The 2021 World Cooperative Monitor

10 YEARS OF EXPLORING THE COOPERATIVE ECONOMY

The World Cooperative Monitor has reached the 10th edition! For 10 years now, the International Cooperative Alliance (ICA) with the scientific and technical support of the European Research Institute on Cooperative and Social Enterprises (Euricse) has produced this annual research report aiming to illustrate the economic and social contributions of cooperatives and mutuals. We have learned a lot over these 10 years and have provided the cooperative movement with a significant tool to evaluate its own positioning and highlight the importance of cooperation in the world to the general public and policy makers.

We do this through analysis of large cooperatives and mutuals and continuous work to develop and refine a methodology for data collection. The rankings are the core of the report, though turnover alone does not express the wide and significant impact of large cooperatives and cooperative groups around the world. Over the years we have sought to analyze and deepen our understanding of various cooperative sectors and areas of impact. Today we cannot ignore the grip that COVID-19 has on our global community, nor the impact that climate change is having around the world.

Bruno Roelants
Director General, ICA

Gianluca Salvatori
Secretary General, Euricse

In this issue of the WCM we present two chapters exploring how cooperatives can build back better from the pandemic and contribute to achieving the UN Sustainable Development Goals (SDGs). In ongoing collaboration with the International Cooperative Entrepreneurship Think Tank (ICETT), a recently formed group of large cooperatives and large cooperative groups engaged with the ICA in the study and deepening of various issues related to the cooperative world, we have examined these challenges. A series of 29 interviews carried out with large cooperatives around the world showed that participation and attention to members and a community focus are key points that have guided the actions of cooperatives in recent months and that could be the pillars for disseminating a business model that embraces the goals promoted by the 2030 Agenda in terms of human rights, fair labor, environmental sustainability, and sustainable growth. These issues, as analyzed in the section on SDGs, are already at the center of many cooperatives' agendas.

We are pleased to share this special anniversary edition of the report with you. Inside you will find the Top 300 and sector rankings, thematic chapters on Covid-19 and SDGs, and highlights from the last 10 years. Here's to the next 10!

Monitoring the impact

“The World Cooperative Monitor is a key instrument to account for the economic power of the cooperative movement on a global scale, which translates into sustainable development opportunities for millions of people.”

Ariel Guarco

President, International
Cooperative Alliance

“In revealing the diversity and size of the global co-operative sector, the WCM has been instrumental in drawing attention to the co-operative business model at a pivotal time of rethinking economies that work in the interests of people and the planet.”

Melina Morrison

Chief Executive Officer, Business
Council of Co-operatives and
Mutuals (Australia)

“The value of the WCM lies in its utility in any context to show the size, breadth, and economic and social relevance of a system of enterprises largely undervalued by official statistics.”

Carlo Borzaga

President, Euricse

Wenyan Yang

Chief, Global Dialogue for Development Branch
Division for Inclusive Social Development
Department of Economic and Social Affairs
United Nations

“The WCM has been a great source of information on cooperatives. The data and good practice examples it provides demonstrate the impact of cooperatives in sustainable development and are critical evidence base for better policy.”

“The WCM is the most reliable compilation of cooperative statistics available to researchers for further exploration of relevant issues in cooperative organizations.”

Sonja Novkovic

Academic director, ICCM
(International Centre for Cooperative
Management) and Chair, ICA CCR
Saint Mary's University

“The WCM is a fundamental tool for IFFCO & other large cooperatives in order to increase our visibility and showcase the contributions we make to our communities and to sustainable development around the world.”

Tarun Bhargava

General Manager, Cooperative Relations, IFFCO, India
Chairperson, International Cooperative Entrepreneurship
Think Tank (ICETT)

“In the past decade the WCM has filled a gap on coop contributions to the economy. I am confident it will continue to play a role highlighting coops' roles in the years to come.”

Simel Esim

Manager, Cooperatives
Unit, International Labour
Organization

High Chief Oriyomi Ayeola

President, International
Cooperative Alliance-Africa;
President, Cooperative
Federation of Nigeria

“The WCM has helped Cooperatives in Africa in identifying and charting a course of action on areas, sectors and economies where cooperatives in the region need to do more and get involved. It also points at the need to have accurate data.”

The World Cooperative Monitor (WCM) is a project designed to collect robust economic, organizational, and social data about cooperatives worldwide. It is the only report of its kind collecting annual quantitative data on the global cooperative movement. The research and collaborations carried out over the last 10 years have provided the cooperative movement with a significant tool to evaluate its own positioning and have highlighted the importance of cooperation in the world to the general public and policy makers.

The World Cooperative Monitor project intends to pursue 3 goals:

The publication reports on the world's largest cooperatives and mutuals, or groups of cooperatives and mutuals, including rankings of the Top 300 and sectoral analysis. Each year, the World Cooperative Monitor builds upon the research and data collection of the previous years, continually refining and improving the methodology and data collection strategies. As the 10-year timeline shows, the report has explored various themes over the 10 years, from sector analysis to capital structure to the contribution of cooperatives to the UN Sustainable Development Goals (SDGs). This work has resulted in the report being pointed to multiple times at the UN General Assembly by Secretary General António Guterres as an important resource for demonstrating the impact cooperatives have on resolving global challenges.

Besides the economic and employment data of the Top 300 cooperatives and mutuals at the global level, this year's report features chapters addressing two key global issues: first, the impact of COVID-19 on large cooperatives, focusing on their reactions to the emergency as well as the actions they have planned to implement in the recovery phase; second, a continuation of the analysis on how large cooperatives are pursuing the achievement of the Sustainable Development Goals (SDGs).

Over the last few years, the thematic analyses in the World Cooperative Monitor are carried out in collaboration with the International Cooperative Entrepreneurship Think Tank (ICETT). This collaboration helps integrate cooperative issues of the moment with the WCM to stimulate strategic action through best practice sharing amongst ICETT members, the top 300 cooperatives and mutuals and the wider cooperative movement.

In addition to this collaboration, the team behind the WCM research has worked directly with cooperatives, federations and representative bodies over the last 10 years to collect the most accurate and consistent data possible. Scientific rigor, transparency and a continuous search for improvement are the key words of these 10 years of joint ICA-Euricse work. This has resulted not only in the collection of robust data on the world's largest cooperatives and mutuals, but also in the strengthening of relationships and collaboration among different stakeholders.

The results of this year's research are found on page 42.

COVID-19 Cooperatives at the forefront of the recovery*

* This chapter is a follow-up to "Impact and Reactions of Cooperatives to Covid-19" in the World Cooperative Monitor 2020 report. Both chapters focus on large cooperatives and cooperative groups, with the first chapter providing further discussion of cooperative characteristics that make them particularly suited to contributing to the recovery.

Over the past year and a half, people's lives and the economy have been heavily impacted by COVID-19. According to data from the World Health Organisation (WHO), as of 24 May 2021, there have been over 166 million confirmed cases of COVID-19 and more than 3.4 million deaths unevenly distributed around the world (WHO, 2021).

While developed countries faced challenges related to the overloading of their health services, in developing countries the pandemic has affected weak health systems and jeopardized the gains made in health and development in recent decades. In these countries, increased job insecurity has exacerbated poverty and economic deprivation and, even in more developed countries, COVID-19 has driven up unemployment and inactivity rates with consequent effects on household poverty, reaching peaks not seen since the 2008 economic crisis (ISTAT, 2021). COVID-19 has thus deepened and amplified existing disparities, further aggravating conditions for precarious sectors and underscoring the possible health, economic, social, and ecological repercussions of environmental disasters, economic crises, and other situations of uncertainty in the future (Köhler et al., 2020).

In recent months, thanks largely to measures to contain the spread of the virus and the increasing number of vaccinations being distributed, the spread of the virus is slowing down, and health systems in several countries around the world are showing better resilience. This is coupled with a faster-than-expected global economic recovery in the second half of 2020. As the latest report released by the Organization for Economic Cooperation and Development (OECD) points out, GDP growth will come in at 5.1% in 2021 and 4% in 2022 (OECD, 2021).

Underlying these global figures are differing rates of recovery, some less positive, in many economies. Indeed, many countries are predicted to experience output and income levels below pre-pandemic levels through the end of 2022. OECD employment data, for example, make clear that even within the fastest recovering countries, there are divergent trends among economic sectors, with leisure, hospitality, transport, and wholesale and retail trade, among others, struggling as a result of the social distancing measures put in place by individual countries to contain the spread of the virus (OECD, 2021).

In this context, governments of various countries around the world have tried to protect families and businesses by implementing emergency policies in the spheres of health, economy, and taxation. As reiterated by the Secretary General of the United Nations António Guterres:¹

“Pandemic recovery is our chance to change course. With smart policies and the right investments, we can chart a path that brings health to all, revives economies and builds resilience and rescues biodiversity [...]. The time has come to...align public and private financial flows with the Paris Agreement commitments and the Sustainable Development Goals (SDGs)”.

Indeed, many of the plans proposed by national governments look beyond the emergency phase towards the restart and recovery phase with a view to boosting the national economy and household incomes to trigger changes in the sustainability of economic activity.

For change to really take hold, governments, businesses, and families must take an active role in implementing changes in their own behaviour and, in this regard, it seems useful to reflect on how cooperatives, especially large cooperatives – due to the valuable impact they can have on suppliers, clients, and the communities in which they operate – can contribute to overcoming the emergency situation and launching a new phase of growth.

COOPERATIVES FACING COVID-19

As last year’s World Cooperative Monitor report (EURICSE-ICA, 2020) highlighted, cooperatives were also severely impacted by COVID-19, but nevertheless took actions to address the challenges posed by the pandemic, confirming the resilience they have shown in previous periods of crisis in large part due to their structural characteristics (Birchall and Ketilson, 2009; Roelants et al., 2012).

