Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 6
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 285
HP cylinder Inlet steam flow rate [t/h]	: 4360

Main generator

Rated active power [MWe]	: 466
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA508B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SIS 2333
Reactor vessel overall length/height [m]	: 9.8
Inside shell diameter [m]	: 3.94
Shell thickness [mm]	: 181
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2,FE-ZR LINER
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 42000
Active core diameter [m]	: 4.6
Active core height/length [m]	: 3.68
Number of fissile fuel assemblies/bundles	: 700
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 126
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 91
Fuel clad thickness [mm]	: 0.605
Average core power density [kW/dm ³]	: 48.6
Average fuel power density [kW/kgU]	: 23.8
Fuel linear heat generation rate [kW/m]	: 17.5

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 169

Reactor coolant system

Number of external reactor coolant loops	: <Not Available>
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7
Reactor outlet temperature [°C]	: 286
Reactor inlet temperature [°C]	: 273.5
Coolant mass flow at the rated power [t/h]	: 5130

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m ²]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 8
Number of pumps per RCS loop	: <Not Available>
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 6
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1500
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.45
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 280
HP cylinder Inlet steam flow rate [t/h]	: 5846

Main generator

Rated active power [MWe]	: 1200
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: -
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 17.6
Inside shell diameter [m]	: 5
Shell thickness [mm]	: 125
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Rods
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: 2.5
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 20
Average discharge burnup [MWd/t]	: 45000
Active core diameter [m]	: 3.67
Active core height/length [m]	: 3.65
Number of fissile fuel assemblies/bundles	: 448
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 90
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 96
Fuel clad thickness [mm]	: 0.60
Average core power density [kW/dm ³]	: 36
Average fuel power density [kW/kgU]	: 17.4
Fuel linear heat generation rate [kW/m]	: 9.70

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD
Soluble neutron absorber material	: <Not Applicable>
Secondary shutdown system	: H3BO3 Injection
Number of control rod assemblies	: 112

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7
Reactor outlet temperature [°C]	: 286
Reactor inlet temperature [°C]	: 274
Coolant mass flow at the rated power [t/h]	: 16600

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Applicable>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m ²]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: 0.98
Design pressure difference [MPa]	: 0.045

Pressurizer

Total volume [m ³]	: <Not Applicable>
Number of safety valves	: <Not Applicable>
Number of relief valves	: <Not Applicable>
Installed heater power [kW]	: <Not Applicable>

Containment systems

Containment type	: Confinement
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: Pools
Additional pressure suppression system	: Spray

Total containment volume [m ³]	: 5500
Number of containment spray pumps	: 2
Containment design pressure [MPa]	: 5.0
Design leakage rate [% per day]	: 1.0
Type of H ₂ recombiner	: Passive

Emergency core cooling systems

Number of HPSI systems	: 1
Number of LPSI systems	: 1
Number of hydroaccumulators	: <Not Applicable>
Number of core spray system pumps (BWR)	: 2
HPSI systems pressure [MPa]	: 7.5
LPSI system pressure [MPa]	: 0.2
HPSI system flowrate [t/h]	: 108
LPSI system flowrate [t/h]	: 1300

Reactor protection system

Control equipment technology	: Digital/Analog
Number of independent system divisions	: 4

Engineered Safeguard Feature Actuation System

Control equipment technology	: Digital/Analog
Number of independent system divisions	: 4

Secondary systems

Turbine

Turbine type	: Saturated steam
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: 1
Number of IP cylinders per turbine	: <Not Applicable>
Number of LP cylinders per turbine	: 5
HP cylinder inlet steam pressure [MPa]	: 6.8
HP cylinder Inlet steam moisture [%]	: 0.20
HP cylinder inlet steam temperature [°C]	: 284
HP cylinder Inlet steam flow rate [t/h]	: 2300

Main generator

Rated active power [MWe]	: 487
Rated apparent power [MVA]	: 572
Output voltage [kV]	: 21.4
Output frequency [Hz]	: 50

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: 4
Condenser tube material	: Titanium

Number of main condensate pumps	: 3
Number of main condensate pumps required for full power	: 2
Condenser vacuum at the full power (absolute pressure) [kPa]	: 3

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Applicable>
Number of motor-driven main feedwater pumps	: 3
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Applicable>
Number of feedwater pumps required for full power operation	: 2
Feedwater discharge pressure [MPa]	: 7.3
Steam generator feedwater inlet temperature [°C]	: <Not Applicable>

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: 2
Number of diesel driven pumps	: <Not Applicable>
Number of turbine driven pumps	: <Not Applicable>

Fire protection system

On-site fire suppression/extinguishing system	: Water+Supplementary chemical systems
Fire retardant cable coating used for	: Safety Related cables
Cable segregation within the unit used for	: Safety Related cables
On-site fire brigade	: Dedicated Full Time Fire Brigade
Off-site fire brigade response time	: Less than 30 min.

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: 2
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: 2
Number of on-site safety related diesel generators (available per unit)	: 4
Number of on-site safety related gas turbines (available per unit)	: 2
Number of on site non-safety related diesel generator	: <Not Applicable>
Number of on site non-safety related gas turbines	: <Not Applicable>
Other on-site emergency AC power sources	: <Not Applicable>
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: 35
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: 969
Interim storage facility type	: Wet
Interim storage facility capacity (number of spent fuel assemblies)	: 3659

Non-electrical applications

Primary heat connection	: <Not Applicable>
-------------------------	--------------------

Number of heat connection points per unit	: <Not Applicable>
Number of intermediate circuits/heat exchangers	: <Not Applicable>
Total capacity of heat connections [MWt]	: <Not Applicable>
Extraction steam pressure [MPa]	: <Not Applicable>

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-308
Reactor vessel overall length/height [m]	: 20
Inside shell diameter [m]	: 5.5
Shell thickness [mm]	: 150
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Rods
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 20

Number of safety valves	: <Not Applicable>
Number of relief valves	: <Not Applicable>
Installed heater power [kW]	: <Not Applicable>

Containment systems

Containment type	: Confinement
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: Pools
Additional pressure suppression system	: Spray

Total containment volume [m3]	: 8500
Number of containment spray pumps	: 4
Containment design pressure [MPa]	: 6
Design leakage rate [% per day]	: 1.0
Type of H2 recombiner	: Passive

Emergency core cooling systems

Number of HPSI systems	: 4
Number of LPSI systems	: 4
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: 4
HPSI systems pressure [MPa]	: 10
LPSI system pressure [MPa]	: 1.5
HPSI system flowrate [t/h]	: 324
LPSI system flowrate [t/h]	: 5100

Reactor protection system

Control equipment technology	: Analogue
Number of independent system divisions	: 4

Engineered Safeguard Feature Actuation System

Control equipment technology	: Analogue
Number of independent system divisions	: 4

Secondary systems

Turbine

Turbine type	: Saturated steam
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1500
Number of HP cylinders per turbine	: 1
Number of IP cylinders per turbine	: <Not Applicable>
Number of LP cylinders per turbine	: 3
HP cylinder inlet steam pressure [MPa]	: 6.7
HP cylinder Inlet steam moisture [%]	: 0.18
HP cylinder inlet steam temperature [°C]	: 285
HP cylinder Inlet steam flow rate [t/h]	: 5832

Main generator

Rated active power [MWe]	: 1205
Rated apparent power [MVA]	: 1295
Output voltage [kV]	: 20.5
Output frequency [Hz]	: 50

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: 3
Condenser tube material	: Titanium

Number of main condensate pumps	: 3
Number of main condensate pumps required for full power	: 2
Condenser vacuum at the full power (absolute pressure) [kPa]	: 7

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Applicable>
Number of motor-driven main feedwater pumps	: 3
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: 1
Number of feedwater pumps required for full power operation	: 2
Feedwater discharge pressure [MPa]	: 7.95
Steam generator feedwater inlet temperature [°C]	: <Not Applicable>

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: 4
Number of diesel driven pumps	: <Not Applicable>
Number of turbine driven pumps	: <Not Applicable>

Fire protection system

On-site fire suppression/extinguishing system	: Water+Supplementary chemical systems
Fire retardant cable coating used for	: Safety Related cables
Cable segregation within the unit used for	: Safety Related + Other systems
On-site fire brigade	: Dedicated Full Time Fire Brigade
Off-site fire brigade response time	: Less than 30 min.

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Applicable>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: 2
Number of on-site safety related diesel generators (available per unit)	: 4
Number of on-site safety related gas turbines (available per unit)	: <Not Applicable>
Number of on site non-safety related diesel generator	: <Not Applicable>
Number of on site non-safety related gas turbines	: <Not Applicable>
Other on-site emergency AC power sources	: <Not Applicable>
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: 10.8
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: 1040
Interim storage facility type	: Wet
Interim storage facility capacity (number of spent fuel assemblies)	: 3659

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA- 533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-18-8
Reactor vessel overall length/height [m]	: 20
Inside shell diameter [m]	: 6
Shell thickness [mm]	: 150
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 15
Average discharge burnup [MWd/t]	: 41000
Active core diameter [m]	: 4.39
Active core height/length [m]	: 3.68
Number of fissile fuel assemblies/bundles	: 648
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 112
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 83
Fuel clad thickness [mm]	: 0.605
Average core power density [kW/dm ³]	: 48
Average fuel power density [kW/kgU]	: 21.9
Fuel linear heat generation rate [kW/m]	: 28

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: Boron/Hafmium
Burnable neutron absorber material specification	: B-4C, HF
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 157

Reactor coolant system

Number of external reactor coolant loops	: 6
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7
Reactor outlet temperature [°C]	: 286
Reactor inlet temperature [°C]	: 272
Coolant mass flow at the rated power [t/h]	: 41580

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 6
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.66
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: -
HP cylinder Inlet steam flow rate [t/h]	: 4072

Main generator

Rated active power [MWe]	: 450
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA- 533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.3
Inside shell diameter [m]	: 4
Shell thickness [mm]	: 200
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: MS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 24
Average discharge burnup [MWd/t]	: 47000
Active core diameter [m]	: 3
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 72
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 204
Fuel clad thickness [mm]	: 0.62
Average core power density [kW/dm ³]	: 99.9
Average fuel power density [kW/kgU]	: 34
Fuel linear heat generation rate [kW/m]	: 22.02

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 32

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.4
Reactor outlet temperature [°C]	: 322.4
Reactor inlet temperature [°C]	: 286
Coolant mass flow at the rated power [t/h]	: 50600

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-690
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.65
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.75
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 272.8
HP cylinder Inlet steam flow rate [t/h]	: 5400

Main generator

Rated active power [MWe]	: 490
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: CS SA320B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 10.7
Inside shell diameter [m]	: 3.3
Shell thickness [mm]	: 166
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂ /MOX
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4/DUPLEX
Average fuel enrichment [% of U235]	: 4.68
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 17
Average discharge burnup [MWd/t]	: 42000
Active core diameter [m]	: 2.45
Active core height/length [m]	: 3.05
Number of fissile fuel assemblies/bundles	: 121
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 38
Moderator weight [t]	: 103
Number of fuel elements per assembly/bundle	: 179
Fuel clad thickness [mm]	: 0.6
Average core power density [kW/dm ³]	: 78
Average fuel power density [kW/kgU]	: 28
Fuel linear heat generation rate [kW/m]	: 16.7

