Calabria, and in the immediate vicinity of Lupiae (Lecce). (Strab. vi. p. 281 : Ptol. iii. 1.§ 76.) Strabo calls it a Greek city' ( $\pi$ ódis 'End $\eta$ vis); but we have no other indication of this fact, and all the other notices we find of it wuld lead us to infer that it was a native Salentine or Messapian town. Under the Romans it appears to have enjoyed manicipal rank (an inscription has "Municipes Rudini," Orell. 3858): but in other respects it was a place of little importance, and derived its sole celebrity from the circumstance of its being the birthplace of the poet Emius. (Strab. l.c. Mel. ii. 4. § 7 ; Sil. Ital. xii. 393; Cic. de Or. iii. 42.) That author is repeatedly terued a Calabrian (Hor. Carm. iv. 8; Ovid. A. A.
iii. 409; Sil. Ital. l. c.; Acron, ad Hor. l. c.), and these passages confirm the accuracy of Ptolemy, who assigns Rhudiae to the Salentines, and therefore to the Calabrians according to the Roman use of the name. Pliny and Mela, on the contrary, enumerate Rudiae among the towns of the Pediculi together with Barium and Egnatia, and the latter author expressly excludes it from Calabria (Plin. iii. 11. s. 16; Mel. l.c.). But it seems impossible to reconcile this statement with that of Strabo, who places it near Lupiae, in the interior of the peninsula, or with the actual situation of Rudiae, which is clearly ascertained at a place still called Rugge, though now uninbabited, about a mile from Lecce, where the inscription above cited was discovered, as well as several others in the Messapian dialect, and many vases and other objects of antiquity. The identity of this place with the municipal town of Rudiae can therefore admit of no doubt; nor is there any reason to question the fact that this was also the birthplace of Ennius : bat considerable confusion has arisen from the mention in the Tabula of a place called "Rudae." which it places 12 miles W. of Rubi, on the road to Canusium. As this place would have been within the limits of the Pediculi or Peucetii, it has been supprsed by some writers to be the same with the Rudiae of Pliny and Mela, and therefore the birthplace of Ennios; but the claims of Kugge to this distinction appear unquestionable. (Galateo, de Sit. Iapyg. p. 77; Romanelli, vol. ii. pp. 93-102; Mommsen, Unter Ital. Dialekte, p. 58.)

The Rudae or Rudiae of the Tabula, which is otherwise quite unknown, must have been situated somewhere in the neighbourhood of the modern Andria.
[E. H. B.]
RHUS. [Mrgara, p. 313, b.]
RHU'SIUM ('Pov́oiov, Anna Comn. vii. pp. 210, 215), a twwn in Thrace on the road from Siracellae to Aenns. Now Ruskioi.
[T. H. D.]
RHUTUPIAE [RUTUPIAE.]
RHY'MMICI MONTES ('Pvщцuкd Ép $\quad$, Ptol. vi. 14. §§ 4, 10, 11), a mountain chain of Asiatic Sarmatia, of which no nearer indication can be given than that it belongs to the great meridian chain, or rather assennblage of nearly parallel mountain chains, of the Ural.
 14. $\S \$ 2,4$ ), which has been a sore puzzle to geographers, took its source in these mountains and discharged itself into the Caspian between the Rha (Volya) and the Daix (Ural). In the present day there is, W. of the embouchure of the Ural to the great delta of the Volga, only one small stream which reaches the Caspian, under the name of the Naryn Chara (Goebel, Raise in die Steppen, vol. ii. p. 342). This river is probably the Rhymmus of Ptolemy. (Humboldt, Asie Centrale, vol. ii. p. 187.)
[E. B. J.]
RHI'NDACUS ('Puvסaxds), an important river in the province of Hellespontus, which has its sources at the foot of Mount Olympus in Phrygia Epictetus, near the town of Azani. (Scylax, p. 35 ; Plin. v. 40 ; Pomp. Mela, i. 19 ; Strab. xii. p. 576 .) According to Pliny, it was at one time called Lycus, and had its origin in the lake of Miletopolis; but this notion is incorrect. The river flows at first in a north-western direction, forming the boundary between Mysia and Bithynia, through the lake of Apollonia, and in the neighbourhood of Miletopolis receives the river Megistus, and discharges itself into the Propuntis opprosite the island of Besbicus.

RIGODUNCM.

The Schoiisast on Apollonius Rhodius (i. 1165) states that in later times the Rhyndacus, after receiving the waters of the Megistus, was itself called Megistus; bat Eustathius (ad Hom. Il. xiii. 771) assures us that in his time it still bore the name of Rhyndacus. According to Valerius Flaccus (iii. 35) its yellow waters were discernible in the sea at a great distance from its mouth. In B. c. 73 Lucullus gained a victory over Mithridates on the banks of this river. (Plut. Luc. 11; comp. Polyb. v. 17 ; Ptol. v. 1. §§ 4, 8 ; Steph. B. 8. v.) The Rhyndacus is now called Lupad, and after its union with the Megistus (Susughirli) it bears the name of Mohalidsh or Micalitza. (See Hamilton's Researches, i. p. 83, \&c.)
[L. S.]
RHYPES ('Pútes, 'Púnal, Steph. B. s. v.: Eth. 'Púq. 'Pútos), a city of Achaia, 30 stadia W. of Aegiom, was originally one of the twelve Achaean cities. It had ceased to be a member of the League in the time of Polybins, who mentions Leontiam in its place. Rhypes, however, continued to exist down to the time of Augustus; but this emperor transferred its inhabitants to Patrae, and its territory ('Puxis, or $\dot{\eta}$ 'Putıkh) was divided between Aegium and Pharae. Its ruins were seen by Pausanias at 2 short distance from the main road from Aeginm is Patrae. We learn from Strabo that this town was mentioned by Aeschylus as кєpavvías 'Púaas, or "Rhypes stricken by the thunderbolt." It was the birthplace of Myscellus, the founder of Croton. (Herod. i. 145; Paus. vii. 6. § 1, vii. 18. § 7, vii. 23. § 4 ; Strab. viii. pp. 386,387 .) In the territory of Rhypes there was a demus called Levctrux ( $\Lambda \in \ddot{\text { úctooy, Strab. p. 387), and also a sea- }}$ port named Eilineum ('Epive $\delta \nu$, or 'Epiveos $\lambda i \mu h \nu$ ), which is mentioned by Thucydides, and which is described by Pausanias as 60 stadia from Aegium. (Thuc. vii. 34 ; Paus. vii. 22. § 10 ; Plin. iv. 6.)

The geographers of the French Commission place Rhypes at some ruins on the right bank of the river Tholo, where it issues into the plain; and the distance of the position on the Tholo from Vostitza (Aegium) is that which Pausanias assigns as the interval between Aegium and Rhypes. But Leake, thinking it highly improbable that two of the chief cities of Achaia should have been only 30 stadia from each other, suspects the accuracy of Pausanias or his text, as to the distance between Rhypes and Aegium. He accordingly places Rhypes further W. on the banks of the river of Salmeniko, and supposes Erineum to have been its port and to have been situated immediately above it at the harbour of Lambiri. The position of Lambiri answers very well to that of Erineum; but the reason given by Leake does not appear sufficient for rejecting the express statement of Pausanias as to the distance between Aegiam and Rhypes. (Leake, Peloponnesiaca, p. 408, seq. ; comp. Curtius, Peloponnesos, vol. i. p. 458, seq.)

RHY'TIUM ('Pútiov, Steph. B.; Plin. iv. 20: Eth. 'Purieús), a town of Crete which Homer (Il. ii. 648) couples with Phiestus as "well-peopled cities." The city belonged to the Gortynians (Strab. x. p.479; Nonnus, Lionys. xiii. 233.) The corrupt reading 'Putium in Steph. B. (s.v. Erŷגai) should be emended into 'PGrioy. (Höck, Kreta, vol. i. p. 414.) The city must have existed somewhere on or close to the route which leads from Kasteliand to Haghtus Dhéka ; but Pashley (Crete, vol. i. p. 293) conid find no vestiges of antiquity in the neighbourbood.
[E. B. J.]

RIBLAH ('Pa6入ad $\mu$ ), a city "in the land of Hamath," where Jehoahaz or Shallom was cast into chains by Pharaoh Necho, and where Nebuchadnezzar subsequently gave judgment on Zedekiah. ( 2 Kings, xxiii. 33, xxv. 6.) We find Nebuchad. nezzar there again, after an interval of ten years, when the last remnant was carried captive and slain there. (Jerem. lii. 27.)
[G. W.]
RICCIACUM, in North Gallia. The Table has a road from Divudurum (Metz) to Augusta Trevirorum (T'rier). From Divodurum to Caranusca is xlii., from Caranusca to Ricciacum x., and from Ricciacum to Augusta x. D'Anville guessed Ricciacum to be Remich on the Mosel; but it is only a guess. There is evidently an error in the Table in the distance between Divodurum and Ricciacum, which is a great deal too much. The geographers have handled this matter in various ways. [CAranusca.] (See also Ukert, Gallien, p. 512, and the note.)
[G. L.]
RICINA. 1. (Eth. Ricinensis: Ru. nerr Macerata), a municipal town of Picenum, situated on a hill above the right bank of the river Potentia (Potenza), about 15 miles from the sea. Pliny is the only geographer that mentions it (iii. 13. s. 18); but the "ager Ricinensis" is noticed also in the Liber Coloniarum (p. 226), and we learn from an inscription that it received a colony under the emperor Severus, and assumed in consequence the title of "Colonia Helvia Ricina" (Orell. Inscr. 915; Cluver. Ital. p. 739.) Its ruins are still visible, and include the remains of a theatre and other buildings. They are situated about 3 miles from Muceruta, and 6 from Recanati, which has preserved the traces of the ancient name. though it does not occupy the ancient site. (Holsten. Not. ad Cluver. p. 137.) The Tabula correctly places it at a distance of 12 miles from Septempeda (S. Severino.) (Tab. Peut.)
2. A small town on the coast of Liguria, mentioned only in the Tubula, which places it on the coast to the E. of Genoa. It is commonly identified with Recco, a town about 12 miles from Genoa, but the Tabula gives the distance as only 7, so that the identification is very doubtful. (Tab. Peut.; Geogr. Kav. iv. 32.)
[E. H. B.]
RICINA ('Pisiva, Ptol. ii. 2. § 11), one of the Ebudae insulae or Hebrides.
[T. H. D.]
RIDUNA, one of the islands off that part of the Galiic coast which was occupied by the Armoric states. As the Marit. Itin. mentions Caesarea (Jersey), Sarria (Guernsey), and Riduna, it is concluded that Riduna is Aurigny or Alderney off Cap de la Hague.
[G. L.]
RIGODULUM, a place on the Mosella (Mosel), "protected either by mountains or the river." (Tacitns, Hist. iv. 71.) In the war with Civilis this place was occupied by Valentinus with a large force of Treviri. Civilis, who was at Mainz, marched to Rigodulum in three days (tertiis castris) and stornned the place. On the following day he reached Colonia Trevirorum (Trier). It is supposed that Rigodulum may be Reol on the Mosel. Lipsius assumes Rigodulum to be Rigol near Confluentes (Coblenz), but that is impossible. Ammianus Marceilinus (xvi. 6) places Rigodulnm near Confluentes, but his authority is small; and there may be some corruption in the text.
[G. L.]
RIGODU'NUM ('Pryóouvov, Ptol. ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana. Cainden ( $\sim \mathbf{~ 9 7 4 )}$ ) conjectures it might have
been Riblle-chester or Rixton; others identify it with Richmond.
[T. H. D.]
RIGOMAGUS, a village of Cisalpine Gaul, forming a station on the road from Ticinum (Pavia) to Augusta Taurinorum (Turin.) It is placed by the Itineraries 36 M. P. from Laumellum (Lomello), and 36 M. P. from Augusta or Taurini: these distances coincide with the site of Trino Vecchio, a village a little to the S . of the modern town of Trino, on the left bank of the Po (Itin. Ant. p. 339; Cluver. Ital. p. 234 ; Walckenaer, Gicogr. des Gateles. vol. iii. p. 23).
[E. H. B.]
RIGOMAGUS (Remagen), on the Rhine. The Table places it between Bonna (Bonn) and Antunnacum (Andernach), viii. from Bunna and ix. from Antunnacum. The Antonine Itin., which omits Rigomagus, makes the distance xvii. from Bonna to Antunnacum. Remagen is on the Rhine and on the north side of the $A \hat{h} r$ near its junction with the Lhine. Ukert (Gallien, p. 518, note) speaks of a milestone found at Remagen with the inscription "a Col. Agripp. м. p. xxx." [G. L.]

RIMMION ('Epє $\mu \mu \omega \omega \nu$ ), $a$ city of the tribe of Simeon (Josk. xix. 7), mentioned by Zechariah as the extremity of the land of Judah (xiv. 10). Placed by Einsebius S. of Daroma, 16 miles from Eleutheropolis. (Onomast. s. vo. 'Е $\rho \in \mu \mathrm{S} \dot{\omega} \nu,{ }^{\prime} \mathrm{P} \in \mu \mu \dot{\mu}$.) He places another town of the same name 15 miles north of Jerusalem. (Ib. s. v. 'P $\in \mu \mu$ ous.) [G. W.]

PIOBE, in North Gallia, a name which appears in the Table on a road which passes from Augustomagus (Semis) through Calagum (Chailli). Kiobe cones after Calagum, but the distance is not given. A road, which appears to be in the direction of a Roman road, runs from Cheilli to Orbi, a few miles north of the Seine ; and D'Anville thinks that the name Orbi and the distance from Riobe to Condate (Montereau-sur-Yonne) enable us to fix Riobe at Orbi. [Condate, No. 2; Calagum.] [G. L.]
RIPA (Plin. iii. I. s. 3, according to the Codex Reg., though the common reading is Ripepora), a place in Hispania Baetica, which according to Rezzonico (Disquisit. Min. ii. p. 11) occupied the site of the modern Castro del Kio. (Comp. Ukert, rol. ii. part i. p. 380.)
[T. H. D.]
RIRA, a river on the E. coast of Thrace. (Plin. iv. 11.s. 18.) Reichards conjectures it to be the Kamczik.
[T. H. D.]
RISARDIR (Polyb. ap. Plin. v. 1), a harbour on the W. coast of Mauretania, which may be identified with the Acre of the Ship-journal of Hanno ("Aкра, Peripl. § 5, ed. Müller). It now bears the name of Agader, signifying in the Berber lancuage (Paradis, Dictionnuire Berbere, p. 110) "a fortros,' and is deveribed as being the best roadstead along $t$ eccast of Marocco. Agader or Santa Cruz, which was called Guertguessem in the time of Leo Africanus, was walled round and strengthened by batteries in 1503 by Emanuel, king of Portugal; but was taken from the Portuguese by the Moors in 1536. (Jackson, Marocco, p. 113 ; Journ. of Geogr. Soc. vol. vi. p. 292.)
[E. B. J.]
RITHYMNA. [Rilithymana.]
RITTIUM ('Pirtiov), a place in the sonth-east of Lower Pamnonia, situsted close to the Dimule, and on the road leading to Taurunum. (It. Ant. p. 242: Ptol. ii. 16. §5: Tab. Peut.) It contained a garrison of Dalmatian cavalry. (Not. Imp., where the name is mis-surlt Rictiun.) According to Muchar (Nrricum, i. p. 265), its site is now occuined by the twin of Titel.
[L. S.]

RITUMAGUS, in Gallia, a Mansio which is placed in the Anton. Itin. and in the Table on a road on the north side of the Seine from Rotomagus (Rouen) to Lutetia (Paris) : and between Rinto magus and Petromaitalum. The distance of Ritumagus from Rotomagus is viii. in the Table and is. in the Itin, which distance fixes Ritumagus near Radepont. at the passage of the Andelle. a small stream which flows into the Seine.
[G. L.]
RIUSIAVA ('Piovalavia), a town in the Agri Decumates, in Germany (Ptol. ii. 11. § 30), is commonly believed to have been situat od in the Riesgau, or Ries, which may possibly derive its name from it.
[L.S.]
ROBOGDII ('Posb $\boldsymbol{\gamma}_{6}$ me, Ptol. ii. 2. § 3), a people in the northernmost part of Hibernia, whose name, according to Camden (p. 1411), is still perpetuated in that of a small episcopal town called Robogh in C'lster.
[T. H. D.]

ii. 2. § 2), a promontory on the N. cuast of Hibernia in the territory of the Robogdii, conjectured by Camden (p. 1411) to be Fair Herth [T. H. D.]

ROBuraria, a station on the Via Latina, 16 miles from Rome, the site of which is probably marked by the Osteria della Molara, at the back of the hill of Tusculum (Itin. Ant. p. 305; West phal. Röm. Kampague. pp. 76, 97.) [Via Latina.] [E.H.B.] ROBOAELLM. [Gablafcia, Vol. L. p. 934, a.]
ROBLiLCA, in Gallia, is placed by the Table on the north side of the Loire, on a road from Juliomagus (Angers) to Caesarodunum (Tours). The distance of Robrica from Juliomagus is xvii. and xxviiii. from Caesarolunum. D'Anville fixed Robrica at the distance of 16 Gallic leagues from Angers at the bridges of Longué, over the Latan, which flows into the Loire. He conjectures that Robrica contains the Celtic element Briga, a bridne or river ford, which is probable. Though D'Anville cannot make the two actual distances severally correspond to those of the Table, he finds that the while distance between Angers and Tours agrees with the whole distance in the Table between Juliomagus and Caesarodunum. Walckenaer has shown in a Mémoire cited by Likert (Gallien, p. 451). that the ancient road deviated in many places from the mailern road.
[G. L.]
RUBLR. Ammianus Marcellinns (xsx. 3) mentions a fortress named Robur, which Valentinian I., A. D. 374, built near Basilia (Basle) on the lime in Switzerland. Schoeptlin guessed that Robur was on the site of the cathedral of Basle, but the words of Ammianus do not give mach support to this conjecture: "Prope Basiliam, quod appellant accolae Robur.: Others have made other guesses. [G. L.]

RoDICM. in North Gallia, is placed in the Table on a road between Samarobriva (Amiens) and Augusta Suessionum (Sicissons). It is xx. from Samarobriva to Rodium, a distance which followed along the ancient road brings us to Roie, which represents Rodium ; but D'Anville says that to make the ancient and modern distances agree we must go further, and as far as the beltry named Roicéglise.
[G. L.]
moDUMNA ('Poסoìuva). in Gallia, is one of the towns of the Segusiani. (I'tol. ii. 8. \$ 14.) the duma appears in the Table on a road wheh pous
 norma. Koduma is Roane on the west bank of the Loire, "hich gave name to the former district of Roamuais.
[G. L.]

ROMA ('Pá $\mu \eta$, Strah. Ptol. et alii : Eth. Romanuy), the chief town of Italy, and long the mistress of the ancient world.

## Situation.

Rome was seated on the Tiber, and principally on its left bank, at a distance of about 15 miles from its mouth. The observatory of the Collegio Romano, which is situated in the ancient Campus Martius, lies in $41^{\circ} 53^{\prime} 52^{\prime \prime} \mathrm{N}$. lat., and $12^{\circ} 28^{\prime} 40^{\prime \prime}$ long. E. of Greenwich.
Korne lies in the vast plain now called the Campagna, which extends in a south-easterly direction about 90 miles from Cape Linaro, a little S. of Civita Vecchia, to the Cirespan promontory: whilst its breadth is determined by the mountains on the NE. and by the Mediterranean on the SW., in which direction it does not exceed ateout 27 miles in its greatest extent. Looking from ${ }^{2 n r}$ of the heights of Rome towards the E., the borizon is bounded from the N. almost to the S. by

- 812
-832
-830
-813
- 8.43 declivit Tusco Lanurium, and on its northern philit Tusculum, consecrated by the genius and philosophy of Cicero. To the S. and SW. of Mons Aibanus there is nothing to obstruct the view over the undulating plain till it sinks into the sea; but on the W. and NW. the prospect is bounded to a very narrow compuss by the superior elevation of Mons Janiculus and Mons Vaticanus.

The plain marked out by these natural boundaries is intersected by two considerable rivers, the Tiber and the Anio. The former, at first called Albula, and afterwards Tiberis or Tibris (Liv. i. 3 ; 1'lin. iii. 5. s. 9; Virg. Aen. viii. 330, \&c.), entering the plain between Soracte and the Sabine chain befine described, bends its yellow course to the $S$. At a distance of about 3 miles from Rome, it receives the Anio flowing from the eastward, and then with increased volume passes through the city and discharges itself into the sea at Ostia. The course of the Tiber marked the limits of Etruria : the angular territory between it and the Anio is attributed to the Sabines; whilst on the southern side the line of the Anio and of the Tiber formed the boundary of Latium.
The Campagnes of Rome consists of andulating ridges, from which scanty harvests are gathered; but the chief use to which it is applied is the pasturing of rast herds of cattle. These, with the picturesque herdsmen, mounted on small and half wild horses and armed with long poles or lances, are almost the only objects that break the monotony of a scene where scarce a tree is visible, and where even the solitary houses are scattered at wide intervals. Yet anciently the Campagna must have prevented a very different aspect. Even within sight of Rome it was thickly studded with cities at first ats tlourishing as herself; and in those times, when " every rood of ground maintained its man," it must have presented an appearance of rich cultiration.

Such is the nature of the country in the immediate neighbourhoul of Kume. The celebrated group of
seven hills - the site on which the eternal city itself was destined to rise-stands on the left bank of the Tiber. To the $\mathbf{N}$. of them is another hill, the Mons Pincius or Collis Hortorum, which was excluded from the ancient city, bat part of it was enclosed in the walls of Aurelian. The Tiber, at its entrance into Rome, very nearly approaches the foot of this hill, and then describes three bold curves or reaches; first to the SW., then to the SE., and again to the SW. The distance from the spot where the Tiber enters the city to the $\mathbf{S W}$. point of the Aventine is, in a direct line, about 2 miles. At the extremity of the second, or most eastern reach, it divides itself for a short space into two channels and forms an island, called the Insula Tiberina. At this spot, at about 300 paces from its eastern bank, lies the smallest but most renowned of the seven hills, the Mons Capitolinus. It is of a saddle-back shape, depressed in the centre, and rising into two eminences at its S. and N. extremities. On its N. or rather NE.
side, it must in ancient times have almost touclied the Collis Quirinalis, the most northerly of the seven, from which a large portion was cut away by Trajan, in order to construct his forum. The Quirinalis is somewhat in the shape of a hook, running first to the SW., and then curving its extreme point to the S. Properly speaking, it is not a distinct hill, but merely a tongue, projecting from the same common ridge which also throws out the adjoining Viminal and the two still more southern projections of the Esquiline. It will be seen from the annexed plan, without the help of which this description cannot be understood, that the Quirinal, and the southernmost and most projecting tongue of the Esquiline, almost meet at their extremities, and enclose a considerable hollow - which, however, is nearly filled up by the Viminal, and by the northern and smaller tongue of the Esquiline. These two tongues of the Esquiline were originally regarded as distinct hills, under the names of Cispius, the northern projection, and Op-

pins the southern one; but they were afterwards considered as one hill, in order not to exceed the prescriptive number of seven. S. of the Esquiline lies Mons Caelius, the largest of the seven; and to the W. of it Mons Aventinus, the next largest, the NW. side of which closely borders on the Tiber. In the centre of this garland of hills lies the lozenge-shaped Mons Palatinus, facing on the NW. towards the Capitoline, on the NE. towards the Esquiline, on the SE. towards the Caelian, and on the SW. towards the Aventine.
It may be observed that, of the seven hills above described, the Quirinal arid Viminal are styled colles, whilst the others, though without any apparent reason for the distinction, are called montes. It cannot depend upon their height, since those called colles are as lofty as thase dignified with the more imposing name uf nontes ; whence it seems probable that the difierence originated in the ancient traditions respecting the Septimontium. A less important eminence, called Velia, which was not reckoned as a distinct hill, projected from the NE. side of the Palatine towards the Esquiline, and separated the two valleys which in after times became the sites of the Forum Romanum and of the Colosseum. The Germalus was another but still smaller offshoot, or spur, of the Palatine, on its western side.
()n the opposite bank of the Tiber, Mons Vaticanus and Mons Janiculns rise, as before remarked, to a considerably greater height than the bills just described. The former of these lies opposite to the Pincian, but at a considerable distance from the river, thus leaving a level space, part of which was called the Ager Vaticanus, whilst the portion nearest the river obtained the name of Prata Quinctia. To the S . of Muns Vaticanus, and close to the river, at the extreme western point of its first reach, the Mons Janiculus begins to rise, and runs almost straight to the $S$. till it sinks into the plain opposite to Mons Aventinas. The open space between this hill and the southernmost curve of the Tiber formed the Regio Transtiberina. The sinuous course of the riser from the Pincian to the Capitoline left a still more estensive plain between its left bank and the hills of Rome, the northern and more extensive portion of which formed the Campus Martius, whilst its suthern part, towards the Capitoline, was called the Prata Flaninia.

From the preceding description it will be perceived that the Capitoline, Aventine, Caelian, and Palatine were completely isolated hills, separated from one another by narrow valleys. Those valleys which lay nearest the Tiber seem, in their original atate, to have formed a marsh, or even a lake. Such was the Vallis Murcia, between the Palatine and Arentine, in later times the seat of the Circus Maximus ; as well as the low ground between the Palatife and river, afterwards known as the Velabrum and Forum Boarium ; and perhaps even part of the forum Romanum itself. Thus, in the combat between the Romans and Sabines, on the spot afterwards occupied by the forum, the affrighted horse of Settins Curtius, the Sabine leader, is described ${ }^{2}$ carrying him into a marsh. (Liv. i. 12.) Nay, there are grounds for believing that the Tiber, in the ueighbourhood of Rome, formed at a very remote period an arm of the sea, as pure marine sand is often found there. (Niebubr, Lect. on Ethnogr. vol. ii. p. 39.)

In order to assist the reader in forming a clear idea of the nature of the Roman hills, we shall here vol. IL.
insert a few measurements. They are taken from a paper by Sir George Schukburg in the "Philosophical Transactions," An. 1777 (vol. Isvii. pt. 2. p. 594), and have been esteemed the most accurate. (Becker, Handbuch, vol. i. p. 83, note.) Other measurements by Calandrelli are also annexed. The latter are according to the Paris foot, which equals 12.785 inches English.

| Height above the Mediterranean: - |  |
| :---: | :---: |
| a | F |
| Arentine, near Priory of Multa . | 117 |
| Palatine, floor of imperial palace | 133 |
| Caelian, near the Claudian aqueduct | 125 |
| Esquiline, floor of S. Maria Maggiore | 154 |
| Capitoline, W. end of the Tarpeian rock | 8 |
| Viminal and Quirinal at their junction, in the Carthusian church, baths of Dio cletian |  |
| Pincian, garden of the Villa Medici | 165 |
| Tiber, above the Mediterranean | - 33 |
| Convent of St. Clare in the Via de' Spec- |  |
| oru |  |

Measurements from Calandrelli, in his and Conti's Opuscoli astronamici e fisici (ap. Sachse, Gesch. der Stadt Rom, vol. i. p. 697): -

Paris feet
Janiculum, floor of the charch of S. Pie-
tro in Montorio (not the highest point of the hill) -

185
Arentine, floor of S. Alessio - - 146 Pulatine, floor of S. Bonaventura - 160 Caelian, floor of S. Giovanni Laterano 158
Esquiline, floor of S. Maria Maggiore - 177
Capitol, floor of S. Maria d Araceli - 151
Viminal, floor of S. Lorenzo - - 160
Quirinal, Palazzo Quirinale - - 148
Pincian, floor of S. Trinitic de' Monti - 150
Vatican, floor of S. Pietro - - 93
In ancient times, however, the hills must have appeared considerably higher than they do at present, as the valleys are now raised in many places from 15 to 20 feet above their former level, and in some parts much more. (Lumisden, Ant. of Rome, p. 137.) This remark is more particularly applicable to the forum, which is covered with rubbish to a great depth; a circumstance which detracts much from the apparent height of the Capitoline; whose sides, too, must formerly bave been much mirs abrupt and precipitous than they now are. The much superior height of the Janiculum to that of any of the hills on the W. bank of the Tiber, will have been remarked. Hence it enjoyed a noble pro-pect over the whole extent of the city and the Campagna beyond, to the mountains which bound the eastern horizon. The view has been celebrated by Martial (iv. 64), and may be still enjoyed either from the terrace in front of S. Pietro in Montorio, or from the spot where the Fontana Paolina now pours its abundant waters :-
"Hinc septem dominos videre montes
Et totam licet aestimare Romam,
Albanos quoque Tusculosque colles
Et quodcunque jacet sub urbe frigus."

## Climate.

The climate of Rome appears to have been much colder in ancient times than it is at pre3 A
sent. Dionysius (xii. 8) records a winter in which the snow lay more than 7 feet deep at Rome, when honses were destroyed and men and cattle perished. Another severe winter, if it be not the same, is mentioned by Livy (v. 13) as occurring b.c. 398, when the Tiber was frozen over and the roads rendered impassable. (Cf. xl. 45, 8c.) A very severe winter is also alluded to by St. Augustin (de Civ. Dei. iii. 17). That such instances were rare, however, appears from the minuteness with which they are recorded. Yet there are many passages in the classics which prove that a moderate degree of winter cold was not at all unusual, or rather that it was of ordinary occurrence. Thus Pliny (xvii. 2) speaks of long snows as being beneficial to the corn; and allusions to winter will be found in Cicero (ud Qu. Fr. ii. 12), Horace (Od i.9, iii. 10), Martial (iv.18), and in numerous other passages of ancient writers. At the present time the occurrence of even such a degree of cold as may be inferred from these passages is extremely rare. One or two modern instances of severe winters are indeed recorded; but, generally speaking, snow seldom falls, and never lies long upon the ground. This change of climate is accounted for by Dr. Arnold as follows: "Allowing that the peninsular form of Italy must at all times have had its effect in softening the climate, still the woods and marshes of Cisalpine Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighburhood of Rome. Besides, even in the Apenuines, and in Etruria and in Latium, the forests occupied a far greater space than in modern times: this would increase the quantity of rain, and consequently the volume of water in the rivers; the floods would be greater and more numerous, and before manis dominion had completely subdued the whole country, there would be a large accumulation of water in the low grounds, which would still further increase the coldness of the atmosphere." (Hist. of Kome, vol. i. p. 449.)

But if the Roman climate is ameliorated with regard to the rigour of its winters, there is no reason to believe that the same is the case with respect to that unhealthy state of the atmosphere called malaria. In ancient times, Rome itself appears to have been tolerably free from this pestilence, which was confined to certain tracts of the surrounding country. This may have been partly owing to its denser population; for it is obsersed that in the more thickly inhabited districts of Rome there is even at present but little malariu. Strabo, speaking of Latiun, observes that only a few spots near the coast were marshy and unwholesome (v. p. 231), and a little further on gives positive testimony to the healthiness of the immediate neigh-

 To the same purpose is the testimony of Livy, who represents Camillus describing the hills of Roone as " saluberrimos colles;" and of Cicero (de Rep.ii. 6): " locumque delegit et fontibus abundantem et in regione pestilenti salubrem: colles enim sunt, qui cuin pertlantur $\mathrm{i}_{1}$ si, tum afterunt umbram vallibus." It is surprising how Becker (Hanalluch, p. 82) can interpret Cicero's meaning in this passage to be that the lower parts of lione were unkealthy, when it is
obrious that he meant just the reverse, - that the slade of the hills secured their healthiness. Little can be inferred with regard to any permanent malaria from the altars which we are told were erected to the goddesses Orbona and Febris on the Esquiline and in other places. (Cic. N. D. ii. 25; Plin. ii. 5; Valer. Max. ii. 5. § 6.) Even the most healthy spots are not always exempt from fevers, much less a populous city during the heats of autumn. The climate of Rome is at present reckoned unhealithy from June till October; but Horace dreaded only the autumnal heats. (Od. ii. 14. 15 ; Sat. ii. 6. 19.) The season is more accurately defined in his Epistle to Maecenas, where he places it at the riponing of the fig: -
"dum ficus prima calorque
Designatoren decorat lictoribus atris."
(Ep. i. 7. 5.)
In the same epistle ( $\mathbf{v} .10$ ) he seems to expect as a usual occurrence that the Alban fields would be covered with snow in the winter.

## PART I. HISTORY OF THE CITY.

## I. Tiladitions respecting the Foundatione

 of Rome.The history of the foundation of Rome is lost in the darkness of remote antiquity. When the greatness of the city, and its progress in arts and letters, a wakened curiosity respecting its origin, authentic records on the subject, if indeed they had ever existed, were no longer to be found. Hence a license of conjecture which has produced at the least no fewer than twenty-five distinct legends respecting the foundation of Rome. To record all these, many of which are merely variations of the same story, would be beside the purpose of the present article. The student who desires a complete account of them will find them very clearly stated in Sir G. Cornewall Lewis's Inquiry into the Credibility of the early Koman History (vol.i. p. 394, seq.), and also, though not so fully, in Niebuhr's History of Rome (Eng. Transl. vol. i. p. 214, seq.), chiefly derived from the following ancient sources: Dionys. Halic. i. c. 72 -74; Plut. Rom. 1, 2; Servius, ad lirg. Aen i. 273; and Festus, s. v. Korma. The importance of the subject, however, and the frequent allusions to it in the classical writers, will not permit ns to pass it over in perfect silence; and we shall therefore mention, as compendiously as possible, some of the principal traditions.

All the therries on the subject may be reduced to three general heads, as follows:-I. That Rome was founded in the age preceding the Trojan War. II. That it was founded by Aeneas, or other persons, a little after the fall of Troy. III. That Romulus, grandson of Numitor, king of Alba Longn. was its founder, several centuries after the Trojan War.
Many who held the first of these opinions ascribed the building of Rome to the Pelasgi, and thought that its name was derived from the furce ( $\delta \dot{\omega}^{\prime} \mu \eta$ ) of their arms. (Plut. Rom. 1.) Others regarded it as having been founded by an indigenous Italian tribe, and called Valentia, a name of the same import, which, after the arrival of Evander and other Greeks, was translated into Rome. (Niebuhr, Hist vol. i. p. 214.) A more prevalent tradition than either of the preceding was, that the city was fint founded by the Arcalian Evander, sbout sixty years befure the Trujan Hiar. The fact that Evander
settled on the Palatine hill seems also to have been sometimes accepted by those who referred the real foundation of Rome to a much later period. The tradition respecting this settlement is interesting to the topographer, as the names of certain places at Rome were said to be derived from circumstances connected with it. The Palatium, or Palatine hill, itself was thought to have been named after the Arcadian town of Pallantium, the $n$ and one $l$ having been dropped in the course of time; though others derived the appellation in different ways, and especially from Pallas, the grandson of Evander by his danghter Dyna and Hercules (Paus. viii. 43; Dionys. i. 32.) So, too, the Porta Carmentalis of the Servian city derived its name from a neighbouring altar of Carmentis, or Carmenta, the mother of Evander. (Dionys. l.e.; Virg. Aen. viii. 338.) Nothing indeed can be a more striking proof of the antiquity of this tradition, as well as of the deep root which it must have taken among the Roman people, than the circumstance that to a late period divine honours continued to be paid to Carmenta, as well as to Evander himself. Another indication of a similar tendency was the belief which prevailed among the Romans, and was entertained even by such writers as Livy and Tacitus, that letters and the arts of civilisation were first introduced among them by Evander. (Liv. i. 7; Tac. Ann. xi. 14; Plut Q. R. 56.)

The greater part of those who held the second opinion regarded Aeneas, or one of his immediate descendants, as the founder of Rome. This theory was particularly current among Greek writers. Sometimes the Trojans alone were regarded as the founders ; sometimes they are represented as uniting in the task with the Aborigines. Occasionally, however, Greeks are substituted for Trojans, and the origin of Rome is ascribed to a son of Ulysses and Circe; nay, in one case Aeneas is represented as coming into Italy in company with Ulysses. But though this view was more particularly Grecian, it was adopted by some Latin writers of high repute. Sallust (Cat. 6) ascribes a Trojan origin to Rome; and Propertius (iv. 1), without expressly naming Aeneas as the founder, evidently refers its origin to him:-
"Hoc quodcunque vides, hospes, qua maxima Roma est,
Ante Phrygem Aenean collis et herba fuit;"
thoogh in the same passage he also refers to the occupation of the Palatine hill by Evander. One very prevalent form of this tradition, which appears to have been known to Aristote (Dionys. i. 72), represents either a matron or a female slave, named Rooné, as burning the ships after the Trojans had landed. They were thus compelled to remain; and when the settlement became a flourishing city, they named it after the woman who had been the cause of its foundation.

The third form of tradition, which ascribed the origin of Rome to Romulus, was by far the most universally received among the Romans. It must be regarded as ultimately forming the national tradition ; and there is every probability that it was of native growth, as many of its incidents serve to explain Roman rites and institutions, such as the worship of Vesta, the Lupercalia, Larentalia, Lemuria, Arval Brothers, \&c. (Lewis, vol. i. p. 409.) The legend was of high antiquity among the Romans, although inferior in this respect to some of the Greek
accounts. It was recorded in its present form by Fabius Pictor, one of the earliest Roman annalists, and was adopted by other ancient antiquarians and historians (Dionys. i. 79). Nay, from the testimony of Livy we may infer that it prevailed at a much earlier date, since he tells us (x.23) that an image of the she-wolf suckling the two royal infants was erected near the Ficus Ruminalis by the curule aediles, B. c. 296.* The story is too well known to be re-

## THE CAPITOLINE WOLF.

peated here. We shall merely remark that although according to this tradition Aeneas still remains the mythical ancestor of the Romans, yet that the building of two cities and the lapse of many generations intervene between his arrival in Italy and the foundation of Rome by his descendant Romulus. Aeneas himself founds Lavinium, and his son Ascanius Alba Longa, after a lapse of thirty years. We are little concerned about the sovereigns who are supposed to have reigned in the latter city down to the time of Numitor, the grandfather of Romulus, ex-

[^29]cept in so far as they may serve to ascortain the era of Rome. The account which has the most pretensions to accuracy is that given by Dionysius (i. 65, 70, 71 ) and by Diodorus (Fr. lib. viii. vol. iv. p. 21, Bipont). The sum of the reigns here given, allowing five years for that of Aeneas, who died in the seventh year after the taking of Troy, is 432 years that is, down to the second year of Numitor, when Rome was founded by Romulus, in the first year of the 7th Olympiad. Now this agrees very closely with Varro's era for the foundation of Rome, viz., 753 b. C. For Troy having been taken, according to the era of Eratosthenes, in 1184 B. c., the difference between 1184 and 753 leaves 431 years for the duration of the Alban kingdom.

Varro's date for the foundation of Rome is that generally adopted. Other authorities place it rather later: Cato. in 751 в. C.; Polybins, in 750; Fabius Pictor, in 747.

This is not the place to enter into the question whether these dates of the Alban kings were the invention of a later age, in order to satisfy the requirements of chronology. It will suffice to remark that the next most prevalent opinion among those Romans who adopted the main points of this tradition assigned only three centuries to the Alban kings before the foundation of Rome. This was the opinion of Virgil (Aen. i. 272), 一
"Hic jam tercentum totos regnabitur annos," - of Justin, of Trogus Pompeius (xliii. 1), and of Livy (i. 29), who assigns a period of 400 years for the existence of Alba, and places its destruction a century after the foundation of Rome. At all events the preponderance of testimony tends very strongly to show that Rome was not founded till several centuries after the Trojan War. Timaeus seems to have been the first Greek writer who adopted the account of the foundation of Rome bs Romulus. (Niebuhr, Hist. vol. i. p. 218.)

## II. The City of Romulus.

The Roman historians almost unanimonsly relate that Rome originally consisted of the city founded by Romulus on the Palatine. (Liv. i. 7; Vell. i. 8 ; Tac. Ann. xii. 24 ; Dionys. i. 88; Gell. xiii. 14; Or. Tr. iii. 1. 29, \&c.) The ancient settlement of Evander on the same hill, as well as a city on the Capitoline called Saturnia (Varr. L. L. v. § 42, Müll.; Festus, p. 322, Müll.), and another on Mons Janiculus called Aenea or Antipolis (Dionys. i. 73; Plin. iii. 9), must be supposed to have disappeared at the time of its foundation, if indeed they had ever existed. It seems probable enough, as Dionysius says, that villages were previously scattered about on the seven hills; but the existence of a place called Vatica or Vaticum, on the right bank of the Tiber, and of a Quirium on the Quirinal, rests solely on the conjecture of Niebuhr (Hist. vol. i. p. 223, seq., 289, seq., Eng. Trans.)

Pomoerium.-Tacitus has given in the following passage the fullest and most authentic account of the circuit of the Romulean city: "Sed initium condendi, et quod ponoerium Romulus posuerit, noscere haud absurdum reor. Igitur a foro Boario, ubi aereum tauri simulacrum adspicimus, quia id genus aninalium aratro subditur, sulcus designandi oppidi coeptus, nt magnam Herculis aram amplecteretur. Inde certis spatiis interjecti lapides, per ima montis Palatini ad aram Consi, mox ad Curias Veteres, tuin ad sacelluin Larum; forumque Romanum et

Capitolium non a Romulo sed a Tito Tatio additum urbi credidere." (Ann. xii. 24.)

According to this description, the point where the furrow of the pomoerium commenced was marked by the statue of a bull, whence the name of the Forum Boarium was by some writers afterwards derived. The Forum Boarium lay under the westernmost angle of the Palatine; and the furrow probably began a little beyond the spot where the Arcus Argentarius now stands, close to the church of $S$. Giorgio in Velabro, embracing the altar of Hercules, or Ara Maxima, which stood in the same foram:-
"Constituitque sihi, quae Maxima dicitur, arann, Hic ubi pars urbis de bove nomen habet."
(Ov. Fast. i. 581.)
Hence it proceeded along the north side of the Vallis Murcia (Circus Maximus). as far as the Ara Consi. According to Becker (Handbuch, p. 98, de $\mathrm{A} / \mathrm{uris}, \mathrm{g} c$. p. 11), this altar must be sought towards the lower end of the Circus, near the southernmost angle of the Palatine; but he gives no authority for this opinion, which is a mere assumption, or rather a petitio principii from the passage of Tacitus before quoted, whence he thinks that it must necessarily be referred to the spot indicated. (Handb. p. 468, and p. 665, note 1438.) But there is nothing at all in the words of Tacitus to warrant this inference : and there seems to be no good reason why we should dispute the authority of Tertullian, from whom we learn that the Ara Consi stood near the first meta of the circus, and therefore somewhere near the middle of the SW. side of the Palatine ("et nunc ara Conso illi in Circo defossa est ad primas metas," de Spect. 5). Hence, after turning, of course, the southernmost point of the Palatine, where the Septizonium of Severus afterwards stood, the pomoerium proceeded through the valley between the Palatine and Caclius (Via de S. Gregorio) to the Curiae Veteres. The situation of this last place has been the subject of much dispute. Niebuhr (Hist. vol. i. p. 288), though with some hesitation (ib. note 735), and Bunsen (Beschreibung, vol. i. p. 138), place the Curiae Veteres near the baths of Titus on the Esquiline, and they are followed by Müller (Etrusker, vol. ii. p. 143). This view appears, however, to be founded on no authority, except that of the modern writers Blondus Flavius and Lacius Faunus, who state that the part of the Esquiline called Carinae, and even the baths of Titus themselves, were designated in ancient notarial documents as "Curia Vetus." But, first, it is highly improbable that Tacitus, in his description, should have taken so long a stride as from the Ara Consi, in the middle of the SW. side of the Palatine, to the Esquiline, withont mentioning any intervening place. Again: if the line of the pomoerium had proceeded so far to the $\mathrm{N}_{\text {. }}$, it must have embraced the Velia as well as the Palatine, as Bunsen assumes (L. c.); and this must have destroyed that squareness of form which, as we shall see further on, procured for the city of Romulns the appellation of "Roma Quadrata." That the furrow was drawn at right angles following the natural line of the hill we are assured by more than one au-
 Dionys. i. 88; antiquissimum pomoerium, quod a Romulo institutum est, Palatini montis radicibus terminabatur, Gell. xiii. 14). But, further, it may be shown from satisfactory testimony that the Curiae Veteres were not seated on the E-quiline, but between the Palatine and Caelian. Thus the Notitia, in de-

ROMA.
scribing the 10th Regio, or Palatium, marks the boundaries as follows, taking the reverse direction of that followed by Tacitus: "Continet casam Romuli, aedem Matris Deum et Apollinis Rhamnusii, Pentapylum, domum Augustinianam et Tiberianam, Auguratorium, aream Palatinam, aedem Jovis Victoris, domam Dionis, Curiam Veterem, Fortunam Respicientem, Septizonium Divi Severi, Victoriam Germanicianam, Lupercal." The Curiae Veteres are here mentioned in the singular number; but there is some authority for this deviation. Thus Ovid (Fast. iii. 139) says:-
" Janua tunc regis posita viret arbore Phoebi; Ante tuas fit idem, Curia prisca, fores,"
where the Curia Prisca is identified with the Curiae Veteres by the following passage in Macrobius:" Eodern quoque ingrediente mense tam in Regia Curïsque atque flaminum domibus, laureae veteres novis laureis mutabantur." (Sat.i.12.) Now, in order to determine the precise situation of the Curia Vetus of the Notitia, it must be borne in mind that the "Domus Augustiniana," or palace of Augustus, occupied a considerable portion of the NE. side of the Palatine, commencing at the N . corner, as will be shown in treating the topography of the later city, and ending probably opposite to the arch of Titus, where the entrance was situated. Proceeding eastward, along the same side of the hill, we find enumerated the Auguratorium and Area Palatina. Then follows the temple of Jupiter Victor, which we must not confound, as Becker does (Handb. p. 100, cf. p. 422, note 847 ; see Preller, Regionen, p. 186), with that of Jupiter Stator, since the latter, according to the Notitia, lay rather more northwards in the 4th Regio, and probably on or near the Summa Sacra Via. That of Jupiter Victor, then, must have lain to the E . of the palace, and, as there is but a short space left on this side of the hill, it is probable that the Domus Dionis must be placed at least at its extreme NE. angle, if not on the side facing the Caelian. The Curia Vetus, of course, lay more to the S., and perhaps towards the middle of the $\mathbf{E}$. side of the Palatine. Its site near the temple (or statue) of Fortuna Respiciens is confirmed by the Basis Capitolina, which mentions in the 10th Regio a "Vicus Curiarum" near to another of Fortuna Respiciens. (Gruter, Inscr. ccl.) The fourth point mentioned by Tacitus - the Aedes Larum - lay on the Summa Sacra Via, and therefore at about the middle of the NE. side of the Palatine hill. ("Aedem Larum in Summa Sacra Via," Mon. Ancyr.; "Ancus Martius (habitavit) in Summa Sacra Via, ubi aedes Larum est," Solin. i. 24.) At this point the historian finishes bis description of the pomoeriam of Romulus, and proceeds to say that the forum and Capitol were believed to have been added to the city not by that monarch but by Titus Tatius. Hence he is charged with leaving about a third of the pomoerium undefined; and, in order to remedy this defect, Becker (de Muris, fec. p. 14, Handb. p. 102), not without the sanction of other critics and editors, proposes to alter the punctuation of the passage, and to read "tum ad sacellum Larum forumque Romanom; et Capitolium non a Romulo," \&cc. But in truth little is gained by this proceeding - only the short space from the arch of Titus to the N. point of the Palatine, whilst the remaining part of the line from thence to the Forum Boarium still remains undescribed. But what is worse, even this little is gained at the expense of truth ; since, strictly speak-

ROMA.
ing, a line drawn from the Aedes Larum to the forum would include the temple of Vesta (S. Maria Liberatrice), which, as we learn from Dionysius (ii. 65), lay outside the walls of Romulus. Moreover, according to the emended punctuation, it might be doubtful whether Tacitus meant that the forum was included in the Romulean city, or not; and it was apparently to obviate this objection that Becker proposed to insert hoc before et (hoc et Capitolium). But these are liberties which sober criticism can hardly allow with the text of such a writer. Tacitus was not speaking like a common topographer or regionary, who is obliged to identify with painful accuracy every step as he proceeds. It is more consistent with his sententions style that, having carried the line thas far, he left his readers to complete it from the rough indication - which at the same time conveyed an important historical fact - that the forum and Capitol, which skirted at some distance the northern angle of the hill, were added by Tatius, and lay therefore outside the walls of Romulus. His readers could not err. It was well known that the original Rome was square; and, having mdicated the middle point in each of the sides, he might have been charged with dulness had he written, " tum ad sacellum Larum, inde ad forum

Boarium." Bunsen, however, has assumed from the omission that the line of wall never proceeded begond the Sacellum Larum, and that, indeed, it was not needed; the remaining space being sufficiently defended by a marsh or lake which surrounded it. (Beschr. vol. i. p. 138.) But, as the Sacellum Larum lay on high ground, on the top of the Velian ridge, this could not have been a reason for not carrying the wall farther; and even if there was a marsh luwer down, we cannot but suppose, as Becker observes (de Mur. p. 14), that the pomoerium must have been carried on to its termination. Indeed the Porta Romanula, one of the gates of the Romulean city, lay, as we shall presently see, on the NW. side, a little to the N. of the spot whence Tacitus commences his description; and if there was a gate there, $\dot{a}$ fortiori there was a wall.

The line described by Tacitus is that of the furrow, not of the actual wall; but, in the case at least of a newly founded city, the wall must have very closely followed this line. The space between them - the wall being inside-was the pomoerium, literally, "behind the wall" (post moerum $=$ murum); and this space could not be ploughed or cultivated. The line of the furrow, or boundary of the pomoerium, was marked by stones or cippi. The name pomoerium was also extended to another open space within the walls which was kept free from buildings. The matter is very clearly explained by Livy in the following passage:-" Pomoerium, verbi vim solum intuentes, postmoerium interpretantur esse. Est autem magis circa murum locus, quem in condendis urbibus olin Etrusci, qua murum ducturi essent, certis circa terminis inaugurato consecrabant: ut neque interiore parte aedificia moenibus continuarentur, quas nunc valgo etiam conjungunt; et extrinsecus puri aliquid ab humano cultu pateret soli. Hoc spatium, quod neque habitari neque arari fas erat, non magis quod post murum esset, quam quod murus post id, pomoerium Romani appellarunt: et in urbis incremento semper, quantum moevia processura erant, tantum termini hi consecrati proferebantur" (i. 44). Every city founded, like Rome, after the Etruscan manner, had a pomoerium. The rites observed in drawing the boundary line, called " primigenius salcus" (Paul. Diac. p. 236, Milll.), were as folluws: the founder, dressed in Gabiuian fashion (cinctu Gabino), yoked to a plough, on an auspicious day, a bull and a cow, the former on the off side, the latter on the near side, and, proceeding always to the left, drew the furrow marking the boundary of the pomoerium. There was a mystical meaning in the ceremons. The bull on the outside denoted that the males were to be dreadful to external enemies, whilst the cow inside typified the women who were to replenish the city with inhabitants. (Juann. Lydus, de Mens. iv. 50.) The furrow represented the ditch; the clods thrown up, the wall; and persons followed the plough to throw inwards those clods which had fallen outwards. At the places left for the gates, the plough was lifted up and carried over the profane space. (Varr. L. L. v. § 143, Müll.; Plut. Q. R. 27, Rom. 11.) The whole process has been summed up in the following vigorous words of Cato: - "Qui urbem novam condet, tauro et vacca aret; ubi araverit, murum faciat; ubi portam vult esse, aratrum sustollat et portet, et portan vocet." (ap. Isidor. xv. 2, 3.)

The religious ase of the pomoerium was to define the boundary of the auspicis urbana, or city anspicus. (Varr. l.c.) So Gellius, from the books of
the Roman augurs: " Pomoerium est locus intra agrum effatum per totias urbis circuitum pone murus regionibus certis determinatus, qui facit finem urbani auspicii" (xiii. 14). Fron this passaye it appears that the ponoerium itself stood within another district called the "ager effatus." This was also merely a religious, or augural, division of territory, and was of five kinds, viz. the ager Romanus, Gabinus, peregrinus, bosticus, and incertus, or the Roman, Gabinian, foreign, hootile, and doubtful territories. (Varr. v. § 33, Mtill.) These agri or territories were called "effati," because the augurs declared (effati sunt) after this manner the bounds of the celestial auguries taken beyond the pomoerium. (Id. vi. § 53, Milll.) Hence in this sense the Ager Romanus is merely a religious or augural division, and must not be confounded with the Ager Romanus in a political sense, or the territory actually belonging to the Roman people. It was the territory dechared by the augurs as that in which alone auguries might be taken respecting foreign and military affairs; and hence the reason why we find so many accounts of generals returning to Rome to take the auguries afresh. (Liv. viii. 30, x. 3, xxiii. 19, \&c.)

It is impossible to determine exactly how much space was left for the pornoerium between the furrow and the wall. In the case of the Romulean city, however, it was probably not very extensive, as the nature of the ground, especially on the side of Mons Caelius, would not allow of any great divergence from the base of the hill. Besides, the boundaries already laid down on the N. side, as the Sacelluin Larum and Aedes Vestae, show that the line ran very close under the Palatine. This question depends upon another, which there is no evidence to determine satisfactorily, namely, whether the wall crowned the summit of the hill or ran along its base. The former arrangement seems the more probable, both because it was the most natural and usual mode of fortificution, and because we should otherwise in some parts hardly find room enough for the pomoerium. Besides, one at least of the gates of the Romulean city, as we shall see further on, was approached by steps, and must therefore have stood upon a height. There seems to be no good authority for Niebuhr's assumption (Hist. vol. i. p. 287, seq.) that the original city of Romulus was defended merely by the sides of the hill being escarped, and that the line of the pomverium was a later enlargement to enclose a suburb which had sprung up round about its foot. It is surprising how Niebuhr, who had seen the ground, could imagine that there was room for such a suburb with a pomoerium. Besides, we are expressly told by Tacitus (l. c.) that the line of the pomoerium which he describes was the beginning of building the city (initium condendi). Indeed Niobuhr seems to have had some extraurdinary ideas respecting the nature of the ground about the Palatine, when he describes the space between that hill and the Caelius, now occupied by the road called Via di S. Gregorio, as "a wide and convenient plain!" (Hist. i. 390, cf. p. 391.) An obscure tradition is mentioned indeed by Greek writers, according to which there was a Roma Quadrata distinct from and older than the city of

 'Párov \# 'Púrous madatotépov toútal, Dion Cass. Fr. Vales. 3, 5, p. 10, St. ; cf. Tzetzes, ad Lycophr. v.1232). But, as Becker observes (Hasdb.
p. 106), we should infer from these words that the Rome alluded to was not on the Palatine, but on some other hill Plutarch, indeed, also alludes to the same tradition (Rom. 9), and describes Romulus as building this Roma Quadrata and afterwards enlarging it. We also find some obscure hints to the same purpose in Latin authors. Thus Solinus: "Nam at antirmat Varro, auctor diligentissimus, Roman condidit Romulus, Marte genitus et Rhea Silvia, vel nt nonnulli, Marte et llia, dictaque est primum Roma quadrata, quod ad aequilibrium foret posita. Ea incipit a silva, quae est in area Apollinis, et ad supercilium scalarum Caci habet terminum, ubi tugurium fuit Faustuli" (i. 2). Now we must not take the whole of this account to be Varro's, as Becker does. (De Muris, g'c. p. 18, seq., Handb. p. 106.) All that belongs to Varro seems to be taken from a passage still extant respecting the parentage of Romulus (L. L. v. § 144, Müll.), and the words after "vel at nonnulli," \&c. belong to Solinus himself. Varro, therefure, is not, as Becker asserts, a witness to Rome having been called quadrata. The fullowing passage in Festus, however, manifestly alludes to ayother sense of Roma Quadrata, namely, as a certain ballowed place which every city built with Etruscan rites possessed, and in which were deposited such things as were considered of good omen in founding a city, and which are described by Orid (Fasti, iv. 821 ; cf. Plut Rom. 11): "Quadrata Roma in Palatio ante templum Apollinis dicitur, ubi reposita sunt quae solent boni ominis gratia in urbe condenda adhiberi, quia saxo munitus est initio in speciem quadratam. Ejus loci Ennius meminit, cum ait : 'et quis est erat Komae regnare quadratae'" (p. 258, Mtill.). The place here described was, in fact, the mundus of the Rumulean city. The words of Solinus, though we are ignorant of the exact position of the places which he mentions, seem to denote too large an area to be reconciled with the description of Festus. In confirmation of the latter, however, Becker (IIandb. p. 107) adduces a fragment of the Capitoline plan (Bellori, Tab. xvi.), with the imperfect inscription rea apo (area Apollinis), and, on the space beside it, a plan of a square elevation with steps at two of its sides. This, he observes, exactly answers to the description of Festus, being a "locus saxo munitus in speciem quadratam;" and the area Apollinis was naturally lefure his temple. That the whole of the Romulean city, however, was also called quadrata, is evident, not only from a passage of Dionysiuy befire cited, where he speaks of the temple of Vesta being outside of the Rome called Quadrata (ört tins tetparívou кa入ou
 mutilated fragment of Ennius, quoted by Festus in the passage just cited. It is without sense as it stands, and Diüller's emendation appears certain : -
"El qui se sperat Romae regnare quadratwe,"
where the meaning is inapplicable to a mere mundus, and must be referred to the entire city.

Gates of the Palatine city. - It was required that in a town built, like Rome, with Etruscan rites, there should be at least three gates and three temples, namely, to Jupiter, Juno, and Minerva (Surv. ad Aen. i. 422); and we learn from Pliny (iii. 9) that the city of Romulus had, in fact, three if not four gates. In the time of Varro, three gates existed at Rome besides those of the Servian walls, and two of these can be referred with certainty to
the Palatine city. "Praeterea intra muros video portas dici. In palatio Mucionis, a mugitu, quod ea pecus in bucita circum antiquom oppidum exigebant. Alteram Romanulam ab Roma dictam, quae habet gradus in Nuva Via ad Volupiae sacellum. Tertia est Janualis dicta ab Jano; et ideo ibi positum Jani signum ; et jns institutum a Pompilio, ut scribit in Annalilins Piso, ut sit aperta semper, nisi quom belluin sit nusquam." (L. L. v. §§ 164,165 , Müll.) The gate here called Mucio by Varro is the same as that called Mugio by other writers, by an ordinary interchange of $c$ and $g$, as in Cains for Gains, Cermalus for Germalus, \&c. Thus Varro himself, as cited by Nonins (xii. 51. p. 531, m.) is made to call it Dlugio. In Paulus Diaconus (p. 144, Mïll.) we find the adjective form Magionia, erroneously formed, however, from Mugins, the name of a man; and lastly, the form Mugonia in Solinus (i. 24).

The most important passage for determining the situation of this gate is Livy's description (i. 12) of the battle between the Sabines and Romans. The former occupy the Capitoline hill, the latter are arrayed in the valley beneath. The Romans mount to the attack, but are repulsed and driven back towards the " old gate" ("rd veterem portam") of the Palatium. Ronulus, who is stationed on the high ground near it (the summit of the Velia), vows to erect on this spot a temple to Jupiter, under the name of "Stator," if he arrest the flight of the Romans. At this time the Sabines had driven back the Romans to the extremity of what was aiterwards the forum, and their leader Metins Curtius had even penetrated nearly to the gate of the Palatium. The Romans, however, rally; the Sabines are repulsed, and the combat is renewed in the valley between the two hills. Dionysius confirms the site of the gate by describing it as leading to the Palatium from the Summa Sacra Via; which street, as will be seen when we come to describe the topocraphy of the later city, crossed the ridge of the Velia at this spot ('Pómu入os $\mu z ̀ \nu$ 'Op $\theta \omega \sigma$ íq $\Delta i t$

 $\delta \delta o u$, ii. 50). The spot is further identified by a graphic passage in Ovid, where the citizen who serves as Cicerone to his book conducts it from the fora of the Caesars along the Sacra Via, and, having crossed the eastern extremity of the Forum Romanum, arrives at the temple of Vesta; then proceeding onwards up the Sacra Via, first points out the former residence of Numa, and then, turning to the right, indicates the gate of the palace:-
" Paruit et ducens, ' Haec sunt fora Caesaris, inquit; Haec est a sacris quae via nomen habet.
Hic locus est Vestae, qui Pallada servat et ignem;
Hic fuit antiqui regia parva Numae.'
Inde petens dextram, ' Porta est, ait, ista Palatt:
Hic Stator; hoc primum condita Roma loco est.'"
(Trist. iii. 1. 27.)
The site of the temple of Jupiter Stator here given is confirmed by other writers. Thus it is described by Livy (i. 41) as near the palace of Tarquinius Priscus, from the windows of which, overhanging the Nova Via, Tanaquil addressed the people. Now, as will be shown in its proper place, the Nova Via ran for some distance parallel with the Sacra Via, and between it and the Palatine, and, at its highest point near this gate, was called "Summa," like the Sacra Via. Thus Solinns (i. 24): "Tarquinius Priscus ad Mugonian Portam supra Summan 3 44

Noram Viam (habitavit)." The site of the temple of Jupiter Stator near the Summa Sacra Via is sufficiently certain without adopting the proof adduced by Becker from the equestrian statue of Cloelia, the history of which he completely misunderstands. The passage from Pliny (xxxiv. 13) which he quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publicola, who disputed with Cloelia the honour of having swum the Tiber, and escaped from the custody of Porsena. Indeed, the two rival legends seem to have created some confusion among the ancients themselves; and it was a disputed point in the time of Plutarch whether the existing statue was that of Cloelia or Valeria. (Popl. 19.) Becker confounds these two statues, and asserts (note 155) that Pliny, as well as Dionysius, speaks of the statue of Cloelia as no longer existing in his time. But Pliny, on the contrary, in the very chapter quoted, mentions it as still in being: "Cloeliae etiam statua est equestris." It was the statue of Valeria that had disappeared, if indeed it had ever existed except in the account of Aunius Fetialis. Pliny, therefore, must share the castigation bestowed by Becker on Plutarch and Servius for their careless topography: whose assertion as to the existence of the statue in their time he will not believe, though the latter says he had seen it with his own eyes (ad Aen. viii. 646). The only ground which Becker has for so peremptorily contradicting these three respectable authorities is a passage in Dionysius (v. 35); who, however, only says that when he was at Rome the statue no longer stood in its place (raúrnv inueis
 he was told that it had been destroyed ( $\eta \phi a v i \sigma \theta \eta$ ) in a fire that had raged among the surrounding houses. But Dionysius may have been misinformed; or perhaps $\eta \phi a \nu i \sigma \theta \eta$ is to be taken in its literal sense, and the statue was only removed for a while out of sight. We may assume, therefore, that it had been restored to its original position in the period which elapsed between Dionysius and Pliny, and that it continued to adorn the Summa Sacra Via for some centuries after the tine of the former writer.
The preceding passages abundantly establish the site of the Porta Mugionis at that spot of the Palatine which faces the Summa Sacra Via, or present arch of Titus; nor does it seem necessary, by way of further proof, to resort to the far-fetched argument adduced by Becker from the nature of the ground (Handb. p. 113), namely, that this is the only spot on the NE. face of the hill which offers a natural ascent, by the road (Via Polveriera) leading up to the Convent of S. Bonaventura. That road, indeed, has all the appearance of being an artificial rather than a natural ascent, and may have been made centuries after the time of Romulus. Unfortunately, too, for Becker's round assertion on this subject (Handb. p. 109), that we must $a b$ initio embrace as an incontrovertible principle that gates are to be sought only where the hill offers natural ascents, we find that the only other known gate, the Porta Romanula, was, on his own showing, accessible only by means of stepe. For the situation of this gate Varro is again our principal authority. We have seen in the passage before quoted from that author that it opened into the Nova Via, near the Sacellum Volupiae, by means of steps. Varro again alludes to it in the following passage: "Hoc sacrificium (to Acca Larentia) fit in Velabro, qua in Novam Viam
exitur, ut aiunt quidam, ad sepulcrum Accae, ot quod ibi prope faciunt Diis Manibus Servilibus sacerdotes; qui uterque locus extra arbem antiquam fuit non longe a Porta Romanula, de qua in priore libro dixi." (L. L. vi. § 24, Müll.) The site of the Sacellum Volupiae cannot be determined; bat the Velabrum is one of the most certain spots in Roman topography, and is still indicated by the church which bears its name, S. Giorgio in Velabro. We learn from both these passages of Varro-for Scaliger's emendation of Nova Via for Novalia in the former is incontestable - the exact site of the Porta Romanula ; for as the sacrifice alluded to was performed in the Velabrum near the spot where the Nova Via entered it, and as the P. Romanula was not far from this place, it follows that it must have been at the lower end of the street or in the infima Nova Via. Varro's account is confirmed by Festus ( $p$. 262, Mül.), who, however, calls the gate Romana instead of Romanula: "Sed porta Romana instituta est a Romulo infimo clivo Victoriae, qui locus gradibus in quadram furmatns est: appellata autem Romana a Sabinis praecipue, quod ea proximus aditus erat Romam." Here the same steps are alluded to that are mentioned by Varro. The Clivus Victoriae was that part of the NW. declivity of the Palatine which overhung the Nova Via. It was so named either from a temple of Victory seated on the top of the hill (" in aedem Victoriae, quae est in Palatio, pertulere deam," Liv. xxix. 14), or mure probably - as this temple was not dedicated by L. Postumius till B. C. 295-from an ancient grove, sacred to Victory, on this side of the Palatine, near the Lupercal (Dionys. i. 32), the tradition of which, though the grove itself had long disappeared, probably led to the temple being founded there.

The Romulean city must undoubtedly have had at least a third gate, both from the testimony of Pliny and because it cannot be supposed that its remaining two sides were without an exit; bat there is no authority to decide where it las. Becker thinks that it was seated at the southernmost point of the hill; but this, though probable enough, is nothing more than a conjecture. The Porta Janualis, the third gate mentioned by Varro, was most probably as old as the time of Romulus, though it certainly never belonged to the Palatine city. Its situation and true nature will be discussed presently. We find, however, a gate called Ferentina mentioned by Plutarch (Rom. 20), who relates that Romulus, after the murder of Tatius, which was followed by visible signs of the divine anger, purified Rome and Laurentum by rites which still continued to be observed at that gate. We also find an account in Festus (p. 213) of a Porta Piacularis, which was so called "propter aliqua piacula quae ibidem fiebant ;" and some have assumed ( $\boldsymbol{v}$. Müller, ad Fest. la.) that these two gates were identical. It is well known that the Roman gates had sometimes two names; and this seems especially probable in the case of thuse which had some religious ceremony connected with them. Becker (Handb. p. 177) rejects, however, with something like indignation the idea that such a gate could have belonged to the Romulean city, and would therefore either place it in the Lucus Ferentinae, or alter the text of Plutarch, his usual expedient. Altogether, however, it does not seem quite so improlahle that it may have been the third and missing gate of Romulus, since its name indicates its site near the S. extremity of the I'alatine, just where we are in want of one.

## III. Progress of the City till the Tinc

 of Servics Tullius.We can only pretend to give a probable account of the progress of the city under the first five kings. The statements on the subject in ancient authors sre divergent, though the contradiction is often rather apparent than real. In the course of his reign Romulus added to his original city on the Palatme, the Capitoline hill, then called Saturnius, the Catlian, then called Querquetulanus, and the Aventine. But we must distinguish the nature of these additions. Dionysius (ii. 37) represents the Capitoline and Aventine as enclosed by Romulus with a strong fortification consisting of a ditch and palisades, chiefly as a protection for herdsmen and their flucks, and not as surruanded with a wall, like the Palatine. Yet it is evident from the account of the attack by the Sabines on the Capitoline (Liv. i. 11) that it must have been regularly fortified, and have had a gate. Fomulus had already marked it out as the arx or citadel of his future city; and when he had defeated the Caeninenses and slain their king, he carried thither and dedicated the first spolia opima at an oak-tree held sacred by the shepherds, but which now became the site of the temple of Jupiter Feretrius (Ib.c. 10). When Livy tells us that this was the first temple consecrated at kume, he probably means with the exception of those which were usually erected at the foundation of every city. That the Capitoline was a much more important hill in the time of Romulus than the Aventine and Caelian is also shown by the fact of his opening upon it the asylum for slaves and fugitives, in order to increase the population of his city. This asylum was situated somewhere in the hollow between the two eminehces of the Capitoline, and the site retained till a late period the name of "Inter duas lucos" (Ib. c. 10; Dionys. ii. 15; Strab. v. 230 : Plut. Rom. 9; Ov. Fast. iii. 431, \&cc.).

The Capitoline hill, or Mons Saturnius, appears then to have been a real addition to the Romulean city ; but the Arentine seems to have remained down to the time of Ancus Martius a mere rudely fortified enclosure for the protection of the shepherds. Farious etymologies, all perhaps equally unsatisfactory, have been invented for the name of Aventinas. One legend derived it from an Alban king so called, who was buried on the hill (Liv. i. 3; Varr. L. L. v. § 43, Miull.; Paul. Diac. p. 19, Müll.), another from a descendant of Hercules, mentioned by Virgil (Aen. vii. 656). Servius in his commentary on this passage makes Aventinus a king of the Abarigines, but adds from Varro that the Aventine mas assigned by Romulus to the Sabines, who named it after the Avens, one of their rivers. This account is not found in the remains which we possess of Varro, who, however (l. c.), adds a few more etymoiogies to that already given. One of them, taken from Naevius, derives the name of the hill from the birds (aves) that resorted thither from the Tiber, to which Virgil also seems to allude (Aen. viii. 233). Varro hirnself thinks that it was so called "ab adventu," because, being formerly separated from the other hills by a marsh or lake, it was necessary to go to it in boats: whilst others derived the name "ab adventu hominum," because, having upon it a temple of Diana common to all the Latin people, it was a place of great resort. But these various etymologies only prove that nothing certain was known.

The preponderance of authority tends to show that
the Caelian hill was also colonised in the time of Romulus. Caelius Vibennus, or Caeles Vibenna, an Etruscan general who came to the assistance of Romulus against Tatius and the Sabines, had this hill assigned to him and settled upon it with his army; whence it derived its name of "Caelius," it having been previously called Querquetulanus from its woods of oak. (Varr. L. L. v. § 46, Müll.; Dionys. ii. 36; Paul. Diac. p. 44, Müll.) The traditions respecting the incorporation of this hill are, however, very various. Some authors relate that it was added by Tullus Hostilius (Liv. i. 30 ; Eutrop. i. 4 ; Aur. Vict. Vir. Ill. 4), others by Ancus Martius (Cic. Rep. ii. 18 ; Strab. v. p. 234) ; whilst some, again, place the arrival of Caeles as low down as the reign of Tarquinius Priscus. (Tac. Ann. iv. 65; Festus, p. 355, Müll.) The last account probably arose from some confusion between the arrival of the Tuscans under Romulus, and a subsequent one under the Tuscan king Tarquinius. But the sacred books relating to the Argive chapels eatablished by Numa mention the hill under the name of Caelius (Varr. ib. § 47), and it therefore seems probable that the arrival of Vibenna must be placed under Romulas. This Tuscan settlement appears, however, not to have been permanent. After the death of their leader a portion of his followers incurred the suspicion of the Romans, and were removed from the hill to a less defensible pusition on the plain, apparently between the Palatine and Capitoline, where they founded the Vicus Tuscus; whilst the remainder were transferred to the arijoining hill called Caeliolus (Varr. ib. § 46). Whence also Propertius: -
" Et ta, Roma, meis tribuisti praemia Tuscis Unde hodie vicus nomina Tuscus habet;
Tempore quo sociis venit Lycomedius armis,
Atque Sabina feri contudit arma Tati."-
(iv. 2. 49.)

Here the Tuscan general is named Lycomedius, which seems to be derived from Lucumo, the name given to him by Dionysius (ii. 42, 43), and which was probably only an appellative for an Etruscan prince. The hill having been vacated by this removal of the Tuscans, was again colonised under a subsequent king, which in some degree reconciles the conflicting accounts : but all we shall say further about it at present is, that in the reign of Tiberius an attempt was made to change its name again, and to call it Mons Augustus, either because Tiberius had luid out a great deal of money there in repairing the damage occasioned by a fire, or from a decree of the senate, which appointed that name to be used because a statue of Tiberius had been saved from the flames. (Tac. Ann. iv. 64; Suet. Tib. 48.) But this name never came into common use.

Legend of Tarpeia.-Porta Janualis and Temple of Janus. -The story of Tarpeia involves two or three points of topographical interest. It shows that the Capitoline hill was regularly fortified, and bad a gate. The deed of Tarpeia, whether treacherous or patriotic, for there are two versions of her history, occasioned a change in the name of the hill. It had previously been called Mons Saturnius, from Suturn, to whom it was sacred (Fest. p. 322); and there was a tradition that some Eleans, who had obtained their dismissal from the army of Hercules on his return from his western expedition, had been attracted to settle upon it by the resemblance of its name to that of Kpovios, a mountain of their own country. (Dionys. i. 34.) After the foundation of the Capitol
its appellation, as we shall have occasion to relate further on, was again altered to that which it ever afterwards continued to bear ; yet one part of the southern portion of the hill still retained the name of Rupes Tarpeia, from the vestal having been buried on it. (Varr. L.L. v. § 41, Müll.) Dionysius (ii. 40) adopted the account of Piso, who attributed the death of Tarpeia to a patriotic attempt to deceive the Sabines, in preference to that of Fabius, which brands her with disloyalty. The latter, however, seems to have obtained most currency among the Romans; and Propertius even derives the name of the hill from her father, Tarpeins, who commanded the Roman garrison,-"A duce Tarpeio mons ext cognomen adeptus" (v.4.93),-whilst he brands the tomb of the vestal with infamy. ("Tarpeiae turpe sepulcrum," v. 4.1). The obscure legend of the Porta Pandana, which existed somewhere on the Capitol in the time of Varro (L.L. v. § 42), is also connected with the story of Tarpeia; and Tatius is said to have stipulated, in the treaty which he made with Romulus, that this gate should always be left open. (Fest. p. 363, and Paul. Diac. p. 220, Müll.) According to an incredible account in Solinus (i. 13), it was a gate of the old Saturnian city, and was originally called Porta Saturnia; nor is the version of Polyaenus more satisfactory (Stratag. viii. 35), who refers the story of the Porta Pandana to the treaty with the Gauls, by which the Romans engaged always to leave one gate open, but, in order to evade the consequences, built it in an inaccessible place.

After peace had been concluded between Romulus and Tatius, they possessed two distinct but united cities,-the former reigning on the Palatine, the latter on the Capitoline, and dwelling on the spot where the temple of Juno Moneta afterwards stood (Plut. Rom. 2; Sol. i. 21.) When Tacitus says, in the passage before cited, that Tatius added the Capitline to the city, we are perhaps therefore to understand that he built upon it and made it habitable, whilst previously it had been only a sort of military outpost. The valley between the two hills formed a kind of neutral ground, and served as a common market-place. The gate called Janualis, mentioned by Varro in the passage cited from him when treating of the Romulean gates, seems undoubtedly to have belonged to the Sabine town. Niebuhr, who is followed by Bunsen (Beschr. vol. i. p. 145), is of opinion (Hist. i. 292) that it was built by the two cities as a barrier of their common liberties; that it was open in time of war in order that succour might pass from one to the other, and shut during peace, either to prevent the quarrels which might arise from unrestricted intercourse, or as a token that the cities, though united, were distinct. Becker, on the other hand, denies that it ever was a gate at all, maintaining that it only got that name catachrestically, from the temple which it subsequently formed being called "Porta Belli" (pp. 118, 119, and note 167). But there seems to be ample evidence that it was originally a gate. Varro, in the passage cited, evidently considered it as such; and it is also mentioned by Macrobius as a real gate, though the situation which he assigns to it will hardly be allowed even by those who give the greatest extention to the walls of the Romulean city (" Cum bello Sabino-Romani portam, quae sub radicibus collis Viminalis erat, quae postea ex eventu Janaulis vocata esit, claudere festinarent," Situ. i. 9). We may learn from Ovid, not only its real situ-
ation, but also that it was the very gate which Tarpeia betrayed to the Sabines. The pissage fixes its site so accurately, and consequently also that of the temple of Janus,-an important point in Roman topography,-that it is nocessary to quote it at length :-
" Presserat ora deas. Tunc sic ego nostra resolvo, Voce mea voces eliciente dei:
Quan tot sint Jani cur stas sacratus in uno, Hic ubi templa foris juncta diubus habes ?
Ille manu mulcens propexam ad pectora barbam Protinus Oebalii retulit arma Tati,
Utque levis custos, armillis capta Sabinis, Ad summae Tatium duxerit arcis iter.
Inde, velut nunc est, per quem descenditis, inquit, Arduus in valles et fora clivus erat.
Et jam contigerat portam, Saturnia cujas Dempserat oppositas insidiosa seras.
Cum tanto veritus committere numine pugnans Ipse meae movi callidus artis opus,
Oraque, qua pollens ope sum, fontana reclusi Sumque repentinas ejaculatus aquas.
Ante tamen calidis subjeci sulphura veris, Clauderet ut Tatio fervidus humor iter.
Cujus ut utilitas pulsis percepta Sabinis, Quae fiverat, tuto reddita forma loco est.
Ara mihi posita est, parvo conjuncta sacello.
Hsec adolet flammis cum strue farra suis."
(Fcast. i. 255. seq.)
We see from these lines, that the gate attaeked by the Sabines lay at the bottom of a path leading down from the Capitoline, which path still existed in the time of Ovid, and was situated between the forum of Caesar and the Forum Romanum. The gate was consequently at the botton of the NE. slope of the Capitoline hill, a little to the N. of the present arch of Septimius Severus. We also learn that a small temple or sacellum was dedicated to Janus at this spot. Whether the ancient gate was incorporated in this temple, or whether it was pulled down, or whether the teinple was erected by the side of the gate, cannot be determined; but at all events its former existence was commemorated by the title of Porta Janualis. It is no objection to Ovid's account, as far as the topographical question is concerned, that it differs from the one usually received, which represents the Sabines as successful through the treachery of Tarpeia, and not as repulsed through the intervention of Janus. He seems to have combined two different legends; but all that we are here concerned for is his accurate description of the site of the temple, and consequently of the gate.

Its site is further confirmed by Procopius (B. G. i. 25. p. 122, Dind.), who mentions it as situated a little beyond the statues of the three Fates, ms will appear in the second part of this article. The temple was dedicated by the peace-loving Numa, who made the opening and shutting of it the sign of war and peace. (Liv. i. 19.) Niebuhr, therefore, besides assiguing an inadmissible and even absurd meaning to this custom, has forestalled its date, when he mentions it as coming into use at the union of the two independent cities.

After writing what precedes, the compiler of this article met with an essay by Dr. Th. Mommsen, published in the Annali dell Instituto for the gear 1844 (vol. xvi.), and entilled De Comitio Romano, in which that writer (p. 306, seq.) considers that he has irrefragably established that the temple of

Jarius was not situated in the place here assigned to it, but in the Forum Olitorium outside the Porta Carmentalis. As the opinion of so distinguished a scholar as Mommsen is entitled to great attention, we shall here briefly review his arguments. They may be stated as follows. That the temple of Janus was in the Forum Olitorium may be shown from Tacitus: "Et Jano templum, quod apud Forum Olitoriuin C. Duilius struxerat (dedicavit Tiberius)," (A风ァ. ii. 49) : and also from Festus: "Religioni est quibusdain porta Carmentali egredi et in aede Jani, quae est extra eam, senatum baberi, quod ea egressi sex et trecenti Fabii apud Cremeram omnes interfecti sunt, cum in aede Jani S. C. factum esset, ut proficiscerentur" (p. 285, Mïll.). But this temple was undoubtedly the same as the famous one founded by Numa, and Duilins could only have restored, not built it ; since it can be shown that there was only one Temple of Janus at Rome before the time of Dumitian. Thus Ovid (as may be scen in the passage before quoted) asks Janus, -
"Cum tot sint Jani cur stas sacratus, in uno, Hic ubi juncta foris templa duobus habes?"
The same thing appears from the following passage of Martial (x. 28.2), which shows that, before Domitian erected the Janus Quadrifrons in the Forum Transitorium, the god had only one little temple:-

> "Pervius exiguos habitabas ante Penates Plurima qua medium Foms terebat iter."

The same situation of this only temple is also testified by Servius (ad Aen. vii. 607): "Sacrarium (Jani) Numa Pompilius fecerat - Quod Numa instituerat, translatum est ad Forum Transitorium." And again "Sacrarium hoc Numa Pompilius fecerat circa imum Argiletum juxta theatrum Marcelli." Thus the situation of the sole temple of Janus is proved by the preponderance of the best authority, and does not rest on mere conjecture.

In these remarks of Mommsen's we miss that accuracy of interpretation which is so necessary in treating questions of this description. The word "struxerat," used by Tacitus, denotes the erection of a new building, and cannot be applied to the mere restorstion of an ancient one. Nor, had there been no other temple of Janus, would it have been necesisary to designate the precise situation of this by the words "apud Forum Olitorium." Again, the words of Ovid refer, not to one temple, but to one Jauos, which, however, as we have seen, was converted into a sort of small temple. "When there are so many Jani, why is your image consecrated only in one ? ${ }^{n}$ This, then, was not a temple in the larger sense of the word; that is, a building of such a size as to be fit for assemblies of the senate, but merely the little sacellum described by Ovid. Let us hear Mommsen's own description of it, drawn from this passage, and from that of Martial just quoted: * Fuit enim Jani aedes (quod luculentissime apparet ex Ovidii verbis supra laudatis) non nisi Janus aliquis, sive bifrons sive quadrifrons, Dei statua ornatus, Ea, quam Numa fecit, fornix erat pervius ad portam Carmentalem applicatus, quo transibant omnes qui a Campo Martio Furoque Olitorio venientes Boarium Romanumve petebant" (p. 307). But - overlooking the point how the building of Numa could have been attached to a gate erected in the time of Servius how is it possible to conceive that, as Monmsen infers from the words of Festus, the senate could have been assembled in a little place of this description,
the common thoroughfare of the Romans? Besides, we have the express testimony of Livy, that the Senatus Consultum, sanctioning the departure of the Fabii, was made in the usual place for the meetings of the senate, -the Curia Hostilia. "Consul e Curia egressus, comitante Fabiorum agmine, qui in vestibulo curiae, senatus consultum exspectantes, steterant, domum rediit" (ii. 48). Livy is certainly a better witness on such a puint than Festus; whose account, therefore, is overthrown. not only by its inherent imprubability, but also by the weight of superior authority. All that we can infer from his words is, that the temple of Janus, outside the Porta Carmentalis, was sufficiently large to hold an assembly of the senate; but this circumstance itself is sufficient proof that it could not have been the original little temple, or sacellum, of Numa There are other objections to the account of Festus. It was not ominous, as he says, to go out at the Carmental gate, but to go out through the right arch of the gate ("infelici via dextro Jano portas Carmentalis profecti, ad Cremeram flumen perveniunt," Ib. c. 49). If the whole gate had been accursed, how could a sacred procession like that of the virgins from the temple of Apollo to that of Juno Regina, described by Livy (xxvii. 37), have passed through it? Nor can it be told whether the relative ea refers to the Porta Carmentalis, as sense, or to aedes Jani, as grammar, requires. Further, it would be contrary to the usual custom, as Becker correctly remarks (Handbuch, p. 139, note), for the senate to assemble outside of the gates to deliberate on a domestic matter of this nature. Then, with reference to Ovid's description, he could not have mentioned the sacellum of Janus as adjoining two fora, had it stood where Mommsen places it, where it would have been separated from the Forum Romanum by the whole length of the Vicus Jugarius. Besides, it is plain from the passage of the Fasti before quoted that the original temple stood at the foot of a clivus, or descent from the Capitoline. Yet Mommsen puts it at the very top of the hill over the Carmental gate ("in ipso monte," p. 310, vide his plan at the end of the volume), where the hill is most abrupt, and where there could not possibly have been any clivus, and the Porta Janualis at the bottom. We should remark, too, that the reading, "arduus in valles of fura clivus erat," is not a mere conjecture of Becker, as Mommsen seems to think (p. 310), but the common reading; and that to substitute "per fora" instead would make evident nonsense. Nor in that case do we ree how the temple could have been "apud Forum Olitorium," as Tacitus says, even if apud only means near, not at : and still less how it could have adjoined the theatre of Marcellus ("juxta theatrum Marcelli"), as indicated by Servius. What has been said will also be sufficient to refute the last named commentator in stating this to be the origival temple. He has evidently confounded the two.
We can therefore only agree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this occasion. "At quod somniavit de aede Jani sine simulacro (p. 259), quod Festum, quod Servium gravissimi erroris incusavit (p. 139, n. 254, seq.), id vix condono homini philologo" (p. 307). It appears, we trust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The explanation we have already given, that Ovid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we
see no reason why Janus, a very ancient Latin divinity, and to whom the Mons Janiculas appears to have been sacred before the building of Rome, should not have been honoured with a regular teniple besides the little affair which was the index of peace and war. As the question, however, is connected with the situation of the Argiletum and Forum Caesaris, we shall have occasion to revert to it, and have mentioned it here only because the legend of Tarpeia, and consequent building of the temple, are closely connected with the history of the city.

Romulus, after his mysterious disappearance, was deified under the name of Quirimus, and his successor, Numa, erected a temple to the new God on the Quirinal. (Dionys. ii. 63; Ov. Fast. ii. 509). This hill, which was previously named Agonus (Fest. p. 254; Dionys. ii. 37), appears in the time of Numa to have been divided into four distinct eminences, each named after some deity, namely, Quirinalis, Salutaris, Mucialis, and Latiaris (Varr. L.L. v. § 51, Müll.) ; but from what deity the name of Mucialis was derived remains inexplicable. The name of Quirinalis, which, however, some derive from the Quirites, who had come with Tatius from Cures, and settled on the hill (Varr. and Fest. U.cc.), ultimately swallowed up the other three. The temple of Quirinus probably stood near the present church of S. Andrea del Noviziato. This question, however, as well as that concerning the sites of the other three temples, will recur when treating of the topography of the city. Numa, who was himself a Sabine, also founded a capitol (Hieron. i. p. 298), subsequently called, by way of distinction, "vetus Capitolium," on the Quirinal, which hill had been chiefly colonised by his countrymen. Of course the name of "Capitolium" could not have been applied to it till after the foundation of the Roman Capitol, and originally it was the arx of the city, containing the three usual temples of Jupiter, Juno, and Minerva. (Varr. L.L. v. § 158, Müll.) This ancient temple of Jupiter is alluded to by Martial (v. 22. 4), and probably stood on the southern part of the Quirinal on the present height of Magnanapoli.

Tullus Hostilius is said to have added the Caelian hill to the city after the destruction of Alba Longa, when the population of Rome was doubled by the inhabitants of Alba being transferred thither ; and in order to render the Caelian still more thickly inhabited Tullus chose it for his own residence. (Liv. i. 30 ; Eutrop. i. 4 ; Victor, Vir. Ill. 4.) The two accounts of the incorporation of this hill by Romulus and Tullus contain, as we have before remarked, nothing contradictory ; otherwise, Dionysius Halicarnassensis would hardly have committed himself by adopting them both (ii. 36, 50, iii. 1). The first Tuscan settlement had been transferred to another place. But when Cicero (de Rep. ii. 18) and Strabo (v. p. 234) state that the Caelian was added to the city by Ancus Martius, this is a real divergence for which we cannot account ; as the hill could hardly have been incorporated by Tullus and again by Ancus.
Ancus is also said, by the two anthorities just quoted, to have added the Aventine; and there is no improbability in this, for Romulus never made it a proper part of his city, and we learn from Plutarch (Num. 15) that it was uninhabited in the time of Numa. We must remember that the earlier enclosures were made rather to assert a future claim to the ground when the number of citizens was in-
creased, than that they were absolutely wanted at the time of making them (" Crescebat interim urbs, munitionibus alia atque alia appetendo loca; quum in spem magis futurae multitudinis, quarn ad id quod tum hominum erat, munirent," Liv. i. 8). The account of Ancas having added the Aventine is confirmed by Dionysius (iii. 43) and by Livy (i. 33), who state that it was assigned to the citizens of the conquered Politorium. Yet the history of the Aventine is more mysterious than that of any other of the Roman hills. At the end of the third century of the city we find it, as an ayer publicus, taken possession of by the patricians, and then, after a hard contest, parcelled out among the plebeians by a Lex Icilia (Dionys. x. 31, 32; cf. Liv. iii. 31, 32), by whom it was afterwards principally inhabited. It remained excluded from the ponoerium down to the time of Claudius, though the most learned Romans were ignorant of the reason. After some further victories over the Latins, Ancus brought many thousands more of them to home : yet we can hardly understand Livy's account (l.c.) that he located them in the Vallis Murcia; not only because that spot seems too limited to hold so large a number, but also because the Circus Maximus seems already to have been designed, and even perhaps begun, at that spot. (Dionys. iii. 68.) At all events they could not have remained there for any length of time, since Livy himself mentions that the circus was laid out by Tarquinius Priscus (i. 35). The fortifying of the Janiculum on the right bank of the Tiber, the building of the Sublician bridge to connest it with Rume, and the foundation of the port of Ostia' at the mouth of the river, are also ascribed to Ancus Martius, as well as the fortification called the Fossa Quiritium. (Liv. i. 33; Dinnys. 44, 45 ; Victor, Vir. Ill. 5; Flor. i. 4.)

The circuit of Rome, then, at the time of the accession of Tarquinius Priscus, appears to have embraced the Quirinal, Capitoline, Palatine, Aventine, and Caelian hills, and the Janicnlam beyond the Tiber. The Viminal and Esquiliue are not mentioned as having been included, but there can be no doubt that they were partially inhabited. Whether the first named hills were surrounded with a common wall it is impossible to say ; but the fortifications, whatever their extent, seem to have been of a very
 каl фаиิла таîs eprafiaus бита, Dionys. iii. 67). Tarquinius does not appear to have made any addstions to the city, bot he planned, and perhaps partly executed, what was of much more utility, a regular and connected wall to enclose the whole city. (Liv. i. 36, 38; Dionys. iii. 67.) Nay, according to Victor ( Iir. Ill. 6), he actually completed this wall, and Servius only added the agger (Ib. c. 7.) The reign of Tarquin was indeed a remarkable epoch in the architectural progress of the city. We must remember that be was of Tuscan birth, and eren of Greek descent; and therefore it is natural to suppose that his knowledge of architecture and of the other arts of civilised life was far superior to that of the Romans and Latins; and hence the improvements which he introduced at Rome. It is satisfactory to discover and point out undesigned coincidences of this description, which greatly add to the credibility of the narratives of ancient writers, since there is too much disposition at the present day to regard then as the inventors or propaysators of mere baseless fables. Tarquin also constructed those wouderful sewers for draining the Velabrum and
forum which exist even to the present day; he improved the Circus Maximus, planned the temple of the Capitoline Jupiter, and erected the first porticoes and tabernae around the forum (Liv. i. 35, 38 ; Dionys. iii. 67-69; Tac. Hist. iii. 72) ; in short, he must be regarded as the founder of the subsequent architectural splendour of Rome.

The additional space included by Servius Tullius in the line of wall which be completed is variously stated in different authors. Dionysius (iv. 13) and Strabo (v. p. 234) relate that he added the Viminal and Esquiline hills: Livy states that the hills which he aldded were the Quirinal and Viminal, and that he enlarged or improved the Esquiline (" auget Esqui-lias- ${ }^{-1.44 \text { ); while Victor ( V'ir. Ill. 7) mentions that }}$ he added all three. It is possible that Livy means all that back or eastern portion of the Quirinal and Esquiline which run together into one common ridye, and which was fortitied by the agger of Servius Tullius; and in this way we may account for his expression of "auget Esquilias," which alludes to this extension of the hill, and the consequent amalgamation of its previously separate tongues, the Oppius and Cispius. Hence there is but little real contradiction in these apparently divergent statements. Though the elder Tarquin may dispute with Servins the bonour of having built the walls of Rome, yet the construction of the agger is unanimously ascribed to Serrius, with the single exception of Pliny (iii. 9). who attributes it to Tarquin the Proud. The custon, however, has prevailed of ascribing not only this, but the walls also, to Servius. A description of these walls and of their gates, and an inquiry into the circumference of the Servian city, will be found in the second part of this article; but there are two other points, in some degree connected with one another, which require investigation here, namely, the Regiones of Servius and the Septimontium.

Regions of Servius. - Servius divided the city into fuar political districts or regions, which, however, were not commensurate with its extent. Their number seems to have been connected with that of the city tribes; but there are many particulars concerning them which cannot be explained. Our knowledge of them is chiefly derived from Varro (L. L. §45, seq., Mïll.), from whom we learn that they were: I. the Suburana, the limits of which cannot be precisely determined, but which embraced the Caelian biil. the valley of the Colosseum, and part of the Sacra $V$ is. that western portion of the southern tongue of the Esqniline (Mons Oppius) known as the Carinae, the Cer,, iensis, - which seems to have been the valley or part of the valley between the Esquiline and Cae-lian,-and the Subura, or valley north of the Oppius. II. The Eisquilina or Eisquilice, which comprehended the smalier or N . tongue of the Esquiline (Mons Cixpins) and its eastern back or ridge, as far as the rampart or agyer of Servins, and perhaps also the eavtern back of the Oppius. III. The Collina, so called from its embracing the Quirinal and Vininal hills, which, as we have before said, were called colles, in contradistinction to the other bills called montes. The intervening valleys were, of course, included. IV. The Palatina or Palatium, enbraced that hill with its two spurs or offshonts, Velia and Germalus.

When we compare these regions with the map of R me we are immediately struck with some remarkable omisuions. Thus, the Capitoline hill, with the valley to the E . (forum), and valley to the S . (Velabrum and Furum Boarium), tugether with the

Aventine, are entirely excluded. Various conjectures have been proposed to account for these omissions. Sime have imagined that the Capitol was excluded becaus the division of Servius regarded only the pliteian tribes, and that the Capitol was inhabited solely ly patricians. Becker (llandb. p. 386 ) rightly rejects this hypothesis; but another, which he prefers to it, seems hardly better founded, namely, that the hill, as being the citadel, was occupied with public buildings to the exclusion of all private ones, or, at all events, as being common to all, could not be incorporated with any one region. But this would have been a better reason for the exclusion of the Quirinal, which was at that time the pruper capitol of the city; nor does it seem to be a fact that private buiddings were excluded from the Capitol. Various reasons have also been assigned for the exclusion of the Aventine ; the principal of which are, the unfavourable auguries which had appeared upon it to Remus, and the circumstance of its containing a temple of Diana, which was common to all the Latin nation, and therefore prevented the hill from being made a portion of the city.

But if we attentively read the account given by Varro of the Servian Regions (L. L. v. §§ $41-54$, Müll.), we shall perceive that the division was entirely guided by the distribution of the Argive chapels, instituted probably by Numa; though Varro does not explain why they should have had this influence. Thus, after giving an account of the Capitoline and Aventine, he proceeds to say (§ 45): "Reliqua urbis loca olim discreta, quom Argeorum sacraria in septem et xx. partis urbis sunt disposita. Argeos dictos putant a principibus qui cum Hercule Argivo venere Romam et in Saturnia subsederunt. E quis prima est scripta Regio Suburana, secunda Exquilina, tertia Collina, quarta Palatina." He then proceeds to enumerate the sacraria or chapels in each regio, mentioning six in each, or twenty-four in all, though he had called them twenty-seven in the passage just quoted.

The obvious meaning of this passage is, that "the other parts of the city were formerly separated (i.e. from the Capitoline and Aventine) at the time when the Argive chapels were distributed into twentyseven parts of the city." It would hardly, perlaps, be necessary to state this, had not some ehminent scholars put a different interpretation on the passare. Thus Bunsen (Beschreibung der Stadt Rom, vol. i. p. 147), whose general view of the matter seems to be approved of by Becker (Handb. p. 127, note 183), takes Varro's meaning to be, that the remaining parts of the city did not originally form each a separate district, like the Capitol and Aventine, but were divided into smaller parts, with different names. This view has been already condemned by Müller (ad loc.), and indeed its improbability is striking; but it requires a somewhat minute examination of the passage to show that it is altogether untenable. Livy also mentions these chapels as follows: "Multa alis sacrificia locaque sacris faciendis, quae Argeos pontifices vocant, dedicavit (Numa)." (i. 21.) Now Bunsen is of opinion that the statements of Livy and Varro are inconsistent, and that whilst the former under the name of Argei means places, the latter alludes to men. In conformity with this view he proceeds to construe the passage in Varro as fiollows: "The name of Argires is derived from the chiefs who came with the Argive Hercules to Rome and settled in Saturnia. Of these parts of the cily we find first described (viz. in the Sacris Argeorum)
the Suburan Region, as second, \&cc." ("Den Namen Argeer leitet man ab von den Anfiihrern die mit dem Argiver Hercules nach Rom kamen, und sich in Saturnia niederliessen. Von diesen Stadttheilen findet sich zuerst verzeichnet (nämlich in den Sucris Argeorum) die Suburanische Region, als zweite, \&c." (Beschr. i. 690, cf. p. 148.) But to say that the name of Argives was derived from other Argives can hardly be what the author intended. Besides, the sense is disjointed; for the relative quis (wrongly translated "of these parts of the city") cannot be made to refer to an antecedent that is separated from it by a long sentence. As the text stands, quis must necessarily refer to Argeos in the sentence immediately preceding. It might be thought that this sentence has been interpolated, since Varro called an Argive Argus, not Argicus. "Itaque dicimus 'hic Argus' cum bominem dicimus; cum oppidum, Graecanice 'hoc Argos,' cum Latine, 'Argei.' (L. L. ix. $\$ 89$, Müll.) We see from this passage that the more ancient Latin name for the town of Argos was Argei (masc. plur.), and bence it might be inferred to be Livy's meaning that the chapels were called Argos or Argoses, not Argives. But Argei, in still more ancient Latin than that of Varro, was also the name for Argines as we find from a verse which he quotes from Ennius (vii. § 44): -
" Libaque, fictores, Argeos et tutulatos;"
whence we are disposed to think that the name of Argives, however anomalous the usage may appear, was really applied to these chapels, just as a modern Italian calls a church S. Pietro or S. Paolo, and that the meaning of Varro in the second sentence of the passage quoted, is : "It is thought that these Argei (i. e. the sacraria so called) were named after the chiefs who came to Rome with the Argive Hercules;" in which manner Varro would coincide with Livy in making these Argei places. How else, too, shall we explain Orid (Fast. iii. 791) : 一
"Itur ad Argeos, qui sint sua pagina dicet ?"
And in like manner Masurius Sabinus, quoted by Gellius (N.A. x. 15): "Atque etiain cum (Flaminica) it ad Argeos." A passage in Paulus Diaconus throws a gleam of light upon the matter; though, with more grammatical nicety than knowledge of antiquity, he has adopted, apparently from the Greek, a neuter form unknown to any other writer: "Argea loca appellantur Romae, quod in his sepnlti essent quidam Argivorum illustres viri," (p. 19, Müll.) Hence it appears that these chapels were the (reputed) burial places of these Argive heroes, and their masculine appellation thus gains still further probability. "E quis," \&c. would mean, therefore, that the different Servian Regions were marked off and named according to these chapels.

We have already remarked that though Varro mentions 27 of these chapels, he enumerates only 24. Hence Becker (Handb. p. 386), as well as Bunsen, are of opinion that the three odd ones were upon the Capitol. The only reason assigned for this conjecture is that the hill had three natural dirisions - two heights with a depression between them. But if we have rightly explained Varro's meaning, it is impossible that the Capitol should have had any of these chapels. Bunsen, however, goes still further, and, connecting the chapels with the Argive men of straw which were annually precipitated into the Tiber, thinks that their number might have been 30, allotting the
remaining three to the ancient Capitol on the Quirinal, although Varro had already accounted for his usual number of six in that district. (Beschr. i. 149.) Howerer, it is not at all improbable that the tradition of the Argive mannikins was counected with that of the chapels, since it may be inferred from the context of the passage in Varro, explaining the line of Ennius before quoted, that they were instituted by Numa. Thus the preceding line ( $\$ 43$ ), " mensas constituit idemque ancilia," refers to Numa's institutions, who is again alluded to in §45, "eundem Pompilium ait fecisse flamines." In § 44 Varro describes the custom regarding the men of straw as follows: "Argei ab Argis; Argei fiunt e scirpeis, simulacra hominum xxiiii.; ea quotannis de ponte sublicio a sacerdotibus publice deici solent in Tiberim." The origin of the castom is variously explained; but the most probable account is that it was intended to commemorate the abolition by the Argives of human sacrifices once offered to Saturn, for which these men of straw were substituted. None of the MSS. of Varro, however, gives the number of 27 or 30 ; though the latter was introduced into the text by Aldus from the account of Dionysins (i. 38). Hence it would perhaps be more in accordance with the principles of sound criticism to reduce the number of chapels given by Varro (v. § 45) from 27 to 24 , instead of increasing them to 30 ; as they would then not only correspond with the number of these Argive mannikins, but also with that of the chapels which Varro separately enumerateas.
Septimontium.-The Septimontium seems also to be in some degree connected with these Argive chapels and the Serviandivisions of the city. The word Septimontium had two meanings ; it signified both the complex of seven hills on which Rome stood, and a festival (Septimontiale sacruın, Suet. Dom. 4) celebrated in commemoration of the traditions connected with them. Now it is remarkable that Antistius Labeo, quoted by Festus (p. 348, Müll.) in his account of the places where this festival was celebrated, omits all mention of the Capitoline and Aventine, just as they seem to have been left out of Numa's town and the regions of Servius subsequently formed according to it: "Septimontium, ut ait Antistius Labeo, hisce montibus feriae: Palatio, cui sarriticium quod fit, Palatuar dicitur. Veliae, cai item sacrificium Fagutali, Suburae, Cermalo, Oppio Caelio monti, Cispio monti." There were Argive chapels at all these places, and hence a strong presumption that the festiral of the Septimontium was founded by Numa, the author of most of the ancient Roman solemnities. That Labeo considered the places be enumerates to be hills is evident, not only as a direct inference from the tern Septimontium itvelf, but also from his express words, " hisce montibus feriae,"-" there are holidays on the hills here recited." Moreover, we know as a certainty that five of the places mentioned were hills, namely, the Palatium, Velia, Oppins, Cispins, and Caelius,a strong presumption that the others also were heights. Yet Niebuhr (Hist. i. 3*9), Bunsen, (Beschr. i. 685), and Becker (Haudb. p. 124), assume that one or two of them were no hills at ail. The places about which there can be any doubt are Fagutal and Germalus. Respecting Subura there can be no doubt at all ; it was certainls a valley. Now the Fagutal was a ridge of the Esquiline containing the Lucus Fagutalis. It was the residence of Tarquinius Superbus: "Esquiliis (habitavit) supra clivum Pullium, ad Fagutalem Incum" (iolin. i. 25). But if the grove was above the clivus it must
have been on a height. Servius had occupied a residence not far from it, over the Clivns Urbius (16.; Liv. 2 48), and it was probably situated at or near the spot now occupied by the church of $S$. Martina. There is not the slightest ground for Niebuhr's assumption (Hist. i. 390) that the Fagutal was what he cails "the plain" between the Caelian and Palatine. The Cermalus or Germalus - for originally $c$ and $g$ were the same letter-was, like the Velia, only a distinct portion of the Palatine hill. ("Huic (Palatio) Cermalum et Veliss conjonxerunt," Varr. v. § 64, Müll.) Preller (Regionen, p. 180) considers the Germalus to be that side of the Palatine which overhangs the Velabrum between the modern churches of S. Giorgio in Velabro and $S$ Anastasia; and it is not improbable, as Becker conjectures ( p .418 ), that the hill formerly projected further to the W. than it now does, and descended in shelves or ledges. It does not appear on what grounds Niebuhr (l.c.) assumed the Germains to be a " spot at the foot of the Palatine." It contained the Lupercal, which, being a cave or grotto, must hare been excarated in a hill or cliff, as indeed Lhonysius states in his description of it : $\bar{\eta} \nu \delta \tau \delta$
 $\mu \in \gamma a$ (i. 32).

All the places, then, enumerated by Labeo appear to have been heights, with the exception of the Subara. Bat on counting the names, we find that be mentions eight places instead of seven, or one more than is required to make a Septimontium. Hence Niebahr (Ib. p. 389) omitted the Subura, - not, however, because it was situated in the plain,-and was followed by Bunsen (Beschr. i. 141), who aftervards altered his mind, and struck ont the Caelius (Ib. p. 685); and this last opinion is also followed by Becker (Handb. p. 124) and Müller (ad Fest. p. 341). The chief reason assigned for this view is that a principal part of the first regio (Suburana) was called Caelimontium,-a name afterwards preserved as that of one of the regions of Augustus; and on comparing this name with that of Septimontium it is inferred that, like the latter, it must have indicated a distinct and independent city union, and could not therefure have been included in any anteServian union. But if there had been any distinct and independent township of this kind, we must sorely have heard of it in some of the ancient suthors. We do not know when the term Caelisumtium first came into use; but it is not improbable that it arose from another small hill, the Caelius Minor or Caeliolum, having been annexed to the heger one. Martial mentions them both in the folbowing livies:-

## ${ }^{4}$ Dam per limina te potentioram

 Sudatrix toga ventilat, vagumque Major Caelius et minor fatigat."-(xii. 18.)We learn from Varro that the junction of these two bills hud taken place in or befure his time: "Caeliolus cum Caelio sunc conjunctum " (L. L. v. § 46, Mill.), though popular use, as we see from the lines of Martial, sometimes still cortinued to regard them as distinct : nor can we tell for what purpose they had been united. Little can be inferred from the order in which the hills are mentioned in the text of Festus, as local sequence is entirely disregarded ; or from the circumstance that Cispius is called "mons" and Oppius not, unless we leave out "Caelio;" or from the ommssion of Caelius in some of the MSS. of Paulus Diaconus. On the whule it scems most
probable that Suburae may be the redundant word; unless indeed we might suppose that there were two Fagutals or groves of Jupiter, and that Suburae was inserted here to define the place of the one which overhung it.

Becker regards the Septimontium not as a proper city festival, but as commemorating traditions connected with the site of Kome long previous to the building of the city. In confirmation of this he refers (Handb. p. 125) to a passage in Varro (L. L. v. § 41, Müll.) and to another in Festus (p. 321), where it is said that a peosple of Reate, called Sacrani, drove the Liguriatus and Sicilians out of Septimontium; and a third passage is adduced from Servius (ad Aen. xi. 317) to prove that the Sicilians once occupied the site of Rome; that they were expelled thence by the Ligurians, and the Ligurians in their turn by the Sacrani. Now, without entering into the historical questions connected with these obscure traditions, it may be allowed in general to be probable enough that such traditions were afloat ; and when, as we have ventured to assume, Numa instituted the festival, he made them the basis of it; just as he instituted the Argive chapels and the twenty-four mannikins to commemorate the tradition of the Argive chiefs and their abolishment of human sacrifices. But the festival, nevertheless, was a proper city festival. Becker urges (Handb. p. 124) that the Septimontium described by Labeo could not have been in commemoration of a city union immediately preceding that of Servins, because it included the Oppins and Cispius, which were first added to the city by Servius. A great deal depends upon what we understand by the words "added to the city" (" zur Stadt gezogen"). To say that they were not included in the wall and agger afterwards completed by Servius would be a mere puerility; but they must have been inhabiten and fonned part of the city before his time, since there were Argive chapels upon them (Varr. $\mathbf{\nabla}$. § 50); and these chapels, as we have seen, formed the basis of the city union formed by him. The festival must certainly have been post-Romulean, since some of the names of places where it was celebrated were not known before the time of Romulus. Caelins occupied the Caelian hill in his reign; the name of Germalus is said to be derived from the twins (germani) Romulus and Remas, who were landed there (Varr. v. § 54); whilst Oppius and Cispins are said by Festus (p. 348, Mïll.), on the authority of Varro, not to have been so named till the reign of Tullus Hustilius. But as they are mentioned by those names in the sacred books of the Argives (Varr. v. § 50) it is probable that they were so called at least as early as the time of Numa.
Such, then, was the ancient Septimontinm. The walls of Servius included a different group of seven hills which came to be regarded by the later Romans as the real Septimontium. They are those already described at the beginning of this article, namely, the Quirinal, Viminal, Esquiline, Caelian, Aventine, Capituline, and Palatine.

## IV. Progress of the City till the Time of Augustis.

Haring thus brought down the history of the city to the foundation of the Servian walls, we shall proceed to sketch its progress to the time of Augustus, and then till the walls of Aurelian. The former walls marked the rise and consolidation of a city, which,
though soon to become formidable to its neighbours, was not yet secure from their attacks. The latter, enclosing an area more than twice as large as that defended by the Servian walls, betokened the capital of a large state, which, after becoming the mistress of the world, was beginning to totter under the weight of its own greatness, and found itself compelled to resort $t$, the same means of defence which had protected its infancy - no longer, however, to ward off the attacks of its inmediate neighbours, but those of the remotest tribes of Asia and Europe. Thus the history of the city, during this period of eight centuries, reflects in some degree the history of the Roman people, and exhibits the varying fortunes of the greatest of all human empires. Unfortunately, however, the matcrials even for a slight sketch of so vast a subject and so long a period are scanty and inadequate; nor, even were they more abundant, would our present limits allow more than an attempt to draw such an outline as may serve to illustrate the tupography of the city.

Tarquin the Proud, the last of the Roman kings, seems to have effected little for the city, except by completing or improving the works of his predecessors. Of these the must important was the temple of the Capitoline Jove, the description of which will be found in the second part of this article. The expulsion of the Tarquins (B. c. 510) restored to the Roman people the use of the Campus Martius. This ground, which from the earliest times had probably been sacred to Mars (Diunys. v. 13), had been appropriated by the Tarquins, and at the time of their expulsion was covered with the crops which they had sown. The unholy nature of this property prevented its distribution among the people, like that of the other royal goods. The corn was ordered to be cut down and thrown into the Tiber; and according to the legend its quantity was so great that it cansed the island afterwards known as the Insula Tilierina, or that of Aesculapius. (Liv. ii. 5; Dionys. l.c. Plut. Publ. 8.)

The defeat of the Etruscans under Aruns, who had espoused the royal cause, was, according to the usual principle of the Romans of incorporating the valquished nations, the means of adding a fresh supply of citizens, as there will be occasion to relats 3 io another place.

We have little or nothing to record respecting the history of the city from this period till its capture by the Gauls B. c. 390 . After the fatal battle at the Allia, the Romans returned dispirited. The city, tugether with the older inhabitants, was abandoned to its fate; many families escaped to Veii and other neighbouring towns; whilst the men of an age to bear arms occupied the Capitol, which they prepared to defend. The flight of the Vestal virgins, who succeeded in escaping to Caere, is connected with a topographical legend. Being unable to carry away all their sacred utensils, they buried some of them in ca-ks (doliolis), in a chapel near the bouse of the Flamen (Quirinalis; whence the place, which seems to have been near the Clonca Maxima. in the Forum Boarium, obtained the name of Duliola, and was held so sacred that it was forbidden to spit upon it. (Liv. v. 40 ; Val. Max. i. $1 . \S 10$.) Varro, however (LLL. v. §157, Müll.), did not recognise this story, but attributed the name either to some bones having been deposited there, or to the burial at an earlier feriol of some sacred objects belonging to Numa P'onpilias.

The Gauis enteral the city unopposed, and through
the open Porta Collina. (Liv. v. 41.) The time during which they held it is variously given at from six to eight months. (Polyb. ii. 22 ; Flor. i. 13; Plot. Cam. 30; Serv. Aen. viii. 652.) Their attempt on the Capitol is alluded to elsewhere. They set fire to and otherwise devastated the city; but perhapa we are not to take literally the words of Livy and other writers, to the effect that they completely destroyed it (v. 42, 43; Flor. i. 13; Plut. Cam. 21). It is at least apparent, from Livy's own narrative (c. 55 ), that the Curia Hostilia was spared ; and it seems probable that the Gauls would have preserved some of the houses for their own sakes. We may, however, conclude. that the destruction was very great and terrible, as otherwise the Romans would not bave discussed the project of emigrating to Veii. The tirmness and judicious advice of Camillus persuaded them to remain. But the pressing necessity of the case, which required the new buildings to be raised with the greatest haste, was fatal to the beauty and regularity of the city. People began to build in a promiscuous manner, and the materials, aflorded at the public expense, were granted only on condition that the houses should be ready within a year. No general plan was laid down ; each man built as it suited him; the ancient lines of streets were disregarded, and houses were erected even over the cloacre. Hence down to the time of Augustus, and perhaps later, the city, according to the furcible expression of Livy (v. 55), resembled in arrancement rather one where the ground had been seized upon than where it had been distributed. It may be inferred from a statement of Cornelius Nepos, as quoted by Pliny, that the greater part of the city was roofed with shingles. ("Scandula contectam fuisse homam, ad Pyrrhi usque bellum, annis cccciaxx., Cornelius Nepos auctor est," xvi. 15.) Livy indeed mentions the public distribation of tiles, but these perhaps may have been applied to other purposes besides roofing, such as for making the floors, \&c.; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more extensisely used in building than is customary in modern times. Within a year the new city was in readiness; and it must have been on a larger scale than before the Gallic invasion, since it had acauired a great accession of inhabitants from the conquered towns of Veii, Capens, and Frlisci. Those homans who, to avoid the trouble of building, had occupied the deserted houses of Veii were recalled by a decree by which those who did not return within a fixed time were declared guilty of a capital uffence. (Liv. vi. 4.) The walls of Rome seem to have been left uninjured by the Gauls, notwithstanding Plutarch's assertion to the contrary. (Cam. 32.) We nowhere read of their being repaired on this occasion, though accounts of subsequent reswrations are frequent, as in the year B. c. 351 (Liv. vii. 20), and again in 217, after the defeat at Trasimene. (Id. xxii. 8.) Nothing can convey a higher notion of Roman energy than the fact that in the very yar in which the city was thus rising from its ashes, the Capitol was supported by a substructure of square and solid masonry, of such massiveness as to excite wonder even in the Augustan age. (Liv.l.c.: Plin. xxxvi. 24. s. 2.)

The censorship of Appius Claudius Caecus, B. c. 312, forms a marked epuch in the progress of the city. By his care Rome obtained its first aqueluct. and its first regularly constructed high-road, the Aqua and Via Appia. (Liv. ix. 29.) But the

## ROMA.

ROMA.
737
war with Pyrrhus which so0n ensned, and afterwards the still larger and more destructive ones waged with the Carthaginians, prevented the progress which might hare been anticipated from these beginnings. The construction of a second aqueduct, the Anio Vetus, in the censorship of Man. Curius Dentatus and L. Papirius Cursor, b. c. 272, testifies, however, that the population of the city must have continued to increase. In the year b. c. 220 we find the censor C. Flaminius constructing the Flaminian Way, as well as the circus which bore his name. (Liv. Epit. Ix.; Paul Diac. p. 89.) But it was the conquests of the Romans in Lower Italy, in Sicily, and Greece, which first gave them a taste for architectural magnificence. The first basilica was erected at Rome in the year B. c. 184, and was soon followed by others, as there will be occasion to relate when we come to speak of the forum. But it was not till ten years later that the city was first pared by the care of the censors Q. Fulvius Flaccus and A. Postumius Albinus. They also pared the public highways, constructed numerous bridges, and made many other important improvements, both in the city and its neighbourhood. (Liv. xli. 27.) Yet, notwithstanding these additions to the public convenience and splendour, the private houses of the Romans continued, with few exceptions, to be poor and inconvenient down to the time of Sulla. The house of Cn . Octavius, on the Palatine, seems to have exbibited one of the earliest examples of elegant domestic architecture. (Cic. de Off: i. 39.) This was pulled down by Scaurus in order to enlarge his own house. The latter seems subsequently to have come into the possession of Clodius (Ascon. ad Cic. Mil. $\Delta \mathrm{rg}$.), and its magnificence may be inferred from the circumstance that he gave $14,800,000$ sesterces for it, or about 130,000 . (Plin. $x \times x$ vi. 24. s. 2.) Indeed, as we a pproach the imperialtimes, the dwellings of the leading Romans assume a scale of extraurdinary grandear, as we see by Pliny's description of that of Crasens the orator, who was censor in B.c.92. It was also on the Palatine, and was remarkable for six magnificent lotus-trees, which Pliny had seen in his youth, and which continued to floarish till they were destroyed in the fire of Nero. It was also distinguished by four columns of Hymettian marble, the first of that material erected in Rome. Yet even this was surpassed by the house of $Q$. Catulus, the colleague of Marius in the Cimbrian war, which was also on the Palatine; and still more so by that of C. Aquilius on the Viminal, a Roman knight, distinguished for his knowledge of civil law. (Plin. x rii. 1.) M. Livius Drasus, tribune of the people in в. c. 93, also possessed an elegant residence, close to that of Catulus. After his death it came into the presession of the wealthy M. Crassua, of whom it was bought by Cicero for about 30,000 l. (ad Fam. r. 6). It seems to have stood on the N. side of the Palatine, on the declivity of the hill, not far from the Nura Via, so that it commanded a view of the fornm and Capitol. It was burnt down in the Clodian riots, and a temple of Freedom erected on the apot; but after the return of Cicero was restored to him, rebuilt at the public expense. (Cic. ad Att. ii. 24, Fam. v. 6.; Vell. Pat. ii. 45; Dion Cass. xxxviii. 17, $\mathbf{x x x i x . 1 1 , 2 0 ; ~ A p p . ~ B . C . ~ i i . ~ 1 5 , ~ \& c . ) ~}$ The house of Lepidus, consul in B. c. 77, was also remarkable for its magnificence, having not only coiamns, but even its thresholds, of solid Numidian marble. (Plin. xxxvi. 8.) The luxury of prirate residences at Rome seems to have attained
vole 1.
its acme in those of Sallust and Lacullus. The distinguishing feature of the former, which lay on the Quirinal, was its gardens (Horti Sallustiani), which probably occupied the valley between the Quirinal and Pincian, as well as part of the latter hill. (Becker, Handb. p. 583.) The house of Lucullus, the conqueror of Mithridates and Tigranes, was situated on the Pincian, and was also surrounded with gardens of such remarkable beauty, that the desire of possessing them, which they awakened in the breast of Messalina, caused the death of their subsequent owner, P. Valerius Asisticus. (Tac. Ann. xi. 1: Dion Cass. Ix. 31.) From this period they formed one of the most splendid possessions of the imperial family. (Plut. Lucull. 39.)

The ambitions designs entertained by the great leaders of the expiring Republic led them to court public favour by the foundation of public buildings rather than to lay out their immense wealth in adorning their own residences. The house inhabited by Pompey in the Carinae was an hereditary one; and though, after his triumph over Dithridates and the pirates, he rebuilt it on a more splendid scale and adorned it with the besks of ships, yet it seems even then to have been far from one of the most splendid in Rome. (Plat. Pomp. 40, seq.) On the other hand, he consulted the taste and convenience of the Rumans by building a theatre, a curia, and several temples. In like manner Caesar, at the height of his power, was content to reside in the ancient Regia; though this indeed was a sort of official residence which his office of Pontifex Maximas compelled him to adopt. (Snet. Caes. 46.) But he formed, and partly executed, many magnificent designs for the embellishment of the city, which his short tenure of power prevented him from accomplishing. Among these were a theatre of unexampled magnitude, to be hollowed out of the Tarpeian rock; a temple of Mars, greater than any then existing; the foundation of two large public libraries; the construction of a new forum ; besides many other important works, both at Rome and in the provinces. (Suet. Caes. 26, 44 ; App. B. C. ii. 102, scc.)

The firm and lengthened hold of power enjoyed by Augustus, and the immense resources at his dispusal, enabled him not only to carry out several of his uncle's plans, but also some new ones of his own; so that his reign must be regarded as one of the most important epochs in the history of the city. The foundation of new temples and other public buildings did not prevent him from repairing and embellishing the ancient ones; and all his designs were executed with so much magnificence that he could boast in his old age of having found Rome of brick and left it of marble. (Suet. Aug. 28.) In these undertakings he was assisted by the taste and munificence of his son-in-law Agrippa, who first founded public and gratuitous baths at Rome (Dion Cass. liv. 29): but as we shall have occasion to give an account of these works, as well as of thuse executed by Pompey and Caesar, in the topographical portion of this article, it will not be necessary to enamerate them here; and we shall proceod to describe the important municipal reforms introduced by Augustus, especially his new division of the city into Vici and Regions.

Regions of Augustus.-Although Rome bad long outgrown its limits under Servius Tullius, yet the municipal divisions of that monarch subsisted till the time of Augustus, who made them his model, 80 far as the altered circuinstances of the city would
pernit. Servius had formed the different Vici into religious corporations somewhat analogous with our parishes, with an appointed worship of the Lares, and proper feasts or Compitalia. During the Republic these corporations became a kind of political clubs, and were often made the engines of designing demagogues. (Preller, Regionen, p. 81.) Augustus, in his new distribution, also adopted the scheme of embodying the Vici as religious corporations, and for this purpose erected chapels in the crossways, and set up images of the gods ricatim, as the Apollo Sandaliarius and the Jupiter Tragoedus. (Suet. Aug. 57.) Many bases of these statues have been discovered. By the term licus we are to anderstand a certain collection of houses insulated by streets running round all its sides; whence the term came also to be applied to the streets themselves (" altero vici appellantur, cum id genus aedificiorum definitur, quae continentia sunt in oppidis, quacve itineribus regionibusque distributa inter se distant, nominibusque dissimilibus discriminis causa sunt dispartita," Fest. p. 371, et ibi Müll). Compitum, which means properly a cross-road, was also, especially in ancient times, only another name for Vicus; and thus we find Pliny describing Rome as divided into Compita Larum instead of Vici (iii. 9). The Vici and Compita, regarded as streets, were narrrower than the Viae and Plateae. (Suct. Amg. 45; Amm. Marc. xxviii. 4. § 29.) They were named after temples and other objects. The Vici were compreed of two classes of houres called rexpectively insulue and domus. The former were so called because, by a law of the XII. Tables, it was ordained that they should be separated from one another by an interval of $2 \frac{1}{2}$ feet, called ambitus, and by laterauthors circuitus (Varr. L. L. v. § 22, Müll.; Paul. Diac. p. 16, 111 Müll.) This law, which seems to have been designed for purposes of healthand for security against fire, was disregarded during the Republic, but again enforced by Nero when he rebuilt the city (Tac. Ann. xv. 43); and there is an ordinance on the subject by Antoninus and Veras (Dig. viii. 2.14). By insulae, therefore, we are to understand single houses divided by a small space from the neighbouring ones, not a complex of houses divided by streets. The latter division formed a Vicus. Yet some insulae were so large and disposed in such a manner that they almost resembled Vici (vide Fest. p. 371, et ibi Müll). The insulae were inhabited by the middling and lower clanses, and were generally let out in floors ("coenacula meritoria," Dig. xix. 2. 30). It appears from the same authority that they were farmed by persons who underlet them; but sometimes the proprietors kept stewards to collect their rents. Insulae were named after their owners, who were called "domini insularum" (Suet. Caes. 41, Tib. 48). Thus we bear of the insula Eucarpiana, Critonia, Arriana, \&cc. (vide Gruter, 611.13 ; Murat. 948. 9.) Rent was high (Juv. iii. 166), and investments in houses consequently profitable, though hazardous, since the principle of insurance was altogether unknown. (Gell. xv. 1, 2.) Crassus was a great speculator in houses, and was said to possess nearly half Rome. (Plut. c. 2.) The domus, on the contrary, were the habitations or palaces of the rich and great, and consequently much fewer in number than the insulae, the proportion in each Region being as 1 to 25 or 30. The domus were also commonly insulated, but not by any special law, like the insnlae. They were also composed of flows or stages, but were occupied by a single tumily (Petron. 77); though parts of them,
especially the postica, were sometimes let out (Phat. Trin. i. 2. 157 ; Suet. Nero, 44 Vitell. 7).

The number of insulae and domas in each Vicus would of course vary. Augustus appointed that each should be under the government of magistrates elected from its plebeian inhalitants (" magistri o plebe cujusque viciniae lecti,"一where vicinia has its original meaning of the householdors composing a Vicus, Suet. Aug. 30). Hence Livy calls them "infimam genus magistratuum " (xxxiv. 7). They were called Magistri, Magistri Vicorum, Curatores Vicorum, and Magistri Larum, and their number varied from two to four in each Vicus. In the Barsis Capitolina each Vicus has 4 Magistri; but the Notitia and Curiosum mention 48 Vico-magistri in each Region, without reference to the number of Vici. On certain days, probably the Compitalia (Ascon. in Cic. Pis. p. 7), these magistrates were allowed to assume the toma praetexta, and to be attended by two lictors; and the public slaves of each Region were at their command, who were commonly at the disposal of the aeviiles in case of fire. (Dion Cass. lv. 8 ; Liv. l. c.) The principal daties of their office were to attend to the worship of the Lares, recensions of the people, \&c. For Augastus restored the Ludi Compitalicii and the regular worship of the Lares in spring and summer (Suet. Aug. 31), and caused his own Genius to be added to the two Lares which stood in the aedicula or chapel of each compitum. (Ov. Fast. v. 145.) The Viconagistri likewise superintended the worship of the popular deities Stata Mater and Vulcanus Quietus, to whom, as protectors against fire, chapels were erected, first in the forum, and afterwards in the different streets. (Fest. p. 317, Müll.; cf. Preller, Regiomen, p. 84.)

A certain number of Vici, varying according to the Notitia and Curiosum from 7 to 78 constituted a Regio ; and Augustus divided Rome into 14 of these Regions. The 4 Servian Regions were followed in the first 6 of Augustus. In determining the boundsries of the Regions Augustus seems to have caused them to be measured by feet, as we see them enumerated in the Notitia and Curiosum. The limits appear to have been marked by certain public buildings, not by cippi. We may safely assume that Augustus included the suburbs in his city, but not within a pomoerium, since the P'orticus Octaviae is mentioned, as being outside of the pomnerium, althnugh it lay far within the 9th Region. (Dion Cass. liv. 8.) The Regions appear at first to have been distinguished only by numbers; and officially they ware perhaps never distinguished otherwise. Some of the names of Regions found in the Notitia and Curiosum are postAugustan, as those of Isis and Serapis and Furum Pacis. The period when names were first applied to them cannot be determined. They are designated only by numbers in Tacitus and Frontinus, and even in the Basis Capitolina which belongs to the time of Hadrian. We tind, indeed, in Suetonius "Regio Palatii" (Auf. 5, Ill. Grumm. 2); but so also he says "Regio Martii Cauni," which never was a Region (Cines. 39, Nero, 12) ; and in these instances Regio seems to be usod in its general sense.

The boundaries of the Regions cannot be traced with complete accuracy; but, as it is not our intention to follow those divisions when treating of the topagraphy of the city, we shall here insert such a general description of them as may enable the reader to form some notion of their situation and relative size. Liegio I., or Forta Caperke, embraced the
suburb lying outside of that gate, to the E. of the baths of Antoninns. It contained 10 Vici, and alnong its principal objects were, the temple of Mars, the arch of Drusus, and the sepulchre of the Scipios. Regio MI., or Caelinontana, lay to the $\mathbf{N}$. of this, and comprehended the whole extent of the Caelian hill. It had 7 Vici, and among its monuments may be mentioned the Arcus Dolabellae and the aquedact of Nero. Regio III., called lsis and Serapis, lay to the $N$. of the Caelimontana, and embraced the ralley of the Colosseum, and that southern portion of the Esquiline anciently known as Mons Oppius. It comprehended 12 Vici, and its principal objects were the baths of Titus and the Flarian amphitheatre or Colosseum. Reyio IV., called Templum Pacis and Sacra Via, was situated to the W. of that of Isis and Serapis, and comprehended the Velian ridge and the greater part of the valley between the Palatine, Esquiline, Viminal, and Quirinal, to the exclusion, huwever, of that western portion which lay immediately under the Capitoline. Yet it embraced the buildings on the N. side of the forum, including the temple of Faustina, the Basilica Paulli, and the Area Vulcani. Its eastern boundary ran close to the Colossenm, since it included the Colossus and the Meta Sudans, both which objects stood very near that building. Its principal monuments, benides those already mentioned, were the temple of Venus and kome, and the basilica of Constantine. It embraced the Subura, the greater portion of the Sacra Via, and the Foram Transitorium, and contained 8 Vici. Regio $V$, or Esquilina, incladed the northern portion of the Fsquiline (Mons Cispius) and the Viminal, besides a vast tract of suburbs lying to the E. of the Servian walls and agger. Thus it extended so far as to embrace the Amphitheatrum Castrense, which adjoins the modern church of $S$. Croce in Gerusulemme, and the so-called temple of Minerva Medica, near the Porta Maggiore. It had 15 Vici, and among its remaining principal oljects were the gardens of Maceenas, the arch of Gallienus, and the Nymphaeum of Alexander Severus. Regio $V I_{\text {, }}$, called Alta Semita, embraced the Quirinal, and extended to the E.so as to include the Practorian camp. It had 17 Vici, and its chief objects were the baths of Diocletian, the house and gardens of Sallast, and the ancient Capitol. Regio VII., or Via Lata, was bounded on the E. by the Quirinal, on the N. by the Pincian, on the S. by the Servian wall between the Quirinal and Capitoline, and on the W. by the road called Via Lata till it juined the Via Flaminia-a point which cannot be accurately ascertuined. The Via Lata was the southern portion of the modern Corso, and probably extended to the N. dearly as far as the Antonine column. The Region comprehended 15 Vici. Being without the Servian walis, part of this district was anciently a burying place, and the tomb of Bibulus is still extant. Kegio VIII., or Forum Romanum Miagnum, was one of the most important and populous in Rome. The ancient forum obtained the name of "Magnum" after the building of that of Caesar. (Dion Cass. zliii. 22.) This Region, which formed the central print of all the rest, embraced not only the ancient from, except the buildings on its $N$. side, but also the imperial fora, the Capitoline hill, and the valley leiween it and the Palatine as far as the Velabrum. It curtained 34 Vici, among which were the densely populated ones Jugarius and Tuscus. The monuments in this district are so numerous and well
known that it is unnecesisary to specify then. Regio IX, called Circus Flaminius, comprehended the district lying between the Via Lata on the E.o. the Tiber on the W., the Capitoline hill and Servian wall on the S.; whilst on the N. it seems to have extended as far as the present Piazza Nazona and Piuzza Colonna. It contained 35 Vici, and among its objects of interest may be named the circus from which it derived its name, the three theatres of Balbus, Pompey, and Marcellus, the Pantheon, and many other celebrated monuments. The Campus Martius, or northen part of the area between the hills and the Tiber, was not comprehended in any of the 14 Regions. Regio X., or Palatium, consisted of the Palatine hill ard its declivities. It had 20 Vici. Its boundaries are so well marked that we need not mention its numerous and wellknown monuments till we come to describe its topography. Regio XI., or Circus Maximus, derived its name from the circus, which occupied the greater part of it. It comprehended the valley between the Palatine and Aventine, and also apparently the northern declivities of the latter hill, as far as the Porta Trigemina. On the N., where it met the Region of the Forum Romanum, it seems to have included the Velabrum. It contained 19 Vici according to the Notitia, 21 according to the Curiosum. Regio XII., called J'iscina Publica, was bounded on the W. by the Aventine, on the N. by the Caelian, on the E. by Riegiu I. or Porta Capena, and on the S. it probably extended to the line of the Aurelian walls. It had 17 Vici, ard its moot remarkable monument was the baths of Caracalla. Regio XIII., or Aventinus, included that hill and the adjoining banks of the Tiber. It had 17 Vici according to the Notitia, 18 according to the Curiosum. Kegio XIV., Transtiberina, or Transtiberim, comprehended all the suburb on the W., or right bank of the Tiber, including the Vatican, the Jariculun, with the district between them and the river, and the Insula Tiberina. This, therefore, was by far the largest of all the Regions, and contained is Vici.

Mrnicipal Regulations of Augustus.-All these Regions were under the control of magistrates chosen annually by lot. (Suet. Aug. 30.) The government of the Regions was not corporative, like that of the Vici, but administrative ; and one or morn Regions seen to have been intrusted to a single magistrate chosen among the aediles, tribunes, or praetors. (Preller, Regionen, p. 77.) The supreme administration, however, was vested in the Praefectus Urbi. At a later period other officers were interposed between the praffect and these governors. Thus the Basis Capitulina meutions a Curator and Denunciator in each Kegion. Subsequently, however, the latter office seems to have been abolished, and the Notitia and Curiosum mention two curators in each Region. There were aliso subordinate officers, such as praecomes or criers, and a number of imperial slaves, or libertini, were appointed to transact any necessary business concerning the Regions. (Preller, p. 79.)

One of the chief objects of Augustus in establishing these Regions seems to have been connected with a reform of the city police. For this purpose he established 7 Cohortes Vigilum, whase stations were so disposed that each cohort might be available for two Regions. Each was under the command of a tribune, and the whole was superintended by a Praefectus Vigilum. (Suet. Aug. 30;

Dion Cass. Iv. 26; Paulus, de Offic. Praef. Vigil., Dig. i. 15.) As these stations were necessarily near the borders of Regions, we find them frequently mentioned in the Notilia and Curiosum. They seem to have been a sort of barracks. But besides the 7 principal stations, the Breviarium mentions 14 excubitoria, or outposts, which seem to have been placed in the middle of each region. The corps of which they were composed were probably supplied from the main stations. The duties of the vigiles were those of a night-police, namely, to guard against fires, burglaries, highway robberies, \&c. The first of these duties had anciently been performed by certain triumviri, called from their functions Noctarni, who were assisted by public slaves stationed at the gates and round the walls. The same office was, however, sometimes assumed by the aediles and tribunes of the people. (Paulus, l. c.) The vigiles were provided with all the arms and tools necessary for their duties ; and from a passage in Petronius (c. 79) seem to have possessed the power of breaking into honses when they suspected any danger. The numbers of the vigiles amounted at last to $\mathbf{7 0 0 0}$ men, or 1000 in each cohort. Augustus also established the Cohortes Praetoriae, or imperial guard, of which 9 cohorts were disposed in the neighbourhood of Rome, and 3 only, the Cohortes Urbanae, were permitted within the city. (Tac. Ann. iv. 5; Suet. Aug. 49.) These cohorts of Augustus were under the command of the Praefectus Urbi. (Tac. Hist. iii. 64.) It was his successor, Tiberius, who, by the advice of Sejanus, first established a regular Praetorian camp at Rome, a little to the enstward of the agger of Servius, and placed the bands under the command of a Praefectus Praetorio. (Tac. And. iv. 2; Suet. Tib. 37.)

Augustus also paid considerable attention to the method of building, and revived the regulations laid down by P. Rutilius Rufus with regard to this subject in the time of the Gracchi (Suet. Aug. 89); but all we know of these regulations is, that Augustus forbade houses to be built higher than 70 feet, if situated in a street. (Strab. v. p. 235.) The lieight was subsequently regulated by Nero and Trajan, the last of whom fixed it at 60 feet. (Aur. Vict. Epit. c. 13.) Yet houses still continued to be inconveniently high, as we see from the complaints of Juvenal, in the time, probably, of Domitian, and dangerous alike in case of fire or falling, especially to a poor poet who lived immediately under the tiles: -
" Nos urbem colimus tenui tibicine fultam Magna Imrte sui; nam sic labentibus obstat Villicus, et veteris rimae quum texit hiatum Securos pendente jubet dormire ruina.
Vivendum est illic ubi nulla incendia, nulli
Nocte metus. Jam poscit aquam, jam frivola transfert
Ucalegon: tabulata tibi jam tertia fumant: Tu nescis; nain si gradibus trepidatur ab imis Ultimus ardebit, quem tegula sola tuetur A plavia, molles ubi reddunt ova columbae."
(iii. 193.)