¹ <https://news.un.org/en/story/2021/01/1081772>

During the year and a half of this pandemic, agricultural cooperatives, for example, make it possible for small producers to share risks and to access the market and re-invest in their own activities (United Nations, 2021). The activities promoted by housing cooperatives in Central America demonstrate their ability to promote the well-being of vulnerable individuals and, more generally, of the communities in which they operate (Zapata, 2021). Solidarity and social networking are the keywords behind the initiatives promoted by Italian consumer cooperatives, which, having registered an increase in their revenues during the pandemic months, donated their profits to local community cooperatives (Billiet et al., 2021).

To further explore actions taken by large cooperatives, the World Cooperative Monitor team carried out a series of 29 interviews with large cooperatives² around the world to assess the impact of COVID-19, their reactions in the emergency as well as the actions they plan to implement in the recovery phase.

ADAPTIVE MEASURES

The analysis of the data collected found, unsurprisingly, that the extent of the actions promoted by cooperatives depends, first, on the severity of the COVID-19 impact in the territory in which they operate.

Second, in the regions where the spread of the virus has been greater, the interviews clearly show that cooperatives are still strongly oriented towards the management of day-to-day activities in an emergency situation with actions that have now become part of the daily life of many people. All cooperatives interviewed had introduced procedures for hand sanitizing, the use of masks and airway protection, teleworking, and other safety devices for workers, members, and clients.

² The large cooperatives were identified thanks to the support of the International Cooperative Think Tank (ICETT) with additional support from the ICA regional offices in Asia-Pacific, Africa and Americas. The criterion adopted in the process of selection of the cooperatives to be interviewed is the size of the cooperatives relative to the size of the domestic economy of the country in which they operate. Therefore, selected cooperatives can be considered key players in the countries in which they operate. See the list in the appendix.

Consumer cooperatives, such as the Japanese Consumers' Co-operative Union (Japan), enhanced home delivery services to deliver groceries to members' homes; some, such as Coop Norge (Norway) through agreements with the national postal service, others by mobilizing volunteers as in the case of The Midcounties Co-operative (The United Kingdom), which engaged more than 1,000 volunteers and 100 community groups to make over 100,000 deliveries to members.

SUPPORTIVE MEASURES FOR MEMBERS AND THE COMMUNITY

Several actions were promoted by the large cooperatives interviewed to support their members and communities during the pandemic.

In multiple countries, agricultural producers have experienced declines in sales due to the temporary cessation of activities of restaurants, bars, or other clients. In Japan, for example, in the spring of 2020, schools were shut down and the demand for school meals suddenly disappeared. Since schools are the main customers for milk, some milk producers suffering from stockpiled inventory posted messages on social media that they would start dumping milk unless they found alternative demand. Consumers responded to the posts, started encouraging milk drinking, and the consumption of milk increased. Zen-Noh supported the spread of the message by tweeting creative ways of consuming milk. One of the posts was retweeted more than 150 thousand times and gathered 350 thousand likes.

Insurance and credit cooperatives have activated tools, in some cases promoted at the government level, to alleviate the debt position of families and businesses in the months of the pandemic, and also plan medium to long-term actions to support the activities of their members during the recovery phase. For example, the Kilimanjaro Cooperative Bank Ltd. (Tanzania) granted funds to cooperatives for purchasing crops and storage since, due to a lack of exports, many crops had rotted and very few were actually sold. The Co-operative Bank of Kenya Ltd. (Kenya) foresees, in the midterm, granting moratoria on interest and principal repayment, restructuring loan repayment, and short-term financing for operations, while the Odua Cooperative Conglomerate Ltd. (Nigeria) plans to inject

funds at low interest rates to help their members continue growing. The Federación de Asociaciones Cooperativas de Ahorro y Crédito de El Salvador (El Salvador), which aims to facilitate lines of credit for microenterprises, takes the same position with the idea that making services more accessible will help reactivate the economy.

As immediate support for communities, several cooperatives launched programs to donate medical products or funds to support families and economic activities.

Examples are the actions promoted by the Indian Farmers Fertiliser Cooperative Limited (IFFCO) and the Krishak Bharati Cooperative Ltd (Kribhco) in India. Due to the pandemic, which hit India hard in recent months, hospitals are running out of oxygen to treat patients in many areas of the country. IFFCO and Kribhco are building oxygen plants in different areas of the country that will supply the health sector for free (see the box).

The Istituto Trentino Alto-Adige per Assicurazioni (ITAS, Italy) donated personal protective equipment and medical devices for the region as well. Moreover, shareholder's representatives donated their attendance fees to some voluntary associations, and the mutual organization implemented a one million "benefit of mutuality" to help insured members most affected by the pandemic crisis, specifically commercial and tourism businesses. Along the same line, the Kenya Union of Savings and Credit Co-operatives contributed toward a kitty, and the money was given to vulnerable members in the form of shopping vouchers to cater to their basic needs.

Likewise, Sancor Seguros (Argentina) organized a collection among the company's employees to contribute to different institutions, non-governmental organizations, food banks, hospitals, etc. A direct contribution from the company was added to the amount collected. Moreover, North Foodstuffs (New Zealand), together with Foodstuffs South Island, supported (and continue to support), 54 social organizations across New Zealand that fed, supported, housed, and lifted up those who were adversely impacted by COVID-19.

MID AND LONG-TERM MEASURES TO ENCOURAGE BUSINESS INNOVATION

Plans for medium to long-term activities of other enterprises interviewed mainly relate to reorganising future activities to ensure the smooth running of the organisations, but the interviews also revealed interesting medium to long-term actions that impact not only the life of the cooperative, but also elucidate the role that cooperatives may assume in the recovery phase and in the years to come.

S Group (Finland), for example, with the goal of being prepared for various disturbances and exceptional situations as well as ensuring continuity during times of crisis, is working on processes for procurement, distribution, and storage activities. Together with other companies and authorities, it is also working to develop security for the supply of grocery products.

Among all the actions promoted to support their members and clients during the pandemic, the Grupo Cooperativo Cajamar (Spain) launched a new service for the elderly that allows senior citizens to have access to cash without leaving their homes through a new home banking service provided by the staff of each municipality. Moreover, they launched a volunteer program in response to isolation problems in the elderly population due to increased restrictions. A group of employee volunteers contacted elderly customers via telephone to take an interest in them, accompany them, and remind them of basic security measures to protect their personal data.

As Coopeuch (Chile) pointed out, guaranteeing the effective functioning of a cooperative means guaranteeing jobs. For Coopeuch, new business models based on digital tools are the basis for achieving this objective, as it is essential to have flexible strategic planning that can serve as a roadmap for medium and long-term strategic objectives.

Finally, another example is Fundación Espriu (Spain), which, during the months of the pandemic, supplemented the public health system to prevent its collapse. Extraordinary measures had to be taken to meet the growing needs of patients and the increased workload of health professionals. The pandemic made it even more evident that the future of medicine depends on new technologies and the ability to foster the digital transformation, adapt facilities, and train professionals. In addition, it led management to identify certain

procedures conducive to telemedicine practice, all with the goal of creating the right environment for doctors to practice their profession and for users to receive the best possible healthcare. To design a people-centred management model, all stakeholders, including professionals and patients, must have representation on the governing bodies.

STRENGTHENING THE COMMUNITY WITH VARIOUS PARTNERS

The case of Fundación Espriu highlights the crucial role that cooperatives can have in strengthening and rethinking health systems. In an evolving society characterized by ever-expanding and diversifying needs, health and social systems will be increasingly called upon to recognize these needs and produce personalized responses. Designing such processes must involve the users. The ability of cooperatives to involve a variety of actors in the design of social and general interest services will be crucial (Diesis, Euricse, 2021). This need is not new, but it has been made even more evident by the pandemic.

Beyond the social and general interest services, cooperatives also contribute to overcome the pandemic by strengthening their community together with various partners.

During the months of the pandemic, Coopetarrazú (Costa Rica) supported the creation of a Covid Centre in coordination with the Tarrazú Municipality, the National Emergency Commission, the Ministry of Health, international clients, and other private organisations. In addition, the cooperative will promote the improvement of production areas (members and suppliers) on the path to sustainable agriculture.

Similarly, Foodstuff NZ North Island (New Zealand) will improve and invest in the Here for NZ project³ to continue making a difference in local food poverty and further support local communities.

³ <https://www.foodstuffs.co.nz/here-for-nz>

COVID-19: LARGE COOPERATIVES' RESPONSE IN SOME OF THE HARDEST-HIT NATIONS

Looking at WHO data from the end of May 2021, more than three-quarters of the reported COVID-19 cases were in the Americas and Europe, which had 6,114 and 5,562 cases per 100,000, respectively (WHO, 2021). Almost half (48%) of all reported COVID-19-associated deaths have occurred in the Americas and one-third (34%) in Europe. Among the most affected countries are the United Kingdom, Brazil, and India. India alone accounts for more than 80% of reported cases in Asia.

In Brazil, cooperatives continue to play a fundamental role in supporting the most fragile workers, who have been hit hard by the pandemic⁴. Unimed, the top-ranking cooperative in the WCM health sector ranking, provides especially vital support to the Brazilian health system's fight against the novel coronavirus. During the pandemic, Unimed strengthened health unit structures, increasing the number of beds and services and building field hospitals⁵. Unimed also initiated a campaign aimed at raising awareness of the importance of vaccinations—both for those vaccinated and the communities in which they live.

Unimed's prevention and assistance initiatives have also supported communities by donating food and medical supplies and providing advice and support to local governments. For example, in addition to donating 35 tons of food baskets and hygiene products to socially vulnerable communities in the Belo Horizonte metropolitan region, Unimed-BH supplied the municipality the technology needed for online coronavirus-related consultation, providing essential medical assistance to the Minas Gerais capital⁶.

