**BRIEF DESCRIPTION
OF THE SERIAL PROPERTY**

The serial property “**The Longobards in Italy. Places of the power (568-774 A.D.)**” comprises the same assets previously selected (in 2008) for recognition of the Site called “*Italia Langobardorum. Places of power and worship (568-774 A.D.)*”; the small differences in the current configuration of nominated property and refer to a) extension of *core zone* for Brescia, b) extension of buffer zones for Spoleto and Campello core areas, c) the exclusion of the modern building to the north-east of Santa Sofia for Benevento, meeting the Recommendations by ICOMOS

Sporadic documentary evidence suggests that the Longobard *élites* in Italy commissioned prestigious buildings right from their arrival (palaces and residences, but also churches and basilicas), along the lines of their Roman predecessors, in order to affirm their position and authority.

Since the century before the Carolingian annexing of the north and centre of the peninsula (second half of the 7th-first half of the 8th century A.D.), the Longobard kings and dukes begun more frequently and more systematically to committed themselves especially to the construction of churches and monasteries. The monastery, in particular, is a typical foundation of this period, an expression not only of the strength of the faith of the Longobard nobles, but also a place of

refuge for themselves and their families and, above all, an institution that guaranteed the continuation of their assets. King Desiderio alone, together with his wife Ansa, founded three monasteries (in addition to San Salvatore in Brescia, there were those in Leno and Sirmione) and all the dukes of the peninsula conformed to this model, undertaking ambitious architectural enterprises unparalleled in Europe at that time.

Sources testify – and monument evidence confirms – that the construction industry was well organised with guilds of specialised craftsmen who could carry out complex commissions to high standards. Not having an architectural, pictorial or sculpture tradition of their own, the Longobards used the existing skills of the local craftsmen. This is one of the reasons that the Longobard artistic style in Italy is extremely composite and presents specific characteristics in different parts of the kingdom. Faced, therefore, with a clear unity of intent which brings together all the monument complexes – owing to the desire for self-determination of the Longobard élites and legitimization before the indigenous population – we find heterogeneous artistic creations which, for example, in Lombardy seem to be more conspicuously subject to the Merovingian influence, as in Friuli the influence is more Byzantine and Syriac. The language in different areas of Italy was therefore different, but the various formal dialects were mutually comprehensible.

Today's region of Friuli is the area of Longobard settlement in Italy that is richest in testimonies and findings; in particular, one of the most complex and original buildings of Longobard architecture is preserved at **Cividale del Friuli**, the so-called “*Tempietto Longobardo*”, Oratory of Santa Maria in Valle, with a single chamber, square-plan, covered in a spacious cross-vault, which terminates in

a lower presbytery, divided by pairs of columns in three parts covered in barrel vaults. The sumptuous decorative scheme, including mosaics on the vaults, stucco figures and ornaments, and a series of frescoes painted in aulic style and skilfully refined, make this one of the most splendid and ambitious works to reach us today from 8th-century Europe, probably the work of the Royal couple Astolfo (749-756) and Giseltrude. In particular, the stucco tondo figures of female saints show the refined and high level of artistic production achieved in Italy in the late Longobard era.

The Temple, together with San Giovanni, the Palatine Church of the royal court, stands in the urban area belonging to the castle, next to the early Christian Church of Santa Maria, which became an Episcopal church with annexed Palace in the late Longobard era.

The Episcopal complex, renovated and extended by the patriarch Callisto, consisted of a set of communicating buildings, which included the Basilica, the Baptistry of Saint John the Baptist and the Patriarchal Palace. From the Baptistry, discovered at the start of the 20th century beneath the Duomo, come two of the most important works of Longobard sculpture, currently preserved in the *Museo Cristiano e Tesoro del Duomo*, a short distance from their origi-

Cividale del Friuli, the “*Tempietto Longobardo*”

nal location. The high level of craftsmanship explains the excellent quality of Callisto's "tegurio" – an octagonal aedicule which covered the baptismal font, with columns and arch vaults finely sculpted with symbolic images and rich decorative motifs – and the altar commissioned by King Ratchis – the only sculptural piece from the Longobard era featuring a biblical narrative theme, achieved using a linear and calligraphic language that invert the standards of classical naturalism, and enriched by a vivid chromatism and a precious set of mounted stones.

The remains of the Patriarchal Palace were uncovered beneath the 16th-century Palazzo dei Provveditori Veneti, designed by Andrea Palladio, today home to the *Museo Archeologico Nazionale* which houses the burial items from urban and suburban necropolises of Cividale, real treasures of Longobard artistic craftsmanship.

The exceptional nature of the proposed artistic item is provided by the preservation of the most representative structures and spaces of the secular and religious élites. This offers a clear proof of the socio-cultural composition of the urban *civitas* – the Longobard ruling one – as well as of the strategies performed by the dominant classes in the power management. Indeed, the site includes evidences of the rich artistic production ascribed to

Longobard period and to a secular customer base. It is a unique repertory, for it displays the ubiquitous creativity and experimentation attitude of workers who elaborated a new original language as result of the confluence of different traditions: the indigenous, Barbarian, Byzantine and Arabic ones.

The monumental area of San Salvatore-Santa Giulia in **Brescia** is an extraordinary architectural palimpsest that incorporates the female convent built by Duke Desiderio of Brescia, with his wife Ansa in 753 A.D. before becoming king. The Church of San Salvatore is one of the most important testimonies of late mediaeval architecture: the building, with triple apse transept, had three naves with a series of columns and capitals, some recycled from the classical era and from Byzantium, others made for this purpose. The church was entirely decorated with stuccoes and frescoes; the decorations, along with those of the Cividale Tempietto, are one of the richest and best preserved collections of the Early Middle Ages. A complex play of stucco reliefs and wall paintings probably decorated the crypt, which also had the three-apse system of the upper floor. Within the church, enhanced by a marble liturgical assemblage of which numerous elements are intact, can be found a number of tombs of the privileged, one of which is thought to be that of Desiderio's wife, Ansa.

The complex somehow recalled architectural and ornamental models already used in the Capital Pavia, and subsequently in Cividale. Nevertheless it became a referring point for the prestigious architectures ordered by the secular and religious purchasers. As a whole, it is possible to recognize here traditions of North-European (British and Alemannic), Mediterranean (Ravenna's and Roman) and Oriental ascendancy.

The Monastery had service structures for the pilgrims reception and the poor

housing. Historical sources recall the *Xenodochio*, which hosted the pilgrims, and the so called *Peresindo's Hospital*. The monastic complex area spread Westward with houses, burial places and productive plants. The walls evidences still visible *in situ* testify the presence of the large number of Longobard buildings, with different functions and structural quality. Such evidences were uncovered in what is still considered to be the most complete medieval urban excavation, within an area where the most important pre-existing Roman remains in Northern Italy are preserved.

S. Salvatore - S. Giulia Monastery, which had reception structures for pilgrims and accommodation for the poor, played a fundamental role in the society of the time, both in religious terms and in political and economic terms. Its importance did not diminish after the fall of the Longobards: its richness and high prestige over the centuries led to new important architectural interventions, extending Desiderio's complex until it became the structure that we see today, which, in addition to three cloisters from different eras, includes the Romanesque Church of Santa Maria in Solario, the 15th-century choir and the 16th-century church of Santa Giulia. The entire complex, the result of an exceptional recovery and valorisation project, is currently home to the *Museo della città*, which houses the finest artistic testimonies of the long history of Brescia and its territory.

While Cividale and Brescia, like Benevento, demonstrate the settlement methods of the Longobards within the most important cities in the urban system created by the Romans, **Castelseprio-Torba** is excellent testimony of how high altitude fortified systems, which developed during the late Roman era following the first Barbarian invasions, were re-used. The *castrum*, destroyed by

Brescia, the Church of San Salvatore

the Visconti in the late 13th-century – with the exception of buildings of worship – and following its abandonment, retained the fundamental features that characterised it: the imposing wall circuit, a place of shelter for the inhabitants in times of peril, the high quality of the housing system and of the main worship complex of San Giovanni Evangelista, with basilica and annexed octagonal baptistery, completely reconstructed by the Longobards in the 7th century and used internally and externally for the burial of important local personages. A particularly significant example of military architecture is the Torba tower, placed at the summit of the fortified site of Castelseprio, which led down to Valle dell’Olona, and which, in late Longobard times, was used as a female convent. The rooms on the first and second floors of the tower, used by the nuns as a sepulchre and oratory respectively, preserve noteworthy remains of paintings which, in some iconographic respects, are reminiscent of the stucco work in the Cividale Tempietto.

The Church of Santa Maria *foris portas* in Castelseprio, a private aristocratic building with annexed cemetery, placed in the area of the burg which developed westwards of the *castrum*, preserves one of the finest pictorial texts of the whole of the Early Middle Ages; the scenes

Castelseprio, Christ Pantocrator in S. Maria *foris portas*

dedicated to the story of the childhood of Christ are presented in the central apse of the small triple-apse structure enriched with an inlaid marble floor. The series of figures is complex and dense with episodes and references, alternated with symbolic images; the style is free and animated which renews and revitalizes the expressiveness and Hellenistic pictorial quality and is unequalled by other creations of the time.

The *Wideramn* epitaph probably comes from the church and is one of the first testimonies of written Longobard funeral culture. Conquering the written culture of the victors went hand in hand with assimilation of architectural and decorative cultures. Having first entered the funeral ritual with the purpose of evoking the memory of the personality rather than merely the physical aspects of the deceased, writing soon took on new functions of celebrating the image and status of the Longobard *élites*: it is in this function that we encounter it in the most extraordinary architectural works, the painted dedicatory inscriptions of San Salvatore and Brescia and the Cividale Tempietto, the inscriptions on the *tegurio* of Callisto and on the altar of Ratchis, again in Cividale, in the epigraphs in the Sanctuary of Saint Michael on the Gargano Coast, the architectural inscriptions on monuments in the duchies of Spoleto and Benevento, clear references to Imperial Roman customs.

The complex as a whole represents an extraordinary example of castrensian settlement which stands out for its spatial organization, monumentality and typological variety of its buildings. The great number of worship buildings, characterized by different functions, public and private, is a proof of the influential relationship of the Longobard *élites* with the Church, to the extent of creating a “new” model of settlement where the

sacred places played a primary role in the power strategies.

Again in the duchy of Spoleto there is the same tendency for the prestigious architecture conveyed in the monuments of the northern duchies. One of the best preserved examples is the Basilica of San Salvatore in **Spoleto** and the Clitunno Tempietto in Campello, both outstanding edifices designed using classic Roman style features. Most of the sculpted ornaments are new works rather than recycled *spolia* from ancient buildings, designed and realised in such a convincing, skilful and credible way that they also convinced Palladio that the Tempietto was a Roman temple and it still puzzles and astounds scholars to this day. The Church of San Salvatore, which probably had funerary functions originally, has a three-aisle basilica floor plan, with presbytery divided into three parts, and central vaulted covering with octagonal base. The semi-circular apse is closed on the outside by a straight wall and flanked by two apsed, cross-vaulted rooms. One characteristic element on the interior, which has lost almost all of its pictorial and stucco decorations, is the rich entablature with Doric frieze set on Doric columns in the nave and Corinthian columns in the presbytery. Of the original rich decorations of the façade, alternated by pillars and divided into two orders by a

Spoleto, the Basilica of San Salvatore

cornice, which must have terminated with a triangular fronton, remain the window cornices and three portals with skilfully elaborate classical motifs. S. Salvatore Church is an early architectural evidence of the Longobard period, as expression of the ruling *élites* ideology. It inaugurates a model for the medieval religious architecture. As original products of different attitudes (Roman-Hellenistic, Bizantine Longbards, indigenous, Syriac), it precociously embodies the cultural pluralism which is the Dark Ages peculiar trait and the ground of the Medieval Europe.

The design of the recomposed spoils is common to the extraordinary marble works of San Salvatore and those of the Clitunno Tempio, a small *sacellum* in the form of a tetrastyle Corinthian temple with two side porticoes *in antis*, located in **Campello sul Clitunno**. The façade features splendid columns covered in leaves from the portico, whose architrave bears an inscription in extraordinarily carved square Roman capital letters invoking God, complementing the inscription on the side porticoes. This is one of the rare examples of monument epigraphs of the Early Middle Ages; the practice of placing monument inscriptions on the façade of a building had been abandoned in late antiquity and was not re-introduced until the 14th century when Leon Battista Alberti creat-

Campello sul Clitunno, the Clitunno Tempio

ed one for the Malatesta Temple in Rimini. Inside the Temple, painted murals of remarkable quality, which have been compared to the frescoes in the presbytery of Santa Maria Antiqua in Rome, framed a small marble aedicule in the apse, which is also partly the product of the assemblage of recycled Roman material and purpose-designed decorations.

The little temple represents a masterpiece of religious and commemorative architecture, to the extent of being a pilgrimage destination (see graffiti). Its structures and decorations together with the surrounding landscape make of it a unique work where artificial elements and natural environment (Clitunno river and the holy *locus*) perfectly merge.

Like the dukes of Spoleto, Arechi II, son-in-law of the Friulan Desiderio and the duke of **Benevento** also carried out prestigious monumental initiatives, trying to develop their own aulic construction style and court art with marked ancient features. The clearest and highest expression of this intention is the Church of Santa Sofia, one of the most complex and best preserved complexes of its era. The dedication to Holy Wisdom, *Haghia Sophia*, which is expressly influenced by the Great Church in Constantinople which stood near the imperial palace, offers another example of the ambitions of its sponsor patron

The church was built in around 760 A.D. as a personal chapel and national sanctuary by the duke, for redemption of his soul and salvation of his people and nation. The quality and inspiration represented by Santa Sofia are testified by its complex central structure and by the intricate vaulted roof; the interior space is divided by columns and pillars laid out to form a central hexagon and a concentric decagon; the columns of the hexagon bear recycled, but carefully selected, capitals from the classical era, also placed in an

upturned position to form bases. The circular perimeter wall, which becomes fragmented beyond the presbytery area, terminates in the three apses. In the two minor apses are preserved the most important pieces of the pictorial series dedicated to stories of the life of Christ, which probably covered the entire interior surface of the church. The fragmentary nature of the images partly limits the effectiveness of the painting, which is nevertheless the highest testimony of "Benevento painting", an art movement of considerable importance (also involving the two monastic centres of San Vincenzo in Volturno and Montecassino), parallel to the *scriptura beneventana* phenomenon, the national script of the Longobards in southern Italy, also used in monasteries to transcribe works from antiquity.

Annexed to the church of Santa Sofia was a female convent, whose extraordinary cloister, with Roman-style forms, re-uses a number of elements of the original Longobard construction. The cloister and the convent structures are currently home to the *Museo del Sannio*, which houses some extraordinary exhibits from the city. This peculiar star-shaped Church is a sophisticated, extremely peculiar product of both Roman-Hellenistic and Bizantine tradition (because of the central plan, typical of the V-VI cent. oriental architecture) meeting the Longobards atti-

Benevento, the Church of Santa Sofia

tude towards experimentation, which in this building is realized once again by a thought out exploitation of the *spolia*. Moreover, the Church anticipates the renewed interests in central planned buildings, which will spread mostly in Northern Europe starting from the Carolingian time especially in the palace chapels.

After 650 A.D., the Benevento Longobards incorporated into the territory of the duchy the Gargano region, where, worship of the Archangel Michael was established the 4th century onwards, thanks to ongoing intense relations between the Greco-Byzantine world and Apulia. Worship of the Archangel was, in some aspects, congenial to the sensitivity of the Longobards; indeed they were now converted to Christianity, and must have felt a particular attraction for Saint Michael, in whom they found attributes and characteristics of the pagan *Wodan*, considered the supreme god by Germanic populations, the god of war, psychopomp, protector of heroes and warriors. From the 7th century, the Gargano sanctuary in **Monte Sant'Angelo** was considered a national Sanctuary by the Longobards and it soon became the most important place of worship of Saint Michael in the west, influencing all others.

The Longobard dynasties of Benevento, but also those of Pavia, as testified by

Longobard inscriptions preserved in the buildings, gave life to vast monumental reconstruction works at the sanctuary, to facilitate access to the primitive cave and provide hospitality for pilgrims. With the Longobards it became one of the most important places of worship in Christendom and was an international destination of pilgrimage, one of the last stages on the road that lead to the Holy Land, coinciding in with the ancient route of the *Via Traiana* southern Italy, which since then took the name of *Via Sacra Langobardorum*.

In the centuries following the fall of the Longobards, the Normans, Swabians and the House of Anjou adopted worship of Saint Michael and became attached to the Gargano sanctuary, and carried out important reconstruction works, changing the original architectural layout of the upper part of the sanctuary and enhanced it with new decorations and important treasures. Today the sanctuary is still a pilgrim destination, with morphological and ritual features dating date back to the Longobard period.

The sanctuary is one of the rare Dark Ages *loca sanctorum* preserved through the centuries. Particularly, the heritage possibly ascribed to the Longobard phase – with its exceptional epigraphical *corpus* – is a unique evidence for the Longobards history outline, being expression of a peculiar spirituality insofar as they combined the German pagan beliefs with Christianity. The Longobards, indeed, transformed and gave new life to S. Michael's worship, which so much contributed towards the development of the medieval pilgrimage – unifying factor of the Bizantine Mediterranean basin and the Northwestern Europe and the Germanic world. This became a universal reference, both for the Christian faith displays and the architectural setting of S. Michael's hundreds sanctuaries built in the West.

JUSTIFICATION

Statement of Outstanding Universal Value

The nominated serial property series bears a unique and exceptional testimony to the disappeared Longobard civilization at its acme during the Kingdom of Italy (568-774 A.D.).

The Longobards created architectural and monumental forms –which were completely alien to the traditions of nomad and semi-nomad peoples– on the Italian territory only, thanks to the reception conservation and enhancement of the form and content of Classical and Christian culture.

The extraordinary integration and interchange process between the original North Germanic culture, the local (Roman and Byzantine) culture and the contribution of the Mediterranean and Eastern European culture, is remarkably testified by the artistic and monumental expressions of the Late Longobard Age and finds its highest expression –thanks to its unique and exceptional nature- in the properties included in the nominated series.

They represent the creative response to the attempt made by the Longobards to reconcile diverging cultural and artistic expressions (syncretism) and stand out in the Early Middle Ages for their excellent artistic quality.

The serial property, therefore, has an exceptional and universal value as the highest expression of the fundamental historic function performed by the Longobards in the crucial transition phase from the Classical to the Medieval world; a transition phase which the most modern historiographical trends consider a *continuum* characterized by the integration of different civilizations.

Icon of San Michele, golden foil

The serial property exemplifies on the one hand the specificity of the Longobard culture in the background of the Early Middle Ages; on the other hand the universal nature of the contribution made by the historical and cultural group to the formation of Medieval Europe. Indeed, the Longobards played a pivotal role in the formulation and diffusion of those meaningful imprints - cultural, artistic, political and religious – which spread from Italy to Europe and anticipated the so called “*renovatio*” - traditionally associated with the Carolingian age.

The cultural heritage of the Longobards is still alive in many facets of art, law and the Christian religion, as well as in other intangible aspects.

Criteria under which property is nominated

(ii) to exhibit an important interchange of human values, over a span of time or within a cultural area of the world, on developments in architecture and technology, as well as in monumental arts, town-planning and landscape design;

The serial property is of the utmost importance as an excellent model of the interchange of values, artistic and cultural expressions established by the historical and cultural group of the Longobards in the epoch-making transition phase between the Antiquity and the Middle Ages.

Among all the peoples, even nomad and semi-nomad peoples, who lived in the time frame considered (6th - 8th century A.D.), the Longobards stood out for their extraordinary capacity to disseminate their pregnant cultural, artistic, political and religious marks. They left their deep

and permanent imprint in Italy and then in the rest of Europe, not only on the subsequent *Carolingian* rule, but also on the following 1,000 years of European History.

The Site bears the most significant testimony to the fundamental contribution the Longobards made to the forging of Medieval culture. The series components represent the creative responses of the long integration and assimilation process the Longobards were involved in.

The series shows with extraordinary completeness:

- the excellent cultural synthesis the Longobards made between their own values and traditions and those ones of the peoples they encountered during their long migration, and the values belonging to the Classical civilization, to the Christian-Roman-Byzantine civilization, which led to the development of a new and genuine civilization;
- the reception, the conservation, the enhancement and the dissemination of architectural, monumental and artistic form and content of the Classical, Roman and Hellenistic cultures;
- the reception, the transformation and the processing of a number of contents and expressions of the Christian tradition, which the Longobards disseminated all over the world; in particular they deeply influenced the spread of the worship to St. Michael in Western Europe, which led to the construction of dedicated sanctuaries all over Europe, including the most famous, Mont Saint Michel on the borders with Brittany;
- the fundamental contribution the Longobards made to pilgrimage, which led in the Middle Ages to an intense interchange of values and the development of a sense of unity between different peoples.

Therefore the series testifies the

importance of the cultural interchange the Longobards were involved in, underlining on the one hand the specificity of their culture in the Early Middle Ages and on the other hand the universality of their contribution to the formation of Medieval Europe.

(iii) to bear a unique and exceptional testimony to a cultural tradition or civilization which is living or which has disappeared;

The serial property, which includes seven component parts -all belonging to the same historico-cultural group- bears a unique and exceptional testimony to the disappeared Longobard civilization, witnessed by new monumental, architectural and artistic forms, the product of the reception and the integration of the highest developed local traditions. The Longobards expressed themselves in such forms only after their arrival to Italy.

The serial property bears the clearest testimony to the strong determination of a semi-nomad barbarian people – with no previous artistic and architectural traditions – to embrace and to portray themselves as the heirs of Classical culture and civilization.

The properties of the series are the highest and most widely recognized expressions of the new and peculiar artistic culture developed by the Longobards, which spread to all the Duchies of the Kingdom, featuring a unified vision and divergent languages and objectives, according to the different customer *élites* (kings, dukes, aristocracy).

In its totality the series mirrors the universality of the Longobard culture at its climax, as it is fully representative of

the cultural, religious and social systems, on which the articulated organisation of power was based and then modelled and determined by the Longobards in Italy. In this view the proposed series is not made up by homogeneous goods from the typological point of view, but rather by structures, which are heterogeneous in their function and morphology; those are indeed testimonies of an urban culture (Cividale), of military settlements (Castelseprio), of monastic complexes (Brescia), of buildings for the religious cults for the *élites* (Spoleto, Campello), of votive chapels of the Longobard people (Benevento), of national sanctuaries of the Longobards (Monte Sant'Angelo).

In its diversified artistic and architectural expressions, the serial property symbolizes and shows:

- the fundamental function performed by the Longobards in merging the cultural and architectural models of the classical Roman and Hellenistic civilizations with those of the Christian-Byzantine civilization;
- the new artistic and architectural trends established by the Longobards, together with Eastern European workers laid the foundations of the subsequent Carolingian "Renaissance" and –for the very first time in history– of a real "European" culture;
- conservation and survival of the cultural heritage dating back to Antiquity, which the Longobards handed down, since they portrayed themselves as the heirs of a past they knew, felt and perceived as present. One of the most typical elements of their architectural complexes is the ideological and conscious use of the *spolia* from Roman monuments, which were re-used and installed in places that emphasized their symbolic value, and integrated into high quality new elements produced for that purpose.

The use of monumental inscriptions, sometimes in golden bronze letters, no longer used after the age of Constantine, is a further manifestation of their intent;

- the conceptual, religious and political value the Longobards and their innovative cultural system attributed to Christian religion and traditions. Christianity accompanied the establishment and the consolidation of the Longobard Kingdom and was supported by the royal court and the aristocracy, who were generous and faithful benefactors.

The series meets the criteria of integrity and authenticity both as a whole –since it represents the universality of the monumental expressions of the historical and cultural group of the Longobards– and with reference to the single buildings and complexes and to the extraordinary decorations, including the rich graffiti and the inscriptions on the walls of the St. Michael's Sanctuary in the Gargano area, the most important collection of existing Early Middle Age inscriptions.

(vi) to be directly or tangibly associated with events or living traditions, with ideas, or with beliefs, with artistic and literary works of outstanding universal significance;

The Longobard inheritance in Italy is remarkable: from the language we speak today to people's and place names, even if more significant is their contribution to the handing down of forms and models –as well as the remains themselves– of Classical Antiquity, an indisputable point of reference for artists of all ages.

By the same token, the Longobards made a fundamental contribution to European culture with the foundation of great Monasteries, and the reconstruction and extension of existing ones, including

Bobbio, Montecassino and Farfa Monasteries.

In so doing, they encouraged the transcription and survival of literary, artistic and scientific works, dating back to the Antiquity. The relevant handing down of iconographies through manuscripts in miniature made a further contribution to a *continuum* stretching from the Antiquity up to the present day.

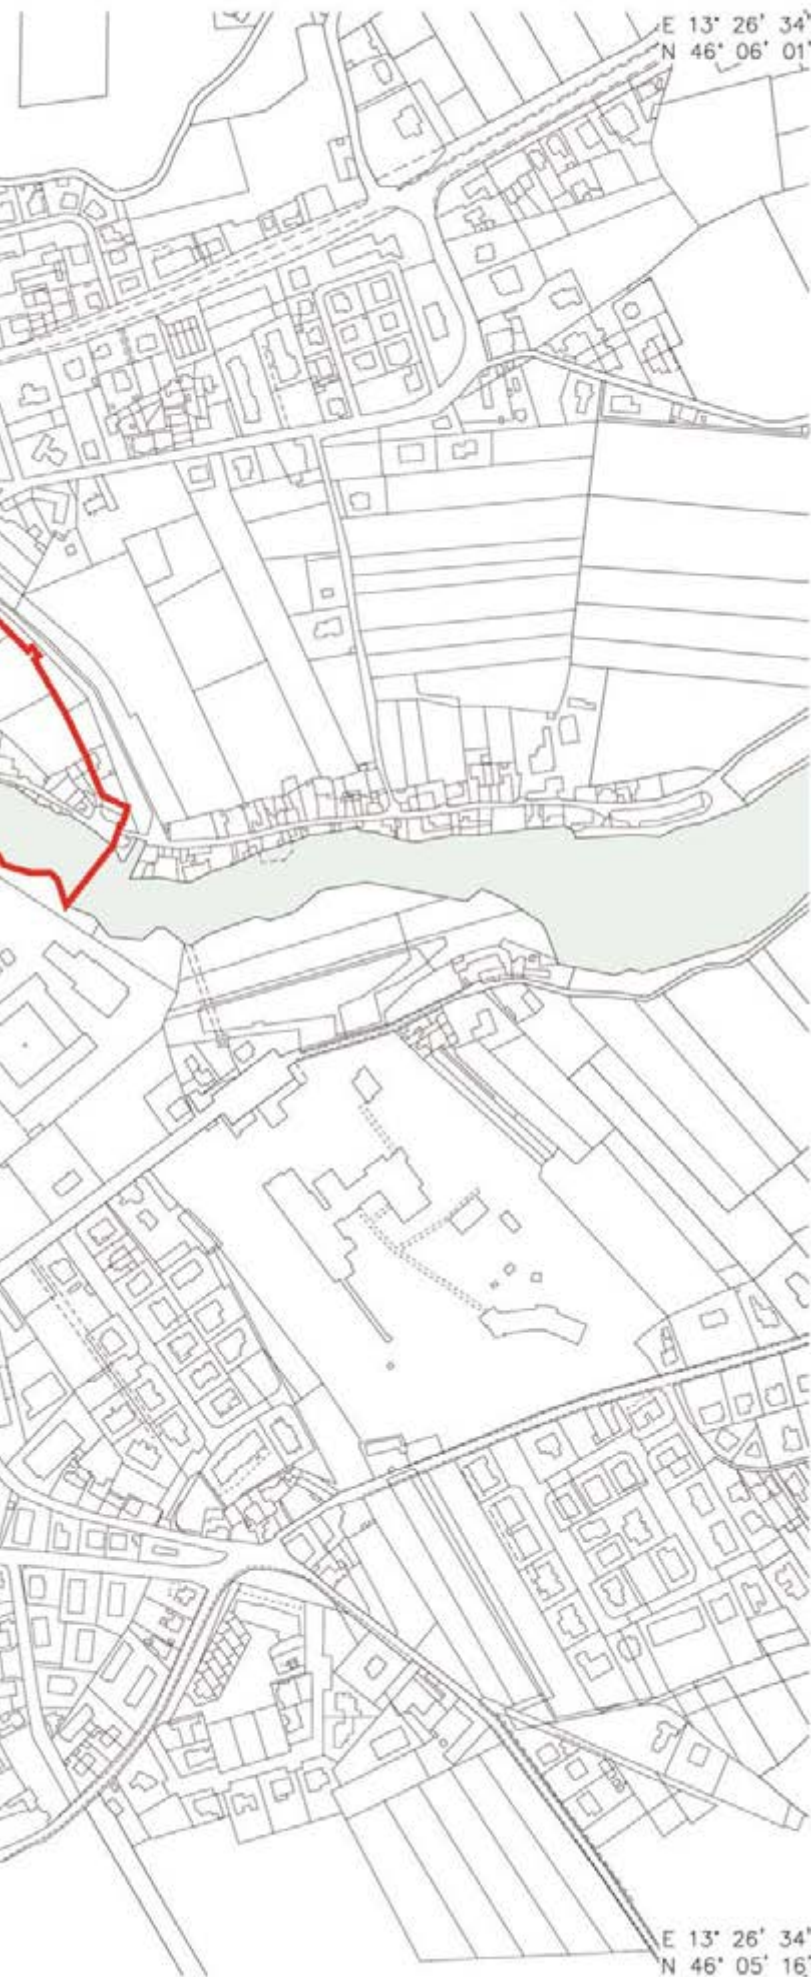

Moreover, Longobard culture survives today in the ongoing importance attributed to their places of worship, in particular to a number of monasteries, where the architectural stratification, a sign of continuity, increases their value and authenticity.

The pilgrimage to the grotto of St. Michael – still partly accessible along the ancient route of the *Via Sacra Langobardorum*– is a prominent example of worship practices directly related to Medieval traditions.

The worship to St. Michael in the Gargano area, transformed and strengthened by the Longobards, led to the construction of numerous dedicated churches and other places of worship and as many statues of the Archangel Michael, with open wings, holding aloft his sword, on top of many bell-towers in Europe, a typically Longobard symbol in defence of local communities.

Notably, the history of the Longobards is featured in important literary works – including *Historia Langobardorum* written by Paul the Deacon in the 8th century, *Adelchi* written by Alessandro Manzoni in the 19th-century and *Rodelinda, Regina de' Longobardi* (Rodelinda, Queen of Longobards), an opera by Georg Friedrich Händel. All the above-mentioned works portrayed the Longobard cultural experience and rendered it universal.

PRELIMINARY REMARKS

The recent historiographical debate has definitely renewed the methodological fundamentals of the studies on the early Middle Ages thanks to the twofold reevaluation of the Germanic-Barbarian cultures role and of the archaeological contribution in the socio-historical reconstruction of a period which built the fundamentals of the medieval civilization.

The Longobards are among the main protagonists of the Germanic and Central Asian tribes migratory movement which involved the area between Western Europe and the Balkan-Danubian region in the historical period starting from the conclusive events of the Roman Empire. Yet, today it is right to the Longobards, among all the other populations, that we ascribe an extraordinary propulsive role in the cultural **transition between the Antiquity and the Middle Ages**. Indeed, they played a pivotal role in the formulation and diffusion of those meaningful imprints - cultural, artistic, political and religious - which spread from Italy to Europe and influenced the next millennium of Western History.

Therefore the Longobards indelibly contributed to the Western medieval civilization development.

The nomination format is consistent with the most updated tendencies of the research activity (which even today keeps dynamism and is characterised by various diverging interpretations) as it recognizes the most original and extraordinary value of the Longobard culture through the various expressions of their ethnic identity. Such an identity must be considered as an anthropological category that is to say as expression of a politico-cultural process, not as a Roman-antithetic racial factor.

The anthropological approach enables us to value some peculiar markers of their culture which otherwise, in the light of the Romans-Longobards simplistic dichotomy (even if considered in terms of fusion between the two elements), would not be taken into consideration.

Therefore in writing up the dossier we always considered - and underlined when possible - the impact of certain factors which appear to be determinant both in the elaboration of the Longobard culture as a whole and in the specific proposed artistic items. Particularly, the following criteria have been employed:

- continuity/discontinuity, as referred to both their own traditional culture and the Roman one;
- spontaneity/planning component in the performance;
- geographical and economic determinism in contrast with human intervention.

We are dealing with interpretative lines which are valid for all the phenomena included in the great system generated by the transformation of the ancient world. This event concerned the entire Mediterranean basin, where different forces operated and inter-operated, such as:

- the Germanic-Barbarian peoples migration,
- the propagation of Christianity,
- the establishing of the Arabic presence.

All these factors were determinant, even if in different ways, in the elaboration of the "new" Medieval culture.

The Longobards then accepted, preserved, enhanced and transmitted forms and contents of the Roman-Hellenistic tradition. In these terms we find the most original, creative and permanent contribute of the Longobard culture which makes it distinct from any other civilization elaborated during the same historical context.

The nominated properties represent the physical evidence of this cultural process, which main factors, in the light of the above mentioned criteria, were:

- the physic-cultural environment as favourable condition (geographical determinism): the Longobards settled in Italy, which had been the centre of the Roman Empire, which was the Christianity seat, and which had been first a Goth site and subsequently Byzantine, as well as a strategic crossroads between West and East;
- the Longobard *élites* programmatic and strong will (planning quality) of being in line with the past, but also with the existing powers of their time, such as that of the Roman Church.

It should be underlined, however, that each above-mentioned component was predominant in a specific moment.

The environment variability aspect was more prominent during the immigration phase, whereas the planning aspect became outstanding after their settling in Italy; for this reason the cultural features, which were actively, intentionally and critically adopted by the Longobards, became the ground during the process of cultural elaboration and transformation.

Since the second phase it is registered a **dialectical relation with the ancient world and the classic tradition**, which the Longobard élites perceive as **authoritative and referential forms of legitimation**. By the way, this is a common trait of many cultures during the interchange phase; the Longobard distinguishing innovation lies in the expression of this dialectical relation, in the manner they considered themselves as heirs of a past which is intended and experienced as the present.

The opportunity to autoptically verify the material of the ancient heritage as well as to exploit it encouraged not only the

knowledge of the tradition and its critic-ideological utilization but also its survival and transmission.

This makes the Longobards - as Paul the Deacon himself wrote - the true heirs of the Roman civilization, much longer than the Byzantines.

Therefore, the relationship of the Longobards with the *Antiquitate* was not a mythological appreciation, as during Teodorico's time, nor an uncritical idealization as during the subsequent Carolingian age.

Concluding, the Longobards were protagonists of a unique and extraordinary experience which resembles other "Roman-Barbarian" kingdoms contexts – particularly, those set by the Merovingian kings in Gaul and by the Visigoth Kings in Spain (see 3.3). Nevertheless they were able to express something different and universal: if anything, this is what makes their experience closer to that of other migrant populations which in different periods and contexts opened the path to definitive cultural transformations and historic evolutions.

Despite different interpretations which could still be noted on certain aspects of their productions, it is now widely considered that the Longobards anticipated the so called "*renovatio*" - traditionally associated with the Carolingian age - saving, continuing and renewing the classic and post-classic Roman Antiquity in the arts, in the written culture and in the law. Well before the school of Charlemagne's court, the Longobards were able to assimilate the ancient forms, giving them new meanings as well as deeply innovating elements.

Supported by a strong creative activity inspired by the conversion to Christianity, but still grounded to the conservation of

their own ethnic identity, they recovered architectural and ornamental models of the Roman-Byzantine culture. **Between the end of VII - VIII century**, they gave rise to an artistic production which flourished in the Northern, Central and Southern Italy spreading from the urban courts to a large part of Italian territories. In the late Longobard monuments, which masterpieces are proposed hereby, it is possible to catch the complex changing process of the ancient culture, now brought to a European dimension. Such a process was undertaken by the Longobards and inherited by the Carolingian Empire.

The properties included in the nominated Site: "***The Longobards in Italy. The places of the power (568-774 A.D.)***" are the result of the Longobard civilization, intended as creative responses of the cultural process they were protagonists of.

Such properties – **selected on a very scrupulous basis** (see below) – represent, each one according to its own specific category, the most indicative or the best preserved sample of the numerous testimonies in Italy. The whole of them embodies the universality of the Longobard culture at its climax, given by the fact that they fully represent the Longobard articulated organization of both power and worship in Italy.

In this perspective, **nominated serial property is not composed by homogeneous elements from a typological point of view**, but by structures which differ in function and morphology. Indeed, we deal with evidences of urban culture (Cividale), of castrensian settlement (Castelseprio), of monastic complex (Brescia), of *élites* worship buildings (Spoleto, Campello), of Longobard votive chapel (Benevento) and of Longobard national sanctuary (Monte Sant'Angelo).

They are artistically perfect and refined monumental complexes, expressing the Longobards monarchy or aristocracy. In this perspective they all are "***places of power***" which well demonstrate the ruling *élites* will of legitimating their own authority, promoting their interests and expressing their own *status*. Worship complexes such as Sanctuaries, private Churches and Monasteries should hence be considered "***places of power***" through which the Longobards not only expressed their support to Christianity, but performed their accord strategies in respect of the Roman Church and the local clerical *élites*, assured their control on the population as well as on the economy, and secure themselves the transmission of their own goods (moreover, the Monasteries were important centres of culture where the transcription activities of literary, technical, legal, artistic and scientific works of antiquity took place, guaranteeing their preservation up to the present).

The serial property, therefore, illustrates from one side the specificity of the Longobard culture during the Dark Ages, and from the other the universality of its results in the formation of medieval Europe.

Serial Property composition/selection

The nominated properties included in the serial Site "***The Longobards in Italy. The places of the power (568-744 AD)***" are the following:

In **Cividale del Friuli**, the *Gastaldaga* area with the so-called Tempietto Longobardo and the Episcopal Complex with the *Palazzo Patriarcale* below the National Archeological Museum.

In **Brescia**, the monumental area with the

monastic complex of San Salvatore - Santa Giulia, today housing the *Museo della Città*

In **Castelseprio-Torba**, the *castrum* with the Torba-Tower and the church outside the walls, Santa Maria “*foris portas*”.

In **Spoletto**, the Basilica of San Salvatore.

In **Campello sul Clitunno**, the Clitunno Tempio.

In **Benevento**, the Santa Sofia complex with church and annexed cloister, part of the abbey, today housing the *Museo del Sannio*.

In **Monte Sant'Angelo**, the Sanctuary of San Michele.

Given the choice of representing, through the proposed series, the specificity and universality of the Longobard culture during the Early Middle Ages, the properties selection has been performed within all the contexts which mark out the Longobard culture in Italy. For this reason, the nominated serial property brings together the two Sites of the Tentative List submitted by Italy: “*Cividale and the first places of Longobard power in Italy*” and “*Monte Sant'Angelo and the Via Sacra Langobardorum*”. [With regard to this, it could be noted that S. Michele Sanctuary, located in the Gargano peninsula, represents the highest expression of the Longobards peculiar behavior towards spirituality and support to Christianity. Indeed, accepting and transforming the worship of Michael Archangel, the Longobards did reaffirm their people identity through the syncretism they created between the original Germanic beliefs and the new religion, and at the same time they set a “*universal*” referring point through the modern proposal of such a

worship, now revitalized and internationalized, which is still experienced.

It also be noted that the serial property “The Longobards in Italy. Places of the power (568-774 A.D.)” comprises the same assets selected in 2008 for recognition of the Site called “*Italia Langobardorum. Places of power and worship (568-774 A.D.)*”; the small differences in the current configuration refer to a) extension of core zone of Brescia, b) extension of buffer zones of Spoleto and Campello, c) exclusion of the modern building to the north-east of Santa Sofia at Benevento, thus meeting the Recommendations by ICOMOS]

The properties included in the nominated series passed a thorough selection in obedience to the World Heritage Convention criteria as well as to further criteria taken for the definition of a complete series, i.e. a series comprehensive of the greatest samples of the Longobard power and worship monumental complexes and buildings

First of all, the PURPOSES of the world heritage, as intended by the Convention (i.e. “*monuments, groups of monuments, sites*”), has been necessarily purged of the whole heritage composed by mobile items, such as findings from a large number of necropolis, which are typical and famous evidences of the Longobard artistic culture.

It has been decided, hence, to select those architectures that better express the VALUE of the Longobard culture and that undoubtedly appear as genuine exemplifications of the “*places of the power*” (see below).

A further decision has been taken by limiting the reference CHRONOLOGY to the period which is conventionally ascribed to the Longobards hegemony in Italy that is

between their arrival in Italy (568 A.D.) and the end of the Kingdom (774 A.D.). This choice clearly excluded from the nomination all the post-Desiderian expressions (subsequent to 774 A.D.), which could be referred only to the duchy of Benevento, lasted beyond the Early Middle Ages. The chronology extension would have caused some troubles in respect of the transition period here considered. Inconsistency would have appeared in the comparative reading of the proposed monuments, as well as in the recognition and definition of a language which is by nature, extremely articulated and heterogeneous, yet consistent with the cultural pluralism expressed by the Longobards.

Finally, further selecting criteria of AUTHENTICITY and INTEGRITY brought to the definitive composition of the series (see item 3.d).

Therefore, a large number of famous contexts concerning the Longobards presence in Italy have not been included in the series submitted for the inscription in the World Heritage List. Here we briefly list them in groups, according to the parameters which justified their exclusion (for a deeper analysis see item 3.d)

1. Buildings which could be ascribed to the Longobard period only through non-available or partially-available archaeological remains.

Sesto al Reghena (Pordenone): S. Maria *in Sylvis* Church

Gazzo Veronese (Verona): S. Maria Church.

Nonantola (Modena): Abbey

2. Buildings which could be ascribed to the Longobard period only through poor archaeological findings and/or through scarce portions of walls included in subsequent stratifications which changed completely the original context and do not allow to recognize a

genuine artistic quality.

Sirmione (Brescia): S. Salvatore

Pavia: S. Maria Teodote Monastery, S. Maria delle Cacce Church, S. Eusebio Church and S. Felice Monastery.

3. Buildings which are known only because of written sources.

Voltorno (Isernia): S. Vincenzo al Voltorno

Leno (Brescia): S. Benedetto male Monastery

Pavia: S. Salvatore Church; S. Agata al Monte Monastery, S. Maria delle Pertiche; S. Giovanni Battista Church, Royal Palace

Milano: S. Maria d'Aurona Monastery

Monza: S. Giovanni Battista Church, Royal Palace

4. Buildings which previous existence is testified only by the discovery of Longobard artefacts: structural elements, fragments of architectonic sculpture, liturgical equipment, burials or grave slabs.

Milano: S. Simpliciano and S. Nazaro Basilicas, San Giovanni in Conca.

Bobbio (Piacenza): Monastery

Ferentillo (Spoleto): S. Pietro in Valle

Farfa (Rieti): monastic complex

Therefore on the ground of the integrity criterion capitals such as Monza, Milano and Pavia have been excluded from the proposed series. Indeed, the architectures built by the Longobards in these cities are only known through written sources or limited material evidences, even though they are relevant sites in the history of Longobards presence in Italy for being important centres of power.

The monuments of Capua have been excluded because of their low chronology, being the city founded in 856 during the Principality of Benevento.

S. Pietro a Corte Church, located in Salerno, has been excluded not only for the chronological criterion (indeed it was

built by Arechi, who became Prince after the Kingdom fall), but also for the difficulty in a clear understanding of its original phase within the present architectural context.

HISTORICAL INTRODUCTION

Preliminary remarks

The Longobard *gens* (whose identity has been well described in the 7th century A.D. anonymous text *Origo gens langobardorum*, and in Paul the Deacon's *Historia Langobardorum*, written in the second half of the VIII cent.) played an influential role in the Early Middle Ages Ancient, and achieved a high level in the architectural and artistic production. It is on these grounds that Longobard Italy and the seven most representative places of the historical and cultural group of Longobard people have been chosen.

The properties included in the serial Site appear then as the best samples of the cultural integration of the Longobard people in the Roman-Mediterranean and Christian context (we can note such an integration even in the adoption of Latin language for the legal and historiographical texts, as well as in the change of funeral rituals).