Augustan Rome. - Strabo, who visited Rome in the reign of Augustus, and must have remained there during part of that of Tiberius, has left us the following lively picture of its appeusence at that period: "The city, having thus attained such a size, is able to maintain its greatness by the aoundance of provisions and the plentitul supply
of wood and stone for building, which the 0000 stant fires and continual falling and palling down of houses render necessary; for even pulling down and rebuilding in order to gratify the taste is but a sort of voluntary ruin. Moreover the abundant mines and forests, and the rivers which serve to convey materials, afford wonderful means for these parposes. Such is the Anio, flowing down from Alba (Fucensis), a Latin city lying towards the territory of the Marsians, and so through the plain till it falls into the Tiber: alsn the Nar and the Tenea, which likewise juin the Tiber after flowing through Umbria; and the Clanis, which waters Etruria and the territory of Clusium. Augastus Caesar took great care to obviate such damages to the city. To guard against fires he appointed a special corps composed of freedmen; and to prevent the falling down of houses he ordained that no new ones should be built. if they adjoined the public streets, of a greater height than 70 feet. Nevertheless the renovation of the city would have been impossible but for the before-mentioned mines and forests, and the facility of transport.
"Snch, then, were the adrantages of the city from the nature of the country; but to these the Romans added those which spring from industry and art. Although the Greeks are supposed to excel in building cities, not only by the attention they pay to the beauty of their architecture and the strength of their situation, but also to the selection of a fertile country and convenient harbours, yet the Romans have surpassed them by attending to what they neglected, such as the making of high-roads and aqueducts, and the constructing of sewers capable of conveving the whole drainage of the city into the Tiber. The high-roads have been constructed through the country in such a manner, by levelling hills and filling-up hollows, that the waggons are enabled to carry freight sufficient for a vessel; whilst the seweri, vaulted with hewn blocks of masonry, are sometimes large enough to admit the passage of a hay-cart. Such is the volume of water conveyed by the aqueducts that whole rivers may be said to flow through the city, which are carried off by the sewers. Thus almost every house is provided with water-pipes, and possesses a never-failing fountain. Marcus Agrippa paid particular attention to this department, besides adorning the city with many beautiful monuments. It may be said that the ancient Romans neglected the beauty of their city, being intent upon greater and more important objects; but later generations, and particulariy the Romans of our own day, have attended to this point as well, and filled the city with many beautiful monuments. Poinpey, Julius Caesar, and Augustus, as well as the children, friends, wife and sister of the last, have bestowed an almost excessive care and expense in providing these objects. The Campus Martius has been their special care, the natural beauties of which have been enhanced by their designs. This plain is of surprising extent, affording unlimited room not only fur the chariot races and other equestrian games, but also for the multitudes who exercise themselves with the bull or houp, or in wrestling. The neighbouring buildings, the perpetual verdure of the grass, the hills which crown the opposite banks of the river and produce a kind of scenic effect, all combine to form a spectacle froul which it is difficult to tear oneself. Adjoining this plain is another, and many porticoes and sacred groves, three theatros, an smphitheatre, and temples
so rich and so close to one another that they might appear to exhibit the rest of the city as a mere supplement. Hence this place is considered the most honourable and sacred of all, and has been appropriated to the monuments of the most distinguished men and women. The most remarkable of these is that called the Mansoleum, a vast mound near the river raised upon a lofty base of white stone, and covered to its sammit with evergreen trees. On the ta $p$ is a bronze statue of Augnstus whilst under the mound are the tombs of himself, his relatives, and friends, and at the back of it a large grove, affording delightful promenades. In the middle of the Campus is an enclosed space where the body of Augustus was burnt. also constructed of white stone, surrounded with an iron rail, and planted in the interior with poplar trees. Then if we proceed to the ancient forum, and survey the numerous basilicae, porticnes, and temples which surround it, and view the Capitul and its works, as well as those on the Palatine and in the portico of Livia, we might easily be led to forget all other cities. Such is Rome " ( $\mathbf{V} . \mathrm{pp} .235,236$ ).

In spite, however, of this glowing picture, or rather perhaps from the emphasis which it lays on the dexcription of the Campus Martius, whilst the remainder of the city is struck off with a few light touches, it may be suspected that in the time of Augustus the ancient part of Rome, with the exception of the immediate vicinity of the forum and Capitol, did not present a spectacle of any great magnificence. The narrowness and irregularity of the streets, the consequence of the hasty manner in which the city was rebuilt after its destruction by the Gauls, still continued to disfigure it in the time of Augustus, as is shown by a passage in Livy ( $v$. 55), already cited (cf. Tacitus, Ann. xv. 38: "Obpoxia urbe artis itineribus, hucque et illuc flexis, at que enormibus ricis, qualis retus Roma fuit"-that is. before the fire). This defect was not remedied till the great fire in the reign of N.ro, which forms the dext remarkable epoch in the history of the city.

## V. The City till the Time of Aurelian.

Fire under Nero.-There had been a destructive fire in the reign of Tiberias, which burnt down all the buildings on the Caelian hill (Tac. Ann. iv. 64); but this was a mere trifle compared with the extensive conflagration under Nero. The latter, the most destructive calamity of the kind that had ever happened at Rome, is unequivocally said by Suctonius (Nero, 38) to have been caused by the wilful act of the emperor, from disgust at the narrow and winding streets. Nero is represented by that historian as contemplating the flames with delight from the tuwer of Marcenas on the Esquiline, and as converting the awful reality into a sort of dramatic spectacle. by singing as the fire raged, in proper scenic attire, the Sack of Troy; nor does the more judicious Tacitus altogether reject the imputation ( $A n n$. xv. 33, seq.) The fire commenced at the lower part of the Circos Maximus, where it adjoins the Caelian and Palatine, in some shops containing combustible materials. Thence it spread through the whole Jength of the circus to the Forum Boarium, and Dorthwards over the whole Palatine till it was arrested at the foot of the Esiquiline. It lasted six dxys and seven nights, and its extent may be judged from the fact that out of the fourteen Regions three were completely destroyed, and seven very nearly so, viulst only three escaped altogether untouched.

The three Regions utterly destinyed must have been the xith, $x$ th, and ivth, or thase called Circus Maximus, Palatium. and Templum Pacis. The forum must have suffered considerably, but the Capitol seems to have excaped, as the Capitoline temple, after its first destruction in the time of Sulla, remained entire till burnt by the Vitellians. The narrow and crooked strects, and the irregular Vici of which ancient Rnme was composed, rendered it impossible to arrest the conflagration. Nero was at Antium when it broke out, and did not return to Rome till the flames were threatening his own palace, which he had not the power to save. This was the Domus Transitorin, the domain of which he had extended from the Palatine to the gardens of Maecenas on the Esquiline. What chiefly directed suapicion against Nero, as having wilfully caused the fire, was the circumstance of its breaking out afresh in the Aemilian property of his minion Tigellinus.

Much irreparable loss was occasioned by this fire, such as the destruction of several time-honoured fanes, of many master-pioces of Greek art, besidex a vast amount of private property. Among the venerable temples which perished on this occasion, were that of Luna, erected by Servius Tullius, the altar and fane of Hercules in the Forum Boarium, the temple of Jupiter Stator, founded by Romulus, those of Vesta and of the Penates Populi Romani, and the Regia of Numa. Yet, on the other hand, the fire made romm for great improvements. Nero caused the town to be rebuilt on a regular plan, with broad streets, open spaces, and less lofty houses. All the buildings were isolated, and a certain portion of each was constructed with Alban or Gabinian stone, so as to be proof against fire; to guard against which a plentiful supply of water was laid on. As a means of escape and assistance in the same calamity, as well as for the sake of ornament, Nero also caused porticoes to be built at his own expense along the fronts of the insulae. He supplied the proprietors with money for building, and specified a certain time by which the houses were to be completed (Tac. Ann. xv. 38-43; Suet. Nero, 38). Thus Rome sprung a second time from her ashes, in a style of far greater splendour than before. The new palace, or domus aurea, of the emperor himself kept pace with the increased magnificence of the city. Its bounds comprehended large parks and gardens, filled with wild animals, where solitude might be found in the very heart of the city; a vast lake, surrounded with large buildings, filled the valley in which the Flavian amphitheatre was afterwards erected ; the palace was of sach extent as to have triple porticoes of a thousand feet ; in the vestibulo stood a colossal figure of Nero himself, 120 feet in height; the ceilings were panelled, the chambers gilt, and inlaid with gems and mother-of-pearl; and the baths flowed both with fresh and sea water. When this magnificent abode was completed, Nero vouchsafed to honour it with his qualified approhation, and was heard to observe, "that he was at last beginning to lodge like a man." (Suet. Nero, 31; Mart. de Spect. 2.)

Cnanges under subsequent Emperors. - The two predecessors of Nero, Caliguia and Claudius, did not effect much for the city; and the short and turbulent reigns of his three successors. Galba, Otho, and Vitellius, were characterised rather by destruction than improvement. Caligula indeed prifected some of the designs of Tiberius (Suet. CuL
21); and the reign of Claudius was distinguished by the completion of two aqueducts and the construction of several beautiful fountains (Id. Claud. 20). The fuctious struggles between Otho and Vitellius were marked by the ominous burning of the Capitol. At length the happier era of the public-spirited Vespasian was distinguished alike by his regard for the civil liberties of the Romans, and for their material comforts, by the attention which he paid to the improvement of the city, and by his restoring to the public use and enjosment the vast space appropriated by Nero for his own selfish gratification. The bounds of the imperial palace were again restricted to the limits of the Palatine, and on the site of Nero's lake rose a vast amphitheatre destined for the amusement of so many thousands of the Roman people, whose ruins we still gaze at with wonder and admiration. Vespasian was likewise the founder of the temple of Peace, near the Forum, and of a temple to Claudius on the Caelian hill. Titus pursued the popular designs of his father, and devoted a large portion of the former imperial gardens on the Esquiline to the foundation of public baths. (Suet. Tit. 7; Mart. iii. 20. 15.) Under this emperor another destructive fire raged for three days and nights at Rome, and again laid a great part of the city in ashes. (Suet. Tit. 8.) The chief works of Domitian were the rebuilding of the temple of Jupiter Capitolinus, which had again been burnt, on the mere external gilding of which be is said to have expended 12,000 talents, or nearly three millions sterling; and the foundation of a new forum, which, however, was not finished till the time of Nerva, whose name it bore. (Id. Dom.5.) Trajan constructed the last of the imperial fora, with which was connected the Basilica Ulpia. (Dion Cass. lxix. 4.) lome probably attained its highest pitch of architectural splendour under the reign of his successor Hadrian. That emperor had a passion for tuilding, and frequently furnished his own designs, which, however, were not always in the best taste. His most remarkable works were the Mausoleum on the right bank of the Tiber, now the Custello di S. Angelo, the Temple of Venus and Dome near the Colosseum, and the enormous villa whose ruins may still be seen at the foot of the ascent which leads to Ticoli. (Spart. Hadr. 19; Procop. B. G. i. 22.)

It would be tedious and unprotitable to recount the works of succeeding emperurs down to the time of Aurelian; and it may suffice to mention that those who most contributed to renorate or adorn the city were Septimius Severus, Caracalia, and Alexander Severus. During this period Rome betrayed unequivocal symptoms of her approaching decline and fall. Large bodies of the barbarians had already penetrated into Italy, and, in the reign of the accomplished but feeble Gallienus, a horde of the Alemani had menaced and insulted Rome itself. After a lapse of eight centuries its citizens again trembled for the safety of their families and homes; and the active and enterprising Aurelian, whilst waging successful wars in Egypt and the East, found himself com. pelled to secure his capital by fortifying it with a wall.
This great undertaking, commenced A. D. 271, was completed in the reign of Probus, the successor of Aurelian. (Vopisc. Aur.21, 39; Aur. Vict. Caes. 35; Eutrop. ix. 15; Zosim. i. 49). The accounts of the circumference of this wall are discrepant and improbable. Vopiscus (Aurel. c. 39) mentions the absurd and extravagant measure of nearly 50 miles; which,
however, has been adopted by Lipsius and Isaac Vossius, as well as by Nibby (Mura, fc. p. 120, seq.). The walls of Aurelian were repaired by Honorius, and with the exception of that part beyond the Tiber, and some modern additions by the Popes, are substantially the same as those which now exist, as appears from the inscriptions on the fates. Without the additions referred to, their circamference would be between 11 and 12 miles, thus reducing the city to about the same dimensions as those given by Pliny in the time of Vespasian; nor is there any reason to believe that, in the sinking state of the Emipire, the city would have received any increase of inhabitants. Another measurement by Ammon, the geometrician, just before the siege of the city by Alaric, gave a circumference of 21 miles (lhot. Bibl. 80, p. 63, ed. Bekk.) ; but this number, though adopted by Gibbon, and nearer to the truth, cannot be accepted any more than that of Vopiscus. (Gibbon, Decl. and Fall, vol. ii. p. 17, ed. Smith, and notes.) Piale suggested that Vopiscus meant pedes instead of passus, and other emendations of both the passages have been proposed; but without discussing the merit of these, it is sufficient to know that the texts are undoubtedly either corrupt or erroneous. This may be briefly but decisively shown from the following considerations, which will, for the most part, apply to both the statements:1 st, the incredible extent of the work; 2nd, the absence of any traces of such walls: 3rd, or of any buildings within their supposed limits, such as would naturally belong to a city; 4th, the fact that the extant inscriptions ascribe to Honorius the restoration of an old line of walls and towers, not the construction of a new one. (Bunbury, in Class. J/us. iii. p. 368.)

## VI. Decline and Fall of the City.

The history of the city from the time of Aurelian presents little more than a prospect of its rapid decline. The walls of that emperor were ominous of its sinking fortunes; but the reign of Diocletian forms the first marked aera of its decay. The triumph of that emperor and of his colleague Maximian, A. D. 303, was the last ever celebrated at Rome, but was distinguished by the trophies of an important Persian victory. (Eutrop. ix. 27.) The Roman emperons had long ceased to be of Roman extraction; Diocletian, the descendant of slaves, was born in Dalmatia; Masimian, the son of a peasant, was his fellow countryman; and thus neither was wedded by any ties of birth or patriutisin to the adcient glories of the eternal city. These were the first emperors who deserted the capital to fix their residence in the provinces. Maximian established his court at Milan, whilst Diocletian resided at Nicomedia, on the embellishment of which he lavished all the treasures of the E:ast, in endeavouring to render it a rival worthy of Rome. His ouly visit to the ancient capital seems to have been on the occasion of his triumph ; it was not prolonged beyond two months, and was ciosed with unexpected precipitation and abraptness. (Lact. Mort Pers. c. 17.) Yet his reign is distinguished ay having conferred upon the city one of the latest, but most magnificent of its monuments, - the baths on the Quirinal which bear his name, by far the largest at Kone, whose enormous ruins may still be traced, and afford room enough for various churches, convents, and gardens. (Vopisc. Prob. 2; Orell. Inscr. 1056.) Subsequewily, iadeed, Maxentius,
the partner and rival of Constantine, resided at Fome during the six years of his reign, and atfected 2n prize the elegance of the ancient metropolis; whilst his lust and tgranny, suppoited by squandering its treasures, created more disgust among the Lumans than the absence of their former sovereigns. Masentius, however, adorned the city which he polluted by his vices, and some of his works are among the last monuments worthy to be recorded. He restornd the temple of Venus and Rome, which had been damaged by a fire, and erected that magnificent b:silica, afterwards dedicated in the name of Constantine, whose three enormons arches may still be Fiewed with admiration. (Aur. Vict. Caes. c. 40. § 26.) The final transfer of the seat of empire to Byzantium by Constantine gave the last fatal blow to the civic greatness of Kome. Yet even that emperor presented the city - we can hardly say adorned it - with a few monuments. One of them, the arch which records his triumph over Mlaxentius, still subsists, and strikingly illustrates the depth of degradation to which architectural taste had alreadiy sunk. Its beautics are derived from the barbarous pillage of former monuments. The superb sculptures which illustrated the acts and victories of Trajan, were ruthle:sly and absurdly constrained to typify those of Constantine; whilst the original sculptures that were alded, by being placed in justaposition with those beautiful works, ouly serve to show more forcibly the bopeless decline of the plastic arts, which seem to have fallen with paganism.

Rome in the Time of Constantius II. - From this period the care of the Romans was directed rather towards the preservation than the adornment of their city. When visited by the Second Constantius, A. D. 357, an honour which it had not received for two and thirty years, Rume could still display her ancient glories. The lively description of this visit by Ammianus Marcellinus, though writien in a somewhat inflated style, furms a sort of pendant to Strabo's picture of Rome in the age of Aucustus, and is striking and valuable, both as exhibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age recrarded its monuments as a kind of Titanic relics, which it would be hopeless any longer to think of imitating. "Having entered Rome," says the historian, " the seat of empire and of every virtue, Constantius was overwhelned with astonishment when he viewed the formm, that most conspicuous monument of ancient power. On whatever side he cast his eyes, he was struck with the thronging wonders. He addressed the senate in the Curia, the people from the tribunal; and was delighted with the applause which accompanied his progress to the palace. At the Circensian games wlich he gave, be was pleased with the familiar talk of the people, who, without betraying pride, asserted their hereditary liberty. He himself observed a proper mean, and did not, a 4 in other cities, arbitrarily terminate the contests, but, as is customary at Rome, permitted them to end as chance directed. When he viewed the different parts of the city, situated on the sides of the seven hills and in the valleys between them, he expected that whaterer he first saw must be superior to everything else: such as the temple of the Tarpeian Jove, whose excellence is like divine to human; the baths which occupy whole districts; the enornous mass of the amphitheatre, builu of solid Tiburtise stone, the height of which almost baflies
the eye; the Pantheon, which may be called a circular Region, vaulted with lofty beauty; the high, but accessible mounds, bearing the statues of precerivig princes; the temple of Rome, the forum of Peace; the theatre of Pompey, the odeum, the stadium, and other similar ornaments of the eternal city. But when he came to the forum of Trajan, which we take to be a structure unparalleled in the whole world, he was confounded with astonishment as he surveyed those gigantic propurtions, which can neither be described nor again imitated by man. Wherefore, laying aside all hope of attempting anything of the hind, he merely expressed the power and the wish to imitate the horse of Trajan, on which that prince is seated, and which stands in the middle of the Atrium. Hereupon prince Hormisda, who stood near him, exclaimed with national gesticulation: 'First of all, emperor, order such a stable to be made for it, if you can, that the horse you propose making may louge as magnificently as the one we beloold.' The same prince being asked his opinion of Rome said that the only thing which displeased him was to perceive that men died there as well as in other places. So great was the emperor's surprise at all these sights that he complained that rumour, which commonly magnifies everything, had here shown itself weak and malignant, and had given but a feelle description of the wonders of Kome. Then, after much deliberation, he resolved that the only way in which he could add to the ornaments of the city would be by erecting an obelisk in the Circus Maximus" (xvi. 10).

The same historian from whom the preceding topographical picture has been transcribed has alao left some lively and interesting notices of the inanners of the Komans at this period. These have been paraphrased in the eloquent language of Gibbon, to whose work the reader is referred for many interesting particulars concerning the state of hime at this time (vol. iv. pp. 70-89, ed. Smith). We may here olserve with surprise that whilst Alaric, like another Hannibal, was threatening her gates, her nobles were revelling in immoderate wealth, and squandering the revelues of provinces on objects of pomp and luxury, though, as we have seen, the arts had fallen to so low an ebb that there was no longer any hope of rivailing the works of their ancestors. The poorer citizens, few of whom could any longer brast a pure Lioman descent, resembled the inmates of a poorhouse, except that their pleasures were provided for as well as their wants. A liberal distribution of corn and bacon, and sometimes even of wine, relieved their necessities, whilst bicalth and recreation were promoted by gratuitous admittance to the laths and public spectacles. Yet Rome was now strugyling for her existence. We have already mentioned the restoration of the walls by Honorius. It was under the same emperor that the first example occurs of that desecration by which the Romans stripped and destroyed their own minuments. If we may credit Zosimus (v. 38), Stilicho was the first to lay violent hands on the temple of the Capitoline Jove, by stripping off the plates of gold which lined its dowrs, when the following inscription was found beneath them: "Misero regi servantur." In after times this example was but ton frequently followed; and it may be said with truth that the Romans themselves were the principal destroyers of their own city.

The Barlarians at Rime. - After two siesers. or rather blockiules, in 408 and 409. I,y the Gutis
under Alaric, Rome was captured and sacked on a third occasion in 410 (A. U. c. 1163) - the first time since the Gallic invasion that the city had actually been in the hands of an eneing. But though it was plundered by the Goths, it dues not appear to have sustained much damage at their hands. They evacuated it on the sixth day, and all the mischief they seem to have done was the setting fire to some houses near the Salarian gate, by which they had entered, which unfortunately spread to and destroyed the neighbouring palace of Sallust (Procop. B. V. i. 2.) Nearly half a century later, in the reign of Maximus, Rome was again taken, and sacked by the Vandals, under Genseric, A. D. 455. This time the pillage lasted a formight; yet the principal damage inflicted on the monuments of the city was the carrying off by Genseric of the curious tiles of gilt bronze which covered the temple of the Capitoline Jupiter (Ib.5). That edifice, with the exception, perhaps, of the spoliation by Stilicho, appears to have remained in much the saine state as after its last rebuilding by Domitian; and though paganism had been abolished in the interval, the venerable fane seems to have been respected by the Roman Christians. Yet, as may be perceived from an edict of the emperor Majorian, A. D. 457, the inhabitants of Rome had already cominenced the disgraceful practice of destroying the monuments of their ancestors. The zeal of the Christians led them to deface some of the temples; others, which had not been converted into Christian churches, were suffered to go to ruin, or were converted into quarries, from which building materials were extracted. Petitions for that purpose were readily granted by the magistrates; till Majorian checked the practice by a severe edict, which reserved to the emperor and senate the cognisance of those cases in which the destruction of an ancient building might be allorred, imposed a fine of 50 lbs . of gold (2000l. sterling) on any magistrate who granted a license for such dilapidations, and condemned all subordinate officers engaged in such transactions to be whipped, and to have their hands amputated (Nov. Major. tit. vi. p. 35: "Antiquarum aedium dissipatur speciosa constructio; et ut earum aliquid reparetur magna diruuntur," \&c.)

In the year 472, in the reign of Olybrius, Rome was for the third time taken and sacked by Ricimer; but this calamity, like the two former ones, does not appear to have been productive of much damage to the public monuments. These relics of her former glory were the especial care of Theodoric, the Os trogoth, when be became king of Italy, who, when he visited the capital in the year 500, had surveyed them with admiration. "The Gothic kings, so injuriously accused of the ruin of antiquity, were anxious to preserve the monuments of the nation whom they bad sublued. The royal edicts were framed to prevent the abuses, the neglect, or the depredations of the citizens themselves; and a professed architect, the annual sum of 200 lbs . of gold, 25,000 tiles, and the receipt of customs' from the Lucrine port, were assigned for the ordinary repairs of the walls and public edifices. A similar care was extended to the statues of metal or marble, of men or animals. The spirit of the horses, which have given a modern name to the Quirinal, was applauded by the barbarians; the brazen elephants of the Via Sacra were diligently restored; the famous heifer of Myron deceived the cattle as they were driven through the forum of Peace; and an ofticer was created to protect those works of art, which Theodoric considered as
the noblest ornament of his kingdom." (Gibbon, Decline and Full, vol. v. p. 21, ed. Smith ; cf. Excerpt. de Odoac. Theod. 67.) The letters of Cassiodorus, the secretary of Theodoric, show that Rome had received little or no injury from its three captures. The Circus Maximus was uninjured, and the Ludi Circenses were still exhibited there (Variar. iii. 51); the thermae and aqueducts were intact (Ib. vii. 6); the Claudian aqueduct was still in play, and discharged itself on the top of the Aventine as if it were a valley (Ib.). That the aqueducts were perfect also appears from Procopius (B. G. i. 19), who says that in the subsequent siege under Vitiges, the Goths broke them down, to deprive the inhabitaits of their supply of water. The theatres had sutfered only from the effects of time, and were repuired by Theodoric (Cassiod. ib. iv. 51.)

In the year 536 the Gothic garrison, with the exception of their commander Leuderis, who preferred captivity to flight, evacuated Rome on the approach of Belisarius, the lieutenant of Justinian. Belisarius entered by the Asinarian gate, and, after an alienation of sixty years, Rome was restored to the imperial dominion. But in a few months the city was beleaguered by the numerous host of Vitiges, the newly elected king of the Goths; and its defence demanded all the valour and ability of Belisarius. For this purpose he repaired the walls, which had again fallen iuto decay. Regular bastions were constructed; a chain was drawn across the Tiber; the arches of the aqueducts were fortified; and the mole of Hadrian was converted into a citadel. That part of the wall between the Flaminian and Pincian gates, called muro torto, was alone neglected (Procop. B. G. i. 14, sqq.), which is said $\omega$ have been regarded both by Goths and Romans as under the peculiar protection of St. Peter. As we have before said, the Goths invested the city in six divisions, from the Porta Flaminis to the Porta Praenestina; whilst a seventh encampment was formed near the Vatican, for the purpose of commanding the Tiber and the Milvian bridge. In the general assault which followed, a feint was made at the Salarian gate, but the principal attacks were directed against the mole of Hadrian and the Porta Praenestina. It was on this occasion that at the former point the finest statues, the works of Praxiteles and Lysippus, were converted into warlike missiles, and hurled down apon the besiegers. When the ditch of St. Angelo was cleansed in the pontiticate of Urban VIII., the Sleeping Faun of the Barberini Palace was discovered, but in a sadly mutilated state. (Winckelmann, Hist. de ['Art, vol.ii. p. 52, sey.) But the assault was not successful, and after a fruitless siege, which lasted a year, the Guths were furced to retire.

After the recall of Belisarius the Goths recovered strength and courage, and, under Totila, once more threatened the walls of Rome. In 544 Belisarius was again despatched into Italy, to retrieve the faults of the generals who had succeeded him; but on this occasion he was deserted by his asual fortune, and, after a fruitless attempt to reliere the city, was compelled to retreat to Ostia. (Procop. B. G. iii. 19.) In December, 546, the Goths were admitted into the city by the treachery of some Isaurian sentinels posted at the Asinarian gate. Rome was again subjectel to pillage, and appears to have suffered more than on any former occasion. A third part of the walls was destroyed in different places, and a great many houses were burnt.
(Procop. 23. c. 22; Marcell. Chrom. p. 54.) Totila threatened to destroy the finest works of antiquity, and even issued a decree that Rome should be turned into a pasture. Yet he was not deficient in magnanimity and clemency, and was diverted from these designs by the remonstrances of Belisarius, who warned him not to sully his fame by such wanton barbarity. Upon Totila's marching into Lucania, Belisarius, at the head of 1000 horse. cut his way through the Goths who had been left to guard the city. He repaired with rude and heterogeneous materials the walls which had been demolished; whilst the gates, which could not be so suddenly restored, were guarded by his bravest soldiers. Totila returned to Korne by forced marches, but was thrice repulsed in three general assaults. Belisarius, however, being commanded by Justinian to proceed into Lacania, left a garrison of 3000 of his best troops at Rome under the command of Dingenes. The city was again betrayed by some Isaurians in 549, who opened the gate of St. Paul to Totila and his Goths. Totila, who seems now to have considered himself as in confirmed possession of Italy, no longer exhibited any desire to destroy the edifices of Rome, which he regarded as the capital of his kingdom, and be even exhibited the equestrian games in the Circus. (Procop. B. G. iv. 22.) But in 552 he was defeated and slain by the eanuch Narses in the battle of Tagina. Narses then marched to Rome, and once more sent its keys to Justinian, during whose reign the city had been no fewer than fire times taken and recovered. (Ib. 26-35; Theoph. Chrom. vol. i. p. 354, ed. Bonn.)

Rome ander the Popes. - Towards the close of the sixth centary Rome had tonched the lowest point of degradation. The Roman citizens lived in continual fear of the attacks of the Lombards ; the inhabitants of the surrounding country, who no longer dared to devote themselves to the pursaits of agriculture, took refuge within the walls; and the Campagna of Rome became a desert, exhaling infectious vaprurs. The indigence and the celibacy of a great part of the inhabitants produced a rapid decrease of population, though their scanty numbers did not protect them from famine. The edifices of Rome fell into decay; and it is commonly believed that Pope Gregory the Great, Who filled the papal chair from 590 to 604 , purposely defaced the temples and mutilated the statues,-a charge, however, which rests on doubtful evidence, and which has been strenuously repelled by Gregory's biographer Platina (ap. Bayle, Grégoire Ier.). Bargacus, in his epistle on the subject (in Graevius, Thesaur. Ant. vol. iv.), says that the Circus Maximus, the baths and theatres, were certainly overthrown designedly, and that this is particularly evident in the baths of Caraculla and Jiocletian (p. 1885). He attributes this, as a merit, to Gregory and one or two subsequent popes, and assigus as a reason that the baths were nothing but schools of licentiousness (p. 1889, seq.). It seems more probable, bowever, that the destruction of the baths arose from the failure of the aqueducts - a circumstance which would have rendered them useless - and from the expense of keeping them up. Bargaeus himself attributes the ruin of the aquedncts to the latter cause (p. 1891); but they must also have suffered very severely in the Gothic wars. Hence perhaps the huge foundations of the thermae, having become altogether useless, began to be used as stone quarries, a circumstance which would account for
the appearance of wilful damage. That ruin had made great progress at Kume before the time of Gregory, is manifest from some passages in his own works in which he deplores it. Thus in one of his homilies he says: "Qualis remanserit Roma, conspicimus. Immensis doloribus multipliciter attrita, desolatione civium, impressione hostium, frequentic ruinarum." And again: "Quid autem ista de hominibus dicimus, cum ruinis crebrescentibus ipsa quaque destrui aedificia videmus?" (Hom. 18 in Ezech. ap. Donatum, de Urbe Roma, i. 28, sub fin.) He would hardly have written thus had he himself been the cause of these ruins. The charge probably acquired strenyth from Gregory's avowed antipathy to classical literature.

Whilst the dominion of Italy was dirided between the Lombards and the exarchs of Kavenna. Rome was the head of a duchy of almowt the same size as her ancient territory, extending from Viterbo to Terracina, and from Narni to the mouth of the Tiber. The fratricide Constans II. is said to have entertained the idea of restoring the seat of empire to Rome (A. p. 662). (Hist. Misc. ap. Muratori, Scrip. R. I. iii. pt. i. p. 137.) But the Lombard power was too strong; and, after a visit of a few days to the ancient capital, he abandoned it for ever, after pillaging the churches and carrying off the bronze roof of the Pantheon. (Schlosser, Gesch. d. bilder-sturmenden Kaiser, p. 80.) In the eighth century the Romans revived the style of the Republic, but the Popes had become their chief magistrates. During this period Rome was constantly harassed and suffered many sieges by the Lombards under Luitprand, Astolphus, and other kings. In 846 the various measure of its calamities was filled up by an attack of the Suracens - as if the former mistress of the world was destined to be the butt of wandering barbarians from all quarters of the globe. The disciples of Mahomet pillaged the church of St. Peter, as well as that of St. Paul outside the Porta Ostiensis, but did not succeed in entering the city itself, They were repulsed by the vigilance and energy of pope Leo IV., who repaired the ancient walls, restored fifteen towers which had been overthrown, and enclosed the quarter of the Vatican; on which in 8.52 he bestowed his blessing and the title of Citta Leonina, or Leonine city (now the Borgo di S. Pietro). (Anastasius, V. Leon. IV.) In the period between 1081 and 1084 Rome was thrice fruitlessly besieged by the emperor Henry IV., who, however, by means of corruption at last succeeded in gaining possession of it; but the ruins of the Septizonium, defended by the nephew of Pope Gregory VII., resisted all the attacks of Henry's forces. Gregory shut himself up in the castle of S. Angelo, und inroked the assistance of his vassal, Robert Guiscard. Henry fled at the approach of the warlike Norman; but Rome suffered more at the hands of its friends than it had ever before done from the assuults of its enemies. A tumult was excited by the imperial adherents, and the Saracens in Fobert's army, who despised both parties, seized the opportunity for violence and plunder. The city was fired; a great part of the buildings on the Campus Martius, as well as the spacious district from the Lateran to the Colosseum, was consumed, and the latter portion has never since been restored. (Malaterra, iii. c. 37 ; Donatus, iv. 8.)

But Rome has suffered more injury from her own citizens than from the hands of foreigners; and its ruin must be chiefly imputed to the civil dioseusions
of the Romans, and to the use which they made of the ancient monuments to serve their own seltish and mercenary purposes. The factions of the Guelphs and Ghibelines, of the Colonna and Ursini, which began in the tenth century and lasted several hundred years, must have been very destructive to the city. In these sanguinary quarrels the ancient elifices were converted into castles; and the multitude of the latter may be estimated from the fact that the senator Brancaleone during his government (1252-1258) caused 140 towers, or fortresses, the strongholds of the nobility, to be demolished in Rome and its neighbourhood; yet subsequently, under Martin V., we still hear of forty-four existing in one чuarter of the city alone. (Matthew Paris, Hist. Maj. p. 741, seq.) Some of these were erected on the most celebrated buildings, as the triumphal monuments of Caesar, Titus, and the Antonines. (Montfiaucon, Diar. Ital. p. 186; Anonymus, ib. p. 285.) But still more destructive were the ravages conmitted on the ancient buildings during times of peace. The beautiful sculptures and architectural members, which could no longer be imitated, were seized upon and appropriated to the adornment of new structures. We have seen that this barbarous kind of spoliation was exercised as early as the reign of Constantine, who applied the sculptures of some monument of Trajan's to adorn his own triumphal arch. In after ages Charlemagne carried off the columns of Rome to decorate his palace at Aix-laChapelle (Sigebert, Chron. in Buuquet, Historiens de France, v. p. 378); and several centuries later Petrarch laments that his friend and patron, Robert, king of Sicily, was following the same pernicious example. ("Itaque nunc, heu dolor! heu scelus indignum I de vestris marmoreis columnis, de liminibus templorum (ad quase nuper ex orbe toto concursus devotissimus fiebat), de inarginibus sepulcrorum sub quibus patrum vestrorum venerabilis cinis erat, ut reliquas sileam, desidiosa Napolis adornatur," Petrar. Opp. p. 536, seq.) It would be endless to recount the depredations committed by the popes and nobles in order to build their churches and palaces. The abbé Barthélemi (Mém. de 「Acad. des Inscr. xxviii. p. 585) mentions that he had seen at Rome 2 manuscript letter relating to a treaty between the chiefs of the factions which desolated Rome in the 14th century, in which, among other articles, it is agreed that the Colosseum shall be common to all parties, who shall be at liberty to take stones from it. (De Sale; Vie de Pétrarque, i. 328, note.) Sixtus V. employed the stones of the Septizoniun in building St. l'eter's. (Greg. Leti, Vita di Sisto V. iii. p. 50.) The nephews of Paul III. were the principal destruyers of the Colosseum, in order to build the Farnese palace (Muratori, Ann. d Italia, xiv. p. 371); and a similar repronch was proverbially applied to those of Urban VIII. ("Quod non fecerunt Barbari, fecere Barberimi," Gibbon, viii. p. 284, note.) But even a worse species of desecration than this was the destruction of the most beautiful marble columns, by converting them into lime. Poggio complains (A.d. 1430) that the temple of Concord, which was almost perfect when he first came to Rome, had almost disappeared in this manner. ("Capitolio contigua forum versus superest forticus aedis Concordiae, quam cum primum ad urbern accessi, vidi fere integram, opere marmoreo admodum specioso; Rornani postmodum, ad calcern, uedern totam et porticîs partem, disjectis columnis, sunt demoliti," de Var. Fort. p. 12.) And the sume practice
is reprobated in the verses of Acneas Sylvius, afterwards Pope Pius II.:-
" Sed tuus hic populus, muris defossa vetustis,
Calcis in obsequium marmora dura conuit.
Impia tercentum si sic gens egerit annos
Nullum hic indicium nobilitatis erit."
(In Mabillon, Mus. Ital. i. 97.)
The melancholy progress of the desolation of Rome might be roughily traced from some imperfect memorials. The account of the writer called the Anonymus Einsiedlensis, who visited Kome early in the 9th century, which has been published by Mabillon (Anal. iv. p. 502), and by Hänel (Archic. f. Philol. u. Pädag. i p. 115), exhibits a much more copious list of monuments than that of another anonymous writer, who compiled a book De Mirabilibus Romae, in the 12th or 13th century. (Montfaucun, Diar. Ital. p. 283, seq.; Nibby, Efficm. Lett. di Roma, 1820, Fasc. i.-iv.) Several passages in the works of Petrarch exhibit the neglected and desolate state of Rume in the 14th century,-the consequence of the removal of the holy see to Avignon. Thus, in a letter to Urian V., he says: "Jacent domus, labant maenia, templa ruunt, sacris pereunt, calcantur leges." And a little after: "Lateranum humi jacet et Ecclesiaram mater omnium tecto carens ventis patet ac pluviis," \&cc. (Cff lib. ix. ep. 1.) Yet the remains of ancient Roman splendour were still considerable enough to excite the wonder and admiration of Manuel Chrysoloras at the commencement of the 15 th century, as may be seen in his epistle to the emperor Juhu Palaeulorgis. (subjoined to Codinus, de Antiq. C. P. p. 107, seq.) Much destruction must have been perpetrated trum this period to the time, and even during the life, of Poggio. Bat the progress of desolation seems to have been arrested subsequently to that writer, whose catalogue of the ruins docs not exhibit a great many more remains than may yet be seen. Care is now taken to arrest as far as possible even the inevitable influence of time; and the antiquarian has at present nothing to regret except that more active ineans are not applied to the disinterment of the ancient city. The funds devoted to the recrection of a nagnificent basilica far without the walls, and on so unwholesome a site that the very monks are forced to desert it during the heats of summer, might, in the eye at least of transmontane taste, have been more wurthily devoted to such an object.

## ViI. Population of Rome.

Before we close this part of the subject it will be expected that we should say something respecting the probable amount of the population of Rome. The inquiry is unfortunately involved in mach obscurity, and the vagueness of the data upon which any calculation can be founded is such that it is impossible to arrive at any wholly satisfactory conclusion. The latitude bence allowed may be judged from the fact that the estimates of some of the best modern scholars are about fuur times as great as those of others; and whilst Dureau de la Malle, in his Economie politique des Romains (i. p. 340, seq.), sets down the population at 562,000 souls, Höch, in his Rümiscle Geschichte (vol. i. pt. ii. p. 383, seq.), estimates it at $2,265,000$; may Lipsius, in his work De Maynitudine Komana (iii. 3), even carried it up to the astounding number of $8,000,000$. But this is an absurd exaggeration; whilst, on the
ot her hand, the estimate cf Dureau de la Malle is undoubtedly moch too low.

The only secure duta which we possess on the subject are the records of the number of citivens who receired the congiaria or inperial largesses, for it is only doring the imperial times that we can profess to riake any caiculation. We learn from the Monumentuin Ancyranum that Augustus, in his 12th consulate, distributed a pecuniary gift to 320,000 of the plebs wbina. ("Consul xir. trecentis et viginti millibus plebei urbanae sexayenos denarios viritim dedi," tab. iii.) The recipients of this bounty were all males. and probably formed the while free male population of Rome, with the exception of the senators, knights, and aliens. Women and bers of a tender age did not participate in these dintributions. It had been custhmary fur the latter to be admitted to participation after the age of ten; but Augustus appears to have extended his liberality to still younger children. ("Ne minores quiden puems praeteriit, quamvis nonnisi ab undecimo aetatis anno accipere consuesseut," Suet. Aug. 41.) The distributions of corn seem to have been regulated on stricter principles, as these were regular, not extraonlinary like the largesses. From these the children were probably excluded, and there was, perhaps, a stricter inquiry made into the titles of the recipients. Thus we learn from the Mon. Ancyranum that those who received corn in the 13th consulate of Augustus amounted to rather more than 200,000. (Cf. Dion Cass. Iv. 10.) From the same document it appears that three largesses made by Augustus, of 400 sesterces per man, were never distributed to fewer than 250,000 persons. ("Quae mea congiaria pervenerunt ad hominum millia nunquam minus quinquaginta et ducenta," Ib., where Hïk. Kōm. Gesch. i. pt. ii. p. 388, by erruneously realing sestertium instead of hominum, has increased the number of recipients to $625,0 \% 0$.) From a pasage in Spartian's life of Sepiimius Severus (c. 23) it would seem that the number entitled to receive the distributions of corn had increased. That author says that Severus left at his death wheat enough to last for seven gears, if distributed according to the regular canon or measure of 75,000 modii dailo. Now, if we calculate this distribution according to the system of Augussus, of five modii per man monthly, and reckon thirty dars to the month, then this would leave the number of recipients at $450,000(75,000 \times 30=2.250 .000+5=$ \&50.000). According to these statements we can hardly place the average of the male plebeian yopulation of Rome during the tirst centuries of the Empire at less than 350,000; and at least twice as much again must be added for the females and boys, thus giving a total of $1,050,000$. There are no very accurate duta for arriving at the numbers of the senators and knirhts. Bunsen (Beschr.i. p. 184), without stating the grounds of his calculation, sets them down, inclading their fannilies, at 10,060 . But this is eridently much to low an estimate. We learn from Dionysius Halicarnassensis (vi. 13) that in the annual procession of the kuights to the temple of Cantor they sornetimes mustered to the number of 5000. But this must have been very far from their whole number. A great many inust have been absent from sickness, old age, and other causes; and a far greater number must have been in the provinces and in foreign conntries, serving with the armies, or empinverl as pablicani, and in ot her pablic capacities. Yet their families would probably, for the most part,
reside at Rome. We see from the complaints of Horace how the equestrian digrity was prostituted in the imperial times to liberti and aliens, provided they were rich enough for it. (Epod. iv. in Menam; cf. Juv. i. 28.) We should, perhaps, therefore be below the mark in fixing the number of knights and senators at 15,000 . If we allow a wife and one child only to each, this would give the number of individuals comproing the senaturial and equestrian families at 45,000 , which is a small proportion to $1,050,000$ freemen of the lower class. It may be objected that marriage was very much out of fashion with the higher classes at Rome during the time of Augustus; but the omission was supplied in another manner, and the number of $\mathrm{ke} \mathrm{p}^{\mathrm{t}}$ women and illegitimate children, who would count as population just as well as the legitimate ones, must have been considerable. In this calculation it is important not to underrate the numbers of the higher classes, since they are very important factors in estimating the slave population, of which they were the chief maintainers. The preceding sums, then, would give a total of $1,095,000$ free inhabitants of Rome, of all classes. To these are to be alded the aliens residing at Rome, the soldiers, and the slaves. The first of these classes must have been very numerous. There must have been a great many provincial persons settled at Rume, for purposes of business or pleasure, who did not possess the franchise, a great many Greeks, as tutors, physicians, artists, \&c., besides vast numbers of other foreigners from all parts of the world. The Jews alone must have formed a considerable population. So large, indeed, was the number of aliens at Kome, that in times of scarcity we sometimes read of their being banished. Thus Augustus on one occasion expelled all foreigners except tutors and physicians. (Suet. Aug. 42.) According to Seneca, the grater part of the inhabitants were aliens. "Nullum non hominum genus concurrit in urbem et virtutibus et vitiis magna prisemia ponentem. Unde domo quisque sit, quaere; videbis majoren partem esse, quae relictis sedibus suis venerit in maximam quidem et pulcherrimam urbem, non tamen suam." (Cons. ad Helv. c. 6.) In this there is no doubt some exaggeration; yet we find the same complaints reiterated by Juvenal:-
"Jam pridem Syrus in Tiberim defluxit Orontes."
" Ilic alta Sicyone, ast hic A:nydone relicta,
Hic Andro, ille Sano, hic Trallibus aut Alabandis,
E.vuilias dictumque petunt a Vimine collem,

Viscera magnarum domuum, dominique futuri '
(iii. 62, seq.).

It would perhaps, then, be but a modest estimate to reckon the aliens and fureigners resident at home, together with their wives and families, at 100,000 . The soldiers and the vigiles, or police, we can hardly estinate at less than 25,000; and as many of these men must have been married, we may reckon them, with their families, at 50,000 . Hence 100,000 aliens and 50,000 military, \&c., added to the foregoing sum of $1,095,000$, makes $1,245,000$ for the total miscellaneous free population of Kome.

There are great ditheulties in the way of estimating the slave population, from the total absence of any accurate data. We can only inter generally that it must have been exceedingly numerous-a fact that is evident from many passages of the aucient authors

The number of slaves kept as domestic servants mast have been exceedingly large. Horace mentions (Sat. i. 3. 12) that the singer Tigellius had sometimes as many as 200 slaves; but when he was taken with a sudden fit of economy, he reduced thein to the very modest number of 10 . No doubt, however, he was a first-rate vocalist, and, like his brethren in modern times, a man of fortune. Tillius the praetor, who was a stingy churl, when he went to Tibur, had 5 slaves at his heels to carry his cooking utensils and wine. (Ib. i. 6. 107.) Horace himself, who of course was not so rich a man as Tigellius, when he sat down to his frugal supper of cakes and vegetables, was waited upon by 3 slaves; and we may presume that these did not compose his entire household. (Ib. v. 115.) In the reign of Nern, 400 slaves were maintained in the palace of Pedanius Secundus, who were all put to death, women and children included, because one of them had murdered his master. (Tac. Ann. xiv. 42, seq.) The slaves no longer consisted of those born and bred on the estates of their masters, but were imported in multitudes from all the various nations under the wide-spread dominion of the Romans. (" Postquam vero nationes in familiis habemus, quibus diversi ritus, externa sacra, aut nulla sunt, colluviem istam non nisi metu coercueris." (Ib. c. 44.) The case of Pedanius, however, was no doubt an extraordinary one. It cannot be imagined that the plebs urbana, who received the public rations, were capable of maintaining slaves; nor probably are many to be assigned to the aliens. But if we place the patrician and equestrian families at 15,000 , and allow the moderate average nuinber of 30 slaves to each family, this would give a total number of 450,000. Sime also must be allowed to the richer part of the plebs-to persons who, like Horace, were not patrician nor equeatrian, yet could afford to keep a few slaves ; as well as to the aliens resident at Rome, so that we can hardly compute the number of domestic slaves at less than 500,000 . To these must be added the public slaves at the disposal of the varicus municipal officers, also those employed in handicraft trades and manufactures, as journeymen carpenters, builders, masons, bakers, and the like. It would not perhaps be too much to estimate these at 300,000 , thus inaking the total slave popilation of Rome 800,000 . This sum, added to that of the free inhabitants, would give a total of $2,045,000$.

The Notitia and Curiosum state the number of insulae at kinne at 46,602, and the number of domus at 1790, besides balnea, lupanaria, military and police stations, \&c. If we had any means of ascertaining the average number of inhabitants in each insula, it would afford a valuable method of checking the preceding computation. But here again we are unfortunately reduced to uncertainty and conjecture. We may, however, pretty surely infer that each insula contained a large number of immates. In the time of Augustus the yearly rent of the coenactia of an insula ordinarily produced 40,000 sesterces, or between 300l. and 400l. sterling. (Dig. 19. tit. 2. s. 30, ap. Gibhon, ch. 31, note 70.) Petronius (c. 95, 97), and Juvenal (Sat. iii. passim) describe the crowded state of these lodgings. If we take them at an arerage of four stories, each accommodating 12 or 13 persons, this would give say 50 permons in each insula : and even then the inmates, men, women and boys, would be paying an average yearly rent of about $\gamma \boldsymbol{j}$. per head. The inmates of each dunsus can hardly be set down at less, since the
family, with tutors and other hangers on, may pere haps be fairly estimated at 10, and the slaves in each domus at 40. We learn from Valerius Maximus (iv. 4. §8), that sixteen men of the celebrated Gens Aelia lived in one small house with their families; but this seems to have been an exceptional case even in the early times, and cannot be adopted as a guide under the Empire, Now, taking the insulae actually inhabited at $\mathbf{4 0 , 0 0 0}$ since some must have been to let, or under repair and the inhabited domus at $1500=41,500$. and the number of inmates in each at 50 , we should have a total population of $2,075,000$ a sum not greatly at variance with the amount obtained by the previous method. But the reader will have seen on what data the calculation procerds, and must draw his own conclusions accordingly. (Cf. Bunsen, Beschreibung der Stadt Rom, i. p. 183, seq.; Dureau de la Malle, Economic politique des Komains i. p. 340. seq.; Mommsen, Die Rümischen Tribus, p. 187, seq.; Höck, Kömische Geschichte, i. pt. ii. p. 383, seq.; Zumpt, Ueber den Stand der Beonlkerung im Alterthum, Berlin, 1841 ; Gibbon, Decline and Fall, vol.iv. p.87, seq., with the note of Smith.)

## PART II. TOPOGRAPHY.

Having thus given an account of the rise and progress, the decline and fall of the Roman city, we shall now proceed to describe its topography. In treating this part of the subject we shall follow those divisions which are marked out either by their political importance or by their natural features rather than be guided by the arbitrary bounds laid down in the Regions of Augastus. The latter, however convenient for the municipal parposes which they were intended to serve, would be but ill calculated to group the various objects in that order in which they are most calculated to arrest the attention of the modern reader, and to fix them in his memory. We shall therefore, after describing the walls of Servius Tullius and those of Aurelian, proceed to the Capitol, one of the most striking objects of ancient Rome, and then to the Forum and its environs, the remaining hills and their valleys, with the various ubjects of interest which they present.

## L. Walis and Gates of Servius Tullius.

At the commencement of the Roman Empire the walls of Servius Tullius could no longer be traced. Instead of dreading the assulults of the surrounding petty nations of Italy. Rome had now extended her frontiers to the Euphrates and the Atlantic; her ancient bulwarks were become entirely useless, and the increase of her population had occasioned the building of houses close to and even over their remains; so that in the time of Dionysius of Halicarnassus, who came to Rome in the reign of Augustus, it way difficult to discover their course (ir. 13). To attempt now to trace their exact outline would therefore be a hopeless task. The remains of the agger of Servius are still, however, partly visible, and the situation of a few of the ancient gates is known with certainty, whilst that of others may be fixed with at least some appronch to accuracy from notices of them contained in ancient authors. It is from these materials that we must endeavour to reconstruct the line of the Servian walls, by first determining the probable sites of the gates, and by then drawing the
wall between them, according to indications offered by the nature of the ground.

We learn from Cicero that Servius, like Romulas, was guided in the construction of his wall by the ontline of the hills: "Cujus (urbis) is est tractatus dactusque muri quum Romuli tum etiam reiquorum regum sapientia detinitus ex omni parte arduis praeruptisque montibus, ut unus aditus, qui esset inter Esquilnum Quirinalemque montem, maximo aggere objecto fossa cingeretur vastissima; atque at ita munita arx circumjectu arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate horribili Gallici adventus incolumis atque intacta pernanserit." (De Rep. ii. 6.) Becker (de Muris, p. 64, Handb. p. 129) asserts that Cicero here plainly says that Servius erected walls only where there were no hills, or across the valleys, and conclodes that the greater part of the defences of the city consisted of the natural ones offered by the hills alone. Becker, however, appears to have formed no very clear ideas upon the subject; for notwithstanding what is here said, we find him a few pages further on, conducting the line of wall not only along the height of the Quirinal, but even over the suminit of the Capitoline hill itself ! (Handb. pp. 131, 136, de Muris, pp. 65, 70.) Neither his first, or thenretical, nor his second, or practical, view, is correct. The former is in direct costradiction to his authority ; for Cicero says that the other kings did liks Romulus; and he, us we have seen, and as Becker himself has shown, walled in his city all round. Cicero says, as plainly as he can speak, that there woas a wall, and that it was defined along its whole extent (" definitus ex omni parte") by the line of the hills. If it did not run along their summit, we cannot explain Pliny's assertion (iii.9) that the agger equalled the height of the walls ("Namque eum (aggerem) muris aequavit qua maxime patebat (urbs) aditu plano : caetero munita erat praccelsis muris, aut abruptis montibus," \&e.), since it would be a no great extolling of its beight to say that it was raised to the level of a wall in the valley. Cicero, however, notices two exceptions to the continuons line, and the fact of his pointing these out proves the contiruity of the wall in the remainder of the circuit. The first exception is the agger just mentioned, upon the top of which, however, according to Dionysius (ix. 68), there seems also to have been a sort of wall, though probably not of so great a height as the rest, at least he uses the comparative when speaking of it: reĩxos dvereipas iqmad́repoy (iv. 54). The second exception was the Arx, or Capitoline hill, which, being on its western side much more abrupt and precipitous than the other hills, was considered as sufficiently defended by nature, with a little assistance from art in escarping its sides. That there was no wall at this spot is also proved, as Niebuhr remarks (Hist. vol. i. p. 396) by the account of the Gauls scaling the height. (Liv. v. 47; comp. Bunbury, Class. Mus. vol. iii. p. 347.) The Capitoline, therefore, must have been the spot to which Dionysius alluded, when he said that Rome was parly defended by its hills, and partly by the Tiber (ix. 68); as well as Pliny in the passage just cited, where we must not infer from the plural (montibas) that he meant more than one hill. This is merely, as in Dionysius also, a general mode of expression; and we have before observed that Pliny's own account shons that the wall crowned the hills. Lastly, had there been no wall npon them, it is difficuit to
see how there could have been gates; yet we find Becker himself placing gates at spots where, according to his theoretical view, there could have been no wall. Niebuhr (l. c.). who, like Becker, does not confine the escarpment to the Capitol, but thinks that the greater part of the city was fortified solely by the steepness of its hills, places towers, walls, and gates just at the different ascents; but this view, improbable in itself, and unsupported by any authority, cannot be maintained against the express testimony of Cicero. There seems, however, to have been an interior fortificution on the E. side of the Capitoline, protecting the ascent by the clirus, as we shall see in the sequel. It was probably intended to secure the citadel, in case an enemy succeeded in furcing the external walls. We have seen before that the hill was fortified by Romulus; but whether these ancient fortifications, as well as those on the Palatine, were retained by Servius, it is impossible to say.

We may assume then that the wall of Servius, or his predecessor,-which seems to have been built of stone (" muro lapideo," Liv. i. 15), -surrounded the whole city, with the exception of the Capitoline hill and a small part defended by the Tiber,-thus justifying the nuble lines of Virgil (Georg. ii. 533.) :-
" rerum facta est pulcerrima Roma

## Septemque ana sibi muro circumdedit arces."

Our next task will be to determine the ontline of this wall by means of the site of the different gates ; though, of course, where the outline of the bills is well defined this ulone will be a guide. The situation of two of the gates may be considered certain,that of the Porta Collina, at the N.extremity of the agger, and that of the Esquiline at its southern end. Taking, therefore, the former as a starting-point, and proceeding continually to the left, we shall make the circuit of the whole city, till we again arrive at the Porta Collina.

This, the most northerly of all the gates, lay near the point where the Via Sularia branches off from the Via Nomentana. From this spot the first gate to the W. was probably the Porta Salutaris, so named, apparently, from its being on that division of the Quirinal which in the time of Numa and in the sacred books of the Argives was called Collis Salutaris, from an ancient sacellum of Sulas which stood upon it (Varr. L. L. v. § 51). When Paulus Diaconus tells us (p. 327, Müll.) that it was named after the temple of Salus, he seems to be alluding to the later and more famous temple dedicated by C. Junius Bubulcus in B. c. 303, which we shall have occasion to describe in the sequel : but it is probable that it obtsined its name, as we have said, at a much earlier period. As the new temple probably stood at or near the site of the ancient one, and as the Notitia in describing the 6th Regio, or Alta Semita, takes this temple for a starting point, and, proceeding always in a circuit to the left, arrive at last at the baths of Diocletian, it may be assumed that this gate was the first important object westward of the baths. It seems to have spanned a Clivus Salutis, which Canina (Roma Antica, p. 187) places, with much probability in the Via delle Quattro Fontane, where it ascends from the Piazza Barberina. (Cf. Preller, Regionen, p. 134.)

The next gate to the left seems to have been the Porta Sanqualis, so named from the temple of Sancus. (Paul. Diac. p. 345, Mïll.) This was the same
divinity as Deus Fidius (Fest. p. 241, Müll.), whose sacellum is mentioned by Livy (viii. 20) as situated near the temple of Quirinus. It is also recorded in the fragments of the Argive books as seated on the Collis Mucialis (Varr. L.L. v. § 62, Müll.), which hill comes next in order after the Collis Salutaris. We have already mentioned the temple of Quirinns as having been situated near the present church of S. Andrea and it may therefore be assumed that the Porta Sanqualis spanned the ascent to it at or near the modern Via della Dataria.

Between the PortaSanqualis and the Capitoline hill there were probably two gates; at all events there must undoubtedly have been one in the very narrow ravine which in early times separated the Capitoline from the Quirinal, and which atforded the only outlet from the neighbourliood of the forum. This was, perhaps, the Porta Ratumena, which we learn from Pliny (viii. 65: "unde postea nomen est")
 'Parou $\mu \dot{e} \nu \alpha \nu$ ка入 $o \tilde{v} \sigma \iota \nu$ ) was still existing in their time. Becker, indeed, disputes the inference of its existence from Pliny's words, and disbelieves the assertion of Plutarch. But there is nothingat all incredible in the fact, and therefore no reason why we should dishelieve it. We know, fiom the example of London and other cities, that a gate, and especially the name of a gate marking its former site, may remain for ages after the wall in which it stood has been removed. Even the local tradition of its name would have sufficed to mark its site; but it seems highly probable, from the nature of the ground where it stood, that the gate itself had been preserved. The road through so narrow a gorge could never have been distarbed for building or other purposes ; and it is probable that the gate remained standing till the ravine was enlarged by cutting away the Quirinal in order to make room for Trajan's forum. We learn from the passages just cited, as well as from Festus (p. 274), that the gate derived its name from a charioteer, who, returning victorious from the Circensian games at Veii, was thrown out of his chariot and killed at this spot, whilst tie affighted horses, thus freed from all control, dashod up the Capitoline hill, and, as the legend runs, did not finish their mad career till they had thrice made the circuit of the temple of Jupiter Capitolinus. (Plin. viii. 65.) So remarkable an omen would have been quite a sufficient gmond in those days for changing the name of the gate. But it matters little what faith we may be disposed to place in the legend; for

TOMB OF CAICS BIBULUS.

## ROMA.

even if it was an invention, it mast have been framed with that regard to local circumstances which would have lent it probability, and no other gate can be pointed dnt which would have so well suited the tenor of the story. Its existence at this spot is further confirmed by the tomb of Bibulus, one of the few remaining monuments of the Repablic, which stands in the Mucel dei Corvi, and by the discovery of the remains of another sepulchral monument a little farther on, in the Via della Peducchia. It is well known that, with a few rare exceptions, no interments were allowed within the walls of Rome; the tomb of Bibulus must therefore have been a little without the gate, and its front corresponds to the direction of a road that would have led from the forum into the Campus Martius (Canina, Roma Antica, p. 218). Bunsen, however, is of opinion (Beschr. vol.iii. p. 35) that it lay within the walls, and infers from the inscription, which states that the ground was presented as a burial-place to Bibulus and his descendants by the Senate and people "honoris virtutisque caussa," that he was one of those rare exceptions mentioned by Cicero (Leg. ii. 23) of persons who obtained the privilege of being burjed within the city. A more unfortanate conjecture was hardly ever hazarded. Becker has justly pointed out that the words of the inscription merely mean that the ground was presented to Bibulus, without at all implying that it was within the walls : and an attentive consideration of the passage in Cicero will show that it could not possibly have been so. Ever since the passing of the law of the XII. Tables against internent within the walls, Cicero could find only one example in which it had been set aside, namely, in honour of C. Fabricius. Now if Bibulus had lived in the period between the compusition of the De Legibus and the final abolishment of the Republic, we could not have failed to hear of an individual who lad achieved so extraordinary a mark of distinction; and if, on the other hand, he lived before that work was written, - of which there can scarcely be a doubt,- then Cicero would ce:tainly have mentioned hiin.

Besides the gates already enumerated between the spot from which we started and the Capitoline hill, there seems also to have been another for which we can find no more convenient site than the SW. side of the Quirinal, between the Porta Ratumena and Porta Sanqualis, unless indeed we adopt the nct improbable conjecture of Preller (Schneidewin's Ihilologus, p. 84), that the Ratumena was one of the gates of the fortification on the Clivos Capitolinus, and that the Porta Fontinalis was the gate in the gorge between the Quirinal and the Capitoline. This latter gate is mentioned by Paulus Diaconns (p. 85, Müll.), in connection with a festival called Fontinalia. It is also mentioned by Varro (LL. vi. § 22, Miill.) and other writers; and we learn fron Livy (xxxy. 10) that a portico was constructed from it to tha altar of Mars, forming a thoroughfare into the Campus Martius. The same historian again mentions the Ara Martis as being in the Campus (xi. 45), but there is nothing to indicate its precise situation. Numa instituted a festival to Mars, as a pledge of union between the Rumans and Sabines (Fest. p. 37 2, Müll.), and it was probably on this occavion that the altar was erected. It is impossible to place any gate and portico leading from it in the short strip of wall on the S . side of the Capitoline, and therefore its site was pertaps that already indicated. The altar mu:t have stood at no great distance from the gate, and could hardly have been so far to the W. as the

Piazza di Veneiza, as Urlichs assumes (Beschr. vol. v. p. 17), since in that case the portico must have crused the road leading out of the Porta Ratumena.

A little beyond the last naned gate the wall must have joined the Capitoline hill, along which, as we have said, there was no other fortitication but the precipitous nature of the ground, rendered here and there still more abrupt by escarpment. At the SW. extremity of the hill the wall must have been resumed, and must undoubtedly have run in a direct line across the short space bet ween the Capitoline hill and the Tiber. Between this spot and the Aventine the wall was discontinued; and this is the part alluded to by Dionysius (l. c.) as sufficiently defended by the river. The piece of wall just mentioned must have shut out the Forum Olitorium and Ciretis Flaminius, since Asconius (ad Cic. Tog. Cand. p. 90, Urell.) mentions a temple of Apollo, which was situated between those places, as being outside the Poera Carmentalis. This gate lay just at the fort or ite Capitul, and is one of the most certain entrances to the servian city. It was named after a fane or alter of Carmenta, the mother of Evander, which stond near it. This altar is mentioned by Dionysius (i. 32), and appears to have existed long after his time, since it was seen by A. Gellius (xviii. 7) and by Servius (al Virg. Aen. viii. 337.) The strett cailed Vicus Jugarius ran from the Porta Farmentalis round the base of the Capitoline to the Forum, as we learn fro:n Livy's description ( $x \times v i i .37$ ) of the procesomon of the virgins to the temple of Juno Regina ari the Aventine, when two white heifers were led from the temple of Apollo before mentioned through the Porta Carmentalis and Vicus Jugarius to the forum. The exact site of the gate was probably a litule to the NW. of the church of S. Omobono.

The primcipal gates of Rome had commonly more than one thorou;htare. These archways, or passages, wore called Furnices and Jani. Cicero's etymolosy of the latter word shows the meaning attached to it, though the etymology itself is absurd ("Ab eundo nomen est ductum: ex quo tramstiones perviae Jani, foresque in liminibus profanarum a adium janaue nominantur," Nat. Deor. ii. 27). Ho have already said that the right Janus of the Porta Carmentalis, on going out of the town, was regarded as ill-omened, and branded with the name of Porta Scelerata, from its having been that through which the Fabii passed on their fatal expedition to the Cremera. (Liv. ii. 49.) So Ovid (Fust i. 201): 一

* Carmentis portae dextro via proxima Jano est: Ire per hanc noli, quisquis es, omen baber."
Festus (p. 285, Müll.), Servius (Aen. viii. 337), and Orusius (ii. 5) have completely misunderstood these pusuges in applying the epithet scelerata to the whie gate, as we have before remarked.

In the shurt piece of wall betvreen the Capitoline hill and the Tiber there must have been at least another gate besides the Carmentalis, namely the Pobta Flumentana. It is mentioned by Cicero (ad Att. rii. 3), and its situation near the river may be inferred not only from its namio, but also from passages in Livy, which mention it in connection with inundutions (xxxv. 9, 21). Plutarch also (Otho, 4) records a great inundation which bad caused much damage in the corn-market, at that time held in the Purticus Minucia Frumentaria, near the Forum Ohtorium (Not. Reg. ix.); but the words of Paulus Diaconus are incomprehensible, who says that a purt
of the Tiber once actually flowed through this gate (" Flumentana Porta Romae appillata, quod Tiberis partem ea fluxisse athmant," p. 89, Müll.) The site is further contirmed by a passage in Varro alluding to the populousness of the suburb just outside the gate: " Nam quod extra urbem est aedificium, nihilo mayis ideo est villa. quum eorum aediticia qui habitant extra portam Flumentanam, aut in Aemilianis" (K. R. iii. 2). This neighbourhood had early become very thickly imhabited, as is evident from the many porticoes, theatres, temples and other buildings, which are mentioned there (see Preller, Regionen, p. 1j6, seq.) But Livy's narrative of the trial of Manlius (vi. 20) is one of the most striking proofs of the situation of the P. Flumentana, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. summit of the Capitoline hill. A spot near the place where the Circus Flaminius afterwards stowd was at that time used for the assemblies of the Comitia Centuriata, by which Manlius was tried. From this place both the Capitwl and the Arx were visible; and Manlius had produced a great effect upon his judges by calling upon them to pronounce their verdict in the sight of those very giols whose temple he had preserved: "Ut Capituliuin atque arcem intuentes, ut al deos immortales versi, de se judicarent." In order to deprive him of this appeal the tribunes adjourned the assembly to a spot just outside the Porta Flumentana, called "Iucus Poetelinus," whence the Capitol could not be seen (" unde conspectus in Capitclium non esset "). A glance at any map of Rome will show that this was the only spot in the Campus Martius where the temple, from its leing hidden ly the SIV. summit, which we assume to have been the Arx, was concealed from view. The tribunes would doubtless have been gidd to conceal the Arx along had it been in their power; but an appeal to the Arx alone would have lacked the effect of the religio which swayed so much with the superstitious Komans. They were no longer in the presence of those rescued deities in whose sight Manlius had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's text, by reading Frumentaria for Flumentana, or seek to place the scene of the trial at another spot. since the Comitia Centuriata were usually assembled in the Campus.

The ancient topngraphers, as well as the modern Italians (Nibby, Mura, flc. p. 132; Canina, Indicazione Topogrufica, pp. 34, 632, ed. 1850), phace amother gate, the Poita Tmiuminais. between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequenty mentioned in classical authors, but unfortunately in such a manner that no decided inference can be drawn respecting its situation. Hence varions theories have been advanced on the sulject, which have led to warm coniroversies. The German schoul of topographers, though not united among themselves, have agreed in departing from the Itadian view, chiefly because it aplears to them absurd to imagine that there could have been three gates in so short a piece of wall. If, however, as it will be shown to be probable, the Porta Triumphalis was opened only on occasions of state, there really seems to be very little force in this objection. Bunsen and his followers allow that it formed a real entrance into the city, but strangely enuurh make it lead into the Circus Maximus; whilst Becker, on the other hand, holds that it was no gate at all properily
so called, but a mere triumphal arch situated in the Campus Martins. The theory of Bunsen necessarily rests on the assumption of a different line of wall from that laid down in the preceding account; and as another lire is also adopted by Niebuhr (Hist. i. p. 397, Ethnogr. ii. p. 49), it will be necessary to examine this point before proceeding to the question of the gate. Niebuhr and Bunsen are, however, far from coinciding. The line drawn by the former proceeds along the banks of the river; that drawn by the latter runs from the Porta Carmentalis to the $N$. angle of the Circus Maximus, and, adopting the NW. front of the circus, or what was called the Oppidum, as part of the line, proceeds onwards to the Aventine, thus shutting the greater part of the Forum Boarium out of the city. Both these theories, however, agree in so far as they assume an enceinte continue, or continued line of wall; and therefore, if this notion can be shown to be false, both fall to the ground. Now it can be proved on the very best evidence that there was no wall in this part of the city, which was defended solely by the Tiber. We have already adduced a passage from Dionysius in confirmation of this statement; and the same author in another passage repeats the same thing in so plain a manner that there can te no reasonable doubt of the fact :

 But Dionysius does not stand alone. We have Livy also as a voucher for the same fact, who, in narrating the enterprise of Porsena against Rome, obserres that the citizens regarded some parts of their city as secured by the wall, and other parts by the Tiber: "Alia muris, alia Tiberi objecto videbantur tuta" (ii. 10). The same fact appears, though not in so direct a manner, from the same author's account of the procession of the virgins from the temple of Apollo, outside the Carmental gate, to that of Juno Regina on the Aventine, to which we have before brietly alluded. The route is described as follows: "A porta (Carmentali) Jugario vico in forum venere. Inde vico Tusco Velabroque per Boarium forum in clivum Publicium atque aedem Junonis Reginae perrectum" (xxvii. 37). Now the small space allotted by Bunsen to the Forum Boarium must have been insile of the wall, since the temples of Fortune and Mater Matuta, which stood upon it (Liv. xxxiii. 27), were within the Porta Carmentalis (Id. xxv. 7). The procession, then, after passing through that forum, must have gone out of the city at another gate,-Bunsen's Flumentana, -and have entered it again by the Trigemina, before it could reach the Clirus Publicius, facts which are not mentioned by Livy in his very precise description of the route.

Having thus shown on the best evidence that no wall existed at this point, it would be a mere waste of time to refute arguments intended to show that it possibly might have existed,-such as whether a wall with a gate would keep out an inundation, whether the Fabii went over the Sublician bridge, and others of the like sort, which would have puzzled an ancient haruspex. We will therefore proceed to examine Becker's hypothesis, that the Porta Triumphalis was, in fact, no gate at all, but merely an arch in the Campus Martius, a theory which is also adopted, though with some little variation, by Preller (Regionen, p. 162, and Anhang, p. 239).

Becker places this arch at the spot where the Campus Martius joins the Regio called Circus

ROMA
Flaminius, and takes it to be the same that was rebuilt by Domitian (of course he must mean rebuilt, though it is not very clearly expressed. De Muris, p. 92, Handb. p. 153). His conjecture is founded on the following lines in a poem of Martial's (viii. 6.5) in which he describes the erection of this arch and of some other buildings near it:-
" Haec est digna tuis, Germanice, porta triumphis, Hos aditus urbem Martis habere decet."

Becker, however, is totally unable to prove that this arch and the temple of Fortuna Redux near it were even in the Campus Martius at all. Thus he says (Handb. p. 642): "It is not indeed expressly said that the Ara of Fortuna Redux was in the Campus Martius; but it becomes probable from the circumstance that Domitian built here, and, as we have conjectured at p. 153, close to the Porta Triumphalis, a temple to the same goddess." The argument then proceeds as follows: "We know from Martial that Domitian built a temple to Fortuna Redux where her altar formerly stood, and also a triamphal arch near it. We do not know that this altar was in the Campus Martius; but it is probable that it was, because Domitian built this temple close to it, and also close to the arch, which, as I conjectured, was the Porta Triumphalis !"

There is, however, another passage of Martial, either overlooked or ignored by Becker, which tends very strongly to show that this arch of Domitian's really was in the Campus Martius, but at quite a different spot from that so conveniently fixed upon by him. It is the following ( x .6 ): -

> "Felices quibus urna dedit spectare coruscum Solitus Arctois sideribusque ducem.
> Quando erit ille dies quo Campus et arbor et omnis
> Lucebit Latia culta fenestra nuru?
> Quando morae dulces, longusque a Caesare pulvis,
> Totaque Flaminia Roma videnda via ?"

There can be no doubt that these lines refer to the same triumphal entry of Domitian's as those quoted by Becker; and they pretty plainly show, as Canina, without any view to the present question, justly observes (Indicazione, fc. p. 437), that the arch and other monaments stood on the Via Flaminia, and therefore at a very considerable distance from the spot assigned to them by Becker.

This arch having broken down, Preller comes to the rescue, and places the Porta Triumphalis near the Villa Publica and temple of Bellona, close to the Via Lata. For this site he adduces several plausible arguments: near the temple of Bellona was the piece of ager hostilis, where the Fetiales went through the formalities of declaring war; as well as the Columna Bellica, whence a lance was thrown when the army was going to take the field; also a Serraculum "citra aedem Bellonae," in which audience was given to foreign ambassadors whom the senate did not choose to admit into the city. The Villa Publica also served for the reception of the latter, and probably also of Roman generals before their triumph, and of all who, being cum imperio, could not cross the pomoerium, and therefore in the ordinary course took up their abode there. After this ceased to exist, the Diribitorium was ased in its stead, in which Claudius passed some nights, and in which probably Vespasian and Titus slept before their triumph. This
spot therefore had the significance of a kind of outpost of the city.

As this theory is evidently framed with a view to the triamph of Vespasian and Titus, and as the account of that triumph is also one of the main arguments adduced by Becker for his Porta Triumphalis, it will be necessary to examine it. The narrative of Josephas runs as follows (Bell. Jud. vii. 5. § 4, p. 1305, Huds.): "The emperor and his son Titus spent the night preceding their triumph in a public building in the Campus Martius, near the temple of Isis, where the army was assembled and marshalled. At break of day the emperors came forth and proceeded to the Porticus Octaviae (near the theatre of Marcellus), where, according to ancient custom, the senate were assembled to meet them. Vespasian, after offering the usual prayer, and delivering a short address, dismissed the troops to their breakfast, whilst he himself returned to the gate named after the triumphal processions that used to pass through it. Here the emperor breakfasted, and, baving pat on the triumphal dress, and secrificed to the gods whose shrines were at the gate, caused the pageant to proceed through the circi." Becker concludes from this narrative that the Porta Triumphalis must have been outside the town, in the Campus Martius, and near the public building where the emperor had shept. A further proof is, he contends, that the procession went through the circi, which must mean the Circus Flaminius and Circus Maximus; and that this was so may be shown from Plutarch (Aem. Paull. 32), who says that Paullus went through the Circi, and in another passage expressly relates (Lucull. 37) that Lucullus adorned the Circus Flaminius with the arms, \&c. which he had taken, which it would be absurd to suppose he would have done unless the procession passed through that circus. Then comes the supposition we have already noticed, that the procesion of Vespasian passed through the arch re-erected by his younger son Domitian some years after his father's death. After passing through the Circus Flaminius, Becker thinks that the procession went through the P. Carmentalis, and by the Vicus Jugarius to the forum, along the latter sub Veteribus, and finally through the Vicus Tuscus, the Velabrum, and Forum Boarium, into the Circus Maximns. Having condacted the emperors thus fur, Becker takes leave of them, and we remain completely in the dark as to the manner in which they got ont of the circus and found their way back again to the forum and Capitol, the usual destination of triumphant generals.

Admitting that Becker has here giren a true interpretation of the text of Josephus as it stands, we shall proceed to examine the conclusions that have been drawn from it, beginning with those of Preller. That writer has very properly assumed (Regionen, p. 240) that if the triumphal arch did not actually cross the pomoerium it led at all events into a terriwry subject to the jurisdiction of the city, into which it was unlawful for a general cum imperio to pass without the permission of the senate. Had not this been so the whole business would have been a mere vain and idie ceremony. The account of Vespasian's triumph scems indeed a little repagnant to this view, since he met the senate in the Porticus Octaviae, which on this supposition was considerably beyond the boundary, and which he had therefore crossed before be had obtained anthority to do so. Still more repugnant is Dion's account of the triumph of Tiberius,

VOL 15.
who, we are told, assembled the senate at the same place precisely on the ground that it was outside of the pomocrium, and that consequently he did not violate their privileges by assembling them there

 instances occurred in the imperial times, when it may be said with Becker (Hundb. p. 151, note) that the ceremony no longer had any meaning, we will go back for an example to the early ages of the Republic. First, however, we must demand the acknowledgment that the triumphal gate passed by Vespasian was the same, or at least stood on the same spot, as that which had been in use from time immemorial. We cannot allow it to be shifted about like a castle on a chessboard, to suit the convenience of commentators; and we make this demand on the authority of Josephus himself in the very passage under discussion, who tells us that it took its name from the circumstance that the triumphal processions had alcays passed through it

 Livy, in his account of the triumph of the consuls Valerius and Horatius, relates that they assembled the senate in the Campus Martius to solicit that honour; but when the senators complained that they were overawed by the presence of the military, the consuls called the senate away into the Prata Flaminia, to the spot occupied in the time of the historian by the temple of Apollo. ("Consules ex compusito eodem biduo ad urbem accessere, senatumque in Martium Campum evocavere. Ubi quam de rebus a se gestis agerent, questi primores Patrum, senatum inter milites dedita opera terroris causa haberi. Itaque inde Consules, ne criminationi esset locum, in prata Flaminia, ubi nunc aedes Apollinis (jam tum Apollinare appellabant) avocavere senatum," iii. 63.) This temple was situated close to the Porticus Octaviae (Becker, Handb. p. 605), and therefore considerably nearer the city than the spot indicated either by Becker or Preller. The consuls therefore must have already passed beyond the Porta Triumphalis before they began to solicit the senate for leave to do sol

Becker, however, has been more careful, and has not extended the jurisdiction of the city beyond the walls of Servius, at this part of the Campus, before the time of the emperor Claudius. But what results from his view? That the whole affair of the Porta Triumphalis was mere farce, - that it led nowhere, - that the triumphant general, when he had passed through it by permission of the senate, was as much outside the city boundary as he was before. But that it afforded a real entrance into the town clearly appears from the passage in Cicero's oration against Piso (c. 23): "Cum ego Caelimontana porta introisse dixissem, sponsione ine, ni Esquilina introisset, homo promtissinus lacessivit. Quasi vero id aut ego scire debuerim, aut vestrum quispiam audierit, ant ad rem pertineat qua to porta introieris, modo ne triumphali; quae porta Macedonicis semper proconsulibus ante te patuit." The Porta Triumphalis being here pat on a level with the Caelimontana and Esquilina, the natural conclusion is that, like them, it afforded an actual, though not customary, entrance within the walls. We further learn from the preceding passage that this rame Yorta Triumphalis had been open to every proconsul of Macedonia before Piso, inclading of course L. Aemilius Paullus, who triumphed over I'ersens b.c. 167
(Liv. xlv. 39), thus establishing the identity of the gate to at least that period.

But to return to Becker's explanation of the passage of Josephas. Admitting Plutarch's account of the triumphs of Paullus and Lucullus, namely, that they passed through the Circus Flaminius, yet what does this prove? how is it connected with the Porta Triumphalis? Those generals may have marshalled their processions in the Campus and passed through the Circus Flaminius in their way to the Porta Triumphalis. The procession would have been equally visible in the Circus as in the streets of Rome, just as the Lord Mayor's show may, or might, be seen at Westminster as well as in the city. It is possible indeed that in the case of Ves pasian there was no procession till he arrived at the gate; but it does not necessarily follow that the same line was always precisely observed. In truth we may perceive a difference between the expressions of Josephus and those of Plutarch. The former
 Plutarch says, of Paullus, that the people assembled
 of Lucullus, that he adorned $\tau \delta \nu \Phi \lambda a \mu i v \in t o \nu ~ i \pi \pi \delta-$ $\delta \rho o \mu o \nu$. Here the circi are precisely designated as hippodromes ; but Josephus uses the general term సิєd́т $\rho \omega \nu$, which may include theatres of all kinds. Now we will suggest a more probable route than that given by Becker, according to which the pageant must have crossed the forum twice. After coming out at the further end of the circus, Vespasian turned down to the left, between the Palatine and Caelian, the modern Via di S. Gregorio. This would bring hin out opposite his own magnificent amphitheatre, the Colosseum, then in course of construction. Eren if it had not risen much above its foundations, still its ample area by means of scaffoldings, would have acconmodated a vast number of spectators; and as to Vespasian personally, it would have imparted no small relish to his trinmph to pass through so magnificent a work of his own creation. Hence his road lay plain and direct over the Summa Sacra Via to the fortun and Capitol.

Now, taking all these things into consideration, we will venture to suggest a very slight change in the text of Josephus, a change not so great as some of those often proposed by Becker upon much smaller occasions, and which will release us from a great deal of perplexity. The alteration is that of an $\mathbf{N}$ into a $\Pi$, a very slight one in the uncial cliaracter; and, by reading $\alpha \pi \epsilon \chi \omega \rho \in t$ for $\mathfrak{a} \nu \in \lambda \dot{\omega} \rho \in t$, we would make Vespasian depart from the Porticus Octaviae towards the gate which had always been used for triumphs, instead of retracing bis steps towards one of which nobody can give any account. But whatever may be thought of the individual case of Vespasian, still we hold it to be incontestable that the ancient Porta Triumphalis, against which the sole objection seens to be that it was near two other gates, is to be sought in that part of the Servian wall between the P. Carmentalis and the P. Flumentana. The objection just alluded to would indeed have some force, if we could assume, with Becker ( Uandb. p. 154), that the Porta Triumphalis, just like an ordinary one, lay always open for common traffic. But it is surprising how anybody could come to that conclusion after reading the passuges which Becker has himself cited from Suetonius, Tacitus, and Dion Cassius, or that in Cicero's oration against Piso before quoted. The first of these authors relates that after the death of Augustus
the senate voted, or proposed to vote, that, as an extraordinary mark of honour, his funeral slrould pass through the triumphal gate, preceded by the statue of Victory which stood in the curia: " Ut censuerint quidaun funus triumphali porta ducendnm, praecedente Victoria, quae est in Curia" (Aug. 100; cf. Tac. Ana i. 8); and Dion says (lvi. 42) that this was actually done, and the body burned in the Campus Martius. Now if the Porta Triumphalis had been an ordinary gate and cornmon thoroughfare, what honour would there have been in passing through it? or how should the spectator have discovered that any distinction had been conferred? Wherefore Preller (Regionen, p. 240) has rightly come to the conclusion that it was usually kept shut.

Between the Capitoline and the Aventine, along the banks of the river, the wall, as we have shown, was discontinued, but it was recommenced at the spot where the latter hill appmaches the Tiber. This may be shown from the well-ascertained position of the Porta Trigrmina, which, as we learn from a passage in Frontinus, lay just under the Clivus Publicius, at the northernmost point of the hill ("incipit distribui Appia (aqua) imo Publicio Clivo ad Portam Trigeminam," Aq. 3); and the Clivus Publicius, as we know from a passage in Livy respecting the procession of the virgins before alluded to, formed the ascent to the Aventine from the Forum Boarium ("inde vico Tusco Velabroque per Boarium forum in clivum Publicium atque uedem Junonis Reginae perrectum," $\mathbf{x x v i i . ~ 3 7 ) . ~ T h e r e ~ a r e ~ s o m e ~ d i f f i c u l t i e s ~}$ connected with the question of this gate, from its being mentioned in conjunction with the Pous Sublicius; but there will be occasion to discuss the situation of that bridge in a separate section; and we shall only remark here that the narratires alluded to scem to show that it was at no great distance from the gate. It is probable that the latter derived its name from its having three Jani or archways.
A little beyond the Porta Trigemina most topographers have placed a Porta Navalis, which is mentioned only once, namely, by P. Diaconus in the following passage: "Navalis Porta a vicinia $\mathrm{Na}-$ valium dicta" (p. 179, Müll.), where we are tuld that it derised its name from the vicinity of the government dockyards. It has been assumed that these docks lay to the $S$. of the Aventine, in the plain where Monte Testaccio stands: but Becher has the merit of having shown, as will appear in its proper place, that they were in the Campus Martins. There was, however, a kind of emporium or merchant dock, between the Aventine and Tiker, and, as this mutst have occasioned considerable traftic, it is probable that there was a gate leading to it somirwhere on the W. side of the hill, perhaps near the Priorato, where there scems to have been an ascent, but whether it was called Porta Navalis it is impossible to say. The writer of this article is informed by a gentleman well acquainted with the subject, that traces of the Servian wall have very recently been discovered at the NW. side of the Aventine, below S. Sabina and S. Alessio.

The line of wall from this point to the Caelian hill cannot be determined with any certainty. Round the Aventine itself it doubtless followed the configuration of the hill; but its course from the S . point of the Aventine has been variously laid down. Hence the question arises whether it included the nameless height on which the churches of $S$. Subina
and S. Saba now stand. It seems probable that it must, at all events, have included a considerable portion of it, since, had it proceeded along the valley, it would have been commanded by the hill; and indeed the most natural supposition is that it enclosed the whole, since the more extended line it would thus have described affurds room for the sereral gates which we find mentioned between the Porta Trigemina and the Purta Capena near the foot of the Caelian.

Among these we must, perhaps, assume a Porta Mexccia or Minutia, which is twice mentioned by Paalus (pp. 122, 147), and whose name, he says, was derived from an ara or sacellum of Minucius, whom the Romans held to be a god. We hear nowhere else of such a Roman deity; but we learn from Pliny (xviii. 4) that a certain tribune of the people, named Minutius Augurinus, had a statue erected to him, by public subscription, beyond the Porta Trigemina, for having reduced the price of enrn. This occurred at an early period, since the same story is narrated by Livy (iv. 13-16) B.C. 436, with the additional information that it was Minutias who procured the condemnation of the great corn monopoliser, Maelius, and that the statue alluded to was a gilt bull. It is possible therefore that the gate may have been named after him; and that from the extraordinary honours paid to him, he may have come in process of time to be vulgarly mistaken for a deity. If there is any truth in this view, the gate may be placed somewhere on the S . side of the Aventine.

In the mutilated fragment which we possess of Varro's description of the Roman gates (L.L. v. § 163, Müll.) he closes it by mentioning three, which it is impossible to place anywhere except in the line of wall between the Aventine and Caelian. He had been speaking of a place inhabited by Ennius, who lived on the Aventine (Hieron. Chron. 134, vol. i. p. 369, Ronc.), and then mentions consecutively a Porta Naevia. Porta Rauduscula, and Porta Lafernalis. He mast therefore be enumerating the gates in the order from W. to E., since it would be imposisible to find room for three more gates, besides the already mentioned, on the Aventine. The P . Naevia, therefore, probably lay in the valley between that hill and the adjoining height to the E. It could not have been situated on the Aventine itself, since the Basis Capitolina, mentions in the 12th Regio, or Piscina Publica, a vicas Porta Naevia, as well as another of Porta Raudusculana. But the exact position of the latter gate, as well as of the Porta Lavernalis, it is impossible to determine further than that they lay in the line of wall between the Arentine and Caelian.

After so much oncertainty it is refreshing to arrive at last at a gate whose site may be accurately fixed. The Porta Capena lay at the foot of the Caelian hill, at a short distance W. of the spot where the Via Latina diverged from the Via Appia. The latter road issued from the P. Capena, and the discovery of the first milestone upon it, in a rineyard a short distance outside of the modern Porta di S. Sebastiano, has enabled the topographer accurately to determine its site to be at a spot now marked by a post with the letters p.c., 300 yards beyood the Via S. Gregorio, and 1480 within the modern gate. That it was seated in the valley, appears from the fact that the Rivus Herculanens, probably a branch of the Aqua Marcia, passed over it; which we are expressly told, lay too low to
supply the Caelian hill. (Front. Ay. 18.) Hence Juvenal (iii. 11): -
"Substitit ad veteres arcus madidamque Capenam," where we learn from the Scholia that the gate, which in later times must have lain a good way within the town, was called "Arcus Stillans." So Martial (iii. 47).:-

## "Capena grandi porta qua pluit gutta."

A little way beyond this gate, on the Via Appia, between its point of separation from the Via Latina and the P.S.Sebastiano, there still exists one of the most interesting of the Roman monuments - the tomb of the Scipios, the site of which is marked by a solitary cypress.

From the Porta Capena the wall must have ascended the Caelian hill, and skirted its southern side; but the exact line which it described in its progress towards the agger can only be conjectured. Becker (Handb. p. 167), following Piale and Buusen, draws the line near the Ospedale di S. Giovanni, thus excluding that part of the hill on which the Lateran is situated, although, as Canina observes (Indicazione, p. 36), this is the highest part of the hill. There was perhaps a gate at the bottom of the present Piazza di Navicella, but we do not know its name; and the next gate respecting which there is any certainty is the Porta Caelimontana. Bunsen (Beschr. i. p. 638) and Becker, in conformity with their line of wall, place it by the hospital of $S$. Giovanni, now approached by the Via S.S. Quattro Coronati, the ancient street called Caput Africae. The Porta Querquetulana, if it was really a distinct gate and not another name for the Caelimontana, must have stood a little to the N . of the latter, near the church of S.S. Pietro e Marcellino, in the valley which separates the Caelian from the Esquiline. This gate, which was also called Querquetularia, is several times mentioned, bat without any more exact definition. (Plin. xvi. 15; Festus, p. 261.) The Caelian hill itself, as we have before remarked, was anciently called Querquetulanus. From this point the wall must have run northwards in a tolerably direct line tili it joined the southern extremity of the agger, where the Porta Esquilina was situated, between which and the Querquetulana there does not appear to have been any other gate. The Esquilina, like the others on the agger, is among the most certain of the Roman gates. We learn from Strabo (v. p. 237) that the Via Labicana procceded from it; whilst at a little distance the Praenestina branched off from the Labicana. It must therefore have lain near the church of $S$. Vito and the still existing arch of Gallienus; but its exact site is connected with the question respecting the gates in the Aurelian wall which corresponded with it, and cannot therefore at present be determined. The site of the Porta Collina, the point from which we started, is determined by the fact mentioned by Strabo (Ib. p 228) that both the Via Salaria and Via Nomentana started from it; and it must consequently have stood near the northern corner of the baths of Diocletian at the commencement of the present Via del Macao. We learn from Paulus Diaconus (p. 10) that this gate was also called Agonensis and Quirinalis. Agonus, us we have said, was the ancient name of the Quirinal hill.

The Porta Collina, then, and the Porta Esquilina were seated at the northern and sonthern extremities
of the agger. But besides these, Strabo (1b. p. 234) mentions another lying between them, the Porta Viminalis; which is also recorded by Festus (p.376) and by Frontinus (Aq. 19). It must have lain behind the SE. angle of the baths of Diocletian, where an ancient road leads to the rampart, which, if prolonged, would run to the Porta Clausa of the walls of Aurelian, just ander the southern side of the Castra Pratoria. It is clear from the words of Strabo, in the passage just cited ( $\dot{u} \pi \delta \quad \mu \in \sigma \varphi$ 対 $\tau \hat{\psi}$
 $\lambda \delta \phi \psi)$, that there were only three gates in the agger, though some topographers have contrived to find ro,m for two or three more in this short space, the whole length of the agger being but 6 or 7 stadia (Strab. l. c.; Dionys. ix. 68), or about $\frac{3}{4}$ of a mile. Its breadth was 50 feet, and below it lay a ditch 100 feet broad and 30 feet deep. Remains of this immense work are still visible near the baths of Diocletian and in the grounds of the Villa Negroni, especially at the spot where the statue of Roma now stands.

Survey under Vespasian and Circumference of the City. - In the preceding account of the gates in the Servian wall we have enumerated twenty, including the Porta Triumphalis. Some topographers have adopted a still greater number. When we consider that there were only nine or ten main roads leading out of ancient Rome, and that seven of these issued from the three gates Capena, Esquilina, and Collina alone, it follows that five or six gates would have sufficed for the main entrances, and that the remainder must have been unimportant ones, destined only to afford the means of convenient communication with the surrounding country. Of those enumerated only the Collina, Viminalis, Esquilina, Caelimontana, Capena, Trigemina, Carmentalis, and Ratumena seem to have been of any great importance. Nevertheless it appears from a passage in Pliny (iii. 9) that in his time there must have been a great number of smaller ones, the origin and use of which we shall endeavour to account for presently. As the passage, though unfortunately somewhat obscure, is of considerable importance in Roman topography, we shall here quote it at length : "Urbem tres portas habentem Romulus reliquit, ant (ut plurimas tradentibus credamus) quatuor. Moenia ejus callegere ambitu Inperatoribus Censoribusque Vespasiaris anno conditae deccxxvir. pass. ximm.cc. Complexs montes septem, ipsa dividitur in regiones quatnordecim, compita Larium cclaxv. Ejusdem spatium, mensura currente a milliario in capite Romani fori statuto, ad singulas portas, quae sunt hodie numero triginta septem, ita at duodecim semel numerentur, praetereanturque ex veteribus septem, quae esse desierunt, efficit passuum per directum $\mathbf{x x x}$. Dc chxv. Ad extrema vero tectorum cam castris Praetoriis ab endem milliario per vicos omnium viarum neensura colligit paulo amplius septuaginta millia passuum." Now there seems to be no reason for doubting the correctness of this account. Pliny could have had no reason for exaggeration, against which, in the account of the Romulean gates, he carefully guards himself. Again, he seems to have taken the substance of it from the official report of a regular survey made in his own time and in the reign of Vespasian. The only room for suspicion therefore seems to be that his text may have been corrupted, and that instead of thirty-seven as the number of the gates we should insert some smaller one. But an examination of his figures does
not tend to show that they are incorrect. The survey seems to have been made with a view to the three following objects: I. To ascertain the actual circumference of the city, including all the suburbs which had spread beyond the walls of Servius. It is well known that moenia signifies the buildings of a city as well as the walls (" muro moenia amplexus est," Flor. i. 4, \&c.), and therefore this phrase, which has sometimes caused embarrassment, need not detain us. Now the result of this first measurement gave 13,200 passus, or $13 \frac{1}{2}$ Roman niles - a number to which there is nothing to object, as it very well agrees with the circumference of the subsequent Aurelian walls. 2. The second object seems to bare been to ascertain the actual measure of the line of street within the old Servian walls. The utility of this proceeding we do not inmediately recognise. It may have been adopted ont of mere curiosity; or more probably it may have been connected with questions respecting certain privileges, or certain taxes, which varied according as a house was situated within or without the walls. Now the sum of the measurements of all these streets, when put together as if they had formed a straight line (" per directum"), amounted to $\mathbf{3 0 , 7 6 5}$ passus, or 30 Roman miles and about $\frac{3}{4}$. Such we take to be the meaning of "per directum;" though some critics hold it to mean that the distance from the milliarium to these gates was measured in a straight line, as the crow flies, without taking into the calculation the windings of the streets. But in that case it would surely have been put earlier in the sentence -" mensura currente per directum ad singulas portas." This, however, would have been of little consequence except for the distinction drawn by Becker (\#andb. p. 185, note 279), who thinks that the measurement proceeds on two different principles, namely per directum, or as the crow flies, from the milliarium to the Servian gates, and, on the contrary, by all the windings of the streets from the same spot to the furthest buildings outside the walls. Such a method, as he observes, would afford no true ground of comparison, and therefore we can hardly think that it was adopted, or that such was Pliny's meaning. Becker was led to this conclusion because he thought that "per vicos omnium viarum" stands contrasted with "per directum;" but this contrast does not seen necessarily to follow. By viae here Pliny seems to mean all the roads leading out of the thirty-seven gates; and by "ad extrema tectorum per vicos omnium viarum" is signitied merely that the measure was further extended to the end of the streets which lined the commencements of these roads. Such appears to us to be the meaning of this certainly somewhat obscure passage. Pliny's account may be checked, roughly indeed, but still with a sufficient approach to accuracy to guarantee the correctness of his text. If a circumference of 134 miles yielded 70 miles of street, and if there were 30 miles of street within the Servian walls, then the circumference of the latter would be to the former as 3 to 7 , and would measure rather more than $5\}$ miles. Now this agrees pretty well with the accounts which we have of the size of the Servian city. Becker, following the account of Thacydides (ii. 13), but without allowing for that part of the walls of Athens described as unguarded, with the whole circuit of which walls Dionysius (iv. 13, and ix. 68) compares those of ancient Rome, sets the latlatter down at 43 stadia, or $5 \frac{8}{8}$ miles. On Nolli's great plan of Rome they are given at a mea-
snrement equal to 10,230 English yards (Burgess, Topmgraphy and Antiquities of Rome, vol. i. p. 458). which agrees as nearly as possible with the namber above given of $5 \frac{5}{4}$ miles. Nibby, who made a laborious but perhaps not very accurate attempt to ascertain the point by walking round the presumed line of the ancient walls, arrived at a considerably larger result, or nearly 8 miles. (Mura, fo. p. 90 .)

False and doubtful Gates. - But our present business is with the gates of the Servian town; and it would really appear that in the time of Vespasian there were no fewer than thirty-seven outlets from the ancient walls. The seven old gates to which Pliny alludes as having ceased to exist, may possibly have included those of the old Rumnlean city and also some in the Servian walls, which had been closed. In order to account for the large number recorded by Pliny, we must figure to ourselves what would be the natural progress of a city surrounded with a strong wall like that of Servius, whose population was beginning to outgrow the accommodation afforded within it. At first perhaps houses would be built at the sides of the roads issaing from the main gates; bnt, as at Rome these sites were often appropriated for sepulchres, the accommodation thas affirded would be limited. In process of time, the use of the wall becoming every day more obsolete, fresh gates would be pierced, corresponding with the line of streets inside, which would be continued by a line of mad outside, on which houses would be erected. Gradually the walls themselves began to disappear; but the openings that had been pierced were still recorded, as marking, for fiscal or other purposes, the boundary of the city wards. Hence, though Augustus had divided the city and suburbs into fourteen new Regions, we find the ancient boundary marked by these gates still recorded and measured in the time of Vespasian ; and indeed it seems to have been kept up for a long while afterwards, since we find the same number of thirty-seren gates recorded both in the Notitia and Curiosum.
Hence we would not tamper with the text of Pliny, as Nibby has done with very unfortunate success (Mura, fc. p. 213, seq.) - a remedy that should never be rescrted to except in cases of the last necessity. Pliny's statement may be regarded as wholly without influence with respect to the original Servian gates, the number of which we should rather be inclined to reduce than to increase. We find, indeed, more names mentioned than those enurerated, bat some of them were ancient or obsolete names; and, again, we must remember that "porta" does not always signify a city gate. Of the former kind was the Porta Agonfnsis, which, as we learn from Paulus Diaconns (p. 10), was another appellation for the Porta Collina. The same author (p. 255) also mentions a Porta Quirinalis as a substantive gate: though possibly, like Agonensis, it was only a duplicate name for one of the gates on the Quirinal. The term "porta" was applied to any arcbed thormaghare, and sometimes perhaps to the arch of an aqueduct when it spanned a street in the line of wall; in which case it was built in a superior manner, and had usually an inscription. Among internal thoroughfares called "portae" were the Stencoraria on the Clivus Capitolinus, the LibitiErensis in the amphitheatre, the Fenestella, mentioned by Ovid (Fast. vi. 569) as that by which Fortuna visited Numa, \&c. The last of these formed
the entrance to Numa's regia, as we learn from Plutarch (de Fort. Rom. 10). Among the arches of aqueducts to which the name of gate was applied, may perhaps be ranked that alluded to by Martial (iv. 18): -
"Qua vicina pluit Vipsanis porta columnis," \&c.
Respecting the gates called Ferentina and Piacularis we have before offered a conjecture. [See p. 728.] The Porta Metia rests solely on a false reading of Plautus. (Cas. ii. 6. 2, Pseid. i. 3. 97.) On the other hand, a Porta Catularia seems to have really existed, which is mentioned by Paulus Diaconus (p. 45; cf. Festus, p. 285) in connection with certain sacrifices of red-coloured dogs. This must be the sacrifice alluded to by Ovid (Fast. iv. 905), in which the entrails of a dog were offered by the flamen in the Lucua Robiginis. It is also mentioned in the Fasti Praenestini, vii. Kal. Mai, which date agrees with Ovid's: "Feriae Robigo Via Clandia, ad miliarium v., ne robigo frumentis noceat." But this is at variance first, with Ovid, who was returning to Rome by the Via Nomentana, not the Via Claudia, and, secondly, with itself. since the Via Clandia did not branch off from the Via Flaminia till the 10th milestone, and, consequently, no sacrifice could be performed on it at a distance of 5 miles from Rome. However this discrepancy is to be reconciled, it can harilly be supposied that one of the Roman gates derived its name from a trifling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to sacerdutal customs, as seems to have been sometimes the case, and in the present instance to denote the gate leading to the spot where the annual rite was performed. Paulus Diaconus also mentions ( $p$. 37) a Porta Collatina, which he affirms to have been so called after the city of Collatia, near Rume. But when we reflect that both the Via Tiburtina and the Via Praenestina issued from the Porta Esquilina, and that a road to Collatia must bave run between them, the impossibility of a substartive Porta Collatina is at once apparent. The Duonkcim Portaf are placed by Bunsen (Beschr. i. p. 633) in the wall of the Circus Maximus; but as it appears from Pliny ( $l . c$.) that they stood on the ancient line of wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not see the force of Piale's celebrated discovery that the Duodecim Portae must have been a place at Rome, because Julius Obsequens says that a mule brought forth there; which it might very well have done at one of the gates. Becker's opinion (Handh. p. 180) that it was an arch, or arches, of the Aqua Appia seems as unfounded as that of Bunsen (vide Preller, Regionen, p. 193). It is mentioned by the Notitia in the llth Regio, and therefore probably stood somewhere near the Aventine ; but its exact site cannot be determined. It seems probuble, as Preller remarks, that it may have derived its name from being a complex of twelve arched thoroughfares like the 'Evvedxu入ov of the Pelasgicon at Athens.

Transtiberine Wall. - Ancus Marcius, as we have related, fortified the Janiculum, or hill on the right bank of the Tilur commanding the city. Some have concluded from Livy (i. 33: "Janiculum quoque adjectum, non inopia locorum, sed ne quando ea arx hostium esset. Id non muro solum, sed etiam ob commoditatem itineris ponte Sublicio tum primum in Tiberi facto conjungi urbi
placuit "), that a wall was built from the fortress on the top of the bill down to the river, but the construction of conjungi in this passage may be a zeugma. It seems strange that Ancus should have built a wall on the right bank of the Tiber when there was yet none on the left bank; and it is remarkable that Dionysius (iii. 45), in describing the fortification of the Janiculum, makes no mention of a wall, nor do we hear of any gates on this side except that of the fortress itself. The existence of a wall, moreover, seems hardly consistent with the accounts which we have already given from the same author of the defenceless state of the city on that side. Niebuhr (Hist. i. p. 396) rejected the notion of a wall, as utterly erroneous, but unfortunately neglected to give the proots by which he had arrived at this conclusion. The passage from Appian (Kגaúdioy $\boldsymbol{\delta}^{\prime}$

 $\pi$ údns, B. C. i. 68) which Becker (p. 182, note) seems to regard as decisire proves little or nothing for the earlier periods of the city; and, even had there been a wall, the passing it would not have affurded an entrance into the city, properiy so called.

## II. Walle and Gates of Aurelian and Honorius.

In the repairs of the wall by Honorius all the gates of Aurelian vanished; hence it is impossible to say with confidence that any part of Aurelian's wall remains: and we must consider it as represented by that of Honorius. Procopius (B. G. iii. 24) asserts that Totila destroyed all the gates; but this is disproved by the inscriptions still existing over the Porta S. Lorenzo, as well as over the closed arch of the Porta Maggiore; and till the time of Pope Urban VIII. the same inscription might be read over the Ostiensis (P.S. Paolo) and the ancient Portuensis. It can hardly be imagined that these inscriptions should have been preserved over restored gates. The only notice respecting any of the gates of Aurelian on which we can confidently rely is the account given by Ammianus Marcellinus (xvii. 4. § 14) of the carrying of the Egyptian obelisk, which Constantius II.erected in the Circus Maximus, through the Porta Ostiensis. It may be assumed, however, that their situation was not altered in the new works of Honorius. By far the greater part of these gates exist at the present day, though some of them are now walled up, and in most cases the ancient name has been changed for a modern one. Hence the problen is not so mnch to discover the sites of the ancient gates as the ancient names of those still existing; and these do not admit of much doubt, with the exception of the gates on the eastern side of the city.

Procopins, the principul anthority respecting the gates in the Aurelian (or Honorian) wall, enumerates 14 principal ones, or xúnat, and mentions some smaller ones by the name of $\pi v \lambda i \delta \epsilon s$ ( $B . G$. i. 19). The distinction, however, between these two appellations is not very clear. To judge from their present appearance, it was not determined by the size of the gates: and we tind the Pinciana indifferently called $\pi u \lambda$ is and $\pi u ́ \lambda \eta$. (Urlichs, Class. Mus. vol. iii. p. 196.) The conjecture of Nibby (Mura, fc. p. 317) may perhaps be correct, that the mínal were probably those which led to the great highwhys. The unknown writer called the Anonymus Einstedlensis, who tlourished about the beginuing of
the ninth century, also mentions 14 gates, and includes the linciana among them; but his account is not clear.

Unlike Servius, Aurelian did not consider the Tiber a sufficient protection; and his walls were extended along its banks from places opposite to the spots whers the walls which he built from the Janiculum began on the further shore. The wall which skirted the Campus Martius is considered to have commenced not far from the Palazzo Farnese, from remains of walls on the right bank, supposed to have belonged to those of the Janiculum; but all traces of walls on the left bank have vanished beneath the buildings of the new town. It would appear that the wails on the right and left banks were connected by means of a bridge on the site of the present Ponte Sisto - which thus contributed to form part of the defences; since the arches being secured by means of chains drawn before them, or by other contrivances, would prevent an enemy from passing through them in boats into the interior of the city: and it is in this manner that Procopius describers Belis.rius as warding off the attacks of the Guths (B. G. i. 19).

From this point, along the whole extent of the Campus Martius, and as far as the Porta Flaminia, the walls appear, with the exception of some small posterns mentioned by the Anonymons of Einsiedlen to have had only one gate, which is repeatedly mentioned by Procopius under the name of Porta Acrirlia (B.G.i. c.19, 22, 28); though he seems to have been acquainted with its later name of Porta Sti Petri, by which it is called by the Anonymons (Ib. iii. 36). It stond on the left bank, opposite to the entrauce of the Pons Aelius (Ponte di $S$. Angeh), leading to the mausoleum of Hadrian. The name of Aurelia is found only in Procopius, and is somewhat puzzling, since there was another gate of the same name in the Janiculum, spanning the Via Aurelia, which, however, is called by Procopins (Ib. i. 18) by its modern name of Pancratiana; whilst on the other hand the Anonymous appears strangely enough to know it only by its ancient appellation of Aurelia. The gate by the bridge, of which no trace now remains, may possibly have derived its name from a Nova Via Aurelia (Gruter, Inscr. cccelvii. 6), which passed through it; but there is a sort of mystery hanging over it which it is not easy to clear up. (Becker, Handb. p. 196, and note.)

The next gate, proceeding northwards, was the Porta Flaminia, which stood a little to the east of the present Porta del Popolo, erected by Pope Pius IV. in 1561. The ancient gate probably stood on
 Procop. B. G. i. 23), as the Goths did not attack it from its being difficult of access. Yet Anastasius (Vit. Gregor. II.) describes it as exposed to inundations of the Tiber; whence Nibby (Muru, \$c. p. 304) conjectures that its site was altered between the time of Procopius and Anastasius, that is, between the sixth and ninth centuries. Nay, in a great inondation which happened towards the end of the eighth century, in the pontificate of Adrian I., the gate was carried away by the flood, which bore it as far as the arch of M. Aurelius, then called Tres Faccicellae, and situated in the Via Flaminia, where the street callol della Vite now runs into the Corso. (ll). The gate appears to have retained its ancient name of Flaminia as late as tha 15th century, as appears from a life of Martin V. in Maratori (Sicriph Rer. Ital L. iii. pt. ii. col
864). When it obtained its present name cannot be determined; its ancient one was undoubtedly derived from the Via Flaminia, which it spanned. In the time of Procopius, and indeed long before, the wall to the east had bent outwards from the effects of the pressure of the Pincian hill, whence it was called merus fractus or inclinatus, just as it is now called muero torto. (Procop. B. G. i. 23.)

The next gate, proceeding always to the right, was the Poita Pinciana, before mentioned, which was already walled up in the time of the Anonymous of Einsiedlen. It of course derived its name from the hill on which it stood. Belisarius had a house near this gate (Anastas. Silcerio, pp. 104, 106); and either from this circumstance, or from the exploits performed before it by Belisarius, it is supposed to have been also called Belisaria, a name which actually occurs in one or two passages of Procopius (B. G. i. 18, 22; cf. Nibby, Mura, fo. p. 248). But the Salaria seems to hare a better claim to this second appellation as the gate which Belisarius himself defended; though it is more probable that there was no such name at all, and that Bedsoapia in the passages cited is only a corruption of इa入apla. (Becker, de Muris, p. 115 ; Urlichs in Class. Mus. vol. iii. p. 196.)

Respecting the two gates lying between the Porta Pinciana and the Praetorian camp there can be no doubt, as they stood over, and derived their names from, the Via Salaria and Via Nomentana. In carlier times both these roads issued from the Porta Colline of the Servian wall; but their divergence of course rendered two gates necessary in a wall drawn with a longer radius. The Porta Salaria still subsists with the same name, although it has undergone a restoration. Pius IV. destroyed the Porta Nomentana, and built in its stead the present Porta Pic. The inscription on the latter testifies the destruction of the ancient gate, the place of which is marked with a tablet bearing the date of 1564 . A little to the SE. of this gate are the walls of the Castra Praetoria, projecting considerably beyond the rest of the line, as Aurelian included the camp in his fortification. The Porta Decumana, thongh walled up, is still visible, as well as the Puincipales on the sides.
The gates on the eastern tract of the Aurelian walls have occasioned considerable perplexity. On this side of the city four roads are mentioned, the Tiburtina, Collatina, Praenestina, and Labicana, and two gates, the Porta Tiburtina and Praenestina. But besides these gates, which are commonly thought to correspond with the modern ones of $S$. Lorenzo and Porla Naggiore, there is a gate close to the Praetorian camp, about the size of the Pinciana, and resembling the Honorian gates in its architecture, which has been walled up from time immemorial, and is hence called Porta Clausa, or Porta Chiusa. The ditficulty lies in determining which were the ancient Tiburtina and Praenestina. The whole question has been so lucidly stated by Mr. Bunbury that we cannot do better than borrow his words: "It has been generally assumed that the two gates known in modern times as the Porta S. Lorenzo and the Porta Magyiore are the same as were oripirally called respectively the Porta Tiburtina and Praenestina, and that the roads bearing the same appellations led from them directly to the important tums from which they derived their name. It is aduitted on all hands that they appear under these
names in the Anonymus; and a comparison of two passages of Procopius (B. G. i. 19, 1b. p. 96) would appear to lead us to the same result. In the former of these Procopius speaks of the part of the city attacked by the Goths as comprising five gates (rúnal), and extending from the Flaminian to the Praenestine. That he did not reckon the Pinciana as one of these seems probable, from the care with which, in the second passage referred to, he distinguishes it as a $\pi u \lambda i s$, or minor gate. Supposing the closed gate near the Praetorian camp to have been omitted for the same reason, we hare just the five required, viz., Flaminia, Sularia, Nomentana, Tiburtina (Porta S. Lorenzo), and Praenestina (Maggiore). On this supposition both these ancient ways (the Tiburtina and Praenestina) must have issued originally from the Esquiline gate of the Servian walls. Now we know positively from Strabo that the Via Praenestina did so, as did also a third road, the Via Labicana, which led to the town of that name, and afterwards rejuined the Via Latina at the station called Ad Pictas (v. p. 237). Strabo, ou the other hand, does not mention from what gate the road to Tibur issued in his time. Niebuhr has therefore followed Fabretti and Piale in assuming that the latter originally proceeded from the Porta Viminalis, which, as we have seen, stood in the middle of the agger of Servius, and that it passed through the walls of Aurelian by means of a gate now blocked up, but still extant, just at the angle where those walls join on to the Castra Pruetoria.
Assuming this to have been the original Tiburtina, Niebuhr (followed by MM. Bunsen and Urlichs) considers the Porta S. Lorenzo to have been the Praenestina, and the Porta Maggiore to have been the Labicana; but that when the gate adjoining the Praetorian camp was blocked up, the road to Tivol was transferred to the Porta S. Lorenzo, and that to Praeneste to the gate next in order, which thus acquired the name of Praenestina instead of its former one of Labicana (Beschreibung, i. p. 657, seq). To this suggestion there appear to be two principal objections brought forward by M. Becker, neither of which M. Urlichs has answered: the first, that, supposing the Via Tiburtina to have been so transferred, which taken alone might be probable enough, there is no apparent reason why the Via Praenestina should have been also shifted, instead of the two thenceforth issuing together from the same gate, and diverging immediately afterwards; and secondly, that there is no authority for the existence of such 2 gate called the Labicana at all. The passage of Strabo, already cited, concerning the Vica Labicana, certainly seems to imply that that road in his time separated from the Praenestina immediately after leaving the Esquiline gate; but there is no improbability in the suggestion of M. Becker, that its course was altered at the time of the construction of the new walls, whether under Aurelian or Honorius, in order to avoid an unnecessary increase of the number of gates. Many such changes in the direction of the principal roads may have taken place at that time, of which we have no account, and on which it is impossible to speculate. Wextphal, in his Römische Campagne (p.78), has adopted nearly the same view of the case: but be considers the Via Labicana to have originally had a gate assigned to it, which was afterwards walled up, and the road carried out of the same gate with the Via Praenestina. The only real difficulty in the ordinary view of the subject, supported by M. Becker, appears to
be that, if the Via Tiburtina always issued from the Porta S. Lorenzo, we have no road to assign to the now closed gate adjoining the Praetorian camp, nor yet to the Porta Viminalis of the Servian walls, a circumstance certainly reinarkable, as it seems unlikely that such an opening should have been made in the agger without absolute necessity. On the other hand, the absence of all mention of that gate prior to the time of Strabo would lead one to suspect that it was not one of the principal outlets of the city ; and a passage from Ovid, quoted by M. Becker, certainly affurds some presumption that the road from Tibur, in ancient times, actually entered the city by the Porta Esquilina (Fast. v. 684). This is, in fact, the most important, perhaps the only important, point of the question; for if the change in the names had already taken place as early as the time of Procopius, which Niebuhr himself seems disposed to acknowledge, it is hardly worth while to inquire whether the gates had borne the same appellations during the short interval from Honorius to Justinian " (Class. Mus. vol. iii. p. 369, seq.).

The Porta Tiburtina (S. Lorenzo) is built near an arch of the Aquae Marcia, Tepula, and Julia, which here flow over one another in three different canals. The arch of the gate corresponds with that of the aqueduct, but the latter is encumbered with rubbish, and therefore appears very low, whilst the gate is built on the rubbish itself. As the inscription on it appeared on several of the other gates, we shall here insert it : S.P.Q.R. Impp. DD. NN. invictissimis principibus Arcadio et Honorio victoribus et triumphatoribus semper Aing. ob instauratos urbis aeternae muros portas ac turres egestis immensis ruderibus ex sugyestione V.C. et inlustris comitis et magistri ulriusque militiae Fl. Stilichonis ad perpetuitatem nominis corum simulacra constituit curante Fl. Macrobio Longiniano V.C. Praef. Urbi D. N. M. Q. eorum. In like manner the magnificent double arch of the Aqua Claudia and Anio Novus, which flow over it, was converted into the Porta Praenestina (Maggiore). The right arch, from the city side, is walled up, and concealed on the outside by the Honorian wall. Just beyond the gate is the curious tomb of Eurysaces, the baker, sculptured with the instru-

TUMB OF EURYSACES
ments of his trade, which was brought to light in 1838, by the pulling down of a tower which had been built over it in the middle ages. Over the closed Honorian arch was the same inscription as over the Ports Tiburtina. On the aqueduct are three inscriptions, which name Claudius as its builder, and Vespasian and Titus as its restorers. The gate had several names in the middle ages.

Hence the wall follows for some distance the line of the Aqua Claudia, till it reaches its easternmost point ; when, turning to the S. and W., and embracing the curve of what is commonly called the Amphitheatrum Castrense, it reaches the ancient Porta Asinaria, now replaced by the Porta di S. Giovanni, built a little to the E. of it in 1574, by Pope Gregory XIII. It derived its name from spanning the Via Asinaria (Festus, p. 282, Müll.), and is frequently mentioned by Procopias. (B. G. i. 14, iii. 20, \&c.) In the middle ages it was called Lateranensis from the neighbouring palace of the Lateran.

After this gate we find another mentioned, which has entirely vanished. The earliest notice of it appears in an epistle of Gregory the Great (ix. 69), by whom it is called Porta Metronis; whilst by Martinus Polonus it is styled Porta Metroni or Metronii, and by the Anonymous, Metrovia. (Nibby, Mura, fc. p. 365.) It was probably at or near the point where the Marruna (Aqua Crabra) now flows into the town. (Nibby, l.c.; Piale, Porte Merid. p. 11.)

The two next gates were the Porta Latma and Porta Appia, standing orer the roads of those names, which, as we have before said, diverged from one another at a little distance outside the Porta Capena, for which, therefore, these gates were substitutes. The Porta Latina is now walled up, and the road to Tusculum (Frascati) leads out of the Porta S. Giovanni The Porta Appia, which still retained its name during the middle ages, but is now called Porta di S. Sebastiano, from the church situated outside of it, is one of the most considerable of the gates, from the height of its towers, though the arch is not of fine proportions. Nibby considers it to be posterior to the Gothic War, and of Byzantine architecture, from the Greek inscriptions and the Greek cross on the key-stone of the arch. (Mwa, fr. p. 370.) A little within it stands the socalled arch of Drusus.

A little farther in the line of wall to the W. stands an arched gate of brick, ornamented with half columns, and having a heavy architrave. The Via Ardeatina (Fest. p. 282, Müll.) proceeded through it, which issued from the Porta Rsudusculana of the Servian walls. (Nibby, p. 201, seq.) We do not find this gate named in any author, and it was probably walled up at a very early period. The last gate on this side is the Porta Ostiensis, now called Porta di S. Paolo, from the celebrated basilica about a mile outside of it, now in course of reconstruction in the most splendid manner. The ancient name is mentioned by Ammianus Marcellinus (xvii. 4), but that of S. Pauli appears as early as the sixth century. (Procop. B. G. iii. 36.) It had two arches, of which the second, though walled up, is still visible from the side of the town, though hidden from without by a tower built before it. Close to it is the pyramid, or tomb, of Cestius, one of the few monuments of the Republic. It is built into the wall. From this point the walls ran to the river, inclosing Monte Testaccio, and then northwards aloug its

ROMA.
banks, till they reached the point opposite to the walls of the Janiculum. Of this last portion only a few fragments are now visible.

On the other side of the Tiher only a few traces of the ancient wall remain, which extended lower down the stream than the modern one. Not far from the river lay the Porta Portuensis, which Urban VIII. destroved in order to build the present Porta Portese. This gate, like the Ostiensis and Praenestina, had two arches, and the same inscription as that over the Tiburtina. From this point the wall proceeded to the height of the Janiculum, where stood the Porta Aurelia, so named after the Via Aurelia (vetus) which issued from it. We have already mentioned that its modern name (Porta di S. Pancrazio) was in use as early as the time of Procopius ; yet the ancient one is found in the Anonymous of Einsiedlen, and even in the Liber de Mirabilibus. The walls then again descended in a NE. direction to the river, to the puint opposite to that whence we commenced this description, or between the Farnese Palace and Ponte Sisto. It is singular that we do not find any gate mentioned in this portion of wall, and we can hardly conceive that there should bare been no exit towards the Vatican. Yet neither Procopius (B. G. i. 19, 23) nor the writers of the middile ages recognise any. We find, indeed, a Transtiberine gate mentioned by Spartianus (Sever. 19) as built by Septimius Severus, and named after hin (Septimiana) ; but it is plain that this could not have been, originally at least, a city gate, as there were no walls at this part in the time of Severus. Becker conjectures (de Muris, p. 129, Handb. p. 214) that it was an archwsy belonging to some building erected by Severus, and that it was sabsequently built into the wall by Aurelius or Honorius; of the probability of which conjecture, seeing that it is never once mentioned by any author, the reader must judge.

## III. The Captrol.

In attempting to describe this prominent feature in the topography of Rome, we are arrested on the threhold by a dispute respecting it which has long prevailed and still continues to prevail, and upon which, before proceeding any further, it will be necessary to declare our opinion. We have before described the Capitoline hill as presenting three natural dirisions, namely, two summits, one at its NE. and the other at its SW. extremity, with a depression between them, thus forming what is commonly called a saddle-back bill. Now the point in dispute is, which of these summits was the Capitol, and which the Arx? The unfortunate ambiguity with which these terms are used by the ancient writers, will, it i, to be feared, prevent the possibility of ever arriving at any complete and satisfactory solution of the question. Hence the contlicting opinions which have prevailed apon the subject, and winich have given rise to two different schools of topographers, generally characterised at present as the Geriman and the Italian school. There is, indeed, a third class of writers, who hold that both the Capitol and Arx occupied the same, or SW. summit; but this evidently absurd theory has now so few adberents that it will not be necessary to examine it. The most conspicuous scholars of the German school are Niebuhr, and his followers Bunsen, Becker, Preller, and others; and these hold that the temple of Jupiter Capitulinus was seated on the SW. summit of the hill. The Italiun view, which is directly
contrary to this, was first brought into vogue by Nardini in the last century, and has since been held by most Italian scholars and topographers. It is not, however, so exclusively Italian but that it has been adopted by some distinguished German scholars, among whom may be named Göttling, and Braun, the present accomplished Secretary of the Archaeological Institute at Rome.

Every attempt to determine this question must now rest almost exclusively on the interpretation of passages in ancient authors relating to the Capitoline hill, and the inferences to be drawn from them; and the decision must depend on the preponderance of probability on a comparison of these inferences. Hence the great importance of attending to a strict interpretation of the expressions used by the classical writers will be at once apparent; and we shall therefore preface the following inquiry by laying down a few general rules to guide our researches.
Preller, who, in an able paper published in Schneidewin's Philologus, vol. i., has taken a very moderate and candid view of the question, consoles himself and thuse who with him hold the German side, by remarking that no passage can be produced from an ancient and trustworthy writer in which Capitolium is used as the name of the whole hill. But if the question turns on this point - and to a great extent it certainly does - such passages may be readily produced. To begin with Varro, who was both an ancient and a trustworthy writer. In a passage where he is expressly describing the hills of Rome, and which will therefore admit neither of misapprehension nor dispute, Varro says: "Septimontium nominatum ab tot monzibus, quos postea urbs muris comprehendit. E quis Capitolium dictum, quod hic, quom fundamenta foderentur aedis Jovis, caput humanum dicitur inventum. Hic mons ante Tarpeius dictus," \&c. (L.L. v. § 41, Müll.) Here Capitolium can signify nothing but the Capitoline hill, just as Palatium in $\S 53$ signifies the Palatine. In like manner Tacitus, in his description of the Romulean pomoerium before cited: "Forumque Romanum et Capitolium non a Romulo sed a Tito Tatio additum urbi credidere" (Ann. xii. 24), where it would be absurd to restrict the meaning of Capitolium to the Capitol properly so called, for Tatius dwelt on the Arx. So Livy in his narrative of the exploit of Horatins Cocles: "Si transitum a tergo reliquissent, jam plus hostium in Palatio Capitolioque, quam in Janiculo, fore" (ii. 10), where its union with Palatium shows that the hill is meant; and the same historian, in describing Romulus consecrating the spolia opima to Jupiter Feretrins a couple of centuries before the Capitoline temple was founded, says, "in Capitolium escendit" (i. 10). The Greek

 duce as a first general rule that the term Capitolium is sometimes used of the whole hill.

Secondly, it may be shown that the whole hill, when characterised generally as the Roman citadel, was also called $\operatorname{Arx}$ : " Atque ut ita munita arx circumjectu arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate horribili Gallici adventus incolumis atque intacta permanserit." (Cic. Rep. ii. 6.) "Sp. Tarpeius Rumanae pracerat arci." (Liv. i. 11.) But there is no need to multiply examples on this head, which is plain enough.

But, thirdly, we must wbserve that though the terms Capitulium and Arx are thus usal generally

c e. Via di Monte Tarpco.
to signify the whole hill, they are nevertheless frequently employed in a stricter sense to denote respectively one of its summits, or rather, the temple of Jupiter Capitolinus and the opposite summit; and in this manner they are often found mentioned as two separate localities opposed to one another: " De arce capta Capitolioque occupato - nuntii veniunt." (Liv. iii. 18.) "Est antern etiam aedes Vejovis Romae inter arcem et Capitolium." (Gell. N. A. v.
12.) On this point also it would be easy to multiply examples, if it were necessary.
The preceding passages, which have been purposely selected from prose writers, suffice to show how loosely the terms Arx and Capitolium were employed; and if we were to investigate the language of the poets, we should find the question still further embarrassed by the introduction of the ancient names of the hill, such as Mons Tarpeius, Rupes Tarpeia

Rec., which are often used without any precise signification.

With these preliminary remarks we shall proceed to examine the question as to which summit was occupied by the Capitoline temple. And as several arguments have been adduced by Becker (Handb. Ip. 387-395) in favour of the SW. summit, which he deems to be of such force and cogency as "compietely to decide" the question, it will be necessary to examine them seriutim, befure we proceed to state our own opinion. They are chiefly drawn from narratives of attempts to surprise or storm the Capitol. and the first on the list is the well-known story of Herdonius, as related by Dionysius of Halicarnassus (x. 14): "Herdonius," says Becker, " lands by night at the spot where the Capitol lies, and where the hill is not the distance of a stadium from the river, and therefore manifestly opposite to its western point. He furces a passage through the Carmental gate, which lay on this side, ascends the height, and seizes the fort ress ( $\phi$ poípoov). Hence he preses forwards still farther to the neighbouring citadel, of which he also gains posisession. This harrative alune suffices to decide the question, since the Capitol is expressly mentioned ay being next to the river, and the Carmental gate near it: and since the band of Herdonius, after taking possession of the western height, proceeds to the adjoining citadel" (p. 388).

In this interpretation of the narrative some things are omitted which are necessary to the proper understanding of it, and others are inserted which are by no means to be found there. Dionysius does not say that Herdonius landed at the spot where the Capitol lies, and where the hill is only a stade from the river, but that he landed at that part of Rome where the Capitoline hill is, at the distance of not quite a stade from the river. Secondly, Becker
 it. by begring the whole question, "the western height." But his greatest misrepresentation arises from omitting to state that Dionysius, as his text stands, describes the Carmental gate as left open in purvuance of some divine or oracular cominand ( $\kappa a 7 \alpha$ Tt Aैंофатov): whereas Becker's words ("er dringt durch das Carmentalische Thor") would lead the reader to believe that the passage was forced by Herionins. Now it has been shown that the Purta Carmentalis was one of the city gates; and it is imprasible to believe that the Romans were so besotted, or rather in such a state of idiotey, that, after building a huge stone wall round their city at great expense and trouble, they should leave one of their gates open, and that too without a guard upon it ; thus rendering all their elaborate defences useless and abortive. We have said without a guard, becance it appears from the narrative that the first distacle encountered by Herdonius was the фpoúpiov, which according to Becker was the Capitol; bo that be must have passed through the Vicus Jugarius, over the forum, and ascended the Clivus Capitolinus without interruption. It is evident, however, that Liongsius could not bave intended the Carmental gate, since he makes it an entrance not to the city but to the Capitol (ifpal rú入at tov Kanıtu入iou); and that he regarded it as seated upon an eminence, is plain from the expression that Herdonius made his men ascend through it (duabisávas $\tau t \nu \delta \delta \nu \nu a \mu \nu)$. The text of Dionysius is manifestly corrupt or interprolated ; which further appears from the fact that when he was describing the real Carmental gate
(i. 32), he used the adjective form Kapuevris (mapd тais Kapرєขтiб، тúnais), whilst in the present instance he is made to use the form Kappévivos. Herdonins must have landed belon the line of wall running from the Capitoline to the river, where, as the wall was not continued along its banks, he would have met with no obstruction. And this was evidently the reason why he brought down his men in buats; for if the Carmental gate had been always left open it would have been better for him to have marched overland, and thus to have avoiced the protracted and hazardous operation of landing his men. It is clear, as Preller has pointed out (Schneidewin's Philologus i. p. 85, note), that Dionysius, or rather perhaps his transcribers or editors, has here confuanded the Porta Carmentalis with the Porta Pandana, which, as we have before seen, was seated on the Capitoline hill, and always left open, for thers could hardly have been two gates of this description. The Porta Pandana, as we have already said, was still in existence in the time of Varro (L. L. v. § 42, Miill.), and was in fact the entrance to the ancient fort or castellum - the фpoúpiov of Dionysius - which guarded the approach to the Capitoline hill, of course on its E. side, or towards the forum, where alone it was accessible. Thus Solinus: "Iidem (Herculis comites) et montem Capitolinum Saturnium nominarunt, Castelli quoque, quod excitaverunt, portam Saturniam appellaverunt, quase postinodum Panduna vocitata est " (i. 13). We also learn from Festus, who mentions the same castrum, or fort, that it was situated in the lower part of the Clivus Capitolinus. "Saturnii quoque dicebantur, qui castram in imo clivo Capitolino incolebant" (p. 322, Mïll.). This, then, was the фpoipiov first captured by Herdonius, and not, as Becker supposes, the Capitul: and hence, as that writer says, he pressed on to the veestern height, which, however, was not the Cupitol but the Arx. When Dionysius says of the latier that it adjoined, or was connected with, the Capitolium, this was intended for his Greek readers, who would otherwise have supposed, from the fashion of their own cities, that the Arx or Acropolis furmed quite a separate hill.

The stury of Herdonius, then, instead of being " alone decisive," and which Becker (Warnung, pp. 43, 44) called upon Braun and Preller to explain, before they ventured to say a word more on the subject, proves absolutely nothing at all; and we pass on to the next, that of Pontius Cominius and the Gauls. "The messenger climbs the rock at the spot nearest the river, by the Porta Carmentalis, where the Gauls, who had observed his footsteps, afterwarls make the same attempt. It is from this spot that Manlius casts them down" (p. 389). This is a fair representation of the matter; but the question remains, when the messenger had clomb the rock was he in the Capitol or in the Arx? The pawages quoted as decisive in favour of the fonner are the following: "Inde (Cominius) qua proximum fuit a ripa, per praeruptum eoque neglectum hostium custoxliae saxum in Capitolium evadit." (Liv. v. 46.) "Galli, seu vestigio notato humano, seu sua sponte animadverso ad Carmentis saxorum adscensu aequo -in summum evasere" (Ib.47). Now, it is plain, that in the former of these passages Livy means the Capitoline hill, and not the Capitol strictly so called; since, in regard to a small space, like the Capitol Proper, it would be a useless and absurd distinction, if it lay, and was known to lie, next the river, to say that Cominius mounted it "where it
was nearest to the river. "Cominius in Capitoliam evadit" is here equivalent to "Romulus in Capitolium escendit," in a passage before cited. (Liv. i. 10.) Hence, to mark the spot more precisely, the historian inserts "ad Carmentis" in the following chapter. There is nothing in the other authorities cited in Becker's note ( na .750 ) which yields a conclusion either one way or the other. We might, with far superior justice, quote the following passage of Cicero, which we have adduced on another occasion, to prove that the attempt of the Gauls was on the Arx or citadel: "Atque ut ita munita Arx circumjectu arduo et quasi circumciso saxo niteretur, ut etian in illa tempestate horribili Gallici adventus incolumis atque intacta permanserit" (De Rep. ii. 6). But, though we hold that the attempt was really on the Arx, we are nevertheless of opinion that Cicero here uses the word only in its general sense, and thus as applicable to the whole hill, just as Livy ases Capitolium in the preceding passage. Hence, Mr. Bunbury (Class. Mus. vol. iv. p. 430) and M. Preller (l. c.) have justly regarded this narrative as affiording no evidence at all, although they are adherents of the German thenry. We may further observe, that the house of Manlius was on the Arx; and though this circumstance, taken by itself, presents nothing decisive, yet, in the case of so sudden a surprise, it adds probability to the view that the Arx was on the southern summit.
We now proceed to the next illustration, which is drawn from the account given by Tacitus of the attack of the Vitellians on the Capitol. Becker's interpretation of this passage is so full of errors; that we must follow him sentence by sentence, giving, first of all, the original description of Tacitus. It runs as follows: "Cito agmine forum et imminentia foro templa praetervecti erigunt aciem per adversum collem usque ad primas Capitolinae arcis fores. Erant antiquitus porticus in latere clivi,dextrae subeuntibus: in quarum tectum egressi saxis tegulisque Vitellianos obruebant. Neque illis manus nisi gladiis armatae; et arcessere tormenta ant missilia tela longum videbatur. Faces in prominentem porticum jecere et sequebantur ignem; ambustasque Capitolii fores penetrussent, ni Sabinus revulsas undique statuas, decora majorum in ipso aditu vice muri objecisset. Tum diversos Capitolii aditus invadunt, juxta lucum asyli, et qua Tarpeia rupes centum gradibus aditur. Improvisa utraque vis: propior atque acrior per asylum ingruebat. Nec sisti poterant scandentes per conjuncta aedificia, quae, ut in multa pace, in altum edita solum Capitolii aequabant. Hic ambigitur, ignem tectis oppugnatores injecerint, an obsessi, quae crebrior fama est, quo nitentes ac progressos depellerent. Inde lapsus ignis in porticus appositas aedibus: mox sustinentes fastigium aquilae vetere ligno traxerunt flamman alueruntque. Sic Capitolium clausis foribus indefensum et indireptum conflagravit." (Hist. iii. 71.)
"The attack," says Becker, " is directed solely against the Capitol ; that is, the height containing the temple, which latter is burnt on the occasion" (p. 390). This is so far from being the case, that the words of Tacitus would rather show that the attack was directed against the Arx. The temple is represented as having been shut up, and neither attacked nor defended: "clausis foritus, indefensum et indireptum conflagravit." Such a state of things is inconceivable, if, as Becker says, the attack was directed solely agrainst the Capitol. That part of the hill was evidently deserted, and
left to its fate; the besieged had concentrated them. selves upon the Arx, which thus became the point of attack. By that unfortunate ambiguity in the use of the word Capitoliam, which we have before pointed out, we find Tacitus representing the gates of the Capitolium as haring been burnt ("ambustas que Capitolii fores") which, if Capitolium meant the same thing in the last sentence, would be a direct contradiction, as the gates are there represented as shut. But in the first passage he means the gates of the fortification which enclosed the whole summit of the hill; and in the second passage he means the gates of the temple. The meaning of Tacitus is also evident in another manner; for if the Vitellians were altacking the temple itself, and burning its gates, they must lave already gained 2 footing on the beight, and would consequently have had no occasion to seek access by other routes - by the steps of the Rapes Tarpeia, and by the Lucas Asyli. Becker proceeds: "Tacitus calls this (i.e. the height with the temple), indifferently Capitolina Arx and Capitolium." This is quite a mistake. The Arz Capitolina may possibly mean the whole summit of the hill; but if it is to be restricted to one of the two eminences, it means the Arx proper rather than the Capitol. "The attacking party, it appears, first made a lodgment on the Clivus Capitolinus. Here the portico on the right points distinctly to the SW. height. Had the portico been to the right of a person ascending in the contrary direction, it would have been separated from the besieged by the street, who could not therefore have defended themselves from its roof." If we thought that this argument bad any vnlue we might adopt it as our own: for we also believe that the attack was directed against the SW. height, but with this difference, that the Arx was on this beight, and not the Capitol. But, in fact, there was only one principal ascent or clivus,-that leading towards the western height; and the only thing worth remarking in Becker's observations is that he should have thought there might be another Clivus Capitolinus leading in the opposite direction. We may remark, by the way, that the portico here mentioned was probably that erected by the greatgrandson of Cu. Scipio. (Vell. Pat. ii. 3.) "As the attack is here fruitless, the Vitellians abandon it, and make another attempt at two different approaches ("diversos aditus"); at the Lacus Asyli, that is, on the side where at present the bromd steps lead from the Palazzo de' Conservatori to Monte Caprino, and again where the Centum Gradus led to the Rupes Tarpeia. Whether these Centum Gradus are to be placed by the church of Sta Maria della Consolazione, or more westward, it is not necessary to determine here, since that they led to the Caffarelli height is undisputed. On the sids of the asylum (Palazzo de' Conservatori) the danger was more pressing. Where the steps now lead to Monte Caprino, and on the whole side of the hill, were bouses which reached to its summit. These were set on fire, and the flanes then caught the adjoining portico, and lastly the temple."