During the first wave of the COVID-19 pandemic in India, large Indian cooperatives supported people and communities across the country through a variety of actions⁷. AMUL, the Punjab State Cooperative Milk Producer's Federation Ltd. (MILKFED), National Agricultural Cooperative Marketing Federation of India Ltd. (NAFED), and MARKFED supported farmers and other citizens by providing basic services that were not

⁴ <https://iloblog.org/2020/07/03/how-cooperatives-can-help-brazils-waste-pickers-build-back-from-covid-19/>

⁵ <https://www.unimed.coop.br/home/imprensa/noticias-unimed/listagem-noticias/unimeds-reforcam-suas-estruturas-para-cuidar-das-vitimas-da-covid-19>

⁶ <https://www.unimed.coop.br/site/-/unimed-bh-adere-ao-movimento-unidos-pela-vacina-e-doa-materiais-para-apoio-%C3%A0-vacina%C3%A7%C3%A3o?redirect=%2Fsite%2F>

⁷ <https://www.ica.coop/en/newsroom/news/cooperatives-stand-test-time-once-again-india>

guaranteed due to the lockdown. The National cooperative Union of India (NCUI), the Indian Farmers Fertiliser Cooperative (IFFCO), the Krishak Bharati Cooperative Limited (KRIBHCO), AMUL, the Self-Employed Women's Association (SEWA), and the Uralungal Labour Contract Cooperative Society (ULCCS), made generous donations by mobilizing various financial resources, including contributions from their employees' salaries. IFFCO and KRIBHCO also distributed masks, sanitizers, PPE kits, and food.

It was during the second wave of the pandemic, however, that the cooperatives really became critical. When oxygen supplies began to run low, the fertilizer cooperative IFFCO established four oxygen plants in Uttar Pradesh, Gujarat, and Odisha at its own expense to provide free oxygen to the population, inspiring other large cooperatives. KRIBHCO, for example, decided to produce oxygen in its two plants, and other regional and local cooperatives followed suit. These cooperative initiatives have been recognized by the Indian government, which encouraged fertilizer companies to follow the cooperatives' example by supporting the provision of oxygen to rural areas.

Moreover, data from Kerala seems to confirm the role of cooperatives in countering the spread of the virus. As NCUI points out, Kerala has effectively managed the pandemic maintaining a low mortality rate despite its high rate of infection. The state has a strong cooperative presence, including within the health sector. The state has more than eight hundred thousand cooperatives spread across about 90% of its villages engaged in most areas of socioeconomic activity, including health⁸. This, once again, raises the question of what contributions these cooperatives can make to rethinking and strengthening village health systems.

The situation in India has raised attention in several areas of the world. In the UK, a number of British retail members expressed the urgent need to extend their collective support and solidarity to their Indian colleagues. Co-operatives UK coordinated a funding call to support cooperative members in India during the escalating COVID crisis across the country. Funding for essential medical equipment was granted to SEWA Co-operative Federation, which currently works with 106 women's co-ops all around India.

The commitment of British cooperatives has been relevant not only internationally but also nationally. The Midcounties Co-operative (the United Kingdom), through their regional community programme, enables members, colleagues, and community groups to work together to develop cooperative solutions to

⁸ <https://ncui.coop/wp-content/uploads/2021/05/The-Cooperator-MAY-2021.pdf>

local issues. Moreover, they actively supported the economy of local communities by broadening their local supplier base and developing closer working ties with their suppliers. During the pandemic, their local supplier base was actively expanded to support local businesses in crisis, increasing the number of suppliers to 200 by the end of 2020. They worked more closely than ever with them to provide support and keep the shelves stocked in what became a difficult environment. The cooperative focused not only on short-term actions but they developed revive (mid-term) and thrive (longer term) plans across all its trading groups to help rebuild the economy and develop cooperative solutions⁹. And this is just one example of how the British cooperative movement is looking to the future by taking an active role in rebuilding and defining a more inclusive, green, and cooperative economy¹⁰.

CONCLUSION

With the virus still traveling at different speeds in different areas of the world, many cooperatives operating in the areas most affected by the pandemic are still grappling with the day-to-day management of their activities in the emergency phase. However, actions promoted during the pandemic show some preliminary indications of the potential for action by cooperatives in the recovery phase to spread an economic model that is more sustainable and more inclusive. Participation and attention to members and a community focus are key points that have guided cooperatives' actions in recent months. These actions could be the pillars for disseminating a business model that embraces the goals promoted by the 2030 Agenda in terms of human rights, fair labor, environmental sustainability, and sustainable growth.¹¹

The large cooperatives interviewed have a clear idea of what their activity focus should be in the coming years: growing organizations while keeping cooperative principles and values in mind, investing in local suppliers, supporting communities, and working to reduce social inequalities exposed by the pandemic. Only research and data collected over the next few years will tell us how many cooperatives have succeeded.

APPENDIX
COOPERATIVES THAT CONTRIBUTED TO THE RESEARCH

The keyword of the recovery: sustainable development

How the Top 300 cooperatives are pursuing the Sustainable Development Goals

COVID-19 is still impacting the world today and conditioning many aspects of our lives. Even past progress made in reducing the poverty rate as well as social and economic inequalities has been lessened by the global pandemic (United Nations, 2021a).

The current situation calls on the global community to make a difference, to change the structural management of crisis set up by states and governments. The virus has shown that the crisis is not only of a social, health and economic nature, but also environmental: cities and countries with high levels of air pollution and green-house emissions have experienced higher COVID-19 spread and lethality rates (Coccia, M., 2021; Vali, M., Hassanzadeh, J., Mirahmadizadeh, A. et al., 2021).

The pandemic has highlighted the interdependency of the climate and healthcare crises and, now more than ever, the achievement of the Sustainable Development Goals (SDGs) is fundamental, even if that objective is more challenging than in the pre-pandemic era (United Nations, 2021a). Various initiatives have already been put into effect around the world.

In Asian countries an increasing focus on more sustainable development has been spreading with the ongoing pandemic and specifically in Japan, Prime Minister Yoshihide Suga launched a US \$19.2 billion recovery plan focused on economic growth through green investments and digital innovation, aiming to become carbon neutral by 2050 (VOA News, 2020). Likewise, the government of Malaysia made for the first time a concrete commitment towards the achievement of the SDGs by projecting a green and inclusive recovery agenda through the establishment of a fund called the "Malaysia-SDG Trust Fund" that aims to cooperate with the UN in order to coordinate financing from both public and private sources. <http://belanjawan2021.treasury.gov.my/index.php/en/>. In South America, for the 2020-2022 period, the Chilean President Sebastián Piñera announced a recovery plan called "Paso a Paso Chile se Recupera" ("Step by step Chile recovers") for a total of US \$34,000 million in public investments that will set cohesive economic, inclusive and sustainable actions to face the healthcare crisis to accelerate the transition to a more sustainable de-

velopment model (<https://www.gob.cl/chileserecupera/>). Likewise, the European Union members have adopted various instruments to face the crisis, including the Next Generation EU project (NGEU), providing prompt economic and social aid to build a greener, high tech, more flexible and responsive Europe (Eurostat, 2021; European Union, 2021).

More generally speaking, the entire international community has addressed an immediate green, fair, and sustainable revolution in order to recover from the ongoing emergency. For instance, the United Nations launched the “UN Decade on Ecosystem Restoration” on the 5th of June 2021 for the World Environment Day with the aim of implementing actions that will combat the deterioration of ecosystems and conserve biodiversity, which specifically pursue the achievement of the SDG 13 (Climate Action), 14 (Life under Water) and 15 (Life on Land) (United Nations, 2021b).

Since 2015, when the 2030 Agenda for Sustainable Development defining the 17 SDGs was launched during the United Nations General Assembly, there has been increased international cohesion towards a more sustainable, green, and fairer world. And cooperatives have been highlighted in the 2030 Agenda as role models to manage global changes, influencing societies and traditional businesses in actively pursuing common sustainability goals (ICA, 2013; United Nations, 2021c). Indeed, Cooperatives have a fundamental role in pursuing the SDGs, acting on several fronts, including gender equity, combating economic inequalities, and implementation of a more sustainable model of production and consumption (Moxom et al., 2019). Moreover, cooperatives have shown that they can be a lighthouse for local communities, and thanks to their solid social networks they can sustain their members and the community, promoting a collective way of perceiving risks and supporting new strategies to face challenges or increase quality (ILO, 2016; UNFTSSE, 2019).

As highlighted by Hudon and Huybrechts (2017), there are several elements of cooperatives (and social economy organisations more generally) that can foster a more sustainable development model. Their participatory and democratic structures, collective decision-making, frequently multi-objective and multi-stakeholder nature, and their focus on social aspects are foundational characteristics that could prove to be fundamental for triggering a shift in the prevailing production model.

The World Cooperative Monitor Top 300 ranking is constituted considering economic data, but it is also important to evaluate the actions of these cooperatives in terms of environmental sustainability, human rights, equitable growth and how much they can affect non-cooperative businesses and society itself. This is even more important considering the difficulties and inequalities raised by the pandemic.

Over the last three years, the World Cooperative Monitor has collected data and analyzed experiences implemented by the world’s largest cooperatives, with particular attention to the theme of labor practices implemented to ensure fair work (SDG 8) and those aimed at combating climate change (SDG 13). Now with the pandemic underway, it may be useful to reflect on how cooperatives can contribute to the recovery phase.

The SDGs are the instrument that helps to assess which strategies are employed, therefore the purpose of this analysis is to understand how the largest cooperatives in the world have contributed to achieving the SDGs and what are the particular areas of focus that they prioritize.

Given this, this paragraph provides an overview of what the current Top 300 cooperatives have accomplished by analyzing the sustainability reports of those that adhere to the United Nation Global Compact project and/or the Global Reporting Initiative (GRI).¹ With reporting for the years 2020 and 2021 not yet fully available, the analysis focuses on actions put in place by cooperatives in 2019 and 2018, thus providing some insights into the status of actions on the eve of the pandemic.