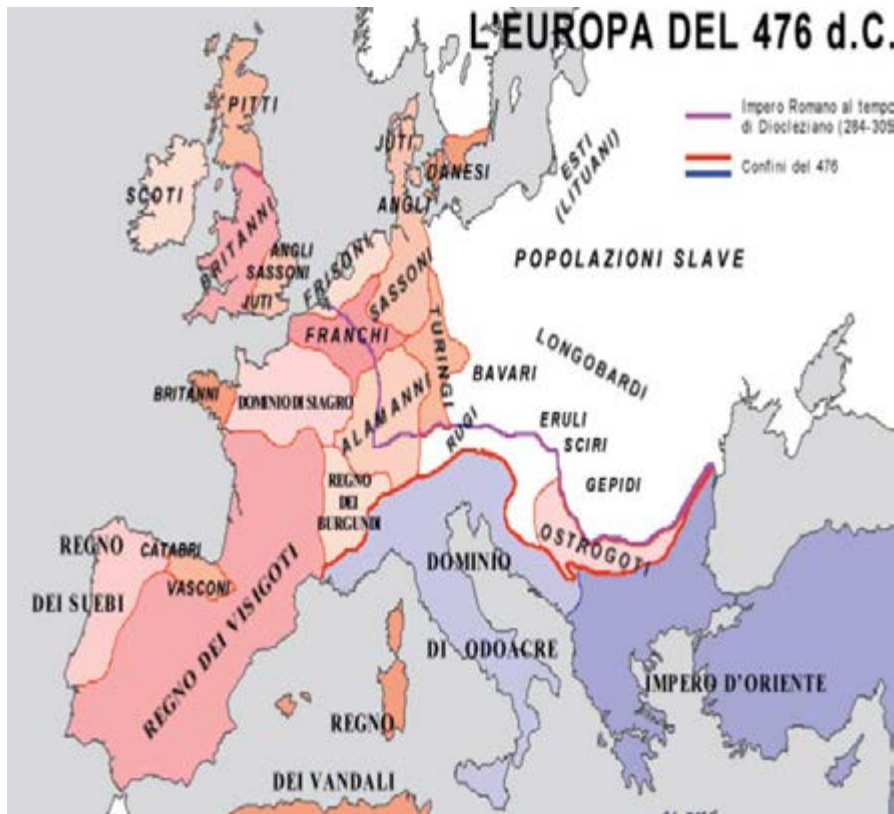

The above mentioned texts outline the whole history of the Longobards –who, according to these sources, were originally inhabitants of Southern Sweden, moving afterwards to present Saxony in the 1st century A.D., and hence furtherly migrated to present Bohemia in the end of the 4th century In these records, both the first and the beginning of the second process of the Longobard ethnic group formation are registered, which took place right on the Italian territory.

During the first phase of the ethnic group formation, the original piety based on fertility cults and worship of goddesses radical-

The Roman Empire in Late Antiquity

Historical map, 476 A.D.

the Roman State's requirements: drawing up treaties and regulating relations with "nations" which needed to be fixed and acknowledged on solid grounds, at least according to the internal elements of the Germanic ethnographical structure. Therefore, some of the Roman-Germanic kingdoms, such as the Franks', set by Clovis, represent a successful achievement of the Roman political skill, since the new political entity kept defending one of the critical boundaries of the Empire.

When the migratory streams could not be managed anymore by the declining Roman power, the Great Migrations started working more and more as incubators of new group identities: the aggregation of different people within single migratory adventures favoured the very **creation of new populations**.

The **Longobards**, a population whose origin is strictly related to extraordinary and complex migratory adventures, were protagonists of an ethnographical and cultural event which is unique, as it deeply diverged from that of the Franks, Goths and Burgundians. The particular length and course of their migratory route caused the necessity of integration with other people in a new compound, which gradually went under renewal. At its arrival in Italy, the Longobard population included Gepids, Sarmats, Bulgarians, Saxons, Turingians and Erulians.

After Christianization a new culture developed, which was able to combine the Germanic substratum with the classical and Roman-Christian tradition, making the Longobards -as Paul the Deacon wrote- true heirs of the Roman civilization much longer than the Byzantines.

Therefore we are facing an absolutely original situation, which is expressed at best by the properties included in the nominated serial Site.

ly changed, being replaced by wotanic, warlike and hellish forms of piety. The second phase is instead associated with the revival of the monarchical institution, testified by the mythical *principes Ibor* and *Aio*. The occupation of the Italian peninsula and the unceasing comparison with the Church and the local Roman-Mediterranean and Christian society were responsible for the acculturation process, which ends in recognized in the full integration of the *gens Langobardorum*. Such integration is historiographically recorded by the Longobard Benedictine Paul the Deacon, and physically testified by the architectures in Cividale, Brescia, Castelseprio, Spoleto, Campello sul Clitunno, Benevento, Monte Sant'Angelo, which are representative masterpieces of the highly original Longobard-Roman-Christian culture.

In turn, the briefly outlined historical events are emblematic of the **European**

situation between the III and the IX century, which was characterized by the **Great Migrations** phenomenon. The Roman public administration was able to cope with this phenomenon thanks to a wise policy of the migratory streams since the 2nd century A.D., and through fostering the insertion and settling of Germanic peoples who were in relations with the Empire since a long time.

This situation lasted as far as the armed clash was kept aside, which became impossible after the fall of the Rhine *Limes* in 406-07.

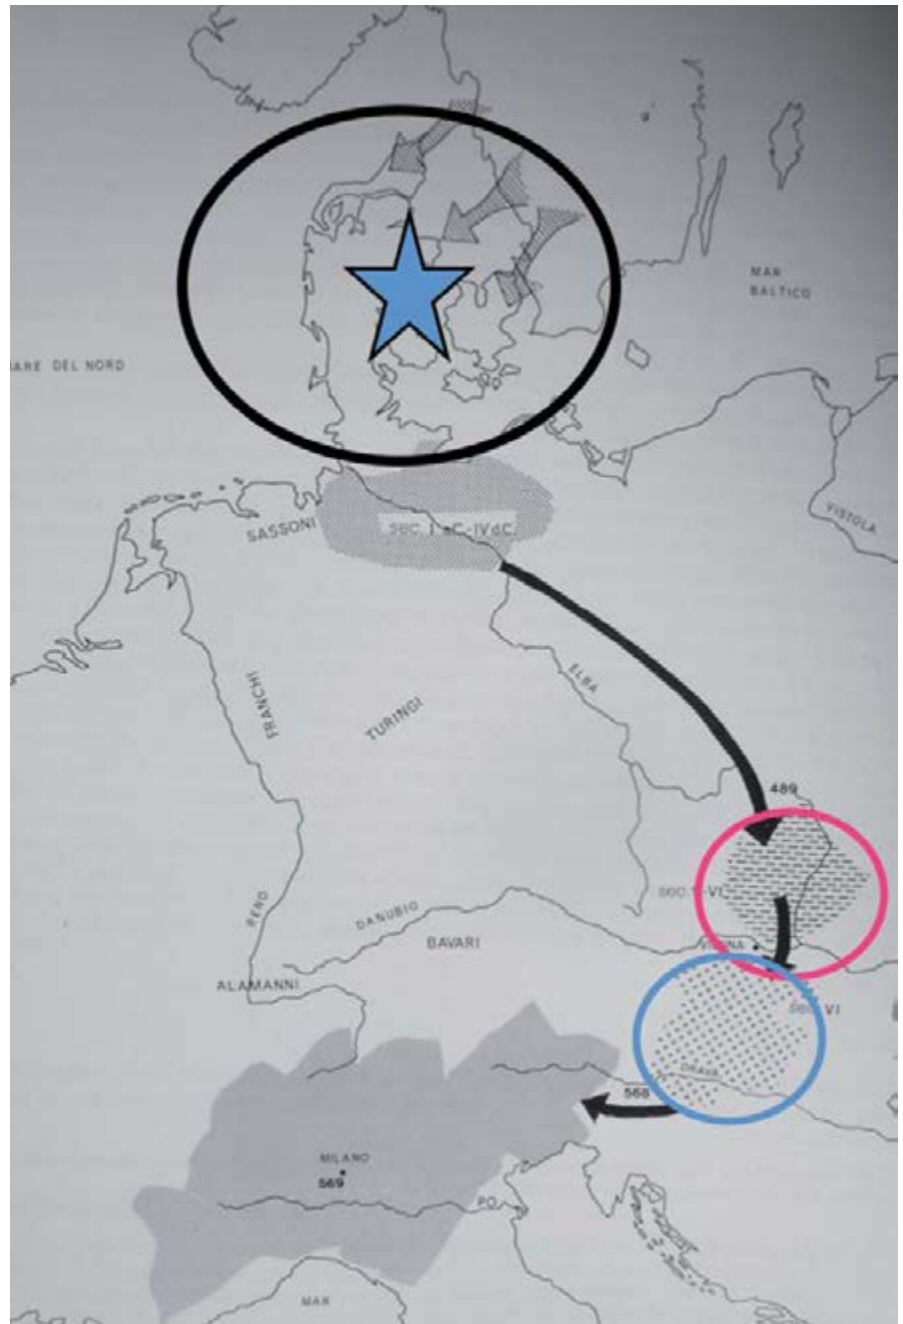

In other words, the Roman Empire aimed at obtaining the Barbarians integration through political mediation acts, and in this way it contributed to the government-required rational organization of the Germanic world. Even the classification of the people set over the borders, recorded by Classics as *Strabo*, *Velleius Paterculus*, *Tacitus*, *Dione Cassius*, etc., meets one of

Historical synthesis

The historical tradition places the **origins** of this population, which took later the name of Longobards, in *Scania* (*Hist. Lang.*). They migrated from this land and settled in Northern Germany between Hamburg and Lüneburg, where their presence is already consolidated between the 1st and the 3rd century A.D. The archaeological sources supply evidences of funerary rituals according to which the grave goods were deposited beside the dead, including weapons for warriors and mostly buckles for the female components of the group. Military operations were organized under the leadership of a “royal” authority –referring to which *Tacitus* mentions these people. Cattle-breeding, metallurgical production of high technical quality, pottery manufactures and agriculture were performed as well, the last one being obviously limited because of their lack of roots in a single territory. Such a condition affected even the dwelling manners and the social structure, still firmly based on tribal and warlike compounds.

From the ethnical identification point of view, the Longobards belong to a human group composed by various *gentes* (Turingians, Swabians, Saxons, either free or slaves from different origins and provenances). The society division on the ground of different functions and hierarchies is evidenced in burials by the presence or absence of grave goods beside the dead, as well as by their richness and artefacts typology. In case of aristocratic tombs, the presence of gifts deriving from large scale trades and imports is relevant, e.g. Byzantine and Coptic-made bronze vessels.

The identity shift accomplished by these Germanic populations has its counterpart in the widespread custom of changing name:

the Longobards take it after the legendary battle against the Vandals, whom they defeated thanks to god Odin’s aid. He changed their ancient name from **Winnili to Longobards**, i.e. “long bearded people”. According to Northern traditions, the identity of a compound of tribes is provided by

a common myth of origins and by the faith in a royal genealogy where every deed appears as the counterpart of an epic event (defeat of enemies, migration). In making his Edict preceded by the kings’ succession list *Origo gentis Langobardorum*, Longobard king Rotary

Longobard male costumes

(643) is still part of this tradition made of sagas and shared beliefs, as well as part of the lineage proceeding from heroes and kings.

During the different **migratory phases**, from Bohemia to Moravia and Lower Austria, from Upper Hungary, the Roman Pannonia (second half 5th – first half 6th century), to Southern Hungary (around the middle of the 6th century up to 568), the Longobard people could absorb other populations and form political alliances – often through marriages– with Turingians, Franks and Gepids, sharing in this way common culture, traditions and customs (**first process of ethnic group formation**).

The qualitative leap taken by these people in life style, metalworking – that is to say, development of new shapes and decorations especially in womenswear accessories– and in the abundance of grave goods items coincides with their establishment along the imperial *Limes* and their settlement as *foederati* within the territories of the Roman provinces.

The turning point is represented by the Barbarians military leaders' accession to

the highest ranks of the Empire, being Stilicho just the most famous and culturally integrated figure among them.

From the architectural point of view, **the Longobard culture of the migration phase** does not display any peculiar trait in comparison with other Germanic people of the time.

In Pannonia the “Longobard” house is a hut with wooden-made structures, often with a partial development below the ground. Such a typology has been uncovered in Brescia in the area where San Salvatore Monastery was subsequently built, in Collegno in Piedmont, and in Poggibonsi in Tuscany, with rectangular, square or irregularly circular plans, clayey dirt floors and stone hearths. Urban conglomerations are surrounded by cultivated fields, sometimes protected by moats.

In some of the Hungarian sites, the huts were placed inside the abandoned Roman cities, in the forum area (Sopron), frequently exploiting the foundations of buildings in disuse. Elsewhere, the masonry of military leaders or other authorities' houses are dry-stone made, with re-employed stone materials (Tokod).

Particularly, their stay in the ex Roman province of Pannonia (present Hungary), which lasted a little more than forty years, allowed the Longobards to come into contact with the Steppe populations cultures (Goths, Avars, Sarmats, Scyths and Huns), which signed their own civilization. For instance, we can mention the Mongolian traditional custom of skull lengthening through the application of strict bandages (evidences of such a tradition can be found in Italy as well, in some burials of Collegno necropolis).

Through the **cultural osmosis typical of the border civilizations**, Longobards and Gepids furtherly acquired mould and a “stralucido”, i.e. glossy, pottery production.

The Great Migrations and the origins of the Longobards

“ and at the present time these latter (the Germanic tribes at the mouth of the Albis, the Longobards) have been driven in flight out of their country into the land on the far side of the River. It is a common characteristic of all the peoples in this part of the world that they migrate with ease, because of the meagerness of their livelihood and because they do not till the soil or even store up food, but live in small huts that are merely temporary structures; and they live for the most part off their flocks, as the Nomads do, so that they load their household belongings on their wagons and with their beasts turn whithersoever they think best. (STRABO, *Geographica*, VII, 1.3.291)

With these words historian *Strabo* describes the characteristics of the peoples met during the campaigns of *Tiberius* and *Augustus* who, at the beginning of the imperial age, drove back the Germans across the Rhine and the Elbe; they included the original dispersed tribes of the Longobards who lived in those times at the mouth of the Elbe in the great kingdom of the Sueves.

These tribes were standing out as an independent and cohesive Germanic group who dominated the others, although outnumbered, thanks to a number of battles and victories in the field such as that of I century in Scoringia, which enabled them to win the Vandals and stop their expansion west of the Oder river, and contributed to strengthening the tribes of the *Winnili* from then on called **Longobards**.

It was the dawning of that process clearly described by Paul the Deacon in his *Historia Langobardorum* (I, 7-10) which concerned the gathering of many Germanic *gentes* as well as the consolidation of tribes due to the recognition of an ethnic community

They accepted the shapes of Byzantine metal and glass vessels and transformed them into tableware which can be recognized from the particular mould decoration. This production (along with other items such as weapons, jewels and buckles that prove the considerable development of metalworking) is typical of **grave goods**, which are the Longobards first distinctive trait in their **pre-Italic phases**.

with a single identity - and a single specific name - thanks to both a shared myth of origins and an epic saga of leaders who led to the tradition of a royal genealogy.

Under the guidance of such military leaders and in search of a better livelihood these *gentes* moved, battle by battle, to conquer new lands.

Although they were not actually nomadic tribes, the Germans - the Longobards included - continuously migrated to new, safer and richer lands, which was a distinguishing mark of their existence, living off cattle-breeding and handicraft production; agriculture was limited by their constant movements, which affected not only their dwelling style but also their social structure hinged on warrior tribes.

In such a system developing outside the boundaries of the Roman Empire - as it was mentioned above, at first alongside it, then conflicting with it to the point that it contributed to causing its end - the vicissitudes of the Longobards were an example of semi-nomadic tribes transmigrating who first gave rise to a *gens* - that is a social community with shared cultural marks - and then became a people or a nation deeply rooted in an area with the need to create stable forms of government in the conquered lands. Thus, in the early period the Longobards migrated from the Baltic islands to the South and then, after coming into contact with the Roman - Byzantine Empire and its lifestyle and forms of power, conquered *Pannonia* and lastly settled in Italy, where they gave rise to the Longobard Kingdom and their conquest period came to an end.

The ethnogenesis process which concerned the Longobards in the first stage of their migration was confirmed by the deeds of the Goths, in particular of those tribal groups who went under the name of **Visigoths**, first under the guidance of Alaric (late 4th

- early 5th century), who tried to invade Italy but with scarce success. After migrating from the Danube and Balkan area to the West, they settled first in Aquitaine and then, at the wave of the increasing Frankish power, in the Iberian Peninsula, where Alaric founded their kingdom (6th - early 8th century).

A longer-lasting settlement was experienced by the **Merovingians**, the ancestors of the Franks, who strengthened their power in Central Western Europe (present-day France), giving rise to a Kingdom which relied upon a strong alliance with Catholic Bishops and the Senators survived to the Collapse of the Empire (476 A.D.). The strength of the Merovingians took shape through the mass conversion to Catholicism in 506 under the model guidance of king Clovis. The way was paved for the future Christian empire of Charlemagne which aspired to become universal and turned to a National state, thus laying the foundations of modern states.

Quite different was the migration of a nomadic people of Mongolian origin, the **Huns**: indeed their impressive military conquest - an aspect marking any migration of peoples - was not followed by the building up of a form of state ruling the invaded lands, mainly because the strength of the Hun empire built on a scarcely cohesive military force made up of an aggregate of traditional groups.

Other steppe peoples such as the **Avars** - whose migration coincided with the arrival of the Longobards in Italy - or the **Hungarians** - who took part in the Great Migrations during the Middle Ages - managed to build up steady kingdoms out of nomadic tribes. In particular the Hungarians laid the foundations of a modern nation.

The migration of the Longobards is thus included in a **widespread process of universal value** which

does not purport to be used in diachronic comparisons but rather, in view of the final land of settlement, to recall the Norman invasion of Southern Italy in full Middle Ages, since both peoples had in common both military capability and a strong sense of social hierarchy.

The aforesaid migrations of peoples altered the ancient structures of power in different geographical areas. Whereas in the West they laid the foundations for the building up of modern states, in the Middle East and Northern Africa the Arab conquest gave rise to new empires and a new system of territorial powers.

Although widely separated, the progressive migration either with evident thirst for conquest over the early centuries of the modern era by Hispanic and Portuguese peoples under the guidance of powerful and noble adventurers to Latin America, or out of necessity by Anglo-Saxon loose groups to the present-day United States of America caused the foundation of new societies and territorial states with new organized structures of power.

The migrations of peoples have been and are currently a primary vehicle in the building of innovative cultures, because these latter stem from different contributions and matrices merging together but still deeply rooted in a variety of previous traditions - refined if referred to the Roman Byzantine or the Persian- Sassanid worlds in the Middle east or to the Spanish world in the Latin American dominations. Transfers of power and cultural acquisitions which have ever been the primary means to renewal and the transmission of universal values belonging to art, architecture and other expressions of ancient and modern societies from the Mediterranean and other areas.

Therefore as regards to the other Germanic people, grave goods are at the same time common and distinctive traits, especially for what concerns the womenware (stirrup buckles). Among these peculiar elements, we can mention as well the monumentality of some "timber house"-shaped burials (Houses of Death), the horse burials beside knights (for the aristocrats), and the male necropolises,

either noble or military ones. As a whole, they are evidences of a smaller social classes division than that registered in Italy, especially in the late 4th - early 7th century graves.

That with the Eastern Roman Empire, which had been carrying out an ambiguous diplomacy in order to secure itself the Northern boundaries safety, was another influential encounter for the Longobards

culture. The gold leaf belts, often with vegetable and floreal patterns, are Byzantine productions or imitations.

From the above mentioned contacts the Longobards at least partially derived **forms of power** as well. The figure of a chief, military and popular together, charismatic for being member of the aristocracy and for having military and

The long transition between 4th/5th and 8th century

The most recent storiographic debate has led to a profound renewal of studies on the transition age between the Classic and the Medieval world (4th/5th – 8th century).

The age between the collapse of the Roman Empire and the rise of the Carolingian Empire has been revalued for subsequent developments of the European civilization: in contrast to the notions of “decadence”, “end” of the civilization and “barbarism”, the idea is currently being devised of a *continuum* of a historical process characterized by the interpenetration of different civilizations.

This theory denies radical changes and needs to be evaluated also in the light of archaeological discoveries as well as direct physical evidence which allow to “filter” and “read again” the history handed down by written texts.

Historical assumptions which regarded the Barbarian settlement in the provinces surrounding the Western Roman Empire as the beginning of a point-of- no-return crisis for the Roman institutions -with all the consequences in terms of management, administration, institutions, public services and structure of the Empire- are being disproved today by a different vision already proposed in storiography in the second half of 19th century. It redefined the long **transformation process which preceded the Germanic dominations in the West** by identifying a number of factors which determined it including: the economic and productive crises of 3rd-4th century the inarrestable mingling process concerning peoples and cultures –mainly due to the increasing presence of barbarian *foederati* in the Roman Imperial troops- a clearer impact of Middle Eastern customs and traditions on the Roman Mediterranean culture, regionalistic crises resulted in social uprisings in Gaul, Armorica, Spain and Britannia (the *bagaudae* of 3rd-4th century), the different interpretations of Christianity which led to heresies like Donatism, Nestorianism and Arianism - spread in northern Africa, the Middle East, north-eastern Europe – which generated a sort of religious and social regionalization.

In brief it is now being recognised that the rupture occurred in 6th century was just the apex of a process of both social and cultural disintegration but also of generalized interculturalism, whose origin is to be traced back to previous centuries.

Basically, the crisis of the Western Roman Empire and its cultural system, caused by the introduction of barbarians into Romance Europe (*România*), assumed at first the shape of a clash and later of a progressive meeting, with cultural and institutional repercussions, which enables us to regard the time-frame between 4th and 8th century as a long dynamic historical cultural transition which generated the European civilization rather than a decay of classical culture.

The issues raised by the debate between archaeologists and historians as well as the numerous archaeological discoveries therefore concern complex and diverse problems ranging from the abandonment of countryside, through the end of villas (5th-6th century), to the progressive breakdown of the urban fabric of great cities, through the reuse of buildings, public spaces and materials, significantly exemplified in the Pavia case by Ennodius (4th century) who described densely populated hovels made out of Roman public buildings during the invasion of the Rugii “...*domarum immanium culmina in augustissimis resecata tuguriis...*”.

In the Longobard period such aspect was a distinguishing mark of all Italy with no exception of Byzantine cities like Rome, Ravenna, Rimini etc.

The reuse and privatization of public spaces, the building of houses using poor and perishable materials located in noble areas such as Campo Marzio in Rome, were widespread throughout the Italian peninsula and on the other side of the Alps (e.g. Verona, Brescia, Ravenna, Lyons, Paris, Arles, Angers) also despite wars, which urged banning rules under Emperor Theodosius (397) and Zeno (483) (*CTh*.14.14.1, *Codex* VIII, 10; *de Aed. Priv.* 12.5). Such rules were incorporated into the *Codex Iustinianus* with a view to protecting the ancient appearance of such cities as Rome.

tinctive trait of the Germanic populations, especially those settled in Eastern Europe). According to some scholars, they shifted from a first acceptance of the orthodoxy to Arianism, probably because of a political necessity of distinguishing themselves from other people of the Roman Empire. By the way, this is still a controversial issue, even though Procopius did mention the Longobards observance of the orthodoxy. For sure the Longobards introduced themselves as Arian, when they arrived in Italy.

In the **Spring of 568 A.D.** the Longobards left their territories in Pannonia, currently in Hungary, to conquer Italy under the leadership of king Alboin.

The Longobards reached the Italian peninsula over the mountain passes of the eastern Alps without encountering resistance. As soon as they arrived, they occupied **Cividale del Friuli**, the Roman *Forum Iulii* (whence the region derived its name: “Friuli”), a military outpost of the Veneto region since the V century. Here the Longobards established their first duchy, which Alboin assigned to Gisulf, his relative and esquire.

The Longobards continued their occupation along the roads built by the Romans connecting Vicenza, Verona, Trento, **Brescia**, and Bergamo, which were assigned the title of ducal cities. Finally, the occupation achieved Piedmont and part of Emilia Romagna all the way to Reggio Emilia. Pavia opposed resistance until 571, when the Longobards settled in the central and southern regions of Italy. The same year, they established the duchies of **Spoleto** and **Benevento**, which included a vast territory.

political skills, gained more and more authority.

The issue of the Longobards **religious**

beliefs is a more complicated one, particularly from the point of view of their adhesion to orthodox conciliar Christianity rather than to Arianism (being this the dis-

The **immigration** phase left Italy divided into areas dominated by the Longobards and by the Byzantines -an inevitable source of conflict. In 584, the Byzantine

Empire responded to enemy expansion with the creation of the Ravenna exarchate; they preserved their connection to Rome open through the so-called “Byzantine corridor” separating the Duchy of Spoleto from the Tuscia. That division codified the physical separation of the Longobard kingdom in:

- *Langobardia Major* (whence Lombardy derived its name), including all of the northern regions and territories except for Liguria, which was annexed under Rotari in 636;
- *Langobardia Minor* that included the duchies of Spoleto and Benevento in central and southern Italy, excluding Rome, Capua, Naples and Sicily.

The Longobard territories managed to preserve political and administrative unity, notwithstanding frequent internal conflict. Initially, Longobard warriors were organized in *fare* -i.e. aristocratic clans- subject to the authority of the dukes who would autonomously appoint a king, picked among the noblest warriors, when need arose for communal military campaigns.

The Longobard **immigration** affected Italian territory according to a specific strategy of military control -of population, agricultural resources, pasture- and woodlands, as well as trade routes. They started by occupying the most important cities then settled in the countryside, in the places where the ancient Roman urban and economic organization was best preserved, and where the road system still guaranteed connections between urban centers and farmlands.

The most recent archaeological excavations have revealed that the Longobards - who settled in the ancient Roman centers, declining due to wars and economic recession- placed their centers of power in the periphery of cities, in well-protected

Longobard (in red) and Byzantine territories (in yellow) in Italy

areas. Such centers were the *curtis regia*, the seat of the royal representative; and the *curtis ducis*, the ducal seat. In particular, they placed these seats near ruining public buildings over which they had fiscal rights, such as palatial *domus*, circuses and amphitheaters. This transfer of political and administrative functions from the ancient central forum areas to peripheral sectors is quite evident in **Cividale**, as well as in **Brescia** and **Benevento**.

In general, the Longobard conquest marks the beginning of a period of urban

destructuring, of which **Brescia** is a prominent example. Several areas were abandoned while others, close to inhabited sectors, were used for the activities of craftsmen, or as burial grounds—at first, sporadically, by the elite aristocracy (such as in **Cividale**) and increasingly, by all social groups. In the same, early period of Longobard occupation, building types were elementary, with simple construction techniques and materials that were not very durable -wood, straw and mud- and re-employed materials.

Fortifications of late antiquity, raised in

The crisis and the attractiveness of the Antiquity

In cities impoverished both in demographic and economic terms, the urban landscape was dominated by imperial palaces, walls, amphitheatres, theatres, circuses and religious complexes which, thanks to the conservatism of the Church were the only to be maintained, thus testifying the continuity of those functions and institutions ruling over them. Besides, the architectural quality was also affected by:

the transformation of professional corporations which adapted themselves to the new means of production and, in Italy after the Longobard invasion (568-569), to new purchasers;

the transport and market squeeze which in building industry led to an increasing use of local raw materials (stone and wood) as well as the reuse (whereas in the Roman age the effective trade system had ensured a large scale circulation of building noble materials transferred from Greece and Asia Minor to Rome and Gaul, guaranteeing the homogeneity of style which had characterized religious architecture from early 4th to early 6th century).

In the second half of 6th century the crisis became unrestrainable. After the Gothic War with Greece (533-552) the changes occurred to (mainly religious) architecture were tangible: structures were rescaled, perimeter support structures and vaults changed; the building technique using the *petit appareil* (small cubical stonework) made up of rough-hewed stones and cobbles from both rock blasting and reused materials from old buildings became increasingly popular; marble wall decorations were replaced by painted plaster; mosaic, marble and stucco works were reserved for civil and religious buildings of

particular value, purchased by high-ranking clergy and leaders.

Technical differences concerned the various geographical areas; in Gaul and some regions of Spain, for example, the stone sources of supply were still the Pyrenees quarries.

The splendour of churches and basilicas and their accurate maintenance would be over the following centuries a major source of inspiration for Germanic decision makers, who were continuously putting their culture and organization to test, as they were obliged to change their tradition, deal with the old leaders, rich in experience and attractiveness (bishops, pope, emperors and high Byzantine aristocracy) and at the same time keep their ancestral originality alive.

In Italy the Longobard kings together with decision makers and the clergy pledged from early 7th century to restore Palaeochristian basilicas symbolizing traditions by using bricks produced in royal factories and tiles bearing their name (e.g. the restoration of the Basilica of San Simpliciano in Milan by kings Agilulf and Adolold). The attractiveness of the old world caused Agilulf to associate his son with the throne with a typically Byzantine ceremony held in the circus of Milan (604) before a number of Frankish representatives.

Whereas bishops (see Isidore of Seville, Gregory of Tours) and monastic orders, with such highly charismatic figures as St. Benedict, St. Columbanus and St. Martin, played in the Early Middle Ages a major role in politics and in the spread of ancient culture by acting as a connecting link, Germanic royal families arranged marriages contributing to a further circulation of ideas and solutions alongside that of the clergy. Hence numerous cross-references and interrelations.

In Italy the experience of the Longobard monarchy was marked by the foundation of a number of basilicas, monasteries and royal palaces (all built in early 7th century and lost over time), mentioned by Paul the Deacon in chronological order under the name of the founding kings. One of the most popular buildings was the Palace of Monza commissioned by Queen Theodelinda, of bavarian origin, who had it frescoed with stories relating to Longobard customs and traditions.

The Hellenistic and Roman culture indeed attracted the new Longobard rulers to the point that they at first imitated it and then took possession of it: the attraction to an aesthetic elegance of a "universally" intelligible culture turned into a recovery-renovation of the old as an expression of the *status symbol* which emphasized both the rank and the role of the possessor.

In terms of communication forms, the aforesaid change compared the Germanic nobles not only to the pope, bishops, emperors and Byzantine aristocracy but also, in certain respects, to the activity promoted in Gaul by the Merovingian kings (e.g. the Palaeochristian basilica of St. Denis, which was built on Roman waterworks, used as a mausoleum by the Frankish royal family in late 6th century; the abbey of *Jourre* sponsored by both St. Columbanus, the founder of the monastery of Bobbio, and the land aristocracy in early 7th century) and in Spain by the Aryan Visigoth monarchs (e.g. the churches of S. Pedro della Nave, Quintanilla de las Viñas, San Juan de Baños in Spain, sponsored by Visigoth kings including Recceswinth, who ascended the throne in 653 with the support of the bishop of Zaragoza).

response to the barbarian invasions of the 3rd and 4th centuries, were also reused by Longobards during their settling phase. The *castrum* of **Castelseprio** is a prominent example: like several other castles it is mentioned in the 7th century Byzantine sources that refer to it as *Civitas*. Between the 6th and the 8th century, these fortified citadels became juridical and administrative centres for vast royal and fiscal districts. Perhaps they were the seat of mints or temporary residences for the royal court, ensuring a

rapid military response to possible Frankish invasions.

Some of the citadels, such as **Castelseprio**, are distinguished by their city walls equipped with towers and by a "urban" style structure. Castelseprio, a *Flavia* city in *Desiderius'* *tremissis*, might have worked during the Longobard period almost as a substitute of Milan, which was anyway in connection with the royal court, keeping mostly its trading and productive functions. By the way, it seems to be significant that Castelseprio shares the

title of *Flavia* both with other citadels and cities such as Pavia, Treviso and Milan itself.

The walls and towers re-employment, in order to obtain from them or lean against them dwelling structures, is a phenomenon which involved big cities as well, and has large and diffused parallels in Early Middle Ages Europe.

Although not all settlements have been explored, the identification of the pattern of Longobard settlement is made possible

by the distribution of their **necropolises**, which were situated in areas rich in natural resources, integrated into the ancient Roman settlement grids, or close to rustic and aristocratic villas. This fact allowed them to reutilize the provided construction materials in the erection of new houses, churches, and funerary monuments.

In Northern Italy, the largest diffusion of the great necropolises, those with over 300 tombs, occurs in plains, and along roads starting from urban centers, such as in the districts of Verona, Mantova, Brescia, Bergamo and Turin. In hilly or pre-Alpine areas instead, burial places generally include few large tombs belonging to landholding families.

From the beginning of the sixth century to the middle of the seventh, well-known examples in Nocera Umbra, Castel Trosino, Leno, Cividale show as burial places were characterized by the traditional practice of dressing the departed in full traditional garb. We have numerous examples of men's coats, trousers, brocade mantles, weapons and their belts, as well as women's jewelry and accessories such as buckles and brooches. Elaborately decorated gold crosses, characteristic of Italo-Longobard funerary traditions, are funerary gifts rich in symbolic values. Other funerary gifts are vases and containers in ceramics, bronze and glass, an indication of Hungarian origins or the outcome of exchanges among noblemen, ambassadors and the wealthy. All are equally representative of significant wealth and of belonging to the highest echelons of royal and ducal aristocracy.

Therefore, **grave goods** are still one of the most important signs of the Longobards presence in Italy. Yet, it must be underlined that in the last years our knowledge of the first migratory phase settlements, with their timber huts partly below

Material culture

During their migrations, the diverse barbarian *gentes*, war-prone and clever at metalwork and ceramics production, developed new forms particularly in female clothing (fibulas and other decoration accessories), partly borrowed from the Roman Byzantine customs, which were formal and fashionable in local, regional and wider geographic areas (e.g. S-shaped zoomorphic fibulas) becoming sometimes the distinguishing symbol of different peoples (e.g. rectangular plate buckles topped with eagle head peculiar to Visigoths and Ostrogoths, Thuringian bow fibulas with rectangular head and Longobard bow fibulas with semicircular head).

Such variety of cultural and productive characters of former province lands of the Western Roman Empire stressed the differences arisen between 6th and 7th century.

Peculiar to the **Italian Longobard tradition** were metal handicrafts produced in the evolved late ancient shops. The most significant technological and iconographic examples included **parade shields** decorated with bronze plates depicting zoomorphic shapes of Germanic tradition, flanked by a rich production of classical compositions with leafage

and vegetable interlace, or, more clearly, with peafowl next to trees of life and *cantharos*, themes widespread in the Byzantine, Mediterranean and Middleeastern artistic culture; funeral **gold plated crosses**, borrowed from the Mediterranean culture, decorated with Germanic, classical and Christian themes. Such syncretism distinguished Longobard metal manufacturing tradition from the Visigoth and Frankish ones.

Jewels of all kinds left in Longobard sepulchres bear witness to the significance of the *atelier* of the Cripta Balbi in Rome in the relations between local handicrafts and Longobard purchasers.

The assimilation process, started in the middle of 7th century, fully developed only in 8th century with the foundations of monasteries, San Salvatore in Brescia (753) being, in Italy, the most significant example in an extremely diverse context which included the monastery of S. Silvestro in Nonantola (752), that of S. Maria d'Aurona (740) in Milan, the monasteries of S. Zeno and S. Maria in Organo (743-745) in Verona and others located throughout Italy such as the monastery of Santa Sofia in Benevento.

Longobard female costume

Integration and assimilation

Integration and assimilation are both processes which clearly describe the origin of the progressive evolution of the official building activity. In Longobard Italy it dates back to the half of 7th century, when the Edict of Rothari (643) and the *Memoratorio de mercedes commacinorum* – traced back to the period of Grimoaldus (663-665) or Liutprand (712-744) - mentioned Comacine masters, a guild of master masons working according to the Roman tradition.

The promotion of building activities using stone and bricks by Germanic leaders, accustomed to a poor architecture of perishable materials, marked the beginning of the transformation process affecting the ancient culture which led to the acquisition of written law, the conversion to official Christianity and, in every day life, the use of official clothes made of gold brocade, jewels and *fibulas* (brooches) of Byzantine production or tradition.

Such processes, in different times and ways, characterized all the peoples settled in Western Europe after long migrations, but the assimilation process by the *gens Langobardorum* was different, unique.

The long transition process, marked by constant military operations aimed at stopping invasions and frontier crossings by barbarians in bordering imperial lands, stood out for the acculturation and mutual imitation of traditions also determined by both the presence of soldiers of heterogeneous Germanic origins in the imperial army and the ascent of warriors, titled *vir magnificus* and *illustris*, to the high ranks of the army and senate; which marked the tradition of the Longobard aristocracy (e.g. the signet rings discovered in the sepulchres of Trezzo

d'Adda), with profound similarities to Byzantine Italy.

The dyptic of *magister militum* Stilicho (late 4th /early 5th centuries) described the Vandal commander in his capacity as a consul, proved by the rich military clothes, the cloak clipped on his shoulder by a cross-shaped fibula peculiar to high ranking imperial officials and his sumptuous parade arms.

In 4th-5th century the cross-border Germanic *élites* were also affected by the process of cultural osmosis with the Roman culture which led, for example, to burials of luxuriously dressed bodies lavishly equipped with arms and bijoux, fruits of gifts or trade, and to change the death ritual which, in the Early Middle Ages, marked tribes and groups of nobles migrating. The objects discovered testify changes of (mainly female) clothing due to the attraction to Roman imperial customs and fashion. The assimilation process, the subject of a number of past and current historical debates and studies, characterized –with slightly differentiated periodizations and different outcomes - Avars, Bavarii, Thuringi, Merovingians and Longobards referred to, according to recent studies, as *gentes* with a multiethnic character, associated by the “awareness of being a community built on the **belief of common origins**” and on their cohesion around a king or a charismatic leader. The *Origo gentis Langobardorum*, as to the Longobards, is a qualified example.

The integration and assimilation processes developed in **Longobard Italy** above all in the middle of the 7th century, when they reached the apex mainly in palace building (almost unknown due to the scarceness and the fragmentary nature of the evidence kept) as well as in defensive and religious building,

that is in architecture, which had no bearing on the Longobards before their invasion of Italy.

The differences noticed in the various forms of assimilations are due to the characteristics of the invaded land: the *Langobardia Major*, hinged on Pavia and on the duchies of Turin, Brescia, Verona and Cividale, kept a closer bond with the original tradition which is tangible in funeral gold crosses, signet rings, parade shields decorated with bronze thin plates, although it created new forms particularly in the art of wrought metals. The *Langobardia Minor*, because of the inevitable contact with the Roman Byzantine civilization, acquired more directly decoration techniques and forms peculiar to the Mediterranean tradition (e.g. disc-shaped filigree fibulas, mounted cameos and old cornelians). However, the circulation of models and styles was constant, followed the Roman tradition and sometimes involved peripheral lands, where, though, a native tradition survived which was less courtly than the imperial one.

The official and courtly Longobard architecture (buildings of worship, monasteries and rich houses) is traced back by most experts to the half of 7th century: this was the main sign of the complete assimilation and transformation of Roman models and building techniques, as testified by the *Edict of Rothari* and the *Memoratorium*. The rural and urban landscape would, however, continue to be marked over the following centuries by poor houses and buildings made up, partially or completely, of wood, dirt floor and straw and/or reused materials. Under Catholic king Cunipert (688-700) an important breakthrough occurred in the politics between the Longobards and the papacy. Pavia, the capital of the kingdom, became the hub of a very active evangelization of those Longobard not yet converted.

the ground, has greatly improved as well. New and more updated excavation records have increased our knowledges even on particular power ceremonies and funerary rituals (horse burials, Houses of Death, bandaged skulls), which contribute to outline a more and more complete overview of this society.

The first evidences of **assimilation/integration of the local culture** by the Longobards (**second process of ethnic group formation**) can be found in the end

of the 6th century, when the monarchical institution grounds its roots in the territory, after consolidation. First of all, it defines the kingdom boundaries in the Alpine areas (conquest of the Comacina Island, ca. 590) through military campaigns; then it fixes the borders with the Byzantines along the Po river (conquests of Brescello, Mantua, Monselice in 602/603).

Indeed kings, court and high aristocracy (in other words, the *élites*) soon recognize the necessity of assimilating the life style

of the now subjected ruling classes. The foundation of churches and monasteries is among the earliest evidences of an unceasing evolution which will gradually modify their own original culture.

Contacts with the local Roman civilization gradually induced the Longobards to **convert to orthodox Christianity**. Previously, only a few groups had adhered to **Arian Christianity** during their sojourn in Hungary. Thanks to her vast culture, and her personal relationship with

Representation of God Odino

Gregory the Great, queen Theodelinda became the great promoter of conversion. Subsequently, the efforts of the Catholic Church on the one hand, and the policy of matrimonial alliances implemented by the Longobards on the other (the marriage of Authari to Theodelinda is significant in this respect) led even those who had tenaciously adhered to the ancient cults as public affirmation of ethnic belonging to progressively convert to Catholicism. Conversion to Christianity, however, never implied the total loss of Longobard cultural traditions. At least until the beginning of the 8th century, traditional funerary rites survived.

Conversion to Christianity is signaled, in all areas occupied by Longobards, by the dissemination of the cult of Saint Michael. The most significant example is the shrine of **Monte Sant'Angelo** on the Gargano, a major pilgrimage destination for Longobards as well as a site kept under careful control by rulers-as the Germanic

Religion

The concept of Europe was devised thanks to both the Greek Roman and the barbarian civilizations in all their expressions: Goths, Ostrogoths, Vandals, Burgundes, Alemanni, Longobards. Barbarian peoples, in religious terms, replaced their heathen worship with a sort of Christianity which was at first pretty vague, then Aryan and lastly Catholic.

The heathen Goths, for example, were converted to Aryan Christianity. **Aryanism** spread above all because of the Aryan mission of bishop *Ulfilas* (311-382), who translated the Bible into his Gothic alphabet: it was the first relevant Germanic document. However Christians, particularly prisoners, mingled with barbarians even before the apostleship of *Ulfilas*.

Ulfilas' doctrine of God the Father, the creator the Only-Begotten Son who in his turn created the world, was not only more comprehensible for the Germanic mentality than the Catholic doctrine of God, One substance and Three persons, but also more faithful to the original religion of the Germans. These latter, indeed, praised in their National chants their main god Tristan, whose son Mannus was the founder of the Germanic *gens*.

Vandals and Burgundes were also converted to Aryanism, which became the principle of their National identity: thus, the conversion to Aryanism had a political aim, as it looked like a distinguishing mark from a nationalist point of view towards the Roman Empire. It became the official creed of the Visigoths settled in the Roman Catholic regions of Southern Gaul and Spain, the Vandals who invaded Roman Catholic Africa and the Ostrogoths settled in Italy.

In 568 the Longobards, hostile to Constantinople's Empire which had relieved Italy over the previous years, invaded the Italian peninsula as Christians of the Catholic faith (they were converted to Catholicism under the apostleship of St. Severine within the Byzantine - Longobard *foedus* as they were settled in Noricum). Heathen and Aryan currents persisted, though: the Longobard Heathenism, indeed, left such traces in different Italian cities and towns as Longobard gods and mythical figures (*Wodan, Frea, Gambara, Ybor, Aio*) depicted in a manuscript miniature of the year 1,000 discovered in Cava dei Tirreni; the Beneventan legend of the witches' orgiastic dance around the walnut tree with the devil having the appearance of a he-goat is the Christian interpretation of both the ritual of the unbridled sarabanda

around the walnut tree by the Longobards worshipping *Wotan* and their arrow-piercing through the he-goat's skin hanging on that tree. The Longobards worshipping *Wotan* left their traces in the name of "Votani" attested in the Tiburtine area.

Alboin's choice of Aryanism on his arrival in Italy, in order to distinguish or to set himself against the Roman Catholic Empire of Constantinople contributed to the progress of this doctrine among his subjects. However, after many decades, the Longobards had not yet adopted a single religion.

During the first period spent in Italy the Longobards were influenced by Theodelinda, who was converted to Christianity before arriving in Italy as the bride of Longobards' king Authari (584-590). After his death she was married by his successor Agilulf (590-616), a deeply religious person.

In Paul the Deacon's view, Theodelinda contributed much to the spread of **Catholicism** among the Longobards settled in Italy, even though not at an official level. The religiousness of the queen led to the production of many works including the building of a church dedicated to John the Baptist in Monza, the restoration of other churches and many donations of assets to sacred places. Such a determined and religious queen openly professing the Roman creed wielded a Catholic and pro-Roman influence on the Longobards in her time. Moreover, thanks to her action Agilulf, Pope Gregory the Great and the Byzantines were finally reconciled. Urged by his wife, Agilulf himself was converted to Catholicism and gave back a number of assets stolen by his people to the Church.

However much had still to be done for the Longobards to adopt a single religion. Whereas both the Visigoths and the Franks were officially converted to Catholicism after the conversion of Reccared I and Clovis, the Longobards, despite their royal family was Catholic, kept on professing Aryanism and Heathenism.

Although its spread was a gradual process, Catholicism was definitively affirmed after the abolition of Aryanism by Aripert I -and after him by Perctarit (671-688)- who, irrespective of the *duces* and the people's assembly and contrary to what Alboin and his successors did, autonomously decided to establish a new religion.

Later, King Cunipert (688-700) had a synod celebrated in Pavia, at that time the capital of the Longobard kingdom, in order to put an end to the schism related to the Three Chapters. Through the Council of Pavia (698) Catholicism became the single official

religion for the Longobards. However, beside their religiousness, the Longobard *élites* were attracted to Christianity as it was the official religion of the Roman Empire, a political and institutional system which, in their view, was superior to theirs and deserved to be used in all its aspects as a tool of social promotion.

Many churches and monasteries were built mainly in Pavia, but also elsewhere at the will of sovereigns and dukes. Generous donations of different kinds were made by Longobard leaders to monasteries and convents; Paul the Deacon wrote that Longobard *principes* (princes) donated land properties to the almost popular abbey of Bobbio, as did duke of Benevento Gisulf II by donating churches, lands and monasteries to the founders of the monastery of San Vincenzo al Volturno.

As to the Christian religion, the Longobards decisively contributed to the evolution of a number of cults, including those related to war which were suitable for

Longobards' sensitiveness and fantasy. In particular, the deep and centuries-old relationship between the Longobards of Benevento and, later, Pavia and the cult of St. Michael in Gargano which contributed to developing the warrior nature of the saint. Moreover, the particular relationship between the Longobards of Benevento, the cult of the Archangel and the Apulian shrine contributed to make St. Michael and the Apulian cave respectively the official saint and shrine of the Longobards.