Reactivity control

Control rod material	: Ag-In-Cd alloy
Burnable neutron absorber material	: <Not Applicable>
Burnable neutron absorber material specification	: <Not Applicable>
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: H3BO3 Injection
Number of control rod assemblies	: 17

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: 103
Operating coolant pressure [MPa]	: 15.3
Reactor outlet temperature [°C]	: 313
Reactor inlet temperature [°C]	: 281
Coolant mass flow at the rated power [t/h]	: 22870

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: Saturated Steam
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-690
SG shell material	: SA508MCL3
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: 565
Design heat transfer surface [m2]	: 3345

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: 3
Design pressure difference [MPa]	: 0.4

Pressurizer

Total volume [m3]	: 20
Number of safety valves	: 3
Number of relief valves	: 3
Installed heater power [kW]	: 645

Containment systems

Containment type	: Double
Containment Shape	: Cylindrical
Containment structure	: Steel+Concrete
Pressure suppression system	: Water Condenser
Additional pressure suppression system	: Spray

Total containment volume [m ³]	: 35000
Number of containment spray pumps	: 3
Containment design pressure [MPa]	: 3.1
Design leakage rate [% per day]	: 0.25
Type of H ₂ recombiner	: Passive

Emergency core cooling systems

Number of HPSI systems	: 3
Number of LPSI systems	: <Not Applicable>
Number of hydroaccumulators	: 2
Number of core spray system pumps (BWR)	: 3
HPSI systems pressure [MPa]	: 10.7
LPSI system pressure [MPa]	: <Not Applicable>
HPSI system flowrate [t/h]	: 203.4
LPSI system flowrate [t/h]	: <Not Applicable>

Reactor protection system

Control equipment technology	: Digital
Number of independent system divisions	: 4

Engineered Safeguard Feature Actuation System

Control equipment technology	: Digital
Number of independent system divisions	: 4

Secondary systems

Turbine

Turbine type	: Saturated steam
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: 1
Number of IP cylinders per turbine	: <Not Applicable>
Number of LP cylinders per turbine	: 2
HP cylinder inlet steam pressure [MPa]	: 5.3
HP cylinder Inlet steam moisture [%]	: 0.01
HP cylinder inlet steam temperature [°C]	: 268
HP cylinder Inlet steam flow rate [t/h]	: 995

Main generator

Rated active power [MWe]	: 190
Rated apparent power [MVA]	: 220
Output voltage [kV]	: 15
Output frequency [Hz]	: 50

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: 2
Condenser tube material	: Titanium

Number of main condensate pumps	: 2
Number of main condensate pumps required for full power	: 1
Condenser vacuum at the full power (absolute pressure) [kPa]	: 4.7

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Applicable>
Number of motor-driven main feedwater pumps	: 3
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: 2
Number of feedwater pumps required for full power operation	: 1
Feedwater discharge pressure [MPa]	: 6.76
Steam generator feedwater inlet temperature [°C]	: 212

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: 4
Number of diesel driven pumps	: <Not Applicable>
Number of turbine driven pumps	: <Not Applicable>

Fire protection system

On-site fire suppression/extinguishing system	: Water Sprinkler Only
Fire retardant cable coating used for	: Safety Related + Other systems
Cable segregation within the unit used for	: Safety Related + Other systems
On-site fire brigade	: Extra-duty Plant Personnel
Off-site fire brigade response time	: Less than 30 min.

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Applicable>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: 2
Number of on-site safety related diesel generators (available per unit)	: 3
Number of on-site safety related gas turbines (available per unit)	: <Not Applicable>
Number of on site non-safety related diesel generator	: <Not Applicable>
Number of on site non-safety related gas turbines	: <Not Applicable>
Other on-site emergency AC power sources	: Hydro power station
Estimated time reserve of the batteries at full load [h]	: 2
Total installed capacity of the on-site emergency power sources per unit [MW]	: 12
Total battery capacity [Ah]	: 6850

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: 560
Interim storage facility type	: Dry
Interim storage facility capacity (number of spent fuel assemblies)	: 2000

Non-electrical applications

Primary heat connection	: Turbine Extraction
-------------------------	----------------------

Number of heat connection points per unit	: 2
Number of intermediate circuits/heat exchangers	: 2
Total capacity of heat connections [MWt]	: 60
Extraction steam pressure [MPa]	: 0.25

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: CS SA320B
Vessel cladding material	: Stainless Steel

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: -
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.76
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 284.8
HP cylinder Inlet steam flow rate [t/h]	: 6120

Main generator

Rated active power [MWe]	: 1285
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: CST
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 19
Inside shell diameter [m]	: 4.03
Shell thickness [mm]	: 100
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 16.7
Average discharge burnup [MWd/t]	: 48000
Active core diameter [m]	: 2.64
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 240
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 42
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.66
Average core power density [kW/dm ³]	: 51.7
Average fuel power density [kW/kgU]	: 22.4
Fuel linear heat generation rate [kW/m]	: 14.6

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 57

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.23
Reactor outlet temperature [°C]	: 288
Reactor inlet temperature [°C]	: 190
Coolant mass flow at the rated power [t/h]	: 15000

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.8
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.75
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 284
HP cylinder Inlet steam flow rate [t/h]	: 1828

Main generator

Rated active power [MWe]	: 188
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

TAIWAN, CHINA

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533/SA-302-B
Vessel cladding material	: <Not Available>
Vessel cladding material specification	: -
Reactor vessel overall length/height [m]	: 21.1
Inside shell diameter [m]	: 5.156
Shell thickness [mm]	: 133
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 16
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 30000
Active core diameter [m]	: 3.47
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 408
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 71.903
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 160
Fuel clad thickness [mm]	: 0.889
Average core power density [kW/dm ³]	: 50.5
Average fuel power density [kW/kgU]	: -
Fuel linear heat generation rate [kW/m]	: 18.41

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 97

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.19
Reactor outlet temperature [°C]	: 284
Reactor inlet temperature [°C]	: 215.5
Coolant mass flow at the rated power [t/h]	: 24040

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.64
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 280.8
HP cylinder Inlet steam flow rate [t/h]	: -

Main generator

Rated active power [MWe]	: 985.6
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: CST
Vessel cladding material	: <Not Available>
Vessel cladding material specification	: -
Reactor vessel overall length/height [m]	: 21.3
Inside shell diameter [m]	: 5.54
Shell thickness [mm]	: 136
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 29
Average discharge burnup [MWd/t]	: -
Active core diameter [m]	: 4.18
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 624
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 108.4
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 91
Fuel clad thickness [mm]	: 0.606
Average core power density [kW/dm ³]	: 52.4
Average fuel power density [kW/kgU]	: -
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 145

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.32
Reactor outlet temperature [°C]	: 284
Reactor inlet temperature [°C]	: 275
Coolant mass flow at the rated power [t/h]	: 38322

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.06
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.64
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 280.8
HP cylinder Inlet steam flow rate [t/h]	: -

Main generator

Rated active power [MWe]	: 985.6
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: CST
Vessel cladding material	: <Not Available>
Vessel cladding material specification	: -
Reactor vessel overall length/height [m]	: 13.9
Inside shell diameter [m]	: 3.98
Shell thickness [mm]	: 200
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZIRLO
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 40
Average discharge burnup [MWd/t]	: 43000
Active core diameter [m]	: 3.04
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 66.64
Moderator weight [t]	: 240
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 105.5
Average fuel power density [kW/kgU]	: -
Fuel linear heat generation rate [kW/m]	: 17.75

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Others
Burnable neutron absorber material specification	: IFBA/ZYBA
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 28

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 328.7
Reactor inlet temperature [°C]	: 291.7
Coolant mass flow at the rated power [t/h]	: 49600

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: -
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: 1620

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.22
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 3
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.56
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 281
HP cylinder Inlet steam flow rate [t/h]	: -

Main generator

Rated active power [MWe]	: 951
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 17.7
Inside shell diameter [m]	: 20
Shell thickness [mm]	: 3800
Number of pressure channels	: -
Pressure channel material	: Manganese Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 14
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 19000
Active core diameter [m]	: 9.4
Active core height/length [m]	: 7.3
Number of fissile fuel assemblies/bundles	: 2856
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 122
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.4
Average core power density [kW/dm ³]	: 127
Average fuel power density [kW/kgU]	: 11.3
Fuel linear heat generation rate [kW/m]	: 14.4

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 36

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 3.43
Reactor outlet temperature [°C]	: 673
Reactor inlet temperature [°C]	: 276
Coolant mass flow at the rated power [t/h]	: 13500

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: -
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 16.3
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 555
HP cylinder Inlet steam flow rate [t/h]	: 1690

Main generator

Rated active power [MWe]	: 660
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 17.7
Inside shell diameter [m]	: 20
Shell thickness [mm]	: 3800
Number of pressure channels	: -
Pressure channel material	: Manganese Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 14
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 18000
Active core diameter [m]	: 9.4
Active core height/length [m]	: 7.3
Number of fissile fuel assemblies/bundles	: 2856
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 122
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.4
Average core power density [kW/dm ³]	: 12.7
Average fuel power density [kW/kgU]	: 11.3
Fuel linear heat generation rate [kW/m]	: 14.4

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 36

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 3.43
Reactor outlet temperature [°C]	: 673
Reactor inlet temperature [°C]	: 276
Coolant mass flow at the rated power [t/h]	: 13500

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: -
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete
Pressure suppression system	: Vacuum Building
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: -
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 16.3
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 555
HP cylinder Inlet steam flow rate [t/h]	: 1690

Main generator

Rated active power [MWe]	: 670
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 18.3
Inside shell diameter [m]	: 13
Shell thickness [mm]	: 6400
Number of pressure channels	: -
Pressure channel material	: Carbon Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 4
Part of the core refuelled [%]	: 7.5
Average discharge burnup [MWd/t]	: 24000
Active core diameter [m]	: 9.37
Active core height/length [m]	: 8.3
Number of fissile fuel assemblies/bundles	: 2592
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 110
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.37
Average core power density [kW/dm ³]	: 2.69
Average fuel power density [kW/kgU]	: 13.6
Fuel linear heat generation rate [kW/m]	: 16.8

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Applicable>
Burnable neutron absorber material specification	: NONE
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 44

Reactor coolant system

Number of external reactor coolant loops	: 8
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 4.22
Reactor outlet temperature [°C]	: 675
Reactor inlet temperature [°C]	: 286
Coolant mass flow at the rated power [t/h]	: 13700

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 8
Number of drum separators	: <Not Applicable>
Tube shape	: Helical
Tube material	: MILD/CHROME/S/ST
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 8
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete
Pressure suppression system	: Vacuum Building
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.53
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -

Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 18.3
Inside shell diameter [m]	: 13
Shell thickness [mm]	: 6400
Number of pressure channels	: -
Pressure channel material	: Carbon Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 4
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 24000
Active core diameter [m]	: 9.3
Active core height/length [m]	: 8.3
Number of fissile fuel assemblies/bundles	: 2592
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 110
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.461
Average core power density [kW/dm ³]	: 2.64
Average fuel power density [kW/kgU]	: 13.7
Fuel linear heat generation rate [kW/m]	: 15.6