¹ The data presented in this section are based on an analysis of the sustainability reports of the Top 300 (2021 edition) cooperatives that joined at least one of the two projects in the years 2019 or 2018. Within the United Nations Global Compact, all participants are required to produce and submit an annual report online entitled Communication on Progress that outlines the efforts to operate responsibly and support society. Within the GRI, cooperatives can upload their sustainability report to the online database of the project specifying whether or not the report was compiled using GRI indicators. However, there has been a partial upload of sustainability reports referred to 2018 and 2019 fiscal year by cooperatives (<https://database.globalreporting.org/search/>). Therefore, we decided to consider primarily data from the UN Global Compact project for the analysis to avoid biased data.

The analysis focuses on areas of action addressed in enterprises' reporting activities. Since the reports emphasize the actions that the enterprises want to communicate, not everything that is communicated is necessarily fully implemented, while not everything that is implemented is necessarily reported. Nevertheless, the analysis can provide interesting insights.

TOP 300 COOPERATIVES: WHICH SDGs ARE THEY TARGETING?

Considering the Top 300 ranking, 72 organisations out of the 300 listed joined at least one of the two initiatives: 9 joined both initiatives, 34 have solely adopted the GRI standards and 29 joined only the United Nations Global Compact. All the 43 organisations that adopted the GRI indicators released a sustainability report applying the GRI standards. 34 of the 38 organisations that joined the United Nations Global Compact project declared they address at least one of the SDGs in their Communication on Progress (CoP).

The themes mainly addressed by those in the UN Global Compact project are related to SDG 13 "Take urgent action to combat climate change and its impacts", SDG 8 "Promote sustained, inclusive and sustainable economic growth full and productive employment and decent work for all" with a focus especially on the decent work, SDG 3 "Ensure healthy lives and promote wellbeing for all at all ages", SDG 5 "Achieve gender equality and empower all women and girls" and SDG 12 "Ensure sustainable consumption and production patterns".

38 cooperative that joined the UN Global compact:

Which of the following Sustainable Development Goals (SDGs) do the activities described in your COP address?

With respect to your company's actions to advance the Sustainable Development Goals (SDGs), the COP describes:

Looking more in-depth at the contributions to meeting the SDGs by the biggest cooperatives in the world, an example of the actions taken to combat climate change and its impacts (SDG 13) is given by the Norinchukin Bank (Japan). In 2019 it established the first dialogue session with a group of experts related to sustainability, involving both the company's directors and employees that resulted in the creation of a "Basic Policy on Finance". It entails the development of a more sustainable offering of responsible investments and loans that focuses on environmental conservation, given that the organisation cooperates with the agriculture, fishery and forestry industries (Norinchukin, 2020).

In relation to the promotion of inclusive and sustainable economic growth and decent work for all (SDG 8), in the agriculture field, the Agrial cooperative (France) established the "Agrial's Code of Conduct" that furnishes best practices to promote employment and skills development in addition to guaranteeing safety and well-being at work applied to all their employees. It has launched a program called "Agriboost" specifically for young members to support them in setting up a farming business through training courses, discussion groups, study trips and financial and technical assistance that differs for each branch of the cooperative in order to better respond to distinct needs (Agrial, 2019).

Another example of large cooperatives' commitment to taking action comes from Unimed (Brazil), which placed a focus on the "Customer Health and Safety" branch, addressing SDG 3 related to the assurance of healthy lives and promotion of wellbeing for all at all ages. The organisation obtained the accreditation of Normative Resolution 277, referring to the Accreditation Program for Private Plan Operators, established by the ANS – National Health Agency. This certifies excellence in continuous improvement in quality and performance in areas related to health services, beneficiary satisfaction, health promotion, and disease management. To better listen to and help its beneficiaries, Unimed implemented "Ouvidoria", a secondary communication channel for the defense of customers' contractual rights that seeks solutions to the issues presented, transforming them into tools for the improvement of internal processes and the optimization of improvements in the services provided (Unimed, 2019).

Regarding gender equality (SDG 5), Meiji Yasuda Life (Japan) has shown that with the right strategy, it is possible to progress from 3.8% (2012 fiscal year) to 30.1% (2020 fiscal year) female managers. In fact, the organisation offers diverse assistance programs and training sessions that include opportunities for women to meet their peers from different business sections, increasing the chances to get a managerial position. Moreover, Meiji Yasuda Life has implemented a progressive conversion of female employees on term-limited employment to permanent employment (Meiji Yasuda Life, 2020).

The last SDG most considered by large cooperatives is related to the sustainable consumption and production of goods and services (SDG 12). For instance, Consum (Spain), in the wholesale and retail trade sector, has almost reached 100% energy consumption from renewable sources, with a reduction of the CO₂ direct emissions by 79.9% in relation to those in 2015, the first year of footprint verification. In addition, to discourage the use of plastic, the cooperative has launched an awareness-raising campaign by handing out 30,000 shopping vouchers to recognize customers who regularly carry their own reusable bags. (Consum S. Coop, 2020).

KEY FACTORS: COOPERATION AND PARTNERSHIP

It is interesting to note that comparing these results with those that emerged from the 2018 analysis (WCM Report, 2018) confirms the above mentioned five SDGs as those on which large cooperatives feel they can act most. One difference, however, emerged from the 2018 data concerning SDG 17—Partnership for the goals. In the 2018 survey, only one-third of the cooperatives studied that joined the UN Global Compact noted the importance of networking in pursuit of achieving the SDGs. In the data collected this year, that percentage rose to more than 50%. Therefore, there seems to be a growing awareness that to bring about change, there needs to be joint action that goes beyond the actions of individuals, companies, and countries, and that acting in partnership can amplify the results of large-scale actions.

For Milcobel, the largest dairy cooperative in Belgium, the focus on sustainable production and climate protection is central to all operations, “*from cow to customer*”. However, it is not conceivable to work on these fronts alone, but rather in close cooperation with customers, dairy farmers, employees, and external stakeholders. Working, for example, with the Flanders Research Institute for Agriculture, Fisheries and Food, Milcobel is trying to make dairy farming more climate neutral. Their goal is to reduce the total greenhouse gas emissions by 30 percent per liter of milk thanks to a special diet for cows (<https://milcobel.com/mvo/milcobel-duurzaamheidsvisie/milieu-en-klimaat/>).

Also in the area of agribusiness, to promote more sustainable meat production, Danish Crown (Denmark) promotes and participates in partnership projects involving both private companies and government agencies, such as the Danish Partnership for Resource and Water Efficient Industrial Food Production. It is a public-private partnership that includes food companies, technology providers, universities, and research institutes with the goal of developing technology that can help reduce freshwater consumption and increase the use of purified recycled water to reduce water consumption in Danish food production by 15–30 percent without compromising food quality and safety (Danish Crown, 2019).

In the financial sector, the Nippon Life Insurance Company (Japan) has decided to set a long-term stable business plan to strengthen stakeholder engagement e.g. co-operating with Nichii Gakkan Co., Ltd., and with the aid of their own subsidiary Life Care Partners Co., Ltd. They incremented the support of the work of Global Kids Co., Ltd., a daycare provider, to complete the installation of approximately 100 daycare centers for children across all the prefectures. This will guarantee both a solution to the rising requests from those parents who need some help with childcare while they are working, and sustainability to the company-led daycare operations (<https://www.nissay.co.jp/english/esg/>).

CONCLUSION

This research aims to demonstrate the link between SDGs and cooperatives, especially the biggest ones that can have a tangible impact that is recognizable worldwide. The cooperative business model can be resolute in facing crises. Indeed, their unique governance and core pillars have demonstrated that choosing a sustainable and green strategy helped them in the recovery phase. The largest cooperatives in the world have shown not only their financial effort in pursuing the achievement of the SDGs, but also the awareness-raising actions made towards the national institutions and the community itself, demonstrating the strength raised from cooperation and unity. The examples highlighted in this chapter demonstrate the role cooperatives can play in pursuing the achievement of the SDGs and the leadership they can take on facing a range of challenges. But the challenge of monitoring concrete results remains.

Data have a crucial role in showing the contributions of cooperatives toward sustainable development. In this perspective, metrics and standards for reporting sustainable practices provide guidelines on how to collect and communicate data. Among the several international initiatives, the Global Reporting Initiative (GRI) and the UN Global Compact are the most popular and adopted. However, the vagueness of some indicators, the lack of consistency in the way indicators are reported and the freedom companies have about which indicators to report are factors that might affect the actual effectiveness of such initiatives. Moreover, the peculiar nature of cooperatives also raises questions about the need for more targeted indicators that can capture the real contribution of cooperatives to the achievement of the SDGs.

The ICA 2020-2030 Strategic Plan, approved at the Kigali General Assembly in October 2019, called “a People Centered Path for a Second Cooperative Decade”, clearly expresses the willingness of the ICA to monitor and report on cooperatives’ contribution to the SDGs. It specifies, “Monitoring: We need to measure and promote the direct contribution of cooperatives to global sustainable development by identifying key indicators within the seventeen interdependent United Nations Sustainable Development Goals against which

to measure our economic, social and environmental impact globally, regionally, nationally and by sector. Reporting: We must conduct primary and secondary research on the contribution of cooperatives to global sustainable development and produce periodic progress reports for wide dissemination with continuing reference to the 7th Cooperative Principle, ‘Concern for Community’”. Based on these objectives, the ICA has been conducting a series of studies to produce a common framework which would allow cooperatives to understand the SDGs from the cooperative point of view. It is expected that the common framework would also lead to the identification of transversal and sectoral indicators that cooperatives from all different levels might use as a common reference to prove their collective power in achieving the SDGs. The discussion on the common framework and indicators will be launched on the occasion of the 33rd World Cooperative Congress 2021 in Seoul. The result of the discussion will aid in developing a more cooperative-centered reporting system which might complement the existing reporting systems.