Our chief oljection to this account is, its impossibility. If the Lucus Asyli corresponded to the steps of the present I'alazzo de' Conserratori, which is seated in the depression between the two summits, or present Piaza del Campidoglio, then the besiezers must have forced the pussage of the Clivus Capitolinus, whereas Tacitus expressly says that they were repulsed. Being repulsed they must have retreated
doventearle, and renewed the attempt at lower points; at the foot of the Hundred Steps, for instance, on one side, and at the bottom of the Lucus Asyli on another; on both which sides they again atteinpted to mount. The Palazzo de' Conservatori, though not the highest point of the hill, is above the clirus. Becker, as we have shown, has adopted the strangely erroneous opinion that the "Capitolinae arcis fores" belonged to the Capitol itself (note 752), and that consequently the Vitellians were storming it from the Piaza del Campidoglio (note 754). But the portico from which they were driven back was on the clirus, and consequently they could not have reached the top of the hill, or piazza. The argument that the temple must have been on the SW. beight, because the Vitellians attempted to storm it by mounting the Centum Gradus (Becker, Warnung, p. 43), may be retorted by those who hold that the attack was directed against the Arx. The precise spot of the Lacus Asyli cannot be indicated ; but from Livy's description of it, it was evidently somewhere on the descent of the hill ("locum qui nanc septus descendentibus inter duos lucos est, asylum aperit," i. 8). It is probable, as Preller supposes (Philol. p. 99), that the "aditus juxta lucum Asyli " was on the NE. side of the hill near the present arch of Severus. The Clivus Asyli is a fiction; there was only one clivus on the Capitoline.

We have only one more remark to make on this narrative. It is plain that the fire broke out near the Lucus Asyli, and then spreading from house to hoase, caught at last the front of the temple. This follows from Tacitus' account of the portico and the eagles which supported the fastigium or pediment, first catching fire. The back-front of the Capitoline temple was plain, apparently a mere wall; since Dionysius (iv. 61) does not say a single word about it, though he particularly describes the front as having a triple row of columns and the sides double rows. But as we know that the temple faced the south, such an accident could not have happened except it stood on the NE. height, or that of A raceli.

We might, therefore, by substituting Caffarelli for A raceli, retort the triumphant remark with which Becker closes his explanation of this passage: "To him, therefore, who would seek the temple of Jupiter on the beight of Caffarelli, the description of Tacitas is in every respect inexplicable."

Becker's next argument in favour of the W. summit involves an equivocation. It is, "that the temple was built on that summit of the hill which bore the name of Mons Tarpeius." Now it is notorious - and as we have already established it, we need not repeat it here - that before the building of the Capitol the whole hill was culled Muns Tarpeius. The passages cited by Becker in note $\mathbf{i 5 5}$ (Liv. i. 55; Dionys. iii. 69) mean nothing mure than this; indeed, the latter expressly states
 Kaxitø入ivos). Capitolium gradually became the name for the whole hill; but who can believe that the name of Tarpeia continued to be retained at that rery portion of it where the Capitoline temple was built? The process was evidently as follows: the northern height, on which the temple was built, was at first alone called Capitolium. Gradually its superior importance gave name to the whole hill; yet a particular portion, the most remote from the temple, retained the primitive name of Rupes Tarpeia. And thus Festus in a mutilated fragment, -
not however so mutilated but that the sense is plain -" Noluerunt funestum locum [cum altera parte] Capitoli conjungi" (p. 343), where Miiller remarks, " non multum ab Ursini supplemento discedere licebit."

Becker then proceeds to argue that the temple of Juno Moneta was built on the site of the house of M. Manlius Capitolinus, which was on the Arx (Liv. v. 47 ; Plut. Cam. 36 ; Dion Cass. F'r. 31, \&c.); and we learn from Ovid (Fast. i. 637) that there were steps leading from the temple of Concord, to that of Juno Moneta. Now as the former temple was situated under the height of Araceli, near the arch of Severus, this determines the question of the site of Juno Moneta and the Arx. Ovid's words are as follows:-
"Candida, te niveo posuit lux proxima templo Qua fert sublimes alta Moneta gradus;
Nunc bene prospicies Latiam, Concordia, turbam," \&c.
This is very obscure; but we do not see how it can be inferred from this passage that there were steps from one temple to the other. We should rather take it to mean that the temple of Concord was placed close to that of Moneta, which latter was approached by a flight of lofty steps. Nor do we think it very difficult to point out what these steps were. The temple of Juno was on the Arx; that is, according to our view, on the SW. summit; and the lofty steps were no other than the Centum Gradus for ascending the Rupes Tarpeia, as described by Tacitus in the passage we have just been discussing. Had there been another flight of steps leading up to the top of the Capitoline hill, the Vitellians would certainly have preferred them to clambering over the tops of houses. But it will be objected that according to this view the temple of Concord is placed upon the Arx, for which there is no authority, instead of on the forum or clivus, for which there is authority. Now this is exactly the point at which we wish to arrive. There were several temples of Concord, but ouly two of any renown, namely, that dedicated by Furius Camillus, B. C. 367, and rededicated by Tiberius after his German triumph, which is the one of which Orid speaks; and another dedicated by the consul Opimius after the sedition and death of Gracchus. Appian says that the latter temple was in the forum:
 $\dot{\epsilon} \tau a \xi \in \nu \quad\langle\gamma \epsilon i p a,(B . C$. i. 26). But in ordinary language the clivus formed part of the forum; and it would be impossible to point out any place in the forum, strictly so called, which it could have occupied. It is undoubtedly the same temple alluded to by Varro in the following passage: "Senaculum supra Graecostasim ubi aedisConcordiae et basilica Opimia" (L.L. v. p. 156, Müll.); from which we muy infer that Opimius built at the same time a basilica, which adjoined the temple. Becker (Handb. p309) denied the existence of this basilica; but by the time be published his Warrung he had grown wiser, and quoted in the Appendix (p. 58) the following passage from Cicero (p. Sest. 67): "L. Opimius cujus monamentum celeberrinum in foro, sepulcrum desertissimum in littore Dyrrachino est relictum ; " maintaining, however, that this passage related to Opimius' temple of Concord. But Urlichs (Röm. Top. p. 26), after pointing out that the epithet celeberrimum," very much frequented," suited better with a basilica than with a teinple, produced
two ancient inscriptions from Marini's Alti de' Fratelli Arvali (p. 212); in which a basilica Opimia is recorded; and Beeker, in his Antwoort (p. 33), confessing that he had overlooked these inscriptions, retracted his doubts, and acknowledged the existence of a basilica. According to Varro, then, the Aedis Concordiae and baslica of Opimius were close to the senaculum; and the situation of the senaculum is pointed out by Festus between the Capitol and forum: "Unum (Senaculum) ubi nunc est aedis Concordiae, inter Capitolium et Forum" (p. 347, Miill.). This description corresponds exactly with the site where the present remains of a temple of Concord are unanimously ayreed to exist: remains, however, which are supposed to be those of the temple founded by Camillus, and not of that founded by Opimius. According to this supposition there must have been two temples of Concord on the forum. But if these remains belong to that of Camillus, who shall point out those of the temple erected by Opimius? Where was its site? What its history? When was it demolished, and its place either left vacant or occupied by another building? Appian, as we have seen, expressly says that the temple built by Opimius was in the forum; where is the evidence that the temple of Caunillus was also in the forum? There is positively none. Plutarch, the only direct evidence as to its site, says no such thing. but only that it looked down upon the forum: ¿ौचпфíavto

 tois $\gamma \in \gamma \in \nu \eta \mu$ évols idpúgaadat (Camill. 42). Now adopdoo means to riew from a distance, and especially from a height. It is equivalent to the Latin prospicere, the very term used by Ovid in describing the same temple:-
" Nunc bene prospicies Latiam, Concordia, turbam."
These expressions, then, like Ovid's allusion to the "sublimes gradus" of Moneta, point to the Arx as the site of the temple. It is remarkable that Lucan (Phars. i. 195) employs the same word when describing the temple of Jupiter Tonans, erected by Augustus, also situated upon the Ars, or Rupes Tarpeia:-
"_ 0 magnae qui moenia prospicis urbis Tarpeia de rupe Tonans."
This temple indeed, bas also been placed on the clivus, on the authority of the pseudo-Victor, and acainst the express evidence of the best authorities. Thus an inscription in Gruter (Ixxii. No. 5), consisting of some lines addressed to Fortuna, likewise places the Jupiter Tonans on the Tarpeian rock:-
" Tu quae Tarpeio coleris vicina Tunanti
Vutorum vindex semper Fortuna meorum," \&c.
Suetonius (Aug. c. 29 and 91). Pliny (xxavi. 6) and the Mon Ancyranum, place it "in Capitolio," meaning the Capitoline hill. It has been absurdly inferred that it was on the clivus, because Dion says that those who were going up to the great temple of Jupiter met with it first,-ört
 (liv. 4), which they no doubt would do, since the clivus led first to the western beight.

On these grounds, then, we are inclined to beliere that the temple of Concord erected by Camillus stoud on the Arx, and could not, therefore, have had any steps leading to the temple of Juno Moneta. The latter was likewise founded by Camillus, as we learn from Livy and Ovid :-

## ROMA:

" Arce quoque in summa Junoni templa Monetae Ex voto memorant facta, Camille, tuo; Ante domus Manli fuerant" (Fast. vi. 183);
and thus these two great works of the dictator stood, as was natural, close together, just as the temple of Concord and the basilica subsequently erected by Opimius also adjoined one another on or near the clivus. It is no objection to this view that there was another small temple of Concord on the Arx, which had been vowed by the practor Manlius in Gaul during a sedition of the soldiers. The vow had been almost overlooked, bnt after a lapse of two years it was recollected, and the temple erected in discharge of it. (Liv. xxii. 33.) It seems, therefore, to have been a small affair, and might very well have coexisted on the Arx with another and more splendid temple.

But to return to Becker's argnments. The next proof adduced is Caligula's bridge. "Caliguls," he says, as Bunsen has remarked, "caused a bridge to be thrown from the Palatine hill over the temple of Augustus (and probably the Basilica Julia) to the Capitoline temple, which is altogether inconceivable if the latter was on the height of Araceli, as in that case the bridge must have been conducted over the formun" (p. 393). But here Becker goes further than his author, who merely says that Caligula threw a bridge from the Palatine hill to the Capitoline: "Super templum Divi Augusti ponte transmisso, Palatiun Capibliumque conjunxit." (Suet. Cal. 22.) Becker correctly renders Palatium by the "Palatine hill," but when he comes to the other hill he converts it into a temple. Suetonius offers a parallel case of the use of these words in a passage to which we had occasion to allude just now, respecting the temple of Jupiter Tonans: "Templum Apollinis in Palatio (extruxit), aedem Tonantis Jovis in Capitolio " (Aug. 29) ; where, if Becker's view was right, we might by analogy translate, -" he erected a temple of Apollo in the palace."

The next proof is that a large piece of mek fell down from the Capitol ("ex Capitolio") into the Vicus Jugarius (Liv. xxxv. 21); and as the Vicus Jugarius ran under the S . summit, this shows that the Capitoline temple was upon it. But pieces of rock fall down from hills, not from buildings, and, therefore. Capitolium here only means the hill. In like manner when Liry says (xxxviii. 28), "substructionem super Aequimelium in Capitolio (censores locaverunt)," it is plain that he must mean the hill; and consequently this passage is another prool of this use of the word. The Aequimelium was in ar by the Vicus Jugarius, and could not, therefore, have been on the Capitol properly so called, even if the latter had been on the SW. height. Becker wrongly translates this passage. - " a substruction of the Capitol over the Aequimelium" ( p .393 .) Then comes the passage respecting the statue of Jupiter being turned towards the east, that it might behold the forum and curia; which Becker maintains to be imposible of a statue erected on the height of Araceli. Those who have seen the ground will not be inclined to coincide in this opinion. The statue stood on a column (Dion Cass. xxxvii. 9 ; Cic. Dir. i. 12 ; of. Id. Cat. iii. 8), and most probably in front of the temple - it could hardly have been placed behind it; and, therefore, if the temple was on the S height, the statue must have been at the extremity of it; a site which certainly would not afford a I very gond view of the forum. Next the direction:
of the Clirus Capitolinus is adduced, which ran to the Western height, and mast have led directly to the temple, whence it derived its name. But this is a complete begging of the question, and the clirus more probably derived its name from the hill. If the direction of the clivus, however, proves anything at all-und we are not disposed to lay much stress upon it - it rather proves the reverse of Becker's case. The clivus was a continuation of the Sacra Via, by which, as we shall have occasion to show when treating of that road, the augurs descended from the Arx after taking the auguries, and by which they carried up their new year's offerings to king Tatius, who lived upon the Arx: and hence in sacerdotai language the clivus itself was called Sacra Via. (Varro, L.L. v. § 47, Müll.; Festus, p. 290. id.). Lastly, "the contined height of Araceli would not have afforded sufficient room for the spacious temple of Jupiter, the Area Capitolina, where meetings of the people were held, and at the same time be able to display so many other templess and nonuments." There is some degree of truth in this observation, so far at least as the Area Capitolina is concerned. But when we come to dencribe the temple of Jupiter Capitolinus, an acquaintance with which is necessary to the complete understanding of the present question, though Becker has chosen to omit it, "as lying out of the plan of his book" ( $p$ 396), we shall endeavour to show how this objection may be obviated. Meanwhile, having now discussed all Becker's arguments in favour of the SW. summit as the site of the Capitoline ternple, it will be more convenient shortly to review the whole question, and to adduce some reasons which have led us to a directly contrary conclasion. In doing this we do not presume to think, with Becker, that we have "completely decided" the question. It is one, indeed, that will not admit of complete demonstration ; but we venture to hope that the balance of probability may be shown to predominate very considerably in farour of the NE. height.
The greater part of Becker's argnments, as we trust that we have shown, prove nothing at all, while the remainder, or those which prove something, may be turned against him. We must claim as our own the proof drawn from the storm of the Capitol by the Vitellians, as described by Tacitus, as well as that derived from Mons Tarpeius being the name of the SW. height, and that from the westerly direction of the Clivus Capitolinus. Another argument in favour of the NE. height may be drawn from Livy's account of the trial of Manlias Capitolinus, to which we have already adverted when treating of the Porta Flumentana [supra, p. 751], and need not here repeat. To these we whall add a few more drawn from probability.

Tatins dwelt on the Arx, where the temple of Juno Moneta afterwards stood. (llut. Rom. 20; Solinus, i. 21.) "This," says Becker (p. 388), " is the height of Araceli, and always retained its name of Arx after the Capitol was built, since certain sacred castoms were attached to the place and appellation." He is here alluding to the Arx being the auguraculum of which Festus says: "Auguraculum appellabant antiqui quam nus arcem dicimus, quad ibi augures publice auspicarentur" (p. 18, where Müller observes: "non tam arcem quam in arce fuisse arbitror auguraculum "). The ternplum, then, marked out from the Arx, from which the city anspices were taken, was detined by a peculiar and
appropriate form of words, which is given by Varro, (L.L. vii. § 8, Muill.) It was bounded on the left hand and on the right by a distant tree ; the tract between was the templum or tescum (conntry region) in which the omens were observed. The augur who inaugurated Numa led him to the Arx, seated him on a stune, with his face turned towards the South, and sat down on his left hand, capite velato, and with his lituus. Then, looking forwards over the city and country - " prospectu in urbem agrumque capto" - he marked out the temple from east to west, and-determined in his mind the sign (signum) to be observed as far as ever his eyes could reach: " quo longissime conspectum oculi ferebant." (Liv. i. 18; cf. Cic. de Off. iii. 16.) The great extent of the prospect required may be inferred trom an anecdote related by Valerius Maximus (viii. 2. § 1), where the augurs are represented as ordering Claudius Centumalus to lower his lofty dwelling on the Caelian, because it interfered with their view from the Arx,-a passage, by the way, which shows that the auguries were taken from the Arx till at all events a late period of the Republic. Now, supposing with Becker, that the Arx was on the NE. summit, what sort of prospect would the augurs have had? It is evident that a large portion of their view would have been intercepted by the huge temple of Jupiter Capitolinus. The SW. summit is the only portion of the hill which, in the words of Livy, would afford a noble prospect, "in urbem agrumque." It was duubtless this point to which the augur conducted Numa, and which remained ever afterwards the place appointed for taking the auguries. Preller is of opinion that Augustus removed them: to a place called the Auguratorium on the Palatine. (1/hilologus, i. p. 92.) But the situation laid down for that building scarcely answers to our ideas of a place adapted for taking the anguries, and it seems more probable that it was merely a place of assembly for the college of augurs.

Another argument that has been adduced in favour of the SW. summit being the Arx, is drawn from its proximity to the river, and from its rocky and precipitous nature, which made it proper for a citadel. But on this we are not inclined to lay any great stress.

Other arguments in favour of the Italian view may be drawn from the nature of the temple itself ; but in order to understand then it will first be necessary to give a description of the building. The most complete account of the Trimplem Jovis Capitolini is that given by Dionysius (iv. 61), from which we learn that it stood upen a high basis or platform, 8 plethra, or 800 Greek feet square, which is nearly the same in English measure. This would give about 200 feet for each side of the temple, for the length exceeded the breadth only by about 15 feet. These are the dimensions of the original construction ; and when it was burnt down a generation befure the time of Dionysius, - that is, as we learn from Tacitus (Hist. iii. 72), in the consulship of L. Scipio and Norbanus (b. c. 83),-it was rebuilt upon the same foundation. The materials employed in the second construction were, however, of a much richer description than those of the first. The front of the temple, which faced the south, had a portico consisting of three rows of columns, whilst on the flanks it had only two rows : and as the back front is not said to have had any portico, we may conclude that there was nothing on this side but a plain wall. The interior contained three cells
parallel to one another with common walls, the centre one being that of Jove, on each side those of Juno and Minerva. In Livy, however (vi. 4), Juno is represented as being in the same cella with Jupiter. But though the temple had three cells, it had but one fastiyium, or pediment, and a single roof.

## temple of jupiter capitolinus.

 (From a Coin of Vespasian.)Now the first thing that strikes us on reading this description is, that the front being so ornamented, and the back so very plain, the temple must have stood in a situation where the former was very conspicuous, whilst the latter was but little seen. Such a situation is afforded only by the NE. summit of the Capitoline. On this site the front of the temple, being turned to the south, would not only be visible from the forum, bat would also present its best axpect to those who had ascended the Capitoline hill; whilst on the other hand, had it stood on the SW. summit, the front would not have been visible from the forum, and what is still worse, the temple would have presented only its nude and unadorned back to those who approached it by the usual and most important ascent, the Clivus Capitolinus. Such a state of things, in violation of all the rules which commonly regulate the disposition of public buildings, is scarcely to be imagined.

We will now revert to Becker's objection respecting the Arka Capitolina. It must be admitted that the dimensions of the temple would have allowed but little room for this area on the height of Araceli, especially as this must have contained other sinall temples and monuments, such as that of Jupiter Feretrius, \&c. Yet the Area Capitolina, we know, was often the scene not only of public meetings but even of combats. There are very striking indications that this area was not confined to the height on which the temple stood, but that it occupied part at least of the extensive surface of lower ground lying between the two summits. One indication of this is the great height of the steps leading up to the vestibule of the temple, as shown by the story related by Livy of Annius, the ambassador of the Latins: who being rebuked by Manlius and the fathers for his insolence, rushed frantically from the vestibule, and falling down the steps, was either killed or rendered insensible (viii. 6). That there was a difference in the level of the Capitol may be seen from the account given by Paterculus of Scipio Nasica's address to the people in the sedition of the Gracchi. Standing appurently on the same lofty steps,-"ex superiore parte Capitolii summis gradibus insistens" (ii. 3),Nasica incited by his eloquence the senators and knights to attack Gracchus, who was standing in the area below, with a large crowd of his adherents, and who was killed in attempting to escape down the Clivus Capitolinus. The area must have been
of considerable size to hold the catervae of Gracchas; and the same fact is shown hy several other passapes in the classics (Liv. xxv. 3, xlv. 36, \&ec.). Now all these circumstances suit much better with a temple on the NE. summit than with one on the opposite height. An area in front of the latter, bosides being out of the way for public meetings, would not have afforded sufficient space for them; nor would it have presented the lofty steps before described, nor the ready means of escupe down the clivus. These, then, are the reasons why we deem the NE. summit the more probable site of the Capitoline temple.

We have already mentioned that this famous temple was at least planned by the elder Tarquin; and according to some authors the foundation was completely laid by him (Dionys. iv. 59), and the building continued under Servius (Tac. Hist. iii. 72). However this may be, it is certain that it was not finished till the time of Tarquinius Superbus, who tasked the people to work at it (Liv. i. 56): bat the tyrant was expelled before it could be dedicated, which honour was reserved for M. Horatios Pulvillus, one of the first two consuls of the Republic (Polrb. iii. 22; Liv. ii. 8; Plat. Popl. 14). When the foundations were first laid it was necessary to exangarate the temples of other deities which stood apon the site destined for it; on which occasion Terminus and Juventas, who had altars there, alone refused to move, and it became necessary to enclose their shrines within the temple; a happy omen for the future greatness of the city! (Liv. v. 54 ; Dionys, iii. 69.) It is a well-known legend that its name of Capitolium was derived from the finding of a haman head in digging the foundation (Varr. L. L. v. § 41, Müll.; Plin. xxviii. 4, \&cc.) The image of the god, originally of clay, was made by Turanius of Fregellae, and represented him in a sitting posture. The face was painted with vermilion, and the statue was probably clothed in a tunica palmuta and toga picta, as the costume was boriowed by triumphant generals. On the acroterium of the pediment stood a quadriga of earthenware, whwe portentous swelling in the furnace was also regarded as an omen of Rome's future greatness (Plin. xxviii. 4; Plut. Popl. 13). The brothers C. \& Q. Ogulnius subsequently placed a bronze quadriga with a statue of Jupiter on the roof; but this probably did not supersede that of clay, to which so much ominous importance was attached. The same aediles also presented a bronze threshold, and consecrated some silver plate in Japiter's cella (Liv. x. 23; cf. Plaut. Trin. i. 2. 46.) By degrees the temple grew exceedingly rich. Camillus dedicated three golden paterae out of the spoils taken from the Etruscans (Liv. vi. 4), and the dictator Cincinnatus placed in the temple a statue of Jupiter Imperator, which he had carried off from Praeneste (Id. vi. 29). At length the pediment and columns became so encumbered with shields, ensigns, and other offerings that the censors M. Fulvius Nobilior and M. Aemilius Lepidus were compelled to rid the temple of these superflious ornaments (Id. xL 51).

As we have before related, the original building lasted till the jear B. C. 83, when it was burnt down in the civil wars of Sulla, according to Tacitus by design (" privata frande," Dist. iii. 72). Its restoration was undertaken by Salla, and sabsequently confided to $\mathbf{Q}$. Lutatius Catulus, not without the opposition of Caesar, who wished to obliterate the name of Catulus from the temple, and to substitute
his own. (Plut. Popl. 15; Suet. Cacs. 15; Dion Cass. xxxvii. 44 ; Cic. Verr. iv. 31, \&c.) On this occasion Sulla followed the Roman fashion of despoiling Greece of ber works of art, and adorned the temple with columns taken from that of the Olympian Zeas at Athens. (Plin. xxxvi. 5.) After its dostrection by the Vitallians, Vespasinn restored it as soon as possible, but still on the original plan, the haruspicee allowing no alteration except a slight increase of its height. (Tac. Hist. iv. 53; Suet.

Vesp. 8; Dion Cnes. Irvi. 10, \& c.) The new building, however, stood but for a very short period. It was again destroyed soon after Vespasian's death in a great fire which particularly desolated the 9th Region, and was rebuilt by Domitian with a splendour hitherto nnequalled. (Suet. Dom. 15; Dion Cass. Irvi. 24.) Nothing further is accurately known of its history ; bat Domitian's structure seems to have lasted till a very late period of the Empire.

TEMPLE OF JUPITER CAPITOLINUS RESTORED.

The Aree Capitolina, as we have already seen, was frequently used for meetings or contiones; but besides theso, regular comitia were frequently holden
 36 ; Plut. Paml Aom. 30 ; App. B. C. i. 15, se.) Here stood the Curia Calabra, in which on the Calends the pontifices declared whether the Nones would fall on the fifth or the seventh day of the month. (Varr. L. L. vi. § 27, Müll.; Macrob. Sat. i. 15.) Here also was a Casa Romuli, of which there were two, the other being in the 10th Region on the Palatine; though Becker (Handb. p. 401 and note) denies the existence of the former in face of the express testimony of Macrobius ( $l$ c.) Seneca (Controv. 9) ; Vitruvius (ii. 1) ; Martial (viii. 80) ; Conon (Narrat. 48), sce. (v. Preller in Schneidewin's Philologus, i. p. 83). It seems to have been a little hut or cottage, thatched with straw, commemorative of the lowly and pastoral life of the founder of Rome. The area had also rootra, which aro mentioned by Cicero (ad Brut. 3).

Besides these, there were several temples and moella on the NE. summit. Among them was the emall temple of Jupitire Feretrius, one of the moot ancient in Rome, in which spolia opima were dedicated first by Romulus, then by Cossus, and lastly by Marcellus (Liv. i. 10; Plat. Marcell. 8 ; Dionys. ii. 34, \&ce.) The last writer, in whose time only the foundations remained, gives its dimensions at 10 feet by 5. It appears, however, to have been subsequently restored by Augustus. (Liv. iv. 20; Mom. Ancyr.) The temple of Fides, which stood close to the great temple, was also very ancient, having been built by Numa, and afterwards restored by M. Aemilins Scaurus. (Liv. i. 21 ; Cic. N. D. ii. 23, Off. iii. 29, \&cc.) It was roomy enough for assemblies of the senate. (Val. Max. iii. $2 . \S 17$; App. B. C. i. 16.) The two small temples of Merss and of Venus Reyciena stood close together, separated ouly by a
trench. They had both been rowed after the battle at the Trasimene lake and were consecrated two jears afterwards by Q. Fabius Maximus and T. Otacilins Crassus. (Liv. xxii. 10, xxiii. 51 ; Cic. N. D. ii. 23.) A temple of Verus Capitolina and Vienos Victrix are also mentioned, but it is not clear whether they were separate edifices. (Suet. Cal. 7, Galb. 18; Fast. A mit. VIII. Id. Oct.) We also hear of two temples of Juptrer (Liv. xxxp. 41), and a temple of Ors (xxix. 22). It by no means follows, however, that all these temples were on the Capitol, properly so called, and some of them might have been on the other summit, Capitolium being used generally as the name of the hill. This seems to have been the case with the temple of Fortune, respecting which we have already cited an ancient inscription when discussing the site of the temples of Concord and Jupiter Tonans. It is perhaps the temple of Fortuna Primigenia mentioned by Plutarch (Fort. Rom. 10) as having been boilt by Servias on the Capitoline, and alluded to apparently by Clemens. (Protrept. iv. 51. p. 15. Sylb.) The temple of Honos and Virtus, built by C. Marius, certainly could not have been on the northern eminence, since we learn from Festus (p. 34, Mill.) that he was compelled to build it low lest it should interfere with the prospect of the augurs, and he should thus be ordered to demolish it. Indeed Propertius (iv. 11. 45) mentions it as boing on the Tarpaian rock, or eouthern summit:-

## "Foedaque Tarpeio conopia tendere saxo Jura dare et statuas inter et arma Mari."

Whence we discover another indication that the anguraculum could not possibly have been on the NE. beight ; for in that case, with the huge temple of Jupiter before it, there would have been little cause to quarrel with this bagatelle erected by Mnrins. It must have stood an a lower point of the 8 D
hill than the anguraculum, and probably near its declivity. The building of it by Marins is testified by Vitruvius (iii. 2, 5), and from an inscription (Orelli, 543) it appears to have been erected out of the spoils of the Cinibric and Teutonic war. We learn from Cicero that this was the temple in which the first senatus consultum was made decreeing his recall. (Sest. 54, Planc. 32, de Div. i. 28.)

We have already had occasion to allude to the temple erected by Augustus to Jupiter Tonans. Like that of Fortune it must have stood on the SW. height and near the top of the ascent by the Clivus, as appears from the following story. Augustus dreamt that the Capitoline Jove appeared to him and complained that the new temple seduced away his worshippers; to which having answered that the Jupiter Tonans had been merely placed there as his janitor or porter, he caused some bells to be hang on the pediment of the latter temple in token of its janitorial character. (Suet. Aug. 91.) That the same emperor also erected a temple to Mars Ultor on the Capitoline, besides that in his forum, seems very doubtful, and is testified only by Dion Cassius (lv. 10). Domitian, to commemorate his preservation during the contest with the Vitellians, dedicated a sacellum to Jupiter Conservator, or the Preserver, in the Velabram, on the site of the house of the aeditaus, or sacristan, in which he had taken refuge; and afterwards, when he had obtained the purple, a large temple to Jupiter Custos on the Capitoline, in which he was represented in the bosom of the god. (Tac. H. iii. 74 ; Suet. Dom. 5.) We also hear of a temple of Beneficencr (Ejepyeola) erected by M. Aurelius. (Dion, lxai. 34.)

But one of the most important temples on the SW. summit or Are was that of Juno Moneta, erected, as we have said, in pursuance of a vow made by Camillus on the spot where the house of M. Manlius Capitolinus had stood. (Liv. vii. 28.) The name of Moneta, however, seems to have been conferred upon the goddess some time after the dedication of the temple, since it was occasioned by a voice heard from it after an earthquake, advising (monens) that expiation should be made with a pregnant sow. (Cic. de Div. i.45.) The temple was erected in B. c. \$45. The Roman mint was subseauently established in it. (Liv. vi. 20; cf. Suidas, Movŋ̂ra) It was rebuilt B. c. 173. (Liv. xlii. 7.) Near it, as we have before endeavoured to establish, must be placed the temple of Concurd erected by Camillus and restored by Tiberius; as well as the other smaller temple to the same deity, of no great renown, dedicated during the Second Punic War, B. c. 217. (Liv. xxii. 33.)

Such were the principal temples which occupied the summit of the Capitoline hill. But there were also other smaller temples, besides a multitude of statues, sacella, monuments, and offerings. Among these was the temple of Vejorts, which stood in the place called "inter duos lucos" between the Capitol and the Tarpeian height. An ara Jovis Pistoris and aedes Veneris Calivae must also be reckoned amung them. (Ovid. F. vi. 387 ; Lactant. i. 20.) Among the statues may be mentioned those of the Roman Kings in the temple of Fides (App. B. C. i. 16 ; Dion, xliii.45), and on the hill the two colossal statues of Apollo and Jupiteli. The former of these, which was 30 cubits high, was brought by M. Lucullus from Apollonia in Pontus. The Jupiter was made Ly Sp. Carvilius out of the armour and helmets of the conaquered Samuites, and was of such a size that
it could be seen from the temple of Jupiter Latiaris on the Alban Mount. (Plin. xxxiv. 18.) It would be useless to run through the whole list of objects that might be made out. It will suffice to say that the area Capitolina was so crowded with the statues of illustrious men that Augustus was compelled to remove many of them into the Campus Martius. (Suet. Cal. 34.)

We know only of one profane building on the summit of the Capitoline hill-the Tabilarium, or record office. We cannot tell the exact site of the original one; but it could not have stood far from the Capitoline temple, since it appears to have been burnt down together with the latter daring the civil wars of Sulla. Polybius (iii. 26) mentions the earlier one, and its burning, alluded to by Cicero (N. D. iii. 30, pro Rabir. Perd. 3). seems to have been effected by a private hand, like that of the Capitol itself. (Tac. Hist. iii. 72.) When rebuilt by Q. Lutatius Catulus it occupied a large part of the eastern side of the depression between the two summits of the Capitoline, behind the temple of Concord, and much of it still exists under the Palazzo Senatorio. In the time of Poggio it was converted into a salt warehouse, but the inscription recording that it was built by Catulus, at his own expense (de suo) was still legible, though nearly eaten away by the saline moisture. (De Variet. Fort. lib. i. p. 8.) This inscription, which was extant in the time of Nardini, is also given by him (Rom. Ant. ii. p. 300) and by Gruter (clxx. 6; cf. Orell. 31), with slight variations, and shows that the edifice, as rebuilt by Catulus, must have lasted till the latest period of the Empire. It is often called aerarium in Latid authors. (Liv. iii. 69 \&c.)

AIRCH OF TABUIARIUM.
We shall now proceed to consider some of the most remarkable spots on the hill and its declivities. And first of the Asylum. Becker (Handb. p. 38i) assumes that it occupied the whole depression between the two summits, and that this space, which by modern topographers has been called by the unclassical name of Intermontivem, was called "inter duos lucos." But here his authorities do not bear him out. Whether the whole of this space formed the original asylum of Romulus, it is impossible to say; but it is quite certain that this was not the asylum of later times. It would appear from the description of Dionysius (ii. 15) that in its original state ( $\boldsymbol{\eta V}_{\nu} \tau \delta \tau \epsilon, \kappa . \tau . \lambda$.) the grove may have extended from one summit to the other; but it does not appear that it uccupied the whole spece. It was convenient for Becker to assume this, on account of his interpretation of the passage in Tacitus respecting the
assult of the Vitellians, where he makes them storm the SW. height from the grove of the asylum, which he places where the steps now lead up to the Palazzo de' Conservatori. But, first, it is impossible to suppose that in the time of Vitellins the whole of this large area was a grove. Such an account is inconsistent with the buildings which we know to have been erected on it, as the Tabularium, and also with the probable assumption which we have ventured to propose, that a considerable part of it was occupied by the Area Capitolina. But, secondly, the account of Tacitus, as we have already pointed out, is quite incompatible with Becker's view. The Vitellians, being repulsed near the summit of the Clivus, retreat dovomoards, and attempt two other ascents, one of which was by the Lucus Asyli. And this agrees with what we gather from Livy's description of the place: "Locum, qui nune septus descendentibus inter duos lucos est, asylum aperit" (i. 8.) Whence we learn that the place called "inter duos lucos" contained the ancient asylum, the enclosure of which asylum was seen by those who descended the "inter duos lucos." Thirdly, the asylum must have been near the approach to it; and this, on Becker's on showing (Handb. p. 415), was under the NE. summit, namely, between the carcer and temple of Concord and behind the arch of Severus. This ascent has been erroneously called Clivus Asyli, as there was only one clivus on the Capitoline hill. But it is quite impossible that an ascent on this side of the hill could have led to a Lucus Asyli where the Palazzo de' Conservatori now stands. It was near the asylum, as we have seen, that the fire broke out which destroyed the temple of Jupiter Capitolinus; and the latter, consequently, must have been on the NE. summit. With respect to the asylum, we need only
further remark, that it contained a small ternple, but to what deity it was dedicated nobody could tell

 15); and he was therefore merely called the divinity

Another disputed point is the precise situation of the Rupes Tarpeia, or that part of the summit whence criminals were hurled. The prevalent opinion among the older topographers was that it was either at that part of the hill which overhangs the Piazza Montanara, that is, at the extreme SW. point, or farther to the W., in a court in the Via di Tor de' Specchi, where a precipitous cliff, sufficiently high to cause death by a fall from it, bears at present the name of Rupe Tarpea. That this was the true Tarpeian rock is still the prevalent opinion, and has been adopted by Becker. But Dureau de la Malle (Mémoire sur la Roche Tarpéienne, in the Mém. de l'Acad., 1819) has pointed out two passages in Dionysius which are totally incompatible with this site. In describing the execution of Cassius, that historian says that he was led to the precipice which overhangs the forum, and cast down from it in the view of all

 $\kappa a \tau \grave{\alpha} \tau \hat{\eta} s \pi \epsilon \in \tau \rho a s$, viii. 78 , cf. vii. 35 , seq.). Now this could not have taken place on the side of the Tor de' Specchi, which cannot be seen from the forum; and it is therefore assumed that the true Rupes Tarpeia must have been on the E. side, above $S$. Maria della Consolazione. The arguments adduced by Becker to controvert this assumption are not very convincing. He objects that the hill is much less precipitous here than on the other side. But this

SUPPOSED TARPEIAN ROCK
proves nothing with regard to its earlier state. Livy, as we have seen, records the fall of a vast mass of rock into the Vicus Jugarius. Such landslips must have been frequent in later times, and it is precisely where the rock was most precipitous that they would oceur. Thus, Flavius Blondus (Inst. Rom. ii. 58) mentions the fall in his own time of a piece as large as a house. Another objection advanced by Becker is that the criminal would have fallen into the Vicus Jugarius. This, however, is absurd ; he would only
have fallen at the back of the houses. Nothing can be inferred from modern names, as that of a church now non-extant, designated as sub Tarpeio, as we have already shown that the whole S . summit was Mons Tarpeius. Becker's attempt to explain away the words $\dot{a} \pi \dot{\alpha} \nu \tau \omega \nu \delta \delta o \omega^{\prime} \nu \tau \omega \nu$ is utterly futile. On the whole, it seems most probable that the rock was on the SE. side, not only from the express testimony of Dionysius, which it is difficult or impossible to set aside, but also from the inherent pro-
bability that among a people like the Romans a public execution would take place at a pablic and conapicucus apot. The Cemtux Gradus, or Hundred Steps, were probably near it ; but their exact situa-

## IV. The Forum and its Exvirons.

The forum, the great centre of Roman life and business, is so intimately connected with the Capitol that we are naturally led to treat of it next. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Velia begins to ascend, by the remains of the temple of Antoninus and Faustina. At the time of the battle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, however, have been neither a thick wood nor an abeolute swamp, or the battle could not have taken place. After the alliance between the Sabines and Romans this spot formed a sort of neutral ground or common meeting-place, and was improved by cutting down the wood and filling up the swampy parts with earth. We must not, indeed, look for anything like a regular forum before the reign of Tarquinins Priscus; yet some of the principal lines which marked its subsequent extent had been traced before that period. On the E. and W. these are marked by the nature of the ground; on the former by the ascent of the Velia, on the latter by the Capitoline hill. Its northern boundary was traced by the road called Sacra Via. It is only of late years, however, that these boundaries have been recoguised. Among the earlier topographers views equally arroneous and discordant

prevailed apon the subject; some of them extending the forum lengthways from the Capitoline hill to the summit of the Velia, where the arch of Titus now stands; whilst others, taking the space between the Capitoline and temple of Fanstina to have been its breadth, drew its length in a southerly direction, so as to encroach upon the Velabrum. The latter theory was adopted by Nardini, and prevailed till very recently. Piale (Del Foro Romano, Roma, 1818,1832 ) has the merit of having restored the correct general view of the forum, though his work is not always accurate in details. The proper limits of the fornm were established by excavations made between the Capitol and Colosseum in 1827, and following years, when M. Fea saw opposite to the temple of Antoninus and Fanstina, a piece of the pavement of the Sacra Via, similar to that which runs under the arch of Severus. (Bansen, Le For. Rom. explique, p. 7.) A similar piece had been previously diecovered during excavations made in the year 1742, before the church of S. Adriano, at the eastern corner of the Via Bonella, which Ficoroni (Vestigic di Roma antica, p. 75) rightly considered to belong to the Sacra Via. A line prolonged through these two pieces towards the arch of Severus will therefore give the direction of the street, and the boundary of the foram on that side. The soathern side was no lees satisfactorily determined by the excavations made in 1835, when the Basilica Julia was discovered; and in front of its
steps another paved street, enclosing the area of the forum, which was distinguishable by its being paved with slabs of the ordinary silex. This street continued eastwards, past the ruin of the three colamns or temple of Castor, as was shown by a similar piece of street pavement having been discovered in front of them From this spot it must have proceeded eastwards, past the church of Sta. Maria Liberatrice, till it met that portion of the

ROMA.
773
Sacra Via which ran in a southerly direction opposite the temple of Faustina ( $S$. Loernzo in Miranda), and formed the eastern boundary of the forum. Hence, according to the opinion now generally received, the forum presented an oblong or rather trapezoidal figure, 671 English feet in length, by 202 at its greatest breadth under the Capitol, and 117 at its eastern extremity. (Bunsen, Les Forum de Rome, p. 15.)

THE FORUM IN ITS PIEESENT STATE.

Sacra Via.- The Sacra Via was thus intimately connected with the forum; and as it was both one of the most ancient and one of the most important streets of Rome. it will demand a particular description. Its origin is lost in obscurity. According to some accounts it must have been already in existence when the battle before alluded to was fonght, since it is said to have derived its name of the "Sacred Way" from the treaty concluded upon it between Romulus and Tatius. (Dionys. ii. 46; Festus, p. 290, Müll.) This, however, seems highly improbable; not only because the road could hardly have existed at so early a period, when the site of the forum itself was in so rude a state, but also because a public highway is not altogether the place in which we should expect a treaty of peace to be concluded. The name of the comitium has also been derived, perhaps with no greater probability, from the same event. It is more likely that the road took its origin at a rather later period, when the Sabine and Roman cities had become consolidated. Its name of Sacra Via seems to have been derived from the sacred purposes for which it was used. Thus we learn
from Varro (L. L. § 47, Müll.) that it began at the sacellum of the goddess Strenia, in the Carinae; that it proceeded thence as far as the arx, or citadel on the Capitoline hill; and that certain sacred offerings, namely, the white sheep or lamb (ovis idulis), which was sacrificed every ides to Jove (Ovid, $F$. i. 56; Macrob. S. i. 15; Paul. Diac. p. 104, Müll.), were borne along it monthly to the arx. It was also the road by which the augurs descended from the arx when, after taking the auguries, they proceeded to inaugurate anything in the city below. It likewise appears that Titus Tatius instituted the custom that on every new year's day the augurs should bring him presents of verbenae from the grove of Strenia, or Strenua, to his dwelling on the arx (" ab exortu poene urbis Martiae Streniarum usus adolevit, anctoritate regis Tatii, qui verbenas felicis arboris ex luco Strenuae anni novi auspicia primus accepit," Symm. Epist. x. 35). This custom seems to have been retained in later times in that known as the angurium salutis. (Cic. Leg. ii. 8; Tac. Ann. xii. 23; Lucian, Pseudol. 8.) Hence perhaps the appellation of 'sacra;" though the
whole extent of road was called Sacra Via only in sacerdotal language, between which and the common usage we have already had occasion to note a diversity when giving an account of the Servian gates. In common parlance only that portion of the ruad was called Sacra Via which formed the ascent of the Velia, from the forum to its summit ("Hujus Sacrae Viae pars haec sola vulgo nota quae est a furo eunti primore clivo," Varr, l. c.). Hence by the poets it is sometimes called "Sacer Clivus:" "Inde sacro veneranda petes Palatia clivo." (Jlart. i. 70.5); and 一
" - quandoque trahet feroces
Per sacrum clivum,imerita decorus
Fronde, Sicambros."
(Hor. Od. iv. 2. 34.)
compared with-

## "Intactus aut Britannus at descenderet

 Sacra catenatus via." (Id. Epod. vii. 7.)(Comp. Anbbrosch, Studien und Andewt. p. 78, seq.) The origin of the vulgar opinion is explained by Featus in the following passage: "Itaque ne eatenus quidem, ut vulgus opinatur, sacra appellanda est, a regia ad domum regis sacriticuli; ced etiam a regis domo ad sacellum Streniae, et rursus a regia usque in arcem" (p. 290, Miull.). Whence it appears that only the part which lay between the Recia, or house of the pontifex maximus, and that of the rex sacrificulus, was commonly regarded, and probably for that very reason, as "sacra." This passage, however, though it shows plainly enough that there must have been a space between these two residences, has caused some embarrassment on account of a passage in Dion Cassius (liv. 27), in which he says that Augustus presented the house of the rex
 because it adjoined their residence ( $\delta \mu \delta$ toroxos $\forall \nu)$; and as we know from Pliny (Ep. vii. 19) that the restals dwelt close to the temple, it seems impossible, if Dion is right, that there should have been a street lying between the two places mentioned. But the matter is plain enough; though Becker (de Mfuris, pp. 30-35, Handb. pp. 226237) wastes several pages in most far-fetched reasonings in order to arrive at a conclusion which already lies before us in a reading of the text of Dion for which there is actually MS, authority. Augustus was chosen pontifex maximus (àpxifpéús), not rex sacrificulus, as Dion himself says in this passage. But the two offices were perfectly distinct ("Regem sacrificulum creant. Id sacerdotium pontifici subjecere," Liv. ii. 2). Augustus would harilly make a present of a house which did not belong to him; and therefore in Dion we must
 for lepan: Dion thus, in order perhaps to convey a lively notion of the office to his Greek readers, designating the Roman pontifex maximus as "king of the priests," instead of using the ordinary Greek term dexiepeús. The matter therefure lies thus. Varro says that in ordiuary life only the clivas, or ascent from the formm to the Summa Sacra Via, obtained the name of Sacra Via. Festus repeats the same thing in a different manner; designating the space so called as lying between the Regia, or house of the pontifex maximus, and that of the rex sacrificulus. Whence it follows that the latter must have beeri on the Summa Nacra Via. It can scarcely be doubted that before the time of Augustus
the Regia was the residence of the pontifex maximus. The building appears to have existed till a late period of the Empire. It is mentioned by the younger Pliny (Ep. iv. 11) and by Plutarch ( $Q R$. 97, Rom. 18) as extant in their time, and also probably by Herodian (i. 14) in his description of the burning of the temple of Peace under Commodus. After the expulsion of the kings, the rex sacrificulus, who succeeded to their sacerdotal prerogatives, was probably presented with one of the royal residences, of which there were several in the neighbourhood of the Summa Sacra Via; that being the spot where Ancus Marcius, Tarquinius Priscas, and Tarquinius Superbus had dwelt. (Liv. i. 41 ; Solin. i. 23, 24 ; Plin. xxxiv. 13.) We cannot tell the exact direction in which the Sacra Via traversed the valley of the Colosseum and ascended to the arch of Titus, nor by what name this part of the road was commonly called in the language of tho people; but it probably kept along the base of the Velia. At its highest point, or Summa Sacra Via, and perhaps on the site afterwards occupied by the temple of Venus and Rome, there seems to have been anciently a market for the sale of fruit, and also probably of nick-nacks and toys. "Summa Sacra Via, ubi poma veneunt." (Varr. R. R. i. 2.) Hence Ovid (A. A. ii. 265.) :-
"Rure suburbano poteris tibi dicere missa Illa, vel in Sacra sint licet emta Via."
Whilst the nick-nacks are thus mentioned by Propertius (iii. 17.11.): 一
"Et modo pavonis candre flabella superbae Et manibus dura frigus habere pila,
Et cupit iratum talos me poscere eburnos Quaeque nitent Sacra vilia dona Via."
The direction of the Sacra Via is indicated by Horace's description of his stroll: "Ibam forte Via Sacra," Sc. (S. i. 9.) He is going down it towards the forum, having prubably come from the villa of Maecenas, on the Esquiline, when he is interrnpted by the eternal bore whom he has pilloried. The direction of his walk is indicated by his nnavailing excuse that be is going to risit a sick friend over the Tiber ( v .17 ) and by the arrival at the temple of Vesta (v. 35); the Sucra Via haring been thus quitted and the forum left on the right. The two extremities of the street, as commonly known, are indicated in the following passage of Cicero: "Huc tamen miror, cur tu huic potissimum irascere. qui longissime a to abfuit. Equidem, si quando ut tit, jactor in turba, non illum accus, qui est in Summa Sacra Via, cum ego ad Fabium Fornicem impellor, sed eum qui in me ipsum incurrit atque incidit" (p. Planc. 7). The Fornix Fabius, as it will be seen hereafter, stood at the eastern extremity of the forum; and Cicero has made the most of his illustration by taking the whole length of the street. Beyond this point, where it traversed the N. side of the forum, we are at a loss to tell what its vulgar appelliation may have been; and if we venture to suggest that it may have been called "Janus," this is merely a conjecture from Horace (Epist. i. 1. 54), where "haec Janus summus ab imo" seems to suit better with a street - just as we should say, " all Lombard street" - than with two Jani, as is commonly interpreted, or than with a building containing several floors let out in counting houses. (Cf. SuLh ii. 3. 18.) This view is supported by the Scholia on the first of these passages, where it is said:
". Janus autem hic platea dicitur, ubi mercatores et freneratores sortis causa convenire solebant." In fact it was the Roman Change. The ascent from the forum to the summit of the Capituline hill, where the Sacra Via terminated, was, we know, called Clivas Capitolinus.

It only remains to notice Becker's dictum (de Muris, p. 23) that the name of this street should always be written Sacra Via, and not in reversed order Via Sacra. To the exceptions which he noted there himself, he adds some more in the Handbuch (p. 219, note), and another from Seneca (Controv. xxvii. p. 299, Bip.) in his Addenda; and Urlichs (Rom. Topogr. p. 8) increases the list. On the whole, it would seem that though Sacra Via is the more usual expression, the other cannot be regarded as unclassical.

Vicus Jugarius - Of the name of the street which man along the south side of the forum we are utterly ignorant; but from it issued two streets, which were among the most busy, and best known, in Rome. These were the Vicus Jugarius and Vicus Tuscus. We have before had occasion to mention that the former ran close under the Capitoline hill, from the forum to the Porta Carmentalis. It was thought to derive its name from an altar which stood in it to Juno Juga, the presiding deity of wedlock. (Paul. Diac. p. 104, Müll.) It does not appear to have contained any other sacred places in ancient times; but Augostus dedicated in it altars to Ceres and Ope Augusta. (Fast. Amit. IV. Id. Aug.) At the top of the street, where it entered the forum, was the fountain called Lacus Servilius, which obtained a sad notoriety during the proscriptions of Sulla, as it was bere that the heads of the murdered senators were expoeed. (Cic. Rosc. Am. 32; Senec. Prov. 3.) M. Agrippa adorned it with the effigy of a hydra (Festus, p. 290, Müll.). Between the Vicus Jugarius and Capitoline hill, and close to the foot of the latter, lay the Aequimaclium (Liv. xxxviii. 28), said to have derived its name from occupying the site of the house of the demagogue, Sp. Maelius, which had been razed (Varr. L.L. v. 157, Mull.; Liv. iv. 16). It serred as a market-place, especially for the sale of lambs, which were in great request for sacrifices, and probably corresponded with the modern Via del Monte Tarpeo. (Cic. Div. ii. 17.)

Vicus Tuscus.-In the imperial times the Vicus Jugarius was bounded at its eastern extremity by the Basilica Julia; and on the further side of this building. again, lay the Vicus Tuscus. According to some anthorities this street was founded in B. c. 507, being assigned to such of the Etruscans in the vanquished host of Aruns as had fled to Rome, and felt a desire to settle there (Liv. ii. 15; Dionys. v. 36); but we have before related, on the authority of Varro and Tacitus, that it was founded in the reign of Romulus. These conflicting statements may, perhaps, be reconciled, by considering the later settlement as a kind of second or subsidiary one. However this may be, it is with the topographical facts that we are here more particularly concerned, about which Dionysius communicates some interesting particulars. He describes the ground assigned to the Tuscans as a sort of hollow or gorge situated between the Palatine and Capitoline hills; and in length nearly 4 stadia, or half a Roman mile, from the forum to the Circus Maximus (v. 36). We must presume that this measurement included all the windings of the street; and even then it would
seem rather exaggerated, as the whole NW. side of the Palatine hill does not exceed about 2 stadia. We must conclude that it was continued through the Velabrum to the circus. Its length as Canina observes (For. Rom. pt. i. p. 67) is a proof that the forum must have extended from NW. to SE., and not from NE. to SW.; as in the latter case, the space for the street, already too short, would have been considerably cortailed. This street, probably from the habits of its primitive colonists, became the abode of fishmongers, fruiterers, bird-fanciers, silkmercers, and perfumers, and enjoyed but an indifferent reputation ("Tusci turba impia vici," Hor. S. ii. 3. 29.) It was here, however, that the best silks in Rome were to be procured (" Nec nisi prima velit de Tusco serica vico," Mart. xi. 27. 11). In fact, it seems to have been the great shopping street of Rome; and the Roman gentlemen, whose ladies, perhaps, sometimes induced them to spend more than what was agreeable there, vented their ill humour by abusing the tradesmen. According to the scholiast on the passage of Horace just cited, the street was also called Vicus Turarius. This appellation was doubtless derived from the frarkincense and perfumes sold in it, whence the allu:ion in Horace (Ep. i. 1. 267):
" Ne capsa porrectus aperta
Deferar in vicum vendentem tus et odores, Et piper, et quicquid chartis amicitur ineptis."
Being the road from the forum to the circus and Aventine, it was much used for festal prucessions. Thus it was the route of the Pompa Circensis, which proceeded from the Capitol over the forum, and by the Vicus Tuscus and Velabrum to the circus. (Dionys. vii. 72.) We have seen that the procession of the virgins passed through it from the temple of Apollo outside the Porta Carmentalis to that of Juno Regina on the Aventine. Yet notwithstanding these important and sacred uses, it is one of the charges brought by Cicero against Verres that he had cansed it to be paved so villanously that he himself would not have ventured to ride over it. (Verr. i. 59.) We see from this passage that a statue of Vertumnus, the national Etruscan deity, stood at the end of the street next the forum. Becker (Handb. p. 308) places him at the other extremity near the Velabrum. But all the evidence runs the other way; and the lines of Propertius (iv. 2. 5), who puts the following words into the god's month, are alone sufficient to decide the matter (Class. Mus. vol. iv. p. 444):-
" Nec me tura juvant, nec templo laetor eburno Romanum satis est posse videre forum."
Comitiwm.-Having thus described the strects which either encircled the forum or afforded outlets from it, we will now proceed to treat of the forum itself, and the objects situated upon and around it, and endeavour to present the reader with a picture of it as it existed under the Kings, during the Republic, and under the Empire. But here, as in the case of the Capitol, we are arrested in the outset by a difficult investigation. We know that a part of the forum, called the comitium, was distinguished from the rest by being appropriated to more hunourable uses; but what part of the forum it was bas been the subject of much dispute. Some, like Canina, have considered it to be a space running parallel with the forum along its whole southern extent; whilst others, like Bunsen and Becker, have thought that it formed
a section of the aree at its eastern extremity, in size about one-third of the whole forum. An argument ailranced by Becker himself ( Handb . p. 278) seems decisire against both these views; namely, that we never hear any building on the S. side of the forum spoken of as being on the comitium. Yet in spite of this just remark, he ends by adopting the theory of Bunsen, according to which the comitium began at or near the ruin of the three columns and extended to the eastern extremity of the forum: and thus both the temple of Vesta and the Regria must have stood very close to it. The two chief reasons which seem to have led him to this conclusion are, the situation of the rostra, and that of the Tribunal Praetoris. Respecting the former, we shall have occasion to speak further on. The argument drawn from the latter, which is by far the more important one, we shall examine at once. It proceeds as follows (Handb. p. 280): "The original Tribunal Praetoris was on the comitium (Liv. vi. 15, xxix. 16; Gell. 2x. 1, 11, 47 (from the XII. Tables); Varro, L. L. v. 32. p. 154; Plaut. Poen. iii. 6. 11 ; Macrob. Sat. ii. 12), which, however, is also mentioned as being merely on the foram. (Liv. xxvii. 50, xl. 2, 44.) But close to the tribunal was the Puteal Liboris or Scribonianum, and this is expressly mentioned as being near the Fornix Fabius, the Atrium Vestae, the rostra, and lastly the aedes Divi Julii (Porphyr. ad Hor. Ep. i. 19. 8: Schol. Cruq. Ib. Id. ad. Sat. ii. 6. 35; Fest. p. 333; Schol. ad Pers. Sat. iv. 49); consequently the comitium also must have been close to all these objects."
We presume that Becker's meaning in this passage is, that the first or original tribunal was on the comitium, and that it was afterwards moved into the forum. It could hardly have been both on the comitiom and forum, though Becker seems to hint at such a possibility, by saying that it is "also mentioned as being merely on the forum;" and indeed there seems to be no physical impossibility in the way, since it is evident that the tribunal at first was merely a movable chair ("dictator-stipatus ea multitudine, sella in comitio posita, viatorem ad M. Manlium misit: qui - agmine ingenti ad tribunal venit," Liv. vi. 15). But if that was his meaning, the passages he cites in proof of it do not bear him out. In the first Livy merely says that a certain letter was carried through the forum to the tribunal of the praetor, the latter of course being on the comitium ("eae literae per forum ad tribunal praetoris latae," $x x v i i .50$ ). The other two passages cited contain nothing at all relative to the subject, nor can there be any doubt that in the early times of the Republic the comitium was the usual place on which the praetor took his seat. But that the tribunal was moved from the comitium to the forum is shown by the scholiasts on Horace whom Becker quotes. Thus Porphyrio says: "Pateal autem Libonis sedes praetoris fuit prope Arcum Fabianam, dictumque quod a Libone illic primum tribunal et subsellia licata sint." Primum here is not an adjective to be joined with tribunal-i. e. "that the first or original tribunal was placed there by Libo; " bat an adverb "that the tribunal was first placed there by Libo." The former version would be nonseuse, because Libo's tribunal could not possibly have been the first. Besides the meaning is unambiguously shown by the Schol. Cruq.: "puteal Libonis; tribunal: Quod autem ait Libonis, hinc sumsit, quod is primus tribunal in foro statweril." If the authority
of these scholiasts is suspicious as to the fact of this removal, though there are no apparent grounds for suspicion, yet Becker at all events is not in a condition to invalidate their testimony. He has quoted them to prove the situation of the pateal; and if they are good for that, they are also good to prove the removal of the tribunal. Yet with great inconsistency, he tacitly assumes that the tribunal had always stood in its original place, that is, on the comitium, and by the puteal, contrary to the express evidence that the latter was on the forum. ("Puteal locus erat in foro," Sch. Cruq. ad Sat. ii. 6. 35.) Libo flourished about a century and a half before Christ. [See Dict. of Biogr. Vol. II. p. 779.] Now all the examples cited by Becker in which the tribunal is alluded to as being on the comitium, are previous to this date. The first two in note 457 might be passed over, as they relate not to the praetor but to the dictator and consuls; nevertheless, they are both anterior to the time of Libo, the first belonging to the year в. C. 382 and the second to 204. The passage from Gellius "ad praetorem in comitium," being a quotation from the XII. Tables, is of course long prior to the same period. The passage in Varro (v. § 155, Müll.), which derives the name of comitium from the practice of coming together there (coire) for the decision of suits, of course refers to the very origin of the place. A passage from Plautus can prove nothing, since he died nearly haif 2 century before the change effected by Libo. The passage alluded to in Macrobius (ii. 12) must be in the quotation from the speech of C. Titins in favour of the Lex Fannia: "Inde ad comitium vadunt, no litem suam faciant; veniunt in comitium tristes, \&cc." But the Lex Fannia was passed in B. © 164 (Macrob. ii. 13): or even if we put it four years later, in B. c. 160, still before the probable date of Libo's alteration; who appears to have been tribune in s. c. 149. Thas the argument does not merely break down, but absolutely recoils against its inventor; for if, as the Scholia Craquiana inform us, Libo moved the tribunal from the comitium to the forum, and placed it near the puteal, then it is evident that this part of the area could not have been the comitium.

The comitiam, then, being neither on the south nor the east sides of the fornm, we must try our fortune on the north and west, where it is to be hoped we shall be more successful. The only method which promises a satisfactory result is, to seek it with other objects with which we know it to have been connected. Now one of these is the Vulcanal. We learn from Festus that the comitium stood beneath the Vulcanal: "in Volcanali, quod est supra Comitium " (p. 290, Müll.). In like manner Dionysius describes the Vulcanal as standing a littie above the forum, using, of course, the latter word in a general sense for the whole area, including

 $\sigma$ ornodrt rîs ayopas (ii. 50). Where iepóy is not to be taken of a proper temple (vaós). but signities merely an area consecrated to the god, and haring probably an altar. It was a rule that a temple of Vulcan should be outside the town (Vitruv. i. 7): and thus in later times we find one in the Campus Martius (" tactam de caelo aedem in campo Vulcani," Liv. xxiv. 10). That the Vulcanal was merely an open space is manifest from its appellation of area, and from the accounts we read of ruin falling upon it (Liv. xxxix. 46, xl. 19), of buildings be.ng
erected opon it (Id. ix 46), \&c. But that it had an altar aypears from the circumstance that sacrifices of live fish taken in the Tiber were here made to Valcan, in propitiation for human souls. (Festus in Piscaturii Ludi, p. 238, Müll.) Another fact which shows it to bave been an open space, and at the same time tends to direct us to its site, is the lotus-tree which grew apon it, the roots of which are said to have penetrated as far as the forum of Caesar, which, as we shall show in its proper section, lay a little N. of the Fornm Romanum. "Verum altera lotos in Vulcanali, quod Romulus constituit ex victoria de decamis, sequaera arbi intelligitur, ut auctor est Masurius. Radices ejus in forum usque Caesaris per stationes municipiorum penetrant." (Plin. xvi. 86.) Froin which passage - whatever may be thought of the tale of the tree - we deduce these facts : that the Vulcanal existed in the time of Pliny; that it had occupied the same spot from time inmernorial; that it could not have been at any very great distance from the forum of Caessr, otherwise the routs of the tree could not possibly have reached thither. Let those consider this last circamstance who hold with Canina that the comitium was on the south side of the forum; or even with Bunsen and Becker that it was on the east. The Vulcanal must originally have occupied a considerable space, since it is represented as having served for a place of consultation between Romulus and Tatius, with their respective senates. (Dionys. ii. 50; Plut. Rom. 20.) Its extent, however, seems to have been reduced in process of time, since the Graecostasis was taken out of its area; a fact which appears from Liry mentioning the Aedes Concordiae, built by Flavias, as being "in area Vulcani" (ix. 46); whilst Pliny says that it was on the Graecostasis (" rediculam aeream (Concordiae) fecit in Graecostasi, quae tunc supra comitium erat," $x x x i i i .6$ ): whence the situation of the Vulcanal may be further deduced ; since we know that the Graecostasis adjoined the curia, and the latter, as will be shown presently, lay on the N. side of the forum. Hence the Vulcanal also must have been close to the caria and forum; whence it ran back in a N . direction towards the spot subsequently occupied by the Forum Cresaris. This site is further contirmed by the Notitia, which places the Area Vulcani, as well as the Templum Faustinae and Basilica Paulli in the 4th Regio. Preller indeed says (Regionen, p. 128), that the area cannot possibly be mentioned in its right place here, becanse it stood iminediately over the forum in the neighbourhood of the temple of Faustina, where the old Curia Hostilia stood; bat his only reason for this assertion is Becker's dictum respecting the Vulcanal at p. 286, of which we have already seen the value. The comitium, then, would occupy that part of the forum which hay immediately under the Vulcanal, or the W. part of its N. side; a situation which is confirmed by other evidence. Dionysius says that, as the jndgment-seat of Romulus, it was in the most conspicuons part of the forum (iv $\tau \bar{\varphi} \phi$ वvepwod $\alpha \tau$ rîs dyopâs, ii. 29), a description which corresponds adnirably with the site proposed. Livy (i. 36) says that the statue of Attius Navius was on the steps of the comitium on the left of the curia, whence it may be inferred that the comitium extended on both sides of the curia. Pliny (xxxiv. 11) speaking of the same statue, says that it stood before the curia, and that its basis was burnt in the same fire which consumed that building when the body of Clodius was burnt there.

Hence, we are led to suppose that the comitiun occupied a considerable part of the N . side of the forum; but its exact limits, from the want of satisfactory evidence, we are unable to define. It must have been a slightly elevated place, since we hear of its having steps; and its form was probably carvilinear, as Pliny (xxxiv. 12) speaks of the statues of Pythagoras and Alcibiades being at its horns (" in cornibus Comitii"): unless this merely alludes to the angie it may have formed at the corner of the forum. It has been sometimes erroneousily regarded as baving a roof; a mistake which seems to have arisen from a misinterpretation of a passage in Livy, in which that author says that in B. c. 208 the comitium was covered for the first time since $\mathrm{H}: \mathrm{n}$ nibal had been in Italy ("Eo anno primum, ex quo Hannibal in Italian venisset, comitium tectum esse, memoriae proditum est," $x \times v i i .36$ ). Hence, it was thought, that from this time the comitinm was covered with a permanent moof. But liale (del Foro Rom. p. 15, seq.) pointed out that in this manner there would be no sense in the words "for the first time since Hannibal was in Italy," which indicate a repeated covering. The whole context shows that the historian is alluding to a revived celebration of the Roman games, in the usual fashion; and that the covering is nothing more than the vela or canvas, which on such occasions was spread over the comitium, to shade the spertators who orcupied it from the sun. That the comitium was an open place is evident from many circumstances. Thus, the prodigious rain, which so frequently falls in the narrative of Livy, is described as wetting it (Liv. uxxiv. 45; Jul. Obseq. c. 103), and troops are represented as marching over it. It was here, also, that the famous Kuminalis Arbor grew (Tac. Ann. xiii. 58), which seems to have been transplanted thither from the Palatine by some juggle of Attius Navius, the celebrated augur (Plin. xv. 20 ; ap. Bunsen, Les Forum de Rorn. p. 43, seq.), though we can by no means accede to Bunsen's emendation of that passage.

The principal destination of the comitium was for holding the comitia curiata, and for hearing lawsuits ("Comitiain ab eo quod coibant eo, comitiis curiatis, et litium causa," Var. L. L. v. § 155, Mull.), and it must, therefore, have been capable of containing a considerable number of persons. The comitia centuriata, on the other hand, were held in the Campus Martius ; and the tributa on the forum proper. The cariata were, however, sometimes held on the Capitol before the Curia Calabra. The conitium was also originally the proper place for contiones, or addresses delivered to the assembled people. All these customs caused it to be regarded as more honourable and important than the forum, which at first was nothing inore than a mere market-place. Hence, we frequently find it spoken of as a moro distinguished place than the forum; and seats upon it for viewing the games were assigned to persons of rank. Its distinction from the forum, as a place of honour for the magistrates, is clearly marked in the following passage of Livy, describing the alarm and confusion at Rome after the defeat at Trasinene: "Romae ad primum nnntium cladis ejus cum ingenti terrore ac tumultu concursus in forwm populi est factus. Matronae vagae per vias, quae repens clades adlata, quaeve fortuna exereitus esset, obvios percontantur. Et quam frequentis contionis modo turba in comitium et curiam versa magistratus rocarel," \&c. (xxii. 7). When not uc-
cupied by the magistrates it appears to have been open to the people. Thus, the senate being assembled in the curia to hear the ambassadors of those made prisoners at the battle of Cannae, the people are represented as filling the comitiam: "Ubi is finem fecit, extemplo ab ea turbs, quae in comitio erat, clamor flebilis est sublatus, manusque ad cariam tendentes, \&c." (Id. xxii. 60.) Being the place for the contiones it of course had a suggestum, or rostra, from which speeches were delivered; but we shall have occasion to describe this and other objects on and around the comitium and forum when we arrive at them in their chronological order.

It was not till after the preceding account of the comitium had been committed to paper that the writer of it met with the easay on the comitium by Mommsen in the Amali dell' Instituto (vol. xvi.), to which reference has before been made. The writer was glad to perceive that his general view of the situation of the comitium had been anticipated, although he is unable to concar with Mommsen respecting some of the details; such as the situation of the Curia Hostilia, of the temple of Janus, of the Forum Caesaris, and some other objects. In refuting Becker's views, Mommsen has used much the same arguments, though not in such detail, as those just adduced; but he has likewise thought it worth while to refute an argument from a passage in Herodian incidentally adduced by Berker in a note ( $p$. 332). As some persons, however, may be disposed to attribute more weight to that argument than we do ourselves, we shall here quote Mommsen's refutation: "Minus etiam probat slterum, quod à Beckero, p. 332, n. 612, affertar, argumentum desumtum ex narratione Herodiani, i. 9, Severum

 subiisse Severo eumque vexisse dri $\tau \hat{\eta}$ s aropâs

 dyopâs, quod multo est simplicius. Nam ut optime quasi in foro insistere videtur qui rerum Romanarum potituras est, ita de comitio eo tempore inepte haec dicerentur; accedit quod, si ad $\tau ो \nu$ dpX加 тท̂s dyopâs omén pertineret, Severus ibi constiturus fuisset, neque in foro medio.-Nullis igitur idoneis argumentis topographi Germani comitium eam partem fori esse statuerunt quas Veliis subjacet" (p. 289).

So mach for the negative side of the question : on the positive side Mommsen adduces ( p . 299) an argument which had not occurred to the writer of the present article in proof of the position above indicated for the comitium. It is drawn from the Sacrum Cluacinse. That shrine, Mommsen argues, stood by the Tabernae Novae, that is, near the arch of Severus, as Becker has correctly shown (Hamdb. p. 321) from Livy iii. 48; but he has done wrong in rejecting the result that may be drawn from the comparison of the two legends; first, that the comitium was so called because Romulus and Tatius met upon it after the battle (p. 273); eecond, that the lomans and Sabines cleansed themselves, after laying aside their arms, at the spot where the statue of Venus Cluacina afterwards stood (Plin. xv. 18. s. 36); whence it follows that the statue was on the comitium. A fresh confirmation, Mommsen continues, may be added to this discovery
of the truth. For that the Tabernae were on the comitium, and not on the forum, as Becker supposes, is pretty clearly shown by Dionysius (rhw

 $\kappa \delta \sigma \mu 01 s$ терı $\lambda a \delta a ́ y$, iii. 67).

We are not, however, disposed to lay any great stress on this argument. We think, as we have already said, that Varro's etymology of the comitium, from the political and legal business transacted there rendering it a place of great resort, is a much more probable one; since, as the forum itself did not exist at the time when Romulus and Tatius met aftor the battle, it is at least very unlikely that any spot should afterwards have been marked out upon it commemorative of that event. It is, nevertheless, highly probable that the statue of Cluaciga stood on the comitium, bat without any reference to these traditions. We do not, however, think that the tabernse occupied the comitium. By dropd Dionysins means the whole forum, as may be inferred from $\pi \in \rho L \lambda a 6 d y$.

The Forwm under the Kings.-In the time of Romulus, then, we mast picture the foram to ourselves as a bare, open space, having upon it only the altar of Saturn at about the middlo of its western side, and the Vulcanal on its NW. side. Under Numa Pompilius it received a few improvementes Besides the little temple of Janus, which

temple of janus. (From a Coin)
did not stand far from the forum, but of which we have already had occasion to speak, when treating of the Porta Janualis in the first part of this articlo, Numa built near it his Regia, or palace, as well as the celebrated temple of Vesta. Both these objects stood very near together at the SE. extremity of the forum. The Asdes Vebtar was a round building (Festus, p. 262; Plut. Nam. 11), bat no templo in the Roman sense of the word; since it had been parposely left aninaugurated, because, being the resort of the vestal virgins, it was not deemed right that the senate should be at liberty to meet in it (Serv. Aem vii. 153). Its site may be inferred frum

temple of vesta (From a Coin.)
eeveral passages in ancient anthors. Thas we learn frum Dienssius (ii. 66) that it was in the forum, and that the temple of the Dioscuri, whose site we shall point out further on, was subsequently built close to it (Id. vi. 13 ; Mart. i. 70. 2). It is also said to have been near the lake, or fountain, of Juturna (Val. Max. i. 8. 1 ; Ov. F. i. 707.) All these circomstances indicate its site to have been near the present church of St Maria Liberatrice; where, indeed the graves of twelve vestal virgins, with inscriptions, were discovered in the 16th century. (Aldroandas, Memorie, n. 3; Lucio Fauno, Antich. di Roma, p. 206.) In all its subsequent restorations the original round form was retained, as symbolical of the earth, which Vesta represented (Ov. F. vi. 265). The temple itself did not immediately abut upon the forum, but lay somewhat back towards the Palatine; whilst the Regu, which lay in front, and a little to the E. of it, marked the boundary of the forum on that side. The latter, also called Atrium Vestae, and Atrium Regium, thoogh but a small building, was originally inhabited by Numa. (Ov. ib. 265; Plut. Num. 14, Scc.). That it lay close to the forum is shown by the account of Caesar's body being burnt before it (App. B. C. ii. 148) ; and, indeed, Servius says expressly that it lay "in radicibus Palatii finibusque Kumani fori" (ad Aex viii. 363). At the back of both the buildings must have been a sacred grove which ran towards the Palatine. It was from this grove that 2 voice was heard before the capture of the city by the Gauls, bidding the Romans repair their walls and gates. The admonition was neglectad; but this impiety was subsequently expiated by building at the spot an altar or sacellum to Aius Luquens. (Cic, INo. i. 45.)

Tullus Hostilius, after the capture of Alba Longa, adorned the form with a curia or senate house, which was called after him the Curin Hostilin, and continued almost down to the imperial times to be the most usual place for holding assemblies of the senate. (Varr. L. L. v. § 155, Müll.; Liv. i. 30.) From the same spoils he also improved the comitium: "Fecitque idem et sepsit de manubiis comitium et curiam" (Cic. Rep. ii. 17); whence we can hardly infer that be surrounded the comitium with a fence or wall, but more probably that he marked it off more distinctly from the forum by raising it higher, so as to be appruached by steps. The Curia Hostilia, which from its pre-eminence is generally called simply curia, must have adjoined the eastern side of the Vulcanal. Niebuhr (Beschr. vol. iii. p. 60) was the first who indicated that it must have stood on the $\mathbf{N}$. side of the forum, by printing out the following passage in Pliny, in which the method of observing noon from it is described:"Duodecim tabulis ortus tantum et occasus nominantur ; post aliquot annos adjectus est meridies, accenso consulum id pronuntiante, cum a curia inter rostra et graecostasim prospexisset solem." (vii. 60.) Hence, since the sun at noon could be obeerved from it, it must have faced the south. If its front, however, was parallel with the northern line of the forum, as it appears to have been, it must have looked a little to the W . of S .; since that line does not run due E., but a few degrees to the S. of E. Hence the necessity, in order to observe the true meridian, of looking between the Graecostasis and rostra. Now the Graecostasisat a period of course long after Tullus Hostilius, and when mid-day began to be observed in this
manner - was a lofty substruction on the righe or W. side of the curia; and the rostra were also an elevated object situated directly in its front. This appears from the passage in Varro just alluded to: -"Ante hanc (curiam) rostra: quojus loci id vo cabulum, quod ex hostibus capta fixa sunt rostra, Sub dextra hujus (curiae) a comitio locus sub. structus, ubi nationum subsisterent legati, qui ad senatum essent missi. Is graecostasis appellatus, a parte ut multa. Senaculum supra Graecostasim, ubi aedis Concordiae et Basilica Opimia." (L. L. v. § 155, 156.) When Varro says that the Graecostasis was sub dextra curiae, he is of course looking towards the south, so that the Graecostasis was on his right. This appears from his going on to say that the senaculum lay above the Graecostasis, and towards the temple of Concord; which, as we have had occasion to mention, was seated on the side of the Capitoline hill. It further appears from this passage that the Graecostasis was a substruction, or elevated area (locus substractus) at the side of, or adjoining the comitium (comp. Plin. xxxiii. 6); and must have projected in front of the curia. The relative situation of these objects, as here described, is further proved by Pliny's account of observing midday, with which alone it is consistent. For, as all these objects faced a little to the W. of S., it is only on the assumption that the Graecostavis lay to the W. of the curia, that the meridian sun could be observed with accuracy from any part of the latter between the Graecostasis and rowtra.

A singular theory is adranced by Mommsen respecting the situation of the Curia Howtilia, which we cannot altogether pass over in silence. He is of opinion (L c. p. 289, seq.) that it lay on the Capitoline hill, just above the temple of Concord, which he thinks was built up in frunt of it; and this he takes to be the reason why the curia was rebuilt on the forum by Sulla. His only authority for this riew is the following passage in Livy: " (Censores) et clivum Capitolinuin silice sternendum curaverunt et porticum ab aede Saturni in Capitolium ad Senaculum ac super id Curiam" (sli. 27). From these words, which are not very intelligible, Mommsen infers (p. 292) that a portico reached from the temple of Saturn to the senaculum, and thence to the curia above it, which stood on the Capitol on the spot afterwards occupied by the Tabularium (p. 292). But so many evident absurdities follow from this view, that Mommsen, had he given the subject adequate consideration, could hardly, we think, have adopted it. Had the curia stood behind the temple of Concord, the ground plan of which is still partly visible near the arch of Severus, it is quite impossible that, according to the account of Pliny, mid-day could have been observed from it between the rostra and Graecostasis, since it would have faced nearly to the east. Mommsen, indeed (p. 296), asserts the contrary, and makes the Carcer Mamertinus and arch of Titus lie almost due N. and S., as is also shown in his plan at the end of the volume. But the writer can affirm from his own observation that this is not the fact. To a person standing under the Capitol at the head of the forum, and opposite to the column of Phocas, the temple of Faustina bears due E. by the compass, and the arch of Titus a few degrees to the S . of E. To a person standing by the arch of Severus, about the assumed site of the curia, the arch of Titus would of course bear a little more $\mathbf{S}$. rtill. -Something must be allowed for variation of the
compass, but theee are trifles. The correct bearings are given in Canina's large plan and in Becker's map, and are wholly at variance with those laid down by Mommsen. Again, it is not to be imagined that Opimins would have built up his temple of Concord immediately in front of the ancient curia, thus screening it entirely from the view of the form and comitium; a state in which it must have remained for nearly half a century, according to the hypothesis of Mommsen. Another decisive refutation of Mommsen's view is that the Basilica Porcia, as we shall see further on, was situated on the forum close by the caria, whilst according to Mommsen the two buildings were separated by a considerable interval. We hold it, therefore, to be quite impossible that the curis could have stood where Mommsen places it; but at the same time we confess our inability to give a satisfactory explanation of the passage in Livy. A word, or several words, seem to have dropped out, as is the case frequently in the very same sentence, where the geps are marked in the editions with asterisks. Such a corrupt sentence, therefore, does not suffice as authority for so important a change, in the teeth of all evidence to the contrary.

We shall only further observe that the preceding passages of Varro and Pliny thus appear, when rightly interpreted, mutually to support and explain one another, and show the Graecostasis to have stood to the W. of the curia, first from its proximity to the senaculum and temple of Concord, and secondly, from the mid-day line falling between it and the rostra. That the curia was considerably raised appears from the circumstance that Tarquin the Proud nearly caused the death of Servins Tullins by hurling him down the steps in front of it, which led to the comitium. (Dionys. iv. 38 ; Liv. i. 48.) It was an inaugurated temple in order that the senate might hold their meetings in it, but not a sacred one. (Liv. i. 30; Varr. Lc.) In the reign of Tullus the forum was adorned with the trophy called Pila Horatlana, consisting of the spoils won from the Curiatii; but where it stood cannot be determined. (Dionys. iii. 22; Liv. i. 26.)

The Senaculum referred to in the preceding account appears to have been a raised and open area, adjoining the Graecostasis and curia, on which the senators were accustomed to assemble before they entered the curia in order to deliberate. Thus Varro: "Senaculum vocatum ubi senatus aut ubi seniores consisterent : dictum at Gerusia appd Graecos " (v. § 156, Müll.). Valerius Maximus gives a still more explicit account: "Senatus assiduam stationem eo loci peragebat qui hodieque Senaculum appellatur: nec exspectabat ut edicto contraheretur, sed inde citatus protinus in Curiam veniebat" (ii. 2. § 6). Festus mentions that there were three Senacula in all; namely, besides the one alluded to, another near the Porta Capena, and a third by the temple of Bellona, in the Campus Martius. But as his account is in some respects contradictory of the two preceding authorities, we shall here insert it: "Senacula tria fuisse Romae, in quibus senatus hajeri solitus sit, memoriae prodidit Nicostratus in libro qui inseribitur de senatu habendo: nnum, ubi nunc est aedis Concordiae inter Capitolium et Forum; in quo solebant magistratus I). T. cum Senioribus deliberare; alterum ad portam Capenam; tertium, citra aedem Bellonae, in quo exterarum nationum legatis, quos in urbem admittere uolehant, senatus dabatur" (p. 347, Müll.).

Here the senaculum is represented, not as a place in which the senate assembled previously to deliberation, but as one in which it actually deliberated. It is impossible, however, that this could have been so. For in that case what would have been the une of the curia? in which the senate is constantly represented as assembling, except in cases where they held their sittings in some other temple. Besides we have no accounts of the senaculum being an inaugurated place, without which it would have been unlawful for the senate to deliberate in it. Nicostratus therefore, who, from his name, seems to have been a Greek, probably confounded the senacula with the curia, and other temples in which the senate assembled; and at all events his account cannot be set against the more probable one of Varro and Valerius Maximus. There is, howerer, one part in the account of Festus, which seems to sot the matter in a different point of view. The words, "in quo solebant magistratus D.T. cam senioribus deliberare," seem to point to the senaculum not as a place where the senators deliberated among themselves, but where they conferred with the magistrates; such magistrates we may suppose as were not entitled to enter the curia. Such were the tribanes of the people, who, during the deliberations of the senate, took their seats before the closed doors of the curia; yet as they had to examine and sign the decrees of the Fathers before they became laws, we may easily imagine that it was sometimes necessary for the tribunes and senators to confer together, and these conferences may have taken place at the senaculum (" Tribunis plebis intrare curiam non licebat: ante valvas antem positis subselliis, decreta patrum attentissima cura examinabant; ut, si qua ex eis improbassent, rata esse non sinerent. Itaque veteribus senatus consultis T . litera subscribi solebat: eaqne nota significabatur, ita tribunos quoque censuisse," Val. Max. ii. 2. § 7.) In this manner the senacula would have answered two purposes; as places in which the senators met previously to assembling in the curia, and as a sort of neutral ground for conferences with the plebeian magistrates.

With regard to the precise situation of the senaculum belonging to the Curia Hostilia, we can hardly assume, with Mommsen, that it occupied the apot on which the temple of Concord was afterwards actually built; nor do the words of Varro and Festus, "Senaculum ubi aedis Concordiae"-seem to require so very rigorous an interpretation. It is sufficient if it adjoined the temple; though it is not improbable that the latter may have encroached upon some part of its area. After the temple was erected there still appears to have been a large open space in front of $i t$, part of the ancient senaculum, but which now seems to have obtained the name of "Area Concordiae." Its identity with the senmculum appears from its adjoining the Vulcanal, like the latter: "In area Vulcani et Concordiae sanguinem pluit." (Liv. xl. 19.) "In area Vulcani per biduum, in area Concordiae totidem diebus sanguinem pluit." (Jul. Obseq. 59.) The temple of Concord became a very usual place for assemblies of the senate, as appears from many passages in ancient anthors. (Cic. Phil ii. 7 ; Lampr. Alex. 6, \&cc.) From the area a flight of steps led up to the vestibule of the temple: "(Equites Romani) qui frequentissimi in gradibus Concordias steterunt." (Cic. Phil. viii. 8.) According to Macrubius the temple of Satarn also had a senaculum
("Habet aram et ante senatulum," i. 8). This must have been near the senaculum of the Curia Hostilia, but could hardly hare been the same. If Macrobius is right, then Festus is wrong in limiting the senacula to three; and it does not seem improbable that the areae near temples, where the senate was accustomed to meet, may have been called senacula.

To Ancus Marcius we can only ascribe the Carcer Mamertinus, or prison described by Livy as overhanging the forum (" media urbe, imminens foro," i. 33). It is still to be seen near the arch of Severus, under the church of $S$. Giuseppe dei Falegnami.

We have before remarked that a new architectural era began at Rome with the reign of Tarquinius Priscus; and if he had not been interrupted by wars, he would doubtless have carried out many of those grand schemes which he was destined only to project. He may almost be called the founder of the forum, since it was he who first surrounded it with private houses and shops. According to Varro (ap. Macrob. § i. 8), he also founded the Temple of Saturn on the forum at the spot where the altar stood; though, according to another account, it was begun by Tullus Hostilins. At all events, it does not seem to have been dedicated before the expulsion of the kings (Macrob. l.c.), and according to Livy (ii. 21), in the consulship of Sempronius and Minucius, B. c. 497. According to Becker (Handb. p, 312) the ruin of the three columns under the Capitol are remains of it, and this, he asserts, is a most decided certainty, which can be denied only by persons who prefer their own opinion to historical sources, or wilfully shat their eyes. It appears to us, however, judging from these very historical sources, that there is a great deal more authority for the Italian view than for Becker's; according to which the temple of Saturn is the ruin of the eight columns, at the foot of the clivus. All the writers who speak of it mention it as being at the lower part of the hill, and beneath the clivus, while the three columns are a good way up, and above the clivus. Thus Servius (Aen. ii. 115, viii. 319) says that the temple of Saturn was " ante clivum Capitolini;" and in the Origo gentis Romanae (c. 3) it is said to be "sub clivo Capitolino." In like manner Varro (L. L. v. § 42, Müll.) places it " in faucibus (montis Saturni);" and Dionysius,

 Festus (p. 322, Muill.) describes the ara as having been "in imo clivo Capitolino." Moreover, the miliarium aureum, which stood at the top of the forum (Plin. iii. 9) was under the temple of Saturn: " ad miliarium aureum, sub aedem Saturni" (Tac. $\boldsymbol{H}$. i. 27); "sub aedem Saturni, ad miliarium aureum" (Suet. Otho. c. 6.) Further, the Monumentum Ancyranum mentions the Basilica Julia as " inter aedem Castoris et aedem Saturni." Now what has Becker got to oppose to this overwhelming mass of the very best evidence? His objections are, first, that Servius (Aen. ii. 116) mentions the temple of Saturn as being " juxta Concordiae templum;" and though the eight columns are near the temple of Concord, yet they cannot, without awkwardness, be called juxta ! Secondly, the Notitia, proceeding from the Carcer Mamertinus, names the temples in the following order: Templum Concordiae et Saturni et Vespasiani et Titi. Now, as the three columns are next to the temple of Concord, it follows that they belong to the temple of Saturn. The whole force of the proof here adduced rests on the assumption that the Notitia mentions these buildings precisely in the order in which they actually occurred. But it is notorious that the authority of the Notitia in this respect cannot be at all depended on, and that objects are named in it in the most preposterous manner. We need no other witness to this fact than Becker himself, who says of this work, " Propterea cavendum est diligenter, ne, quoties plura simul templa nominantur, eodem ea ordine juncta fuisse arbitremor." (De Muris, \&ce., p. 12, note.) But thirdly, Becker proceeds: "This argument obtains greater certainty from the inscriptions collected by the Anonymous of Einsiedlen. Fortunately, the entire inscriptions of all the three temples are preserved, which may be still partly read on the ruins. They run as follows: 'Senatus populusque Romanus incendio consumptum restituit Divo Vespasiano Augusto\|. s. p. Q. r. impp. Caess. Severus et Antoninus pii felic Aug. restituerunt.|| S.P.Q.R. aedem Concordiae vetustate collapsam in meliorem faciem opere et cultu splendidiore restituerunt." Now as the whole of the first inscription, with the exception of the last three words, " Divo Vespasiano Augusto," are still to be read over the eight columns, and the letters estitver, a fragment of "restituerunt" in the second inscrip.

tabularium and temples of vespasian, saturn and comiokd.
tion, over the three columns, Becker regards the order of the Notitia as fully confirmed, and the three temples to be respectively those of Concord, Vespasian and Titus, and Saturn.

With regard to these inscriptions all are agreed that the third, as here divided, belongs to the temple of Concord; but with regard to the proper division of the first two, there is great difference of opinion. Bunsen and Becker divide them as above, but Canina (Foro Rom. p. 179) contends that the first finishes at the word "restituit," and that the words from "Divo Vespasiano" duwn to " restituerunt " form the second inscription, belonging to the temple of Vespasian and Titus. In the original codex containing the inscriptions, which is in the library of Einsiedlen, they are written consecutively, without any mark where one begins and another ends; so that the divisions in subsequent copies are merely arbitrary and without any authority. Now it may be observed that the first inscription, as divided by Canina, may still be read on the architrave of the eight columns, which it exactly fills, leaving no space for any more words. Becker attempts to evade this difficulty by the fullowing assertion: "There is no room," he says (Handb. p. 357), "for the dedication 'Divo Vespasiano,' on the front of the temple; and although it is unusual for one half of an inscription to be placed on the back, yet on this occasion the situation of the temple excuses it !" We are of opinion, then, that the whole of the words after " restituit'" down to the beginning of the inscription on the temple of Concord, belong to the temple of Vespasian, or that of which three columns still remain. Another proof that the words "Divo Vespasiano Augusto" could never have existed over the temple with the eight columns is that Pogeio (de Variet. Fort. p. 12), in whose time the building was almost entire, took it to be the temple of Concord, which he conld not have done had the dedication to Vespasian belonged to it. (Bunbury, in Class. Mfus. iv. p. 27, note.) Thus two out of Becker's three arguments break down, and all that he has to adduce against the mass of evidence, from the best classical authorities, on the other side, is a stiff and pedantic interpretation of the preposition juxta in such a writer as Servius! Thus it is Becker himself who is amenable to his own clarge of shatting his eyes against historical evidence. His attempt to separate the altar from the temple (Handb. p.313), at least in locality, is equally unfortunate.

TEMPIER OT BATURN.

The remains of the temple of Saturn, or the portico with the eight columns at the head of the forme, are in a rude and barbarous style of art, some of the columns being larger in diameter than others. Hence Canina infers that the restoration was a very late one, and probably subsequent to the removal of the seat of empire to Constantinople. Fmm the most ancien: times the temple of Saturn served as an aerarium, or state treasury, where the public money, the military ensigns, and important documents were preserved (Liv. iii. 69; Plut. Q R. 42; Macrob. i. 8; Solin. i. 12, \&c.). On account of its Grecian origin sacrifices were performed at the altar of Saturn after the Greek rite, that is, capite aperto, instead of capite velato as among the Romans (Macrob. l.c.).

Adjoining the temple of Saturn was a small cella or Akdes of Ops, which serred as a bank for the public mones. The Fasti A miternini and Capranicorrm mention it as being " ad Forum," and "in Vico Jugario," which determines its position hero (Calend. Amit. Dec.; Cal. Capran. Aqg.). It is several times alluded to by Cicero: "Pecunia ntinam ad Opis maneret" (Phil i. 7, cf. ii. 14). Before the temple stood a statue of Silvanus and a sacred fig-tree, which it was necessary to remove in в. c. 493, as its roots began to upset the statue ( P 'lin. xv. 20). Behind the temple, in a small lane or Angiportus, and about midway up the ascent of the clivus, was the Porta Stercoraria, leadirg to a place where the ordure from the temple of Vesta was deposited on the 15 th of June every year. (Varr. L. L. vi. § 32, Mïll.; Festus, p. 344.) This custom seems to have been connected with the epithet of Stercutus applied to Saturn by the Romans, as the inventor of applying manure to the fields (Macrob. Sat. i. 7.) Close to the Ara Saturni there was a Sackllum Ditis, in which wax masks were suspended during the Saturnalia. (Ib. 11.)

But the most important alteration made by Tarquinius Priscus with regard to the forum was the causing of porticoes and shops to be erected around it (Liv. i. 35; Dionys. iii. 67). This gave the forum a fixed and unalterable shape. We may wonder at the smallness of its area when we reflect that this was the great centre of politics and business for the mistress of the world. But we must recollect that its bounds were thus fixed when she herself was not yet secure against the attempts of surrounding nations. As her power and population gradually increased various means were alopted for procuring more accommodation - first, by the erection of spacious basilicae, and at last, in the imperial times, by the construction of several new fora. But at first, the structures that arose upon the forum were rather of a useful than ornamental kind; and the tabernae of Tarquin consisted of butchers' shops, schools, and other places of a like description, as we learn from the story of Virginia. These Tabernas were distinguished by the names of Veteres and Novae, whegce it seems probable that only the former were erected in the time of Tarquin. The two sides of the forum, lengthways, derived their names from them, one being called sub Veteribus, the other sub Novis. A passage in Cicero, where he compares these tabernae with the old and new Academy, enables us to determine their respective sites: "Ut ii, qui sub Novis solem non ferunt, item ille cum aestu aret, veterum, ut Maenianorum, sic Academicorum umbram secutus est" (Acad iv. 22). Hence it appears that the Novae, being exposed to the sun, must have been on the northern side of the furuin,
and the Veteres of course on the sonth side. This relative situation is also established by the accounts which we have of basilicae being built either on or near their sites, as will appear in the sequel. Their arrangement cannot be satisfactorily ascertained, but of course they could not have stood before the curia and comitium. In process of time the forum began to put on a better appearance by the conversion of the butchers' shops into those of silversmiths (" Hoc intervallo primum forensis dignitas crevit, atque ex tabernis lanienis argentariae factae," Varro in Non. p. 532, M.). No clue, however, is given to the exact date of this change. The earliest period at which we read of the argentariae is in Livy's description of the triumph of Papirius Cursor, b. c. 308 (ix. 40). When the comitia were declared it seems to have been customary for the argentarii to close their shops. (Varr. L. L. vi. § 91, Müll.) The tabernae were provided with Maeniana or balconies, which extended beyond the columns supporting the porticoes, and thus formed convenient places for beholding the games on the forum (Fertus, p. 134, Müll.; Isid. Orig. xv. 3, 11.) These Maeniana appear to have been painted with subjects. Thus Cicero: "Demonstravi digito pictum Gallum in Mariano scuto Cimbrico sub Novis " (de Or. ii. 66). Pliny mentions another picture, or rather caricature, of a Gaul sub Veteribus, and also a figure of an old shepherd with $a$ stick. The latter appears to have been considered by the Romans as a valuable work, as some of them asked a German ambassador what he valued it at ? But the barbarian, who had no taste for art, said he would not bave it as a gift, even if the man was real and alive (xxsv. 8). According to Varro, quoted by the same anthor (Ib. 37), the Maeniana sub Veteribus were painted by Serapion.
Another service which Tarquin indirectly rendered to the forum was by the construction of his cloacae, which had the effect of thoroughly draining it. It was now that the Lacus Curtius, which had formerly existed in the middle of the forum, disappeared ( ${ }^{*}$ Curtium in locum palustrem, quitum fuit in form, antequam cloacae sunt factae, secessisse," Piso ap. Varr. L. L. v. § 149, seq. Miill.) This, though not so romantic a story as the self-immolation of Curtius, is duabtless the true representation; but all the three legends connected with the subject will be found in Varro (l. c.) It was perhaps in commemoration of the drainage that the shrine or sacellum of Venus Cluacina was erected on the N. side of the forum, mear the Tabernae Novae, as appears from the story of Virginius snatching the butcher's knife from a

shrine of cluactisa. (From a Coin.)
shop close to it. (Liv. iii. 48 ; cf. Plin. xv. 36.) The site of the Lacus Curtios after its disappearance was commemorated in another manner. Having been strack with lightning, it seems to have been converted into a dry puteal, which, however, still continued to bear the name of Lacus Curtius (cf. Varr. $\overline{\text { § }}$ § 150):
${ }^{\prime}$ Cartius ille lacus, siccas qui sustinet aras, Nunc solide est tellus, sed lacus ante fuit." (Ov. Fast. vi. 397.)

Every pear the people used to throw pieces of moncy into it. a sort of angurium salutis, or new year's gift for Augustus. (Suet. Aug. 57.) Clnse to it grew a fig-tree, a vine, and an olive, which had been fortuitously planted, and were sedulously cultivated by the people; and near them was an altar, dedicated to Vulcan, which was removed at the time of the gladiatorial games given at Caesar's funeral. (I'lin. xv. 20 ; cf. Gruter, Inscr. lxi. 1, 2.)

Servius Tuilius probably carried on and compieted the works begun by his predecessor aronnd the forum, just as he finished the wall; but he does not appear to have undertaken anything original excepting the adding of a lower dungeon, called after him Tullianum, to the Mamertine prison. ("In hoo (carcere) pars quae sub terra Tullianum, iden quod additum a Tullio rege," Varr. L. L. v. § 151.) This remains to the present day, and still realises to the spectator the terrible description of Sallust (Cat. 55).

The Roman Ciceroni point out to the traveller the Scalak Gemoniak inside the Mamertine prison, where there are evident remains of an ancient staircase. But it appears from descriptions in ancient authurs that they were situated in a path leading down from the Capitol towards the prison, and that they were visible from the forum. (Dion Cass. lviii. 5; Valer. Max. vi. 9. § 13; Tac. Hist. iii. 74.) Traces of this path were discovered in the 16 th century (Lac. Fauno, Ant. di Koma, p. 32), and also not many years ago in excavating the ground by the arch of Severus.

It does not appear that any additions or improvements were made in the forum during the reign of Tarquinius Superbus.

The Porum during the Republic. - One of the earliest buildings erected near the forum in the republican times was the temple of Castor and Pollux. After the battle at lake Regillus, the Dioscuri, who had assisted the Romans in the fight, were seen refreshing themselves and their horses. all covered with dust and sweat, at the little fountain of Juturna, near the temple of Vesta. (Dionys. vi. 13 ; Val. Max. i. 8. § 1 ; Cic. N. D. ii. 2, \&c.) A temple had been vowed to those deities during the Latin War by Postumius the dictator; and the spot where this apparition had been observed was chosen for its site. It was dedicated by the son of Postumius b. c. 484. (Liv. ii. 42.) It was not a temple of the largest size; but its conspicuous situation on the formm made it one of the best known in Rome. From the same circumstance the flight of steps leading up to it served as a kind of suggestum or rostra from which to address the people in the forum; a parpose to which it seems to have been sometimes applied by Caesar. (Dion Cass. xxxviii. 6 ; cf. Cic. p. Sest. 15 ; Appian, B.C. iii. 41.) The temple served for assemblies of the senate, and for judicial business. Its importance is thus described by Cicero: "In aede Castoris, celeberrimo clarissimoque monumento, quod templum in oculis quotidianoque conspectu populi Romani est positum ; quo saepenumero senatus convocatur; quo maximarum rerum frequentissimae quotidie advocationes fiunt" (in Verr. i. 49). Though dedicated to the twin gods, the temple was commonly called only Aedes Castoris, as in the preceding passage ; whence Bibulus, the colleague of Caesar in the aedileship took occasion to compare himself to Pollux, who, thoagh he shared the temple in common with his brother, was never once named. (Suet. Caes. 10.) It was restored by

Metellus Dalmaticus (Cic. Scaur. 46, et ibi Ascon), and afterwards rebuilt by Tiberius, and dedicated in his and Drusus's name, A.d. 6. (Suet. Tib. 20; Dion Cass. 1v. 27.) Caligula connected it with his palace by breaking through the back wall, and took a foolish pleasure in exhibiting himself to be adored between the statues of the twin deities. (Suet. Cal. 22 ; Dion Cass. lix. 28.) It was restored to its former state by Claudius (Id. lx. 6). We learn from Dionysius that the Roman knights, to the number sometimes of 5000 , in commemoration of the legend respecting the foundation of the temple, made an annual procession to it from the temple of Mars, outside of the Porta Capena. On this occasion, dressed in their state attire and crowned with olive, they traversed the city and proceeded over the

COLUMNE OF THE TEMPLE OF CASTOR AND POLLUX.
forum to the temple (vi. 13). Its neighbourhood was somewhat contaminated by the offices of certain persons who trafficked in slaves of bad character, who might be found there in shoals. ("Num moleste feram si mihi non reddiderit nomen aliquis ex his, qui ad Castoris negotiantur, nequan mancipia ementes vendentesque, quorum tabernae pessimorum servorum turba refertae sunt," Senec. de Sapient. 13; cf. Plant. Curc. iv. 1. 20.) The three elegant columns near the forum, under the Palatine, are most probably remains of this temple. We have seen in the preceding account that it stood close to the forum, as well as to the temple of Vesta, a position which precisely agrees with that of the three columns. None of the other various appropriations of this ruin will bear examination. Poggio (de Var. Fort. p. 22) absurdly considered these columns to be remains of Caligula's bridge. By the earlier Italian topographers they were regarded as belonging to the temple of Jupiter Stator; but it has been seen that this must have stood a good deal higher up on the Velia. Nardini thought they were remains of the comitium, and was followed by Nibby (Foro Rom. p. 60) and Burgess (Antiq. of Rome, i. p. 366). We have shown that the comitium was not at this side of the forum. Canina takes them to have belonged to the Curia Julia (Foro Rom. parte i. p. 132), which, however, as will appear in its proper place, could not have stood here. Bunsen (Les Forum de Rome, p. 58) identifies them with a temple of Minerva, which, as he himself observes (p. 59), is a "dénomination entièrement nouvelle," and indeed, though new, not true. It arises from his confounding the Chalcidicum mentioned in the Monumentum Ancyranum with the Atrium Minervae mentioned by the Notitia in the 8th Region. But we have already observed that the curia and Chalcidium, which adjoined it, would be quite misplaced here. The Curiosum, indeed, under the same Region, mentions besides the Atrium Minervae a Templum Castorum et Minervae, but this does not appear in the Notitio. Bunsen was more correct in his previous adoption of the opinion of Fea, that the columns belonged to the temple of Castor. (Bullettino dell' Inst. 1835; cf. Bunbury in Class. Mus. iv. p. 19.)

The capture of the city by the Gauls, в. c. 390, which, as we have before said, inflicted so much injury that the Romans entertained serious thoughts of migrating to Veii, must of course have occasioned considerable damage in the vicinity of the forum. The Curia Hostilia, however, mast have escaped, since Livy represents the senate as debating in it respecting this very matter (v. 5) Such shops and private houses as had been destroyed were probably restored in the fashion in which they had previously existed. It was now that the little temple to Aius Loquens, or Locutius, to which we have before alluded, was erected on the Nova Via, not far from the temple of Vesta (Ib. 50). From this period the forum must have remained without any important alterations down to the time of $\mathbf{M}$. Porcius Cato, when basilicae first began to be erected. During this interval all that was done was to adorn it with statues and other ornaments, but no building was erected upon it; for the small ex voto temple to Concord, which appears to have been made of bronze, erected on the Vulcanal by the aedile C. Flavius, B. c. 303 (Id. ix. 46), can hardly come under that denomination. It was probably also during this period that the Graecostasis,
or elevated area, which served as a waiting-place for foreign ambassadors before they were admitted to an audience of the senate, was constructed on the Vulcanal close to the curia, as before described. The adornment of the suggestum or oratorical platform on the comitium with the beaks of the ships taken from the Antiates, forms, from the connection of this celebrated object with the history of republican Rome, and the change of name which it underwent on the occasion, a sort of epoch in the history of the forum. This occurred B. c. 337. (Plin. xxxiv. 11.) The Rostra at this time stood, as we have said, on the comitium before the curia - a position which they continued to occupy even after the time that new ones were erected by Julins Caesar. (Dion Cass. xliii. 49 ; Ascon. ad Cic. Milon. 5.) The rostra were a templum, or place consecrated by anguries (" Rostrisque earum (navium) suggestum in foro extructum, adornari placuit: Rostraque id templum appellatum," Liv. viii. 14 ; comp. Cic. in Vatin. 10.) They are distinguished by Dion Cassius (lvi. 34) from those erected by Caesar, by the epithet of $\beta \hat{\eta} \mu a \quad \delta \eta \mu \eta \gamma o \rho \kappa \kappa \delta \nu$, and by Suetonius by that of vetera. (Suet. Aug. 100.) It may be inferred from a passage in a letter of Fronto's to the emperor Antoninus, that the rostra were not raised to any very great height above the level of the comitium and forum ("Nec tantulo superiore, quanto rostra foro et comitio excelsiora ; sed altiores antemnae sunt prora vel potius carina," lib. i. ep. 2). When speaking from the rostra it was usual in the more ancient times for the orator to turn towards the comitium and curia,-a custom first neglected by C. Licinius Crassus in the consulship of Q. Maximus Scipio and L. Mancinus, who turned towards the forum and addressed himself to the people (Cic. Am. 25); though, according to Plutarch (Gracch. 5), this innovation was introduced by C. Gracchus.

## rostra. (From a Coin.)

The erecting of columns in honour of military achievements came very early into use at Rome, and seems to have preceded the triumphal arch. The first monument of this sort appears to have been the column on the forum called the Columna Maenia, commemorative of the victory gained by C. Maenius over the Latins, B. c. 338 . (Liv. viii. 13.) Livy, indeed, in the passage cited says that the monument was an equestrian statue; whilst Pliny on the other hand (xxxiv. 11) states that it was a column, which is also mentioned by Cicero. (Sest. 58.) Niebuhr would reconcile both accounts, by assuming that the statue was on a colamn. (Hist. vol. iii. p. 145.) Pliny in another place (vii. 60) says that the column afforded the means of determining the last hour of the day ("A columna Maenia ad carcerem inclinato sidere supremam pronuntiabat (accensus)"); but it is very difficult to see how a column standing on the forum could vOL. II.
have thrown a shadow towards the carcer in the evening.

Another celebrated monument of the same kind was the Duilian column, also called Columna Rostrata, from its having the beaks of ships sculptured upon it. It was erected in honour of C. Duilins, who gained a great naval victory over the Carthaginians, B. c. 260. According to Servius (Georg. iii. v. 29) there were two of these columns, one on or near the rostra, the other in front of the circus. Pliny, indeed (xxxiv. 11), and Quintilian (Inst. i. 7) speak of it as "in foro;" but forum is a generic name, including the comitium as a part, and therefore, as used by these authors, does not invalidate the more precise designation of Servius. The basis of this column was found at no great distance from the arch of Severus (Ciacconio, Columnae Rostratae Inscrip. Explicatio, p. 3, ap. Canina, Foro Rom. p. 301, note), a fact which confirms the position which we have assigned to tho comitium and curia. The inscription in a fragmentary state is still preserved in the Palazzo de' Conservatori.

## COLUMNA DUILLA.

On the forum in front of the rostra stood the statue of Marsyas with uplifted hand, the emblem of civic liberty. (Serv. ad Aen. iv. 58; cf. Macrob. Sat. iii. 12.) Here was the great resort of the causidici, and also of the Roman courtesans. Hence Martial (ii. 64. 8): -

## " Ipse potest fieri Marsya causidicus."

Horace (Sat. i. 6. 120) has converted the pointed finger of the Satyr into a sign of scorn and derision against an obnoxious individual :-
"-_ obeundus Marsya, qui se

Vultum ferre negat Noviorum posse minoris."
It was here that Julia, the daughter of Augustus, held her infamous orgies, in company with the 3 E
vilest of the Roman prostitutes. (Senec. Ben. vi. 32 ; Plin. xxi. 6.) The account given by Servius of this statue has been the subject of much discussion, into which the limits of this article will not permit us to enter. The whole question has been exhausted by Creuzer. (Stud. ii. p. 282, seq.; cf. Savigny, Gesch. des Röm. Rechts, i. 52.)

Near the rostra were also the statues of the Thres Sibyls (Plin. xxxiv. 11), which are apparently the same as the three Muipal or Fates, mentioned by Procopius. (B. Goth. i. 25.) These also were at the head of the forum, towards the temple of Janus, a position which points to the same result as the Duilian column with respect to the situation of the comitiam.

Livy's description of a great fire which broke out about the forum B. c. 211 affords some topographical particulars: "Interrupit hos sermones nocte, quae pridic Quinquatrus fuit, pluribus simul locis circa forum incendium ortum. Eodem tempore septem Tabernae, quae postea quinque, et argentariae, quae nunc Novae appellantur, arsere. Comprehensa postea privata aedificia, neque enim tum basilicae erant: comprehensae Lautumiae, forumque piscatorium, et atrium regium. Aedis Vestae vix defensa est" (xxvi. 27). As the fire, wilfully occasioned, broke out in several places, and as the Curia Hostilia does not seem to have been endangered, we may perhaps conclude that the Septem Tabernae here mentioned were on the S. side of the forum. The argentariae afterwards called Novae were undoubtedly on the N. side, and, for the reason just given, they perhaps lay to the E. of the curia, as the fire seems to have spread to the eastward. It was on the $\mathbf{N}$. side that the greatest damage was done, as the fire here spread to the Lautumiae and Forum Piscatorium. The Septen Tabernae appear to have been the property of the state, as they were rebuilt by the censors at the public expense, together with the fish-market and Atrium Regium ("Locaverunt inde reficienda quae circa forum incendio consumpta erant, septem tabernas, macellum, atrium regium," Id $x$ xvii. 11). This passage would seem to show that the reading quinque (tabernae) in that previously cited is corrupt. Muretus has observed that one codex has "quae postea vet.," which in others was contracted into $\mathbf{v}$., and thus taken for a numeral. (Becker, Handb. p. 297, notes). Hence we may infer that the Veteres Tabernae on the $S$. side of the forum were seven in number, and from the word poitea applied to thein, whilst nunc is used of the Novae, it might perhaps be inferred that the distinctive appellation of Veteres did not come into use till after this accident.

It also appears from this passage, that there were no basilicae at Rume at this period. It was not long atterwards, however, namely e.c. 184, that the first of these buildings was founded by M. Porcius Cato in his censorship, and called after him Basilica Porcla. In order to procure the requisite ground, Cato purchased the houser of Maenius and Titius in the Lautumiae, and four tabernae. (Liv. xxxix 44.) Hence we may infer that the Lautumiae lay close at the back of the forum; which also appears from the circumstance that Maenius, when he sold his house, reserved for himself one of its columns, with a balcony on the top, in order that he and his posterity might be able to view from it the pladintorial shows on the foram. (Ps. Ascon. ad Cic. Div. in Caecil. 16; cf. Schol. ad Hor. Sat. i. 3. 21.) This column must not be confounded with
the monument called the Columna Maenia, which stood on the forum. The Basilica Porcia must have stood close to the curia, since it was destroyed by the same fire which consumed the latter, when the body of Clodius was burnt in it (Ascon. ad Cic. pro Mil. Arg. p. 34, Orell.); but it must have been on the eastern side, as objects already described filled the space between the curia and the Capitoline hill. The Forum Piscatoriux stood close behind it, since Plautus describes the unsavoury odours from that market as driving away the frequenters of the basilica into the forum: -
" Tum piscatores, qui praebent populo pisces foetidos Qui advehuntur quadrupedanti crucianti canterio Quorum odos subbasilicanos omnes abigit in forum."
(Capt. iv. 2. 33.)
In the time of Cicero, the tribunes of the people held their assemblies in the Basilica Porcia. (Plnt. Cato Min. 5.) After its destruction by fire at the funeral of Clodius it does not appear to have been rebuilt; at all events we do not find any further mention of it.

The state of the forum at this period is described in a remarkable passnge of Plautus; in which, as becomes a dramatist, he indicates the different localities by the characters of the men who frequented them (Curc. iv. 1): -
"Qui perjurum convenire volt hominem mitto in comitium ;
Qui mendacem et gloriosum, apnd Cloacinae sacrum Ditis damnosos maritos sub bavilica quaerito: lbidem erant scorta exoleta, quique stipulari solent : Symbolarum collatores apud Forum Piscarium ; In foro infimo boni homines atque dites ambulant, In medio propter canalem, ibi ostentatores meri ; Confidentes garrulique et malevoli supra lacum, Qui alteri de nihilo audacter dicunt contumeliam Et qui ipsi sat habent, quod in se possit vere dicier. Sub Veteribus ibi sunt, qui dant quique accipiunt foenere;
Pone aedem Castoris ibi sunt, subito quibus credas male,
In Tusco Vico ibi sunt homines, qui ipsi sese renditant.
In Velabro vel pistorem, vel lanium, vel aruspicem, Vel qui ipsi vortant, vel qui aliis ut vorsentur praebeant.
[Ditis damnosus maritos apud Leucadiam Oppiam]."
This is such a picture as Greene might hare drawn of Paul's, or Ben Jonson of Moor Fields. The good men walking quietly by themselves in the obscurest part of the forum, whilst the flash gentlemen without a denarius in their purnes, are strutting conspicuously in the middle; the gonermands gathering round the fishmarket and clabbing for a dinner ; the gentlemen near the Lacus Curtius, a regular set of scandal-mongers, so ready to spenk ill of others, and so wholly unconscious that they live in glass-houses themselves; the perjured witness pruwling about the comitium, like the man in Westminster Hail in former days with a straw in his shoe; the tradesman in the Vicus Tuscus, whose spirit of trading is so in-bred that he would sell his very self; all these sketches from life present a picture of manners in "the gand old times" of the Koman Repablic, when Cato himself was censor, which shows that human nature is very much the same thing in all ages and countries. In a topographical point of view there is little here but
what confirms what has been already said respecting the forum and its environs; except that the usurers sub Veteribus show that the bankers' shops were not confined to the N . side of the forum. What the canalis was in the middle of the forum is not clear, but it was perhaps a drain. The passage is, in some places, probably corrupt, as appears from the two obscure lines respecting the mariti Ditis, the second of which is inexplicable, though they probably contain some allusion to the Sacellum Ditis which we have mentioned as adjoining the temple of Saturn. Mommsen, however (l.c. p. 297), would read "dites damnosos marito," \&cc., taking these "dites" to be the rich usurers who resorted to the basilica and lent young men money for the purpose of corrupting city wives. But what has tended to throw doubts upon the whole passage is the mention of the basilica, since, according to the testimony of Cicero (Brut. 15), Plautus died in the very year of Cato's censorship. Yet the basilica is also alluded to in another passage of Plautus before quoted; so that we can hardly imagine but that it must have existed in his lifetime. If we could place the basilica in Cato's aedileship instead of his censorship, every difficulty would vanish; but for such a view we can produce no authority.

Mornmsen (Ib. p. 301) has made an ingenious, and not improbable attempt to show, that Plautus, as becomes a good poet, has mentioned all these objects on the forum in the order in which they actually existed; whence he draws a confirmation of the view respecting the situation of the comitium. That part of the forum is mentioned first as being the most excellent. Then follows on the left the Sacrum Cluacinae, the Basilica Porcia, and Foram Piscatorium, and the Forum Infimum. Returning by the middle he names the canalis, and proceeds down the forum again on the right, or southern side. In the "malevoli supra lacum" the Lacus Servilins is alluded to at the top of the Vicus Jugarius. Then we have the Veteres Tabernae, the temple of Castor, the Vicus Tuscus, and Velabrum.

The Basilica Porcia was soon followed by others. The next in the order of time was the Basilica Fulvia, founded in the censorship of M. Aemilius Lepidus, and M. Fulvius Nobilior, b.c. 179. This was also "post Argentarias Novas" (Liv. xl. 51), and must therefure have been very close to the Basilica Porcia. From the two censors it was sometimes called Basilica Aemilia et Fulvia. (Varr. L.L. vi. § 4, Mïll.) All the subsequent embellishments and restorations appear, however, to have proceeded from the Gens Aemilia. M. Aemilius Lepidus, consul with Q. Lutatius in B. c. 78, adorned it with bronze shields bearing the effigies of his ancestors. (Plin. xxxv. 4.) It appears to have been entirely rebuilt by L. Aemilius Panllus, when aedile, B. c. 53. This seems to have been the restoration alluded to by Cicero (ad Att. iv. 16), from which passage - if the punctuation and text are correct, for it is almost a lucus desperatus - it also appears that Paullus was at the same time constructing another new and magnificent basilica. Hence a difficulty arises respecting the situation of the latter, which we are unable to solve, since only one Basilica Paulli is mentioned by ancient authors; and Plutarch (Caes. 29) says expressly that Paullus expended the large sum of money which he had received from Caesar as a bribe in building on the forum, in place of the Basilica Fulvia, a new one which bore his own name. (Cf. Appian, B. C. ii. 26.) It is certain at
least that we must not assume with Becker (Handb. p. 303) that the latter was but a poor affair in comparison with the new one because it was built with the ancient columns. It is plain that in the words " nihil gratins illo monumento, nihil gloriosius," Cicero is alluding to the restoration of the ancient basilica, since he goes on to mention it as one which used to be extolled by Atticus, which would not have been possible of a new building; and the employment of the ancient columns only added to its beauty. The building thas restored, however, was not destined to stand long. It seems to have been rebuilt less then twenty years afterwards by Paullus Aemilius Lepidus (Dion Cass. xlix. 42); and in about another twenty years this second restoration was destroyed by a fire. It was again rebuilt in the name of the same Paullus, but at the expense of Augustus and other friends (Id. liv. 24), and received further embellishments in the reign of Tiberius, A. D. 22. (Tac. Ann. iii. 72.) It was in this last phase that Pliny saw it when he admired its magnificence and its columns of Phrygian marble (xxxvi. 24).

## basilica aemilia. (From a Coin.)

The third building of this kind was the Basilica Sempronia, erected by T. Sempronius Gracchus in his censorship, b.c. 169. For this purpose he purchased the house of Scipio Africanus, together with some adjoining butchers' shops, behind the Tabernae Veteres, and near the statue of Vertumnus, which, as we have said, stood near the forum at the end of the Vicus Tuscus. (Liv. xliv. 16.) This, therefore, was the first basilica erected on the S. side of the forum. We hear no further mention of it, and therefore it seems probable that it altogether disappeared, and that its site between the Vicus Tuscus and Vicus Jugarius was subsequently occupied in the imperial times by the Basilica Julia.

The Lautumar, of which we have had occasion to speak when treating of the Basilica Porcia, was not merely the name of a district near the forum, but also of a prison which appears to have been constructed during the Republican period. The Lautumiae are first mentioned after the Second Punic War, and it seems very probuble, as Varro says (L. L. v. § 151, Müll.), that the name was derived from the prison at Syracuse; though we can hardly accept his second suggestion, that the etymology is to be traced at Rome, as well as in the Sicilian city, to the circumstance that stone quarries formerly existed at the spot. The older topographers, down to the time of Bunsen, assumed that Lautumiae was only another appellation for the Carcer Mamertinus, a misconception perhaps occasioned by the abruptness with which Varro (l. c.) passes from his account of the Tullianum to that of the Lautumiae. We read of the latter as a place for the custody of hostages and prisoners of war in Livy (xxxii. 26, xxxvii. 3); a purpose to which neither the size nor the dungeon-like con-
struction of the carcer would have adapted it. That the Lantumiae was of considerable size may also be inferred from the circumstance that when the consul Q. Metellus Celer was imprisoned there by the tribune L. Flavius, Metellus attempted to assemble the senate in it. (Dion Cass. xxxvii. 50.) Its distinctness from the Carcer Mamertinus is also shown by Seneca (Controv. 27, p. 303, Bipont).

An important alteration in the arrangement of the foram, to which we have before alluded, was the removal of the Tribunal Praitoris from the comitium to the eastern end of the forum by the tribune L. Scribonius Libo, apparently in B. c. 149. It now stood near the Puteal, a place so called from its being open at the top like a well, and consecrated in ancient times either from the whetstone of the augur Navius having been buried there, or from its having been struck by lightning. It was repaired and re-dedicated by Libo; whence it was afterwards called Putral Libonis, and Pureal Scribonlanus. After this period, its vicinity so the judgment-seat rendered it a noted object at Rome, and we find it frequently alluded to in the classics. (Hor. Ep. i. 19. 8, Sat. ii. 6. 35 ; Cic.p.

## PUTEAL MBONIS OR ECRIBONIANUM.

Sest. 8, \&sc.) The tribunal of the praetor urbenus seems, however, to have remained on the comitium. Besides these we also find a Tribunal Aurbijum mentioned on the forum, which seems to have stood near the temple of Castor (Cic. p. Sest. 15, in Pis. 5, p. Cluent. 34), and which, it is conjectured, was erected by the consul M. Aurelius Cotta b. C. 74. These tribunals were probably constructed of wood, and in such a manner that they might be removed on occasion, as for instance, when the whole area of the forum was required for gladiatorial shows or other purposes of the like kind; at least it appears that the tribunals were used for the purpose of making the fire in the coria when the body of Clodins was burnt in it. (Ascon. ad Cic. Mil. Arg. p. 34.)

In the year b.c. 121 the Temple of Concord was built by the consul L. Opimins on the Clivus Capitolinus just above the senaculum (Varr. L. L. v. § 156, Mill.); but, as we have already had occasion to discuss the history of this temple when treating of the Capitol and of the senaculum, we need not revert to it here. At the same time, or a little afterwards, he also erected the Basiuca Opimin, which is mentioned by Varro in clove connection with the temple of Concord, and must therefore have stood on its northern side, since on no other would there have been space for it. Of this basilica we hear but very litule, and it seeins not improbable
that its name may have been afterwards changed to that of "Basilica Argentaria," perhaps on account of the silversmiths' and bankers' shops having been removed thither from the tabernac on the forum. That a Basilica Argentaria, about the origin of which nobody can give any account, existed just at this spot is certain, since it is mentioned by the Notitic, in the 8th Regio, when proceeding from the forum of Trajan, as follows: "Cohortem sextam Vigilum, Basilicam Argentariam, Templum Concordiae, Umbilicum Romae," \&c. The present Salita di Marforio, which runs close to this spot, was called in the middle ages "Clivus Argentarius;" and a whole plot of buildings in this quarter, terminating, according to the Mirabilia (Montf. Diar. Ital. p. 293). with the temple of Vespasian, which, as we shall see in the sequal, stood next to the temple of Concord, bore the name of "Insula Argentaria" (Becker, Handb. p. 413, seq.).

In the same year the forum was adorned with the triumphal arch called Fornix Fabius or Fabinncs, erected by Q. Fabius Allobrogicus in commemoration of his triumph over the Allobroges. This was one of the earliest, though not precisely the first, of this species of monuments at Rome, it having been preceded by the three arches erected by L. Stertinius after his Spanish victories, of which two were situated in the Forum Boarium and one in the Circus Maximus. (Liv. xxxiii. 27.) We may here remark that fornix is the classical name fur such arches; and that the term arcus, which, however, is used by Seneca of this very arch (Const. Sap. 1), did not come into general use till a late period. The situation of this arch is indicated by several passages in Roman authors. We hare already cited one from Cicero (p. Planc. 7), and in another he says that Memmius, when corting down to the forum (that is, of course, down the Sacra Via), was accustomed to bow his head when passing through it ("Ita sibi ipsum magnum videri Memmium, ut in forum descendens caput ad fornicem Fabii demitteret," de Orat. ii. 66). Its site is still more clearly marked by the Pseudo-Asconius (ad Cic. Verr. i. 7) as being close to the Regia, and by Porphyrio (ad Hor. Epist i. 19. 8) as near the Puteal Libonis,

The few other works about the foram during the remainder of the Republican period were merely restorations or aiterations. Sulla when dictator seems to have made some changes in the curia (Plin. xxxiv. 12), and in B. C. 51, after its destruction in the Clodian riots, it was rebuilt by his sun Fanstus. (Dion Cass. xl. 50.) Caesar, however, caused it to be pulled down in B.c. 45, under pretence of having vowed a temple to Felicitas, but in reality to efface the name of Sulla. (Id. xliv. 5.) The reconstruction of the Basilica Fulvia, or rather the superseding of it by the Basilica Paulli, has been already mentioned.

It now only remains to notice two other objects connected with the Republican Forum, the origin of which cannot be assigned to any definite period. These were the Schola Xantha and the Jani. The former, which lay back considerably behind the teinple of Saturn and near the top of the Clivus Capitolinus, consisted of a row of arched chambers, of which three are still visible. They appear from inscriptions to have been the offices of the scribes, copyists, and praccones of the aediles, and seem to be alluded to by Cicero. (Philipp. ii. 7, p. Sees. 12.) Another ruw was discovered in 1835 at the side of the temple of

Vespasian and against the wall of the Tabularium, with a handsone though now ruined portico before them, from which there was an entrance into each separate chamber. From the fragments of the architrave an inscription could still be deciphered that it was dedicated to the twelve Dei Consentes. (Canina, Foro Rom. p. 207, Bullet. d. Inst. 1835.) This discovery tallies remarkably with the following passage in Varro: "Et quoniarn (ut aiunt) Dei facientes adjuvant, prius invocabo eas; nec ut Homerus et Ěunius, Musas, sed xiI. deos consentis; neque tamen eos urbanos, quorum imagines ad forum auratae stant, sex mares et feminae totidem, sed illos XII. deos, qui maxime agricolarum duces sunt" (R. R.i. 1). We may, however, infer that the inscription was posterior to the time of Varro, probably after some restoration of the building; since in his De Lingua Latina (viii. § 71) he asks: " Item quserunt. si sit analogia, cur appellant omnes aedes Deum Cousentum et non Deorum Consentium?" whereas in the inscription in question we find it written "Consentium." We may farther remark that the former of these passages would sanction the including of the whole Clivus Capitolinus under the appellation of "forum."

With respect to the Jani on the forum, it seems rather problematical whether there were three of them. There appear to have been two Jani before the Basilica Paulli, to which the money-lenders chiefly resorted. (Schol. ad Hor. Ep. i. 1. 54.) But when Horace (Sat. ii 3.18) says -

## "_ postquam omnis res mea Janum Ad medium fracta est,"

he probably means, as we said before, the middle of the street, and not a Janus which lay between two others, as Becker thinks must necessarily follow from the use of the word medius. (Handb. p. 327, note.)

The Forum under the Empire. - The important alterations made by Julins Caesar in the disposition of the forum were the foundation of its subsequent appearance under the Empire. These changes were not mere caprices, but adaptations suited to the altered state of political society and to Caesar's own political views. But the dagger of the assassin terminated his life before they could be carried oat, and most of them were left to be completed by his successor Augustus. One of the most important of these designs of Caesar's was the building of a new curia or senate-house, which was to bear his name. Such a building would be the badge of the senate's servitude and the symbol of his own despotic power. The former senate-house bad been erected by one of the kings; the new one would be the gift of the first of the emperors. We have mentioned the destruction of the old curia by fire in the time of Sulla, and the rebuilding of it by his son Faustus; which structure Caesar caused to be pulled down under a pretence, never executed, of erecting on its site a temple of Felicitas.
The curia founded by Pompey near his theatre in the Campus Martius-the building in which Caesar was ascassinated - seems to have been that comm.nly in use; and Ovid (Met. xv. 801), in describing that event, calls it simply Curia:-
"-_ neque enim locus nllus in urbe
Ad facinus diramque placet, nisi Curia, caedem."
We may suppose that when Caesar attained to sureme power he was not well pleased to see the
meetings of the senate held in a bailding dedirated by his great rival.

A new curia was voted a little before Caesurs death, bat he did not live to found it; and the Monumentum Ancyranum shows that it was both begun and completed by Octavianus.

Respecting the site of the Curia Julia the most discordant opinions have prevailed. Yet if we accept the information of two writers who could not have been mistaken on such a sulject, its position is not difficult to find. We learn from Pliny that it was erected on the comitium: "Idem (Augustus) in Curia quoque quam in Comitio consecrabat, duas tabulas impressit parieti" (xxxv. 10) ; and this site is confirined by Dion Cassius: ro Bou-

 (xlvii. 19). It is impossible to find any other spot for it on the cumitium than that where the old curia stood. Besides the author last quoted expressly informs us that in consequence of some prodigies that occurred in the year before Caesar's murder it had been resolved to rebuild the Curia Hostilia (kal 8 id
 $\delta 0 \mu \eta \theta \hat{\eta} \nu$ as $\dot{\&} \psi \eta \phi i \sigma \theta \eta, I b$. xlv. 17.) At the time when this decree was made Caesar was himself pontifex maximus; it would have been a flagrant breach of religion to neglect a solemn vow of this description; and we cannot therefore accept Becker's assertion that this row was never accomplished. (Handb. p. 331, note 608.) We cannot doubt that the curia erected by Augustus was in pursuance of this decree, for Caesar did not live even to begin it ("Curiam et continens ei Chalcidicum - feci," Mon. Ancyr); but though the senate-house was rebuilt, it was no longer named Hostilia, but, after its new founder, Julia. Now what has Becker got to oppose to all this weight of testimony? Solely a passage in Gellius,- which, however, he misapprehends,-in which it is said, on the authority of Varro, that the new curia had to be inaugurated, which would not have been the case had it stood on the ancient spot (" Tum adscripsit (Varro) de locis in quibus senatus consultum fieri jure posset, docuitque confirmavitque, nisi in loco per augures constituto, quod templum appellaretur, senatusconsultum factum esset, justum id non faisse. Propterea et in Curia Hostilia et in Pompeia. et post in Julia, cuin profana ea loca fuissent, templa esse per augures constituta," xiv. 7. § 7.) But Becker has here taken only a half view of these augural rites. As a temple could not be built without being first inaugurated, so neither could it be pulled down without being first exaugurated. This is evident from the accounts of the exauguration of the fanes in order to make room for the temple of the Capitoline Jupiter. ("Et, ut libera a caeteris religionibus area esset tota Jovis templique ejus, quod inaedificaretur, exaugurare fana sacellaque statuit, quae aliquot ibi a Tatio rege, consecreta inaugurataque postea fuerant," Liv. i. 55, cf. v. 54 ; Dion. Halic. iii. 69.) When Caesar, therefore, pulled down the curia of Faustus he first had it exaugurated, by which the site again became a locus profanus, and would of course require a fresh inauguration when a new temple was erected upon it. The curia in use in the time of Propertius (iv. 1.11) must have been the Curia Julis; and the following lines seem to show that it had risen on the site of the ancient one:-

A forther confirmation that the new curia stood on the ancient spot is found in the fact that down to the latest period of the Empire that spot continued to be the site of the senate-house. The last time that mention is made of the Curia Julia is in the reign of Caligula ("Consensit (senatus) ut consules non in Curia, quia Jalia vocabatur, sed in Capitolium convocarent," Suet. Cal. 60): and as we know that the curia was rehuilt by Domitian, the Julia must have been burnt down either in the fire of Nero, or more probably in that which occurred under Titus. It is not likeiy, as Becker supposes (Handb. p. 347), that Vespasian and Titus would have suffered an old and important building like the curia to lie in ashes whilst they were erecting their new amphitheatre and baths. The new structure of Domitian, called Sernatus in the later Latin ("Senatum dici et pro loco et pro hominibus, ${ }^{\text { }}$ Gell. x xiii. 7,5), is mentioned by several authorities (Hieronym. an. 92. i. p. 443. ed. Ronc.; Cassiod. Chron. ii. p. 197 ; Catal. Imp. Vienn. p. 243.) The place of this senatus is axcertained from its being close to the little temple of Janus Geminus, the index belli pacisque ( ${ }_{\chi} \in \mathbb{1}$
 Bou入єutnpiov, Procop. B. G. i. 25); and hence from its proximity to Numa's sacellum it was sometimes called "Curia Pompiliana" (Vopisc. Aurel. 41, TaciL 3.) The same situation is confirmed by other writers. Thas Dion Cassius mentions that Didius Julianus, when he first entered the curia as emperor, sacrificed to the Janus which stond before the doors (Ixxiii. 13). In the same manner we find it mentioned in the Notitia in the viiith Region. That it orcupied the site of the ancient church of S. Martinn. subsequently dedicated to and now known as $S$. Isuca, close to the arch of Severus, appears from an inscription (Grater, clxx. 5) which formerly exited in the Ambo, or hemicycle, of S. Martina, showing that this hemicycle, which was afterwards built into the church, originally formed the Secretarium Senatus (Urlichs, Röm. Top. p. 37, seq.; Prelier, Regionen, p. 142.) The Janus temple seens to have been known in the middle ages under the appellation of templum fatale, by which it is mentioned in the Mirabilia Urbis. ("Juxta eum templum fatale in S. Martina, juxta quod est templum refugii, i. e., S. Adrianus," Ib.) In the same neighbourbood was a place called in the later ages "All Palmam," which also connects the senatus with this spot, as being both near to that place and to the Arcus Severi. Thus Ammianus: "Deinde ingressus arbem Theodoricus, venit ad Senatum, et ad Palmam populo alloquutus," \&c. (Excerpt. de Odo. 66.) And in the Acta SS., Mai. vii. p. 12: " Ligaverant ei manas a tergo et cecollaverunt extra Capitolium et extrahentes jactaverunt eum juxta arcum triumphi ad Palinam." (cf. Anastas. V. Sist. c. 45.) The appellation "ad Palnam" was derived from a statue of Claudius II. clothed in the tunica palmata, which stood here: "Illi totius orbis judicio in Rostris posita est columna cum palmata statua saperfixa." (Treb. Pollio, Claud. c. 2.)

We cannot doubt, therefore, that the curia or senatus built by Domitian was near the arch of Severas: which is indeed admitted by Becker himself (Handb. p. 355). But, from his having taken a wrong view of the situation of the comitiam, he is compelled to maintain that this was altogether a new site for it; and hence his curia undergues no fewer than three changes of situation, receiving a new one almost every time that it was rebuilt,
namely, first, on the $N$. sido of his comitium, secondly on the $S$. side, and thirdly near the Arcus Severi, for which last site the evidence is too overwhelming to be rejected. We trust that our view is more consistent, in which the senatehouse, as was most probable, appears to have always retained its original position. And this result we take to be no slight confirmati $n$ of the correctness of the site which we have assigned to the comitium. In their multitudinous variations, Bunsen and Becker are sore puzzled to find a place for their second curia-the Julia-on their comitium, to which the passages before cited from Pliny and Dion inevitably fix them. Bunsen's strange notions have been sufficiently refuted by Becker (Handb. p. 333), and we need not therefore examine them here. But though Becker has succeeded in overthrowing the hypothesis of his predecessor, he has not been able to establish one of his own in its place. In fact he gives it up. Thus he says (p. 335) that, in the absence of all adequate authority, be will not venture to fix the site of the curia; yet he thinks it protable that it may have stood where the three columns are ; or if that will not answer, then it must be placed on the (his) Vulcanal. But his complaint of the want of authorities is unfuunded. If he had correctly interpreted them, and placed the comitium in its right situation, and if he had given due credit to an author like Dion Cassius when he says (l.c.) that it was determined to rebuild the Cn ria Hostilia, he had not needed to go about seeking for impossible places on which to put his Curia Julia.