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 44

Reactor coolant system

Number of external reactor coolant loops	: 8
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 4.22
Reactor outlet temperature [°C]	: 651
Reactor inlet temperature [°C]	: 287
Coolant mass flow at the rated power [t/h]	: 13700

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: MILD/CHROME/S/ST
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 8
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete
Pressure suppression system	: Vacuum Building
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: -
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 16.3
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 538
HP cylinder Inlet steam flow rate [t/h]	: 1800

Main generator

Rated active power [MWe]	: 666
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 21.9
Inside shell diameter [m]	: 20.3
Shell thickness [mm]	: 5762
Number of pressure channels	: -
Pressure channel material	: Carbon Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 3
Part of the core refuelled [%]	: 5
Average discharge burnup [MWd/t]	: 27000
Active core diameter [m]	: 9.46
Active core height/length [m]	: 8.31
Number of fissile fuel assemblies/bundles	: 2592
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 113
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.38
Average core power density [kW/dm ³]	: 2.76
Average fuel power density [kW/kgU]	: 13.6
Fuel linear heat generation rate [kW/m]	: 16.8

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 44

Reactor coolant system

Number of external reactor coolant loops	: 8
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 4.32
Reactor outlet temperature [°C]	: 635
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 14700

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 8
Number of drum separators	: <Not Applicable>
Tube shape	: Helical
Tube material	: CHR/SS
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 8
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 35.65
Inside shell diameter [m]	: 18.9
Shell thickness [mm]	: 5030
Number of pressure channels	: -
Pressure channel material	: Manganese Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: -
Part of the core refuelled [%]	: 2
Average discharge burnup [MWd/t]	: 27000
Active core diameter [m]	: 9.11
Active core height/length [m]	: 8.31
Number of fissile fuel assemblies/bundles	: 2464
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 105.2
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.381
Average core power density [kW/dm ³]	: 2.96
Average fuel power density [kW/kgU]	: 10.74
Fuel linear heat generation rate [kW/m]	: 14.32

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 44

Reactor coolant system

Number of external reactor coolant loops	: 1
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 4.24
Reactor outlet temperature [°C]	: 655
Reactor inlet temperature [°C]	: 280
Coolant mass flow at the rated power [t/h]	: 13700

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 8
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: MILD/CHROME/S/ST
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 8
Number of pumps per RCS loop	: 8
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: -
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 16.3
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 495
HP cylinder Inlet steam flow rate [t/h]	: 1435

Main generator

Rated active power [MWe]	: 660
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 19.35
Inside shell diameter [m]	: 18.9
Shell thickness [mm]	: 5000
Number of pressure channels	: -
Pressure channel material	: Manganese Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Stainless Steel
Fuel clad material specification	: SS
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: -
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 21000
Active core diameter [m]	: 9.11
Active core height/length [m]	: 8.29
Number of fissile fuel assemblies/bundles	: 2464
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 105
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 36
Fuel clad thickness [mm]	: 0.38
Average core power density [kW/dm ³]	: 2.76
Average fuel power density [kW/kgU]	: 14.3
Fuel linear heat generation rate [kW/m]	: 16.9

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 44

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 4.04
Reactor outlet temperature [°C]	: 639
Reactor inlet temperature [°C]	: 282
Coolant mass flow at the rated power [t/h]	: 13000

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: -
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 18.3
Inside shell diameter [m]	: 23.5
Shell thickness [mm]	: 4600
Number of pressure channels	: -
Pressure channel material	: Manganese Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: U
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Magnesium Alloy
Fuel clad material specification	: MAGNOX
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: -
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 5470
Active core diameter [m]	: 12.8
Active core height/length [m]	: 8.5
Number of fissile fuel assemblies/bundles	: 26464
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 293.7
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 1
Fuel clad thickness [mm]	: 2.4
Average core power density [kW/dm ³]	: 0.74
Average fuel power density [kW/kgU]	: -
Fuel linear heat generation rate [kW/m]	: 27

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 65

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 2.66
Reactor outlet temperature [°C]	: 365
Reactor inlet temperature [°C]	: 220
Coolant mass flow at the rated power [t/h]	: 17855

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: -
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Spherical
Containment structure	: Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.96
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1500
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 2.7
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 350
HP cylinder Inlet steam flow rate [t/h]	: -

Main generator

Rated active power [MWe]	: 313
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-508/SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13.59
Inside shell diameter [m]	: 4.39
Shell thickness [mm]	: 220
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 33000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 88.6
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 104.5
Average fuel power density [kW/kgU]	: 33.8
Fuel linear heat generation rate [kW/m]	: 17.8

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BORON
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 21

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.82
Reactor outlet temperature [°C]	: 323.4
Reactor inlet temperature [°C]	: 292.4
Coolant mass flow at the rated power [t/h]	: 69000

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-690
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Double
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.4
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.71
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282.6
HP cylinder Inlet steam flow rate [t/h]	: 6868

Main generator

Rated active power [MWe]	: 628.8
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: 21.9
Inside shell diameter [m]	: 20.28
Shell thickness [mm]	: 5762
Number of pressure channels	: -
Pressure channel material	: Carbon Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: ON-line

Refuelling frequency [month]	: -
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 54000
Active core diameter [m]	: 17.4
Active core height/length [m]	: 9.1
Number of fissile fuel assemblies/bundles	: 49248
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 592.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 1
Fuel clad thickness [mm]	: 3.4
Average core power density [kW/dm ³]	: 0.9
Average fuel power density [kW/kgU]	: 2.78
Fuel linear heat generation rate [kW/m]	: 28.6

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 153

Reactor coolant system

Number of external reactor coolant loops	: 1
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 2.76
Reactor outlet temperature [°C]	: 370
Reactor inlet temperature [°C]	: 230
Coolant mass flow at the rated power [t/h]	: 40000

Steam generators (SG)/drum separators

Type of SG	: <Not Available>
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: -
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 4
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete
Pressure suppression system	: Vacuum Building
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 2.76
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 3.54
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 320
HP cylinder Inlet steam flow rate [t/h]	: 1180

Main generator

Rated active power [MWe]	: 335
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: <Not Available>
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Concrete
Reactor vessel material specification	: PC
Vessel cladding material	: <Not Applicable>
Vessel cladding material specification	: NONE
Reactor vessel overall length/height [m]	: -
Inside shell diameter [m]	: 29.3
Shell thickness [mm]	: 3360
Number of pressure channels	: -
Pressure channel material	: Manganese Steel
Pressure channel wall thickness [mm]	: -

Reactor Core

Fuel assembly geometry	: <Not Available>
Fuel Form	: <Not Available>
Fuel material	: U
Refuelling type	: ON-line
Moderator material	: GRAPHITE
Fuel clad material	: Magnesium Alloy
Fuel clad material specification	: MAGNOX
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: -
Part of the core refuelled [%]	: -
Average discharge burnup [MWd/t]	: 54000
Active core diameter [m]	: 17.4
Active core height/length [m]	: 9.1
Number of fissile fuel assemblies/bundles	: 49248
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 592.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 1
Fuel clad thickness [mm]	: 3.4
Average core power density [kW/dm ³]	: 0.85
Average fuel power density [kW/kgU]	: -
Fuel linear heat generation rate [kW/m]	: -

Reactivity control

Control rod material	: Boron SS
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: <Not Available>
Secondary shutdown system	: -
Number of control rod assemblies	: 153

Reactor coolant system

Number of external reactor coolant loops	: 1
Coolant type	: CO2
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 2.76
Reactor outlet temperature [°C]	: 370
Reactor inlet temperature [°C]	: 234
Coolant mass flow at the rated power [t/h]	: 40000

Steam generators (SG)/drum separators

Type of SG	: <Not Available>

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: 15Ch2MFA; 2,5%Cr0.6°Mo0,25%V
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: 08%Cr18%Ni10%Ti
Reactor vessel overall length/height [m]	: 12.95
Inside shell diameter [m]	: 4.136
Shell thickness [mm]	: 192.5
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Hexagonal
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR/1%NB
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 40000
Active core diameter [m]	: 3.16
Active core height/length [m]	: 3.53
Number of fissile fuel assemblies/bundles	: 163
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 76
Moderator weight [t]	: 330
Number of fuel elements per assembly/bundle	: 317
Fuel clad thickness [mm]	: 0.68
Average core power density [kW/dm ³]	: 108
Average fuel power density [kW/kgU]	: 46
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: CRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 61

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 16
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 64000

Steam generators (SG)/drum separators

Type of SG	: Horizontal
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: 08CH18N10T SS
SG shell material	: 10GN3MFA alloyed carbon steel
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: 79
Number of safety valves	: 2
Number of relief valves	: 1
Installed heater power [kW]	: 2520

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Reinforced Concrete
Pressure suppression system	: Spray
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Active core height/length [m]	: 2.5
Number of fissile fuel assemblies/bundles	: 349
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 42
Moderator weight [t]	: 240
Number of fuel elements per assembly/bundle	: 126
Fuel clad thickness [mm]	: 0.65
Average core power density [kW/dm ³]	: 83
Average fuel power density [kW/kgU]	: 32.7
Fuel linear heat generation rate [kW/m]	: 13.1

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 37

Reactor coolant system

Number of external reactor coolant loops	: 6
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 12.5
Reactor outlet temperature [°C]	: 295.8
Reactor inlet temperature [°C]	: 267
Coolant mass flow at the rated power [t/h]	: 39000

Steam generators (SG)/drum separators

Type of SG	: Horizontal
SG output	: <Not Available>
Number of SG	: 6
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: 08CH18N10T SS
SG shell material	: 22K carbon steel
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 6
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: 44
Number of safety valves	: 2
Number of relief valves	: 1
Installed heater power [kW]	: 1620

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Applicable>
Containment structure	: Reinforced Concrete
Pressure suppression system	: Spray
Additional pressure suppression system	: Water Condenser

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 3000
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 4.4
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 255
HP cylinder Inlet steam flow rate [t/h]	: 1375

Main generator

Rated active power [MWe]	: 220
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: 15Ch2MFA; 2,5%Cr0.6°Mo0,25%V
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: 08%Cr18%Ni10%Ti
Reactor vessel overall length/height [m]	: 13.9
Inside shell diameter [m]	: 3.54
Shell thickness [mm]	: 140
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Hexagonal
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR/NB
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 28600
Active core diameter [m]	: 2.88
Active core height/length [m]	: 2.5
Number of fissile fuel assemblies/bundles	: 349
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 42
Moderator weight [t]	: 240
Number of fuel elements per assembly/bundle	: 126
Fuel clad thickness [mm]	: 0.65
Average core power density [kW/dm ³]	: 83
Average fuel power density [kW/kgU]	: 32.7
Fuel linear heat generation rate [kW/m]	: 13.1

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 37

Reactor coolant system

Number of external reactor coolant loops	: 6
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 12.5
Reactor outlet temperature [°C]	: 295.8
Reactor inlet temperature [°C]	: 267

Active core height/length [m]	: 3.53
Number of fissile fuel assemblies/bundles	: 163
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 76
Moderator weight [t]	: 330
Number of fuel elements per assembly/bundle	: 317
Fuel clad thickness [mm]	: 0.68
Average core power density [kW/dm ³]	: 108
Average fuel power density [kW/kgU]	: 46
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: CRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 49