2019 Results and Rankings

This section presents the results of the economic analysis of the world's largest cooperative organisations, cooperative groups, and mutuals.

In addition to economic data, employment data and organization type are also presented for the Top 300 where available.

The WCM provides two different Top 300¹ and sectoral rankings: one based on turnover and the other based on the ratio of turnover over Gross Domestic Product (GDP) per capita². The ratio of turnover over GDP per capita measures the turnover of the Top 300 cooperative and mutual enterprises in terms of the purchasing power of an economy, relating the turnover of the enterprise to the wealth of the country. It allows us to compare the relative size of enterprises in considering different levels of national economic wealth, but does not compute the contribution of each enterprise to the national GDP. Rather, it measures the size of the enterprise in its national context.

The data collected for the 2021 edition of the World Cooperative Monitor is from the fiscal year 2019. The primary sources of data include annual and sustainability reports, existing databases of economic data, data collected by national associations, research institutes, and other organisations, and the use of a questionnaire to collect data directly from enterprises³. Over the last two years we have concentrated efforts on collecting turnover and employment data through the search for annual and sustainability reports for each organization in the Top 300 ranking of the WCM 2019 rather than

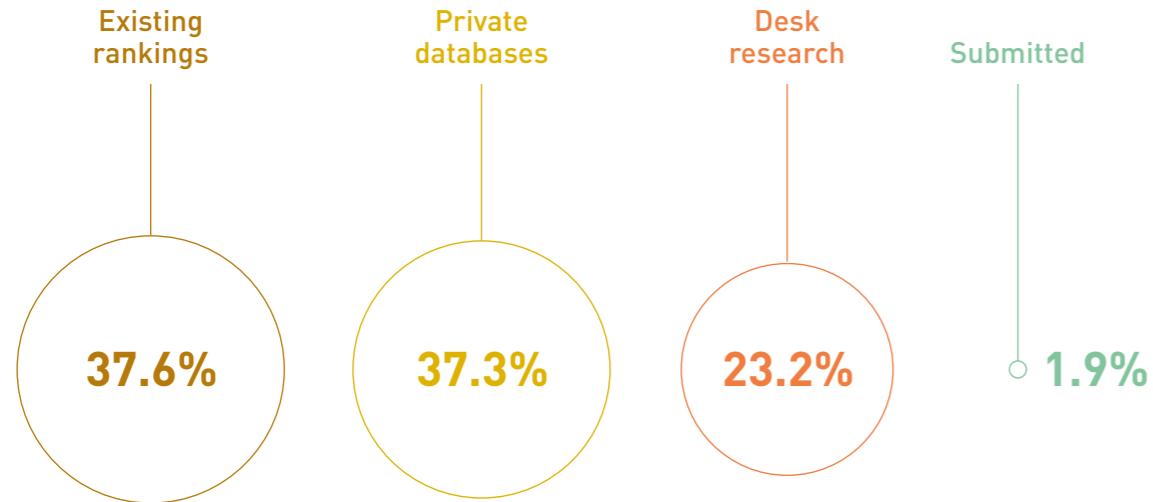

¹ It should be noted that due to limited data sources, the Top 300 rankings cannot be considered exhaustive. However, it should also be noted that based on the consolidated data collection methods refined over the last ten years, the rankings in the WCM 2021 represent a very important part of largest cooperatives worldwide (for more detailed information on data collection, please see the Methodology and Data sources chapter).

² GDP per capita data is sourced from the World Bank.

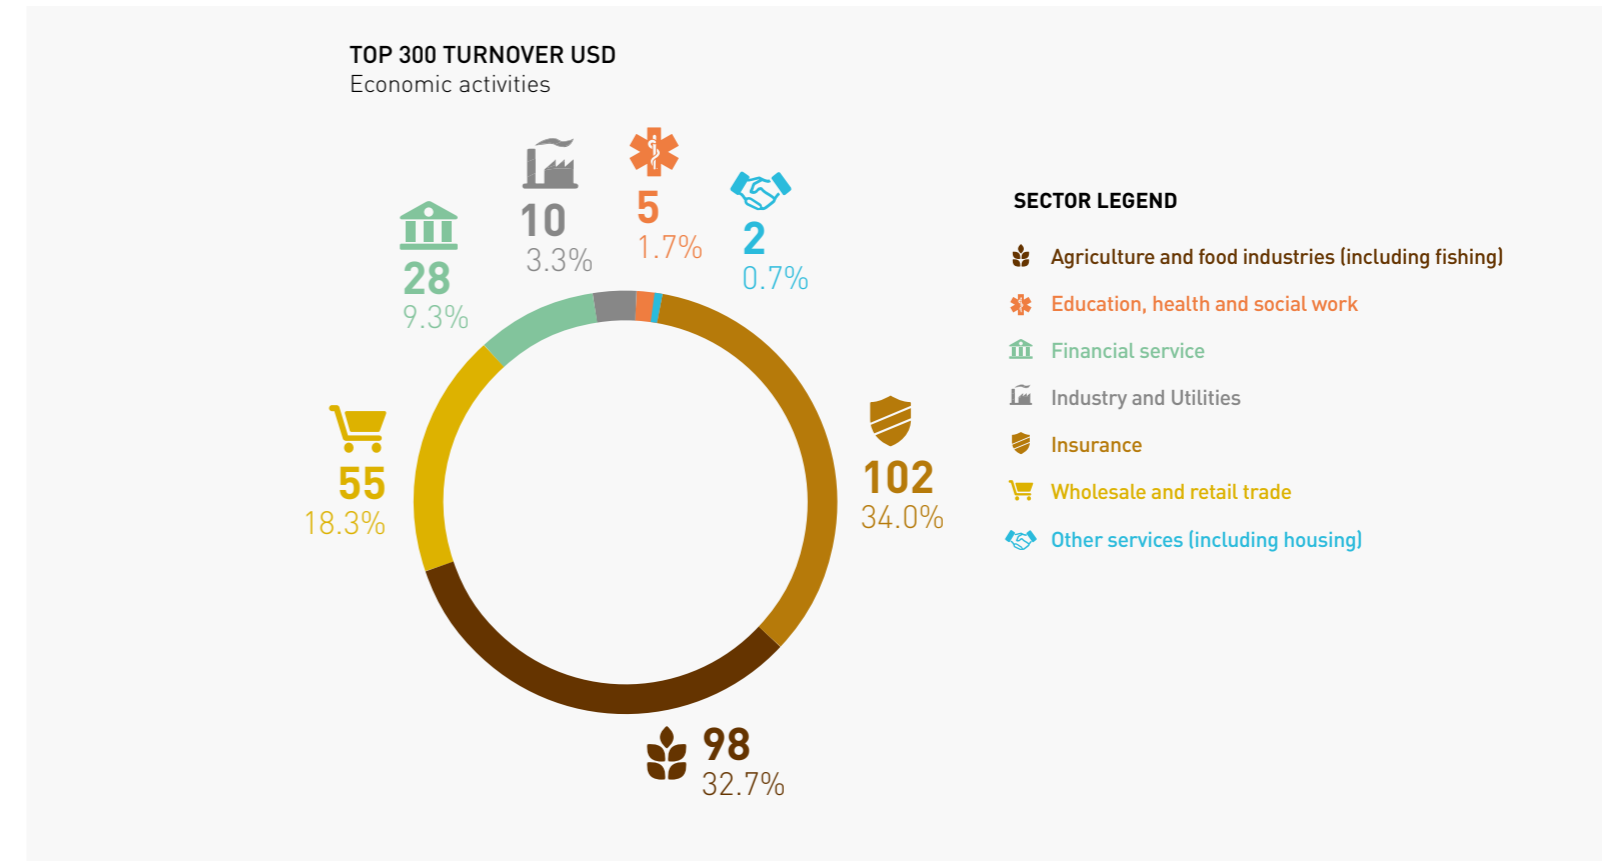

³ The complete list of data sources is in the methodology chapter.

relying primarily on external datasets. This strategy helps ensure data is collected using the same methodology and has contributed to the increased coverage of employment data in the rankings. When online research (in the tables the source is labelled “desk research”) is incomplete, other data sources are utilized, though when multiple sources are available, the desk research is utilized. For some organisations there is a larger than usual variance between this year’s and last year’s turnover data due to changes in accounting methods adopted (for example, the adoption of new International Financial Reporting Standards).

Data for 2019 comes from:

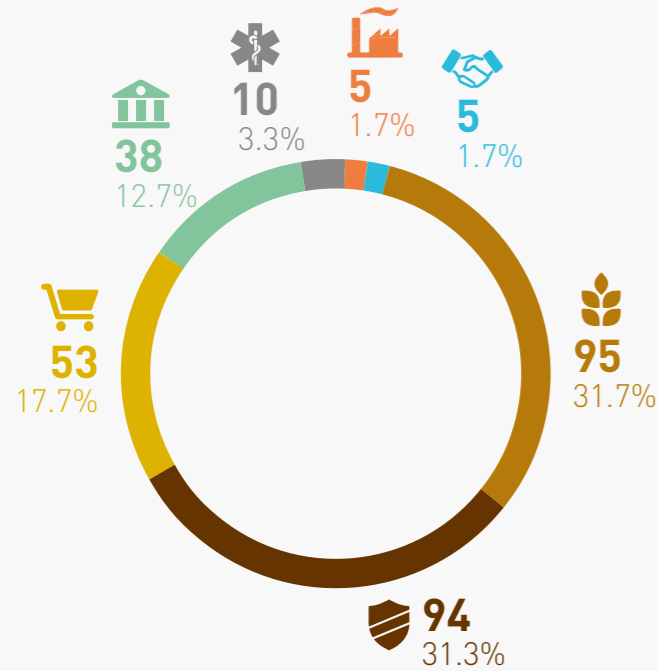

The Top 300 by turnover ranking presents an overall total of 2,180.01 billion USD for the year 2019 with most of the enterprises operating in the insurance sector (102 enterprises) and agricultural sector (98 enterprises), followed by wholesale and retail trade (55 enterprises). The Top 300 by turnover over GDP per capita, rather, sees the insurance and agriculture sectors with almost equal numbers of enterprises (94 and 95 respectively) followed by wholesale and retail trade (53 enterprises). The service sectors become more visible in the turnover over GDP per capita ranking with 10 enterprises in the education, health and social work sector (compared to 5 in the turnover ranking) and 5 in other services with compared to 2 enterprises in the Top 300 by turnover.