Some epigraphs of 7th-8th century on the shrine structure depicting either characters of the Longobard dynasty of Benevento (Grimoaldus, Romualdus I, Romualdus II) and Pavia (Perctarit, Cunipert), or explicitly the almost Nicene-Catholic character of their faith, the cult of Archangel Michael certainly affected the Longobard transition from Aryanism to Catholicism.

(duchy and kingdom), and through social and territorial composite structures; b) reform its own religious beliefs and life customs; c) create a new artistical language meeting the new civilization's requirements, which, exploiting middle Eastern experiences as well, retrieves and revises the classical tradition forms. In this way it produces artworks and monuments which stand out for their extraordinary originality and which represent the physical heritage of their civilization.

Above all, there was a distinct evolution toward a monarchical organization. The idea of the king as a temporary military leader connected to a war period gradually gave way to a sovereign that could institutionally represent the whole people and a territorial dominion vis-à-vis the Byzantine Empire, the papacy, and the Merovingian kingdom across the Alps. The sovereign set up an administrative structure to govern the territory, especially establishing a fiscal system founded on loyalty to the court. New public offices were established, which are mentioned in royal documents: the *gastaldi*, royal chancellors, judges and notaries to which one must add, in the eighth century, the *gasindi*.

During the transformation process, the influence of local traditions as well as of Christianity is equally relevant on manufactures (brick, goldsmith's, building industries), on ceremonies (throne ascension), on rituals (gradual reduction of grave goods, use of shrouds for the bodies deposition in burials), on all types of economical activities and self-image investment (mortuary chapels, donations, adoption of brocade clothes and Byzantine jewells), on cultural and juridical expressions (*scriptoria*, Rotary's Edict, notarial acts).

A revealing evidence of the influence of Roman culture on Longobard society is

names and the Runic characters inscribed within the monumental complex indicate. Among these there are the names of members of Pavia and Benevento dynasties who contributed to the internationalization of both worship and pilgrimage.

The integration in the Roman-Mediterranean and Christian context

developed more and more strongly and radically, causing a real change in Longobard society both from the politico-social and cultural point of view.

The final "product" of such a process of **integration/acculturation** gives to History and Culture a real civilization which is able to: a) rule over a wide territory through a branched and complex system of power

Golden foil of Agilulfo (590-612 A.D.). Firenze, Museo Nazionale del Bargello

Rothari's Edict, issued from the royal palace of Pavia in 643. Written in Latin, the *Edict* devotes the first pages to the ancestral culture of the Longobards and the genealogy of their kings, but combines that to recent laws, in a single *corpus* as Romans did. Practices and traditions heretofore transmitted orally were thus congealed into written norms. These written laws mark the end of Germanic sagas and barbarian practices, transporting Longobard society into a clearly defined context of laws and institutions. The Roman influence transmitted to the Germanic society a culture of law. A warrior population was thus transformed into a stable society, based on landholding, marriage, and hereditary rights.

Among the most significant **creative responses of the Longobard acculturation** there are uncountable and monumental building works, which are enriched with frescos, sculptoric decorations and furniture of great prestige. They are authentic image promotions commissioned by the Longobard monarchy and aristocracy.

Such a zeal in building construction attracted artists, lapicides, goldsmiths, illuminators to urban centers and castels, causing an exceptional artistical revival which is visible today in the **worship architecture**, protagonist of an exponential growth (indeed, of the prestigious dwelling constructions of the *élites*, often described by the ancient sources, just scanty and highly unfrequent material evidences have come to us).

Between the 7th and the 8th century, the construction of churches and monasteries increased exponentially in both urban and rural areas; examples are in **Cividale**, **Brescia**, S. Giovanni in **Castelseprio**, **Spoleto**, and **Benevento**. Through endowments and concessions, the last

Pilgrimage

Pilgrimage, considered as a journey of an individual or a group to a sacred place is a kind of cult and devotion now intensely used which was very popular in such ancient (mainly universalistic) religions as Judaism, Induism, Buddhism, Christianity and Islam. In the Early Middle Ages, before the affirmation of the pilgrimage to Santiago de Compostela, the Roman shrines as well as that of St. Michael in Monte Sant'Angelo were the favourite destinations of pilgrims of Germanic origin. Paul the Deacon and Bede wrote that between 7th and 8th century many pilgrims, men and women, people of all ranks, lay and clerical, started from England to Rome, where they were given hospitality in the papal "*xenodochia*" or at a number of hostels founded by the Anglo-Saxons near St. Peter.

It is sure that many of these pilgrims went on with their pilgrimage to the shrine of St. Michael in Gargano which became a very important stage of the Itinerary to the Holy Land, as proved by the almost two hundred epigraphs discovered in the shrine which reveal different layers of Germanic and, above all, Longobard anthroponymy. These inscriptions hand down the memory of 182 people (178 men and 14 women), who almost all were of Longobard origin and could not write as many other pilgrims. Their name was therefore written on the walls against payment of a remuneration by lapicides (*hupographeis*) stationed in the shrine. Clear names included anthroponyms of Semitic, Greek, Latin origin and at least ninetyseven of Germanic origin. These latter were in particular Gothic, Frankish, Saxon, Alemannic and Longobard (e.g. *Afridus*, *Ansipertus*, *Arechis*, *Auderada*, *Cunualdus*, *Ildirissi*, *Isitrude*, *Luduald*,

Mauruald, *Ratemund*, *Rodigini*, *Rumildi*, *Tato*, *Varnetrude*, including some written next to acclamation *vivas in Deo*).

Such a variety of names emphasized how internationalized was the pilgrimage to Gargano between 7th and 9th centuries, becoming an experience of European significance which coincided with the period of maximum expansion and most incisive presence of the Longobards in Apulia, where the Dukes of Benevento, in 8th century, established the gastaldati of Siponto (740), Canosa (747) and Lucera (774). In the Middle Ages, the pilgrimage to Gargano was a major factor of the "brownian motion" (as said Marc Bloch), that unceasing but at the same time "inconstant and perpetual" movement of individuals and groups, men and women, adults and children which concerned and spread throughout northern Europe, the Germanic and Byzantine civilizations.

But the pilgrimage was a permanent and long-lasting element in the changeable landscape of history with very strong (even ritual) repetitiveness and reproduction elements in a number of social environmental contexts above all in Europe, which can be referred to as an aggregate of pilgrimage destinations and shrines. Two aspects which, at different levels, made Europe unitary throughout the Middle Ages to the point that Goethe wrote: «The conscience of Europe was born wandering between Latin, Germanic, Celtic, Anglo-Saxon and Slav hubs ».

Longobard sovereigns sought to capture the benevolence of the religious ruling class; achieve control over agricultural production and the work of craftsmen in rural courts and, in general, over the population and the economy.

From the middle of the 7th century, also the number of **private churches** started growing -establishments for the burial of aristocrats who funded them. The earliest of these burials continued the traditional practice of including the weapons that defined the social *status* of the deceased.

Gradually, ritualistic weapons replaced the actual ones, adequately preserving the link with ethnic traditions. The number of symbolic objects buried with the corpse-mostly decorations for belts, combs and jewels-decreased, while at the same time becoming more precious, often made of gold. Finally, donations and bequests to churches and monasteries gradually replaced the ancient tradition of funerary furnishings. The donations are testimony to the intention of the aristocracy to leave a favorable impression and long-lasting memory, guaranteeing continued prayers for their

Trade

The Longobards also stood out for trade above all with Venice and Comacchio, ports of discharge of Eastern Byzantine products which could be reached by inland waterways and rivers.

Andrea Dandolo wrote that about the year 715 the Venetians were probably granted by King Liutprand several privileges pertaining to trade in his land.

At the beginning of 8th century Longobard merchants took part in the fair of St. Denis, also attended by the Anglo-Saxons and Frisians; even the Alps were crossed through the passes of Monginevro, Moncenisio, Gran San Bernardo, San Bernardino, Brenner, all routes where numerous Longobard objects were discovered. Besides, more or less significant traces remained in different areas of Northern Italy.

Literary production

The Germanic *gentes* left a literary production, for example the translation of the Bible into Gothic by Ulfilas in 4th century for his people, which required the creation of a National alphabet drawn on by the Greek biblical capital letter with the addition of a number of characters of Latin uncial and some runes. The Roman barbarian kingdoms contributed to the development of Roman storiography, too. The *Gothic History* by Cassiodorus, which was the best cultural expression of the Italian Roman opening to the Ostrogothic world, paved the way for the following current of National histories by orientating the composition of the histories of Germanic *gentes* settled in Western Romance Europe (România) and almost progressively acculturized according to the Latin-Christian traditions.

Particularly important are: the anonymous *Origo gentis Langobardorum*, *Historia Langobardorum* by Paul the Deacon, Isidor's history of Goths, Vandals and Sueves in Visigothic Spain, *Historia Francorum* by Gregory of Tours in Gaul, *Historia ecclesiastica gentis Anglorum* by Bede in Anglo-Saxon Britannia.

If the process of mutual approach of both Germanic and Roman sides inside the various Germanic kingdoms led to the genesis of nations, the Germanic National storiographies were a paramount component of such genesis. The histories of the Germanic *gentes* paved the way for National storiographies, that is the Histories of the European peoples.

souls, and lit candles in family chapels and oratories.

The architectural evolution is equally extraordinary also in Longobard **private buildings**, where materials were generally pilfered from ancient buildings, but mounted together with solid building techniques -as several partially preserved houses in **Benevento** indicate.

The process of cultural transformation which characterizes the Early Middle Ages is mature and rich in innovations and premises in the 7th century. By that time the **revival** subsequently named after Liutprand (729-744) explodes, being cast in the Carolingian world after Desiderius death (*renovatio*). There it will reach its greatest expression through the creation of a Europe-wide artistical and cultural movement.

Liutprand, a Christian king, tried to annex the exarchate Byzantine territories and to conquer Rome. He widened the norms of Rotary's Edict – as Grimoald and later on Ratchis and Aistulf already did – with rules promoting a greater respect for women, now heirs of the paternal patrimony as well as sons. He regulated the commercial exchanges along the Po with the Comacchio traders (715), imposing duties on the river ports of the Padanian cities. Furthermore, he stands out for his aggressive politics against papacy, being able of mediations as well in a historical context where the land power was being reorganized on aristocratical grounds, with a nearly feudal character.

The Friulan **Desiderius**, the last Longobard king, acted on the same line, being conscious of the need of strenghtening his control over the territory through the ma-nagement of the great monastic foundations. Just in Brescia area we owe him and his queen Ansa the foundations

of the great monasteries of S. Salvatore di Brescia and S. Salvatore di Leno. They were equipped with lands which, thanks to their goods variety, ensured them an effective control over raw materials and production.

That peak of artistic and cultural achievement, however, also marked the beginning of the decline.

The thirty years of great political instability which had origin in Liutprand's death came to an end in 774 to coincide with Charlemagne's victory on the last Longobard king, Desiderius.

The reasons for the **end of the Longobard kingdom** should be found in the unceasing contradictions among different religious traditions (Arians and Christians), in the inner tensions of the Longobard hierarchy, which caused the end of the Pavia dynasty, favouring the Friulian aristocracy, in the expansionistic will directed towards the unification of the peninsula, and perhaps in the less strenght of the army. But most of all, they can be found in the non-alliance with clerical world and papacy, who resorted to Franks' protection as a reaction to the Longobards military attacks. The alliance of 754 between Pope Stephen II and Pepin the Short, king of Franks, who had guaranteed prompt intervention in Pope's favour in case of Longobards aggression, was then premise and ground of Charlemagne's invasion of Italy.

The Carolingians were, however, unable to achieve control of the southern Longobard territories. In the years following the fall of the northern kingdom, the Longobards conferred on Arechi, duke of Benevento and son-in-law of king Desiderius, the title of prince and continuator of Longobard culture and tradition. The **Duchy of Benevento** survived in this new configura-

tion for three more centuries, until the Normans conquered it in 1076.

By the way, some cultural aspects of the Longobard heritage still lasted for centuries. Cases of application of Longobard law are still recorded at the height of Middle Ages; the same for what concerns toponymy. Manifold evidences of their domination are mostly visible in toponymy and linguistics. The Region of Lombardia itself was named after this population.

Paul the Deacon, the great Longobard historian, compiled the history and traditions of his people in the *Historia Langobardorum*. Written in Latin in the late VIII century and composed in the Benedictine monastery of Montecassino, the *Historia* related that history from its early beginnings to culmination, tinged with a vein of nostalgia. The scion of an aristocratic family from **Cividale** del Friuli, Paul embodies the tormented history of a highly fractured barbarian society that was involved in a prolonged conflict with the Byzantines, but that eventually developed, just before it was conquered by Charlemagne, into a Roman-Longobard society with a single religion and a unified culture.

As Julius Schlosser remarked in his dense volume *Magistra Latinitas und Magistra Barbaritas* (1937), the Longobards and the other “Barbarian” people offered a significant contribute to the civilization of late-ancient and early medieval period. Indeed, the heritage of the Longobards, together with Greek, Roman, Etruscan and oriental traditions, with reciprocal influences and connections, is the result of what Braudel has called “cultural pollen”. It involved the Mediterranean civilizations and contributed to create the socio-cultural identity of modern Europe during the centuries, a Europe made of cultural diversity and ethnical mixture.

Law

Over 6th and 7th centuries the Roman law was enriched with the Germanic law of people come from outside with their quite different mentality. In Italy the Longobard law left long-lasting traces: it was indeed in juridical and administrative respects that the Longobard nationalist character still made its voice heard.

Before the arrival in Italy the Longobard law was customary, unwritten and orally handed down. As long as the people dwelled in a narrow land the assembly had confirmed, cleared up and explained its own laws. In Italy instead, the dispersion of the *gentes* in a vast land prevented such customary law from being enforced.

Thus, in 643 the **Edict of Rothari** (636-652) was issued, which was the first written law of the Longobard kingdom. Although it was specifically addressed to the Longobards, it was drawn up in Latin but with many Longobard words, as to entries and morphology (e.g.: *amund*, *angargathungi*, *fulcfree*, *gairethinx*, *grabworfin*, *launegild*, *marthworfin*, *rairaub*, *wecworin*).

On the one hand the Edict reconfirmed the rules, still alive in traditions, of the old Longobard customary law, on the other bore witness to the cultural development of that people.

Rothari's protection of land private property proved the development of the Longobard economy after the arrival in Italy. When Rothari issued his Edict, agriculture in the Longobard society was almost acquired and consolidated, which was the outright origin of private property.

The Edict assured subjects, particularly the lowest social classes which provided most of the soldiers, that those rules would guarantee their rights against all forms of arrogance.

The Edict gave rise to a legislative trend promoted by Grimoaldus (662-671), Liutprand and Ratchis (744-749; 756-757): such genesis of the Longobard national law was the true origin of their storiography. The Edict kept its popularity over time to the point that in the town of Monte Sant'Angelo a monument, presumably a baptistery, was dedicated to Rothari under the name of “Tomba di Rotari”.

Linguistics, Toponymy

Historical and cultural studies emphasized numerous Longobard testimonies which attested their influence in literature, beginning from the half of 7th century on, and in the linguistic field, beginning from 8th century. It is in **language**, both Italian and dialects, that a strong Longobard influence is noticed, as testified by many anthroponyms and surnames, terms of common speech pertaining to different fields such as wood manufacture (*bra* whence It. *bara* – En. coffin; *skaf* whence It. *scaffale* – En. shelf; *panka* whence It. *panca* – En. bench; *balk* whence It. *palco* – En. stage), weaving (*fdera* whence It. *federa* – En. feather), weapons (*strl* whence It. *strale* – En. dart), anatomy (*milzi* whence It. *milza* – En. spleen, *skna* whence It. *schiena* – En. back; *skink* whence It. *stinco* – En. shin). Many words stem from the every day language, including the following examples: *zupfa* whence It. *ciuffo* – En. tuft; *fetida* whence It. *faida* – En. feud; *krimmjam* whence It. *ghermire* – En. to claw; *krapfo* whence It. *graffiare* – En. to claw; *gram* whence It. *grama* – En. miserable; crossing of *krampf* and *grfan* whence It. *grinfa* – En. clutch, claw; *gruzzi* whence It. *gruzzolo* – En. good sum of money; *walkjan* whence It. *gualcire* – En. to crumple; *mago* whence It. *magone* – En. grief; *mim* whence It. *melma* – En. slime; *palla* whence It. *palla* – En. ball; *balk* whence It. *falco* – En. (rar.) falcon; *rghi* whence It. *ricco* – En. rich; *wrdan* whence It. *ridda*, *riddare* – En. turmoil; *hrzzan* whence It. *russare* – En. to snore; *sala* whence

It. *sala* – En. room, hall; *skirmjan* whence It. *schermire* – En. to fence; *skerzan* whence It. *scherzare* – En. to joke; *skif* whence It. *schifo* – En. skiff; *scran-na* whence It. *scranna* – En. high-backed chair; *fillez-zan* whence It. *sferzare* – En. to whip, to lash; *skarrjo* whence It. *sgherro* – En. thug; *guattero* whence It. *sguattero* – En. scullery boy; *spalt* whence It. *spalto* – En. terrace; *spalhan* whence It. *spaccare* – En. to split; *spanna* whence It. *spanna* – En. span; *stoffa* whence It. *stoffa* – En. stuff; *stainberga* whence It. *stamberga* – En. hovel; *strak* whence It. *stracco* – En. tired out; *stranfinr* whence It. *strofinare* – En. to rub; *stroz* whence It. *strozza* – En. throat; *strunz* whence It. *stronzo* – En. turd; *stukka* whence It. *stucco* – En. stucco; *trappa* whence It. *trappola* – En. trap; *tauff(j)an* whence It. *tuffare* – En. to dive; *zain(j)whence* It. *zaino* – En. backpack; *zann* whence It. *zanna* – En. fang; *zazza* whence It. *zazzera* – En. mane; *zäkka* whence It. *zecca* (*acaro*) – En. tick.

Current **toponymy** also include terms used by the Longobards. As a consequence of the Longobard domination new toponyms related to various aspects of the Longobard culture were added to pre-Roman, Roman and Ostrogothic toponyms: settlement toponyms (e.g.: *fara*, **harimann*, *sala*, **sunder*, **warda*), toponyms from technical and administrative appellations (e.g.: **biunda*, **blaha*, **gahagi*, *snida*, *wald*, *waldmann*, *wiffa*), toponyms from geographic notions (e.g.: *binda*, *braida*), toponyms from proper nouns.

Sporadic documentary evidence suggests that the Longobard *élites* in Italy commissioned prestigious buildings right from their arrival (palaces and residences, but also churches and basilicas), along the lines of their Roman predecessors, in order to affirm their position and authority.

Since the century before the Carolingian annexing of the north and centre of the peninsula (second half of the 7th-first half of the 8th century A.D.), the Longobard kings and dukes began more frequently and more systematically to committed themselves especially to the construction of churches and monasteries. The monastery, in particular, is a typical foundation of this period, an expression not only of the strength of the faith of the Longobard nobles, but also a place of refuge for themselves and their families and, above all, an institution that guaranteed the continuation of their assets. King Desiderio alone, together with his wife Ansa, founded three monasteries (in addition to San Salvatore in Brescia, there were those in Leno and Sirmione) and all the dukes of the peninsula conformed to this model, undertaking ambitious architectural enterprises unparalleled in Europe at that time.

Sources testify – and monument evidence confirms – that the construction industry was well organised with guilds of specialised craftsmen who could carry out complex commissions to high standards. Not having an architectural, pictorial or sculpture tradition of their own, the Longobards used the existing skills of the local craftsmen. This is one of the reasons that the Longobard artistic style in Italy is extremely composite and presents specific characteristics in different parts of the kingdom. Faced, therefore, with a clear unity of intent which brings together all the monument complexes – owing to the desire for self-determination of the

Longobard élites and legitimization before the indigenous population – we find heterogeneous artistic creations which, for example, in Lombardy seem to be more conspicuously subject to the Merovingian influence, as in Friuli the influence is more Byzantine and Syriac. The language in different areas of Italy was therefore different, but the various formal dialects were mutually comprehensible.

Today's region of Friuli is the area of Longobard settlement in Italy that is richest in testimonies and findings; in particular, one of the most complex and original buildings of Longobard architecture is preserved at **Cividale del Friuli**, the so-called “Tempietto Longobardo”, Oratory of Santa Maria in Valle, with a single chamber, square-plan, covered in a spacious cross-vault, which terminates in a lower presbytery, divided by pairs of columns in three parts covered in barrel vaults. The sumptuous decorative scheme, including mosaics on the vaults, stucco figures and ornaments, and a series of frescoes painted in aulic style and skilfully refined, make this one of the most splendid and ambitious works to reach us today from 8th-century Europe, probably the work of the Royal couple Astolfo (749-756) and Giseltrude. In particular, the stucco tondo figures of female saints show the refined and high level of artistic production achieved in Italy in the late Longobard era.

The Temple, together with San Giovanni, the Palatine Church of the royal court, stands in the urban area belonging to the castle, next to the early Christian Church of Santa Maria, which became an Episcopal church with annexed Palace in the late Longobard era.

The Episcopal complex, renovated and extended by the patriarch Callisto, consisted of a set of communicating buildings,

Cividale del Friuli, the “Tempietto Longobardo”

which included the Basilica, the Baptistry of Saint John the Baptist and the Patriarchal Palace. From the Baptistry, discovered at the start of the 20th century beneath the Duomo, come two of the most important works of Longobard sculpture, currently preserved in the *Museo Cristiano e Tesoro del Duomo*, a short distance from their original location. The high level of craftsmanship explains the excellent quality of Callisto's “*tegorio*” – an octagonal aedicule which covered the baptismal font, with columns and arch vaults finely sculpted with symbolic images and rich decorative motifs – and the altar commissioned by King Ratchis – the only sculptural piece from the Longobard era featuring a biblical narrative theme, achieved using a linear and calligraphic language that invert the standards of classical naturalism, and enriched by a vivid chromatism and a precious set of mounted stones.

The remains of the Patriarchal Palace were uncovered beneath the 16th-century Palazzo dei Provveditori Veneti, designed by Andrea Palladio, today home to the *Museo Archeologico Nazionale* which houses the burial items from urban and suburban necropolises of Cividale, real treasures of Longobard artistic craftsmanship.

The exceptional nature of the proposed artistic item is provided by the preservation of the most representative structures

and spaces of the secular and religious *élites*. This offers a clear proof of the socio-cultural composition of the urban *civitas* – the Longobard ruling one – as well as of the strategies performed by the dominant classes in the power management. Indeed, the site includes evidences of the rich artistic production ascribed to Longobard period and to a secular customer base. It is a unique repertory, for it displays the ubiquitous creativity and experimentation attitude of workers who elaborated a new original language as result of the confluence of different traditions: the indigenous, Barbarian, Byzantine and Arabic ones.

The monumental area of San Salvatore-Santa Giulia in **Brescia** is an extraordinary architectural palimpsest that incorporates the female convent built by Duke Desiderio of Brescia, with his wife Ansa in 753 A.D. before becoming king. The Church of San Salvatore is one of the most important testimonies of late mediaeval architecture: the building, with triple apse transept, had three naves with a series of columns and capitals, some recycled from the classical era and from Byzantium, others made for this purpose. The church was entirely decorated with stuccoes and frescoes; the decorations, along with those of the Cividale Tempietto, are one of the richest

Brescia, the Church of San Salvatore

and best preserved collections of the Early Middle Ages. A complex play of stucco reliefs and wall paintings probably decorated the crypt, which also had the three-apse system of the upper floor. Within the church, enhanced by a marble liturgical assemblage of which numerous elements are intact, can be found a number of tombs of the privileged, one of which is thought to be that of Desiderio's wife, Ansa.

The complex somehow recalled architectural and ornamental models already used in the Capital Pavia, and subsequently in Cividale. Nevertheless it became a referring point for the prestigious architectures ordered by the secular and religious purchasers. As a whole, it is possible to recognize here traditions of North-European (British and Alemannic), Mediterranean (Ravenna's and Roman) and Oriental ascendancy.

The Monastery had service structures for the pilgrims reception and the poor housing. Historical sources recall the *Xenodochio*, which hosted the pilgrims, and the so called *Peresindo's* Hospital. The monastic complex area spread Westward with houses, burial places and productive plants. The walls evidences still visible *in situ* testify the presence of the large number of Longobard buildings, with different functions and structural quality. Such evidences were uncovered in what is still considered to be the most complete medieval urban excavation, within an area where the most important pre-existing Roman remains in Northern Italy are preserved.

S. Salvatore - S. Giulia Monastery, which had reception structures for pilgrims and accommodation for the poor, played a fundamental role in the society of the time, both in religious terms and in political and economic terms. Its importance did not diminish after the fall of the Longobards: its richness and high prestige over the centuries led to new important

architectural interventions, extending Desiderio's complex until it became the structure that we see today, which, in addition to three cloisters from different eras, includes the Romanesque Church of Santa Maria in Solario, the 15th-century choir and the 16th-century church of Santa Giulia. The entire complex, the result of an exceptional recovery and valorisation project, is currently home to the *Museo della città*, which houses the finest artistic testimonies of the long history of Brescia and its territory.

While Cividale and Brescia, like Benevento, demonstrate the settlement methods of the Longobards within the most important cities in the urban system created by the Romans, **Castelseprio-Torba** is excellent testimony of how high altitude fortified systems, which developed during the late Roman era following the first Barbarian invasions, were re-used. The *castrum*, destroyed by the Visconti in the late 13th-century – with the exception of buildings of worship – and following its abandonment, retained the fundamental features that characterised it: the imposing wall circuit, a place of shelter for the inhabitants in times of peril, the high quality of the housing system and of the main worship complex of San Giovanni Evangelista,

Castelseprio, Christ Pantocrator
in S. Maria foris portas

with basilica and annexed octagonal baptistery, completely reconstructed by the Longobards in the 7th century and used internally and externally for the burial of important local personages. A particularly significant example of military architecture is the Torba tower, placed at the summit of the fortified site of Castelseprio, which led down to Valle dell'Olonia, and which, in late Longobard times, was used as a female convent. The rooms on the first and second floors of the tower, used by the nuns as a sepulchre and oratory respectively, preserve noteworthy remains of paintings which, in some iconographic respects, are reminiscent of the stucco work in the Cividale Tempietto.

The Church of Santa Maria *foris portas* in Castelseprio, a private aristocratic building with annexed cemetery, placed in the area of the burg which developed westwards of the *castrum*, preserves one of the finest pictorial texts of the whole of the Early Middle Ages; the scenes dedicated to the story of the childhood of Christ are presented in the central apse of the small triple-apse structure enriched with an inlaid marble floor. The series of figures is complex and dense with episodes and references, alternated with symbolic images; the style is free and animated which renews and revitalizes the

expressiveness and Hellenistic pictorial quality and is unequalled by other creations of the time.

The *Wideramn* epitaph probably comes from the church and is one of the first testimonies of written Longobard funeral culture. Conquering the written culture of the victors went hand in hand with assimilation of architectural and decorative cultures. Having first entered the funeral ritual with the purpose of evoking the memory of the personality rather than merely the physical aspects of the deceased, writing soon took on new functions of celebrating the image and status of the Longobard *élites*: it is in this function that we encounter it in the most extraordinary architectural works, the painted dedicatory inscriptions of San Salvatore and Brescia and the Cividale Tempietto, the inscriptions on the *tegurio* of Callisto and on the altar of Ratchis, again in Cividale, in the epigraphs in the Sanctuary of Saint Michael on the Gargano Coast, the architectural inscriptions on monuments in the duchies of Spoleto and Benevento, clear references to Imperial Roman customs.

The complex as a whole represents an extraordinary example of castrensian settlement which stands out for its spatial organization, monumentality and typological variety of its buildings. The great number of worship buildings, characterized by different functions, public and private, is a proof of the influential relationship of the Longobard *élites* with the Church, to the extent of creating a "new" model of settlement where the sacred places played a primary role in the power strategies.

Again in the duchy of Spoleto there is the same tendency for the prestigious architecture conveyed in the monuments of the northern duchies. One of the best preserved examples is the Basilica of San

Salvatore in **Spoleto** and the Clitunno Tempietto in Campello, both outstanding edifices designed using classic Roman style features. Most of the sculpted ornaments are new works rather than recycled *spolia* from ancient buildings, designed and realised in such a convincing, skilful and credible way that they also convinced Palladio that the Tempietto was a Roman temple and it still puzzles and astounds scholars to this day. The Church of San Salvatore, which probably had funerary functions originally, has a three-aisle basilica floor plan, with presbytery divided into three parts, and central vaulted covering with octagonal base. The semi-circular apse is closed on the outside by a straight wall and flanked by two apsed, cross-vaulted rooms. One characteristic element on the interior, which has lost almost all of its pictorial and stucco decorations, is the rich entablature with Doric frieze set on Doric columns in the nave and Corinthian columns in the presbytery. Of the original rich decorations of the façade, alternated by pillars and divided into two orders by a cornice, which must have terminated with a triangular fronton, remain the window cornices and three portals with skilfully elaborate classical motifs. S. Salvatore Church is an early architectural evidence of the Longobard period, as expression of

Spoleto, the Basilica of San Salvatore

Campello sul Clitunno, the Clitunno Tempietto

the ruling *élites* ideology. It inaugurates a model for the medieval religious architecture. As original products of different attitudes (Roman-Hellenistic, Bizantine Longbards, indigenous, Syriac), it precociously embodies the cultural pluralism which is the Dark Ages peculiar trait and the ground of the Medieval Europe.

The design of the recomposed spoils is common to the extraordinary marble works of San Salvatore and those of the Clitunno Tempio, a small *sacellum* in the form of a tetrastyle Corinthian temple with two side porticoes *in antis*, located in **Campello sul Clitunno**. The façade features splendid columns covered in leaves from the portico, whose architrave bears an inscription in extraordinarily carved square Roman capital letters invoking God, complementing the inscription on the side porticoes. This is one of the rare examples of monument epigraphs of the Early Middle Ages; the practice of placing monument inscriptions on the façade of a building had been abandoned in late antiquity and was not re-introduced until the 14th century when Leon Battista Alberti created one for the Malatesta Temple in Rimini. Inside the Temple, painted murals of remarkable quality, which have been compared to the frescoes in the presbytery of Santa Maria Antiqua in Rome, framed a small marble aedicule in the apse, which is also partly the product of the assemblage of recycled Roman material and purpose-designed decorations.

The little temple represents a masterpiece of religious and commemorative architecture, to the extent of being a pilgrimage destination (see graffiti). Its structures and decorations together with the surrounding landscape make of it a unique work where artificial elements and natural environment (Clitunno river and the holy *locus*) perfectly merge.

Like the dukes of Spoleto, Arechi II, son-in-law of the Friulan Desiderio and the duke of **Benevento** also carried out prestigious monumental initiatives, trying to develop their own aulic construction style and court art with marked ancient features. The clearest and highest expression of this intention is the Church of Santa Sofia, one of the most complex and best preserved complexes of its era. The dedication to Holy Wisdom, *Haghia Sophia*, which is expressly influenced by the Great Church in Constantinople which stood near the imperial palace, offers another example of the ambitions of its sponsor patron

The church was built in around 760 A.D. as a personal chapel and national sanctuary by the duke, for redemption of his soul and salvation of his people and nation. The quality and inspiration represented by Santa Sofia are testified by its complex central structure and by the intricate vaulted roof; the interior space is divided by columns and pillars laid out to form a central hexagon and a concentric decagon; the columns of the hexagon bear recycled, but carefully selected, capitals from the classical era, also placed in an upturned position to form bases. The circular perimeter wall, which becomes fragmented beyond the presbytery area, terminates in the three apses. In the two minor apses are preserved the most important pieces of the pictorial series dedicated to stories of the life of Christ, which probably covered the entire interior surface of the church. The fragmentary nature of the images partly limits the effectiveness of the painting, which is nevertheless the highest testimony of "Benevento painting", an art movement of considerable importance (also involving the two monastic centres of San Vincenzo in Volturno and Montecassino), parallel to the *scriptura beneventana* phenomenon, the national script of the Longobards in

southern Italy, also used in monasteries to transcribe works from antiquity.

Annexed to the church of Santa Sofia was a female convent, whose extraordinary cloister, with Roman-style forms, re-uses a number of elements of the original Longobard construction. The cloister and the convent structures are currently home to the *Museo del Sannio*, which houses some extraordinary exhibits from the city. This peculiar star-shaped Church is a sophisticated, extremely peculiar product of both Roman-Hellenistic and Bizantine tradition (because of the central plan, typical of the V-VI cent. oriental architecture) meeting the Longobards attitude towards experimentation, which in this building is realized once again by a thought out exploitation of the *spolia*. Moreover, the Church anticipates the renewed interests in central planned buildings, which will spread mostly in Northern Europe starting from the Carolingian time especially in the palace chapels.

After 650 A.D., the Benevento Longobards incorporated into the territory of the duchy the Gargano region, where, worship of the Archangel Michael was established the 4th century onwards, thanks to ongoing intense relations between the Greco-Byzantine world and Apulia. Worship of

Benevento, the Church of Santa Sofia

the Archangel was, in some aspects, congenial to the sensitivity of the Longobards; indeed they were now converted to Christianity, and must have felt a particular attraction for Saint Michael, in whom they found attributes and characteristics of the pagan *Wodan*, considered the supreme god by Germanic populations, the god of war, psychopomp, protector of heroes and warriors. From the 7th century, the Gargano sanctuary in **Monte Sant'Angelo** was considered a national Sanctuary by the Longobards and it soon became the most important place of worship of Saint Michael in the west, influencing all others.

The Longobard dynasties of Benevento, but also those of Pavia, as testified by Longobard inscriptions preserved in the buildings, gave life to vast monumental reconstruction works at the sanctuary, to facilitate access to the primitive cave and provide hospitality for pilgrims. With the Longobards it became one of the most important places of worship in Christendom and was an international destination of pilgrimage, one of the last stages on the road that lead to the Holy Land, coinciding in with the ancient route of the *Via Traiana* southern Italy, which since then took the name of *Via Sacra Langobardorum*.

In the centuries following the fall of the

Longobards, the Normans, Swabians and the House of Anjou adopted worship of Saint Michael and became attached to the Gargano sanctuary, and carried out important reconstruction works, changing the original architectural layout of the upper part of the sanctuary and enhanced it with new decorations and important treasures. Today the sanctuary is still a pilgrim destination, with morphological and ritual features dating date back to the Longobard period.

The sanctuary is one of the rare Dark Ages *loca sanctorum* preserved through the centuries. Particularly, the heritage possibly ascribed to the Longobard phase – with its exceptional epigraphical *corpus* – is a unique evidence for the Longobards history outline, being expression of a peculiar spirituality insofar as they combined the German pagan beliefs with Christianity. The Longobards, indeed, transformed and gave new life to S. Michael's worship, which so much contributed towards the development of the medieval pilgrimage – unifying factor of the Byzantine Mediterranean basin and the Northwestern Europe and the Germanic world. This became a universal reference, both for the Christian faith displays and the architectural setting of S. Michael's hundreds sanctuaries built in the West.

CIVIDALE DEL FRIULI

THE GASTALDAGA AREA WITH THE SO-CALLED TEMPIETTO LONGOBARDO AND THE EPISCOPAL COMPLEX WITH THE PALAZZO PATRIARCALE BELOW THE NATIONAL ARCHAEOLOGICAL MUSEUM

"the main city in the Venetian region was once *Aquileia*: today instead it is *Forum Iulii*, so called because Julius Caesar had set up a market there"

These are the words used by Paul the Deacon, the historian of the longobards, to sum up the history of the city of Cividale, which had become the seat of the first longobard duchy in Italy.

THE CITY BEFORE THE ARRIVAL OF THE LONGOBARDS

Forum Iulii was one of the lesser cities founded by the Romans on the margins of the land belonging to the colony of *Aquileia*, originally set up during the Romans' expansion towards the Alpine regions, the area East of the Alps towards the Balkans.

The city rises on a natural plateau overlooking the *Natisone* river, between the plain and the pre-alpine area, along what was already a route in Protostoric times. This track reached from the basin of the Danube river to the sea and followed the course of the river *Natisone*, and the upper reaches of the river *Isonzo*. On account of its strategically important position it was probably fortified by the Romans during the late Republican period, when an imposing city wall was built, which partly survives to this day. The documentary evidence shows that the city, founded by *Cesar* (56-50 BC) probably enjoyed administrative autonomy as of 49 BC and was raised to the rank of *municipium*. It was enrolled within *X Regio* and was assigned to the *Scaptia* tribe.

During or shortly after the walls' construction,

a daring bridge was flung over the chasm, or *forra*, in which the *Natisone* flowed, as the river in this area had formed a deep cleft in the bank of rocky conglomerate. The bridge is aligned with the city axis running North to South, which constituted the *cardo maximus*, and corresponds today to *via Paolino d'Aquileia* and *corso Mazzini*. On the route leading from *Cividale* to *Aquileia*. The Roman city's urban layout, together with its necropolises which stretch to the South and to the North East, were revealed, albeit only in part, by extensive excavations carried out by *Michele della Torre* at the beginning of the 19th century, as well as by emergency excavation work of the 19th and 20th century, and by a few recent methodical research work. To this day there are few certainties as to the location of the main public areas. Their hypothetical location is based on the only existing epigraphical documents (i.e. bases bearing dedicatory inscriptions to Emperor *Caracalla*, which probably stood in

the Forum, and a small altar dedicated to *Jupiter* now in the National Archaeological Museum). Private buildings on the other hand are well documented: the most sumptuous boasted expensive mosaic floors while a wealthy *domus* was equipped with a thermal bathing complex. All of these buildings rose in the South Eastern area of the city. The northern neighbourhoods were probably those mostly given over to commercial and productive activities.

The city developed rapidly during the Late

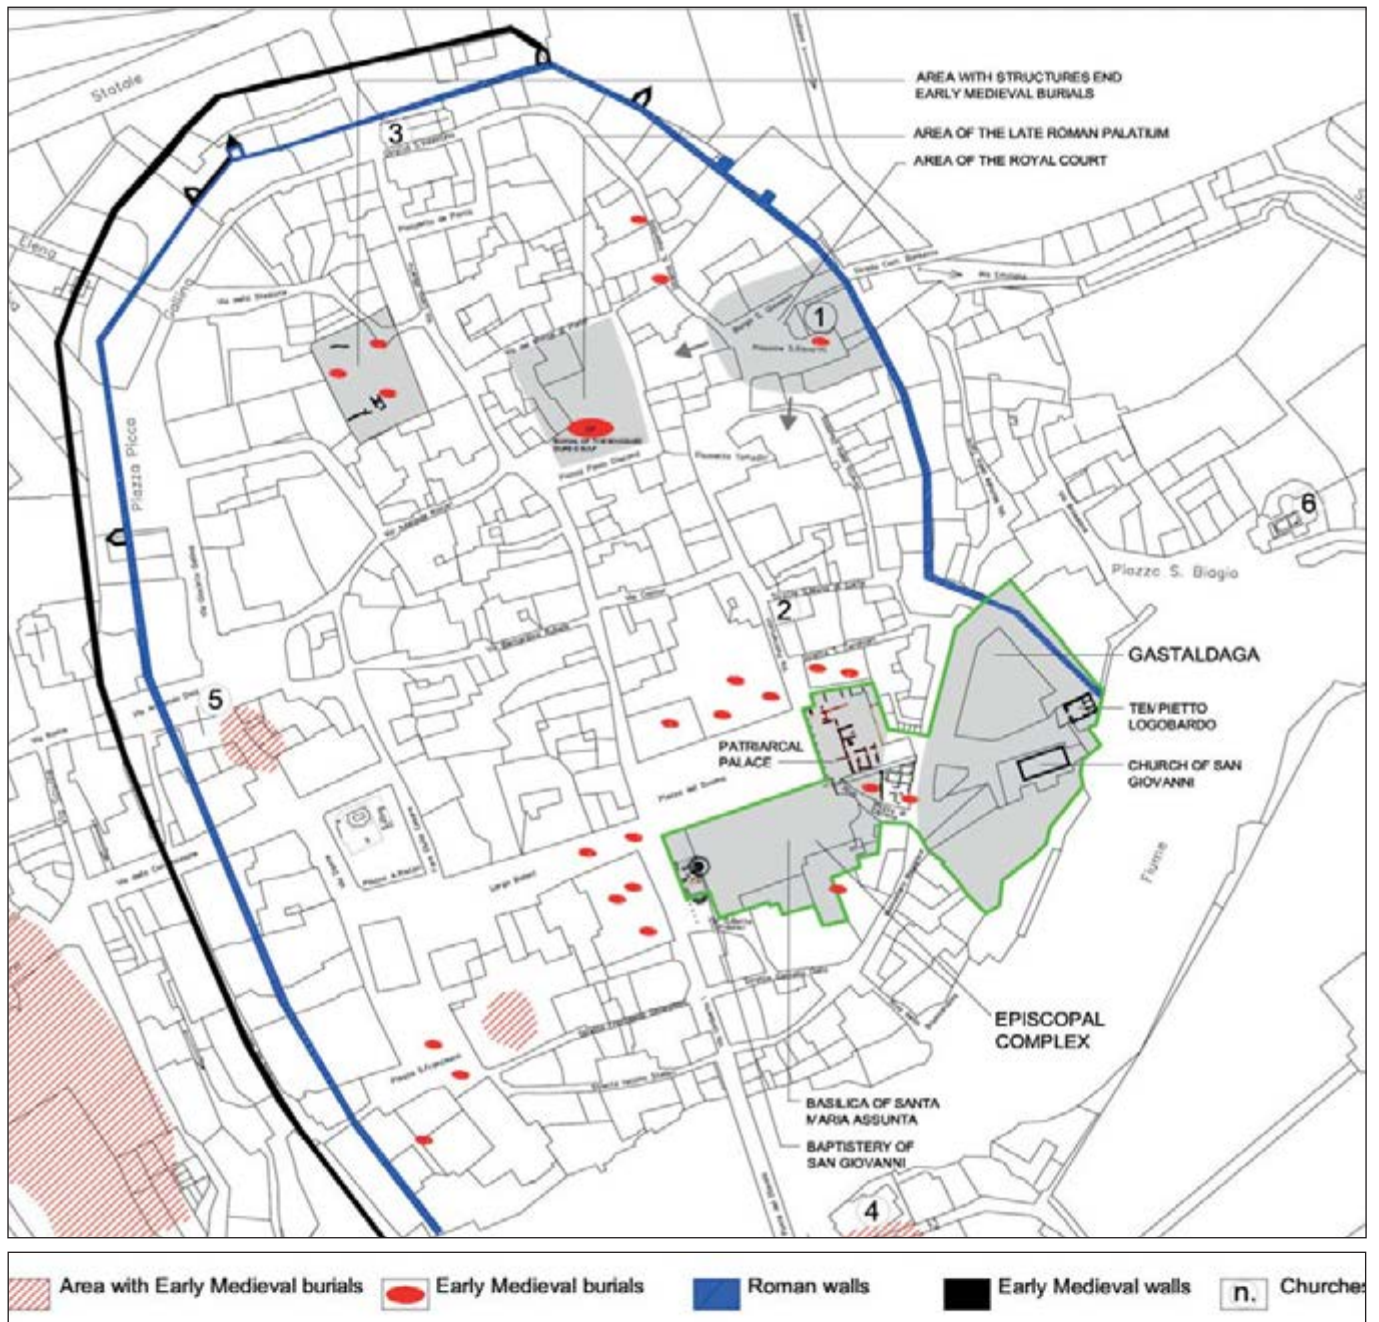

Mosaic depicting Ocean, from a Roman *domus*

Forum Iulii during Roman times

Antique period, thanks to its strategic role in frontier defence. During the second half of the 4th century it supplanted Aquileia as seat of the *corrector*, or governor, of Italy's North-Eastern province. During this period, the inhabited area's limits remained identical

to those of the old *municipium*, as defined by the late Republican walls, which were reinforced and enhanced during the 5th and the 6th centuries. The city's expansion during these times is proved by the development of new monumental areas, such as the

religious complex of Santa Maria—today's Duomo—with an Early Christian baptistry, and important palaces. One of these, possibly belonging to the provincial governor, has been partially revealed by excavations carried out in piazza Paolo Diacono.