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 16
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 64000

Steam generators (SG)/drum separators

Type of SG	: Horizontal
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: 08CH18N10T SS
SG shell material	: 10GN3MFA alloyed carbon steel
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: 79
Number of safety valves	: 2
Number of relief valves	: 1
Installed heater power [kW]	: 2520

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Reinforced Concrete
Pressure suppression system	: Spray
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1500
Number of HP cylinders per turbine	:
Number of IP cylinders per turbine	:
Number of LP cylinders per turbine	:
HP cylinder inlet steam pressure [MPa]	: 6
HP cylinder Inlet steam moisture [%]	:
HP cylinder inlet steam temperature [°C]	: 274.3
HP cylinder Inlet steam flow rate [t/h]	: 6430

Main generator

Rated active power [MWe]	: 1000
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	:
Output frequency [Hz]	:

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: <Not Available>

Number of main condensate pumps	:
Number of main condensate pumps required for full power	:
Condenser vacuum at the full power (absolute pressure) [kPa]	:

Feedwater system

Number of turbine driven main feedwater pumps	: 3
Number of motor-driven main feedwater pumps	: <Not Applicable>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Applicable>
Number of feedwater pumps required for full power operation	: 2
Feedwater discharge pressure [MPa]	: 7.6
Steam generator feedwater inlet temperature [°C]	: 220

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: 5
Number of diesel driven pumps	: <Not Applicable>
Number of turbine driven pumps	: <Not Applicable>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	:
Cable segregation within the unit used for	:
On-site fire brigade	:
Off-site fire brigade response time	:

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Applicable>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: 1
Number of on-site safety related diesel generators (available per unit)	: 3
Number of on-site safety related gas turbines (available per unit)	: <Not Applicable>
Number of on site non-safety related diesel generator	: 2
Number of on site non-safety related gas turbines	: <Not Applicable>
Other on-site emergency AC power sources	:
Estimated time reserve of the batteries at full load [h]	: 1
Total installed capacity of the on-site emergency power sources per unit [MW]	: 18.9
Total battery capacity [Ah]	: 1500

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: 15Ch2MFA; 2,5%Cr0.6°Mo0,25%V
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: 08%Cr18%Ni10%Ti
Reactor vessel overall length/height [m]	: 12.95
Inside shell diameter [m]	: 4.136
Shell thickness [mm]	: 192.5
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Hexagonal
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR/1%NB
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 40000
Active core diameter [m]	: 3.16
Active core height/length [m]	: 3.53
Number of fissile fuel assemblies/bundles	: 163
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 76
Moderator weight [t]	: 330
Number of fuel elements per assembly/bundle	: 317
Fuel clad thickness [mm]	: 0.68
Average core power density [kW/dm ³]	: 108
Average fuel power density [kW/kgU]	: 46
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: CRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 61

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 16
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 64000

Steam generators (SG)/drum separators

Type of SG	: Horizontal
SG output	: <Not Available>

Active core diameter [m]	: 3.16
Active core height/length [m]	: 3.53
Number of fissile fuel assemblies/bundles	: 163
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 76
Moderator weight [t]	: 330
Number of fuel elements per assembly/bundle	: 317
Fuel clad thickness [mm]	: 0.68
Average core power density [kW/dm ³]	: 108
Average fuel power density [kW/kgU]	: 46
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide SS
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: CRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 61

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 16
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 64000

Steam generators (SG)/drum separators

Type of SG	: Horizontal
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: 08CH18N10T SS
SG shell material	: 10GN3MFA alloyed carbon steel
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: 79
Number of safety valves	: 2
Number of relief valves	: 1
Installed heater power [kW]	: 2520

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Reinforced Concrete
Pressure suppression system	: Spray
Additional pressure suppression system	: -

Total containment volume [m ³]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5
Design leakage rate [% per day]	: -
Type of H ₂ recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1500
Number of HP cylinders per turbine	:
Number of IP cylinders per turbine	:
Number of LP cylinders per turbine	:
HP cylinder inlet steam pressure [MPa]	: 6
HP cylinder Inlet steam moisture [%]	:
HP cylinder inlet steam temperature [°C]	: 274.3
HP cylinder Inlet steam flow rate [t/h]	: 6430

Main generator

Rated active power [MWe]	: 1000
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	:
Output frequency [Hz]	:

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: <Not Available>

Number of main condensate pumps	:
Number of main condensate pumps required for full power	:
Condenser vacuum at the full power (absolute pressure) [kPa]	:

Feedwater system

Number of turbine driven main feedwater pumps	: 3
Number of motor-driven main feedwater pumps	: <Not Applicable>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Applicable>
Number of feedwater pumps required for full power operation	: 2
Feedwater discharge pressure [MPa]	: 7.6
Steam generator feedwater inlet temperature [°C]	: 220

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: 5
Number of diesel driven pumps	: <Not Applicable>
Number of turbine driven pumps	: <Not Applicable>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	:
Cable segregation within the unit used for	:
On-site fire brigade	:
Off-site fire brigade response time	:

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Applicable>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: 1
Number of on-site safety related diesel generators (available per unit)	: 3
Number of on-site safety related gas turbines (available per unit)	: <Not Applicable>
Number of on site non-safety related diesel generator	: 2
Number of on site non-safety related gas turbines	: <Not Applicable>
Other on-site emergency AC power sources	:
Estimated time reserve of the batteries at full load [h]	: 1
Total installed capacity of the on-site emergency power sources per unit [MW]	: 18.9
Total battery capacity [Ah]	: 1500

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: 15Ch2MFA; 2,5%Cr0.6°Mo0,25%V
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: 08%Cr18%Ni10%Ti
Reactor vessel overall length/height [m]	: 12.95
Inside shell diameter [m]	: 4.136
Shell thickness [mm]	: 192.5
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Hexagonal
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR/1%NB
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 40000
Active core diameter [m]	: 3.16
Active core height/length [m]	: 3.53
Number of fissile fuel assemblies/bundles	: 163
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 76
Moderator weight [t]	: 330
Number of fuel elements per assembly/bundle	: 317
Fuel clad thickness [mm]	: 0.68
Average core power density [kW/dm ³]	: 108
Average fuel power density [kW/kgU]	: 46
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide SS

Average discharge burnup [MWd/t]	: 40000
Active core diameter [m]	: 3.16
Active core height/length [m]	: 3.53
Number of fissile fuel assemblies/bundles	: 163
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 76
Moderator weight [t]	: 330
Number of fuel elements per assembly/bundle	: 317
Fuel clad thickness [mm]	: 0.68
Average core power density [kW/dm ³]	: 108
Average fuel power density [kW/kgU]	: 46
Fuel linear heat generation rate [kW/m]	: 17.6

Reactivity control

Control rod material	: Boron Carbide SS
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: CRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 61

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 16
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 64000

Steam generators (SG)/drum separators

Type of SG	: Horizontal
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: 08CH18N10T SS
SG shell material	: 10GN3MFA alloyed carbon steel
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: 79
Number of safety valves	: 2
Number of relief valves	: 1
Installed heater power [kW]	: 2520

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Reinforced Concrete
Pressure suppression system	: Spray
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1500
Number of HP cylinders per turbine	:
Number of IP cylinders per turbine	:
Number of LP cylinders per turbine	:
HP cylinder inlet steam pressure [MPa]	: 6
HP cylinder Inlet steam moisture [%]	:
HP cylinder inlet steam temperature [°C]	: 274.3
HP cylinder Inlet steam flow rate [t/h]	:

Main generator

Rated active power [MWe]	: 1000
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	:
Output frequency [Hz]	:

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: <Not Available>

Number of main condensate pumps	:
Number of main condensate pumps required for full power	:
Condenser vacuum at the full power (absolute pressure) [kPa]	:

Feedwater system

Number of turbine driven main feedwater pumps	: 3
Number of motor-driven main feedwater pumps	: <Not Applicable>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Applicable>
Number of feedwater pumps required for full power operation	: 2
Feedwater discharge pressure [MPa]	: 7.6
Steam generator feedwater inlet temperature [°C]	: 220

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: 5
Number of diesel driven pumps	: <Not Applicable>
Number of turbine driven pumps	: <Not Applicable>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	:
Cable segregation within the unit used for	:
On-site fire brigade	:
Off-site fire brigade response time	:

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Applicable>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: 1
Number of on-site safety related diesel generators (available per unit)	: 3
Number of on-site safety related gas turbines (available per unit)	: <Not Applicable>
Number of on site non-safety related diesel generator	: 2
Number of on site non-safety related gas turbines	: <Not Applicable>
Other on-site emergency AC power sources	:
Estimated time reserve of the batteries at full load [h]	: 1
Total installed capacity of the on-site emergency power sources per unit [MW]	: 18.9
Total battery capacity [Ah]	: 1500

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

US-313

ARKANSAS ONE-1

UNITED STATES OF AMERICA

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: -
Reactor vessel overall length/height [m]	: 12.4
Inside shell diameter [m]	: 4.77
Shell thickness [mm]	: 214
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 35000
Active core diameter [m]	: 3.27
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 177
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 82
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 208
Fuel clad thickness [mm]	: 0.673
Average core power density [kW/dm ³]	: 76
Average fuel power density [kW/kgU]	: 31.32
Fuel linear heat generation rate [kW/m]	: 18

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 60

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.3
Reactor outlet temperature [°C]	: 318
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 66000

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed+Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.15
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Average core power density [kW/dm ³]	: 100
Average fuel power density [kW/kgU]	: 36.6
Fuel linear heat generation rate [kW/m]	: 17.06

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: ZRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 48

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 284
Coolant mass flow at the rated power [t/h]	: 20000

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.8
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.3
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 266
HP cylinder Inlet steam flow rate [t/h]	: 5265

Main generator

Rated active power [MWe]	: 888
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA 304
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.36
Inside shell diameter [m]	: 4.39
Shell thickness [mm]	: 216
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 43
Average discharge burnup [MWd/t]	: 49000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.65
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 101
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.057
Average core power density [kW/dm ³]	: 104.5
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 18.3

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BOROSILICATE
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 25

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.5
Reactor outlet temperature [°C]	: 326
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 15470

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .42
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.63
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 7550

Main generator

Rated active power [MWe]	: 1175
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Pond (closed-cycle)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>

Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.2
Reactor outlet temperature [°C]	: 285
Reactor inlet temperature [°C]	: 275
Coolant mass flow at the rated power [t/h]	: 51250

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.9
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.8
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 6063

Main generator

Rated active power [MWe]	: 1152
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-B/SA-336
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS SA371 ER309-ER308
Reactor vessel overall length/height [m]	: 22.1
Inside shell diameter [m]	: 6.37
Shell thickness [mm]	: 158.7
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 12
Part of the core refuelled [%]	: 32
Average discharge burnup [MWd/t]	: 38000
Active core diameter [m]	: 4.8
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 149
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 149
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 60
Fuel clad thickness [mm]	: 0.81
Average core power density [kW/dm ³]	: 48.7
Average fuel power density [kW/kgU]	: 23
Fuel linear heat generation rate [kW/m]	: 17.5