TOP 300 TURNOVER/GDP PER CAPITA

Economic activities

SECTOR LEGEND

- Agriculture and food industries (including fishing)
- Education, health and social work
- Financial service
- Industry and Utilities
- Insurance
- Wholesale and retail trade
- Other services (including housing)

With regards to type, the majority of enterprises in the Top 300 by turnover are producer cooperatives mainly representing agricultural cooperatives and retailers' cooperatives (120, to which is added one producer/consumer), followed by mutuals (86) and consumer/user cooperatives (76). 11 of the top 300 are non-cooperatives controlled by cooperatives, while only 4 are worker cooperatives and 2 are multi-stakeholder cooperatives. The results are similar in the Top 300 based on turnover over GDP per capita, though there are more worker cooperatives (10 enterprises).

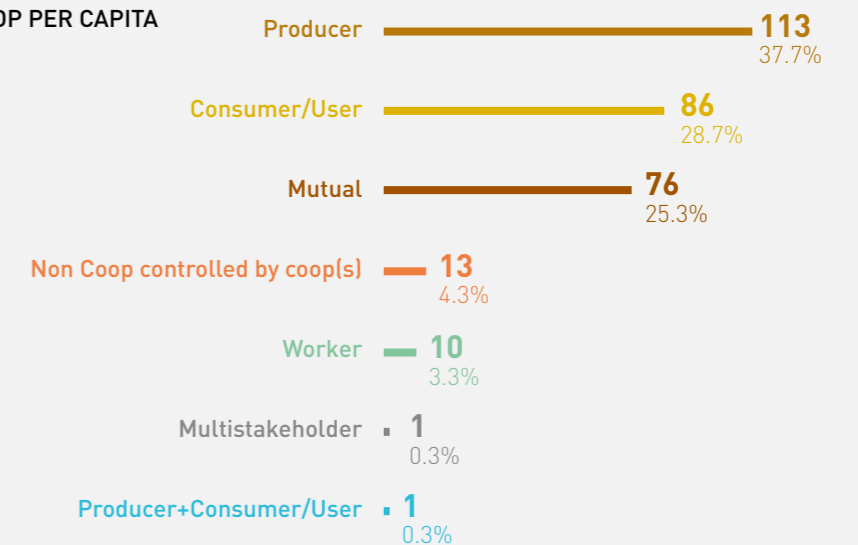

TOP 300 TURNOVER USD

Type

TOP 300 TURNOVER/GDP PER CAPITA

Type

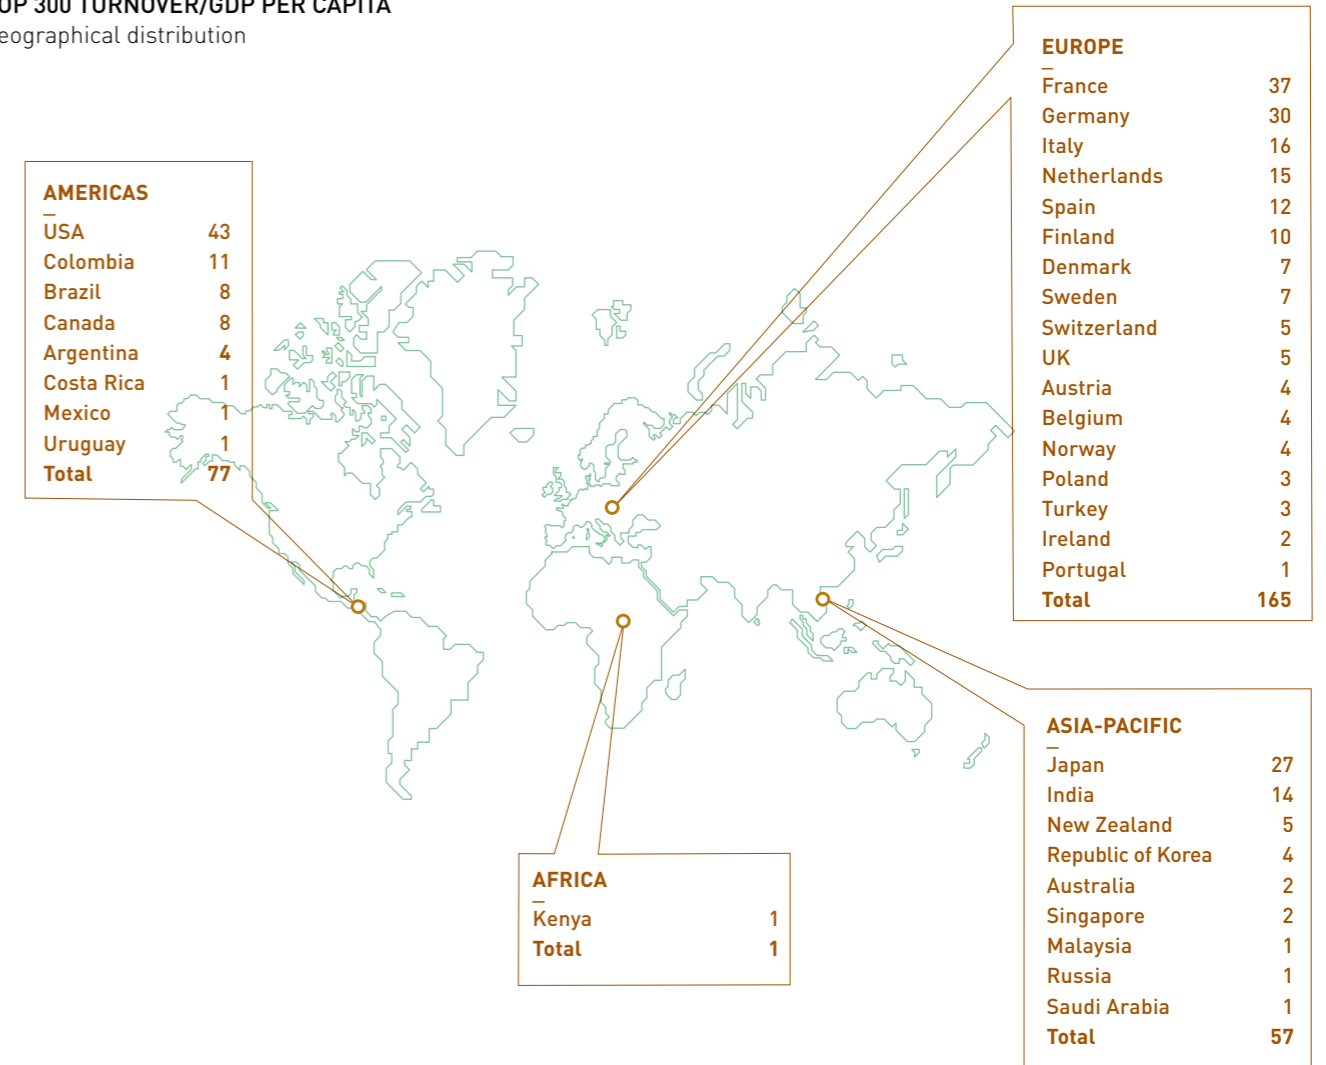

The geographical distribution of the Top 300 by turnover and the Top 300 by turnover over GDP per capita is similar to past years, with most of the large cooperatives and mutuals in the Top 300 rankings located in the most industrialized countries. The Top 300 by turnover over GDP per capita, though, has a larger number of countries, as it is not based on absolute value.

SECTOR RANKINGS

The following pages present the World Cooperative Monitor rankings by sector of activity. The results presented in the rankings are to be considered exploratory, not exhaustive. The methodology found on page 168 provides details concerning the data collection and analysis; however, some key points to keep in mind regarding the rankings include:

- If an organisation performs more than one activity, it is categorized in the sector representing its primary activity. Organizations are classified by economic activity, in some cases multiple economic activities have been combined into a sector.
- Comparisons among cooperatives in different sectors should be made with due caution, keeping in mind that varying economic indicators have been used for different types of organisations (banking income for banks, premium income for insurance cooperatives and mutuals, and turnover for other cooperatives).
- The rankings in this edition are based on data from 2019. To create the Top 300 and sector rankings based on U.S. Dollars (USD) the 2019 average exchange rate was utilized. Note that the conversion to USD from Local currency unit (LCU) is impacted by the fluctuations from year to year.

Agriculture and food industries

This section includes all cooperatives that operate along the entire agricultural value chain, starting from the cultivation of agricultural products and livestock farming to the industrial processing of agricultural products and animals. This sector includes both agricultural producers' cooperatives and consortia of cooperatives (or similar arrangements) that carry out the processing and marketing of agricultural goods for their members. Organizations in the fishing sector are included. Agricultural cooperatives exist in almost every country around the world. They are very well represented in both developed and emerging economies and contribute to food security and poverty reduction in different areas of the world. They help farmers increase their returns and income by pooling their resources to support collective arrangements and economic empowerment.