There are three other objects near the forum into which, from their close connection with the Bawilica Julia, we must inquire at the same time. These are the Chalcidicum, the Imprerial Graecostasis, and a Temple of Minerva. We have already seen that the first of these buildings is recorded in the Monumentum Ancyranum as erected by Augustus adjoining the curia; and the same edifice is also mentioned by Dion Cassius among the works of

 (li. 22). But regarding what manner of thing the Chalcidicum was, there is a great diversity of opinion. It is one of those names which have never been sufficiently explained; but it was perhaps a sort of portico, or covered walk (deambulatorium), annexed to the curia. Bunsen, as we have mentioned when treating of the temple of Castor in the preceding section, considers the Athenaeum and Chalcidicum to have been identical; and as the Notitia mentions an Atrium Minervae in the 8th Region, and as a Minerva Chalcidica is recorded among the buildings of Domitian, he assumes that these were the ssme, and that the unlucky ruin of the three columns, which has been so transmuted by the topographers, belonged to it. In all which we can only wonder at the uncritical spirit that could have suggested such an idea; for in the first place the Monumentum Ancyranum very distinctly separates the aedes Minervae, built by Augustus, from the Chalcidicum, by mentioning it at a distance of five lines apart; secondly, the aedes Minervae is represented to be on the Aventine, where we find one mentioned in the Notitia (cf. Ov. Fast. vi. 728; Festus, v. Quinquatrus, p. 257, Mïll.), and consoquently a long way from the curia and its adjuining Chalcidicum; thirdly, they are also mentioned separately by Dion Cassius in the passage
before cited, whose text is not to be capriciously

 which cannot support itself. We need not, therefore, enter further into this view. That of Becker (Handb. p. 335) seems probable enough, that the Chalcidicum usurped the place of the sensculum of the curia, though we should be more inclined to say that of the Graecostasis, as the position of the latter seems at all events to lave been shifted about this period. We learn from Pliny (xxxiii. 6) that in his time it no longer stood " supra Comitium." Yet such a place seems to have existed to the latest period, and is mentioned in the Notitia (Regio viii.) under the altered name of Graecostadium, close to the Basilica Julia, though the MSS. vary with regard to the position. It had probably, therefore, been removed before the time of Pliny to the south side of the forum, and perhaps at the time when the new curia and Chalcidicum were built. If this was so, it would tend to prove that the comitium did not extend across the whole breadth of the forum. The Atrium Minervae of the Notitia must have been of a later period.

Another change in the disposition of the forum, with reference to the politics of the times, which was actually carried out by Caessar in his lifetime, was the removal of the ancient rostra. The comitiom, which may be called the sristocratic part of the forum, had become in a great measure deserted. The popular business was now transacted at the lower end of the forum; and Caesar, who courted the mob, encouraged this arrangenent. The steps of the temple of Castor had been converted into a sort of extempore rostra, whence the demagogues harangued the people. and Caesar himself had sometimes held forth from them. (Dion Cass. xxxviii. 6 ; cf. Cic. p.Sest. 15 ; App. B. C. iii. 41.) Dion Cassius expressly mentions that the Kostra were changed by Caesar (sliii. 49). The change is also mentioned by Asconius: "Erant enin tunc rostra non eo loco quo nunc sunt. sed ad Comitium prope juncta Curiae" (ad Cic. Mil. 5), where, by this absolute and unqualitied mention of the curia, he must of course have meant the curia existing in his time, which was the Julia; and this shows that it stood on the ancient site of the Hostilia. Another prow that the rostra were moved in Caesar's lifetime may be derived from Livy (Epit. cxvi.): "Caesaris corpus a plebe ante Rostra crematum est." For, as Appian (B. C. ii. 148) indicates the place in another manner, and says that the burning of the body took place before the Regia, it is plain that the rostra mentioned in the Fpitome just cited must have been very near the Regia. But we have seen that the ancient rostra were on the comitium, at the other end of the forum. There are other passages from which we may arrive at the exact situation of the new rostra. Thus Suetonias, in his account of the funeral of Angustus, says that a panegyric was pronounced upon him by Drusus from the rostra under the Tabernac Veteres ("pro Rustris sub Veteribus," Aug. 100 ; cf. Dion Cass. Ivi. 34). It should be stated, however, that the common reading of this passage is " pro Rustris veterious," that is, from the old rostra on the comitium; and we shall see further on that the old rostra appear to have existed after the erection of the new. It is not, however, probable that they would be used on this occa-ion, even if they were ever used at all; and we see from Dion Cassius's account of the
funeral of Octaria, the sister of Augustus, that Drusus also on that occasion pronounced a panegyric from the new rostra, or those commonly used. as we must conclude from Dion's mentioning them without any distinctive epithet ( $\langle\pi i$ тоî $\beta$ h $\mu a \tau 0 s$ ). Canina (Foro Rom. p. 129) adopted the common reading, with the omission of sub, because he imagined that "sub Veteribus" must mean "under some old building," instead of its being a designation for the S. side of the formm. And Cicero, when pronouncing one of his invectives against Antony from the rostra, bids his audience look to the leff at the gilt equestrian statue of Antony, which, as appears from what Cicero says a little further on, stood before the temple of Castor. (Phil. vi. 5.) From a comparison of all these passages we may state with precision that the new rostra were established by Cuesar on the SE. side of the forum, between the temple of Castor and the Regia, a spot which, as we have said, had previously become the regular place for the contiones. But, as this spot was on Becker's comitium, - his lower end of the forum being our upper end, - he could mot of course admit that this was the place on which the new rostra were erected, and he is therefore oblized to place them a great deal higher up towards the Capitol, and to the W. of the temple of Castor. As, however. in questions of this sort, one error always begets another, he is thas puzzled to account for the circumstance how Cicero, speaking from these rostra, could allude to the statue of Antony as being on his left (Handb. p. 33i); and, in order to avoid this contradiction, asserts that Dion Cassius was mistaken, in saying that the rostra were removed in Cuesar's lifetime. It must be the old rostra, those on the (his) comitium, before which Caesar's body was burnt, and then everything goes right. Uufortunately, however, the testimony of Dion is confirmed by the expressive silence of the Monumentum Ancyranum. That record, in which Augustus so ostentationsly recites his buildings, his repairs, and his alterations, says not a word about the rostra. We have seen a little while ago that Becker contradicts Dion respecting the Curia Julia, and now he contradicts both that author and the Monumentum Ancyranum, and solely because he has adopted a wrong site for his comitium. How shall we characterise a topographical system which at every turn comes into collision with the best authorities? On the other hand, if there is any truth in the system we have aduptel, all the merit we can claim for it is derived from paying due respect to these authorities, and implicitly following what they say, without presuming to set our own opinion above their teaching. Befure we quit this subject it may be as well to say that, though these new rostra of Caesar's became the ordinary suygestum, or platfurm, for the orators, yet the old ones do not appear to have been demolished. We hare before seen, from a passage in Trebellius Pollio, that the old rostra ad Palmam, or near the arch of Severus, existed in the time of Claudius II.; and the Notitia and Curiosum expressly mention three rostra on the forum.

In a bas-relief on the arch of Constantine Caniua has correctly recognised a representation of this purt of the forum, with the buildings on the Clivas Capitolinus. Constantine is scen addressing the people from a raised plat form or sugyestum, provided with a balustrade, which is undoubtedly intended fur the ancient rootra. Canina is further of opinion
that an elevated terrace, presenting the segment of a circle, which was excavated at this part of the forum some years ago, is the actual rostra (Indicazione, p. 270, ed. 1850, and his Dissertation "Sui Rostri del Foro Romano" in the Atti dell Accademia Rom di Archeologia, viii. p. 107, seq.; cf. Beeker, Handbuch, p. 359). It seems also to have been here that Augustus received the homage of Tiberius, when the latter was celebrating his German triumph: " Ac priusquam in Capitolium flecteret, descendit e curru, seque praesidenti patri ad genua subunisit." (Supt. Tib. 20.) The scene is represented on the large Vienna Cameo. (Eckhel, Pierres grarées, 1 ; Mongez, Iconogr. Rom. 19, rol. ii. p. 62.) If these inferences are just the ancient rostra would appear to have been ased occasionally after the erection of the new ones.

The Statues of Sulla and Pompry, of which the former appears to have been a gilt equestrian one, were re-erected near the new rostra, as they had formerly stoxd by the old ones. After the battle of Pharsalus they were both removed, but Caesar replaced them. Bexides these there were two Statues or Caesar, and an equestrian Statce of Octavian. (Dion Cass. xlii. 18, xliii. 49, xliv. 4 ; Suet. Caes. 75 : App. B. C. i. 97.)

Caesar also began the large basilica on the S . side of the forum, called after him the Basilica Julia; but, like most of his other works, he left it to be finished by Augustus ("Forun Julium et Basilicam quae fuit inter aedem Castoris et aedem Saturni, coepta profligataque opera à patre meo perfeci," Mon. Ancyr.). Its situation is here so accurately fixed

thus leaving no doubt that they were the same. (Bullettino dell Insi. Marzo, 1835) Panvinius, whose work was written in 1558, as appears from the dedicatory epistle, says that the inscription was found "paulo ante in firo Romano prope columnam," that is, the column of P'hocas. The basis on which it stood must therefore have been again covered with rubbish, till the inscription was re-discovered in its more imperfect form after a lapse of nearly three centuries. Anulinus and Fronto were consuls a. d. 199, and consequently in the reign of Septimius Severus, when the basilica appears to have been repaired.

Altogether, therefore, the site of the basilica may be considered as better ascertained than these of most of the imperfect monuments. It must have been bounded on the E. and W., like the basilica Sempronia, by the Vicus Tuscus and the Vicus Jugarius. It arpears from the Monumentum Ancyranum that the original building, begun by Caesar, and completed by Augastus, was burnt down during the reign of the latter, and again rebuilt by him on a larger scale, with the design that it should be dedicated in the names of his grandsons Caius and Lucius ("Et eandem basilicam consumptam incendio ampliato ejus solo sub titulo nominis filiorum
that it cannot possibly be mistaken, namely, between the temple of Saturn, which, as we have seen, stood at the head of the forum, and the temple of Castor, which lay near that of Vesta; and the Notitia indicates the same position; so that it must have been situated between the Vicus Jugarius and Vicus Tuscus. It has been seen before that this was the site of the ancient Basilica Sempronia, a building of which we hear no more during the imperial times: whence it seems probable that it was either pulled down by Caesar in order to erect his new basilica upon the site, or that it had previously gone to ruin. And this is confirmed by the fact that, in the excavations made in 1780, it was ascertained that the basilica was erected upon another ancient foundation, which Canina erronevusly supposes to have beell that of the comitium. (Fredenheim, Exposé d'une Décousverte faite dans le Forum Romain, Strasbourg, 1796; Fea, Varietà di Notizie e della Basilica Giulia ed alcuni Siti del Foro Romano, ay. Canina, Foro Romano, p. 118.) In some excavations made in 1835 near the column of Phocas, another proof of the site of the basilica was discovered. It was the following fragment of an inscription, which taken by itwelf seems too mangled and imperfect to prove anything: . . . a . . . asilica . . . er reparatae . . . set adiecit. It was recollected, however, that this must be the fragment of an inscription discovered in the 16 th century at this spot, which is recorded by Gruter (clxxi. 7) and by Panvinius in his $D e$ scriptio Urbis Romae (Graerius, iii. p. 300). The two inscriptions, when put in juxta-proition, appear as follows :-

Gabinius vetriles<br>probianus . V. C. prater. vrb<br>gTATUAM QVAE BASILICAE<br>IVLIAE A $8 E$ NOVITER<br>REPARATAE ORNAMENTO<br>ESSET ADIECIT<br>DEDIC . XV. KAL . FEERVARI<br>blicorva<br>CORNELIO ANNVLINO $\overline{I I}$<br>ET. AVFID . FRONTONE

[menram] inchoavi et, si vivus non perfecissem, perfici ab heredibus [meis jussi]." But, from a supplement of the same inscription recently discovered, it appears that Augustus lived to complete the work ("Opera fecit nova-forum Augustum, Basilicam Juliam," etc. ; Franz, in Gerhard's Archüolog. Zeit. No. ii. 1843). Nevertheless it seems to have anciently borne the names of his grandsons: "Quatedam etian opera sub nomine alieno, nepotum scilicet et uxoris sororisque fecit: ut porticum basilicamque Lucii et Caii, \&c." (Suet. Aug. 29). The addition which Augustus mentions having made to the building ("ampliato ejus sulo") may probably bave been the portico here mentioned. In A. n. 282 it was again destroyed by fire, and was rebuilt by Diocletian (Catul. Imp. Vienn. p. 247, Renc.)

The Basilica Julia was chiefly used for the sittings of law-courts, and especially for the causae centuinvirales (Plin. Epist. v. 21, ii. 14.) Its immense size may be inferred from another passage in Pliny (vi.33), from which we learn that 180 judices, divided into 4 concilia, or courts, with 4 separate tribunals, and numerous benches of advocates, besides a large concourse of spectators, both men and women, were accustomed to assemble here. The 4 tribunals are also meutioned by Quintilian (In. Or. sii. 5, 6).

The funeral of Caesar was also that of the Republic. After his death and apotheosis, first an Almar and then an Aedes Divi Julia were erected to him, on the spot where his body had been burnt ( $\beta \omega \mu \delta \nu \tau \tau_{i \nu}$

 "Acdem Divi Juli-feci," Mon. Ancyr.) We also find mention of a column of Numidian marble nearly 20 feet high, erected to him on the forum by the people, with this inscription: " Parenti Patriae," (Suet. Caes. 88.) This, however, seems to have been the same monument sometimes called ura; for Suetonius goes on to say that the people continued for a long while to offer sacrifice and make vows at it (" Apud eandem longo tempore sacrificare, vota suscipere, controversias quasdam interposito per Caesarem jurejurando distrahere persereravit"). This ara or columna was afterwards overthrown by Dolabella (Cic. Phil. i. 2, ad Att. xiv. 15). We have before seen that Caesar's body was burnt on the forum, before the Regia and the new rostra which he had erected, and we must therefore conclude that this was the spot where the altar was set up by the people, and subsequently the temple by Augustus. But this has been the subject of a warm controversy. Bunsen placed the temple on the Velian ridge, so that its front adjoined the Sacra Via where it crosses the eastern boundary of the forum, whilst Becker (Handb. p. 336) placed it on the forum itself, so that its back adjoined the same road. The authorities are certainly in favour of the latter view; and the difficulties raised by Urlichs (Röm. Top. p. 21, seq.), who came to the rescue of Bunsen's theory, arise from the mistake shared alike by all the disputants, that this end of the forum was the comitiom. Urlichs might have seen that this was not so from a passage he himself quotes (p. 22) fmm the Fasti Amiternini, XV. Kal. Sept., showing that the temple stood on the forum ("DivoJulioad Forum"). He seeks, however, to get rid of that passage by an unfortunate appeal to the Schol. Cruq. ad Hor. S. i. 6.35, in order to show that after the time of Caesar there was no longer any distinction made between the forum and comitiom, since the putcal is there named as being on the forum, instead of on the comitium as Urlichs thinks it should be. But this is only trying to support one error by another, since we have already shown that the puteal really was on the forum and not on the comitium. We need not therefore meddle with this controversy, which concerns only those who have taken a wrong view of the comitium.

We will, however, remark that the passage adduced by Becker in his Antwort, p. 41, from the Scholiast on Persius (iv. 49), where the puteal is mentioned as "in porticu Julia ad Fabianum arcum," confirms the sites of these places: from which passage we also learn that the temple had a portico. Vitruvius says (iii. 3) that the temple, which must have been a small one, was of the order called peripteros pycnostylos, that is, having columns all round it, at a distance of une diameter and a half of a column from one another. It must have been raised on a lofty base or substruction, with its front towards the Capitol, as we see from the following lines of Ovid (Met. xv. 841): -
" _nt serrper Capitolia nostra forumque Dirus ab excelsa prospectet Julius acde."
The same circumstance, as well as its close proximity to the temple of Castor, are indicated in the
following verses of the same poet (Ex Port. ii 285): -
"Fratribus assimilis, quos proxima templa tenentes
Divus ab excelsa Julius acde videt."
This substruction, or кpprils, as it is called by Dion, served, as we have seen, for a third rostra and, after the battle of Actium, was adorned by Augustus with the beaks of the captured Egyptian ships, from which time it was called Rostra Julla. (Dion Cass. li. 19.)
Such were the alterations made by Julins Caesar in the forum, and by Augustus in honour of his adoptive father. The latter also made a few other additions. He erected at the head of the forum, under the temple of Saturn, the Milinilum Aureise, which we have before had occasion to mention. (Dion Cass. liv. 8 ; Suet. Otho, 6; Tac. H. i. 27.) It was in shape like a common milestone, but seems to have been of bronze gilt. Its use is' not very

THE MILIARIUM.
clear, as the milestones along the various roads denoted the distances from the gates. But when we recollect that Augustus included a great extent of new streets in his Regions, it seems nut improbathe that it was intended as a measure of distances within the city; and indeed we find that it was made the starting point in the survey of the city under Vespasian. (Plin. iii. 9.) Hence it might be regarded, as Plutarch says (Galb. 24), the common centre at which all the roads of Italy terminated. The Umbinicus Romar which Becker confounds with it (p. 344) appears to have been a different thing, as the Notitia mentions both of them separately under Regio viii. The piece of column excavated near the arch of Severus must have belonged to this umbilicus, or to some other monument, not to the miliarium, which appears from the Notitia and Curiosum to have retained till a late period its original position near the temple of Saturn at the head of the forum.

We also read of a Fornix Augusti or triumphal arch erected on the forum in honour of Angustus, but its pasition is nowhere accurately defined; thnugh from some Scholia on Virgil (Aen. viii. v. 606) edited by Mai, it is supposed to have been nera the temple of Julius (Cauina, Foro Rom. p. 139 note.)

The Arcus Tirerir, another triumphal arch, dedicatal to Tiberius, was erected at the foot of the Ciivus Capitolinus near the temple of Saturn, in commemoration of the recovery of the Ruman standards lost with the army of Varus. (Tac. Ann. ii. 41.) Tiberias also restored the temple of Castor in the name of himself and of his brother Drusus, as well as the temple of Concord, as we have before had occasion to remark.

Under the following emperors down to the time of Domitian we do not read of many alterations on the forum. The fire of Nero seems to have chiefly destroyed its lower part, where the temple of Vesta and the Regis lay; the upper portion and the Capitul appear to have escaped. The Curia Julia was probably burnt down in the fire which occurred in the reign of Titus; at all events it was certainly rebuilt by Domitian. The celebrated Statue of Viccorr, consecrated in the curia by Augustus, appears, however, to have escaped, since Dion Cassius expressly gays that it existed in his time, and we find it mentioned even later. (Suet. Aug. 100; Dion Cass. li. 22; Herodian, v. 5.) It was this statue, or more correctly perhape the altur which stood before it, that occasioned so warm a contention between the Christian and heathen parties in the senate in the time of Theodosius and Valentinian II., the former being led by Ambrosius, the latter by Syinmachus, the praefectus urbi. (Symmach. Epist. x. 61 ; cf. Ambros. Epist. ad calcem Symm. ed. Par. 1. p 740, ii. Pp. 473, 482; Gibbon, Decline and Fall, vol. iii. p. 409, seq., ed. Smith.) Ambrose is said to have obtained its removal; though this, perhaps, relates only to the altar, since the statue is mentioned by Claudian as still existing in the time of Honorius. (De VI. Cons. Hon. v. 597):-
" Adfuit ipsa suis ales Victoria templis Romanae tutela togae: quare divite penna Patricii reverenda fovet sacraria coetus."
Domitian had a peculiar predilection for two deities, Janus and Minerva He erected so many archways all over the city that an ancient pasquinade, in the form of a Greek pun, was found inscribed apon one of them: "Janos arcusque cum quadrigis et insignibus triumphorum per Regiones urbis tantos ac tot extruxit ut cuidam Graece inscriptum sit, døкei." (Suet. Dom. 13; cf. Dion Cass. Ivii. 1.) Among other temples of Minerva he is said by some anthorities to have erected one on the fornm between those of Vesta and Castor. (Becker, Handb. p. 356.) But there seems to have been hardly room for one at this spot; and, as we have before renarked, the Notitia does nut mention it. Domitian also built, in honour of his father and brother, the Temple of Vespasian and Tirus, next to the temple of Concord. The three columns on the Clivus Capitolinus most probably belong to it. The opinion that the eight Ionic colunns are remains of this temple has been already discuised.

Such was the state of the forum when the colossal equestrian Statue of Domitian was erected on it near the Lacus Curtios. Statius (Silvae i. 1) has written a small poem on this statue, and his description of it affords many interesting topographical particulars, which fully contirm what has been already said respecting the arrangement of the forum:-

[^31]Flnxit opus? Sieulis an comformata caminis Effigies, lassum Steropem Brontemque reliquit?

Par operi sedes. Hinc obvia limina pandit, Qui fessus bellis, adscitae munere prolis.
Primus iter nostris ostendit in aethera divis.
At laterum passna hinc Julia tecta tuentur Illine belligeri sublimis regia Paulli.
Terga pater blandoque videt Concordia vultu. Ipse autem puro celsum caput aere septus Templa superfulges, et prospectare videris An nova contemptis surgant palatia flammis Pulcrius; an tacita vigilet face Troïcus ignis Atque exploratas jam landet Vesta ministras," \&c.
The statue, therefore, must have faced the east, with the head slightly inclined to the right, so as to behold the temple of Vesta and the Palatine. Directly in front of it rose the temple of Divus Julius; on the right was the Basilica Julia, on the left the Basilica Aemilia; whilst behind, in close juxtapusition, were the temples of Concord and of Vespasian and Titus. The site of the statue near the Lacus Curtius is indicated in the poem (v. 75, seq.).

The next important monament erected on the formin after the time of Domitian appears to have been the Temple of Antoninus and Faustina, considerable remains of which still exist before and in the walls of the modern church of S. Lorenzo in Miranda. It stood at the eastern extremity of the N. side of the forum. These remains, which are now sunk deep in the earth, consist of the pronaos or vestibule. composed of eight columns of cipollino marble supporting an architrave, also part of the cella, built of square blocks of piperino. The architrave is ornamented with arabesque candelabra and griffins. On the front the inscription is still legible:-
divo - antonino . et
divae. faystinae.ex.s.c.

TEMPLE OF ANTONLIUS AND FAUSTINA.
But as a temple was decreed both to Antoninus Yius and his wife, the elder Faustina (Capitol. Anton. P. c. 6, 13), and to the younger Faustina, their daughter (Ib. c. 26), and as divine honours were also rendered after his death to MI. Anrelius Antoninas, the husband of the latter, it becomes doubtful to which pair the temple is to be referred (Nibby, Foro Rom. p. 183). It seems, however, most probable that it was dedicated to Antoninus Pius and the elder Faustina. It is stated by Pirro Ligorio (ap. Canina, Furo Rom. p. 192) that in the excavations made here in 1547, the basis of a
statue was discovered with an inscription purporting that it was erected by the guild of bakers to Antoninus Pius. In the time of Palladio the temple was a great deal more perfect than it is at present, and had an atrium in front, in the middle of which stood the bronze equestrian statue of M. Aurelins, which now adorns the Capitol. (Architettura, lib. iv. c. 9.) The inscription in Gruter (cclix. 6) probably belonged to the pedestal of this statue. It was found in the Sacra Via in 1562. Some difficulty, however, arises with regard to this account, since from varions other sources we learn that the statue stood for a long while before the church of St. John Lateran. From Palladio's account of the cortile, or court, it would appear that the building lay some distance back froin the Sacra Via.

In the reign of Commodus a destructive fire, which lasted several days, occasioned much damage in the neighbourhood of the foram, and destroyed annong other things the temple of Vesta. (Herodian, i. 14.) According to Dion Cassius the same fire extended to the Palatine and consumed almost all the records of the empire (lxxii. 24). It was on the same occasion that the shop of Galen, which stood on the Sacra Via, was burnt down, and also the Pulatine Library, as he himself assures us. (De Compos. Medicam. i. c. 1.)

This damage seems to have been repaired by Septimius Severus, the munificent restorer of the Boman buildings, who with, a rare generosity commonly refrained from inscribing his own name upon them, and left their honours to the rightful founders (" Romae omnes aedes publicas, quae vitio temporum labebantur, instauravit; nusquam prope suo nomine inscripto, servatis tamen ubique titulis conditorum," Spart. Sever. c. ult.). Of the original monuments erected by that emperor the principal one was the Arcus Severi or triumphal arch, which still exists in good preservation at the top of the Roman forum. The inscription infurms us that it was dedicated to Severus, as well as to his two sons, Caracalla and Geta, in his third consulate and the 11 th year of his reign, consequently in A. D. 203. Between the temple of Concord and the arch, the church of SS. Sergio e Bacco was built in the middle ages, with its tower

ARCH OF SEPTIMIUS BEVERUS.
resting upon the arch. It appears from a medal of Caracalla that a chariot with six horses and persons within it stood on the summit of the arch, and other persons on horseback at the sides, supposed to be the emperor's sons. It was erected partly in front of the temple of Concord, so as in some degree to conceul the view of that building, and thas to dis-
turb the whole arrangement of the edifices at this part of the forum. Originally it does not seem to have spanned any road, as the latest excarations show that it stood somewhat elevated above the level of the forum, and that the two side arcbes were approached by means of steps. (Canina, Foro Rom. p. 202.) The paved road that may be now seen under it must have been made at a later period. It would be quite a mistake to suppose that the Sacra Via passed under it. This road (here the Clicus Capitolinus) began to ascend the hill in front of the temple of Saturn and under the arch of Tiberius.

There seem to have been several other arches in the neighbourhood of the curia or senatus, and further on in the street which led into the Campus Martius; but whether these belonged to the numerous ones before alluded to as erected by Domitian, or were the works of a later age, cannot be determined, nor are they of such importance as to justify any extended research in this place. The haphazard names lestowed on them in the middle ages, as Arcus manus carneae, and perhaps also panis awrei, affurd no clue by which to determine their meaning with any certainty.

Aurelian erected a golden statue of the Gerious of the Roman People on the rostra; and that these were the ancient rostra may be inferred from this statue being mentioned as close to the senatus, or curia, in the Notitia. ("Aurelianus-Genium Populi Romani in Rostra posuit," Catal. Imp. Viems. t. ii. p. 246, ed. Ronc.; "continet,-Genium Populi Romani aureum et Equum Constantini, Senatum, Atrium Minervae," \&cc. Not. Reg. viii.) The same inference may be deduced from a passage in Dion Cassius (xlvii. 2), which describes some valtures settling on the temple of Concordia, as also on the sacellum of the Genius of the People; but as this passage rolates to Augustus and Antony, it likewise proves that the sacellum must have been there long previously to the time of Aurelian, though when it was erected cannot be determined. The Equus Constantini, recorded in the preceding passage of the Notitia, is also mentioned by the Anonymus Einsiedlensis near the arch of Severus, under the title of Cavallus Constantini.

We shall here mention three other statues which stood in this neighbourhood, since they serve to confirm the topography of it as already described. Pliny mentions three Statues of the Sibyl as standing near the rostra. ("Equiden et Sibyllae juxta Rostra esse non miror, tres sint licet," xaxiv. 11.) That he meant the ancient rostra is evident from his going on to say that he considered these statues to be among the earliest erected in Rome. At a late period of the Empire these seem to have obtained the name of the Fates (Moipas or Parcae). They are mentioned by Procopius, in a passage before alluded $t o$, as in the vicinity of the curia and

 кa入eiv, B. G. i. 25.) A whole street or district in this quarter seems to have been named after them, since both the modern charch of S. Adriano, at the eastern corner of the Via Bonella, and that of SS. Cosmo e Damiano, which stands a little beyond the temple of Faustina, and consequently out of the proper boundaries of the forum, are said to have been founded in it. ("Fecit ecclesiam beato Adriano martyri in tribus Fatis," Anastas. Ir. Honor. i. p.

121, Blanch; " In ecclesia vero beatorum Cosmae et Damiani in tribus Fatis," \&cc. Id. V. Hadr. ib. p. 254.) Hence perhaps the name of templum fatale apptied to the temple of Janns.

The last object which wo shall have to describe on the form is the Column of Phocas. Whilst the glorions monuments of Julius and Augastus, the founders of the empire, have vanished, this pillar, erected in the year 608 by Smaragdus, exarch of Ravenna, to one of the neanest and most hateful of their successons, still rears its head to testify the low abyss to which Rome had fallen. It appears from the inscription, which will be found in Canina (Foro Rom. p. 213) and Bunsen (Beschr. vol. iii. p. 271), that a gilt statue of Phocas stood upon the summit. The name of Phocas has been erased from this colamn, prokably by Heraclius; but the date sufficiently shows that it must have been dedicated to him. Previously to the discovery of this inscription, which happened in 1813, it was thought that the column belonged to some building ; and indeed it was probably taken from one, as the workmanship is much superior to what could have been executed in the time of Phocas. Byron alludes to it as the " nameless column with a buried base." In the excavations made in 1816, at the expense of the dachess of Devonshire, the pedestal was discovered to be placed on a raised basis with steps of very inferior workmanship. (Murray's Handbook of Rome, p. 62.) It may be remarked that this column proves the furum to have been in its ancient state, and unencumbered with rubbish, at the commencement of the 7 th century. Between this pillar and the steps of the Basilica Julia are three large bases intended for statues.

## V. The Imperlal Fora.

Forum Julium.-As Rome increased in size, its small forum was no longer capable of accommodating the multitudes that resorted to it on mercantile or legal business; and we have seen that attempts were early made to afford increased accommodation by erecting varions basilicae around it. Under the Empire, when Rome had attained to enormous greatness, even these did not suffice, and several new fora were constructed by various emperors; as the Forum Caesaris or Julium, the Forum Augusti, the Forum Nervae or Transitorium, and lastly the Forum Trajani. The political business, huwever, was still confined to the ancient forum, and the principal use of the new fora was as courts of justice. Probably another design of them was that they should be splendid monuments of their founders. In most cases they did not so much assume the aspect of a forum as that of a temple within an enclosed space, or répevos,-the forum of Trajan being the only one that possessed a basilica. From this characteristic of them, even the magnificent temple of Peace, erected by Vespasian without any design of its being appropriated to the purposes of a forum, obtained in after times the names of Forum Vespasiani and Forum Pacis.

The first foundation of this kind was that of Caesar, enclosing a Temple of Venus Genitrix, which he had rowed before the breaking out of the Civil War. After the battle of Pharsalus the whole plan of it was arranged. It was dedicated after his triumph in b.c. 45, before it was finished, and indeed so hastily that it was necessary to substitate a plaster model for the statue of Venus, which afterwards occupied the cella of the temple. (Plin. $x \times x \nabla$.
45.) Caesar did not live to see it completed, and it was finished by Augustus, as we learn from the Mortumentum Ancyranum. We are told by Appian (B.C. ii. 102) that the temple was surrounded with an open space, or t'épevos, and that it was not destined for traffic but for the transaction of legal business. As it stood in the very heart of the city Caesar was compelled to lay out inmense sums in purchasing the area for it, which alone is said to have cost him "super H. s. millies," or about $900,000 l$. sterling. (Suet. Caes. 26 ; Plin. xxxvi. 24.) Yet it was smaller than the ancient forum, which now, in contradistinction to that of Caesar, obtained the name of Forum Magnum. (Dion Cass. xliii. 22.)

No restige of the Forum Julinm has survived to modern times, and very various opinions have been entertained with regard to its exact site; although most topographers have agreed in placing it behind the N. side of the Forum Komanum, but on sites varying along its whole extent. Nardini was the first who pointed to its correct situation behind the church of Sta Martina, but it was reserved for Canina to adduce the proof.

We must here revert to a letter of Cicero's (ad Att. iv. 16), which we had occasion to quote whell speaking of the restoration of the Basilica Aemilia under the forum of the Republic. It has an important passage with regard to the situation of the Forum Julium, but unfortunately so obscurely worded as to have proved quite a crux to the interpreters. It appears to have been written in B. c. 54 , and runs as follows: "Paullus in medio foro basilicam jam paene texuit iisdem antiquis columnis; illam autem quam locavit facit magnificentissimam. Quid quaeris? nihil gratius illo monumento, nihil gloriosius. Itaque Caesaris amici (me dico et Oppium, dirumparis licet) in monumentum illud, quod tu tollere laudibus solebas, ut forum laxaremus et usque ad atrium Libertatis explicaremus, contempsimus sexcenties H. s. Cum privatis non poterat transigi minore pecunia. Efficiemus rem gloriosissimam : nam in Campo Martio septa tributis comitiis marmorea sumus et tecta facturi eaque cingemus excelsa porticu," \&cc. Of these words Becker has given two different interpretations. He first imagined (Handb. p. 302, seq.) that Cicero was speaking only of two buildings : the Basilica Aemilia, which Paullus was restoring, and a new basilica, which the same person was building with Caesar's money, and which was afterwards named the Basilica Julia. But before he had finished his work he altered his mind, and at p. 460 pronounces his opinion that Cicero was speaking of no fewer than four different edifices : lst, the Basilica Paulli ("Paullus-Columnis"): 2nd, the Basilica Julia ("il-lam-gloriosius"); 3rd, the Forum Julium ("Itaque -pecunia") ; 4th, the Septa Julia ("Efficiemus," \&c.). With all these views, except the second, we are inclined to agree; but we do not think it probable that Paullus would be constructing two basilicae at the same time; nor do we perceive how a new one only then in progress could have been a monument that Atticus had been accustomed to praise. The chief beauty of the basilica of Paullus was derived from its colanns (" Nonne inter magnifica dicamus basilicam Paulli columnis e Phrygibus mirabilem," Plin. xxxvi. 24. s. 1); and though it had undergone two or three subsequent restorations before the time of Pliny, we are nevertheless inclined to think tiat the columns praised by him were the very same
which Atticus had so often admired. However this may be, we see through the obscurity of Cicero's letter the rough sketch of a magnificent design of Caesar's, which had not yet been perfectly matured. The whole space from the back of the Basilica Aemilia as far as the Septa Julia in the Campus Martius was to be thrown open; and perhaps even the excavation of the extremity of the Quirinal, ultimately executed by Trajan, may have been comprised in the plan. Cicero is evidently half ashamed of this vast outlay in favour of Caesar, and seeks to excuse it with Atticus by leading him to infer that it will place his favourite monament in a better point of view. When Cicero wrote the plan was evidently in a crude and incipient state. The first pretence put furth was probably a mere extension of the Forum Romanum; but when Caesar a few years later attained to supreme power the new foundation became the Forum Julium. In his position some caution was requisite in these affairs. Thas the curia of Faustus was pulled down under pretence of erecting on its site a temple of Felicitas-a compliment to the boasted good fortune of Sulla, and his name of Felix. But instead of it rose the Curia Julia. The discrepancy in the suins mentioned by Cicero and Suetonius probably arose fron the circumstance that as the work proceeded it was found necessary to buy more houses. If this buying up of private houses was not for the Forum Julium, for what purpose could it possibly have been? The Curia Julia stood on the site of the Curia Hostilia, the Basilica Julia on that of the Sempronia, and we know of no other buildings designed by Caesar about the forum.
With regard to the situation of the Atrium Libertatis, to which Cicero says the forum was to be extended, we are inclined to look for it, with Becker, on that projection of the Quirinal which was subsequently cut away in order to make room for the forum of Trajan. The words of Livy, "Censores extemplo in atrium Libertatis escenderunt" (xliii. 16), seem to point to a height. A fragment of the Capitoline plan, bearing the inscription lubertatis, seems to be rightly referred by Canina to the Basilica Ulpia. (Foro Rom. p. 185; cf. Becker, Antwort, foc. p. 29.) Now if our conjecture respecting the site of the Atrium Libertatis is correct, it would have been occupied by the forum of Trajan and its appurtenances; and it therefore appears probable that the Atrium was comprehended in the Basilica Ulpia. Nor is this a mere unfounded guess, since it appears from some lines of Sidonius Apollinaris (Epig. 2), that in his time the Basilica Ulpia was the place where slaves received their manumission. And that the old Atrium Libertatis was devoted to manamission and other business respecting slaves appears from several passages of ancient uuthors. 'Thus Livy: "Postremo eo descensum est, ut ex quatuor urbanis tribubus unam palam in Atrio Libertatis sortirentur, in quam omnes, qui servitutem servissent, conjicerent" (xlv. 15). And Cicero: ${ }^{4}$ Sed quarestiones urgent Milonen, quare sunt habitae nunc in Atrio Libertatis: Quibusnam de servis?" Scc. (Mil. 22). Lastly, it may be mentioned that the following fragment of an inscription was found near the church of $S$. Martina, and therefore near this sput: -

## senatvs . popvlvsque [romanvs] Libehtati.

(Canina, Foro Rom. p. 391 ).
The preceding letter of Cicero's points to the

Foram Julium as closely adjoining the Basilica Aemilia, and there are other circumstances that may be adduced in proof of the same site. Orid (Fast. i. 258) alludes to the temple of Janus as lying between two fora, and these must have been the Forum Romanum and the Forum Caesuris. Pliny's story (xvi. 86) of the lotus-tree on the Vulcanal, the roots of which penetrated to the forum of Caesar, whatever may be its absolute truth, mast at all events have possessed sufficient probability to be not actually incredible; and there is no situation for Caesar's forum which tallies with that story better than that here assigned to it with relation to the site of the Vulcanal, as established in the preceding pages. Our Vulcanal need not have been distant more than about 30 yards from the Forum Julium; that of Becker lies at about five times that distance from it, and would render Pliny's account utterly improbable.

Palladio mentions that in his time considerable remains of a temple were discovered behind the place where the statue of Marforio then stood, near the charch of S. Martina, which, from the cornice being adorned with sculptures of dolphins and tridents, he took to be one dedicated to Neptune. But as we have no accounts of a temple of Neptune in this neighbourhood, and as these emblems would also suit the sea-born goddess, it seems probable that the remains belonged to the temple of Venas Genitrix. This is still more strikingly confirmed by Palladii's account of its style of architecture, which was pyennstyle, as we know that of Venus to have been. (Archit. lib. iv. 31; comp. Vitruv. iii. 23.)

We can hardly doubt, therefore, that the forum of Caesar lay on this spot, as is indicated by so many variọus circumstances. The only objection that has been urged against it is the following passage of Servius, which places the Arginetum, a district which undoubtedly adjoined the Forum Julinm, in quite a different part of the town: "Sunt geminae belli portao-Sacrarium hoc Numa Pompilius fecerat cirra imum Argiletum juxta theatrum Marcelli, quod fuit in duobus brevissimis templis. Duobus autem propter Janum bifrontem. Postea captis Faliscis, civitate Tusciae, inventum est simulacrum Jani cum frontibus quatuor. Unde quod Numa instituerat translatum est ad forum Transitorium et quatuor portaram num templum est institutum" (ad Virg. Aen. vii. 607). That the Argiletum adjoined the forum of Cuesar is evident from the following epigram of Martial's (i. 11\%. 8): -
" Quod quarris propius petas licebit Argi nempe soles subire letum: Contra Caesaris est forum taberna Scriptis postibus hinc et inde totis Omnes ut cito perlegas poetas. Illinc me pete, ne ruges Atrectum; Hoc nomen dominus gerit tabernae."
Hence, if Servius is right, the forum of Caesar could not have been where we have placed it, but on the S. side of the Capitoline hill; and this opinion has found some defenders (Mommsen, Annali dell Instit. vol. xvi. p. 311 , seq.) We trust, however, that the situation of the small temple of Janus, the index belli pacisque, has been clearly established by what we have said in the former part of this article. Servius is evidently confounding this little temple with the larger one near the theatre of Marcellas; and indeed the whole passage is a heap of trash. For how can we connect such remote events as the
taking of Falisci, or rather Falerii, and the erection of a Janus Quadrifrons on the Forum Transitorium, which did cot exist till many centuries afterwards? Livy also indicates the Janus-temple of Numa as being in the Argiletum (" Janum ad infimuin Argiletum indicem pacis bellique fecit," i. 19); whence we must conclude that it was a district lying on the N . side of the forum. We do not think, however, with Becker (Handb. p. 261), that any proof can be dramn from the words of Virgil ( $A$ en. viii. 345, seq.), where, with a poetical license, the various places are evidently mentioned without regard to their order. But how far the district called Argiletum may have been encroached upon by the imperial fora it is impossible to say.

The forum of Caesar mast have been very splendid. Before the temple of Venus stood a statue of the celebrated horse which would suffer nobody but Caesar to mount him, and whose fore-feet are said to have resembled thuse of a human being (Suet. Cacs. 61; Plin. viii. 64). The temple was adorned with pictures by the best Greek artists, and enriched with many precious offerings (Plin. vii. 38, ix. 57, xxxvii. 5, \&c.). It was one of the three fora devoted to legal business, the other two being the Forum Romanum and Augusti: -
"Cansas, inquis, agam Cicerone disertius ipso Atque ecit in triplici par mihi nemo foro."
(Mart. iii. 38. 2.)
Whether it was ever used for assemblies of the senate seems doubtful; at all events the passage cited by Becker (Handb. p. 369) from Tacitus (Ann. xvi. 27) proves nothing, as the word curia there seems to point to the Curia Julia. Of the subsequent history of the Forum Caesaris but little is known. It appears to have escaped the fire of Nero; but it is mentioned among the buildings restored by Diocletian after the fire under Carinus ("Opera publica arserunt Senatum, Forum, Caesaris patrimonium, Basilicam Juliam et Graecostadium, Catal. Imp. Vienn. where, according to Preller, Rey. p. 143, we mu-t read "Forum Caesaris, Atrium Minervae.") It is mentioned in the Ordo Romanus, in the year 1143, but may then have been a ruin.

Forvm Augusti. - This forum was constructed for the express purpose of affording more accommodation for judicial business, which had now increased to such an extent that the Forum Romanum and Forum Julium did not suffice for it. It included in its area a Temple of Mars Ultor, vowed by Augustus in the civil war which he had undertaken to avenge his father's death:-
« Mars ades, et satia scelerato sanguine ferrum, Stetque favor causa pro meliore tuas.
Templa feres, et, ine victore, vocaberis Ultor. Voverat, et fuso laetus ab hoste redit."
(Ov. Fast. v. 575 , seq.)
This temple was appointed to be the place where the senate should consult about wars and triumphs, where provinces cum imperio should be conferred, and where victorious generals should deposit the insignia of their triumphs (Suet. Aug. 29). The forum was constracted on a smaller scale than Augustus had intended, because he could not obtain the consent of some neighbouring householders to part with their property (Ib. 56). It was opened for business before the temple was finished, which was dedicated b. с. I ( 16.29 ; Vell Pat. ii. 100). The forum exraded on each side of the temple in a senicircular
shape (Palladio, Archit. iv.), with porticoes, in which Augustus erected the statues of the most eminent Roman generals. On each side of the temple were subsequently erected triumphal arches in honour of Germanicus and Drusus, with their statues (Tac. Ann. ii. 64). The temple is said to have been very splendid (Plin. xxxvi. 54), and was adorned, as well as the forum, with many works of art ( $1 b$. vii. 53, xxxiv. 18. xxxv. 10; Op. Fast. v. 555, \&c.). The Salii were accustomed to banquet here; and an anecdote is recorded of the emperor Claudius, that once when he was sitting in judgment in this forum, he was so attracted by the savoury odour of the dimer preparing for these priests, that he quitted the tribunal and joined their party. (Suet. Cland. 33.) This anecdote has partly served to identify the site of the temple, an inscription having been discovered on one of the remaining walls in which the Salii and their Mansiones are mentioned (Canina, Foro Rom. p. 150).

The remains of three of the columns, with their entablature, of the temple of Mars Ultor are still to be seen near the place called the Arco de' Pantani. It must therefore have adjoined the back of the Forum Cresaris. These three columns, which are tall and handsome, are of the Corinthian order. All we know respecting the history of the Forum Augusti is that it was restored by Hadrian (Spart. IIulr. 19). The church of S. Basilio was probably built on the site of the temple (Ordo Rom. 1143; Mabill. Mus. Ital. ii. p. 143).

TFMIPIE OF MARS ULTOR.
Forum Transitorium or Forum Nervac.-This forum was begun by Domitian, but completed and dedicated by Nerva (Suet. Dom. 5; Aur. Vict. Caes. 12). We have said that Domitian had a particular predilection for Minerva, and he funded a large Aedes Minervae in this forum ("Dedicato prius foro, quod appellatur Pervium, quo aedes Minervae eminentior consurgit et magnificentior," A. Vict. Ib.). From this circumstance it was also called Forum Pall:dium ("Limina post Pacis Palladiumque forum," Mart. i. 2. 8); besides which it also had the name of Pervium or Transitoriam, apparently because it was traversed by a street which connected the N . and S. sides of the city, which was not the case with the other fora (Niebuhr, in the Beschreibung Roms. iii. p. 282). Thus Lampridius (Alex. Seo. 28): "In foro Divi Nerrae, quod Transitorium dicitur;" and Aurelius Victor in the passage just cited. From the line of Martial's before quoted, it appears to have adjoined the temple of Peace, erected by Vespasian, which we shall have occasion to describe in another section. There appears to have stood upon it a temple, or rather perhaps fourfold archway of Janus Quadrifrons, probably somewhat resembling that which still exists near $S$. Georgio in Velabro, connecting the roads which led to the four different forums, namely, the Forum Romanum, Forum Cuesaris, Forum Nervae, and Forum Pacis, as Vespasian's temple of Peace was sometines called. The passage.
before quoted from Servius (ad Aem. vii. 607), howover absurd in other respects, may at least be received as evidence of the existence of such a Janus here, especially as it is confirmed by other writers. Thus

 бeoworúvon (de Mens.iv. 1). So also Martial: -
" Nunc tua Caesareis cingantur limina donis Et fora tot numeros, Jane, quot ora geris"
(x.28.5).

In the middle ages this Janus-temple appears to have borne the name of Noah's Ark.

In the tine of Pope Paul V..considerable remains existed of the pronaos, or vestibule of this temple of Minerra, consisting of several columns with their entablature, with the following inscription: n(P. nerva. caesar. avg. pont. max. trib. pot. II. mp. II. Procos. (Canina, Foro Rom. p. 171.) Paul took these columns to adorn his fountain, the Acqua Paolo, on the Janiculum. In the Fia Alessandrina there are still remains of the wall of peperino which formed the enclosure of the forum, together with two large Corinthian columns half buried in the earth, now called the Colonnacce. Their entablature is corered with matilated reliefs, and over them is an Attic, with a figure of Minerva, also in relief. The situation of the forum of Nerva, and the remains of it existing in his time, are decribed by Palladio (Architettura, lib. iv.), also by Du Pérac (tom. vi.), who observes, that it was then the most complete ruin of a forum in Rome. The Colonnacce are represented by Gamucci, Antichild di Roma, p. 55; Desgodetz, p. 159, seq.; Overbeke, pl. 39. There is a good description of the fora of Augustus and Nerva by Niebuhr in the Beschreibung Roms, vol. iii. p. 275.

Forum Trajami - Thus between the Capitoline and Palatine hills, the Velian ridge and the ascent of the Quirinal, the valley was almost filled with a splendid series of public places, which we might imagine conld hardly be surpassed. Yet it was reserved for Trajan to complete another forum, still more magnificent than any of the preceding ones, for the construction of which the Quirinal itself was forced to yield up part of its mass. Previously to the time of Trajan that hill was connected with the Capitoline by a sort of isthmus, or slender neck; the narrow and uneven defile between them was covered with private houses, and traversed only by a single road of commanication between the forum and Cainpus Martius. But on the western side of this defile lay one of the handsomest quarters of Rome, containing the Septa Julia, the Flaminian circus, the theatres of Balbus, Pompey, and Marcellus, together with those temples and porticoes which so much excited the admiration of Strabo, and which he has described in a passage quoted in the former part of this article. The design of the forum of Trajan was, therefore, to connect this quarter of the town with the imperial fora in a manner not anworthy of the magnificent structures on either side of it. This gigantic work, a portion of which still remains, though the greater part has disappeared under the united influences of time and barbarism, is supposed to have been projected, and even begun, by Domitian. (Aur. Vict. Caes. 13; Hieron. i. p. 443, Ronc.; Cassiod. Chron. ii. p. 197.) It was, however, executed by Trajan, with the assistance of the celebrated architect Apollodorus of Damascus. (Dion Cass. kxix. 4.) But no
ancient author has left us a satisfactory description of it, and we are obliged to make out the plan, as best we may, from what we can trace of the remains; a task somewhat aided by the excavations made by the French when they had possession of Rorne at the commencement of the present century. (See Tournon, Etudes Statist. Rome, tom. ii. p. 253, pl. 28, 29; Fea, Notisie degli scavi nelr Anfiteatro Flavio e nel Foro Traiano, Rom. 1818; Bunsen, Les Forwens do Rome, $\mathrm{ii}{ }^{40}$ partie, p. 24, seq.) This immense work consisted of the following parts :-

1. The forum, properly so called, a large open area immediately adjoining the NW. sides of the fora of Caesar and Angustus, and filling the whole space between the Capitoline and Qairinal, - much of the latter hill, indeed, and some of the former, having been cut away in order to make room for it. This part, which was called the area or atrium furi (Gell. xiii. 24 ; Amm. Marc. xvi. 10), contained, in the middle, an equestrian stctue of Trajan, and was adorned with many other statues. The SW. and NE. sides of this square. Where the ground had been cut away from the hills, was occupied with semicircular buildings. There are still large remsins of that nnder the Quirinal, which are vulgarly called the baths of Paullus Aemilius. The lower part of this edifice, which has ouly been laid open within the last few years, consists of quadrangular niches, which probably served as little shops ; above them was a vaulted portico, with rooms and staircases leading to the upper floors. Piranesi and other topographers conjectured that there was another similar building on the side of the Capitol, at the place called the Chiavi d' Oro; but Canina was the first to demonstrate its existence in his Indicazione Topografica Along the front of each of the crescents thus formed there seems to have been a portico, which gave the forum its proper rectangular form. The forum was thas divided into three parts, through both the exterior ones of which there was a road for carriages, as appears from traces of pavement; whilst the square, or middle division was paved with flag-stones. In the middle of the SE. side there seems to have been a triumphal arch. vestiges of which were discovered in the time of Flaminio Vacca (Memorie, no. 40). forming the principal entrance on the side of the imperial fora.

FORUM TRAJANI.
2. Next to the foram on the NW. side lay the BAsilica Ulipia, which extended across it lengthways, and thus served to form one of its sides. The basilica was called Ulpia from Trajan's family name The plan of the middle part is now laid entirely open. It seems to have been divided internally by four rows of columns, thas forming fire aisles, with circalar absides or chalcidica at each ond. During the ex.
cavations the bases of these columns were discovered partly in their original situation. But it is doubtful whether the fragments of columns of gray granite now seen there belonged to the interior of the basilica; it is more probable that it had columns of giallo antico and paonezzato, remains of which have been found (Nibby, For. Trajano, p. 353). The floor was pared with slabs of the same marbles. It is supposed from the authority of two passages in Pausanias to have had a bronze roof (v. 12, x. 5). On the side which faced the forum were three magnificent entrances, a large one in the middle and two sinaller on each side, decorated with columns, as may be seen on medals.

BASILICA ULPIA.
On the NW. side of the basilica stood, and still stands, the Column of Trajan, the finest monament of the kind in the world. This column was intended to answer two purposes: to serve as a sepulchre for Trajan, and to indicate by its height the depth of soil excavated in order to make room for the forum and its buildings. The latter object is expressed by the inscription, which runs as follows :-

SENATVS . POPVLVSQVE . ROMANVS .
IMP. CAESARI . DIVI . NERVAE . F. NERVAE
TRALANO . AVG. GERM. DACICO . PONTIF.
MAXIMO . TRIB. POT. XVII. IMP. VI. COS. VI. P. P. AD . DECLARANDVM • QVANTAE . ALTITVDINIS MONS . ET . LOCVS . TANT[IS . OPERI]BVS . SIT [egestivs.
(Cf. Aur. Vict. Epit. 13; Dion Cass. Ixviii. 16). The height of the column, including the pedestal, is $127 \frac{1}{2}$ English feet. The diameter at the base is between 12 and 13 feet, and rather more than a foot less at the top. The shaft consists of 19 cylindrical pieces of white marble, in which steps are cut for ascending the interior. On the top was a statue of Trajan, now replaced by that of St. Peter, erected by Pope Sixtus V. When the tomb beneath was opened by the same pontiff, in 1585, it was discovered to be empty. Round the column runs a spiral band of admirable reliefs, representing the wars of Trajan against Decebalus, and containing no fewer than 2500 human figures. The height of the reliefs at the bottom is 2 feet, increasing to nearly double that size at the top; thus doing away with the natural effect of distance, and presenting the figures to the spectator of the same size throughout. The best descriptions of this magnificent column will be found in Fabretti, De Columna Trajani, Rome, 1690, with plates by Pietro Santi Bartoli; Piranesi, Trofeo, o sia magnifica Colonna Coclide, foc., with large folio drawings ; De Rossi, Colonna Trajana designata.

The column stood in an open space of no great extent, being 66 feet long and 56 broad. This
space was bounded on its two sides by porticoes with double columns. In the NW. side of the ba-

## COLUMN OF TRAJAN.

silica,* on either side of the column, were two libraries, the Bibliotheca Graeca and Latina, as indicated by Sidonius:-
" Cum meis poni statuam perennem
Nerva Trajanus titulis videret
Inter auctores utriusque fixam
Bibliothecae."-(ix. Epigr. 16.)

* It is remarkable, however, that the library is called by A. Gellius, "Bibliotheea templi Trajani" (xi. 17).

ROMA.
8. There are evident traces that Trajen's form extended still farther to the NW., though it is doabtful whether this extension was owing to Trajan himself or to Hadrian. Excavations in this direction have brought to light enormous granite pillars belonging probably to the temple which Hadrian dedicatod to Trajan (Spart. Hadr. 19), and which

TEMPLE OF TRAJAN.

TEMPLS OF TRAJAN.
is mentioned in the Notitia in conjunction with the column. This is further confirmed by some inscriptions bearing the name of Hadrian which have been discovered in this quarter. (Bunsen, Les Forum Romains, iide partie, p.35.) Thas the spuce occupied by these noble structures extended from the fora of Caesar and Augustus almost to the Via Lata, or to the modern Piasza degli Apostoli.

How long the forum of Trajan existed is uncertain. The Anonymous of Einsiedlen mentions it in the way from Porta Nomentana to the Forum Romanum. In the Mirabilia it seems to be spoken of as a thing that has disappeared.

## VI. The Palatine and Velia.

After the Capitol and forum, the Palatine hill is undoubtedly the most interesting spot at Rome, both from its having been the cradle of the eternal city, and also the seat of its matured power-the residence of the emperors when those emperors ruled the world, or, in the words of Tacitus, "ipsa imperii arz " ( $\boldsymbol{H} . \mathrm{iii} .70$ ), $\rightarrow$ circamstance from which it has given name to the residences of subeequent princes. (Dion Cass. liii. 16.). In treating of the topography of this region, and indeed of that of the remainder of the citt, we shall not endeavour to observe a chronological order, as was desirable in treating of the forum, in order that the reader might gain a clear idea of its appearance in the various periods of Roman history; but shall follow the most convenient method without regard to the dates of the

## ROMA.

different objects mentioned. We have already described the sitaation and height of the hill The latter, however, cannot be very sccarately given, as the soil is covered to a great depth with rabbish, the sole remains of those magnificent edifices which once stood apon it. On the side of the Circus Maximus, indeed, in the Vigna ded Collegio Ingless, these ruins assume something of a more definite form; but the gigantic arches and terraces at that part, though they may still excite our wooder, are not sufficiently perfect to enable us to trace any plan of the buildings which they once formed. However, they must all have been subsequent to the time of Nero; since the ravages of the fire under that emperor were particularly destructive on the Palatine hill. Hence the chief topographical interest attaches to the declivities of the hill, which present more facilities for ascertaining spots connected with and sanctified by the early traditions of the city,-of which eeveral have already been discussed, as the Porta Romanula and Clivus Victorive, the Porta Mugionis, the Curiae Voteres, \&c.

We have already seen that the declivity towards the Capitoline hill was called Grrmalus or Cermalus; but though in ancient times this was regarded as a separate hill, the reason is pot clear, since it by no means presents any distinct features, like the Velia. Here was the Luprercal, according to tradition a grotto sacred to Pan ever since the time of the Arcadians (Dionys. i. 32, 79), and near it the Fious Rumiralus, or sacred fig-tree, under which Romulus and Remns wers discovered suckled by the wolf. It is difficult to detarmine the exact spot of the Lupercal. Evander points it oat to Aeneas as lying "gelida sab rupe" (Virg. Aen. viii. 343), and Dionysius ( $L$ c.) doscribes it as on the road ( $\kappa$ ard Thy 880y) leading to the Circus Maximus; and his anthority is preferable to that of Servius, who describes it as "in Circo" (ad Aem. viii. 90). Its most probable site therefore is at the wertarn angle of the hill, towards the circus. Its situation is in some degree connected with that of the Casa Romuls. The deacription of the 101h Regio, or Palatine, in the Notitia begins at the Casa Romuli, and proceeding round the base of the hill to the N. and E. onds, in coming from the circus, with the Lupercal; whenco it is plain that the Casa Romali must have stood a little to the N. of it Plutarch notices the Casa Romuli, which was also called Tugarium Faustali, in the following manner: 'Pøu

 20). Here the expression Kadो 'Ancty is pusaling, as an equivalent name dues not occur in any Latin anthor. Properly dery signifies the aca-ahore, and cannot therefore be applied to the banks of the Tiber; nor, in prose at least, to an inland bank. Hence Preller is inclined to think that it is merely Plutarch's awkward translation of the Roman name for a place called Pulcra Rupes, which obtained this appellation after the Lupercal had been restored by Augustus and adorned with architeotoral elevations. (Regionen, p. 181.) Bat Plutarch was surely master of his own language; and though he may not have been a very profound Latin scholar, yet as he lived some time in Rome and occapied himself with studying the history and manners of the people, we may perhape give him credit for knowing the difference between rupes and littus. It ceems more probable therefore that the Roman
came of the place alluded to was Purcrum Littus than Pulcra Rupes (though unfortunately we do not find it mentioned in any Latin anthor), and that, like the Casa Romali and Lupercal, it was a traditionary name, as old as the story of Rnmulus and Remus itself. According to that story, we must recollect that the Tiber had overflowed its banks and formed a lake here, and that the cradle was washed ashore at the foot of the Palatine; whence the name littus, which is frequently used of the shores of a lake, might without impropriety be applied to this spot. The Ba0رoi or steps mentioned by Platarch in the preceding passage were of course a more recent work, bat their date cannot be fixed. Propertius ( v .1 .9 ) seems to allude to them in the following passage as existing even in the time of Romulus and Remus:-
"Qua gradibus domus ista Remi se sustulit olim Unus erat fratrum maxima regna focus."
But though we can hardly imagine their existence at that time, yet the passage at all events suffices to prove the existence of the steps in the time of Aggustus. Becker, however, will by no means allow this. (Handb. p. 420 and note.) Plutarch goes on to say that in the neighbourhood of the Casa Romuli stood the cherry-tree said to have sprong from the lance hurled by Romulus from the Aventine to the Palatine; and that the tree withered and died from the roots having been injured when Caius Caesar (Caligula) cansed the steps to be

 Becker drawe the conclusion that this was the origin of the steps, and that they did not exist before the time of Caligula. But this is by no means a necessary consequence from Plutarch's words, since $\mathbf{d T r}_{1}$ areudlco often signifies to repair or make better. We find the same steps meationed by Solinus under the name of Scalae Caci: "Ad supercilium scalarum Caci habet terminum (Roma Quadrata), abi tugorium fuit Fanstuli. Ibi Romulus mansitavit," \&ce. (i.18). It cannot be doubted that these are the same steps mentioned by Propertius and Platarch. Gerhand proposed to emend this passage by reading Caii for Casi; an emendation of which Becker of course approved, as it suits his view that the steps did not exist before the time of Caligula. But unfortunately he was not aware of a passage in Diodorus Siculus which also mentions these steps in a manner confirmatory of the account of Solinus and Propertius:

 inecvoŷ Kaxiay (iv. 21). And as Diodorus wrote in the age of Augastas, the existence of the steps before the time of Caligula in thus proved.
An Aedes Romuli is also mentioned on the Germalus in the sacred books of the Argives quoted by Varro (L. L. r. § 54, Müll.); but it is not found in any other author, and hence it may appear doubtful whether it is not the same as the Casa Romuli. The round church of $S$. Teodoro on the W. side of the Palatine has frequently been identified with this Aedes Romuli, and it is very probable that it was built over the remains of some ancient temple; bot it is too far from the circus to have been the Casa Romuli, which lay more towards S. Anastasia. Beasides the Casa seems to have been nothing more then a little thatched but; of which, as we have
seen, there appears to have been a duplicate on the Capitol.

In the dearth of any more accurate information we cannot fix the situation of these venerable relics of Roman antiquity more precisely than may be gathered from the preceding general indications. M. Valerins Messala and C. Cassius Longinus, who were censors in B.c. 154, projected, and even began, a theatre at this spot, which was to extend from the Lupercal on the Germains towards the Palatine. But this scheme was opposed by the rigid morality of Scipio Nasica, and all the works were put up to anction and sold. (Vell. Pat. i. 15 ; Val. Max. ii. 4. § 2 ; Appian, B. C. i. 28.) The Lapercal is mentioned in the Monumentum Ancyranum, as reconstructed by Augustus; whence Canina infers that the ancient one must have been destroyed when this theatre was commenced. (Indicaeione Topogr. p. 460, 1850.) The Casa Romuli is represented by Fabius Pictor, as translated by Dionysius of Halicarnassus (i. 79), to have been carefully preserved in his time, the damage occasioned by age or tempests being made good according to the ancient pattern. Whether the building mentioned in the Notitia was still the same it is impossible to say.

We have already noticed, when treating of the city of Romulus, the Sanctuary of Victoriamost probably a sacred grove-and the Clivus Victoriar on the NW. slope of the Palatine. At or near this spot an Ardes Matris Deum was erected B. c. 191, to contain the image of the Mater Idaea, which Scipio Nasica had brought from Asia thirteen years before. (Liv. xxxvi. 35; Cic. Har. R. 12.) It must have been to the N. of the Casa Romuli, since it is mentioned after it in the Notitia, when proceeding in that direction, yet at some distance from the N. point of the hill, between which and the temple the Domus Tiberiana must have intervened. It is recorded as having been twice burnt down; once in B. C. 110, when it was rebuilt by Metellas (Jul. Obs. 99), and again in A. D. 2 , in the same fire which destroyed the palace of Augustus, by whom it was restored. (Val. Max. i. 8. § 11 ; Dion Cass. Iv. 12 ; Mon. Ancyr.). It must also have been destroyed in the contlagration under Nero, and again rebuilt. Becker (Handb. p. 421) observes that its front must have faced the E., as the statue of the Magaa Mater Idsea is described by Dion Cassius as looking that way (x|vi. 43). But this relates only to the statue ; and we fancy that there is some reason to believe, from a passage in Martial, that the temple was a round one, and could not therefore be properly said to face any way. In this passage two temples aro mentioned (i. 70.9):-
"Flecte vias hac qua madidi sunt tecta Lyaei Et Cybeles picto stat Corybante tholus."
Becker observes (p. 422) that the age and situation of the temples here mentioned cannot be determined, as they occur nowhere else; and this seems to be true of the temple of Bacchus; but there appears to be no reason why the Tholus Cybelfg-which Becker writes Torus, without any apparent meaning-may not have been the Aedes Matris Ineum before referred to. The description of the road to the house of Proculus given in this epigram suits the situation of this temple; and the house itself is mentioned as "nec propior quam Phoebus amat." Now, the temple of Apollo, built by Augustus, lay close to that of the Idaean Mother, as we shall see presently; and,
indeed, they are mentioned in one breath in the Notitia. ("Aedem Matris Deum et Apollinis Rhamnusii.") That this Tholus Cybeles may have been the temple which once occupied the site of the present circular charch of S. Teodoro before referred to, we can only offer a conjecture; its situation, at least, admirably corresponds with that of the temple of the Idaean Mother.

We find a temple of this deity, as well as one of Juventas mentioned in the Monumentum Ancyranum (tab. iv. l. 8) as erected by Augustus on the Palatine. The first of these may, however, have been only a restoration of the ancient temple. We can hardly conclude from the word feci that it was an entirely new and separate structure; since we find the same word used in that record with relation to other edifices which were among the most ancient in Rome, and of which it is not likely that there shonld have been duplicates : such as the temple of Jupiter Feretrius on the Capitol, that of Quirinus, that of Juno Regina on the Aventine, and others. In these cases it seems probable that the edifices were in such a ruinous state from long neglect that Augustus fonnd it necessary to rebuild them from their foundations; which would justify the use of the word feci instead of refeci, but hardly the regarding of them as entirely new temples. The great care used by Augustus in restoring the ancient temples is alluded to by Horace (Od. iii. 6). The temple of Juventas may possibly have been new; at all events it could hardly have been the one dedicated by C. Licinius Lucullus about the same time as that of the Mater Magna Idaea, since the former was in the Circus Maximus. (Liv. xxxvi. 36 ; cf. Cic. Brut. 18, ad Atc. i. 18.)

What the Pentapylum may bave been which is mentioned in the Notitia between the temple of Apollo and the palace of Augustus, it is difficult to say, except that it was probably a building with five gates. Preller (Regionen, p. 183) cites a passage from an anonymous describer of the Antiquities of Constantinople in Banduri (Imp. Orient. i. p. 21), in which a building in that city called Tetrapylum, which was used for depositing and bewailing the corpse of the emperor, or of that of any member of his family, is mentioned; and as this building is said to have been imitated from one at Rome, Preller thinks it highly probable that the Pentapylum in question may have afforded the model, and been used for a similar purpose.

Of the teinples of Jupiter Victor and Jupiter Stator - the furmer near the Nova Via and Porta Mugionis, the latter farther off towards the Sacra Via -we have already spoken when describing the Romulean city; besides which there seems to have been a temple of Jupiter Propuonator, probably of the time of the Antonines, kuown only from an inscription. (Gruter. ccc. 2; Orell. 42; Canima, Indicazione, p. 469.) We have also had occasion to mention the Curane Veteres and the sacellum of Fortuna Respiciens. Other ancient buildings and shrines on the Palatine, the sites of which cannot be exactly determined, were the Curin Salioruy (Palatinorum), where the ancilia and the lituus Romuli were preserved, probably not far from the temple of Vesta (Dionys. ii. 70; Cic. Div. i. 17 ; Gruter, Inscr. clxiii. 5 ; Orell. 2244); a fanum, or Ara Febris (Cic. Leg. ii. 11 : Val. Max. ii. 5. § 6; Plin. ii. 5), an ancient sacellum of the Dea Viriplaca, the appeasing deity of connubial quarrels (Val. Max. ii. 1. § 6); and an
'Aфpodioloy, or Temple of Venus (Dion Cass. lxiv. 3).

When the Romans began to improve their domestic architecture, and to build finer houses than those which had contented their more simple ancestors, the Palatine, from its excellent and convenient situation, early became a fashionable quarter. We have already alluded slightly to some of the more noted residences on this hill. The house of Vitrovius Vaccus is one of the most ancient which we find mentioned in this quarter. It was pulled down in B. C. 330 in consequence of the treasonous practices of its owner ; after which the site remained unbuilt upon, and obtained the name of Vacci Prata (Liv. viii. 19 ; Ps. Cic. p. Dom. 38); but how long it remained in this state it is impossible to say. The Porticus Catuli rose on the Palatine from a similar cause. Its site had previously been occupied by the house of M. Fulvius Flaccus, who perished in the sedition of C. Gracchus : the house was then razei, and the ground on which it stood called Fiaccuasa Area, till this portico was erected on it by Q. Lutatius Catulus, after his Cimbric victory. (Val. Max. vi. 3. § 1 ; Ps. Cic. p. Dom. 43.) Near it stood the Honse of Cicero which he bought of Crassus, probably not the celebrated orator, - the fate of which we have already related. It seems to have been on the NE. side of the Palatine, as Cicero is described by Plutarch as traversing the Sacra Via in order to arrive at the forum (Cic. 22): and Vettius calls Cicero "vicinum consulis," that is, of Caesar, who then dwelt in the Regia (ad Att. ii. 24). Catilineses House was also on the Palatine, and was annexed by Augustus to his residence. (Suet. Ill Gramom 17.) Here also was a House of Antonius, which Augustus presented to Agrippa and Messala (Dion Cass. liii. 27); and also the Hou'se of Scaurus, famed for its magnificence. (Cic. Scaur. 27; Plin. xxxvi. 3.)

With the reign of Augustus a new era commenced for the Palatine. It was now marked out for the imperial residence; and in process of time, the buildings erected by successive emperors monopolised the hill, and excluded all private possessions. Angustus was born in this Region, at a place called ad Capita Bubula, the situation of which we are unable to deternine (Suet. Aug. 5). In early manhood he occupied the house of the orator C. Licinius Calvus " juxta forum super scalas anularias" (Ib. 72); but neither can the site of this be more definitely fixed. Hence he removed to the Palatine, where he at first occupied the Hodse of Hortensius, a dwelling conspicuous neither for size nor splendour. (15.) After his victory over Sextus Pompeius, he appears to have purchased several houses adjoining his own, and to have vowed the Temple of Apollo, which he afterwards built (Vell. Pat. ii. 81; Dion Cass. lxix. 15.) This temple, the second dedicated to that deity at Rome-the earlier one being in the Circus Flaminius-does not, however, appear to have been begun till after the bsttle of Actium, or at all events the plan of it was extended after that event. It is well known that after that victory Augustus dedicated a temple to the Leacadian Apollo near Actium, and in like manner the new structare on the Palatine was referred to the same deity ; whence the phrases "Actius Apollo" (Virg. Aen viii. 704; Prop. iv. 6. 67), and "Phoebus Navalis" (-"ubi Navali stant sacra Palatia Phoebo," Prop iv. 1. 3). It was dedicated in B. c. 27. It was surrounded with a portico containing the Bibliothecae Graeca
et Latina (Suet. Aug. 29; Dion Cass. liii. 1 ; Mon. Ancyr.) These far-famed libraries were quite distinct institutions, as appears from monumental inscriptions to slaves and freedmen attached to them, who are mentioned as " a Bibliotheca Latina Apollinis," or, "a Bibliotheca Graeca Palatina" (Panvinius in Graevius, Thes. iii. col. 305 ; Orell. Inscr. 40, 41). In them were the busts or clipeatae imagines of distinguished authors. (Tac. Ann. ii. 83.) Propertius, in a short poem (iii. 29), has given so vivid a description of the whole building, that we cannot do better than insert it:-
"Quaeris cur veniam tibi tardior? Aurea Phoebo Porticus a magno Caesare aperta fuit.
Tota erat in speciem Poenis digesta columnis Inter quas Danai femina turba senis.
Hic equidem Phoebo visus mihi pulchrior ipso Marmoreus tacita carmen hiare lyra.
Atque aram circum steterant armenta Myronis Quatuor artificis, vivida signa, boves.
Tum medium claro surgebat marmore templum Et patria Phoebo carius Ortygia.
In quo Solis erat supra fastigia currus Et valvae Libyci nobile dentis opus.
Altera dejectos Parnassi vertice Gallos Altera moerebat funera Tantalidos.
Deinde inter matrem deus atque inter sororem Pythius in longa carmina veste sonat."
Hence we learn that the columns of the portico were of African marble, and between them stood statues of the fifty danghters of Danaus (cf. Ovid. Amor. ii. 2. 4.) According to Acron, fifty equestrian statues of the sons of Danaus also stood in the open space. (Schol. ad Pers. ii. 56.) The temple itself was of solid white marble from Luna (Carrara). (Serv. Virg. Aen. viii. 720.) The statue alluded to by Propertius as "Phoebo pulchrior ipso "was that of Augustus himself, which represented him in the dress and attitude of Apollo. (Schol. Cruq. ad Hor. Ep. i. 3, 17 : Serv. ad Virg. Ec. iv. 10.) In the library was also a colossal bronze statue of Apollo, 50 feet in height (Plin. xxxiv. 18), as well as many precious works of art. (Ib. xxxiv. 8, xxxvii. 5, \&cc.) The Sibylline books were preserved in the temple (Suet. Aug. 31; Amm. Marc. xxiii. 3) before which was the spacious place called the Arra Apollinis.

From all these notices we may gather some idea of the splendour of this celebrated temple; but its exact site, as well as that of the Palace of Augustus, is nowhere clearly intimated. From several passages, however, which have been cited when discossing the situation of the Porta Mugionis, we may infer pretty accurately that the latter must have stood at the NE. side of the Palatine, between the arch of Titus and the temple of Vesta. (S. Maria Liberatrice.) It appears from a passage in Ovid ("Inde tenore pari," \&cc., Trist. iii. 1. 59), that the temple must have lain some way beyond the palace, and there seems to be no reason why we may not place it near $S$. Teodoro, though it stood perhaps on the summit of the hill. This seems to be the spot indicated in the Notitia. The temple is there called "aedis Apollinis Rhamnusii"-an epithet not easily explained, notwithstanding the attempt of Preller (Regionen, p. 182); although there can be no donbt that the temple built by Augustus is meant.

In the same document a Domus Tiberiana, or palace of Tiberius, is mentioned as distinct from that of Augustus; a house, indeed, which he probably
inherited, as he was born on the Palatine. (Suet. Tib. 5.) In his youth, when he lived in a quiet, retired manner, he first inhabited the house of Pompey in the Carinae, and afterwards that of Maecenas on the Esquiline (Ib. 15); but when he became emperor, it is most probable that he resided on the Palatine, till he secluded himself in the island of Capreae. The Domus Tiberiana must have stood near the NW. corner of the Palatine, since it is described as affording an exit into the Velabrum ("per Tiberianam domum in Velabrum," Tac. Hist. i. 27). Suetonius, speaking of the same departure of Otho, says that he hastened out at the back of the palace ("proripuit se a postica parte Palatii," Otho, 6); from which passages it would appear that the two palaces were connected together, that of Augustus being the more conspicuous towards the forum, whilst that of Tiberius formed the back front. It was from the latter that Vitellius surveyed the storming of the Capitol. (Suet. Vit. 15.) At a later period of the Empire we find a Bibliotheca mentioned in the palace of Tiberius, which had probably superseded the Palatine Library, as the latter is no longer mentioned. (A. Gell. xiii. 19; Vopisc. Prob. 2.) All these buildings must, of course, have been destroyed in the fire of Nero; but we must assume that, after they were rebuilt, the Domus Augusti et Tiberii still continued to be distinguished, as they are mentioned as separate buildings in the Notitia; and indeed Josephus expressly says that the different parts of the complex of buildings forming the imperial palace were named after their respective founders. (Ant. Jud. xix. 1. § 15).

On or near the Palatine we must also place the Templum Augusti - one of the only two public works which Tiberius undertook at Rome, the other being the scena of the theatre of Pompey. Even these he did not live to finish, but left them to be completed and dedicated by Caligula. (Tac. Ann. vi. 45; Suet. Tib. 47, Cal. 21.) The circumstance of Caligula using this temple as a sort of pier for his bridge to the Capitoline makes it doubtful whether it could have stood on the Palatine hill. (Suet. Ib. 22.). Yet Pliny (xii. 42) alludes to it as " in Palatii templo;" and if it was not exactly on the summit of the hill, it could not have been very far from it. Becker conjectures that the Bridge of Caligula passed over the Basilica Julia; but the only proof is, that Caligula was accustomed to fling money to the people from the roof of the basilica, which he might have ascended without a bridge. (Suet. Cal. 37, Jos. Ant. Jud. xix. 1. § 11.) The bridge, perhaps, did not stand very long. Caligula seems to have made extensive alterations in the imperial palace, though we cannot trace then accurately. (" Bis vidimus urbem totam cingi domibus principum Caii et Neronis," Plin. xxxvi. 24. s. 5.) We have already mentioned that he connected the temple of Castor with it. Yet in his time there must have been still some private dwellings on the NE. side of the Palatine, as Pliny mentions that the lotustrees belonging to the house of Crassus at that spot lasted till the fire of Nero. (lb. xvii. 1.) The enormous buildings of the last-named emperor probably engrossed the whole of the Palatine; at all events we hear no more of private houses there after the commencement of his reign. We have already adverted to Nero's two palaces. The first of these, or Domus Transitoria, with its gardens, though not finished in the same style of splendour
as its successor, the domas aurea, seems to have occapied as large an extent of ground, and to have reached from the Palatine to the gardens of Maecenas and the agger of Servius on the Esquiline. (Suet. Nero, 31 ; Tac. Amb. xv. 39.) The Aurea Domus was a specimen of insane extravagance. Its atrium or vestibule was placed on the Velia, on the spot where the temple of Venus and Rome afterwards stood, and in it rose the colossal Sratus or Nero, 120 feet high, the base of which is still visible at the NW. side of the Colosseum. We may gain an iden of the vastness of this residence by comparing the prose description of Suetonius with the poetical one of Martial, when we shall see that the latter has not abused the privilege of his calling. (Suet. Nero, 31; Mart. de Spect. 2). It was never perfectly finished, and Vespesian, as wo have said, restored the ground to the pablic. We know bat little of the arrangement of the buildings on the Palatine itself under Nero, except that the different parts appear to have retained their former names. Domitian added much to the palace, now again confined to this hill, and fitted it up in a style of extraordinary magnificence; but, though we frequently hear of single parts, such as baths, diaetae, a portico called Sicilia, a dining-room dignified with the appellation of Coenatio Jovis, \&cc., yet we are nowhere presented with a clear iden of it as a whole (cf. Plat. Poph 15; Plin. xxxv. 5. s. 38; Capit. Pert. 11 ; Mart. viii. 36 ; Stat. Sitr. iii. 4. 47, iv. 2. 18, \&c.) The anxiety and terror of the tyrant are strikingly depicted in the anecdoto told by Suetunius (Dom. 14), that he caused the walls of the portico in which he was sccustomed to walk to be covered with the stote, or crystallised gypoum, called phengits, in order that he might be able to see what was going on behind his back. It is ancertain where the Apomaka, or gardens of Adonis, lay, in which Domitian received Apollonius of Tyana, and which are marked on a fragment of the Capitoline plan (Bellori, tab. xi.) Of the history of the palace little more is known. Several acoounts mention the domus aures as having been burnt down in the reign of Trajan (Oros vii. 12; Hieron. an. 105, p. 447, Ronc.), and the palace which succeeded it appears to have been also destroyed by fire in the reign of Commodus (Dion Cass. lxxii. 24; Herodian, i. 14.)

At the soathern extremity of the Palatine, Septimins Severus built the Septizontux, considerable remains of which existed till nour tho ond of the

THE AEPTIZONTUA

16th century, when Pope Sixtus V. cansed the pillers to be carried off to the Vatican. Bepresentations of the ruins will be foand in Da PGrac (tav. 13) and Gamucci (Antichita di Roma, p. 85, Specmluem Rom. Magnifcentiae, t. 45). The name of the bailding, which, however, is very variously written in the MSS. of different anthors, is by some sapposed to have been derived from its form, by others from the circumstance of seven roads meoting at this spot. It seems not improbable that a similar place existed before the time of Severus, since Suetonius mentions that Titus was born near the Septizociam (c. 2); though topographers, but without any adequate grounds, have assigned this to the 3rd Region. It has been inforred from the name that the building had seven rows of columns, one above another, but this notion seems to be without foundation, as the ruins never exhibited traces of more than three rows. The tomb of Severus must not be confounded with it, which, as we learn from Spartianus, was on the Via Appia, and built so as to resemble the Septizooium. The same anthor informs us (Sev. 24) that the design of Severus was to make the Septizonium an atrium of the palace, so that it should be the first object to strike the ejes of thoee coming from Africa, his native country. But the true nature and destination of the building remain enigmatical.

We know of no other alterations in the palace except some slight ones under the emperors Elagabalus and Alexander Severus. The former consecrated there the Temple or Heluogablos (Lampr. Heliog. 3; Herodian, r. 5), and opened a pablic bath, also destined apparently as a place of licentionsness (Lampr. 1b. 8). Of the buildings of Alexander Severus wo hear only of a diaeta, erectod in howour of his mother Julia Mammace, and commoaly called "ad Mammam" (Id. Al. Sev. 26). These diactae were small isolated buildings, commonly in parks, and somewhat resembled a modern Roman casino or pavilion (Plin. Ep. ii. 17, v. 6). It is aleo related of both these emperors that they cansed the streets of the Palatine to be paved with porphyry and verde antico (Lampr. Hel. 24, AL Sev. 25). The Palatium was probably inhabited by Maxentins during his short reign, after which wo hear no moce of it. That emperor is said to have founded baths there. (Catal. $/ \mathrm{mpp}$. Viemm. t. ii. p. 248, Ronc.)

The Victoria Germamiclaira, the only object recorded in the Notitia between the Seplisoniam and the Lapercal, and which must therefore have stood on the side next the circos, was probably one of those numerous monuments arected either in hooour of Germanicus, of which Tacitus speaks (Amm. ii 83), or else to Caracalle, who likewise bore the name of Germanicus (Preller, Regionem, p. 187).

We have already treated generally of the Volia and Sacra Via, and of some of the principal objects connected with them, as well as of the Nova Vis under the Palatine. The Nova V'is was not a very important road, and we have little more to add respecting it It seems to have begun at the Porta Mugionis, where, like the Sacra Via, at the anne spot, it was called Seamana Nova Via (Solin. i. 1). From this plece it ran almost parallel with the Sacra Via, and between it and the hill, as far as its northern point, where it turned to the S., and still continued to run along the base of the Palatine as far at least as the Porta Romanule (near S. Giorgio in Velabro). Some, indeed, carry it on as far as the Circus Daximns (Canins, Indic. 7'op. p. 331); a view which does not
seem to be sapported by any authority. The lower part of it, both on the side of the forum and of the Velabrum, was called Infima Nova Via. (Varro, v. $\S 43$, Mïll.) Orid describes it as tonching the foram (" Qua Nova Romano nunc Via juncta foro eat," Fast. vi. 389); whence we must conclude that not only the open space itself, but also the ground around it on which the temples and basilicae atood, was included ander the appellation of forum. A road appeara, however, to bave led from the Nova Via to the forum between the temples of Vesta and Castor, as is shown by remains of pavement discovered there; and this may have been the junction alluded to by Ovid, which from his words would seem to have been comparatively recent. The Lucus Vestar must have lain behind the Nova Via, towards the Palatine, and indeed on the very slope of the hill, as appears from the following passages: "Exandita vor est a luco Vesteo, qui a Palatii radice in Novam Viam deverus est " (Cic. Div. i. 45); "M. Caedicius de plebe nuntiavit tribunis, se in Nova Via, nbi nune sacellam est supra sedem Vestae rocem noctis silentio audisso clariorem humana " (Liv. v. 32). The sacellum here alluded to was that of Aius Loquens. (Cic. L c. and ii. 32.) It is described by Varro (ap. Gell. xvi. 17) as "in infima Nova Vis "; whence we mast conclude that it was in the part near the forum that Caedicius heard the voice. Though called Nooa, the road must have been of high antiquity, since Livy mentions that Tarquinius lived in it (i. 47); and perhaps it received its pame from its newness in comparison with the Secra Vis

Before we proceed to describe the monuments on the Velis, we must observe that some writers, and especially the Italian achool of topographers (Canina, Foro Rom. p. 60, seq., Indic. Top. p. 462), do not allow that the Velia consisted of that height which lies between the Palatine, the Esquiline, and the eastern side of the forum, but confine the appellation to the northern angle of the Palatine, which, it is contended, like the Germalus, was in ancient times considered as distinct from the romainder of the hill. Indeed it appears that Niebuhr firat applied the name of Velia to the ridge in question (Hist. i. p. 390, Eng. trans.), in which view he was of course followed by Bunsen (Beschr. iii. p. 81). One of the chief arguments addaced against it is the account given of the housa of Valerius Publicola. Valerius is said to have begun bailding a hoose on the same spot where Tullus Hostilius had previously dwelt (Cic. Rep. ii. 31); and the residence of Tullus Hostilins again is recorded to have been on the Velia, on the spot afterwards occupied by the Aedis Deum Penatium (Varro, ap. Non xii. 51, p. 363, Gerl.; "Tullus Hostilius in Velia, ubi postea Deum Penatium aedes fucta eot," Solin. i. 22). Now Bunsen (Ib. p. 85), and after him Becker (de Muris, p. 43, Hamdb. p. 249), hold that the Aedes Deum Penatium here alluded to was that mentioned by Dionysius Halicarnessensis (i. 68) as standing in the short cut which led from the forum to the Carinae, in the district called 'rreतalous. The MSS. vary in the spelling of this name; but we think with Becker that the Velia, os rather "Sub Velia," is meant, as Cujacius has translated the word: and Casanbon (od Mom. Anyr.) reads OÚé $\lambda$ cua. Bat, whatever opinion may be entertained on that point, the other part of the description of Dionysius, namely, that the temple stood in the short cut between the forum and the

Carinac, sufficiently indicates the locality; and we are of opinion, with Becker, that Bunsen arrived at a very probable conclusion in identifying this temple with the present circular vestibule of the church of SS. Cosma e Damiano. Yet, if we assume with those writers that this was the only temple of the Penates on the Velia, and consequently the spot on which the house of Publicols stood, then we must confess that we see considerable force in the objection of Canina, that such a situation does not correspond with the descriptions given by Cicero, Livy, and other writers. All thoee descriptions convey the idea that Publicola's house stood on a somewhat cousiderable, though not very great, elevation. Thus Dionysius characterises the spot as $\lambda 6 \phi 0$ y $\mathbf{i} \pi \in \rho \kappa$ íi-
 ek "Quod in excelsiore loco coepisset aedificare" (Rep. ii. 31). A still more decisive passage is that of Livy: "Aedificabat in summa Velia" (ii. 7). For how can that spot be called the opp of the Velia, which was evidently at the bottom, and, according to Becker's own showing, in a district called sub Velia? His attempts to evade these difficulties are feeble and nnsatisfactory (de Muris, p. 45). Yet they are not incapable of solution, without abandoning Niebuhr's theory respecting the Velia, which we hold to be the true oue. There were in fact two temples of the Penates on the Velia, namely, that identified by Bunsen with SS. Cosma e Damiano, and another " in Summa Velia," as Livy says; which latter occupied the site of the residence of Tullus Hostiline, and of the sabsequent one of Valerins Publicola. Thus Solinus: "Tullus Hostilius in Velia (habitavit), ubi postea Deum Penatium aedes facta est" (i. 22). We cannot determine the length of this postea; but it was most probably after the time of Publicola, and perhaps a great deal later. But the other temple was certainly older, as it is mentioned in the sacred books of the Argives (ap. Varro, L.L. v. § 54: "In Velia apud aedom Deum Penatium"); and thus it is plain that there mnst have been two temples. The one in the Summa Velia is the Sacellum Larum mentioned by Tacitus, in describing the pomoerium of Romulus (Anch xii. 24): and this is another proof that there were two temples; for it is impossible to imagine that the pomoerinm could have axtended so far to the $\mathbf{N}$. as the church of SS. Cosma e Damiano. The situstion of this sacellam would answer all the requirements of the passages before cited. For there is still a very considerable rise from the forum to the arch of Titus, near to which the sacellum must have stood, which rise was of course much more marked when the foram was in its original state, or some 20 feet below its present level. Indeed the northern angle of the Palatine, which Canina supposes to have been the Velia, does not present any great difference of height: and thus the sbjections which he justly urges against the aedes near the temple of Faustina do not apply to one on the site that we have indicated. Besides it appears to us an insuperable objection to Canina's view that he admits the spot near the temple of Faustina to have been called Sub Velia, though it is separated by a considerable space and by the intervening height, from the N. angle of the Palatine. The account of Asconius (ad Cic. Pis. 22) of a honse of P. Valerins "sub Velia, ubi nunc aedis Victorise est," is too confused and imperfect to draw any satisfactory conclusion from it. By all other authorities the

Aedis Victorise is said to be not at the foot of the Velia, bat on the summit of the Palatine.
But there is another argament brought forwards by Canina against the height in question being the Velia He observes that the area on which the temple of Venus and Rome stands is divided from the Palatine by the Sacra Via, and hence could not have belonged to the Velia; since the Sacra Via, and all the places on the opposite (northern) side of it, wers comprehended in the lst Regio of Servius, or the Suburana, whilst the Palatine, including the Velia, were contained in the 4th Regio (Indicas. Topogr. p. 462, cf. Foro Rom. p. 61). Now if this were so, it would certainly be a fatal objection to Niebuhr's view; but we do not think that any such thing can be inferred from Varro's words. In describing the lst Region, in which a place called Ceroliensis was included, he says, "Ceroliensis a Carinarum junctu dictus Carinae, postea Cerolia, quod hinc oritur caput Sacrae Vise ab Streniae sacello," \&c. (L. L. v. § 47.) The passage is obscure, bat we do not see how it can be inferred from it that the Sacra Via formed the boundary between the 1st and 4th Servian Regions. Varro seems rather to be explaining the origin of the name Cerolia, which he connects with the Sacra Via, but in a manner which we cannot understand. The Sacra Via traversed the highest part of the ridge, and thus on Canina's own showing must have included some part of it in the 4th Region, making a division where no natural one is apparent, which is not at all probable. Besides, if this height was not called Velia, what other name can be foond for it ? And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very heart of the city, should have been without a name.

Assuming the Velia, therefore, to have been that rising ground which lies betwean the valley of the forum on the one hand, and that of the Colosseam on the other, we shall proceed to describe its monuments. The Ardes Penatius, before referred to as standing on the declivity of the ridge, or Sab Velia, and described by Dionysius (i. 68), seams to have been one of the most venerable antiquity. In it were preserved the images of the household gods said to have been brought from Troy, having apon them the inscription $\triangle E N A X$, which has given rise to so mach controversy; namely, whether it is a scribe's error for IENAX, that is IENAEI = Penatibus, or whether it should have been $\triangle I \Sigma$ MAFNII (Diis Magnis), \&cc. \&cc. (See Ambrosch, Stud, u. Andeut. p. 231, seq.; Clausen, Aeneas u. die Penaten, ii. p. 624, n. 1116; Hertzberg, de Diis Rom Patriis, lib. ii. c. 18.) We shall here follow our usual rule, and give Dionysius credit for understanding what he was writing about, as there does not appear to be any grave objection to doing 80 ; and as he immediately adds, after citing the above epigraph, that it referred
 oav robr nevdras), we shall assume that this was really the temple of the Trojan household gods. The Italian writers regard it as the temple of Remus.
We do not find any large buildings mentioned apon the Velia till the time of Nero, who, as we have soen, occupied it with the restibule of his palace. A considerable part of it had perhaps been a market previously. Close to its NW. foot, immediately behind the Aedes Penatium just indicated, Vespasian, after his triumph over Jerusalem, built his celebrated Temples of Peace, to which we have already had cocasion to allude, when describing the imperial fora.
(Joseph. B. J. vii. $5 . \S 7$; Suet. Veqp. 9; Dian Cass Ixvi. 15.) It stood in an enclosed space, much like the temple of Venus Genitrix in Caesar's foram, or that of Mars Ultor in the foram of Augustus; and hence though notdesigned like them as a place for legal business, it was nevertheless sometimes called Forum Pacis, The temple was built with the greatest splendour, and adorned with precious works of art from Nero's palace, as well as with the costly spoils brought from the temple of Jerusalem, which made it one of the richest and most magnificent sanctuaries that the world ever beheld. (Joseph. l.c.; Plin. xxxiv. 8. s.84, xxxvi. 24; Herodian, i. 14.) Hence its attraction and notoriety gave a new name to the 4th Region, in which it stood, which was previously called "Sacra Via," but now obtained the name of "Templum Pacis." The exact site of this temple was long a subject of dispate, the older topographers maintaining that the remains of the three vast arches a little to the E. of the spot just described, and now universally allowed to belong to the besilica of Constantine, were remnants of it. Piransel raised some doubts on the point, but Nibby was the first who assigned to these two monuments their true position (Foro Rom. p. 189, seq.); and his views havo been further developed and confirmed by Canine. (Indicas. Topogr. p. 131, seq.). As Becker has also adopted the same conclusion, it will not be necesiary to state the grounds which led to it, as they would occupy considerable spuce ; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annered to the temple was a library, in which the learned were accustomed to meet for the purposes of stady and literary intercourse. (A. Gell. v. 21, xvi. 8.) The temple was burnt down a little before the death of Commodus. (Dion Cass. lii. 24 ; Herodian, i. 14 ; Galen, de Comp. Med. i. 1.) It does not appear to have been restored, bat the rains still remained undisturbed, and the spot is several times mentioned in later writers under the name of Forum Pacis, or Foram Vespasiani (Amm. Marc. xvi 10 ; Procop. B. G. iv. 21 ; Symm. Ep. x. 78; Catah Imp. Viemn. p. 243.)
The three arches just alluded to as standing near the temple of Peace, and apparently at the commencement of a road branching off from the Secra Via, belonged, as is almost universally admitted, to the Basiuca Constantini, erected by Maxentius, and dedicated after his death in the name of Constantine. Their architecture has all the characteristics of a basilica, and could not possibly have been adapted to a temple. (Canina, Indicas p. 124.) The first notice which we find of this building is in Auralius Victor (Caesar, 40, 26), who mentions it as having been erected by Maxentius; and this account is confirmed by an accident which happened in 1828, when on the falling in of a part of an arch a coin bearing the name of Maxentius was discovered in the masonry. (Beschr. iii. 298.) In the Cat. Imp. Viowa. p. 243, it is mentioned as occupying the site of the horrea piperataria, or spice warehouses of Domitian (" borrea piperataria ubi modo est Basilica Constantiniana et Forum Vespasiani ${ }^{n}$ ). These spice warehouses must have been the same that are related by Dion Cassius ( $1 \times x i i .24$ ) to have first caught the flames when the temple of Peace was burnt, A.D. 192, and are described as rds dxootinas tây $\tau \in$ 'Apabians cal tan Aizutriouy фoption ; whence, as the fire spread towards the Palatine, it may be presumed that they stood on the site of the basilica.

ROMA.
Between the basilica of Constantine and the Colosseum, and consequently on the eastern side of the Velian height, Hadrian built the splendid Temple of Roma and Venus, commonly called at a later period Templum Urbis, considerable remains of which still exist behind the convent of S. Francesca Romana. In the middle ages it was called Templum Concordiae et Pietatis (Mirabilia Rom. in Effemerid. Letter. i. p. 385); the older topographers gave it various names, and Nardini was the first to designate it correctly. The remains exhibit the plan of a double temple, or one having two cellae, the semicircular tribunes of which are joined together back to back, so that one cella faced the Capitol and the other the Colosseum; whence the description of Prudentius (Contra Symm. i. 214): -
" Atque Urbis Venerisque pari se culmine tollunt Templa, simul geminis adolentur tura deabus."
The cella facing the Colosseum is still visible, but the other is enclosed in the cloisters of S. Francesca. In them were colossal statues of the goddesses in a sitting posture. Hadrian is related to have planned this temple himself, and to have been so offended with the free-spoken criticisms of the great architect Apollodorus upon it that he caused him to be put to death. (Dion Cass. lxix. 4.) Apollodorus is related to have particularly criticised the extravagant size of the two goddesses, who he said were too large to quit their seats and walk out of the temple, had they been so minded. The temple was of the style technically called pseudo-dipteros decastylos, that is, having only one row of ten columns, but at the same distance from the cella as if there had been
two rows. With its porticoes it occupied the whole space between the Sacra Via and the street which ran past the front of the Basilica Constantini. For a more detailed description of it see Nibby, Foro Romano, p. 209, seq., and Canina, Edifizj di Roma, classe ii. A ground plan, and elevations and sections of it as restored, will be found in Burgess, $\boldsymbol{A} \boldsymbol{n}$ tiquities and Topography of Rome, i. pp. 268, 280. Servius (ad Aen. ii. 227) speaks of snakes on the statue of Roma similar to those on that of Minerva. From some coins of Antoninus Pius the temple appears to have been restored by that emperor. Silver statues were erected in it to M. Aurelius and Faustina, as well as an altar on which it was customary for brides to offer sacrifice after their marriage. (Dion Cass. 1xxi. 31.) It was partly burnt down in the reign of Maxentius, but restored by that emperor.

The Arch of Titus, to which from its conspicuous position we have so frequently had occasion to allude, stood close to the SW. angle of this temple, spanning the Sacra Via at the very summit of the Velian ridge. Its beautiful reliefs, which are unfortunately in a bad state of preservation, represent the Jewish triumphs of Titus. The arch could not have been completed and dedicated till after the death of that emperor, since he is called Divus in the inscription on the side of the Colosseum, whilst a relief in the middle of the vault represents his apotheosis. It has undergone a good deal of restoration of a very indifferent kind, especially on the side which faces the forum. During the middle ages it was called Septem Lucernae and Arcus Septem Lucernarum, as we see from the Anonymus.

ARCH OF TITUS RESTORED.

We shall here mention two other monuments which, though strictly speaking they do not belong to the Palatine, yet stand in such close proximity to it that they may be conveniently treated of in this place. These are the Arch of Constantine and the Meta Sudans. The former, which stands at the NE. corner of the Palatine, and spans the road now called Via di S. Gregorio, between that hill and the Caelian, was erected, as the inscription testifies, in honour of Constantine's victory over Maxentius. It is adorned with superb reliefs relating to the history of Trajan, taken apparently from some arch or other monument of that emperor's. They contrast strangely with the tasteless
and ill-executed sculptures belonging to the time of Constantine himself, which are inserted at the lower part of the arch. This monument is in a much better state of preservation than the arch of Titus, a circumstance which may perhaps be ascribed to the respect entertained for the memory of the first Christian emperor. For detailed descriptions and drawings of this arch see Niebuhr (Beschr. iii. p. 314, seq.), Canina (Edifizj Antichi, classe xii.), Overbeke (Restes de I' An. Rome, ii. t. 8, 9), Piranesi (Ant. Rom. i.).

The Meta Sudans, so called from its resemblance to the metae of the circus, was a fountain erected by Domitian, remains of which are still to be seen

ROMA.
between the arch of Constantine and the Colosseum. (Hieron. p. 443, Ronc.; Cassiod. Chron. ii. p. 198.) It atands in the middle of a large circular basin, which was discovered in the last excavations at that spot, as well as traces of the conduit which con-

## BOMA.

vered the water. A meta sudans is mentioned in Seneca (Ep. 56), whence we might infer that the one now existing superseded an earlier ane ( r . Beschr. iii. 312, seq.; Caning, Indicat. p. 119).

ARCH OF CONBTANTINE.

## Vil. The Aventine

We have already adverted to the anomalous character of this hill, and how it was regarded with suspicion in the early times of Rome, as ill-omened. Yet there were several famons spots apon it, having traditions connected with them as old or older than those relating to the Palatine, as well as several renowned and antique temples. One of the oldest of these legendary monuments was the Altar of Evander, which stood at the foot of the hill, near the Porta Trigeming (Dionys. i. 32.) Not far from it, near the Salinee, was the Cave of Cacus, a name which a part of the hill near the rirer still retains. (Solinas, i. 8; cf. Virg. Aes. viii. 190, seq.; Ovid, Fast. i. 551 , seq.) Here also was the altar said to have been dedicated by Hercules, after he had found the cattle, to Jupirrer Invervor. (Dionys. i. 39.) A spot on the summit of the bill, called Remoria, or Remuria, preserved the memory of the auspioes taken by Remus. (Paul. Disc. p. 276 ; Dionys. i. 85, seq.) Niebuhr, however, assumes another hill beyond the basilica of St. Paolo, and consequently far outside the walls of Aurelian, to have been the place called Remoria, destined hy Remus for the building of his city. (Hist. i. p. 223, seq. and note 618.) Other spots connected with very ancient traditions, though subsequent to the foundation of the city, were the Armilustriom and the Lauretum. The Armilustrum, or Armilustriam, at first indicated only a festival, in which the soldiers, armed with ancilia, performed certain military sports and sacrifices; but the name was subeequently applied to the place where it was celebrated. (Varr. L.L. v. § 153 , vi. § 22, Mill.; Liv. xxvii. 37 ; Plut. Rom. 23.) Plutarch ( $l$ c.) says that king Tatius was buried bere; but the Lavretua, so named from its grove of laurels, is also designated as his place of sepalture. (Varr. L.L. v. § 152; Plin. xv. $\$ 40$; Dionys. iii. 43; Festus, p. 360 .). There was a distinction between the Lauretum Majus and Minus (Cal. Capram. Id. Amg.); and the Basis Capitolina mentions a Vicus Loreti Majoris and another Loreti Minoris. The same document also records a Vicus Armilustri. Numa dedicated an altar to Jufitikr Elicius on the Aventine. (Vart. L. L. vi.
§ 54; Liv. i. 20; cf. Ov. F. iii. 295, seq.); and the Calendars indicate a sacrifice to be performed there to Consus (Fast. Capram. XII. Kal. Sep; Fact Amitorn. Pr. Id. Dec.); bat this is probably the same deity whose altar we have mentioned in the Circus Maximus.

The Temple of Diana, built by Servins Talling as the common sanotuary of the cities belonging to the Latin League, with money contributed by them, conferred more importance on the Aventine (Varr. L.L. v. § 48 ; Liv. i. 45 ; Dionys. iv. 26). This union has been compared with, and is said to have bean suggested by, that of the Ionians for building the Artemisinm, or temple of Diana, at Ephesus. It has boen justly observed that Rome's supremacy was tacitls acknowledged by the building of the temple on one of the Roman bills (Liv. L.c.; Val. Max. vii. 3. § 1). Dionysius informs us that he saw in this temple the original stele or pillar containing the Foedus Latinum, as well as that on which the Lex Icilia was engraved. It appears, from Martial (vi.64.12), to have been situated on that side of the Aventine which faced the Circus Maximas, and hence it may have stood, as marked in Bufalini's plan, at or near the church of S. Prisca (cf. Canina, Indicasione, p. 532). We may further observe that Martial calls the Aventine "Collis Dianae," from this temple (vii. 73, xii. 18.3). We learn from Suetonins that it was rebuilt by L. Cornificius, in the reign of Augustus (Aug. 29). That emperor does not appear to have done anything to it himself, as it is not mentioned in the Monvementum Ancyranum.
Another famous temple on the Aventine was that of Juno Reansa, built by Camillus after the conquest of Veii, from which city the wooden statue of the goddess was carried off, and consecrated here; but the temple was not dedicated by Camillus till four years after his victory (Liv. v. 22, seq.; Val. Max. i. 8. § 3). Hence, probably, the reasoa why "eupreseen simulacra" or images of cypress, were sabsequently dedicated to this deity (Liv. xxrii. 37 ; Jul. Obs. 108); although a bronze statue appears to have been previously erected to her. (Liv. xxi. 62.) We have already seen from the description of the procession of the virgins in Livy (xxvii. 37) that the
temple was approached by the Cuvus Pususcius, which ascent lay at the northern extremity of the Aventine, near the Porta Trigemina; but its situation cannot be accurately inferred from this circumstance. The Clivus Publicius, made, or rather perhaps widened and paved, by the aediles L. and M. Publicii Malleoli, was the main road leading up the hill. (Festus, p. 238 ; Varr. L. L. v. § 158 ; Frunt. Aq. 5.) Canina places the temple near the church of S. Sabina, where there are traces of some ancient building (Indicazione, p. 536). This is one of the temples mentioned as having been rebuilt by Angustus (Mon. Ancyr. tab. iv.)

From the document last quoted it would appear that there was a Temple or Jupiter on the Aventine; and its existence is also testified by the Fasti Amiternimi (Id. Aug. fer. iovi. dianae. vortymno. in . aventino.); but we do not find it mentioned in any author. The passage just quoted likewise points probsbly to a sacellum or Ara or Vortumnus, which the Fasti Capranici mention as being in the Ioretum Majus. The Temple of Minerva, a!so mentioned in the $M \mathrm{~mm}$. Ancyramum as having been repaired by Augustus, is better known, and seems to have been in existence at all events as early as the Second Punic War, since on account of some verses which Livias Andronicus had written to be sung in celebration of the better success of the war, this temple was appointed as a place in which scribes, as it appears poets were then called, and actors should meet to offer gifts in honour of Livins. (Festus, p. 333.) From an imperfect inscription (Gruter, xxxix. 5) it would appear that the temple Was near the Armilustrium, and indeed it is named in conjunction with it in the Notitia.

There was a part of the Aventine called "Saxum," or "Saxter Sacrum" (Cic. Dom. 53), on which Remus was related to have stood when he took the auguries, which must therefore be considered as identical with, or rather perhaps as the highest and most conspicuons part of, the place called Remuria, and consequently on the very summit of the hill. Hence Ovid (Fast. v. 148, seq.):-

## u-_interea Diva canenda Bona est.

Est moles nativa, loco res nomina fecit.
Appellant Saxum; pars bona montis ea est.
On this spot was erected a Temple of the Bona Dea, as Ovid proceeds to say "leniter acclivi jugo." From the expression jugum, we may conclude that it lay about the middle of the hill; but Hadrian removed it ("Aedem Bonae Deae transtalit," Spart. Hadr. 19), and placed it under the hill; whence it subsequently obtained the name of Templum Bonae Dese Subsaxoneae, and now stood in the 12th Region, or Piscina Publica, where it is mentioned in the Notitia, probably under the SE. side of the Arentine. For a legend of Hercules, connected with the rites of the Bona Dea, see Propertius (v. 9 ) and Macmbius (Sat. i. 12).

Bevides these we find a Temple of Luna and one of Libertas mentioned on the Aventine. The former of these is not to be confounded with the temple of Dians, as Bunsen has done (Beschr. iii. p. 412), since we find it mentioned as a substantive temple in several authors. (Liv. xl. 2; Aur. Vict. Vir. Ill. 65; Fast. Praen. Prid. Kal. Apr. "Lunae in Ave . . ;" whilst in the Capran., Amitern., and Antiat. we find, under Id. Aug., "Dianae in Aventino.") It probably stood on the side next the circus. The Temple of Libertas was founded by
T. Sempronins Gracenus, the father of the conqueror of Beneventum; the latter caused a picture reprosenting his victory to be placed in the temple. (Liv. xxiv. 16.) Some difficulty has been occasioned by the manner in which the restoration of this temple by Augustus is mentioned in the Monumentum Ancyranum, namely, "Aedes Minervae et Junonis Reginae et Jovis Libertatis in Aventino (feci)" (tab. iv. 1. 6). In the Greek translation of this record, discovered in the temple at Ancyra, and communicated by Hamilton (Researches in Asia Min. ii. n. 102), the words "Jovis Libertatis" are rendered $\Delta i d s$ 'Eגcuөcpíou, whence Franz assumed that the Latin text was corrupt, and that we ought to read "Jovis Liberatoris." (Gerhard's Archäolog. Zeitung, na ii. p. 25.) But there is no mention of any such temple at Rome, though Jupiter was certainly worshipped there under the title of Liberator (see the section on the Circus Maximus); whilst the existence of a temple of Libertas on the Aventine is attested not only by the passage just cited from Livy, but also by Paulus Diaconus. ("Libertatis templum in Arentino fuerat constructum," p. 121.) Hence it seems most probable that the Greek translation is erronenus, and that the reading "Jovis Libertatis" is really correct, the copula being omitted, as is sometimes the case; for example, in the instance "Honoris Virtutis," for Honoris of Virtutis, \&c. And thns, in like manner, we find a temple of Jupiter Lihertas indicated in inscriptions belonging to municipal towns of Italy ( $\mathbf{v}$. Orell. Inscr. no. 1249, 1282; cf. Becker, Handb. Nachträge, p. 721; Zumpt, in Mon. Ancyr. Commentor. p. 69). Another question concerning this Templum Libertatis, namely, whether there was an Atrium Libertatis connected with it, has occasioned much discussion. The Atrium Libertatis mentioned by Cicero (ad Att. iv. 16), the situation of which we have examined in a preceding section, could not possibly have been on the Aventine; yet the existence of a second one adjoining the temple of Libertas on that hill has been sometimes assumed, chiefly from Martial (xii. 3). The question turns on the point whether the words "Domus alta Kemi," in that epigram, necessarily mean the Aventine; for our own part we think they do not. The question, however, is somewhat long; and they who would examine it more minutely may refer to Becker (Handb. p 458, seq.; Urlichs, Röm. Topogr. p. 31, seq.; Becker, Antworth p. 25, seq.; Canina, Indicasione, p. 536, seq.; Urlichs, Antwort, p. 5, seq.)

As the Basis Capitolina names among the Vici of the 13th Region, a Vicus Fidii and a Vicus Fortunae Dubiae, we may perhape assume that there were temples to those deities on or near the Aventine; but nothing further is known respecting them. The Notitia mentions on the Aventine, "Thermars Surianaf et Declanae." The former of these baths seem to have been built by Trajan, and dedicated in the name of his friend Licinius Sura, to whom he was partly indebted for the empire. ("Hic ob honorem Surae, cujus studio imperium arripuerat, lavacra condidit," Aur. Vict. Epit. 13; cf. Dion Cass. Isviii. 15 ; Spart. Adri. 2, seq.) The dwelling of Sura was on that side of the Aventine which faced the Circus Maximus, and probably, as we have said, near the temple of Diana:-
"Quique videt propius Magni certamina Circi
Laudat Aventinue vicinus Sura Dianae."
(Mart. vi. 64. 12.)

Whence we may perhaps conclude that the baths also were near the same spot ( v . Preller, Regionen, p. 200; Canina, Indicaz. p. 533, seq.), where they seem to be indicated by the Capitoline plan (Bellori, tav. 4) and by traces of ruins. The baths of Decius are mentioned by Eutropius (ix. 4). Near the same spot appears to have been the House of Trajan before he became emperor, designated in the Notitia as Privata Trajani, in which neighbourhood an inscription relating to a Domus Ulpiorum was found. (Gruter, xlv. 10.) Hence we may conclude that under the Empire the Aventine had become a more fashionable residence than during the Republic. when it seems to have been principally inhabited by plebeian families. The residence of Ennius, who, as we have said, possessed a house here, was, however, safficient to ennoble it.

The narrow strip of ground between the hill and the Tiber also belonged to the district of the Aventine. In ancient times it was called "Extra Portam Trigeminam," and was one of the busiest parts of the city, in consequence of its containing the emporium, or harbour of discharge for all laden ships coming up the river. Here also was the principal corn-market, and the Basis Capitolina mentions a Vicus Frumentarias in this neighbourhood. The period of its development was between the Second and Third Punic Wars, when the aediles M. Aemilins Lepidus and L. Aemilius Paullus first founded a regular Emporium, and at the same time the Porticus Aemilia. (Liv. xxxv. 10.) Their successors, M. Tuccius and P. Junius Brutus, founded a second portico inter lignarios, which epithet seems to refer to the timber yards at this spot. (Id. $\mathbf{x x x v}$. 41.) Subsequently, in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, the building of a harbour and of a bridge over the Tiber was commenced, as well as the foundation of a market and of other porticoes. (Liv. xl. 51.) The next censors, Q. Fulvius Flaccus and A. Postumius Albinus, paved the emporium with slabs of stone, constructed stairs leading down to the river, restored the Porticus Aemilia, and built another portico on the summit of the Aventine. (Liv. xli. 27.) The neighbourbood still bears the name of La Marmornla; and as numerous klocks of nuwrought marble have at different times been discovered near the Vigna Cesarini, sometimes bearing numbers and the names of the exporters, it seems to have been the principal place for landing foreign marbles, and perhaps also for the workshops of the sculptors. (Vacca, Mem. 95-98; Fea, Miscell. i. p. 93; Bunsen, Beschr. iii. p. 432.) Just in this neighboarbood stood a temple of JUPITER Dolichenus or Dolicenus, indicated in the Notitia under the name of Dolocenum. It is connected with the worship of the sun-god, brought from Heliopolis in Syria, concerning which there are numerous inscriptions, treated of by Marini (Atti, g'c. pp. 538-548). In these the god is called Jup. 0. M. Dolichenus, and sometimes a Juno Assyria Regina Dolichens is also mentioned. The worship resembled that brought to Rome by Elagabalus, but was previons to it, as some of the inscriptions relate to the time of Commodus. The temple seems to have been in the neighbourhood of $S$. Alessio, as several inscriptions relating to the god were found here. (Preller, Regionen, p. 202.)

The broad level to the S . of the hill in which the Monte Testaccio stands, probably contained the large and important magazines mentioned in the Notitia, such as the Horrea Galbiaxa et Ansclana, which
seem to have been a kind of warehouses for storing imported goods. They are sometimes mentioned in inscriptions. (Gruter, lxxv. 1; Orell. 45.) The Monle Testaccio itself is an artificial hill of potsherds, 153 ft . high according to Conti, and about one-third of a mile in circumference. Its origin is enveloped in mystery. According to the vulgar legend it was composed of the fragments of vessels in which the subject nations brought their tribute. A more plansible opinion was that this was the quarter of the potteries, and that the hill rose from the pieces spoiled in the process of manufacture; bat this notion was refuted by the discovery of a tomb, during the excavation of some caves in the interior to serve as wine-cellars. (Beschr. iii. p. 434.) The whole district round the hill is strewed to a depth of 15 or 20 feet with the same sort of rubbish; the Porta Ostionsis, built by Honorius, stands on this factitious soil, which is thus proved to have existed at the beginning of the fifth centurs; bat its origin will never, perhaps, be explained.

The last object we need mention here is the Forus Pistoriux, or Bakers' Market, so named apparently not because they made or sold their goods here, but because this was the place in which they bought their corn. We may remark that it was just opposite this point, under the Janiculam, that the corn-mills lay. (Preller, Regiones, p. 205.)

## ViII. The Velabrum, Forum Boarium, and Circus Maximus.

Between the Palatine, the Aventine, and the Tiber, the lerel ground was occupied by two districts called the Velabrum and the Forum Boarium, whilst the valley between the two hills themselves was the site of the Circus Maximus. It will be the object of the present section to describe these districts and the monuments which they contained. They were comprehended in the 11 th Region of Angustus, called "Circus Maximus," of which the Velabrom formed the boundary on the N., where it joined the 8th Region, or "Forum Romanum."
All accounts conspire in representing the Velabrum as a marsh, or lake, at the time when Rome was founded, whence we may conclade that it coold not have been built upon till the ground had been thoroughly drained by the constraction of the Cloaca Maxima. Thus Tiballus (ii. 5. 33) : -
"At qua Velabri regio patet, ire solebat
Exiguus pulsa per vada linter aqua."
Exiguus pulsa per vada linter aqua."
(Cf. Varr. L. L. v. 43, seq. Mull.; Prop. v. 9. 5; Ov. Fast. vi. 399, \&cc.) Its situation between the Vicus Tuscus and Foram Boarium is ascertained from the descriptions of the route taken by triumphal and festal processions. (Liv. xxvii. 37; Ov. L.c.; Plut. Rom. v. \&c.) Its breadth, that is, its extension between the Vicus Tuscus and the Forum Boarium, cannot be accurately determined, but seems not to have been very great. Its termination on the S. was by the Arcus Argentarius, close to the modern charch of $S$. Giorgio in Vclabro, which marked the entrance into the Foram Boarium. This site of the Velabrum is also proved by testimonies which connect it with the Nova Via, the Porta Romanula, and the sepulchre of Acca Larentia. (Varr. L. L. vi. § 24, Müll. ; cf. Cic. ad Brus. 15 ; Macrob. S. i. 10.) It is uncartain whether the Sacellise Volupiaf, which also lay on the Nors Via, should be assigned to the Velabrum or to the Palatine. (Varr. Ib. v. § 164 ; Macrob. Mb.)

ROMA.
ROMA.

There was also a Velabrum Minus, which it is natural to suppose was not far distant from the Velabrum Majus. Varro says that there was in the Velabrum Minus a lake or pond formed from a hot spring called Lautolae, near the temple of Janus Geminus (Ib. § 156); and Paulus Diaconus (p.118) describes the Latulae as being "locus extra urbem." Hence it would seem that the Janus Geminus alluded to by Varro, must have been the temple near the Porta Carmentalis; but both the spring and the lake had vanished in the time of Varro, and were no longer anything but matters of antiqnity.

The Arcus Argentarius already mentioned as standing near the church of S.Giorgio in Velabro appears, from the inscription, to have been erected by the Negotiantes and Argentarii of the Foram Boarium in honour of Septimius Severus and his family. (Gruter, celxv. 2; Orell. 913.) Properly speaking, it is no arch, the lintel being horizontal instead of vaulted. It is covered with ill-executed sculptures. Close to it stands the large square building called Janus Quadrifrons, vaulted in the interior, and having a large archway in each front. The building had an upper story, which is said to have been used for mercantile purposes. The architecture belongs to a declining period of art, and the arch seems to have been constructed with fragments of other buildings, as shown by the inverted bas-reliefs on some of the pieces. (Beschr. iii. p. 339.) The Notitia closes the description of Regio xi. by mentioning an "Arcus Constantini," which cannot, of course, refer to the triumphal arch on the other side of the Palatine. The conjecture of Bunsen, therefore (Beschr. Anh. iii. p. 663), does not seem improbable, that this Janus was meant; and from its style of architecture it might very well belong to the time of Constantine.

The Forum Boarium, one of the largest and most celebrated places in Rome, appears to have extended from the Velabrum as far as the ascent to the Aventine, and to have included in breadth the whole space between the Palatine and Circus Maximus on the E. and the Tiber on the W. Thus it must not be conceived as a regular forum or market surrounded with walls or porticoes, but as a large irregular space determined either by natural boundaries or by those of other districts. Its connection with the river on the one side and the circus on the other is attested by the following lines of Ovid (Fast. vi. 477) : -
"Pontibus et Magno juncta est celeberrima Circo Area quae posito de bove nomen habet."
Its name has been variously derived. The referring of it to the cattle of Hercules is a mere poetical legend (Prop. v. 9. 17, seq.); and the derivation of it from the statue of a bronze bull captured at Aegina and erected in this place, though apparently more plausible, is equally destitute of foundation, since the name is incontestably much older than the Macedonian War. (Plin. xxxiv. 5 ; Ov. l.c.; Tac. Ann. xii. 24.) It seems, therefore, most probable, as Varro says (L.L. v. § 146 ; cf. Paul. Diac. p. 30), that it derived its name from the use to which it was put, namely, from being the ancient cattle-market; and it would appear from the inscription on the Arcus Argentarius before alluded to that this traffic still subsisted in the third century. The Forum Boarium was rich in temples and monuments of the ancient times. Amongst the most famous were those of Hercules, Fortuna, and

Mater Matuta; but unfortunately the positions of them are not very precisely indicated. There seems to have been more than one Temple of Hercules in this district, since the notices which we meet with on the subject cannot possibly be all referred to the same temple. The most ancient and important one must have been that connected with the Magna Ara Herculis, which tradition represented as having been founded by Evander. ("Et magna ara fanumque, quae praesenti Herculi Arcas Evander sacraverat," Tac. Ann. xv. 41 ; cf. Ib. xii. 24 ; Solin. i. 10.) This appears to have been the Hercules styled triumphalis, whose statue, during the celebration of triumphs, was clothed in the costume of a triumphant general ; since a passage in Pliny connects it with that consecrated by Evander. ("Hercules ab Evandro sacratus ut produnt, in Foro Boario, qui triumphalis vocatur atque per triumphos vestitur habitu triumphali," xxxiv. 16.) It was probably this temple of Hercules into which it was said that neither dogs nor flies could find admittance (Ib. x. 41 ; Solin. i. 10), and which was adorned with a painting by Pacuvius the poet (Plin. xxxv. 7). A Round Temple of Hercules, also in the Forum Boarium, seems to have been distinct from this, since Livy (x.23) applies apparently the epithet "rotunda" to it, in order to distinguish it from the other. (" Insignem supplicationem fecit certamen in sacello Pudicitiae Patriciae, quae in Foro Boario est ad aedem rotundam Herculis, inter matronas ortum.") Canina (Indicazione, p. 338) assumes from this passage that the temple to which it refers must have been in existence at the time of the contest alluded to, namely, B. c. 297 ; but this, though a probable inference, is by no means an absolutely necessary one, since Livy may be merely indicating the locality as it existed in his own time. The former of these temples, or that of Hercules Triumphalis, seems to be the one mentioned by Macrobius (Sat. iii. 6) under the name of Hercules Victor; and it appears from the same passage that there was another with the same appellation, though probably of less importance, at the Porta Trigemina. Besides these we hear of a "Hercules Invictus" by the Circus Maximus (Fast. Amitern; Prid. Id. Aug.), and of another at the same place "in aede Pompeii Magni" (Plin. xxxiv. 8. s. 57), which seems to refer to some Aedes Herculis built or restored by Pompey, though we hear nothing more of any such temple. Hence there would appear to have been three or four temples of Hercules in the Forum Boarium. The conjecture of Becker seems not improbable that the remains of a round temple now existing at the charch of S. Maria del Sole, commonly supposed to have belonged to a

TEMPLE OF HERCULES,
temple of Vesta, may have been that of Hercules, and the little temple near is, now the charch of $S$. Maria Egiziaca, that of Pudicitia Patricia (Handb. p. 478 , seq.)

This question is, however, in some degree conmected with another respecting the sites of the Temples of Fortuna and Mater Matuta. Canina identifies the remains of the round temple at the church of S. Maria del Sole with the temple of Mater Matuta ; whilst the little neighbouring temple, now the church of S. Maria Egiziaca, he holds to have been that of Fortuna Virilis. His chief reason for maintaining the latter opinion is the following passage of Dionysius, which points, he thinks, to a temple of Fortuna Viriiis, huilt by Servius Tullius close to the banks of the Tiber, a position which would answer to that of S. Maria Egiziaca: kal

 (Ant. Rom. iv. 27.) It should be premised that Canina does not hold the two temples in question to have been in the Forum Buarium, but only just at its borders. ("Corrispondevano da vicino al Foro Boario," Indicaz, p. 338.) The temple of Fortuna Virilis here mentioned by Dionysius was, be contends, a distinct thing from the temple of Fors Fortuna, which he allows lay outside of the city on the other bank of the Tiber (p. 506). Indeed the distinction between them is shown from the circumstance that their festivals were celebrated in different months: that of Fortuna Virilis being in April, that of Fors Fortuna in June. (Comp. Ov. Fast. iv. 145, seq., with the Fasti Praenestini in April: "Frequenter mulieres supplicant . . . Fortunae Virili humiliores." Also comp. Ov. Fast. vi. 773, seq., with the Fasti Amiternini, VIII. Kal. Juh: "Forti Fortunse Transtiber. ad Milliar. Prim. et Sext." )
Now these passages very clearly show the distinction between Fortuna Virilis and Fors Fortuna; and it may be shown just as clearly that Dionysius confounded them, as Plutarch has also done. (De Fort. Rom. 5.) Servius Tullius, as Dionysius says, built a temple of Fortuna in the Forum Boarium ; but this Fortuna was not distinguished by any particular epithet. Dionysius gives her none in the passage cited; nor does any appear in passages of other authors in which her templo is mentioned. Thus Livy: "De manubiis duos fornices in foro Boario ante Fortunae aedem et Matris Matutae, nnum in Maximo Circo fecit" (xxxiii. 27). So also in the passages in which he describes the fire in that district (xxiv. 47, xxv. 7). One of the two temples of Fortana built by Servius Tullius was then that on the Forum Buarium, as shown in the preceding passages from Livy and from Dionysius : that the other was a temple of Fors Fortuna and not of Fortuna Virilis appears from Varro: "Dies Fortis Fortunae appellatus ab Servio Tullio Rege, quod is fanum Fortis Fortunae secundum Tiberim extra Urbem Romam dedicavit Junio mense" (L.L. vi. § 17, Müll.) Hence it is plain that both Dionysius and Plutarch have made a mistake which foreigners were likely enough to fall into. Temples being generally named in the genitive case, they have taken fortis to be an adjective equivalent to àvסpeios or virilis (v. Bunsen, Beschr. iii. Nachtr. p. 665; Becker, Handb. p. 478, note 998), and thus confounded two different temples. But as this temple of Fors Vortuna was "extra Urbem," it
could not have been the same as that with which Canina indentifies it, which, as Livy expressly says, was "intra portam Carmentalem" (xxv.7). The site of the temple of Fortuna Virilis cannot be determined, and Bunsen (l.c.) denies that there was any such temple: but it seems probable from the passage of Ovid referred to above that thero was one, or at all events an altar; and Plutarch (Ruaest. Rom. 74) mentions a TúXVs "Ap̀pevos lepob. On the other hand, there seem to have been no fewer than three temples of Fors Fortuna on the right bank of the Tiber. First, that built by Servius Tullius, described by Varro as "extra Urbem secundum Tiberim." Second, another built close to that of Servius by the consul Sp. Carvilins Maximus (b. c. 293): "De reliquo aere aedem Fortis Fortunae de manubiis faciendam locavit, prope aedem ejus Deae ab rege Ser. Tullio dedicatam." (Liv. x. 46.) Third, another dedicated under Tiberius (A. D. 16) near the Tiber in the gardens of Caesar. and hence, of course, on the right bank of the river: "Aedis Fortis Fortunae, Tiberim juxta, in hortis quos Caesar dictator populo Romano legaverat." (Tac. Ann. ii. 41.) That the Horti Caesaris were on the right bank of the Tiber we know from Horace (S. i. 9. 18) and Plutarch. (Brut. 20.) The temple built by Servius must also have been on the right bank, as it seems to be referred to in the following passage of Donatus: "Fors Fortuna est cujus diem festum colunt qui sine arte aliqua vivunt: hujus aedes trans Tiberim est" (ad Terent. Phorm. v. 6. 1). The same thing may be inferred from the Fasti Amiternini: "Forti Fortunae Transtiber. ad Milliar. Prim. et Sextum " (VIII. Kal. Jul.). The temple in the gardens of Caesar seems here to be alluded to as at the distance of one mile from the city, whilst that of Servius, and the neighbouring one erected by Carvilius appear to have been at a distance of six miles. Bat this need not excite our suspicion. There are other instances of temples lying at a considerablo distance from Rome, as that of Fortana Muliebris at the fourth milestone on the Via Latina. (Fest. p. 542; cf. Val. Max. i. 8. § 4, v. 2. §1; Liv. ii. 40, \&cc.) It would appear, too, to have been some way down the river, as it was customary to repair thither in boats, and to employ the time of the vogage in drinking (Fast. vi. 777) : -
"Pars pede, pars etiam celeri decurrite cymba
Nec pudeat potos inde redire domum.
Ferte coronatae juvenum convivia lintres
Multaque per medias vina bibantur aqnas."
We have entered at more length into this subjeet than its importance may perhaps seem to demand, because the elegant remains of the temple now forming the Armenian church of S. Maria Egiziaca cannot fail to attract the notice of every admirer of classical antiquity that visits Rome. We trust we have shown that it could not possibly have been the temple of Fortuna Virilis, as assumed by Canina and others. The assumption that the neighbouring round temple was that of Mater Matuta may perhaps be considered as disposed of at the same time. The only grounds for that assumption seem to be its vicinity to the supposed temple of Fortuna Virilis. Livy's description (xxxiii. 27) of the two triumphal arches erected in the Forum Boarium before the two temples appearing to indicate that they lay close together.

With regard to the probability of this little church

ROMA.
having been the temple of Pudicitia Patricia, it might be objected that there was in fact no such temple, and that we are to assume only a statue with an altar (Sachse, Gesch. d. S. Rom. i. p. 365). Yet, as Becker remarks (Handb. p. 480, note 100), Livy himself (x. 23) not only calls it a sacellum, a name often applied to small temples, but even in

ROMA.
815
the same chapter designates it as a templum ("Quum se Virginia, et patriciam et pudicam in Patriciae Pudicitiae templum ingressam vero gloriaretur"); and Propertius (ii. 6.25) also uses the same appellation with regard to it. On the other hand some have fixed on S. Maria in Cosmedin as the site of this temple, but with little appearance of

TEMPLE OF PUDICITIA PATRICIA.
probability. Becker seeks in the church just named the temple of Fortuna built by Servius Tullins in the Forum Boarium. The church appears to have been erected on the remains of a considerable temple, of which eight columns are still perceptible, built into the walls. This opinion may be as probable as any other on the subject; but as on the one hand, from our utter ignorance of the site of the temple, we are unable to refute it, so on the other we must confess that Becker's long and laboured argument on the subject is far from being convincing (Handb. p. 481, seq.). The site of the Tempie of Mater Matuta is equally uncertain. All that we know about it is that it was founded by Servius Tullius, and restored by Camillus after the conquest of Veii (Liv. v. 17), and that it lay somewhere on the Forum Boarium (Ovid, Fast. vi. 471). If we were inclined to conjecture, we should place both it and the temple of Fortuna near the northern boundary of that forum; as Livy's description of the ravages occasioned by the fire in that quarter seems to indicate that they lay at no great distance within the Porta Carmentalis (xxiv. 47, xxv. 7). The later history of both these temples is unknown.

In the Forum Boarium, near the month of the Cloaca Maxima, was also the place called Doliola, mentioned in the former part of this article as regarded with religious awe on account of some sacred relics having been buried there, either during the attack of the Gauls, or at a still more ancient period. (Liv. v. 40; Varr. L.L. v. § 157, Müll.) When

the Tiber is low, the month of the Cloaca Maxima may be seen from the newly erected iron bridge connecting the Ponte Rotto with the left bank. The place called Ad Busta Gallica where it is said that the bodies of the Gauls were burnt who died during or after the siege of the Capitol, has also been assumed to have been in this neighbourhood because it is mentioned by Varro (Ib.) between the Aequimelium and the Doliola (cf. Liv. v. 48, xxii. 14). But such an assumption is altogether arbitrary, as Varro follows no topographical order in naming places. Lastly, we shall mention two objects named in the Notitia, which seem to have stood on the Forum Boarium. Theseare the Apollo Coelispex, and the Hercules Olivarius, apparently two of those statues which Augustus dedicated in the different Vici. Becker (Handb. p. 493) places them in the Velabrum, and thinks that the epithet of Olivarius was derived from the oil-market, which was established in the Velabrum (Plaut. Capt. iii. 1. 29), but it seems more probable that it denoted the crown of olive worn by Hercules as Victor (Preller, Regionen, p. 194). The Forum Boarium was especially devoted to the worship of Hercules, whence it seems probable that his statue stood there; besides both that and the Apollo are mentioned in the Notitia in coming from the Porta Trigemina, before the Velabrum.

Before we quit the Forum Boarium we must advert to a barbarous custom of which it appears to have been the scene even to a late period of Roman history. Livy relates that after the battle of Cannae a Gallic man and woman and a Greek man and woman were, in accordance with the commands of the Sibylline books, buried alive in a stone sepulchre constructed in the middle of the Forum Boarium, and that this was not the first time that this barbarous and un-Roman custom had been practised (xxii. 57). Dion Cassius adverts to the same instance in the time of Fabius Maximus Verrucosus (Fr. Vales. 12), and Pliny mentions another which had occurred even in his own time ("Boario vero in foro Graecum Graecamque defossos, aut aliarum gentium, cum quibus tum res esset, etiam nostra aetas vidit," xxviii. 3; cf. Plut. Q. R. 83). It may also be remarked that the first exhibition
of gladiatorial combats at Rome took place on the Foram Boarium, at the funeral of the father of Marcus and Decimus Brutus, B. c. 264. (Val. Max. ii. 4. § 7.)

The valley between the Palatine and Aventine, occupied by the Circus Maximus was, as we have had occasion to mention in the former part of this article, in earlier times called Vallis Murcia, from an altar of the Dea Murcia, or Venus, which stowd there. He who mounts the enormous mass of ruins which marks the site of the imperial palace on the S. side of the Palatine hill may still trace the extent and configuration of the circus, the area of which is occapied by kitchen gardens, whilst a gas manufactory stands on the site of the carceres. The description of the circus itself will be reserved for a separate section devoted to objects of the same description, and we shall here only treat of the different monuments contained in it as a Region or district. The whole length of the circus was $3 \frac{1}{\frac{1}{2}}$ stadia, or nearly half a mile, the circular end being near the Septizonium, and the carceres or starting place nearly auder the church of $S$. Anastasia, where the circus adjoined the Furum Boarium. Its proximity to the latter is shown by the circumstance that the Maxima Ara Herculis before alluded to is sometimes mentioned as being at the entrance of the Circus Maximus, and sometimes as on the Forum Boarium ("Ingens ara Herculis pos januas Circi Maximi," Serv. ad Aen. viii. 271 ; cf. Dionys. i. 40; Ovid, Fast. i. 581 ; Liv. i. 7, \&ce.) The large Temple of Hercules must undoubtedly have been close to this altar, but on the Forom Boarium.

The Vallis Murcia contained several old and famous temples and altars, some of which were included in the circus itself. Such was the case with the altar or Sacellum of Murcia herself ("Intumus Circus ad Murcim vocatur -ibi sacellum etiam nunc Mrurteae Veneris," Varr. L. L. v. § 154, Müll.); but its exact site cannot be determined. Consus had also a subterranean altar in the circus, which was opened during the games and closed at other times. It is described by Tertullian as being "ad primas metas," and therefore probably at a distance of about one-third of the whole length of the circus from the carceres, and near the middle of the S . side of the Palatine hill. (Tert. de Spect. 5; Varr. L. L. vi. § 20, Müll.; Tac. Ann. xii. 24; Plat. Rom. 14.) But the chief temple on the circus was the Temple of thr Sun, to which deity it was principally consecrated (" Circus Soli principaliter consecratur: cujus zedes medio spatio et effigies de fastigio aedis emicat," Tert. Spect. 8). Tacitus mentions the same ancient temple as being "apud Circum" (Ann. xv. 74); and from a comparison of these passages we may conclude that it stood in the middle of one of its sides, and probably under the Aventine. The Notitio and Curiosum mention it aunbiguonsly in conjunction with a Temple of Luma, so that it might possibly be inferred that both deities had a common temple ("Templum Solis et Lunae," Reg. xi.). It seems, however, more probable that there were two distinct temples, as we frequently find them mentioned separately in anthors, but never in conjunction. It is perhaps the same temple of Luna which we have already mentioned on the Arentine, in which case it might have been situated on the declivity of that hill facing the circus, and behind the temple of Sol. Luna, like Sol, was 2 Circensian deity, both performing their appointed circuits in quadrigac. (Joh. Lydus, de Mens. i. 12; Tert. Spect.

9; Cass. Var. iii. 51.) The situation of the Temple of Mercury, mentioned next to the two preceding ones in the Curiosum, may be determined with more accuracy, if we may believe an account recorded by Nardini (Rom. Ant. lib. vii. c. 3) on the authority of a certain Francesco Passeri, respecting the discovery of the remains of a small temple of that deity in a vineyard between the Circus Maximus and the Aventine. The remains were those of a little tetrastyle temple, which was identified as that of Mercury from an altar having the caduceus and petasus sculptured on it. The temple is represented on a medal of M. Aurelins, who appears to have restored it. The site agrees with that described by Orid (Fast. v. 669):-
"Templa tibi posuere patres spectantia Circum Idibus: ex illo est haec tibi festa dies."
A comparison of this passage with Livy, "aedes Mercurii dedicata est Idibus Maiis" (ii. 21), shows that the same ancient sanctuary is alluded to, the dedication of which cansed $a$ dispate between the consuls, в. c. 495 (Ib. c. 27). We next find mentioned in the Notitia an Aedes Matris Deux, and another of Jovis Arboratoris, for which we should probably read "Liberatoris." The Magna Mater was one of the Circensian divinities. Hor image was exhibited on the spina (Tert. Spect. 8), and it would appear that she had also a temple in the vicinity. Of a temple of Jupiter Liberator we know nothing further, though Jove was certainly worshipped at Rome under that name (Tac. Amm $x$. 64, xvi. 35), and games celebrated in his honour in the month of October. (Calend. Vindob. ap. Preller, Reg. p. 192.)