Reactivity control

Control rod material	: Boron Carbide SS
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.2
Reactor outlet temperature [°C]	: 285
Reactor inlet temperature [°C]	: 275
Coolant mass flow at the rated power [t/h]	: 51250

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.9
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.8
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 6063

Main generator

Rated active power [MWe]	: 1152
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 21.1
Inside shell diameter [m]	: 5.5
Shell thickness [mm]	: 140
Number of pressure channels	: <Not Applicable>
Pressure channel material	: Zircaloy
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 27800
Active core diameter [m]	: 4.1
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 560
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 102.7
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.81
Average core power density [kW/dm ³]	: 50.5
Average fuel power density [kW/kgU]	: 23.3
Fuel linear heat generation rate [kW/m]	: 18.42

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 137

Reactor coolant system

Number of external reactor coolant loops	: <Not Available>
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.07
Reactor outlet temperature [°C]	: 285
Reactor inlet temperature [°C]	: 215
Coolant mass flow at the rated power [t/h]	: 7756

Steam generators (SG)/drum separators

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.5
Reactor outlet temperature [°C]	: 326
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 15470

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .42
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.63
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 7550

Main generator

Rated active power [MWe]	: 1175
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: -
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.36
Inside shell diameter [m]	: 4.19
Shell thickness [mm]	: 216
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 43
Average discharge burnup [MWd/t]	: 49000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.65
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 101
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.057
Average core power density [kW/dm ³]	: 104.5
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 18.3

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BOROSILICATE
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 25

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.5
Reactor outlet temperature [°C]	: 326
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 15470

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .42
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.63
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 7550

Main generator

Rated active power [MWe]	: 1175
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS300
Reactor vessel overall length/height [m]	: 13.3
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 216
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 42000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.65
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 82
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 109.2
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 19.13

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Others
Burnable neutron absorber material specification	: IFBA
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 53

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 329
Reactor inlet temperature [°C]	: 293
Coolant mass flow at the rated power [t/h]	: 69012

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed+Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.4
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.78
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 6513

Main generator

Rated active power [MWe]	: 1236
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>

Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-600S
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Reinforced Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.52
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 274
HP cylinder Inlet steam flow rate [t/h]	: 5058

Main generator

Rated active power [MWe]	: 880
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 12.7
Inside shell diameter [m]	: 4.6
Shell thickness [mm]	: 219
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 39
Average discharge burnup [MWd/t]	: 40200
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 82
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 103.5
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 18.3

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 25

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 325
Reactor inlet temperature [°C]	: 293
Coolant mass flow at the rated power [t/h]	: 16406

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Single
Containment Shape	: Spherical
Containment structure	: Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 2.04
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.83
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 283
HP cylinder Inlet steam flow rate [t/h]	: 6488.7

Main generator

Rated active power [MWe]	: 1202
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.16
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.82
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282.7
HP cylinder Inlet steam flow rate [t/h]	: 6133

Main generator

Rated active power [MWe]	: 1100
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B/SA-508
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.36
Inside shell diameter [m]	: 4.39
Shell thickness [mm]	: 219.2
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 40000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 84.497
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 104.5
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 17.81

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C/Al2O3
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: -

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 325
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 67771

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.03
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.75
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 283
HP cylinder Inlet steam flow rate [t/h]	: 6866

Main generator

Rated active power [MWe]	: 1175
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B/SA-508
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.36

Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5.5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.328
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 297
HP cylinder Inlet steam flow rate [t/h]	: 4819

Main generator

Rated active power [MWe]	: 890
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-18-8
Reactor vessel overall length/height [m]	: 11.9
Inside shell diameter [m]	: 4.3
Shell thickness [mm]	: 214
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 50000
Active core diameter [m]	: 2.9
Active core height/length [m]	: 3.57
Number of fissile fuel assemblies/bundles	: 177
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 82.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 208
Fuel clad thickness [mm]	: 0.7
Average core power density [kW/dm ³]	: 92
Average fuel power density [kW/kgU]	: 33.8
Fuel linear heat generation rate [kW/m]	: 21.1

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C/Al2O3
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 28

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.5
Reactor outlet temperature [°C]	: 321
Reactor inlet temperature [°C]	: 293
Coolant mass flow at the rated power [t/h]	: 68000

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.8
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.22
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 307
HP cylinder Inlet steam flow rate [t/h]	: 4904

Main generator

Rated active power [MWe]	: 925
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13.35
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 219
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 45000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 82
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 102.3
Average fuel power density [kW/kgU]	: 37.54
Fuel linear heat generation rate [kW/m]	: 17.5

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: ZRB-2 IN IFBA
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 53

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.83
Reactor outlet temperature [°C]	: 320
Reactor inlet temperature [°C]	: 285
Coolant mass flow at the rated power [t/h]	: 60270

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.12
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 264.1
HP cylinder Inlet steam flow rate [t/h]	: 5914.7

Main generator

Rated active power [MWe]	: 1089
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: ASTM-A-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-308L/309L
Reactor vessel overall length/height [m]	: 13.4
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 216
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 48000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 81
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 103.8
Average fuel power density [kW/kgU]	: 36.5
Fuel linear heat generation rate [kW/m]	: 17.81

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 28

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.82
Reactor outlet temperature [°C]	: 319
Reactor inlet temperature [°C]	: 283
Coolant mass flow at the rated power [t/h]	: 60292

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.9
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.43
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 267.9
HP cylinder Inlet steam flow rate [t/h]	: 6074.7

Main generator

Rated active power [MWe]	: 1162
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304-L
Reactor vessel overall length/height [m]	: 21
Inside shell diameter [m]	: 6.3
Shell thickness [mm]	: 155.6
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 35
Average discharge burnup [MWd/t]	: 47000
Active core diameter [m]	: 4.55
Active core height/length [m]	: 3.6
Number of fissile fuel assemblies/bundles	: 724
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 150
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 81
Fuel clad thickness [mm]	: 0.81
Average core power density [kW/dm ³]	: 41.1
Average fuel power density [kW/kgU]	: 18.5
Fuel linear heat generation rate [kW/m]	: -

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: -

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.1
Reactor outlet temperature [°C]	: 286
Reactor inlet temperature [°C]	: 276
Coolant mass flow at the rated power [t/h]	: 7400

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .43
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>

Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.68
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 3096

Main generator

Rated active power [MWe]	: 565
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 22.2
Inside shell diameter [m]	: 6.36
Shell thickness [mm]	: 163.2
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 19404
Active core diameter [m]	: 4.75
Active core height/length [m]	: 3.8
Number of fissile fuel assemblies/bundles	: 764
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 140.3
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.813
Average core power density [kW/dm ³]	: 48.7
Average fuel power density [kW/kgU]	: 24
Fuel linear heat generation rate [kW/m]	: 37.73

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BP/BORON INJ
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.3
Reactor outlet temperature [°C]	: 286
Reactor inlet temperature [°C]	: 278
Coolant mass flow at the rated power [t/h]	: 6390

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.4
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.8
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 285
HP cylinder Inlet steam flow rate [t/h]	: 6435

Main generator

Rated active power [MWe]	: 1154
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: ASTM A 533B1
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 203
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 33000
Active core diameter [m]	: 3.02
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 72.8
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 101.1
Average fuel power density [kW/kgU]	: 32.3
Fuel linear heat generation rate [kW/m]	: 17.1

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BORON
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 45

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 285
Coolant mass flow at the rated power [t/h]	: 45600

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.8
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.27
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 267
HP cylinder Inlet steam flow rate [t/h]	: 5058

Main generator

Rated active power [MWe]	: 860
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Main generator

Rated active power [MWe]	: 850
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Alloyed Steel
Vessel cladding material specification	: AS-304
Reactor vessel overall length/height [m]	: 9.8
Inside shell diameter [m]	: 3.94
Shell thickness [mm]	: 181
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 13500
Active core diameter [m]	: 2.7
Active core height/length [m]	: 3.25
Number of fissile fuel assemblies/bundles	: 133
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 47.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 176
Fuel clad thickness [mm]	: 0.75
Average core power density [kW/dm ³]	: 80.4
Average fuel power density [kW/kgU]	: 29
Fuel linear heat generation rate [kW/m]	: 49.93

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 41

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 14.8
Reactor outlet temperature [°C]	: 312
Reactor inlet temperature [°C]	: 284
Coolant mass flow at the rated power [t/h]	: 8136

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL - 600MA
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.22
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.85
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 272
HP cylinder Inlet steam flow rate [t/h]	: 2824

Main generator

Rated active power [MWe]	: 509
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: CST-SS-CLAD
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 22.3
Inside shell diameter [m]	: 6.38
Shell thickness [mm]	: 156
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 16
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 28000
Active core diameter [m]	: 4.8
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 800
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 144.5
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.81
Average core power density [kW/dm ³]	: 54.1
Average fuel power density [kW/kgU]	: 26.2
Fuel linear heat generation rate [kW/m]	: 19.5

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 193

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.31
Reactor outlet temperature [°C]	: 288
Reactor inlet temperature [°C]	: 278
Coolant mass flow at the rated power [t/h]	: 7483

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.05
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.925
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 7484.3

Main generator

Rated active power [MWe]	: 1372.5
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302/304-CLAD
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 12.89
Inside shell diameter [m]	: 3.95
Shell thickness [mm]	: 237
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: <Not Available>
Fuel clad material specification	: -
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 30000
Active core diameter [m]	: 3.04
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 70
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 204
Fuel clad thickness [mm]	: 0.762
Average core power density [kW/dm ³]	: 82.6
Average fuel power density [kW/kgU]	: 32
Fuel linear heat generation rate [kW/m]	: 43.96

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 45

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.71
Reactor outlet temperature [°C]	: 318
Reactor inlet temperature [°C]	: 286
Coolant mass flow at the rated power [t/h]	: 15271

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 2.95
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.4
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 267
HP cylinder Inlet steam flow rate [t/h]	: 4349

Main generator

Rated active power [MWe]	: 775
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)

Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Stainless Steel
Reactor vessel material specification	: -
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 21.1
Inside shell diameter [m]	: 5.54
Shell thickness [mm]	: 140
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: <Not Available>
Fuel clad material specification	: -
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 18750
Active core diameter [m]	: 4.27
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 560
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 103.4
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.86
Average core power density [kW/dm ³]	: 49.15
Average fuel power density [kW/kgU]	: 23.8
Fuel linear heat generation rate [kW/m]	: 18.4

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 137

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.07
Reactor outlet temperature [°C]	: 279
Reactor inlet temperature [°C]	: 218
Coolant mass flow at the rated power [t/h]	: 4450

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.35
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 2
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.68
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 284
HP cylinder Inlet steam flow rate [t/h]	: 4565.4

Main generator

Rated active power [MWe]	: 850
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B-CL-1
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 22.3
Inside shell diameter [m]	: 6.4
Shell thickness [mm]	: 159
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 30000
Active core diameter [m]	: 4.8
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 764
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 139.5
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.81
Average core power density [kW/dm ³]	: 48.7
Average fuel power density [kW/kgU]	: 23.6
Fuel linear heat generation rate [kW/m]	: 17.52

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.17
Reactor outlet temperature [°C]	: 287
Reactor inlet temperature [°C]	: 278
Coolant mass flow at the rated power [t/h]	: 45350

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.2
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.56
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 283
HP cylinder Inlet steam flow rate [t/h]	: 7424