From this sector, there are **98** in the Top 300 based on turnover and **95** in the Top 300 turnover over GDP per capita

Industry and utilities

This section includes cooperatives operating in industrial sectors with the exception of the food industry as well as those whose economic activity deals with utilities. It includes worker cooperatives in the construction sector and users' cooperatives in the utilities sector, that is, cooperatives that are active in the management of infrastructure for a public service, such as electricity, natural gas, and water. Energy and other public services are sectors in which cooperatives are strongly motivated by ethical-cultural considerations and innovation. Often, they are committed to "green" energy and employ a more sustainable and responsible model of development, while providing local communities with the power to intervene directly in their own futures.

From this sector, there are **10** in the Top 300 based on turnover and **5** in the Top 300 turnover over GDP per capita

Wholesale and retail trade

This section includes retailers' cooperatives formed to purchase and supply goods and services at competitive conditions in the interest of their members (which are classified as producer cooperatives in the cooperative typology) and consumer cooperatives operating in wholesale and retail activities (which are classified as consumer/user cooperatives in the cooperative typology). As is the case with cooperatives in general, the aim of cooperatives in this sector is not to maximize profits, but to be of use to their members and defend their interests. The goals of cooperatives include fostering sustainable development of local communities, promoting environmental concerns and ensuring the health and safety of consumers. With strength in numbers, cooperatives are able to further these aims through their ability to purchase and supply goods and services at competitive conditions in the interest of their members.

From this sector, there are **55** in the Top 300 based on turnover and **53** in the Top 300 turnover over GDP per capita

Insurance

This section focuses on mutual organisations and cooperatives owned and democratically controlled by their insured customers. Insurance co-operatives and mutuals focus on the long-term needs of their customers and on delivering high quality products at fair prices. According to the International Cooperative and Mutual Insurance Federation (ICMIF), mutual or cooperative insurers serve more than 900 million people worldwide. Their contribution is crucial within the social protection system, enabling members to obtain insurance policies at more favourable conditions than those available on the open market.

From this sector, there are **102** in the Top 300 based on turnover and **94** in the Top 300 turnover over GDP per capita

Financial service

This section refers to cooperative banks and credit unions providing banking and financial intermediation services, democratically controlled by member customers (borrowers and depositors). In the financial service sector, cooperatives play a central role in supporting economic development. Even during economic crises, cooperatives have remained more stable than other banks, continuing to provide trustworthy financial support for their members.

From this sector, there are **28** in the Top 300 based on turnover and **38** in the Top 300 turnover over GDP per capita

Education, health and social work

This section includes cooperatives that manage educational, health or social services. These may include consumer (user), producer (provider) and multistakeholder social and health cooperatives that seek to provide high-quality, cost-effective community health care and social services. The contributions of health and social care cooperatives range from medical intervention to the prevention of disease and the improvement of general health outcomes and collective well-being. The impact of these organisations is all the more important given the increasing demands on welfare systems around the world due in part to cuts in public funding and an aging population.

From this sector, there are **5** in the Top 300 based on turnover and **10** in the Top 300 turnover over GDP per capita

*The figure includes the central and single coops

Methodology and Data Sources

The methodology for the World Cooperative Monitor is briefly described below.

A summary of the population under study, data collection, rankings, and methodological issues is provided.

The methodology of the chapters dedicated to the SDGs and Covid-19 are within the chapters.

The World Cooperative Monitor project intends to pursue three goals:

1. provide visibility to the movement by monitoring and demonstrating the impact of large cooperatives, from both an economic and a social perspective;
2. maintain an up-to-date database on large cooperatives containing economic, employee, and membership data;
3. respond to the knowledge needs of large cooperatives, providing both ad-hoc quantitative and qualitative research on aspects of their interest.

WHO IS SURVEYED

The project collects data on large cooperative enterprises and aggregations of cooperatives, mutual, and non-cooperative enterprises in which cooperatives have a controlling interest.

The project focuses on units that carry out economic activity for the production of goods or services for their members. Cooperative unions and federations that mainly carry out lobbying, representation, and protection of the interests of associated cooperatives are not covered by the project.

The organisation types to be surveyed are currently under revision by the World Cooperative Monitor team and Advisory Committee to better compare organisations across countries, sectors, and types. The difficulty lies in the fact that finding a definition that is shared by different countries is complicated. There are very different regulations and laws between one country and another in this regard and finding a way to define all organisations through a unique classification, which can at the same time take into account and enhance the peculiarities of the different systems is complicated and challenging. Moreover, cooperatives that enter the top 300

classification of the WCM, given their size, are real giants from an economic point of view and therefore their structure is in most cases very complex and branched. On this point a continuous exercise of refinement over the years, is leading to a continuous improvement of the data collected.

CLASSIFICATIONS

The project classifies the cooperative organisations by economic activity and cooperative type (International Labour Organisation, 2018). Information on the economic activity or industrial sector of each organisation is collected and classified into ten categories (Table 1), each of which mainly reflects the structure of ICA sectoral organisations. The classification into the ten categories is determined by the International Standard Industrial Classification of All Economic Activities (ISIC) or regional and national equivalents class, in which the activity of the cooperative is included. If a cooperative combines two or more economic activities, the main economic activity is identified following international methods and standards.¹

In the sector rankings, some economic activities are combined to form more general sectors, as described in the rankings paragraph. Units are also classified based on the main interest of their members (Table 1). In the cases of cooperatives with members' interest different from those proposed in Table 1, they will be analysed case by case. Mutuels and non-cooperative enterprises are classified as such.

¹ "The principal activity of the unit in general can usually be determined from the goods that it sells or ships or the services that it renders to other units or consumers. [...] Ideally, the principal activity of the unit should be determined with reference to the value added to the goods and services produced. The relevant valuation concept is gross value added at basic prices, defined as the difference between output at basic prices and intermediate consumption at purchaser's prices." (UN 2008, p. 20).

INDICATORS

The project collects primarily economic data, along with data, where possible, on work generated, calculated using the total head count at the balance sheet year-end date, but also taking into account the data of Full-time equivalents or average data of the employed for the year in case data on head count are not available.

Annual turnover data is collected for the all the entities. In the case of a cooperative group, the consolidated data is taken into account. If the consolidated data is not available, if possible the turnover of the entities that make up the group are considered, excluding the amount of value resulting from operations within the group, meaning operations among members of the group.

TABLE 1. COOPERATIVE TYPE CLASSIFICATION

Producer cooperatives	The main interest of the members is related to their production activity as enterprises in their own right. The members typically comprise household market enterprises such as small agricultural or craft producers but may also include corporations.
Worker cooperatives	Members share an interest in the work which is provided by or ensured through the cooperative. The members are individual workers (worker-members) whose jobs are directly assured through their cooperative.
Consumer/User coops	Members are the consumers or users of the goods or services made available by or through the cooperative. Financial service cooperatives are classified as part of consumer/user cooperatives even if these cooperatives also service producers.
Multi-stakeholder coops	A cooperative which has more than one type of member with significant involvement in the activity of the cooperative and in which: (i) more than one type of member is represented in the governance structure of the cooperative; and (ii) no type of member has a dominant position through a majority of votes in the governing body or an exclusive veto over decisions.

Source: (International Labour Organisation, 2018)

The present report refers to data from the year 2019. For all the economic data, the account closing date is 31 March, which means that data for accounts with closing dates between 01/04/2019 and 31/03/2020 is considered as representing economic activity in year 2019.

Data is collected in the local currency and then converted into USD. The average monthly 2019 exchange rate was utilized. Note that the conversion to USD from Local currency unit (LCU) is impacted by the fluctuations from year to year. Economic data is reported in billion (1 billion = 1,000,000,000). The absolute values are rounded to the second decimal place and percentages are rounded to the nearest whole number.

RANKINGS

In the rankings tables, in addition to the Top 300 rankings, a list of the largest cooperatives in each individual sector is presented. The rankings presented are based on turnover data, defined as the income generated by the business activities conducted by a company, usually the sales of goods and services to customers. In the case of the Insurance sector, this is premium income. For the Financial Service sector, this is the sum of net interest income, net premiums and other operating income, such as deposit and payment service charges, lending fees and credit card service revenues, income from brokerage and investment fund services, management and custodial service fees, foreign exchange income as well as other income. However, this value was used solely for the Financial Service ranking. In the Top 300 ranking, to achieve a more homogeneous comparison, the sum of interest income, non-interest income (income from banking services and sources other than interest-bearing assets) and premium income (if the organisation also provides insurance services) was utilized for financial service organisations. This methodology creates the most homogeneity possible among data sources but note that there could be variations among countries and existing rankings regarding calculations and values used. When available, the number of employees is also listed.

In addition to rankings based on turnover, a Top 300 ranking based on the ratio of turnover over gross domestic product (GDP) per capita is also presented. The purpose of this

FIGURE 1. ECONOMIC DATA SOURCES
2021 WORLD COOPERATIVE MONITOR
DATABASE

ranking is to neutralize the differences between the different countries due to differences in purchasing power and therefore the different cost of living that differentiates the individual countries: this allows a greater comparison of turnover.

Some of the economic activities described above are grouped into sectors for the sector rankings: fishing is included in the agriculture and food industries sector, industry and utilities are grouped together, as are housing and other services.

DATA SOURCES

Data is collected through online research and consultation of financial statements and annual reports integrated with datasets developed at the national/regional level by representative associations of cooperatives and mutual societies and other private databases that gather personal and economic data about cooperative organisations from across the world. A questionnaire directed at the largest cooperatives was also utilized.

Also, with regard to the employment data, the working group has used various sources, online research, the questionnaire completed by the organisation, data collected from lists at the national level and data collected in databases.

The direct involvement of federations and cooperatives is essential to ensuring good coverage in different areas of the world. For this reason, ICA promotes the creation of national monitors which, following the methodology of the international project, collect data on the largest cooperatives active in the country.