Next to these an Aeders Ditis Patris is named in the Notitia, but does not appear in the Curioswn. Some writers would identify Dispater with SUXmanus, quasi Summus Manium ( $\mathbf{v}$. Gruter, MXV. 7: Mart. Capell. ii. 161); bat there was a great difference of opinion respecting this old Sabine god, and even the Romans themselves could not tell procisely who he was. Thus Ovid (Fast. vi. 725): -
" Reddita, quisquis is est, Summano templa feruntur Tunc cum Romanis, Pyrrhe, timendus eras."
The temple to him here alluded to was, howerer, certainly near the Circus Maximus, since Pliny mentions some annual sacrifices of dogs as made "inter aedem Juventatis et Summani" (xix. 4) ; and that the Temple of Jufantas was at the Circus Maximus we learn from Livy: "Juventatis aedem in Circo Maximo C. Licinius Lacullus triumvir dedicavit" (xxxvii. 36; cf. Calend Amert. XII. Kal. Juh.: "Summano ad Circ. Max."). The temple of Summanus, therefore, must have been dedicated during the war with Pyrrhus, and that of Juventas in B. c. 192.

Close to the W. extremity of the circas, and towering as it were over the carceres, from its being built apparently on the slope of the Aventine (imép
 famons Temple of Cerrs, dedicated also to Liser and Libera. Thus Tacitus, relating the dedication of the temple by Tiberius, it having been restored by Augustus, says: "Libero, Liberseque et Cereri, juxta Circum Naximum, quam A. Postumins dictator roverat (dedicavit)" (Ann. ii. 49). It is mentioned by other writers as "ad Circum Maximum"; whence Canina's identification of it with the church of S. Maria in Cosmedin seems improbable (Indicas.
p. 498), since that building is at some little distance from the circus, and certainly does not stand on higher ground. The temple of Ceres contained some precious works of art (Plin. xxxv. 10. s. 36. § 99), especially a picture of Dionysus by Aristides, which Strabo mentions that he saw (viii. p. 381), but which was afterwards destroyed in a fire which consumed the temple.

We also find a Temple of Venus mentioned at the circus, founded by Q. Fabius Gurges, B. c. 295, very appropriately out of the money raised by fines levied on certain matrons for incontinence. (Liv. x. 31.) It seems to have been at some distance from the Forum Boarium, since the censors M. Livins and C. Claudius contracted for the paving of the road between the two places. (Id. xxix. 37.) Yet we have no means of defining its site more accurately, nor can we even tell whether it may not have been connected with the altar of Venus Murcia before mentioned. But the Temple of Flora, founded by the aediles L. and M. Publicius, the same who constructed the clivus or ascent to the Aventine which bore their name, must have lain close to that ascent, and consequently also to the temple of Ceres just described ; since Tacitus, after relating the re-dedication of the latter under Tiberius, adds: "eodemque in loco aedem Florae (dedicavit), ab Lucio et Marco Publiciis aedilibus constitutam." (Ann. ii. 49.) The Publicii applied part of the same money - raised by fines - with which they had constructed the clivus, in instituting floral games in honour of the divinity which they had here consecrated, as we learn from the account which Ovid puts into the mouth of the goddess herself (Fast. v. 283).

These are all the temples that we find mentioned in this quarter; but before we leave it there are one or two points which deserve to be noticed. The Cave or Cacces was reputed to have been near the Clivus Publicius. Solinus mentions it as being at the Salinae, near the Porta Trigemina (i. 8); a situation which agrees with the description in Virgil of the meeting of Aeneas and Evander at the Ara Maxima of Hercules, from which spot Evander points out the cave on the Aventine (Aen. viii. 190, seq.): —
"Jam primum saxis suspensam hanc adspice rupem," \&c.
Of the Duodectix Portae mentioned in the Notitia in this Region we have already spoken [Part II. p. 757].

## IX. The Cablian Hill

The Caelius presents but few remains of ancient buillings, and as the notices of it in the classics are likewise scanty its topography is consequently involved in considerable obscurity. According to Livy (i. 30) Tullus Hostilius fixed his residence ufon it; but other accounts represent him as residing on the Velia. (Cic. Rep. ii. 31.) We find a Sacelluy Dianar mentioned on the Caeliolus - an undefined part of the eastern ridge (de Har. Resp. 15); another of the Dea Carna "in Caelio monte" (Macrob. S. i. 12); and a little Temple of Minerva Capta situated on the declivity of the hill:-
"Caclius ex alto qua Mons descendit in aequum,
Hic abi non plana est, sed prope plana ria est,
Parra licet rideas Captae delubra Minerrae."
(Ov. Fast. iii. 837, seq.)

Hence it was probably the same ancient sanctuary, called "Minervium" in the sacred books of the Argives, which lay on the northern declivity of the Caelian towards the Tabernola ("Circa Minervium qua e Caelio monte iter in Tabernola est," Varr. L. L. v. § 47), and probably near the modern street Viu della Navicella.

The most considerable building known on the Caelian in later times was the Temple of Divus Claudius, begun by Agrippina, destroyed by Nero, and restored by Vespasian. (Suet. Vesp. 9; Aur. Vict. Caes. 9.) The determination of its site depends on the question how far Nero conducted the Aqua Claudia along the Caelius, since we learn from Frontinus that the arches of that aqueduct terminated at the temple in question. (Front. Aq. 20, 76.) These Arcus Neroniani (also called Caelimontani, Gruter, Inscr. clxxxvii. 3) extend along the ridge of the narrow hill, supposed to be the Caeliolus, from the Porta Maggiore to the Santa Scala orposite the Lateran, where they are interrupted by the piazza and buildings belonging to that basilica. They recommence, however, on the other side in the Via di S. Stefano Rotondo, and proceed with 2 small gap as far as that church. There are further traces of them on the W. side of the arch of Dolabella; and the opinion of Canina seems probable enough, that they terminated near the garden of the convent of SS. Giovanni o Paolo, and that the remains of a huge substruction at this spot belonged to the temple of Claudius. (Indicas. p. 73, seq.) Canina is further of opinion that the Aqua Claudia was distributed a little beyond this spot, and that one of the uses to which it was applied by Nero was to replenish his lake, which occupied the site of the Flavian amphitheatre. Others, however, are of opinion that the aqueduct did not proceed beyond the charch of S. Stefano Rotondo, and therefore that the temple of Claudius stood near that spot, or that the church may even have been built on its foundations. Bnt there are no sufficient grounds for arriving at any satisfactory conclusion on these points, and altogether the view of Canina is perhaps the more probable one.

The Arch of Dolabella, just alluded to, appears from the inscription on it to have been erected ir. the consulship of Dolabella and Silanus, A. D. 10. Its destination has been the subject of various conjectures. Some have imagined it to be a restoration of the Porta Caelimontana; but this can hardly be the case, since, if the Servian walls had run in this direction, half of the Caelian bill would have been shut out of the city. On the other hand, its appearance excludes the notion of a triumphal arch; and it could not originally have formed part of an aqueduct, since it was erected previously to the construction of the Aqua Cladia. It seems most probable therefore that it was designed as an entrance to some public place; but there are appearances that Nero subsequently conducted his aqueduct over it. (Canina, Indicaz. p. 77.) The road which led up to it from the Via di S. Gregorio seems in ancient times to have been called Clivus Scauri. It is mentioned under that name in the Epistles of $S$. Gregory (vii. 13), and the Anonymus Einsiedlensia calls it Clivus Tauri, which is probably a scribe's error.

Next to the temple of Claudius, the Notitia mentions a Mackllum Magnum, probably the market recorded by Dion Cassius as founded by Nero ( $\tau \rightarrow$

vol. IIL

Olepow Canina (Indicusione, p. 83), is of opinion that the church of S. Stefano Rotondo was part of the macellum, perhaps a slaughter-house with a dome, and surrounded with porticoes.

MACELLUM.
The Castra Peregrina recorded in the Notitia are not mentioned by any author except Ammianus Marcellinus, who relates that Chnodomar, when conquered by Julian, was conducted to and died in this camp on the Caelian (zvi. 12, extr.) The name, however, occurs in inscriptions, and sometimes in connection with a temple of Jupiter Redux, as in that found in the charch of S. Naria in Domnica (Gruter, xxii. 3; Orell. 1256). These inscriptions also mention a Princeps Peregrinorum, the nature of whose office we are unacquainted with; but it seems probable that he was the commander of the foreign troops stationed in this camp. Near the same church were found several little marble ships, apparently votive offerings, and one which stood a long while before it gave to the church and to the surrounding place the name of della Navicella.

An Isius, or temple of Isis, is mentioned by Treb. Pollio ( $X X X$. Tyram.25) on the Caelian, but it occurs nowhere else. It was probably one of the many temples erected to this goddess by Caracalla (Lampr. Carac. 9.) The spring called the Aqua Mercurir recorded by Orid near the Porta Capena (Fasti, v. 673) was rediscovered by M. Fea in 1828, in the vigna of the Padri Camaldolesi di S. Gregorio. On the Caelian was also the Campus Martialis in which the Equiria were beld in March, in case the Campus Martius was overflowed. (Ovid, Fast. v. 673; Panl. Diac. p. 161). Its situation rests chiefly on conjecture; but it was probably near the Lateran; where the neighbouring charch of S. Gregorio, now S. Marria Imperatrice, was called in the middle ages "in Campo Martio". (Canina, Indicasione, p. 84.)

In the Imperial times the Caelian was the residence of many distinguished Romans; and it is here that Martial places the "limina potentiorum" (xii. 8). We have already had occasion to allude to the House of Claudius Centumalus on this hill, which was of such an extraordinary height that the angurs commanded him to lower it; but this was during the Republic. Under the Empire we may mention the House of Mamurra, a Roman knight of Formise, and praefectus fabrum of Caesar in his Gallic wars, the splendour of which is described by Pliny (xurvi. 7), and lampooned by Catullus (xlii. 4). Here also was the House or Amaius Verus, the grandfather of Marcus Aurelius, in which that emperor was edncated, situated near the howee of the Laterani (Jul.Capit. M. Ant. 1.) It appears to have been surrounded with gardens; and according to the Italian writer Vacca (Memor. 18) the noble eques-
trian statue of Marcus Aurelins which now adorns the Capitol was discovered in a vineyard near the Scala Santa. On the same hill were the Aedres Victilianar where Commodus sought refuge from the uneasy thoughts which tormented him in the palace, but where he could not eecape the snares of the assassin (Lampr. Comm. 16; Jul. Capitol. Pert. 5). But the most remarkable of all these residences was the Palace of the Lateranit, characterised by Juvenal ( $x .18$ ) as the "egregiae Lateranorum sedes" the residence of the consul Plautius Lateranus, whose participation in Piso's conspiracy against Nero cost him his life (Tac. Ann. xv. 49, 60). After this event the palace of the Laterani seems to have been confiscated, and to have become imperial property, since we find Septimius Severns presenting it to his friend Latoranus, probably a descendant of the family to which it had once belonged (Aur. Vict. Epit 20). Subsequently, however, it appears to have been in the possession of the emperor Constantine, who erected upon its site the celebrated basilica which still bears the name of the Lateran, and presented it to the bishop of Rome (Niceph. vii. 49). The identity of the spot is proved by several inscriptions found there, as well as by the discovery of chambers and baths in making the facade of the modern basilica. (Vennti, Roma Ant. P. i. c. 8; Canina, Indic. p. 85). The Domus Philippi mentioned in the Notitia was probably the private house of the emperor of that name. Lastly, we may mention that on the Caelian was the Housr of Symmachus, the strenuous defender of paganism in the reign of Valentinian (Symm. Epist. iii. 12, 88, vii. 18, 19).
There are a few other objects on the Caolian mentioned in the Notitia, some of which, bowever, hardly admit of explanation. Such is the Atruys or Antrux Cyclopis, respecting which we cannot say whether it was a cavern, or an area surrounded with porticoes. Whatever it was it seems to have stood on the S. side of the hill, since the vicus Ab Cyclopis in the lst Region, or Porta Capena, was probably named after it (Preller, Reg. p.119.) The CAPUT Africae of the Notitia, which likewise appears in several inscriptions (Orell. 2685, 2934, 2935), is thought to have been a street in the neighbourhood of the Colosseum, since the Anonymus Einsiedlensis mentions it between the Meta Sudans and the church of SS. Quattro Coronati; whence it is held to have corresponded with the modern street which bears the name of that church (Nibby, Mura di Roma, p. 173, note 140; Urlichs, Röm. Topogr. p. 101). Becker observes (Handb. p. 508), that the name does not appear in any earlier writer, and connects it with some building founded by Septimins Severas, in order to strike his countrymen, the Africans, who arrived at Rome by the Via Appia; though, as Urlichs observes, they must have gone rather out of their way " to be imposed upon." Varro mentions a Vicus Africus on the Esquiline, so named because the African hostages in the Punic War were said to have been detained there (" Exquilis vicus Africus, quod ibi obsides ex Africa bello Punico dicuntur custoditi," L. L. v. § 159). Hence it is very probable, as Canina remarks (Indicas p. 91), that the head, or beginning, of this street stood at the spot indicated by the Anonymus, namely, near the Colosseum, whence it ran up in the direction of the Esquiline, although Becker (Hasdb. p. 560) denies that the Capat Africae had any connection with the Vicus Afrious. The Arbor Surcta is inexplicable

The Ludus Matutinus et Gallicus (or Dacieus), the Spoilarium, Saniarium, and AbmamentamiCx, were evidently gladiatorial schools with their appurtenances, situated apparently on the northern side of the Caelian, not far from the amphitheatre. Officers attached to these institutions are frequently mentioned in inscriptions. The Spoliarium and Armamentarium speak for themselves. The Saniarium is a word that does not occur elsewhere, and is thought by Preller to denote a hospital (a sanie) where the wonnded gladiators were received. For a further accoant of these institutions see Preller, Regionen, pp. 120-122. Lastly, the Mica Aurea appears from an epigram of Martial's to have been a banqueting room of Domitian's (ii. 59): -
${ }^{4}$ Mica vocor; quid sim cernis; coenatio parva.
Ex me Caesareuin prospicis, ecce, tholum."
It is also mentioned, along with the Meta Sudans, as built by Domitian in the Chronica Regia Colosiensis, in Eccard's Corpus Historicum (vol. i. p. 745.)

## X. The District to the S. of the Cablian.

To the S. of the Caelian lies a somewhat hillv district, boanded on the $W$. by the Aventine, and comprehending the 1st and 12th Regions of Augustus, or those called Porta Capena and Piscina Publica. The latter of these is decidedly the least important district of Rome, but the forner presents sereral objects of considerable interest. Of the Porta Capena itself we have already treated. In its immediate vicinity stood the double Temple of Honos and Virtus, vowed by Marcellus in his Gallic wars, bat not erected till after his conquest of Syracuse. It was the first intention of Marcellus that both the deities should be under the same roof; and, indeed, the temple seems to have been a mere restitution of an ancient one dedicated to Honos by Q. Fabius Verrucosus many years befure. (Cic. N. D. ii. 23.) Bat when Marcellus was about to dedicate it, and to introduce the statue of another deity within the sanctuary, the pontifices interposed, and forbade him to do so, on the ground that the procwratio, or expiation of any prodigy occurring in a temple so constructed, would be difficult to perform. (Liv. xxvii. 25.) Hence, Marcellus was constrained to add another temple of Virtus, and to erect two images of the deities "separatis aedibus;" bot though the work was pressed on in haste, he did not live to dedicate them. (Liv. L. c.; Val. Max. i. 1. § 8.) Nerertheless, we frequently find the temple mentioned in the singular number, as if it had formed only one building ("ad aedem Honoris attque Virtutis," Cic. Verr. iv. 54 ; cf. Ascon. ad Cic. in Pis. 19; also the Notitia and Curiosum.) Hence, perhaps, the most natural conclusion is that it consisted of two cellae under the same roof, like the temple of Venus and Rome, a form which agrees with the description of Symmachus: "Majores mstri -aedes Honori ac Virtuti gemella facie junctim bcarunt." (Epist. i. 21.) The temple was adorned vith the spoils of Grecian art brought by Marcellus from Syracuse; an instance noted and condemned by Livy as the first of that kind of spoliation, which he observes was subsequently inflicted apon the Roman temples themselves, and especially upon thiss very temple of Marcellus; for, in Livy's time, few of those ornaments remained, which had previoasly rendered it an object of attraction to all strangers who visited Bome (xxv. 40, cf. $x \times x \mathrm{~m}_{\mathrm{V}}$ 4).

They probably disappeared during the Civil Wars, in which the Roman temples seem to have suffered both from neglect and spoliation; for in the time of Cicero the Syracusan spoils still existed in the temple (in Verr. iv. 54). It appears to have been burnt in the fire of Nero, since it is mentioned as having been restored by Vespasian. (Plin. xxxv. 37.)

According to Aurelius Victor (Vir. Ill. 32) the annual procession of the Roman knights to the temple of Castor started from this temple of Honos and Virtus, whereas Dionysius (xi. 13) names the temple of Mars as the starting-place. Becker (Handb. p. 311) regards the discrepancy between these accounts as tending to prove the correctness of his assumption that the temples must have lain close together. That one of the accounts is erroneous is a more probable conclusion, and it is a certain one that it is fallacious to draw any topographical deductions from such very skadowy premises. The true site of the Temple of Mars has been ascertained as satisfactorily as that of any of the monuments which do not actually speak for themselves; such, we mean, as the Colosseum, Trajan's column, the Pantheon, and others of the like description. There can be no doubt that the temple of Mars, instead of being close to the Porta Capena, or at S. Sisto, as Becker places it (Handb. p. 513), lay on the Via Appia, at the distance of about $1 \frac{1}{2}$ miles from that gate. The proofs are overwhelming. In the first place an inscription, still preserved in the Vatican, recording the levelling of the Clivus Martis, was found in the Vigna Nari, outside of the Porta Appia (the modern S. Sebastiano). Secondly, another inscription, in the Palazzo Barberini, recorded by Fabretti (Inscr. p. 724, no. 443), Marini (Fratr. Arv. p. 8), and others, testifies that Salvia Marcellina gave a piece of ground to the Collegium of Aesculapius and Hygia for a smalh temple, close to the temple of Mars, between the first and second milestone on the Via Appia, on the left-hand side in going from the city. Thirdly, both the Notitia and Curiosum place the Aedes Martis at the extremity of the first Regio, close to the Flumen Almonis. The Almo flows outside the Porta Appia, near the Vigna Nari :-
" Est locus ante urbem, qua primum nascitar ingens Appia, quaque Italo gemitus Almone Cybebe Ponit, et Idseos jam non reminiscitur amnes."
(Stat. Silv. v. 1. 222.)
A brook now flows between the Porta S. Sebastiano and the church of Lomine quo vadis, which, with great probability, has been identified with the Almo. (Cluver, Ital. Ant. p. 718; Westphal, Röm. Campagna, p.17.) Fourthly, the same locality is indicated by several documents of the middle ages. Thus, in the Acts of the Martyrs: "Tunc B. Stophanus ductus a militibus foras muros Appiae portae ad T. Martis " (Act of S. Stephanus and S. Julius). "Diacones duxerunt in clivam Martis ante templam et ibidem decollatus est" (Act of S. Sixtus). And the Mirabilia (in Montfaucon, Diar. Ital. p. 283) : "Haec sunt loca quas inveniuntur in passionibus sanctorum foris portam Appiam, ubi beatus Syxtus decollatus fuit, et ubi Dominus apparuit Petro, Domine quo vadis ? Ibi templum Martis, intus portam, arcus Syllae." Now, the passages in the classics which relate to the subject do not run counter to these indications, but, on the contrary
tend to confirm them. Appian (B. C. iii. 41) mentions a temple of Mars 15 stadia distant from the city, which would answer pretty nearly to the distance of between 1 and 2 miles given in the inscription quoted. Ovid says (Fast. vi. 191):-
" Lux eadem Marti festa est; quem prospicit extra
Appositum tectae Porta Capena viae."
The word prospicit denotes a long view; and as the temple of Mars stood on a hill, as is evident from the Clivus Martis, it might easily be visible at the distance of a mile or two. The words of Statius ("qua primum nascitur," \&c.) must be corrupt, being both tautological and contrary to fact. The paving of the road from the Porta Capena to the temple would not have been worth twice recording by Livy, had it lain oniy at a distance of some 300 yards (x. 23, xxxviii. 28). The only way in which Becker can escape from the legitimate conclusion is by assuming two temples of Mars in this quarter; in which few, we suspect, will be inclined to follow him, and which may be regarded as equivalent to a confession of defeat. (Becker, Handb. p. 511, seq.; Antw. p. 63, seq.; Urlichs, Röm. Topryp. p. 105, seq.; Preller, Regionen, p. 116, seq.; Canina, Indicazione, p. 56, seq.)

Close to the Purta Capena and the temple of Honos et Virtus lay the Valley of Egeria with the Lucus and Aedes Camenarum, the traditionary spot where Numa sought inspiration and wisdorn from the nymph Egeria. (Liv. i. 21 ; Plut. Num. 13.) In the time of Juvenal, whose description of the spot is a locus classicus for its topography, the grove and temple had been profaned and let out to the Jews:-
"Substitit ad veteres arcus madidamque Capenam
Hic ubi nocturnae Numa constituebat amicae. Nunc sacri fontis nemus et delubra locantur Judaeis, quorum cophinus foenumque supe!lex. Omnis enim populo mercedem pendere jussa est Arbor, et ejectis mendicat silva Camenis.
In vallem Egriae descendimas et speluncas
Dissimiles veris. Quanto praestantius esset
Numen aquae, viridi si margine clauderet undas
Herba, nec ingenuum violarent marmora tophum."
(Sat. iii. 10, seq.)
It is surprising how Becker could doubt that there was an Aedes Camenarum here, since it is not only alluded to in the preceding passage, but also expressly mentioned by Pliny (xxxir. 10.) The modern Ciceroni point out to the traveller as the valley of Egeria a pretty retired spot some distance outside of the Porta S. Sebastiano, in the valley called La Caffarella, near which are the remains of a little temple, called by some the temple of Honos et Virtus, by others a temple of Bacchus, with a grove said to be sacred to the latter deity. But though at present our imagination would more gladly fix on this spot as the scene of the conferences between Numa and his nymph, and though respectable authorities are not wanting in favour of this view (Venuti, Descr. di Rom. ii. p. 18: Guattani, Rom. Iescr. ii. p. 45), yet the preceding passages, to which may be added Syminachus ("Sed enim propter eas (acdes Honoris et Virtutis) Camenarum religio sacro fonti advertitur," $E_{p}$ ist, i. 21) and the Notitia, which places the templo of the Camenae
close to that of Honour and Valour, are too decisive to allow us to do so; and we must therefore assume the valley of Egeria to hare been that near the charch of S. Sisto, opposite to the baths of Caracalla. The little fountain pointed out as that of Egeria in the valley Caffarella, is perhaps the remains of a nymphaeum. Here was probably a sanctuary of the Almo, which waters the valley.

Near the temple of Mars, since it is mentioned in the Notitia in conjunction with it, lay the Templef of Tempestas, built by L. Cornelius Scipio, the victor of Aleria, in commemoration of the escape of the Roman fleet from shipwreck off the island of Corsica, as appears from the inscription on his tomb. The temple and the occasion of its foundation are alluded to by Ovid (Fasti, vi. 193) in the following lines: -

> "Te quoque, Tempestas, meritam delubra fatomur, Cum paene est Corsis obruta classis aquis."

But of the Temple of Miserva, also mentioned at the same time with that of Mars, we know nothing more. Near the last was preserved the Lapis Manalis, a large cylindrical stone so called from manare, " to flow," because during seasons of drought it was carried in procession into the city, for the sake of procuring rain. (Paul. Diac. p. 128; Varr. ap. Non. xv. p. 375, Gerl.)

Close to the Porta Capena, and probably outside of it, lay one of the three Sevacula mentioned by Festus; but the only time at which we find meetings of the senate recorded there is during the year following the battle of Cannae, when they appear to have been regularly held at this place. (Liv. xxiii. 32.) During the same period the tribunal of the praetor was erected at the Piscina Publica. This last object, which seems to have been a swimmingplace for the people in the Republican times (Festus, p. 213), gave name to the 12 th Kegio, which adjoined the lst, or that of Porta Capena, on the W. (Amm. Marc. xvii. 4; cf. Cic. ad Quint. Fr. iii. 7.) The pond had, nowever, vanished in the time of Festus, and its exact situation cannot be determined. There are several other objects in this district in the like predicament, such as the Laccs Рhomethei, the Balneum Torquati, and others mentioned in the Notitia. The Thermae Commodianae and Severianae will be considered under the section which treats of the thermae. The Mutatomicm Caesaris, perhap; a kind of imperial villa (Preller, Reg. p. 115), appears to have been situated near the modern church of S. Balbina. (Montfaucon, ap. Urlichs Rum. Topogr. p. 112.) The three Tkiumphal Arches of Thajan, Vfres, and Drusus, mentioned by the Notitia in the 1st Regio, probably spanned the Via Appia in the space between the temple of Mars and the Porta Capena. The arch still existing just within the Porta $S$. Sebastiano is generally thought to be that of Drusus, the father of the emperor Claudius. (" Praeterea Senatus, inter alia complura, marmoream arcuin cum tropaeis via Appia decrevit (Druso)," Suet. Ciaud. 1.)

For many miles the tombs of distinguished Romans skirt both sides of the Via Appia; and these remains are perhaps better calculated than any other object to iypress the stranger with an adequate idea of Rome's former greatness. For the most part, however, they lie begond the bounds of the presient subject, and we shall therefore content ourselves

ARCH OF DRUSUS.
with mentioning a few which were contained within the actual boundaries of the city. They appear to have commenced immediately outside the Porta Capena (" An tu egressus porta Capena, cum Calatini, Scipionum, Serviliorum, Metellorum sepulcra vides, miseros putas illos?" Cic. Tusc. i. 7); and bence many of them were included in the larger circuit of the walls of Aurelian. The tomb of Horatia, slain by the hand of her victorious brother, seems to have been situated just outside the gate. (Liv.i.26.) Fortunately the most interesting of those mentioned by Cicero - the Tomb of the Scipios - is still in existence. It was discovered in 1780 in the Vigna Sassi, on the left-hand side of the Via Appia, a little beyond the spot where the Via Latina branches off from it, and about 400 paces within the Porta S. Sebastiano. Its entrance is marked by a single tall cypress tree. In Livy's time the tomb was still adorned with three statues, said to be those of Publius and Lucius Scipio, and of the poet Ennius, who was interred in the sepulchre of his patrons. (Hieron. Chron. p. 379, Ronc.) It was here that the sarcophagus of L. Scipio Barbatus, consul in B. c. 298, now preserved in the Vatican, was discovered, together with several monumental stones with inscriptions relating to other members of the family, or to their connections and freedmen. The originals were carried off to the Vatican and eopies inserted in their stead. The most remarkable of these inscriptions are that of Scipio Barbatus; of his son Lacius Cornelins Scipio, the conqueror of Corsica, consul in e. c. 259; of Publins Scipio, son of Africanus Major, whose feeble state of health is alladed to by Cicero (Cato Maj. 11), and whose touching epitaph shows that he died young; of $L$. Cornelius Scipio, grandson of the conqueror of Spain, gathered to his fathers at the early age of 20 ; and of another of the same name, the son of Asiaticus, who died aged 33, whose title to honour is summed up in the laconic words, "Pater regem Antiochum subegit." A complete account of this tomb will be found in Visconti (Mon. degli Scipioni, Rom. 1785)
and in the Beschreibung Roms (vol. iii. p. 612, seq.), where the various epitaphs are given.
Also on the left-hand side of the Via Appia in going from the Porta Capena was the Mausoleum of Septimius Severus, which he caused to be erected for himself in his lifetime, in imitation of his Septizonium, but probably on a reduced scale. (Spart. Geta, 7.) In the same neighbourhood are some of those Columbaria, or subterranean chambers, which formed the common resting-places for the ashes of persons of a lower condition. One of these, not far from the tomb of the Scipios, is said to contain the remains of the courtiers and domestics of the Caesars, from Julins to Nero. Among others there is an inscription to M. Valerius Creticus, with a hust. The walls, as well as a large pier in the middle, are hollowed throughout with vaulted recesses like large pigeon-holes, - whence the name,- in which are contained the ashes of the dead. The Mausoleum of Caectlia Metella, which stands on the Via Appia, about 2 miles outside the Porta S. Sebastiano, though it does not properly belong to our subject, demands, from the magnificence of its construction, as well as from Byron's well-known lines (Childe Harold, canto iv.), a passing word of notice here.

The remaining part of the district, or that forming the 12 th Regio, and lying to the W. of the Via Appia, does not present many monuments of interest. The most striking one, the Thermae Antoninianae, or baths of Caracalla, will be spoken of under its proper head. We have already treated of the Bona Dea Subsaxanea and of the Isium. Close to the baths just mentioned Caracalla built the street called Nova Via, reckoned one of the handsomest in Rome. (Spart. Carac. 2; Aur. Vict. Caes. 21.) Respecting the Fortuna Mammosa, we know nothing more than that the Basis Capitolina mentions a street of the same name in this neighbourhood. In the later period of the Empire this district appears to have contained several splendid palaces, as the Septem Domus Parthorum, the

TOMB OF METELLA CAECILIA.

Domus Cilonis, and Domus Cornificies. The Domus Parthorum and Cilonis seem to have been some of those palaces arected by Septimins Severus, and presented to his friends. (Aur. Vict. Epit. 20.) Cilon is probably the same person mentioned by Dion (lxxvii. 4), Spartian (Carac. 3), and in the Digest (i. 12. 1, and 15.4.) The Parthi seem to have been Parthian nobles, whom Severus brought with him to Rome, and of whose luxurious habits Tertullian has drawn a characteristic picture. (De Hab. Mul. 7.) The Privata Adriani and the Domus Cornificies (Cornificiae) mentioned in the Notitio, lay doubtless close together. The former must have been the private residence of Hadrian, where M. Antoninus dwelt after his adoption by that emperor. (Jul. Capit. M. Anton. 5.) M. Antoninus had a younger sister named Anna Cornificia, to whom the house bearing her name doubtless belonged. (Ib. c. 1; Praller, Regionen, p. 198.)

## SI. The Esquiling and its Neighbourhood.

The Esquiline (Esquiliae, or in a more ancient form Exquailiae) was originally covered with a thick wood, of which, in the time of Varro, the only remains were a few sacred groves of inconsiderable extent, the rest of the hill having been cleared and covered with buildings. (Varr. L. L. v. § 49, Mull.) Yot the derivation of the name of the hill from aceculetum seems to have been anknown to antiquity, and is a mere conjecture of Miller's (ad loc.); the ancient etymology being derived either from concwbiae regis, because Servius Tullins had fized his abode there, or from excolere, because the hill was first cleared and settled by that king. (Varr. L. c.; Ov. Fast. iii. 245.)

Wo have already described the Esquiline as throwing out two tongues or projections, called respectively, in the more ancient times of lome, Oppius and Crspius. Their relative situation is indicated in the following passage of Festus: "Oppius antem appellatus est, ut ait Varro rerum humanarum L. viii., ab Opita Oppio Tusculano, qui cam praesidio Tusculanorum missus ad Romam tuendam, dum Tullus Hostilius Veios oppugnaret, consederat in Carinis et ibi castra habuerat. Simi-
liter Cispium a Laevio Cispio Anagnino, qui ejnsdem rei cansa eam partem Esquiliarum, quae jacet ad vicum Patricium versus, in qua regione est aedis Mefitis, tuitus est " (p. 348, Müll.). Hence we learn that the Cispius was that projection which adjoined the Vicus Patricius, and must consequently have been the northern one, since the Vicus Patricius is known to have corresponded with the modern streets called Via Urbama and Via di S.Pwdenziana, which traverse the valley lying between the Viminal and the Esquiline. The following passage of Paulus Diaconus shows that the Vicus Patricius must have lain in a valley: "Patricius vicus Rornae dictus ea, quod ibi patricii habitaverant, jubente Servio Tullio, ut, si quid molirentur adversus ipsam, ex locis superioribus opprimerentur" (p. 221, Mill.); and its identity with the modern streets just mentioned appears from Anastasius (Vita Pii I.) : "Hic ex rogratu beatae Prassedis dedicavit ecclesiam thermas Novati in vico Patricii in honorem sororis suse sunctae Potentianae " ( $p$. 14). This church of S. Pudensiana still exists in the street of the same name. It is also mentioned by the Anonymons of Einsiedlen, in whose time most of the streets still bore their ancient names, as being "in vico Pa tricii." That the Cispius was the smaller and more northern tongue likewise appears from the sacred books of the Argives (ap. Varr. L.L. v. § 50), which, in proceeding northwards from the Caelian, first name the Oppias, which had four sacraria or chapels, and then the Cispius, which, being the smaller hill, had only two, namely, the Lacus Poetelius and the Aedes Janonis Lacinae.

From the passage of Festus just quoted, it appears that part of Mons Oppius bore the name of Cartane; and this appellation continued to exist when the names Oppius and Cispius had fallen out of use and been superseded by the general name of Esquiliace. Yet it is one of the contested points of Roman topography whether the Carinae formed part of the hill. The Italians still cling to the ancient opinion that under that name was comprehended the low ground from the Foram Transitorium to the Colosseum. Becker (Handb. p. 522 seq.) partly adopted this vien, bat at the same time
extended the district so as to embrace the western extremity of the Oppius; whilst Urlichs, on the contrary, confined the Carinse entirely to that hill. (Beschr. vol. iii. part ii. p. 119, seq.) That the Itaian view is, at all events, partly erroneous, can hardly admit of a question. Besides the preceaing passage of Festus, which clearly identifies the Carinae as part of the Oppins, there are other places in ancient writers which show that a portion at lesat of the district so called lay on a height. Thus Dronysius, speaking of the Tigillum Sororium, says that it was situated in the lane which led down

 Again Varro (L. L. v. § 48), in describing the Subura ar valley at the foot of the Oppins, says that it lay "sab muro terreo Carinarum;" obviously indicating that the latter place was on a height. Becker, indeed, maintains that walls of earth or aggeres were used in fortification only where the ground was level. But a wall on a height was certainly the usual mode of fortification in ancient Italy; and, as Mr. Bunbury justly remarks (Class. Mus. vol. v. P. 222), the peculiar appellation of "marus terreus" clearly distinguishes this wall from a common agyer. Nor, as the Subara lay behind the gorge between the Esquiline and Quirinal, is it easy to see how any murus terreus in the district of the Carinas could have been so situated as to overhang the Subura, except upon the hill. The following wurds of Varro (l.c.) are even perhaps still more conclusive. He identifies the Subura with the Pagus Succusanus, - the ancient name of Subara being Succusa, by an interchange of $b$ and $c$, - and holds it was thus named "quod succurrit Carinis:" where, whatever we may think of his etymology, it is plain that he regarded the Carinae as a height. It may be added that the western part of the Oppius, where the church of $S$. Pietro in Vincoli now stands, bore the name of le Carre es late as the 16th century. (And. Fulvius, de Urb. Ant. p. 304; cf. Niebuhr, Hist. i. p. 390, seq.)

It cannot therefore be doubted that the Carinae occapied the extremity of the Oppius; but how far that district extended eastwards cannot be said. It is a more difficult question to determine whether part of the valley lying at the western foot of the hill also bore the name of Carinae. Its solution is connected with another question respecting the site of the Temple or Tellus. We know that this ternple-which was a considerable one, since assemblies of the senate were sometimes held in it - lay in the Carinae, and that it was built on the site of the honse of Sp . Cassius, which was confiscated and pulled down when that demagogne was convicted of a desion to make himself sovereign of Rome. (Liv. ii. 41 ; Val. Max. vi. 3. § 1 ; Plin. xaxiv. 14.) That event took place B.c. 485 ; but the temple does not seem to have been built till B.c. 269 . Its site is further determined by notices respecting the house of Pompey, which subsequently came into the possession of M. Antony, the situation of which is known to have been in the Carinae, and at the same time close to the temple of Tellns: "Docuit (Lenaeus) in Carinis, ad Telluris aedem, in qua regione Pompeiorum domus fuerat." (Suet. Ill. Gramm. 15, cf. Id. Tib. 15; Vell. Pat. ii. 77; Aur. Vict. Vir. Ilu. 84 ; Dion Cass. Ilviii. 38.) And Servius says expressly, though in some respects unintelligibly, "Carinae sant aedificia facta in Carinarum modam,
quae erant circa templum Telluris" (ad Aen. viii. 361).

There is nothing in the preceding passages to exclude the possibility of the Templum Telluris having been on the summit of the bill ; since it is not necessary to assume with Urlichs that it stood on its very edge (Köm. Topogr. p. 117); in which case, as there was an area attached to the temple, its back front must have been turned towards the road leading up to it from the valley, and the area have lain before it on the summit of the hill-a dispusition which does not appear very probable. Yet there are some other circumstances tending to the inference that the temple was situated in the valley. Dionysius mentions it as being, not in the Carinae, but on the road leading to the Carinae (кatà тiv
 view, taken by Urlichs (l.c.) of the constraction of $d \pi l$ in this passage is one of the reasons which led him to place the temple on the hill. He thinks that it must necessarily mean "up to : " but it might just as well be said that it means "down to," in a passage quoted a little while ago from the same author respecting the situation of the Carinae and the Vicus Cyprius. In both cases it simply means "to." It will be perceived that Dionysius is here at variance with the authorities before quoted respecting the site of the temple. If the appellation of Carinae extended over some part of the adjacent valley it is possible that Dionysius, as a foreigner, might have been unaware of that fact, and have attached the name only to the more striking part of the district which lay on the hill. And there is a passage in Varro, a very obscure one indeed, from which it might be inferred that part of the Ceroliensis, which seems to have been the name of the valley between the Caelian, the Esquiline, and the Velian ridge, had likewise borne the name of Carinae ("Ceroliensis a Carinarum junctu dictus Carinae, postea Cerolia, quod hinc oritur caput Sacrae Viae," L.L. v. § 47). These passages would seem to indicate that the temple of Tellus lay in the valley between S. Maria de' Monti and the Tor de' Conti, where indeed we find traces of the name : since the churches of S. Salvatore and of S. Pantalcone, the latter of which still exists near the lia del Colosseo, bore in the iniddle ages the epithet of "in Tellure." Passages are also adduced from the Acts of the Martyrs to show that the temple of Tellus stood opposite to that of Pallas in the Forum Transitorium. ("Clementianus praecepit ei caput amputari ante templum in Tellure, corpusque ejus projici ante Palladis aedem in locum supradictum," Act. S. Gordian.) Hence it seems not improbable that the district of the Carinae, in which the temple undoubtedly stood, may have extended over a considerable part of the valley; but the passages relating to the subject are far from being decisive; and the question is one of that kind in which much may be said on both sides.

Two striking legends of early Roman history are connected with the Esquiline and its vicinity ; that of the murder of Servius Tullius by his inbuman daughter, and that of the Tigillum Sororium, or typical yoke, by passing under which Horatius expiated the marder of his sister. We have before related that Servius Tullius resided on the Esquiline, and that he was the first to clear that hill and make it habitable. It was on his return to his residence on it, after his ejection from the curia hy his son-inlaw, Tarquinius Superbus, that he was murdered by the hirelings of that usurper. Livg's account of the

304
transaction is clear and graphic, and the best guide to the topography of the neighbourhoud. The aged monarch had reached the top of the Vicus Cyprius ("ad summum Cyprium vicum") when he was overtaken and slain. His daughter followed in her carriage, and, having arrived at the same spot where stood a temple of Diana a little before the time when Livy wrote, she was just turning to the right in order to ascend the Clivus Urbius, which led to the summit of the Esquiline, when the affrighted driver reined his horses, and pointed out to Tullia the bleeding corpse of her murdered father; but the fiend-like Tullia bade him drive on, and arrived at home hespattered with the blood of her parent. From this unnatural deed the street which was the ncene of it obtained the name of Vicus Scelikratus (i. 48). The question that has been sometimes raised whether Tullia was returning to her father's or to her husband's house, does not seem to be of much importance. Solinus, indeed (i. 25), represents Servius Tullius as residing "supra clivam Urbium," and Tarquinius Superbus, also on the Esquiline, but, "Supra clivum Pullium ad Fagutalem lucum." The house of the latter therefore must have been upon the Oppius, on which the Lucus Fagutalis was situated, and most probably upon the southern side of it; but he may not have resided here till after he became king. On the other hand, as Tullia is represented as turning to the right in order to ascend the Clivus Urbius to the royal residence, it is plain that the Vicus Cyprius must have lain on the north side of one of the tongues of the Esquiline; and as we are further informed by Dionysius, in a passage before quoted (iii. 22), that there was a lane which led down from the Carinae, or western extremity of the Oppius, to the Vicus Cyprius, the conclusion is forced upon us that the palace of Servius Tullius must have been situated upon the eastern part of the northern side of the Oppius, and that consequently the Vicus Cyprius must have corresponded with the modern Via di S. Lucia in Selci. The Summus Cyprius Vicus was evidently towards the head of the valley, the lower part of the street running under the Carinae; and hence the Clivus Urbius and the residence of Servius may be placed somewhere near the church of S. Martino. Before the usurpation of Tarquin, he and his wife may have resided near his father-in-law, or even under the shme roof; or, what is still more probable, Tullia, as Ovid represents her (" patrios initura Penates," Fast. vi. 602), was proceeding to take possession of her father's palace, since his deposition had been effected in the senate before his murder. Urlichs (Röm. Topogr. p. 119) admits that the Vicus Cyprius answered to the Via di S. Lucia, yet holds that Servius resided on the Cispius; a view atterly irreconcilable with the fact that the Clirus Urbins and palace lay on the right of that street. The passages before adduced prove the direction of the Vicus Cyprius as clearly as any locality in Rome can be proved which depends for its determination solely on notices in the classics. Yet Becker shuts his eyes to this satisfactory evidence, and maintains that the Vicus Cyprius corresponded with the modern Via del Colosseo (Antwort, p. 78); although in that case also it would have been impossible for Tullia to have ascended the Esquiline by turning to the right. The only ground he assigns for this incomprehensible view is an arbitrary estimate of the distances between the ubjects mentioned in Regio IV. of the Notitia, founded also on the assumption that
these objects are enumerated strictly in the order in which they actually followed one another. But we have already shown from Becker himself that th is is by no means always the case, and it is evidently not so in the present instance ; since, after mentioning the Tigillium Sororium, which lay in or near the Subura, the order of the catalogne leares that apot and proceeds onwards to the Colosseum, and then again at the end of the list reverts to the Subira. The chief objection to placing the Vicus Cyprius under this side of the Oppius is, as Mr. Bunbery observes (Class. Mus. vol. v. p. 227), that it would thus seem to interfere with the Subura. But this objection is not arged either by Becker or Urlichs; and indeed the Subura, like the Velabrum, seems to have been a district rather than a street, so that we may conceive the Vicus Cyprius to have run througl it.

The position of the Tighlum Sororium is determined by what has been already said; namely, in a narrow street leading down from the Carinae to the Vicus Cyprius. It seems to have been a wooden beam erected across the street. As it is mentioned in the Notitia, this monament, connected with one of Rome's early legends, mast have existed down to the 5th century; and indeed Livy (i. 26) informs us that it was constantly repaired at the public expense. We learn from Dionysius (iii. 22) and Festus (p. 297, Müll.) that on each side of it stood an altar; one to Juno Sororin, the other to Janus Curiatius.

Having had occasion to mention the Subura, it may be as well to describe that celebrated locality before proceeding further with the topugraphy of the Esquiline. We have already seen from Varro that it was one of the most ancient districts in Rome; and its importance may be inferred from its having given name to the lat Servian Region. We have also alluded to a passage in the same author (L. L. v. § 48, Müll.) which shows it to have been originally a distinct village. called Succuva or Pagus Succusanus, lying under the Carinae. Varro adds, that the name still continued to be written with a $\mathbf{C}$ instead of a B; a statement which is confirmed by the fact that in inscriptions the Tribus Suburana is always denoted by the abridged form trib. svc. (Cf. Festus, 8. v. Subura, p. 309, Miill.; Quintil. Inst. Or. i. 7. § 29; Mommsen, Die Röm. Tribus, p. 79, seq.) A piazza or place under the church of S. Pietro in Vincoli still bears the name of Subura; and the church of S. Agata over the Via de' Serpenti, which skirts the eastern foot of the Quirinal hill, bore in the middle ages the name of "in Suburra" or "super Suburra." Hence it seems probable that the Subura occupied the whole of the valley formed by the extremities of the Quirinal, Viminal, and Esquiline, and must consequently have been, not a street but, a region of some pxtent; as indeed we find it called by Gregory the Great in the 6th century (" in regione urbis illa quae Subura dicitur," IVal iii. c. 30). But that it extended westward as far as the Forum Transitorium, a suppusition which seems to rest solely on the order of the the names in the 4th Region of the Notitia, we can hardly conceive. We have shown that the district between the back of the imperial fora and the western extremity of the Esquiline may perhaps have formed part of the Carinae; but it can hardly have been called both Carinae and Subura. The latter seems to have properly begun at the point where the Quirinalis approaches the extremity of the Oppius; and
this seems to have been the spot called by Martial the primae fauces of the Subura (ii. 17):-

> "Tonstrix Suburae fancibus sedet primis, Cruenta pendent qua flagella tortorum Argique letum multus obsidet sutor."

Juvenal (v. 106) represents the Cloaca Maxima as penetrating to the middle of the Subura, and this fact was established by excavations made in the year 1743. (Ficoroni, Vestigia di Ruma, ap. Bunbury, Class. Mus. vol. v. p. 219.)

From its situation between the imperial fora and the eastern hills, the Subura must have been one of the most frequented thoroughfares in Rome; and hence we are not surprised to find many allusions to its dirt and noise. It was the peculiar aversion of Juvenal, - a man, indeed, of many aversions (" Ego vel Prochytam praepono Suburae," Sat. iii. 5); a trait in his friend's character which had not escaped the notice of Martial (xii. 18):-

## "Dum tu forsitan inquietus erras Clamosa, Juvenalis, in Subura."

The epithet clamosa bere probably refers to the cries of itinerant chapmen: for we learn from other passages in Martial that the Subura was the chief place in which he used to market (vii. 31, x. 94, \&c.; cf. Juv. xi. 136, seq.) It appears also to have been the abode of prostitutes (vi. 66; comp. Hor. Epod. v. 58). It was therefore what is commonly called a low neighbourhood; though some distinguished families seem to have resided in it, even Caesar himself in his early life (Suet. Caes. 46), and in the time of Martial, L. Arruntius Stella (xii. 3. 9). The Suburanenses, or inhabitants of the Subara, kept up to a late period some of the ancient customs which probatly belonged to them when they formed a distinct village; especially an annual contest with the Sacravienses, or inhabitants of the Sacra Via, for the head of the horse sacrificed to Mars in the Campus Martius every Octaber. If the Suburanenses gained the victory they fixed the head on a tower in the Subura called Turris mamilia, whilst the Sacravienses, if successful, fixed it on the Regia. (Festus, s. v. October Equus, p. 178, Müll.; Paul. Diac. p. 131.)

Throughout the time of the Repablic the Esquiline appears to have been by no means a favourite or fashionable place of residence. Part of it was occupied by the Campus Esquilinus, a place used as a burying-ground, principally for the very lowest class of persons. such as paupers and slaves; whose bodies seem to have been frequently cast out and left to rot bere without any covering of earth. But under the Empire, and especially the later period of it, many palaces were erected on the Espuiline. Maecenas was the first to improve it, by converting this field of death, and probably also part of the surrounding neighbourhood, - the pauper burial-ground itself ap!eary to have been only 1000 feet long by 300 drep, - into an agreeable park or garden. Horace (S. i. 8. 14) mentions the laying out of these celebrated Horti Maecenatis:-
" Nonc licet Esquiliis habitare salubribus atque Aggere in aprico spatiari, qua modo tristes Albis informem spectabant ossibus agrum."
It appears from these lines that the Campus Esquilinus adjoined the agger of Servius Tullius, which, by the making of these gardens, was converted into a cheerful promenade, from which people were no
longer driven by the disgusting spectacle of mouldering bones. The Campus Esquilimus being a cemetery, must of course have been on the outside of the agger, since it was not lawful to bury within the pomoerium; and Varro (L.L. v. § 25) mentions it as " ultra Exquilias," by which he must mean the Servian Region so called, which was bounded by the agger. Its situation is also determined by a passage in Strabo (v. p. 237), where the Via Labicana, which issued from the Esquiline gate at the southern extremity of the agger, is said to leave the campus on the left. It appears to have also been the place of execution for slaves and ignoble criminals (Suet. Claud. 25; Tac. Ann. ii. 32, xv. 60; Plaut. Mil. ii. 4. 6, ed. Ritschl.). There does not seem to be any anthority for Becker's assumption that the whole of the Esquiline outside of the Servian walls was called Campus Esquilinus (Handb. p. 554), nor that after the laying out of the gardens of Maecenas the ancient place of expcution was transferred to the Sessorium, near S. Croce in Gerusalemme. Part of the cannpus was the field given, as the scholiast on Horace sars. by some person as a burying-place. The Sessorium mentioned in the Excerpta Valesiana de Odoacre (69) was a palace; and though Theodoric ordered a traitor to be beheaded there it can hardly have been the ordinary place of execution for common malefactors. Besides the Sessorium mentioned by the scholiasts on Horace (Epod. จ. 100, Sat. i. 8. 11) was close to the Esquiline gate, a full mile from S. Croce, and seems, therefore, to have been annther name for the Campus Esquilinus, if the scholiasts are right in calling it Sessorium. The executions recorded in the passages before quoted from Suetonius and Tacitus took place long after the gardens of Maecenas were made; yet when Tacitus uses the words "extra Portam Exquilinam," there can be no doubt that he means just without the gate. It would be a wrong conception of the Horti Maecenatis to imagine that they resembled a private garden, or even a gentleman's park. They were a common place of recreation for the Roman populace. Thus Juvenal describes the agger as the usual resort of fortune-tellers. (S. vi. 588.) We see from the description of Horace that not even all the tombs had been remored. Canidia comes there to perform her incantations and evoke the manes of the dead; at sight of which infernal rites the moon hides herself behind the sepulchres ( $\mathbf{\nabla}$. 35):
"__ lunamque rubentem,
Ne foret his testis, post magna latere sepulcra."
Such a place, therefore, might still have been used for executions ; though, doubtless, bexilies were no longer exposed there, as they had formerly been. These "magna sepulcra" would also indicate that some even of the better classes were buried here ; and the same thing appears from Cicero. ( $1 / h i l$. ix. 7.)

The Horti Maecenatis probably extended within the agger towards the baths of Titus. and it was in this part that the House of Marcenas seems to have been situated. Close to these baths, on the NE. side, others, built by Trajan, existed in ancient times, although all traces of them have now vanished. They have sometimes been confounded with those of Titus; but there can be no doubt that they were distinct and separate foundations. Thus the Notitia mentions in the 3rd Region the "Thermae Titianae et Trajanae;" and their distinction is also shown
by the inscription of Ursus Togatus: Thikrmis traiani thermis agrippaig et titi, \&c. (Grater, dcxixvii. 1). The site of the baths of Trajan, close to the church of S. Martino, may be determined from another inscription found near that church, in the pontificate of Paul III., which records some improvements made in them; 23 well as from a notice by Anastasius, in his Life of Symmachus (p. 88, Blanch.), stating that the church alluded to was erected "juxta Thermas Trajanas." It is a very common opinion that the house of Maecenas occupied part of the site of the baths of Titus, and this opinion is as probable as any other. It was a very lofty building. Horace describes it as a " molem propinquam nubibus arduis" ( $O d$ iii. 20.10), and from its situation and height must no doubt have commanded a view of Tibur and its neighbourhood; though we do not draw that conclusion from the immediately preceding lines, where we think the far better reading is, "Ut semper udum Tibur," \&c., the semper belonging to "udum," and not to " contemplere" (cf. Tate's Horace, Prel Diss. p. 24). We have before related how Nero beheld the fire of Rome from the house of Maecenas. Suetonius, in his account of that scene, calls the house "turris Maecenatiana" (Nero, 38), by which, perhaps, we are not to anderstand a tower, properly so called, but a lofty superstructure of several stories over the lower part of the house (Becker, Charikles, i. p. 195). Maecenas bequeathed his house and gardens to Augustus; and Tiberius lived there after his return from Rhodes, and before he succeeded to the empire (Suet. Tib. 15). The subsequent history of the house is unknown; but, as we have said, it may probably have been included in the baths of Titus.

Close to the gardens of Maecenas lay the Horti Lamiani (Philo Jud. vol. ii. p. 597, Mang.), belonging perhaps, to the Aelius Lamia celebrated by Horace (Od. i. 26, \&c.). We learn from Valerius Maximus (iv. 4. 8) that the ancient family of the Aelii dweit where the monument of Marius afterwards stood; whence it seems probable that the Horti Lamiani may have lain to the E . of those of Maecenas, towards the church of S. Bibiana. It was here that the body of Caligula was first hastily buried, which was afterwards burnt and reinterred by his sisters (Suet. Cal. 59).

There sppear to have been several more gardens between the Porta Esquilina and the modern Porta Maggiore ; as the Horti Pallantiani, founded apparently by Pallas, the poweriul freedman of Claudius (Tac. Ann. хі. 29; Suet. Clawd. 28; Plin. Ep. viii. 6); and which, from several passages of Frontinus ( $A q$. 19, seq.), appear to have been situated between P. Maggiore, the Marian monument, and the church of S. Bibiana. Frontinus also mentions (Aq. 68) certain Horti Epaphroditiani, perhaps belonging to Epaphroditus, the libertus of Nero, who assisted in putting that emperor to death (Suet. Ner.49, Dom. 14; Tac. Ann. xv. 55); as well as some Horti Torquatiani (c. 5), apparently in the same neighbourhond. The Campus Viminalis sub Aggere of the Notitia was probably an exercise ground for the Practorian truxps on the outside of the agger near the Porta Viminalis. Hence the eastern ridge of the Viminal and Esquiline beyond the Servian walls must have been rery open and airy.

The Esquiline derives more interest from its having been the residence of several distinguished poets and authors than the most splendid palaces could have conferred upon it. Virgil dwelt upon the Esquiline,
close to the gardens of his patron Maecenas. Whether Horace also had a house there cannot be said; but he was certainly a frequent guest with Maecenas; he loved to saunter on "the sunny agger," and he wus at last buried close to the tomb of his manificent benefactor at the extremity of the hill. (Suet. V. Hor. 20.) Propertius himself informs us that his abode was on the Esquiline (iii. (iv.). 23. 23); where also dwelt the younger Pliny, apparently in the hoose formerly belonging to the poet Pedo Albinovanus (Plin. Ep. iii. 21 ; Mart. x. 19). Its precise situation will be examined a little further on, when treating of the Lacus Orphei.

The Esquiline and its neighbourhood did not contain many temples of note. That of Tellus, already mentioned, was the most important one ; the rest seem for the most part to have been more remarkable for antiquity than for size or beauty. We have already adverted to the ancient sacraria mentioned here by Varro (L. L. v. 49, seq.); as the Lucus and Sacellum of Jupiter Fagutalis, on the southern side of the Oppius; the Lucus Esquilinus, probably near the Esquiline gate; a Lucus Poetelius; a Lucus Meftits, with an aedes, lying near the Vicus Patricius (Festus, s. v. Septimontio, p. 351, Müll.) ; and a Lucus of Juno Lucina, where, according to Pliny (xvi. 85), a temple was built to that goddess, B. c. 374 ; although it would appear from Dionysius (iv. 15) that there must have been one there previously in the time of Servios Tullius. An inscription relating to this temple was found in 1770, in digging the foundations of the monastery delle Paollotte, in the road which separated the Oppius and Cispins. We learn from Ovid (Fust. ii. 435) that the grove lay beneath the Esquiline; but as it appears from Varro that the temple stood on the Cispius, whilst the stone with the inscription in question was found on the side of the Oppius: it is probable that it may have rolled down from the monastery of the Filippine on the opposite beight (Nibby, Roma nel Anno 1838, p.670; Urlichs, Röm. Top. p. 120; Canins, Indic. p. 151). The Sacrllum Streviare, where the Sacra Via began, probably lay on the S. side of the Carinae, near the Colosseum. It seems not improbable that the Lucus Veneris Libitinar may also have been situated on the Esquiline, on account of the neighbourhood of the Campus Esquilinus; but there are no authorities by which its site can be satisfactorily determined. It was the great magazine for funereal paraphernalia (cf. Dionys. iv. 15; Festus, s. v. Rustica Vinalia, p. 265 ; Plut. Q. R. 23). On the Esquiline were also Altars of Mala Fortuna and of Febris, the latter cluse to the Marian monument (Cic. N. D. iii. 25; Plin. ii. 5; Val. Max. ii. 5. § 6). We may likewise mention a Tenples of Fortuna Respiciens (Plut. Fort. R.10), of Fortuna Seia in the Vicus Sandaliarius (Inecr. ap. Graev. Thes. iii. p. 288; Plin. xxxvi. 46), and one of Diaxa in the Vicus Patricius, from which men were excludec (Plut. Q. R. 3). The Hercules Victor or Hercules stllanus of the Notitia was perhaps only a statue. We shall close this list by mentioning a Texple or Sres Vetus, near the Horti Pallantiani, several times alluded to by Frontinus; of Isis Patricia, probably in the Vicus Patricins; and of Minerva Medica, commonly identified with the ruins of a large circular building in a vineyard near the Porta Maggiore. This building bore, in the middle ages, the name of Le Guluzze, whence Canina is of opinion that it was the place where the emperor Gallienus
was accustomed to divert himself with his court. (Treb. Pollio, Gall. Deoo, c. 17.) The temple of Minerva Medica mentioned in the Notitia may probably have stood in the neighbourhood; but the building in question seems too large to be identified with it.

Among the profane monuments of this district we have had occasion to mention once or twice an object called the Trophirs of Marius. Valerius Maximas relates that Marius erected two tropaea (vi. 9. §14); and that these must have been on the Eisquiline appears from a passage of the same author (ii. 5. § 6), quoted a little while ago reapecting the site of the altar of Febris. A building which stands at the junction of the Via di S. Bibiama and Via di P. Maggiore a little way outside the ancient Porta Esquilina bore during the middle ages the name of Templam Marii, or Cimbrum. and was adorned with those sculptured trophies which were removed in the pontificate of Sixtus V. to the balustrade of the Piazza del Campidoglio, where they still remain. (Ordo Rom. an. 1143, ap. Mabill. Mus. Ital. ii. p. 141; Poggio, de Var. Fort. p. 8, ed. Par. 1723.) There can be no doubt, however, that the building so called was no temple, but the castellum of an aqueduct, and is in all probability the object mentionel in the Notitia as the Nympheum Divi Alkxandri. It must have been one of the principal castella of the Aqua Julia, and from the trophies which stond in the neighbourhood having been applied to its adornment it was mistaken in a later age for a temple erected by Marius. (Canina, Indicaz. p. 156, seq. ; Preller, Regionen, p. 131.)

Between this Nymphaeum and the Porta Esquilina stands the Arcus Gallieni, which must have spanned the ancient Via Praenestina. It is a simple arch of travertine, and we learn from the inscription upon it, which is still legible, that it was erected by a certain M. Aurelins Victor in honour of the emperor Gallienus and his consort Salonina. Originally there were smaller arches on each side of it (Spec. Rom. Magn. tab. 24), but at present only the middle one remains.

Close to this arch and between it and the basilica of S. Maria Maggiore, lay the Forum Esquilimem and Macellum Livunum. This position of the macellum is certain. The basilica just named was built "juxta Macellum Liviae." (Anastas. V. Liberiï and V. Sist. III.) That it was close to the arch of Gallienus appears from the Ordo Rosмалиs. ("Intrans sub arcum (Gallieni) ubi dicitur Macellum Lunanum (Livianum) progreditur ante templum Marii quod dicitur Cimbram," Ann. 1143, p. 141.) And the church of S. Vito close to the arch was designated as "in Macello." (An. Fulrias, Ant. R. ii. c. 6.) But it is a more difficult question to determine whether the Forum Esquilinum and Macellum Livianum were distinct objects or one and the same. We know that the Forum Esquilinum was in existence in B. c. 88, since it is mentioned by Appian (B. C. i. 58) as the scene of the struggle between Marius and Sulla. Hence Nibby (Roma nell Anno 1838, tom. ii. p. 2.5), assuming that the macellum and forum were identical, regarded it as founded by M. Livius Salinator, who was censor with Claudius Nero, b. c. 204. But this view is unsupported by any authority, nor is it probable that the forum had two appellations; whence it seems most likely that the nuacellom was quite a distinct but adjoining market
founded by Augustus, and named after his consort Livia. (Preller, Kegionen, p. 131.)

There was also a Porticus Liviae somewhere on the Esquiline, named in the Notitia in the 3rd Region after the baths of Titus. It was a quadrangular porticus (xєpia $\tau \varphi \rho \boldsymbol{v}$ ), built by Augustus, B. c. 14, on the site of the house of Vedius Pollin which be had inherited. (Dion Cass. liv. 23.) As the same author ( 1 lv .8 ) calls it a $\tau \in \mu \dot{e} v \sigma \sigma \mu$, we may conclude that it contained the Temple of Concord mentioned by Ovid. (Fast. vi. 633.) It is alluded to by Strabo (v. p. 236), and by both the Plinys. (xiv. 3; Ep. i. 5; cf. Becker, Handb. p. 542, Antw. p. 78.) We also read of a Porticis Julia, built in honour of Cains and Lacius Caesar (Dion Cass. Ivi. 27, as emended by Merkel ad Ov. Fast. p. cxli.), but its situation cannot be determined.
Near the church of S. Croce in Gerusalemme, towards the side of the Portn Maggiore, lie the ruins of a large building already alluded to, which in the middle ages bore the name of Sessorium. We have remarked that in the Excerpta Valesiuna at the end of Ammianus Marcellinus it is called a palace ("in palatio, quod appellatur Sessorium," de Odoac. 69). It is identified by a passage in Anastasius stating that the church of $S$. Croce was erected there. (Vit. Silvest. p. 45, Blanch.)

Also near the same church, but on the other side of it, and built into the wall of Aurelian, are the remains of a considerable amphitheatre which are usually identified as the Amphitheatrem Castrense of the Notitia. Becker, huwever (Handb. p. 552 , seq.), denies this identity, his chief objection being the great space which the 5th Regio must have occupied if this building is included in it, and holds that the true Amphitheatrum Castrense must have been near the Castra Praetoria. There are, however, no traces of the remains of an amphitheatre in that direction, and Becker acknowledges (LIandb. p. 558) that he is unable to give any name to that by S. Croce. But there could not have been many structures of this description in Rome, and on the whole it seems most reasonable to conclude with Preller (Kegionen, p. 132) that the one in question was the Castrense; especially as we know from Procopius (B. G. i. 22, keq.) that there was a vivarium, or place for keeping wild beasts used in the sports of the amphitheatre, close to the Porta Praenestina.

In the valley under this amphitheatre were the Gardens and Circus of Elagabalus (Lampr. Heliog. 14, 23). where the obelisk was found which now stands on the promenade on the Pincian (Ligorio, Sui Cerchi, p. 3 ; Canina, Indic. p. 178). Just outside the Porta Maggiore is the curious Monument of Ecrisaces the baker, which has been spuken of above, p. 760.

The remaining monuments in the district ander consideration are few and unimportant. The Apollo Sandaliarics mentioned in the Notitia in the 4th Region was one of those statues which Augustus erected in the different Vici. (Suet. Aug. 57.) We have said that the temple of Fortuna Seia stood in the Vicus Sandaliarius; and as this temple was included in the domain of the golden house of Nero (Plin. Ixxvi. 46) we may conclude that it was in or near the Carinae. (Becker, Handb. p. 561.) The Colosseum will be described in a separate section. The 3rd Region, in which it was situated, must doubtless have contained a splendid Temple of

Ists and Serapis, from which the Region derived its name, but the history of the remple is unknown. The same remark applies to the Moneta mentioned in this Region, which seems to have been the imperial mint. (Preller, Reg. p. 124.) It is mentioned in inscriptions of the time of Trajan. (Marini, Atti, gec. p. 488.) The Summum Сhoragiom is inexplicable. The Lacus Pastohum or Pastoris was a fountain near the Colosseum, as appears from the Acta Sanctorum (in Eusebio). The Domus Brutti Praesentis probably lay on the Esquiline. Marcus Aurelius affianced Commedus with the daughter of a Bruttus Praesens. (Capitol. M. Antor. Ph. c. 27.) A Porticus Claumin stood at the extremity of Nero's golden house, not far from the colossus of that emperor:-
"Claudia diffusas ubi porticus explicat umbras Ultima pars aulae deficientis erat."
(Mart. de Spec. 2.)
It is mentioned by the Anonymus Einsiedlensis and in the Mirabilia ander the name of "Palatium Claudii," between the Colosseum and S. Pietro in Vincoli. The Ludus Magnus was a gladiatorial school apparently near the Via di S. Giocanni. (Canina, Indic. p. 108.) The Schola Quaestorum kt Caplatorum or Capulatorum seems to have been an office for the scribes or clerks of the quaestors, as the Schola Xantha on the Capitoline was for those of the curule aediles. The Capulatores were those officers who had charge of the capides or capulae, that is, the bowls with handles used in sacrifices (Varr. L.L. v. § 121); but where this schola may have been cannot be said. The Castra MisfanaTIUM were the city station for what we may call the marines, or soldiers attached to the fleet and naval station at Misenum, established by Augustus. (Tac. Ann. iv. 5; Suet. Aug. 49.) This camp appears to have been situated near the church of S. Vito and Via Merulana, where also there was an aedicula of Neptune. (Canina, Indicaz, p. 110.) The Balneum Daphnidis, perhaps alluded to by Martial (iii. 5.6), was probably near the Subura and Carinae. Lastly the Lacus Orphei, or fountain of Orpheus, seems to have lain near the church of S. Lucia, which bore the epithet in Orfeo, or, as the Anonymous calls it, in Orthea. It is described in the lines of Martial, in which he desires Thalia to carry his book to Pling (x. 19. 4, seq.):-
"I, perfer, brevis est labor peractae
Altum vincere tramitem Suburae.
Illic Orphea protenus videbis
Udi vertice lubricum theatri,
Mirantesque feras avemque regis
Roptum quae Phryga pertulit Tonanti.
Illic parva tui domus Pedonis
Caelata est aquilae minore penna."
From this description it would appear that the fountain was in a circular basin-for such seems to be the meaning of " udum theatrum," because a statue of Orpheus playing on the lyre stood high in the midst of the basin, wet and shining with spray, and surrounded by the fascinated beasts as an audience. (Becker, Handb. p. 559, note.) The situation of the fountain near the church mentioned is very clearly indicated in these lines. As Martial lived on the southern extremity of the Quirinal the way from his house to that spot would of course lie through the Subura. At the top of the street lead-
jing through it, which, as we have seen, must have been the Vicus Cyprius, a short but steep ascent brought the pedestrian to the top of the Esquiline, where the first object that met his eyes was the fountain in question. The locality is identified by another poem of Martial's addressed to Paulus, who also lived on the Esquiline (v. 22. 4 ):-
"Alta Suburani vincenda est semita clivi
Et nunquam sicco sordida saxa gradu;"
where we must not take Clivas Suburanus to be the name of a road, like Clivus Capitolinus, Publicius, \&cc., but merely a synonymous appellative with what Martial calls "altus trames" in the other poem. It may be further observed that this situation of the fountain agrees with the order of the Notitia, where it is named immediately before the Macellum Livianum. Close to it lay the small house formerly inhabited by Pedo Albinovanus, and in Martial's time the residence of his friend the younger Pliny.

## XII The Colles, or the Vimival, Quirinal, and Pisclan Hills.

We hare already remarked that the three northernmost hills of Rome were called Colles, in contradistinction to the others, which were called Montes. Only two of the former, the Viminal and Quirinal, were enclosed within the walls of Servius Tullius, and considered as properly belonging to the city; but part of the Pincian was included within the walls of Aurelian.

The Collls Viminalis, the smallest of the three bills, is separated from the Esquiline by the valley through which ran the Vicus Patricius, and by a hollow ruming towards the rampart of Servius. On the other side, towards the Quirinal, is another valley, which divides it from that hill, at present traversed by the streets called Via de' Serpenti and Via di S. Vitale. The must northern part of the valley, through which the latter street runs, was the ancient Vallis Quirivi (Juv. ii. 133). The hill derived its name from the oviers with which it was anciently corered (" dictum a vimine collem," Id. iii. 71); and upon it was an Altar of Jepiter Viminalis, answering to the Jupiter Fagutalis of the Esquiline. (Varr. L. L. v. § 51 ; Fest. p. 373.) The Viminal was never a district of much importance, and seems to have been chiefly inbabited by the lower classes. The only remarkable building which we find recorded on it is the splendid PAiace of C. Aquiluus (Plin. xvii. 2). The existence of some baths of Agrippina upon it rests only on traditions of the middle ages. The baths of Dincletian, which lay on the ridge which united the Viminal and Quirinal, will be described in the section on the thermae. The Sacellum of Nagsia lay without the Porta Viminalis. (Paul. Diac. p. 163.)

After the Palatine and Capituline liils, the Qurminal was the most ancient quarter of the city. As the seat of the Sabine part of the population if Rome. it acquired importance in the period of its early history, which however it did not retain when the two nations had become thoroughly amalgamated. The Quirinal is separated from the Pincisn on the N. by a deep valley; its western side is skirted by the Campus Martius; the manner in which it is parted from the Viminal by the Vallis Quirini has been already described. The street which ran
through this last valley was called Vicus Lonous, as we learn from the Anonymous of Einsiedlen, who mentions the church of S . Vitalis as situated "in vico longo." We find its name recorded in Livy (x. 23), and Valerius Maximus (ii. 5. § 6). Of the different ancient divisions of the Collis Quirinalis and of the origin of its name, we have already spoken in the former part of this article.

The Quirinal abounded in ancient fanes and temples. One of the earliest foundations of this sort was the Temple of Quirinus, erected by Numa to Romulus after his apotheosis. The first practical notice that we find of it is, however, in B. c. 435, when Livy (iv. 21) records a meeting of the senate in it; a fact which shows that it must have been a considerable building. A new one was dedicated, probably on the same spont, by L. Papirius Cursor, в. c. 292. (Liv. x. 46 ; Plin. vii. 60.) This structure appears to have been burnt in R. C. 48, and we do not hear of its re-erection till B. c. 15, when Augustus rebuilt it, as recorded in the Monumentum Ancyranum, and by Dion Cassius (liv. 19). Yet in the interval between these dates we find it alluded 20 as still existing (Id. xliii. 45 ; Cic. ad Att. xiii. 28), whence we may conclude that it had been only partially destroyed. Dion (liv. 19) describes the Dew stracture of Augustus as having 76 columns, equalling the years which he bad lived. Hence, it appears to have been the same building as that addaced by Vitruvius (iii. 2, 7) as an example of the dipteros octastylos; for that kind of temple had a double row of columns all round; namely, two rows of 8 each at the front and back; and, without counting the outside ones of these over again, two rows of 11 each at the sides $(32+44=76)$. This noble portico appears to have been the same alluded to by Martial as the resort of the idlers of the vicinity (ix. 1. 9). Topographers are universally agreed that it was situated on the height over $S$. Vitale in the neighbourhood of S. Andrea del Noriziato. (Becker, Handb. p. 573 ; Urlichs, Beschr. iii. 2, 366 ; Canina, Indic. p. 185.) There appears to have been also a Sacellem Quirinalis near the Porta Collina

All the more interesting traditions respecting the Quirinal belong to the reign of Numa. One of the residences of that Sabine monarch was situated on this hill (Plut. Num. 14; Solin. i. 21), where he also founded a citadel, or capitol; and where bis saccessor Tullus Hostilius, in pursuance of a vuw made in the Sabine War, repeated, as it were in duplicate, Numa's peculiar institution of the Salian worship (Liv. i. 27; Dionys. ii. 70). All these things show rery clearly the distinction between the Roman and Sabine cities during the reigns of the first monarchs. On the Qairinal, the Salian priests with their ancilia were attached to the worship of Quirinus, as, in the Romulean city, they were to that of Mars ("Quid de ancilibus vestris, Mars Gradive, tuque Quirine pater (loquar)?" Liv. v. 52); and the priests were called, by way of distinction, Salii Agonenses, or Collini, from the name of the hill ("In libris Saliorum quorum cognomen Agonensium," Varr. L. L. vi. § 14 ; cf. Dionys. L. c., where, however, he erroneously speaks of a $\lambda \sigma \phi$ os Ko入入ivos.)

Next to the temple of Quirinns, proceeding in a westerly direction, as may be inferred from the order in which the objects are mentioned in the Curiosum (the Notitia somewhat differs), stood a Statur of mamurius; and then, after an interval occupied in
later times by the baths of Constantine, - the site of the present Palazzo Rospigliosi. - followed the Vetus Capitolium, or citadel of Numa. Whether Damurius was another name for Mamers, the Sabine god of war, of which, according to Varro (L. L. v. §73), the Roman name of Mars was only a corruption, or whether it was the name of the reputed maker of the ancilia (Yaul. Diac. p. 131, Müll.), matters but little; the statue is equally connected with the ancient Salian rites, and therefore one of the most venerable objects in the city. We find a Clivus Mamuri mentioned in the middle ages in the neighbourhood of S. Vitale (Anastas. V. Innoc. I. p. 64, Blanch.), which no doubt took its name from this statue; whence we may infer that it stood near the temple of Quirinus; since the church of S. Vitale and that of S. Andrea, where the temple stood, are close together.

We have remarked in the former part of this article that the ancient Capitol of Numa probably stood on the height of Maynanapoli. It contained, like the Palatine before it and the Capitoline subsequently, a temple to the three divinities, Jupiter, Juno, and Minerva, as we learn from Varro: "Clivos proximus a Flora susus versus Capitolium vetus, quod ibi sacellum Jovis, Junonis, Minervae; et id antiquius quam aedis, quae in Capitolio facta" (L. L. v. § 158). Its site may be determined by that of another ancient sanctuary, the Temple of Flora. In the order of the Cuiosum and Notitia that temple stands between the Capitolium Vetus and the temple (or temples) of Salus and Serapis. The temple of Salus must undoubtedly have been situated near the Porta Salutaris, which, as we have before remarked, took its name from that sanctuary; and we must consequently seek for the temple of Flora on the W. side of the Quirinal, or that which faced towards the Campus Martius. That it stood on this side is confirmed by what Martial says respecting the situation of his house, which, as we learn from one of his epigrams, lay uear the temple of Flora (v. 22. 2):
"Sed Tiburtinae sum proximus accola pilae Qus videt-antiquum rustica Flora Jovem."
(Cf. vi. 27.) From which we also learn that the temple of Flora could not have been very far from that of Jupiter in Numa's Capitol; as indeed likewise appears from the passage of Varro before quoted, with the addition that it must have lain on a luwer part of the hill. But as Martial's house is thus shown to have been near the temple of Flora, so also that it was on the W. side of the hill appears from another epigram (i. 108. 2):-

## "At mea Vipsanas spectant coenacula laurus Factus in hac ego sum jam regione senex. ${ }^{7}$

It can hardly be doubted that this passage contains an allusion to some laurel trees growing near the Porticus Vipsania, erected, as will appear in a subsequent section, near the Via Lata by Agrippa, whose family name was Vipsanius. This portico is plainly alluded to in another passage of Martial (iv. 18), ander the name of Vipsaniae Columnae. There is nothing surprising in Martial's indicating a locality by certain trees. In ancient Rome trees were noted objects, and claimed a considerable share of public attention, as we have already seen with regard to several that grew in or about the forum. Two laurel trees grew before the imperial palace (Tert. Apol 35); and in front of the temple of Quirinus
just described were two sacred myrtles, which were characterised by distinctive appellations as patricia and plebeia. But, to have faced the Porticus Vipsania, Martial's house must not only have been situated on the western side of the Quirinal, but also towards its southern extremity; which likewise appears from what has been said in the preceding section respecting the route from it to that of his friend Pliny being through the Subura and Vicus Cyprius ; for this would have been a roundabout way had Martial dwelt towards the northern part of the hill.

All these circumstances tend to snow that Numa's Capitol must have stood on the spot before indicated, and the temple of Flora a little to the N. of it. The part of the hill which it occupied was probably that called Latlaris in the Argive fragments. The part styled Collis Salutaris must have been that near the gate of the same name, derived from the ancient Sacellum of Salus, which stood near it; in place of which a regular Temple of Salus was dedicated by C. Junius Bubulcus, B. c. 203 (Liv. ix. 43, x. 1), and adorned with paintings by Fabius Pictor. These were still to be seen in the time of Pliny, when the temple was destroyed by fire in the reign of Claudius (xxxv. 7; cf. Val. Max. viii. 14. § 6).

Cicero's friend Atticus lived close to the temple of Salus (" -tuae vicinae Salutis," ad Att. iv. 1), and at the same time near that of Quirinus: "Certe non longe a tuis aedibus imambulans post excessum saum Romalus Proculo Julio dixerit, se deum esse et Quirinum vocari, templumque sibi dedicari in eo 1000 jusserit." (De Leg. i. 1.) The vicinity of the temples is likewise indicated in another passage relating to a statue of Caesar, which had been erected in that of Quirinus: "De Caesare vicino scripseram ad to, quia cognoram ex tais literis: eum oúvraon Quirino malo quam Saluti" (ad Att. xii. 45). Hence the sites of the two temples in question are still further established. For as that of Salus lay on the N. side of the hill, near the Porta Salutaris, and that of Quirinus some 200 yards to the $S$. of it, at the church of $S$. Andrea, so we may assume that the house of Atticus lay between the two, and he would thus be a close neighbour to both.

Another ancient sacrarium on the Quirinal was that of Skmo Sancus or Diles Fidius. We have shown, when treating of the Servian gates, that the PortaSanqualis took its name from this sacellum; and Livy (viii. 20) deseribes it as facing the temple of Quirinus. Hence it must have stood on or near the site of the Palazzo Quirinale, between the temple of Salus and that of Flora. It had a perforated roof, for the deity loved the open air, whence his title of Dins; and some thought that no oath by this god should be sworn under a roof. (Varr. L. I. V. § 66.) Sancus was an old Sabine deity, and his temple at Rome appears to have been founded by Tatius. (Ov. Fast. vi. 213; Prop. v. 9. 74; Tertull. ad Nat. ii. 9.) Its antiquity is attested by the circumstance that the distaff and sandals of Tanaquil, the wife of Tarquinius Priscus, are recorded to have been preserved in it, and are said to have been in existence down to the time of Augustus. (Plin. viii. 74; Plut. Q. R. 30.) It appears to have been rebuilt by Tarquinius Superbus, but its dedication was reserved for Sp . Postumius. (Dionys. ix. 60.) The part of the hill where it stoud must have been the Collis Mucialis of the Argive fragments. (Varr. v. § 52.)

There were several Templess of Fortuna on the Quirinal, but they do not seem to hare been of much importance; and the notices respecting thein are very obscure. Vitruvius (iii. 2) mentions three which stood close together at the Porta Collina, belonging perhaps to those alluded to by Ovid under the name of Fortura Publica (Fast. iv. 375, v. 729), and by Livy, who mentions a temple of Fortuna Primigenia on this hill (xaxiv. 53). There was also an Altar of Fortuna in the Vicus Longus. (Plut. Fort. Rom. 10.)

In the street just named stood also a Sacris.cm Pldicitiar Plebelae, fuanded by Virginia, the daughter of Aulus, after the quarrel between the matrons in that of Pudicitia Patricia alluded to in a furmer section (Liv. x. 23). Outside of the Porta Collina was a temple of Venus Erycina, near which the Ludi Apollinares were held when the circus had been overflowed by the Tiber. (Liv. 1xx. 38; Appian, B. C. i. 93.) Of the Texplex of Serapis, mentioned in the Notitia along with that of Salus, nothing further is known, except that from the fragment of an inscription found near the church of S. Agata alla Subura, where possibly the temple may have stood, it may be inferred that it was dedicated by Caracalla. (Grater, lxxxv. 6; Preller, Reg. p. 124.)

These are all the ascertained temples that lay on the Quirinal; for it is a disputed point whether we are to place on this hill the splendid Temple of Sol, erected by Aurelian. (Aur. Vict. Caes. 25; Eutrop. ix. 15 (9); Vopisc. Aurel) Altogether, however, the most probable conclusion is that it stood there, and Becker's objections admit of an easy answer (Handb. p. 587, seq.). By those who assume it to have been on the Quirinal it is commonly identified with the remains of a very large building, on the declivity of the hill, in the Colonna gardens, on which spot a large Mithraic stone was discovered with the inscription "Soli Invicto." (Vignoli, de Columna Antoniniana, p. 174.) This position may be very well reconciled with all the ancient accounts respecting the temple. Becker objects that it is mentioned in the Notitia in the 7th Region (Via Lata). But this Region adjoined the western side of the Quirinal, and the temple of the Sun may have been recorded in it, just as many buildings on the declivity of the Arentine are enumerated in the 11th Region, or Circus Maximus, In the Catalogus Imperatorum Vienm (ii. p. 246, Ronc.) it is said of Aurelian, "Templum Solis et Castra in Campo Agrippae dedicavit;" and it will appear in the next section that the Campus Agrippae must have been situated under this part of the Quirinal. Becker assumes from the description given by Vopiscas of his ride with Tiberianus, the conversation during which was the occasion of his writing the life of Aurelian, that the temple in question could not have been so near the Palatine as the spot indicated (" lbi quam animus a causis atque a negotiis publicis solutus ac liber vacaret, sermonem multum a Palatio usque ad hortos Valerianos instituit, et in ipoo praecipue de vita principum. Quumque ad templum Solis venissemus ab Aureliano principe consecratum quod ipse nonnihilum ex ejus origine sanguinem duccret, quaesivit," \&c., Vopisc. Aurel. 1). We do not know where the Horti Valeriani lay; they might possibly, as assumed by Preller, have been identical with those of Lucullus on the Pincian, subsequently in the pasgession of Valerius Asiaticus (Tac. Amm. хі. 1),
though these continued to bear in general the name of Lucullus. But Becker interprets the passage wrongly when he thinks that the temple of Sol lay beyond these gardens: on the contrary, the passing that temple gave rise to the conversation, which lasted till Vopiscus and his friend arrived at the Horti Valeriani, wherever these may have been; and if they were on the Pincian, the temple of Sol, in the locality indicated, would have been on the road to them from the Palatium. Lastly, we may observe that the Quirinal had, in very early times, been dedicated to the worship of Sol, who was a Sabine deity (Varro, L. L. v. § 74); and there was a Pulvisar Solis in the neighburhood of the temple of Quirinus. (Quint. Inst. Or. i. 7; Fast. Capran. Id. Aug.; cf. Urlichs, Beschr. iii. 2. p. 386; Canina, Indic. p. 210, seq.; Preller, Regionen, p. 137.)

Sach were the sanctuaries of the Quirinal. The ancient topographers, who are followed by the modern Italians, have assigned two circi to this quarter: the Circes Florar near the temple of the same name, and the Circus Sallustii in the gardens of Sallust, between the Quirinal and Pincian. The former has certainly been invented by misconstruing an inscription relating to the games of Flora in the Circus Maximus. (Becker, Handb. p. 673.) It is more doubtful whether a Circus Sallustii may not have existed. We have seen from a passage of Livy that the Ladi Apollinares were performed outside the Porta Collina when the overflowing of the Tiber prevented their performance in the usual place ; and, according to Canina (Indicaz. p. 199), traces of a circus are still visible in that locality. But none is mentioned in the catalogues of the Regions, nor does it occur in any ancient anthor. The Horti Sallustiani, however, undoubtedly lay in the valley between the Quirinal and Pincian, but their exact extent cannot be determined. They were formed by Sallust the historian with the money which he had extorted in Numidia. (Dion Cazs. xliii. 9.) The house of Sallust lay near to the (subsequent) Porta Salaria, as we learn from Procopins, who relates that it was burnt in the storm of the city by Alaric, and that its half-consumed remains still existed in his time. (B. V.i.2.) The Anonymous of Einsiedlen mentions some Thrrmar Sallustianae near the church of S. Susanna; and the older topographers record that the neighbourhood continued to be called Salustricum or Salustium even in their days. (Andr. Fulvius, de Urb. Ant. p. 140 ; Luc. Fauno, Ant. di R. iv. 10. p. 120.) Becker (Uandb. p. 585) raises a difficulty about the situation of these gardens from a passage in Tacitus (Hist. iii. 82), which, however, presents none if rightly understood. The Flavian troops which had penetrated to the gardens of Sallust on their left were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. Ann. xiii. 49.)

The Horti Sallastiani subsequently became imperial property, though in what manner is unknown. The first notice which we find of them as such occurs under Nero in the passage just cited from Tacitus. Several emperors are described as residing in them, as Vespasian, Nerva, and Aurelian. (Dion Cass. Lxvi. 10 ; Vopisc. Aur. 49 ; Hieron. p. 445, Bnnc.)

Also close to the Porta Collina, but inside and to the right of it, lay the Cunpus Sckirikatus, im-
mediately under the agger. The spot obtained its name from being the place where Vestal Virgins convicted of uncbastity were buried alive; for even in this frightful panishment they retained their privilege of being interred within the walls. Dionysius attributes the introduction of this mode of execution to Tarquinius Priscus; and, according to Livy, the first example of its application was in the case of Minucia, в. c. 348. Dionysius, however, calls the first vestal who suffered Pinaria. (Dionys. ii. 67, iii. 67 ; Liv. viii. 15; Plut. Num. 10.)

The emperors appear to have shared with the restals the privilege of intramural interment, although they did not always avail themselves of it. Indeed, according to Hieronymus (vol. i. p. 449, Ronc.), Trajan was the only emperor buried within the walls; but this statement is certainly erroneous, since Domitian erected a magnificent mausoleum for the Flavian family somewhere between the gardens of Sallust and the spot subsequently occupied by the baths of Diocletian. It is the object mentioned under the name of "Gens Flavia" in the Notitia, and is alluded to in several epigrams of Martial, in one of which be designates it as being near his own dwelling (v. 64.5):
"Tam vicina jubent nos vivere Mansolea, Quum doceant ipsos posse perire deos."
(Cf. ix. 2 and 35; Stat. Silv. iv. 3. 18.) It was commonly called Templum Gentis Fiaviae, as appears from Suetonius (Dom. 17); but the same passage shows it to have been a sepulchre also, since the ashes of Julia, the daughter of Titus, as well as those of Domitian himself, were deposited in it. (Cf. Becker, de Muris, \&ec. p. 69.) It was erected on the site of the house in which Domitian was born, designated as being ad Malum PuNICUM (Suet. Dom. 1); which name occurs again in the Notitia, and could not, therefore, have been applied to the whole Region, as Preller supposes (Regionen, p. 69), but must have denoted some particular spot, perhape a vicus, called after a pomegranate tree that grew there. We have already adverted to the importance attached to trees gruwing within the city.

The only other object that remains to be noticed on the Quirinal is the Praetorlan Camp, since the baths of Diocletian will be described under the proper head. We have related in the former part of this article that the Castra Praetoria were established in the reign of Tiberius outside the Porta Collina, to the eastward of the agger. They were arranged after the usual model of a Roman camp, and were enclosed within a brick wall, of which there are still some remains. (Canina, Indicas. p. 194.) They were included within the wall of Aurelian, which preserved their outline. We need only add that the 6th Region of Augustus, of which the Esquiline formed the principal part, was called Alta Semita, from a road which ran along the whole back of the hill, answering to the modern Strada di Porta Pia.

The Pivclun Hill presents but few objerts of importance. Its earlier name was Collis Hortorum, or Hortulorum, derived from the gardens which covered it; and it was not till a late period of the empire that it obtained the name of Mons Pincins, from a magnificent palace of the Pincian family which stood upon it. (Urlichs, Beschr. vol. iii. part. ii. p. 5i2, Röm. Top. p. 136.) This Domus Pucrasu is rendared intaresting from
its having been the residence of Belisarius during his defence of Rome. It is the same building mentioned by Procopins under the name of ra入driov. (Procop. B. G. ii. 8.9 ; Anastasius, V. Silver. pp. 104, 106, Blanch.) The part of the hill included within the later city was bounded by the wall of Aurelian, by the valley which separates the Pincian from the Quirinal, and by the Campus Martius on the west.

The most famous place on the Pincian was the Gardens of Lucullis. Their situation is deternined by a passage in Frontinus, from which we learn that the arches of the Aqua Virgo began under them. (Aq. 2.) This must have been in the street called Capo le Case, since the arches are still in existence from that spot to the Fontana di Trevi. (Canina, Indic. p. 395.) The early history of these gardens is obscure. They were probably formed by a Lucullus, and subsequently came into the possession of Valerius Asiaticus, by whom they were so much improved that Messalina's desire of possessing them caused the death of Valerius. (Tac. Ann. xi. 1, 32, 37.) They appear to have been also called after him "Horti Asiatici" (Becker, Handb. p. 591). and it is possible, as we have said before, that they may sometimes have borne the name of "Horti Valeriani." They were the scene of Messalinn's infamous marriage with Silius (Juv. S. x. 334) and of her death by the order of Claudius. (Tac. Ann. xi. 37.) The gardens remained in the possession of the inperial family, and were reckoned the finest they had. (Plut. Lucull. 39.) The family of the Domitii, to which Nero belonged, had previously possessed property, or at all events a sepulchre, on the Pincian; and it was here that the ashes of that emperor were deposited. (Suet. Ner. 50.) Popular tradition places it on that part of the hill which overhangs the church of S. Maria del Popolo near the gate of the same name.

## XIII. The Cabpus Martius, Circus Flaminics, and Via Lata.

The whole plain which lies between the Pincian, Quirinal, and Capitoline hills on the E. and the Tiber on the W., -on which the principal part of modern Rome stands,-may be designated generally by the name of Campus Martics, though strictly speaking it was divided into three separate districts. It is narrow at the northern part between the Pincian and the river, but afterwards expunds to a considerable breadth by the winding of the Tiber. It is terminated by the approach of the latter to the Capitoline hill, between which and the stream a part of the Servian wall forming its southern boundary anciently man. It was cut through its whole lencth by a straight road, very nearly corresponding with the modern Corso, running from the Porta Flaminia to the foot of the Capitol. The southern part of the district lying between this road and the hills formed, under the name of Via Lata, the 7th of the Augustan Regions; but how far it extended to the N . cannot be determined. From its northern boundary, wherever it may have been, to the Porta Flaminia und beyond that gate, the road before described was called Via Flaminia. The southern portion of the Campus Martius lying between the same road and the Tiber, as far N. as the modern Piazza Navona and Piazza Colonna, constituted the 9th Region of Augustus, under the name of Circus Flaminius.

In the earlier times all this district between the
hills and the river was private property, and was applied to agricultural purposes. We have already related in the former part of this article, how, after the expulsion of the Tarquins, the Campus Martius was assigned, or rather perhaps restored, to the public use. But the southern portion of the plain appears still to have belonged to private owners. The most considerable of these possessions was the Prata Flaminia, or Campls Fiaminics, which, however, must soon have become public property, since we find that assemblies of the people were held here under the decemvirs. (Liv. iii. 54.) Among these private estates must have been the Ager Cati, in which was a fountain whence the stream called Petronia flowed into the Tiber, and seems to have formed the southern boundary of the proper Campus Martius(" Petronia amnis est in Tiberim pertluens, quam magistratus auspicato transeuint cum in Campo quid agere volunt," Fest. p. 250; cf. Paul. Diac. p. 45); also the Campus Tiberinus, the property of the vestal Taracia, or Suffetia, which she presented to the people. (Plin. $x \times x$ ir. 11.)

We shall begin the description of this district from its southern side; that is, from the Servian wall between the Capitoline hill and the Tiber. Immediately before the Porta Carmentalis lay the Forum Olitomum. It was, as its name implies, the vegetable market. (Varr. L.L. v. § 146.) The Elephas Herbarics, or bronze statue of an elephant, which stood near the boundary of the 8th Region (v. Notitia) has by some topographers been connected with this forum, merely, it would seem, from the epithet herbarius; but the wall must bave made here a decided separation between the 8th and 9th Regions. There were several temples in the Forum Olitorium, as those of Spes, of Juno Sospita, of Pietas, and of Janus. The Temple of Spes was founded by M. Atilins Calatinus in the First Punic War. (Tac. Ann. ii. 49; Cic. N. $D$. ii. 23; Liv. xxi. 62.) It was destroyed in the great fire which devastated this neighbourhood during the Second Punic War (Liv. xxiv. 47), and though soon rebuilt, was again burnt down in B. c. 30; after which the restored temple was dedicated by Germanicus. (Tac. l. c.) The Temple of Juno was consecrated by C. Cornelius Cethegus in в. C 195. There is a confusion in Livy between the names of Sospita and Matcta applied to this deity (xxxii. 30, xxxiv. 53); and it is difficult to decide which epithet may be the correct one. The Temple of Pietas is connected with the well-known legend of the Roman daughter who nourished her father (or mother) when in prison with the milk of her breast, and is said to have resided on the spot where the temple was erected. (Festus, p. 209 ; Val. Max. ii. 5. § 1.) It was dedicated in B. c. 180 by the son of M. Acilius Glabrio, in pursuance of a vow made by his father, on the day when he engaged king Antiochus at Thermopylae. (Liv. sl. 34.) It was pulled down in order to make room for the theatre of Marcellus. (Plin. vii. 36.) There appears, however, to have been another temple of l'ietas in the Circus Flaminius itself. (Jul. Obs. 114.) Cluse by was the Temple of Jancs, to which we have already adverted in the former part of this article. The greater portion of the Forum Olitorium must have been engrossed by the Theatre of Marcellus, of which we shall speak in another section; and it may therefore be doubted whether it continued to serve the purposes of a market when the theatre was
erected. On the Forum Olitorium also stood the Columexa Lactaria, so called because children were provided with milk at that spot. (Paul. Diac. p. 118.) The supposition that there was likewise a Forum Piscarium in this neighbourhood rests only on a doubtful reading in Varro. (L. L. г. § 146.)

The Campus Flaminius began at an early period to be occupied with temples and other public buildings. One of the most ancient and renowned of the former was the Temple of Apolio. The site appears to have been sacred to that deity from very early times, and was called Arollinare, probably from some altar which stood there. (Liv. iii. 63.) The temple was dedicated in B. c. 430, in consequence of a vow made with the view of averting a pestilence. (Liv. iv. 25, 29.) It remained down to the time of Augustus the only temple of Apollo at Rome, and must have been of considerable size, since the senate frequently assembled in it. It lay between the Forum Olitorium and Circus Flaminius, or, according to Pling's designation, which amounts to the same thing, close to the Porticus Octavise. (Ascon. ad Cic. in Tog. Cand. p. 90, Orell.; Plin. xxxvi. 5. s. 34.)
Another celebrated and important temple was the Aedes Bellonar, since it was the chief place for assemblies of the senate when it was necessary for them to meet outside of the pomoerium; as, for instance, when generals cum imperio were soliciting them for a triumph, for the reception of foreign ambassadors whom it was not advisable to admit into the city, and other similar occasions. Close to it was one of the three Senacula mentioned by Festus (p. 347). The temple of Bellona is said to have been built in pursuance of a vow made by Appius Claudius Caecus, in the battle against the Etruscans, B. C. 297 (Liv. x. 19) ; but according to Pliny (xxxv. 3) it was built by Appius Claudius Regillensis two centuries earlier, who placed the images of his forefathers in it, B. c. 494; in which case the vow of Appius Claudius Caecus must have been accomplished by restoring the former temple. In front of the temple lay a small area, on which stood the Columna Bellica, so called because it was the spot whence the Fetialis threw a lance in the ceremony of declaring war. When the war with Pyrrhus broke out this custom could not be observed in the usual manner by throwing the lance into the enemy's country; wherefore, a captured soldier of Pyrrhus's was made to bay a piece of ground near the temple, which symbolised the territory of the enemy; and into this the lance was flung on all subsequent occasions of declaring war against a people whose country lay beyond the ven. (Serv. ad Aen. ix. 53.) This custom was observed as late as the time of Marcus Aurelius. (Dion Cass. lxxi. 33.) There are two points in dispate about this temple; first, whether the area containing the Columna Bellica stood before or behind it ; and secondly, whether the temple itself stood at the eastern or western end of the Circus Flaminins; which latter question also concerns the site of the temple of Hercules Custos, as will be seen from the fullowing lines of Ovid (Fast. vi. 206) : -

- Prospicit a templo summum brevis area Circum: Est ibi non parvae parva columna notae.
Hinc solet hasta mana, belli praenuntia, mitti, In regem et gentes quam placet arma capi.
Altera pars Circi custode sub Hercule tuta est Quod deus Euboico carmine munus habet."
vol. II.

In the first line Becker (Handl. p. 607) reads "a tergo," with Merkel, instead of "a templo," which is the reading of Heinsius, and of most editions, and thus places the aren behind the temple. But this was not the usual situation for an area, and there is express authority that the column stood before the temple. (Paul. Diac. p. 33; Serv. l. c., where Becker admits that we should read "ante aedem" for "ante pedem.") The other point respecting the site of the temple depends on whether "summus circus" means the part where the carceres were, or the circular end. Becker adopts the former meaning, and consequently places the temple of Bellona at the eastern end of the circus, and that of Hercules Custos at the western end. Urlichs rererses this order, and quotes in support of his view Salmasias, ad Solin. p. 639, A.: "Pars circi, ubi metae ultimae superior dicitur; inferior ad carceres." (Antro. p. 31.) This is a point that is not altogether establishod; but Becker's view seems in this case the more probable one, as will appear a little further on, when we come to treat of the Villa Publica.

The Circus Flaminius itself, which will be described in another section, lay under the Capitol, on which side its carceres were, and extended in a westerly direction towards the river. Between it and the theatre of Marcellus lay the Porticus Octaviak, - which must be carefully distinguished from the Porticus Octavia, built by Cn. Octavins, enclesing Tremples of Jupiter Stator and Juno. This portico occupied the site of a former one built by Q. Caecilius Metellus, after his Macedonian triumph, and called after him Porticus Metrell. It seems most probable that the two temples before alluded to were in existence before the time when Metellus erected his portico; but the notices on this subject in ancient authors are obscure and contradictory. (Becker, Handb. p. 608, seq.) There can be no doubt, however, that the Porticus Octaviae superseded that of Metellus. (Plin. xxxiv. 14 ; cf. Plat. C. Gracch. 4.) It was erected by Augustus, and dedicated in the name of his sister ; but at what date is uncertain. (Suet. Aug. 29 ; Ov. A. A. iii. 391.) It contained a library, which was destroyed in the great fire in the reign of Titus, with all its literary treasures. (Dion Cass. xlix. 43, Isvi. 24 ; Suet. Ill. Gramm. 21.) This library was probally in the part called the "Schola in porticibus Octaviae," and, like the Palatine library, was sometimes used for assemblies of the senate. (Plin. xxxv. 10. s. 114 , xxxvi. 5, s. 22. s. 28 ; Dion Cass. Iv. 8.) Hence, it was even called Octavia Curia, and sometimes Octaviae Opera. The church of S. Angelo in Pescaria now stands opposite to its principal entrance towards the river.

Close to the Porticus Octaviae, on its western side, lay the Porticus Philipfi, enclosing a temple of Hercules Musarum. This temple was built by M. Fulvius Nobilior, the conqueror of the Aetolians (Cic. p. Arch. 11), and rebuilt by L. Marcius Philippus, the step-father of Augustus, who aloo surrounded it with the portico. (Suet. Aug. 29.) The name of the temple does not signify, as Becker supposes (Handb. p. 613), that it was dedicated to Hercules and the Muses, but to Hercules as leader of the Muses (Movadérøs), the genitive, Musarum, depending on Hercules, as appears from coins of the Gens Pomponia, where he is represented in that character, with the legend hercyies musaRVM, as well as from an inscription in Gruter (mlxay
5) hercili . mysarvm . pythvs (Urlichs, Rïm. Topogr. p. 140, and Antw. p. 32). Indeed Eumenius expressly says that Fulvius Nobilior when in Greece had heard "Herculem Masagetem esse comitem ducemque Musarum" (pro Inst. Schol. Avg. p. 195, Arntz.); and we learn from Ovid that the statue of Hercales represented him with a lyre (Fast. vi. 810) : 一

## " Annuit Alcides, increpuitque lyram."

The vicinity of the temple and portico is indicated in Martial (v. 49. 8).

It is supposed that the Theatrum Balbi lay close to the western side of this portico, and, a little farther on, opposite the round end of the circus, but rather to the north of it, the Theatrum Pompeil; of which latter there are still some remains at the Pahuzo Pio. Pompey's theatre must have lain close to the boundary between the Campus Martius and Circus Flaminius since Pliny mentions that a culossal statue of Jupiter, erected by the emperor Claudius in the Campus, was called Pompeianus from its visinity to the theatre ("Talis in Campo Martio Jupiter a Divo Claudio Caesare dicatus, qui vocatur Pompeianus a vicinitate theatri," xxxiv. 18). The same thing might also be inferred from Cicero (" Quid enim loci natura afferre potest, ut in porticu Pompeii potius quam in Campo ambulemus," de Fato, 4.) Hence it would appear that the boundary of the two districts, after proceeding along the northern side of the Circus Flaminius, took a north-westerly direction towards the river. The Porticus Pompeir adjoined the scena of his theatre, and afforded a shelter to the spectators in the event of bad weather. (Vitruv. v. 9.) But what conferred the greatest interest on this group of buildings was the Cuhin Pomperi, a large hall or hexedra in the portico itself, sometimes used for the representation of plays as well as for assemblies of the senate. It was here that Caesar was assassinated, at the base of Pompey's statue; an event which caused it to be regarded as a locus sceleratus, and to be walled up in consequence. (Cic. Div. ii. 9; Dion Cass. xliv. 16, 52; Suet. Caes. 80, 88 ; Plut. Brut. 14, Caes. 66, \&c.) The statue of Pompey, however, was first taken out by order of Augustus, and placed under a marble arch or Janas, opposite the portico. (Suet. Aug. 31.) It is a question whether tho portico styled Hecatostylon, from its having a hundred columns, was only another name for the portico of Pompey, or quite a distinct building. It is sometimes montioned in a manner which would seem to intimate that it was identical with the Porticus Pompeii. Thus both are said to have had groves of planetrees (Prop. ii. 32. 11), and to have been consumed in one and the same fire. (Hieron. Chron. p. 475, Ronc.) The following lines of Martial, however, appear to show that they were separate, but adjoining buildings (ii. 14.6): -
" Inde petit centum pendentia tecta columnis; Illinc Pompeii dona nemusque duplex"
From these lines, and from two fragments of the Capituline Plan, Canina has correctly inferred that there were two distinct porticoes, and that the Hecatostylon adjoined the N. side of that of Pompey. (Indic. p. 373.) Pompey also built a private dwell-ing-honse near his theatre, in addition to the house which he possessed in the Carinae. The former of these seems to have been situated in some gardens.
(Plut. Pomp. 40, 44.) We find other Horti PomPeII mentioned with the epithet of superiores, probably from their lying on the Pincian hill. (Ascan. ad Cic. Mil. Arg. p. 37, and c. 25. p. 50, Orell.)

Near the theatre of Pompey was also the Porticus Octavia, which, as we have said, must be carefully distinguished from the Porticus Octaviae. It was a double portico originally erected by Cn. Octavius after his triumph over Perseus. It was likewise called Corinthia, from its columns being adorned with bronze capitals. (Plin. xxxiv. 7; Vell. Pat. ii. 1; Fest. p. 178.) Augustus rebuilt it, but dedicated it again in the name of its founder. Also near the theatre was the Thiumphal Arch of Tiberius, erected by Claudius. (Suet. Clauch. 11.)

Other temples in the district of the Circus Flaminius, besides those already enumerated, were a Temple of Diana, and another of Juno Regina, - different from that of Juno in the Porticus Octaviae,_both dedicated by M. Aemilius Lepidus, B. C 179. (Liv. xl. 52.) An Akdes Fortunak Equestris vowed by Q. Fulvius Flaccus in a battle against the Celtiberians, B. c. 176. (Liv. xl. 40, 44, xlii. 3, 10.) It stood near the theatre of Pompey in the time of Vitruvius (iii. 3. § 2, Schn.), but seems to have disappeared before that of Tacitus. (Ann. iii. 71.) A Temple of Mars, founded by D. Junius Brutus Callaicus (Plin. xxxvi. 5. s. 26); one of Neptune, cited as "delubrum Cn. Domitii" (Ib.; Gruter, Inscr. ccasviii. 5); one of Castor and Pollux (Vitruv. iv. 8. 4); and probably also one of Vulcan. (Fash Capran. X. Kal Sep.) Some of these last, however, were parhaps, mere sacella in the circus itsolf.
A few profane objects will close the list of public buildings in this quarter. The Stabula iv. Factionum of the Notitia must have been the stables in which the horses of the four factions or coloturs of the circus, albata, prasina, russata, and veneta, were kept. Domitian added two mure colours, the aurata and purpurea, and another reading of the Cwriasmm mentions six stables, whilst the Notitia - certainly erroneously - names eight; but it seems most probable that there were only four. (Preller, Regionem, p. 167.) Some of the emperors paid great attention to these stables. Tacitus represents Vitellius as building some (Hist. ii. 94); and Caligula was constantly dining and spending his time in the stables of the Green Faction. (Suet. Cal 55.) The four in question were probably situated under the Capitol, near the carceres of the Circus Flaminius. Between the Porticus Philippi and the theatre of Balbus lay two Porticus Minuciar, styled respectively Vetus and Frumentaria, both built by Minacius who was consul in B. C. 111. (Vell. Pat. ii. 8.) The Frumentaria appears to have been the place in which the tesserae were distributed to those entitled to share the public gifts of corn. (Appul. de Musd. extr. p. 74. 14, Elm.; cf. Cic. Phil. ii. 34; Lampr. Comm. 16.) The Crypta Balbi mentioned in the Notitia was probably a peculiar species of portico, and most likely attached to the theatre of Balbus. A crypta differed from a portico by having ont of its sides walled, and by being corered with a roof, in which were windows. (Urlichs, Beschr. vol. iii. pt. ii. p. 62.)

Such were the public buildings in the district called Circus Flaminius; inmediately to the $N$. of which lay the Campus Martius, sometimes called merely Campus. The purpuses to which this plain
was applied were twofold; it served for gymnastic and warlike exercises, and also for large political assemblies of the people, as the comitia and contiones. At first it must have been a completely open field with only a few scattered sacred places upon it; and it was not till the 6th century of the city that regular temples began to be built there. By degrees it became covered with buildings, except in that part devoted to the pablic games and exercises, and especially the equiria, or horse-races, instituted by Romnlus in honour of Mars. (Varr. L. L. vi. § 13; Paul. Diac. p. 81.) The spot where these took place is indicated by Ovid (Fast. iii. 519): -
" Altera gramineo spectabis Equiria campo Quem Tiberis curvis in latus urget aquis.
Qui tamen ejecta si forte tenebitur unda Caelius accipiet pulverulentus equos."
The part of the Campus the side of which may be said to be "pressed upon" by the stream of the Tiber, is that lying between Piazza Navona and the bridge of $S$. Angelo, where the ground furms an anglo opposed to the descending waters. Here also was the bathing-place of the Roman youth. (Hor. Od. iii. 7.25 ; Comp. Cic. pro Coel. 15.)

Some writers have assumed that this spot was regarded as forming a distinct division called CarPUS linor, whilst the remainder of the plain was called Campus Major. (Preller, Regionen, p. 160; Urlichs, Röm. Marsfeld, p. 19; Canina, Jrdic, pp. 384, 412.) But this distinction does not appear to rest on adequate authority. It is derived from a passage in Catullus: "Te campo quessivimus minore" (liii. (lv.). 3); and from another in Strabo, quoted in the former part of this article, where, in deacribing the Campus Martins, he speaks of another field, or plain, near it ( $\pi \lambda \eta$ -

 observes (Handb. p. 599), Strabo has already described the Campus Martius as the usual place for gymnastic exercises, and therefore his bulo aedov cannot be the part of it just described. It seems most probable that he meant the Campus Flaminius, which still retained its ancient name, though for the most part covered with the porticoes and other buildings which he describes ; just as we have a Moorfields and Goodman's Fields in the heart of London. The Campas Minor of Catullus may have been the Campus Martialis on the Caelian; or, as Preller obserres, the punctuation may be:-

> " Te campo quaesivimus, minore Te in circo."

The ancient loci religiosi on the Campus Martins were the following:-The Palus Capreae, or Capraz, where Romulus is said to have disappeared during the holding of an assembly of the people: its situation is nnknown; bat it does not seem improbable, as Preller suggests (Regionen, p. 137), that its site may have been marked by the Aedicula Capraria, mentioned in the Notitia in the 7th Region, and that it may consequently have lain somewhere under the Quirinal. (Liv. i. 16; Ov. Fast. ii. 489, \&c.) A place called Taientum, or Terentum, which appears to have been volcanic (campus ignifer), with a subterranean Aka Ditis Patris ext Proserpinae, where the !udi saeculares were performed. The legend of Valesius and his children, and an account of the institution of the games, will be found in the Dictionary of Antiqui-
ties, p. 716. We are here only concerned for the situation of the place, which is very varionsly assigned by different writers. Urlichs placed it in the Forum Boarium, which, however, must be wrong, as it was undoubtedly in the Campus Martius (Val. Max. ii. 4. §5; Festus, p. 329), though at one extremity of it. (Zns. ii. 4.) Hence Becker placed it near the mausoleum of Augustus, heing led to this conclusion by the Sibylline oracle recorded by Zosimus (L.c.):--

##  <br> 

Becker refers the word $\sigma$ otelydratov in this passage to $\pi \in \delta \delta o v$, and hence selects the northern part of the Campus for the site of Tarentum, as being the narrowest. But it may equally well refer to B $\delta \mathrm{cop}$; and the narrowest part of the Tiber in its course through the Campus Martius - taking that appellation in its more extended sense-is where it is divided by the Insula Tiberina. Other passages adduced are undecisive, as those of Ovid (Fast. i. 501) and Seneca (de Morte Claudii, 13); and therefore though Preller (Regionen, Anhang, p. 241) pronounces against Becker's site, we must leave the question undetermined.

The Ara Martis, near which, when the comitin were ended the newly-elected censors took their seats in curule chairs, was probably the earliest holy place dedicated to the god on the Campus which bore his name. We have alreudy observed, when treating of the Porta Fontinalis, that it must have been near that gate, and that it was perhaps erected by Numa. There was also an Aedes Martis on the Campus, probably at the spot where the equiria were celebrated. (Dion Cass. Ivi. 24; Ov. Fast. ii. 855.) It seems to have been a distinct temple from that already mentioned in the Circus Flaminius. The site of the Tempie of the Lares Permarini, dedicated by the censor M. Aemilius Lepidus, в. c. 179, in pursuance of a vow made by L. Aemilius Regillus after his naval victory over the fleet of Antiochus, cannot be determined (Liv. xl. 52; Macrob. Sat. i. 10); but it may probably have stood, as Preller conjectures, near the Navalia The Aedes Juturnae, built by Q. Lutatius Catulus towards the end of the Republic, stood near the arches of the Aqua Virgo, and consequently near the Septa. (Serv. ad Aen. xii. 139; Ov. Fast. i. 463; Cic. pro Cluent. 36.)

Such was the Campus Martius down to the imperial times; when the great works undertaken there by Julius Caesar and Augustus gave it quite a new appearance. But, before we proceed to describe these, we must say a few words respecting the Navalia, or government dockyards. The older topographers placed them under the Aventine, from confounding them with the Emporium or commercial docks. Piale first pointed out the incorrectness of this view; but erred himself in placing the Navalia on the opposite bank of the Tiber, from his ignorance of certain passages which determine them to have been in the Campus Martius. These passages, which were first adduced by Becker (de Muris, gc. p. 96, Handb. p. 159), are the following: "Spes unica imperii populi Romani, L. Quinctius, trans Tiberim contra eum ipsum locum, ubi nunc Navalia sunt, quatuor jugerum colebat agrum, quae prata Quinctia vocantur." (Liv. iii. 26.) This passaga shows the Navalia to have been on the left bank of the Tiber, opposite some fields called prata Quinctia; and the following one from Pliny fixes the situation
of these fields in the district called Vaticanus: "Aranti quatuor sua jugera in Vaticano, quae prata Quinctia appellantur, Cincinnato viator attulit dictaturam" (xviii. 4). That the Navalia were in the Cumpus Martins may also be inferred from Livy (xlv. 42): "Naves regiae captae de Maccdonibus inusitatae ante magnitudinis in Campo Martio subductae sunt"; and from Platarch's account of the return of the younger Cato from Cyprus, in which he relates that although the magistrates and senate, as well as a great part of the Roman population, were ranged along both banks of the Tiber in order to greet him, yet he did not stop the coarse of his vessels till he arrived at the Navalia (Cat. Min. 39) ; a circamstance which shows that this arsenal must have lain towards the upper part of the stream's course through the city. Hence, though we cannot define the boundary between the Janiculum and the Vatican, nor consequently the exact situation of the Prata Quinctia, yet the site fixed upon by Becker for the Navalia, namely, between the Piazea Navona and Porto di Ripetta, seems sufficiently probable. Preller is dispesed to place them rather lower down the stream, but without any adequate reuson (Reyionen, Anh. p. 242).

It was Caesar who began the great changes in the Campas Martius to which we have before alluded. He had at one time meditated the gigantic plan of diverting the course of the Tiber from the Milvian bridge to the Vatican hill, by which the Ager Vaticanus would have been converted into a new Campus Martius, and the ancient one appropriated to building; but this project was never carried into execution. (Cic. ad Att. xiii. 33.) The only building which he really began in the Campus was the Skrpta Julia. It has been said, when treating of the Porta Flumentana, that a spot near the Circus Flaminius was appropriated to the holding of the Comitia Centuriata. In early times it was enclosed with a rude kind of fence or boundary, probably of hurdles: whence, from its resemblance to a sheep-fold, it obtained the name of Ovile, and subsequently of Septa. (Liv. xxvi. 22; Juv. vi. 528; Serv. ad Virg. Ecc. i. 34.) For this simple and primitive fence Caesar substituted a marble building (Septa marmorea), which was to be surrounded with a portico a mile square, and to be connected with the Villa Publica. (Cic. ad Att. iv. 16.) It was probably not much advanced at the time of Caesar's assassination; since we find that it was continued hy the triumvir Lepidus, and finally dedicated by Agrippa (Dion Cuss. liii. 23); but whether it was completed on the inagnificent plan deseribed by Cicero cannot be said. Its situation may le determined by a passage in Frontinus, in which he says that the arches of the Aqua Virgo ended in the Campus Martius in front of the Septa. (Aq. 22.) These arches, which, as we have seen before, began under the gardens of Lucullus on the Pincian, were conducted to the baths of Agrippa. Donati mentions that remains of them were discovered in his time in front of the church of $S$. Ignasio (near the Collegio Romano). (De U.b. R. iii. 18.) This coincides with remains of the portico of the Septa existing under the Palazzo Doriut and church of S. Maria in Via Lata in the Cerso (Canina, Indic. 400); and we may therefore conclude that the Septa Julia stood at this spot. The portico must have onclosed a large open space where the assemblies were held, and in which gladiaturial shows, and on
one occasion even a mumachis, were exhibited. (Suet. Auy. 43, Cal. 18, Ner. 12; Dion Cass. Iv. 8, lix. 10.) There was of course a suggestum or rostra, for haranguing the people. (Dion Cass. Ivi. 1.) The Septa were destroyed in the great fire under Titus (Dion Cass. Ivi. 24), but must have been restored, since, in the time of Dumitian, when they had lost their political importance, they appear to have been used as a market, in which the most valuable objects were exposed for sale. (Mart. ix. 60.) They appear to have undergone a subsequent restoration under Hadrian. (Spart. Hadr. 19.)

The Vilila Publica adjoined the Septa Julia, and must have been on its $S$. side, since it is described by Varro ( $\boldsymbol{R} . \operatorname{R}$. iii. 2) as being "in Campo Martio extremo," and must consequently have lain between the Septa and the Circus Flaminius, near the Palazzo di Venezia. The original one was an ancient and simple building, and is mentioned by Livy (iv. 22) as early as the year B. c. 436 . It was used by the consuls for the levying of troops, and by the censors for taking the census (Varr. l. c.); also for the reception of foreign ambassadors whom it was not thought advisable to admit into the city, and of Roman generals before they obtained permission to enter the gates in triumph (Liv. $\mathbf{x x x}$. 21, $\mathbf{x x x i i i}$. 24, \&c.). It was the scene of the massacre of the four Marian legions by Sulla (Val. Max. ix. 2. § 1 ; Liv. Epit. lxxiviii.; Strab. v. 249). A passage in Lucan respecting this horrible transaction confirms the position of the Villa Publica close to the Septa (ii. 196): -
"Tunc flos Hesperiae, Latii jam sola juventus
Concidit et miserae maculavit Ovilia Romae"
And another passage in Plutarch shows that it must have adjcined the Circus Flaminius on the other

 eis $\tau \delta \tau \hat{\eta} s$ 'Evuous icpor, Sull. 30.) Sencca (de Clem. i. 12) likewise mentions the assembling of the senate in the neighbouring temple of Bellona, where the cries of the massacred soldiers were heard; and this circunstance would rather lead ns to suppose that the temple in question was situated at the eastern end, or towards the carceres, of the Circus Flaminius, since the Septa and Villa Publica must have lain towards that end of it nearest to the Capitol. The simple building described by Varro must have been that rebuilt in the censurship of S Aelius Paetus and C. Cornelius Cethegus, b. c. 194. Caesar could hardly have done anything to it, since a coin of C. Fonteius Capito, consul in B. c. 33, testifies that the latter either restored or rebuilt it.

The name of M. Vipsanius Agrippa, the son-inlaw of Augustus, is connected with the principal changex and the most important buildings in the Campus Martius. The latter consisted of the Pantheon, the thermae, a portico, and the large structure called the Diribitorium. The Campus Agrippae and its buildings will be described when we cone to treat of that part of the district ander consideration called Via Lata.

The Pantheon of Agrippa, which is still in so good a state of preserration tliat it serves for public worship, is one of the finest monuments of ancient Rome. An inscription on the frieze of the portico testifies that it was erected by Agrippa in his third consulate; whilst another below records repairs by the emperors S'ptimius Severus and Caracalla. From
a very corrupt passage in Pliny (xxxvi. 24. s. 1), topographers have related that the temple was dedicated to Jupiter Ultor; but this is altogether inconsistent with other accounts of its destination: and it appears from an emendation of Jan, derived from the Codex Bambergensis, that we should read Diribitorii for Jovi Ulori (Becker, Handb. p. 635). Dion Cassius states that it received the name
of Pantheon because it contained the images of many gods (liii. 27), which, however, seem to have been those of the deities mythically connected with the Julian race, and among them that of Caesar himself. The temple is circular, and its magnificent portico with triple row of columns, though perbaps not quite in harmony with the main building, cannot fail to excite the admiration of the beholder. It owes its

PANTHEON OF AGRIPPA.
excellent state of preservation partly to the solidity of its construction, partly to its having been consecrated as a Christian church as early as the reign of Phocas, under the title of S. Maria ad Martyres, or della Rotonda. To the lover of the fine arts it is doubly interesting from containing the tomb of Raphael. Some architects have thought that it was not originally intended for a temple, but as part of the baths; a notion, however, that is refuted by passages in ancient writers, where it is styled templum (Plin. xxxvi. 5. s. 88; Macrob. Sat. ii. 13). The Pantheon stood in the centre of the Campus Martius, taking that name in its widest sense. The Thermae, of which only a few unimportant remains exist, adjoined it on the S., and must have extended to near the Hecatostylon. The Diribitorium was a large building destined, according to Becker (Handb. p. 638), to the examination of the voting tablets used in the comitia, in order to determine the result of elections, and must therefore have been situated near the Septa. It seems to have been left unfinished at Agrippa's death, and was dedicated by Augustus, B. c. 7. Its vast unsupported roof was one of the wonders of Rome, and, when destroyed in the fire of Titus, could not be replaced. (Dion Cass. lv. 8 ; Plin. xvi. 40.) In hot weather Caligula sometimes converted it into a theatre (Dion Cass. lix. 7). The portico which Agrippa erected in the Campus Martius appears to have been called Porticus Argonautarum, from its being adorned with a picture of the Argonauts, and was erected in commemoration of Agrippa's naval victories (Dion Cass. liii. 27 ; Mart. iii. 20. 11). Becker (Handb. p. 637) contends that this was the same building called Basilica Neptuni by Spartian (Hadr. 19), and Пoati $\delta \omega \nu \iota o v$ by Dion Cassius (lxvi. 24). But a basilica is not equivalent to a portico, nor can we imagine that Dion would have used the term Пo$\sigma \epsilon$ iò́viov of a $\sigma \tau o d$; whence it seems more probable, as assumed by Canina (Indic. p. 406) and other topographers, that Agrippa also erected a Temple of Neptune, which was connected with, or probably surrounded by the portico. Nardini and Caninathe latter from recent researches-are of opinion that
the eleven columns now existing in the front of the Dogana di Terra in the Piazza di Pietra, near the Antonine column, belonged to this temple. Of a Porticus Meleagri mentioned in the Notitia in connection with that of the Argonautarum, we know nothing further.

Augustus also erected a few monuments on the Campus Martius. Among them was the Solarium Augusti, an obelisk which now stands on Monte Citorio, which served as a gigantic gnomon, and, on an immense marble flooring that surrounded it, exhibited not only the hours, but also the increase and decrease of the days (Plin. xxxvi. 15). In the northern part of the Campus, between the Via Flaminia and the Tiber, he caused to be constructed during his life-time that superb Mausoleum, a description of which by Strabo has already been cited in the former part of this article. This district had for some time previously served as a burying place for the most distinguished persons. Among others buried near this spot were Sulla, Caesar together with his aunt and daughter, and the two consuls Hirtius and Pansa, who fell at Mutina. Several members of the family of Augustus had been entombed in the mausoleum before the ashes of Augustas himself were deposited within it ; as Marcellus, Agrippa, Octavia, and Drusus (Dion Cass. liii. 30; Virg. Aen. vi. 873, seq.; Ov. Cons. ad Liv. 67). By the time of Hadrian it was completely filled; which caused him to build a new one on the opposite side of the river (Dion Cass. lxix. 23). There are still considerable remains of the monument of Augustus. The area on which the sepulchre of the Caesars stood is now converted into a sort of amphitheatre for spectacles of the lowest description: sic transit gloria mundi. It is doubtful whether a third building of Angustus called Porticus ad Nationes, or xiv. Nationes, stood in the Campus Martius or in the Circus Flaminius. It appears to have been near the theatre of Pompey; and contained statues representing different nations (Plin. xxxvi. 5. s. 4 ; Serv. ad Aen. viii. 721.)

Near the Mausoleum appears to have been a portico called Via Tecta; the origin of which is un-

3 н 3
known. Its situation near the place assigned is determined by the following passage in Seneca's Apocolocyntosis: "Injicit illi (Claudio) manum Talthybius deorum nuntius et trahit capite obvoluto, ne quis eum possit agnoscere, per Campum Martium ; et inter Tiberim et Viam Tectam descendit ad inferos ${ }^{n}$ ( p .389, Bip.). If this descent to the infernal regions was at the subterranean altar of Pluto and Proserpine before mentioned, it would go far to fix the situation of the Tarentum in the northern part of the Campus ; but this, though probable, is not certain. The Via Tecta is mentioned once or twice by Martial (iii. 5, viii. 75).

Among the other monuments relating to Angustus in the Campus Martius, was an Ara Paois, dedicated to Angustus on his return from Germany, в. c. 13. (Dion Cass. liv. 25; Ov. Fast iii. 882 ; Fash. Praem. III. Kal Feb.) The Ara Forturae Reducis was another similar altar (Dion Cass. liv. 19); but there is nothing to prove that it was on the Campus Martios.

In the reign of Angustus, Statilins Taurus erected an Amphitheatre on the Campus, - the first built of stone at Rome ; but its situation cannot be determined. (Dion Cass. li. 23; Suet. Aug. 29.)

A long interval ensued after the reign of Augustus before any new public buildings were erected on the Campus Martius. Caligula began, indeed, a large amphitheatre near the Septa ; but Cladius cansed it to be pulled down. Nero erected, close to the baths of Agrippa, the Thermar Neronianae, which seem to have been subsequently enlarged by Alexander Severus, and to have obtained the name of Thrrmar Albxandrinaf. The damage occasioned in this district by the fire of Nero cannot be stated, since all that we certainly know is that the amphitheatre of Statilius Tuurus was destroyed in it (Dion Cass. lxii. 18). The fire under Titus was considerably more destructive in this quarter (Id. lxvi. 24); but the damage appears to have been made good by Domitian. Among the buildings restored by him on this occasion we find the Trmples of Isis and Skrapis mentioned; but we have no accounts respecting their foundation. Their site may, however, be fixed between the Septa Julia and the baths of Agrippa, near the modern church of $S$. Maria sopra Minerva Thos Juvenal (vi. 527):-
"A Meroe portabit aquas, ut spargat in aedem Isidis, antiquo quae proxima surgit Ovili."
(Cf. Joseph. B. Jud. vii. 5. § 4.) It was near the spot indicated that the celebrated groap of the Nile was discovered which now adorns the Vatican (Braun, Muceums of Rome, p. 160), together with several other Egyptian objects (Flaminio Vacca, Mem. nos. 26, 27 ; Bartoli, Mem. no. 112, \&c.). Alexander Severus devoted much attention to these temples (Lampr. A. Sev. 26), and they must have existed till a late period, since they are enamerated in the Notitia.

Domitian also restored a temple of Minerva which stood near the same spot, the Minerva Chalcidica of Cassiodorus (Chrom sub Domil) and of the Notitio (Montf. Diar. Ital p. 292). It must have been the temple originally founded by Pompey in commemoration of his eastern victories, the inscription on which is recorded by Pliny (vii. 27). It was from this temple that the church of $S$. Maria just mentioned derived its epithet of eopra Minerva; and it seems to have been near this spot that the celebrated statue of the Giustiniani Pallas, now in the Braccio Nwoo of the Vaticau,

## ROMA.

was discovered; though according to other, bat lese probable, accounts, it was found in the circular temple near the Porta Maggiore (Braun, Muremase \&c. p. 154). Some topographers asume that the temple built by Pompey was a different one from the above, with the barbarous title of Minerva Campensis, but in the same neighbourhood; which does not seem probable (Canina, Indicass p. 405).

Domitian also founded in the Campas Martius an Odeux and a Stadiux (Suct. Dom. 5), which will be described in the proper eections. The situation of the former cannot be determined. The Stadium, in all probability, occupied the site of the Piasean Naoona, the form of which shows that it must have been a circus. The name of Navona is a corruption of in Agome, and important remains of this Stadinm

AATUNINE COLUMR. (COLUEA OE M. AULELAUS.)
were in existence in the time of the Anonymous of Einsiedlen (Preller, Regionen, p. 171). The assumption that this place was occupied by a stadium built by Alexander Severus - in which case that of Domitian must be sought in some other part of the Campus - rests only on traditions of the middle ages (Canina, Indic. p. 392).

Trajan is said to have built a theatre in the Campus Martins, which, however, was destroyed by Hadrian. (Spart. Hadr. 8.) The same emperor probably erected what is called in the Notitia the Bastlica Marctanes (Marcianae), which was probably a temple in honour of his sister, Marciana. The Antonines appear to have adorned this quarter with many buildings The Basilica Matidies (Matidiae) was perhaps erected by Antoninus Pius, and consecrated to Matidia, the wife of Hadrian; as well as the Hadrianum, or temple to Hadrian himself, also mentioned in the Notitia. (Preller, p. 175.) The Templum Antonini and Columina Cochlis were the temple and pillar erected in honour of M. Aurelius Antoninus. (Capitol. M. Ant. 18; Anr. Vict. Epit. 16.) All these buildings stood near together in the vicinity of the Piazza Colonna, on which the column (Columna Antoniniana) still exists. For a long while this column was thought to be that of Antoninus Pius, and was even declared to be such in the inscription placed on the pedestal during the pontificate of Sixtus V. But the sculptures on the column were subsequently perceived to relate to the history of Antonine the philosopher; and this view was confirmed not only by the few remaining words of the original inscription, but also by another inscription found in the neighbouring Piazza di Monte Citorio, regarding a permission granted to a certain Adrastus, a freedman of Septiminas Severus and Caracalla, to erect a small house in the neighbourhood of the column, as curator of it. This inscription, which is now preserved in the corridor of the Vatican, twice mentions the column as being that "Divi Marci." (Canina, Indic. p. 417, seq.) The column is an imitation of that of Trajan, but not in so pure a style of art. Both derive their name of cochlis from the spiral staircase (cochlea, кoх入(as) in the interior of them. (Isid. Orig. xv. 2, 38.) The Columna Antonini PII was a large pillar of red granite, erected to

PEDESTAL OF COLUMN OF ANTONINUS PIUS.
him, as appears from the inscription, by M. Aurelins and L. Verus. It was discovered in the pontificate of Clement XI., in the garden of the Padri della Missione, on the E. side of the Palazzo di Monte Citorio. It broke in the attempt to erect it in the Piazza di Monte Citorio, where the obelisk now stands; but the pedestal with the inscription is
still preserved in the garden of the Vatican. (Canina Indic. p. 419.) The sculptures on the pedestal represent the Apotheosis of Antoninus Pius and Faustina.
The Thermae Commodlanae and Alexandrinae will be treated of in the section on the baths. After the time of Alexander Severus we find but few new buildings mentioned in this district. Gordian III. is said to have entertained the design of building an enormous portico under the Pincian hill, but it does not appear that it was ever executed. (Capitol. Gord. III. c. 32.) Respecting the Porticus Flaminia, see the article Pons Milvius. Some porticoes near the Pons Aelius, which appear to have borne the name of Maximae, were terminated by the Triumphal Arch of Gratian, Valentinian, and Theodosius; the inscription on which will be found in the Anonymous of Einsiedlen, and in Gruter (clxxii. 1). Claudius, who was prefect of the city underValentinian I., erected a portico near the baths of Agrippa, which he called Porticus Boni Eventus, after a neighbouring temple with the same name (Amm. Marc. xxix. 6. § 19); but with regard to this temple we have no information.
We shall now proceed to that part of the district under consideration comprised in the 7th Region of Augustus, and subsequently called Via Lata, from the road which bounded its western side, and which formed the southern extremity of the Via Flaminia. The most important topographical question connected with this district is the situation of the Campus Agrippae, and the buildings connected with it. We have already shown from the situation of Martial's house, as well as from the probable site of the temple of Sol, that the Campus Agrippae must have lain under the western side of the Quirinal, and not under the Pincian, where Becker places it. It is probable, too, that it lay on a line with the Pantheon and thermae of Agrippa, although divided from them by the Via Lata; and hence Canina correctly describes it as facing the Septa (Indic. p. 215), whilst Urlichs and Preller, in like manner, place it between the Piczza degli Apostoli and the Fontana Trevi. (Beschr. vol. iii. pt. iii. p. 112 ; Regionen, p. 138.) The Campus Agrippae contained gardens, porticoes, and places for gymnastic exercises, and was, in short, a kind of Campus Martius in miniature. It was also a favourite lounge and promenade. (A. Gell. xiv. 5.) It appears from a passage in Dion Cassius, that the Campus was not finished before Agrippa's death, and that it was opened to the public by Augustus (lv. 8.) It contained a Porticus Polae, so named after Agrippa's sister Pola or Polla; which is probably the same as that alluded to by Martial, in some passages before quoted, under the name of Vipsania. The latter name seems to be corrupted in the Notitia into Porticus Gypsiani. Becker (Handb. p. 596) would identify the Porticus Polae with the Porticus Europae, butthey seem to be different structures. (Urlichs, Röm. Topogr.p.139.) The latter, which derived its name from a picture of the rape of Europa, is frequently mentioned by Martial (ii. 14, iii. 20, xi. 1). Its situation cannot be determined; but most topographers place it in the Campus Martins, among the other buildings of Agrippa. (Canina, Indicaz. p. 409; Urlichs, Röm. Marsfeld, p. 116.) It appears from the Notitia that the Campus Agrippae contained Castra, which, from the Catalogus Imperat. Vienn. (t. ii. p. 246, Ronc.), appear to have been dedicated by Aurelian; but the Porticus Vipsania served as a
sort of barracks as early as the time of Galbe. (Tac. H. i. 31 ; Plut. Galb. 25.)

Several objects mentioned in this district are doublful as to site, and even as to meaning, and are not important enough to demand investigation. It contained Triumphal Arches of Claudius and M. Aurelius. The latter subsisted in a tolerably perfect state near the Piazza Fiana in the Coreo, till the year 1662, when pope Alexander VII. cansed it to be palled down. Its reliefs still adorn the staircase of the Palasso de' Conservatori. (Canina, Indicas. p. 220.)

ARCII OF AURKLIUS,
We shall conclude this section with noticing a very humble but very useful object, the Forum Suarivm. Bacon was an article of great consumption at Rome. It was distributed, as well as bread, among the people, and its annual consumptiun in the time of Valentinian III. was estimated at 3,628,000 pounds. (Gibbon, Decline and Fall, vol. iv. p. 85, ed. Smith.) The custom of distributing it had been introduced by Aurelian. (Vopisc. Aurel. 25.) A country in which hogs'-flesh is the cheapest meat betrays a low state of farming. The swine still abounds in Italy; but in ancient times the Roman market was principally sapplied from the forests of Lucania. The market was important enough to have its special tribune, and the " pigmen of the eternal city" ("Porcinarii Urbis aeternae") were considered such a useful body that peculiar privileges were granted to them. (Cod. xi. tit. 16; Not. Dignit Part. Occ. p. 16; Grater, Insor. cclaxx. 4.) The market is alluded to in a sort of proverbial manner by Philostratus (arud te ral noud фиaus' un, ofotep iv ouivy dyopâ, Heroic. p. 283. 19, ed. Kayser.). It is supposed to have stood near the present church of $S$. Croce dei Lucchesi, which was substituted for that of $S$. Nicolo in Porcilibus. (Canina, Indic. p. 209; Preller, Regionen, p. 139.)

## XIV. The Transtiberine District.

Although the district beyond the Tiber formed one of the 14 Regions of Augustus, and although part of it may perhaps have been enclosed with a wall as early as the time of Ancus Marcius, and was certainly included in that of Aurelian, yet, while it was considered a part of Rome, it never ibelonged to the Urbs, properly so called. The distiuction be-
tween Roma and Urbs was at least as old is the time of Augustus, and was thus haid down by Alfenus Varus: "Ut Alfenns ait, Urbs est Roena, qua muro cingeretor; Roma est etiam, qua continentia redificia essent." (Digesh L. tit. 16.1.87.) This circumstance rather tends to strengthen Niebahr's opinion that Ancus Marcius only built a citadel on the Janiculum, without any walls extending to the river. [See above, Part II. Sect. I. sub fin.] The district in question is naturally divided into three parts, the Mons Janiculus (or Janiculum), the Mons Vaticanus, - each with their respective plains towards the river, - and the Insula Tiberina. We shall begin with the last.