Forum Iulii during Longobard times

HISTORY AND URBAN ORGANIZATION OF THE CITY DURING THE LONGOBARD PERIOD

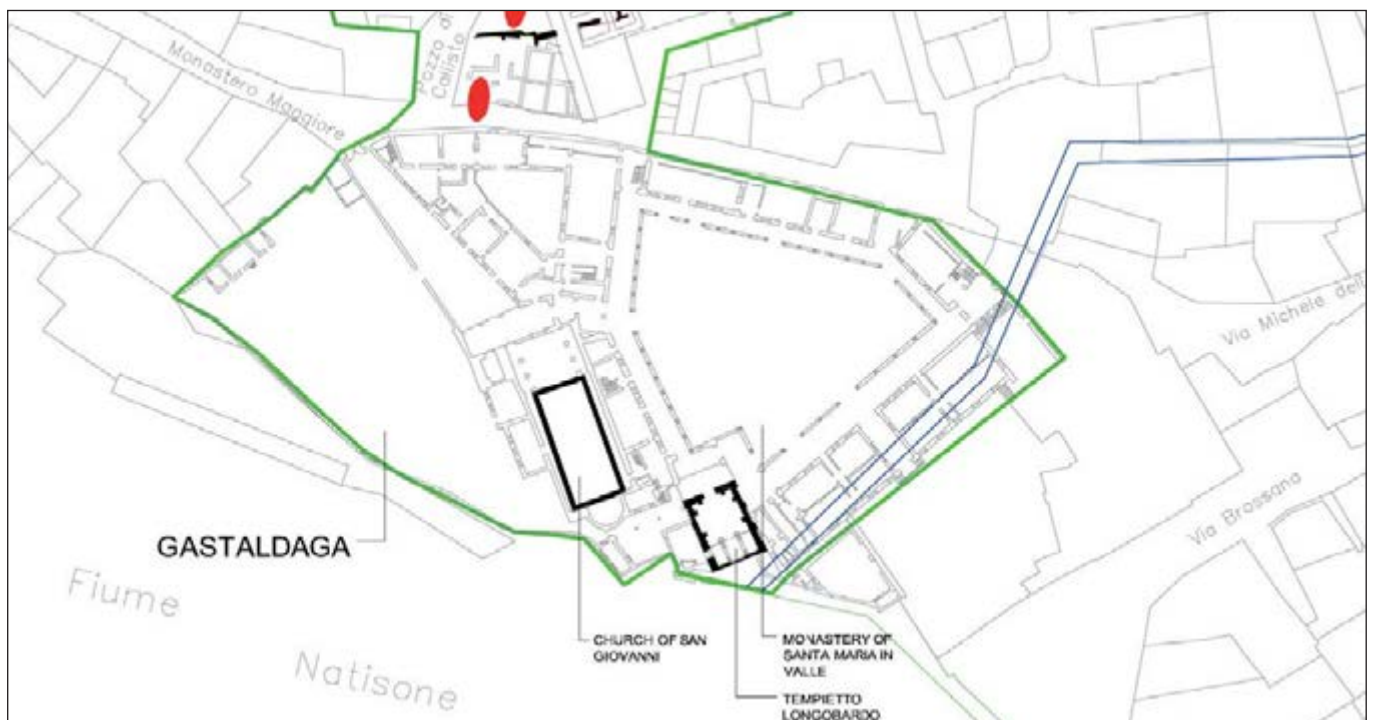

In 568 A.D. the Longobards had descended into Italy and immediately took over *Forum Iulii*. King Alboinus left here his nephew Gisulf, together with some of his best warriors. Gisulf governed a Duchy including four Roman *municipia* (Aquileia, *Concordia Iulium Carnicum* and *Forum Iulii*), corresponding more or less to modern Friuli. To the East it reached as far as the river Livenza, bordering with the duchy of Ceneda, stretching to the South as far as the Adriatic coast, past which were the areas such as Grado and other areas, still under Byzantine rule. Cividale must have appeared to the Longobards as a well-fortified castle, within the ancient walls which resisted and survived the only conquest and devastation the city experienced during Longobard domination, namely, the sack by the Avars, at the beginning of the 7th century, when the city was taken by means of a stratagem.

Within the enceinte the main monumental areas of the Longobard city included the following:

- the area called Valle, appointed as seat of the *Gastaldaga*, or seat of the *gastaldus regis* –the King's representative; here the church of San Giovanni and the Oratory of Santa Maria were built, as well as an important monastery, known as Monastero di Santa Maria in Valle, a monument erected in the last years of the Longobard rule;
- the area around the Early Christian centre, called Santa Maria, which became episcopal church with a nearby palace, certainly built during a later phase of Longobard rule.

During the reign of Duke Pemmon and of his son Ratchis, in the 8th century, Cividale enjoyed a period of remarkable architectural and artistic development; moreover, Callixtus, Patriarch of Aquileia, helped by King Liutprand, transferred his seat to an imposing palace rising immediately to the North-East of the basilica of Santa Maria

Assunta, under the auspices of King Liutprand. The aristocracy also contributed, by founding new worship places, of which significant sculptural artefacts survive to this day. These monuments are described in detail below, and are being proposed as candidates for inscription on the World Heritage List; apart from these, the traces of the Longobard period relate to a common type of domestic architecture, where older structures are routinely re-used by making wide use of economical and perishable materials. The existence of wooden huts of the kind used by Germanic cultures has been ascertained, as well as the presence of open, unoccupied spaces, which testify how some parts of the Late Antique city had reverted to a rural state. The appearance of burials inside the city points to significant changes in the use of city space: single tombs, or burials grouped in more consistent and organized groups have been discovered both in close proximity to places of worship, as well as in residential areas. A nobleman, wrongly identified as Duke Gisulf,

The Santa Maria in Valle Monastery with the so-called Tempietto Longobardo and the Church of San Giovanni

View of the western area of Cividale del Friuli including the nominated property

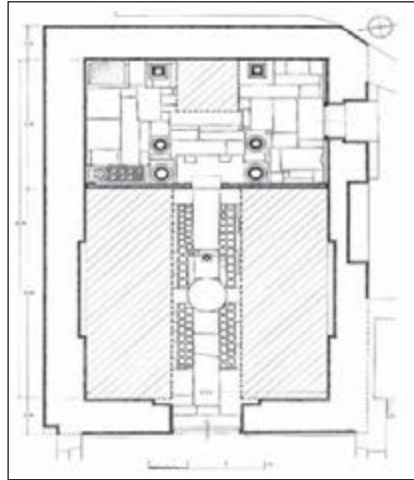

was buried with his rich funerary apparel some time around the middle of the 7th century A.D. in the area occupied by the Late Antique palace discovered in piazza Paolo Diacono; this palace is believed to be associated with the seat of ducal power in the city. The main Longobard necropolises rose outside the walls, mostly along the main routes which led into the city, starting from the very first phases of Longobard settlement.

THE SITE

The site for which inscription on the World Heritage List is required corresponds to the heart of the Longobard city.

This is an emblematic example of the urban culture of the Longobard period, which brings together in one place the two most important centres of power in the city: the Gastaldaga and the *insula episcopalis*.

The site's outstanding importance lies in the fact that it still preserves the most representative buildings and spaces -used by both

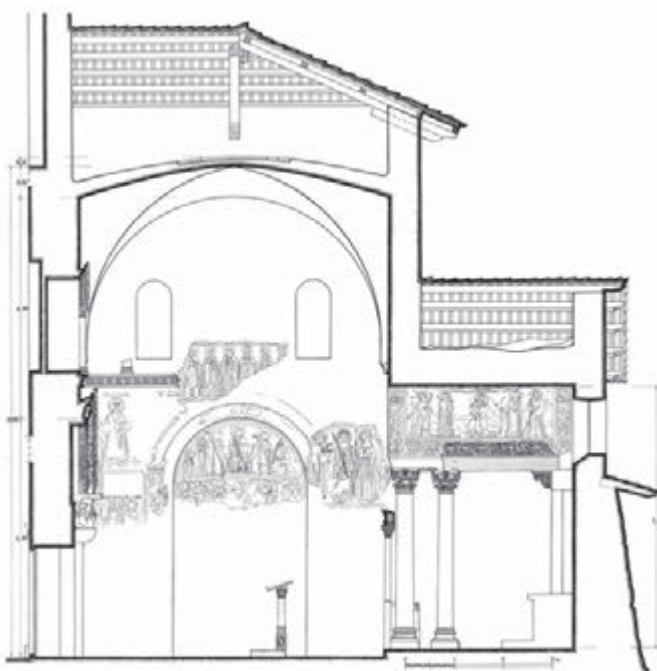

the secular and religious *élites*-, as evidence of the dominant socio-cultural organisation of the urban *civitas* in the Longobard period, and of the strategies by which the ruling classes exercised their power.

This wholly original artefact resulted from an encounter between different cultures that expressed themselves in different areas, most importantly in their organisation of urban space and in their mutual interdependence; the proximity of the secular and

religious buildings demonstrates the close connection between the two seats of power and for that reason, as an example of *forma urbis*, the settlement pattern of Cividale is early evidence that the urban power structures (the Cathedral and the Palace) had become polarised in a unique place (the central square).

Furthermore, the multi-layered cultural and typological nature of the site bears eloquent witness to the types of secular and civil artistic artefacts that were being commissioned during the Longobard age. This collection of finds is unique because at all levels and in all fields, they demonstrate that the artisans who made them took a creative approach and were ready to experiment, actively developing an original language that came out of mixing different traditions: the indigenous, the barbaric, the Byzantine, and the Arabic.

This property is also of outstanding importance because it still perfectly preserves the geo-morphological components that led to its being selected for the construction of an enemy fortified settlement.

The Tempietto Longobardo: plan and internal vertical sections of Northern and Western walls

La gastaldaga

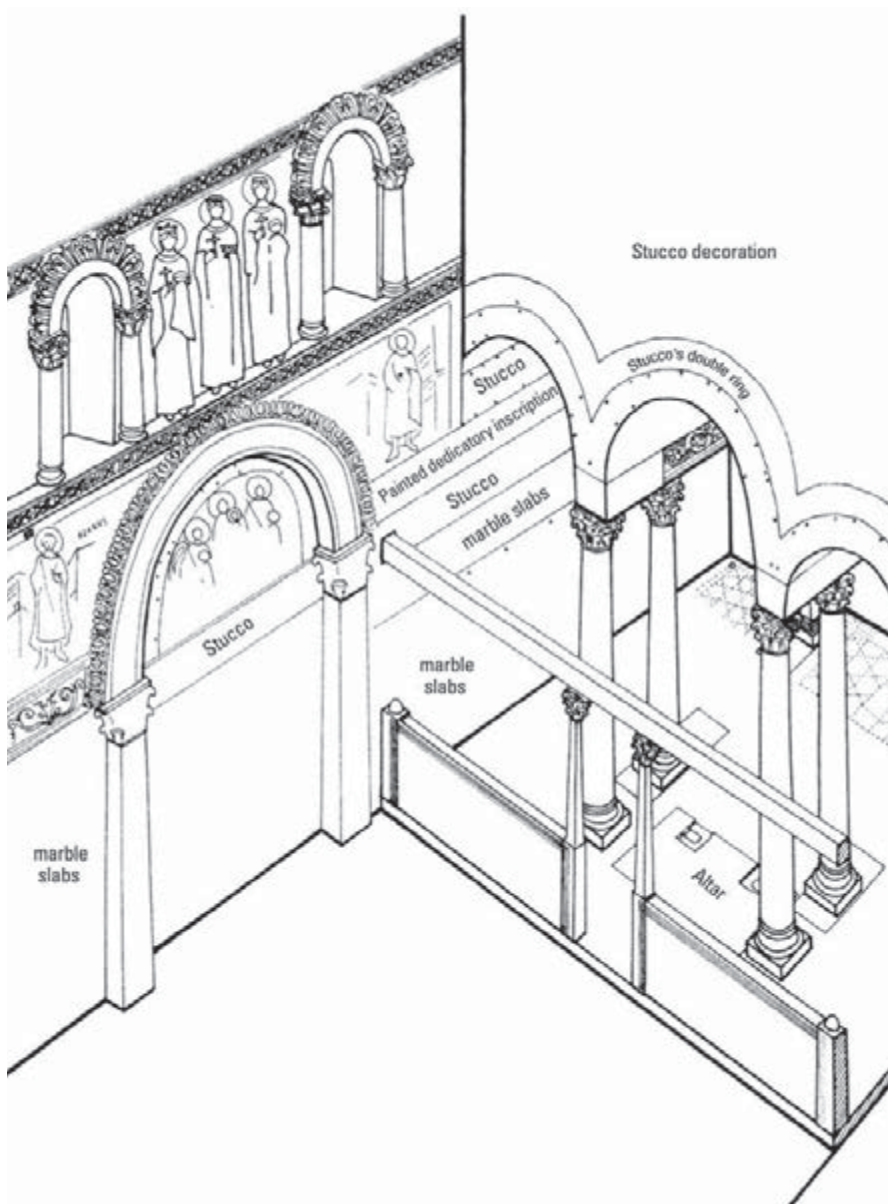

The 16th century transcription of a diploma of Berengarius I (889-890 or 917-918 A.D.) states that in the place known as Valle there was the *Gastaldaga*, or seat of the *gastaldus regis*, the administrative officer in charge of the fiscal estate and of the possessions of the Longobard King in Cividale and in the Duchy of Friuli. The low lying area called Valle –which occupies the South-Eastern area of the city, close to the walls, not far

from an ancient city gate, called Porta Brossana– is an area with its own particular atmosphere, overlooking the craggy chasm in which the river Natisone flows, in a place which is both impervious and picturesque, capable of evoking the prestigious medieval past of this ducal city. Possibly, this area had already assumed a central function within the urban structure under the domination of the Goths. This situation conditioned the development of monuments in

the area around the Church of San Giovanni, the city's most important and oldest religious building, second only to the Cathedral, and in the area of the a small building known as the *Tempietto Longobardo* (literally, “the little Longobard temple”), a work of unparalleled splendour dating from the late Longobard period, which can be considered a royal building. It is in this context, probably still during the Longobard period, that the monastery of Santa Maria incorporated older buildings, and became the core of a new building complex.

Because the Monastery was considerably developed during subsequent periods and right up to today, it is not easy to identify the surviving traces of the ancient palace settlement. After Torp had completed his investigations, remnants of the Early Middle Ages Paace of *gastaldus* were identified in archaeological structures came to light within the Church of San Giovanni, in a space that connects the cloister to the narthex. Here it can be seen that in the rebuilding of this church and the south-western arm of the monastery, the orientation of the earlier structure was respected and adhered to, in both cases. Recent stratigraphic tests of the wall construction further confirm that on each occasion when the monastery complex was reorganised over the centuries, the intention was always to respect the older building, and to replicate a space that had particular architectural significance within the overall arrangement.

Other elements brought to light during the 2008 archaeological excavations, in a small courtyard located between the apse of San Giovanni and the southern perimeter of the *Tempietto*, can be identified as parts of the original layout of the valley site. Investigations carried out here in 1962 had previously found evidence of the first phase of frequentation of the site as a series of interconnecting rectangular rooms, paved in mosaic, that extended below the sacristy of

Axonometric reconstruction of the Northern wall of the hall with the presbyterial area

View of the hall from the presbyterial area

the Tempietto. The 2008 investigations clearly demonstrated that these structures, which can now be visited by the public visit, were partly reused in construction of the religious buildings for the Longobard palace, which in fact seem to have been well integrated with those pre-existing structures.

The so-called “Tempietto Longobardo” Oratory of Santa Maria in Valle

The building faced East and included two rooms: the presbyterial area covered by three barrel vaults, and a hall with an almost square plan, with a cross vault ceiling. The plan is based on a 3 to 5 relationship between the two spaces, while the elevation is based on the golden rule. The possible existence of a narthex, which some researchers have proposed, has not been ascertained. The building's exterior was executed using a mix of techniques, and

appears quite plain, the walls being enlivened only by simple blind arches; this creates a contrast with the decorative wealth of the interior's surfaces.

The Western wall of the hall has overall preserved its original appearance, the walls being divided into three areas, a rule which was also followed on the North and South walls; it is thus easy to reconstruct the appearance of the small building in the 8th century. The walls were covered by a tall marble skirting, over which ran the complex decoration of the middle section, comprising frescoes depicting male Saints, placed on either side of the large central arch; the latter was decorated by vine trellis motifs, and was supported by two tall capitals modelled in stucco, and rested on semicolumns.

The magnificent arches were originally covered in polychrome decoration, possibly touched up in some areas with gold leaf, and were meant to offset the lunettes containing

frescoes: to the West was a scene showing 'Christ among the Archangels Michael and Gabriel', on the south side the 'Madonna and Child between two Archangels'. The scene in the fresco which graced the lunette on the North wall is too badly damaged and cannot be interpreted.

In addition to the figures of Saints, this middle area to the West also contained a dedicatory inscription which started here and ended on the wall East of the apse, comprising characters painted in white and ochre pigments over a purple background, totalling twenty four hexameters in all. This fragmentary inscription, of which only a few lines are legible today, invokes the protection of the Virgin Mary and of the Redeemer, and mentions events involving deaths, and the building's *pii auctores* (literally “the pious authors”), unfortunately without stating their actual names; this has led researchers such as Torp to identify them as representing the

Arch with the stucco archivolt with vine shoots and frescoed lunette with Blessing Christ between Archangels Michael and Gabriel

Detail of lunette's fresco depicting Blessing Christ between Archangels Michael and Gabriel

royal couple Astulf (749-756) and Giseltrude. In the upper section of each wall there are five windows, each flanked by small columns, and by arches decorated with sculptural openwork: one window takes up the central part of the West wall, while other two grace the side walls. On either side of the windows runs a stucco high relief decoration, consisting in a line of twelve female figures: six survive on the west wall on either side of the window, while other ones, now missing, probably stood in groups of three on either side of the other windows on the side walls. These figures are a little larger than life, and each wears a *nimbus*, or square shaped halo. The ones on either side of the window are turned slightly inwards, at a slight angle, in a pose signifying religious worship, and both wear a tunic and a cloak called *palla*, raised to cover their heads. The remaining four are depicted frontally, richly clothed and wearing gem studded collars and diadems, and each holds the crown of martyrdom and a cross. The wall decoration is further enriched by ledges modelled in stucco showing flower motifs, with glass ampoules inserted in the centre of each flower, according to a technique also found in San Salvatore, at Brescia.

The female Saints in stucco and the male Saints painted in fresco were meant ideally to converge towards the triumphal arch on which had been placed, presumably within a rich frame, a stucco sculpture group of figures, probably of a slightly larger size than the figures of female saints, possibly depicting an 'Annunciation' or a figure of 'Christ in glory'.

The surviving elements at the base of the vault may indicate that the hall's original ceiling formed a barrel shaped vault, and was embellished by mosaics, but collapsed in the 13th century and was thus rebuilt.

The presence of both precious marble, as well as polychrome, gilded stuccoes and mosaics also characterized the transept

Details of the stucco archivolt with vine shoots

Fresco with dedicatory inscription

Fresco with Saint, detail

Fresco depicting Saints on the Northern and Western walls

area. In the middle of the eastern wall there was a stucco arch, of a slightly smaller size than the large vine covered ones of the hall; above the skirting covered in marble slabs ran the purple band bearing the building's dedicatory inscription. The traces left by nails on the preparation layer which still adheres to the three small vaults, in the transept area seems to suggest a mosaic or stucco decoration, which would have further enhanced this section, where one finds a central vault supported by six columns with Corinthian capitals on which rest two re-used Roman epistyles decorated with vegetal volutes. Between the presbyterial area and the aula, the main body of the building, there is a section consisting of plutei in Proconnesian marble on which rest two small piers crowned by Corinthian capitals, supporting a wooden lintel beam. The aula preserves large parts of the original floor mosaic in *opus sectile* comprising geometric motifs (hexagons and triangles), similar to the one partly still preserved in the church of Santa Maria *foris portas* at Castelseprio, and to the one which graced Santa Sofia in Benevento. The presbyterial area is today floored by re-used marble elements; in the North-East corner although the marble covering has gone missing, it is possible to inspect the preparatory layer of the earlier pavement in *opus sectile*, which still shows traces of the imprint of small stone slabs of hexagonal and triangular shape.

On the North side of the presbyterial area stand two marble slabs decorated with bas reliefs showing entwined motifs and other elements typical of the decorative repertoire of the early medieval period; these slabs originally belonged to an 8th century ambo, and were dismantled and re-used as sides of a sarcophagus placed in the same presbyterial area, possibly around the beginning of the 9th century.

The building, includes frescoes dating from the late Medieval period have been partly

preserved, and also holds a wooden choir dating from the 14th century.

The majority of scholars believe that the so-called Tempietto, which rose in the area pertaining to the *gastaldus*, was erected to act as a Palace Chapel, and that the exalted quality of the building is the result of royal patronage. But from the point of view of the chronology, the prevailing view is that the building and decoration date from the middle of the 8th century, or to the years between 733 and 766 A.D., that is, to the

Female Saints in stucco

Female Saints in stucco

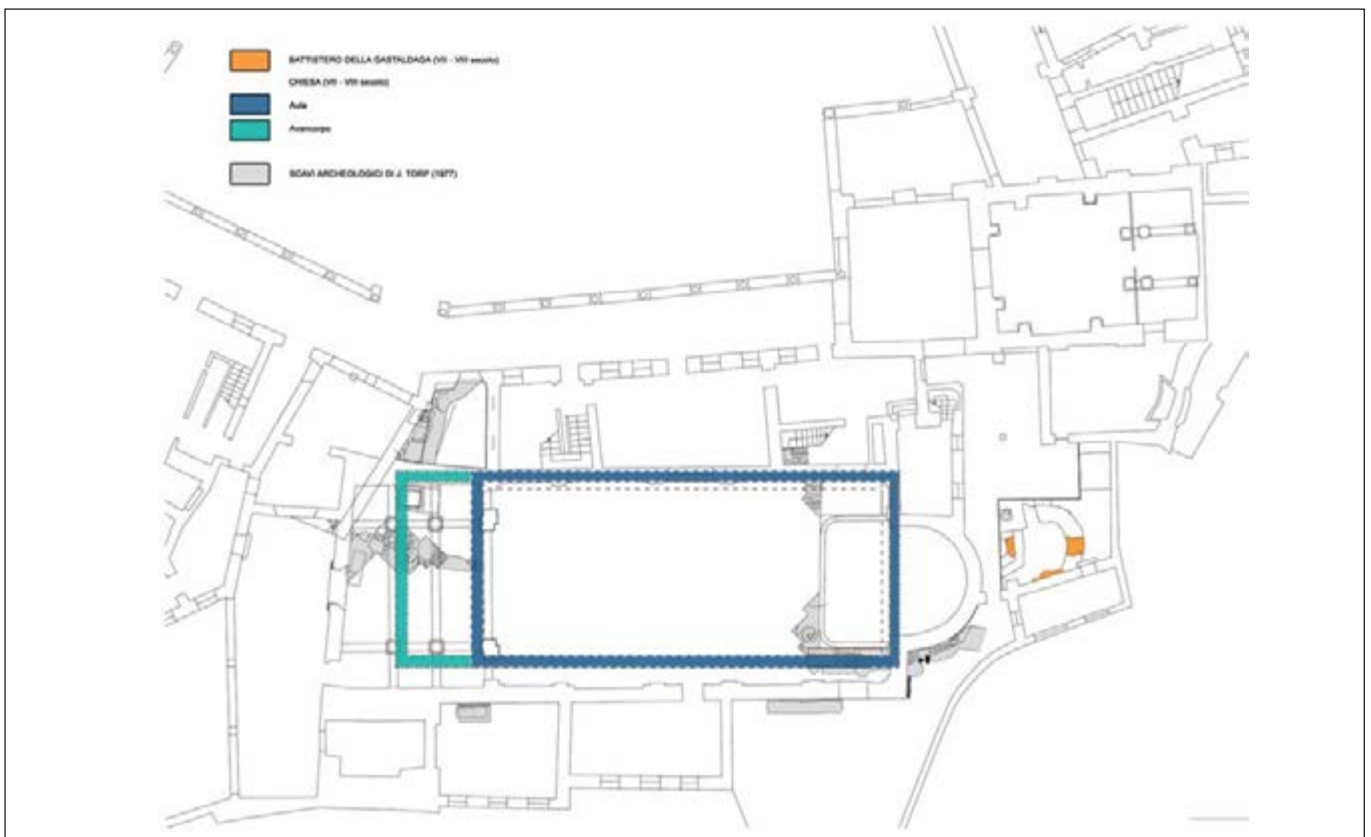

View of the presbytery

reign of Astulf or *Desiderius*. The creation of the exceptional decorative, pictorial and stucco furnishings is generally attributed to artists of Byzantine culture, originally from areas of the near East which had recently been conquered by Islam, and who had reached Italy thanks to Popes of Eastern origin, who reigned in Rome in the 8th century. The decorators of the Tempietto were perhaps supervised by the same *Paganus*, who carved his name on the plaster of the intrados of the window of the Eastern wall.

The Church of San Giovanni

S. Giovanni, the Palace Church used by the royal court in the early Longobard period, later became a monastic worship centre. It had originally dedicated solely to John the Baptist, and was later dedicated also to John the Evangelist, and is first mentioned in a document dating from 830 A.D., when

Church di S. Giovanni in Valle: reconstruction of building phases

its domains bordered with those of the monastery of Santa Maria. At a later date the church was incorporated into the monastic complex, at the time in which Berengarius I allowed the Western section of the Gastaldaga to be given over to the monastery for its enlargement, either in 889-890 A.D. (the third year of his reign as King) or in 917-918 (the third year of his reign as Emperor).

The research of Hjlmar Torp indicates that the original building consisted of a small rectangular building ending with a flat wall with no apse; as in the case of the Tempietto nearby, the presbyterial area was emphasized by a slightly raised floor and a narrower width compared to the hall. A rectangular atrium was situated, or was probably leaned against the façade during Early Middle Ages, as proved by documentary evidence from recent excavations and survey. The sculptural elements belonging to this phase are the following: a lunette decorated with peacocks facing each other among floral motifs, an architrave with a frieze showing lambs bearing crosses, which can be

dated to the end of the 6th and the beginning of the 7th century, and finally a series of artefacts belonging to the burials of Longobard nobles, discovered here in 1751; among these are a small golden cross and a beautiful golden disc bearing the figure of a stag, dating to the first half of the 7th century. This evidence points to the fact that around that time the church of San Giovanni represented a privileged burial place for the Longobard aristocracy, which would explain its location close to the royal court.

The Church's importance throughout Longobard nomination –and after its demise– is proved by the many sculptures dating from the 8th century or to the Carolingian period, which relate to later work carried out to embellish its interior decoration.

The church was placed immediately to the South-East of the Tempietto, and its architectural appearance today is the result of continual remodelling during medieval and renaissance times. It comprises of a large rectangular hall with a deep semi-circular apse facing East.

Gold elements of furnishing from Longobard graves found inside the Church

The 2008 excavations in the courtyard behind the apse of San Giovanni - which are still visible and can be visited by the public - brought to light an additional place of worship with an apse at its eastern end, and which was built within the area of some earlier rooms with mosaic floors. The enclosures of those earlier spaces have been preserved because they include evidence that a more recent crushed earthenware floor was laid inside the semicircular perimeter of the new apse, and also continued outside, creating a sort of usable space beyond the apse.

Within the space to which the apse was attached, and whose perimeter walls have not been found, were found the remains of a brick-built depression paved with marble slabs, and whose sides were finished in a crushed earthenware mortar. It is possible that this depression, of which only the eastern side has been preserved, but which lines up with the centre of the apse and appears to have been hexagonal in shape, was a baptismal font. It appears to have been at a lower level than the original floor, and to have had two or three steps down, for access. And it is very suggestive to note that the perimeter size of this depression is the same as that of a small hexagonal arched arcade for a baptismal font, preserved in the Archaeological Museum, whose workmanship can be associated with that of the workshops that made the coronation for the

Archaeological excavation behind the apse of San Giovanni Church: remains of previous Baptistry and cemetery of the Monastery

Cathedral baptismal font (*tegurium*), commissioned by the Patriarch Callisto and sculpted in the second quarter of the eighth century. It is also likely that this arched arcade, a decorative feature found on many other early baptismal fonts, was part of the font used by the royal court.

Within the Longobard *Gastaldaga* (Chamberlain's palace), the complex of the Church of San Giovanni probably therefore also included, right from the beginning, a baptistery standing east of the church and apparently connected to it. This would have been more than justified by the importance of the location, which was the traditional place of worship for the Longobard nobility of Cividale, and may also have initially been specifically associated with the adhesion of the Longobards to Arian Christianity.

The Monastery of Santa Maria

The monastery's existence is documented for the first time in year 830 A.D., in a *diploma* issued by the Carolingian Emperors Lotharius and Ludwig. This document assigned jurisdiction over the convent of Santa Maria, to the patriarch of Aquileia. This monastic institution was situated within the city walls in the Valle area, and shared boundaries with the Church of San Giovanni (which was not included in the donation, as it still formed part of the *Gastaldaga*). Up to that date, therefore, the monastery has been a part of the King's estates.

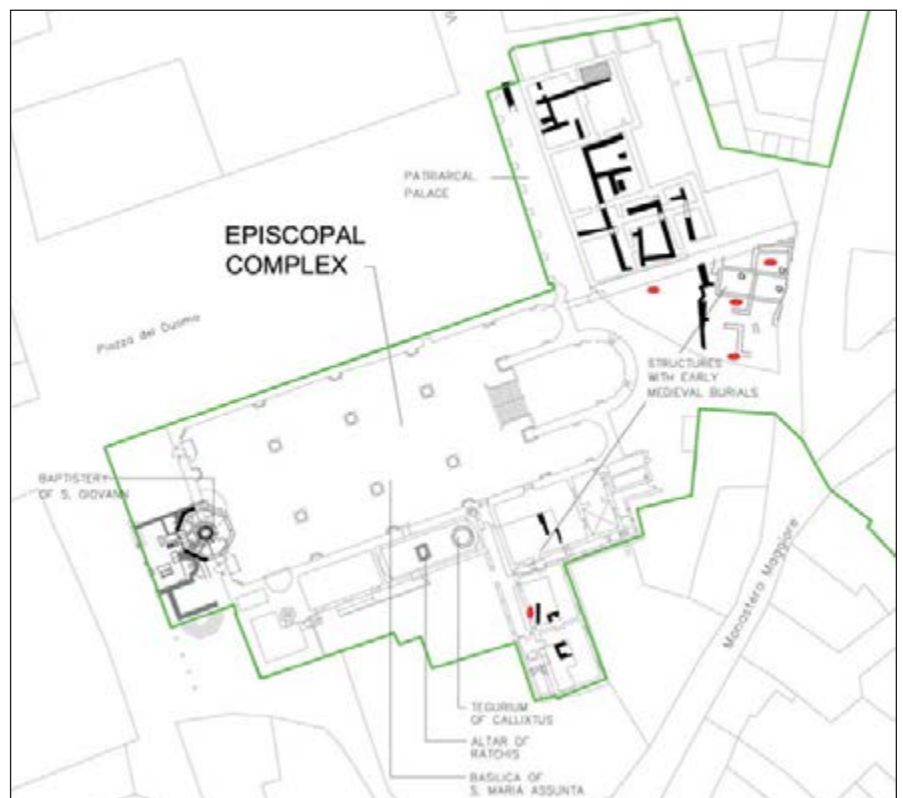

The monastery was probably founded during the Longobard period, sometime between the middle and the third quarter of the 8th century, at a time in which there seems to have been a surge in the number monastic foundations by the King and his Longobard aristocracy. In the duchy of Friuli at this time the monasteries of Sesto and Salt were founded by high ranking patrons. Some traditions still alive in Cividale, which however have never been confirmed by other elements, ascribe the foundation of

Santa Maria to a Longobard woman of royal blood, possibly Queen Tassia, wife of Ratchis (744-749) or else Giseltrude, the wife of Ratchis's successor, Astulf, and sister of duke Anselm, founder of the large monastic complex of Nonantola.

The Episcopal complex

The history of the Longobard duchy of Friuli is entwined with that of the patriarchal seat of Aquileia. As soon as the Longobards descended into Italy, the bishop of Aquileia, Paolinus (reigned 557-569 A.D.) decided to flee to the coastal city of Grado, also bringing the treasures belonging to the church of Aquileia. The patriarchal title was duplicated between Grado and Aquileia, and after this, probably sometime between 608 and 628, the patriarch of Aquileia, who resided in the territory of the Longobards, moved from the city of Aquileia into the *castrum* of Cormons.

Byzantine capitel (end 5th - first half 6th century A.D.)

Plan of the Episcopal Complex

In 737 the patriarch Callixtus, encouraged by King Liutprand, transferred his residence from Cormons to Cividale, evicting the *praesul* (a governing clerical figure) of the town of *Iulium Carnicum* who had earlier established his residence in the city as agreed with Duke Pemmon. The arrival in Cividale of Callixtus (737-757) coincided with a period of great political and cultural prosperity for the Longobard Duchy of Friuli and the city enjoyed a period of great splendour. Patriarch Callixtus (737-757) is credited with the renewal and enlargement of the church complex which became the episcopal seat during this same period of Longobard domination: "...*post haec Patriarcha (Calistus) ad Civitatem rediens, ibi Ecclesiam, et baptisterium Sancti Johannis, atque Palatium Patriarchale construxit...*"².

The complex included a series of interconnected buildings, comprising the basilica dedicated to the Assumption, (Santa Maria Assunta), the Baptistery of San Giovanni Battista, and the Patriarch's Palace. The complex occupied a hillock immediately to the North of the Valle area. Here, within the area of today's Duomo, an octagonal baptistery was rediscovered, which had been made more monumental by a *tegurium*, or baldaquin, added by Callixtus, and possibly also by adding the altar of Ratchis (today held in the nearby Christian Museum). The structures of the Patriarch's Palace, adjacent

to the Basilica of Santa Maria, were rediscovered under the area of the Palazzo dei Provveditori Veneti, the seat of today's Museo Archeologico Nazionale.

The Basilica of Santa Maria Assunta and the baptistery of San Giovanni Battista

As shown by the sculptural elements which have come to light in the past, the remains of the religious centre probably date back to the early Christian period. This first place of worship was beautified and enlarged by Patriarch Callixtus and its remains are very probably still largely buried under the Duomo, which was built at the beginning of the 16th century. The complex was characterized by the alignment along a single axis of the basilica, its atrium, and the baptistery, a typical trait of the traditions of Aquileia. The only remains investigated are those which can be referred to the baptistery building, which can be dated between the Early Christian period and the Carolingian period, and which were revealed by the excavations carried out by Ruggero della Torre between 1906 and 1909. The building had an octagonal plan with an entrance on the eastern side, and probably comprised an apse on the West, where an altar would stand. It can be easily compared to the baptisteries in Grado, Parenzo, and Castelseprio, which are all datable to the 5th and 6th centuries; it is thus possible that this

building was erected around that time, and that Callixtus had been responsible for giving it a monumental appearance, by enriching it with precious liturgical furnishings, including the *tegurium* sheltering the baptismal font; probably the altar of Duke Ratchis was placed there around the same time.

Around the Baptistery other buildings directly linked with the Baptistery were erected, and received mosaic decorations, of which only a fragment of geometric phytomorphic decoration survives.

The basilica of Santa Maria Assunta was also renovated under Callixtus, as shown by the discovery of liturgical furnishings. Around it stretched a burial ground, identified in a number of different sightings: in proximity to piazza Duomo (Michele della Torre's excavations, in 1819), in the area of the sagrato (Ruggero della Torre 1906-1909), and under the former Canons' house (excavations of 1989), and under the Duomo's sacristies (excavation campaigns 2001-2002). Some burials included Longobard type furnishings. The burials discovered in the 2000-2001 campaign supplied interesting information concerning living conditions and pathologies of those buried there.

The tegurium of Callixtus

The decorative covering called a *tegurium*, was added under Patriarch Callixtus to the octagonal baptismal font of the Basilica of

Details of small arches of the *Tegurium* of Callixtus, above the baptismal font

Small arch with the name of Callixtus

Santa Maria and represents the most well-known and important sculptural example of the so-called "Liutprandean Renaissance", which can be referred to the artistic climate of the reign of King Liutprand (712-744).

The *tegurium* consisted of a series of eight small marble arches on columns bearing refined, elegant capital sculpted in an imitation of the Corinthian style, with acanthus leaves, volutes and a central rosette, which strove to echo Early Christian examples. The arches rose all around the font, over the points in which two sides of the octagonal parapet joined up, and where baptisms were performed with a triple immersion into the water font. The small arches' decorations are framed by bands of intricate motifs and vegetal volutes, and include peacocks, lions, lambs, fishes, griffons, and deer, sculpted with a fresh, realistic style. The figures are

Baptismal font with *Tegurium* of Callixtus Patriarch (737-744 A.D.)

shown in couples, facing each other, and are placed on the sides of the archivaults and surrounded by other decorative floral elements. They are meant as Christian symbols of redemption, as the animals drink from the source of salvation, the main theme in a baptismal context. On the upper ledge of the arches runs a dedicatory

inscription in capital characters which explicitly calls to mind the patronage of patriarch Callixtus. A further possibility of refining the chronological context of this artefact would be the mention of Liutprand and his son Hildebrand, who reigned until 744, and inscribed on an arch found in the 16th century in the Duomo's paving, which has been identified as an element originally belonging to the *tegurium*. This would allow a dating of the work between 737 and 744.

The altar of Ratchis

The dedicatory inscription running along the upper ledge of the work means that the altar can be considered a gift of King Ratchis (who reigned after Liutprand, from 744 to 749), commemorating his father Pemmon Duke of Cividale. It reads "Ratchis Hildebohlorit ensures the very great gifts granted by Christ to the sublime Pemmon may shine, so that temples in honour of God should be built everywhere, and thus, among other things, he has adorned the house of the blessed John with hanging jewels to enhance the beautiful *tegurium* and has enriched the altar with the colour of marble".

The altar appears as an oblong composed of marble slabs placed side by side, four of

The Altar of Ratchis

which are sculpted with figures framed by decorative motifs. On the front of the altar is a figure of Christ shown in the act of blessing, and inscribed in an almond shape, or *mandorla*, flanked by cherubim, and supported triumphantly by angels. On the sides instead are shown scenes from the life of Christ, which relate respectively to the Visitation, to the Virgin and to Saint Elizabeth, and to the adoration of the Three Kings. On the back is an opening to allow the viewing of relics, and this is flanked by figures of crosses encrusted with precious gems, while other floral motifs fill the lower section.

The altar was probably executed sometime around the fifth decade of the seventh century or later, possibly in 749, the year in which Ratchis abdicated and retired to a monastery, and must be considered one of the most singular sculptural works of the Longobard period.

The altar's appearance is that of a precious reliquary, created by the goldsmith's traditional skills cherished by Longobards. The work is remarkable because of the peculiar way in which the figures are shown, rendered dynamically and enhanced with great chromatic effect thanks to the thick lines which cover the figures' drapery.

Recent research has confirmed that the work was further enriched by precious stones placed in small holes present in the floral elements, the crosses, the cherubim's wings, and probably also in the eyes of some of the characters. The whole work was characterized by strong colouring which meant the altar seemed more like a precious jewel case than a marble liturgical object.

Both the *tegurium* of Callixtus and the altar of Ratchis are preserved, together with other Early Medieval sculptural elements, in close proximity to their original location, in a room focusing on the Early Medieval period, in the museum called **Museo Cristiano e Tesoro del Duomo**. This museum, which has recently been restructured,

Patriarchal Palace: detail of the Early Middle-Ages mosaic

occupies buildings to the South of the Basilica of Santa Maria Assunta (today's Duomo of Cividale). The museum holds many artefacts which illustrate the Christian history of Cividale and of its ecclesiastical institutions, as well as numerous others which exemplify the jewellers' and goldsmiths' capacity during the later years of Longobard domination and during the Carolingian period in Cividale.

The Palazzo Patriarcale

Some structures belonging to the Patriarch's palace have survived and are visible in the lowest level of the Museo Archeologico Nazionale, and likewise, a well still today bearing the name of Well of Callixtus, survives in an area behind the apse of the Duomo. The palace structures were brought back to light in the 1970s, and belong to two phases: the first belongs to the Early Middle Ages, while the second one belongs to a Late Medieval or Renaissance phase. In the Early Medieval masonry it is easy to see what remains of the Longobard Patriarchal Palace mentioned by Paul the Deacon.

Probably Callixtus chose to take up residence in a pre-existing palace -built by Bishop Amator perhaps upon late Roman structure- which Callixtus restructured or totally rebuilt. The building was erected on one side of the Basilica of Santa Maria; its wall masonry consisted of large river pebbles bound with mortar, and it had a square plan and may have been equipped with a *solarium* on the first floor.

It is still possible to admire part of the original decoration, a mosaic floor comprising of geometrical patterns picked out in black *tesserae*, against a white background. The mosaic can be compared to the paving of the early Christian episcopal seat in Aquileia, which belongs to the end of the 4th or the beginning of the 5th century; the mosaic in Cividale is thus considered a late imitation of the one in Aquileia.

The palace is described by Late Medieval sources as a large building including many halls and a chapel dedicated to Saint Paulinus of Aquileia, and overlooking a large open area, described as a *viridarium* ("garden"), where, as situated in *aere prope*

palatium e post ecclesiam maiorem (“in the area close to the palace and behind the main church”) with a well, which still exists, and whose memory is recorded also by the local place names. The recent excavations (1987 – 1988) have shown that the episcopal complex near the Basilica had been built close to an area inhabited from the 3rd to the 5th century, after which its structures were reused in the Longobard period, during phases which may date to the 6th or 7th cen-

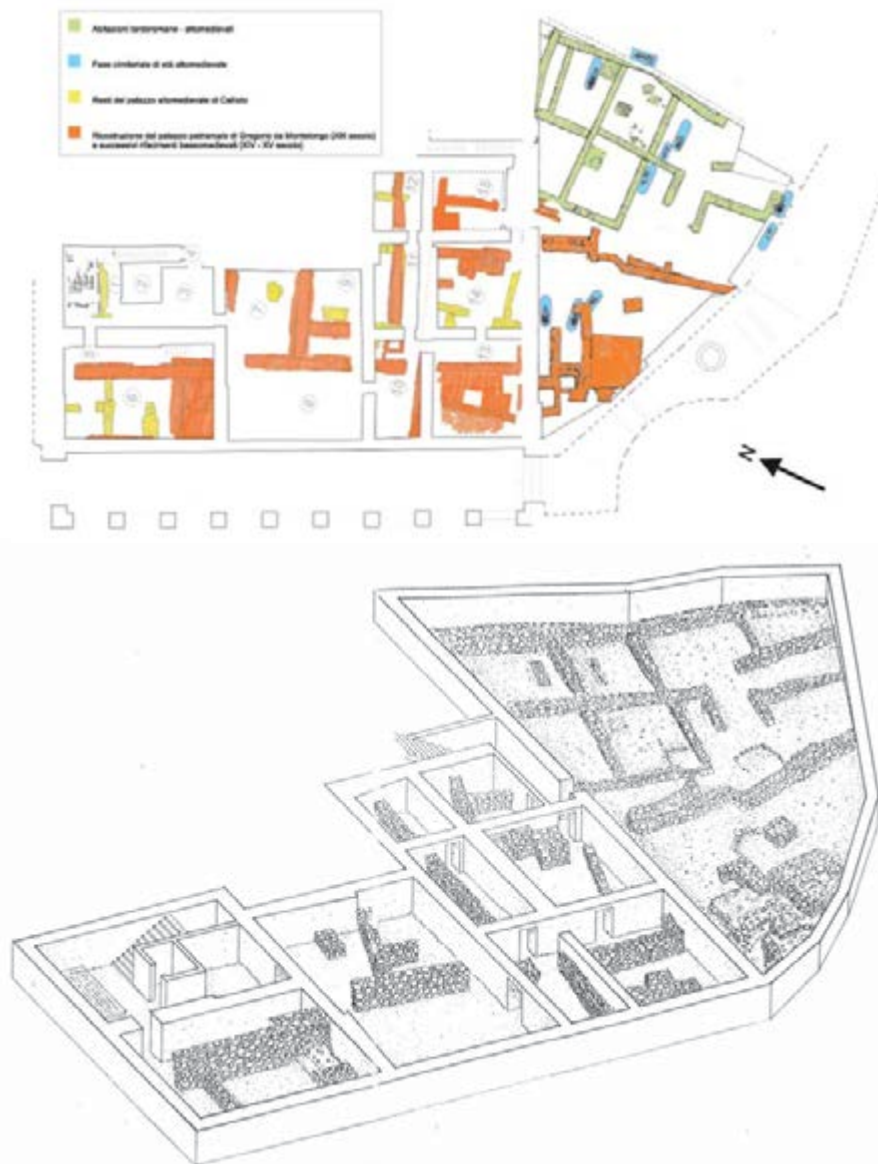

turies, which is also the date of certain inhumation burials found there. In this context, which exemplifies the development of a city neighbourhood between the Late Antique and the Early Medieval period, this area has been inserted in the visitors’ route, as a roofed archaeological annexed to the Archaeological Museum.

Over the remains of the Patriarch’s Palace which was mostly destroyed by the earthquake of 1511, the so-called Palazzo dei

Provveditori Veneti was built following plans of Andrea Palladio, between 1565 and 1596. This building is today the site of the **Museo Archeologico Nazionale** (National Archaeological Museum). The museum is home to almost all archaeological finds excavated in Cividale and in its surrounding areas from the early 19th century, when a Canon, Count Michele della Torre Valsassina, embarked on the first methodical archaeological excavation. The finds range from the early Palaeolithic up to modern times. In the Roman *lapidarium* are placed architectural elements and epigraphy monuments which form the base for the historical reconstruction and the administrative and urban organization of *Forum Iulii*. The Early Medieval *lapidarium*, recently enhanced by new didactic materials, preserves many fragments of sculpture belonging to the liturgical field, and which testify the architectural wealth of the many religious buildings extant in Cividale between the 6th and the 9th century (namely, the Basilica of Santa Maria Assunta, San Giovanni in Valle, the Tempietto Longobardo, Santa Maria di Corte and San Salvatore). Their presence allows us to follow the stylistic development of Cividale’s Early Medieval sculpture from the Early Christian period up to the Carolingian.

