

# NATIONAL ASSOCIATES OF THE NATIONAL ACADEMIES

## The National Associates Program

At its meeting on February 7, 2001, the Council of the National Academy of Sciences initiated a new “National Associates” program to recognize extraordinary contributions to the National Research Council through *pro-bono* service to National Research Council and Institute of Medicine programs.

Many dedicated individuals serve on study and oversight committees of the National Research Council and the Institute of Medicine without compensation. In fact, 5,908 individuals were members of one or more of the 574 committees active in the year 2007. In addition, approximately 1,500 individuals served as reviewers of one or more reports that year. This service is highly valued, honored, and appreciated both within the National Academies and by the nation. Our work in advising government and the public on matters of science, technology, and health would not be possible without this dedicated commitment of experts to provide the nation with their wisdom and advice.

The purpose of the National Associates designation is to formally recognize the extraordinary service of 903 of these individuals listed in this booklet as National Associates of the National Research Council of the National Academies. The NRC Chair designates individuals for this special honor under guidelines established by the NRC Governing Board. Membership in the Associates is for life, recognizing past service, and new designations will be made annually.