Main generator

Rated active power [MWe]	: 1118
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13.2
Inside shell diameter [m]	: 4.3
Shell thickness [mm]	: 218
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 36000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 88.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 204
Fuel clad thickness [mm]	: 0.617
Average core power density [kW/dm ³]	: 85
Average fuel power density [kW/kgU]	: 31.1
Fuel linear heat generation rate [kW/m]	: 18.81

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 29

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.82
Reactor outlet temperature [°C]	: 309
Reactor inlet temperature [°C]	: 276
Coolant mass flow at the rated power [t/h]	: 15450

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Alloyed Steel
Vessel cladding material specification	: AS
Reactor vessel overall length/height [m]	: 11.9
Inside shell diameter [m]	: 3.35
Shell thickness [mm]	: 165
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 38900
Active core diameter [m]	: 2.45
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 121
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 46.1
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 179
Fuel clad thickness [mm]	: 0.62
Average core power density [kW/dm ³]	: 94.9
Average fuel power density [kW/kgU]	: 30.4
Fuel linear heat generation rate [kW/m]	: 20.82

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B2O3
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 21

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 315
Reactor inlet temperature [°C]	: 279.9
Coolant mass flow at the rated power [t/h]	: 15467

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Double
Containment Shape	: Cylindrical
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.22
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 4.95
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 263
HP cylinder Inlet steam flow rate [t/h]	: 3007

Main generator

Rated active power [MWe]	: 582
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: -
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 22.2
Inside shell diameter [m]	: 6.38
Shell thickness [mm]	: 171.4
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 40
Average discharge burnup [MWd/t]	: 45000
Active core diameter [m]	: 4.88
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 764
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 158
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 72
Fuel clad thickness [mm]	: 0.81
Average core power density [kW/dm ³]	: 48.7
Average fuel power density [kW/kgU]	: 20.8
Fuel linear heat generation rate [kW/m]	: 44

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.1
Reactor outlet temperature [°C]	: 286
Reactor inlet temperature [°C]	: 274
Coolant mass flow at the rated power [t/h]	: 8097

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .41
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.65
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282.4
HP cylinder Inlet steam flow rate [t/h]	: 6475

Main generator

Rated active power [MWe]	: 1122
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Pond (closed-cycle)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -

Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 22.4
Inside shell diameter [m]	: 6.38
Shell thickness [mm]	: 160
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 40
Average discharge burnup [MWd/t]	: 45000
Active core diameter [m]	: 4.57
Active core height/length [m]	: 3.71
Number of fissile fuel assemblies/bundles	: 764
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 192
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.711
Average core power density [kW/dm ³]	: 52.6
Average fuel power density [kW/kgU]	: 23.64
Fuel linear heat generation rate [kW/m]	: 16.4

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.1
Reactor outlet temperature [°C]	: 282
Reactor inlet temperature [°C]	: 277
Coolant mass flow at the rated power [t/h]	: 15500

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Steel
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .38
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.65
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 291
HP cylinder Inlet steam flow rate [t/h]	: 7410

Main generator

Rated active power [MWe]	: 1150
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: -
Reactor vessel overall length/height [m]	: 12.7
Inside shell diameter [m]	: 4.6
Shell thickness [mm]	: 219
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 37
Average discharge burnup [MWd/t]	: 40200
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 89
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 103.5
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 18.3

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 25

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 325
Reactor inlet temperature [°C]	: 293
Coolant mass flow at the rated power [t/h]	: 16046

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Single
Containment Shape	: Spherical
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 2.04
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.83
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 283
HP cylinder Inlet steam flow rate [t/h]	: 6488.7

Main generator

Rated active power [MWe]	: 1220
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: MNMO
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13.36
Inside shell diameter [m]	: 3.33
Shell thickness [mm]	: 203
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 33000
Active core diameter [m]	: 3.4
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 580
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 86.57
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.572
Average core power density [kW/dm ³]	: 78.5
Average fuel power density [kW/kgU]	: 33.19
Fuel linear heat generation rate [kW/m]	: 18.2

Reactivity control

Control rod material	: Carbon Steel
Burnable neutron absorber material	: <Not Available>
Burnable neutron absorber material specification	: -
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 24

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.9
Reactor outlet temperature [°C]	: 327
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 21111

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-600TT
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.7
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.7
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: -
HP cylinder Inlet steam flow rate [t/h]	: 3478

Main generator

Rated active power [MWe]	: 1253
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: CST-GRB-SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: ER308ELC
Reactor vessel overall length/height [m]	: 13.9
Inside shell diameter [m]	: 5.21
Shell thickness [mm]	: 131
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 75
Average discharge burnup [MWd/t]	: 27000
Active core diameter [m]	: 3.96
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 484
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 91.1
Moderator weight [t]	: 240
Number of fuel elements per assembly/bundle	: 63
Fuel clad thickness [mm]	: 0.64
Average core power density [kW/dm ³]	: 41.1
Average fuel power density [kW/kgU]	: 17.8
Fuel linear heat generation rate [kW/m]	: 39

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Others
Burnable neutron absorber material specification	: 7/ASS
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 121

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.17
Reactor outlet temperature [°C]	: 285
Reactor inlet temperature [°C]	: 277
Coolant mass flow at the rated power [t/h]	: 6800

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: 44
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: 1620

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Applicable>
Containment structure	: Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.94
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.78
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 285
HP cylinder Inlet steam flow rate [t/h]	: 3074

Main generator

Rated active power [MWe]	: 568
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-B/CST
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-308 / SS304
Reactor vessel overall length/height [m]	: 19.5
Inside shell diameter [m]	: 5.4
Shell thickness [mm]	: 181
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 22
Part of the core refuelled [%]	: 34
Average discharge burnup [MWd/t]	: 26000
Active core diameter [m]	: 4
Active core height/length [m]	: 3.7
Number of fissile fuel assemblies/bundles	: 532
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 93.6
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 63
Fuel clad thickness [mm]	: 0.7
Average core power density [kW/dm ³]	: 40.6
Average fuel power density [kW/kgU]	: 17.9
Fuel linear heat generation rate [kW/m]	: 15.5

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 129

Reactor coolant system

Number of external reactor coolant loops	: 5
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.13
Reactor outlet temperature [°C]	: 285
Reactor inlet temperature [°C]	: 277
Coolant mass flow at the rated power [t/h]	: 30612

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA533B1 SA508 II
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-308INCONEL
Reactor vessel overall length/height [m]	: 13.17
Inside shell diameter [m]	: 3.99
Shell thickness [mm]	: 199
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 39000
Active core diameter [m]	: 3.04
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 72.5
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 108.7
Average fuel power density [kW/kgU]	: 33.88
Fuel linear heat generation rate [kW/m]	: 18.59

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BOROSILICATE
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 32

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 327
Reactor inlet temperature [°C]	: 298
Coolant mass flow at the rated power [t/h]	: 16073

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-690
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.16
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.82
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 272
HP cylinder Inlet steam flow rate [t/h]	: 5417.8

Main generator

Rated active power [MWe]	: 984
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-508
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-308INCONEL
Reactor vessel overall length/height [m]	: 13.17
Inside shell diameter [m]	: 3.99
Shell thickness [mm]	: 199
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 39000
Active core diameter [m]	: 3.04

Reactor vessel material specification	: SA534
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-18-8
Reactor vessel overall length/height [m]	: 12.4
Inside shell diameter [m]	: 4.77
Shell thickness [mm]	: 214
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 34
Average discharge burnup [MWd/t]	: 30000
Active core diameter [m]	: 3.27
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 177
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 94.1
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 208
Fuel clad thickness [mm]	: 0.67
Average core power density [kW/dm ³]	: 83.4
Average fuel power density [kW/kgU]	: 31.3
Fuel linear heat generation rate [kW/m]	: 19.06

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 28

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.5
Reactor outlet temperature [°C]	: 318
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 20000

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: INCONEL-600S
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 5.13
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.33
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 297
HP cylinder Inlet steam flow rate [t/h]	: 5078

Main generator

Rated active power [MWe]	: 893
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-B/CST
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 19.5
Inside shell diameter [m]	: 5.4
Shell thickness [mm]	: 181
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 43000
Active core diameter [m]	: 4.07
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 560
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 125
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 60
Fuel clad thickness [mm]	: 0.813
Average core power density [kW/dm ³]	: 40.6
Average fuel power density [kW/kgU]	: 17
Fuel linear heat generation rate [kW/m]	: 47.6

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: -

Reactor coolant system

Number of external reactor coolant loops	: 5
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.1
Reactor outlet temperature [°C]	: 288
Reactor inlet temperature [°C]	: 271
Coolant mass flow at the rated power [t/h]	: 7723

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 5
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Reinforced Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .43
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.65
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 3288

Main generator

Rated active power [MWe]	: 687.5
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 38000
Active core diameter [m]	: 3.65
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 241
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 99.03
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 236
Fuel clad thickness [mm]	: 0.635
Average core power density [kW/dm ³]	: 95.6
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 18.21

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 76

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 327
Reactor inlet temperature [°C]	: 296
Coolant mass flow at the rated power [t/h]	: 25288

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 7
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 288
HP cylinder Inlet steam flow rate [t/h]	: 8790

Main generator

Rated active power [MWe]	: 1303
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 14.63
Inside shell diameter [m]	: 4.63
Shell thickness [mm]	: 230
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: -
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 38000
Active core diameter [m]	: 3.65
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 241
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 99.03
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 236
Fuel clad thickness [mm]	: 0.635
Average core power density [kW/dm ³]	: 95.6
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 18.37

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 76

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 327
Reactor inlet temperature [°C]	: 296
Coolant mass flow at the rated power [t/h]	: 25288

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Single
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.5
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 7
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 288
HP cylinder Inlet steam flow rate [t/h]	: 8790

Main generator

Rated active power [MWe]	: 1303
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: ASME-SA-336 / SA533B CC1339
Vessel cladding material	: Alloyed Steel
Vessel cladding material specification	: SA-371-ER-309_ER-308
Reactor vessel overall length/height [m]	: 22
Inside shell diameter [m]	: 6.4
Shell thickness [mm]	: 160
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 40
Average discharge burnup [MWd/t]	: 48000
Active core diameter [m]	: 4.57
Active core height/length [m]	: 3.71
Number of fissile fuel assemblies/bundles	: 764
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 134.2
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.711
Average core power density [kW/dm ³]	: 50
Average fuel power density [kW/kgU]	: 22.8
Fuel linear heat generation rate [kW/m]	: 16.37

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.1
Reactor outlet temperature [°C]	: 287
Reactor inlet temperature [°C]	: 276
Coolant mass flow at the rated power [t/h]	: 7720

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>

Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 7614
Active core diameter [m]	: 4.65
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 748
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 152.1
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.813
Average core power density [kW/dm ³]	: 54
Average fuel power density [kW/kgU]	: 26.25
Fuel linear heat generation rate [kW/m]	: 19.85

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 177

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.31
Reactor outlet temperature [°C]	: 285.5
Reactor inlet temperature [°C]	: 278.3
Coolant mass flow at the rated power [t/h]	: 6985

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.05
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.78
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 285.5
HP cylinder Inlet steam flow rate [t/h]	: 7000