In the Romanesque section there are many sculptural element which must have formed part of the architectural decoration of the Patriarch’s Palace after the building was enlarged in the 13th century.

The most interesting section, which ranks at an impressive second place due to its

Plan and axonometry of the structures referring to Patriarchal Palace, brought to light under the Provveditori Veneti Palace, today housing the *Museo Archeologico Nazionale*

Structures referring to Patriarchal Palace

Façade of the Provveditori Veneti Palace (*Museo Archeologico Nazionale*)

importance, is the one exemplifying Longobard funerary archaeological remains. The exhibition includes the main funerary furnishings, which have been reconstructed where possible in their entirety, and which belong to suburban necropolises (San Mauro, Santo Stefano in Pertica, Cella-San Giovanni, Ferrovia, piazza della Resistenza), or to burials within the urban area, as well as some furnishings from other early medieval necropolises of the Duchy of Friuli and of the Duchy of Ceneda. The exhibition layout has been designed to ensure maximum appreciation of the main treasures produced by the artistic handicraft of the Longobards, while also highlighting the many aspects of ritual and of Longobard society. The funerary complexes of Santo Stefano in Pertica and San Mauro stand out for their importance and richness, and are the result of recent excavations carried out by the Soprintendenza per i Beni Archeologici del Friuli Venezia Giulia. The so-called "tomb of Gisulf", a monument of quite exceptional character, was found during the 19th century in piazza Paolo Diacono, not far from the ruins of the imposing late imperial palace. The tomb contains the remains of a wealthy courtier of the 7th century, which had been placed in a sarcophagus sealed by a stone slab. The complex is a unique specimen of its kind, and can be compared to the burials of aristocrats of ducal or royal blood, as also the highly wealthy furnishings which comprise some elements which symbolize the exalted rank of the deceased, e.g., a signet ring containing a gold coin dating to the time of Emperor Tiberius, a cross in gold lamina and semi-precious stones, unparal-

leled in the Italian peninsula, and a small encrusted with polychrome enamel. In all the exhibition section covering Longobard funerary archaeology, it is easy to chart the evolution of clothing, of handicraft, of daily life of Longobards in Cividale and in Friuli, from their arrival in Italy until the end of the 7th century. In the most ancient women's tombs a custom still prevails by which four typical *fibulae* (brooches) placed in the burial, two of which are S-shaped and two are shaped like a stirrup, according to the traditions of Pannonia; on the other hand, female burials of the 7th century illustrate the gradual introduction of techniques and fashions from the Mediterranean world, derived from the Byzantine world, where large brooches take the place of the small shaped ones. The museum holds a collection of golden crosses, which are exceptional in both number and richness, and which are typical of funerary furnishings of Longobards in Italy, appearing in both male and female, in adult and child burials. These are specifically funerary objects, which the Longobards began using by imitating a custom typical of the Mediterranean area, in which such crosses were sewn on to a veil and indicated the deceased was a Christian. Many bronze containers, real luxury objects placed in tombs of people of consequence, testify to the early medieval long range trading routes, which started in the Mediterranean basin and reached Germany and the Rheinisch region via Italy.

Significantly, golden and silver coins also came to light in the necropolises, thus documenting the first minting efforts of the Longobards of the Duchy of Friuli. An extraordinary collection of gold coins, the second in rank in the whole world for its importance, and acquired on the antiquarian market³, includes 56 golden coins, some being of a type of coin called *tremissis* and others being coins called *solidi*; these were mostly coined in the mints of Ticinum-Pavia and Benevento, and date from the second

half of the 6th century to the first years of the 9th century.

The last floor of the museum houses the **Archives and Library** where ancient library and documental collections are kept, and can be consulted by the general public. These come from ecclesiastical, civil and monastic institutions of Cividale, mostly founded during Longobard rule. The richest collection belongs to the prestigious Chapter of the Collegiata of Santa Maria Assunta, which had been endowed during the centuries by Pontiffs and Patriarchs, being presented with large donations and many privileges and with the ownership of the Benedictine monastery of Santa Maria in Valle. An extraordinary nucleus, including over a hundred handwritten codexes stands out, being exceptional in its entirety, and because of a few items of unequalled value: among most important elements is a copy of Paul the Deacon's *Historia langobardorum*, one of the most ancient copies of this work, as it dates to the 9th century. Other great highlights include a *Psalterium Egberti* – part of a corpus of manuscripts from

Longobard golden coin from Fondazione CRUP collection featured in the Archeological Museum "S"-shaped gold fibula from a grave goods

Monastery of Reichenau -already part of UNESCO World Heritage- and a Psalter of Saint Elizabeth. In the museum is also the **Archivio Storico del Museo Archeologico** (the Historical Archives of the Archaeological Museum), which includes the "Fondo Michele Torre di Valsassina 1817-1844", a collection comprising of

The *Historia Langobardorum* code by Paul the Deacon

manuscripts and albums of drawings which are still partly unpublished, which are particularly important in documenting the archaeological excavations carried out at the beginning of the 19th century at Cividale and in its surroundings, and the first Longobard burials to be found and documented.

Lastly, the museum is home to works of art (such as jewellery, textiles and paintings on wood panels and on canvas), of exceptional artistic value, which formed part of the treasury collections of the city's main religious institutions and are now being transferred to a new museum that is being set up, called "Museo d'Arte Antica di Palazzo de Nordis" (Ancient Art Museum of Palazzo de Nordis). Among the most ancient pieces is a large cross in silver lamina from Santa Maria in Valle, dating to the second half of the 8th century, which recalls the Cross of *Desiderius* of the monastery of San Salvatore in Brescia and the so-called "*pace*" ("peace") of Duke Orso, a precious covering for a Book of the Gospel, made of

wood, ivory, silver semiprecious stones, mother of pearl, which was re-used as a "*pace*", which can be dated to a time between the 8th and the 9th century.

CRITICAL ANALYSIS

Although they were partly transformed over the centuries, the Longobard *Gastaldaga* (Chamberlain's palace) and the Episcopal complex remain clearly recognisable within the urban structure of Cividale; the remarkable continuity of these important sites over time was thus a strong influence on the make it possible to reconstruct the urban form of the Longobard city.

The **Cathedral** and the **Patriarchal Palace** complex are an expression of cultural processes that developed in the duchy of Friuli and throughout the whole Longobard kingdom, and included the development of an architectural language that focused on building churches and palaces, as the direct expression of power.

Strongly supported by the Longobard king Liutprado, the building works carried out by Callistus, the Patriarch of Aquileia (737-757) in the capital of the duchy consisted of the Patriarchal Palace and the refurbishment of the Episcopal complex of Cividale (where, as Paolo Diacono records in his *Historia Langobardorum*, there had already been a bishop's residence since the beginning of the eighth century). Callisto's works gave new impetus to the growth of the city, transforming it not only into a political centre but also making it the religious reference point for a large surrounding area. This was the beginning of a period of particular architectural and artistic vitality in the capital city of Friuli, which became not only the most important centre of creativity of the Longobard kingdom, but in absolute terms, the most important in the whole of Italy and the Western world.

The Patriarchal Palace, which was discovered underneath the National Archaeological Museum, is a rare example of a palace building of the Longobard kingdom. As attested by its surviving elements, which are sometimes valuable, such as its mosaic floor (which recalls that of the ancient patriarchal seat of Aquileia) the area in which the palace stood was intensively frequented in Late Antiquity and the Early Middle Ages. In the opinion of some scholars, this mosaic floor might have been a medieval revival of the mosaic technique, but we cannot exclude the possibility that it dates from an earlier period. In any event, the most recent investigations demonstrate that mosaic was still being used right up until at least the end of the eighth century, the point at which this site was finally divested of its role and was occupied by a succession of burial grounds. The great extension of what remains of the palace demonstrates its considerable importance as a centre of religious power. This is also expressed in the sculptures, which demonstrate that master sculptors

Capital of the *Tegurium* by Callistus Patriarch

were actively maintaining workshops in the city, and influencing sculpture not only throughout the duchy itself but also across the whole kingdom, as the point of reference for subsequent development of the art of sculpture. Indeed, the sculptures at Cividale can be ranked among the highest and most innovative of the whole period of the high middle ages. Two works of absolutely outstanding importance, the **baptismal font of Callisto** (*tegurium*) and the **Altar of Ratchis**, can both be attributed to the direct intervention of royal patrons, since the names of their two promoters are explicitly mentioned in the inscriptions (which is extremely rare, and of great importance in clarifying the meaning and context of these two works).

With such exemplary evidence before us, these two works alone demonstrate that different approaches coexisted in the artistic culture of the Longobard kingdom, which was characterised by its great versatility and its openness to diverse influences.

With its evident naturalistic suggestions, which clearly attest to a recovery of the courtly tradition in Early Christian and Byzantine art, the baptismal **Font of Callisto** (datable between 737 and 744) is one of the highest pinnacles ever reached in the return to antiquity, and is comparable to previous works executed during the reign of Theodelinda or at Spoleto (in the parapets of the cathedral, the Church of San Salvatore, and the Clitunno Tempietto), and the slightly later San Salvatore in Brescia (the peacock relief in particular). Whilst there can be no doubt about the date of the arches in the arcade surrounding the font itself, the date of the column capitals remains controversial. The refinement of these capitals, and their strict conformity to Byzantine prototypes, has led one scholar (Tagliaferri) to consider the possibility that they were fabricated at an earlier date and subsequently re-used in the font. They do, in fact, belong to the same “classical”

language as was used in the workshops that also produced the reliefs on Callisto’s font, and the same “classicism” can also be seen in a famous carved stone bracket, dating from the same period, in the church of Santa Maria d’Aurona in Milan, which was certainly founded in the reign of Liutprand. Furthermore, it may be significant that these capitals closely resemble those in the colonnade of the Tempietto; a fact that has been underlined by Cattaneo, Kingsley Porter, L’Orange, and Torp.

On the other hand, the **Altar of Ratchis** (which dates from no later than AD 749) refers to a different tradition that finds echo not so much in a barbaric conception of art and form (De Francovich), as in previous “expressionistic” figurative experiences that can also be found in provincial Roman art of that period, not only in Italy but also in other areas of the Mediterranean, the East (particularly Syria and Egypt), in the Balkans, and also in the West (reference authors) (see paragraph 3.c).

Nothing is certain about the origins of the **gastaldaga** complex (the Chamberlain’s palace); one possible frame of reference might be the church of San Giovanni, whose construction can be located in the 6th-early 7th centuries, on condition that we accept the dates attributed to the sculptures of the original building (which, according to

Tagliaferri and Villa, relate to the final developments of 6th century Byzantine sculpture, characterised by an ever greater schematisation and exemplification of their forms; but which according to Gaberscek, Lusuardi, and Siena-Piva, should be dated to the late Longobard period). Whatever the facts of the matter, the church of San Giovanni must have already been in existence by the first half of the seventh century, since a number of Longobard dignitaries were entombed there; San Giovanni was in fact the church of the Longobard nobility in attendance at the royal court, and had probably been dedicated to St. John the Baptist, with a baptismal function, right from the beginning. This suggestion is based on the recent discovery, to the rear of the building, of a baptistery with an hexagonal font (perhaps in opposition to the octagonal shape of the baptistery inside the cathedral, which is associated with Catholic orthodoxy).

The **Tempietto** was built as part of the development of the Gastaldaga (Chamberlain’s palace). Thanks to several decades of studies by Torp, there is no longer any doubt about its original function as a Palatine Chapel, a function that finds further ample justification by its outlying position in relation to San Giovanni.

The older, conflicting chronological attributions that date the Tempietto to an early

Capitals of the colonnade and presbiterial enclosed of the Tempietto Longobardo

period (7th century) or even to later than the Early Middle Ages (10th-12th centuries -De Francovich, Toesca, and Kingsley Porter) have largely been superseded; discussion has now focussed on a more narrowly defined period, and has concentrated not so much on the chronology of the building as on its decorative apparatus. For the dating of this apparatus, some scholars argue for the first Carolingian period between the late 8th and early 9th centuries (Lorenzoni, Peroni, and Bertelli); others favour the later Longobard period from the middle to the third quarter of the 8th century (Dyggve, Torp, L'Orange, Mor, Tavano, Lomartire, Brogiolo, Jaggi, Pace, and Lusuardi Siena). Its attribution to the Carolingian period - as is still sustained by some critics in the Franco-German area (Winterer-Imhof, *Karl der Grosse; Le stuc Visage oublié del l'art médiéval*) is based on the close link between the Tempietto and the church of San Salvatore in Brescia. But now that recent acquisitions have traced back the dating of San Salvatore to the time of Desiderio (Brogiolo), none of the architecture and decoration of the Tempietto can find any exact meeting points with the Carolingian era; if at some places it is still possible to see relationships between the Tempietto and particular works of the Carolingian period, albeit only in individual aspects, in reality those works appear to be imitations of the apparatus at Cividale, and are moreover of inferior quality.

There is a greater body of evidence to support a dating of the Tempietto to the late Longobard period. This begins with the architectural elements: the imitation Corinthian capitals and the column bases in the colonnade of the presbytery, and the small capitals on the columns of the pergola. These artefacts, all carved from limestone, are surely local products specially made to complete the *spolia* found on the site and re-used (pre-connected marble columns and pergola), with which

they fit perfectly. The capitals of the colonnade, in particular, are less elegant imitations of the capitals ordered by Callisto before the middle of that century, for use in his font in the cathedral; the capitals of the pergola have some affinities with 8th century capitals emanating from the area of San Salvatore in Brescia and Santa Maria d'Aurona in Milan, and with examples from Spoleto datable to the same period.

Overall, the architecture is the result of an experimentalism that characterised the Longobard period; it takes an archetype of Eastern origin, a domed building, and equips it with appendages (apses, though only as hints, as arches set into the thickness of the wall), and then adds other elements that are more in tune with the upper Adriatic/alpine locality (Sennhauser); the space is based on a simple rectangular plan, with a tripartite chorus and external arches. The result has the semblance of being unique, but is nonetheless significant in terms of its chronology.

As many authors have asserted (Torp, Tavano, Lomartire, and Jaggi) there can be no doubt that like few other buildings, in its conception and its execution the Tempietto exhibits a close, inextricable interrelatedness between its architecture and its decorative apparatus. Above all, the stuccoes - which give life to the interior spaces by creating a spatiality that causes the architecture itself to dissemble - confirm that there must have been a close connection between the construction of the building and the realisation of the decorations; a connectedness that cannot readily be found in the Carolingian, and which rather refers to architectural and artistic practices and traditions of the age of Justinian - of which there is ample testimony in the upper Adriatic - and to influences coming from the Middle East.

The frescoes adorning the walls were carried out after the stuccoes had been made, as has correctly been pointed out by Torp; their lan-

guage is of an absolute quality that has but few equals, and is reminiscent of other early to mid- 8th century frescos in Rome, for instance in Santa Maria Antiqua. Other echoes of them can be seen at the Desiderian monastery of San Salvatore in Brescia. But so far as the decorative elements datable with certainty to the Carolingian period are concerned, these are of uneven quality (Munstair, Mals); the influence of Italian Longobard art in the Carolingian period can only be seen here and there in illustrated manuscripts of the very early part of that epoch (the Godescalc Gospels; the Egino codex; the Ada Group). Ultimately, the stuccoes and frescos in the Tempietto lead us back to the mainstream of the best 8th century work. They can be attributed to highly skilled artisans who were in step with the most up-to-date artistic idioms, whose background was rooted in the classical and late classical Mediterranean tradition, and whose cultural grounding was of clearly Byzantine derivation. In fact, the decorative apparatus of the Tempietto suggests significant connections to a tradition that was particularly strong at Ravenna (the Arian Baptistery, the Episcopal chapel), a city that was in fact conquered precisely at the midpoint of the 8th century by the Longobard king Astolfo, from Cividale itself, and was able to see these and other works at first hand, take his cue from them, and use the spoils of victory to add lustre to his own creations.

1. Other authors ascribe the foundation to Desiderius (756-774)
2. During the excavations carried out between 1917 and 1918 a few glass *tesserae* were found in the apse area. These have led to the supposition that mosaic decoration once covered the vaulted ceiling, as well as the entrance wall.

BRESCIA

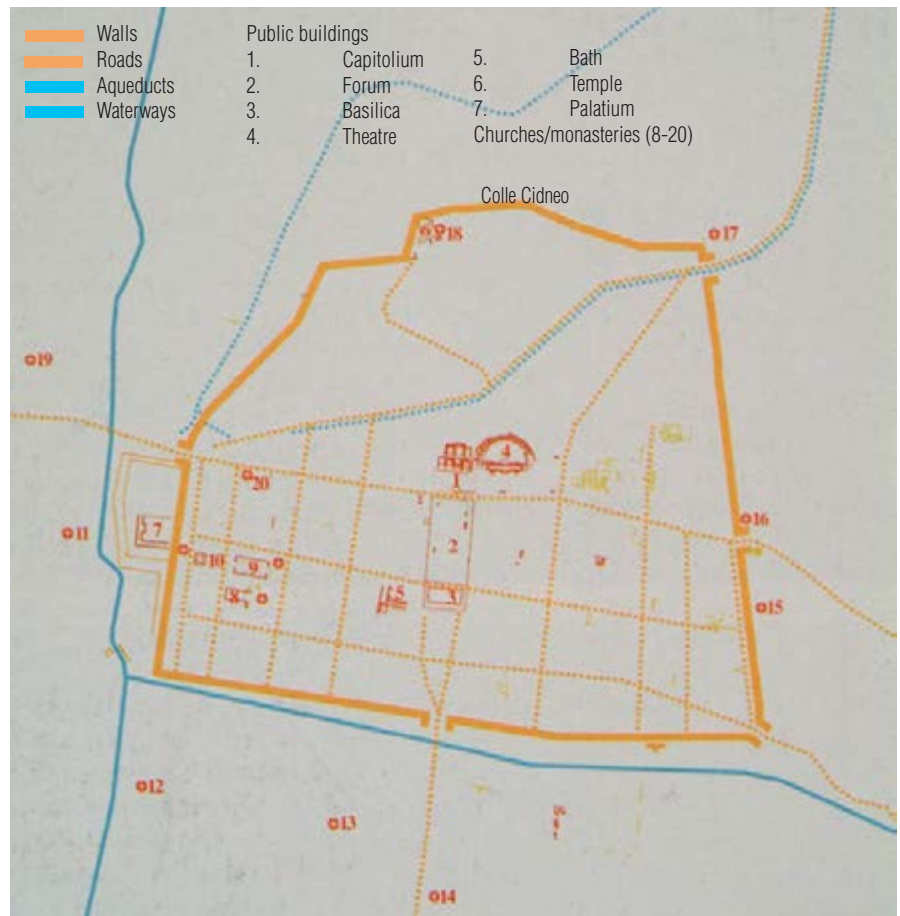

THE MONUMENTAL AREA WITH THE MONASTIC COMPLEX OF SAN SALVATORE-SANTA GIULIA, TODAY HOUSING THE “MUSEO DELLA CITTÀ”

Brescia, whose strength lies in its many Longobard nobles
(Paul the Deacon, *Historia Langobardorum*, V, 37)

THE CITY BEFORE THE LONGOBARDS

The wealth and variety of natural resources in the area of Brescia, as well as the ease of communications, guaranteed by the ancient routes which converged around the hill called Cidneo, had all helped to determine a thriving economy as early as the 5th century B.C., at the time of the first settlement. Brescia was the most important city in this area at the time of the *Cenomani*. According to *Polibius* and *Livy* it became a city governed by Latin law in 89 B.C., graduating to full Roman law between 49 and 42 B.C. Under Augustus the city received the honorary title of colony and an organic urban plan was laid out, including fortification walls and an orthogonal street network, as well as wealthy mansions. The monumental centre of the ancient city is still visible today along the street called *Via dei Musei*, corresponding to ancient *decumanus maximus*. The ancient city centre includes the *Capitolium*, a temple erected by order of Emperor Vespasian in 73 A.D., dedicated to the gods Jupiter, Juno and Minerva; opposite the *Capitolium* is the ancient *Forum*, a porticoed square, bordered on the Southern end by a *basilica*; at the foot of the hill rose the city's Roman theatre. During the Republican period a worship centre had occupied this space; a unique specimen in Northern Italy, this largely well preserved temple is decorated by very high quality mosaics and frescoes created by artisans from central Italy. In many of the city's neigh-

Brescia during Roman and Gotich domination (1st B.C. - beginning 6th A.D.)

bourhoods a number of Roman residential areas have been identified, where residences held rich mosaics and frescoed walls. The city, which the Longobards reached in 569 A.D., was quite different from the Roman *Brixia*; once paganism was abandoned, and especially after the fall of the Roman Empire, the urban organization began to slowly collapse. The main city axis shifted West, towards the new buildings dedicated to Christian worship, which rose in the area of today's Piazza Duomo, outside of the Roman city walls.

The Eastern half of the city was abandoned and the buildings partly deprived of their valuable marble. With the sole exception of the ancient theatre, which remained in use as a place for meetings and assemblies, all ruins were covered by the earth transported by runoff from the Cidneo, the hill which

overlooks the city on its Northern side. Many areas within the walls by this time were used as pastures.

Led by Theoderic, the Goths had settled in Brescia between the end of the 5th and the beginning of the 6th century A.D., only occupying the Eastern neighbourhoods in limited numbers. In the area of Santa Giulia there is evidence of human habitation,

within the walls of old buried Roman *domus* which jutted out from the ground, which had been subjected to minimal adaptation work, which was carried out with reused Roman materials. On the other hand, along the *decumanus maximus*, within an enlargement of the city's fortifications to the West, the *Goths* built the so-called *Palatium*.

HISTORY AND URBAN STRUCTURE OF THE CITY DURING LONGOBARD DOMINATION

The Longobards settled in Brescia presumably in 569 A.D., in the same year of their arrival in Italy, and entrusted its government to the Duke Alachis.

The city's importance grew after the Longobard conquest, which turned the town into one of the main bulwarks in the effort to resist the threat posed by Franks and Byzantines. The importance of Brescia mirrors that of its establishment, which played a first rate role in the kingdom's history.

Paul the Deacon in his *Historia Langobardorum* explicitly mentions Brescia regarding the discussions between Perctarit and his son Cunipert, which concerned the concession of the Duchy of Brescia to Alachis. This was because by doing so, Cunipert would "give his enemy the strength to reign". Paul adds: "this is so because in the city of Brescia there have always been large numbers of noble Longobards". He thus underlines the importance and strength of the city, from which two Longobard Kings rose to the throne: Rotaris, and Desiderius. Moreover, according to the *Historia Langobardorum*, the Longobards had as their ancestress *Gambara*, mother of two brothers named *Ibor* and *Aio*: the name 'Gambara' is still today present in the territory of Brescia. It is both the name of a small town in the plain in the province of Brescia, as well as the name of one of the most ancient noble families, the Counts Gambara.

Monastery of San Salvatore - Santa Giulia. Planimetric and axonometric projection of Longobards huts referring to the first settlement

Rotari, the Duke who governed the city, became King and in 643 A.D. he published an edict which bears his name, and which contains the Longobards' first written laws. Under King Desiderius and his wife Ansa, Brescia reached the pinnacle of its prestige, as testified by the public royal patronage clearly manifest in the monumental size and

wealth of decoration of the monastery of San Salvatore-Santa Giulia. This monastery was founded by the royal couple and its inscription on the World Heritage List is being requested.

The defeat of King Desiderius in year 774 meant the city fell under Carolingian rule. On their arrival in Brescia the Longobards at

Monastery of San Salvatore - Santa Giulia, view of the southern cloister of San Salvatore showing traces of Longobards huts upon Roman *domus* floorings

Aerial view of Monastery of San Salvatore - Santa Giulia from South

first took up strategic positions of control, concentrating on the two opposite ends of the *decumanus maximus*, the main Roman road which crossed the city from East to West. To the West, in the same area of the Late Antique *Palatium*, the seat of authority during Gothic rule, the Longobards built the *curia ducis* (namely, the ducal court); instead to the East, in the direction of Verona, there were the royal areas.

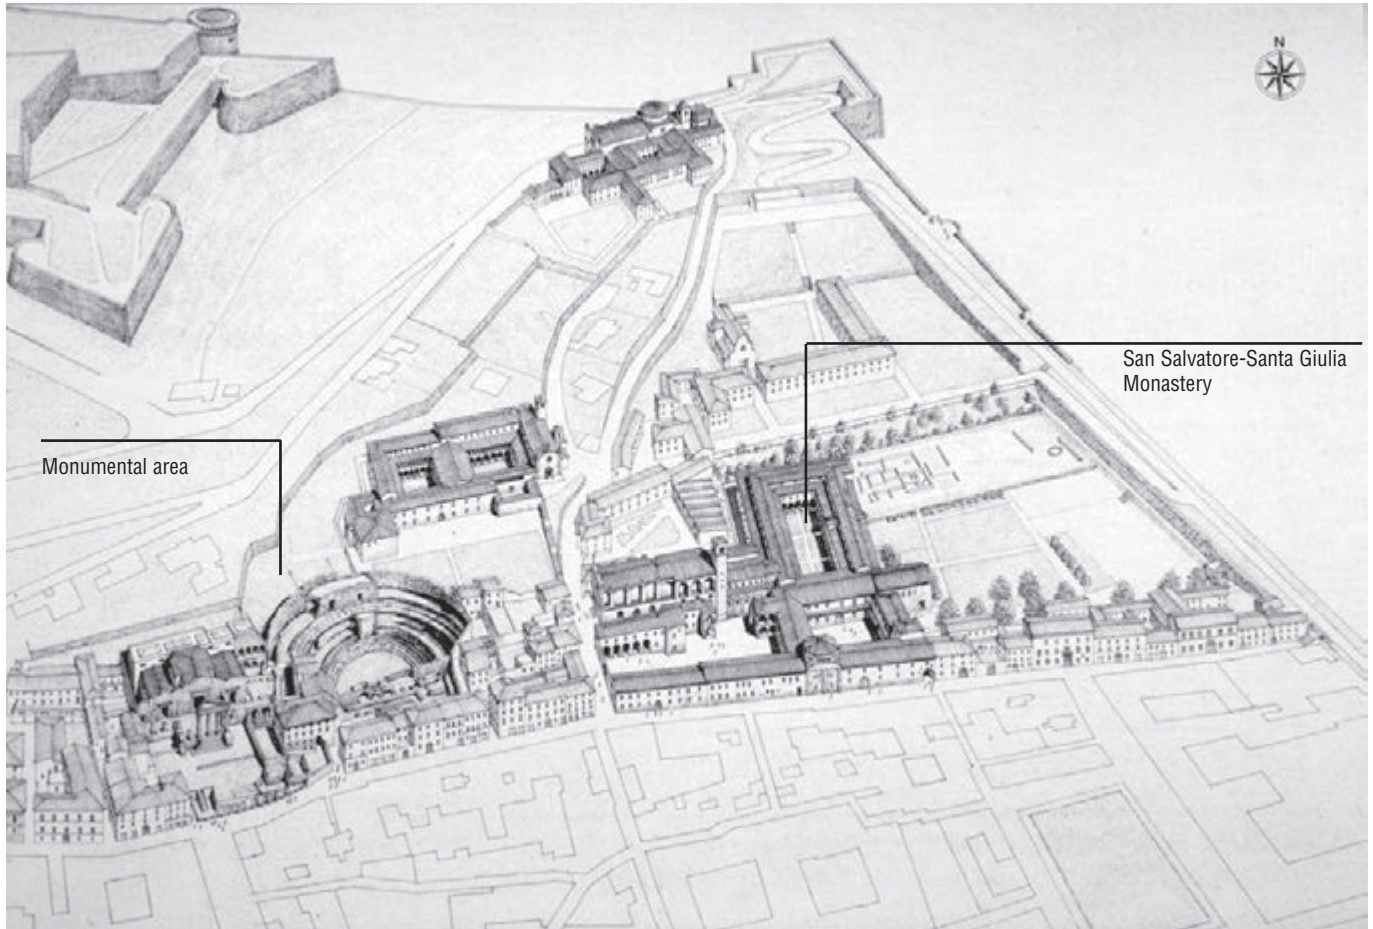

The enceinte, built under Emperor Augustus -which dated from the 1st century B.C. to 1st century A.D.-, was still in use. Within its perimeter, in the large abandoned areas of the Roman city, the Longobards built their simple homes and begun tilling the land and engaging in small scale cattle grazing. Archaeological research has identified a settlement characterized by: systematic reuse

of the ruins of Roman buildings; scattering of habitations both within the old city blocks, or *insulae*, as well as along the city streets, thus occupying public areas; a prevalence of single room habitations with walls built using a mixed technique including wood, masonry and using clay as a binding agent; the custom of discharging refuse on site, leading to the progressive raising of the levels of use; the custom of burying the dead close to the houses.

All this points to promiscuity between habitations and manufacturing facilities, and burials, which are typical traits of post-Classical settlements. These characters are particularly remarkable in the very area in which the monastery of San Salvatore will be eventually built. It is here, in fact, that a rather poor settlement is attested, which

shows many signs of the fact that handicrafts were practiced there. Habitations here mainly consisted of huts with earthenware floors spread over a level of Roman mosaic floor, and with walls comprising wooden upright poles placed firmly in the ground.; The spacious halls of the Roman *domus* type residences, whose walls stuck out over the levels of debris, were subdivided by means of screens made of wattle or pelts. It was only during the second half of the 7th century that the wood huts were pulled down, and the first masonry buildings were erected by trained masons, who built walls made of stone chips and mortar: a church was built, which preceded the one which would be founded by Desiderius, and included at least three buildings and a well cistern, all surrounding a central courtyard.

3D graphic reproduction of the property

A second building phase is recorded in mid the 8th century: Desiderius, duke of Brescia was presented with fiscal estates by King Astulf, whom he had loyally served. In 753 A.C. Desiderius and his wife Ansa began building a Benedictine nuns' convent, called San Salvatore, and entrusting its direction to their daughter *Anselperga*, who thus became the nunnery's first Abbess.

Three years later, in 756, Desiderius became King of the Longobards; he fostered the ambition of starting a royal dynasty and generously endowed the convent, which had meanwhile acquired the relics of Saint Julia, a gift of his son Adelchi in 761 A.D. Around the conventual building the Longobard aristocracy encouraged the building of structures to be used as housing for the pilgrims and for the poor.

The monastery became part of the widely diffuse monastic network which spread all through Longobard territory and played a primary role in contemporary society, both as a religious point of reference, as in the field of economy and politics.

Its royal foundation conferred to this monastic community remarkable independence from the diocese's religious authority, together with financial independence and ample power over the surrounding area, as well as a string of donations and privileges.

THE SITE

The area for which a nomination is being submitted includes the vast monumental area with monastic complex of San

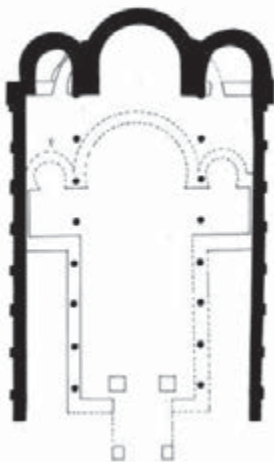

Salvatore – Santa Giulia, where the traces of Longobard presence in Brescia are most evident. Here, the evergetism of the royal family came to expression in the architectural grandeur of the Monastery of Santa Giulia-San Salvatore and in the refinement of its decorative apparatus.

Although this complex looked back to architectural and decorative examples that had already been developed in the capital at Pavia, and then at Cividale, it was adopted here by secular and ecclesiastical patrons as the model for their buildings of prestige. The decorations are of outstanding importance; the stucco ceiling panels in the side-aisles can be seen as an illustrious antecedent of the Renaissance coffered ceiling. In the overall arrangements it is possible to recognise the traditions of

San Salvatore, planimetry of the Desiderius' Church

San Salvatore, one of the two "bread basket" style capitals of Byzantine origin, re-used in colonnade

northern European (British and Germanic), the Mediterranean (Ravenna, Rome), and the East. The monastery complex is part of a spatial and structural context that includes the remains of important earlier buildings dating from the Roman era. These came to light in the course of an excavation that still remains today the most complete of any medieval urban site, and which has now been arranged as a museum within the Santa Giulia complex, making it possible to appreciate the changes that took place in the ancient city in the period after the Longobard occupation.

Nominated property comprises the Longobard church and the crypt of San Salvatore, built at the behest of Desiderius and Ansa, and incorporated with other artefacts by later additions to the convent (including the Church of Santa Giulia, the Church of Santa Maria in Solario, the nuns' choir, three cloisters and a courtyard) and other remains from the Longobard period in the area to the West of the monastery, built over the extraordinary remains of the Roman buildings: the Republican sanctuary, the *Capitolium* and the Theatre.

San Salvatore, view from Northern nave

The church of San Salvatore

The church of San Salvatore constitutes one of the most important surviving examples of Early Medieval religious architecture still standing. Recent investigations (1989) have helped shed light on the monument's many building phases.

A first Longobard place of worship, dating to the second half of the 7th century A.D.,

and consisting of a building with a T-shaped plan, has been identified in the area formerly occupied by Roman housing. This first church shows a single-aisle plan, with a three-apsed transept, according to an architectural type which was diffuse in the area between the Adriatic and the Alps. The many different architectural phases identified in this first church point to continual use up to

the mid 8th century, when the church of Desiderius was built.

Under Desiderius the church is rebuilt, on a larger scale, and divided into three naves by lines of columns. The widespread re-use of Classical and Byzantine materials in these structures provides one of the most significant indications of the Longobards' self-asserting stance. Columns and capitals

are made of different materials and show different types of decorations, but are placed so as to create a correspondence of type between the ones placed in the North aisle and the ones to the South; some are elements looted from older buildings, while others were purposely created. In the Northern aisle two particular "bread basket" style capitals of Byzantine origin stand out. These may have come from Ravenna, following that city's conquest by the Longobards.

The basilica was built by the royal couple, King Desiderius and Queen Ansa, and was entirely covered in stucco and fresco decorations, which formed a completely integrated whole; together with the decorative program of the so-called "Tempietto Longobardo", in Cividale, San Salvatore's decoration is one of the richest and best preserved examples from the Early Middle Ages.

Three tiers of **paintings** were executed on the walls of the central aisle, in the areas over the arches. The scenes of the upper section represent episodes from the life of Christ, ranging from infancy to Resurrection; the lower section shows scenes from the lives of the saintly Christian

martyrs Giulia, *Pistis*, *Elpis* and *Agape*, whose relics were removed from the catacombs in Rome by order of Astulf, and presented to the convent, and it was here they were placed in the crypt. The scenes are separated by egg-and-dart mouldings, and ended in a frame painted to suggest corbels and illusionistic small arches, while busts of Saints placed in round *clipea* are painted in the archivolts.

The cycle began in the upper section of the North wall with the scene of the Annunciation, which was followed by the journey to Bethlehem; it probably then included the Nativity, the Adoration of the Magi (or perhaps the Baptism of Jesus), ending with two unidentified miracles, possibly including the miracle of the woman suffering from long term bleeding. The stories from the life of Christ must have continued on the opposite wall, where they included events from the passion and to his glory. In the lower section of the South wall it is possible to identify the burial of a Saint in a sarcophagus and a number of citizens leaving a city, while a woman seems about to be taken away against her will; this last

figure might be Saint Julia, being taken out of the city of Carthage.

At the base of these stories there used to be inscriptions, which survive only in fragments; on the South wall of the central nave the words "*REGNANTEM DESIDERIUM*" can be clearly read, while other lettering remains obscure.

The surviving fragments of the fresco decoration – especially on the Southern wall – show landscape scenes and views of complex architectural structures, executed with a sense for the three-dimensional in lively colours, employing an original style which is however firmly based in the 8th and 9th century painting tradition of Northern

San Salvatore, central nave. Detail of stucco decoration

Italy and of the Alpine area, and which displays an interesting proximity with the frescoes of Castelseprio.

These paintings were carried out upon a very thin layer of plaster, using colours dissolved in lime over underdrawings executed with a paintbrush dipped in black pigment, having previously puckered the white plaster which served as a base. In some cases researchers have noticed a difference between the preparatory drawing and the final painted version.

The **stuccoes** played a fundamental role in the basilica's decorations, as they completed both the architecture and the narrative paintings, and thus followed models established in Ravenna (at Sant'Apollinare in Classe), and in Rome (at the church outside the walls, Saint Paul). Moreover, the stuccoes masked discrepancies in the joints between different architectural elements and completed the lacunae of the ancient marble re-used in the church.

The different motifs carried out in stucco (entwined ribbons, spiralling acanthus leaves, stylized lilies alternating with leaves, entwined arches, frames including ovals and reels, rosettes, cross-shaped lilies and rose shaped patterns), are placed in carefully symmetrical patterns along the intrados of the arches, the arch-rings and the aureole surrounding the faces of the main characters

depicted in the frescoes. As in the friezes present in the so-called "Tempietto Longobardo" in Cividale, here too the floral elements were enhanced by small coloured glass ampoules placed in the centre of the flowers' petals.

The coffering decoration of the flat wooden ceilings was also covered in stucco.

The stuccoes were modelled directly onto the wall, using an underlying structure made of very thin reeds, and creating the stuccoes out of many superimposed layers; the first layer was applied at the same time as the fresco decoration and the modelling was then completed and enlivened by applying pigments.

The basilica of Desiderius was further enriched by ledges, corbels and small panels modelled in **terracotta**, the only known example of this type of artwork to have been produced at this time. These

works were produced using a mould, or sculpted after firing with vegetal motifs which refer to religious themes, such as the grape vine; the absence of any works comparable to these make it difficult to make any hypothesis as to their function.

In the main supporting wall to the South of the church a place had been adapted to house a **privileged tomb**, which must have consisted in a sarcophagus of stone slabs, now lost; only its surmounting arch bearing traces of fresco decoration survives. Up to the 17th century the inscription *ANSA REGINA, REGIS DESIDERII UXOR* could be read on it. This, and the tomb's exalted location, in a location normally reserved to the founder, as well as the traditional offering of pies and wine to the poor to mark the anniversary of queen Ansa's death, which is attested in frescoes on the sustaining walls beneath the intrados of the arched recess,

San Salvatore. Fragments of the original terracotta decoration

all leads to the supposition that this may have been the final resting place of the wife of Desiderius.

Opposite the *arcosolium*, under the floor, there are also three burials consisting in oblong masonry tombs of the Capuchin type, (i.e., consisting of a line of tiles set out to support the body, and two other lines of tiles placed so as to form a simple roof over the body itself), their interiors decorated by painted crosses and interlaced patterns. These burials probably belonged to members of Queen Ansa's family, possibly to her father and to her two brothers, as historical sources indicate the three were buried in the church of San Salvatore.

The ornamental motifs on the **marble liturgical furnishings** match the wealth of stucco and terracotta decorations; many elements have survived. Two slabs of white marble might have belonged to an ambo (a type of raised structure similar to a pulpit); the marble consistency shows a medium

San Salvatore, central nave. The three Early Middle-Ages burials existing under the floor

San Salvatore, central nave.

San Salvatore, crypt. Longobard period structures

type of grain, and the bas relief represents two peacocks placed sideways converging towards the centre, one of the most exquisite examples of Early Medieval sculpture, providing a synthesis between the

naturalism of the Late Antique period and Byzantine elegance. Arc shaped slabs with geometrical and vegetal decorations should perhaps constitute a canopy shaped structure over an altar or a reliquary, while

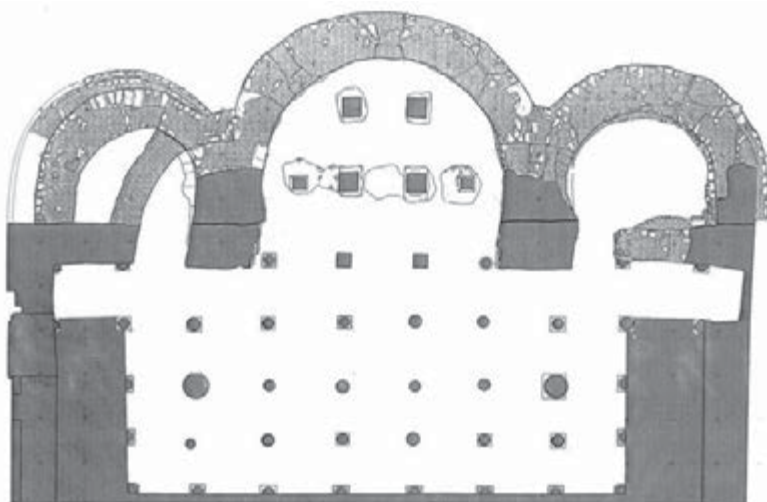

San Salvatore, southern side of southern cloister. Stratigraphic analysis of vertical structures and graphic reconstruction of Longobard building

many arc shaped frames seem to have originally belonged to a *pergula* or screen, separating the apse area from the church nave.

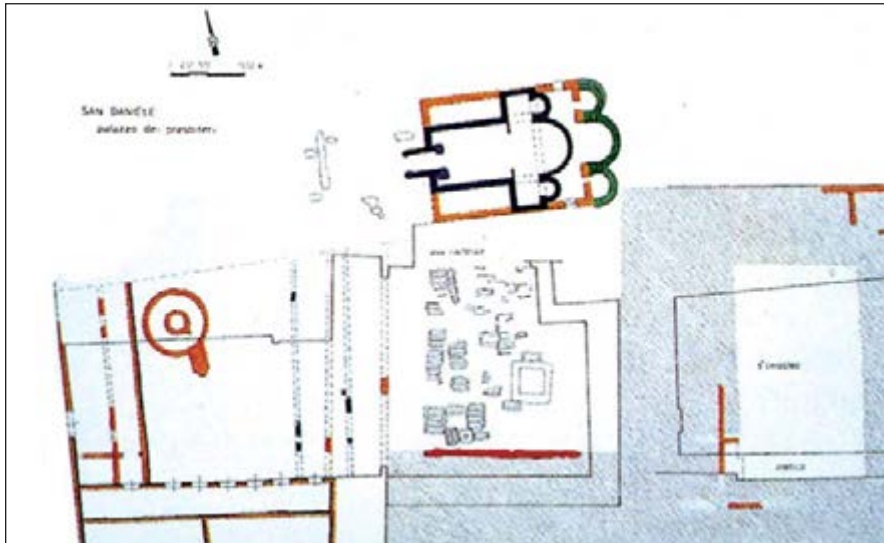

Finally, many small columns decorated with relief decorations and capitals bearing similar ornamentation, strongly resembling the stuccoes in the basilica come from the monastery's cloisters; these works exemplify the organic overall decorative program which included the structures linked to the church as well as the church itself.

After the arrival of the relics of Saint Julia in year 761, a **crypt** was added, which later was the focus of a number of transformations in the antique period and during the Romanesque period, when it was enlarged westwards. During the earliest phase the crypt had a semicircular shape; the space was articulated by pilasters supporting

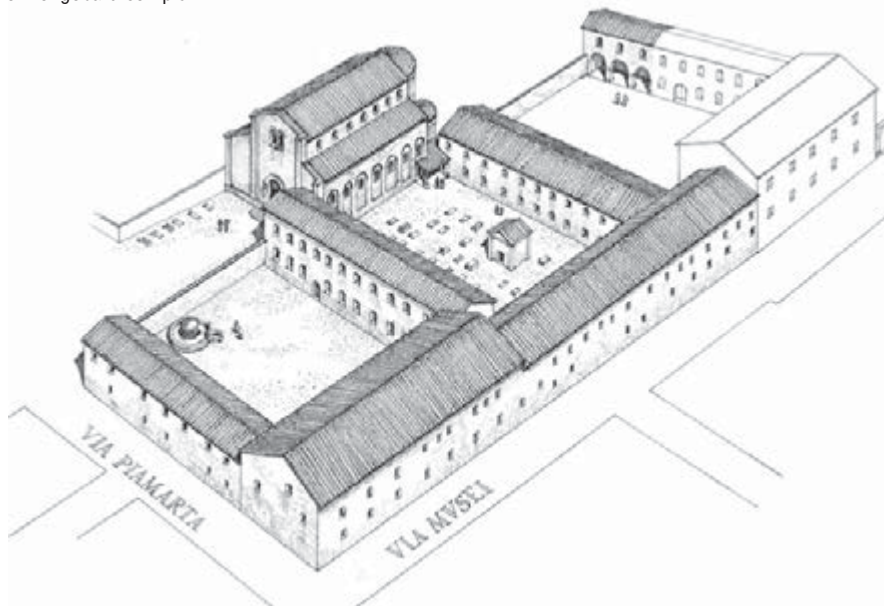

Plan of the crypt showing the Romanesque enlargement

Church of Santa Maria in Solario

Monastery of San Salvatore - Santa Giulia. Planimetry and axonometry of Longobard complex

small arches decorated with stuccoes and frescoes. On the end wall was a fresco showing three framed areas, surrounded by garlands. Access to this underground area was gained by means of two annular corridors, probably equipped with wooden stairs, which led to the lower area where the sacred relics were kept.

The original decoration in the crypt probably comprised of many stucco figures, only one of which survives to this day.

The Longobard monastery

South of the church, during the phase of rebuilding by Desiderius, monastic buildings were placed around three open spaces, used up to this time as a burial site for the nuns and the monastery's servants. In the Western sector there are remains belonging to the façade of a building with five arches on its ground floor, matched by a corresponding set of trefoil windows at the first floor level. The walls are made of bricks, reflecting

the masonry work of the ecclesiastical building nearby. This would prove the importance of the patrons, who disposed of a workforce which retained the building knowledge of Roman tradition.