We have already mentioned the legend respecting the formation of the Issula Tibrrisa through the corn belonging to the Tarquins being thrown into the river. In the year s. c. 291 the island became sacred to Aesculapius. In consequence of a pestilence an embassy was despatched to Epidaurus to bring back to Rome the image of that deity; but instead of the statue came a snake, into which it was perfectly known that the god himself had entered. As the vessel was passing the Tiberine island the snake swam ashore and hid itself there; in consequence of which a Temple of Absculapius was built upon it, and the island ever afterwards hore the name of the god. (Liv. Epit xi.; Ot. Met xr. 739; Val. Max. i. 8.§ 2; Dionys. v. 13; Suet. Claud 25.) Sick persons resorted to this temple for a cure; but it does not appear that there was any hospital near it, as was the case at Epidaurus. There is no classical anthority for the fact that the sides of the island were afterwands walled round in the shape of a ship, with the prow against the current, typifying the vessel which brought the deity ; but it is said that vestiges of this substruction are still visible. (Canina, Indic. p. 574.) The island also contained a Temple or Jupiter and a Temple of Faunus, both dedicated in B. c. 193. (Liv. xxxiii. 42, xxxiv. 53.) The temple of Jupiter appears to have adjoined that of Aesculapius. (Ov. Fast. i. 293.) It has been concluded, from the folluwing rerses of Ovid, that the temple of Faunus must have stood on the uppar part of the island (Fast. ii. 193):-

> "Idibus agrestis fumant altaria Fauni Hic, ubi discretas insula rumpit aquas ; "
but this, though a probable, is not a necessary inference. Srmo Sancus, or Deus Fidins, seems also to have had a sacellum here, as well as Tiberinus, as the river-god is called in the Indigitamenta, or religious books. (Fast. Amit. VI. Id. Dec.) By a curious error the early Christian writers confounded the former deity with Simon Magus, and thought that he was worshipped on the island. (Just. Murt. Apol.2; Euseb. H. Ecch ii. 12.) After the building of the two bridges which connected the island on either side with the shore, it seems to have ubtained the name of "Inter duos Pontes" (Plat. Publ. 8); and this part of the river was long famons for the delicious pike canght in it; which owed their flavour apparently to the rich feeding afforded by the proximity of the banks. (Plut. Popl. 8; Macrob. Sat. ii. 12.) In the Acta Martyrwin the island is repeatedly styled Inoula Lycaonia; it is at present called Isola di S. Bartolomaneo, from the church and convent of that name.

The Janiculum begins at that point opposite the Campus Martius where the Tiber reaches furthest
to the W., whence it stretches in a sontherly direction to a point opposite the Aventine. The masculine forn of the name (Janiculus), though employed as a substantive by some mudern writers, seems to rest on no classical authority, and can only be allowed as an adjective form with mons or collis. (Becker, Handb. p. 653.) The name Janiculum is usually derived from Janus, who is said to have had an arx or citadel here. (Or. Fast. i. 245; Macrub. Sat. i. 7.) As the ridge runs in a tolerably straight line nearly due $S$. from the point where it commences, the curve described by the Tiber towards the $E$. leaves a considerable plain between the rive: and the hill, which attains its greatest breadth at the point opposite to the Forum Boarium. This was the original Regio Transtiberina. It appears to have been covered with buildings long before the time of Augustus, and was principally inhabited by the lower classes, especially fishermen, tanners, and the like, though it contained some celebrated gardens. Hence the Ludi Piscatorii were held in this quarter. (Ov. Fast. vi. 237 ; Fest. pp. 210, 238.) It was the ancient Ghetto, or Jews' quarter, which now lies opposite to it. (Philo, de Virt. ii. p. 568, Manger.)

The Regio Transtiberina contained but few temples or other public buildings. Of the temple of Fors Fortuna we have already spoken when discussing the question respecting that of Pudicitia Patricia [supra, p. 814]. Of other loci religiosi in this quarter little more is known than the name. Such was the Lucus Furinar, mentioned in the narratives of the death of C. Gracchus. (Aur. Vict. Vir. Ill. 65; Plut. C. Gracch. 17.) Cicero connected this grove with the Eumenides, or Furies (Nat Leor. iii. 18); but there is no account of those Attic deities having been naturalised at liome, and we should rather infer from Varro that the grove was consecrated to sone ancient indigenous coddess. (L. L. vi. § 19, Mïll.) It was a universal tradition that Numa was buried in the Janiculum (Dionys. ii. 76; Plut. Num. 22; Val. Max. i. 1. § 12). Cicero, in a corrupt prassage, places his tomb "hand procul a Funti Ara" (or Fontis Aris) (de Leg. ii. 22); but of such a deity or altar we bave no further account. We also find a Lucus Corniscarum Divarum mentioned by Paulus Diaconus (p. 64, Müll.) as "trans Tiberim;" but though the names of these godderses are also found in an inscription (Gruter, Ixxxviii. 14), what they were cannot be told. Lastly, as the Basis Capitolina records a Vicus larum Ruralium in this district, we may conclude that they had a sacellum bere.

Among the profane places trans Tiberim were the Mucia Prata and the field called Codeta. The former-the land given to Mucius Scaevola by the Senate as a reward of his valour (Liv. ii. 13) -may, however, have lain beyond the district now under consideration, and probably farther down th? Tiber. The Codeta, or Ager Codetanus, was so named from a plant that grew there resembling a horse's tail (coda) (Paul. Diac. pp. 38 and 58, Miall.), - no doubt the Equisetis, or Equisetum puluatre of Linuaeus. ("Invisa et equisetis est, a similitudine equinae setae," Plin. xviii. 67. s. 4.) There seems to have been a Codeta Major and a Binor, since Suetonius relates that Caesar exhibited 2 naval combat in the latter, where he had formed a lake (" in minore Codeta defosso lacu," Caes. 39) Dion Cassius, on the other hand, represents this
naumachia as taking place in the Campus Martins (xliii. 23). Becker (Handb. p. 656, note) would reconcile these divergent accounts by assuming that the Codeta Minor lay in the Campus Martias, and the Codeta Major opposite to it, on the other side of the Tiber. (Cf. Preller, Regionen, p. 218.) But there seem to be some grave objections to this assumption. It is not probable that two places bearing the same name should have been on different sides of the river, nor that there should have been a marshy district, as the Codeta evidently was, in the Campus Martius, in the time of Caesar. Besides, had the latter contained a place called Codeta Minor, - which must bave been of considerable size to afford room for the exhibition of a naval combat,we should surely have heard of it from some other source. Becker adduces, in proof of his view, another passaye from Suetonius (Ib. c. 44), from which it appears that Caesar contemplated building a magnificent temple of Mars, on the site of the lake, attor causing it to be filled up; a project, however, which does not seem to have been carried into execution. Becker assumes that this temple must of course have been in the Campus Martins; though on what grounds does not appear, as we have already seen that there was a temple of Mars a long way outside the Porta Capena, besides a subsequent one in the forum of Augustus. We are, therefure, of opinion, that the word 'Apeity, in Dion Cassius, must be a mistake either of his own, or of his copyists, and that the Campus Codetanus of the Notitia must have lain rather below the city, on the right bank of the Tiber. (Cf. Camina, Indic. p. 566, seq.) The Notitia mentions a Campus Brutrianus in connection with the Campus Codetanus, but what it was cannot be said. Some have conjectured that it was called after the Bruttii, who were employed at Kome as public servants. (Paul. Diac. p. 31.)

Near the same spot must have been the Horti Cafsaris, which Caesar bequeathed to the Roman people. (Suet. Caes. 83; Tac. Ann. ii. 41; Cic. Phil. ii. 42.) According to Hurace, they must havo lain at some distance:-
"Trans Tiberim longe cubat is, prope Caesaris
hortos."
(Sat. i. 9. 18.)
And it may be inferred from the situation of the Templef of Fors Fortuna, which we have already discussed [supra, p. 814], that they mast have been at about a mile's distance from the Porta Portuensis. (Fast. Amit. VIII. Kal. Jul.) It seems probable that they were connected with the Nemus Carsarum, where Augastus exhibited a naumachia, and where a grove or garden was afterwards laid out. ("Navalis proelii spectaculum populo dedi trans Tiberim, in quo loco nunc nemus est Caesirum" Mon. Ancyr.) This would rather tend to confirm the view that the codeta was in this neighbourhond. In Tucitus ( $A n n$. xii. 56: "Ut quondan Augustus structo cis Tiberim stagno ") we are therefore probably to read $u l_{s}$ for cis, which ancient form seems th have been retained in designating the Transtiberine district (" Dicebatur cis Tiberim et uls Tiberim," Aul. Gell. xii. 13: cf. Varr. L.L. v. § 83, Mïll.; Pompon. Dig. i. tit. 2.1. 2. § 31.) The Nemus Caesarum seems to have been so called from Caius and Lucius Caesar. (Dion Cass. Ixvi. 25.) We are not to suppose that it occupied the site of the lake excavated for the naunachia, but was planted round it as we learn from Tacitus (-" apud

## ROMA

nemus quod navali stagno circumposuit Angustus," Ann. xiv. 15). There are several passages which show that the lake existed long after the time of Augustus. Thus Statius (Silv. iv. 4. 5): 一
"Continuo dextras flavi pete Tybridis oras,
Lydia qua penitus stagnum navale coercet
Ripa, suburbanisque vadum praetexitur hortis."
This passage likewise confirms the situation of the lake on the right, or Etruscan, bank (Lydia ripa) with the Nemus round it (cf. Suet. Tib. 72). It was used by Titus to exhibit a naumachin (Suet. Tit. 7; Dion Cass. l. c.); and remains of it were visible even in the time of Alexander Severus (Id. lv. 10). Although the passage in the Monumentum Ancyranum in which Angustus mentions this lake or basin is rather mutilated, we may make out that it was 1800 feet long by 1200 broad.

The Notitia mentions five Naumachiae in the 14th Region, but the number is probably corrupt, and we should read two. (Preller, Regionen, p. 206.) We know at all events that Domitian also made a basin for ship-fights in the Transtiberine district. (Suet.Dom.4.) The stone of which it was constructed was subsequently employed to repair the Circus Maximus (Ib.5). That it was in a new situation appears from Dion Cassius ( $\langle\nu \kappa \alpha \iota \nu \bar{\varphi} \tau \iota \nu \iota \chi \omega \rho i \varphi$, lxvii. 8). It probably lay under the Vatican, since St. Peter's was designated in the middle ages as " apud Naumachiam." (Flav. Blond. Instaur. R. i. 24; Anastas. V. Leo. III. p. 306, Blanch.; Montf. Diar. Ital. p. 291.) The naumachia ascribed to the emperor Philip (Aur. Vict. Caes. 28) was perhaps only a restoration of this, or of that of Augustus.

Among other objects in the district of the Janiculum, we need only mention the Horti Getae and the Castra Lecticarionum. The former were probably founded by Septimius Severus, and inherited by his son Geta. We know at all events that

Severus founded some baths in this district (Spart. Sept. Sev. 19; cf. Becker, de Muris, p. 127) and the arch called Porta Septimuna; and it likewise appears that he purchased some large gardens before his departure into Germany. (Spart. Ib. c. 4.) The Lecticarii were either sedan-chairmen, or men employed to carry biers, and their castra means nothing more than a station for them, just as we hear of the Castra Tabellariorum, Victinnariorum, \&c. (Preller, Regionen, p. 218.)

The Mons or Collis Vaticanus rises a little to the NW. of the Mons Janiculus, from which it is separated only by a narrow valley, now Valle $d$ Inferno The origin of the name of this district, at present the most famous in Rome, cannot be determined. The most common derivation of it is from a story that the Romans gained possession of it from the Etruscans through an oracular response ("Vatum responso expulsis Etruscis," Paul. Diac. p. 379.) We have already remarked that there is no ground for Niebuhr's assumption respecting the existence here of an Etruscan city called Vatica or Vaticum [see p. 724]. This district belonged still less than the Janiculum to the city, and was not even included in the walls of Aurelian. It was noted for its unhealthy air (Tac. H. ii. 93), its unfruitful soil (Cic. de Leg. Agr. ii. 35), and its execrable wine. ("Vaticana bibis, bibis venenum," Mart. vi. 92. 93; cf. x. 45.) In the Republican times the story so beautifully told by Livy (iii. 26) of the great dic tator L. Quinctius Cincinnatus who was saluted dictator here whilst cultivating his farm of four acres, the Prata Quinctia, lends the only interest to the scene, whether it may belong to the romance of history or not. There were no buildings in this quarter before the time of the emperors, and almost the only one of any note in all antiquity was a sepulchre-the Mausoleum or Moles Hadriani, now the Castello di S. Angelo. (Dion Cass. Ixix. 23;

MOLE OF HADRIAN RESTORED.

Spart. Hadr. 19.) Among the ancient notices of it the most important is that of Procopius. (B. G. i. 22. p. 106. ed. Bonn.) A complete history of it is given by Bunsen (Beschr. vol. ii. p. 404, seq.), and descriptions will be found in all the guide-books. Hadrian's mausoleum was the tomb of the following
emperors and their families, certainly till the time of Commodus, and perhaps till that of Caracalla (v. Becker Handb. note 1430). It was built in the Hokti Domitiae (Capitol. Ant. P. 5), if we are to understand the word collocavit in that passage of an actual entombment, and not of a lying-in-state.

ROMA.

These gardens of the Domitian family are frequently mentioned in inscriptions; and those who are curious respecting their history will find a long account of them in Preller's Regionen (p. 207, so4.). They appear to have existed under the same name in the time of Aurelian. (Vopisc. Aurel. 49.) In the same district were also the Horti Agrippinae. These came into the possession of her son, Ca licula, who built a circus in them, afterwards called the Circus Neronis. It will be treated of in another section; and we shall only mention here that this was the place in which the Christians, hasving previously been wrapped in the tumica molesta or picata, were burnt, to serve as torches for the midnight games. (Tac. Anm. xv. 44.) Both the gardens mentioned came into the possession of Nero, and may therefore have also been called Horti Neronis. (Tac. Ib. and c. 39.)

The neighbourhood seems to have been a chosen spot for the sepulchres of the great. One of them, a pyramid lurger than the still existing monument of Cestins, existed till the end of the 15 th century, and was absurdly regarded sometimes as the sepulcrum Romuli, sometimes as the sepulcurm Scipionis Africani. It appears from notices belonging to the middle ages that on or near the spot where St. Peter's now stands, there was anciently a Temrlum Apollivis, or more probably of Sol. (Anastasius, V'it. Silvestri, p. 42; Dlontf. Liar. i. p. 155.)

Having thus gone over the various districts of the city, and noted the principal objects of interest which they contained, we shall now pruceed to give an account of certain objects which, from their importance, their general similarity, and the smallness of their number, may be most conveniently ranged together and treated of in distinct sections. Such are, - (1) the structures destined for public games and spectacles, as the Circi, Theatres, and Amphitheatres; (2) the Thermae or Baths ; (3) the Bridges; and, (4) the Aqueducts.

The general characteristics of these objects have been so fully described in the Dictionary of Antiquities that it will be unnecessary to repeat the descriptions here, and we shall therefore confine ourselves to what may be called their topographical histors; that is, an account of their origin and progress, their situation, size, and other similar particulars.

## XV. The Circt, Theatres, and Amphitheatres.

Horse and chariot races were the earliest kind of spectacle known at Rome. The principal circus in which these sports were exhibited, and which by way of pre-eminence over the others came ultimately to be distinguished by the title of Circus Maximus, was founded, as we have already related, by the elder Tarquin, in the vailey between the Palatine and Aventine. That king, however, probably did little more than level and mark out the ground; for certain spaces around it were assigned to the patricians and knights, and to the 30 curiae, on which, at the time of the games, they erected their own seats or scaffolds, called spectacula and fori. (Liv. i. 35 ; cf. Dionys. iii. 68.) According to Livy, the same custom continued to prevail under Tarquinius Superbus (1b. c. 56); though Dionysius represents that monarch as surrounding the circus with por-
ticoes (iv. 44). It was not till the year b. c. 228 that carceres for the chariots were built. (Liv. viii. 20.) We cannot tell what the original number of carceres may have been, but it was probably adapted to that of the chariots which started in the race. According to Tertullian (de Spect. 9) there were originally only two Circensian factions, or colours, the albata and russata-that is, winter and summer; but these distinctions of colours and factions do not seem to have been known till the time of the Empire. Joannes Lydus (de Mens. iv. 25, Beck.) states the original number of the factions to have been three, the russata, albata and prasina; and this seems to agree with the following passage in Cicero-if, indeed, it is to be interpretad strictly, and is anything more than a fortuitous coincidence: "Neque enim in quadrigis eum secundum numeraverim, aut tertium, qui vix e carceribus exierit, cum palmam jam primus acceperit." (Brut. 47.) However this may be, we know that in the early part of the Empire there were four colours, though by whom the fourth, or veneta, was added, cannot be said. Domitian added two more the aurata and purpurata (Suet. Dom. 7), but these do not seem to have come into customary use. The usual missus, or start, consisted of four chariots, as we learn from Virgil with the note of Servius : -
"Centum quadrijugos agitabo ad flumina curras" (Georg. iii. 18); where the commentator remarks from Varro:-" Id est, unius diei exhibeho circenses ludos, quia, ut Varro dicit in libris de gente populi Romani, olim xxv. missus fiebant." It appears probable that the carceres were twice the number of the chariots which started, in order to affiord egress to those which had finished the course, whilst fresh charioteers were waiting in thuse which were closed to begin a new course ( v . Becker, de Muris, p. 87). Thus in the Lyons mossic eight carceres are represented; but in the Circus Maximus, after the increase of the factions to six, there were probably twelve carceres; and such also appears to have been the number in the circus on the Via Appia (Cf. Cassiod. Var. iii. 51.) The Circus Maximus seems to have remained in a very rude and imperfect state till the time of Julius Caesar. He increased it by adding to both its extremities; and its size when thus enlarged appears to have been 3 stadia in length and 1 in breadth. Caesar also surrounded it with a canal, called Euripus, in order to protect the spectators from the fury of the elephants; but this was filled up by Nerv and converted into seats for the equites, whose increased numbers probably required more accommodation. (Suet. Caes. 39; Plin. viii. 7, xxxvi. 24. s. 1.) The description of the circus by Dionysius (iii. 68) is the clearest and longest we pussess, but the measurements which he gives differ from those of Pliny, as he makes it 31 stadia long and 4 plethra, or 3 ds of a stade, broad. But perhaps these authorities may be reconciled by assuming that one took the inner and the other the onter circumference. The reader will find a lengthened examination of these different measures in Canina's Indicasione Topografica, p. 491, seq. In Caesar's circus it was only the lower rows of seats that were built of stone; the upper rows were of wood, which accounts for the repeated fires that happened there. The first of these occurred in в.c. 31, a little before the battle of Actime, and destroyed a considerable
part of the building. (Dion Cass. 1. 10.) Augustus rebuilt the Pulvinar, or place on which the images of the gods were laid, and erected the first obelisk between the metac. (Mon. Ancyr.: Suet. Aug. 45 ; Plin. xxxvi. 14. s. 5.) The side towards the Aventine was again burnt in the reign of Tiberius. (Tac. Ann. vi. 45.) Claudius much improved the appearance of the circus by substituting marble carceres for those of tufo, and metae of gilt bronze for the previous ones of wood. He also appropriated certain seats to the senators. (Suet. Claud 21.) We have seen that the fire of Nero broke out in the circus, whence it is natural to conclude that it must have been completely destroyed. Yet it must have been soon restored, since Nero caused his ridiculons triumphal procession to pass through it, and hung his triumphal wreaths round the obelisk of Augustus. (Dion Cass. lxiii. 21.) The effects of another fire under Domitian were repaired with the stone from his naumachia, and it was now, perhaps, that 12 carceres were first erected. (Suet. Dom. 5, 7.) We read of another restoration on a still more magnificent scale by Trajan. (Dion Cass. lviii. 7.) During the celebration of the Ludi Apollinares in the reign of Antoninus Pins, some of the rows of seats fell in and killed a large number of persons. (Capitol. Antom. P. 9: Catal. Imp. Vienn. ii. p. 244.) We know but little more of the history of the Circus Maximus. Constantine the Great appears to have made some improvements (Aur. Vict. Caes. 40. § 27), and we hear of the games being celebrated there as late as the 6th century. (Cassiod. Var. iii. 51.) The circus was used for other games besides the chariot races, as the Ludus Trojae, Certamen Gymnicum, Venatio, Ludi Apollinares, \&cc. The number of persons it was capable of accommodating is varioasly stated. Pliny (xxxvi. 24. s. 1) states it at 260,000. One codex of the Notitia mentions 485.000, another 385,000 ; the latter number is probably the more correct. (Preller, Regionen, p. 191.) The circas seems to have been enlarged after the time of Pliny, in the reign of Trajan.

The Circus Flaminius was founded in b.c. 220 by the censor of that name. (Liv. Epit. xx.; Cass. Chron. p. 178.) We have but few notices respecting this circus, which lay under the Capitoline, with its carceres towards the hill, and its circular end towards the river. The Luuli Plebeii, and those called Taurii, were celebrated here (Val. Max. i. 7. § 4 ; Varr. L.L. v. § 154), and Aucustus afforded in it the spectacle of a crocodile chase. (Dion Cass. Iv. 10.) It also served for meetings of the people, which had previously been beld in the Prata Flaminia. (Liv. xxvii. 21 ; Cic. ad Att. i. 14.) We find no mention of the Circus Flaminius after the first century of our era; and in the early part of the 9 th century it had been so completely forgotten that the Anonymous of Einsiedlen mistook the Piazza Navona for it. Yet remains of it are said to have existed till the 16 th century, at the church of S. Caterina de' Funari and the Palazzo Mattei. (And. Fulvio, Ant. Urb. lib. iv. p. 264 ; Lucio Fauno, Ant. di Roma, iv. 23. p. 138.)
What is sometimes called by modern topographers the Circus Agonalis, occupied, as we have shid, the site of the Pizzza Navona. But the Agomalia were certainly not celebrated with Circensian games, and there are good reasons for doubting whether this was a circus at all. Its form, however, shows that it was a place of the same kind,
and hence Becker's conjecture seems not improbable (Handb. p. 670), that it was the Stadium founded by Domitian. The Grecian fuot-races had been introduced at Rome long before the time of Domitian. Both Caesar and Angustus had built temporary stadia in the Campus Martius (Suet. Caes. 39; Dion Cass. liii. 1), and Domitian seems to have constructed a more permanent one. (Suet. Dom. 5; Cassiod. Chron. t. ii. p. 197.) We are not indeed told that it was in the Campus Martius, but this is the most probable place for it ; and the Notitia after mentioning the three theatres and the $O d e u m$ in the 9 th Region names the Stadiam. It is also mentioned in conjunction with the Odeum by Ammianus Marcellinus (zvi. 10. § 14). It is discriminated from the circi by Lampridius: "Omnes de circo, de theatro, de stadio - meretrices collegit." (Leliog. 26.) In the middle ages it seems to have been called "Circus Alexandrinus," an appellation doubtless derived from the neighbouring thermae of Alexander Severus. By the Anonymus Einsiedlensis it was confounded, as we have said, with the Circus Flaminius.

Putting this on one side, therefore, the third circus, properly so called, founded at Rome, would be that which Caligula built in the gardens of his mother Agrippina in the Vatican. (Plin. xvi. 40, xxxvi. 11; Suet. Claud. 21.) From him the place subsequently obtained the name of Calanusa (Dion Cass. lix. 14). by which we find it mentioned in the Notitia. (Reg. xiv.) This circus was also used by Nero, whence it commonly obtained the name of Circus Neronis. (Plin. L.c.; Suet. Ner. 22; Tac. Ann. xiv. 14.) In the middle ages it was called Palatium Neronis. Some writers assume another circus in this neighbourhood, which Canina (Indic. p. 590) calis Circus Hadriani, just at the back of the mausoleam of that emperor: but this seems hardly probable. (Cf. Urlichs, in Class. Mus. vol. iii. p. 202.) The chief passage on which this assumption is founded is Procopius, de BelL Goth. ii. 1 (Preller, Regionen, p. 212).

A fourth circus was that of Mexentive about two miles on the Via Appia, near the tomb of Caecilia Metella. It used to be commonly attribated to Caracalla; but an inscription dug ap in 1825 mentions Romulus, the son of Maxentius (Orell. Inscr. 1069); and this agrees with the Cataluncs Imperatorum Viennensis, which ascribes the building of a circus to Maxentins (ii. p. 248, Ronc.). This building is in a tolerable state of preserration; the spina is entire, and great part of the external walls remains; so that the spectator can here gain a clear idea of the arrangements of an ancient circus. A complete description of it has been pablished by the Rev. Kichard Bargess (London, Murray, 1828.)

The fifth and last of the circuses at Rome, which can be assumed with certainty, is the Circus Heliogabali, which lay near the Amphitheatrum Castrense, outside the walls of Aurelian. (Urlichs, Röm. Topngr. p. 126, seq.; Becker, Antzoort, p. 81.) We have already said that the existence of ${ }^{\text {a }}$ Circus Floraf in the 6th Region, is a mere invention; and that of a Cincus Sallustif, in the same district, rests on no satisfactory authority.
Although theatrical entertainments were introduced at Rome at an early period, the city possessed no permanent theatre before the Thratrum PomFEII, built in the second consulship of Pompey, R. C. 55. (Vell. Pat. ii. 48; Plut. Pomp. 52.) I're
viously to this period, plays were performed in wooden theatres, erected for the occasion. Some of these temporary buildings were constructed with extravagant magnificence, especially that of M. Aemilius Scaurus in B. C. 59, a description of which is given by Pliny (xxxvi. 24. s. 7). An attempt, to which we have before alluded, was indeed made by the censor Cassius, B. c. 154, to erect a stone theatre near the Lupercal, which was defeated by the rigid morality of Scipio Nasica (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Liv. Epit. xlviii.; Oros. iv. 21). A good deal of this old Roman feeling remained in the time of Pompey; and in order to overcome, or rather to evade it, he dedicated a temple to Venus Victrix on the summit of his theatre, to which the rows of seats appeared to form an ascent (Tac. Ann. xiv. 20 ; Tert. de Spect. 10; Plin. viii. 7). Gellius places the dedication of the theatre in the third consulship of Pompey, which is at variance with the other authorities (N.A. x. 1). We have spoken of its situation in a preceding section, and shall refer the reader who desires any further information on this head to Canina (Indicaz. p. 368, seq.), who has bestowed much labour in investigating the remains of this building. There is great discrepancy in the accounts of the number of spectators which this theatre was capable of accommodating. According to Pliny, in whose MSS. there are no variations, it held 40,000 persons (xxxvi. 24. s. 7); and the account of Tacitus of the visit of the German ambassadors seems to indicate a large number (" Intravere Pompeii theatrum, quo magnitudinem populi viserent," Ann. xiii. 54). Yet one of the codices of the Notitia assigns to it only 22,888 seats, and the Curiosum still fewer, or 17,580 . It was called theatrum lapideum, or marmoreum, from the material of which it was built; which, however, did not suffice to protect it from the ravages of fire. The scena was destroyed in the reign of Tiberius, and rededicated by Claudius (Tac. Ann. iii. 72; Dion Cass. 1x. 6). The theatre was burnt in the fire under Titus, and again in the reign of Philip; but it must have been restored on both occasions, as it is mentioned by Ammianus Marcellinus among the objects most worthy of notice in his account of the visit of Constantius II. (xvi. 10). We learn from the Catalogus Imperatorum, that it had been repaired by Diocletian and Maximian; and it was also the object of the care of Theodoric (Cassiod. Var. iv. 51).

The Theatre of Balbus, dedicated in b.c. 12 (Suet. Aug. 29 ; Dion Cass. liv. 25), was a building of much less importance, and but few accounts have been preserved of it; yet it must have lasted till a late period, as it is recorded in the Notitia. According to the Curiosum it accommodated 11,600 persons; whilst the MSS, of the Notitia mention 11,510 and 8088.

The Theatrum Marcelli was begun by Caesar (Dion Cass. xliii. 49), and dedicated by Augustus, B. C. 12, to the memory of his nephew, Marcellus. (Mon. Ancyr.; Suet. Aug. 29; Dion Cass. liv. 26.) We have already mentioned its situation in the Forum Olitorium; and very considerable remains of it are still to te seen in the Pizzza Montanara. Its arches are now occupied by dirty workshops. It does not seem to have enjoyed so much celebrity as Pompey's theatre. According to the Curiosum it was capable of accommodating 20,000 spectators. The scena was restored by Vespasian (Suet. Vesp. 19); and Lampridius mentions that Alexander

Severus contemplated a renovation of the theatre (Alex. 44.)

These were the three Roman theatres, properly so called (Ov. Tr. iii. 12.24.):-
" Proque tribus resonant terna theatra foris."
Some of the MSS. of the Notitia mention four theatres, including, of course, the Odeum, which was a roofed theatre, intended for musical performances. According to the most trustworthy accounts, it was built by Domitian, to be used in the musical contests of the Capitoline games which he instituted (Suet. Dom. 4; Cassiod. Chron. p. 197, Ronc.) ; and when Dion Cassius (lxix. 4) ascribes it to Trajan, we may perhaps assume that it was finished or perfected by him. Nero appears to have first introduced musical contests (Tac. Ann. xiv. 20), but the theatre in which they were held was probably a temporary one. The Odeum was capable of holding 10,000 or 12,000 persons. It is mentioned by Ammianus Marcellinus (xvi. 10).

The Amphitheatre of Stathifus Taurus was the first permanent building of that kind erected at Rome. After the chariot races, the gladiatorial combats were the most favourite spectacle of the Romans; yet it was long before any peculiar building was appropriated to them. We have already related that the first gladiators were exhibited in the Forum Boarium in B.c.264; and subsequently these combats took place either in the circus or in the Forum Romanum: yet neither of these places was well adapted for such an exhibition. The former was
inconvenient, from its great length, and the metae and spinae were in the way; whilst the latter, besides its moral unsuitableness for such a spectacle, became by degrees so crowded with monuments as to leave but little space for the evolutions of the combatants. The first temporary amphitheatre was the wonderful one built of wood by Caesar's partisan, C. Scribonius Curio. It consisted of two separate theatres, which, after dramatic entertainments had been given in them, were turned round, with their audiences, by means of hinges or pivots, and formed an amphitheatre (Plin. xxxvi. 24. s.8). Caesar himself afterwards erected a wooden amphi-

## ROMA.

theatre (Dion Cass. xliii. 22); but that of Statilius Taurus was the first built of stone, and continued to be the only one down to the time of Vespasian. We have mentioned that it was in the Campus Martius. It was dedicated in the fourth consulship of Augustus, b.c. 30. (Dion Cass. li. 23 ; Suet. Aug. 29.) The amphitheatre erected by Nero in the Campus Martius was a temporary one of wood. (Suet. Nero, 12.) The amphitheatre of Taurus, which does not appear to have been very magnificent (Dion Cass. lix. 10), was probably destroyed in the fire of Nero; at all events we hear no more of it after that event. The Amphitheatrum Flangum,

COLOSSEUM.
erected by Vespasian, appears to have been originally designed by Augustus. (Suet. Vesp. 9.) It stood on the site previously occupied by the lake of Nero, between the Velia and the Esquiline. (Mart. Spect.
2. 5), and was capable of containing 87,000 persons. (Notitia, Reg. iii.) A complete description of this magnificent building will be found in the Dictionary of Antiquities, and need not be re-

GROUND PLAN OF THE COLOSSEUM.
peated here. It was not completely erected, till the reign of Domitian ; though Titus dedicated it in the year 80. (Suet. Tit. 7 ; Aur. Vict. Cues. 9. 7.) In the reign of Macrinus it was so much damaged by a fire, occasioned by lightning, that it was necessary to exhibit the gladiatores and venatinnes for several years in the Stadium. (Dion Cass. lxxviii. 25.) The restoration was undertaken by

Elagabalus, and completed by Alexander Severus. (Lampr. Hel. 17, Alex. 24.) It suffered a similar calamity under Decius (Hieron. Chron. p. 475); but the damage was again made good, and venationes, or combats with wild beasts, were exhibited in it as late as the 6th century. In the middle ages it was converted into a fortress; and at a later period a great part of it was destroyed by the

Romans themselves, in order to build the CancelLeria and the Palczzo Farnese with the materials. Enough, however, is still left to render it one of the
most striking and important monnuments of imperial Rome. Its nane of Colosseum, first mentioned by Bede (ap. Ducange, Gloss. ii. p. 407, ed. Bas.)

## ELEVATION OF COLOSSECM.

under the form Colyseus, was either derived from the vast size of the building, or, more probably, from the colossus of Nero, which stood close to it. (See Nibby, Dell Anfitentro Flavio, in the Appendix to Nardini, i. p. 238, which contains the best history of the building, down to modern times.) Of the Amphitheatrum Castrense, near S. Croce, we have alreads spoken [p. 827].

## XVI. The Therbiae, or Batis.

We, of course, propose to speak here only of thnse large pablic institutions which were open either gratis or for a mere trifle to all, and of which the first were the Thermar Agrippae, near his Pantheon. The therinae must not be regarded as mere babneac, or places for bathing. They likewise contained gymnasia, or places for gymnastic exercises ; hexedrae, or rooms for the disputations of philosophers; as well as apartments for the delivery of lectures, \&c. The thermase of Agrippa do not seem to have been so splendid as some of the subsequent ones; jet, though they suffered in the fire under Titus, they were preserved till a late period, and are mentioned more than once by Martial (iii. 20. 15, 36. 6). The Thermae Neronianae were erected by Nero very near to those of Agrippa (Tac. Ann. xiv. 47; Suet. Nero, 12). After their restoration by Alexander Severus, who appears, however, to have also erilarged them (Lamprid. Alex. 25), they obtained the naine of Thermae Alexandrinaf (Cassiod. Chrom vol. ii. p. 194, Ronc.). They must have lain between the Piczaza Navona and the Pantheon, as they are thrice mentioned by the Anonymons of Einsiedlen between the latter building and the Circus Flaninius, which was the name he applied to the Piuza Navona. Hence the probability that the place just named was the Stadium of Nero. The Thermae Neronianae are frequently mentioned in a way that indicates considerable splendour (Mart. ii. 38. 8, vii. 34. 5; Stat. Silv. i. 5. 62); but their name was obliterated by that of the Thermae Alexandrinse, by which they appear in the Notitia.

The third baths erected at Rome were the Thermas Tith, on the Esquiline, near the Flavian amphitheatre. (Mart. Spect. 2). There are still considerable remains of these baths; but the plan of them is difficult to make out, from their having been erected on the site of a large previous building. Canina's account of them is the best (vide Semoric Romane di Antichità, vol. ii. p. 119, Indicaz p. 101). The site on which they stand was perhaps previously occupied by the golden house of Nera Near them stand the Thermar Trajani, which Canina has correctly distinguished from those of Titus (Preller, Regionen, p. 126; Becker, Handb. p68i). They are named in the Notitia as distinct,
and also in the Chmniclers, who however, singularly enough, place the building of both in the reign of Donitiau. (Cassiod. Chron. vol. ii. p. 197, Ronc. ; Hieron. vol. i. p. 443.) The baths of Titus had been run up very expeditiously ("velocia munera,' Mart. Spect. 2; " thermis juxta celeriter extructis," Suet. Tit. 7), and might consequently soon stand in need of restorations; and it seems not improbable, as Becker suggests (Handb. p. 687), that Trajan, whilst he repaired these, also built his own at the side of them, before he had yet arrived at the imperial dignity. Cassiodorus (l.c.) expressly mentions the year 90 . Those actually built by Trajan must have been the smaller ones lying to the NE. of those of Titus, since Anastasius mentions the church of S. Martino de' Monti as being built "juxta thermas Trajanas" (Vit. Symmachi, p. 88, Blanch.). His object in building them may have been to separate the baths of the sexes; for the men and women had hitherto bathed promiscoously: and thus the Catal. Imp. Vienn. notes, under Trajan: "Hoc Imperat. mulieres in Termis Trajanis laverunt."

The emperor Commoxias, or rather his freedman Cleander in his name, is related to have built some baths (Lampr. Comm. 17; Herod. i. 12); and we find the Thermaf Commodianae set down in the lst Region in the Notitia; whilst, by the Anonymous of Einsiedlen, on the contrary, they are three or four times mentioned as close to the Rotunda. Their history is altogether obscure and impenetrable. The Thfrmar Sevkrianae are also recorded in the Notitia in the lst Region in connection with the Commodianae. They are mentioned by Lampridius (Sever. 19); but no traces of then remain.

The Thermae Antoninlanae or Caracallar present the most perfect remains of any of the Roman baths, and from their vastness cannot fail to strike the spectator with astonishment. The large hall was regarded in antiquity as inimitable. (Spart. Carac. 9, Sever. 21.) They were dedicated by Caracalla; but Elagabalus commenced the outer porticoes, which were finished by Alexander Severus. (Lampr. Hel. 17, Alex. 25.) They are situated under the church of S. Ballina, on the right of the Via Appia.

But the largest of all the baths at Rome were the Thermae Diocletinnae. Unfortunately they are in such a rained state that their plan cannot be traced so perfectly as that of the baths of Caracalla, though enough remains to indicate their vast extent. They are situated on the inside of the agger of Servius, between the ancient Porta Collina and Porta Viminalis. Vopiscus mentions them in connection with the Bibliotheca Ulpia, which they contained (Prob. 2). These were followed by the

Thermar Constantinianaf, the last erected at Rome. They are mentioned by Aurelius Victor as an "opus caeteris haud multo dispar" (Caes. 40. 27). In the time of Du Pérac, there were still some vestiges of them on the Quirinal, on the site of the present Palazzo Rospigliosi; but they have now entirely disappeared. At one time the colossal figures on Monte Cavallo stood near these beths, till Sixtus V. caused them to be placed before the Quirinal palace. Tradition connects them with the Equi Tiridatis Regis Armeniorum, mentioned in the Notitia in the 7th Region; in which case they would belong to the time of Nero. On the other hand they claim to be the works of Phidias and Praxiteles; bat there is no means of deciding this matter.
Besides the baths here enumerated, the Notitia and Curiosum mention, in the 13th Region, but under mutilated forms, certain Thermae Suranar et Decianae, to which we have already alluded in the 5th Section. They do not, however, seem to have been of much importance, and their history is unknown.

## XVII. The Bridgers.

Rome possessed eight or nine bridges; but the accounts of them are $s 0$ very imperfect that there are not above two or three the history of which can be satisfactorily ascertained. The Pons Subliclus, the oldest and one of the most frequently mentioned of all the Roman bridges, is precisely that whose site is most doubtful. It was built of wood, as its name imports, by Ancus Marcins, in order to connect the Janiculum, which he had fortified, with the city. (Liv. i. 33; Dionys. iii. 45.) It was considered of such religious importance that it was under the special care of the pontifices (Varr. L. L. v. § 83), and was repaired from time to time, even down to the reign of Antoninus Pius. (Capitol. Ant. P. 8.) Nay that it must have existed in the time of Constantine is evident, not only from its being mentioned in the Notitia, bat also from the fact of a bridge at Constantinople being named after it, no doubt to perpetuate in that city the remembrance of its sacred character. (Descr. Const. Reg. xiv.) Yet the greatest difference of opinion prevails with regard to its situation; and as this question also involves another respecting the site of the Pons Aemilius, we shall examine them both together.

We shall first consider the circumstances undes which the Sublician bridge was built; and then inquire into the passages in ancient authors regarding it. Whether Ancus Marcius likewise built walls on the right bank of the Tiber when he built the bridge is, as we have before observed, very pro. blematical, seeing that in his time there were none on the lefi bank, and therefore there could have been no impediment to his choosing whatever site he pleased for his bridge, due regard being paid to the nature of the groand. But, as before the time of Tarquinius Priscus, the district about the Forum Boarium and circus was little better than a swamp, it does not seem probable that such a spot should have been selected as the approach to a bridge. The ground beyond the subsequent Porta Trigemina lies higher and drier, and would consequently have afforded a more eligible site. Then comes the question whether, when Servius Tullius built his walls he included the Sublician bridge within them, or contrived that it should be left outside of the gate. As the intention of walls is to defend a city, it is evident that the latter course would be the safer one; for had the bridge afforded a passage to a spot within the walls, an enemy, after forcing it, would have found himself in the heart of the city. And if we examine the passages in ancient anthors relating to the subject we shall find that they greatly preponderate in favour of this arrangement. Polybins expressly says that the bridge was $\pi \rho$ o $\tau \hat{\eta} s$ $\pi$ diccos, before or outside of the city (vi. 55). Becker, indeed ( p .697 ), would rob $\pi \rho \delta$ of its usual meaning here, and contends that the expression
 or $\xi_{\xi} \infty$ Tîs $\pi \delta \lambda \in \omega 5$; but he does not support this assertion with any examples, nor would it be possible to support it. The narratives of the flight of Caius Gracchus likewise prove that the bridge must have been outside of the town. Thus Valerius Maximus: "Pomponius, quo is (Gracchus) facilius evaderet, concitatum sequentiom agmen in Porta Trigemina aliquamdin acerrima pagaa inhibuit - Laetorius autem in ponte Sublicio constitit, et eum, donec Gracchus transiret, ardore spiritus sui sepsit" (iv. 7. § 2). In like manner the account of Aurelius Victor (Vir. IU. c. 65) plainly shows that Gracchus must have passed the gate before he arrived at the bridge. There is nothing in Livy's narrative of the defence of the bridge by Horatius Cocles to determine the question either one way or

## PONS SUBLICIUS, RESTORED BY CANINA.

the other. An inference might perhaps be drawn from a passage in Seneca, compared with another in Plautus, in favour of the bridge being outside of the Porta Trigemina: "In Subliciam Pontemı me transfer et inter egentes me abige: non ideo tamen me despiciam, quod in illorum numero considen, qui manam ad stipem porrigunt." (Sen. de V. Beat. 25.) As the Pons Sublicius is here shown to have been the haunt of beggars, so Plautus intimates that their
station was beyond the P. Trigemina (Cape i. 1. 22): -
"Ire extra Portam Trigeminam ad saccum licet."
When the Tiber is low the piles of a bridge are still visible that existed just outside of the Porta Trigemina, near the Porto di Ripa Grande (Canina, Indicaz. p. 557); and the Italian topographers, as well as Bunsen, have assumed them to be the re-

ROMA.
mains of the Sablician bridge; whilst Becker, in his De Muris, held them to belong to the Pons Aemilius. That writer in the treatise alloded to ( $p$. 78, seq.) made three assertions respecting the Ae. milian bridge: (1) That it was not the same as the Sublician; (2) that it stood where the Sublician is commonly placed, i. e. just below the Porta Trigemina; (3) that it was distinct from the Pons Lapideus, or Lepidi. Bat in his Handbuch, published only in the following year, he rejected all these assertions except the first.

According to the most probable view of this intricate and mach disputed question at which we can arrive, the matter appears to us to have stood as follows: the Pons Sublicius was outside of the Porta Trigemina, at the place where remains of a bridge still exist. The reasons for arriving at this conclusion have been stated at the beginning of this discussion. Another bridge, of stone, also called Sablicius, was erected close to it to serve the purposes of traffic; but the wooden one was still preserved as a venerable and sacred relic, and as indispensable in certain ancient religious ceremonjes, sach as the procipitating from it the two dozen men of straw. But the stone bridge had also another name, that of Lapideus, by way of distinction from the wooden bridge.

Becker is of opinion that the notion of Aethicus, or Jalius Orator, that Pons Lapideus was only a vulgar error for Pons Lepidi, is a " falsae eraditionis conjectura" and we think 80 too. We do not believe that the bridge ever bore the name of Lepidus. We may see from the account given of the wooden bridge by Dionysius, that, thoogh preserved in his time, it was useless for all practical purposes (iii. 45).

ROMA.
We may be sure that the pontifices would not have taken upon themselves the repairs of a bridge subject to the wear and tear of daily traffic. Ovid (Fast v. 622) adverts to its existence, and to the sacred purposes to which it was applied : -

## "Tunc quoque priscorum virgo simulacra virorum

 Mittere roboreo scirpes ponte solet."The coexistence of the two bridges, the genaine wooden Sublician, and its stone substitute, is shown in the following passage of Plutarch : ov rdo

 тautéoytos. (Num. 9.) Still more decisive is the testimony of Servius: "Cum per Sablicium pontem, hoc est ligneum, qui modo lapideus dicitur, transire conaretur (Porsena) " (ad Aem viii. 646). There must certainly have been a strong and practicable bridge at an early period at this place, for the heavy traffic occasioned by the neighbourhood of the Emporiam; but when it was first erected cannot be said. The words of Plutarch, $\boldsymbol{v}^{\prime}$ ' Aimilion tauc兑ovtos, are obscure, and perhaps corrupt; but at all events we must not confound this notice with that in Livy respecting the building of the Pons Aemilius ; the piles of which were laid in the censorship of M. Aemilius Lepidus and M. Fulvias Nobilior, B.c. 179, and the arches completed some years afterwards, when P. Scipio Africunus and L. Mammius were censors (xl. 51). There is no proof that the Ponte Rotto is the Pons Aemilius; but Becker, in his second view, and Canina assume that it was; and this view is as probable as any other.

IMgULA TIBERLTA, FITE THE FONS FABRICIUS AND PONS CESTIU8.

There were several bridges at Rome before the Pons Aemilins was built, since Livy (xexv. 21) mentions that twoo were carried away by the stream in B. C. 193; and these could hardly have been all, or be would undoubtedly have said so. The Insula Tiberina was, in very early times, connected with each shore by two bridges, and hence obtained the name of Letrer Duos Pontes. (Flut. Popl. 8; Macrob. Sat. ii. 12.) That nearest the city (now Ponte Quattor Capi) was the Pons Fabricius, so mamed from its founder, or probably its restorer, VOL. 12.
L. Fabricius, as appears from the inscription on it, and from Dion Cassius (xxxvii. 45). It was the favourite resort of suicides:-
"__ jussit sapientem pascere barbam
Atque a Fabricio non tristem ponte reverti."
(Hor. S. ii. 3. 36.)
The bridge on the farther side of the island (now Ponte S. Bartolommeo) is commonly called Pons Cestius, and appears to have borne that name in
the middle ages. In the inscription, howerer, which is still extant upon it, it is called Pons Gratianus, and its restoration by Valentinian, Valens, and Gratian is commemorated (Canina, Indic. p. 576; cf. Amm. Marc. xxvii. 3; Symm. Epist v. 76, x. 45).

Besides these bridges we find four others recorded in the suinmary of the Notitia, namely, the Aelius, Aurelina, Probi, and Milvius. The last of these lay two miles N. of Rome, at the point where the Flaminian Way crossed the Tiber, and has been already described in this dictionary. [Pons Milvius.] The Pons Aelius (now Ponte S. Angelo) was bnilt by Hadrian when he founded his mausoleum, to which it directly leads. (Spart. Hadr. 19.) In the time of the Anonyinous of Einsiedlen, who has preserved the inscription, it was called Pons S. Petri. But before the time of Hadrian there was a bridge which connected the district of the Vatican with the city near the gardens of Caligula and Nero, remains of which still exist near $S$. Spirito. This is probably the bridge which is called in the Mirabilia "Pons Neronianus," and by the ancient topographers "Pons Vaticanus." The Pons Triumphalis has also been sometimes identified with this bridge; but Piranesi, who is followed by Bunsen, places the Pons Triumphalis above the Aelian bridge; and it is said that there are still remains of one of the piles near Tor di Nona. But in the time of Procopius these had disappeared, and the Pons Aelius formed the only communication between the city and the Vatican district.

The Pons Aurrlius was most probably the present Ponte Sisto, leading to the Janiculum and the Porta Aurelia It appears to have been called Pons Antoninus in the middle ages. What the Pons Probi may have been it is impossible to say. Becker assigns the name to the bridge by the Porta Trigemina, but merely because, having denied that to be the Sublicius, he has nowhere else to place it. Canina, on the contrary (Indic. p. 609), places it where we have placed the Pons Aurelins.

## XVIII. Aqueducts.

In the time of Frontinus there were at Rome nine principal aqueducts, viz., the Appia, Anio Vetus, Marcia, Tepula, Julia, Virgo, Alsietina, Claudia, Anio Novas; and two subsidiary ones, the Augusta and Rivus Herculaneus. (Aq. 4.) Between the time of Frontinus and that of Procopius their namber had considerably increased, since the latter historian relates that the Goths destroyed 14 aqueducts that were without the walls. (B. G. i. 19.) The Notitia enumerates 19, viz. the Trajana, Annia, Attica, Marcia, Claudia, Herculea, Cerulea, Julia, Augustea, Appia, Alseatina, Ciminia, Aurelia, Damnata, Virgo, Tepala, Severiana, Antoniniana, Alexandrina. To enter into a complete history of all these would almost require a separate treatise; and wo shall therefore confine ourselves to a statement of the more important particulars concerning thern, referring those readers who are desirous of more information on the subject to the Dictionary of Antiquities, art. Aquarductus.

The AqUa Appin was, as we have already related, the first aqueduct conferred on Rome by the care of the censor Appius Claudius Caecus, after whom it was named. It commenced on the Via Praenestina, between the 7th and 8th milestone, and extended to the Salinae, near the Porta Trigeminu. The whole of it was underground, with
the exception of sixty passus conducted on arches from the Porta Capena. Its water began to be distributed at the imus Clivas Pnblicius, near the Porta Trigemina. (Front. Aq. 5.)

The Anio Vetus was commenced by the censor Mr. Curius Dentatus in b.c. 273, and completed by M. Fulvius Flaccus. (Ib. 6; Aur. Vict. Vir. IU. 33) It began above Tibur, and was 43 miles long; but only 221 passus, or less than a quarter of a mile, was above ground. It entered the city a little N. of Porta Maggiore.

The Aqua Marcia, one of the noblest of the Roman aqueducts, was built by Q. Marcius Rex, in pursuance of a commis.ion of the senate, в. C. 144. It began near the Via Valerin at a distance of 36 miles from Rome; but its whole length was nearly 62 miles, of which 6935 passus were on arches. Respecting its source, see the article Fucuxus Lacus [Vol. I. p. 918]. It was lofty enough to supply the Mons Capitolinus. Augustus added another source to it, lying at the distance of nearly a mile, and this duct was called after him, Aqua augusta, but was not reckoned as a separate aqueduct. (Frontin. Aq. 12 ; Plin. xxxi. 24 : Strab. v. p. 240.)

The Aqua Tepula was built by the censors Cn. Servilius Caepio and L. Cassius Longinus, b. c. 127. Its source was 2 miles to the right of the 10th milestone on the Via Latina.

The preceding aqueduct was united by Agrippa with the Aqua Julia, which began 2 miles farther down ; and they flowed together as far as the Piscina on thie Via Latina. From this point they were conducted in separate channels in conjunction with the Aqua Marcia, so that the Aqua Julia was in the uppermost canal, the Marcia in the lowest, and the Tepula in the middle. (Front. Aq. 8, 9, 19.) Remains of these three aqueducts are still to be seen at the Porta S. Lorenzo and Porta Maggiore.

The Aqua Virgo was also conducted to Rume by Agrippa in order to supply his baths. According to Frontinus (Aq. 10) its name was derived from its source having been pointed out by a young maiden, but other explanations are given. (Plin. xxxi. 25; Cassiod. Var. vii. 6.) It commenced in a marshy district at the 8th milestone on the Via Collatina, and was conducted by a very circuitous route, and mostly underground, to the Pincian hill; whence, as we have before mentioned, it was continued to the Campus Martius on arches which began under the gardens of Lucullas. It is the only aqueduct on the left bank of the Tiber which is still in some degree serviceable, and supplies the Fontana Trevi

The Aqua Alsietina belonged to the Transtiberine Region. It was constructed by Augustus, and had its source in the Lacus Alsietinus (now Lago di Martignano), lying $6 \frac{1}{2}$ miles to the right of the 14th milestone on the Via Claudia. Its water was bud, and only fit for watering gardens and such like purposes. (Front. 11.)

The Aqua Claudia was begun by Caligula, and dedicated by Claudius, A. 5 . This and the Anio Novus were the most gigantic of all the Roman aqueducts. The Chaudia was derived from two abundant sources, called Caerulus and Curtins, near the 38th milestone of the Via Sublacensis, and in its course was angmented by another spring, the Albudinus. Its water was particularly pure, and the best after that of the Marcin.

The Anio Novus began 4 miles lower down the Via Sublacensis than the preceding, and was the
longest and most lofty of all the aqueducts, being 58,700 passus, or nearly 59 miles, long, and its arches were occasionally 109 feet high. (Front. 15.) This also was completed by the emperor Clandius, as appears from the inscription still extant upon its remains over the Porta Maggiore; where both enter the city on the same arch, the Anio Novus flowing over the Claudia. Hence it was conducted over the Caelian hill on the Arcus Neroniani or Caelimontani, which terminated, as we have already said, near the temple of Claudius.

As Procopins mentions fourteen aqueducts, five new ones mast have been added between the time of Frontinus and of that historian; but respecting only two have we any certain information. The first of these is probably the Aqua Trajasa, which we find recorded apon coins of Trajan, and which is also mentioned in the Acta Martyr. S. Anton. The water was taken from the neighbourhood of the Lacus Sabatinus (Lago di Bracciano), and, being conducted to the height of the Janiculum, served to turn the mills under that hill. (Procop. B. G.i. 19.) This duct still serves to convey the Acqua Paola, which, however, has been spoilt by water taken from the lake. It was also called Ciminia.

The Aqua Alkiandrina was constructed by the emperor Alexander Severus for the use of his baths. (Lamprid. Alex. 25.) Originally it was the same as that now called Acqua Felice, but conducted at a lower level.

The Aqua Severiana is supposed to have been made by the emperor Septimins Severus for the use of his baths in the lst Region; but there is no evidence to establish its execution.

The Aqua Antoniniana was probably executed by Caracalla for the service of his great baths in the 12th Region; but this also is unsupported by any satisfactory proofs. (Canina, Indic. p. 620.) The names and history of a few other aqueducts which we sometimes find mentioned are too obscure to require notice here.

It does not belong to this subject to notice the Roman Viae, an account of which will be found onder that bead.

## Soleces and Literatcre of Roman TopoовAPHY.

With the exception of existing monuments, the chief and most authentic sources for the topography of Rome are the passages of ancient authors in which different localities are alluded to or described. Inscriptions also are a valuable source of information. By far the most important of these is the Monumentum Ancyranum, or copy of the record left by Augustus of his actions ; an account of which is given elsewhere. [Vol. I. p. 134.] To what is there said we need only add that the best and most aseful edition of this docament is that published at Berlin with the emendations of Franz, and a commentary by A. W. Zumpt (1845, tio. pp. 120). Another valuable inscription, though not nearly so important as the one just mentioned, is that called the Basis Capitolisa (Gruter, ocl.), containing the names of the Vici of 5 Regions (the 1st, 10th, 12th, 13th, and 14th), whose curatores and vicomagistri erected a munument to Hadrian. It will be found at the end of Becker's Handbuch, vol. i. We may also mention among sources of this description the fragments of Calendars which have been found in rarious places, and which are frequently useful by marking the sites of temples where certain sacrifices
were performed. For the most part the original marbles of these fragments have disappeared, and the inscriptions on them are consequently only extant in MS. copies. One of the most ancient monuments of this kind is the Fasti Maffeorum or Calendarium Maffeanum, so called from its having been preserved in the Palazzo Maffei. With a few lacunae, it contains all the twelve months; but what little information that is to be found in it, besides the principal festivals, relates chiefly to Augustus. The next in importance is the Fastr Praenestini, discovered at Praeneste (Palestrina) in 1774. Verrius Flaccus, the celebrated grammarian, arranged and annotated it, caused it to be cut in marble, and erected it in the forum at Praeneste. (Suet. In. Gramm. c. 17.) Only four or five months are extant, and those in an imperfect state. The Calendarium Amiternninum was discovered at Amitemum in 1703, and contains the months from May to December, but not entire. The calendar called Fasti Capranicorum, so named from its having formerly been preserved in the Pa lazzo Capranica, contains August and September complete. Other calendars of the same sort are the Antiatinum, Venusinum, \&c. Another lapidary document, but unfortunately in so imperfect a state that it often serves rather to puzzle than to instruct, is the Capitoline Plan. This is a large plan of Rome cut upon marble tablets, and apparently of the age of Septimius Severas, though with subse. quent additions. It was discovered by the architect Giovanni Antonio Dosi, in the pontificate of Pius IV., under the church of SS. Cosmo e Damiano; where, broken into many pieces, it was used as a covering of the walls. It came into the possession of Cardinal Farnese, but was put away in a lumber room and forgotten for more than a century. Being rediscovered, it was published in 1673, in 20 plates, by Giovanni Pietro Bellori, librarian to Queen Christina; and subsequently at the end of the 4th volume of the Thesaurus of Graevius. The original fragments were carried to Naples with the other property of the Farnese family, and were subsequently given by the king of Naples to Pope Benedict XIV. In 1742 Benedict presented thern to the Capitoline Museum at Rome, where they now appear on the wall of the staircase; but several of the pieces had been lost, for which copies, after the designs of Bellori and marked with a star, were substituted. On these fragments the plans of some ancient buildings may be made out, but it is very seldom that their topographical connection can be traced.
Amongst the literary records relating to Roman topography, the first place must be assigned to the Notitin. The full title of this work is: Notitia Dignitatum utriusque Imperii, or in Partibus Orientis et Occidentis; and it is a statistical view of the Roman empire, of which the description of Rome forms only a small portion or appendix. It cannot be later than the reign of Constantine, since no Christian charch is mentioned in it, and indeed no building later than that emperor; nor, on the other hand, can it be earlier, since numerous buildings of the 3rd century, and even some of Constantine's, are named in it. The design of it seems to have been, to name the principal buildings or other objects which marked the boundaries of the different Regions; but we are not to assume that these objects are always named in the order in which they occurred, which is far from being the case. This
catalogue has come duwn to us in various shapes. One of the simplest and most genuine seems to be that entitled Curiosum Urbis Romae Regionum XIIII. cum Breviariis suis, the MS. of which is in the Vatican. Some of the other MSS. of the Notitia soem to have been interpolated. The spelling and grammar betray a late and barbarous age; but it is impossible that the work can have been composed at the time when the MS. was written.

Besides these there are two catalogues of the socalled Regionari, Publites Victor, and Sextus Rufus, which till a very recent period were regarded as genuine, and formed the chief basis of the works of the Italian topographers. It is now, however, universally allowed that they are campilations of a very late date, and that even the names of the writers of them are forgeries. It would be too long to enter in this place into the reasons which have led to this conclusion; and those realers who are desirous of more information will find a full and clear statement of the matter in a paper of Mr. Bunbury's in the Classical Museum (vol. iii. p. 373, seq.).

The only other authorities on Roman topography that can be called original are a few notices by travellers and others in the middle aqes. One of the principal of these is a collection of inscriptions, and of routes to the chief churches in Rome, discovered by Mabillon in the monastery of Einsiedlen, whence the author is commonly cited as the Anonymus Einsiediensis. The work appears to belong to the age of Charlemaque, and is at all events older than the Leonine city, or the middle of the 9th century. It was published in the 4th vol. of Mabillon's Analecta; but since more correctly, according to the arrangement of Gustav Huenel, in the Archiv für Philologie und Pädagogik, vol. v. p. 115, seq. In the Routes the principal objects on the right and left are mentioned, though often lying at a considerable distance.
The treatise called the Mifabilia Romar, prefixed to the Chronicon Rumauldi Salernituni in a MS. preserved in the Vatican, and belonging apparently to the 12 th century, seens to have been the first attempt at a regular description of ancient Rome. It was compiled from statistical notices, narratives in the Acta Martyrem, and popular legends. It appears, with variations, in the Liber Censurum of Cencius, and in many subsequent manuscripts, and was printed as early as the 16th century. It will be found in Montfaucon, Diarium Jtal. p. 283, seq., and in Nibby's Effemeridi Letterarie, Rome, 1820, with notes. A work ascribed to Martinus Polonus, belonging probably to the latter part of the 13th century, seems to bave been chiefly founded on the Mirabilia. Accounts of some of the gates of Rome will be found in William of Malmesbury's work De Gestis Regum Anglorum (book iv.).

The Florentine Pogaro, who flourished in the 15th century, paid great attention to Roman antiquities. His description of Kome, as it existed in his time, is a mere sketch, but elegant, scholar-like, and touching. It is contained in the first book of his work entitled De Varietate Fortunce Urbis Romae, and will be found in Sallengre, Nov. Thesaur. Ant. Rom. rol. i. p. 501. A separate edition of his work was also published in Paris, 1723. His predecessor, Petranchi, has given a few particulars respecting the state of the city in his time; but be treats the subject in an oucritical manuer.

The traveller Kyriacus, called from his native town Anconitanus, who accompanied the emperor Sigisinund, passed a few days in Rome during the time that Poggio was also there, which he spent in collecting inscriptions, and noting down some remarks. His work, entitled Kyriaci Anconitani Itinerarium, was published at Florence in 1742.

Such are the chief original sources of Roman topography. The literature of the subject is abandantly copious, but our space will permit us to do little more than present the reader with a list of the principal works. The first regular treatise on the antiquities of Rome was that of Biondo Flavio (Blondus Flavius) ( $1388-1463$ ), who was at once a man of business and a man of letters. His work entitled Roma Instaurata, a gigantic step in Roman topography, was published by Froben at Basie, 1513, fol. An Italian translation by Lucio Fanna, but imperfect, appeared at Venice in i548. Towards the end of the 15 th century, Julius Pomponius Laetus founded the Roman Academy. Laptus was an enthusiastic collector of inscriptions, but his fondness for them was such that he sometimes invented what he failed in discovering, and he is accused of having forged the inscription to the statue of Claudian found in the forum of Trajan. (Tirabnschi, Storia della Lett. vol. ii. lib. iv.) His book, De Romumae Urbis vetustate, is uncritical. and of small value. Janus Parrhasius had a little previously pablished the pseudo-Victor. To the same perind belong the De Urbe Roma Collectanea of the bishop Fabricius Varranus, a compilation chiefly borrowed from Biondo, and published, like the work of Latus, in the collection of Mazocchi, Rome, 1515, 4ta Bernardo Raccellai, a friend of Lorenzo de' Medici, commenced a description of Rome, by way of commentary on the so-called Victor. It was never completed, and the MS., which is of considerable value, was first printed among the Florentine "Scriptores," in an Appendix to Muratori's collection (rol. ii. p. 755).

The next work that we need mention is the Antiquitates Urbis Romae of Andreas Fulvius, Rome, 1527 , fol. Bresc. $1545,8 \mathrm{vo}$. This production is a great step in advance. Fulvius procured from Raphael a sketch of the 14 Regions, according to the restoration of them by himself, but it does not seem to have been preserved. In 1534 the Milanese knight Bartholomneus Marlianus published his Urbis Romae Topographia, a work in many points still unsurpassed. An augenented and much improved edition was published in 1544 ; but that of 1588 is a mere reprint of the first. It will also be found in the Thesaurus of Graevins, vol. iii. Marliano was the first to illustrate his work with plans and drawings, though they are not of a very superior kind. Lucio Fauno's Delle Antichità dilla Città di Roma appeared at Venice in 1548. It contains a few facts which had been overlooked by his predecessors. The celebrated herinit Onuphrius Punvinius of Verona, published at Venice in 1558 his Commentarium Reipublicae Rmnanae LibriIII. The first book, entitled Antiquae Urbis Imago, which is the topngraphical part, is written with much learning and acuteness. It was intended merely as a preface to a complete description of Rome according to the Regions of Augustus, but the early death of Panvinius prevented the execution of this plan. His work is contained in the collection of Graerius, vol. iii. It was Panvinius who first published Sextus Rufus, and he also greatly augnented Publius

## ROMA.

ROMA. 853

Victor. George Fabricius, of Chemnitz, author of Antiquitatum Libri II., Basle, 1550, accused Panvinius of stealing from him; but if such was the case, be greatly improved what he purloined. Jean Jacques Boissard, of Besançon, published at Frankfort in 1597 a Topographia Romanae Urbis, which is not of much value; but the sketches in his collection of inscriptions have preserved the axpect of many things that have now disappeared. The next work of any note is the Roma Vetus et Recens of the Jesuit Alex. Donatus of Siena, in which particular attention was paid to the illustration of Roman z.ragraphy by passages in ancient authors. It was published at Rume, 1638, 4to, and also in the Thescrurses of Graevius, vol. iii. But this production was soon obscured by the more celebrated work of Faminiano Nardini, the Roma Antica, which marks an epoch in Roman Topography, and long enjoyed a paramonnt authority. So late as the year 1818. Hubbouse characterised Nardini as "to this day the most serviceable condnctor." (Hist. Illustrations of Childe Harold, p. 54.) Yet, in many respects, lhe was an incompetent guide. He knew no Greek; he took the works of the pseudo-Kegionaries for the foundation of his book; and it is even affirmed that, though he lived in Rome, he had never visited many of the buildines which be describes. (Bunsen, Vorrede zar Beschreibung, p. xxxix.) His work was published at hume, 1668 , 4to; but the best edition of it is the 4th, edited by Nibby, Rome, 1818, 4 vols. 8 vo . There is a Latin translation of it in Graevius, vol. iv. In 1680, Raphael Fabretti, of Urbino, secretary to Cardinal Uttuboni, published a ealuable work, De A puneductions, which will also be fuand in the same volume of Graevius.

Towards the end of the 17th century two learned French Benedictines, Mabillon and Montfaucon, remdered much service to Roman topography. Mabillon first published the Anonymus Einsiedlensis in his Analecta (vol. iv. p. 50, seq.) Montfaucon, who spent two years and a half in Rome (16981700), inserted in his Diarium Italicum a description of the city divided into twenty days. The 20th chapter contains a copy of the Mirabilia. In 1687 Olaus Borrichius published a topographical sketch of Rome, accoruing to the legions. It is in the 4 th volume of Graevius. The work of the Marquis Ridolino Venuti, entitled Accurata e succinta Inscrizione Topografica delle Antichità di Koma (Roma, 1763, 2 vols. 4to.), is a book of more pretersions. Venuti took most of his work from Nardini and Piranesi, and the new matter that he added is generally erroneous. The 4th edition by Stefano Yiale, Rume, 1824, is the best. Francesco Ficoroni's Vestiyia e Rarità di Roma Antica (Roma, 1744 , 4to.) is not a very satisfactury performance. The most useful portions of it have been inserted in the Miscellanea of Fea (part i. pp. 118-178). The work of our countryman Andrew Lumisden, Remarks on the Antiquities of Rome and its Enrirons (London, 1797, 4to.) was, in its day, a book of some authority. Many valuable observations on Kornan topography are scattered in the works of the learned Gaetano Marini, and especially in his Alti de' Fratelli Arvali; but he treated the subject only incidentally. The same remark applies to Visconti. The Roma descritta ed illustrata (Roma, 1806, 2 vol. 4 to .), of the Abbate Guattani is the parent of most of the modern guide books. Antonio Nibhy has published several aseful works on Roman topography, which, if sometimes deficient in accurate
scholarship, display nevertheless considerable acuteness and knowledge of the subject. His principal works are, Del Furo Romano, della Via Sacra, q'c., Roma, 1819, 8vo.; Le Mura di Roma, disegnnte cha Sir W. Gell, illustr. da A. Nibby, Roma, 1820; and his Roma Antica, published in 1838. Sir Wm. Gell's Topography of Rome and its Vicinity (2nd Edit., revised and enlarged by Bunbury, London, 1846) contains some aseful information. The Miscellanea filologica, critica ed antiquaria (Rome, 1790), and the Nuova Descrizione di Roma (Rome, 1820, 3 vols. 8 vo.), by Carlo Fea, are useful works. Hubhouse's Histcrical Illustrations of Childe IIarold, with Lissertations on the Ruins of Rome (Landon, 2nd ed. 1818, ovo.) are chiefly valuable for their account of the gradual destruction of the city. The works of two other Englishmen are now ont of date viz. Edward Burton's Description of the Antiquities of Rome (Oxf. 1821 ; London, 1828, 2 vols. 8vo.); and the Kev. Richard Burgess's Topography and Antiquitics of Rome (London, 1831, 2 vols. 8vo.). Forsyth's Italy is of little service for Rome. Sachse's Geschichte und Beschreibung der alten Stadt Kum (Hanover, 1824-1828, 2 vols. 8vo.), though still in some respects a useful production, must now be regarded as superseded by more recent works.

We are now arrived at the Beschreibung der Stadt Rom, with which may be said to commence the modern epoch of Roman topography. This work was projected in 1817 by some German literati then residing at Rome, among whom were the present Chevalier Bunsen, and Ernst Platner, Eduard Gerhard and Wilhelm Köstell. They were joined by the celebrated historian B. G. Niebuhr, who undertook the superintendence of the ancient part; for the scheme of the look embraced a complete description of the modern city, with all its treasures of art, besides an account of ancient Rome. It is, however, of course only with the latter that we are here concerned, which was andertaken by Niebuhr. Bunsen, and subsequently L. Urlichs. Niebuhr's connection with the work was not of long duration, and only a few of the descriptions are from bis band, which form the most valuable portion of the book. The views of the German scholars threatened a complete revolution in Rcman topography. They seemed to have come to Rome with the express design of overturning the paper city, as their ancestors many centuries before had subverted the stone one. In extent and accuracy of erudition they were far superior to their Italian antagonists; but this advantage is often more than counterbalanced by that want of sober and critical good sense which so frequently mars the productions of German scholars. They have succeeded in throwing doubt upon a great deal, but bave established very little in its place. To Piale, and not to the Germans, belongs the merit of having reestablished the true situation of the forum, which may be considered as the most important step in the modern topography of Kome. The Gernan views respecting the Capitol, the comitium, and several other important points, have found many followers; but to the writer of the present article they appear for the most part not to be proved; and he has endeavoured in the preceding pages to give his reasons for that opinion.
It cannot be denied, however, that the appearance of the Beschreibung did gond service to the cause of Roman tolography, by awakening a sharper and more extended spinit of inquiry. The first volume
appeared at Stuttgand in 1829, the last in 1842. As a literary production - we are speaking of course of the ancient parts-it is of little service to the scholar. The descriptions are verbose, and the ancient ones being intermingled with the mudern have to be sought through a voluminous work. A still graver defect is the almost entire absence, especially in the earliar volumes, of all citation of anthorities.
At this period in the history of Roman topography W. A. Becker, paid a short visit to Rome. Becker took up the subject of his researches as a point of national honour; and in his first tract, $D e$ Romae Veteris Muris atque Portis (Leipzig, 1842), devoted two pages of the preface to an attack upon Canina, whom he suspected of the grave offence of a want of due reverence for German scholarship. But with an inborn pugnacity his weapons werealsoturned against his own countrymen. Amida little faint praise, the labours of Bunsen and Urlichs were censured as incomplete and unsatisfactory. In the following year (1843) Becker published the first volume of his Handbuch der Römischen Alterthumer, containing a view of the topography of Rome. A review of his work by L. Preller, which appeared in the Newe Jenaische Allgemeine Literatur-Zeitung, though written with candour and moderation, soems to have stung Becker into fury. He answered it in a pamphlet entitled Die Römische Topographie in Rom, eine Warnung (Leipsig, 1844), in which be accused Preller of having taken up the cadgels in farour of Canina, though that gentleman is a moderate adherent of the German school of topographers. Nothing can exceed the arrogant tone of this pamphlet, the very title of which is offensive. It was answered by Urlichs in his Römische Topographie in Leipzig (Stuttgart, 1845), in which, though Becker well deserved castigation, the author adopted too much of the virulent and personal tone of his adversary. The controversy was brought to a close by a reply and rejoinder, both written with equal bitterness; but the dispute has served to throw light on some questions of Roman topography. In a purely literary point of view, Becker's Handbuch must be allowed to be a very useful production. His views are arranged and stated with great clearness, and the constant citation of anthorities at the bottom of the page is very convenient to the stadent. The writer of this article feels himself bound to acknowledge that it would not have been possible for him to have prepared it without the assistance of Becker's work. Nevertheless he is of opinion that many of Becker's views on the most important points of Roman topography are entirely erroneous, and that they have gained acceptation only from the extraordinary confidence with which they are asserted and the display of learning by which they are supported. Amongst other German topographers we need only mention here $L$. Preller, who has done good service by some able papers and by his useful work on the Regions of Augustus (Die Regionen der Stadt Rom, Jena, 1846, 8vo.). We may add that the English reader will find a succinct and able sketch of the views of the German school, and particularly of Becker, in a series of very valuable papers by Mr. Bunbury, published in the Classical Museum (vols. iii. iv. and v.).

We shall close this list with the names of two modern Itulian topographers. Between the years 1820 and 1835, Stefano Piale published some very useful dissertations on various points of Roman to-
pography, among which the following may be particularly mentioned: Delle Porte settentrionali dal Recinto di Servio; Delle Porte orientali, delle meridionali, e di quelle del Monto Aventino della stessas cinta; Della grandesza di Roma al tempo di Plinio; Del Foro Romano; Delle Mfura Aureliane; e degli antichi Arsenali detti Navalia, gic. But at the head of the modern Italian school must be placed the Commendatore, Luigi Canina. Canina has a real enthusiasm for his subject, which, from his profession, he regards from an architectural rather than a philological point of view; and this, combined with the advantages of a residence at Rome, goes far to compensate the absence of the profounder, but often unwieldy, erudition of the Germans. The later editions of his works have been freed from some of the errors which disfigared the carly ones, and contain much useful information, not unmixed sometimes with erroneous views; a defect, however, which in a greater or less degree must be the lot of all who approach the very extensive and very debatable subject of Roman topography. Canina's principal works are the Indicazione topografica di Roma antica, 4th ed. Rome, 1850, 8vo.; Del Foro Romano e swe Adjacenze, 2nd ed. 1845; and especially his magnificent work in four large folio volumes entitled Gli Edifizi di Roma antica, with views, plans, and restorations.

It now only remains to notice some of the principal maps and other illustrations of Rome. The Florentine San Gallo, who flourished in the 15th century, drew several of the most remarkable monuments. The sketches and plans of Antonio Labacco, executed at the beginning of the 16 th century, are valuable but scarce. We have already mentioned that Raphael designed, or thought of denigning, a plan of the restored city. This plan, if ever executed, is no longer in existence; but a description of it will be found in a letter addressed by Castiglione to Pope Leo X. (Published in the works of Cas:tiglione, Padua, 1733. There is a translation of it in the Beschreibung, vol. i. p. 266. seq.) Serlin of Bologna, architect to Francis I., gave many plans and sketches of ancient Roman buildings in the 3rd book of his work on architecture (Venice, 1544,fol.), to which. however, he added restorations. Leonardo Buffalini's great plan of Rome, as it was in 1551, was most important for Roman topography. It was drawn on wood in 24 plates; bat unfortunately all that now remains of it is an imperfect copy in the Barberini palace. Pirro Ligorio and Bernardo Gamucci published several views in Rome about the middle of the 16 th century. In 1570 appeared the great work of Palladio, Libri IV. dell Architettura, frc. (Venice, fol.), in the 4th book of which are several plans of ancient temples; but the collection is not so rich as that of Serlio. Scamozziis Discorsi sopra le Antichità di Roma (Venice, 1852, fol.) contains some good views, but the letter-press is insignificant. In 1574 Fulvins Ursinus assisted the Parisian architect Du Pérac in drawing up a plan of the restored city, which was published in several sheets by Giacomo Lauro. It is errodeous, incomplete, and of little service. Of much more value are the views of ancient monuments published by Dus Pérac in 1573, and republished by Loesi in 1773. In the time of Da Pérac several monuments were in existence which have now disappeared, as the forum of Nerra, the Septizonium, and the trophies of Marius. The sketches of Pietro Santi Bartoli, first published in 1741, are clever but full of mannerisim

Antoine Desgodetz, sent to Rome by Colbert, published at Paris in 1682 his work in folio, entitled Les $E^{\prime}$ 'difices antiques de Rome mesuris et dessines. The measurements are very correct, and the work iodispensable to those who would thoroughly study Roman architecture. Nolli's great plan of Rome, the first that can be called an accurate one, appeared in 1748 . In 1784 Piranesi published his splendid work the Antichità Romane (Rome, 4 vols.fol.), containing the principal ruins. It was continued by his son, Francesco Piranesi. The work of Mich. d'Orerbeke, Les restes de lancienne Rome (a la Haye, 1673 , 2 vols. large fol.), is also of great value. In 1822 appeared the Antichitis Romane of Litigi Rossini (Rome, 1822, large fol.). To the plans and restorations of Canina in his Edifizi we have already alluded. His large map of Rome represents of course his peculiar views, but will be found useful and valuable. Further information on the literature of Roman topography will be found in an excellent preface to the Beschreibung by the Chevalier Bunsen.
[T. H. D.]

## COIN OF ROME.

ROMATI'NUS. [Concordia.]
ROME'CHIUM, a place on the E. coast of the Bruttian peninsula, mentioned only by Ovid, in his description of the voyage of the Epidaurian serpent to Kome (Ovid. Met. xv. 705). The geography of the passage is by no means very precise; but according to local topographers the name of Romechi is still retained by a place on the sea-coast near Roccella, about 12 miles N . of the ruins of Locri (Romanelli, vol. i. p. 156; Quattromani, Not. ad Barrii Calabr. iii. 13.)
[E. H. B.]
RO'MULA, a place in Upper Pannonia, on the road leading from Aemona along the river Savus to Sirmium. (It. Ant. p. 274; Tab. Peut.) It is perhaps the modern Carlstadt, the capital of Croatia.
[L. S.]
RO'MULA. [DACIA, F. 744, b.]
ROMU'LEA ('P $\omega \mu \nu \lambda$ la, Steph. B.: Bisaccia), a city of Samnium, mentioned by Livy (x.17), as being taken by the Roman consul P. Decius, or according to others by Fabius, in the Third Samnite War, B. C. 297. It is described as being a large and opulent place; but seems to have afterwards fallen into decay, as the name is not noticed by any other writer, except Stephanus of Byzantium, and is not found in any of the geographers. But the Itineraries mention a station Sub Romula, which they place on the Appian Way, 21 miles beyond Aeculanum, and 22 miles from the Pons Aufidi (Ition Ant. p. 120). Both these stations being known, we may fix Romulea, which evidently occupied a hill above the road, on the site of the modern town of Bieaccia, where various ancient remains have been discovered. (Romanelli, vol. ii. p. 348; Cluver. Ital. p. 1204 ; Pratilli, Via Appia, iv. 5).
[E. H. B]
BOSCIANUM (Roseano), town of Brattium, situsted on a hill about 2 miles from the sea-coast, on the gulf of Tarentum, and 12 miles from the mouth of the Crathis. The name is not found in
the geographers, or mentioned by any earlier writer; but it is found in the Itinerary of Antoninus, which places it 12 miles from Thurii, and is nuticed by Procopius during the Gothic wars as a strong fortress, and one of the most important strongholds in this part of Italy. (Itin. Ant. p. 114 ; Procop. B. G. iii. 30.) It was taken by Totila in A. D. 548 , but continued throughout the middle ages to be a place of importance, and is still one of the most considerable towns in this part of Calabria. [E.H.B.]

ROSTRUM NEMAVIAE, a place in the ceutral part of Vindelicis, on the river Virdo. (It. Ant. pp. 237, 258.)
[L. S.]
ROTOMAGUS ('Parduayos), in Gallia Lugduneusis, is mentioned by Ptolemy (ii. 8. § 8) as the capital of the Veneliocasi, as the name is written in some editions. [Vellocasses.] In the Table the name is written Rattomagus, with the mark which indicates a capital town; and in the Antonine Itin. it occurs in the corrupted form Latomagus on the road which runs from a place called Carocotinum. Ammianus (xv. 11) speaks of it in the plural number Rotomagi. There ure said to be coins with the legend Riatumacos.

Kotomagus is Rouen on the north side of the Seine, and the capital of the department of Seino Infërieure. The old Gallic name was shortened to Rotomum or Rodomum, and then to Rouen, as Ro. dumna has been shortened to Roanne. The situation of Rouen probubly made it a town of some importance under the IWman Empire, but very few Roman remains have been found in Rouen. Some Roman tombs have been mentioned. [G. L.]
 the Sarmatian stock, who first appear in history about a century before Christ, when they were found occupying the steppes between the Dnieper and the Don. (Strab. ii. p. 214, vii. pp. 294, 306, 307, 309; Plin. iv. 12 ; Ptol. iii. 5. $\S \S 19,24,25$.$) After-$ wards some of them made their footing in Dacia and behind the Carpathians. Strabo (vii. p. 306) has told the story of the defeat of the Roxolani and their leader Tasius by Diophantus, the general of Mithridates, and takes the opportunity of describing some of their manners which resembled those of the Sarmatian stock to which they belonged. Tacitus (Hish i. 79) mentions another defeat of this people, when making an inroad into Moesia during Otho's short lease of power. From the inscription (Orelli, Inscr. 750) which records the bonours paid to Plautius Silvanus, it appears that they were also defeated by him. Hadrian, who kept his frontior quiet by subsidising the needy tribes, when they complained about the payment came to terms with their king (Spartian, Hadr. 6) - probably the Rasparasanus of the inscription (Orelli, Inscr. 833). When the general rising broke out among the Sarmatian, German. and Scythian tribes from the Rhine to the Tanais in the reign of M. Aurelius, the Rosolani were included in the number. (Jul. Capit. M. Anton. 22.) With the inroads of the Goths the name of the Rozolani almost disappears. They probably were partly exterminated, and partly united with the kindred tribes of the Alani, and shared the general fate when the Huns poured down from the interior of Asia, crossed the Don, and oppressed the Alani, and, later, with the help of these, the Ostro-Goths.

It has been assumed that the name of the RhaCamani ('Pakalavoc, Ptol. iii. 5. § 24) is not dif. ferent from that of the Roxolani, who, according to

## RUADITAE.

Schafarik (Slav. Alf. vol. i. p. 342), received their appellation from the Sarmatian "Raxa,"-perhaps the Volga or some other river in their settlements.
[E. B. J.]
RUADITAE. [Marmarica, p. 278, a.]
RUBI (Eth. 'Pufartetyds, Rubastinus: Ruvo), a city of Apaliu, situated on the branch of the Appian Way between Canusia and Butuntum, and about 10 miles distant from the sea-coast. It is mentioned by Horace, as one of the places where Maocenas and his companions slept on the journey from Rome to Brundusium. (Hor. Sat i. 5. 94.) The distance from Canusium is given as 23 miles in the Antonine Itinerary, and 30 in the Jerusalem Itinerary, which is the more correct, the direct distance on the map being above 28 miles. (Ition. Ant. p. 116; Itin. Hier. p. 610.) Neither Strabo nor Ptolemy notices the existence of Rabi, bat the inhabitants are mentioned under the name of Rubustini by Pliny, among the manicipal towns of Apulia, and the "Rubustinus Ager" is enumerated in the Liber Coloniarum among the "Civitates Apuliac." (Plin. iii. 11.s. 16; Lib. Colom. p. 262.) An inscription also attests the municipal rank of Rubi in the reign of the younger Gordian. (Mommsen, Inscr. R. N. 624.) The singular ethnic form given by Pliny is confirmed by the evidence of coins which have the name PV BAZ:TEIN $\Omega$ N at full. These coins show also that Rubi must have received a considerable amount of Greek influence and cultivation; and this is still more strongly confirmed by the discoveries which have been recently made by excavations there of numerous works of Greak art in bronze and terra cotta, as well as of vast numbers of painted vasex, of great variety and beauty. These, however, like all the others found in Apulia and Lucania, are of inferior execution, and show a declining state of art as compared with those of Nola or Volci. All these objects have been discovered in tombs, and in some instances the walls of the tombs themselves have been found covered with paintings. (Romanelli, vol. ii. p. 172; Bullett. dell' Inst. Arch. 1829, p. 173, 1834, pp. 36, $164,228,8 c \mathrm{c}$.) The modern town of Ruvo is still a considerable place, with an episcopal see. [E.H.B.]

coms of rubi.
RUBICON ('Pousicov), a small river on the E. coast of Italy, flowing into the Adriatic sea, a few miles $N$. of Ariminum. It was a trifling stream, one of the least considerable of the numerous rivers that in this part of Italy have their rise in the Apennines, and discharge their waters into the Adriatic; but it derived some importance from its having formed the boundary between Umbria, or the part of the Gaulish territory included in that province, and Cisalpine Gaul, properly so called. Hence, when the limits of Italy were considered to extend only to the frontiers of Cisalpine Gaul, the Rabicon became on this side the northern boundary of Italy. (Strab. v. p. 217 ; Plin. iii. 15. 8. 20; Lucan. i. 215.) This was the state of things at the outbreak of the Civil War between Caesar and Pompey: Cisalpine Gaul was included in the government of the former, and the Rubicon was therefore the limit of his province; it was this which rendered the passage of
this trifling stream so momentoas an event, for it was, in fact, the declaration of war. Caesar himself makes $n 0$ mention of its passage, and it is difficult to believe that he would have set out on his march from Ravenna without being fally prepared to advance to Ariminum; but the well-known story of his halt on its benks, his hesitation and ultimate decision, is related in detail by Suetonins and Plutarch, as well as by Lucan, and has given a proverbial celebrity to the name of the Rubicon. (SuetCacs. 31; Plut. Caes. 32; Appian, B. C. ii. 35; Lucan, i. 185, 213-227.) The river is alluded to by Cicero a few years later as the frontier of Gaul; and M. Antonius was ordered by a decree of the senate to withdraw his army across the Rubicon, as a proof that he abandoned his designs on the Gaulish province. (Cic. Phil. vi. 3.) Strabo still reckons the Rubicon the limit between Gallia Cisalpina and Umbria; but this seems to have been altered in the division of Italy by Augustus; and though Pliny alludes to the Rubicon as "quondam finis Italiae," he includes Ariminum and its territory as far as the river Crustumins, in the 8th Region or Gallia Cispadena. (Plin. l.c.; Ptol. iii. 1. § 23.) Ito name, however, was not forgotten; it is still found in the Tabula, which places it 12 miles from Ariminum (Tab. Peuth), and is mentioned by Sidonius Apollinaris. (Ep. i. 5.) But in the middle ages all trace of it seems to have been lost; even the Geographer of Ravenna does not notice it, notwithatanding its proximity to his native city.

In modern times the identification of this celebrated stream has been the subject of mach controversy, and cannot yet be considered as fully determined. But the question lies within vafy narrow compass. We know with certainty that the Rubicon was intermediate between Ariminam and Ravenna, and between the rivers Sapis (Savio), which flowed some miles S. of the latter, and the Ariminus or Marecchia, which was immediately to the N. of the former city. Between these two rivers only two streams now enter the Adriatic, within a very short distance of each other. The southernmost of these is called the Luco or Luca, a considerable stream, which crosses the high-road from Rimini to Ravenna aboat 10 miles from the former city. A short distance further N. the same road crosees a stream now called Fiomicino, which is formed by the united waters of three small streams or torrents, the most considerable of which is the Pisatello (the uppermost of the three); the other two are the Rigosa or Rigone, called also, according to some writers, the Rugose, and the Plusa, called also the Fiumicino. These names are those attested by the best old maps as well as modern ones, especially by the Atlas of Magini, published in 1620, and are in accordance with the staternents of the earliest writers on Italian topography, Flavio Biondo and Leandro Alberti. Cluverius, however, calls the northernmost stream the Rugone, and the one next to it the Pisatello. This point is, however, of little importance, if it be certain that the two streams always united their waters as they do at the present day before reaching the sea. The question really lies between the Luso and the Fiumicino, the latter being the outlet both of the Rugone and the Pisatello. A papal bull, issued in 1756, pronounced in favour of the Luso, which has, in consequence, been since commonly termed the Rubicon, and is still called by the peasants on its banks Il Rubiconc. But it is evidant that such an anthority has no real
weight. The name of Rugone, applied to one of the three branches of the Fiumicino, would be of more value, if it were certain that this name had not been distorted by antiquarians to suit their own purposes. But it appears that old maps and books write the name Rigosa. Two arguments, however, may be cousidered as almost decisive in favour of the Fiumi cino as compared with the Luso: lst. The distance given in the Tabula of 12 miles from Ariminum, coincides exactly with the distance of the Fiumicino from that city, as statel by Cluverius, who examined the question on the spot; and 2 ndly, the redness of the gravel in the bed of the stream, from which it was supposed to have derived its name, and which is distinctly alluded to by Sidonius Apollinaris, as well es by Lucan (Sidon. Ep. i. 5; Lucan, i. 214), was remarked by Cluverius as a character of the Fiumicino, which was wholly wanting in the Luso. The circumstance which has been relied on by some authors, that the latter river is a more considerable and rapid stream than the other, and would therefore constitute a better frontier, is certainly of no value, for Lacan distinctly speaks of the Rubicon as a trifling stream, with little water in it except when swullen by the winter rains.

The arguments in favour of the Fiumicino or Pisatello (if we retain the name of the principal of its three confluents) thus appear decidediy to preponderate; but the question still requires a careful examination on the spot, for the statements of Cluverius, though derived from personal observation, do not agree well with the modern mape, and it is not improbable that the petty streams in question may have undergone considerable cbanges since his time: atill more probable is it that such changes may have taken place since the time of Caesar. (Cluver. Ital. pp. 296-299; Blondi Flavii Italia Illustrata, p. 343; Alberti, Descrizione d Italia, p. 246; Magini, Carta di Romagna; Mannert, Geographie ron Italien, vol. i. p. 234 ; Murray's Handbook for Central Italy p. 104. The older dissertations on the subject will be found in Graevius and Burmann's Thesaurus, vol. vii. part 2.) [E.H.B.]

RLBRAE and AD RUBRAS, a town in Hispania Baetica, now Cabezas Rubias. (It. Ant. p. 431.)
[T.H.D.]

## RUBRESUS LACUS. [Atax.]

KLBHICA'TA ('Poubpiкata, Ptol. ii. 6. § 74), an inland city of the Laeëtani in the NE. part of Hispanis Tarraconensis, on the river Rubricatus; according to Reichard, Olesa.
[T. H. D.]
RUBRICA'TUS or -UM ('Pouspikatos, Ptol. ii. 6. § 18), a river of Hisprnia Tarraconensis flowing into the Mare Internum a little W. of Barcino, the modern Llobregat. (Mela, ii. 6. § 5; Plin. iii. 3. s. 4.)
[T. H. D.]
RUBRICA'TUS, in Numidia. [Rhubricatus.]
RUBRUM MARE, or ERYTHISAEUM MARE
 159, iv. 39: Polyb. v. 54. § 12, ix. 43. § 2; Strat. i. pp. 32, 33, 50, 56, xvi. pp. 765, 779, xvii. pp. 804, 815 ; Pornp. Mela, iii. 8 . § 1 ; Plin. vi. 2. s. 7). The sea called Erythra in Herodotus has a wide extension, inclading the Indian Ocean, and its two gulfs the Red Sea and the Persian Gulf [Persicus Sinus], which latter he does not seem to have considered as a gulf, but as part of a continuous sealine; when the Red Sea specitically is meant it bears the name of Arabicus Sinus [Arabices Sinus]. The thick, wall-like masses of coral which form the shores or fringing reefs of the cleft by which the
waters of the Indian Ocean advance through the struits of Bab-el-Mandeb, with their red and purple hues, were no doubt the original source of the name. Thus also in Hebrew (Fxod. x. 19, xiii. 18; Ps. cvi. 7, 9, 22) it was called "yam eaph," or the "weedy sea," from the coralline forests lying below the surface of the water. Ramses Miamoum (Sesostris) was the first (from 1388 to 1322, B. C.) - so said the priests - who with long ships subjected to his dominion the dwellers on the coast of the Erythraean, until at length sailing onwards, he arrived at a sea so shallow as to be no longer navigable. Diodorus (i. 55, 56; comp. Herod. ii. 102) asserts that this conqueror adranced in India beyond the Ganges, while Strabo (xvi. p. 760) speaks of a memorial pillar of Sesostris near the strait of Deire or Bab-el-Mandeb. It appears that the Persian Gulf had been opened out to Phoenician navigation as three places were found there which bore similar if not identical names with those of Phoenicia, Tylus or Tyrus, Aradus, and Dora (Strab. xvi. pp. 766, 784, comp. i. p. 42), in which were temples resembling those of Phoenicia (comp. Kenrick, Phoenicia, p. 48). The expeditions of Hiram and Solomon, conjoint undertakings of the Tyrians and Israelites, sailed from Ezion Geber through the Straits of Bab-el-Mandeb to Ophir, one locality of which may be fixed in the basin of the Erythraean or Indian Ocean [Ophir]. The Lagid kings of Aegypt availed themselves with great success of the channel by which nature brought the traffic and intercourse of the Indian Ocean, within a few miles of the coast of the Interior Sea. Their vessels visited the whole western peninsula of India from the gulf of Barygaza, Guzerat, and Cumbay, along the coasts of Malubar to the Brahminical sanctuaries of Cape Comorin, and to the great island of Taprobane or Ceylon. Nearchus and the companions of Alexander were not ignorant of the existence of the periudical winds or monsoons which favour the navigation between the E. coast of Africa, and the N. and W. coasts of India. From the further knowledge acquired by navigators of this remarkable local direction of the wind, they were afterwards emboldened to sail from Ocelis in the straits of Bab-el-Mandeb and hold a direct course along the open sea to Muziris, the great mart on the Malabar const (S. of Mangalor), to which internal traffic brought articles of commerce from the E. coast of the Indian peninsula, and even gold from the remote Chryse. The Ruman empire in its greatest extent on its E. limit reached only to the meridian of the Persian Gulf, bat Strabo (i. p. 14, ii. p. 118, xvi. p. 781, xvii. pp. 798, 815) saw in Aegypt with surprise the number of ships which sailed from Myos Hormos to India. From the Zend and Sanscrit words which have been preserved in the geographical nomenclature of Ptolemy, his tabular geography remains an historic monument of the commercial relations between the West and the most distant regions of Southern and Central Asia. At the same time Ptolemy (iv. 9, vii. 3. § 5) did not give up the fable of the "unknown southern land" connecting Prasum Prom. with Cattigara and Thinae (Sinarum Metropolis), and therefure joined E. Africa with the land of Tsin or Chince. This isthmus-hypothesis, derived frum views which may be traced back to Hipparchus and Marinus of Tyre, in which, however, Strabo did not concur, made the Indian Ocean a Dtediterranean sea. About half a century later than I'wlemy a minute, and as it ap-
pears a very faithful, account of the coast was given in the Periplus of the Erythraean Sea (a work erroneously attributed to Arrian, and probably not anterior to Septimius Severus and his son Caracalla) (comp. Cooley, Claudius Ptolemy and the Nile, p. 56). During the long wars with Persia, the Aegyptian and Syrian population, cut off from their ordinary communication with Persia and India, were supplied by the channel which the shores of the Persian Gulf and the Red Sea afforded; and in the reign of Justinian this commerce was very important. After the disturbances cansed by the wars of Heraclius and Chosroes, the Arabs or Saracens placed upon the confines of Syria, Aegypt, and Persia, had the greatest portion of the rich trade with Aethiopia, S. Africa, and India thrown into - their hands. From the middle of the ninth century the Arab population of the Hedjaz maintained commercial relations with the northern countries of Europe and with Madagascar, with E. Africa, India, and China, diffusing their language, their coins, and the Indian system of numbers. But from the time that the Kaliph Al-Mansur closed the canal connecting the Fed Sea with the Nile, the important line of communication between the commerce of Aegypt and India and the E. coast of S. Africa has never been restored. For all that concerns the data furnished by the ancient writers to the geography of the Erythraean sea the Atlas appended by Müller to his Geographi Graeci Minores (Paris, 1855) should be consulted. He has brought together the positions of Agatharchides, Artemidorus, Pliny, Ptolemy, and the Pseudo-Arrian, and compared them with the recent surveys made by Moresby, Carless, and others.
[E. B. J.]
RUCCO'NIUM. [DACIA, p. 744, b.]
RUESSIUM. [Revessio.]
RUFINIA'NA ('Pouфıviava). Ptolemy (ii.9. § 17) names Noeomagus [Noviomagus, No. 2.] and Rufiniana as the two towns of the Nemetes, a people on the Rhine in Gallia Belgica. If we place Rufiniana with D'Anville and others at Ruffach in Upper Alsace and in the present departunent of Haut Rhin, we must admit that Ptolemy has made a great mistake, for Ruffach is within the territory of the Rauraci. But D'Anville observes that it is not more entraordinary to find Rufiniana misplaced in Ptolemy than to find him place Argentoratum in the territory of the Vangiones.
[G. L.]
RUFRAE, a town of the Samnites on the borders of Campania, mentioned by Virgil (Aen. vii. 739) in a manner that would lead us to suppose it situated in Campania, or at least in the neighbourhood of that country; while Silius Italicus distinctly includes it among the cities of the Samnites (viii. 568), and Livy also mentions Rufrium (in all probability the same place) among the towns taken from the Samnites at the commencement of the Second Samnite War, B. c. 326. (Liv. viii. 25.) None of these passages afford any clue to its position, which cannot be determined; though it must certainly be sought for in the region above indicated. The sites suggested by Romanelli (vol. ii. p. 463) and other local topographers are mere conjectures. [E. H. B.]

RUFRIUM. [RUFRAE.]
RL'GII, RUGI ('Poũyoc or 'Pojoc), an important people in the north of Germany, occupring a considerable part of the coast of the Baltic. (Tac. Germ. 43.) Their country extended from the river Viadus in the west to the Vistula in the east, and was surrounded in the west by the Sideni, in the
sonth by the Helvecones, and in the east by the Sciri, who were probably a Sarmatian tribe. Strabo does not mention them, and Ptolemy (ii. $11 . \$ 14$ ) speaks of a tribe 'Poutiknetot, who are probably the same as the Rugii. After their first appearance in Tacitus, a long time passes away during which they are not noticed, until they suddenly reappear during the wars of Attila, when they play a conspicuous part. (Sidon. Apoll. Paneg. ad Avit. 319 ; Paul. Diac. de Gest. Rom. p. 534, ed. Erasm.) After the death of Attila, they appear on the north side of the Danube in Austria and Upper Hongary, and the country there inhabited by them was now called Rugia, and formed a separate kingdom. (Procop. Bell. Goth. ii. 14, iii. 2; Paul. Diac. Longob. i. 19.) But while in this latter country no trace of their name is now left, their name is still preserved in their original home on the Baltic, in the island of Rügen, and in the town of Rügenwalde, and perhaps also in Rega and Regenvalda. (Comp. Latham on Tac. 1 c., and Prolegom. p. xix., who strangely believes that the Rugii of Tacitus dwelt on the Gulf of Riga.)
[L. S.]
RUGIUM ('Poúriov), a town in the north of Germany on the coast of the Baltic (Ptol. ii. 11. §27), the site of which seems to correspond exactly with that of the modern Regenwalde, on the river Rega, though others seek it elsewhere. (Wilhelm, Germanien, p. 273.)
[L. S.]
RUNICATAE ('Pouvıxâtal), an Alpine tribe in the north-east of Vindelicia between the Oenus and Danubius. (Ptol. ii. 13. § 1.) In the inscription of the Alpine trophy quoted by Pliny (iii. 24) they are called Rucinates.
[L.S.]
RURA (Ruhr), a river of Western Germany, which flows into the Rhine from the east near the town of Duisburg. (Geogr. Rav. iv. 24.) [L.S.]

RURADA (Ruradensis Resp?), a place in Hispania Baetica, the name of which appears only upon coins, the present Rus near Baeza. (Florez, Exp. Sagr. vii. p. 98.)
[T.H.D.]
RUSADIR (Plin. v. 1 ; Puofdocipov, Ptol. iv. 1. § 7; Russader, Itin. Ant.), a colonia of Mauretania, situated near Metagonites Prom., which appears sometimes to have been called from the town Rusalic (Ptol.iv. 1. § 12). It is represented by the "baridero" of Melilla, or Spanish penal fortress, on the bight formed between C. Tres Forcas and the Mlíia.
[E. B. J.]
RUSAZUS. [Mauretania, p. 298, b.]
RIISCINO ('Povakırov. 'Pougkivav), a city of the Volcas Tectosages in Gallia Narbonensis. (Ptol. ii. 10. § 9.) When Hannibal entered Gallia by the Pyrenees, he came to Illiberis (Elne), and thence marched past Ruscino (Liv. xxi. 24). Ruscino stood on a river of the same luaine (Ptol. Strab.): "There was a lake near Ruscino, and a swampy place a little above the sea full of salt and containing mullets ( $\kappa \in \sigma \tau \rho \in i s)$, which are dug out; for if a man digs down two or three feet, and drives a trident into the muddy water, he may spear the fish, which is of considerable size: and it feeds on the mud like the eels." (Strab. iv. p. 182.) Polybins (xxxiv. 10, ed. Bekker) has the same about the river and the fish, which, however, he says, feed on the plant rgrostis. (Athen. viii. p. 332.) The low tract which was divided by the Ruscino is the Cyneticum Littus of Avienus (Or. Mar. v. 565):-

> " post Pyrenacum jugum,

Jacent arenae littoris Cynetici,
Easque late sulcat annis Roschinus."

Mela (ii. 5) names the place a Colonia, and so the title appears on coins, col. rus. leg. vi. Pliny calls it "Oppidum Latinorum." It seems to have been a Colonia Latina.

The name is incorrectly written Ruscione in the Antonine Itin. and in the Table. It is placed between Combusta [Combusta] and Illiberis, and it is represented by Castel-Roussillon or the Tour de Roussillon on the Tet, the ancient Ruscino, a short distance from Perpignam, the capital of the French department of the Pyrénées Orientales. Perpignan lies on the high-road from France into Spain, and there is no other great road in this part of the Py renees.

Ruscino is named Rosciliona in middle age documents, and from this name the modern name Koussillon is derived. Roussillon was a province of the ante-revolutionary history of France, and it corresponds to the modern department of Pyrénées Orientales.

The river Ruscino or Ruscinus is the Telis of Mela (ii. 5), the Tet; and we may probably conclode that the true reading in Mela is Tetis. The Tet rises in the Pyrenees, and flows past Perpignan into the Mediterranean, after a course of about 70 miles. Sometimes it brings down a great quantity of water from the mountains.
[G. L.]
RUSELLAE ('Pouoér入at: Eth. Rusellanus : Roselle), an ancient and important city of Etruria, situated about 14 miles from the sea, and 3 from the right bank of the river Ombrone (Umbro). In common with several of the ancient Etruscan cities, we have very little information concerning its early history, though there is no doubt of its great antiquity and of its having been at a very early periud a powerful and important city. There is every probability that it was one of the twelve which formed the Etruscan League (Müller, Etrusker, vol. i. P. 346). The first mention of it in history is during the reign of Tarquinins Priscus, when it united with Clusiam, Arretiam, Volaterrae, and Vetulonia, in declaring war against the Roman king, apart from the rest of the confederacy,-a sufficient proof that it was at that time an independent and sovereign state. (Dionys. iii. 51.) From this time we hear no more of it antil the Romans had carried their arms beyond the Ciminian forest, when, in B. c. 301, the dictator M. Valerius Maximus carried his arms, apparently for the first time, into the territory of the Rusellae, and defeated the combined forces of the Etruscans who were opposed to him. (Liv. x. 4,5.) A few years later, in в. c. 294, the consul L. Postumius Megellus not only laid waste the territory of Rusellae, but took the city itself by storm, taking more than 2000 of the inhabitants captives (Id. x. 37). No other mention of it occurs during the period of Etruscan independence ; but during the Second Punic War the Rusellani are mentioned among the "populi Etruriae" who came forward with voluntary supplies to equip the fleet of Scipio (b.c. 205), and furnished him with timber and corn (Id. xxviii. 45). It is evident that at this time Rusellae was still one of the principal cities of Etruria. We find no subsequent notice of it ander the Roman Republic, but it was one of the places selected by Augustus to receive a colony (Plin. iii. 5. s. 8 ; Zumpt, de Colon. p. 347); notwithstanding which it seems to have fallen into decay; and though the name is mentioned by Ptolemy (iii. 1. § 48) we meet with no later notice of it in ancient times. It did not, however, altugether cease to exist till a much
later period, as it retained its episropal see down to the twelfth century, when it was transferred to the neighbouring town of Grosseto. (Repetti, Dis. Top. vol. ii. pp. 526, 822.)

The site of Rusellae is now wholly desolate and overgrown with thickets, which render it very difficult of access. But the plan may be distinctly traced, and the line of the ancient walls may be followed in detached fragments throughout their entire circuit. It stood on the flat top of a hill of considerable elevation, about 6 miles from the modern city of Grosseto, overlooking the broad valley of the Ombrone and the level plain of the Maremma, which extends from thence to the sea. The walls follow the outline of the hill, and encluse a space of about 2 miles ip circuit. They are constructed of very rude and massive stones, in some places with an approach to horizontal structure, similar to that at Volterra and Populonia; but in other parts they lose all traces of regularity, and present (according to Mr. Dennis) a strong resemblance to the rudest and most irregular style of Cyclopian construction, as exemplified in the walls of Tiryns in Argolis. (Dennis's Etruria, vol. ii. pp. 248, 249.) The sites of six gates may be traced; but there are no indications of the manner in which the gateway itself was formed. Within the walls are some fragments of rectangular masonry and some vaults of Roman construction. It is remarkable that no traces of the necropolis-so often the most interesting remnant of an Etruscan city-have yet been discovered at Rusellae. But the site is so wild and so little visited, that no excavations have been carried on there. (Dennis, l.c. p. 254.)

About 2 miles from the ruins, and 4 from Grosseto, are some hot-springs, now called I Bagni di Roselle. On a hill immediately above them are the mediaeval ruins of a town or castle called Moscona, which have been often mistaken for those of Rusellae. (Dennis, l.c.)
[E. H. B]
RUSGU'NIA (Itin. Ant.; 'PougTdytoy, Ptol. iv. 2. § 6), a town of Mauretania, and a colonia, which lay 15 M. P. to the E. of Icosium. Its ruins have been found near Cape Matafu or Temendfuz (Barth, Wanderungen, p. 55). For an account of these, see Ausland, 1837, No. 144. [E. B. J.]

RUSICADE (Plin. v. 2; Mela, i. 7.§ 1 ; 'Povolкaסa, Ptol. iv. 3. § 3; Rusiccade, Itin. Ant., Peut. Tab.), the harbour of Cirta in Numidia, and a Roman colonia, at the moath of the small river Thapsers (Vib. Seq. de Flum. p. 19: U. Safsa), and probably therefore identical with the Thapsa (Odya), a harbour-town, of Scylax (p. 50). Its site is near Stora; and the modern town of Philippeville, the Ras-Skikda of the Arabs, is made in part of the materials of the old Rasicade (Barth, Wanderungen, p. 66).
[E. B. J.]
RUSIDA'VA. [DACLA, p. 744, b.]
RUSPE (Peut. Tab.; 'Poû $\sigma \pi a l$ al. 'Poûore, Ptol. iv. 3. § 10), a town of Numidia between Acholla and Usilla, near the Caput Vadordm (Corippus, Johamn, i. 366: C. K'abuidiah), and the see of Fulgentius, well-known in the Pelagian controversy; he was expelled from it by the Vandal Thrasimund. Barth (Wandorungen, p. 177) found remains at Schebba.
[E. B. J.]
RUSPI'NUM ('Pougaivov, Strab. xvii. p. 831; Ruspina, Auct. B. Afr. 6; Plin. v. 3; Peut. Tab.), a town of Africa Proper, where Caesar defeated Scipio, and which he afterwards made his position while waiting for reinforcements. It is probably the
same place as the Thermar of the Coast-describer (Stadiasm. § 114, ed. Müller), near the ruins of Leptis Parva.
[E. B. J.]
RUSTICIA'NA ('Pouqtikana, Ptol. ii. 5. § 7), a city of the Vettones in Lusitania, on the right bank of the Tagus. Variously identified with Corchuela and Galisteo. (It. Ant. p. 433.)
[T. H. D.]
RUSUCU'RRIUM, RUSSUCU'RRIUM (Plin. v. 1 ; It. Ant.; 'Pougбoккбןal, Ptol. iv. 2. § 8), a town of Mauretania, which Claudius made a municipium (Plin. l.c.), but which was afterwards a colonia (Itin. Ant.). Barth (Wanderungen, p. 60) has identified it with the landing-place Dellys in AL geria, where there is good anchorage. [E.B. J.]

RUTE'NI ('Poutท̂vol), and 'Poutavol in Ptolemy (ii. 7. § 21), who places them in Gallia Aquitania. Pliny (iv. 19) says that the Ruteni border on the Narbonensis Provincia ; and Strabo (iv. p. 191) places them and the Gabaleis or Gabali next to the Narbonensis. Their country was the old province of Rovergue, which extended from the Cévennes, its eastern boundary, abont 90 miles in a western direction. The chief town was Rhodez. The modern department of Aveyron comprehends a large part of the Rovergue. There were silver mines in the country of the Ruteni and their neighbours the Gabali [Gabali], and the flax of this country was gond.

The Arverni and Ruteni were defeated by $\mathbf{Q}$. Fabius Maximus, B. c. 121, but their country was not reduced to the form of a Roman province (Caes. B. G. i. 45). In Caesar's time part of the Ruteni were included in the Provincia under the name of Ruteni Provinciales (B. G. vii. 5, 7). Vercingetorix in B. C. 52 sent Lacterius of the Cadurci into the country of the Ruteni to bring them over to the Gallic confederation, which he did. Caesar, in order to protect the Provincia on this side, placed troops in the country of the Ruteni Provinciales, and among the Volcae Arecomici and Tolosates. Pliny, who enumerates the Ruteni among the people of Aquitania, also mentions Ruteni in the Narbonensis (iii. 4), but he means the town Segodunum [Segodunum]. The Ruteni Provinciales of course were nearer to the Tectosages than the other Ruteni, and we may perhaps place them in that part of the departments of Aveyron and Tarn which is south of the Tarnis (Tarn). It may be conjectured that part of the Ruteni were added to the Provincia, either after the defeat of the Ruteni by Maximus, or after the conquest of Tolosa by Caepio (r.c. 106.) [G.L.]

## RUIICLEI. [Rugir.]

RUTUBA ( R(ja), a river of Liguria, which rises in the Maritime Alps, near the Col de Tende, and flows into the sea at Vintimiglia (Albiun Intemelium). Its name is found in Pliny (iii. 5. s. 7), who places it apparently to the W. of Albium Intemelium, whereas it really flows on the E. side of that town; Lucan also notices it among the streams which flow from the Apennines (ii. 422), and gives it the epithet of "cavus," from its flowing through a deep bed or ravine. From the mention of the Tiber just after, some writers have supposed that he must mean another river of the name; but there is no reason to expect such strict geographical order from a poet, and the mention of the Macra a few lines lower down sufficiently shows that none such was intended. Vibius Sequester (p.17) who makes the Rutuba fall into the Tiber, has obviously misunderstowd the passage of Lucan.
[E. H. B.]
RUTUBIS (Polyb. ap. P'lin. v. 1 ; 'Pouo،6is, I'tol.
iv. 5. § 1), a port of Mauretania, which must be identified with the low rocky point of Mazagas. The town situated upon this was the last possessed by the Portuguese in Marocco, and was abandoned by them in 1769. (Jackson, Marocco, p. 104 ; Journ. of Geogr. Soc. vol. vi. p. 306.) [E. B. J.]

RU'TULI ('Poúrounot), a people of ancient Italy, who, according to a tradition generally received in later times, were settled at a very early period in a part of Latiom, adjoining the sea-coast, their capital city being Ardea. The prominent part that they and their king Turnus bear in the legendary history of Aeneas and the Trojan settlement, especially in the form in which this has been worked up by Virgil, has given great celebrity to their name, but they appear to have been, in fact, even according to these very traditious, a small and unimportant people. Their king Turnas himself is represented as dependent on Latinus ; and it is certain that in the historical period Ardea was one of the cities of the Latin League (Dionys. v. 61), while the name of the Ratuli had become merged in that of the Latin people. Not long before this indeed Livy represents the Rutuli as a still existing people, and the anns of Tarquinius Superbus as directed against them when be pruceeded to attack Ardea, just before his expulsion. (Liv. i. 56, 57.) According to this narrative Ardea was not taken, but we leam from much better anthority (the treaty between Rome and Carthage preserved by Polybius, iii. 22) that it had fallen under the power of the Romans before the close of the monarchy, and it is possible that the extinction of the Rutuli as an independent people may date from this period. The only other mention of the Ratuli which can be called historical is that their name is found in the list given by Cato (ap. Priscinn. iv. 4. p. 629) of the cities that took part in the foundation of the celebrated temple of Diana at Aricia, a list in all probability founded upon some ancient record ; and it is remarkable that they here figure as distinct from the Ardeates. There were some obscure traditions in antiquity that represented Ardea as founded by a colony from Argos [Arden], and these are regarded by Niebuhr as tending to prove that the Rutuli were a Pelasgic race. (Nieb. vol. i. p. 44, vol. ii. p. 21.) Schwegler, on the other hand considers them as connected with the Etruscans, and probubly a relic of the period when that people had extended their duminion throughout Latium and Campania. This theory finds some support in the name of Turnus, which may probably be connected with Tyrrhenus, as well as in the union which the legend represents as subsisting between Turnus and the Etruscan king Mezentius. (Schwegler, Röm. Gesch. vol. i. pp. 330, 331.) But the whole subject is so mixed up with fable and poetical invention, that it is impossible to feel confidence in any such conjectures.
[E. H.B.]
RUTU'NIUM (It. Ant. p. 469), apparently a town of the Cornavii in the W. part of Britamia Romana. Camden (p.651) identifies it with Rocton in Shropshire, Horsley (p.418) with Wem. [T. H. D.]

KU'TU'PIAE ('Poutoúmial, Ptol. ii. 3. § 27 ; in the Tab. Peut. and Not. Imp. Rutupae; in the Itin. Ant. Ritupar, also Portus Rutupensis and Portus Ritupius: Adj. Rutupinus, Luc. Phars. vi. 67 ; Juv. iv. 141), a town of the Cantii on the E. coast of Britannia Prima, now Richborough in Kent. Rutupiae and Portus Rutupensis were probsbly distinct, the former being the cily, the latter its harlour at some little distance. The harbour was probably

Slmarr, not Sandioich; which latter town seems to have sprung ap under the Saxuns, after Rutupiae had begun to fall into decay, and was indeed probably built with materials taken from it. According to Camden (p. 244) the etymology of the name of Rutupiae is anslogous to that of Sandroich, being derived from the British Rhydtufeth, signifying "sandy bottoms"; a derivation which seems much more probable than that from the Rateni, a people who occupied the district in France now called La Roergue. The territory sround the town was styled Ratupinus Ager (Auson. Parent. xviii. 8) and the coast Rutupinus Littus (Luc. l.c.). The latter was celebrated for its oysters, as the coast near Margate and Reculver is to the present day. Large beds of oyster-shells hare been found in the neighbourhood, at a depth of from 4 to 6 feet under ground. The port is undoubtedly that mentioned by Tacitus (Agric. 38), under the erroneous name of Tratulensis Portus, as occupied by the fleet of Agricola. It was a safe barbour, and the nsual and most convenieit one for the passage between France and England. (Amm. Marc. xx. 1, xxvii. 8. §6.) The principal Roman remains at Richborough are those of a castrum and of an amphithestre. The walls of the former present an extensive ruin, and on the $N$. side are in some places from 20 to 30 feet in height. Fragments of sculptured marbles found within their circuit show that the fortification must have contained some handsome bnildings. The foundation walls of the amphitheatre were excavated in 1849, and are the first remains of a walled building of that.description dibcovered in England. There is a good description of Richborough, as it existed in the time of Henry VIII., in Leland's Itinerary (vol. vii. p. 128, ed. Hearne). Leland mentions that many Roman coins were found there, which still continues to be the case. Other Roman antiquities of various descriptions have been discovered, as pottery, fibulae, ornaments, knives, tools, \&cc. Rutupias was under the jurisdiction of the Comes litoris Saxonici, and was the station of the Legio IIds Augusta. (Notitia, c. 52.) A complete account of its remains will be found in Roach Smith's Antiquities of Richborough, London, 1850.
[T. H. D.]
RYSSADIUM ('Puafdoıoy üpos, Ptol. iv. 6. § 8), "a mountain of Interior Libya, from which Hows the Stacheir (Gambia), making near it the lake Clonia; the middle of the mountain (or lake?) $17^{\circ}$ E. long., $11^{\circ}$ N. lat." (Ptol. L.c.) This mountain terminated in the headland also called Ryssadium ('Puardotov Kxpov), the position of which is fixed by Ptolemy (iv. 6. § 6) at $8^{\circ} 30^{\prime}$ E. long., and $11^{\circ} 30^{\circ}$ N. lat. We assume, with Rennell and Leake, that Arsinarium is C. Verde, a conjecture which can be made with more confidence because it is found that Ptolemy's difference of longitude between Arsinarium and Carthage is very nearly cor-rect,-according to that assumption this promontory must be looked for to the $N$. of the mouth of the Cambia. The mountain and lake must be assigned to that elevated region in which the Senegul and the Gambia take their rise, forming an appendage to the central highlands of Africa from which it projects northwards, like a vast promontory, into the Gireat Sahara.
[E. B. J.]

## S.

SABA, SABAEI ( $\Sigma \alpha^{\prime} 6 \eta$ or Ea6al: Eth. Eabaios, fem. Eabaía), were respectively the principal city and nation in Yemen, or Arabia Felix. [Arabia.] Ancient gengraphers differ considerably as to the extent of territory occupied by the Sabaeans, Eratosthenes assigning to it a much larger area than Ptolemy. The difference may perhaps be reconciled by examining their respective accounts.

Our knowledge of the Sabaeans is derived from three sources: the Hebrew Scriptures, the Greek historians and geographers, and the Roman puets and encyclopedists, Pliny, Solinus, \&c. The Arabian geographers, also, throw some light upon this anciont and far-extending race.

1. In the Hebrew genealogies (Genesis, x. 6, xxp. 3) the Sabaeans are described as the descendants of Cush, the son of Ham. This descent was probably not so much from a single stem, as from several branches of Hamite origin; and as the tribes of the Sabaeans were numerous, some of them may have proceeded immediately from Cush, and others frum later progenitors of the same stock. Thus one tribe descended from Seba, the son of Cush, another from Jokshan, Abraham's son by Keturah; 2 third from Sheba, the son of Raamahthe 'Pequà of the LXX. (Compare Psaln Ixxii. 10; Isaiah, xlv. 14; Ezekiel, xxvii. 22, 23, xxxviii. 13.) The most material point in this pedigree is the fact of the pure Semitic blood of the Sabaeans. The Hebrew prophets agree in celebrating the stature and noble bearing, the enterprise and wealth of this nation, therein concurring with the expression of Agatharchides, who describes the Sabaeans
 pations appear to have been various, as would be the case with a nation so widely extended ("Sabaei . . . ad utraque maria porrecti," Plin. vi. 28. s. 32): for there is no doubt that in the south they were actively engaged in commerce, while in the north, on the borders of Idumea, they retained the predatory habits of nomades. (Job, ii. 15.) The "Queen of the South," i.e. of Yemen or Sabaea, who was attracted to Palestine by the fame of Solomon, was probably an Arabian sovereign. It may be observed that Yemen and Saba have nearly the same import, each signifying the right hand; for a person turning his face to the rising sun has the south on his right, and thus Saba or l'emen, which was long regarded as the southern limit of the habitable zone, is the lefthand, or southern land. (Comp. Herod. iii. 107113; Forster's Geogr. of Arabia, vol i. pp. 2438.) A river Sabis, in Carmania (Mela, iii. 8. § 4), and a chain of mountains Sabo, at the entrance of the Persian Gulf (Arrian, Periplus. M. Erythr., $\mathrm{b}_{\mathrm{p}}$ )
 apparently indicate an extension of the Sabaeans beyond Arabia Proper. That they reached to the eastern shore of the Red Sea is rendered probable by the circumstance that a city named Sabu or Sabe stood there, about 36 miles $S$. of Podnn, in lat. $14^{\circ}$ N. (Ptol. vi. 7. § 38, v. 22. § 14.)
2. The first Greek writer who mentions the Sabaeans by name is Eratosthenes. His account, however, represents a more recent condition of this nation than is described by Artemidorus, or by Agatharchides, who is Strabo's principal authority in his narrative of the Sabseans. On the other hand, Diodorus Siculus protesses to have compiled his
accounts of them from the historical books of the Aegyptian kings, which le consulted in the Alexandreian Library. (Diod. iii. 38, 46.) There can be little question that Herodotus, although he does not name the Sabseans, describes them in various passages, when speaking of the Arabians, the southernmost people of the earth. (Herod. ii. 86, iii. 107 -113.) The commerce of Yemen with Phoenicia and Aegypt under the Pharaohs would render the name of the Sabaeans familiar in all the havens of the Red Sea and the eastern Mediterranean. The Aegyptians imported spices largely, since they employed them in embalming the dead; and the Phoonicians required them for the Syrian markets, since perfumes have in all ages been both favourite luxuries and among the most popular medicines of the East. At the time when Ptolemy wrote (in the second century A.D.) their trade with Syria and Aegypt, as the carriers of the silks and spices so much in request at Rome, brought the Sabaeans within ken of the scientific geographer and of the learned generally.
3. Accordingly, we meet in the Roman poets with numerous, although vague, allusions to the wealth and luxury of the Sabmeans. "Molles," "divites," "beati," are the epithets constantly applied to them. (See Catull. xi. 5; Propert. ii. 10. 16, ib. 29. 17, iii. 13. 8 ; Virgil, Georg. i. 57, ii. 150, Aeneid. i. 416 ; Horace, Carm. i. 29. 2, ii. 12. 24 ; Id. Epist. i. 6. 6, ib. 7. 36 ; Statius, Silv. iv. 8.1 ; Senec. Hercules, Oet. v. 376.) The expedition of Aelius Gallus, indeed (B. C. 24), may have tended to bring Southern Arabia more iminediately under the notice of the Romans. But their knowledge wiss at best very limited, and rested less on facts than on ramours of Sabaean opulence and luxury. Pling and the geographers are rather better informed, but even they had very erroneous conceptions of the physical or commercial character of this nation. Not until the passage to India by the Cape had been discorered was Sabaea or Yemen really explored by Europeans.
Assuming, then, that the Sabeans were a widelyspread race, extending from the Persian Gulf to the Red Ses, and running up to the borders of the desert in the Arabian peninsula, we proceed to examine the grounds of their reputation for excessive opulence and luxury. A portion of their wealth was undoubtedly native; they supplied Aegypt and Syria from the remotest periods with frankincense and aromatics; and since the soil of Yemen is highly productive, they took in exchange, not the corn or wine of their neighbours, but the precious metals. But aromatics were by no means the capital source of their wealth. The Sabacans possessed for many centuries the keys of Indian commerce, and were the intermediate factors between Aegypt and Syria, as these countries were in turn the Indian agents for Europe. During the Pharaonic eras of Aegypt, no attempt was made to disturb the monopoly of the Sabseans in this traffic. Ptolemy Philadelphus (B.c. 274) was the first Aegyptian sovereign who discerned the value of the Red Sea and its harbours to his kingdom. He established his Indian emporium at Myos-Hormus or Arsinoe, and under his saccessors Berenice, which was connected with Coptos on the Nile by a canal, shared the profits of this remunerative trade. But even then the Sabaeans lost a small portion only of their former exclusive advantages. They were no longer the carriers of Indian exports to Aegypt, but they were still the
importers of them from India itself. The Aegyptian fleets proceeded no further than the haven of Sabbatha or Mariaba; while the Sabaeans, long prior even to the voyage of Nearchus (B. c. 330), ventured across the ocean with the monsoon to Ceylor and the Malabar coast. Their vessels were of larger build than the ordinary merchant-shipe of the Greeks, and their mariners were more skilful and intrepid than the Greeks, who, it is recorded, shrank back with terror from the Indian Ocean. The track of the Sabaean navigators lay along the coast of Gedrosia, since Nearchus found along its shores many Arabic names of places, and at Possens engaged a pilot acquainted with those seas. In proportion as luxury increased in the Syro-Macedonian cities (and their extravagance in the article of perfumes alone is recorded by Athenreus, xii.), and subsequently in Rome, the Indian trade becaine more valuable to the Sabaeans. It was computed in the third centary of the Empire, that, for every pound of silk brought to Italy, a pound of silver or even gold was sent to Arabia; and the computation might fairly be extended to the aromatics employed so lavishly by the Romans at their banquets and funerals. (Comp. Petronius, c. 64, with Platarch, Sulla, c. 38.) There were two avenues of this traffic, one overland by Petra and the Elanitic gulf, the other up the Red Sea to Arsinoe, the Ptolemaic canal, and Alexandreia. We may therefore fairly ascribe the extraordinary wealth of the Sabseans to their long monopoly of the Indian trade. Their country, however, was itself highly productive, and doubtless, from the general character of the Arabian peninsula, its southern extremity was densely populated. The Sabaeans are described by the Hebrew, the Greek, and the Arabian writers as a numerous people, of lofty stature, implying abundance of the means of life; and the recurrence of the name of Saba thoughout the entire region between the Red Sea and Carmania shows that they were populous and powerful enough to send out colonies. The general barrenness of the northern and central districts of Arabia drove the population down to the south. The highlands that border on the Indian Ocean are distinguished by the plenty of wood and water; the air is temperate, the animals are numerous (the horses of Yemen are strong and serviceable), and the fruits delicious. With such abundance at home the Sabaeans were enabled to devote themselves to irade with undivided energy and success.

Nothing more strikingly displays the ignorance of the ancient geographers as regards Sabaea thian their descriptions of the opulence of the country. Their narratives are equally pompous and extravagant. According to Agatharchides and Dioktoriss, the odour of the spice-woods was so potent that the inhabitants were liable to apoplexies, and counteracted the noxious perfumes by the ill odours of burnt goats'-hair and asphaltite. The decorations of their houses, their furniture, and even their domestic atensils were of gold and silver: they drank from vawes blazing with gems; they used cinnamon chips for firewood; and no king could compete in luxury with the merchant-princes of the Sabaeans. We have only to remember the real or imputed sumptuonsness of a few of the Dutch and English East India Companies' merchants in the 18th century, while the trade of the East was in a few hands, in order to appreciate the worth of these descriptions by Agatharchides and Diodorus.

The delusions of the ancients were first dis.
pelled by the traveller Niebulir. (Description ile l'Arabie, p. 125.) He asserts, and he has not been contradicted, that Yemen neither produces now, nor ever could have produced, gold; but that, in the district of Saade, it has iron-mines, - a fact annoticed by earlier describers, 一 which were worked when he visited the conntry. He states, moreorer, that the native frankincense is of a very ordinary quality, Sabaea yielding only the species called Liban, while the better sorts of that gum are imported from Sumatra, Siam, and Java. The distance from which the superior kinds of myrrh, frankincense, nard, and cassia were fetched, probably gave rise to the strange tales related about the danger of gathering them from the trees, with which the Sa baeans regaled the Aegyptian and Greek merchants, and through them the Greek geographers also. One cause of danger alone is likely to have been truly reported: the spice-woods were the abode of venomons reptiles; one of which, apparently a purple cobra, was aggressive, and, springing on intruders, inflicted an incurable wound. The ancients, however, said and believed that cinnamon was brought to Yemen by large birds, which build their nests of its chips, and that the ledonum was combed from the beards of he-goats.

The Sabreans were governed by a king. (Dion Cass. liii. 29.) One inexorable condition of the royal office was, that he should never quit his palace: found beyond its precincts, it was allowable to stone him to death. The rule which governed the succession to the throne was singular. A certain number of noble families possessed equal claims to the crown: and the first child (femaies were eligible) born after an accession was presumptive heir to the reigning monarch. This seclusion of the king, and the strange mode of electing him, seem to indicate a sacerdotal influence, similar to that which regulates the choice of the Grand Lama and the homige paid to him by the Thibetians.

The precise boundaries of Sabaea it is impossible to ascertain. The area we have presumed is comprised within the Arabian Sea W., the Persian Gulf E., the Indian Ocean S., and an irregular line skirting the Desert, and ranning up in a narrow point to Idumea N .

For the principal divisions of the Sabacans see the articles on Arabia; Adramitae; Minael.

The decline of the Sabaeans seems to have proceeded from two causes: (1) the more direct intercourse of the Aegypto-Greeks with India, and (2) the rivalry of the powerful tribe of the Homeritae, who subjugated them. In the account of their eastern traffic, and of the characteristics of their land, we have traced the features of the race. Compared with the Arabs of the Desert, the Sabaeans were a highly civilised nation, under a regular government, and, as a mercantile community, jealous of the rights of property. The author of the Periplus remarks upon similar security among the Adramitae; the interests of the merchant had curbed and softened the natural ferocity of the Arab. This also, according to Niebuhr (Descript. de l'Arabie, p. 315), is still observable in Yemen, in comparison with the inland provinces of Hejáz, and Neged.
[W. B. D.]
SABA. Three cities of this name are distinguished by ancient geographers: the name indeed was a common appellation of towns, and signified head of the province, or of its lesser divisions. (Comp. Plin. vi. 28. s. 32.)

1. ( $a$ abai, Steph. B. s. v. Zaßâs, Agatharch. ap. Phot. p. 63), was the chief city of the Sabaeans. It
is deacribed by Diodorus (iii. 46) as situated upon a lofty wooded hill, and within two days' iourney of the frankincense country. The position of Saba is, however, quite uncertain: Mannert (Gengr. der Griech. u. Röm. vol. vi. pt. i. p. 66) places it at the modern Saade: other geographers identify it with Mareb [Mariabi]; and again Sabbatha, both from its site in the interior and its commercial importance, seems to have a good title to be considered as Saba ( $\Sigma d 6 \eta$ of Agatharchides) or Sheba, the capital of the Sabaeans.
 was also seated in the interior of the Sabaean territory, 26 miles NE. of Aden. Niebuhr (Descript. de I.Arabie, vol. ii. p. 60) identifies it with the modern Sanba.
2. ( ábat, Strab. xvii. p. 771 ; Eabár, Ptol. iv. 7. § 8), on the western shore of the Red Sea, was the capital city of the Sabaeans, and its harbour was the Sabaiticum Os ( $\sum$ abatricov $\sigma \tau \delta \mu a$, Strab. xvii. p. 770). The position of Sabae, like that of so many Aethinpian races and cities, is very uncertain. Sume writers place it at the entrance of the Arabian gulf (Heeren, Histor. Researches, vol. i. p. 333); others carry it up as high as the bay of Adule, lat. $15^{\circ} \mathrm{N}$. Bruce (Travels, vol. iii. p. 144) identifies the modern $A z a b$ with the Sabae, and places it between the tropics and the Abyssinian highlands. Combes and Tamisier (Vnyages, vol. i. p. 89) consider the island Massotea to have a better claim: while Lord Valentia (Travels, vol. ii. p. 47) finds Sabae at Port Mornington. But although neither ancient geographers nor modern travellers are agreed concerning the site of the Aethiopian Sabate, they accord in placing it on the sea-coast of the kingdom or island of Meroe, and between the Siuns Avalites and the bay of Adale, i. e. between the 12 th and 15 th degrees of N . latitude. On the opposite shore were seated the Sabaeans of Arabia, and as there was much intercourso between the populations of the opposite sides of the Ked Sea, the Aethiopian Sabacans may have been a colony from Arabia. Both races are described as lofty in stature and opulent (Psalm Ixxii.; 1 Kings, x. 1; Isaiah, xlv. 14), and this description will apply equally to the Sabaeans who dwelt in the spice country of Arabia, and to those who enjoyed almost a monopoly of the Libyan spicetrade, and were not far removed from the goldmines and the emerald and topaz-quarries of the Aegyptian and Aethiopian mountains. The remarkable personal beanty of the Sabaeans is confirmed by the monuments of Upper Nubia, and was probably reported to the Greek gengraphers by the slave-dealers, to whom height and noble features would be a recommendation. The Sabaeans, at least in earlier periods, may be regarded as one of the principal tribes of the Aethiopian kingdon of Meroe. [Meroe.] Josephns (Antiq. ii. 5) affirms that the Queen of Sheba or Saba came from this region, and that it bore the name of Saba before it was known by that of Meroe. There seems also some affinity between the word Saba and the name or title of the kings of the Aethiopians, Saha-co.
[W.B.D.]
SABADI'BAE (Laßaס̄eitsal vīoo, Ptol. vii. 2. § 28), three islands, mentioned by Ptolemy, in the neighhourhood of the Aurea Chersonesus in India extra Gangem. From the great resemblance of the nume, it is not unlikely that he has confounded it with that of the island of Iabadius (or Sahadius), now Java, which he mentions in bis next section. [IABadice.]
[V.]
 pıva), a town in Lesser Armenia, is mentioned only by Ptolemy (v. 7. § 10) as belonging to the prefecture of Isaviniane.
[L. S.]
SABALINGII (Kaba入lryiol), a German tribe, placed by Ptolemy (ii. 11. § 11) above the Saxunes in the Cimbrian peninsula, the modern Schleswig. In the absence of all further information about them, it has been inferred, from the mere resemblance of name, that they dwelt in and about the place called Sabyholm in the island of Lalund.
[L.S.]
SABA'RIA (Eaovapla), an important town in the north of Upper Pannonia, was situated in a plain between the river Arrabo and the Deserta Boiorum, on the road from Carnuntum to Poetovium. The town, which seems to have been an ancient settlement of the Boii, derived its importance partly from the fertility of the plain in which it was situated, and partly from the fact that it formed a kind of central point at which several roads met. The emperor Claudius raised it to the rank of a Roman colony, whence it received the surname of Claudia. (Plin. iii. 27; Ptol. ii. 15. §4.) In this town Septimius Severus was proclaimed Augustus (Aurel. Vict. Epit. 19), and the emperor Valentinian resided there some time. (Amm. Marc. xxx. 5.) Owing to this and other circumstances, the town rose to a high degree of prosperity during the latter period of the Roman Empire; and its ancient greatness is still attested by its numerous remains of temples and aqueducts. Many statues, inscriptions, and coins also have been found at Stein am Anger, which is the modern name, or, as the Hungarians call it, Szombathely. (It. Ant. pp. 233, 261, 262, 434 ; Orelli, Inscript. n. 200 and 1789; Schönwisner, Antiquitates Sar bariae. p. 4.5 ; Muchar, Noricum, i. p. 167.) [L.S.]
SABARICUS SINUS. [Indicus Ocranus.]
SABATA or SABDATA (Plin. vi. 27. s. 31), a town of Assyria, probably the same place as the ZaEa日d of Zosimus (iii. 23), which that writer describes as 30 stadia from the ancient Seleuceia. It is also mentioned by Abulfeds (p. 253) under the name of Sabath.
SABA'TIA VADA. [Vada Sabatia.]
SABATI'NUS LACUS (Ed\&ara $\lambda / \mu \nu \eta$, Strab.: Lago di Bracciano), one of the most considerable of the lakes of Etruria, which, as Strabo observes, was the most southerly of them, and consequently the nearest to Rome and to the sea. (Strab. v. p. 226.) It is, like most of the other lakes in the same region, formed in the crater of an extinct volcano, and has consequently a very regular basin-like form, with a circuit of abont 20 miles, and is surrounded on all sides by a ridge of hills of no great elevation. It is probable that it derived its name from a town of the name of Sabate, which stood on its shores, bat the same is not found in the geographers, and the only positive evidence of its existence is its mention in the Tabula as a station on the Via Claudia. (Tab. Peut.) The lake itself is called Sabata by Strabo, and Sabate by Festus, from whom we learn that it gave name to the Sabatine tribe of the Roman citizens, one of those which was formed ont of the new citizens added to the state in B. c. 387 . (Liv. vi. 4, 5; Fest. s. v. Sabatina, pp. 342, 343.) Silius Italicus speaks of the "Sabatia stagna" in the plural (viii. 492), probably including under the name the much smaller lake in the same neighbourhood called the Lacus Alsietinus or Lago di Martignano. The same tradition was reported of this lake as of the Ciminian, and of many others, that there was a city
swallowed ap by it, the remains of which could still occasionally be seen at the bottom of its clear waters. (Sotion, de Mir. Font. 41, where we should certainly read Eábatos for Edkatos.) It abounded in fish and wild-fowl, and was even stocked artificially with fish of various kinds by the luxurious Romans of late times. (Columell. viii. 16.)