PROMOTERS

International Cooperative Alliance (ICA)

www.ica.coop

The International Cooperative Alliance is an independent, non-governmental association which unites, represents and serves cooperatives worldwide. Founded in 1895, the ICA has member organisations in 100 countries active in all sectors of the economy. Together these cooperatives represent nearly one billion individuals worldwide.

European Research Institute on Cooperative and Social Enterprise (Euricse)

www.euricse.eu

The mission of the European Research Institute on Cooperative and Social Enterprises is to promote knowledge development and innovation for the field of cooperatives, social enterprises and other non-profit organisations engaged in the production of goods and services. The Institute aims to deepen the understanding of these types of organisations and their impact on economic and social development, furthering their growth and assisting them to work more effectively. Through activities directed toward and in partnership with both the scholarly community and practitioners, including primarily theoretical and applied research and training, we address issues of national and international interest to this sector, favouring openness and collaboration.

ORGANISATIONAL PARTNERS

Made possible by the support of our organisational partners

Banco Credicoop

It was established in 1979. Today, it is the Argentina's eleventh-largest bank by total assets and ninth largest by deposits (US\$2.8 billion); nearly all of this is accounted for by its over 670,000 members, and Credicoop maintains 244 branches. It is also a lender in a country where domestic credit is difficult to access, holding a net loan portfolio of US\$1.7 billion (3.5% of the domestic total).

Buldana Urban Cooperative Credit Society

It was founded on 15 August 1986. It has a size of 1.1-billion-dollar business with more than half a million (700,000) membership. The area of operation is mainly in central and western India in four states of India. The society has 451 branches and 7000 employee and 300 warehouses. Business activities are mainly in warehouse loan business, gold loan business, industrial finance, infrastructure finance business, housing loan and vehicle loans, individual loans and educational loans.

CCA Global Partners

Founded in 1984, CCA Global is an international purchasing cooperative supporting over 500,000 family businesses and over 20,000 childcare centers in four countries and another 1 million independent businesses in North America benefit from CCA Global's business leadership through its 14 different affiliate companies. These businesses represent five distinct categories: flooring and home furnishings; business services; sporting goods; nonprofit and childcare; and management and contracting. Today, CCA is one of the largest privately held cooperatives in the United States. The superior benefits that CCA Global delivers include: Lower buying & operating costs; Powerful & fully supported tech solutions; Expert marketing programs; National advertising & PR support; Exclusive profitability tools; and Award-winning training programs.

Cooperativa de Portuarios del Puerto de San Martin

It was founded in 1961. Located along the Paraná River, the Cooperative offers services of stowage, cleaning, cargo packaging, bulk loading and unloading, barge discharge, berthing, bulk movement in horizontal silos and loading and unloading in underground grain silos using extraction machinery. The Cooperative supports the development of local and multinational companies by setting up cutting-edge factories and loading terminals to improve foreign trade services.

Cooperative Obrera

Founded in Bahía Blanca in the year 1920 when a group of 173 residents of Bahía Blanca decided to join to form a cooperative bakery that would ensure the right price, the exact weight and quality of bread, such a vital food. In 1932 its first cooperative store was opened. Today it has 1.6 million associates and 5,000 workers. It is the second large consumer cooperative in Latin America. It has its own quality control laboratory. It also has own credit cards which facilitates access to credit to its members.

IFFCO Ltd

In 1967, the Indian Farmers Fertiliser Co-operative Limited (IFFCO) was established by an initiative of NCBA/CLUSA in collaboration with ACDI/VOCA for the welfare of India's farmers. Today, IFFCO is the world's Largest Fertiliser Cooperative, growing from an association of just 57 cooperatives in 1967, to 35,300 cooperatives at present. IFFCO is an autonomous cooperative i.e. wholly owned by Cooperative Members. All its initiatives are aimed to benefit its member's i.e. farmers.

Kibbutz Movement

The Kibbutz (Hebrew word for "gathering") Movement is the largest settlement movement in Israel. It was re-organized in 1999 as a merger between two Kibbutz organizations and includes 257 members (kibbutzim). The kibbutz is a multi-purpose cooperative, binding together community, housing, and production means. The majority of kibbutzim are rural communities, based on principles of joint ownership, equality and cooperation in production, consumption and education, providing mutual aid to their members.

Midcounties Cooperative

The Midcounties Co-operative is the largest independent consumer cooperative in the UK, with over 700,000 members. It operates a range of businesses in Food, Travel, Healthcare, Funeral, Childcare, Energy, Post Offices, Flexible Benefits and Telecoms. It was formed in 2005, by the merger of the Oxford, Swindon and Gloucester Co-operative Society and the West Midlands Co-operative Society. The Midcounties Co-operative generates annual gross sales of over £1bn, has over 400 Trading Sites, 8,000 colleagues and over 700,000 members. It focuses on enabling their members to influence, connect and co-operate in joint activities that benefit their Society, their members and their communities.

Mondragon Corporation

MONDRAGON groups 98 cooperatives located mainly in the Basque Autonomous Region of Spain, and in their majority SMEs. It is the largest business group in the Basque Autonomous Region and the tenth in Spain. Its origins go back to 1956, when the first industrial worker cooperative was established in Mondragon, then a very small Basque town. It is a cross-sectoral group organized into four major areas: industry, distribution, finance and knowledge. Its mission combines the basic objectives of a business organization competing in international markets with the use of democratic and participatory governance, job creation, human and professional promotion of its workers and commitment to social and economic development of its territory.

National Agricultural Cooperative Federation (NACF)

NACF was borne out of the integration of the former agricultural cooperatives and the Agricultural Bank in 1961. Since then, NACF has played a crucial role not only in improving the conditions of farmers economically, socially and culturally, but also in contributing to the balanced development of the Korean economy. NACF and its member cooperatives are engaged in diversified business activities and support services to meet the need of member farmers and other clients. They can be grouped into three broad categories: banking sector, non-banking sector (commercial business), and support service sector. They also handle the farm credit guarantee service for the government.

National Co-op Grocers (NCG)

NCG is a business services cooperative for retail food co-ops located throughout the United States. We represent 147 food co-ops operating over 200 stores in 39 states with combined annual sales over \$2.1 billion and over 1.3 million consumer-owners. NCG helps unify natural food co-ops in order to optimize operational and marketing resources, strengthen purchasing power, and ultimately offer more value to natural food co-op owners and shoppers everywhere.

Rabobank

The first local Rabobank was established in 1895. Nowadays, Rabobank Group consists of 89 local Rabobanks, Rabobank Nederland (APEX) and domestic and foreign subsidiaries. Rabobank has 1.9 million members who are customers of local Rabobanks. The common thread since Rabobank's inception is to offer financial solutions for economic needs and social issues. In practice, Rabobank has frequently reoriented its strategy, business model and governance structure in anticipation of or in response to shifting trends in society, technology, competition, banking regulation and supervision, etcetera. Being a cooperative, profit maximalisation has never been our overriding purpose, but profits are necessary for meeting capital requirements, continuity and the pursuit of our social goals.

S-Group

S Group is a Finnish network of consumer cooperatives operating in the retail and service sectors, mainly in Finland but also in Estonia and in Russia. S Group comprises 19 regional cooperatives and SOK Corporation along with its subsidiaries. SOK Corporation was founded in 1904 and it's owned by the regional cooperatives. Today by turnover, S Group is the biggest cooperative group in Finland. S Group's key business areas are the supermarket trade, department stores, specialty stores, the hardware trade, service station store and fuel sales, and the travel industry and hospitality business. In addition, S-Bank offers banking services to cooperative members. Individual cooperatives conduct also automotive trade and services.

Sancor Seguros

The Sancor Seguros Group is a financial cooperative institution based in Sunchales, province of Santa Fe, Argentina. It was founded in 1945. The cooperative manages different specialized organizations, including: Sancor Seguros (insurer) Previsión ART Previsión Salud, Previsión Retiro, Alianza Inversora, CITES, Fundación Grupo Sancor Seguros and Banco del Sol. As of March 2020, it has a capital of 363 million dollars. It has more than 7 million capita insurance and 170 thousand health affiliates. It has about 8,300 associated producers and 3,330 employees. It opened subsidiaries in Uruguay in 2006, Paraguay in 2009 and Brazil in 2013.

Smart

Established in 1998 as non-profit association specialised in offering economic activity and contract management services, insurance services, legal and consulting services, information and training, co-workspaces, and mutual financial tools mainly to artists, Smart Belgium was converted into a cooperative in 2016 and has a French and Belgian management. More recently it has opened itself to freelancers of all sectors of activities. Smart Belgium has organised a process for converting itself into a multi-stakeholder cooperative (workers, clients, partners, service providers etc.). Smart has disseminated to another 8 European countries through similar cooperatives, with a total of 85,000 members.

UP Group

Founded in 1964 as a consumer cooperative, it became a worker cooperative in 1972. It designs and markets products and services that facilitate access to food, culture, recreation, education, home help, and social assistance but also accompanies companies in the management of their professional expenses or in the animation of stimulation and fidelity devices. It offers a wide range of titles and services for companies, works councils, communities and individuals. The group is also present in the software solutions market for personal services structures. Present in 19 countries on all continents, the Up group works for more than 24.5 million customers and is the world number three in lunch vouchers.

Vancity

Founded in 1946, Vancity is a values-based financial cooperative serving the needs of its more than 543,000 member-owners and their communities in the Coast Salish and Kwakwaka'wakw territories, with 55 branches in Metro Vancouver, the Fraser Valley, Victoria, Squamish, and Alert Bay. With \$23.2 billion in assets plus assets under administration (\$28.2 billion total) and 2,675 employees, Vancity is Canada's largest community credit union. Vancity uses its assets to help improve the financial well-being of its members while at the same time helping to develop healthy communities that are socially, economically, and environmentally sustainable. Vancity shared 30% of its net profits with members and communities, sharing over \$375 million through Shared Success since 1994.