The monastery was supplied with running water by means of a water conduit, built in 761 A.D., to connect the building to the Roman aqueduct, which was still functioning at the time: a number of water pipes called *fistulae* all branched off from this underground channel, thus exemplifying the high quality of the monastery's infrastructure.

After Charlemagne defeated Desiderius, the monastery suffered no change and kept its original primary role. The wealth of its

with "Cross of Desiderius"

assets and prestige led to new important architectural works, which enlarged the complex built by Desiderius, which reached its present composition. From the Romanesque period onwards, the buildings which were erected held a place of great importance, and remained as reference points which stand for each of the different architectural phases which they represent. During the Romanesque period the **Oratory of Santa Maria in Solario** was added to the complex (12th century AD). The square building is surmounted by an octagonal drum, with many re-used architectural elements dating from the Longobard period. Its lower hall was probably the place where the most precious objects of the treasury were kept. The upper floor was instead constituted by a single square hall with three little apse, covered by a hemispherical dome, and was the place reserved for the nuns' liturgical functions. In the second half of the 15th century following the Benedictine Order's Reform the façade of San Salvatore was built against the nuns' choir, and completely decorated in fresco a few years later. The **church of Santa Giulia** was built during the Renaissance period and constitutes the Western boundary to the sequence of religious buildings within the monastery.

Thanks to the conservation and refunctionalizing work carried out during the last thirty years the monastic complex is today a museum in itself, and houses the *Museo della Città*, the museum of the city of Brescia, containing 13,000 archaeological and art exhibits from Brescia and its territory. Visitors' itineraries unfold along a route which reaches from pre-historic times up to the 18th century, including the monastery's monumental buildings within the context of the particular historic period being addressed. In particular, in the sector focusing on Early Medieval times, various Longobard funerary furnishings are exhibited, all found in the city and its surroundings. By inspecting swords, spear points, a typical type of weapon known as a scramasax, shield centrepieces called umbos, golden crosses, male and female clothing accessories (buckles, belts, hanging elements, bone combs), as well as ceramics it is possible to chart the evolution of the Longobard people, whose first settlement, in 569 A.D., shows strong cultural ties with the Longobards' former home, Pannonia (part of today's Hungary). One then leaves this section to visit the church of San Salvatore and the crypt and its related furnishings. Among the Roman exhibits there are many sculptures and furnishings originally belonging to Roman residential *domus* and to public buildings in the ancient city, some – the bronzes found at the *Capitolium* – are particularly remarkable, such as the Winged Victory. Along the archaeological route, another important element from the Roman period is of course the area of the wealthy Imperial residential *domus*, which were discovered beneath the monastery's kitchen garden, and are to be viewed *in situ*.

In the Romanesque oratory of Santa Maria in Solario are also the various surviving devotional objects belonging to the monastery's treasury, linked to the worship of relics. As well as the so-called "lipsanote-

Archaeological area. Aerial view (2004)

ca” or reliquary, consisting of a small ivory casket dating from the 4th century A.D., bearing, the other main object of interest is the so called “Cross of Desiderius”, a masterwork of Carolingian jewelry and a precious devotional object; the four arms of the cross are embellished by 212 gems cut at different times, from the period of Emperor Augustus up to the 16th century. The object was given this name in honour of the monastery’s founder. The monastery’s treasure originally included also the so called “Purple Codex” held today in the *Biblioteca Quiriniana* (property of the Brescia Municipality), located in the buffer zone. The Codex reached its present home after the suppression of the monastery during the Napoleonic occupation. It constitutes one of the few Longobard codexes still in existence, and is dates to some time between the 6th and 7th century; its main

feature its intense colour which gives it its name. It includes about 400 vellum pages, containing the four Gospels of Matthew, John, Luke and Mark. The text itself is preceded and enriched along the bottom of the page of the Canon written by *Eusebius* of Caesarea. The pages are written in uncial script, using silver and gold mica.

To the West of the monastic complex lies an **archaeological area** closely linked to the events affecting San Salvatore-Santa Giulia at the time between Late Antiquity period and Early Middle Ages. ICOMOS has suggested this area be inserted in the property’s perimeter during the early stages of its evaluation. The archaeological area includes the area to the North of the *Forum*, namely, the heart of the ancient Roman city, where all main functions were concentrated, be they religious, commercial, political or relating to

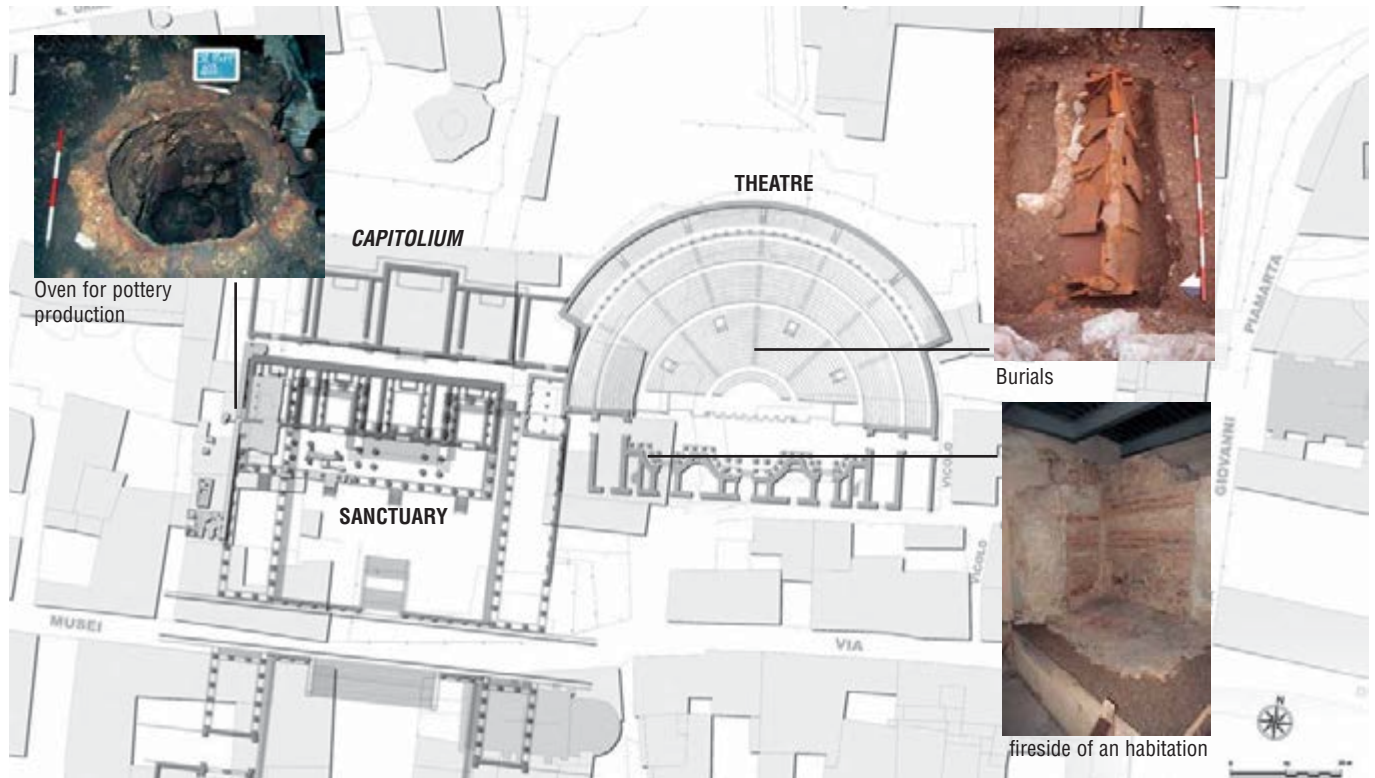

Virtual reconstruction of the monumental area of Roman period

Archaeological area, Republican Atrium. Western hall

Archaeologica area. Plan showing the main evidences from Longobard period

the law. The public buildings (all belonging to the Brescia Municipality), used to overlook the *decumanus maximus*, the ancient city's main street. A section of the street's original paving is still visible today, and shares the same route with today's Via dei Musei, which constitutes the Southern boundary of the San Salvatore-Santa Giulia complex.

The most ancient religious building dates back to the second quarter of the 1st century A.D., thus to Republican times. Archaeological campaigns carried out since

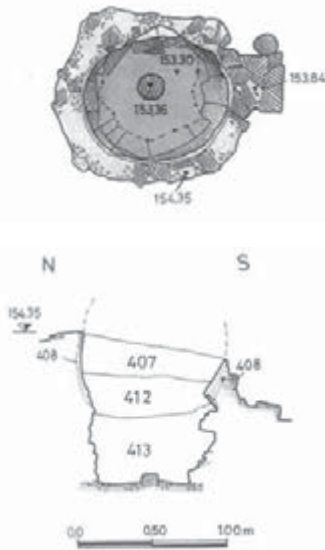

Virtual reconstruction of the Roman *basilica* between 6th and 8th centurt A.D., with traces of degradation

1823 to the present have made it possible to define the building's overall plan. The building comprised four halls, flanking each other, covered with a barrel vault and placed on a podium, each with its independent monumental access. The interior of each hall was decorated with Hellenistic style frescoes, which can be compared to the frescoes in Pompeii showing a transitional style, showing elements belonging to both the so-called First and Second Style. The high quality of these works suggests these were workmen possibly coming from Rome itself or from the area surrounding the Vesuvius. The excellent level of conservation, the architectural and decorative elements make this a unique example unparalleled in the area North of Rome. Archaeological work and conservation work are now underway to ensure visitors' access to the Westernmost of the halls, which is the one best preserved, on account of having remained buried under the

Western portico of the *Capitolium*, which was built over it.

The *Capitolium*, built in 73 A.C., was dedicated to Emperor Vespasian and dedicated to the cult of the so-called Capitoline Triad (Jove, Juno and Minerva). The building is characterized by a high podium; the prominent *pronaos* is conceived as a continuation of the lateral *portico* which act as boundaries of the temple's terrace, The same *portica* on the Southern side, crossed the *decumanus maximus* and stretched out this way to surround the open space constituted by the Forum and the basilica, the Southernmost building in the Forum complex. The *Capitolium*, whose architectural elements belong to the Corinthian order, was built using local limestone; for the paving of the halls imported polychrome marble was used. The resulting *sectilia* floorings, work of great quality and luxury are visible in the central and in the Western cell.

Surveys of a oven for pottery production

The building was excavated between 1823 and 1830; its elevation was partly reconstructed and the *Museo Patrio*, the city's first museum, was placed inside (compare 2.b.2 History and development of the property). To the East of this temple lie the remains of the Roman Theatre, a building used for public spectacles. Here, an early phase, dating back to the time of Augustus, was followed by an enlargement during the Flavian period, which went hand in hand with the erection of the nearby *Capitolium*. The *cavea* held spectators' seating, and vaulted corridors to reach the various sectors, and was built to ensure the hill behind acted as a support. Between the *cavea* and the *decumanus maximus* the *frons scenae* was built. This acted as the backdrop against which the dramatic action unfolded; the lower levels of the *frons scenae*, which must have been quite imposing, still survive to this day thanks to a quantity of architectural fragments and precious decorations, which can be dated to the Severan period (end of the 2nd beginning of the 3rd century AD), when this part of the building was modified and enriched. Except the Republican Sanctuary, which was superseded by the *Capitolium* of 73 A.D., all

Early Middle Ages flooring re-using Roman marble slabs

the Forum buildings remained in use probably up to the 4th century A.D. As in the case of many other cities, Brescia loses its function and importance and a long period of degradation begins. This is well documented by the archaeological data, and totally concurs with what was happening in the rest of the peninsula. Polychrome marble, limestone blocks and even bricks belonging to the ancient monuments are removed, for reuse in new buildings; the area is gradually covered by dumps of debris, the result of

these demolitions. The Roman city has originally been divided according to functions into different sectors, but now this distinction disappears. As also occurred in the San Salvatore-Santa Giulia area, here too the total promiscuity of buildings, burials, and craftsmenlike activities are in evidence. The single buildings had a slightly different fate, which partly depended on their original function and on their monumental form. The signs indicating a change of function and use are mostly visible in the Western

Romano theatre. Longobard burial brought to light in 1954

Romano theatre. Longobard burial

portico of the *Capitolium*; over the levels of abandonment of the building deprived of its architectural elevation, two small interred ovens are built. The levels of abandonment of the building deprived of its architectural elevation became the base for two small interred vertical ovens to fire clay. These were brought to light between 1991 and 1992 the two ovens constitute the only structures known in Italy for the production of Longobard ceramics. The ovens have a circular combustion area with a central support; the fuel could be loaded by means of a double *præfurnium*, which also served to control the fire. A perforated plane separated the combustion area from the firing area; the vault which was destroyed every time the firing was complete, so it has not survived. One of the two ovens will be visible: its combustion area diameter is 60 to 70 cms, and 40 cms; their modest capacity could accommodate about 20 to 30 vases in one firing session. The ceramic rejects found close to the two ovens are good quality, and show the high quality of the production plant, which also thanks to the interment could reach high temperatures and a good control of the atmosphere inside the firing chamber; the greater or

lesser quantity of oxygen in the chamber allowed the vases to acquire different colouring, ranging from bright red to black. In 2005 a floor level was found which is linked to the same production plant. This floor was composed of polychrome marble slabs including inscriptions originally belonging to the area and the monuments of the Roman period.

In the same area very simple Early Medieval burials were also found, adjacent the top of the walls of the Republican period which jutted out from the lower layers. The theatre, on account of its less direct link to the Pagan religion and for its same shape was used to contain large numbers of people at least up to the Late Medieval period, and was used as a place for public meetings. This public meetings area was however quite small compared to the Roman building's size. The building's abandoned areas and neighbouring buildings were thus deprived of their stone, marble and brick masonry. The result of these demolitions are large dumps of debris which archaeological surveys have identified in the whole area. Over this layer, as in the nearby temple, a brick firing plant datable between the Late Antique and the Early Longobard period has been found.

Another area of the same Theatre was used as a burial ground which surely dates from the Longobard period. It includes four rectangular burials bordered by small stone walls and capuchin-type coverings, as well as 19 later tombs, associated in a building composed of "roughly squared blocks" whose function has not been identified yet. In the area of the *frons scenæ* there are also levels which were freed and regularized to accommodate simple habitations, where levels of use and hearths are documented. In particular in the area to the west traces of fires and degradation, pits for pole supports and fire hearths used for habitation purposes have been found and are related to the levels of the burial and with the ones comprising Longobard ceramics. In the area a lime-burning kiln has also been found, probably built to produce lime by burning the marble detached from the nearby Theatre. A relatively high number of productive structures are present in the area of the *Capitolium* and in the theatre, and seem to indicate these could be under the control of public authority. Surely such authority should be identified as a Royal representative, who lived at the Royal court (corresponding today to the area of the monastery of San Salvatore-Santa Giulia), from whom this area of the city actually depended.

CRITICAL ANALYSIS

The North-Eastern area of Brescia, at the foot of the Colle Cidneo, is all said, the one in which the main attestations of the Longobard period are to be found relating to the royal estates, and comprise significant examples of reuse of the ancient urban centres and of the settling of Longobards in the city at an early date.

The development in this same area of the monastic complex centred on the Church of San Salvatore will constitute an urban nucleus capable of maintaining a relevant

Arc shaped slab with geometrical and vegetal motifs probably originally belonging to a *ciborium*

role within Brescia's urban structure through the centuries, and up to our own times.

It is by now ascertained that this area's monumental appearance and the birth of the monastic complex first begun in the period of the Longobard King Desiderius.

Desiderius probably was born some time between 710 and 720 A.D. During the reign of King Astulph (749-756) appears already as an important office holder (*comes stabuli*) and the King's plenipotentiary for Tuscany. At that time he already had a number of estates in the area of Brescia, where he founded the monastery of Leno and accumulated a number of estates both in and around Brescia, which were presented to him by the King. He may also have acquired the Ducal title of Brescia, which he passed on to his son, following his accession to the throne in 757, at the death of King Astulph. He remained King up to the fall of the Longobard Kingdom following its conquest by King Charlemagne.

Under King Desiderius, Brescia became the new political capital of the Longobard Kingdom, taking over from Cividale, the capital under the Friulan dynasty of Ratchis and Astulph, both sons of Pemmon. Following the example of his predecessors, he too pursued the hope of defining a stable and lasting rule, (in 759 he associated his son Adelchis as co-ruler), promoting the monumental development of his city, turning San Salvatore into a dynastic tomb, and centering his family's political and financial power upon the monastery of Santa Giulia. This is documented by special privileges were granted to the monastery by Desiderius, by his wife Ansa, and his son Adelchis in 760, but also by the fact that the monastery's founder Queen Ansa, and possibly other members of the family were buried in the church.

The process of monumentalizing Santa Giulia probably had begun before Desiderius became King. Likewise, at the time in which King Astulph presented his trusty

Monastery of San Salvatore - Santa Giulia. From left to right: the Church of Santa Giulia, the Nuns' choir, the belt tower and the Church of San Salvatore

Desiderius with a donation of the whole section of the city which had previously belonged to the King. This is the area over which San Salvatore was founded, and where the monastic complex developed, as is shown by literary sources. A 13th century source, entitled *Rituale*, mentions the foundation date as 753 A.D., while the first reliable mention of the foundation date is contained in a document of January 759.

Desiderius's ascent to the throne meant both the church and the monastery were further enlarged and enriched, and the whole complex became the hub around which revolved all his aspiration to sovereignty. In this context the religious and dynastic centre of San Salvatore-Santa Giulia was meant to tower over and eclipse both in quality and refinement all other monumental creations in the kingdom, rival with Pavia (i.e., Santa Maria delle Cacce), and the highly sophisticated creations at Cividale, particularly the *Tempietto Longobardo* in the *Gastaldaga*.

The act of placing relics within the Church also had a strong ideological value, and contribute to turn this into an important sanctuary. In 761 new relics were acquired directly from Queen Ansa: the bodily

remains of Santa Giulia were brought here from the island of Gorgona. Other believed to belong to Roman Saints and martyrs, such as Sophia and her daughters Helpis Pistis, Agape, and Saints Hyppolitus and Pimenius, all of which were celebrated at San Salvatore, may have been placed here on account of a donation by Astulph, who may have removed them from Rome during the siege of 756, or else the relics may be a donation of Pope Paul I. The same female Roman martyrs mentioned above appear in a list drawn up by the Pope for a Roman foundation in 761. The same Pope in 762 had sent a Papal Bull listing the privileges of the monastery founded by her mother Ansa to Desiderius's daughter *Anselperga*, then newly appointed Abbess of the monastery. It may well be that this provided the occasion in which the relics were sent from Rome, as Brescian medieval documentary tradition seems to indicate. This documentation mentions the fact that the Pope himself came to Brescia for the ceremonial consecration of the church, which probably was celebrated in year 763.

A highly original crypt and oratory were built under the main apse to house the relics at San Salvatore: the new structure was

equipped with access corridors was very probably added when the apses were already standing (compare Brogiolo, Lobbedey, Jakobs, Reichwald). Their arrival probably occasioned some changes in the nave's decorative programme, as some frescoes seem to bear evidence of alterations carried out while work was under way, such as the inclusion of stories of Saint Julia and of the Roman martyrs, according to Bertelli.

The reconstruction of the historical events which affected the complex are also supported by archaeological data, and by recent re-interpretation of the complex's architectural and decorative phases (Brogiolo, Bertelli, Gheroldi, Lomartire), researches therefore confirm the works' attribution to a late Longobard context, particularly relating to the reign of Desiderius the completion and decoration of the monument.

After the first researches, conducted at San Salvatore by Gaetano Panazza in 1958, and leading to the identification of two distinct structural phases, one view among researchers emerged as to the possible interpretation of the finds. According to this way of thinking, the early phase belonged to the time of Desiderius, while the later phase, in which walls decorated with frescoes and

stuccoes are still preserved, might date to the Carolingian period (Paonazza, Peroni, Bagnetti believe this, and are supported by French and German historical studies). This attribution however was not based on specific data or on parallels drawn from contemporary buildings, being principally based on the identification of the name of a Carolingian ruler – either Lotharius, or Ludwig the Pious – in a fragmentary painted inscription in one of the halls; in particular, this meant interpreting the words following the phrase "*REGNANTEM DESIDERIUM*": *TIRO HLU(DOVICUS OR THARIUS)*. On such basis therefore the monastery's renovation was dated to the beginning of the 9th century. Today many have raised doubts concerning this inscription, because it shows it has been integrated and remodelled in the very same part in which it presumably refers to the Carolingian sovereign. Moreover, according to recent studies (De Rubeis), the original inscription's epigraphic style, which alternately employs uncial and capitals, may not be assigned to Carolingian but rather to the late Longobard period.

This opinion is also supported by the results of the most recent research carried out on the structures (Brogiolo), which identify a earlier church in the first building phase (called San Salvatore I), which existed in the

context of the Royal court of Brescia, and which can be placed sometime around the second half of the 7th century, as already argued by a number of researchers in the past (Bona Ruggiu Zaccaria, Giosefi, Torp, Tavavno). Small scale successive changes in the interior disposition of this first building, involving the adoption of the cross-shape and T-shape at different times, also included the creation of the sculpted elements dating from the first half of the 8th century, which are still preserved in the monastery, and may date to the time of King Liutprand. A later building (San Salvatore II), with a basilican plan and three apsed naves, probably inspired by the basilicas of Ravenna and the Northern Adriatic coast such as Parenza or Grado. This should be identified as the church erected by Desiderius.

Recent investigative soundings have also confirmed that the decorative stucco-work on the brick arches along the naves seems to have been carried out immediately after the fresco-work in the upper parts of the hall had been completed and just before the decorations were painted along the fascia above the arches. These investigations also revealed that the nails that act as the fixing for the stucco were inserted into the joints of the brick arches while the mortar was still soft; this unequivocally testifies that the wall decorations were planned from the beginning.

Finally the close artistic link with the so-called *Tempietto Longobardo* in Cividale; this link is particularly evident in the style and technique used in the frescoes, and in the character of the stuccoes – carried out within the same decorative programme to which the frescoes belong. Here, as in Cividale, glass ampoules are inserted within the floral motifs, to liven up the decoration. The complex in Brescia therefore represents one of the main expressions of the new sophisticated language of late Longobard art and architecture.

CASTELSEPRIO-TORBA

THE *CASTRUM* AREA WITH THE TORBA TOWER AND THE CHURCH OUTSIDE THE WALLS, S. MARIA *FORIS PORTAS*

“*Flavia Seprio*”: this is how the *Castrum Sibirium* is commemorated on the gold coins minted by the Longobard King Desiderius in the mid 8th century.

Gold coin of the second half of 6th century

THE *CASTRUM* BEFORE THE ARRIVAL OF THE LANGOBARDS

The *castrum* at Castelseprio stands at an altitude of around 366 metres, dominating the Valle dell’Olona above the main road network which, in ancient times, linked the towns of Como, Varese, Milan and Pavia.

Aerial view of Castelseprio-Torba area after 1940s excavation

The area was settled as far back as prehistoric and protohistoric times and bears evidence of Imperial and Late Antique Roman periods in its monuments and funeral structures as well as artefacts of material culture. An early defence structure was set up to face the early waves of Germanic invasions which affected the plain of the River Po during the first few decades of the 3rd century A.D. This would explain the origin of the towers in the boundary wall of the first *castrum*, which was probably built during the time of the Goths (between 5th and 6th A.D.) and then extended and fortified in the Byzantine era. The latter is also the period in which the Eastern perimeter wall which incorporates the Torba Tower was built. The architectural model of the arched walls is a paragon of the best fortification techniques in use in the 6th century, and can be compared to the *castra* built at Castelfeder, Alberga and Trino.

Towards the end of the 6th century, *castrum Sibirium* constituted a strategic position on the peninsula’s Northern front, in a territory that was constantly disputed by the Franks, Byzantines and Longobards. Archaeological evidence regarding the presence of the latter group at Castelseprio indicates that the Longobards only occupied the castle around

the first decades of the 7th century, a sign that this castle, compared to others such as the Sirmione Fortress, remained in Byzantine hands for a longer period of time. The ample re-use of materials from earlier buildings indicates many building campaigns succeeded one another to restore and refunctionalize the buildings and the walls during the site’s long history, which was only definitively abandoned during the 17th century.

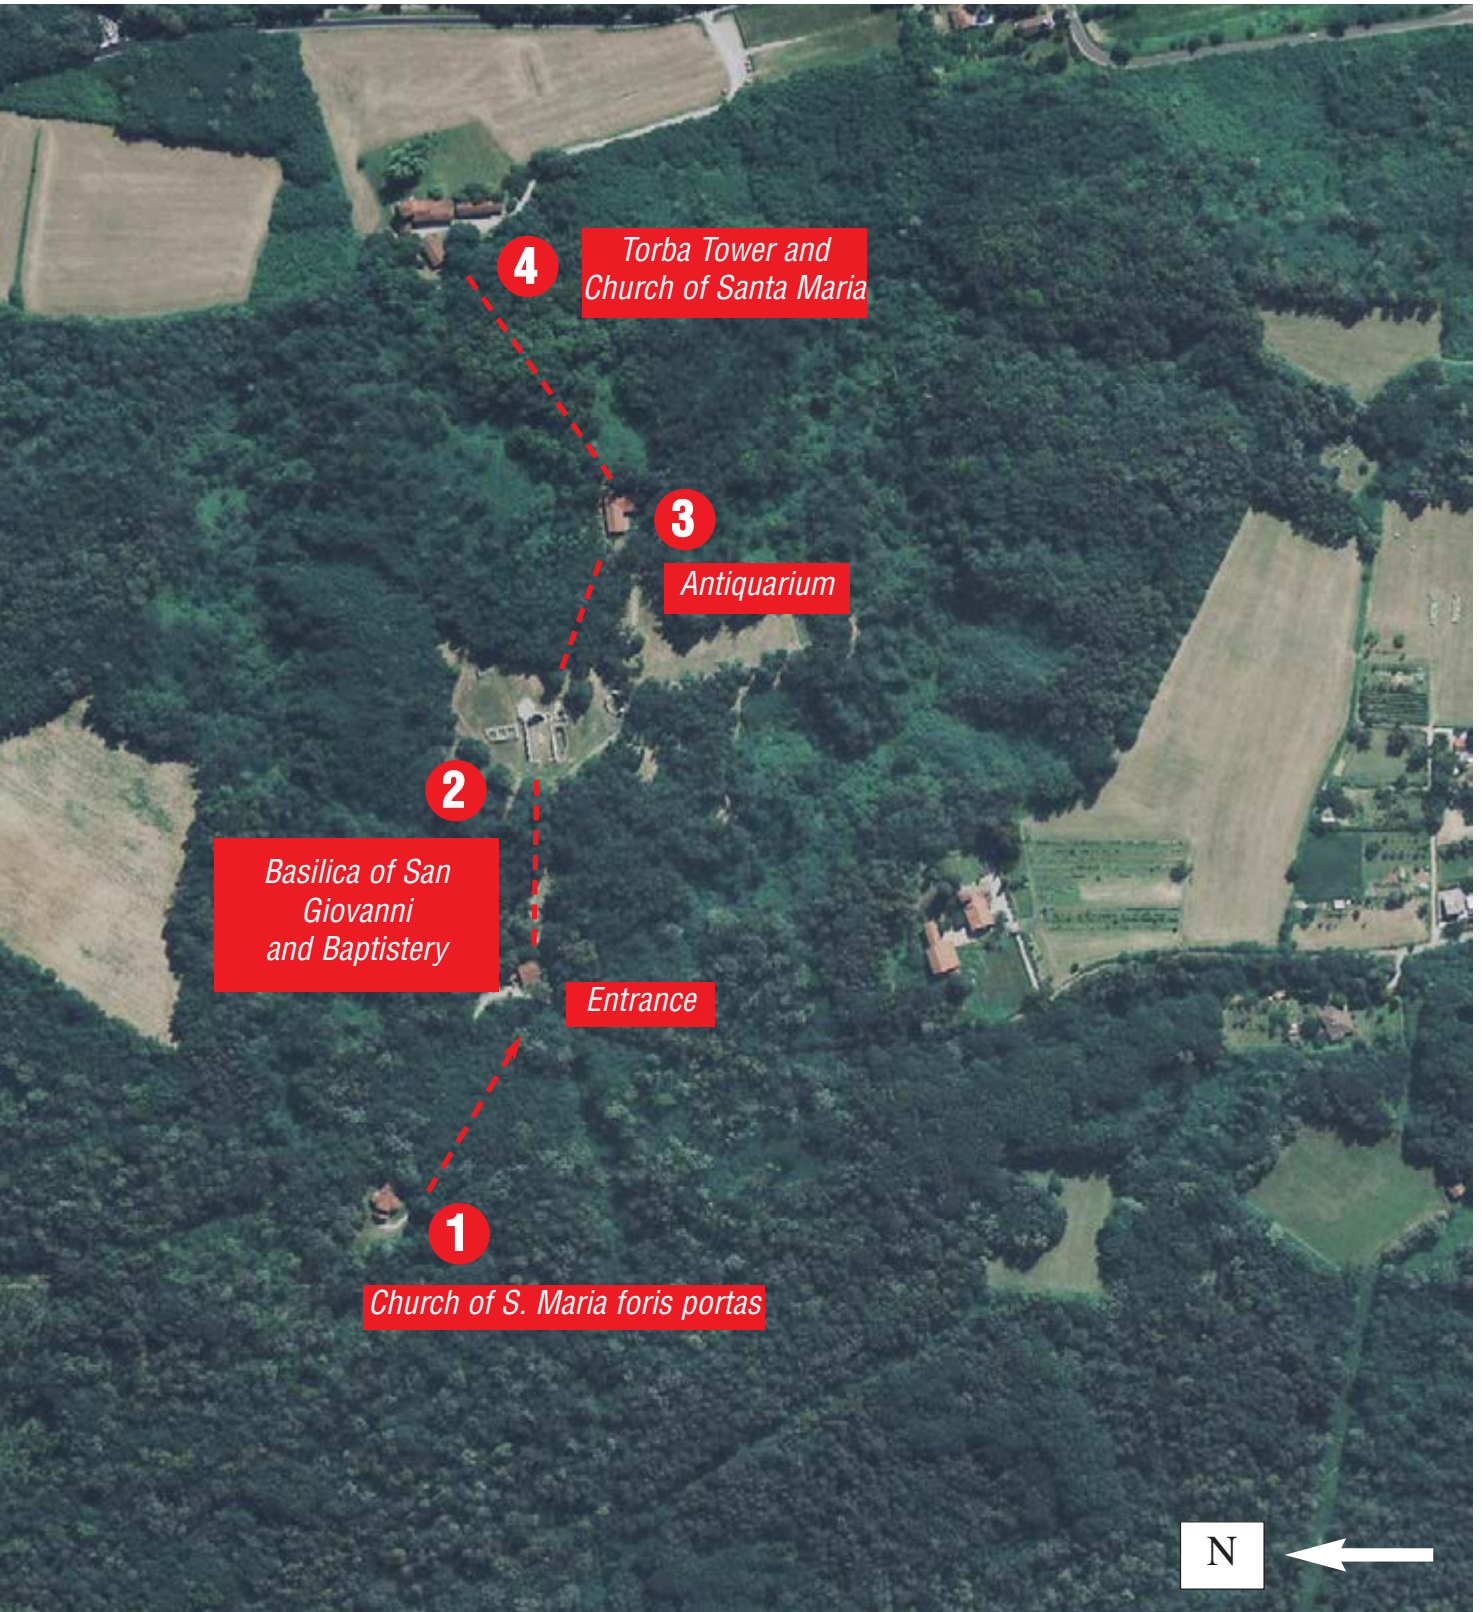

HISTORY AND STRUCTURE OF THE *CASTRUM* DURING THE LANGOBARD ERA

Castelseprio developed into a fortified town when the threat of barbarian invasions became more intense, owing to the increasing fragility and gradual retreat of the Imperial transalpine *limes*. The castle retained an important role during the Early Middle Ages, owing to its position of territorial control.

During the Longobard domination, it took on the role, of judicial and administrative centre for a large region which extended Southwards almost as far as Milan itself, and Northwards to the area of Upper Lake Como and the Ticino Valleys, thus partly replacing Milan in this capacity; the region thus described was called the “*giudicaria*” and was governed, on behalf of the Longobard King, by “*gastaldi*” and “*sculdasci*”, namely, stewards and court officials who were commoners.

A document from 721 A.D. (Longobard Diplomatic Code) cites the “*giudicaria of Seprio*”, stating that the inhabitants of the territory beneath his jurisdiction were *civis sepriasca*. The documents from the 8th century show that the Seprio territory belonged to the royal tax authority’s estates, as was usual for areas that were traversed by long roads, important river ways and rich and diverse economic assets.

King Desiderius confirmed the particular

Aerial view of Castelseprio-Torba area: tourist path, main Longobard building evidences and antiquarium (Immagine Terralaty™ © Blom CGR)

importance of the castle within the settlement and defence system of the *regnum langobardorum*, granting it the status of “*Flavia*” city. Flavian cities coincide with some of the Kingdom’s main urban centres (such as Milan, Pavia, Treviso, for example) and with castles placed on higher ground, controlling access to valleys, in positions such as to exert wide ranging control over the main means of communications, such as roads and rivers (examples in this region include Castelnovate and Pombia sul Ticino).

With the defeat of Desiderius by the Franks in 744 A.D., the *castrum* fell under their control, and maintained its role of territorial and administrative centre in the County of Seprio.

At the time of the Longobards’ arrival the *castrum* was already organised in terms of its monuments and buildings and had an almost urban-style layout, arranged around the most important buildings of worship: the basilica of San Giovanni with the adjacent Baptistry and its nearby cemetery for the “aristocracy”.

Archaeological excavations have revealed the presence of some houses mostly placed along the wall enceinte.

The *castrum* is mentioned in a source, an anonymous manuscript from Ravenna known as the *Anonimo Ravennate*, dating back to the 7th century. It is described as a *civitas* and included therefore also the religious complex which constituted the key of the settlement from the beginning, as well as a series of residential buildings. The seat of civil power was situated probably in the Southernmost area of the *castrum*, possibly in the so-called “*casaforte*”, the only building which survives from this period, which boasts imposing brick masonry and was built during a series of different building campaigns.

As in other castle settlements of that time, outside the walls were the burgs which, in Castelseprio, have not been explored systematically. The main access road to the burg led by means of a side road towards the North-East, and reached the church of Santa Maria *foris portas*, hence a pathway led to the furthestmost defensive outpost of

Torba, placed on the valley floor.

The entrance to the *castrum* was to the West, with a door preceded by a bridge supported by four piers. The walls, which followed the contour of the plateau -which was thus entirely protected-, had a series of towers placed at regular intervals. Five of these remain along the Southern façade of the perimeter.

Within the walls, a short distance from the entrance stands the imposing complex of the Basilica of San Giovanni and its Baptistry. These guaranteed the keeping of the proper public “parish” functions, i.e. worship, baptism as well as burials which occurred both inside and outside the Basilica, as indicated by the presence of some privileged tombs. In the cemetery, around the external perimeter of the apse, there are tombs covered by monolithic slabs with crosses carved upon them. The same is true of a burial found at Santa Maria *foris portas*, a private aristocratic oratory with its own cemetery, where different phases of use are recorded for both the Longobard and the Carolingian period.

San Giovanni: central apse; northern wall and wall's detail

THE SITE

the site for which inscription on the World Heritage List is requested corresponds to the extension of the *castrum*, with its main testimonies of the Longobard era, the Torba Tower, the worship complex of San Giovanni Evangelista and the church outside the walls, Santa Maria *foris portas*.

It is an extraordinary example of *castrum* settlement, which is different for the spatial organization, monumentality and typological variety of its buildings.

It is a complex and articulated settlement model that, due to its marked double function of both defensive and demic structure, represented a fundamental reference for the most typical Medieval settlement: the "castle".

The lack of continuity in the utilization of the

area contributed to preserve the habitat, which still today enables to appreciate all the geo-morphological features that since the ancient times made it an eligible place for the foundation of the *castrum*.

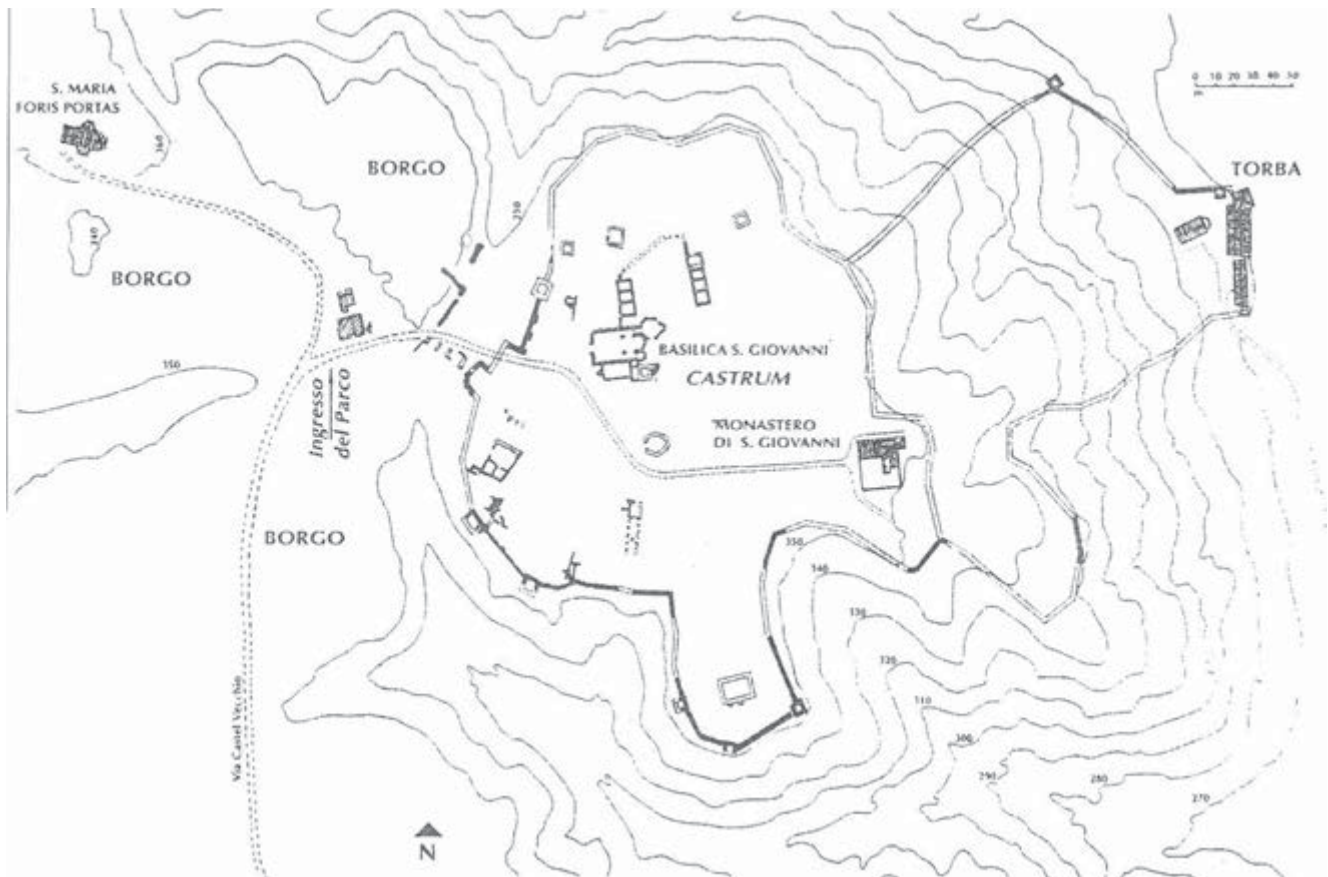

The articulated functional organization of the spaces and structures as well as the high standard of the decorations express the social prestige of the commission - of direct royal emanation -. In particular, the plurality of the cultural traditions that contributed to the construction and definition of a such exceptional site outlines an attentive social environment open to the consolidated experiences coming from the Byzantine and Roman worlds in the painting and architectonic models, but also active in the experimentation in the urban field and military architecture (the *Polioretica*).

Moreover, the considerable presence of

worship buildings having differentiated functions, public and private, shows to what extent the relation between the Longobard *élites* and the Church was important and crucial, also in relation to the elaboration of a "new" settlement model where the spaces of the sacred played a role of primary importance in the strategies of the power.

The *castrum*

The imposing perimeter wall which enclosed the *castrum*, of which some visible sections are well preserved. It appears to have a variable thickness of between 1.30 and 2.20 m; its masonry is constituted of courses of small schistose stone blocks and of pebbles, both intact and broken up, with a nucleus of pebbles mixed with mortar. The walls which taper upwards are lightened by the presence of wide niches on the Eastern

Archaeological map with tourist paths

Aerial view of Torba complex

side and by blind arches in the sections to Torba. Re-worked elements -such as architectural fragments, dedications and funeral inscriptions, stone funerary urns- are often used in the walls and in the square-plan towers placed at almost regular intervals along the Western side.

The Torba Tower

The complex of Torba which is an extension of the fortified site of Castelseprio, currently consists of a tower, a church dedicated to Saint Mary, a 15th-century building next to the tower and the boundary wall.

The tower is placed on the Southern tip of the fortified annex which went down from the *castrum*, and is a rare example of 5-6th century defence architecture in Northern Italy. The tower today stands 18 metres high, its upper sections having been rebuilt at different times after the Longobard period.

It is built according to a square plan, its sturdy walls gradually tapering upwards (the sides measure 8.85 m at the base and 7.90 at the top). The three sides facing towards the valley are reinforced at the corners and in the centre by mighty buttresses. Below there are embrasures and on the second floor there are windows with the characteristic “mushroom” shape (i.e. with arch wider than the span of the window opening).

In the 8th century, still during the Longobard era, the tower lost its military function, and was incorporated into a nuns' convent. The

The Torba complex

The Torba tower

Second floor of Torba tower. Frescoes with female figures on the western wall

Second floor of Torba Tower: *velaria*

Detail of the fresco representing *Aliperga*

first floor was thus used as a cemetery for aristocrats, and abbesses, as testified by the *arcosolia* type of burials. The frescoes and painted inscriptions show us the faces, names and role of the nuns buried in the tower, including that of *Aliperga*, whose Longobard name flanks the portrait in yellow ochre paint. The name was later substituted by a new inscription in white paint, mentioning *Casta*, a nun like *Aliperga*. The only traces of this portrait visible today are the hands, as it was later overpainted. This later layer included a figure of a bishop, recognizable by his vestments, the only surviving fragment. A niche in the Southern wall still preserves a dark red cross with curved arms, from which hang two small chains bearing the Greek letters alpha and omega, symbols of the beginning and the end, and a fragmentary funerary inscription. The style features of all the inscriptions point to the 8th century, on account of the style, which many researchers date back to the Longobard period.

On the second floor a chapel was built for the nuns, with an altar entirely frescoed with religious images. Here too an inscription of a didascalical type, only partly legible, recalls the style in vogue in the *scriptoria* of the Longobard period. To a time, that is, before Charlemagne's introduction of the Caroline reform.

On the Western wall, to the right of the window, as in the *Tempietto Longobardo* at Cividale del Friuli, two orders of female figures are represented in an intercession scene: a group of female Saints above and, below, a procession of eight nuns painted frontally, with one hand open as a sign of prayer and a cross in the other. On the Eastern wall is a beardless Blessing Christ, placed in the centre, and seated on a throne flanked by two angels, with the Virgin Mary on one side (no longer visible) and Saint John the Baptist on the other; at the base are depicted six *velaria* of different shapes

Church of S. Maria. Eastern and southern architectural surveys

Church of S. Maria. Apse and southern side

and decorations. On the Southern wall on the left can be seen fragments of several characters, probably martyrs, while on the right dominate the figure of the Madonna and Child, surrounded by saints, bishops and a woman bearing offerings. Other wall decorations and frescoes are attributed to refurbishment work subsequent to the Longobard period.

The church of Santa Maria

The original phase of the church dedicated to Saint Mary is also attributed to the Early Middle Ages, erected as part of the same monastery complex opposite the tower. Excavations have demonstrated the chronological sequence of construction work over four main phases, with successive reconstructions due to the sinking of the Southern perimeter wall, imprudently founded on an unstable mass of pudding-stone. The current building with a single chamber and truss roof, built with river cobbles and despoiled stone, is mainly attributed to the 11th century, while the apse section, made from large pebbles and bricks and decorated with hanging arches, which shows a more mature architectural approach, is fully Romanesque and attributable to the 13th

century. A number of scholars believe that the first Early Mediaeval church had a single chamber, equipped with an ambulatory crypt, with access via two side stairways, partly dug out from the rock, partly built from recycled material. Excavations have uncovered the crypt of this first structure, together with the stairwells and a number of fragments of 8th-century frescoes. Other painted fragments, attributable to the same period of the Early Middle Ages were found in the archaeological digs carried out there and currently being studied.

