

Advisory Statement

Many people are now attempting to reduce their salt intake, and are using LoSalt as a substitute. In most people this can be beneficial to their health, however in some people this product could interact with prescribed medication.

Therefore people taking medication for diabetes, kidney or heart disease and the elderly should consult with their doctor or nurse before using this product.

People taking ANY of the following drugs **SHOULD NOT** use Lo Salt:

Amiloride
Triamterene
Dytac
Spironolactone
Aldactone
Eplerenone
Inspra

(These are all potassium sparing diuretics)