Main generator

Rated active power [MWe]	: 1250
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: -
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 19.7
Inside shell diameter [m]	: 5.7
Shell thickness [mm]	: 145
Number of pressure channels	: <Not Applicable>
Pressure channel material	: Zircaloy
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 25000
Active core diameter [m]	: 4.14
Active core height/length [m]	: 3.69
Number of fissile fuel assemblies/bundles	: 580
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 113
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 62
Fuel clad thickness [mm]	: 0.812
Average core power density [kW/dm ³]	: 40.2
Average fuel power density [kW/kgU]	: 17.86
Fuel linear heat generation rate [kW/m]	: -

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: -

Reactor coolant system

Number of external reactor coolant loops	: 1
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.17
Reactor outlet temperature [°C]	: 296
Reactor inlet temperature [°C]	: 276
Coolant mass flow at the rated power [t/h]	: 7650

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.97
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.78
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 283
HP cylinder Inlet steam flow rate [t/h]	: 3621

Main generator

Rated active power [MWe]	: 687
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 11.4
Inside shell diameter [m]	: 5.84
Shell thickness [mm]	: 165.1
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 74
Average discharge burnup [MWd/t]	: 45000
Active core diameter [m]	: 2.46
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 121
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 50
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 179
Fuel clad thickness [mm]	: 0.62
Average core power density [kW/dm ³]	: 87
Average fuel power density [kW/kgU]	: 32.1
Fuel linear heat generation rate [kW/m]	: 18.7

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Others
Burnable neutron absorber material specification	: IFBA
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 21

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 316
Reactor inlet temperature [°C]	: 285
Coolant mass flow at the rated power [t/h]	: 31900

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.22
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 121
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 42.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 179
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 95
Average fuel power density [kW/kgU]	: 33.8
Fuel linear heat generation rate [kW/m]	: 20.3

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 21

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 315
Reactor inlet temperature [°C]	: 280
Coolant mass flow at the rated power [t/h]	: 15470

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 2.91
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.06
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 263
HP cylinder Inlet steam flow rate [t/h]	: 3165

Main generator

Rated active power [MWe]	: 560
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304 INCONEL
Reactor vessel overall length/height [m]	: 11.9
Inside shell diameter [m]	: 3.35
Shell thickness [mm]	: 178
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZIRLO
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 20
Part of the core refuelled [%]	: 40
Average discharge burnup [MWd/t]	: 51000
Active core diameter [m]	: 2.45
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 121
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 42.9
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 179
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 95
Average fuel power density [kW/kgU]	: 33.8
Fuel linear heat generation rate [kW/m]	: 20.3

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 21

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 315
Reactor inlet temperature [°C]	: 280
Coolant mass flow at the rated power [t/h]	: 15470

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 2.91
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.06
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 263
HP cylinder Inlet steam flow rate [t/h]	: 3165

Main generator

Rated active power [MWe]	: 560
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of fuel elements per assembly/bundle	: 179
Fuel clad thickness [mm]	: 0.6
Average core power density [kW/dm ³]	: 88.9
Average fuel power density [kW/kgU]	: 31.2
Fuel linear heat generation rate [kW/m]	: 19.02

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: ZRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 17

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.82
Reactor outlet temperature [°C]	: 317
Reactor inlet temperature [°C]	: 284
Coolant mass flow at the rated power [t/h]	: 29940

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.23
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.1
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 264
HP cylinder Inlet steam flow rate [t/h]	: 2849

Main generator

Rated active power [MWe]	: 498
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA- 533-B
Vessel cladding material	: Alloyed Steel
Vessel cladding material specification	: AS-SAF-5.9
Reactor vessel overall length/height [m]	: 21.29
Inside shell diameter [m]	: 5.54
Shell thickness [mm]	: 152
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 25
Average discharge burnup [MWd/t]	: 29600
Active core diameter [m]	: 4.29
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 624
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 112.6
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 64
Fuel clad thickness [mm]	: 0.813
Average core power density [kW/dm ³]	: 52.4
Average fuel power density [kW/kgU]	: 25.9
Fuel linear heat generation rate [kW/m]	: 18.86

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 145

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.56
Reactor outlet temperature [°C]	: 288
Reactor inlet temperature [°C]	: 278
Coolant mass flow at the rated power [t/h]	: 7400

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.05
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.78
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282.4
HP cylinder Inlet steam flow rate [t/h]	: 5647

Main generator

Rated active power [MWe]	: 991
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: ASTM A 533/508
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.4
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 114.3
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 40000
Active core diameter [m]	: 3.4
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 89.1
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 102.6
Average fuel power density [kW/kgU]	: 37.7
Fuel linear heat generation rate [kW/m]	: 17.85

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BOROSILICATE
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 29

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 285
Coolant mass flow at the rated power [t/h]	: 65600

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 83

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.82
Reactor outlet temperature [°C]	: 321.6
Reactor inlet temperature [°C]	: 289
Coolant mass flow at the rated power [t/h]	: 16818

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed+Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.2
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.33
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 278
HP cylinder Inlet steam flow rate [t/h]	: 6523

Main generator

Rated active power [MWe]	: 1181
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B/SA-508
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.22
Inside shell diameter [m]	: 4.81
Shell thickness [mm]	: 219
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 33000
Active core diameter [m]	: 3.45
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 217
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 89.5
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 236
Fuel clad thickness [mm]	: 0.641
Average core power density [kW/dm ³]	: 94.9
Average fuel power density [kW/kgU]	: 37.9
Fuel linear heat generation rate [kW/m]	: 18.4

Reactivity control

Control rod material	: Boron Carbide/Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 49

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.82
Reactor outlet temperature [°C]	: 321.6
Reactor inlet temperature [°C]	: 289
Coolant mass flow at the rated power [t/h]	: 16818

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Single
Containment Shape	: <Not Available>
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.2
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 8.33
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 278
HP cylinder Inlet steam flow rate [t/h]	: 6523

Main generator

Rated active power [MWe]	: 1181
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>

Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 33000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 101
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 43.6
Average fuel power density [kW/kgU]	: 38.92
Fuel linear heat generation rate [kW/m]	: 17.18

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B2O3
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 57

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 326
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 64445

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL

Reactor outlet temperature [°C]	: 322.4
Reactor inlet temperature [°C]	: 286
Coolant mass flow at the rated power [t/h]	: 62600

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Double
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m ³]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 0.84
Design leakage rate [% per day]	: -
Type of H ₂ recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.85
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 272.6
HP cylinder Inlet steam flow rate [t/h]	: 7127

Main generator

Rated active power [MWe]	: 1221
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533/304-CLAD
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13
Inside shell diameter [m]	: 4
Shell thickness [mm]	: 204
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 31500
Active core diameter [m]	: 3.03
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 73.1
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.559
Average core power density [kW/dm ³]	: 105
Average fuel power density [kW/kgU]	: 39.6
Fuel linear heat generation rate [kW/m]	: -

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B2O3
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 52

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 326
Reactor inlet temperature [°C]	: 290
Coolant mass flow at the rated power [t/h]	: 16480

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.2
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.56
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 280
HP cylinder Inlet steam flow rate [t/h]	: 5100

Main generator

Rated active power [MWe]	: 950
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B-CL-1
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 13.4
Inside shell diameter [m]	: 5.57
Shell thickness [mm]	: 213
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZIRLO
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 16.7
Average discharge burnup [MWd/t]	: 43000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 4.27
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 117.82
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 98
Average fuel power density [kW/kgU]	: 36.6
Fuel linear heat generation rate [kW/m]	: 17.03

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BOROSILICATE
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 29

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 330
Reactor inlet temperature [°C]	: 293
Coolant mass flow at the rated power [t/h]	: 64150

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600

Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.1
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.38
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 267
HP cylinder Inlet steam flow rate [t/h]	: 4739

Main generator

Rated active power [MWe]	: 842
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-CIB
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 12.5
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 219
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 35
Average discharge burnup [MWd/t]	: 36000
Active core diameter [m]	: 3.45
Active core height/length [m]	: 3.47
Number of fissile fuel assemblies/bundles	: 217
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 92.7
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 236
Fuel clad thickness [mm]	: 0.635
Average core power density [kW/dm ³]	: 83.2
Average fuel power density [kW/kgU]	: 31.3
Fuel linear heat generation rate [kW/m]	: 14.5

Reactivity control

Control rod material	: Boron Carbide/Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C/Al ₂ O ₃
Soluble neutron absorber material	: Boric Acid H ₃ BO ₃
Secondary shutdown system	: -
Number of control rod assemblies	: 91

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H ₂ O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 314
Reactor inlet temperature [°C]	: 288
Coolant mass flow at the rated power [t/h]	: 63049

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m ²]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m ³]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.1
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.38
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 267
HP cylinder Inlet steam flow rate [t/h]	: 4733

Main generator

Rated active power [MWe]	: 935
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>

Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.72
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.69
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282.2
HP cylinder Inlet steam flow rate [t/h]	: 7075

Main generator

Rated active power [MWe]	: 1134
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 22
Inside shell diameter [m]	: 6.3
Shell thickness [mm]	: 163.5
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 30
Average discharge burnup [MWd/t]	: 36000
Active core diameter [m]	: 4.57
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 764
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 132.3
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 79
Fuel clad thickness [mm]	: 0.76
Average core power density [kW/dm ³]	: 48.7
Average fuel power density [kW/kgU]	: 23.82
Fuel linear heat generation rate [kW/m]	: 14.32

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 185

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.19
Reactor outlet temperature [°C]	: 287
Reactor inlet temperature [°C]	: 195
Coolant mass flow at the rated power [t/h]	: 6170

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.72
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.69
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282.2
HP cylinder Inlet steam flow rate [t/h]	: 7075

Main generator

Rated active power [MWe]	: 1134
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: -
Reactor vessel overall length/height [m]	: 12.4
Inside shell diameter [m]	: 4.34
Shell thickness [mm]	: 214
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: Pellets
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 24
Part of the core refuelled [%]	: 40
Average discharge burnup [MWd/t]	: 54000
Active core diameter [m]	: 3.27
Active core height/length [m]	: 3.6
Number of fissile fuel assemblies/bundles	: 177
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 82.1
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 208
Fuel clad thickness [mm]	: 0.67
Average core power density [kW/dm ³]	: 84.7
Average fuel power density [kW/kgU]	: 30.44
Fuel linear heat generation rate [kW/m]	: 18.83

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 32

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 14.9
Reactor outlet temperature [°C]	: 318
Reactor inlet temperature [°C]	: 291
Coolant mass flow at the rated power [t/h]	: 65771

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: Straight
Tube material	: INCONEL-600S
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: <Not Available>
Additional pressure suppression system	: <Not Available>

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: .38
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: <Not Available>
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.28
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 311
HP cylinder Inlet steam flow rate [t/h]	: 4790

Main generator

Rated active power [MWe]	: 871
Rated apparent power [MVA]	: <Not Available>
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-302-GR-B; ASTM A-508B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS-304
Reactor vessel overall length/height [m]	: 12.8
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 200.8
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33.3
Average discharge burnup [MWd/t]	: 33000
Active core diameter [m]	: 3.04
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 79.8
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 204
Fuel clad thickness [mm]	: 0.62
Average core power density [kW/dm ³]	: 82.8
Average fuel power density [kW/kgU]	: 30.9
Fuel linear heat generation rate [kW/m]	: 18