The remains of frescoes that are still present in the inner walls of the church testify that all construction phases were matched by a new series of paintings: remains of scenes painted in the 11th century on the long walls to the south and to the North still remain today and were probably set out in two tiers (other fragments from the same period were found during excavations); in the apse there are fragments of a painting from the 13th century, perhaps depicting a martyr with a palm branch. Fragments of painted decorations have also been found on the inner wall of the bell tower, which was reconstructed in the 9th century from an existing tower that was probably in the more ancient boundary

S. Giovanni Complex. Late Roman cistern

Apse of S. Giovanni

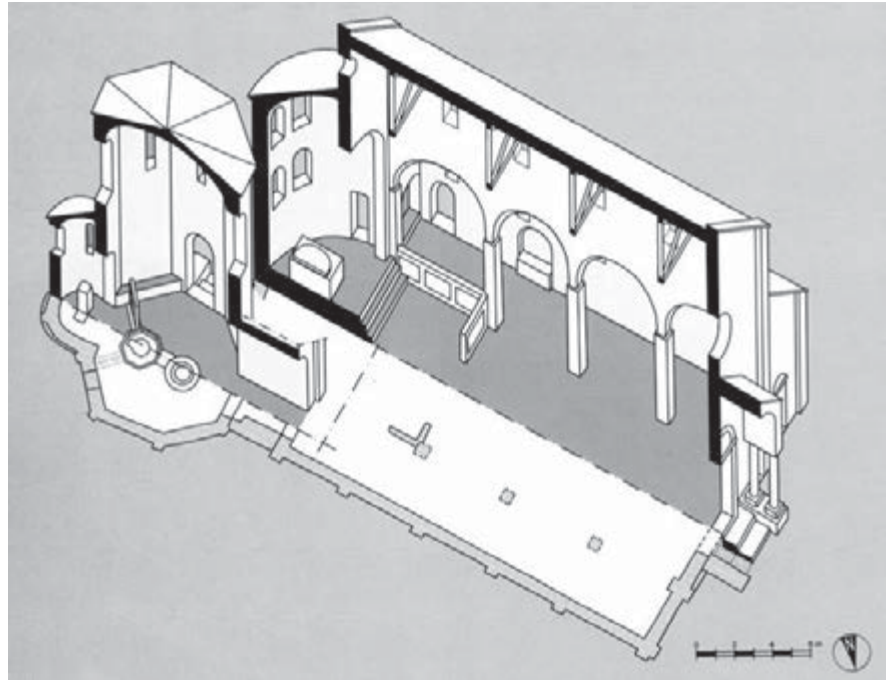

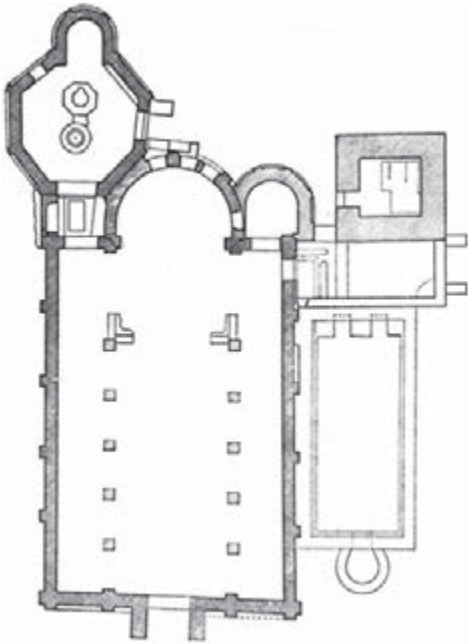

wall. Among the remains of frescoes there is a particularly interesting fragment which can be traced to the 11th century, depicting a male figure accompanied by the writing “*K(a)im*”, and identified as Saint Joakim or perhaps Cain.

The cemetery area and the burials inside the building point to the funerary use of this church during the centuries, its earliest phase probably dating back to the middle of the 8th century, or to a date slightly later than this. Recent excavations (summer of 2009) have brought to light the burial located in the outer perimeter wall on the North side. On account of the style of the characters written on the outer monolithic covering, it appears to be similar to the style of writing found on certain tombs found in the *castrum* area, which date to a time between the 6th and 8th century A.D. The burial at present is judged as possibly corresponding to the Early Medieval phase of the building. The data from the excavation is still being studied.

The complex of San Giovanni

The religious complex of San Giovanni Evangelista, consisting of a basilica with a baptistery and a cemetery, and constitutes

S. Giovanni complex. Plan and axonometric reconstruction of the Longobar building

the most important monument built in the *castrum* between the Late Antique and the Early Middle Ages period. The Longobard **basilica** stands upon the remains of a previous place of worship with a rectangular chamber and polygonal apse with three entrances from the side of the façade; on the North-Eastern side of this building there was once an octagonal apsed baptistery. In the 7th century, during the Longobard era, the complex was completely reconstructed, the rectangular chamber was divided into three naves while the apse was raised and took the shape of a a hemicycle. The Northern entrance from the façade was blocked to allow the burial of a knight who, according to the characteristic Longobard funeral ritual, was buried with his coat of arms some time around the second third of the 7th century. The baptistery, which remains unaltered in form, was probably linked to a corridor on the North-West corner of the nave at the apse.

The basilica walls consist of regular courses of pebbles and small stones mixed with dense lime mortar; during this phase the apsidal area and the nave were probably

Lance tip from a Longobard knight's burial (Antiquarium)

Burial belonging to person of high lineage, excavated into the apse of S. Giovanni

S. Giovanni Complex. Marble *pluteus* of the presbyterial barrier

separated by a presbyterial barrier, to which belonged a marble *pluteus* from the 6th-7th century, now in the museum of Gallarate. The slab bears an engraving representing four arches on columns each framing a simple cross. The small column with capital bearing decorations imitating the Corinthian style –from the Late Longobard period (8th century)– belonged to a *pergula* or *ciborium*, which may have been part of a sumptuous

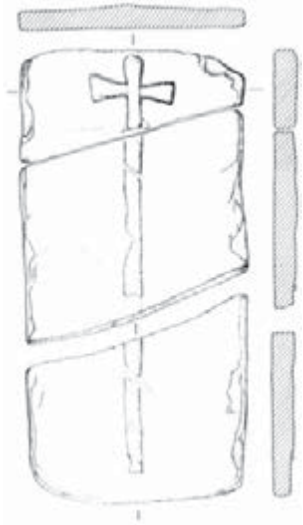

Little capital from liturgical furnishing

liturgical church furnishing apparel. Several sections of plaster that are still visible in the interior wall of the basilica may also be from the Early Middle Ages. Only one stone plaque remains today as a clue of the original magnificence of the *opus sectile* marble encrustations, including hexagonal and triangular elements, the same type as those found in the Baptistry and in the Church of Santa Maria *foris portas* in the burg of the *castrum*. This floor covering is directly comparable not only to the ones found in the nearby Church of San Vincenzo in Galliano, at Cantù (Como) but also in other Longobard buildings of worship that are nominated for inscription: the Tempietto Longobardo at Cividale and the Church of Santa Sofia in Benevento.

Two tombs, one found in the apse and the other in the presbytery area, belonged to personalities from the local aristocracy or the clergy. Other burials of high-ranking personages have been found in the inner area and near the liturgical annex of the basilica, dug out of an existing tower on the South-Eastern side. From this cemetery area, explored on several occasions, come a number of horse bone remains; the custom of burying a knight with his horse is seen in other Longobard necropolises, including those of San Mauro in Cividale del Friuli and in Nocera Umbra.

Along the Southern side of the basilica of San Giovanni is a large rectangular cistern dating back to Late Roman times. This was probably built to collect and use water from

Stone slab bearing a cross

the roof of the church, as also occurred in Parenzo. The structure preserves the attachment points of the barrel vault and the flooring in waterproof *cocciopesto* mortar. Over the long period during which it was in use, the cistern underwent numerous renovations and consolidation works and the emerging wall today is very similar to those of the nearby basilica. On the Western side the structure is connected to a well with “mushroom” shaped opening which was already walled up at the time of its discovery. From the rubble that filled a small well, among other materials found, there was an interesting gold Byzantine coin dated from the 6th century, therefore to the period of Longobard occupation.

The **Baptistry**, has an hexagonal floor plan with a South-West little apse, and is similar to the ones in Grado and Cividale; the original construction phase dates back to the 5th-6th century. The building includes a baptismal font for total immersion, also covered in marble, which does not stand in the center of the building. The floor is executed in *opus sectile*, including marble encrustations of hexagonal and triangular geometrical forms cut out of white marble from Musso and black marble from Varenna; the

wall module of the elements composing the main body of the church varies as to size and texture from the one employed in the apse of the same baptistery.

The original faux marble decoration on the walls was replaced during the Longobard era by a ornamental geometric pattern painted on the rose-coloured base of the plaster.

During the Longobard era, the common Christian practice of burying the dead in and around churches is attested by numerous earth burials dating from the 7th-8th century, and which also cover the area to the East and South of the worship complex. Among the burials –some of which are plastered according to a common practice of the Early Middle Ages– there are a number of earth burials, with monolithic coverings decorat-

ed with spear-shaped crosses sculpted in low-relief, belonging to persons of high lineage, aristocracy or prelates. This type of covering is widespread in Italy and beyond the Alps, particularly in towns, with or without castles, which had a settlement tradition in the Late Roman era and which were integrated at an early date into the ecclesiastic hierarchy (e.g. Lake Garda area, or Vaison la Romaine in Provence).

Housing system

Only a few areas of the residential areas within the *castrum* sector that have been explored and show definite phases from the 5th-6th century to the latter part of the Early Middle Ages.

Civil construction during the Longobard period was concentrated in an area of the

old town, buttressed against the South-Western walls; the houses, lined up along cobbled streets leading to the central religious complex, have different dimensions and layout; all, however, have at least the foundations made of stone. Some have only one room with a stone base for the central support column for the roof; others have more than one room, with annexed facilities. Houses from the same Longobard period are nevertheless distributed in the area North of the great basilica and probably also in the Eastern area of the *castrum*. The varying thickness of the dwellings which have been explored suggest that some had stonemasonry walls, or, in other cases, walls made of wood and other perishable materials, such as cane and clay of the type that is also present in

Remains of Early Middle Ages houses

“Casa Forte”

Worship building dedicated to S. Paolo

Farmhouse of S. Giovanni, housing the Antiquarium

South-western path along the fortification walls

Brescia and in other areas of Early Mediaeval Italy. The numerous remains of Roman-tradition roof tiles are proof of the quality of the settlement's housing system. Loom weights for weaving and moulds, elements used to print and to regulate the flow of molten metal, crucibles employed to work iron, bronze and copper, attest to the presence of production activities, as well as objects made out of unfinished elements. The recovery of a fragment of a type of stone cooking utensil called *pietra ollare* indicates that possibly these containers were produced in a place not too far away. In addition to the Early mediaeval monuments, it is also important to highlight the presence of a religious building dedicated to Saint Paul, which today lies in ruins, and which is mentioned by 11th century sources, and may possibly date to the 12th century. Identified as a church by some researchers and by others as a baptistery, it presents a hexagonal plan, with ashlar stone elevation with mainly regular courses. Its apse is scanned by pilasters, and ornamented by blind arches which flank splayed windows. It is still to be ascertained whether the building was remodelled in ancient times.

The central area is surrounded by an ambulatory, on which stands a loggia supported by six central columns, thus forming the upper floor which was accessed probably via a stone stairway dug out of the Northern wall. According to the descriptions made of the pastoral visits which took place from the 16th century onwards, it seems that the building was originally equipped with a small apse over the altar which was decorated with frescoes.

The farmhouse of San Giovanni, a small building of the 14th century, was built over the remains of a Longobard building, of which few elements have been identified. This was initially built as a monastery of the order of the *Umiliati*, later housed Franciscan friars, and was decorated with beautiful frescoes in the 16th century.

The building was reduced to farmhouse status in the 18th century and today it hosts the Antiquarium of the archaeological park (see paragraph 2.b.3), where the most significant artefacts of local history are held. They have been selected among the many successive campaigns affecting the *castrum* from the mid-19th century onwards.

The church of Santa Maria foris portas

Outside the walls, where the burg developed in the Early Middle Ages, in a raised area –occupied previously by a necropolis from the Final Bronze age– stands the splendid church of *Santa Maria foris portas*. The building is famous for its triple apse plan and for the series of Early Mediaeval frescoes which constitute a cycle which a unique example of its type.

The building's façade is preceded by an atrium and has a triple apse plan: a short rectangular chamber with three apses which use the walls of the central area as supports. The three apses connect to the central area by means of three triumphal arches. The apses are equipped with windows for illumination and strengthened on the outside by buttresses.

The shape of the structure is reminiscent of Late Roman and Byzantine buildings, and a large number of comparisons can be made with examples in the Middle East and in North Africa. On the other hand though, the type of masonry technique, using small units, is similar to the Basilica of San Giovanni, inside the *castrum*. This is why many scholars have dated the original building to a time ranging from the 7th to the 8th century, in spite of many restorations and remodelling. This idea is based on analysis which were made a long time ago, but are nonetheless reliable. This study analyzed: three brick fragments found in the underfloor preparation area; eight tiles crowning the secondary façade of the church; one ceiling truss belonging to the main apse. The chronology results include a range of possibility, but indicate it is not unlikely that the building should be dated to the Late Longobard period, especially if one takes into account the many building campaigns which affected the structure.

The foundations are made "a sacco" (mortared rubble) using large sunken cobbles, clay or mortar; the original parts of the elevations are made of broken stones

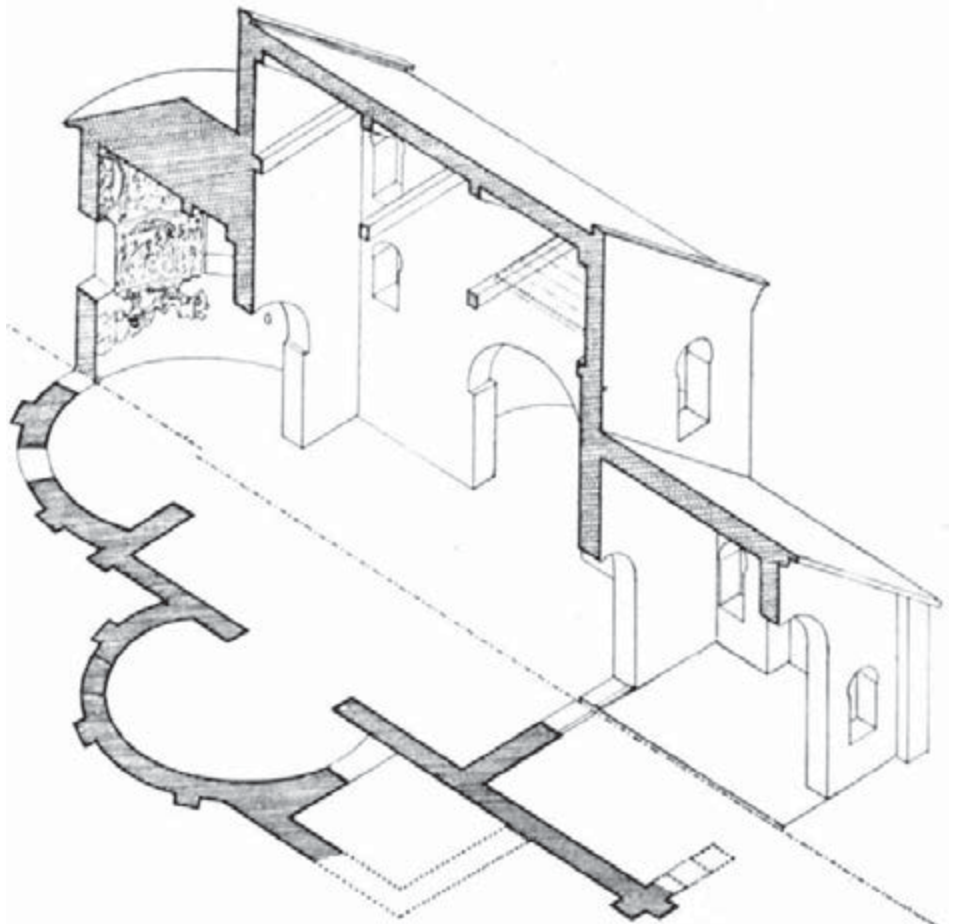

S. Maria foris portas

and pebbles, often small, bound with mortar, with rare insertions of blocks of a type of limestone similar to travertine. On the Southern façade of the building is found a service area, perhaps used for liturgical purposes; now only its plan remains visible. The flooring is partially preserved in the central chamber, as in the basilica of San Giovanni and in its baptistery and consists of hexagonal and triangular white and black marble tiles of white marble from Musso and black marble from Varenna.

Both the building and the frescoes which cover the apse are unique pieces, architecturally and artistically. The placing of this work within the geographical, political and cultural context of Longobard and Carolingian Italy appears less challenging. It is well-known that Castelseprio was part of the orbit of the Royal court, as attested by its central role at a local level both during the Longobard and during the Carolingian period, when it was able to maintain this role as the centre of a County partly based on the structure of the *judicaria* which it had supplanted. Thanks to these relations it necessarily was affected by the main contemporary art styles, which at the time were active and elaborating new models at the new Royal courts present at Pavia and in the city of Milan. Its aristocracy enjoyed remarkable economic power, which attracted artisans and artists, and exercised its role by commissioning high quality art work.

A further indication lies in the geographical position of the *castrum* and of the burg,

Triumphal Arch. Upper register: Two angels hold the sheptre and globe adoring the *etimasia*. Lower register, on the left: Adoration of the Magi. On the right: Arrival in Egypt (?)

placed in the very centre of a wide ranging communications network, a central junction for those routes which led over the Alps to Bellinzona and to Coira, and hence to the mountain passes into the lands of the Franks and Baiuvarii, while the routes leading to the River Ticino and the River Po allowed transit towards the central and southern regions of the Italian peninsula. Above all, the River Po acted as a primary axis to reach the city of Ravenna and the Comacchio area, or to take the routes which led directly to Rome and to Southern Italy. There were also other roads leading to the city of Milan or to the Lake Maggiore, to Brescia, Como and Bergamo to the East, and to Novara and Turin to the West.

At Santa Maria *foris portas* main apse walls boast a series of frescoes which constitute one of the most important cycles of the Early Middle Ages period. These were first seen in 1934, and finally discovered by G.P.Bognetti in 1944 below an insipid layer

of whitewash which had been applied at an unknown date.

The frescoes illustrate the theme of the Infancy of Christ and the Stories of the Incarnation, from both the canonical and the apocryphal Gospels which had spread in the East (Protogospel of James and Gospel of pseudo-Matthew) to illustrate the dogma of the incarnation and to emphasise the double nature of Christ, human and divine.

They seem to follow a specific political programme, opposing the iconoclastic policies that long characterised the areas under to the rule of the Byzantine empire, probably in homage to the anti-Arian nature of the those that commissioned the work.

In the dome of the apse the scenes are set out in frames placed on two registers, beneath which is a base with fake niches closed by *velaria* from which small birds are peeping out. The scene was to be read from left to right on the upper order and from right to left on the lower order.

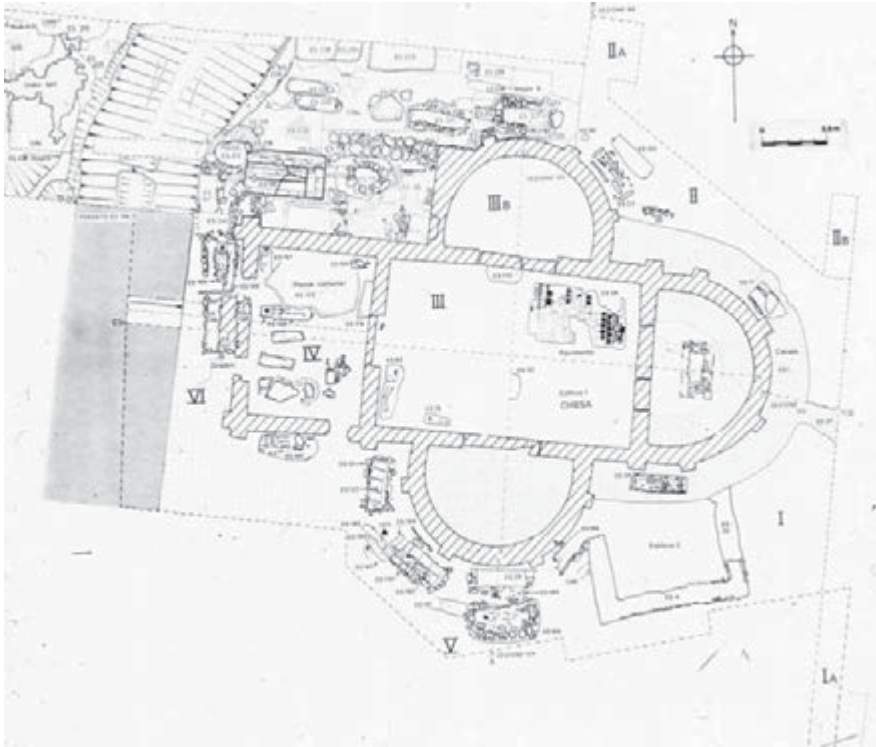

In the upper register, the scenes are divided by three roundels placed above the windows; only the central roundel is preserved in its entirety and shows the bust of a blessing Christ *Pantocrator*. The scenes on the left side include: the Annunciation and the Visitation, and the Bitter Water made Sweet; those on the right show the Apparition of the Angel to Joseph and the Journey to Bethlehem. In the lower register the frames are divided by the windows; those on the left are not well preserved (it is thought that they depict the Flight of Elisabeth with the Death of Zachary and the Baptism); those on the right side depict the Presentation at the Temple and the Nativity and the Annunciation to the Shepherds.

On the counter-façade of the triumphal arch are depicted other figures: two angels in flight, in the upper area, are reminiscent of ancient representations of Victory. The angels hold the sceptre and globe, and adore the *Etimasia* (namely, the empty

Annunciona to the Shepherds

Plan of the Church with cemeterial area

using a technique that enables the painter to add additional touches later. The series is of exceptionally high quality, and no comparable works have been discovered so far. The style is free and animated; the human and animal figures drawn with great fluidity and agility, move in a space created with confidence, characterised by splendid architectural backgrounds with perspective; the expressiveness is immediate and not static. The decorations are an unequalled example of pictorial mastery that regenerates and revive Classicism and is unparalleled in the Early Middle Ages, at least in Europe. Owing to its uniqueness, the series at Castelseprio has scholars' opinion regarding the artistic context of the artist and the placement of the work. The date is still debated, between the end of the 6th-last decades of the 7th century or between the last decades of the 7th and the 8th-9th centuries (see below, critical analysis).

Marble slab from *Wideramn* tomb

throne on which the crown and cross are placed, symbols of Christ's royalty). The throne is surrounded by a circle of light; in the lower register left of the arch is the Adoration of the Magi (on the right the lost scene probably represented the Arrival in Egypt).

The painting technique is evidence of the material continuity with the Roman world, testified by the materials and techniques employed to prepare the walls and to paint the scenes, which recall the glorious tradition of the Antique world, in spite of these techniques are poorer in terms of the variety of pigments, the work is nevertheless effective on the whole. The wall preparation comprises two layers of plaster: a rougher layer of plaster placed directly onto the masonry and a second layer both finer and more uniform, on which the sketch is drawn and on which the base colour is frescoed. The third, uppermost, layer is made of colours for which white lime is used as a binder, thus

In the area in front of the church and near the perimeter walls of the Church of Santa Maria *foris portas* stood a **necropolis** that was laid out over several periods. One burial, in particular, stands out for its monumental structure, with a roof of recycled stone slabs, one of which bears a low relief of a cross sword. The burial has been excavated and yielded traces of threads which had belonged to a gold brocade texture, probably part of the clothing of the deceased; the body has been identified as that of an aristocrat laid to rest close to a private oratory reserved for the burial of members of his class. This is attested by a range of different sources in the field of epigraphy, numismatics and by ancient diplomas such as the *Longobard Diplomatic Codex*.

According to some scholars, an inscription discovered by A. Corbellini (in 1845), and known as the inscription of *Wideramn*, may have originally been placed in the church of Santa Maria *foris portas*. It is now held in

the *Civiche Raccolte d'Arte del Castello Sforzesco* in Milano. This inscription was cut on a re-used marble slab sometime during the 7th century to be laid over the tomb of *Wideramn*, an aristocrat of Germanic origin. According to the Roman-Byzantine tradition, the decision to commemorate the deceased through written memory on precious material, testifies that he was a member of the high nobility of the Longobard Kingdom.

*Hic requies/cet in pace / b(onae)

"Here lies in peace Wideramn, of good memory, who lived in this century for around twenty-eight years; he died eight days before the ides of September in the tenth year of the indiction; may he be happy".

CRITICAL ANALYSIS

According to researchers today, the chronological placing of the frescoes of Torre di Torba ranges between the mid-8th century and the beginning of the 9th. However, no in-depth diagnostic and stratigraphic tests have been carried out so far.

Researchers have emphasized the fact that these works are carried out in a very different

Detail of Annunciation

Apparition of the angel to Joseph

style compared to the one used by the artist who executed the work at Santa Maria *foris portas*.

The painters at Torba are certainly interpreting the art style being developed to its maturity in the Alpine area in the field of large scale fresco painting. However, their style is somewhat removed from the great cultural and iconographic tradition of Roman-Byzantine art, lacking the smoothness, artistic quality, and imaginative characters. These instead are the characteristics which mark the works at Santa Maria *foris portas*, a case for which scholars believe an artist of Middle-Eastern training and origin was responsible.

The lower floors of the tower constitute a re-use, as often in the Early Medieval period, which can be dated to a time between the Late Antique and the Late Medieval period. The presence of Longobard aristocrats connected in some way to the foundation of the church and to the rank of the Abbesses

can be also deduced by the inscriptions and by the long explanatory texts which accompany the frescoes.

The fresco cycle surrounding the apse of Santa Maria *foris portas* is a unique work of art for which no comparable works have been found so far. Its analysis has generated at least three main schools of thought in the field of specialist research. One proposes a date between the 6th and the 8th century; among these are G.P.Bognetti, G. Chierici, A. De Capitani d'Arzago, M.Salmi, C.R.Morey, V.Lazarev, G. De Francovich, and more recently V.Gheroldi (whose as yet unpublished paper was presented at the meeting entitled 'Convegno di Studio Castelseprio e Vico Seprio', held in Castelseprio in year 2001). G.Bergamini in 1990 mentions "a figurative culture not easily defined, but certainly not too far removed from the issues being addressed in Rome"; the same researcher dates the works to the last few years of the 7th century and the

beginning of the 8th century. Another school of thought would instead prefer to date the frescoes to the 8th-9th or 10th century; thus A. Peroni, E.Arisan, M.Schapiro, A.Grabar, C.Bertelli, the last of whom takes a stance which can be considered intermediate, as he indicates the 8th-9th century, and who must be credited for having conducted an in-depth analysis of a vast field of evidence, including comparisons with luxury items, codexes and illuminated gospel manuscripts.

The third school of thought believes the fresco cycle should be dated to an early date, among them M.Rossi (2008), who thinks an intermediate date should be proposed in the first half of the 8th century. This line of interpretation, and its variations, includes the study conducted by A.Gagnana, S.Roascio and A. Zucchiatti (2009), which addresses the stratigraphic study of the plasters, and archaeometric studies of the pigment. This work offers

Jouny to Bhethlehem

Adoration of the Magi

Detail showing the lack of contact between the wooden beam and fresco layers

further elements, which modify the picture of previous diagnostic data. The frescoes are superimposed over an older pictorial surface, which is visible in the form of horizontal bands of light red colour. The stratigraphic relations between the wooden beam and the fresco layer visible today indicate that an earlier level of decorative painting existed before the present one.

The wooden carpentry might be indeed the result of a restructuring campaign conducted only a short time before the present layer of frescoes was painted. This would add further support to an idea advanced by Carver in 1987. The building of the church and the earlier decorative phase

might thus have preceded the more complex and articulated fresco cycle, which might date to a later phase.

From the historical point of view the hypothesis of the present frescoes dating to sometime during the first half of the 8th century is supported also by the historical and cultural context. At that time East and West faced each other across the divide of the iconoclast dispute, which caused a particularly strong conflict during the first half of the 8th century, at the time in which Longobard art production was enjoying its golden age, under King Liutprand and his successors.

The debate concerning the figurative culture

Bitter water made sweet

and painting tradition of the “Master of Castelseprio” divides scholars into two further, opposing camps: orientalist specialists recognize iconographic references to works of Eastern origin (for example one might look at Santa Maria Antiqua in Rome); they detect a smoothness of style, a naturalistic use of perspective which would point to an artist belonging to a Hellenistic or Hellenizing school. This would be supported by the political events taking place at the court of Pavia, which at this time was following a course that drew it closer and closer to the policy of Rome. This convergence began under Grimoaldus, who died in 671 A.D., when the bishop was directly consecrated

by the Pope of Rome, and would have coincided with the flight of many Byzantine and Middle Eastern artists after the invasion and occupation of Eastern Christendom by the Arabs in the 7th century. (A. Maria Romanini in 1978 anchored the painted cycle to the moment of the pre-iconoclastic Hellenistic renaissance which started under the Byzantine Emperor Justinian, thus placing the work in the 7th century). Researchers of Western art, on the other hand, consider the culture of the Master of Castelseprio as a link between the influences deriving ultimately from Constantinople, and a Latin, Western culture then being remodelled thanks to the cultural impulses from across the Alps, a

Detail of frescoes with architectural element

Castel Seprio

La nobiltà longobarda

A Castel Seprio la presenza di un'aristocrazia è attestata da fonti scritte e archeologiche; la cultura longobarda (569-774) emerge dai rituali funerari e dagli oggetti d'abbigliamento e di corredo.

È evidente l'assimilazione, da parte dell'aristocrazia locale e dei funzionari regi che operavano sul territorio, della tradizione romano-cristiana, considerata anche la vicinanza alla capitale Pavia e alle città di Milano e di Como, favorita da una efficiente viabilità.

Al secondo quarto del VII secolo è da attribuire la sepoltura rinvenuta in un muro della facciata della basilica di San Giovanni Evangelista. Il defunto è sepolto con gli oggetti simbolo del suo status sociale: spada, lancia, elementi metallici della cintura reggiamani, spennoni in ferro decorato a intarsi ageminati, che ne qualificano l'appartenenza alla cavalleria, corpo scelto dell'esercito. È membro dell'aristocrazia anche Wideraman, che i parenti scelgono di ricordare con un'epigrafe funeraria in marmo secondo il costume romano-bizantino.

Le tombe con coperture in pietra decorate a croci antiche di diversa struttura formale, poste esternamente all'abside della chiesa di San Giovanni e presso i muri perimetrali di Santa Maria *fero peran*, confermano la frequentazione di Castel Seprio e del suo borgo da parte di personalità legate alla corte longobarda prima e al potere imperiale franco poi, ma parlano anche della presenza di un clero radicato nella pratica del culto pubblico e integrato nelle gerarchie ecclesiali già da età paleocristiana. A fianco dei Longobardi viveva la popolazione locale di cultura romana; appartengono al costume femminile bracciali, anelli da dito e spilloni in bronzo utilizzati per trattenere l'acconciatura o per chiudere le vesti o il mantello. È finora rara la ceramica di tradizione longobarda e sono pochi gli utensili d'uso domestico e rurale.

I manufatti di pregio sono attesi al patrimonio di forme romano-bizantine, come il terminus aere di probabile imitazione (rinvenimento nel pozzo presso la torre adiacente alla basilica di San Giovanni), i calici in vetro, le fasce di bracciale d'abito forse di età carolingia, decorate con fili d'oro intessuti a motivi ornamentali geometrici (zombi), secondo il costume dell'aristocrazia.

SPOLETO

THE BASILICA OF SAN SALVATORE

“In that very same period, Faroald, first duke of Spoleto, with a Longobard army attacked the wealthy city of Classis, which he left stripped of all riches”

(Paul the Diacon, *H. L. III*, 13)

THE CITY BEFORE THE LONGOBARD ERA

Despite the fact that early evidence of Longobard presence on the hill of St. Elia – which would later become the historic settlement of Spoleto – would appear to date back to the mid-Bronze Age, permanent presence there is only documented from the end of the Bronze Age, namely the period to which a significant amount of pottery and a large

bi-conical vase found on the slopes of the hill may be dated. The Umbri, *populus antiquissimus Italiae* according to the accounts of Pliny the Elder, are commonly attributed with the creation of a settlement on the hillside.

The pre-Roman settlement layd primarily on the western slopes of the hill, benefiting from the natural terraces that facilitated the construction of huts. The site would have been chosen since the great differences in level of the terrain would have made it naturally easy to defend, and also in virtue of its strategic position at the mouth of the *Tessino* valley, at a point of convergence of the major thoroughfares through the region, most importantly that heading in a northerly direction which, during Roman times, was to become the *Via Flaminia*. The trait along the watershed line especially, running along the hillside from the area of the *Fuga* gateway as far as the *Rocca*, must have

been vitally important from the early days of the settlement’s creation. This route, which has remained in use throughout the centuries, became the main road axis running through the city, corresponding to the present-day roads of *Via di Porta Fuga*, *Via Salara Vecchia*, *Via Minervio* and *Via Saffi*.

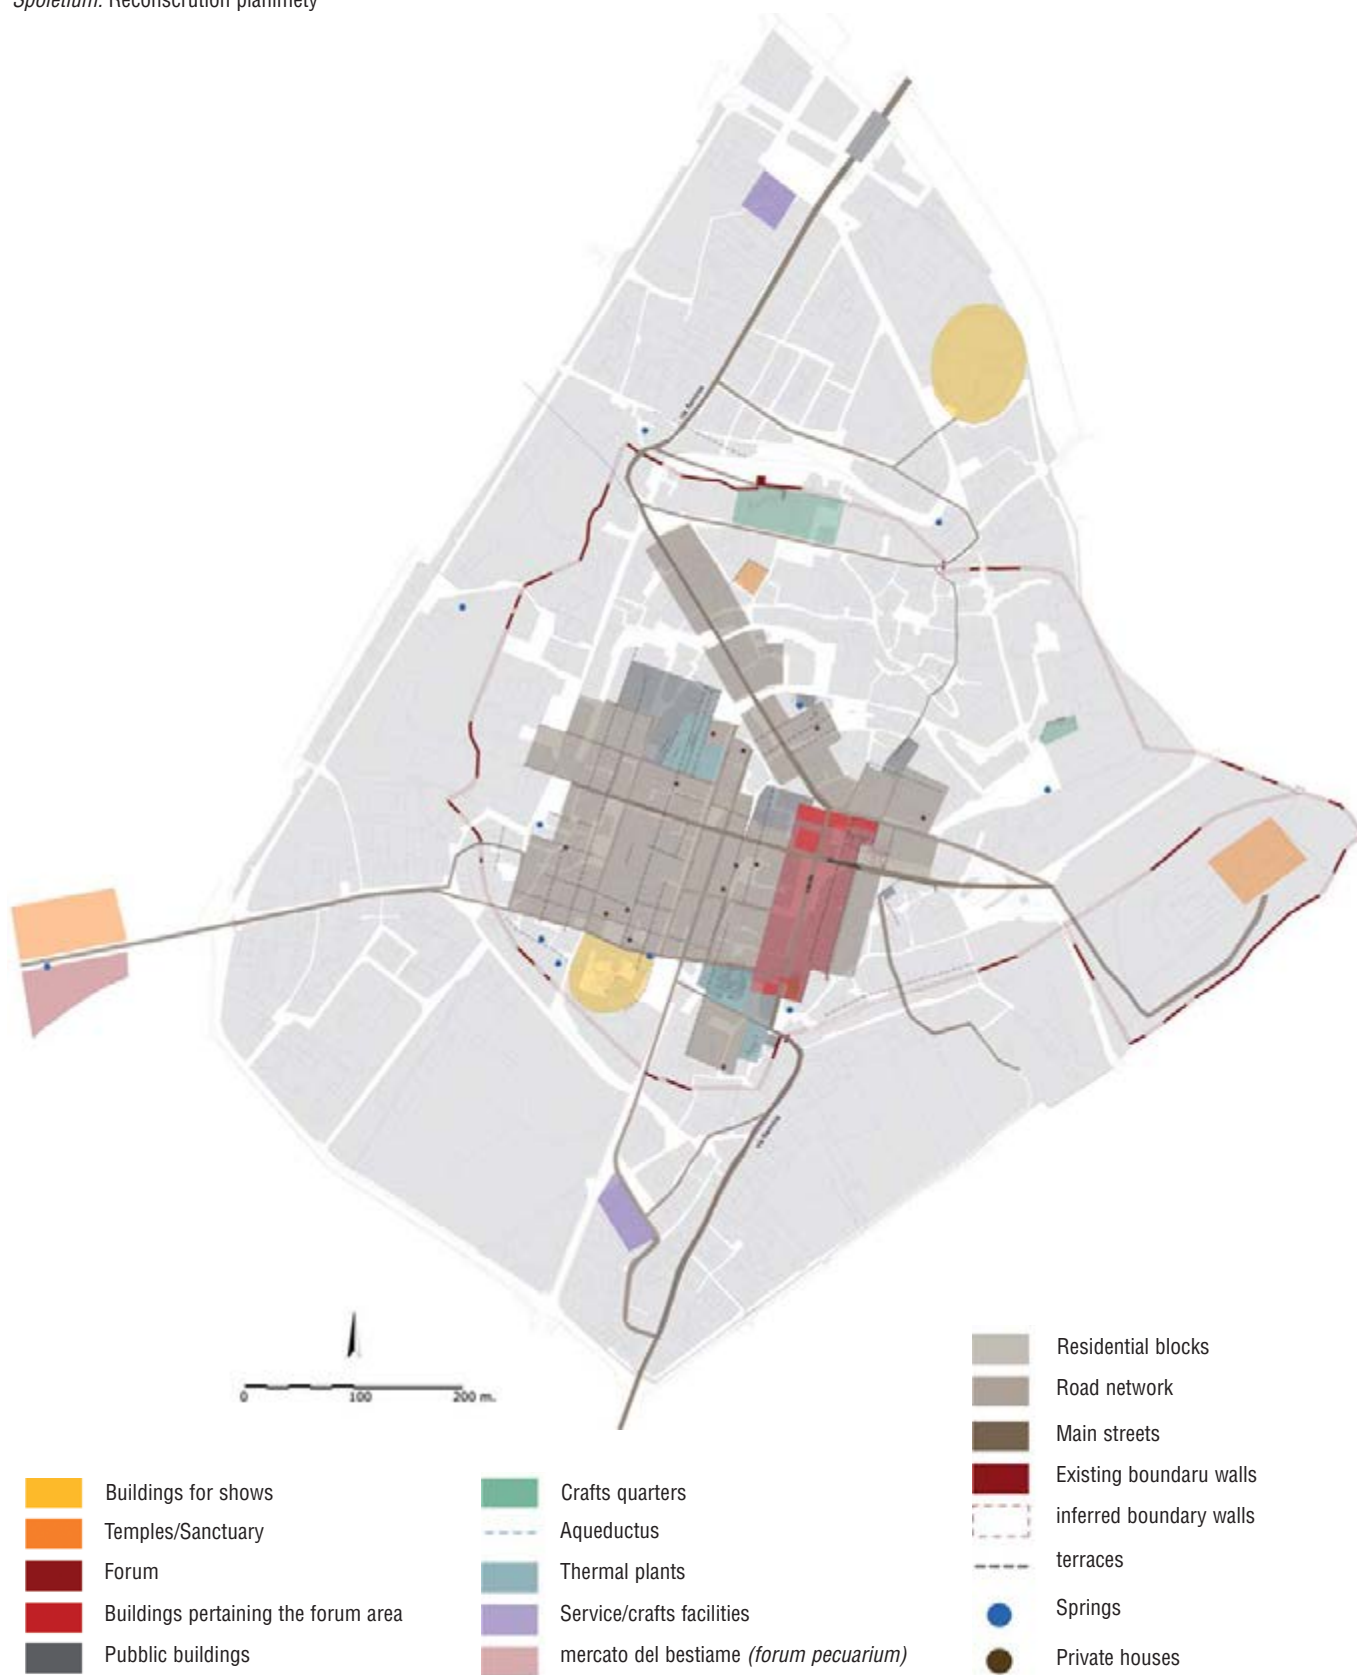

The Umbro settlement must have enjoyed a particularly flourishing period during the seventh and sixth centuries B.C., evidence for which is provided by the wealth of pottery and bronze burial art dating from that time, sometimes found in monumental tumuli having a diameter exceeding 20 m, unearthed primarily in the vast area of necropolises situated in the area of *Piazza d’Armi* beyond the course of the river *Tessino*.

From the fourth century B.C. onwards, tension experienced throughout central Italy as a result of Roman presence encouraged

Spoleto, view of historical centre

Spolegium. Reconsruction planimety

the inhabitants of the settlement to improve the hill's natural defences, constructing the first defence barriers in great blocks of irregularly-hewn stone, erected at the points most likely to be attacked.

Rome took control of the region nonetheless during the third century B.C. and in 241 B.C. founded a colony in Spoleto, governed by Latin law. Having become a stronghold for the Romans in their expansion towards the north, consolidated through the construction of the *Via Flaminia* (220 B.C.), the city assumed great importance in the control of internal central Italy, a role it continued to fulfil throughout history until the end of the nineteenth century.

With the founding of the Roman colony, the layout of the settlement was radically re-organised. Terraces on an impressive scale were cut out of the southern and western slopes of the hill which, together with the creation of a road system, led to the division of the settlement into regular blocks all roughly running from north to south (only the section above the forum seems to fall into a less regular-shaped grid, probably due to the more uneven lay of the land).

The *Forum* square was situated at the cross-roads between the main urban thoroughfares, the *decumanus* and the *cardo maximus*, the latter, corresponding with the urban section of the *Via Flaminia*,

cut through the square lengthways, linking up on the northern side with the ancient main road of the Umbro settlement. Defence was provided by means of a wall encompassing the entire settlement, built using great blocks of tightly-fitting polygonal stone and later further fortified using the construction technique of *opus quadratum*. Extensive underground piping fed the city with water from the Cortaccione springs.

Spoleto became a *municipium* in 90 BC and was transformed during the first century BC and especially during the Augustan Age, which saw the construction of prominent public buildings (the reconstruction of walls, the porticoed substruction of *Via dello Spagna*, the theatre, the archway in honour of *Drusus* and *Germanicus*, the *Capitolium* and the temple below the Church of Sant'Ansano, the so-called *Ponte Sanguinario*).

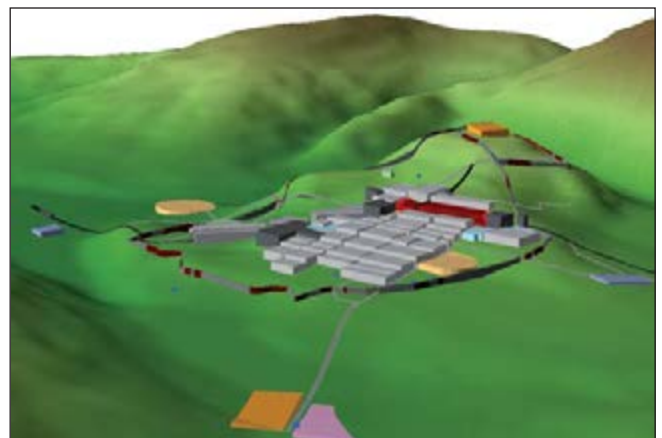

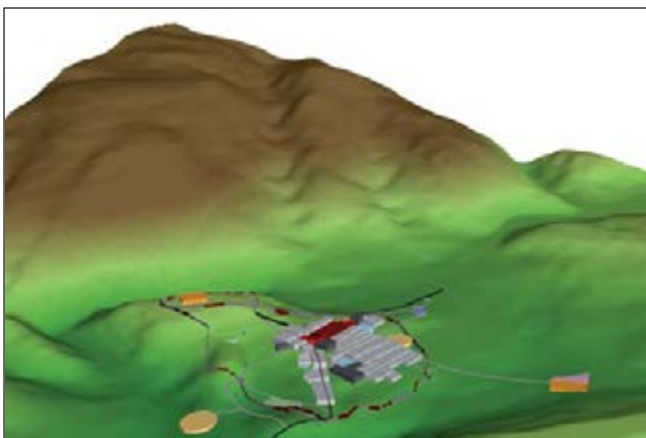

Close to the square, prestigious private dwellings were built, such as the *Casa Romana*, with its rich mosaics and stuccoes. In keeping with tradition, necropolises were situated along the roads leading out of the urban area and are well documented by numerous epitaphs.

During Roman times, the area now occupied by the Basilica of St. Salvatore, to the north of the city and at the feet of the hill known as "*Colle Ciciano*" or "*Luciano*" and cut through by the *Via Nursina*, was also used

for funereal purposes. This tradition ran without interruption from Late Antiquity up until the Early Middle Ages when the hill became an important centre of martyr worship, based on the *civitas* of Spoleto, of Longobard origin. Despite the fact that relatively little is still known about the city during the periods of Late Antiquity and the Early Middle Ages, finds from the most recent excavations, the result of restoration programmes following the earthquake of 1997, have allowed scholars to affirm the primary role played by Spoleto from the fourth century onwards, also due to renewed importance of the eastern branch of the *Via Flaminia*.

During the fourth century, considerable building works were undertaken involving the restoration of public buildings dating from the Roman age, most notably the theatre and the large public thermal baths. Between the end of the fourth and the beginning of the fifth century, written testimonies and the number of churches constructed outside the urban area are testament to the increasingly important role played by the Church and the considerable status of the bishops of Spoleto.