The Tabula places Sabate at the distance of 36 miles from Rome, but this namber is much beyond the truth. The true distance is probably 27 miles, which would coincide with a site near the W. extremity of the lake about a mile beyond the modern town of Bracciano, where there are some ruins of Roman date, probably belonging to a villa. (Tab. Peut.; Holsten. Not ad Cluver. p. 44; Westphal, Röm. Kampagne, pp. 156, 158.) The town of Bracciano, which now gives name to the lake, dates only from the middle ages and probably does not occupy an ancient site.
[E. H. B.]
SABATUS. 1. (Sabbato), a river of Samnium, in the country of the Hirpini, and one of the tributaries of the Calor (Calore), with which it unites under the walls of Beneventum. [Calor.] The name of the river is not found in any ancient author, but Livy mentions the Sabatini among the Campanians who were punished for their defection to Hannibal in the Second Punic War. (Liv. xxvi. 33, 34.) These may mean generally the people of the valley of Sabatus, or there may have been, as supposed by Cluver, a town of the same name on the banks of the river. (Cluver. Ital. p. 1199.)
2. (Saruto), a river of Bruttium, on the W. coast of the peninsula, flowing into the sea between Amantea and Capo Sucero. Its name is known only from the Itineraries, from which we learn that it was crossed by the high-road to Rhegium 18 miles S. of Consentia (Cosenza), a distance which, combined with the name, clearls identifies it with the modern Savuto. (Itin. Ant. pp. 105, 110.) It is generally identified by geographers with the Ocinarus of Lycophron, on the banks of which the Greek city of Terina was situated; but this assumption rests on no sufficient grounds. [TERiNA.] [E. H. B.]

## SA'BBATA or SABBA'TIA. [Vada Saba-

 TIA.]SA' ${ }^{\prime}$ BBATHA (Ed́sfa0a, Ptol. vi. 7. § 38; Sabotha, Plin. vi. 28. s. 32), was the capital of the Adramitae, a Sabaean tribe inhabiting the S . const of Arabia Felix (lat. $14^{\circ} \mathrm{N}$.). [Ádramitae.] Its inhabitants are called Sabbathae by Festus Avienus (Descr. Orb. Terr. v. 1136). Sabbatha was seated far inland, on the coast of a navigable river (Prion?) - an unusual circumstance in that region, where the streams are brief in their course and seldom navigable. (Peripl Mar. Erythr. p. 15.) If it really contained sixty temples within its walls, Sabbatha must have ranked second to none of the cities of Arabia. Its monopoly of the Indian trade doubtless rendered it a wealthy and important place. At no other haven on the conast were the spices, gums, and silks of India permitted to be landed: if exposed to sale elsewhere, they were confiscated, and their vendors punished with death. They were conveyed up the river to Sabbatha in boats made of leather, strained over wooden frames. One gate alone - probably for the convenience of detecting fraud - of Sabbatha was assigned to this branch of commerce; and after the bales had been examined, the goods were not handed over to their owners until a tithe had been deducted for a deity named Sabid (=dominus), and also a portion for the king.

Geocraphers attempt to identify Sabbatha with Mariaba (Mareb), but the provfs of their identity are unsatisfactory; and it may even be questioned whether Sabbatha be not an elongated form of Saba, a common appellation for cities in Arabia Felix. The Kafárayov of Strabo (xvi. p. 768) is supposed by his translator Groskurd (vol. iii. p. 287) to be an error for Ka6átavov, and the latter to be a form of Sabbatha. [See Marlaba. Vol. II. p. 274.]
[W. B. D.]
SABI'NI (Eafivot), a penple of Central Italy, who inhabited the rugged mountain country on the W. of the central chain of the Apennines, from the sources of the Nar and Velinus to the neighbourhood of Reate, and from thence southwards as far as the Tiber and the Anio. They were bounded on the N. and W. by the Uinbrians and Etruscans, on the NE. by Picenum, from which they were separated by the main ridge of the Apennines; on the E. by the Vestini, the Marsi and Aequiculi, and on the S. by Latium. Their country thus formed a narrow strip, extending about 85 miles in length from the lofty group of the Apennines above Nursia, in which the Nar takes its rise (now called the Monti della Sibilla), to the junction of the Tiber and Anio, within a few miles of Rome. The southern limit of the Sabines had, howerer, undergone many changes; in Pliny's time it was fixed as above stated, the Anio being generally received as the boundary between them and Latium; hence Pliny reckons Fidenae and Nomentum Sabine cities, though there is good ground for assigning them both in earlier times to the Latins, and Ptolemy again includes them both in Latium. Strabo, on the other hand, describes the Sabine territory as extending as far as Nomentum, by which he probably means to include the latter city; while Eretum, which was only about 3 miles N. of Nomentum, seems to have been universally considered as a Sabine city. (Strab. v. p. 2:28; Ilin. iii. 5. s. 9, 12. s. 17; Ptol. iii. 1. §62.) In like manner Pliny includes the important city of Tibur among the Sabines, though it was certainly commonly reckoned a Latin city, and never appears in the early history of Rome in connection with the Sabines. The fact appears to be, that the frontier between the Sabines and Latins was in early times constantly fluctuating, as the Sabines on the one hand were pressing down from the N., and on the other were driven back in their turn by the arms of the Romans and Latins. But on the division of Italy into regions by Augustus, the Anio was established as the boundary of the First Rerion, and for this reason was considered by Pliny as the limit also between the Latins and Sabines. (Ilin l.c.) It is remarkable that no name for the country is found in ancient writers, standing in the same relation to that of the people which Samnium does to Samnites, Latium to Latini, \&c.: it is called only "the land of the Sabines" (Sabinorum ager, or Sabinus ager, Liv. i. 36, ii. 16, \&c.; Tac. Hist. iii. 78), and Roman writers would say " in Sabinis versari, in Sabinos proficisci," \&c. The Greeks indeed used $\dot{\boldsymbol{\eta}}$ Easion for the name of the country (Strab. v. pp. 219, 2.28 .8 Cc. ; Steph. Byz. s. v.), which is called to the present dar by the Puman peasantry La Sabina, but we do not find any corresponding form in Latin authors.

All ancient authors agree in representing the Sabines as one of the most ancient races of Italy, and as constituting one of the elements of the Roman people, at the same time that they were the progenitors of the far more numerous races which had vol 11.
spread themselves to the $E$. and $S$., under the names of Picentes, Peligni, and Samnites, the last of whom had in their turn berome the parents of the Frentani, the Lucaniaus, Apulians and Bruttians. The minor tribes of the Marsi, Marrucini and Vestini, were also in all probability of Sabine origin, though we have no distinct testimony to this effiect [Marsi]. These various races are often comprehended by modern writers under the general name of Sabellian, which is convenient as an ethnic designation; but there is no ancient authority for this use of the word, which was first introduced by Niebuhr (vol. i. p. 91). Pling indeed in one passage says that the Samnites were also called Sabelli (Plin. iii. 12. s. 17). and this is confirmed by Strabo (v. p. 250). Salellus is fruand also in Livy and other Latin writers, as an adjective form for Samnite, though never for the name of the nation (Liv. viii. 1, x. 19); but it is frequently also used, especially by the poets, simply as an equiralent for the adjective Sabine. (Virg. G. ii. 167, Aen vii. 665 ; Hor. Carm. iii. 6.37 ; Juv. iii. 169.)

But notwithstanding the important position of the Sabines in regard to the early history and ethnography of Italy, we have very little information as to their own origin or affinities. Strabo calls them a very ancient race and autochthons (v. p. 228). which may be understood as meaning that there was no account of their immigration or origin which he considered worthy of credit. He distinctly rejects as a fiction the notion that they or their Samnite descendants were of Laconian origin (lb. p. 250); an idea which was very probably suggested only by fancied resemblances in their manners and institutions to those of Sparta (Dionys. ii. 49). But this notion, though not countenanced by any historian of authority, was taken up by the Roman poets, who frequently allude to the Lacedaemonian descent of the Sabines (Ovid. Fast. i. 260, iii. 230; Sil. Ital. ii. 8 , viii. 412, \&.c.), and adopted also by some prase writers (Plut. Rom. 16; Hygin. ap. Serv. ad Aen. viii. 638). A much more inportant statement is that preserved to us by Dionysius on the authority of Zenodotus of Truezen, which represents the Sabines as an offshoot of the Umbrian race (Dionys. ii. 49). The authority of Zenodotus is indeed in itself not worth much, and his statement as reported to us is somewhat confused; but many analogies would lead us to the same conclusion, that the Sabines and Umbrians were closely cognate races, and branches of the same original stock. We learn from the Eugubine tables that Sancus, the tutelary divinity of the Sabine nation, was an object of especial worship with the Umbrians also; the same documents prove that various other points of the Sabine religion, which are spoken of as peculiar to that nation, were in fact common to the Uinbrians also (Klenze, Philol. Abhandl. p. 80). Unfortunately the Sabine language, which would have thrown much light upon the subject, is totally lost; not a single inscription has been preserved to us; but even the few words recorded by ancient writers, though many of them, as would naturally be the case in such a selection, words peculiar to the Sabines, yet are abundantly sufficient to show that there could be no essential difference between the language of the Sabines and their neighbours, the Umbrians on the one side, and the Oscans on the other (Klenze, l. c.; Donaldson, Varronianus, p. 8). The general similarity between their dialect and that of the Oscan was probably the cause that they alupted with facility in the more southern regions of Italy, which they had conquered.
the language of their Oscan subjects; indeed all the extant inscriptions in that language may be considered as Subello-Oscan, and have probably received some influence from the language of the conquerors, though we have no means of estimating its amount. The original Sabines appear to have early lost the use of their own language, and adopted the general use of Latin; which, considering the rugged and secluded character of their country, and their primitive habits of life, could hardly have been the case, had the two languages been radically distinct.

On the woole, tinerefore, we may fairly conclude that the Sabines were only a branch of the same great family with the Oscans, Latins, and Umbrians, but apparently most closely related to the last of the three. Their name is generally derived from that of Sabus, who is represented as a son of Sancus, the chief tutelary divinity of the nation. (Cato, ap. Dionys. ii. 49; Sil. Ital. viii. 422; Serv. ad Aen. viii. 638.) But another etymology given by ancient writers derives it from their religious habits and devotion to the worship of the gods. (Varr. ap. Fest. p. 343; Plin. iii. 12. s. 17.) This last derivation in fact comes to much the same thing with the preceding one, for the name of Sabus (obviously a mythological personage) is itself connected with the Greek $\sigma \in 6 \in 0$, and with the word "sevum" found in the Eugubine tables in the sense of venerable or holy, just as Sancus is with the Latin "sanctus," " sancire," \&c. (Donaldson, L c.)

The original abode of the Sabines was, according to Cato, in the apper valley of the Aternus, about Amiternum, at the foot of the loftiest group of the Apennines. We cannot indeed understand literally, at least as applying to the whole nation, his assertion (as quoted by Dionysius) that they proceeded from a village called Testrina, near Amiternum (Cato, ap. Dionys. i. 14, ii. 49); though this may have been true of the particular band or clan which invaded and occupied Reate. But there is no reason to doubt the general fact that the Sabines, at the earliest period when their name appears in history, occupied the lofty mountain group in question with its adjacent valleys, which, from the peculiar configuration of this part of the Apennines, would afford natural and convenient outlets to their migrations in all directions. [Aprnninus.] The sending forth of these migrations, or national colonies, as they may be called, was connected with an ancient custom which, though not unknown to the other nations of Italy, seems to have been more peculiarly characteristic of the Sabines - the Ver Sacrum or "sacred spring." This consisted of dedicating, by a solemn row, nsually in time of pressure from war or famine, all the produce of the coming year, to some deity: Mamers or Mars seems to have been the one commonly selected. The cattle born in that year were accordingly sacrificed to the divinity chosen, while the children were allowed to grow up to man's estate, and were then sent forth in a body to find for themselves new places of abode beyond the limits of their native country. (Strab. v. p. 250; Fest. 3. vv. Mamertini, p. 158, Sacrani, p. 321, Ver Sacrum, p. 379 ; Sisenna, ap. Non. p. 522 ; Varr. R. R. iii. 16. § 29 ; Liv. xxii. 9,10.) Such colonies were related by tradition to have given origin to the nations of the Picentes, the Samnites, and the Hirpini, and in accordance with the notion of their consecration to Mars they were reported to have been guided by a woodpecker, or a wolf, the animals peculiarly connected with that deity. (Strab. v.
pp. 240, 250 ; Fest. pp. 106, 212.) We have no statements of the period at which these successive emigrations towards the E. and S. took place: all that is known of the early history of the nations to which they gave rise will be found in the respective articles, and we shall here content ourselves with tracing that of the Sabines themselves, or the people to whom that appellation continued to be confined by the Romans.

These, when they first emerged from their upland valleys into the neighbourhood of Reate, found that city, as well as the surrounding territory, in the possession of a people whom Dionysius calls Aborigines, and who, finding themselres unabie to withstand the pressure of the Sabines, withdrew, after the capture of their capital city of Lista, towards the lower valley of the Tiber, where they settled themselves in Latium, and finally became one of the constituent elements of the Latin people. (Cato, ap. Dionys. i. 14, ii. 48, 49.) [Aborigines; Latium.] Meanwhile the Sabines, after they had firmly established themselves in the possession of Reate and its neighbourhood, gradually pressed on towards the S . and W., and occupied the whole of the hilly and ruggel country which extends from Reate to the plain of the Tiber, and from the neighbourhood of Ocriculum to that of Tibur (Tivoli.) (Dionys. ii. 49.) The conquest and colonisation of this extensive tract was probably the work of a long time, but at the first dawn of history we find the Sabines already established on the left bank of the Tiber down to within a few miles of its confluence with the Anio; and at a period little subsequent to the foundation of Rome, they pushed on their adranced posts still further, and established themselves on the Quirinal hill, at the very gates of the rising city. The history of the Sabines under Titus Tatius, of the wars of that king with Romulus, and of the settlement of the Sabines at Rome upon equal terms with the Latin inhabitants, so that the two became gradually blended into one people, has been so mixed up with fables and distorted by poetical and mythological legends, that we may well despair of recovering the truth, or extricating the real history from the maze of various and discordant traditions; but it does not the less represent a real series of events. It is an unquestionable historical fact that a large part of the population of the city way of Subine origin, and the settlement of that people on the Quirinal is attested by numerous local traditions, which there is certainly no reason to doubt. (Schwegler, Röm. Gesch. vol. i. pp. 243, 478, 8cc.)

We cannot attempt here to discuss the various theories that have been suggested with a view to explain the real nature of the Sabine invasion, and the origin of the legends connected with thern. One of the most plausible of these is that which supposes Rome to have been really conquered by the Sabines, and that it was only by a subsequent struggle that the Latin settlers on the Palatine attained an equality of rights. (Ibne, Resenrches into the History of the Roman Constitution, p. 44, \&c.; Schwegler, vol. i. pp. 491-493.) It cannot be denied that this view has much to recommend it, and explains many obscure points in the early history, but it can be scarcely regarded as based on such an amount of evidence as would entitle it to be received as a historical fact.

The Sabine influence struck deep into the character of the Roman people; but its effect was especially prominent in its bearing on their sacred
rites, and on their sacendotal as well as religious institutions. This is in entire accordance with the character given of the Sabines by Varro and Pliny; and it is no wonder therefore that the traditions of the Romans generally ascribed to Numa, the Sabine king. the whole, or by far the greater part, of the religious institutions of their country, in the same manner as they did the military and political ones to his predecessor Romulus. Numa, indeed, became to a great extent the representative, or rather the impersonation of the Saline element of the Roman people; at the same time that he was so generally reparded as the founder of all religious rites and institutions, that it became customary to ascribe to him even those which were certainly not of Sabine origin, but belonged to the Latins or were derived from Alba. (Ambrosch, Studien, pp. 141 -148; Schwegler, R. G. vol. i. pp. 543, 554.)

Throughout these earliest traditions concerning the relations of the Sabines with Rome, Cures is the city that appears to take the most prominent part. Tatius himself was king of Cures (Dionys. ii. 36); and it was thither also that the patricians sent, after the interregnum, to seek out the wise and pacific Numa. (Liv. i. 18; Dionys. ii. 58.) A still more striking proof of the connection of the Boman Sabines with Cures was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as immediately derived from that of Cures. (Liv. i. 13; Varr. L. L. vi. 68; Dionys. ii. 46 ; Strab. v. p. 228.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from " quiris," a spear, and meant merely" spearmen" or "warriors," just as Quirinus was the "spear-god," or god of war, closely connected, though not identical with, Mamers or Mars. It is certain also that this superiority of Cures, if it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconsiderable place. [Cures.]

The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secure the rising city from hootilities with the rest of the nation. Already in the reign of Tullus Hostilius, the successor of Numa, we find that monarch engaged in hostilities with the Sabines, whose territory he invaded. The decisive battle is said to have taken place at a forest called Silva Malitiosa, the site of which is unknown. (Liv. i. 30; Dionys. iii. 32, 33.) During the reign of Ancus Marcius, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur ; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio ; and after their final defeat we are told that they were deprived of Collatia and the adjoining territory. (Liv. i. 36-38; Dionys. iii. 55-66.) Cicero also speaks of Tarquin as repulsing the Sabines from the very walls of the city. (Cic. de Rep. ii. 20.) There seems therefore no doubt that they had at this time extended their power to the right bank of the Anio, and made themselves masters of a considerable part of the territory which had previously belonged to the Latins. From this time no further mention of them occurs in the history of Rome till after the expulsion of the kings ; but in B. c. 504, after the repulse of Porsena,
a Sabine war again broke out, and from this time that people appears almost as frequently among the enemies of Rome, as the Veientes or the Volscians. But the renewal of hostilities was marked by one incident, which exercised a permanent erfect on Roman history. The whole of one clan of the Sabines, headed by a leader named Atta Clausus, dissenting from the policy of their countrymen, migrated in a body to Rome, where they were welcomed as citizens, and gave rise to the powerful family and tribe of the Claudii. (Liv. ii. 16 ; Dionys. v. 40 ; Virg. Aen. vii. 708; Tac. Ann. xi. 24 ; Appian, Kom. i. Fr. 11.) It is unnecessary to recapitulate in detail the accounts of the petiy wars with the Sabines in the early ages of the Republic, which present few features of historical interest. They are of much the same general character as those with the Veientes and the Volscians, but for some reason or other seem to have been a much less favourite subject for popular legend and national vanity, and therefore afford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed disposes of them for the most part in a very summary manner; but they are related in considerable detail by Dionysius. One thing, however, is evident, that neither the power nor the spirit of the Sabines had been I roken; as they are represented in B. c. 469, as carrying their ravages up to the very gates of Rome; and even in B.c. 449, when the decisive victory of M. Horatius was followed by the capture of the Sabine camp, we are told that it was found full of booty, obtained by the plunder of the Roman territories. (Liv. ii. 16, 18, \&c.. iii. 26, 30, 38, 6163 ; Dinnys. v. $37-47$, vi. 31, \&c.) On this, as on several other occasions, Eretum appears as the frontier town of the Sabines, where they established their head-quarters, and from whence they made incursions into the Roman territory.

There is nothing in the accounts transmitted to us of this victory of M. Horatius over the Sabines to distinguish it from numerous other instances of similar successes, but it seems to have been really ot importance ; at least it was followed by the remarkable result that the wars with the Sabines, which for more than fifty years had been of such perpetual recurrence, ceased altogether from this time, and for more than a century and a half the name of the Sabines is scarcely mentioned in history. The circumstance is the more remarkable, because during a great part of this interval the Romans were engaged in a fierce contest with the Samnites, the descendants of the Sabines, but who do not appear to have maintained any kind of political relation with their progenitors. Of the terins of the peace which sabsisted between the Sabines and Komans during this period we have no account. Niebahr's conjecture that they enjoyed the rights of isupolity with the Romans (vol. ii. p. 447) is certainly without foundation; and they appear to have maintained a position of simple neutrality. We are equally at a loss to understand what should have induced them at length suddenly to depart from this policy, but in the year B.c. 290 we find the Sabines once more in arms against Rome. They were, however, easily vanquished. The consul Mi'. Curius Dentatus, who had already put an end to the Third Samnite War, next turned his arms against the Sabines, and reduced them to submission in the course of a single campaign. (Liv. Epit. xi.; Vict. V'ir. Ill. 33; Onw. iii. 22; Flor. i. 15.) They were severely punished for their defection; great numbers of pri-
soners were sold as slaves; the remaining citizens were admitted to the Roman franchise, but without the right of suffrage, and their principal towns were reduced to the subordinate condition of Praefecturae. (Vell. Pat. i. 14; Festus, s.v. Praefecturae; Serv. ad Aen. vii. 709, whose statement can only refer to this period, though erroneously transferred by him to a much earlier one.) The right of suffrage was, however, granted to them about 20 years later (b. c. 268): and from this time the Sabines enjoyed the full rights of Koman citizens, and were included in the Sergian tribe. (Vell. Pat. l.c.; Cic. pro Balb. 13, in Vatin. 15.) This circumstance at once separated them from the cause of the other nations of Italy, including their own kinsmen the Samnites, Picentes, and Peligni, during the great contest of the Social War. On that occasion the Sabines, as well as the Latins and Campanians, were arrayed on behalf of Rome.

The last occasion on which the name of the Sabines as a people is found in history is during the Second Punic War, when they came forward in a body to furnish volunteers to the army of Scipio. (Liv. axviii. 4.5.) After their incorporation with the Roman state, we scarcely meet with any separate notice of them, though they continued to be regarded as among the bravest and hardiest of the subjects of Rome. Hence Cicero calls them "florem Italiae ac robur rei publicae." (Pro Ligar. 11.)

Under the Empire their name did not even continue to be used as a territorial designation. Their territory was included in the Fourth Region by Augustus. (Plin. iii. 12. s. 17.) It was subsequently reckoned a part of the province of Valeria, and is included with the rest of that province under the appellation of licenum in the Liber Coloniaruan. (Lib. Col. pp. 253, 257, \&cc.; P. Diac. Hist. Lang. ii. 20; Mommsen, ad Lib. Col. p. 212.) But though the name of the Sabines thus disappeared from official usage, it still continued in current popular use. Indeed it was not likely that a penple so attached to ancient usages, and so primitive in their habits, would readily lose or abandon their old appellation. Hence it is almost the only instance in which the ancient name of a district or region of Italy has been transinitted without alteration to the present day: the province of $L a$ Sabina still forms one of the twelve into which the States of the Charch are divided, and is comprised within very nearly the same limits as it was in the days of Strabo. (Rampoldi, Dis. Corog. dItalic, s. v.)

The country of the Salines was, as already mentioned, for the most part of a rugged and mountainous character; even at the present day it is calculated that above two-thirds of it are incapable of any kind of cultivation. But the valleys are fertile, and even luxuriant ; and the sides of the hills, and lower slopes of the mountains, are well adapted for the growth both of vines and olives. The northernmost tract of their territory, including the upper valleys of the Nar and Velinus, especially the neiglibourhood of Nursia, was indeed a cold and bleak highland country, shut in on all sides by some of the highest ranges of the Apennines; and the whole brodd tract which extends from the group of the Nonte Velino, SE. of Reate, to the finnt of the mountain ranges that border the Campagna of Rome, is little more than a mass of broken and rugged mountains, of inferiur eleration to the more
central ranges of the Apennines, bat still far from inconsiderable. The Monte Gennaro (the Mons Lucretilis of Horace), which rises directly from the plain of the Campagna, attains to an elevation of 4285 English feet above the sea. But the isolated mountain called Monte Terminillo near Lemessa, NE. of Rieti, which forms a conspicuons object in the view from Rome, rises to a height of above 7000 fect, while the Monte Velino, SE. of Rieti, on the confines of the Sabines and the Vestini, is not less than 8180 feet in beight. The whole of the ridge, also, which separates the Sabines from Picenum is one of the most elevated of the Apennines. The Monti della Sibilla, in which the Nar takes its rise, attain the height of 7200 feet, while the Monte Vettore and Pizzo di Sevo, which form the continnation of the same chain towards the Gran Sasso, rise to a still greater eleration. There can be no doubt that these lofty and ragged groups of mountains are those designated by the ancients as the Mons Fiscellus, Tetrica ("Tetricae horrentes rupes," Virg. Aem vii. 713), and Severus: but we are unable to identify with any certainty the particular mountains to which these names were applied. The more westerly part of the Sabine territory slopes gradually from the lofty ranges of these central Apennines towards the valley of the Tiber, and though always hilly is still a fertile and productive country, similar to the part of Umbria, which it adjoins. The lower valley of the Velinus about Reate was also celebrated for its fertility, and even at the present day is deservedly reckoned one of the most beautiful districts in Italy.
The physical character of the land of the Sabines evidently exercised a strong influence upon the chasracter and manners of the people. Highlanders and mountaineers are generally brave, hardy, and frugal; and the Sibines seem to have possessed all these qualities in so high a degree that ther became, as it were, the types of them among the Komans. Cicero calls them " severissimi homines Sabini," and Liry spenks of the "disciplina tetrica ac tristis veterum Sabinorum." (Cic. in Vatin. 15, pro Ligar. 11; Liv. i. 18.) Cato also described the severe and frugal mode of life of the early Romans as inherited from the Sabines (ap. Serv. ad Aen. viii. 638). Their frugal manners and moral purity continued indeed, even under the Roman government, to be an object of admiration, and are often introduced by the poets of the Empire as a contrast to the luxury and dissoluteness of the capital. (Hor. Carm. iii. 6. 38 -44, Epod. 2. 41, Epist. ii. 1. 25 ; Propert. iii. 24. 47; Juv. iii. 169.) With these qualities were combined, as is not unfrequently found anong secluded mountaineers, an earnest piety and strong religious feeling, together with a strenuous attachment to the religious usages and forms of worship which had been transmitted to them by their ancestors. The religion of the Sabines does not appear to have differed essentially from that of the other neighbouring nations of Italy; but they had several peculiar divinities, or at least divinities unknown to the Latins or Etruscans, though some of them seem to have been common to the Umbrians also. At the head of these stood Sancus, called also Semo Sancas, who was the tutelary divinity of the nation, and the reputed father of their mythical progenitor, or eponymous hero Sabus. He was considered as the peculiar guardian of caths, and was thence generally identified by the Romans with Dius Fidins; while others, for less obvious reasons, identified him with

Hercules. (Ovid. Fast. vi. 215 ; Sil. Ital. viii. 420; Iactant. i. 15; Augustin, Civ. Dei, zviii. 19; Ambroech. Studien p. 170, \&c.) Among the other deities whese worship is expressly said to have been introduced at Rome by the Sabines, we find Sol, Feronia, Minerra and Mars, or Mamers, as he was called by the Sabines and their descendants. (Varr. L. L. v. 74.) Minerva was, however, certainly an Etruscan divinity also; and in like manner Vejovis, Ops, Diana, and several other deities, which are said to be of Sabine extraction, were clearly common to the Latins also, and probably formed part of the mythology of all the Italian nations. ( Varro, Le.; Augustia, C.D.iv. 23 ; Schwegler, Rōm. Gesch. i. p. 250 : Ambrosch. l.c.pp. 141-176.) On the other hand Quirinus was certainly a Sabine deity, notwithstanding his subsequent identification with the deitied Romulas. His temple, as well as that of Sancus, stood on the Quirinal hill, to which indeed it probably gave name. (Varr. L. L. v. 51 ; Ambrosch, pp. 149, 169.)

Connected with the religious rites of the Sabines may be mentioned their superstitious attachment to magical incantations, which they continued to practise down to a late period, as well as their descendants the Marsi and other Sabellian tribes. (Hor. Epod. 17. 28, Sat. i. 9. 29.) They were noted also for their skill, or pretended skill, in divination by dreams. (Fest. p. 335.) The rites of augury, and especially of auspices, or omens from the flight of birds, were alio considered to be essentially of Sabine origin, though certainly common in more or less degree to the other nations of Central Italy. Attus Navius, the celebrated augur in the reign of Tarquin the Elder, who was regarded by many as the founder of the whole science of augury (Cic. de Div. ii. 38), was a Sabine, and the institution of the "auspicia majora" was also referred to Numa (Cic. de Rep. ii. 14.)

The Ssbine language, as already observed. is known to us only from a few words preserved by ancient writers, Varro, Festus, \&c. Some of these, as "multa," "albus," "imperator," \&c., are well known to us as Latin words, though said to have originally passed into that language from the Sabines. Others, such as "hirpus" or "irpus" for a wolf, "caris" or "quiris" (a spear), "nar" (sulphur), "teba" (a hill), \&c., were altogether atrange to the Latin, though still in use among the Sabines. A more general peculiarity of the Sabine dialect, and which in itself proves it to have been a cognate language with the Latin, is that it inserted the digamma or $\mathbf{Y}$ at the commencement of many words instead of the rough aspirate; thus they said "fircus," 'fedus," "fostis," "fostia," \&cc., for the Latin " hircus," "hedus," " hostis," "hostis," \&ec. (Varro, L. L. v. 97 ; Fest. pp. 84, 102; Klenze, Philolog. Abhandl. pp. 70-76; Mommsen, U. I. Dialekte, pp. 335-359.) The two last authors have well brought together the little that we really know of the Sabine language. It is not quite clear from the expressions of Varro how far the Sabine langnage could be considered as still existing in his time; bat it seems probable that it could no longer be regarded as a living langange, though the peculiar expressions and forms referred to were still in ase as provincialisms. (Klenze, l.c.)
The Sabines, we are told, dwelt principally in villages, and even their towns in the earliest times тere unwalled. (Strab. r. p. 228 ; Dionys. ii. 49.) This is one of the points in which they were thought
to resemble the Lacedaemonians (Plut. Rom. 16); though it probably arose merely from their simplicity of manners, and their retaining unchanged the habits of primitive mountaineers. In accordance with this statement we find very few towns mentioned in their territory ; and even of these Reate appears to have been the only one that was ever a place of mach importance. Interocrea, about 14 miles higher up the valley of the Velinus (the name of which is still presersed in Antrodoco), seems never to have been a municipal town; and it is probable that the whole upper valley of the Velinus was, municipally speaking, included in the territory of Reate, as we know was the case with the lower valley also, down to the falls of the river, which formed the limit of the territory of the Sabines on this side: Interamna, as well as Narnia and Ocriculum, being included in Umbria. FalacritnUM, the birthplace of Vespasian, situated mear the sources of the Velinus, was certainly a mere village; as was also Forcli (Civita Tommasa), situated in the cross valley which led from Interocrea to Amiternum and formed the line of communication between the valley of the Velinus and that of the Aternus. Amiternum itself, though situated in the valley of the Aternus, so that it would seem to have more naturally belonged to the Vestini, was certainly a Sabine city (Plin. iii. 12. s. 17 ; Strab. v. p. 228), and was probably, next to Reate, the most considerable that they possessed. Nursia, in the upper valley of the Nar, was the chief town of the surrounding district, bat was never a place of much importance. The lower country of the Sabines, between Reate and Rome, seems to have contained sereral small towns, which were of municipal rank, though said by Strabo to be little more than villages. Among these were Forum Novom, the site of which may be fixed at lescorio, on the banks of the Imele, and Forcm Decif, the situation of which is wholly anknown. Both these were, as the names show, Koman towns, and not ancient Sabine cities; the former appears to have replaced the Sabine Casperla, which was probably situated at Aspra, in the same neighbourhood. On the other hand Cures, the supposed metropolis of the Sabines that had settled at Rome, still retained its municipal rank, though not a place of much importance. The same was the case with Erktum, which was, as already observed, the last of the strictly Sabine towns in proceeding towards Kome ; though Pliny includes Nomentum and Fidenae also among the Sabines. Besides these there were two towns of the name of Trebula, both of which must probably be placed in the southern part of the land of the Sabines Of these Trebula Mutusca (the Mutuscae of Virgil, Aen. vii. 711) is represented by Monte Leone, about 15 miles S. of Rieti, and on the right of the Salarian Way; while Trebula Suffenas may perhaps be placed at S. Antimo near Stroncone, in the hills W. of Rieti. Lastly, Varia, in the valley of the Anio, 4 miles abore Tibur, still called Vicovaro, would appear to have been certainly a Sabine town; the whole valley of the Digentia (Licenza), with its villages of Mandela, Digentia, and Fanum Vacunae (the well-knuwn neighbourhood of Horace's Sabine farm), being included among its dependencies. [Digentla.]

The territory of the Sabines was traversed throughout its whole extent by the Salarian Way, which was from an early period one of the great highroads of Italy. This proceeded from Rome

## SACASTENE．

direct to Reate，and thence ascended the valley of the Velinus by Interocrea and Falacrinum，from whence it crossed the ridge of the Apennimes into the valley of the Truentus in Picenum，and thus descended to Asculum and the Adriatic．The stations between Rome and Reate were Eretum， which may be fixed at Grotta Marozza，and Vicus Novus，the site of which is marked by the Osteria Nuova，or Osteria dei Massacci， 32 miles from Rome．（Westphal，Rüm．Kamp．p．128．）［Via Salaria．］

Notwithstanding its mountainous character the Sabine territory was far from being poor．Its pro－ ductions consisted chiefly of oil and wine，which， though not of first－rate quality，were abundant，and supplied a great part of the quantity used by the lower classes at Rome．（Hor．Carm．i．9．7，20． 1 ； Juv．iii．85．）The Sabine hills produced also in abundance the plant which was thence known as Subina herba（still called Savin），which was used by the natives for incense，befure the more costly frankincense was introduced from the East．（Plin． xri．20．s．33，xxiv．11．s． 61 ；Virg．Cuh．402；Ovid， Fast．i．342．）The neighbourhood of Reate was also famous for its breed of mules and horses；and the mountains afforded excellent pasturage for sheep．The wilder and more inaccessible summits of the Apennines were said still to be frequented by wild goats，an animal long since extinct throughout the continent of Italy．（Varr．R．R．ii．1．§ 5， 3．§ 3．）
［E．H．B．］
SABIS（ $\sum_{d}$ ers），a small river of Carmania，which is mentioned by Mela in connection with two other sinall streams，the Andanis and Coros（iii．8）． It is also noticed by Pliny，who places it in the neighbourhood of Harmuza（Ormüz，vi．23．s．27）． Ptulemy speaks of a town in Carmania of the same name with this river（vi．8．§ 14），

SABIS（Sambre），a river of Belgica，which joins the Mosa（Maas）at Charleroi．Caesar（b．c．57） marched against the Nervii and their confederates from the south，and he found the enemy posted on the north side of the Sabis（B．G．ii．16）．In this battle the Belgae were defeated with great slaughter． ［NERVII．］
［G．L．］．
SABLONES，in Gallis Belgica，is placed by the Antonine Itin．on a road from Colunia Trajana （Kelln）to Juliacum（Juliers）and Colonia Agrippi－ nensis（Cologne）．Sablones is supposed to bo a place named Int－Sandt near Strïlen，a town on the river Niers，a branch of the Maas．But see Mediohanum in Gallia，No． 3.
［G．L．］
SABOCI（̌а6ஸ̂ко al．इabóкo九，Ptol．iii． 5. § 20），a people of European Sarmatia，who from the termination＂boki，＂＂bank，＂so often occurring in hussian and Polish local names，must be looked for in the basin of the river Sun，one of the largest affluents of the Vistula，and which drains a greater part of Galizia．（Schafarik，Slav．Alt．vol．i． p．206．）
［E．B．J．］
SABORA，a place in Hispania Baetica，in the mountains above Malaga，near Canete；known only from inscriptions．（Carter，Travels，p．252； Ukert，vol．ii．pt．i．p．360．）
［T．H．D．］
SABRACAE，a people who dwelt，according to Curtius，in the southern part of the Iunjab，in the neighbourhood of the Insula Pattalene（ix．8．§ 4）． They are mentioned in connection with the Praesti as forming part of the realm of Musicanus．（Ar－ rian，Anab．vi．15；Diuvi．xvii．102．）［V．］

SABRATA（之a6púta，I＇tol．iv．3．§ 41 ．P＇lin．v． 4.
s．5；Solin．S7；Itin．Anton．Peus．Tab．；इabapaod， Procop．de Aed．vi．4；Za8pd0a，Stadiasm．§§ 99， 100），a Phoenician town（Sil．Ital．iii．256）on the coast of N．Africa between the Syrtes．The name， which is Phoenician and occars on coins（Movers， Dic Phöniz．vol．ii．p．491），received the Graecised furm Abrotonum；for although Pliny（l．c．）dis－ tinguishes the two towns they are undoubtedly the same places．It became afterwards a Roman co－ lonia，and was the birthplace of Flavia Domitilla， the first wife of Vespasian，and mother of Titus and Domitian．（Sueton．Vespas．3）．Justinian furtified it（Procop．l．c．），and it remained during the middle ages one of the most frequented markets upon this coast，to which the natives of central Africa brought their grain（comp．Ibn Abd－el－Hakern，Journal A siatique，1844，vcl．ii．p．358）．Barth（Wander－ ungen， p ．277）has given an account of the extensive ruins of Sabrata，which he found to the W．of Tripoli．at Tripoli Vecchio，or Soára－esch－Schurkica， lat． $32^{\circ} 49^{\prime}$ ，long． $12^{\circ} 26^{\prime}$ ．（Smyth，Mediterraseass， p．456．）
［E．B．J．］
SABRINA（called by Ptolemy Eafpidva，ii． 3. § 3；probably also the Sarva of the Geog．Rav．v．31 ）， a river on the W．coast of Britannia Komana，which falls into the sea near Venta Silurum，now the Severn．Its mouth formed an estuary of the same name．（Comp．Tac．Ann．xii．31．）［T．H．D．］

SABUS， 2 fortified place in Armenia Minor，at the foot of Antitaurus．（It．Ant．p．209；Not． Imp．c．27．）In the Peuting．Table it is called Saba．
［L．S．］
SACAE．［Scrithia．］
SACALA（ $\tau \dot{\alpha} \Sigma \Sigma_{\alpha} \alpha a \lambda a$ ），a desert spot on the sea－ shore of Gedrosia which was visited by the fleet of Nearchus（Arrian，Ind．c．22）．It is not satisfac－ torily identified with any modern place．（Vincent， Voyage of Nearchus，i．p．202．）
［V．］
SACANI．［Sarmatla．］
SACAPENE．［Sacasene．］
SACARAULI（ इacapaū入oc，Strab．xi．p．511），a nomad people of Central Asia，belonging to the oldest stock of the Turks of the Altai．In Ptolemy （vi．14．§4）this people appear under the name of Sugaraucae（之aүapaükau）（comp．Ritter，Erdkunde， vol．vii．p．696）．
［E．B．J．］
SACASSE＇NE（ $\Sigma a \kappa a \sigma \sigma \eta \nu \hbar$, Strab．ii．p．73，xi． pp．509，511，529：Eth．Sacassani，Plin．vi．11），a province of Armenia，on the borders of Gogarede， which it separated from the valley of the Araxes， and which extended to the river Cyrus．St．Martin （ Mém．sur l＇A rminie，vol．i．pp．143，209，210） identifies it with the Armenian province of Siownikh， which was governed up to the 12 th century by a race of princes who traced their descent to Haig，first king of Armenia，and who in the 9th century had political relations with the Byzantine court．（Cunst． Porph．de Cueren．Aul．Byz．vol．i．p．397．）The Sacapene of Ptoleny（v．13．§9）appears to be the same as this province．
［E．B．J．］
SACASTE＇NE（ $\Sigma$ aкa $\sigma \tau \eta \nu \eta$ ），a district of the interior of Drangiana，which was occupied by the Sucae or Scythians，who appear to have descended through the P＇unjáb，and to have settled there． （Isidor．Mans．Parth．c．18．）According to Isido－ ras，it bore also the name of Paraetacene．It has been supposed that the modern name of this country， Segestan or Seistan，is derived from Sacastene（Wah1， Vorder u．Mittel－dsien，i．p．569；comp．litter， viii．p．120）．Fuur towns，Buida，Min，Palacenti， and Sigal，are mentioned in it ：of these，Min may
be compared with Min－nagara，a town on the Indus bslonging to the same people．（Arrian，Peripl．Mar． Eryth．§ 38．）［Minnagara．］
［V．］
SACCASE＇NA，a place in Cappadocia，probably in the neighbourhood of the modern Urgub or Urkup． （It．Ant．p．296．）
［L．S．］
SACCO＇PODES（Zaккondठes），according to Strabo，a name given to the people of Adiabene in Assyria（xvi．p．745）．There has been a great dispote among learned men as to this name，which does not appear to be a genuine one．Bochart has suggested Sancropodes（之aukpónofes）．On the whole，however，it would seem that the emendation of Tzschukke is the best，who reads इav入onoठes． （Grosknrd，ad Strab．vol．iii．p．225．）
［V．］
SACER MONS（ $\tau \delta$＇Iepòv $\quad$ poos）was the name given to a hill about 3 miles from Rome，across the Anio and on the right of the Via Nomentana．It is mentioned only on occasion of the two secessions of the plebeians from Rome：the first of which，in B．c． 494，was terminated by the dexterity of Menenius Agrippa，and gave occasion to the election of the first tribunes of the people．（Liv．ii．32；Dionys．vi． 45；Appian，B．C．i．1．）In memory of this treaty and the＂Lex Sacrata＂which was passed there to confirm it，an altar was erected on the spot，which thenceforth always bore the name of＂the Sacred Mount．＂（Dionys．ri．90；Appian，Lc．）．The se－ cond occasion was during the Decernvirate；when the plebeians，who had at first seceded only to the Aventine，on finding that this produced no effect， withdrew to the Sacred Mount（Liv．iii．52）．Cicero， on the contrary，represents the secession on this occasion as taking place first to the Sacred Mount， and then to the Aventine（Cic．de R．P．ii．37）． Hardly any spot in the neighbourhood of Rome，not marked by any existing ruins，is so clearly identified by the descriptions of ancient writers as the Sacer Mons．Both Livy and Cicero concur in placing it 3 miles from Rome，across the Anio；and the former expressly tells us that the plebeians，on the second occasion，proceeded thither by the Via Nomentana， which was then called Ficulensis（Liv．ii．32，iii．52； Cic．Brut．14，pro Cornel．，ap．Ascon．p．76）．Now the third mile along the Via Nomentana brings us to a point just across the Anio；and on the right of the road at this point is a hill overlooking the river，in some degree isolated from the plateau beyond，with which it is，however，closely connected，while its front towards the valley of the Anio is steep and almost precipitous．
On its E．side flows a small stream，descending from the Casale dei Pazzi（apparently the one known in ancient times as the Rivus Ulmanus）：so that the position is one of considerable strength，especially on the side towards Rome．The site is now uninhabited，and designated by no peculiar appel－ lation．（Nibby，Dintorni di Roma，vol．iii．pp．54， 55．）
［E．H．B．］
SACHALI＇TAE（Eaxa入itai），a people upon the S．coast of Arabia Felix（Ptol．vi．7．SS $11,24,25$ ）， and upon the bay called after them Sachalites Sumes（Zaxalitns кб才лтоs）．Respecting the position of this bay there was a difference of opinion among the ancient geographers，Marinus placing it towards the west，and Plolemy towards the east，of the pro－ montory Syagras（Ras Fartak）．（Ptol．i．17．§ 2， comp．vi．7．§§ 11,46 ．）Marcianus（p．23）agrees with Ptolemy；and says that the bay extended from this promontory to the mouth of the Persian gulf

（Peripl．Mar．Erythr．p．17．§ 29）on the other hand agrees with Marcian，and places the bay be－ tween Cane and the promontory Syagrus．（Dee C． Müller，ad Arrian，l．c．）

SACILI or SACILI MARTIALIUM（Pkin．iii． 1. s．3：called by Ptolemy इakidis，ii．4．§ 11），a town of the Turduli in Hispania Baetica，at a place near Perabad，now called Alcorrucen．（Morales，Antig． p． 96 ：Florez，Esp．Sagr．p．147．）［T．H．D．］

SA＇CORA（ （ákopa），a town in the interior of Paphlagonia，is mentioned oniy by Ptolemy（v． 4. § 5 ）．
［L．S．］
SACORSA（ áácopaa），a town in the interior of Paphlagonia，is mentioned only by Ptolemy（v． 4. § 6 ）．
［L．S．］
SACRA＇NI，was the name given by a tradition， probably of very ancient date，to a conquering people or tribe which invaded Latium at a period long before the historical age．Festus represents them as proceeding from Reate，and expelling the Siculi from the Septimontium，where Rome afterwards stood． He tells us that their name was derived from their being the offspring of a＂ver sacrum．＂（Fest．s．v． Sacrani，p．321．）It bence appears probable that the Sacrani of Festus were either the same with the people called Aborigines by Dionysius（i．16） ［Aborigines］，or were at least one clan or tribe of that people．But it is very doubtful whether the name was ever really used as a national appellation． Virgil indeed alludes to the Sacrani as among the inhabitants of Latium in the days of Aeneas（ Sa － cranae acies，Aen．vii．796），but apparently as a small and obscure tribe．Servius in his commen－ tary on the passage gives different explanations of the name，all varying from one another，and from that given by Festus，which is the mont distinct statement we have upon the subject．In another passage（ad Aen．xi．317）Servius distin－ guishes the Sacrani from the Aborigines，bat little value can be attached to his statements on such subjects．
［E．H．B．］
SACRARIA．［Clitumnus．］
SACRIPORTUS（ $\delta$＇I 1 p $\rho_{s} \lambda_{\iota} \mu \hbar \nu$, Appian，B．C．i． 87），a place in Latium，between Signia and Praeneste， celebrated as the scene of the decisive battle between Sulla and the younger Marius，in which the latter was totally defeated，and compelled to take refuge within the walls of Praeneste，b．c．82．（Liv．Epit． Ixxxvii．；Appian，B．C．i．87；Vell．Pat．ii．26， 28 ； Flor．iii．21．§ 23；Vict．Vir．IU．68，75；Lucan，ii． 134．）The scene of the battle is universally de－ scribed as＂apud Sacriportum，＂bat with no more precise distinction of the locality．The name of Sacriportus does not occur upon any other occasion， and we do not know what was the meaning of the name，whether it were a village or small town，or merely a spot so designated．But its locality may be approximately fixed by the accounts of the battle； this is described by Appian as taking place near Praeneste，and by Plutarch（Sull．28）as near Signia． We learn moreover from Appian that Sulla having besieged and taken Setia，the younger Marius，who had in vain endeavoured to relieve it，retreated step by step before him until he arrived in the neigh－ bourhood of Praeneste，when he halted at Sacriportus， and gave battle to his pursuer．It is therefore evident that it mast have been situated in the plain below Praeneste，between that city and Signia，and probably not far from the opening between the Alban hills and the Volscian mountains，through which must have lain the line of retreat of Marius；
but it is impossible to fix the site with more pre－ cision．
［E．H．B．］
SACRUM PR 1．（ $\tau \delta$ lepò d aкpotvipiov，Strab． iii．p．137），the SW．extremity of Lusitania ；ac－ cording to Strabo（l．c．），the most W．point，not only of Europe but of the known world；the present Cape St．Vincent．Strabo adds that the surrounding district was called in Latin＂Cuneus．＂Strabo also says that the geographer Artemidorus，who had been there，compared the promontory with the bow of a ship，and said that there were three small islands there；which，however，are not mentioned by any other writer，nor do they now exist．（Cf． Mela，ii． 1 ；Plin．iv．22．s．35，\＆c．）

2．（ $\tau \delta$ lepdン áкроу，Ptol．ii．2．§ 6）the SE．$^{2}$ point of Hibernia，now Carnsore Point．［T．H．D．］

SACRUM PROM．（ $\tau \delta$ iepd axpov，Ptol．iii． $5 . ~_{\text {．}}$ §8），the western point of the Achilleos Dro－ mos．
［E．B．J．］
SACRUM PROM．，a promontory of Lycia upon the borders of Pamphylia，opposite the Chelidoniae Insulae，whence the promontory is called by Livy Chelidonium Prom．［For details，see Vol．I． p．606，b．］

SADACORA（ $\Sigma a \delta d \kappa o p a)$ ，a town of Cappadocia， situated on the great road from Coropassus and Garsabora to Mazaca．（Strab．xiv．p．663．）［L．S．］

SADAME（Itin．Anl．p．230；in Geog．Kav．4，6， written Sadanua），a town in the NE．part of Thrace， on the road from Hadrianopolis to Develtus，its dis－ tance from the latter，according to the Itinerary，being 18,000 paces．This would give as its site the pre－ sent town of Kanareh，situated near the source of a small river which runs through a narrow valley and falls into the Black Sea at Cape Zaitan．But according to Reichard it was in the neighbourhood of Omar－Fakihi，which is perhaps the Sarbazan of Voudoucourt．
［J．R．］
SADOS（ $\Sigma$ áoos），a small river of the Aurea Chersonesus，which fell into the Bay of Benyal （Ptol．vii．2．§ 3）．It has been supposed by For－ biger to be the same as the present Sundoway． Ptolemy mentions also in the same locality a town called Sada，which was，in all probability，on or near the river．

SAELI＇Ni．［Astures．Vol．I．p．249．］
SAEPI＇NUM or SEPI＇NUM（the name is variously written both in MSS．and even irscriptions，but Saepinum is probably the most correct form：Eal－ mivov，Ptol．：Eth．Saepinas：Altilia near Sepino）， a city of Samnium，in the country of the Pentri，on the E．slope of the great group of the Monte Ma－ tese，and near the sources of the Tamaro（Tamarus）． It seems to have been in early times one of the chief towns of the Sannites，or rather one of the few which they possessed worthy of the name．From its po－ sition in the heart of their country it was not till the Third Samnite War that it was attacked by the Roman arms；but in B．C． 293 it was besieged by the consul L．Papirius Cursor，and though vigorously defended by a garrison amounting almost to an army， was at length carried by assault．（Liv．x．44，45．） From this time the name of Saepinum disappears from history，but it is found again at a later period among the municipal towns of Samnium under the Koman Empire．Its name is not indeed mentioned by Strabo，among the few surviving cities of Sam－ nium in bis day：but it received a colony under Nero（Lib．Colon．p．237），and appears for a time to have recovered some degree of importance．Its name is found both in Ptolemy and Pliny awong
the municipal towns of Samnium；and it is certain from inscriptions that it did not bear the title of a Colonia．（Plin．iii．12．s． 17 ；Plol．iii．1．§ 67 ； Orell．Inscr． 140 ；Mommsen，Inscr．R．N．4918， 4929，4934，\＆cc．）Its name is mentioned also in the Tabula，which places it $30 \mathrm{M} . \mathrm{P}$ ．from Bene－ ventum，the intermediate station being a place called Sirpium，the site of which is unknown．（Tal．Peut．） Saepinum became an episcopal see before the fall of the Roman Empire；it had，however，fallen into great decay in the time of the Lombards，but was repeopled by Romoaldus，duke of Beneventum（P．Diac．v． 30 ），and survired till the 9 th century，when it was taken and plundered by the Saracens；after which it seems to have been abandoned by the inhabitants， who withdrew to the site occupied by the modern town of Sepino，about 2 miles from the site of the ancient one．The ruins of the latter，which are now called Altilia，are evidently of Koman date，and， from their regularity and style of construction，ren－ der it probable that the town was entirely rebuilt at the time of the establishment of the Roman colony， very probably not on the same site with the ancient Samnite city．The existing walls，which remain in almost complete preservation throughout their whole circuit，and which，as we learn from an inscription over one of the gates，were certainly erected by Nero （Mommsen，I．R．N．4922），enclose a perfect square， with the angles slightly rounded off，and four gates， placed at the four cardinal points，flanked by massive square towers．The masonry is of reticulated work， the arches only of the gates being of inarsive stone． Within the enclosure are the remains of a theatre， besides the substructions and vestiges of several other buildings，and numerous fragments of an archi－ tectural character，as well as inscriptions．Of these last the mo－t interesting is one which is still extiant at the gate leading to Bovianum，and has reference to the flocks which then，as now，passed annually backwards and forwards from the thirsty plains of Apulia to the upland pastures of Samnium，espe－ cially of the Mutese；and which appear to have even then followed the same line of route：the tratturo or sheep－track still in use passing directly throngh the ruins of Altilia．（Craven＇s Abruzzi，vol．ii．pp． 130－135；Romanelli，vol．ii．pp．444－448：Biomm－ sen，I．R．N．4916．）［E．H．B．］

SAEPONE，an inland town of Hispania Bactica， near Cortes in the Sierra de Konda．（Plin．iii． 1. 8．3．）
［T．H．D．］
SAETABICULA（Eaitabiкou入a，Ptol．ii． 6. s．62），a town of the Contestani in Hispania Tarra－ conensis，probably the present Alzira in Valentia （Laborde，Itin．i．p．266．）
［T．H．D．］
SAETABIS，SETABIS，or SAETABI（Kairabis， Strab．iii．p．160），a town of the Contestani in Hispania Tarraconensis．It was a Roman muni－ cipium in the jurisliction of Carthago（Murat． Inscr．ii．p．1183．6），and had the sorname of Augustanorum．（Plin．iii．3．s．4．）It lay upon an eminence（Sil．Ital．iii．372）to the S．of the Sucro，and was famed for its flax and linen manu－ facture．（Plin．xix．2．s．1；Catull．xii．14，\＆c．） Now Jativa．（Cf．Laborde，Itin．i．p． 266 ；Marca， Hisp．ii．6．p．118．）
［T．H．D．］
SAE＇TABIS（ 年ita6is，Ptol．ii．6．§ 14），a river S．of the Sucro in the territory of the Contestani，on the E．coast of Hispania Tarraconensis．Most pro－ bahly the Alcoy．（Ukert，ii．ph．i．p．294．）［T．H．D．］

SAGALASSUS (Eara入a $\sigma \sigma \delta s:$ Eth. Eava-
 and fortress near the north-western frontier of Pisidia, or, as Strabo (xii. p. 569) less correctly states, of Isauria, while Ptolemy (v. 3. § 6) erroneously mentions it among the towns of Lycia. (Comp. Steph. B. 8. v.) Alexander the Great twok the town by assault, having previously defeated its brave Pisidian inhabitants, who met the aggressor drawn up on a hill outside their town. (Arrian, Anab. i. 28.) Livy ( $x \times x$ viii. 15), in his account of the expedition of Cn . Manlius, describes Sagalassus as situated in a fertile plain, abounding in every species of produce; he likewise characterises its inhabitants as the bravest of the Pisidians, and the town itself as most strongly fortified. Manlius did not take it, but by ravaging its territory compelled the Sagalassians to come to terms, to pay a contribation of 50 talents, 20,000 medimni of wheat, and the same quantity of barley. Strabo states that it was one of the chief towns of Pisidia, and that after passing under the dominion of Amyntas, tetrarch of Lycaonia and Galatia, it became part of the Roman province. He adds that it was coly one day's march from Apamea, whereas we learn from Arrian that Alexnnder was five days on the road between the two towns; but the detention of the latter was not occasioned by the length of the roaid but by other circumstances, so that Strabo's account is not opposed to that of Arrian. (Comp. Polyb. xxii. 19; Plin. v. 24.) The town is mentioned also by Hierocles (p. 693), in the Ecclesiastical Notices, and the Acts of Councils, from which it appears to have been an episcopal see.

The traveller Lucas (Trois Voyages, i. p. 181, and Second Voyage, i. c. 34) was the first that reported the existence of extensive ruius at a place called Aglasoun, and the resemblance of the name led him to identify these ruins with the site of the ancient Sagalassus. This conjecture has since been fully confirmed by Arundell (A Visit to the Seven Churches, p. 132, foll.), who describes these ruins as situated on the long terrace of a lofty mountain, rising above the village of Aglasoun, and consisting chiefly of massy walls, heaps of sculptured stones, and innumerable sepulchral vaults in the almost perpendicular side of the inountain. A little lower down the terrace are considerable remains of a large building, and a large paved oblong area, full of fluted columns, pedestals, \&c., about 240 feet long: a portico nearly 300 feet long and 27 wide; and beyond this some magnificent remains either of a temple or a gymnasium. Abuve these rises a steep hill with a few remains on the top, which was probably the acropolis. There is also a large theatre in a fine state of preservation. Inscriptions with the words Eaya入aóécov «ódis leave no doubt as to these noble ruins belonging to the ancient town of Sagalassus. (Comp. Hamilton, Researches, vol. i. p. 486, foll. ; Fellows, Asia Minor, p. 164, foll.)
[L. S.]
SAGANUS (Laravbs, Marcian, Peripl. p. 21., ed. Hudson), a small river on the coast of Carmania, about 200 stadia from Harmuza. It is mentioned also by Ptolemy (vi. 8. § 4), and Pliny (vi. 25). It is probably the same stream which is called by Ammisnus Marcellinus, Saganis (xxiii. 6). Vincent thinks that it may be represented by a small river which flows into the Persian Gulf, near Gomeroon. (Vory. of Nearchus, vol. i. p. 370).

Ptol. iv. 6. §§ 8, 14, 16, 17), a mountain of Interior Libya, from which flows the Subus, the position of which is fixed by Ptolemy (l. c.) $13^{\circ}$ E. long., $22^{\circ}$ N . lat. It may be assumed that the divergent which Ptolemy describes as ascending to this mountain from the Nigeir is one of the tributaries which flow into the Djolibá or Quorra, from the highlands to the N. of that river (comp. Journ. Geoy. Soc. vol. ii. p. 13.)
[E. B. J.]
SAGARAUCAE. [Sacaraulr.]
SAGARIS, a river of European Sarmatia ( $0 \mathrm{\nabla}$. ex Pont. iv. 1047), which has been assumed, from the name, to have discharged itself into the Sinus Sagarius. (Plid. iv. 26.)
[E. B. J.]
SAGA'R'TII. [PERSIS]
 a metropolis of Central India, which is perhaps the same as the present Sohajpir, near the sources of the river Soane. [V.]
SAGKAS ( $\dot{\eta}$ İd $\gamma \rho a s$, Strab. vi. p. 261), a river of Bruttium, on the E. coast of the peninsula, to the S. of Caulonia, between that city and Locri. It is celebrated in history for the great battle fought on its banks, in which an army of 130,000 Crotoniats is said to have been totally defeated by 10,000 Locrians: an event regarded as so extraordinary that it passed into a kind of proverb for something that appeared incredible, though true. ( $\dot{\alpha} \lambda \eta \theta \dot{\epsilon} \sigma \tau \in \rho \alpha \tau \hat{\omega} \nu$ d $\pi l$ इá $\gamma \rho$ qu, Suid. s. v.; Strab. vi. p. 261 ; Cic. de $N$. D. iii. 5 ; Justin. xx. 3 ; Plin. iii. 10. s. 15.) The victory was ascribed by the Locrians to the direct intervention of the Dioscuri, to whom they in consequence erected altars on the banks of the river, which were apparently still extant in the time of Strabo. It was added that the news of the victory was miraculously conveyed to the Greeks assembled at Olympia the same day that the battle was fought. (Strab. l. c.; Cic. de N. D. ii. 2.) But notwithstanding the celebrity thus attached to it, the dato and occasion of the battle are very uncertain: and the circumstances connected with it by Strabo and Justin would lead to opposite conclusions. [Crotona.] The date assigned by Heyne is b. c. 560 , while Strabo certainly seems to imply that it took place after the fall of Sybaris in n. c. 510 . (Grote's Greece, vol. iv. p. 552, note.) But whatever uncertainty prevailed concerning the battle, it seems certain that the Sagras itself was a well known stream in the days of Strabo and Pliny; both of whom concur in placing it to the N . of Locri and S . of Caulonia, and as the latter city was a colony and perhaps a dependency of Crotona, it is probable that the battle would be fought between it and Locri. Unfortunately the site of Caulonia cannot be determined [Caulonia], and we are therefore quite at a loss which of the small streams flowing into the sea between Locri and the Punta di Stilo should be identified with the celebrated Sagras. The Alaro has been generally fixed upon by local writers, but has really no better claim than any other. (Romanelli, vol. i. p. 161 ; Swinburue's Travels, vol. i. p. 340.).
[E. H. B.]
SAGRUS ( árpos : Sangro), one of the most considerable of the rivers of Samnium, which has its sources in the lofty group of the Apennines $S$. of the Lago di Fucino, and has a course of above 70 miles from thence to the Adriatic. It flows at first in a SE. direction, passes under the walls of Aufidena as well as of the modern Castel di Sangro, and in this part of its course flows through a broad and level, but upland valley, bounded on both sides by lufty
mountains. After passing Aufidena it turns abruptls to the NE., and parsues this course till it reaches the sea. In the lower part of its course it enters the territory of the Frentani, which it traverses in its whole breadth, flowing into the sea between Histonium and Ortona Strabo indeed represents it as forming the boundary between the Frentani and the Peligni, but this is certainly a mistake, as the $\mathrm{Pe}-$ ligni did not in fact descend to the sea-coast at all, and Ortona, one of the chief towns of the Frentani, was situated to the N. of the Sagrus. (Strab. v. p. 242 ; Ptol. iii. 1. § 19; where the name is erroneously written Edpos.) The upper valley of the Sagrus, with its adjoining mountains, was the territory of the Samnite tribe of the Caraceni. (Ptol. iii. $1 . \S 66$.)
[E. H. B.]
SAGU'NTIA. 1. ( Kayouvria, Ptol. ii. 4. § 13), a town in the SW. part of Hispania Baetica. (Liv. xxxiv. 12 ; Plin. iii. 1. s. 3.) Now Xigonza or Gigonza, NW. from Medina Sidonia, where there are many ruins. (Morales, Antig. p. 87 ; Florez, Esp. Sagr. x. p. 47.)
2. A town of the Arevaci, in Hispania Tarraconensis, SW. from Bilbilis. It was in the jurisdiction of Clania, on the road from Emerita to Caesaraugusta, and was the scene of a battle between Sertorias and Metellus. (Plut. Sert 21 ; App. B. C. i. 110.) The name is written Segontia in the Itin. Ant. Pp. 436 and 438, and in the Geog. Kav. ir. 43; but must not be confounded with that of a town of the Celtiberi. Now Siguensa on the Henarez. (Flurez, Esp. Sagr. viii. p. 18 ; Morales, Antig. p. 87.)
[T. H. D.]
SAGUNTUM ( Káyouvtov, Ptol. ii. 6. § 63), also called SAGUNTUS (Mela, ii. 6 ; Edyouvtos, Steph. B. s. v.), a town of the Edetani or Sedetani in Hispanis Tarraconensis, seated on an eminence on the banks of the river Pallantias, between Sucro and Tarraco, and not far from the sea. Strabo (iii. p. 159) erroneously places it near the mooth of the Iberus, though it lies near 100 miles to the SW. of it. The same author states that it was founded by Greeks from Zacynthus; and we find that Stephanus calls it Zakavoa and Zdxuy0os. Livy adds that the founders were mixed with Ratuli from Ardea (Liv. xxi. 7); whence we sometimes find the city called Ausonia Saguntus. (Sil. Ital. i. 332.) Another tradition ascribed its foundation to Hercules. (lb. 263, 505.) Saguntum lay in a very fertile district (Polyb. xvii. 2), and attained to great wealth by means of its commerce. It was the immediate cause of the Second Punic War, from its being besieged by Hannibal when it was in the alliance of the Romans. The siege is memorable in history. The town was taken, after a desperate resistance, in B. C 218, and all the adult males put to the sword; but how long the siege lasted is uncertain. (Liv. xxi. 14, 15 ; Cf. Sil. Ital. i. 2: 1, seq.) Eight years afterwards Sagontum was recovered by the Romans. The Carthaginians had partly destroyed it, and had used it as a place for the custody of their hostages. (Polyb. iii. 98 ; Liv. xxiv. 42.) The city was restored by the Romans and made a Roman colouy. (Liv. xxviii. 39; Plin. iii. 3. 8. 4.) Saguntum was famous for its manufacture of earthenware cups (calices Saguntini) (Plin. xxxv. 12. s. 46 ; Mart. iv. 46, xiv. 108), and the figs grown in the neighbourhood were considered very fine. (Plin. xv. 18. s. 19.) Its site is now occupied by the town of Murciedro, which derives its naune from the ancient
fortifications (muri veteres). But little now remaine of the ruins, the materials having been unsparingly used by the inhabitants for the parpose of building. "The great temple of Diana stood where the conveat of La Trinidad now does. Here are let in some six Roman inscriptions relating to the families of Sergia and others. At the back is a water-course, with portions of the walls of the Circus Maximus. In the suburb San Salvador, a mossic pavement of Bacchus was discovered in 1745, which socn afterwards was lot go to ruin, like that of Italica. Tho famous theatre is placed on the alope above the town, to which the orchestra is turned; it was much destroyed by Suchet, who need the stones to strengthen the castie, whose long lines of wall and tower rise grandly above; the general form of the theatre is, however, easily to be made out. . . . The local arrangements are such as are common to Roman theatres, and resemble those of Merida. They have been measured and described by Dean Marti; Ponz, iv. 232, in the Esp. Sagr. viii. 151." (Ford's Handbook for Spain, p. 206.) For the coins of Saguntam see Florez, Med. ii. p. 560; Mionnet, i. p. 49, Suppt. i. p. 98. The accompanying coin of Segantum contains on the obverse the head of Tibarins, and on the revarse the prow of a ship.
[T.H.D.]

## CODS OF BAGUNTUM.

SAGUTE SINUS (Polyb. ap. Plin. v. 1), a gulf on the W. cosst of Mauretania, S. of the river Lixus, which must be identified with the Emporicus Snsus. The Phoenician word "Sacharut " signifies "Emporia," and by an elision not uncommon among the Africans assumed the form under which it appears in Polybius. (Movers, Die Phowis rol. ii. p. 541.)
[E. B. J.]
 steep rock in the interior of Pontus, which was one of the strongholds of the Pontian kings. (Strab. xii. pp. 560, 561.)
[L. S.]
SAIS (Edïs, Herod. ii. 28, 59, 152, 169 ; Strab. xvii. p. 802; Steph. B. s. v.; Mela, i. 9. § 9; Plin. v. 10. 8. 11 : Eth Zatrvs, fem. इẫris), the capital of the Saitic Nome in the Delta, and occasionally of Lower Aegypt also, stood, in lat. $31^{\circ} 4^{\prime}$ N., on the right bank of the Canopic arm of the Nile. The site of the ancient city is determined not only by the appellation of the modern town of Sa-el-Hadjar, which occupies a portion of its area, but also by mounds of rain corresponding in extent to the importance of Sais at least under the later Pharanhs. The city was artificially raised high above the level of the Delta to be out of the reach of the inandations of the Nile, and served as a landmark to all who ascended the arms of the river from the Mediterranean to Memphis. Its rains have been very imperfectly explored, yet traces have been found of the lake on wh ch the mysteries of Isis were performed, as well as of the teraple of Neith (Athenè) and the necropolis of the Swite kinge. The wall of
nubnrnt brick which surrounded the principal buidings of the city was 70 feet thick, and probably therefore at least 100 feet hizh. It encloved an area 2325 feet in length by 1960 in breadth. Beyond this enclosure were also two large cemeteries, one for the citizens generally, and the other reserved for the nobles and priests of the hisher orders. In one respect the Saites differed from the other Aegyptisns in their practice of interment. They buried their kings within the precincts of their temples. The tomb of Amasis attracted the attention of $\mathrm{He}-$ rodotas (ii. 169), and Psammitichus, the conqueror and successor of that monarch, was also buried within the walls of the temple of Neith.

Sais was one of the sacred cities of Aegypt: its principal deities were Neith, who gave oracles there, and Isis. The mysteries of the latter were celebrated annually with unusual pomp on the evening of the Feast of Lamps. Herodotus terms this festival (ii. 59) the third of the great feasts in the Aegyptian calendar. It was held by right; and every one intending to be present at the sacrifices was required to light a number of lamps in the open air around his house. The lampe were small saucers filled with salt and oil, on which a wick flosted, and which continued to burn all night. At what season of the year the feast of burning lamps was celebrated Herodotus knew, but deemed it wrong to teil (ii. 62); it was, however, probably at either the verial or autumnal equinox, since it apparently had reference to one of the capital revolutions in the solar course. An inscription in the temple of Neith declared her to be the Mother of the Sun. (Plutarch, Is.et Osir. p. 354, ed. Wyttenbach; Proclus, in Timaeum. p. 30.) It ran thus: "I an the things that have been, and that are, and that will be; no one has uncovered my skirts; the fruit which I brought forth became the Sun." It is probable, accordingly, that the kindling of the lamps referred to Neith as the author of light. On the same night apparently were performed what the Aegyptians designated the "Mysteries of Inis." Sais was one of the supposed places of the interment of Osiris, for that is evidently the deity whom Herodotus will not name (ii. 171) when he says that there is a burfal-place of him at Siais in the temple of Athene. The mysteries were symbolical representations of the sufferings of Oiris, especially his dismemberment by Typhon. They were exhibited on the lake behind the temple of Neith. Portions of the lake may be still discerned near the hamlet of Sa-el-IIaujar.

Sais was altemately a provincial city of the first order and the capital of Lower Aerypt. These changes in its rank were probably the result of political revolutions in the Delta. The nome and city are said by Manetho to have derived their appellation from Saites, a king of the xviiih dynasty. The xuivth dynasty was that of Bocchoris of Sais. The xxvith dynasty contained nine Saite kings; and of the xxviiith Amyrtacus the Saite is the only monarch: with him expired the Saite dynasty, b. c. 408.

Bocchoris the Wise, the son of Tnephactus (Diodor. i. 45. § 2, 79. § 1), the Technatis of Plutarch (1s. et Osir. p. 354; comp. Athen. x. p. 418; Aelian, H. A. xi. 11), and the Aegyptian Pehor, was remarkable as a judge and legislator, and introduced, according to Diodorus, some important amendments into the commercial laws of Sais. He was put to death by burning after revolting from sabaco the Aethiopian. During the Acthiopian dyuasty Sais
seems to have retained its independence. The period of its greatest prusperity was between b. c. 697524, under its nine native kings. The strength of Aecypt generally had been transferred from its southern to its northern provinces. Of the Saite monarchs of Aegypt Psammitichus and Amasis were the most powerful. Psammitichus maintained him. self on the throne by his Greek mercenaries. He established at Sais the class of interpreters, caused his own sons to be educated in Greek learning, and encouraged the resort of Greeks to his capital. The intercourse between Sais and Athens especially was promoted by their worshipping the same deity -Neith-Athene; and hence there sprung up, although in a much later age, the opinion that Cecrops the Saite led a colony to Athens. The establishment of the Greeks at Cyrene was indirectly fatal to the Saitic dynasty. Uaphris, Apries, or Hophra, was defeated by the Cyrenians, в. C. 569; and his discontented troops raised their commander Amasis of Siouph to the throne. He adorned Sais with many stately buildings, and enlarged or decorated the temple of Neith; for he erected in front of it propylaes, which for their height and magnitude, and the quality of the stones employed, surpassed all similar structures in Aegypt. The stones were transported from the quarries of El-Mokattam near Memphis, and thence were brought also the colossal figures and androsphinxes that adorned the Dromos. To Sais Amasis transported from Elephantine a monolithal shrine of granite, which Herodotus especially admired (ii. 175). Though the ordinary passage from Elephantine to Sais was performed in twenty days, three years were employed in conveying this colossal mass. It was, however, never erected, and when Herodotus visited Aegypt was still lying on the ground in front of the temple. It measured, according to the historian, 30 feet in height, 12 feet in depth from front to back, and in breadth 21 feet. After the death of Amasis, Sais sank into comparative obscurity, and does not seem to have enjoyed the favour of the Persian, Macedonian, or Ro:nan masters of Aegypt.

Suis indeed was more conspicuous as a seat of commerce and learning, and of Greek culture generally, than as the seat of government. Nechepsus, one of its kings, has left a name for his learning (Auson. Epigram. 409), and his writings on astronomy are cited by Pliny (ii. 23. s. 21). Pythagoras of Samos risited Sais in the reign of Amanis (comp. Plin. xxxvi. 9. s. 14); and Solon the Athenian conversed with Sonchis, a Saite priest, about the same time (Plut. Solon, 26; Herod. ii. 177 ; Clinton, Fast. Hellem vol. ii. p. 9). At Sais, if we may credit Plato (Timaeus, iii. p. 25), Solon heard the legend of Atlantis, and of the ancient glories of Athens some thousand years prior to Phoroneus and Niobe and Deucalion's flood. The priests of Sais appear indeed to have been anxious to ingratiate themselves with the Athenians by discovering resemblances between Attic and Aegyptian institutions. Thus Diodorus (i. 28), copying from earlier narratives, says that the citizens of Sais, like those of Athens were divided into eupratrids, or priest-nobles; geomori, land-owners liable to military service; and craftsmen or retail traders. He adds that in each city the upper town was called Astu. The Greek population of Sais was governed, according to Danetho, by their uwn laws and inagistrates, and had a separate quarter of the city assigned to them. So strong indeed was the Hellenic element in Sais that
it was doubted whether the Saites colonised Attica， or the Athenians Sais；and Diodorus says incon－ sistently，in one passage，that Sais sent a colony to Athens（i．28．§ 3），and in another（v．57．§ 45） that it was itself founded by Athenians．The prin－ cipal value of these statements consists in their establishing the Graeco－Aegyptian character of the Saite people．

The ruins of Sais consist of vast heaps of brick， mingled with fragments of granite and Syenite marble．Of its numerous structures the position of one only can be surmised．The lake of Sa－el－ Hadjar，which is still traceable，was at the back of the temple of Neith：but it remains for future travellers to determine the sites of the other sacred or civil structures of Sais．（Champollion， $\boldsymbol{6}$ Egypte， vol．ii．p． 219 ；Id．Letlres，50－53；Wilkinson，Mod Eyrmt and Thebes．）
［W．B．D．］
SALA（ $\Sigma$ d $\lambda a s$ ）．1．A river in Germany，be－ tween which and the Rhine，according to Strabo （vii．p．291），Drusus Germanicus lost his life． That the river was on the east of the Rhine is im．－ plied also in the account which Livy（Epit．140） and Dion Cassius give of the occurrence；and it has therefore been conjectured with some probability that the Sala is the same river as the modern Siacle，a tributary of the Elbe，commonly called the Thuringian Saale ；though others regard the Sala as identical with the Yessel．

2．A river of Germany，alluded to by Tacitus （Ann．xiii．57），who，without mentioning its name， calls it＂flumen gignendo sale fecundum．＂It formed the boundary between the country of the Chatti and Hermanduri and near its banks were great salt－ works，about which these two tribes were perpetually involved in war．From this circumstance it is clear that the river alluded to by Tacitus is none other but the Saale in Franconia，a tributary of the Moe－ nus or Main；and that the salt－springs are，in all probability，those of the modern town of Kissingen．

3．A town in Upper Pannonia，on the road from Sabaria to P＇oetovium（P＇wl．ii．15．§ 4；It．Ant． p．262，where it is called Salle；Geogr．Rav．iv． 19，where it is called Salla）．Some identify the place with the town of Szala Egerssek，and others with Lüvir on the river Saala．（Comp． Muchar，Noricum．i．p．261．）

4．A town in the south－western part of Phrygia， on the frontiers of Caria and Pisidia，on the north－ west of Cibyra．（I＇tol．v．2．§26．）

5．A town in the north－western part of Armenia Minor，on the eastern slope of Mount Muschus． （Pbol．v．13．§ 10．）
［L．S．］
SALA（ （á $\lambda a$, I＇tol．ii．4．§ 12），a town of the Turdetani in Hispania Baetica between Ptucci and Nabrissa．
［T．H．D．］
SALA（ Lá $\lambda a$, Ptol．iv．1．§ 2 ；Plin．v．1），a town of Mauretania，on the W．coast of Africa， situated near a river of the same name，＂noticed by the Romans as the extreme object of their power and almost of their geography．＂（Gibbon，c．i．）In the Antonine Itinerary the name occurs as Sala－ conia，which has been supposed to be a corruption of Sala Cobonia；but from the Vienna MS．it appeas that the word＂conia＂has been inserted by a later hand．（Itin．Anton．ed．Parthey，p．3．）The ino－ dern Sla or Sallee，near the mouth of the river Bu－ Regrab，retains the name，though the site of the andient town must be sought at Rullat，on the S． side of the river，where there are Roman remains． （Barth，Hunderungen，Yp．32，37，50．）［E．B．J．］

## SALAMIS．

SALACIA．1．（Earakela，Ptol．ii．5．§ 3），a municipal town of Lusitania，in the territory of the Turdetani，to the NW．of Pax Julia and to the SW．of Ebora．It appears from inscriptions to have had the surname of Urbs Imperatoria．（Gra－ ter，p．13．16；Mionnet，i．p．4；Sestini，p．16．） Salacia was celebrated for its manufacture of tine woollen cloths，（Plin．viii．48．s．73；Strab．iii．p． 144，with the note of Groskurd．）Now Alaçer dos Sal．（Florez，Esp．Sagr．xiii．p．115，xir．p． 241 ； comp．Mela，iii．1；It．Ant．pp．417，418，and 422．）

2．A town of the Callaici Bracarii in the NW．of Hispania Tarraconensis．（Itin．Ant．p．422．）Iden－ tified either with Salamonde or Pombeiro．［T．H．D．］
 Cappadocia，in the district Garsauritis．（Ptol． $\mathrm{V}_{-}$ 6．§ 14 ；Tab．Peut．，where it is called Salabe－ rina．）

SALAMI＇NIA．［Salame．］
SALAMI＇NIAS，a town in Coele－Syria in the district Chalybonitis（It．Anton．p．197；Not．Imp．） which Reland（Palaest．i．p．217）identifies with Salamias（Ea入dulas）in the Not．Iemis Imp．，and with Salemjat in Abulfeda（Tab．Syr．p．105）．It is said still to bear the name Selmen．（Richter， Wallfahrten．p．238．）

SA＇LAMIS（ $\Sigma a \lambda a \mu / s$, Aesch．Pers．880；Scyl． p． 41 ；Ptol．v．14．§ 3，viii． $20 . \S 5$ ；Stadiasm $\S \$ 288,289$ ；Pomp．Mela，ii． $7 . \S 5$ ；Plin．v． 35 ； Horat．Carm．i． 729 ；Ea入auiv，Eustath od IL．ii． 558 ；Ea入apias，Malala，Chron．xii．p．313，ed． Bonn：E＇th．ミa入aulvios，Böckh，Inscr．nos．2625， 2638，2639），a city on the E．coast of Cyprus， 18 M．P．from Tremithus，and 24 M．P．from Chytri． （Peut．Tab．）Legend assigned its foundation to the Aeacid Teucer，whose fortunes formed the sub－ ject of a tragedy by Sophocles，called Teíkpos，and of one with a similar title by Pacuvius．（Cic．de Orat．i．58，ii．46．）The people of Salamis showed the tomb of the archer Teucer（Aristot．Anthologin． i． 8,112 ），and the reigning princes at the time of the Ionic revolt were Greeks of the Teucrid＂Gens．＂ although one of them bore the Phoenician name of Siromas（Hiram）．（Herod．r．104．）In the 6 th cen－ tury b．c．Salamis was already an important town，and in alliance with the Battiad princes of Cyrene， though the king Evelthon refused to assist in rein－ stating Arcesilaus III．upon the throne．（Herod． iv．162．）The descendant of this Evelthon－the despot Gorgus－was unwilling to join in the Imic revolt，but his brother Onesilus shut hin out of the gates，and taking the command of the united forces of Salamis and the other cities，flew to arms．The battle which crushed the independence of Cyprus was fought under the walls of Salamis，which was compelled to submit to its former lord，Gorgus． （Herod．. ．103，104，108，110．）Afterwards it was besieged by Anaxicrates，the successor of Cimon，but when the convention was made with the Persians the Athenians did not press the siege． （Diod．xii．13．）After the peace of Antalcidas the Persians had to struggle for ten years with all their forces against the indefatigable and gentle Evagoras． Isocrates composed a paregyric of this prince ad－ dressed to his son Nicocles，which，with every allowance for its partiality，gives an interesting pic－ ture of the struggle which the Hellenic Evagoras waged against the Phernician and Oriental intluence under which Salamis and Cyprus had languished． （Comp．Grote，Hist．of Greece，vol．x．c．Ixavi．）

Esagoras with his son Pnytagoras was assassinated by a eanuch, slave of Nicocreon (Aristot. Pol. v. 8. § 10; Diodor. xv. 47; Theopomp. Fr. iii. ed. Didot), and was succeedel by another son of the name of Nicocles. The Graeco-Aegyptian fleet under Menelaus and his brother Ptolemy Soter was utterly defeated off the harbour of Salamis in a seafight, the greatest in all antiquity, by Demetrius Poliorcetes, B. c. 306. (Diodor. xx. 45-53.) The famous courtezan Lamia formed a part of the booty of Demetrius, over whom she soon obtained unbounded influence. Finally, Salamis came into the hands of Ptolemy. (Plut. Demetr. 35 ; Polyaen. Strateg. 5.) Under the Roman Empire the Jews were numerous in Salamis (Acts, xiii. 6), where they had more than one synagogue. The farming of the copper mines of the island to Herod (Joseph. Antiq. xv. 14. § 5) may have swelled the numbers who were attracted by the advantages of its harbour and trade, especially its mannfactures of embroidered stuffs. (Athen. ii. p. 48.) In the memorable revolt of the Jews in the reign of Trajan this populous city became a desert. (Milman, Hist. of the Jews, vol. iii. pp. 111, 112.) Its demolition was completed by an earthquake: but it was rebuilt by a Christian emperor, from whom it was named Constantia. It was then the metropolitan see of the island. Epiphanius, the chronicler of the heretical sects, was bishop of Constantia in A.D. 367. In the reign of Heraclius the new town was destroyed by the Saracens.

The ground lies low in the neighbourhood of S:lamis, and the town was situated on a bight of the coast to the $N$. of the river Pediaeus. This low land is the largest plain-Salaminia-in Cyprus, stretching inward between the two mountain ranges to the very heart of the country where the modern Turkish capital-Nicosia-is situsted. In the Life and Epistles of St. Paul, by Coneybeare and Howson (vol. i. p. 169), will be found a plan of the harbour and ruins of Sulamis, from the survey made by Captain Graves. For coins of Salamis, see Eckhel, vol. iii. p. 87.
[E. B. J.]
SA'LAMIS ( лapivıos, Salaminius: Adj. इaлauuvakós, Salaminiacus: Kuluri), an island lying between the western coast of Attica and the eastern coast of Megaris, and forming the southern boundary of the bay of Eleusis. It is separated from the coasts both of Attica and of Megaris by only a narrow charnel. Its form is that of an irregular semicircle towards the west, with many small indentations alung the coast. Its greatest length, from N . to S ., is about 10 miles, and its width, in its broadest part, from E. to W., is a little more. Its length is correctly given by Strabo (ix. p. 393) as from 70 to 80 stadia. In ancient times it is said to have been culled Pityussa (חırvov̂ $\sigma \sigma \alpha$ ), from the pines which grew there, and also Sciras ( Koipas) and Cychreia (Kuxpeia), from the names of two heroes Scirus and Cychreus. The former was a native hero, and the latter a seer, who came from Dudona to Athens, and perished along with Erechtheus in fighting against Eumolpus. (Strab. ix. p. 393; Paus. i. 36. § 1 ; Philochor. ap. Plut. Thes. 17.) The latter name was perpetuated in the island, for Aeschylus (Pers. 570) speaks of the àктal Kuxpeial, and Stephanus B. mentions a Kuxpeios adoos. The island is said to have obtained the name of Salamis from the mother of Cychreus, who was also a daughter of Asopus.
(Paus. i. 35. § 2.) It was colonised at an early period by the Aeacidae of Aegina. Telamon, the son of Aeacus, fled thither after the murder of his half-brother Phocus, and became sovereign of the island. (Paus. i. 35. § 1.) His son Ajax accompanied the Greeks with 12 Salaminian ships to the Trojan War. (Hom. Il. ii. 557.) Salamis continued to be an independent state till about the beginning of the 40th Olympiad (в. с. 620). when a dispute aroce for its possession between the Athenians and Megarians. After a long struggle, it first fell into the hands of the Megarians, but was subsequently taken possession of by the Athenians through a strittagem of Solon. (Plut. Sol. 8, 9; Pans. i. 40. §5.) Both parties appealed to the arbitration of Sparta. The Athenians supported their claims by a line in the Iliad, which represents Ajax ranging his ships with those of the Athenians (Il. ii. 558), but this verse was suspected to have been an interpolation of Solon or Peisistratus; and the Megarians cited another version of the line. The Athenians, moreover, asserted that the island had been made over to them by Philaeus and Eurysaces, sons of the Telamonian Ajax, when they took up their own residence in Attica. These arguments were considered sufficient, and Salamis was adjudged to the Athenians. (Plut. Sol. 10; Strab. ix. p. 394.) It now became an Attic demus, and continued incorporated with Attica till the times of Macedonian supremacy. In B. c. 318, the inhabitants voluntarily received a Macedonian garrison, after having only a short time before successfully resisted Cassander. (Diod. xviii. 69 ; Polyaen. Strat. iv. 11. § 2 ; Paus. i. 35. § 2.) It continued in the hands of the Macedonians till B. c. 232, when the Athenians, by the assistance of Aratus, purchased it from the Macedonians tosether with Munychia and Sunium. Therupon the Salaminians were expelled from the island, and their lands divided among Athenian cleruchi. (Plut. Arat. 34 ; I'aus. ii. 8. § 6; Bückh, Inscr. vol. i. p. 148, seq.) From that time Salamis probably continued to be a dependency of Athens, like Aegina and Oropus; since the grammarians never call it a $\delta \bar{\eta} \mu o s$, which it had been originally, but generally a $\pi \delta$ dis.

The old city of Salamis, the residence of the Te lamonian Ajax, stood upon the southern side of the island towards Aegina (Strab. ix. p. 393), and is identified by Leake with the remains of some Hellenic walls upon the south-westem! coast near a small port, where is the only rivulet in the island, perhaps answering to the Bocarus or Bocainas of Strabo (ix. p. 394; Leake, Demi, p. 169). The Bocarus is also mentioned by Lycophron (451). In another passage, Strabo (ix. p. 424) indeed speaks of a river Cephissus in Salamis; but as it occurs only in an enumeration of various rivers of this name, and immediately follows the Athenian Cephissus without any mention being made of the Eleusinian Cephissus, we ought probably to read with Leake

When Salanis became an Athenian demus, a new city was built at the head of a bay upon the eastern side of the island, and opposite the Attic coast. In the time of Pausanias this city also bad fallen into decay. There remained, however, a ruined agora and a temple of Ajax, containing a statue of the hero in ebony; also a temple of Artemis, the trophy erected in honour of the victory gained over the Persians, and a temple of Cychreus. (Paus. i. 35. § 3, 36. § 1.) Pausanias has not mentioned the
statue of Solon, which was erected in the agora, with one hand covered by his mantle. (Dem. de Fals. Leg. p. 420; Aeschin. in Tim. p. 52.) There are still some remains of the city close to the village of Ambelákia. A portion of the walls may still be traced; and many ancient fragments are found in the walls and churches both of Ambelákia and of the neighbouring village of Kuluri, from the latter of which the modern name of the island is derived. The narrow rocky promontory now called Cape of St. Barbara, which forms the SE. entrance to the bay of Ambelikia, was the Sileniae ( $\Sigma$ i $\lambda \eta \nu i a i$ ) of Aeschylus, afterwards called Tropaea (Tpotaia), on account of the trophy erected there in memory of the victory. (Asch. Pers. 300, with Schol.) At the extremity of this promontory lay the small island of Psytraleia ( $\Psi u t \tau \alpha ́ \lambda e i a$ ), now called Lipsokutáli, about a mile long, and from 200 to 300 yards wide. It was here that a picked body of Persian troops was cut to pieces by Aristeides during the battle of Salamis. (Herod. viii. 95; Aesch. Pers. 447, seq.; Plut. Arist. 9; Paus. i. 36. § 2, iv. 36. § 3; Strab. ix. p. 393; Plin. iv. 12. s. 20 ; Steph. B. s. v.)

In Salamis there was a promontory Sciradium ( $\Sigma \kappa \iota \rho a ́ \delta \iota o \nu$ ), containing a temple of the god of war, erected by Solon, because he there defeated the Megarians. (Plut. Sol. 9.) Leake identifies this site with the temple of Athena Sciras, to which Adei-
mantus, the Corinthian, is said to have fled at the commencement of the battle of Salamis (Herod. viii. 94); and, as the Corinthians could not have retreated through the eastern opening of the strait, which was the centre of the scene of action, Leake supposes Sciradium to have been the south-west promontory of Salamis, upon which now stands a monastery of the Virgin. This monastery now occupies the site of a Hellenic building, of which remains are still to be seen.

Budorum (Boviopopon or Bovówoov) was the name of the western promontory of Salamis, and distant only three miles from Nisaea, the port of Megara. On this peninsula there was a fortress of the same name. In the attempt which the Peloponnesians made in B. C. 429 to surprise Peirneens, they first sailed from Nisaea to the promontory of Budorum, and surprised the fortress; but after overrunning the island, they retreated without venturing to attack Peiraeeus. (Thuc. ii. 93, 94, iii. 51; Diod. xii. 49; Strab. xi. p. 446; Steph. B. \&. v. Bov́ $\delta \omega p o v$.

Salamis is chiefly memorable on account of the great battle fought off its coast, in which the Persian fleet of Xerxes was defeated by the Greeks, B. c. 480. The details of this battle are given in every history of Greece, and need not be repeated here. The battle took piace in the strait between the eastern part of the island and the coast of Attica, and the position of the contending forces is

shown in the annexed plan. The Grecian fleet was drawn up in the small bay in front of the town of Salamis, and the Persian fleet opposite to them off the coast of Attica. The battle was witnessed by Xerzes from the Attic coast, who had erected for himself a lofty throne on one of the projecting declivities of Mt. Aegaleor. Colonel Leake has discussed at length all the particulars of the battie, bat Mr. Blakesley bas controverted many of his views, following the authority of Aeschylus in preference to that of Herodotus. In opposition to Col. Leake and all preceding anthorities, Mr. Blakesley supposes, that though the hostile fleets occupied in the afternoon before the battle the position delineated in the plan annexed, yet that on the morning of the battle the Greeks were drawn up acruss the southern entrance of the strait, between the Cape of St. Barbara and the Attic coast, and that the Persianswere in the more open sea to the south. Into the discussion of this question our limits prevent us from entering; and we must refer our readers for particulars to the essays of those writers quoted at the close of this article. There is, however, one difficulty which must not be passed over in silence. Herodetus says (viii. 76) that on the night before the battle, the Persian ships stationed about Cens and Cynosura moved up, and beset the whole strait as far as Munschia. The only known places of those names are the island of Ceos, distant more than 40 geographical miles from Salamis, and the promontory of Cynısura, immediately N. of the bay of Marathon, and distant more than 60 geographical miles from Salamis. Both of those places, and more especially Cynosura, seem to be too distant to render the movement practicable in the time required. Accordingly many modern scholars appiy the names Cens and Cynosura to two promontories, the southernmost and sonth-easternmost of the island of Salamis, and they are so called in Kiepert's maps. But there is no authority whatever for giving those names to two promontories in the island; and it is evident from the narrative, as Mr. Grote has observed, that the names of Ceos and Cynosura must belong to some points in Attica, not in Salamis. Mr. Grote does not attempt to indicate the position of these places; but Mr. Blakesley maintains that Ceos and Cynosura are respectively the well-known island and cape, and that the real difficulty is occasioned, not by their distance, but by the erroneous notion conceived by Herodotus of the operations of the Persian fleet. (Leake, Demi of Attica, p. 166, seq., and Appendix II. On the Battle of Salamis; Blakesley, Excuraus on Herodotus, viii. 76, vol. ii. p. 400, seq.; Grote, Hisk of Greece, vol. v. p. 171, seq.)

COLN OF BALAMIS.
SALANLA'NA, a town of the Callaici Bracarii in Gallsecia (Itim. Ant. p. 427.) Varimusly identified with Cela Nooa, Moymenta, and Portela de Abade.
[T. H. D.]
SALA'PIA (Za入amia: Eth. Zanaxivos; Salapinns: Salpi), one of the most considerable cities of Apulia, situated on the coast of the Adriatic, but separated
from the open sea by an intervening lagune, or saltwater lake, which was known in ancient times as the Salatina Palus (Lucan, v. 377: Vib. Seq. p. 26), and is still called the Lago di Salpi. This lagune hats now only an artificial outlet to the sea through the bank of sand which separates them; but it is probable that in ancient times its communications were more free, as Salapia was certuinly a considerable sca-port and in Strabo's time served as the port both of Arpi and Canusium (Strab. vi. p. 284). At an earlier period it was an independent city, and apparently a place of considerable importance. Tradition ascribed its foundation, as well as that of the neighbouring cities of Canusium and Arpi, to Diamedes (Vitruv. i. 4. § 12): or, according to others, to a Rhodian colony under Elpias (Id. ib.; Strab. xir. p. 654).* There is no trace of its having received a Greek colony in historical times, though, in common with many other cities of the Daunian Apulians, it semms to have imbibed a large amount of Hellenic influence. This was probably derived from the Tarentines, and did not date from a very early period.

The name of Salapia is not mentioned in history till the Second Punic War. in which it bears a considerable part. It was evidently one of the cities of Apulia which revolted to Hannibal after the battle of Cannae (Liv. xxii. 61): and a few years after we find it still in his possession. It was apprarently a place of strength, on which account he collected there great magazines of corn, and established his winter quarters there in B. c. 214. (Id. xxiv. 20.) It remained in his hands after the fall of Arpi in the following year (Id. xxiv. 47); but in B. C. 210 it was betrayed into the power of Marcellus by Blasius, one of its citizens, who had been for some time the leader of the Roman party in the place, and the Numidian garrison was put to the sword. (Id. xxvi. 88: Appian, Annib. 45-47.) Its loss seems to have been a great blow to the power of Hannibal in this part of Italy : and after the death of Marcellns, b.c. 208, he made an attempt to recover possession of it by stratagem ; but the fraud was discovered, and the Carthaginian troops were repulsed with loss. (Liv. xavii. 1, 28; Appian, Annib. 51.) No subsequent mention of it is found till the Social War, in the second year of which, when the tide of fortune was beginning to turn in favour of Rome, it was taken by the Roman praetor C. Cosconius, and barnt to the ground (Appian, B. C. i. 51). After this time it appears to have fallen into a state of decay, and suffered severely from malaria in consequence of the exhalations of the neighbouring lagune. Vitruvius tells us, that at length the inhabitants applied to M. Hostilius, who caused them to remore to a more healthy situation, about 4 miles from the former site, and nearer the sea, while he at the same time opened fresh communications bet ween the lagane and the sea (Vitruv. i. 4. § 12). We bave no clue to the time at which this charge took place, bat it could bardly have been till after the town had fallen into a declining condition. Cicero, indeed, alludes to Salapia as in his day notorious for its pestilential climate (de Leg. Agr. ii. 27); but this may be understood as relating to its territory rather than the actual town. Vitruvius is the only author who notices the change of site; but if his account can be depended

[^32]upon, the Salapia mentioned by Pliny and Ptolemy as well as Strabo, must have been the new town, and not the original city of the name. (Strab. vi. p. 284; Plin. iii. 12. s. 17 ; Ptol. iii. 1. § 16.) The Liber Coloniarum also speaks of it as a colony adjoining the sea-cosst, which doubtless refers to the new town of the name. This does not, however, seem to have ever risen into a place of much importance, and the name subsequently disappears altogether.

Extensive ruins of Salapia are still visible on the southern shore of the Lago di Salpi, in a tract of country now almost wholly desolate. They evidently belong to a city of considerable size and importance, and must therefore be those of the ancient Apulian city. This is further confirmed by the circumstance that the coins of Salapia, which of course belong to the period of its independence, are frequently found on the spot. (Swinburne's Travels, vol. i. p. 81.) The site of the Roman town founded by M. Hostilius is said to be indicated by some remains on the seashore, near the Torre di Salpi. (Romanelli, vol. ii. p. 201.)

The lagune still called the Lago di Salpi is about 12 miles in length by about 2 in breadth. At its eastern extremity, where it communicates with the sea by an artificial cut, are extensive salt-works, which are considered to be the representatives of those noticed in the Itineraries under the name of Salinae. It is by no means certain (though not improbable) that these ancient salt-works occupied the same site as the modern ones; and the distances given in the Itineraries along this line of coast, being in any case corrupt and confused, afford no clue to their identification. (Itin. Ant. p. 314; Tab. Peut.) It is probable that the name of Salapia itself is connected with sal, the lagune having always been well adapted for the collection of salt.

The coins of Salapia, as well as those of Arpi and Canusium, have Greek legends, and indicate the strong influence of Greek art and civilisation, though apparently at a late period, none of them being of an archaic style. The magistrates' names which oecur
 trary, clearly of native origin. (Mommsen, U.I.D. pp. 82, 83.)
[Е. Н. B.]

coin of salapia.
SALA'RIA. 1. ( Laddpla, Ptol. ii. 6. § 61), a town of the Bastitani, in the SE. part of Hispania Tarraconensis. According to Pliny it was a Roman colony. (Colonia Salariensis, iii. 3. s. 4.) Ukert (ii. pt. i. p. 407) identifies it with Sabiote, between Ubeda and Baeza.
2. A toirn of the Oretani, in the same neighbourhood. (Ptol. ii. 6. § 59.) [T. H. D.]

SALAS. [Sala.]
SALASSI ( $\Sigma a \lambda a \sigma \sigma o l$ ), one of the most powerful of the Alpine tribes in the N. of Italy, who occupied the great valley of the Durias or Dora Baltea, now called the Val $d^{\prime} A$ asta, from the plains of the $\Gamma o$ to the foot of the 'iraian and Pennine Alps. Their country is correctly described by Strabo as a deep
and narrow valley, shut in on both sides oy very lofty mountains. (Strah. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance at Ivrea to its head among the very highest ranges of the Alps, must always have been one of the natural inlets into the heart of those mountains: hence the two passes at its head, now called the Great and Little St. Bernard, seem to have been frequented from a rery early period. If we may trust to Livy, it was by the former of theso passes, or the Pennine Alps, that the Boii and Lingones cmossed when they frst migrated into the plains of the N. of Italy. (Liv. v. 35.) It was the same pass by which Hannihal was commonly supposed in the days of Livy to have crossed those mountains, while Coelius Antipater represented him as passing the Little St. Bernard, an opinion commonly adopted by modern writers, though still subject to grave difficulties. One of the most serious of these arises from the character of the Salassi themselves, who are uniformly described as among the fiercest and most warlike of the Alpine tribes, and of inveterate predatory habits, so that it is difficult to believe they would have allowed an army like that of Hannibal to traverse their country without opposition, and apparently withoat molestation. (See Arnold's Rome, vol. iii. p. 481.)

The Salassi are commonly reckoned a Gaulish people, yet there are reasons which render it more probable that they were in fact, like their neighbours the Taurini, a Ligurian race. The Ligurians indeed seem, at a very early period, to have spread themselves along the whole of the western chain of the Alps, and the Gaulish tribes which occupied the plains of the Padus passed through their country. But the ethnical relations of all these Alpine races are very obscure. No mention of the Salassi is found in history till B.c. 143, when they were attacked without provocation by the consul Appius Claudius, who was, however, punished for his aggression, being defeated with the loss of 3000 men. But he soon repaired this disaster, and having in his turn slain 5000 of the mountaineers, claimed the honour of a triumph. (Dion Cass. Fr. 79; Liv. Epit. liii.; Oros. v. 4) From this time they appear to have frequently been engaged in hostilities with Rome, and though nominally tributary to the republic, they were continually breaking out into revolt, and ravaging the plains of their neighbourhood, or plandering the Roman convoys, and harassing their troops as they marched thmagh their country. As early as b.C. 100 a Roman colony was established at Eporedia (Ivrea), at the mouth of the valley (Vell. Pat. i. 15), with the view of keeping them in check, bat it suffered severely from their incursions. Even at a much later period the Salassi plundered the baggage of the dictator Cacsar when marching through their country, and compelled Decimus Bratas, on his way into Gaul after the battle of Mutina, to purchase a passage with a large sum of money. (Strab. iv. p. 205.) In B. c. 35 they appear to have broken out a fresh into revolt, and for some time were able to defy the efforts of Antistius Vetus; bat the next year they were reduced to submission by Valerius Messala. (Dion Cass. xlix. 34, 38; Appian, Illyr. 17.) Still, however, their subjection was imperfect, till in B. C. 25 Tcrentius Varro was sent against them, whe having compelled the whole nation to lay down their arms, sold them without distinction as slaves. The number of captives thus sold is said to have amoanted to

36,000 persons, of whom 8000 were men of military ace. The tribe of the Salassi being thus extirpated, a Roman colony was settled at Praetoria Augusta (Aosta). and a highroad made through the valley. (Dion Cass. liii. 25; Strab. iv. p. 205; Liv. Epit. cxxxv.) The name of the Salassi, however, still remained, and is recognised as a geographical distinction both by Pliny and Ptolemy, but no subsequent trace of them is found as an independent tribe. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 34.)

One of the main causes of the disputes between the Salassi and Romans had arisen from the goldwashings which were found in the valley, and which are said to have been extremely productive. These were worked by the Salassi themselves before the Roman invasion; but the Romans seem to have early taken possession of them, and they were farmed out with the other revenues of the state to the Pub. licani. But these were, as might be expected, involved in constant quarrels with the neighbouring barbarians, who sometimes cut off their supplies of water, at other times attacked them with more open violence. (Strab. iv. p. 205; Dion Cass. Fr. 79.)

The line of road through the country of the Salassi, and the passes which led from Augusta Praetoria over the Pennine and Graian Alps, are described in the article Alpes [Vol. I. p. 110]. [E. H. B.]

Sala'SSII. [Mauretania, Vol. II. p. 298, b.]
SALATARAE (Ea入arápaı, Ptol. vi. 11. § 6), a tribe of the Bactrians who lived along the banks of the Oxus. Forbiger suspects that they are the sane as the Saraparae, noticed by Pliny (vi. 16. 8. 18). [V.]

SALATHUS (Zd入aOos, Ptol. iv. 6. § 5), a river on the W. coast of Africa, with a town of the same name. This river, which took its rise in Mt. Mandrus, is represented by one of the Wadys, which flows into the sea in the district occupied by the ancient Autololes, on the coast to the N. of Cape Mirik. [E. B. J.]

SALAURIS, 2 town on the coast of Hispania Tarraconensis, mentioned in the Ora Marit. of Avienus (v. 518).
[T. H. D.]
SALDA, a town in the south of Lower Pannonia, on the southern bank of the Savas, and on the great highroad from Siscia to Sirmium. (Tab. Peut.; Geogr. Kav. iv. 19, where it is called Saldum.) It is very probably the same as the town of Sallis ( Eardis) mentioned by Ptolemy (ii. 16. § 8). The site is commonly believed to be occupied by the modern Szlatina.
[L. S.]
SALDAE ( ${ }^{2}$ d $\lambda \delta a$, , Strab. xvii. p. 831 ; Ptol. iv. 2. § 9, viii. 13. § 9 ; Plin. v. 1; Itin. Antom.; Peut. Tab.), a town on the coast of Mauretania Caesariensis, with a spacions harbour, which was in earlier times the E. boundary between the dominions of Juba and those of the Romans. (Strab. l.c.) Under Angustus it became a Roman " colonia." (Plin. l.c.) In later times it was the W. limit of Mauretania Sitifensis, against Mauretania Caesariensis in its more contracted sense. It is identificd with Bujeiyah, the flourishing city of the Kaliphat, taken by Pedro Navarro, the general of Ferdinand the Catholic, after two famons battles, A. d. 1510 (comp. Prescott's Ferdinand and Isabella, vol. ii. p. 457), or the C. Bongic of the French province. (Barth, Wanderungen, p. 62.)
[E.B. J.]
SALIAAPA, a town of Moesia (Theophyl. Simocat. i. S), which was ravaged by the Avars in their wars with the emperor Manrice (Le Beau, Bas Empire, vol. x. pp. 248, 369). Schafarik (Slav. Alt. vol. ii. p. 158) has fixed the site at the ruins of Likelrick upon the Danube.
[E. B. J.]
vol. II.

SALDU'BA. 1. A small river in the territory of the Turduli in Hispania Bartica, probably the same called इaסoúka, (with var. lect.) by Ptolemy (ii. 4. § 7). Now Rio Verde.
2. A town at the mouth of the preceding river (इ́á $\delta o u \& a$, Ptol. ii. 4. § 11), of no great importance (Mela, ii. 6; Plin. iii. 1. s. 3), near the present Marbella.

## 3. [Caesaratgusta.]

[T. H. D.]
SALE, a town on the S. coast of Thrace, near the W. mouth of the Hehrus, and nearly equidistant from Zone and Doriscus. It is mentioned by Herodotus (vii. 59) as a Samothracian colony. [J. K.]

SALEM. [Jerusalear.]
SALENI, a people of Hispania Tarraconensis, probably in Cantabria, mentioned by Mela (iii. 1). They are perhaps the same as the $\Sigma_{\text {aidinol }}$ of Plolemy (ii. 6. § 34).
[I. H. D.]
SALENTI'NI or SALLENTI'NI (both forms seem to rest on good authority), ( $\left.\sum a \lambda \in \nu T i \nu o r\right)$ a people of Southern Italy, who inhabited a part of the peninsula which forms the SE. extremity, or as it is very often called the heel, of Italy. Their territory was thus incladed in the region known to the Greeks by the name of Iapygia, as well as in the district called by the Romans Calabria. Strabo remarks that the peninsula in question, which he considers as hounded by a line drawn across from Tarentum to Brundusium, was variously called Messapia, Iapygia, Calabria, and Salentina; but that some writers established a distinction between the names. (Strab. vi. p. 282.) There seems no doubt that the names were frequently applied irregularly and vaguely, but that there were in fact two distinct tribes or races inhabiting the peninsula, the Salentines and the Calabrians (Strab. vi. p. 277), of whom the latter were commonly known to the Greeks as the Messapians [Calabria]. Both were, however, in all probability kindred races belonging to the great family of the Pelasgian stock. Tradition represented the Salentines as of Cretan origin, and, according to the habitual form of such legends, ascribed them to a Cretan colony under Idomenens after the Trojan War. (Strab. vi. p. 282; Virg. Aen. iii. 400; Fest. 8. v. Salentini, p. 329; Varr. ap. Prob. ad Virg. Ecl. vi. 31.) They appear to have inhabited the southern part of the peninsula, extending from its southern extremity (the Capo di Leuca), which was thence frequently called the Salentine promontory ("Salentinum Promontorium," Mel. ii. 4. §8; Ptol. iii. 1. § 13), to the neighbourhood of Tarentum. But we have no means of distinguishing accurately the limits of the two tribes, or the particular towns which belonged to each.

The name of the Salentines does not seem to have been familiarly known to the Greeks, at least in early times: as we do not hear of their name in any of the wars with the Tarentines, though from their position they must have been one of the tribes that early came into collision with the rising colony. They were probably known under the general appellation of Iapygians, or confounded with their neighbours the Messapians. On the contrary, as soon as their name appears in Roman history, it is in a wider and more general sense than that to which it is limited by the geographers. Livy speaks of the Salentini as acceding to the Samnite alliance in B. c. 306. when the consal L. Volumnius was sent into their country, who defeated them in several battles, and took some of their towns. (Liv. ix. 42.) It is almost impossible to believe that the Romans
had as early as this pushed their arms into the Iapygian peninsula, and it is probable that the Salentines are here confounded with the Pcucetians, with whom, according to some accounts, they were closely connected. (Plin. iii. 11. s. 16.) But the name is used with still greater laxity shortly after, when Livy speaks of Thuriae as " urbem in Sallentinis " (x. 2), if at least, as there seems little doubt, the place there meant is the well-known city of Thurii in Lucania [Thurir].

The name of the Sallentines does not again occur in history till the Fourth Samnite War, when they joined the confederacy formed by the Samnites and Tarentines against Rome; and shared in their defeat by the consul L. Aemilius Barbula in B. c. 281, as we find that general celebrating a triumph over the Tarentines, Samnites, and Sallentines. (Fast. Capit. ann. 473.) For some time after this the appearance of l'yrrhus in Italy drew off the attention of the Romans from more ignoble adversaries, but when that monarch had finally withdrawn from Italy, and Tarentum itself had fallen into the hands of the Romans, they were left at leisure to turn their arms against the few tribes that still maintained their independence. In в. c. 267 war was declared against the Salentines, and both consuls were employed in their subjugation. It was not likely that they could offer much resistance, yet their final conquest was not completed till the following year, when both consuls again celebrated triumphs "de Messapiis Sallentinisque." (Fust. Capit.; Zonar. viii. 7 ; Liv. Epit. xv: Florus, i. 20; Eutrop. ii. 17.) All the Roman writers on this occasion mention the Salentines alone; the Triumphal Fasti, however, record the name of the Messapians in conjunction with them, and it is certain that both nations were included both in the war and the conquest, for Brandusium, which is cailed by Florus "caput regionis," and the occupation of which was evidently the inain object of the war (Tonar. l. c.), seems to have been at that period certainly a Messapian city. The Salentines are again mentioned as revolting to Hannibal during the Second Punic War (b.c. 213), but seem to hare been again reduced to subjection without difficulty. (Liv. xxv. 1, xxvii. 36, 41.) From this time their name disappears from history, and is not even found among the nations of Italy that took up arms in the Siciial War. But the "Sallentinus ager" continued to be a recognised term, and the people are spoken of both by Pliny and Strabo as distinct from their neighbours the Calabri. (Strab. vi. p. 277 ; Plin. iii. 11. s. 16 ; Ptol. iii. 1. § 13 ; Mel. ii. 4 ; Cic. pro Roec. Am. 46.) The "regio Salentina" is even mentioned as a distinct portion of Calabria as late as the time of the Lombards. (P. Diac. Hist. Lang. ii. 21.)

The physical character and topography of the country of the Salentines are given in the article Catabria. The following towns are assigned by Pliny to the Salentines, as distinguished from the Calabrians, strictly so called: Aletium, Basta, Nfretum, Uxentum, and Veretcm. All these are situated in the extreme southern end of the Iapygian peninsula. The list given by Ptolemy nearly agrees with that of Pliny; but he adds Rhudiae, which was considerably further N., and is reckoned on good anthority a Calabrian city [Rhediak]. The place he calls Banota is probably the Brata of Pliny. To these inland towns may probably be added the seaports of Calimpolis, Castimim Muneivae, and perhaps Ifidruntim also, though
the last seems to have early received a Grepk colony. But it is probable that at an earlier perinel the territory of the Salentines was considerably more extensive. Stephanus of Byzantiun speaks of a cily of the name of Sallentia, from which was derived the name of the Sullentines, but no mention of this is found in any other writer, and it is prohably a mere mistake.
[E. H. B.]
SALERNUM (Eádepvov: Eth. Salernitanus: Salerno), a city of Campania, but situated in the territory of the Picentini, on the N. shore of the gulf of Pasidonia, which now derives from it the name of the Gulf of Salerno. We have no accomnt of its origin or early history; it has been supposed that it was like the neighbouring Marcina a Tyrrhenian or Pelasgic settlement [Marcina]; but there is no authority for this. and its name is uever mentioned in history previous to the settlement of a Roman colony there. But when this was first decreed (in B. c. 197, it was not actually founded till B. c. 194), Livy speaks of the place as Castrum Sulerni, whence we may infer that there was at least a fortress previously existing there (Liv. xxxii. 29, xxxiv. 45; Vell. Pat. i. 14 : Strab. r. p. 251.) The Koman colony was established, as we are expressly told by Strabo, for the purpose of holding the Picentines in check, that people having actively esponsed the cause of Hannibal during the Second Punic War (Strab. l. c.) Their town of Picentia being destroyed, Salernum became the chief town of the district; but it does not appear to have risen to any great importance. In the Social War it was taken by the Samnite general C. Papius (Appian. B. C. i. 42): but this is the only occasion on which its name is mentioned in histury. Horace alludes to it as having a mild climate, on which account it had apparently been recommendel to him for his health (Hor. E.p. i. 15. 1.) It continued to be a municipal town of some consideration ander the Roman Empire, and as we learn from inscriptions retained the title of a Colonia (Plin. iii. 5. s. 9 ; Ptol. iii. 1. § 7 ; Itin. Anl.; Tab. Peut.; Mommsen, Inscr. R. N. pp. 9 -12.) But it was not till after the Lombard conquest that it became one of the most flourishing cities in this part of Italy; so that it is assuciated by Paulus Diaconus with Caprea and Neapolis among the " opulentissimae urbes" of Campania (P. Disc. Hist. Lang. ii. 17). It retained this consideration down to a late period of the middle ages, and was especially renowned for its school of medicine, which, under the name of Schola Salernitana, was long the most celebrated in Europe. Bat it seems certain that this was derived from the Arabs in the 10th or 1lth century, and was not transmitted from more ancient times. Salerno is still the see of an archbishop, with a population of about 12,000 inhabitants, though greatly fallen from its mediaeval grandeur.

The ancient city, as we learn from Strabo (v. p. 251), stood on a hill at some distance from the sea, and this is confirmed by local writers, who state that many ancient remains have been found on the hill which rises at the back of the modern city, but no ruins are now extant. (Romanelli, vol. iii. p.612.) From the foot of this hill a level and marshy plain extends without interruption to the mouth of the Silarus, the whole of which seems to have been included in the municipal territory of Salernum, as Lucan speaks of the Silarus as skirting the cultivated lands of that city (Lucan, ii. 425.) The distance from Salernum itself to the moath of the

Silarus is not less than 18 miles，though erroneously given in the Tabula at only 9．（Tab．Peut．）［E．H．B．］

SALE＇TIO，in Gallia．This name occurs in the Not．Imp．，in the Antonine Itin．and in the Table． Ammianns（xvi．2）names it Saliso：＂Argento－ ratum，Brocomagum，Tabernas，Salisonem，\＆c．＂ The Itill．places Saletio between Argentoratum （Strassburg）and Tabernae；and the Table places it between Tabernae and Brocomagus（Brumath）， which is north of Strassburg．The numbers are not correct in the Itin．；but there is no doubt that the place is Setz near the Rhine．A diploma of Otho the Great names it＂Salise in Elisazium，＂in Elsaz or Alsace．（D＇Anville，Notice，foc．）［G．L．］

SALGANEUS（Ealyaveis；Liv．uses the Gr． acc．Salganea：Eth．इadydyios），a town upon the eastern coast of Boeotia，and between Chalcis and Anthedon，is said to have derived its name from a Bocotian，who served as pilot to the Persian fleet of Xerxes，and was put to death upon suspicion of treachery，because no outlet appeared to the channel of the Euripus；but the Persian commander，having found out his mistake，erected a monument on the spot，where the town was afterwards built．（Strab． ix．p． 403 ；Dicaearch．Stat．Graec．p．19；Steph．B． s．r．）．Salganeus was considered an important place from its commanding the northern entrance to the Earipos．（Diod．xix．77；Liv．xxxv．37，46，51．） The remains of the town stand directly under the highest summit of Mount Messapium，in the angle where the plain terminates，and upon the side of a small port．The citadel occupied a height rising from the shore， 90 yards in length，and about 50 broad，and having a flat summit sloping from the SE．towards the sea．There are remains of walls on the crest of the summit，and on the SE．side of the height．（Leake，Northern Greece，vol．ii． p．267．）

SALI（इd́ol，Ptol．iii．5．§ 22），a people of European Sarmatia，whom Schafarik（Slav．Alt． vol．i．p．302）places on the river Salis in the Baltic province of Livonia．
［E．B．J．］
SA＇LIA，a river in the territory of the Astures， on the N．conast of Hispania Tarraconensis．（Mela， iii．1．）Now the Sella，
［T．H．D．］
SA＇LIA，a branch of the Mosells（Mosel），men－ tioned by Venant．Fortan．（iii．12．5），which must be the Seille（Forbiger，vol．iii．p．126）．The Seille wins the Masel at Metz．
［G．L．］
SALICA（Edduca，Ptol．ii．6．§59），a town of the Oretani in Hispania Tarracouensis．［T．H．D．］ SALICE．［TAProbank．］
SALICES（AD），a place in Moesia which the Antonine Itinerary places not far from the mouths of the Danube at $43 \mathrm{M} . \mathrm{P}$ ．from Halmyris，and 62 M．P．from Tomi．The low and marshy meadows which surrounded it were the scene of the sanguinary hattle between the great Fridigern and the legions d Valens．（Amm．Marc．xxxi．7．§ 5；Gibbon， c xxvi．；Le Beau，Bas Empire，iv．p． 112 ；Green－ vood，Hist．of the Germans，p．328．）［E．B．J．］

SALIENTIS（Salientibus，Itin．Ant．p．428），a phace in Gallaecia，on the road from Bracara to As－ trica；variously identified with Caldelas and Orense．
［T．H．D．］
SALINAE，in Gallia，the chief town of the Suetri ＊Suctrii（Ptol．iii．1．§ 42），a people in the Pro－ riscia E．of the Rhone．An inscription in Spon， ＂Lecc．civitatis Salin．，＂is said to belong to this place； and another inscription has been found at Lacerano near the sources of the Paglione：＂C．Julio Valenti

J．F．Fabr VI．viro civitat．Saliniens．．．Alpium maritimarum patrono optimo．＂Some place Sulinae at Castellan in the diocese of Senez in the Maritime Alps，where there are salt springs，and where Spon＇s inscription is said to have been found．D＇Anville places it at Seillans in the diocese of Fréjus，near Faventia（Fayence）；and he observes that all the old towns of this country preserve their names．（D＇An－ ville，Notice，g̛c．；Ukert，Gallien．p．438．）［G．L．］

SALI＇NAE（EaAival，Ptol．ii．3．§ 21 ），a town of the Catyeuchlani or Capelani，towards the E． coast of Britannia Romana．Camden（p．339） identifies it with Salndy or Sandye，near Potton in Bedfordshire ；others have sought it in the S．part of Lincolnshire．
［T．H．D．］
SALI＇NAE（之arivat，Ptol．iii．8．§ 7 ；Pemt． Tab．；Geog．Kav．iv．7），a town of Dacia identified with Thorda，on the Aranyos in Transylvania，where there are Roman remains．（Comp．l＇ayet，Hungary and Transylvania，vol．ii．p．259．）［E．B．J．］

SALINsAE．［Mauretania，Vol．II．p．299，a．］
SALI＇NUM（ EaNivov），a place on the right bank of the Danube，a little below Aquincum，on the road from this town to Mursa in Lower Pannonia．（Ptol． ii．16．§ 4；It．Ant．p．245，where it is called Vetus Salina．）On the Peut．Table we find in that spot the corrupt name Vetusalium．Its site must have been in the neighbourhood of the modern Hansza－ bek．
［L．S．］
SALIOCANUS．［Staliocanus．］
SALIOCLITA，in Gallia，is placed by the An－ tonine Itin．on the road from Genabum（Orleans） to Lutetia（Paris）．It is Saclas，a little south of Etampes，on the Juine，a branch of the Seine．The Itin．makes the distance the same from Genabum， and Lutetia，which we must take to be La Cité de Paris ；but there is an error in the Itin．，as D＇Anville shows，in the distance from Salioclita to Lutetia，and he proposes to correct it．［G．L．］

SALISSO，in north Gallia，is placed by the An－ tonine Itin．on a road from Augusta Trevirorum （Trier）to Bingium（Bingen）．The places reck－ oned from Augusta are Baudobrica xviii．，Salisso xxii，Bingium xxiii．This Baudobrica is not the place described under the article Baudobrica （Boppart）．These 63 Gallic leagues exceed the real distance from Trier to Bingen considerably．The site of Salisso is uncertain．
［G．L．］
SALLAECUS（Eá＾入aukos，Ptol．ii．5．§8），a town in the S．of Lusitania．
［T．H．D．］
SALLENTI＇NI．［Salentini．］
SALLUNTUM．［Dalmatla．］
SALMA＇NTICA（ミ̌a $\mu \alpha ́ \nu \tau \iota \kappa \alpha$, Ptol．ii．5．§ 9 ； in the Itin．Ant．called Salmatice；in Polyaenus Strat．viii．48，$\Sigma$ a $\alpha \mu \alpha \tau(s)$ ，an important town of the Vettones in Lusitania，on the S ．bank of the Durius，on the road from Emerita to Caesarangusta． It is incontestibly identical with the＇Eл $\mu$ avrikn＇of Polybius（iii．14），and the Hermandica or Helman－ tica of Livy（xxi．5；cf．Nonius，Hisp．c．38）．It is the celebrated modern town of Salamanca，where the piers of a bridge of twenty－seven arches over the Tormes，built by Trajan，are still in existence．（Cf． Miñano，Diccion vii．p．402；Florez，Eisp．Sayr． xiv．p．267．）
［T．H．D．］
SALMO＇NA，a branch of the Mosella（Mosel）．
＂Nec fastiditos Salmonae usurpo fluores．＂
（Ausonius，Musell．366．）
The Salmona is the Salme，which flows into the Moscl，near the village of Neumagen．

SALMO NE（ $\Sigma a \lambda \mu \omega \dot{\nu} \eta$ ，Steph．B．8．v．；Strab．；
 veitns，Steph．B．；the form $\sum a \lambda \mu \omega \nu \epsilon i \tau \eta s$ presupposes a form $\Sigma a \lambda \mu \omega \nu$ eia，which probably ought to be read in Diodorus instead of $\sum a \lambda \mu \omega \nu(a)$ ，an ancient town of Pisatis in Elis，said to have been founded by Salinoneus，stood near Heracleia at the sources of the Enipeus or Barnichius，a branch of the Alpheius． Its site is uncertain．（Strab．viii．p．356；Diod．Lc．； Apollid．i．9．§ 7 ；Steph．B．l．c．）

SALMONE．［Snmonium Promontorium．］
SALMYCA（ $\Sigma \dot{d} \lambda \mu v k a$, Steph．B．l．c．）a city of Spain near the Pillars of Hercules；perlaps in the Campus Spartiarius near Carthago Nova，if the reading of Brodaeus in Oppian（Cyneg．iv．222）is correct．（Comp．Ukert，ii．pt．i．p．402．）［T．H．D．］

SALMYDESSUS（＇A $\lambda \mu \nu \delta \iota \sigma \sigma \delta s$ 谊о $\sum a \lambda \mu \nu \delta \eta \sigma$－ ods，Ptol iii． $11 . \S 4$ ；Halmydessos，Plin．iv． 11 ．s．18； Mela，ii．2．§ 5）．a coast－town or district of Thrace， on the Euxine，about 60 miles NW．from the entrance of the Bosporas，probably somewhere in the neighbourhood of the modern Muijeh．The eastern offishoots of the Haemus here come very close to the shore，which they divide from the valley of the Hebrus．The people of Salmydessus were thus cut off from commanication with the less barbarous portions of Thrace，and became notorious for their sarage and inhuman character，which harmonised well with that of their country，the coast of which was extremely dangerous．

Aeschylus（Prom．726＊）describes Salmydessus as＂the rugged jaw of the sea，hostile to sailors， step－inother of ships；＂and Xenophon（Anab．vii． 5. § 12 ，seq．）informs us，that in his time its people carried on the business of wreckers in a very syste－ matic manner，the coast being marked out into portions by means of posts erected along it，and those to whom each portion was assigned，having the exclusive right to plunder all vesselis and persons cast upon it．This plan，he says，was adnpted to prevent the bloodshed which had frequently been occasioned among themselves by their previous prac－ tice of indiscriminate plunder．Strabo（vii．p．319） describes this portion of the coast of the Euxine as ＂desert，meky，destitate of harbours，and completely exposed to the north winds；＂while Xenophon（l．c．） characterises the sea adjoining it as＂full of shoals．＂

The earlier writers appear to speak of Sulny－ dessus as a district only，but in later authors，as Apollodorus，Pliny and Mela，it is mentioned as a twwn．

Little is known respecting the history of this place．Herodotus（iv．93）states that its inhabi－ tants，with some neighbouring Thracian tribes，sub－ mitted without resistance to Darius when he was marching through their country tuwards the Danube． When the remnant of the Greeks who had tollowed Cyrus the Younger entered the service of seuthes， one of the expeditions in which they were employed under Xenophon was to reduce the people of Saliny－ densus to obedience；a task which they seen to have accomplished without much difficulty．（Anab． l．c．）
［J．R．］
SALO，a tributary of the Iberus in Celtiberia， which flowed past the town of Bilbilis（whence

[^33]SALONA．
Justin，xliv．3，calls the river itself Bilbilis），and entered the Iberus at Allabon．（Mart．i．49，x．20， 103，iv．55．）Now the Xalon．
［T．H．D．）
SALODU＇RUM，in Gallia，is placed in the An－ tonine Itin．x．from Petinesca［Pritivesca］，and the distance from Salodurum to Augusta Raura－ corum（Ahgst near Basle）is $x x$ ii．

Salodurum is Solothurn，as the Germans call it， or Soleure，and though the distance between Basle and Solothurn is somewhat less than that in the Itins．，this may be owing to the passage over the iills which separate the cantons of Basle and Solu． thurn．

It is said that there are Roman remains at So－ letre，and an inscription of the year в．c． 219, ＂Vico Salod．＂，has been found there．Salodurum is one of the towns of the Helvetii with a Celtic ter－ mination（dur）．Cluver conjectured that Ptoleny＇s Ganeduram［Ganodorum］might be Saloduram． （D＇Anville，Notice frc．；Ukert，Gallien．）［G．L．］

SALOE（इa入ón，Paus．vii．24．§ i），or Sale （Plin．v．31），a small lake of Lydia at the foot of Mount Sipylus，on the site of Tantalis or Sipylas， the ancient capital of Maeonia，which had probably perished during an earthquake．（Strab．i．p．58， xii．p．579．）

The lake was surmunded by a marsh；and the Phyrites，which flowed into it as a brook，issued at the other side as a river of some importance．［L．S．］

SALOMACUM，or SALADOCLM，is placed by the Antonine Itin．on a road from Aquae Tarbellicue （Dax）to Burdigala（Bordeaux）．Salomarum is the next place on the road to Burdigala and xviii． distant．The distance and the name Sales show that Sales is Salomacum．
［G．I．］
SALO＇NA，SALO＇NAE（ $\Sigma a \lambda \omega \hat{\nu} a, ~ \Sigma \alpha \lambda \hat{\omega} v a r$ ； this latter is the more usual form，as found in Inscriptions，Orelli，Inscr．nos．502，3833，4995； and on coins，Rasche，vol．iv．pt．i．p． 1557 ：Fth． इa入 $\omega \nu(\tau \eta s$, इa入avé́s），a town and barbour of Dalmatia，which still bears its ancient name，situated on the SE ．corner of the gulf into which the Adriatic breaks（Can．di Castelli）on the N．of the river Iader（il Giad o）．Lucan＇s description（riii． 104）－
＂Qua maris Adriaci longas ferit unda Salonas
Et tepidum in molles Zephyros excurrit Iader＂－
agrees with its oblong form，still traceable in the ruins，and with the course of the river．Though the public buildings and houses of ancient Salonae have been destroyed，enough remains of the wall to show the size，as well as position，of the city； and the arch of the bridge proves that the course of the river is unch nged．

The city consisted of two parts，the eastern and the western；the latter stands on rather higher ground，sloping towards the N．，along which the wall on that side is built．Little is known of Salonae before the time of Julius Capsar；after the fall of Dalminium it becanne the chief town of Dalmatia，and the head－quarters of L．Caecilius Metellus，B．C．117．（Appian，Illyr．11．）It was besieged a second time，and opened its gates to Cn． Cosconius，в．c．78．（Eutrup．vi．4；Uros．v．23．） When the Pompeian fleet swept the Ionian gulf from Corcyra to Salonae，M．Uctavius，who com－ manded a squadion for Pompeius，was compelled to retreat with loss from before this stranghold of

Caesar's. (Caes. B. C. iii. 9.) The profligate Gabinius, after being cooped up for months in the fortress, died here. (Auct. B. Alex. 43 ; Dion Cass. xlii. 12.) In b. c. 39 Asinius Pollio defeated the Partheni, who had espoused the cause of Brutus and Cassius, and took Salonae, in commemoration of which his son Asinius Gallus bore the "agnomen" Saloninus (Comp.Virg. Bucol. viii. 7 ; Hor. Carm.ii. 1. 14-16.) From the time it received a colony it was looked apon as the great bulwark of the Roman power on that side the Adriatic, and was distinguished for its loyalty, as was shown in the siege it maintained against Bato the native leader, A.d. 6 . All the great Roman roads in Dalmatia met at this point, and when the country was divided into three " conventus," or assize towns, as many as 382 "decuriae" were convened to it. (Plin. iii. 26.) Under the earlier emperors the town was embellished with many public buildings, the number of which was greatly increased by Diocletian, who, according to Porphyrogenitus (de Adm. Imp. 29), completely rebuilt the city. No great change took place for nearly two centuries after the death of that emperor; but if we are to believe Porphyrogenitus (l.c.) the "long Salonae" attained to half the size of Constantinople. In A. D. 481 Salonae was taken by Odoacer, king of the Heruli, but was recovered from the Goths by the Gepid prince Mundus, the general of Justinian. Totila occupied it for a time. Little is known of these sieges, except that it was partially destroyed. (Procop. B. G. i. $5,7,17$, sce.) It soon recovered from these diasters; and it was from Salonae that Belisarius in 544, and Narses in 552, set out to rescue Italy from Totila and the Goths. (Comp. Gibbon, c. xliii.) The Avars invaded Dalmatia in 639, and, advancing upon Salonae, pillaged and burnt the town, which from that time has been deserted and in ruins. (Const. Porph. l.c.) The town possessed a dockyard, which, from Strabo's (vii. p. 315) account, seems to have been the only one deserving that name on the Dalmatian coast. The present state of the place offers many illustrations of past events ; the following works twach very fully upon the remains of the fortifications and other ruins: Wilkinson, Dalmatia, vol. i. pp. 151-164; Neigebaur, Die Sud-Slaven, pp. 151-164; Lanza, Antiche hapide Salonitane inedite, Zara, 1850; F. Carrara, Topografia e Scavi di Salona, Trieste, 1850.

The fame of Salonae mainly rests upon its neighbourhood having been chosen by Diocletian as the place of his retirement. That emperor, after his resignation, spent the last nine years of his life in the seclusion of the palace which has given its name to Spalato. Spalato, often erroneously called Spalatro. in Illyric Split, is a corrupted form of Salonae Palatium or .S. Palatium. The building of the paiace, within the precincts of which the greater jart of the modern town is constructed, occupied twelve years. The stone, which was very little inferior to marble itself, was brought from the quarries of Tragurium. After the death of Diocletian, bat little is known of the palace or its occupants. Part of it was kept by the magistrates of Salonse, as a state palace; and part was occupied by the "Gynaecium," or cloth manufactory, in which women only were employed, - whence the name. It was tenanted by the phantom emperors of the West, Glycerias and Jalias Nepos, the latter of whom was murdered here. When Salonae was captured by the Avars, the houseless citizens Hed to
the inassive structure of the palace for shelter: the settlement swelled by the arrival of their countrymen became a Roman city under the name of Aspalathum, and paid an annual tribute of 200 pieces of gold to the Eastern emperors. (Const. Porph. l. c.)

The palace is nearly a square, terminated at the four corners by a quadrangular tower. According to the latest and most accurate admensurements, the superficial content, including the towers, occupies a space of a little more than eight acres. (Wilkinson, Dalmatia, vol. i. pp. 114-143; Neigebaur, Die Sud-Slavem, pp. 134-151.) The entire building was composed of two principal sections, of which the one to the $S$. contained two temples - one dedicated to Jupiter the other to Aesculapius - and the private rooms of the emperor. Two streets intersected each other at right angles, nearly in the centre of it; the principal one led from the Porta Aurea, the main entrance on the N . front, to a spacious court before the vestilule; the other ran in a direct line from the W. to the E . gate, and crossed the main street just below the court. What remains is not enough to explain the distribution of the various parts of the interior. By a comparison of what existed in his time with the precepts of Vitruvius, Adams (Antiquities of Diocletian's Palace, 1764) has composed his ingenious restoration of the palace. (Comp. Gibbon, c. xiii.) All the gates, except the Porta Argentea, were defended by two octagonal towers; the principal or "golden gate" still remains nearly perfect. The temple of Jupiter is now the "Duomo", and that of Aesculapius is a baptistery dedicated to St. John. Diocletian's palace marks an aera;-columnar was so combined with arched architecture, that the arches were at first made to rest upon the entablature, and afterwards were even forced iminediately to spring from the abacus, in violation of the law of statics, which requires undiminished and angular pillars under the arch; at length the entablature itself took the form of an arch. (Müller, Ancient Art, § 193.) But although this architecture offends against the rules of good taste, yet these remains may serve to show how directly the Saracens and Christian architects borrowed from Roman models many of the claracteristics which have been looked upon as the creation of their own imagination. (Comp. Hope, Architecture, vol. i. c. viii.; Freeman, Hist. of Architecture, p. 152.) A plan of the palace of Diocletian, taken from Adarns, will be found in Forgusson's Handbook of Architec ture, vol. i. p. 356, accompanied by an account of the general arrangements of the building. [E.B.J.]

SALPESA, a Roman municipium in Hispania Baetica, SE. of Hispalis, at the ruined Facialcazar, between Utrera and Coronil. (Florez, Esp. Sagr. ix. p. 17; Mionnet, Suppl. i. p. 44.) [T. H. D.]

SALPI'NUM (Eth. Salpinas), an ancient city of Etruria, mentioned only by Livy (v. 31, 32), who speaks of the Salpinates as assisting the Volsinians in their war against home in B. C. 389. It is clear from the manner in which they are here sposen of that they were an independent people, with a considerable territory and a fortified city ; and the manner in which they are associated with the powerful Volsinians would lead to the inference that they also must have been a people of considerablo power. Yet no subsequent mention of their name is found, and all trace of their existence disappears. Niebubr conjectures that Salpinum occupied the site of the 3 L 3
modern Orvieto, the name of which is evidently a corruption of Urbs Vetus, the form used by Paulos Diaconus in the seventh century (P. Diac. iv. 33): there is, therefore, little doubt that the site was one of a more ancient Etruscan city ; and its proximity to Volsinii renders it probable enough that it may have been Salpinum. But no reliance can be placed upon any such conclusion. (Niebuhr, vol. ii. p. 493.)
[E. H. B.]
SALSAS or SALSA, a river of Carmania, noticed by Pliny (vi. 25). Reichard imagines that this is the same stream as that called by Marcian, Cathraps (p. 21, ed. Hudson), and by Ptolemy, Araps or Cathraps (vi. 8. § 4); and he identifies it with the modern Shir ; but this seems very doubtful. [V.]