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Others
Burnable neutron absorber material specification	: WABA/IFBA
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 29

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.7
Reactor outlet temperature [°C]	: 338
Reactor inlet temperature [°C]	: 285.7
Coolant mass flow at the rated power [t/h]	: 46039

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-600TT
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: Cylindrical
Containment structure	: Pre-stressed Concrete+Steel
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.1
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.13
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 266
HP cylinder Inlet steam flow rate [t/h]	: 4068

Main generator

Rated active power [MWe]	: 728
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>

Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4.1
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 5.13
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 266
HP cylinder Inlet steam flow rate [t/h]	: 4068

Main generator

Rated active power [MWe]	: 728
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Sea (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: CS SA-533B
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS ER-309
Reactor vessel overall length/height [m]	: 19.2
Inside shell diameter [m]	: 5.2
Shell thickness [mm]	: 133
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-2
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 16
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 33760
Active core diameter [m]	: 3.3
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 368
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 65.4
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 61
Fuel clad thickness [mm]	: 0.812
Average core power density [kW/dm ³]	: 50.96
Average fuel power density [kW/kgU]	: 22.4
Fuel linear heat generation rate [kW/m]	: 42.5

Reactivity control

Control rod material	: Boron Carbide/Hafnium
Burnable neutron absorber material	: Gadolinium
Burnable neutron absorber material specification	: GD 203
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: -

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 7.13
Reactor outlet temperature [°C]	: 288
Reactor inlet temperature [°C]	: 189
Coolant mass flow at the rated power [t/h]	: 1116

Steam generators (SG)/drum separators

Type of SG	: <Not Applicable>
SG output	: <Not Available>
Number of SG	: <Not Applicable>
Number of drum separators	: <Not Applicable>
Tube shape	: <Not Applicable>
Tube material	: <Not Applicable>
SG shell material	: <Not Applicable>
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: <Not Applicable>
Design heat transfer surface [m2]	: <Not Applicable>

Main coolant pumps/circulators

Total number of pumps/circulators	: 2
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: Confinement
Containment Shape	: <Not Available>
Containment structure	: <Not Available>
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.9
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.68
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 282
HP cylinder Inlet steam flow rate [t/h]	: 2913

Main generator

Rated active power [MWe]	: 540
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Carbon Steel
Reactor vessel material specification	: CS
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 12.33
Inside shell diameter [m]	: 4
Shell thickness [mm]	: 197
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4,ZIRLO
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 43.3
Average discharge burnup [MWd/t]	: 38900
Active core diameter [m]	: 3.04
Active core height/length [m]	: 3.66
Number of fissile fuel assemblies/bundles	: 157
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 65.42
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 104.5
Average fuel power density [kW/kgU]	: 38.3
Fuel linear heat generation rate [kW/m]	: 17.83

Reactivity control

Control rod material	: Cadmium Alloy
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: ZRB-2
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: -

Reactor coolant system

Number of external reactor coolant loops	: 3
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 327
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 47400

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 3
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL-690
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 3
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Reinforced Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 4
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 8.33
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 315.6
HP cylinder Inlet steam flow rate [t/h]	: 5538.5

Main generator

Rated active power [MWe]	: 933
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Lake (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.81
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 284
HP cylinder Inlet steam flow rate [t/h]	: 7283.5

Main generator

Rated active power [MWe]	: 1157
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: Cooling Towers
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13.3
Inside shell diameter [m]	: 4.37
Shell thickness [mm]	: 192.5
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 33
Average discharge burnup [MWd/t]	: 33450
Active core diameter [m]	: 3.45
Active core height/length [m]	: 3.81
Number of fissile fuel assemblies/bundles	: 217
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 89.5
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 236
Fuel clad thickness [mm]	: 0.64
Average core power density [kW/dm ³]	: 94.9
Average fuel power density [kW/kgU]	: 39.6
Fuel linear heat generation rate [kW/m]	: 17.52

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: Al203/B-4C
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 41

Reactor coolant system

Number of external reactor coolant loops	: 2
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.8
Reactor outlet temperature [°C]	: 322
Reactor inlet temperature [°C]	: 289
Coolant mass flow at the rated power [t/h]	: 67100

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 2
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 2
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: 79
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: 2520

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: -
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 3.09
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Secondary systems

Turbine

Turbine type	: <Not Available>
Number of turbine-generators per unit/reactor	: 1
Turbine speed [rpm]	: 1800
Number of HP cylinders per turbine	: -
Number of IP cylinders per turbine	: -
Number of LP cylinders per turbine	: -
HP cylinder inlet steam pressure [MPa]	: 6.05
HP cylinder Inlet steam moisture [%]	: -
HP cylinder inlet steam temperature [°C]	: 275
HP cylinder Inlet steam flow rate [t/h]	: 6303

Main generator

Rated active power [MWe]	: 1153
Rated apparent power [MVA]	: -
Output voltage [kV]	: -
Output frequency [Hz]	: -

Main condenser

Primary means of condenser cooling	: River (once-through)
Number of condensers per turbine-generator	: <Not Available>
Condenser tube material	: -

Number of main condensate pumps	: -
Number of main condensate pumps required for full power	: -
Condenser vacuum at the full power (absolute pressure) [kPa]	: -

Feedwater system

Number of turbine driven main feedwater pumps	: <Not Available>
Number of motor-driven main feedwater pumps	: <Not Available>
Number of start-up feed-water pumps (if different from the auxiliary FWP)	: <Not Available>
Number of feedwater pumps required for full power operation	: -
Feedwater discharge pressure [MPa]	: -
Steam generator feedwater inlet temperature [°C]	: -

Auxiliary / Emergency feedwater

Number of electrical motor-driven pumps	: <Not Available>
Number of diesel driven pumps	: <Not Available>
Number of turbine driven pumps	: <Not Available>

Fire protection system

On-site fire suppression/extinguishing system	: <Not Available>
Fire retardant cable coating used for	: -
Cable segregation within the unit used for	: -
On-site fire brigade	: -
Off-site fire brigade response time	: -

Emergency power supply systems

Number of alternate power sources from the neighbouring units (available per unit)	: <Not Available>
Number of alternate power sources from the transmission grid (standby transformers available per unit)	: <Not Available>
Number of on-site safety related diesel generators (available per unit)	: <Not Available>
Number of on-site safety related gas turbines (available per unit)	: <Not Available>
Number of on site non-safety related diesel generator	: -
Number of on site non-safety related gas turbines	: -
Other on-site emergency AC power sources	: -
Estimated time reserve of the batteries at full load [h]	: -
Total installed capacity of the on-site emergency power sources per unit [MW]	: -
Total battery capacity [Ah]	: -

Spent fuel storage

Reactor building spent fuel pool capacity (number of spent fuel assemblies)	: <Not Available>
Interim storage facility type	: <Not Available>
Interim storage facility capacity (number of spent fuel assemblies)	: -

Non-electrical applications

Primary heat connection	: <Not Available>
-------------------------	-------------------

Number of heat connection points per unit	: <Not Available>
Number of intermediate circuits/heat exchangers	: <Not Available>
Total capacity of heat connections [MWt]	: -
Extraction steam pressure [MPa]	: -

Design Characteristics

Primary Systems

Reactor pressure vessel

Reactor vessel shape	: Cylindrical, Hemispherical End
Reactor vessel centreline orientation	: Vertical
Reactor vessel material	: Alloyed Steel
Reactor vessel material specification	: SA-533-B-CL-1
Vessel cladding material	: Stainless Steel
Vessel cladding material specification	: SS
Reactor vessel overall length/height [m]	: 13.4
Inside shell diameter [m]	: 4.4
Shell thickness [mm]	: 215.1
Number of pressure channels	: <Not Applicable>
Pressure channel material	: <Not Applicable>
Pressure channel wall thickness [mm]	: <Not Applicable>

Reactor Core

Fuel assembly geometry	: Square
Fuel Form	: <Not Available>
Fuel material	: UO ₂
Refuelling type	: OFF-line
Moderator material	: H ₂ O
Fuel clad material	: Zirconium Alloy
Fuel clad material specification	: ZR-4
Average fuel enrichment [% of U235]	: -
Refuelling frequency [month]	: 18
Part of the core refuelled [%]	: 32
Average discharge burnup [MWd/t]	: 36000
Active core diameter [m]	: 3.37
Active core height/length [m]	: 3.65
Number of fissile fuel assemblies/bundles	: 193
Number of fertile fuel assemblies (for FBR, N/A for other reactors)	: <Not Applicable>
Fuel weight [t]	: 88.6
Moderator weight [t]	: -
Number of fuel elements per assembly/bundle	: 264
Fuel clad thickness [mm]	: 0.57
Average core power density [kW/dm ³]	: 102.1
Average fuel power density [kW/kgU]	: 38.6
Fuel linear heat generation rate [kW/m]	: 17.88

Reactivity control

Control rod material	: Boron Carbide
Burnable neutron absorber material	: Boron
Burnable neutron absorber material specification	: BOROSIL GLASS
Soluble neutron absorber material	: Boric Acid H3BO3
Secondary shutdown system	: -
Number of control rod assemblies	: 33

Reactor coolant system

Number of external reactor coolant loops	: 4
Coolant type	: H2O
Coolant weight [t]	: -
Operating coolant pressure [MPa]	: 15.71
Reactor outlet temperature [°C]	: 326
Reactor inlet temperature [°C]	: 292
Coolant mass flow at the rated power [t/h]	: 15910

Steam generators (SG)/drum separators

Type of SG	: Vertical
SG output	: <Not Available>
Number of SG	: 4
Number of drum separators	: <Not Applicable>
Tube shape	: U-tube
Tube material	: INCONEL 600
SG shell material	: -
Drum separator shell material	: <Not Applicable>
Design thermal capacity per SG [MW]	: -
Design heat transfer surface [m2]	: -

Main coolant pumps/circulators

Total number of pumps/circulators	: 4
Number of pumps per RCS loop	: 1
Pump motor rating [MW]	: -
Design pressure difference [MPa]	: -

Pressurizer

Total volume [m3]	: <Not Available>
Number of safety valves	: <Not Available>
Number of relief valves	: <Not Available>
Installed heater power [kW]	: -

Containment systems

Containment type	: <Not Available>
Containment Shape	: <Not Available>
Containment structure	: Steel+Concrete
Pressure suppression system	: Ice Condenser
Additional pressure suppression system	: -

Total containment volume [m3]	: -
Number of containment spray pumps	: -
Containment design pressure [MPa]	: 1.05
Design leakage rate [% per day]	: -
Type of H2 recombiner	: -

Emergency core cooling systems

Number of HPSI systems	: <Not Available>
Number of LPSI systems	: <Not Available>
Number of hydroaccumulators	: <Not Available>
Number of core spray system pumps (BWR)	: <Not Available>
HPSI systems pressure [MPa]	: -
LPSI system pressure [MPa]	: -
HPSI system flowrate [t/h]	: -
LPSI system flowrate [t/h]	: -

Reactor protection system

Control equipment technology	: -
Number of independent system divisions	: <Not Available>

Engineered Safeguard Feature Actuation System

Control equipment technology	: -