SALSULAF, in Gallia Mela (ii. 5) describes the Salsulae Fons as not sending forth fresh water, but water salter than the sea. He places the Fons south of the lake Rubresus, and near the shore which he calls Leucate [Leucate]. Salsulae is in the Antonine Itin. on the road from Narbo to the Pyrences. Salsulae is Salses or Salces, where there is a salt-spring. Near the Fons, says Mela, is a plain very green with fine and slender reeds, under which is water. This is the place, he says, where fish are got by striking down with a prong or something of the sort; and this is the origin of the fables told by the Greeks and some Romans about fishes being dug out of the ground. He alludes to Polybius (xxxiv. 10). [Ruscino.]
[G. L.]
SALSUM FLUMEN, a tributary of the Baetis in Hispania Baetica, between Attegua and Attubis. (Hirtius, B. A. c. 7, 8.) Variously identified with the Guadajoz and Salado.

## SALSUS. [Stachir.]

SALTIA'TES ( $\sum_{a \lambda \tau \iota \hat{\eta} \tau a l, ~ S t r a b . ~ i i i . ~ p . ~ 144), ~}^{\text {in }}$ according to Strabo a people of Spain celebrated for their woollen manufacture. But we must probably read in this passage इa入aкı $\hat{\eta} \tau a$.
[T. H. D.]
SALTICI, a town of the Celtiberi in Hispania Tarraconensis. (Itin. Ant. p. 447.) Variously identified with Jorquera and S. Maria del Campo. [T. H. D.]

SALTIGA (इ́d $\lambda \tau \iota \gamma a$ Ptol. ii. 6. § 61), a town of the Bartitami in Hispania Tarraconensis. [T. H. D.]

SALTOPYRGUS. [Teglicium.]
SALULSIS (Silurn), a town in Rhaetia, on the river Athesis, in the north of Tridentum, is mentioned only by Paulas Diaconas. (Hist. Langob. iii. 9.)
[L. S.]
SALUTARIS PHRYGIA. [Phrygia, p. 625.]
SALVA ( $\Sigma a \lambda o u ́ a)$, a town in the north-eastern extremity of Lower l'annonia, on the right bank of the Danube. (Ptol. ii. 16. § 4; Itin. Ant. pp. 266, 267.) According to the Notitia Imperii, where it is called Solva, it contained a garrison of a body of horsemen. The site of this place cannot be ascertained with certainty.
[L.S.]
SA'LYES (Zádues), SALYI, SALLU'VII, or SA'LLYES (Steph. Byz. s. v.), a Ligurian people in Gallia. There are other varieties in the writing of the word. The early Greeks gave the name of Ligyes to these Salyes; and their territory, which was in the possessin of the Massaliots, when Strabo wrote, was originally called Ligystice. (Strab. iv. p. 203.) The geographer means to say that the old Greeks were not acquainted with the name of Salyes, but only with the name of the nation to which they belonged. Livy (v. 34) speaks of the Phecarans who funded Massilia being attacked by the Salyes, for in his time the name Salyes was familiar to the Romans.

Strabo speaks of the Salyes in his description of the Alps. He makes their country extend from Antipolis to Massilia, and even a little farther. They occupied the hilly country which lies inland and some parts of the coast, where they were mingled with the Greeks (iv. p. 203). They extended west as far as the Rhone. The Salyes had also the country north of Massilia as far as the Druentia (Durance), a distance of 500 stadia; but on crossing the Druentia at Cabellio or Caballio (Cavaillon) a man would be in the country of the Cavares (Strab. iv. p. 185), who extended from the Druentia to the Isars (Isère). [Cavares.] Strabo adds that the Salyes occupy both plains and the mountains above the plains. In this passage ( $\mathrm{O}: \mu \geqslant \gamma$ oivy ミdivues $\langle\nu$ aidois) Groskard (Transh. Strab. vol. i. p. 318) has altered Edaues into Kaoúapot, and so he has spoiled the meaning. Ukert has defended the true reading, though he has not correctly explained $2 v$ aürois. The Salyes occupied the wide plains east of Tarascon and Arles, one of the best parts of the country between the Durance and the Mediterranean; and so Strabo could correctly say that the Volcae Tectosages who reach to the Rhone had the Salyes extending along their border and opposite to them on the other side of the river, and the Cavares opposite to them (north of the Durance).

The Salyes are sometimes distinguished from the Ligures, as when Strabo (iv. p. 178) speaks of the coast which the Massaliots possess and the Salyes as far as the Ligyes to the parts towards Italy and the river Varus, the boundary of the Narbonitis (Provincia Narbonensis) and Italy. Livy also ( x xi. 26) speaks of P. Cornelius Scipio sailing along the coast of Etruria and of the Ligures, and then the coast of the Salyes till he came to Massilia. This shows that the Ligurians of Gallia, or the country west of the Var, became known to the Romans by the name of Salyes. Strabo's remark that these Salyes, whom the early Greeks named Ligures, were called Celtoligyes by the later Greeks, may explain how Livy or his Epitomiser has called the Salyes both Ligurians ("Transalpinos Ligures," Epit. 47) and Galli (Epit. 60). They were a mised race of Galli and Ligures.

The Salyes were a warlike people. They had both infantry and cavalry, distributed into ten tribes or divisions. They were the first of the Transalpine nations which the Romans subdued. (Florus, iii. 2.) The Romans fought for a long time with the Ligurians east of the Var, and with the Salyes west of it, for these people being in possession of the sea-coast closed against the Romans the way into Spain. They plundered both by sea and land, and were so formidable that the road through their land was hardly safe for a large army. After eighty years of fighting the Romans with difficulty succeeded in getting a road of 12 stadia in width allowed for the free passage of those who went on the public service.

Livy ( $x \times x$ i. 10) tells us that in the Second Punic War the Insubres, Cenornani, and Boii stirred up the Salyes and other Ligurians to join them; and all together under Hamilcar attacked Placentia. There is no ground, as Ukert remarks, to alter the reading "Salyis," for we see no reason why the Salyes as well as other Ligurians or mixed Ligurians should not aid the enemies of Rome. Both the Ligurians and the Cisalpine Galli drouled the arms and the encrouchment of the Rumans. The alliance with

Massilia first brought the Romans into the conntry of the Salyes; and in B. c. 154 the Oxybii and Deceates, or Deciates, who were threatening Massilia, were defeated by the consul Q. Opinius. The Salyes or Sulluvii are not named on this occasion by the historians, and the Deceates and Oxybii, who were certainly Ligurians, may have been two smaller tribes included under the general name of Salyes or Sallovii. [Decintes; Oxybin.] The consul M. Fulvius Flaccus in b. c. 125 defeated the Salyes, and in B. c. 123 the consul C. Sextius Calvinus completed the subjugation of this people, and founded Aquate Sextiae (Aix) in their territory.

Ptolemy (ii. 10. § 15) enumerates Tarascon, Glanum, Arelatum (Arelate) Colonia, Aquae Sextiae Colonia, and Ernaginum as the towns of the Silyes. Tarascon, Glanum (St. Remi), Arelate, and firnaginum [Eienaginum] all lie west of Aquae Sextise (Aix) and of Marstille; and we may conclude that the country of the Salyes is the western half of the tract between the Var and the Rhone, and between the Lurance and the Mediterranean.

The tribes east of the Salyes, the Albici, Suetri, Nerusi, Oxybii, and Deciates, and there may be some others [Commoni], were perhaps sometimes included under the uame of the more powerful nation of the Salyes; but Strabo's statement does not appaar to be strictly correct, when he makes the Salyes extend along the coast to Antipolis. The coast inmediately west of the Var belonged to the Deceates and Oxybii. Pliny says "Ligurium celeberrimi ultra Alpes, Salluvii, Deciates, Oxybii " (iii. 5); the three trites of Transalpine Ligures whowe names occur in the history of the Roman conquest of this country.

In Pliny's lis: of the Coluniae in the interior of Narbonensis east of the Rhone there is "Aquae Sextiae Salluviorum," and we may conclude that the head-quarters of the Salyes or Salluvii were in the plain country ahove $A i x$, and thence to Arles. Owing to their proximity to the Greeks of Massilia they would be the first of the Ligures or the mixed Gulli and Ligurians who felt the effect of Greek civilisation, and there can be no doubt that their ruce was crussed by Greek blood. Pussessing the town of Arelate, at the head of the delta of the Khone, they would have in their hands the navigation of the lower part of the river. The history of this brave and unfortunate people is swallowed up in the blood-stained annals of Rome; and the race was probably nearly extirpated by the consul Calvinus selling them after his conquest. [G. L]

SAMAICA (इauaiký, I'wl. iii. 11. § 9), is described by Ptolemy as a orpartria of Thrace, on the boriers of Macedonia and the Aegean. [J. K.]
 al. $\Sigma \in \mu \in \chi \omega \nu i \tau u s)$, the name given by Josephus to the small lake of the Upper Jordan, called in Scripture the "waters of Merom," where Joshua routed the army of Jabin, king of Hazor, which city, according to Josephus, was situated above the lake. (Comp. Josh. xi. 5, 7, and Julg. iv. with Josephus, Ant. v. 5. § 1.) He elsewhere describes the lake as 60 stadia long by 30 broad, extending its marshes to a place called Daphne, which Reland is probably right in altering to Dane, i. e. Dan, as Josephas immediately identifies it with the temple of the Golden Calf. (Joseph. B. J. iv. 1. § 1; Reland, Palaist. p. 263.) The name, which is not elsewhere fuund, has been variously derived, but the most probable etymology would connect it in sense with the He brew name Merom $=$ aquae superivres, deriving the
word from the Arabic "samaca," altus fuil. (Reland, l.c. p. 262.) It is singular that no other notices occur of this lake in sacred or in other writings. Its modern name is Buhr-el-Huleh. Pococke writes: " Josephus says the lake was 7 miles long, but it is not above 2 miles broad, except at the north end, where it may be about 4. The waters are muddy and esteemed unwholesome, having something of the nature of the water of a morass." (Observations on Praluestine, vol. ii. p. 73.) Dr. Robinson "estimated its length at alout 2 hours, or from 4 to 5 gengraphical miles; its breadth at the northern end is probably not less than 4 miles." It had the appearance almost of a triangle, the northern part being far the broadest; "or rather the map gives to it in some degree the shape of a pear." (Bibl. Res. vol. iii. pp. 339, 340, Bibliwth. Stcr. vol. i. p. 12; Stanley, Sinai and Palestine, p. 383, u. 1.) [G. W.]

SAMAMYCII. [SYRTICA.]
SA'MARA. [Frudis; Samarobriva.]
SAMA'RIA ( $\sum a \mu a \rho e i t i s, ~ L X X ., ~ J w s e p h . ; ~ \chi ' \omega ́ \rho \alpha ~$
 has been already described in general, under l'ALaestina [p. 518], where also the notice of Josephus has been cited [p. 532]. It remains to add a few words concerning its extent, its special characteristics, and its place in classical gengraphy. It lay, according to Josephus, "between Judaea and Gulilee (comp. St. John, iv. 4), extending from a village called Ginaea in the great plain (Esdraelon) to the toparchy of Acrabatta." Ginaca there can be no difficulty in identifying with the modern Jenin, at the southern extremity of the plain, on the road from Nablis to Nazareth. The toparchy of Acrabatta, mentioned also by Pliny, it is difficult to define: but it certainly lay between Nablüs and Jericho, and therefore probably east of the toparchy of Gophina and in the same parallel of latitude. (Eusebius, Onomast. 8. v. 'Aкpa66ely; Reland, Palaest. p. 192.) The northern boundary of Samaria is well defined by a continuous line of hills, which, commencing with Mount Carmel on the W., runs first in a SW direction and then almost due $E$. to the valley of the Jordan, bounding the great plain of Esdraelon on the S. Its southern boundary is not so distinctly marked, but was protably conterminous with the northern linits of the tribe of Benjamin. It comprehended the tribe of Ephraim, and the half of Manasseh on this side Jordan, and, if it be extended as far E. as Jordan, included also some part of Issachar, that skirted these two tribes on the E. Pliny (v. 13) reckons to Samaria the towns Neapolis, formerly called Mamortha, Sebaste, and Gamala, which last is certainly erroneous. [Gamala.] Ptoleny names Neapolis and Thena ( $\Theta \hat{\eta} \nu \mathrm{a}$, v. 16. §5), which last is evidently identical with Thanath ( Oavà $\theta$ ) of the tribe of Joseph, mentioned by Eusebius (Onomast. s. v.), and still existing in a village named Thena, 10 miles E. of Neapolis, on the descent to the Jordan. St. Jerome nutes that the most precions oil was produced in Samaria (in Hoseam, cap. xii.), and its fertility is attested by Josephus. [G. W.]

SAMARIA, SEBASTE ( $\left.\sum a \mu \alpha \alpha^{\prime} \in i a, ~ \sum \in f a ́ \sigma \tau \eta\right)$, the Hebrew Shomron, the capital city of the kingdom of Israel, and the royal residence from the time of Omri (cir. в. c. 925). of whom it is said that "he bought the hill Samaria of Shemer for two talents of silver, and built on the hill, and called the name of the city which he built after the name of Shemer, owner of the hill, Samaria" (Heb. She meron). (1 Kings, xvi. 24.) Mr. Stanley thinky
that Omri built it merely as a palatial residence (Sinai and Palestine, p. 240); but Dr. Robinson perhaps more justly concludes that it was chosen as the site of the capital, and remarks that "it would be difficult to find in all Palestine a situation of equal strength, fertility, and beauty combined." (Bibl. Res. iii. p. 146.) Its great strength is attested by the fact that it endured a siege from all the power of the Syrian army under Hazael, in the days of Jehoram (cir. B. c. 892), little more than 30 years after its first foundation, and was not taken notwithstanding the frightful effects of the famine within the walls (2 Kings, vii. 24-viii. 20); and when subsequently besieged by the Assyrians (cir. B. c. 721) it was only reduced after a siege of three years ( $x$ viii. 9,10 ). After the captivity it was taken by John Hyrcanus, after a year's siege, when he is said to have sapped the foundations of it with water and destroyed all traces of a city. It was subsequently occupied by the Jews until Pompey restored it to its own inhabitants. It was further restored by Gabinius. (Joseph. Ant. xiii. 10. § 3, 15. § 4, xiv. 4. § 4, 5. § 3, xiii. $10 . \S 3,15$. §4.) It was granted to Herod the Great by Augustus on the death of Antony and Cleopatra, and was by him converted into a Ruman city under the name of Sebaste =Augusta, in honour of his imperial patron. (Ant. xv. 3. §§ 3, 7, 8. § 5, B. J. i. 20. § 3.) The town was surrounded with a wall 20 stadia in length: in the middle of the town was a temple built in honour of Caesar, itself of large dimensioris, and standing in a temenos of $1 \frac{1}{2}$ stadium square. It was colonised with 6000 veterans and others, to whom was assigned an extremely fertile district around the city. (B. J. i. 21. § 2.) Dr. Robinson imagines that it was in this city that Philip first preached the Gospel, and that the church was founded by the apostles St. Peter and St. John (Acts, viii. 5, \&cc.); but considering the absence of the article in the original, supplied in the English translation, and comparing the passage with the identical expression in St. John (iv. 5), it is more probable that the same town is intended, viz. Sychar, or Neapolis, the chief seat of the Samaritan worship. Nor does the expression in Acts (viii. 14), that "Samaria had received the word of God," militate against this view ; for here also the country may be very well understood, and it is well remarked by Dr. Robinson that "it is sometimes difficult to distinguish whether, under the name Samaria, the city or the region is meant." (Bibl. Res. iii. p. 146.) It is most probable, however, that the sacred writers would have used the classical name then in vogue had they had occasion to mention the city. Septimius Severus placed a colony there in the beginning of the third century (Ulpian, quoted by Robinson, l. c. p 148, n. 1), and it was probably at that time an episcopal see; for its bishop, Marius or Marinus, was present at the Council of Nicaea and subscribed its acts. (Le Quien, Oriens Christianus, vol. iii. col. 549-5.52.) The tradition which assigns Sebaste as the place of St. John Baptist's imprisumment and martyrdom is first found in St. Jeroune (Comment in (Osee, i. 5), who also phaces there the tombs of Obadiah and Elisha (Comment. in Abdiam, i. 1, Epituph. Paulee, c. 6), and militates against Josephus, whose statement, however, is inadmissible. [Machafrus.] The modern village which represents in its name and site the nagnificent city of Herol the Great is situated on an isolated hill 6 miler N. of Nablís, reckoned by Josephus n day's journey from Jerusalem. (Aut. xv. 1l.)

The village occupies only the eastern extremity of the hill, and stands at the height of abont 926 feet above the sea. Its only conspicunus building is the ruined charch of St. John, overhanging the brow of the eastern declivity: at the further extremity of the bill, are the remains of an ancient gateway, and near it stand 60 columns in situ, the commencement apparently of a colonnade which extended the whole length of the hill, for at some distance eastward 20 more still stand, and others, whole or in fragments, lie prostrate over the whole hill, while the debris of the buildings have raised the surrounding valleys, renarkably fulfilling the prophecy of Micath (i.6): "I will make Samaria as an heap of the field, as plantings of a vineyard; and I will pour down the stones thereof into the valley, and I will discover the foundations thereof." At about half its height the hill is girt about with a distinct belt of level ground, while similar terraces, not so well defined, may be traced above and below, which it is thought may have once serred as the streets of the city. (Fitter, Erdkunde Palastina, iii. pp. 661-666.) Coins of the city are quoted by Vaillant, Noris, Eckhel, and others, chiefly of the earlier emperors. [G. W.]

SAMARIANE, a town of Hyrcania, mentioned by Strabo (xi. p. 508). It is no doubt the same as that called Samaranne by Ptolemy (vi. 9. § 2), and by Ammianus Marcellinus, Saramanna (xxiii. 6). It cannot be identified with any modern place. [V.]

SAMAROBRI'VA, in Gallia, the ford or passage of the Samara, was a town of the Ambiani cn the Samara (Somme). Caesar held a meeting of the states of Gallia at Samarobriva in the autumn of B. c. 54 , before patting his troops in winter-quarters. Caesar himself stayed at Sumarobriva, as his narrative shows (B. G. v. 24, 46, 47, 53), and as appears from those letters of Cicero addressed to his friend Trebatius, who was about Caesar at that time (ad Fam. vii. 11, 12, 16). Ptolemy mentions Samarobriva as the chief town of the Ambiani (ii. 9. §8). The town afterwards took the name of "Ambiani urbs inter alias eminens" (Amm. Marc. xv. 11), or "Civitas Ambianorum" in the Notitia Prov. Gallia. The name of Samarobrira appears in the Antonine Itin. and in the Table; but the Itin. has Ambiani also. There seems no reason for fixing Samarobrira at any other site than Amiens, though some geographers would do so.
[G. L.]
SAMBANA ( Eá $_{\mu} 6 a \nu a$ ), a small place mentioned by Diodorus Siculus (xvii. 27). There car be little doubt that it is the same as the Sabata of Pliny (vi. 27. § 31). It was situated about two days' journey N. of Sittake and E. of Artemita.
[V.]
SAMBASTAE ( $\Sigma a \mu 6 \alpha \sigma \tau \alpha i$ ), one of the many small tribes in the district of Pattalene mentioned by Arrian (vi. 15) as noticed by Alexander and his troops near the mouths of the Indus. It has been conjectured that the present ruins of Sexistan or Schwan indicate the site of the chief fortress of this people; and Burnes appears to believe that this is the same place noticed by Curtius (ix. 8) as a stronghold of the Brachmani (Burnes, Travels in Bokhara, iii. p. 57).
[V.]
SAMBRACITA'NUS SINUS, in Gallia, is placed in the Maritime Itin. between Forum Julii and Heraciea. It is the gulf of Grimaud. [G. L.]
 river of Hispania Tarraconensis, which entered the sea between the l'yrenees and the Iberus. Ukert (ii. pt.i. p. 292) takes it to be the same river called Allis l.y Pliny (iii. 3. в. 4); the modern Tor. [T. H. D.]

Sambulos. [Bagistanus Mons.]
SAMBUS ( $\Sigma^{\prime} \alpha \beta$ bos), a small river which forms one of the tributaries of the Jumna. It is mentioned by Arrian in his list of Indian rivers (Ind. c. 4.).
[V.]
 Samo), the most ancient city in Cephallenia, which is also the name of this island in the poems of Homer. [Cephallenia.] The city stood upon the eastern const, and apon the channel separating Cephailenia and Ithaca. (Strab. x. p. 455.) Along with the other Cepballenian towns it joined the Athenian alliance in B. c. 431. (Thuc. ii. 30.) When M. Fulvius passed over into Cephallenia in b. c. 189, Samos at first submitted to the Romans along with the other towns of the island : but it shortly afterwards revolted, and was not taken till after a siege of four months, when all the inhabitants were sold as slares. (Liv. $x \times x$ viii. 28,29 .) It appears from Livy's narrative that Same had two citadels, of which the smaller was called Cyatis; the larger be designates simply as the major arx. In the time of Strabo there existed only a few vestiges of the ancient city. (Strab. l.c. ; comp. Plin. iv. 12. s. 19.)

Same has given its name to the modern town of Sarmo, and to the bay upon which it stands. Its position and the remains of the ancient city are described by Leake. It stood at the northern extremity of a wide valley, which borders the bay, and which is overlooked to the southward by the lofiy sammit of Mount Aenus ('Elato). It was built apon the north-western face of a bicipitous height, which rises from the shore at the northern end of the modern town. "The ruins and vestiges of the ancient walls show that the city occupied the two summits, an intermediate hollow, and their slope as far as the sea." On the northern of the two summits are the rains of an acropolis, which seems to have been the major arx mentioned by Livy. On the southern height there is a monastery, on one side of which are some remains of a Hellenic wall, and which seems to be the site of the Cyatis, or smaller citadel. There are considerable remains of the town walls. The whole circuit of the city was barely two miles. (Leake, Northern Greece: vol. iii. p. 55.)

COM OF SAME.
SA'MIA. [SAmicum.]
SA'MICUM ( of Triphylia in Elis, situated near the coast about half-way between the mouths of the Alpheius and the Neda, and a little north of the Anigrus. It stood upon a projecting spur of a lofty mountain, which here approaches so near the coast as to leave only a narrow pass. From its situation commanding this pass, it is probable that a city existed here from the earliest times; and it was therefore identified with the Arene of Homer (Il. ii. 591, xi. j23), which the poet places near the mouth of the Minyeius, a river supposed to be the same as the Anigrus [Arene.] According to Strabo the city wis originally called Samos ( $\sum \alpha \mu o s$ ), from its being situated upon a hill, because this word formerly signified "heights." Samicum was at first the
name of the fortress, and the same name was also given to the surrounding plain. (Strab. viii. pp. 346, 347; Paus. v. 5. § 3.) Pausanias speaks (v. 6. § 1) of a city Samia ( $\Sigma a \mu i a$ ), which be apparently distinguishes from Samicum; but Samicum is the only place mentioned in history. [See some remarks under Macistus.] Samicum was occupied by the Actolian Polysperchon against the Arcadians, and was taken by Philip, в. c. 219. (Paus. v. 6. § 1 ; Polyb. iv. 77, 80.) The ruins of Samicain are found at Khaiciffa (written Xaiánza), which is only the name of the guarded pass. The rained walls are 6 feet thick, and about $1 \frac{1}{2}$ mile in circumference. They are of the second order of Hellenic masonry, and are evidently of great antiquity. The towers towards the sea belong to a later age.

Near Samicuin upon the coast was a celebrated temple of the Samian Poseidon, surrounded by a grove of wild olives. It was the centre of the religious worship of the six Triphylian cities, all of whom contributed to its support. It was ander the superintendence of Macistus, the most puwerful of the Triphylian cities. (Strab. viii. pp. 344, 346, 347.) In a corrupt passage of Strabo (p. 344) this temple is said to be 100 stadia equidistant from Lepreum and the Annius ( $\tau o \bar{u}$ 'Avvlov); for the latter name we ought to read Alpheius and not Anigrus, as some editors have done.

In the neighbourhood of Samicum there were celebrated medicinal springs, which were said to cure cutaneous diseases. Of the two lagoons which now stretch along the coast, the larger, which extends as far as the mouth of the Alpheius, begins at the northern foot of the hill upon which Sanicum stands; the southern extends along the precipitous sides of the hill, which were called in antiquity the Achaean rocks. (Strab viii. p. 347.) The river Anigrus flows into the latter of these lagoons, and from thence flows out into the sea. The lagoon is deep, being fed with subterraneous sources; in summer it is said to be very fetid, and the air extremely unwholesome. Strabo relates that the waters of the lake were fetid, and its fish not eatable, which be attributes to the Centaurs washing their wounds in the Anigrus. Pansanias mentions the same circumstances; and both writers describe the efticacy of the water in coring cutaneous diseases. There were two caves, one sacred to the Nymphis Anigrides ('Avırpífes, Paus.; 'Avıfpıáfes, Strab.), and the other to the Atlantides; the former was the more important, and is alone mentioned by Pausamias. It was in the cave of the Anigrides that the persons who were going to use the waters first offered up their prayers to the Nymphs. (Strab. viii. p. 346, seq.; Puus. r. 5. §§ 7-11.) These two caves are still visible in the rocks; but they are now accessible only by a boat, as they are immediately above the surface of the lake. General Gordon, who visited these caverns in 1835, found in one of them water distilling from the rock, and bringing with it a pure yellow sulphur. (Leake, Morea, vol. i. p. 54, seq., Peloponnesiaca. p. 108; Bublaye, K'echerches, פc., p. 133, seq.; Curtius, Peloponnesos, vol. ii. p. 78 , seq.)

SAMINTHUS ( Eá $_{\mu \nu \nu \theta o s), ~ a ~ t o w n ~ i n ~ t h e ~ A r g e i a, ~}^{\text {a }}$ on the western edge of the Argive plain, which was taken by Agis, when he marched from Phlius into the territory of Argos in b. c. 418 . (Thuc. v. 58.) Its position is uncertain. Leake, who suppeses Agis to have marched over Mt. Lyrceium and the adjoining hills, places it at Kutzopodhi (Morea,
vol. ii. p. 415), and Ross at the village of Phiklia, on the southern side of Mt. Tricaranon, across which is the shortest pass from the Phliasia into the Argive plain. (Peloponnes, p. 27.)

## SANIMO'NIUM. [SAMONIUM.]

SA'MNIUM (ì Zavyitis, Pol., Strab.: Eth. Samnis, pl. Samnites, Eavyitau, Pol., Strab., \&cc.; Ea vital, Ptol.), one of the principal regions or districts of Central Italy. The name was sometimes used in a more extensive, sometimes in a more restricted, sense, the Samnites being a numerous and powerful people, who consisted of several distinct tribes, while they had founded other tribes in their immediate neighbourhood, who were sometimes included under the same appellation, though they did not properly form a part of the nation. But Samnium proper, according to the more usual sense of the name (exclusive of the Frentani, bat including the Hirpini), was a wholly inland district, bounded on the N. by the Marsi, Peligni, and Frentani, on the E. by Apulia, on the S. by Lucania, and on the SW. and W. by Campania and Latium.

## I. Genrral Description.

The territory thus limited was almost wholly mountainous, being filled up with the great mountain masses and ramifications of the Apennines, which in this part of their course have lost even more than elsewhere the character of a regular chain or range, and consist of an irregular and broken mass, the configuration of which it is not very easy to understand. But as the whole topography of Samnium depends upon the formation and arrangement of these mountain groups, it will be necessary to examine them somewhat in detail.

1. In the northern part of the district, adjoining the Marsi and Peligni, was a broken and irregular mass of mountains, containing the sources of the Sagrus (Sangro), and extending on both sides of the valley of that river, as far as the frontiers of the Frentani. This was the land of the Caraceni, the most northerly of the Samnite tribes, whose chief city was Aufidena, in the valley of the Sagrus, about 5 iniles above Castel di Sangro, now the chief town of the surrounding district.
2. The valley of the Sagras was separated by a mountain pass of considerable elevation from the valley of the Vulturnus, a river which is commonly considered as belonging to Campania; but its sources, as well as the upper part of its course, and the valleys of all its earliest tributaries, were comprised in Sannium. Aesernia, situated on one of these tributaries, was the principal town in this part of the country; while Venafrum, about 15 miles lower down the valley, was already reckoned to belong to Campania. This portion of Samnium was one of the richest and most fertile, and least mountainous of the whole country. From its proximity to Latium and Campania, the valley of the Vulturnus was one of the quarters which was most accessible to the Loman arms, and served as one of the highroads into the enemy's country.
3. From Aesernia a pass, which was probably used from very early times, and was traversed by a road in the days of the Roman Empire, led to Bovianum in the valley of the Tifernus. This city was situated in the very heart of the Sumnite country, surrounded on all sides by lofty mountains. Of these the most important is that on the SW., the Monte Afatese, at the present day one of the most celebrated of the Apennines,
but for which no ancient name has been preserved. The name of Mons Tifernus may indeed have been applied to the whole group; but it is more probable that it was confined, as that of Monte Biferno is at the present day, to one of the offshoots or minor summits of the Matese, in which the actual sources of the Tifernus were situated. The name of Matese is given to an extensive groap or mass of mountains filling up the whole space between Bojano (Bovianam) and the valley of the Vulturnus, so that it sends down its ramifications and anderfalls quite to the valley of that river, whence they sweep round by the valley of the Calor, and thence by Morcone and Sepino to the sources of the Tamarus. Its highest summit, the Monte Miletto, SW. of Bojano, rises to a height of 6744 feet. This rugged group of mountains, clothed with extensive forests, and retaining the snow on its summits for a large part of the year, must always have been inaccessible to civilisation, and offered a complete barrier to the arms of an invader. There could never have been any road or frequented pass between that which followed the valley of the Vulturnus and that which skirts the eastern base of the Matese, from the valley of the Calore to that of the Tamaro. This last is the line followed by the modern road from Naples to Campobasso.
4. N. of Bojano the mountains are less elevated, and have apparently no conspicuous (or at least no celebrated) summits; but the whole tract, from Bojano to the frontier of the Frentani, is filled up with a mass of ragged mountains, extending from Agnone and the valley of the Sangro to the neighbourhood of Campobasso. This mountainous tract is traversed by the deep and narrow valleys of the Trigno (Trinius) and Biferno (Tifernus), which carry off the waters of the central chain, but without affording any convenient means of communication. The mountain tracts extending on all sides of Bovianum constituted the country of the Pentir, the most powerful of all the Samnite tribes.
5. S. of the Matese, and separated from it by the valley of the Calor (Calore), is the group of the Mons Taburnus, still called Monte Ta. burno, somewhat resembling the Matese in character, but of inferior elevation as well as extent. It formed, together with the adjoining vallers, the land of the Caudini, apparently one of the smallest of the Samnite tribes, and the celebrated pass of the Caadine Forks was situated at its foot. Closely connected with Mount Taburnus, and in a manner dependent on it, though separated from it by the narrow valley of the Isclero, is a long ridge which extends from Arpaja to near Capua. It is of very inferior elevation, but rises boldly and steeply from the plain of Campania, of which it seems to form the natural boundary. The extremity of this ridge nearest to Capua is the Mons Tifata, so celebrated in the campaigns of Hannibal, from which he so long looked down upon the plains of Campania.
6. At the eastern foot of Mons Taburnus was situated Beneventum, the chief town of the Hirpisi, and which, from its peculiar position, was in a manner the key of the whole district inhabited by that people. It stood in a plain or broad valley formed by the junction of the Calor with its tributaries the Sabatus and Tamarus, so that considerable valleys opened up from it in all directions into the inountains. The Calor itself is not only the most considerable of the tributaries of the Vulturnus, but at the point of its junction with that river, about 20 miles below

Benerentum, is little if at all inferior to it in magnitude and volume of waters. The Calor itself rises in the lofty group of mountains between $S$. Angelo dei Lombardi and Eboli. This group, which is sometimes designated as Monte Irpino, and is the most elevated in this part of the Apennines, sends down its waters to the N. in the Calor and its tributary the Sabatas; while on the E. it gires rise to the Aufidus, which flows into the Adriatic sea, after traversing more than two-thirds of the breadth of Italy; and on the S . the Silarus flows by a much shorter coarse into the Gulf of Salerno. From this point, which forms a kind of knot in the main chain of the Apennines, the mountains sweep round in a semicircle to the NE. and N. till they reach the head waters of the Tamarns, and adjoin the mountains already described in the neighbourhood of Bojano and Campobasso. In this part of its course the main chain sends down the streams of the Ujita and the Miscano on the W . to swell the waters of the Calore, while on the E. it gives rise to the Cerbalus or Cerraro, a stream flowing into the Adriatic.
7. From the Monte Irpino towards the E. the whole of the opper valley of the Aufidus was included in Samnium, though the lower part of its course lay through Apulia. The exact limit cannot be fixed, 一the confines of the Hirpini towards Apulia on the one side, and Lucania on the other, being, like the boundaries of Samnium in general, almost wholly arbitrary, and not marked by any natural limit. It may be considered, indeed, that in general the mountain country belonged to Samnium, and the lower falls or hills to Apulia; but it is evident that such a distinction is itself often arbitrary and uncertain. In like manner, the rugged mountain chain which extends along the right bank of the Aufidus appears to have been included in Samnium ; but the line of demarcation between this and Lucania cannot be determined with accuracy. On the other hand, the detached rolcanic mass of Mons Vultur, with the adjacent city of Venusia, was certainly not considered to belong to Samnium.

## II. History.

All ancient writers agree in representing the Samnites as a people of Sabine origin, and not the earliest occupants of the country they inhabited when they first appear in history, but as having migrated thither at a comparatively late period. (Varr. L. L. vii. 29; Appian, Samnit., Fr. 4, 5; Strab. v. p. 250 ; Fest. s. v. Samnites, p. 326; A. Gell. xi. 1.) This account of their origin is strongly confirmed by the evidence of their name; the Greek form of which, Eavyita, evidently contains the same root as that of Sabini (Sav-nitae or Saf-nitae, and Sab-ini or Saf-ini); and there is reason to believe that they :hemselves used a name still more closely identical. For the Oscan form "Safinim," found on some of the denarii struck by the Italian allies during the Social War, cannot refer to the Labines usually so called, as that people was long before incorporated with the Romans, and is, in all probability, the Oscan dame of the Samnites. (Mommsen. Unter Ital. Dialekte, p. 293; Friedlander, Oskische Münzen, p. 78.) The adjective form Sabellus was also used indifferently by the Romans as applied to the Sabines and the Samnites. [Sabini.]

The Samnite emigration was, according to Strabo (r. p. 250), one of those sent forth in pursuance of a vow, or what was called a " ver sacrum." It was, as usual, under the special protection of Mars, and
was supposed to have been guided by a bull. (Strab. l.c.) It is probable from this statement that the emigrants could not have been numerous, and that they established themselves in Samnium rather as conquerors than settlers. The previously existing population was apparently Oscan. Strabo tells u3 that they established themselves in the land of the Oscans (l. c.); and this explains the circumstance that throughout the Samnite territory the language spoken was Oscan. (Liv. x. 20.) Bat the Oscans themselves were undoubtedly a cognate tribe with the Sabines [Italia]; and whatever may have been the circumstances of the conquest (concerning which we have no infermation), it seems certain that at an early period both branches of the population had completely coalesced into one people under the name of the Samnites.

The period at which the first emigration of the Samnites took place is wholly unknown; but it is probable that they had not been long in possession of their mountainous and inland abodes before they began to feel the necessity of extending their dominion over the more fertile regions that surrounded them. Their first movements for this purpose were probably those by which they occupied the hilly but fertile tract of the Frentani on the shores of the Adriatic, and the land of the Hirpini on the $\mathbf{S}$. Both these nations are generally admitted to be of Samnite origin. The Frentani, indeed, were sometimes reckoned to belong to the Samnite nation, though they appear to have had no political union with them [Frentant]: the Hirpini, on the contrary, were generally regarded as one of the component parts of the Samnite nation; but they appear to have been originally a separate colony, and the story told by Strabo and others of their deriving their name from the wolf that had been their leader, evidently points to their having been the result of a separate and subsequent migration. (Strab. v. p. 250; Serv. ad Aen. xi. 785.) The period of this is, however, as uncertain as that of the first settlement of the other Samnites: it is not till they began to spread themselves still further both towards the S. and W., and press upon their neighbours in Lucania and Campania, that the light of history begins to dawn upon their movements. Even then their chronology is not clearly fixed; but the conquest and occupation of Campania may be placed from about B. C. 440 to B.C. 420 , and was certainly completed by the last of these dates. [Campania.] That of Lucania must probably be placed somewhat later; but whatever were the causes which were at this time urging the movements of the Sabellian tribes towards the S ., they seem to have continued steadily in operation; and within less than half a century (B. c. 410-360) the Samnites spread themselves through the whole of Lucania, and almost to the southern extremity of Italy. [Lucanla.] The subsequent fortunes of these conquering races, and their contests with the cities of Mayna Graecia, do not belong to our present subject, for the Lucanians seem to have early broken off all political connection with their parent nation, the Samnites, just as the latter bad done with their Subine ancestors. This laxity in their political ties, and want of a common bond of union, seems to have been in great measure characteristic of the Sabellian races, and was one of the canses which undoubtedly paved the way for their final sabjection under the Koman yoke. But the Samnites seem to have retiuned possessicn, down to a much later period, of
the tract of country from the Silarus to the Sarnus, which was subsequently occupied by the Picentini. (Scylax, p. 3. § 11 ; Niebuhr, vol. i. p. 94.) They certainly were still in possession of this district in the Second Samnite War; and it is probable that it was not till the close of their long struggles with Rome that it was wrested from them, when the Romans transplanted thither a colony of Picentines, and thus finally cut off the Samnites from the sea. On the side of Apulia the progress of the Samnites was less definite: and it does not appear that they established themselves in the permanent possession of any part of that country, though they were certainly pressing hard upon its frontier cities; and it was probably the sense of this and the fear of the Sannite arms that induced the Apulians early to court the alliance of Rome. [Apulia.]

The Samnite nation, when it first appears in Ronam history, seems to have consisted of four different tribes or cantons. Of these the Pentri and the Hirpini were much the most powerful; so much so indeed that it is difficult to understand how such petty tribes as the Caraceni and Caudini could rank on terms of equality with them. The Frencivi are frequently considered as forming a fifth canton; but though that people was certainly of Samnite race, and must have been regarded by Scylax as forming an integral part of the Samnite nation, as he describes the Samnites as occupying a considerable part of the coast of the Adriatic (Peripl. p. 5. § 15), they seen to have alrealy ceased to form a part of their political body at the time when they first came into contact with Rome. [Frentani.] We have no account of the nature and character of the political constitution that bound together these different tribes. It seems to have been a mere federal league, the bouds of which were drawn closer together in time of war, when a supreme general or commander-in-chief was chosen to preside over the forces of the whole confederacy, with the title of Fmbratur, the Sabellian form corresponding to the Latin Imperator. (Liv. ix. 1; Niebuhr, vol. i. p. 107.) But we find no mention, even on occasions of the greatest emergency, of any regular council or deliberative assembly to direct the policy of the nation; and the story told by Livy of the manner in which Herennius Pontius was consulted in regard to the fate of the Roman army at the Caudine Furks seens to negative the supposition that any sach body could have existed. (Liv. ix. 3; see also viii. 39.)

The first mention of the Samnites in Roman history, is in B. c. 3.54, when we are told that they concluded a treaty of alliance with the republic, the progress of whose arms was already beginning to attract their attention (Liv. vii. 19; Diod. xvi. 45). It is probable that the Samnites, who were already masters of Aesernia and the apper valley of the Vulturnus, were at this time pushing forward their arms down the course of that valley, and across the mountain country from thence to the Liris, then occupied by the Volscians, Auruncans, and other tribes, of Ausonian or Oscan origin. It was not long before these onward movements brought them into collision with the Romans, notwithstanding their recent alliance. Anong the minor tribes in this part of Italy were the Sidicini, who, though situated on the very borders of Campania, had hitherto prekerveri their independence, and were not included in the Campanian people [sibtcini]. This petty people laving been assailed by the Siamnites, upon
what cause or pretext we know not, and finding themselves unable to cope with such powerful neighbours, invoked the assistance of the Campanians. The latter, notwithstanding their connection with the Samnites, readily espoused the cause of the Sidicini, but it was only to bring the danger upon their own heads; for the Samnites now turned their arms against the Campanians, and after occupying with a strong force the ridge of Mount Tifata, which immediately overlooks Capua, they descended into the plain, defeated the Campanians in a pitched battle at the very gates of Capua, and shut them up within the walls of the city (Liv. vii. 29). In this extremity the Campanians in their turn applied for assistance to Rome, and the senate, after some hesitation on account of their recent alliance with the Samnites, granted it ( $/ b .30,31$ ). Thus began the First Samnite War (b. c. 343), the commencement of that long struggle which was eventually to decide whether the supremacy of Italy was to rest with the Romans or the Samnites.

This first contest was, however, of short duration. In the first campaign the two consuls M. Valerius Corrus and A. Cornelius Cossus gained two decisive victories; the one at the foot of Mount Gaurus, the other near Saticula. The first of these, as Niebuhr observes (rol. iii. p. 119), was of especial importance; it was the first trial of arms between the two rival nations, and might be taken as a sort of omen of the ultimate issue of the contest. A third battle near Suessula, where the remains of the army that had been defeated at Mount Gaurus, after having been reinforced, again attacked Valerius, terminated in an equally decisive victory of the Romans; and both consuls triumphed over the Samnites (Liv, vii. 32-38; Fast. Capit.). The next year the military operations of the Romans were checked by a mutiny of their own army, of which the cominons at Rome took adrantage; and the city was divided by dissensions. These causes, as well as the increasing disaffection of the Latins, naturally disposed the Romans to peace, and a treaty was concluded with the Samnites in the following year, B. C. 341. The account which represents that people as humiliated and suing for peace, is sufficiently refuted by the fact that the Romans abandoned the Sidicini to their fate, and left the Samnites free to carry out their aggressive designs against that unfortunate people (Liv. viii. 1, 2).
The peace which terminated the First Samnite War renewed the alliance previously existing between the Romans and the Samnites. In consequence of this the latter took part in the great war with the Latins and Campanians, which alnost immediately followed, not as the enemies, but as the allies, of Rome; and the Roman ammies were thus enabled to reach Campania by the circuitous route through the country of the Marsi and Peligni, and down the valley of the Vulturnus (Liv. viii. 6). Daring the fifteen years that follored, down to the renewal of the contest between Rome and Samnium, the course of events was almost uniformly farourable to the forner power. The successful termination of the war with the Latins and Campanians, and the consolidation of the Roman power in both those countrics had alded greatly to the strength of the republic; and the latter had followed up this advantage by the reduction of several of the sinaller independent tribes in the same neighbourhood - the Ausones, Sidicini, and the Privernates, who appear on this occision as independent of, and separate from, the
other Volscians [Privernum]. But the power of the Volscians seems to have been by this time very much broken up; and it was apparently during this interval that the Samnites on their side carried on successful hostilities against that people, and wrested from them or destroyed the cities of Sora and Fregellae in the valley of the Liris, while they threstened Fabrateria with the same fate (Liv. viii. 19, 23, x. 1). This movement, however, gave umbrace to the Romans, while the Samnites on their side could not view with indifference the reduction of the Sidicini, and it was evident that a fresh rapture between the two nations could not be long delayed (Id. viii. 17, 19). The attention of the Samnites was, however, drawn off for a time by the danger that threatened them from another quarter, and they jnined with their kinsmen the Lucanians to oppose the arms of Alexander, king of Epirns, who was advancing from Paestum into the heart of the country. Both Samnites and Lucanians were defeated by him in a pitched battle; but he subsequently turned his arms towards the sonth, and his death in B. c. 326 relieved the Samnites from all apprebension in that quarter. (Liv. viii. 17, 24.)

The same year (в. с. 326) witnessed the outbreak of the Second Samnite War. The immediate occasion of this was the assistance furnished by the Sumnites to the Greek cities of Palaepolis and Neapolis, against which the Romans had declared war, when the Samnites and Nolans (who were at this tine in alliance with Samnium) threw into their cities a strong body of auxiliaries as a gartison. Ther did not, however, arert the fall of Palaepolis; while Neapolis escaped a similar fate, only by espousing the alliance of Rome, to which it ever after steadily adhered (Liv. viii. 22-26). The Romans had about the same time secured a more important alliance in another quarter; the Lucanians and Apulians, with whom, as Liry remarks, the republic had previously had no relations, either friendly or hostile, now concluded an alliance with Rome ( 16.25 ). The Lucanians indeed were soon persuaded by the Tarentines to abandon it again (Ib. 27), but the Apulians continued steadfast; and though it is evident that the whole nation was not united, and that many of the chief towns took part with the Samnites, while others continued to side with Rome, yet such a diversion must have been of the greatest consequence. Hence throughout the war we find the contest divided into two portions, the Romans on the one side being engaged with the Samnites on the frontiers of Camrania, and in the valley of the Vulturnus, from whence they gradually pushed on into the heart of Sarnnium; and on the other carrying on the war in Apulia, in sapport of their allies in that country, against the hostile cities supported by the Samnites. I: is evident that the Frentani must have at this time alrealy separated themselves from the Samnite alliance, otherwise it wocld have been impossible for the Romans to march their armies, as we find them repeatedly doing, along the coast of the Adriatic into Apulia. (Liv. ix. 2, 13.)

The first operations of the war were unimportant; the Romans conquered some small towns in the valiey of the Vulturnus (Liv. viii. 25): and we are told that Q. Fabius and L. Papirius gained repeated victories over the Samnites, so that they even sued for peace, but obtained only a truce for a year, and, without observing even this, resumed the contest with increased forces. ( $16.30,36,37$.) It is evident therefore that no real impression had been made
upnn their power. Nor did the victory of A. Cornelins Arvina in the following year (в. с. 322), though it again induced them to sue for peace without success, produce any permanent effect; for the very next year (b. c. 321) the Samuites under the command of C. Pontius were not only able to take the field with a large army, but inflicted on the Romans one of the severest blows they had ever sustained in the celebrated pass of the Caudine Forks. [Caudium.] There can be little doubt that the circumstances and character of that disaster are greatly disguised in the accounts transmitted to us; but, whatever may have been its true nature, it is certain that it caused no material interruption of the Koman anns, and that, after repudiating the treaty or capitulation concluded by the consuls, the Komans renewed the contest with undiminished vigour. It is impossible here to follow in detail the operations of the succeeding campaigns, which were continued for seventeen years with many fluctuations of fortune. The disaster at Caudium shook the faith of many of the Roman allies, and was followed by the defection even of their own colonies of Sia. tricum, Fregellae, and Sora. Some years later (B. c. 315) the capture of Saticula by the Romans and of Plistia by the Samnites shows that both annies were still engaged on the very frontiers of Samnium; while the advance of the Samnites to the pass of Lautulae, and the victory which they there a second time obtained over the Romans (Liv. ix. 22, 23; Diod. xix. 72), once more gave a shuck to the power of the latter, and for a moment endangered their supremacy in Campania. But they speedily recovered the adrantage, and the victory gained by them at a place called Cinna (of uncertain site) decided the submission of the revolted Campanians. (Liv. ix. 27 ; Diod. xix. 76.) Their arms had meanwhile been successful in Apulia, and had ultimately effected the reduction of the whole province, so that in B.c. 316 the consul Q. Aemilius Barbula was able to carry the war into Lucanis, where he took the town of Neralum. (Liv. ix. 20.) The decisive victory of the consuls of B. c. 314 had also for the first time opened the way into the heart of Samnium, and they laid siege to Bovianum, the capital of the Pentri. The next year was marked by the fall of Nola, followed by that of Atina and Calatia (Cajazzo); and it seemed probable that the war was at length drawing to a close in favour of the Romans, when the outbreak of a fresh war with the Etruscans in B. C. 311 divided the attention of that people, and, by occupring a large part of their forces in another quarter, operated a powerful diversion in favour of the Samnites. To these additional enemies were added the Umbrians as well as the Marsi and Peligni; yet the Romans not only made head against all these nations, but at the same time carried their victorious arms into the heart of Samnium. Bovianum, the capital city of the Pentri, was twice taken and plundered, once in 311 by C. Junius, and again in 305 by T. Minucius. At the same time Sora and Arpinum were finally added to the Roman dominion. These successive defeats at length compelled the Samnites to sue for peace, which was granted them in B. c. 304 ; but on what terms is very uncertain. It seems impossible to believe that the Komans, as asserted by Livy, should have restored them their ancient treaty of alliance, and it is probable that they in some form consented to acknowledge the supremacy of Rome. (Liv. ix. 45; Dionys. Exc. p. 2331 ; Niebuhr, vul. iii.p. 259.)

But the peace thus concluded was of short duration. Little more than five years elapsed between the close of the Second Samnite War and the commencement of the Third. It might well have been thought that, after a struggle of more than twenty years' duration, the resources of the Samnites, if not their spirit, would have been exhausted; but they seem to have been actively engaged, even before the actual outbreak of hostilities, in organising a fresh coalition against Rome. A new and formidable anxiliary had appeared in a large body of Gauls, which had recently crossed the Alps, and, uniting with their countrymen the Senones, threatened the Roonans from the N. Rome was at this time engaged in war with the Etruscans and Umbrians, and the Etruscans hastened to secure the services of the Gauls. Meanwhile the Samnites, deeming the attention of the Romans sufficiently engaged elsewhere, attacked their neighbours the Lucanians, probably with the view of restoring the power in that country of the party favourable to the Samnite alliance. The opposite party, however, called in the Romans to their assistance, who declared war against the Samnites, and thus began the Third Samnite War, B. c. 298. (Liv. x. 11.) Tbe contest had now assumed larger dimensions; the Samnites concluded a league with the Etruscans, Umbrians, and Gauls, and for several successive campaigns the operations in Samnium were subordinate to those in the valley of the Tiber. But the territory of Samnium itself was at the same time ravaged by the Roman generals in so systematic a manner, that it is clear they had obtained a decided superiority in the field; and though the Samnites on one occasion retaliated by laying waste the Campanian and Falernian plains, they were soon again driven back to their mountain fastnesses. (Liv, x. 15, 17, 20.) At length, in в. c. 295, the great battle of Sentinum, in which the united forces of the Gauls and Samnites were totally defeated by the Roman consul Q. Fabius, decided the fortune of the war. Gellius Egnatius, the Samnite general, who had been the main organiser of the confederacy, was slain, and the league itself virtually broken up. (Liv. x. 27-30.) Nevertheless the Samnites continued to carry on the war with unabated energy; and in B. c. 293 they raised a fresh army of 40,000 men, levied with solemn sacred rites, and arrayed in a peculiar garb. These circumstances sufficiently prove the importance which they attached to this campaign, yet its result was not more successful than those which had preceded it, and the Samnite armies were again defeated by the consuls L. Papirius Cursor and Sp. Carvilius in two successive battles near Aquilonia and Cominium. (Liv. x. 38-45.) The operations of the subsequent campaigns are imperfectly known to as, from the loss of the books of Liry in which they were related: but the next year (b. c. 292) C. Pontius, the victor of the Caudine Forks, reappears, after a long interval, at the head of the Samnite armies; he defeated Q. Fabius, but was in his turn defeated in a far more decisive curgagement, in which it is said that 20,000 Samnites were slain, and 4000 taken prisoners, including C. Pontius himself, who was led in triumph by Fabius, and then put to death. (Oros. iii. 22; Liv. Epit. xi.) It is probable that this battle gave the final blow to the Samnite power, yet their resistance was still prolonged for two years more; and it was not till B. c. 290 that they consented to lay down their arms and suc for Ieace. Even in that year the consul

Mr. Curius Dentatus could still earn the honour of a triumph, and the fame of haring put an end to the Samnite wars after they had lasted for more than fifty years. (Liv. Epic. xi.; Eutrop. ii. 9.)

The conclusion of the Third Samnite War is regarded by some of the Roman historians as the close of the struggle between Rome and Samnium, and not without reason, for though the name of the Fourth Samnite War is given by modern writers to the war that broke out afresh in B.c. 282, the Samnites on that occasion certainly figore rather as auxiliaries than as principals. They, however, joined the league which was formed at the instigation of the Tarentines against Rome; and bore a part in all the subsequent operations of the war. They seem indeed to have at first looked with jealousy or suspicion upon the proceedings of Pyrrhus; and it was not till after the battle of Heraclea that they sent their contingent to his support. (Plut. Pyrrh. 17.) But in the great battle at Asculum the following year (B. c. 278) the Samnites bore an important part, and seem to have sustained their ancient reputation for valour. (Dionys. xx. Fr. Didot.) The departure of Pyrrhus for Sicily shortly after, and his final defeat by M'. Curius at Beneventum after his retum (в. с. 274), left the Samnites and their allies to bear the whole brunt of the war, and they were wholly unable to contend with the power of Rome. We know nothing in detail of these last campaigns: we learn only that in B. c. 272, just before the fall of Tarentum, the Samnites, as well as their allies the Lacanians and Brattians, made their final and absolute submission; and the consul Sp. Carvilins celebrated the last of the long series of triumphs over the Samnites. (Zonar. viii. 6; Liv. Epit.xiv.; Fast. Capit.) A fresh revolt indeed broke out in the N. of Samnium three years afterwards, annong the petty tribe of the Caraceni, but was speedily suppressed, before it had attained any more formidable character. (Lonar. viii. 7; Dionys. xx. 9, Fr. Mai.)

We have no account of the terms on which the Samnites were received to submission by the Romans, or of their condition as subjects of the republic. But there can be no doubt that the policy of the dominant people was to break up as much as possible their national organisation and all bonds of anion between them. At the same time two colonies were established as fortresses to keep them in check: one at Beneventum, in the country of the Hirpini (b.c. 268), and the other at Aesernia, in the valley of the Vulturnus (b. c. 264). All these precautions, however, did not suffice to secure the fidelity of the Samnites during the Second Punic War. After the battle of Cannae (b. с. 216), the Hirpini were among the first to declare themselves in favour of Hannibal, and their example is said to have been followed by all the Samnites, except the Pentrians: (Liv. xxii. 61.) It is singular that this tribe, long the most powerful and warlike of all, should have thus held aloof; hat the statement of Livy is confirmed by the subsequent course of the war, during which the Pentrians never seem to have taken any part, while the land of the Hirpini, and the southern portions of Samnium bordering on Lucania, were frequently the scene of hostilities. But the Ronam colonies Aesernia and Beneventam never fell into the hands of the Carthaginians; and the latter was through a great part of the war held by one of the Roman generals, as a post of the ntinost military importance. In B. c. 214 and again in B. c. 212,
the land of the Hirpini was still in the hands of the Carthaginians, and became the scene of the operations of Hannibal's lieutenant Hanno against Sempronius Gracchas. It was not till B. c. 209 that, Hannibal having been finally compelled to relinquish his hold upon Central Italy, the Hirpini (and apparently the other revolted Samnites also) renewed their submission to Rorne. (Liv. xxvii. 15.)

From this time we hear no more of the Samnites in history till the great outbreak of the Italian nations, commonly known as the Social War, B. c. 90, in which they once more took a prominent part. They were not indeed among the first to take up arms, bat quickly followed the example of the Picentes and Marsi; and so important an element did they constitute of the confederation, that of the two consuls chosen as the leaders of the allies, one was a Samnite, Caius Papins Mutilus. (Diod. xxxvii. 2. p. 539.) Besides Papius, several of the most distinguished of the Italian generals, Marius Eynatius, Pontius Telesinus, and Trebatius, were also of Samnite origin; and after the fall of Corfinium, the seat of government and head-quarters of the allies was transferred to the Samnite town of Bovianum, and from thence subsequently to Aesernia. The Samnites indeed soffered severely in the second campaign of the war, being attacked by Sulla, who defeated Papius Mutilus, took Aeculanum and Bovianum by assault, and reduced the Hirpini to submission. The other Samnites, however, still held out, and an army which had thrown itself into Nola wis able to prolong its resistance against all the efforts of Sulla. Hence at the end of the second year of the war (b. c. 89), when all the other nations of Italy had successively submitted and been admitted to the Roman franchise, the Samnites and Lucanians were still unsubdued, and maintained a kind of guerilla warfare in their mountains, while the strong fortress of Nola enabled them still to maintain their footing in Campania (Vell. Pat. ii. 17; Liv. Epit. 1xxx; Diod. xxxvii. 2. p. 540; Appian, B. C. i. 53.) In this state of things the civil war which broke ont between Sulla and Marius altered the nature of the contest. The Samnites warmly esponsed the Marian cause, from a natural feeling of enmity towards Sulla, from whose arms they had recently suffered so severely; and so important was the share they took in the struggle that ensued after the return of Sulla to Italy (B. c. 83), that they in some measure imparted to what was otherwise a mere civil war, the character of a national contest. A large number of them served in the army of the younger Marius, which was defeated by Sulla at Sacriportus (Appian, B.C. i. 87); and shortly afterwards an army, composed principally of Samnites and Lacanians, under the command of C. Pontius Telesinus, made a desperate attempt to relieve Praeneste by marching suddenly upon Rome. They were met by the army of Sulla at the very gates of the city, and the battle at the Colline gate (Nov. 1, B. c. 82), though it terminated in the complete victory of Sulla, was long remembered as one of the greatest dangers to which Rome had ever been exposed. (Vell. Pat. ii. 27 ; Appian, B. C. i. 93: Plut. Sull. 28; Lucan, ii. 135-138.) Pontius Telesinus fell in the field, and Sulla displayed his implacable hatred towards the Samnites by putting to the sword, without mercy, 8000 prisoners who had been taken in the battle. (Appian, L.c.; Strab. v. 249; Plut. Sull. 30.) He had alrealy put to death all the Samnites whom he had taken prisoners at the
battle of Sacriportus, alleging that they were the eternal enemies of the Roman name; and he now followed up this declaration by a systematic devastation of their country, carried on with the express purpose of extirpating the whole nation. (Strab. l.c.) It can hardly be believed that he fully carried out this sanguinary resolution, but we learn from Sitrabo that more than a century afterwards the province was still in a state of the utmost desolation,-many of what had once been flourishing cities being reduced to the condition of mere villages, while others had altogether ceased to exist. (Strab. lc.)

Nor is it prububle that the province ever really recovered from this state of depression. The rhetorical expressions of Florus point to its being in his day still in a state of almost complete desolation. (Flor. i. 16. § 8.) Some attempts seem indeed to have been made under the Roman Empire to recruit its population with fresh colonists, especially by Nero, who founded colonies at Saepinum, Telesia, and Aesernia (Lib. Colon. pp. 259, 260, \&c.); but none of these attained to any great prosperity, and the whole region seems to have been very thinly populated and given up chiefly to pasturage. Beneventum alone retained its importance, and continued to be a flourishing city throughout the period of the Roman Empire. In the division of Italy under Augustus the land of the Hirpini was separated from the rest of Samnium, and was placed in the Second Region with Apulia and Calabria, while the rest of the Samnites were included in the Fourth Region, together with the Subines, Frentani, Peligni, \&c. (Plin. iii. 11. 8. 16, 12. 8. 17.) At a later period this district was broken up, and Samnium with the land of the Frentani constituted a separate province. This is the arrangement which we find in the Notitia, and it was probably introduced at an earlier period, as the Liber Coloniarum in one part gives under a separate head the "Civitates Regionis Samnii," including under that name the towns of the Peligni, as well as the Frentani. (Notit. Dign. ii. pp. 9, 10; Lib. Colon. p. 259.) In another part of the same document, which is undoubtedly derived from different sources, the Samnite towns are classed under the head of Campania; but this union, if it ever really subsisted, could have been but of very brief duration. The "Provincia Samnii" is repeatedly mentioned in inscriptions of the the century, and was governed by an officer styled "Praeses." (Mommsen, Lie Lib. Col p. 206.) The same appellation continued in use after the fall of the Roman Empire, and the name of Samnium as a separate province is found both in Cassiodorus and Paulus Diaconas. (Cassiod. Var. xi. 36; P. Diac. Mist. Lang. ii. 20.) The only towns in it that retained any consideration in the time of the last writer were Aufidena, Aesernia, and Beneventum. The last of these cities became under the Lombards the capital of an independent and powerful duchy, which long survired the fall of the Lombard kingdom in the N. of Italy. But in the revolutions of the middle ages all trace of the name and ancient limits of Samnium was lost. At the present day the name of Samio is indeed given to a province of the kingdom of Naples; but this is merely an official designation, recently restored, to the district, which had previously been called the Contado di Molise. This and the adjoining province of the Principato Ultra comprise the greater part of the ancient Samnium; but the modern boundaries have no reference to the ancient divisious, and a considerable portion
of the Samnite territory is included in the Torra di Lavoro, while a comer in the NW. is assigned to the Abrizai.

Of the national character of the Samnites we learn little more than that they were extremely brave and warlike, and had inherited to a great degree the frugal and simple habits of their ancestors the Sabines. We find also indications that they retained the strong religious or superstitions feelings of the Sabines, of which a striking instance is given by Livy in the rites and ceremonies with which they consecrated the troops that they levied in B. c. 293. (Liv. x. 38.) But they had almost ceased to exist as a nation in the days of the Latin poets and writers that are preserved to us; and hence we cannot wonder that their name is seldom alluded to. They are said to have dwelt for the most part, like the Sabines, in open villages; but it is evident, from the accounts of their earliest wars with the Romans, that they possessed towns, and some of them, at least, strongly fortified. This is confirmed by the remains of walls of a very ancient style of construction, which are still preserved at Aesernia and Bovianum, and stil! more remarkably at Aufidena. (Abeken, Mittel Italien, pp. 142, 148.) But from the very nature of their country the Samnites must always have been, to a great extent, a rade and pastoral people, and had probably received only a faint tinge of civilisation, through their intercourse with the Campanians and Apuliars.

## III. Topography.

The rivers of the Samnite territory have been already noticed in connection with the mountain chains and groups in which they take their rise. From the parely inland character of the region, none of these rivers, with the exception of the Calor and its tributaries, belong wholly to Samnium, but traverse the territories of other nations before they reach the sea. Thus the Sugrus and Trinius, after quiting the mountains of Samnium, flow throush the land of the Frentani to the Adriatic; the Tifernus separates the territory of that people from Apulia, while the Frento and the Aufidus traverse the plains of Apulia. On the other side of the central chain the Vulturnus, with its affluent the Calor, and the tributaries of the latter, the Sabatus and Tamarus, carry down the whole of the waters of the Apennines of Samnium, which flow to the Tyrrhenian sea.

The topography of Samnium is the most obscure and confused of any part of Italy. The reason of this is obvious. From the continued wars which had derastated the country; and the state of desolation to which it was reduced in the time of the geographers, only a few towns had survived, at least in such a state as to be deemed worthy of notice by them; and many of the names mentioned by Livy and other authors during the early wars of the Romans with the Samnites never reappear at a later period. It is indeed probable that some of these were scarcely tomns in the stricter sense of the term, but merely fortified villages or strougholds, in which the inhabitants collected their cattle and property in time of war. Those which are mentioned by the geographers as still existing under the Roman Empire, or the site of which is clearly indicated, may be briefly enumerated. Aufinena, in the upper valley of the Sagrus, is the only town that can be assigned with any certainty to the Caraceni. In the upper valley of the Vulturnus wis Aesgrinia, the terri-
tory of which bordered on that of Venafrum in Campania. At the northern foot of the Monse Matese was Bovinnum; and in the mountan tract between it and the Frentani was Treventum or Tereventim (Trivento). SE. of Bovianum lay Saepinum, the ruins of which are still visible near Sepino ; and at the southern foot of the Monte Matesc, in the ralley of the Calor, was Telesia. Allifae lay to the NW. of this, in the valley of the Vulturnus, and at the foot of the Matese in that direction. In the country of the Hirpini were Beneventum, the capital of the whole district; Aeculanum, near Mirabella, about 15 miles to the SW.; Equus Tuticus, near the frontiers of Apulia; Aquilonia, at Lacedogna, on the same frontier; Abellinum, near the frontiers of Campania; and Compsa, near the sources of the Aufidus, bordering on Lucania, so that it is assigned by Ptolemy to that country. On the borders of Campania, between Beneventum and the plains, were Caudium, apparently once the capital of the Caudine tribe; and Saticula, the precise site of which has not been determined, but which must have been situated in the neighbourhood of Mount Tifata. The Samnite Calatia, on the other hand, was situated N. of the Vulturnus, at Cajazzo ; and Compulteria, also a Samnite city, was in the same neighbourhood. The group of hills on the right bank of the Valturnus, extending from that river towards the Via Latina, mast therefore have been included in Samnium; but Teanum and Cales, situated on that highroad, were certainly both of them Campanian towns. It is probable, however, that in early times the limits between Campania and Samnium were subject to many fluctuations; and Strabo seems to regard them as imperfectly fixed even in his day. (Strab. v. p. 249.)

Of the minor towns of Sainnium, or those which are mentioned only in history, may be noticed: Duronin (Liv. x. 39), identified, but on very slight grounds, with Civita Vecchia, N. of Bojano; Mivrgantin (Liv. x. 17), supposed to be Baselice, on the frontiers of Apulia, near the sources of the Frento (Fortore); Romulesa, on the frontiens of Apulia, between Aeculanum and Aquilmia; Turvicum, in the same neighbourhood, still called Trevico; Plistia, near Sta Agata dei Goti, on the frontiers of Campania; Callifare and Fufrium, both of them mentioned by Liry (viii. 25) in connection with Allifae, and probably situated in the neighbourhood of that city; Cominium (Lir. x. 39, 44), of very ancertain site; Aquilonin (Liv. l.c.), also of uncertain site, but which must be distinguished from the city of the same name in the country of the Hirpini; Maronea, noticed by Livy in the Second Punic War, when it was recovered by Marcellus, in B. c. 210 (Liv. xxvi. 1); Melae, Fulfulae, and Orbitanium, all of which are noticed on only one occasion (Liv. xxiv. 20), and the sites of which are wholly undetermined.* To these must be added Cluria, Cimetra, Volana, Palumbinum, and Herculaneum, all of them mentioned as towns taken from the Samnites (Lir. is. 31, x. 15, 45), but of which nothing more is known; Imbrinium (Liv. viii. 30), where Fabius gained a victory over the Samuites in в. c. 325; Cinna, which is repre-

* It has been thought annecessary to repeat in these and other similar cases the modern sites assigned by Italian or German topographers, where these rest on no other foundatiou than mere conjecture.
sented by Dialorus as the scene of the decisive victory in B. c. 314 (Diod. xix. 76); and several places of which the names are found only in Virgil and Silius Italicus,-Mucrae, Rufrar, Batulum, and Chlfnea (Virg. Aem. vii. 739 ; Sil. Ital. viii. 564), which seem to have been situated on the borders of Campania, so that it is doubtful to which country they are to be assigned. The minor towns of the Hirpini have been already discossed in that article; Pauna, or Panna, a nume fuund in Strabo (v. p. 250) as that of a place still existing in his time, is probably corrupt, but we are wholly at a loss what to substitute. On the other hand, inscriptions attest the existence under the Roman Empire of a town called Juvavium, or Juvanum, of municipal rank, which is not mentioned by any of the geographers, but is probably the one meant by the Liber Coloniarum, which notices the "Iobanus ager" among the "civitates Samnii." (Lib. Col. p. 260.) It was probably situsted in the neighbourhood of Sta Maria di Palazzo, a few miles N. of the Sagrus, and on the very frontiers of the Marrucini. (Mommsen, Inscr. R. N. p. 271.) The existence of a town named Tifernum is very doubtful [Tifernus]: and that of a city of the name of Samnium, though adopted by many local writers (Romanelli, vol. ii. p. 490), certainly rests on no adequate authority.

Samnium was traversed in ancient times by several lines of highway. One of these, following nearly the same line with the modern road from Naples to Aptila, proceeded up the valley of the Vulturnus from Venafrum to Aesernia, thence crossed the mountain ridge to Aufidena in the valley of the Sagrus, and from thence again over another mountain pess to Sulmo in the land of the Peligni. Another branch led from Aesernia to Bovianum, and from thence to Equus Tuticus, where it joined the Via Appia or Trajana. A third followed the valley of the Vultarnus from Aesernia to Allifae, and thence by Telesia to Beneventum. There seems also to have been 2 cross line from the latter place by Saepinum to Bovianum. (Itin. Ant, p. 102; Tab. reut.) But these different lines are very confusedly laid down in the Tabula, and the distances given are often either corrupt or erroneous. The course of the Via Appia, and its branch called the Via Trajana, through the land of the Hirpini, has been already noticed in that article. [Niee also Via Aplid.]
[E. H. B]
SAMO'NIUM, SAMMO'NIUM, SALMO'NIUM,
 ii. p. 106, x. pp. 474, 475, 478, 489 ; $\sum \alpha \lambda \mu \omega ́ \mu \eta$, Acts, $\mathbf{x x v i i . ~ 7 ; ~ c o m p . ~ P t o l . ~ i i i . ~ 1 5 . ~ § ~} 5$; Pomp. Mela, ii. 7. § 12 ; Plin. iv. 20. s. 21 ; Stadiasm.
 iv. 1693 ; Dionys. Per. 110 ; Inscrip. ap. Bückh, Corpus, vol. ii. p. 409), the E. promontory of Crete, to which the seamen of the Alexandrian vessel which conveyed Paul to Rome, thinking they could parsue their voyage ander the lee of the island, ran down. (Acts, h.c.) Mach difference of opinion has been entertained relative to the identification of this celebrated foreland, the position of which would seem to be incontrovertibly ascertained by the existence of the modern name C. Salinnon. (Comp. Hück, Kreta, vol. i. p. 427.) But though the name is certainly in favour of this site, the statements of the ancients as to its position, and of the seven islets or rocks which surround it, determine conclusively that it must be C.S. Silero. It is true that by the recent Admiralty survey it is not
quite so far to the E. as C. Salomon (the difference is, however, only a few seconds of longitude) ; but by its extreme extension from the mainland it would be considered as the principal promontory at this end of the island, and known as the "E. foreland." (Comp. Museum of Cluss. Antiquities, vol. ii. p. 302.)
[E. B.J.]
SAMOS or SAMUS ( $\Sigma$ duos: Fth. and Adj. इá-
 in the language of the modern Greeks, who call the island Samo, इámw: the Turks call it Susam A dassi), 2 large island in that part of the Aegaean which is called the Icarian sea, and the must important of the Sporades next after Rhodes. The word denotes a beight, especially by the sea-shore. (See Const. Porphyrog. de Them. 16. p. 41, ed. Bonn.) Hence Samothracia, or the Thracian Samos, which is said by Pausanias (vii. 4. § 3) to have been colonised and named by certain fugitives from the Icarian Samos,-and Same, one of the names of Cephalonia, which is inversely connected with it by one of Strabo's conjectures (x. p. 457). How applicable the idea of elevation is to the island before us may be seen in the narratives and views given by Dr. Clarke (Travels, vol. ii. p. 192, vol. iii. p. 366), who uses the strongest language in describing the conspicunus height of Samos above the surrounding islands.

The following earlier names of Samos are mientioned by Pling (v. 37) and other writers, - Parthenia, Anthemus, Melamphylus, Dryusa and Cyparissia. Some of these have evidently arisen from the physical characteristics of the island. Samos was, and is, well-wooded. It is intersected from $\mathbf{E}$. to W. by a chain of mountains, which is in fact a continuation of the range of Mycale, being separated from it only by the narrow channel, hardly a mile in breadth, which the Turks call the Little Boghaz. Here was fought the decisive victory against the Persians, b. c. 479. The Great Boghaz, which is nearly 10 miles in breadth, separates the other extremity of Samos from the comparatively low island of Icaria. The length of Samos, from E. to W., is about 25 miles. Its breadth is very variable. Strabo reckons the circuit at 600 stadia, Pliny at 87 miles, though he says that Isidorus makes it 100 . These differences may be readily accounted for by omitting or including Port Vathy, which is a wild-looking bay, though a very serviceable harbour, on the north. Here the modern capital is situated: but in ancient times the bay of Vathy seems to have been comparatively deserted-perhaps, as Tournefort suggests, because it was peculiarly exposed to pirates, who infested the straits and bays of an island which lay in the route of commerce between the Bosporus and Egypt. What Tournefort tells us of his travels through Samos gives us the idea of a very ragged, though picturesque and productive, island. (Possibly the Palinurus and Panormus of Samos, mentioned by Livy, xxxvii. 11, may have been in the bay of Vathy.) The highest point, Mount Kerlis, the ancient Cerceteus (Strab. x. p. 488), which is nearly always covered with snow, and reaches the height of 4725 English feet, is towards the west. A ridge, which branches off in a south-easterly direction from the main range, and ends in the promontory of Poseidinm, oppusite Mycale, was called Ampeius, which name seems also to have been given to the whole mountain-system (Strab. xiv. p. 637). The westernmost extremity of the island, opposite Icaria was anciently called Cantharium. Here the cliffs are very bare and lofty. A landslip, whicl: has taken place in voL $I I$.
this part of the island, has probably given rise to the name by which it is now called ( $\boldsymbol{\eta}$ кaraubarh).

The position of Samos was nearly opposite the boundary-line of Caria and Ionia; and its early traditions connect it, first with Carians and Leleges, and then with Ionians. The first Ionian colony is said to have consisted of settlers from Epidaurus, who were expelled from thence by the Argives. However this may be, we find Samos at an early period in the position of a powerful member of the lonic confederacy. At this time it was highly distinguished in maritime enterprise and the science of navigation. Thucydides tells us (i. 13) that the Samians were among the first to make advances in naval construction, and that for this purpose they availed themselves of the services of Ameinocles the Corinthian shipbuilder. The story of Pliny (vii. 57), that either they or Pericles the Athenian first constructed transports for the conveyance of horses, though less entitled to literal acceptance, is well worthy of mention; and Samos will always be famous for the voyage of her citizen Colaeus, who, "not without divine direction" (Herod. iv. 152), first penetrated through the Pillars of Hercules into the Ocean, and thus not only opened out new fields of commercial enterprise, but enlarged the geographical ideas of the Greeks by making them for the first time familiar with the phenomenon of the tides.

Under the despot Polycrates, Samos was in fact the greatest Greek maritime power. This famous man, about ten years after the taking of Sardis by Cyrus, held Samos in a position of proud independence, when Lesbus and Chios had submitted to the Persians. He had 1000 bowmen in his pay; he possessed 100 ships of war, and made considerable conquests both among the islands and the mainland. He fought successfully against the Milesians and Lesbians, and made a treaty with Amasis, king of Egypt. Whether we are to take the story in the poetical form in which it is presented to us by $\mathrm{He}-$ rodotus, or to attribute the change to the more probable motive of self-interest, this treaty was broken off for an alliance with Cambyses. In connection with this monarch's expedition to the Nile, some Samian maicontents were so treacherously treated by Polycrates, that they sought and obtained assistance from Greece. A joint force of Lacedaemonians and Corinthians besieged Polycrates in Samos for forty days: but in this struggle also he was successful. At last his own cupidity, acted on by the fraud of Oroetes, a neighbouring satrap, brought him to a wretched death on the mainland. The time which succeeded was full of crime and calamity for Samos. In the end, Syloson, the brother of Polycrates (whose association with Cambyses is the subject of another romantic story in Herodotus), landed with a Persian army on Samos, and became a tribntary despot; bat not till his native island had been so depopulated as to give rise to the proverb
 lives of Polycrates and Syloson in the Dict. of Biography. It was at this period that Pythagoras, who was a native of Samos, left the island to travel in foreign oountries, being partly urged to leave his home (according to Platarch, Placit. i. 3) throngh discontent under the government of Polycrates, Who, however, was a patron of literature, and had Anacreon many years at his court. For the chronology of this period see Clinton, Fast. Hell. vol. ii. note B. pp. 230-232.

Samos was now Persian. It was from Samos that

Datis sailed to Marathon, taking Naxos on his way: But the dominion of the Persians did not last long. When their fleet was gathered at Samos again, after the battle of Salamis, to the number of 400 sail, it was in a great measure the urgency of Samian envoys which induced the commanders of the Greek fleet at Delos to go across to the eastern side of the Aegrean. Then followed that battle in the strait, which completed the liberation of the Greeks.

- In the maritime confederacy which was organised soon afterwards under Athenian rule, Samos seems to bave heen the most powerful of the three islands which were exempted from paying tribute. It was at the instance of her citizens that the common treasure was removed from Delos to Athens. But this friendship with Athens was turned into bitter enmity in consequence of a conflict with Miletns about the territory of Priene. Samos openly revolted; and a large force was despatched from Athens against it under the command of tan generals, two of whom were Sophocles and Pericles. The latter pronounced in the Cerameicus the funeral oration over those who had fallen in the war which, after it resistance of nine months, reduced Samos to complete subjection.

From 439 to 412 Samos remained without fortifications and without a fleet. But about this latter date it became the hinge upon which all the conclading events of the Peloponnesian War really tarner. The first movements towards the establishment of an oligarchy at Athens began at Samos through the intrigues of Alcibiades; and yet this island was practically the home of the Atheuian democracy during the struggle which ensued. It was at Samos that Alcibiades rejoined his fellow-citizens; and from Samos that he finally sailed for the Peiraena in 407. Even till after the battle of Arginasae Samos was, more than any other place, the headquarters and bise of operations for the Athenian fleet.

Our notices of the island now become more fragmentary. After the death of Alexander the Great it was for a time subject to the kings of Egypt. (Polyb. v. 35.) Subsequently, it took the part of Antiochus the Great in his war with Rome. It also acted with Mithridates against Rome; but was finally anited with the province of Asia B.c. 84. After the battle of Actium, Augustus passed the winter there. Under the Roman emperors it was on the whole a place of no great importance, though it had the honour of being a free state. (Plin. v. 37.) This privilege was taken away under Vespasian. (Snet. Vesp.8.) In the division of the Empire contained in the Synecdemus we find it placed with Rhodes, Cos, Chios, \&cc., in the Irovince of the Islands. In the later division into themes, it seems to be again raised to a distinguished position. It gave its name to a separate theme, which included a large portion of the mainland, and was divided into the two turms of Ephesus and Adramyttium, the governor having his residence ( $\pi$ pantúpor) at Sinyrna; and this arrangement is spoken of in such a way (Const. Porphyrog. de Them. L.c.) as distinctly to connect it with the ancient renown of Samos.

It would be difficult to follow the fortunes of Samos through the middle ages. (See Finlay's History of the Byzantive and Greek Empires, vol. ii. p. 112.) There are some points of considerable interest in its modern history. In 1550, after being sacked by the Ottomans, it was given by Selim to the Capitan Pacha Ochiadi, who introduced colonists
from various other places; whence the names of some of the modern villages in the island, Metelinors, Albaniticori, and Vourlotes (Vourla giving the name to some islands at the entrance of the bay of Smyrna). Samos was much injured by the ravages of Morosini. In Tournefort's time the largest part of the inland was the property of ecclesiastics; and the number of convents and nunneries was considerable. He reckoned the population to be 12,000 ; now it is estimated at 50,000 , nearly the whole being Christian. Samos performed a distinguished part in the War of Independence. The Turks often attempted to effect a landing: the defences constructed by the Samiotes are still visible on the shore: and the Greek fleet watched no point more carefully than this important island. On the 17th of August, 1824, a curious repetition of the battle of Mycale took place. Formidable preparations for a descent on the island were made by Tahir-Pacha, who had 20,000 land-troops encamped on the promontory of Mycale. Canaris set fire to a frigate near Cape Trogillium, and in the confusion which followed the troops fled, and Tahir-Pacha sailed awry. At this time the Logothete Lycurgus was tupayyos of the island " in the true classical sense of the word," as is observed by Ross, who describes the castle built by Lycurgus on the ruins of a medizeval fort, adding that he was then ( $18+1$ ) residing with the rank of Colonel at Athens, and that he was well remembered and much regretted in Sauos. This island was assigned to Turkey by the treaty which fixed the limits of modern Greece; but it continued to make struggles for its independence. Since 1835 it has formed a separate Beylick under a Phanariot Greek named Stephen Vogorides, who resides in Constantinople with the title of "Prince of Samos," and sends a governor as his deputy. Besides other rights, the island has a separate flag exhibiting the white Greek cross on a blue ground, with a narrow red stripe to denote dependence on the Porte. It does not appear, however, that this government of Greeks by 2 Greek for the Sultan is conducive to contentment.

The present inhabitants of this fruitful island are said to be more esteemed for their industry than their honesty. They export silk, wool, wine, oil, and fruits. If the word Sammet is derived from this place, it is probable that silk has been an object of its industry for a considerable time. Pliny (xiii. 34) mentions pomegranates among its fruits. At the present day the beans of the carob-tree are exported to Russia, where a cheap spirit for the common people is made from them. We might suppose from the name of Mount Ampelus, that the wine of the island was celebrated in the ancient world ; but such a conclusion would be in direct contradiction to the words of Strabo, who notices it as a remarkable fact, that though the wine of the surmanding islands and of the neighbouring parts of the mainland was excellent, that of Samos was inferior. Its grapes, however, under the name of $\delta_{\mu} \mu \eta \lambda i \delta e s$ or $\alpha \mu a \mu \eta \lambda i \delta e s$, are commended by Athenaeus (xiv. p. 653; see Poll. Onomast. vi. 11), and now they are one of the most valued parts of its produce. Ross saw these grapes ( $\sigma$ тaфida) drying in large quantities in the sun; and other anthorities speak highly of the Malmsey or sweet muscato wine exported in large quantities from Samos. Its marble is abundant; but it has a greater tendency to split into small fragments than that of Pentelicus or Paros. A stone found in the island is
said by Pliny (xxxvi. 40) to have been used for polishing gold. He also mentions in several places (l.c., also $x \times v i i i .53,77$, $x \times x$ i. 46, $x \times x v .19,53$ ) the various medicinal properties of its earth. The Samian earthenware was in high repute at Rome ("Samia etiamnum in esculentis laudantur," Plin. xxxv. 46), and the name has been traditionally given by modern writers to the "red lustrous pottery " made by the Romans themselves for domestic use. (See Marryatt's Pottery and Porcelain. London 1850, pp. 286, 290.) For the natural Flora and Fauna of the island we must be content to refer to Tournefort, who says, among other facts, that tigers sometimes swim across to it from Mycale, which Chandler describes as a mountain infested with wild beasts. The woody flanks of Mount Kerkis still supply materials for shipbuilding. It is said in Athenaens (l. c.) that the roses and fruits of Samos came to perfection twice a year; and Strabo informs us that its general fruitfulness was such as to give rise to the proverb фépet кal bpvilowv pá入a.

The archaeological interest of Samos is almost entirely concentrated in that plain on the $S$., which contained the sanctuary of Hera at one extremity and the ancient city on the other. This plain is terminated at the SW. by a promontory, which from its white cliffs is called $\alpha \sigma \pi \rho o$ кábo by the Greeks, but which received from the Genoese the name of Cape Colonna, in consequence of the single column of the Heraeum which remains standing in its immediate neighbourhood. Virgil tells us (Aen. i. 16), that Samos was at least second in the affections of Juno; and her temple and worship contributed much to the fame and affluence of Samos for many centuries. Herodotus says that the temple was the largest he had seen. It was of the Ionic order; in form it was decastyle dipteral, in dimensions 346 feet by 189. (See Leake, Asia Minor, p.348.) It was never entirely finished. At least, the fluting of the columns was left, like the foliage on parts of our cathedrals, incomplete. The original architect was Rhoecus, a Samian. The temple was burnt by the Persians. After its restoration it was plundered by pirates in the Mithridatic War, then by Verres, and then by M. Antony. He took to Rome three statues attributed to Myron: of these Augustus restored the Athene and Heracles, and retained the Zeus to decorate the Capitol. The image of the goddess was made of wood, and was supposed to be the work of Smilis, a contemporary of Daedalus. In Strabo's time the teinple, with its chapels, was a complete picture gallery, and the hypaethral portion was full of statues. (See Orig. c. Cels. 4.) In the time of Tacitus, this sanctuary had the rights of asylum. ( $\mathrm{Ann}$. iv. 14.) When Pausanias was there, the people pointed out to him the shrab of Agnus Castus, under the shade of which, on the banks of the river Imbrasus, it was believed that Hera was born. (Pans. l. c.) Hence the river itself was called Parthenias, and the goddess Imbrasia. (Comp. Apoll.
 age in front of the sanctuary was called 8 pmos 'Hpatrys. (Athen. xv. p. 672.) The temple was about 200 paces from the shore, according to Ross, who found its whole basement covered with a mass of small fragments of marble, among which are portions of the red tiles with which the temple was roofed. He discovered hardly anything of interest, except an inscription with the word vaozoian.

The appearance of the watercourses of the Imbrasus shows that they are often swollen by rains,

## SAMOSATA.

and thas harmonises with the natural derivation of the word. In the plain which extends along the base of the mountains eastwards towards the city, Ross says that there are traces of ancient channels made for the parpose of irrigation. He regards the marshy places near the temple to be the Kdлamor and the Exos mentioned by Athenaeus (xiii. p. 572) in connection with the expedition of Pericles. (The former place is likewise referred to by Herodotus, ix. 96.) Across this plain, which is about two miles in length, there is no doubt that a Sacred Way extended from the sanctuary to the city, like that which connected Athens with Elensis. Somewhere on this line (кaтd rity $\delta 8 \delta y$ viny eis $\tau \delta$ 'Hpaioy, Paus. vii. 5. § 6) was the tomb of Rhadine and Leontichus, where lovers used to make their vows; and traces of funeral monaments are still seen at the extremity of the line, cloee to the city-wall.

The modern town of Chora, close to the pass leading through the mountains to Vatky, is near the place of the ancient city, which was situated partly in the plain and partly on the slope of the hill. The westarn wall runs in a straight line from the mountain towards the sea, with the exception of a bend inwards near the tombs just mentioned. Here is a brackish stream (y $\gamma \boldsymbol{\gamma} u \cup \phi d \delta a$ ), which is the Chesius, the second of the three streams mentioned by Pliny. (See Etym. Magm. \&.v. 'Aotvraiala) The southern wall does not toach the sea in all its length, and is strengthened by being raised on vaulted substructions. Here and elsewhere the ruins of Samos touch the question of the use of the arch among the Greeks. On the east side of the city the walls are very considerable, being 10 or 12 feet thick, and about 18 feet high. The masonry is partly quadrangular and partly polygonal; there are round towers at intervals on the outside of the wall, and in one place are traces of a gate. In the eastern part of the city was the steep citadel of Astypalaea, which was fortified by Polycrates (Polyaen. Strat. i. 23. § 2), and here probably was what Suetonius culls the palace of Polycrates. (Suet. Calig. 21.) In the higher part of the town the theatre is distinctly visible; the marble seats are removed; onderneath is a large cistern. The general area is covered with small fragmenta, many of the best having furnished materials for the modern castle of Lycargus wear the shore on the SE.; and little more remains of a city which Herodotus says was, under Polycrates, the greatest of cities, Hellenic or Barbarian, and which, in the time of comparative decay, is still called by Horace Concinna Samos.

Herodotus makes especial mention of the harbour and of an immense tunnel which formed an aqueduct for the city. The former of these works ( $\tau \boldsymbol{d}$ trydyr, as it is now called, from being shaped like a frying-pan) is below Astypalses; and, though it is now accessible only to small craft, its famous moles remain, one extending eastwards from the castle of Lycurgas, the other extending to meet it from the extremity of the east city-wall southwards. Here Roses saw subterranean paseages hewn in the rock, one of which may posaibly be the kpuxith subout ik Tîs dxpowdicos фépouva dul NAdうajoay (Herod. iii. 146), constructed by Maeandrius after the death of Polycrates. The tunnel has not been clearly identified; bat, from what M. Musurus told Prof. Ross, it is probable that it is where Tournefort placed it, and that it penetrated the hill from Metelinous to Chora, and that thence the water was taken into the city by a covered channel, traces of which re-
main. It is clear that it cannot be in the quarry pointed out to Ross; both because the cleavage of the rock is in the wrong direction, and becanse water from such a height would fall like a cascade on the city.

The anthorities, to which reference has been made in this article, are. Tonrnefort (Voyage de Levant, 1717, pp. 404-436), who has given a very copions account of the island; and Ross (Reisen aunf den Griechischen Inseln des Agäischer Meeres, vol. ii. 1843, pp. 139-155), who has examined the sites and reinains of the ancient city and Heraeam more carefully than any one else. (See also Clarke, Travels, rol. ii. pp. 192-194, rol. iii. pp. 364-367.) Maps of the island will be found in Tournefort and Choiseul-Gouffier; but the best delineation of it is given in three of the English Admiralty charts. There is a small sketch of the neighbourbood of the city in Kiepert's Hellas (1841), and a larger one in Ross. In Kiepert's general map the rivers Imbrasus and Chesius are wrongly placed, and also (probably) the ridge of Ampelus. It is very questionable whether the point called Poseidion can be where it is (doubtfully) placed in Ross's plan: the position of the little island Narthecis in the strait seems to show that this promontory ought to be further to the east. (See Strab. xiv. p. 637.) A little volume was published in London, and dedicated to James Duke of York, in 1678 , enticled " $A$ Description of the present State of Samos, Nicarin, Patmos, and Mount Athoa, by Joseph Georgirenes (rewprecphons), Archbishop of Samos, now living iu London, translated by one that knew the anthor in Constantinople." From this book it appears that Dapper has taken much directly, and Tournefort indirectly. Panofka has written a book on Samoe (Res Samiorum, Berlin, 1822): and more recently (1856) Guérin has published a work on this island and Patmos.
[J. S. H.]

CODE OF sAMOB.
SAMOS, in Triphylia [SAmicum.] SAMOS or SAME, in Cephallenia. [SAME.]
SAMOSATA (Zauboara), a strongly fortified city of Syria, placed by Ptolemy (v. 15. § 11) and Strabo in the district of Commagene. It contained the royal residence, and was a province in the time of Strabo, surrounded by a small but very rich country, and situated at the bridge of the Euphratex. (Strab. svi. 2. §3, p. 749.) Its distance from the borders of Cappadocia in the vicinity of Tomisa across Mount Taurus was 450 stadia. (Ib. xiv. 2. § 29, p. 664.) It was besieged and taken by Mark Antony daring his campaign in Syria. (Joseph. Ant. xiv. 15. §8.) Its strategic importance is intimated by Cacsennius Paetus, prefect of Syria under Vespasian, who, having repremented that Antiochus, king of Commagene, was meditating an alliance with the Parthians to enable him to throw off the Roman yoke, warned his imporial master "that Samosata, the largest city of Commangene, was situated on the Enphrates, and would therefore secure the Parthians an easy paseage

SAMOTHRACE.
of the river and a safe asylum on the western side." The legate was therefore instructed to seize and hold possession of Samosata. (B. J. vii. 7. § 1.) This uwn gave birth to Lucian, and became infamous in the third century in connection with the heretical bishop "Panl of Samosata," who first broached the heresy of the simple humanity of our Lord; and was condemned in a council assembled at Antioch (A. D. 272, Euseb. H. E. vii. 27, 28). The modern name of the town is Sempeat or Samical, about 40 miles S. of toe cataracts of the Euphrates, where it passes Mount Taurus, but Pococke could hear of no ruins there (Observations on Syria, vol. ii. pt. 1, p. 156.)
[G. W.]

## COLT OF BAMOBATA.

SAMOTHRA'CE, SAMOTHRA'CA, or SAMO-
 Oppiten in Herodotus, who nses the adjective Zapoopnicios, and calls the inhabitants Eapoophuces. In Pliny (iv. 23) we find the form Samothrace; in the Itim. Ant. (p. 522, Wess.), Samothraca ; in Livy (xlii. 25, 50, xliv. 45, 46), both Samothraca and Samothracia. Properly it is "the Thracian Samos." Thas Homer calls it sometimes Iduos Eppuxin, sometimes simply Eduos. Hence the line in Virgil (Acm. vii. 208):
"Threiciamque Samam quae nunc Samothracia fertur."
By the modern Greeks it is called Samothraki, and
 merely a corruption of the other, formed in ignorance, after the analogy of Stamboul and Stalimni, - May8pdact denoting "a sheepfold"). An island in the north of the Aegaean, opposite the mouth of the He brus, and lying N. of Imbrus, and NE. of Lemnos. Its distance from the cosst of Thrace is eatimated at 38 miles by Pliny ( $L$ c.), who says its circuit is 32 miles. It is of an oval shapo, and, according to the English survey, 8 miles in length and 6 in breadth. It was traditionally said to have been diminished in size, in consequence of an outburst of waters from the Hellespont; and perhaps some great physical changes took place in this part of the Aegaean at no very remote period. (See Admiral Smyth's Mediterrancan, pp. 74, 119.) However this inay be, Samothrace is remarkable for its extreme elevation. No land in the north of the Archipelago is so conspicuous, except Mt. Athos ; and no island in the whole Archipelago is so high, except Candia. The elevation of the highest point, called Saoce by Pliny (l.c.), is marked 5240 feet in the Admiralty Chart (No. 1654). The geographical position of this point (the modern name of which is $1 / L$ Fingares) is $40^{\circ} 26^{\prime}$ $57^{\prime \prime}$ N. lat., and $25^{\circ} 36^{\prime} 23^{\prime \prime}$ E. long. Though there are several anchorages on the const of Samothrace, there is an entire absence of good harbours, a circumstance in harmony with the expression of Pliny, who calls it "importuosissima omnium." Scylax, however
(p. 280, ed. Gail), mentions a port, which possibly was identical with the harbour Demetrium spoken of by Livy. The ancient city (of the same name as the island) was on the north, in the place marked Palaepolis on the chart.

The common name of the Thracian and the Ionian Samos was the occasion of speculation to Strabo and Pansanias. The latter (vii. 4. § 8) says that the Thracian island was colonised by emigrants from the other. The former ( $x . p p .457,472$ ) mentions a theory that it might be named from the Saii, a people of Thrace. Scymnus Chius (692) says, that aid came from Samos to Samothrace in a time of famine, and that this brought settlers from the Ionian to the Thracian Island. The truth seems to be, that oános denotes any elevated land near the sea, and that the name was therefore given to the island before us, as well as to others. [Cephallemia; Sanos.] The earlier names of Samothrace were Dardania, Electris, Melite, and Leucosia. Diodorus Siculus (v.47) speaks of its inhabitants as Autochthons, and dwells on peculiarities of their language as connected with their religious worship. The chief interest of this island is connected with the Cabeiri. For these mysterious divinities we must refer to the Dict. of Biography amd Mythology. Pelasgians are said by Herodotus (ii. 51) to have first inhabited the island, and to have introduced the mysteries.

The lofty height of Samothrace appears in Homer in a very picturesque connection with the scenery of Troy. He deacribes Poseidon as gazing from this throne on the incidents of the war: and travellers in the Troad have noticed the view of Samothrace towering over Imbros as a proof of the trathfulness of the Iliad. Bearing in mind this geographieal affinity (if we may so call it) of the mountain-tops of Saoce and Ida, we shall hardly be surprised to find Scymnus Chius (678) calling Samothrace a Trojan island (ฑิणos Tpouch). The tradition was that Dardanus dwelt there before he went to Troy, and that he introduced the Cabeiric mysteries from thence into Asia.

A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhabitants joined Xerxes in his expedition against Greece; they are apoken of as akilful in the use of the javelin; and a Samothracian ship is said to have sunk an Athenian ship, and to have been sunk in turn by an Aeginetan one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samothracians possessed forts erected on the mainland. (lb. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. Pax, 277, and Subol.) Samothrace appears also to have had the rights of asylum; for Perseus took refuge there, aftor he was defeated by the Romans in the battle of Pydna. (Liv. xlv. 6.) Germanicus sailed to the island with the view of being initiated: but he was prevented by an omen. (Tac. Anm. ii. 54.) St. Paul passed the night at anchor bere on his first voyage from Asia to Earope. (Acts, xvi. 11.) In Pliny's time Samothrace was a free state(l.c.). In the Synecdemus we find it, with Thasos, in the province of Illyricum. (Wess. p. 640.) In the later division described by Constant. Porphyrog. (De Them. p. 47, ed. Bonn) it is in the Thracian subdivision of the First European or Thracian Theme.

Samothrace appears to have no modern history $3 \times 3$
and no present importance. Pliny (xxxvii. 67) makes mention of a gem which was found there; and in the Middle Ages its honey and goats are said to have been celebrated. No traveller seems to have explored and described this island. [J.S.H.]

SAMULOCENAE, according to the Peut. Tab., or more correctly according to inscriptions found on the spot, Sumlocenne, was apparently a Roman colony of some importance in the Agri Decumates of Germany. The Table erroneously places the town in Vindelicia. whence some antiquarians have regarded Samulocenae and Sumlocenne as two different places. But there can be no doubt that they are only two forms of the same name belonging to one town, the site of which is occupied by the modern Sulchen, near Rottenburg on the Neckar, where many Roman remains, such as coins, inscriptions, and arms, have been found. (Comp. Jaumann, Colonia Sumlocenne, fe., Stattgart, 1840, 8vo.; Leichtlen, Schwaben woster den Rümern, p. 107, foll.)
[L.S.]
SAMUS. [Samos.]
SAMUS, a river of Hispania Baetica. (Geog. Rav. iv. 45.) Ancient Spanish coins indicate a town of the same name. (Florez, Med iii. p. 142.)
[T. H. D.]
SAMYDACE ( $\Sigma$ auubdrn), a tww on the coast of Carraania, noticed by Marcian (c. 28. od. Didot) and Ptoleny (vi. 8. § 7). It appears to have bean pluced near the month of the river Samydacus. (See also Steph. B. 8.v.) It is possible, as suggested by Forbiger, that the river is the same as the present Sadji.
[V.]
SANAUS ( Lavabs), a town of Phrygia, in the
neighbourhood of Laodiceia. (Strab. zii. p. 576 ; Hierocl. p. 666.) In the acts of the Council of Chalcedon (p.674), it is called Zavaî̀ $\pi \delta \lambda i s$, and is probably mentioned by Ptolemy (v. 2. § 26) under the name of Sanis.
[L. S.]
SANCTIO, a place in the Agri Decumates, in the south-west of Germany, was situated on the banks of the Rhine, but is mentioned only by Ammianus Marcellinus (xxi. 3), and in such a manner that it is not easy to identify its site; it is possible, however, that the modern Seckingen may correspond with it.
[L. S.]
SANDA, a river on the N. coast of Hispania Tarraconensis (Plin. iv. 20. 8. 34.) Probably the Miera.
[T. H. D.]
SANDA'LIUM ( $\Sigma$ of Pisidia, mentioned only by Strabo (xii. p. 169) and Stephanus B. (s. v.).
[L. S.]
SANDANES (Eavdáves, Periph Mar. Erythr. c. 52). There has been some question whether this is the name of a man or of a place. As the text stands in the Periplus, it would seem to be that of a ruler of the coast-district in the neighboarhood of Bombay. On the other hand, Ptolemy speaks of the same territory under the title of 'Aptak力 इadivày; whence Benfey (Ersch and Griiber, Encych art. Indien) argues, with strong probability, that the reading in the Periplus is incorrect, and that Ptolemy is right in making the name that of a people rather than of a chief.
[V.]
SANDARACA (Eavסapdkn), a coast-town of Bithynia, at a distance of 90 stadia to the east of the river Oxines. (Arrian, Peripl. P. E. p. 14 ; Anonym. Peripl. P.E. p. 4.)
[L.S.]
SANDOBANES. [Albania, Vol. I. p. 89, b.]
SANDRIZETES, according to some pditions of Pliny (iii. 28), the name of a tribe in Pannonia on
the river Dravus; but a more correct reading gives the name Andizetes, which is no doubt the same as the Andizetii ('A $\bar{\delta}$ (Strioc) mentioned by Strabo (vii. p. 314) among the tribes of Pannonia [L.S.]

SANE. 1. ( Herod. vii. 22 ; Thuc iv. 109 ; Steph. B. s. v.), a colony of Andros, situated upon the low, undulating ground, forming the isthmus which connects the peninsula of Acte with Chalcidice, through which the canal of Xerxes passed. Masses of stone and mortar, with here and there a large and squared block, and foundations of Hellenic walls, which are found upon this Próvlalia or neck of land, mark the site of ancient Sane, which was within Acte and turned towards the sea of Euboea. (Leake, Northern Greece, vol. iii. p. 143.)
2. It appears from Herodotus (vii. 123; comp. Thuc. v. 18) and the Epitomiser of Strabo (vii. p. 330, Fr. 27), that there was another town of this name in Pallene. According to the position assigned to it in the list of Herodotns, the site must be sought for between C. Posidhi and the W. side of the isthmus of Porta. Mela (ii. 3. § 1) is opposed to this position of Sane, as he places it near Canastraeum Prom. (C. Paliúri). [E. B. J.]
 Arrian to the NW. of the Malli (or Multan), apparently near the junction of the Hydraotes and Acesines ( $\mathbf{v} .22$ ). There can be little doubt that it is the same place as that noticed by Ptolemy under
 The position, however, of the latter is assigned with this difference, that it is placed below the junction of the Hydaspes and Acesines, whereas the former would seem to have been to the E. of the Hydraotes. Burnes has identified Sagala with the present Lahore, which is probable enough (Travels, vol. iii. p. 82). It may be remarked, that the Ei 0 vundia of Ptolemy ought in all probability to be Eiduonnula, the name being derived from the well-known Bactrian king, Euthydemus.
[V.]
SANGA'RIUS (Zarpdotos: Sakarya or Sakari; Turkish Ayala), one of the principal rivers of Asia Minor, is mentioned in the Iliad (iii. 187, xvi. 719) and in Hesiod (Theog. 344). Its name appears in different forms as Sagraphos (Schol. ad Apollon. Rhud. ii. 724), Sangaris (Constant. Porphyr. i. 5), or Ssgaris (Ov. ex Pont iv. 10.17 ; Plin. vi. 1 ; Solin 43). This river had its sources on Mount Adoreus, near the town of Sangia in Phrygia, not far frmm the Galatian frontier (Strab. xii. p. 543), and flowed in a very tortuous course, first in an eastern, then in a northern, then in a north-western, and lastly again in a northern direction through Bithynia into the Euxine. In one part of its course it formed the boundary between Phrygia and Bithynia; and in early times Bithynia was bounded on the east by the Sangarius. [BIthynia.]

The Bithynian part of the river was narigable, and was celebrated from the abandance of fish found in it. Its principal tributaries were the Alander, Bathys, Thymbres, and Gallus. (Comp. Scylax, p. 34 ; Apollon. Rhod. ii. 724 ; Scymnus 234, foll.; Strab. xii. pp. 563, 567; Dionys. Perieg. 811; Ptol. r. 1. § 6; Steph. B. s. v.; Liv. Exyviii. 18: Plin. v. 43; Amm. Marc. xxii. 9.) [L. S.]

SA'NGIA ( 和ria), a small place in the east of Phrygia, near Mount Adoreus and the sourres of the Sangarius. (Strab. xii. p. 543.) [L.S]
SANIA'NA (Eaviava, Const. Porph. Them. i. p. 28, de Adm. Inv. c. 50, p. 225, Boun.), a place in
the interior of Thrace, probably the modern Ezenga or Zingane. SANIGAE (Kaviyas, Arrian, Peripl. Pont. Eux. p. 12; Eárvǐa, Steph. B. s. v.; Eayíat, Procop. B. G. ir. 3), a trile of Mt. Caucasus, who were found in the neighbourhood of Dioscurias or the Roman Sebastopolis.
[E. B. J.]
SANISERA, a city in the island Balearis Minor (Plin. iii. 5.s. 11), the modern Alajor. (Cf. Wernsd. And Bal. p. 57; Salmas. ad Solin. c. 34, p. 401.)
[T. H. D.]
SANITIUM (Eavitiov), is placed in the Alpes Maritimae by Ptolemy (iii. 1. §43), and named as one of the towns of the Vesdiantii or Vediantii. Cemenelium is the other town which he names [Cemenelicm]. If Sanitium is Senez, which is west of the Var, part of this people were east of the Var and part of them were west of it. [G.L.] SANNI. [Macrones.]
SANTICUM (Eıavrikoy, Ptol. ii. 14. § 3), a town of Noricum, on the sonth-west of Virunum, on the road from this place to Aquileia (It. Ant. p. 276). The exact site of the place is utterly uncertain, but conjecture has fixed upon four or five different places that might be identified with Santicum with equal probability.
[L. S.]
SA'NTONES or SA'NTONI (Eduroves, Lávtovos, Ed́venves), a penple of South-western Gallia, in the Celtogalatia Aquitania of Ptolemy (ii. 7. § 7), who names their capital Mediolanium. [Mediolanum.] They were in the Celtica of Caesar, being north of the Garumna (Garome). The Roman poets make the quantity of the word suit their verse, as Lucan does when he says (i. 422), "gandetque amoto Santonus hoste;" and Jurenal and Martial when they use the word Santonicus.

Caesar, who first mentions the Santones (B.G. i. 10), says that when the Helvetii were preparing to leave their country with their families and moveables, their intention was to make their way to the territory of the Santones, "who are not far distant from the borders of the Tolosates." He gives us no means for conjecturing why the Helvetii proposed to cross the whole width of Gallia and settle themselves in a country on the coust of the Atlantic which was full of people. The position of the Santones is defined by Ptolemy, who places them between the Pictones and the Bituriges Vivisci, one of whose towns was Burdigala (Bordeaux). Strabo (iv. pp. 190, 208) fixes the position of the Santones still clearer when he says that the Garumna flows into the sea between the Bituriges Iosci (Vivisci) and the Santones, both of which are Celtic nations. In another passage he places the Pictones and Santones on the shores of the Atlantic, and the Pictones north of the Santones; which completes the description of their position.

Caesar never made any campaign against the Santones, or, if he did, he has said nuthing about it. He got ships from the Pictones and Santones for his naval war with the Veneti (B. G. iii. 11), from which we learn that the Santones and Pictones were a maritime people. When Vercingetorix (в. с. 52) was stirring up the Gallic nations against Caesar, he secured the assistance of the Pictones and "adl the rest of the states that border on the ocean," an expression which includes the Santones, though they are not mentioned. But the Santones sent 12,000 men to the siege of Alesia. (B.G. vii. 75.) In Pliny's enumeration of the Gallic people (iv. 33) tine Santones are named Liberi.

The Santones gave name to that division of France before the revolution which was named Saintonge, the chief part of which is included in the French department of Charente Inferieure. The coast of the territory of the Santones is low and marshy; the interior is generally level and fertile. D'Anville supposed that the territory of the Santones comprehended the diocese of Saintes, and the small province of Aunis on the north-west.

The wormwood of this country is spoken of by varions writers, Pliny (xxvii. 38), and Martial (Ep. ix. 95): -
"Santonica medicata dedit mihi pocula virga."
Martial (xiv. 128) and Juvenal (viii. 145) mention a "cucullus" with the name "Santonicus." It appears that some thick coarse woolien cloths were imported from Gallia into Italy.

Havercamp in his edition of Orosius (vi. 7) gives a coin with the name "Arivos," and on the other side the legend "Santonos" in Roman capitals with the figure of a horse in action. He gives also another coin with the same legend; and a third with the abbreviated name "Sant" and the name of "Q. Doci" en it.
[G. L.]
SA'NTONUM PORTUS (Kavtovav $\lambda i ́ \mu \eta \nu)$. Ptolemy in his description of the coast of Celtogalatia Aquitania (ii. 7. § 1) proceeds from south to north. Next to the outlets of the Garonne be places Santonum Portus, and next to it Santonuin Promontoriun
 telus is placed north of the promontorium. The Carantonus of Ausonius is certainly the Charente [Carantonvs]; and Ptolemy's Canentelus is a different river, or, if it is the same river, he has placed it wrong.

It is impossible to determine what is the Santonuin Portus of Ptolemy. If it is Rochelle, as sorne geographers maintain, and if Ptolemy's Canentelus is the Charente, he has placed their positions in wrong order. It seems very unlikely that I'tolemy should mention a river between the Garonne and Loire, and not mention the Charente. The only other large river between the Garonne and the Loire is the Sivre Niortaise, which is north of La Rochelle, and if Ptolemy's Canentelas is the Serre, the Santonum Portus might be La Rochelle. D'Anville sapposes Santonum Portus to be the embouchure of the Seudre, which opens into the sea opposite the southern extremity of the Isle dOléron; but he does not undertake to fix the position of the Santonum Promontorium. The latitudes of Ptolemy cannot be trusted, and his geography of Gallia is full of errors. [G.L.]

SA'NTUNUM PROMONTO'RIUM. [SAntonum Portus.]

SAOCE. [SAmothrace.]
SAO'CORAS (Zaóкopas, Ptol. v. 18. § 3), a river of Mesopotamia, mentioned by Ptolemy, which appears to have had its source in the M. Masius near Nisibis, and to have flowed to the SW. into the Euphrates. There has been much dispute, as to what river Ptolemy intended by this nane, as at present there is no stream existing which corresponds with his description. Forbiger has conjectured with some reason that it is the same as the Mascas of Xenophon (Ancb. i. 5. § 4), which flowed about 35 parasangs to the E. of the Chaboras (Khabur), and surrounded the town of Corsote: Ptolemy would seem to have confounded it with the Mygdouius. [Mygdonius.]
[V.]
SAPAEI (之azaîot or Edzanot), a Thracian people, occupying the southern portion of the Pan-
gaeus，in the neighbourhood of Abdera．（Strab． xii．p．549．）In this passage，however，Strabo calls them Sapae（ $\Sigma \alpha^{\prime} \pi a l$ ），and assumes their identity with the Sinti，which in another place（x．p．457） he treats as a mere matter of conjecture．The Via Egnatia ran through their country，and especially through a narrow and difficult defile called by Ap－ pian（B．C．iv．87，106）the pass of the Sapaei，and stated by him to be 18 miles from Philippi；so that it must bave been nearly midway between Neapolis and Abdera．The Sapaei are mentioned，and merely mentioned，by Herolotus（vii．110）and by Pling （iv．11．8．18）．Their town is called Sapaica （之anaikh）by Steph．B．（s．v．）．
［J．R．］
SAPAICA．［SAPAEI．］
SAPARNUS（ $\sum$ árapvos），a small tribatary of the Indus，in the upper Panjab，noticed by Arrian （Indic．c．4）．It is probably the present Abba－ $\sin$.
［V．］
SAPAUDIA．This name occurs in Ammianus Marcellinus（xv．11），in his description of Gallia． He says of the Rhone that after flowing through the Lake of Genera＂per Sapaudiam fertur et Sequanos．＂ In the Notit．Imp．we read：＂in Gallia Ripense prae－ fectus militum Barcariorum Ebruduni Sapaudiae，＂ where Ebrudunum appears to be Yrerdun，which is at one end of the Lake of Neufchatel．In another passage of the Notit．there occurs：＂tribunus cohor－ tis primae Sapandiae Flaviae Calarone，＂or＂Cula－ rone，＂which is Grenoble［Cularo］．Thus Sapau－ dia extended northward into the country of the Helvetii and southward into the territory of the Allobroges．The name Sapaudia is preserved in Saboia，or Savoy，but in a much more limited signifi－ cation；and in the country now called Savoy there is said to be a canton which bears the particular name of Savoy．（D＇Anville，Notice，fc．）
［G．L．］
SAPHAR［SAPPHAR．］
SAPHE．［Bezabda．］
SAPHRI（ $\sum$ aøpi），a small village of Parthyene mentioned by Isidurus（Stath．Parth．c．12）．It may be the same place as that called by Ptolemy ミóp\＆a（vi．9．§ 6），which he places in Hyrcania， close to the Astabeni．Forbiger identifies it with the modern Shoffri
［V．］

 Steph．B．s．v．），an island in the Arabian gulf，NE． of Jlyos Hormos and S．of the promontory Pbaran， from which sapphires were obtained according to Stephanus．Nuw Sheduan．
SAPIS（ ミánıs，Strab．：Savio），a small river of Cisalpine Gaul，not far from the frontiers of Um－ bria．It rises in the Umbrian Apennines，a few miles above Sarsina，flows under the walls of that town，and afterwards，pursuing a course nearly due N．，crosses the Aernilian Way close to the town of Creseua（Cesena），and falls into the Adriatic about 10 miles S．of Ravenna．（Strab．v．p．217；Plin． iii．15．8．20；Lacan．ii．406；Sil．Ital．viii．448； Tab．Peut．）It is called in the Tabula Sabis；and the name is written Isapis in several editions of Iucan and Strabo；but there seems little doubt that Sipis is the true form of the name．It is still called the Savio．Thore can be little doubt that the SA－ finin Tribus，mentioned by Livy（xxsi．2，xaxiii． 37），as one of the tribes or divisions of the Umbrian nation，imnediately adjoining the Gaulish tribe of the Boii，derived its name from the Sapis，and must have dwelt on the banks of that river．［E．H B．］

ron（s），placed by Ptolemy in long． $88^{\circ}$ ，lat． $14^{\circ}$ $30^{\prime}$ ；doubtless the capital of the Sappharitae（ $\Sigma a \pi ф a-$ pitai），whom the same geographer places near the Homeritae（vi．6．§ 25），which Bochart identifies with the＂Sephar＂called by Moses＂a mount of the East，＂and which was the limit of the children of Joktan．（Gen．x．30．）This Forster further identifies with the Mount Climax of Ptolemy，which Niebuhr judged to be the Sumara or Nakil Sumara of modern Arabia，the highlands of Yemen，on the E．of which that same traveller found some ruins， half a day＇s journey SW．of Jerim，named Saphar， which he says is without doubt Aphar，or lha－ far．（Forster，Geogr．of Arabia，vol．i．pp．94， 105， 127 notes，175，vol．ii．pp．154，172．）Aphar was the metropolis of the Sabaeans according to the author of the Periplus ascribed to Arrian，and dis－ tant 12 days＇journey eastward from Musa on the Arabian gulf；Mr．Forster remarks＂that the di－ rection and the distance correspond with the site of Dhafar＂（vol．ii．p．166，note＊）．It is to be re－ gretted that this important and well marked site has not yet been visited and explored．
［G．W．］

## SAPPHARI＇TAE．［SAPPHAR．］

## SAPPIRE＇NE．［SAPIRINE．］ <br> SAPRA PALUS．［Bucks．］

SARACE＇NI（Eapaknvoi）．This celebrated name，which became so renowned and dreaded in Earope，is given to a tribe of Arabia Felix by the classical geographers，who do not，however，very clearly define their position in the peninsula，and indeed the country of Saracene in Ptoleny seems scarcely reconcileable with the situation assigned to the Saraceni by the same geographer．Thus be， consistently with Pliny，who joins them to the Na－ bataei（vi．28．8．32），places the Saraceni south of the Scenitae，who were situated in the neighbourhood of the northern mountains of the Arabian peninsala （vi．7．§ 21）；but the region Saracene he places to the west of the black monntains（ $\mu$ e入and $8 \rho \eta$ ）－ by which name he is supposed to designate the range of Sinai，as he couples it with the gulf of Pharan－and on the confines of Egypt（v．17．§ 3）．St．Jerome also calls this district the＂mons et desertum Saracenorum，quod vocatur Pharann （Onomast．s．v．Xaph6，Choreb），in agreement with which Eusebius also places Pharan near the Saraceni who inhabit the desert（s．v．\＄apdy）．According to these writers their country corresponds with what is in Scripture called Midian（Exod ii．15，iii．1；see Midian），which，however，they place incorrectly on the east of the Red Sea；and the people are ideu－ tified with the Ishmaelites by St．Jerome（Onomast． l．c．），elsewhere with Kedar（Comment．in les．xlii． and in Loc．Heb．ad voc．），with the Midianites by St．Augustine（in Numer．），with the Scenitac by Am－ mianus Marcellinus，who，however，uses the name in a wider acceptation，and extends them from Assyria to the cataructs of the Nile（xiv．4）．Their situa－ tion is most clearly described by the anthor of the Periplus．＂They who are called Saraceni inhabit the parts about the neck of Arabia Felix next to $\mathrm{Pe}-$ traea，and Arabia Deserta．They have many narnes， and occupy a large tract of desert land，bordering on Arabia Petraea and Deverta，on Palaestina and Persis，and consequently on the before－named Ara－ bia Felix．＂（Marcian．apud Geog．Min vol．i．p． 16，Hudson．）The fact seems to be that this name， like that of Scenitse（with whom，as we have seer， the Saraceni are sometimes identified），was uned either in a laxer or more restricted sense for various
wandering tribes. As their nomadic and migratory habits were described by the latter, so their predatory propensities, according to the most probable interpretation of the name, was by the former, for the Arabic verb Saraka, according to lexicographers, signifies "to plander." (Bochart, Geog. Sac. lib. iv. cap. 2, pp. 213, 214.) The derivation of the name from Sarab has been rejected by nearly all critics as historically erroneous; and the fact that the name was in use many centuries before Mohammed, at once negatives the theory that it was ad, pted by him or his followers, in order to remove the stigma of their servile origin from Hagar the bondwoman. (Reland, Palaestina, p. 87.) This author maintains that " Saraceni nil nisi orientales populos notat:" deriving the word from the Arabic sharaka =ortus fuit; and as unhappily the Greek alphabet cannot discriminate between sin and shin, and the name does not occur in the native authors, there is nothing to determine the etymology. Mr. Forster, in defiance of Bochart's severe sentence, "Qui ad Saram referunt, nugas agunt" (Geog. Sac. i. 2, p. 213), argues for the matronymic derivation from Sarah, and shows that the country of Edom, or the mountains and territory bordering on the Saracena of classic authors, are called "the conntry, mountains, \&c. of Sarah" by the Jews; and he maintains that, as this tract derived its name of Edom and Idunaea from the patriarch Esau, so did it that of Sarah from Surah the wife of Abraham, the ack nowledged mother of the race. (Geog. of Arabia, vol. ii. pp. 17-19.) His attempt to identify the Saraceni with the Amalekites is not so successful: for however difficult it may be to account for the appearance of the latter in the Rephidim (Exod. xvii. 1, 8 ; Rephidim), which was the country of Saracena, yet their proper seat is fixed beyond doubt in the south of the promised land, in the hill-country immediately north of the wilderness of Paran, near to Kadesh (Numb. xiii. 29): and it is impassible to understand "the valley" in xiv. 25. and "the hill" in xiv. 45, of Horeb, as Mr. Forster does, since the whole context implies a position far to the north of the district of Horeh, marked by the following stations: Taberah, 3 days' journey from "the Mount of the Lord" (x. 33, xi. 3): Kibroth-hattaavah, Hazeroth, the wilderness of Paran (xi. 34, 35, xii. 16, compare $x \times x$ xii. 16-18). It must indeed be admitted that the name of the Amalekites is occasionally used, in a much wider acceptation than its proper one, of all the Edomite tribes, throughout Northern Arabia, as e. g. in 1 Sam. xr. 7; and similarly the name Saraceni is extended in Marcian's Periplus, already cited: but it seems more natural to interpret the words of ка入oú $\mu$ vot 之apa-
 name of several specific tribes, marking common habits or common position rather than common origin, according to the analogy of the Scenitae in old times and of Bedawin = " deserti incolae," in modern times; particularly as it does not appear that the name was ever alopted by the Arabs themselves, who would not have been slow to appropriate an honourable appellation, which would identify them with the great patriarch. That their predatory character had become early established is inanifest from the desperate expedient resorted to by the emperor Decius in order to repress their encroachments. He is said to have brought lions and lionesses from Africa and turned them lonse on the borders of Arabia and Palestine, as far as the Circisium Castrum,
that they might breed and propacate against the Saracens. (Chron. Alex. in A.m. 5760 , Olymp. 257, Ind. xiv. =A. D. 251.) This strong fortrese, called by Procopius Circesium (Kıpкifotov фpoúptov), the most remote of the Koman garrisons, which was fortified by Diocletian (Amm. Marc. xxiii. 5), was situated on the angle formed by the confluence of the Aborrhas (Khabour) and the Euphrates (it is still called Karkisia), so that it is clear that, in the time of Procopius, the Dame of Saraceni was given to the Arab tribes from Egypt to the Euphrates. Consistently with this view, he calls Zenubia's husband Odonathes, " king of the Saracens in those parts" (Bell. Pers. ii. 5, p. 288); and Belisarius's Arab contingent, under their king Aretas ('Apétas) he likewise calls Suracens (ii. 16, p. 308). That Roman general describes them (c. 19, p. 312) as incapable of building fortifications, but adepts at plunder, which character again justifies the etymology above preferred; while it is clear from these and other passages that the use of the name had become established merely as a general name, and precisely equivalent to Arab (see Bell. Pers. i. 19, p. 261), and was accordingly adopted and applied indifferently to all the followers of Mohammed by the writers of the middle ages.
[G. W.]
SARALA. [Sardinia.]
SARA'LIUM or SARALUS (Eápaios), a town of the Trocmi in Galatia, on the east of the river Halys. (Tab. Peut.; Ptol. v. 9. § 4.) [L. S.]
 on the bay of Amisus. (Strab. xii. p. 547; comp. Pontus.)
[L. S.]
SARANGA (Tà $\left.\sum a \rho a r y a\right)$, a small place on the coast of Gedrosia between the Indus and the Arabis. It was visited by Nearchus in his coust voyage to Persia (Arrian, Ind. c. 22). It has been conjectured by Müller (Geogr. Graec. Min. L. c., ed. Paris) that it is the same as the 'Pı§dva of Ptolemy (vi. 21. § 2).

## SARANGAE. [Drangiana.]

SARANGES ( $\Sigma a p d \gamma \eta s$ ), a small tributary of the Hydraotes (Iravati), mentioned by Arrian (Ind. c. 4) in his list of Indian rivers. It is doubtless the Sunscrit Saranyu, though it has not been deterinined to what stream this Indian name applies.

SARAPANA (इарatravd, Strab. xi. p. 500; इa paravis, Procop. B. G. iv. 14), a strong position in Iberia, upon the river Phasis, identified with Scharapani in Imiretia, on the modern road which leads from Mingrelia into Georgia over Suram. (Comp. Journ. Geog. Soc. vol. iii. p. 34.) [E. B. J.]

SARAPARAE (Zарaxdpan, Strab. xi. p. 531; Plin. vi. 16. s. 18), a Thracian people, dwelling beyond Armenia near the Guranii and Medi, according to Strabo, who describes them as a savage, lawless, and mountainons people, who scalped and cut off heads (тєрібкиөıбтds каl джокефалиотds). The latter is said by Strabo to be the meaning of their name, which is confirmed by the fact that in the Persian sar means " head " and para " division." (Anquetil, Sur les anc. Langues de la Perse, in Mcm. de l'Acud. fc. vol. xxxi. p. 419, quoted in Kramer's Strab. vol. ii. p. 500; comp. Groskurd's Strab. vol. ii. p. 439.)
SARAPIONIS PORTUS. [Niconis Dromus.]
SARAPIS INS. ( $\Sigma a p d \pi i \delta o s ~ \nu h \sigma o s)$, an island off the South Coast of Arabia, mentioned by the author of the Periplus ascriked to Arrian (Geog. Graec. Min. vol. i. p. 19, Hudsou) as situated 2000 stadia east
of the seven islands of Zenobia, which are identified with the ishnds of Kwiom Murian. The island of Sarapis is therefore correctly placed by D'Anville at Mozeira. It is described in the Periplus as abmat 120 stadia distant from the cosst, and about 200 stadia wide. It had three villages, and was inhabited by the sacred caste of the Ichthyophagi. They spoke Arabic, and wore girdles of cocoa leaves. The island produced a variety and abundance of tortoises, and was a favourite station for the merchant vessels of Cane.
[G. ${ }^{1}$.]
SARA'VUS, a river of Gallia, a branch of the Moeella (Mooel). The Itins place the Pons Saravi on the Saravus, on a road from Divodurum (Metz) to Argentoratum (Strassburg). [Pons Saravi.]

The Saravas is mentioned in the poem of Ausoaius on the Mosella (v. 367): 一
" Naviger undisona dudum me mole Saravas Tota reste rocat, longum qui distulit amnem, Fessa sab Augustis ut volveret ostia muris."
The Saravus is the Sarre, which joins the Masel on the right bank a few miles above Augusta Trevirorum (Trier). In an inscription the river is named Sarra.
[G. L.]
SARBACUM (Edpbakoy, Ptol. iii. 5. § 29), a town of Sarmatia, upon an affluent of the Tanais, probably a Graecised form of the Slavonic Srbec. (Schafarik, Slav. Alt. vol. i. pp. 512,514.) [E.B.J.]

SARDABALE. [Siga.]
SARDEMISUS, a southern branch of Mount Taurus on the frontiers of Pisidia and Pamphylia, extending as far as Phaselis; it is also connected with Mount Climax on the frontiers between Milyas and Pisidia Proper. (Pomp. Mela, i. 14 ; Plin. v. 26.)
[L. S.]
SARDE'NE (Eapórm), a mountain of Mysia, on the northern bank of the Hermus, in the neighbourhood of Cyme; at its foot was the town of Neonteichos. (Hom. Ep. i. 3; Vit. Hom. 9.) [L. S.]

SARDES (Zdpठets or Edpots: Eth. Eapotavbs), the ancient capital of the kingdom of Lydia, was situated at the northern foot of Mount Tmolus, in a fertile plain between this mountain and the river Hermus, from which it was about 20 stadia distant. (Arrian, Anab. i. 17.) The small river Pactolus, a tribatary of the Hermus, flowed through the agora of Sardes. (Herod. v. 101.) This city was of more recent origin, as Strabo (xiii. p. 625) remarks, than the Trojan times, but was nevertheless very ancient, and had a very strong acropolis on a precipitous height. The town is first mentioned by Aeschylus (Pers. 45); and Herodotus (i. 84) relates that it was fortified by a king Meles, who, according to the Chronicle of Eusebius, preceded Candaules. The city itself was, at least at first, built in a rude manner, and the houses were covered with dry reeds, in consequence of which it was repeatedly destroyed by fire; but the acropolis, which some of the ancient geographers identified with the Homeric Hyde (Strab. xiii. p. 626 ; comp. Plin. v. 30; Eustath. ad Diow. Per. 830), was built upon an almost inaccessible rock, and surrounded with a triple wall. In the reign of Ardys, Sardes was taken by the Cimmerians, but they were unable to gain possession of the citadel. The city attained its greatest prosperity in the reign of the last Lydian king, Croesus. After the overthrow of the Lydian monarchy, Sardes became the residence of the Persian gatraps of Western Asia. (Herod. v 25 ; Paus. iii. 9. § 3.) On the revolt of the Ionians, excited by Aristagoras
and Histiaeus, the Ionians, assisted by an Athenian furce, took Sardes, except the citadel, which was defended by Artaphernes and a numerous garrison. The city then was accidentally set on fire, and burnt to the ground, as the baildings were constructed of easily combustible materials. After this event the Ionians and Athenians withdrew, but Sardes was rebailt; and the indignation of the king of Persia, excited by this attack on one of his principal cities, determined him to wage war against Athens. Xerxes spent at Sardes the winter preceding his expedition against Greece, and it was there that Cyrus the younger assembled his forces when aboat to march against his brother Artaxerzes. (Xenoph. Anab. i. 2. § 5.) When Alexander the Great arrived in Asia, and had gained the battle of the Granicus, Sardes surrendered to him without resistance, for which he rewarded its inhabitants by restoring to them their freedom and their ancient laws and institutions. (Arrian, i. 17.) After the death of Alexander, Sardes came into the possession of Antigonus, and after his defeat at Ipsus into that of the Soleucidae of Syria. But on the murder of Seleucus Ceraunas, Achaeus set himself up as king of that portion of Asia Minor, and made Sardes his residence. (Polyb. iv. 48, v. 57.) Antiochus the Great besieged the usurper in his capital for a whole year, until at length Lagoras, a Cretan, scaled the ramparts at a point where they were not guarded. On this occasion, again, a great part of the city was destroyed. (Polyb. vii. 15, \&cc. viii. 23.) When Antiochus was defeated by the Romans in the battle of Magnesia, Sardes passed into the hands of the Romans. In the reign of Tiberius the city was reduced to a heap of ruins by an earthquake; but the emperor ordered its restoration. (Tac. Anem ii. 47; Strab. xiii. p. 627.) In the book of Revelation

COLN OF SARDES.
(iii. 1, \&c.), Sardes is named as one of the Seven Churches, whence it is clear that at that time its inhabitants had adopted Christianity. From Pliny (v. 30) we learn that Sardes was the capital of a conventus: during the first centuries of the Christian era we hear of more than one council held there; and it continued to be a wealthy city down to the end of the Byzantine empire. (Eunap. p. 154 ; Hierocl. p. 669.) The Turks took possession of it in the 11th century, and two centuries later it was almost entirely destroyed by Tamerlane. (Anna Comn. p. 323 ; M. Ducas, p. 39.) Sardes is now little more than a village, still bearing the name of Sart, which is situated in the midst of the ruins of the ancient city. These ruins, though extending over a large space, are not of any great consequence; they consist of the remains of a stadium, a thentre, and the triple walls of the acropulis, with lofty towers.
The fertile plain of Sardes bore the name of Sardiene or Eapdiayon redion, and near the city was the colebrated toinb of Alyattes. Sardes was believed to be the native place of the Spartan poet Alcman, and it is well known that the two rhetoricians Diodorus and the historian Eunapius were natives of Sardes. (Chandler, Travels in Asia Minor, p. 316, foll.: Leake, Asia Minor, p. 342, foll. ; Richter, Wallfahrten, p. 511, foll. ; Prukesch, Lenkuurdigk. vol. iii. p. 31, foll.] [L. S.]

SARDI'NLA ( $\boldsymbol{\eta}$ 之apठó: Eth. Zapঠ̂ஸos, Sardus: Sardinia), one of the largest and most important islunds in the Mediterranean sea, situated to the $S$. of Corsica (from which it was separated only by a barrow strait, now called the Strait of Bonifazio) and NW. of Sicily. Its most southern extremity, Cape Spartivento, was distant only 120 geog. miles frum Cape Serrat in Africa.

## I. General Description.

It was a disputed point in ancient times whether Sicily or Sardinia was the largest. Herodotus calls

 in passages where it is not certain that the expression is to be construed quite strictly. Scylax, however, distinctly calls Sardinia the largest of all the islands in the Mediterranean, assigning to Sicily only the second rank (Scyl. p. 56. § 113); and Timaeus seems to have adopted the same view (ap. Strab. xiv. p. 654). Bat the general opinion was the other way: the cornic poet Alexius already enumerated the seven great islands, as they were called, placing Sicily first and Sardinia second (Alex. ap. Const. Porphyr. de Prov. ii. § 10): and this view is followed by Scymnus Chius, as well as by the later gengraphers. (Scymn. Ch. p. 223; Strab. ii. p. 123; Plin. iii. 7. 2. 13. 8. 2. 14 ; Diod. v. 17). Diodorus, however, justly remarks, that it is very nearly equal to Sicily in magnitude (Diod. v. 16): and this opinion, which was adopted by Clurerius (Sicil. Ant. p. 478), continned to prevail down to a very recent period. But midern researches have proved that Sardinia is actually the larger of the two, though the difference is but trifling. (Smyth's Sardinia, p. 66.) Its general form is that of an oblong parallelogram, above 140 geog. miles in its greatest length, by about 60 in its average breadth, which, however, attains to as much as 77 in one part. The measurements given by Pliny, of 188 miles ( 1483 geng. miles) in length along the E. coast, and 175 on the W., are therefore very fair approximations (Plin.
iii. 7. s. 13), while those of Strabo, who calls the island 220 miles in length by 98 in breadth, are considerably overstated. (Strab. v. p. 224.)

Sardinia is a much more fertile and less mountainous island than Corsica. It is, however, traversed throughout its whole length from N. to S. by a chain of mountains which commence at the headland called Capo Lungo Sardo, and extend along the eastern side of the island, as far as Capo Carbonara, which forms the SE. extremity of the island. This range, which is composed of granitic and other primary rocks, is unduubtedly a continuation, in a geological sense, of the mountains of Corsica, and produces a rugged and difficult country forming much the wildest and most uncivilised part of Sardinia. The mountain summits, however, are far from attaining the same elevation as those of Corsica, the highest point, called Monte Genargentu, rising only to 5276 feet, while the Monte di Sta l'ittoria, in the same neighbourhood, rises to 4040 feet, and the peak of Limbarra (the most northerly group of the chain) to 3686 feet: but the general elevation of the range rarely exceeds 3000 feet. (Smyth, p. 67.) West of this mountain district, which may be considered on a rough estimate as comprising about one half of the whole island, are situated three detached groups of mountains; the most considerable of which is that in the SW., which extends from Capo Spartivento to Capo della Frasca on the Gulf of Oristano, and the highest summits of which attain to an elevation of nearly 4000 feet. In the extreme NW. of the island is another isolated range of less extent, called the Monti della Nurra, extending from the Capo della Caccia to the Capo del Falcone. Both these groups are, like the mountains in the E. of the island, composed of primary rocks; but N. of the river Tirso, and extending from thence to the N. coast of the island beyond Sassari, is an extensive volcanic tract. occupied in considerable part by a range of extinct volcanoes, one of which, the Monse Urticu, rises to an elevation of 3430 feet. There is no trace of any volcanic action having taken place within the historical period, bat extensive tracts are still covered with broad streams and fieids of lava. Notwithstanding this abundance of mountains, Sardinia possesses several plains of considerable extent. The largest of these is that called the Campidano, which extends from the Gulf of Cagliari to that of Oristano, thus separating entirely the range of mountains in the SW. from those in the $\mathbf{E}$. of the island; it is a tract of great fertility. A similar plain, though of less extent, stretches across from the neighbourhood of Alghero to that of Porto Torres, thus isolating the chain of the Monti della Nurra; while several smaller ones are found in other parts of the island. The general character of Sardinia is therefore well summed up by Strabo, when he says, "the greater part of it is a rugged and wild country, but a large part contains much fertile land, rich in all kinds of produce, but most especially in corn." (Strab. v. p. 224.)

The great disadvantage of Sardinia, in ancient as well as modern times, was the insalubrity of its climate. This is repeatedly alluded to by ancient writers, and appears to have obtained among the Romans an almust proverbial notoriety. Mela calls it "soli quam coeli melioris, atque nt foecunda, ita pene pestilens." Strabo gives much the same account, and Martial alludes to it as the most deadly climate he can mention. (Strab. v. p. 225; Mel. ii. 7.§ 19; Paus. x. 17. § 11 ; Martial, iv. 60. 6;

Cic. ad Q. Fr. ii. 3; Tac. Hist ii. 85; Sil. Ital. xii. 371.) There can be no doubt that this was mainly owing to the extensive marshes and lagunes on the coast, formed at the mouths of the rivers; and as these uaturally adjoined the more level tracts and plains, it was precisely the most fertile parts of the island that suffered the most severely from malaria. (Strab. l.c.) The more elevated and mountainous tracts in the interior were doubtless then, as now, free from this sconrge; but they were inhabited only by wild tribes, and rarely visited by the more civilised inhabitants of the plains and cities. Hence the character of unhealthiness was naturally applied to the whole island.

## II. History.