The city must also have occupied a position which was far from marginal within the framework of more long-distance relations: a significant indication of this is the fact

Roman Spoleto. 3D reconstruction

Spoleto, Roman *domus*

that, at some point during the third decade of the sixth century, the hermit monk, St. Isaac, came to Spoleto from Syria.

His presence at *Monteluco* promoted the spread of eastern eremitism towards *Ferentillo*, *Preci* and the valley area of *Valnerina* in general, a phenomenon which was later to form the *humus* underpinning St. Benedict's spiritual development and that of western monasticism.

As to the Ostrogoth period, *Cassiodorus* recalls the works of marshland reclamation carried out under Theodoric, whose palace is purported to have been situated on the large terrace of the archbishop's palace, despite the lack of archaeological evidence supporting the claim.

The presence of Ostrogoths in Spoleto was also a determining factor in the transformation of the amphitheatre into a fortress, as recorded by Procopius, in addition to works probably carried out on the Roman theatre, as suggested by the fact that the church later constructed on the site was dedicated to Saint Agatha.

HISTORY AND URBAN ORGANISATION DURING THE LONGOBARD AGE

The constitution of the Longobard Duchy of Spoleto, the work of Faroald, may date to a time shortly after the Longobards' arrival in Italy. Like the Duchy of Benevento, this dukedom in central Italy with its capital in Spoleto remained largely independent until 729 A.D. when it came under the rule of the Longobard King.

Recent studies would suggest that the Basilica of St. Salvatore, situated on the outskirts of the city, and the Clitunno Tempio, found along the *Via Flaminia* just a few kilometres to the north of Spoleto, both exceptional buildings and extraordinarily well preserved, are both associated with the period of Spoleto's independence; both buildings display strong signs of that predilection for prestigious architectural features encountered in all the other duchies, to the north and the south, an expression of the aspirations of the Longobard *élites*.

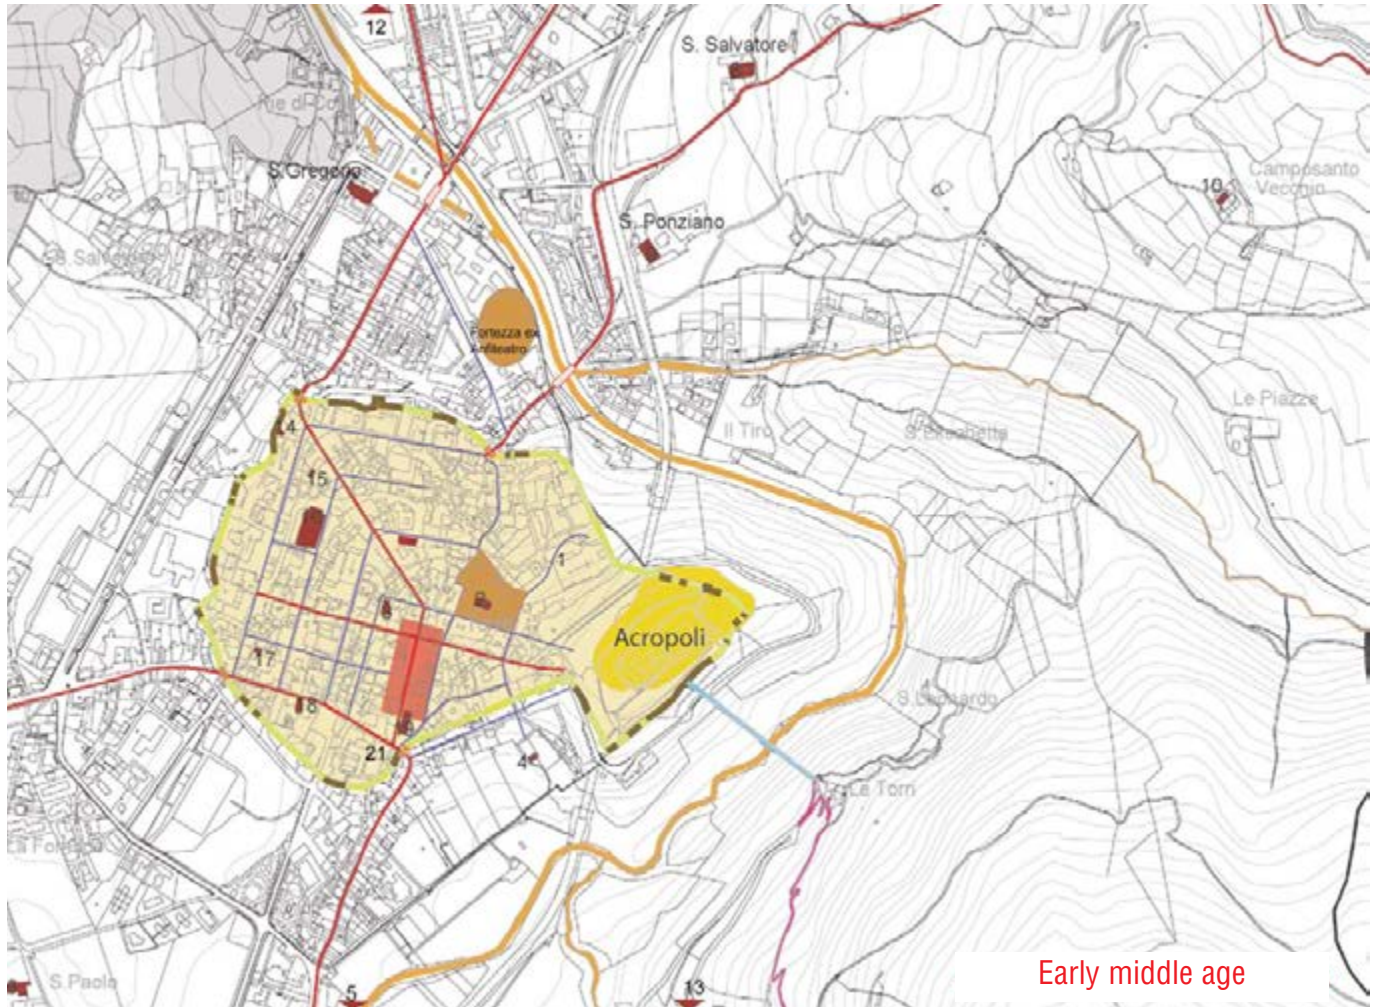

As to the city itself, our knowledge of urban organisation as well as public and residential architectural styles during the Longobard age is still in its early stages. Archaeological

excavations carried out as part of restoration programmes involving historic buildings have, nonetheless, recently brought to light evidence of undoubted significance which may allow a framework plan describing the urban layout of this Duchy capital to be identified.

First and foremost, in 2004 a series of rooms were discovered in the vicinity of the *forum* under the *Palazzo Mauri*, dating from the Roman era. Two rooms have to date been excavated, believed to have been part of a thermal bath complex. The first of these holds a semi-circular bath lined in crushed earthenware whilst the other room, square in shape and measuring 6 metres along each wall, features an exceptional mosaic floor covering with a central drainage point in marble, sculpted in bas-relief and depicting plant motifs. The mosaic decoration, edged with a plaited strand encompassing triangles and rosettes, comprises vine-shoots bursting forth from four centrally positioned baskets, developing into large, elegant spirals which enclose bunches of grapes and vine leaves; amongst the vine-shoots a number of different animals are depicted; deer, birds, a horse and a hare. Following the restoration work on the floor carried out in 2008, in the triangle in front of the entrance, hence in a favourable position for the visitor, a lamb is clearly visible, which undoubtedly points to a Christian spirit that is revealed by all the symbols of this depiction. In the baskets, there are buds of roses and lilies. The portrayal, rendered mainly in red and black on a white background, is embellished with mosaic tiles in blue, green and burgundy glass used for animals in general and the lamb in particular. White marble is used instead of limestone for some bunches and sectors of the plaited strand along the perimeter.

The mosaic and the bas-relief on the manhole recall similar works in Ravenna and in the figurative culture of Constantinople.

Palazzo Mauri. Floor mosaic, detail

The work's dating can be fixed at the end of Theodoric's age or around the half of the sixth century at the latest. Ancient conservation interventions that can be observed on the floors show it kept on being used in Longobard times. The work is of enormous interest since the quality of the figures depicted suggests it was commissioned by a person of extremely high social *status*, as well as vouching for the presence of highly skilled builders and craftsmen in the area. The thermal bath building may, therefore, have been re-floored upon the commission of the first Longobard dukes, raising its standard and bringing it into keeping with their residence, or possibly that of the diocese, bearing in mind the Christian connotations of the depiction, which might reasonably lead to its allocation as part of a baptistery. In the same area, in the vicinity of the Palazzo Fontana, impressive residential structures have also been brought to light, dating to the Roman period yet still in use until the late Longobard age as suggested by

the considerable quantity of pottery from the sixth and seventh centuries which have been found there, in addition to prestigious wall decorations featuring glass-tiled mosaics and marble slabs. The many tiles in vitreous paste, along with those done with glass scraps, crucible fragments and vitreous paste residues, show the presence of artisans' shops at the service of prestigious commissioning parties. The overall framework allows for clarifying the very rich cultural context that the Longobards met on their arrival to Spoleto. Such frame helps understanding their particular construction of the classical world and the peculiar architecture of Spoleto monuments. In the immediate vicinity of Palazzo Mauri, on the southern border of the *Forum*, there is a temple on a high podium that dates back to Augustus, precociously turned into a church dedicated to Sant'Ansano, a martyr from Siena. The temple was turned into a church before the Longobard phase, as evidenced by excavations during the 1950s that brought

back to light the whole base of the temple. This early transformation of a pagan temple into Christian church, which occurred with little adaptation, on a building that was still very well preserved, may have contributed to orient the architectural choices in the Longobard period, in the peculiar *facies* of Spoleto. Singularly, the podium of the temple under the church of Sant'Ansano is crossed by two transversal, flanked spaces, put underneath the pronaos and is in relation with water, as it contains a previously existing well. This very same architectural solution, in this case limited to a single space, can also be observed in the Clitunno Tempietto, which also rose in relation to the water of the stream below.

The whole southern sector of the Roman settlement gains particular importance during the Early Middle Ages, in particular around the streets connecting the theatre to where the *Via Flaminia* crossed the *cardo maximus*. Such route corresponds to the southernmost among the minor *decumani*

and not only the great Early Middle Ages complex under *Palazzo Fontana* and *Palazzo Mauri* used to gravitate around it, but also the former churches of Sant'Apollinare and Sant'Agata, a few meters away from each other, whose respective titling reveal the commissioning parties' origin, respectively

the Ostrogoths and the Longobards. The original buildings now have completely disappeared, their place being taken by later buildings. The Church of Sant'Agata was erected above the structures of the theatre's stage area; of the Early Middle Ages' building, some interesting crutch capitals

remain, on display at the *Museo del Ducato di Spoleto*. The attractiveness of this axis continues across the centuries and leads to the overturning of the orientation of the Church of Sant'Ansano, when it was rebuilt during the Romanesque period. The identification in this area of the diocese

Palazzo Pianciani. Mosaic flooring and details

explains the growing importance of this part of the town, where the *platea magna* becomes the privileged stage for all public ceremonies and processions. It must be highlighted that in Spoleto, the denomination of *via magna* was given to the urban route of the *Via Flaminia*, as evidenced by the

denomination of the church of San Sabino *de via magna*, given to a church, now demolished, that used to rise along the *Via Flaminia*, in the part which is now called *Via Salara Vecchia*, close to the northern entrance to the town.

Along the crossing axis of the *Via Flaminia*

inside the town, further archaeological finds made in 2005 close to *Palazzo Pianciani* have allowed scholars to set out a possible framework of events extending into the darkest centuries (i.e. the seventh and tenth centuries). Beneath the Palazzo, a baptistry has been unearthed featuring a mosaic floor covering attributed with the eighth century, once again constructed over rooms pertaining to a thermal bath from the Roman period. The mosaic features a geometric design, encompassing two square decorative panels, one of which is illustrated and polychromatic. The scene depicted is clearly symbolic of the baptism rite: two deer and two doves on the borders of a *kantharos* out of which rivulets of water run, quenching the thirst of the deer and watering two berry-laden shoots on which the doves are feeding, the central section

depicts a peacock with its tail feathers open, symbolising the renewal of the soul through the rite of baptism.

The existence of a Longobard quarter in the northern section of the city was proposed some time ago, close to the amphitheatre that had previously been remodelled by Totila for military-defence purposes. Close to *Palazzo Mauri* and Sant'Ansano, there is the ruined Church of San Marco *in pomeriis*, where fragments of a mosaic dating back to Theodoric's age have been found.

As for the immediate suburbs of the city, and especially the area of *Colle Ciciano*, evidence of Longobard presence has been found in the various sanctuaries scattered throughout the area; in addition to the Basilica of San Salvatore – which Pani Ermini claims may, “after an initial funereal or martyrial purpose, have fulfilled a religious function within the Duchy”, - in the

sanctuary of St. Sabino, a cult particularly dear to leaders of Longobard mercenary companies; in the Church of St. Michael the Archangel, fulfilling an ecclesia baptismalis function; and in the Cemetery of St. Ponziano, which held the emblematic funeral stone of the Longobard *Agipertus*.

In San Sabino, archaeological excavations brought back to light a *ceometerium* sector with about 40 investigated graves. The oldest ones dating back to the fourth and fifth centuries are “cappuccina” graves, protected by tile coverings and containing terracotta sarcophaguses, which are frequently found in the early Christian contexts of San Gregorio and Santi Apostoli, in the town's suburbs. On them, tombs from the following phase are located, which appear to be simple unprotected holes in the ground. The findings of coins that appear to belong to the so-called Vandalic series, allows for dating these depositions to the

Longobard period, thus testifying to the passage and transformation from the Roman period to the Longobard one.

In 2009, Longobard tombs were also found in *Cortaccione* during the construction of the *Strada delle Tre Valli*. These “cassone” tombs were built with reused plastered square stones and slabs and contained more than one person. The pottery, especially oil-lamps found inside and outside the graves, allows for dating between the sixth and eighth centuries. In this case as well, the graves insist on a previously existing funerary site and are not far away from a country house in Eggi, which was the object of investigations back in 2001 and that dates to the sixth and seventh centuries. The great interest of this manufacturing plant lies in the ovens that were found there, proving that in the first centuries of the Longobard presence Spoleto was a manufacturing area for pottery.

National Museum of the Duchy. Hall VI, architectural finds

National Museum of the Duchy. Hall V, Longobard grave goods

The historical framework for the events affecting the territory that starting from the second half of the fourth century is the Duchy of Spoleto is identified by the *Museo del Ducato di Spoleto*: from territorial organ-

isation in the fourth century and Christian community settlements to monasticism and the establishment of the Longobard Duchy; from annexation of the Duchy's territories to its transformation into a province of the

Church. These events are presented through finds, original figurative texts and illustrative tools whose main function is to establish a permanent connection between the museal itinerary and the context in which the material on display was produced or originally located. Halls 5 and 6 describe the period when the Longobard dominion was turned into a Duchy; in the former, part of the funerary outfits coming from the *Portone* necropolis in Nocera Umbra, the largest Longobard necropolis discovered to date along with that in Castel Trosino (Ascoli Piceno), in the territory of the Duchy of Spoleto, can be seen. The oldest graves of this necropolis belong to the first generation of Longobards, who came from Pannonia and settled in central Italy; the outfits' characteristics are testament to a settlement of a nucleus directly related to

Rocca Albornoziana, housing the National Museum of the Duchy. Interior court-yard

territorial conquest and exertion of power. In the second hall, sculpted architectural elements (the aforementioned capitols, a fencing slab and a small pier fragment) from Spoleto are displayed; the sculptural finds represent an important evidence of the Early Middle Ages building phases of cult sites which are otherwise not documented, and of the presence of local Longobard marble working shops.

THE SITE

The proposed new World Heritage site is the Basilica of San Salvatore, an important martyrial church for the ethnic Longobard *civitas* of Spoleto.

The church is a masterpiece of religious architecture, a unique building from both a

structural and an aesthetic point of view which is original due to the type and quality of the architectural sculpture as well as the reuse of *spolia*. Its very uniqueness had been a magnet for great architects and artists since the Renaissance.

The church of San Salvatore is an early architectural evidence of the Longobard period which expressed the ideologies of the power *élites* and became a model for wide range religious architecture in the Middle Ages. It bears witness to an extraordinary use of old *spolia* with new architectural bearings and reliefs in imitation of the old ones and combined in such an original and unprecedented *unicum* that the critics had long discussed the chronology of the monument: old temple or Palaeochristian church? Early Medieval or Romanesque building? However it is a fact that its

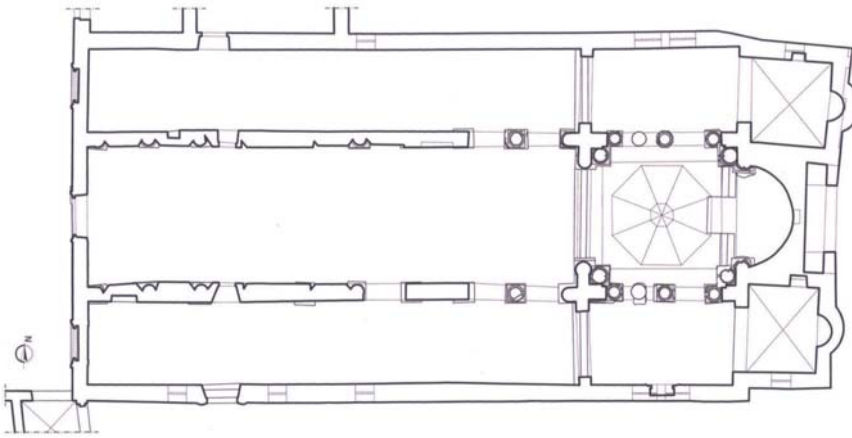

sculptural (architectural) apparatus –and above all the façade– had been one of the benchmarks for the Romanesque style as well as for a number of architectural styles of the Renaissance and later centuries.

The Longobard building is the original fruit of different trends combined: Roman-Hellenistic, Byzantine, Longobard, local. Therefore the Church of San Salvatore was the early incarnation of cultural pluralism, which was the hallmark of the early Middle Ages in all its expressions and would become the underlying principle of medieval Europe. From a religious point of view the church is a relevant evidence of the Longobards' conversion to Christianity and the exchange between immigrant power groups and the local religious authority, in that case monasticism of Eastern- Syrian origin. Moreover, the church emblematically

Basilica of San Salvatore

San Salvatore, planimetry (by E. Rapetti 2001)

San Salvatore, nave

expresses the character of the Longobards' culture in Italy, particularly the leaning towards the use of local, Eastern-monastic or Roman traditions and workers to build unique products unmatched in later periods. Its composite structures and decorations do not prevail over the uniqueness and organic unity of this place of worship which established itself as a rare evidence of a society which, in its cultural specificity, was bound to disappear with the arrival of the Carolingians (with the exception of the Duchy of Benevento). The Longobards' capability to acquire and reformulate structures and stylistic features of the cultures, with which they more or less directly dealt, also enabled the transmission of aspects peculiar to local traditions, which otherwise would get lost. For example, a number of marks peculiar to the church of San Salvatore (the Tempietto included) namely the taste of the architectural decoration of the façade, the type of themes used and some architectural solutions alien to the Western tradition (*pastophors*) are all signs of the influence of the Syrian monastic culture.

The church of San Salvatore and the Tempietto were popular in later centuries as well. In the Renaissance, indeed, they almost became object of interest and study. The first evidence known is still a drawing by Francesco di Giorgio from Siena dating back to the 1470s, followed by the drawings of the Tempietto and an incomplete drawing of the jamb including a part of the lintel of the main and most studied door of San Salvatore by Antonio di Sangallo the Younger. The church of San Salvatore was also the source of inspiration of Michele Sanmicheli who produced a number of works in Verona including the front door of his house, the door of Pellegrini's Chapel in San Bernardino in 1536-37, the side openings of Porta Palio, the door of the Madonna della Campagna). In 16th century Sebastiano Serlio, in its architectural treatise, book 4,

provided a simplified drawing of the main portal, defining it as part of a heathen temple. The same portal was reproduced by Andrea Palladio at first in a scrupulous drawing now kept in the Royal Institute of British Architects in London, and later in the building of the door, anterefectory and interior cornices of the refectory of San Giorgio Maggiore in Venice, and the northern side door of the Dome of Vicenza. San Salvatore is a three-nave basilica with a tripartite, raised presbytery ending with a semi-circular apse and two ambulatories with apsidioles on the sides. The fabric of the building was originally characterised by two architraved colonnades of Doric order, eight reused columns and two semi-columns leaning against the walls that continued in the presbytery with columns of Corinthian order, in conformity with the great western early Christian architectures, from the first San Pietro to Santa Maria Maggiore. The original layout has now significantly changed owing to interventions carried out in the Middle Ages, which led to the suppression of the Doric entablature and the construction of arches. A new row of supports was then created following this pattern: two columns – a pier – a column – a pier – a column.

From the 1946 excavations by Ward Perkins, it resulted that the building, in its initial phase, should have shown a rectangular plan and only later the apse and the chapels were added to the presbytery. The investigations clarified the context of the transversal foundations of the façade, the triumphal arch and of the apse's cord, as well as of the stylobates of the nave and the presbytery, whilst they highlighted the later insertion of the foundations of the corner columns of the presbytery. The central canopy also refers to this second phase; it's made of four big columns of Ionic order, with entablature and *soprassestoes*, originally sustaining a cross vault instead of the current dome.

Capitols and columns of the presbytery are made of re-used materials, whereas the *dies* of *soprassestoes* were especially created to support the cross vault; similarly, plinths and skirts beneath the Attic bases were created with reused materials so that capitols could achieve the same height as the supports of the triumphal arch. On each side of the apse there are two ambulatories with apsidioles, which today are actual chapels. Initially, however, the

apsidioles functioned as a *Pastophorium*, or as the *Prothesis* and *Diaconicon* of Syriac basilicas of the fifth and sixth centuries (see the Church of Zenobia), ancillary spaces that held the baptistery and the relics of martyrs. On the exterior, the presbytery is enclosed by a straight wall. Some radical rearrangement interventions in the presbytery area were a turning point in the history of the building and aligned it with the most popular architectures in the Aegean

San Salvatore, presbytery

Left side of presbytery

Chapel on right side

area of the Mediterranean Sea starting from the second half of the sixth century, as shown by the “*extra muros*” basilica of Korykos in Cilicia or the Church of Santa Tecla in Meriammlik, whereas the three-cell layout has a Syriac origin like the peculiar tower-shaped structure that defines and

San Salvatore, dome on the presbytery

tops the central portion of the presbytery. It can be found, for instance, in the Convent Church of Alahan Kilisè with its cross tower and, in general, in buildings containing the relics of martyrs as a specific architectural solution opposed to the Byzantine tradition of domed basilicas.

Today, the original architectural ornamentation partly survives in good state of conservation, also thanks to recent restoration works carried out at the end of the 109s. The entablature with Doric frieze and Corinthian cornice that run above the epistyle is still partly visible in the presbytery together with a part of the overlying decoration system with false *matroneum* delimited by small square

piers crowned by Ionic-like capitals, probably decorated with stuccoes and paintings. Traces of stuccoes still survive in the architrave of the main portal.

Certain elements in the pictorial ornamentation are preserved in the apse. On the central niche is a bejewelled cross from whose arms small chains with the letters A and Ω hang -entirely similar to those on the apse of the Clitunno Tempietto- and flanked by marble panels enclosing *clipei*.

A source dating back to the tenth century also mentions the presence of mosaics.

The building's walls are made of coloured limestone blocks and inserted bricks, whilst the upper portions of the façade and apse are made of large blocks of Travertine limestone ("sponga" stone).

San Salvatore, apse. Fresco

San Salvatore, presbytery. Details of architectural elements on the left side

The marble encrustations of the façade and the complex as a whole, resulting from the re-use of *spolia*, are particularly noteworthy. Part of the ornamentation is missing from the façade, which was originally subdivided by pilaster strips that rested on a horizontal cornice, dividing the elevation into two stories topped by a pediment. Of that decoration, three portals survive, topped by an architrave. A classicising frame surrounds the doorways while the wide entablature is topped by a protruding cornice, under which two brackets curl up in volutes.

The three windows are enclosed by small fluted piers, raised on high pedestals and with foliate capitals. Simple triangular pediments top the lateral windows, while a round-headed arch with a remarkable cornice surmounts the central window. The cornice is partly carved out of the stone facing that must have originally extended across the entire upper story of the façade.

San Salvatore, survey (from Jäggi, 1998)

San Salvatore, external view from piazza Salmi

San Salvatore, façade

San Salvatore, façade. Detail of the windows

On the three doorframes is the same motif of acanthus foliate friezes with rosettes, rosebuds and leaves that emerge from a central stem on which the foliate cross is implanted. The sequence of fronds is enclosed into a cornice with a “leaf and counter-leaf” pattern that curves laterally. The resulting space between the cornices and the end of the marble slab is filled by half a palmette. On the central window, the crowning of the arch is a motif with short rays in bas-relief; at the centre, a cross takes the place of one of the rays, and the ends of the halo of rays are enclosed by two half palmettes similar to those in the portal friezes. The sculpted parts of the façade — except for the posts and the architrave of the main portal, the small pediments of the lateral windows and the stringcourses, which are all in italic marble—are carved out of a very compact white limestone.

In the course of the restoration campaign of 1997, it was observed that several of the sculpted elements were carved out of blocks pilfered from buildings of classical antiquity: on the ledge of the left window, for example, runs the inscription “*AVO MATRI*,” the architrave of the main portal, decorated in the visible part by a “diplex,” was part of a frame that was used as a doorsill.

The frieze was sculpted on the great monolithic slab of a Roman tomb dating to the first century A.D. The backside of the frieze became visible when some parts of the entablature were dismantled: coffers that include rosettes ornament it, while the central portrait of the deceased has been chipped away. The same study campaign has shown how the lack of architectural elements in the upper story of the façade (pilasters and capitals) is not due to a destructive event, as some scholars have suggested, but rather to the interruption of construction work: the bases and cornices that are still in situ, in fact, do not bear traces of manipulation—the same can be said of the missing doorposts.

San Salvatore, façade. Portals

Main portal architrave detail

Finally, the façade must have been designed with a portico in front of it: it was never built, but sculpted brackets intended for the portico are still in place. A peculiar characteristic of San Salvatore is the consistent presence of *spolia*, which were

either reused as found -for example, in the case of columns, bases, capitals, or the interior architrave -or radically manipulated especially in the decorative elements of the façade, the cornice of the presbytery and in the dies that are the dome imposts.

Scholars have rightly underlined the evident artistic intentionality in the reuse of spolia. That is an indication that links the extraordinary master marble workers of San Salvatore with those of the Clitunno Tempietto. Also the presence of especially

San Salvatore, façade. Detail of the main portal architrave

made architectural relief formally consistent with the style of reuse – such as the bracket cornice above the Doric frieze in the presbytery points to the works in the aedicule of the Tempietto.

CRITICAL ANALYSIS

The monument, owing to its huge and extraordinary shapes, has always drawn the attention of scholars and experts. Starting from the end of the nineteenth century, but especially during the twentieth century, an intense debate took place amongst very renowned Italian and foreign scholars. Salmi and Deichmann were the first to challenge Giovanbattista De Rossi and Giuseppe Sordini and suggest vastly differing dates (the former maintained the end of the fourth century for the first building stage, the latter mentioned the second half of the eighth century). At any rate, the two scholars defined the topics to be discussed: was it a Roman building or a

San Salvatore, survey of the Church's back
(G. Nasoni R. De Sio / Terni)

San Salvatore, presbytery. Eternal wall

revival of Late Classicism? The goal was to lay out a credible theory to explain the unquestionable morphological and iconographic heterogeneity of this complex starting from the shared concept of “classicism in ornamentation”, according to the words of Deichmann, who for this very reason pointed to “Carolingian Renaissance and similar expressions in Rome”, although he stressed that “several considerations about architecture – which is midway between the Ancient and Medieval styles – lead to the conclusion that the building layout is by far more decisive than its ornamentation”. Salmi, in his monograph “The Basilica of San Salvatore”, as well as in several studies that followed, analysed the monument as a whole, thus avoiding dangerous prejudicial positions when it

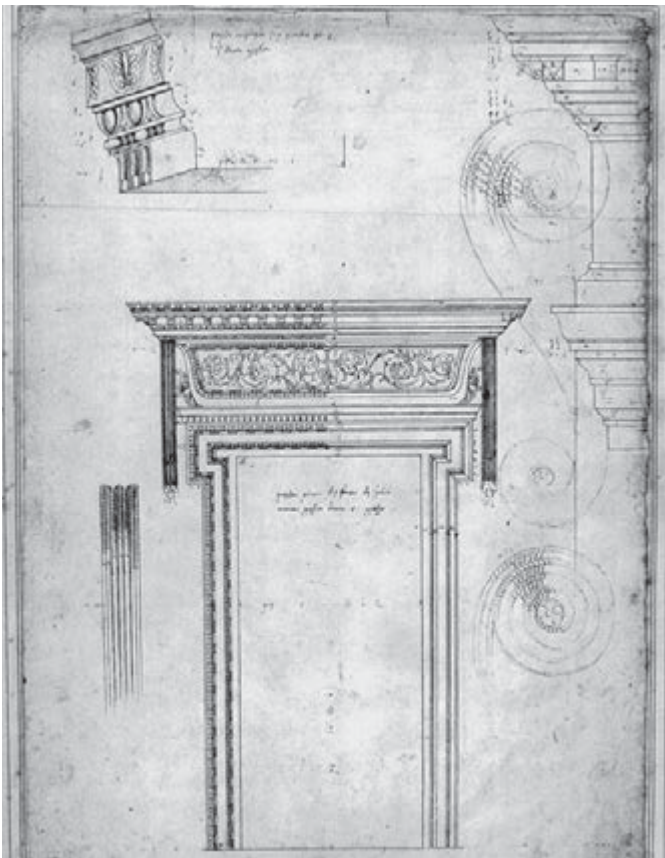

came to attribute a different weight with structures and decoration (in both directions). His compared analysis showed a first stage dating back to the end of the fourth century in line with the traditional approach maintaining an early Christian origin. This line is first and foremost supported by Sansi (p. 224), when he expressly stated that he agreed with Campello and Serafini on the “beginning of the Constantine age”. Moreover, Sansi also accepted the traditional idea of the existence of a previous pagan site devoted to Igea (the so-called temple of Concordia according to others). The same line was followed by Hubsch, whilst Ricci was favourable to the idea of a civil basilica.

Meanwhile, another group of scholars believed that the Church of San Salvatore was the structural reuse of a pagan temple, a transformation that, according to Giovan

Battista De Rossi, would have occurred in the Theodosia’s age (end of the fourth century) or in the sixth century according to Guardabassi and Cattaneo. Mothes maintained that the original temple dated back to the end of the fourth and fifth centuries with reference to the shapes of the church, but it had no apse. Following the damage suffered during the Ostrogoth war, its façade would have been restored (sixth century). It would have been transformed into a church in the ninth century. Grisar stated that the building dated back to the eleventh century and the sculptures on the façade to the Romanesque age (like those of the Clitunno). This idea was shared by Adolfo Venturi and Gavini. However, according to most of the scholars, at least until the end of the last century, the origin was early Christian. Rivoira, Hoppenstedt, Toesca, Salmi, Ducati, Haseloff and

Pietrangeli, like Salmi, maintained that the building was “partly a remake of a more ancient basilica, whose façade, presbytery and beginning of naves [had] remained” (p. 76); Cecchelli (fifth century) maintained that the church was built at the same time as the Clitunno Tempietto.

The survey made by Deichmann and published in 1946 put forward a new interpretation. Mainly starting from structural considerations, the German scholar vigorously maintained the idea of a “Barbaric” origin (eighth and ninth centuries): from the plan to wall structures, everything would have pointed to Late Merovingian and Carolingian environments. A turning point in cognitive investigations was the investigation performed by Perkins in 1946 (published in 1949) in the presbytery area. He ascertained that the façade, naves and presbytery belonged to

San Salvatore, drawing of the main portal (Andrea Palladio)

San Salvatore, drawing of the presbytery (Francesco di Giorgio Martini)

the same construction stage, whereas the apse, the two side apsidioles and angular dome-supporting columns were subsequent additions, although they had been added immediately after, as stressed by Salmi. Perkins did not put forward any proposal in terms of dates. The idea of Deichmann was strongly opposed by Salmi

in his monograph published in 1951, which still today is an unquestionable reference point for a proper philological reconstruction of the monument. The scholar reviewed very carefully all known data from previous surveys, excavations, restoration works that he had personally directed in the years 1919-1921, when he was the Inspector of

Monuments in Umbria, for the consolidation of the presbytery, reopening of original windows in the two side apsidioles, removal of filling in one of the bay and replacement of fragments on the bracket of the middle door on the façade (recomposed by the Opificio delle Pietre Dure in Florence). In this way, he had the opportunity to challenge Deichmann on some crucial aspects of their *querelle* such as on the morphology of the two apsidioles that the German scholar regarded as original, but had actually been built in the twelfth and thirteenth centuries at the time when the walls that separated the apsidioles from the room were demolished to obtain the two wide arches still in place. The same holds true for the theory about the architectural decoration and its supposed Longobard origin that the German scholar used to demonstrate that the dukes of Spoleto were the commissioning party of the Basilica of San Salvatore and the Tempietto in the second half of the eighth century.

The Longobard commissioning party for both the monuments of Spoleto was then accepted also by Vignali and Verzone, whereas Torp, together with Salmi, suggests a much later date and attributes its partial remake with a Longobard intervention, somewhere in the eighth century.

Carola Jäggi has based her more recent studies along the lines of Deichmann (Longobard commissioning party), suggesting that the various parts of the building were built simultaneously, dating its construction to between the end of the seventh century and the first half of the eighth century, setting it within the context of developments experienced as part of the Liutprand revival in northern Italy.

The scholar also claims that interpretable reconstructions in the naves (such as the plugging on the intercolumniations) may be dated back to the Romanesque era.

San Salvatore, interior

CAMPELLO SUL CLITUNNO

THE CLITUNNO TEMPIETTO

"Have you ever seen the Clitunno Springs? ... I saw them recently and I regret not going there before. ... there stands the rather ancient and venerable sanctuary. Clitunno is also there..."

This is how Pliny the Younger describes in a letter the place where the Clitunno Tempietto stands.

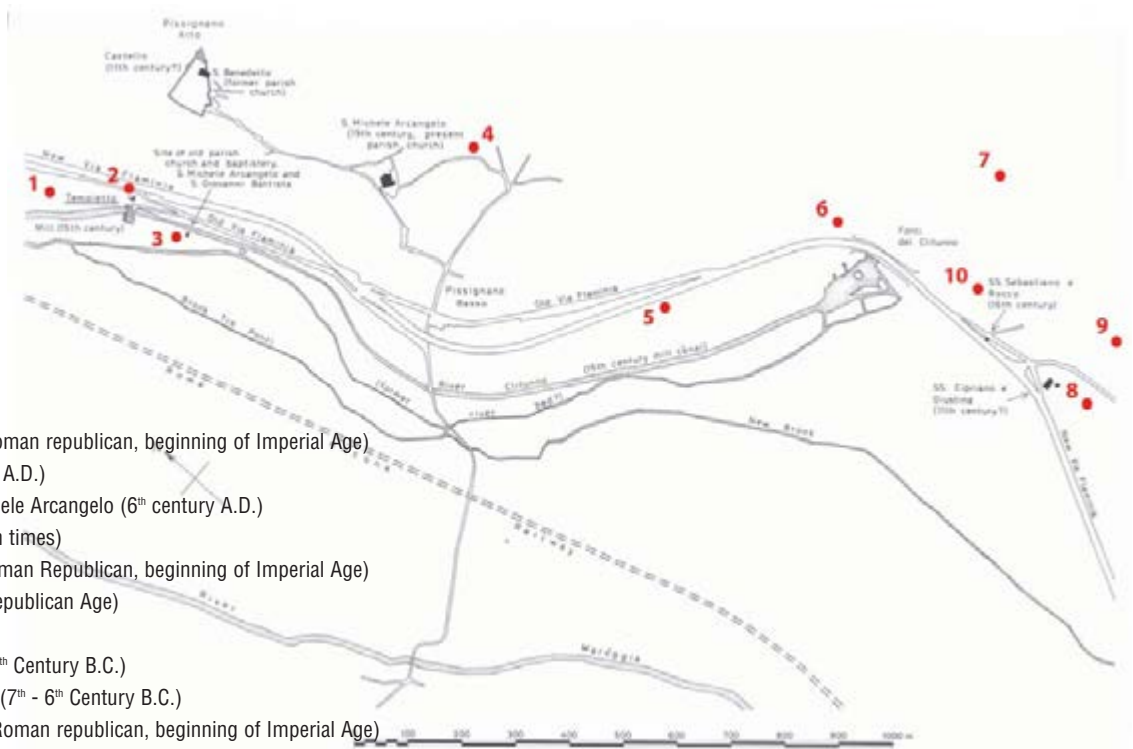

THE CAMPELLO TERRITORY BEFORE THE LONGOBARDS

Since antiquity, the valley of the Clitunno river was marked by an articulated road system focusing on trans-alpine paths, and on trajectories along the alluvial plains and waterways. Writing of the Clitunno, Pliny the Younger speaks of a river flowing along a slight incline, so wide that two boats could

travel side by side (Plinio, *Epist.* VIII, 8). It is well known, in fact, that small boats descended along the river all the way to the Tiber, going by the municipality of Mevania (Plinio, *Epist.* VIII, 8; and Strabo V, 10). Some sources also mention the existence of a lake or pond, the *lacus Clitumnus*. The area morphology favored the implementation of a plan under Augustus to transform the valley into an important worship center, while at the same time exploiting its agricultural potential. The proximity to the *Via Flaminia*, the consular road, contributed to the development of the region. According to the *Burdigalense itinerarium* (333 A.C.) the *mutatio sacraria* was placed eight miles from *Spoletium* and at four from *Trebiae*, thus exactly corresponding to the small center of Piè Beroide¹. Here forked the road leading to the *sacella* of the *lacus Clitumnus*—a path about eleven kilometers long, connecting several traces of ancient roman interventions. Pliny confirms that the

sources of the Clitunno, previously under the jurisdiction of *Spoletium*, were donated to the municipality of *Hispellum*, as an extraterritorial holding.

It was probably concurrently to that transfer that the surrounding district was reclaimed and centuriated, as is suggested by the orientation of the centuriation of Campello, still identifiable south of the sources, corresponding to that of *Hispellum*. Some of the best known latin writers—Virgil, Propertius, Statius, Juvenal, Claudianus—recall the therapeutic properties of the water of Clitunno and related cults; the *sacella* placed along the river; and the beauty of the landscape. In the area there also existed a sacred forest that, according to injunctions spelled out in an epigraph dating back to the 3rd century B.C. now in the 'Museo Civico' of Spoleto, could neither be touched, nor inhabited. From that same area came the "white" oxen used in Rome for ritual sacrifices on the temple of the Capitoline Jove. A

The Clitunno springs

bridge marked the confine between the sacred and the profane area; its memory is perhaps preserved in the toponym Santa Maria di Ponte.

Literary sources provide ample testimony concerning the numerous sacred buildings on the area, of which material traces do not survive except in *spolia*—funerary inscriptions and marbles, for example—reused in the Clitunno Tempietto as well as in the nearby buildings of Pieve di S. Angelo and in the Baptistery of S. Giovanni. Undoubtedly, by the second half of the fifth century, the whole area of the Clitunno could be found lying semi-abandoned, covered by a thick layer of alluvial detritus. It is therefore probable that the massive intervention to reclaim the land and render it suitable to farming, carried out under Theodoric and well documented for the district of *Spoletium*, extended to the area of the Clitunno as well. According to a tradition that was consolidated between the 17th and

the 18th century, the scarcity of water in the river was the consequence of at least two earthquakes, mentioned in the writings of *Ammianus Marcellinus* and *Nicephorus*.

THE TERRITORY OF CAMPELLO AFTER THE ARRIVAL OF THE LONGOBARDS

The pattern of inhabitation in the Early Middle Ages is difficult to trace, as is often the case given the lack of both archaeological and literary documentation. Other than the Tempietto, only isolated tracts of wall survive, mostly incorporated in later buildings. An example is the parish church of Sant'Angelo *in Capite*, whose walls are still partly visible, now incorporated in a modern building near the Tempietto. Fausti claims that there was also a Baptistery of S. Giovanni in the vicinity—both the parish church and the baptistery were probably longobard buildings, contemporary to the Tempietto. The presence of plebeian

structures indicates that religious authorities (the diocese and the bishop) reorganized the administration of the territory in a transition period—that which goes from the end of the roman villas to the definitive concentration of the population in elevated places. Significant in this respect is the case of the Castle of Pissignano, a clear example of the pattern of foundation of castles along an ancient *pagus*, probably emerging due to the presence of the renowned thermal baths of the *Hispellates*—whence, perhaps, the toponym of Pissignano derived.

THE SITE

The site for which we are requesting inscription on the World Heritage List is the Clitunno Tempietto and the ancient system of land and water routes that surrounds it. The Tempietto represents a masterpiece of religious and commemorative architecture, destination of pilgrimages (see graffiti), a unique construction in terms of structure, decoration, and countryside, constituting a perfect synthesis between the construction and natural environment (Clitunno and the *lucus sacro*). The wealth of architectural sculpting is exceptional and unique and uses *spolia* and new works in a completely extraordinary harmonious way that has inspired international artists and intellectuals

since Renaissance times. “The Clitunno Tempietto is a monument that is as enigmatic as it is fascinating, and which still has not achieved a specific artistic and chronologic identification”. Thus, Valentino Pace in his recent contribution on longobard art in Umbria and Campania in the context of the 16th International Congress of the Fondazione CISAM titled ‘I longobardi dei ducati di Spoleto e Benevento’ [the Longobards in the Duchies of Spoleto and Benevento]. Several years have, in fact, gone by since Mario Salmi assigned the Tempietto to the early Christian period and Deichmann suggested instead the dawn of the Carolingian age. More recent studies by Judson Hemerick and Carola Jäggi have circumscribed the chronology to the age of

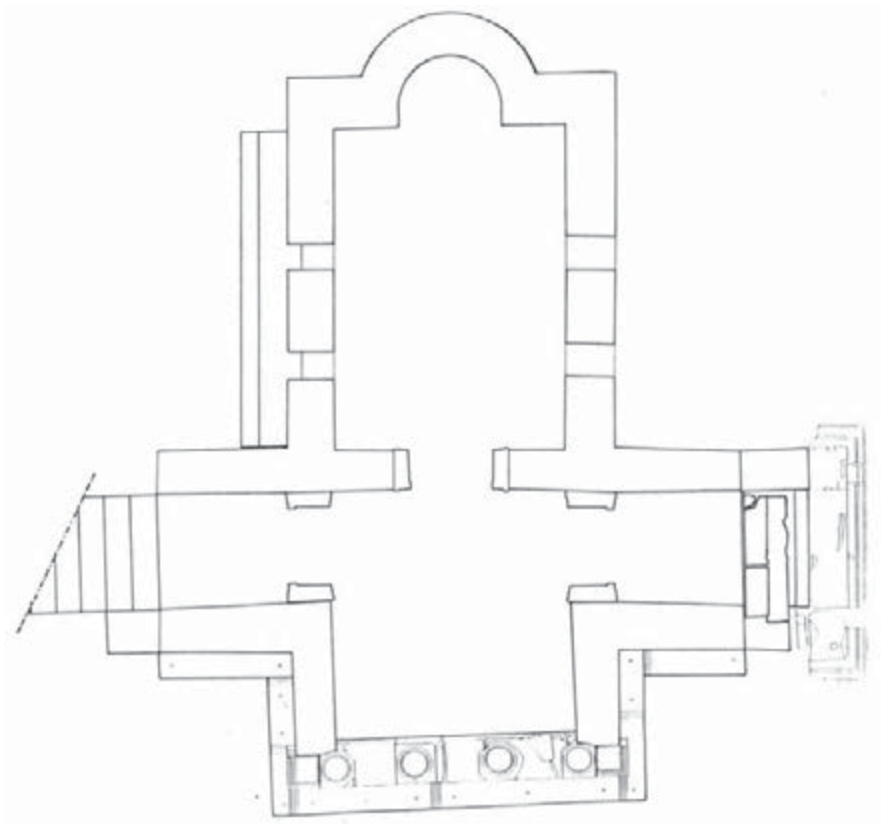

the Longobards, with dating oscillating from the early 7th (Jäggi) to the full-blown 8th century (Hemerick).

Was the Tempietto a reliquary-monument, as Pace proposes, or a funerary chapel? The morphologic eccentricity of the building has given rise to various interpretations concerning its original purpose. The small building looks like a small temple *in antis*, on a high podium, built in the course of at least two building campaigns that closely followed upon each other. Originally, it must have been a single room covered by a barrel vault, now the cella of the temple. An ionic frame, pilfered from an ancient building, surrounds a door on the west wall. Five camber windows pierce the lateral walls,

The Clitunno Tempietto in a view from Clitunno river

Planimetry of the Tempietto

and a small terrace gave access to the room. Subsequently, the terrace was enlarged to form a vestibule, and two lateral porticoes were raised on a high podium with a base and cornice. At the centre of the podium is an aperture with a Corinthian colonnade *in antis*, topped by ionic entablature and a pediment. Access to the terrace occurred through two flights of stairs on the side of each portico, reproducing on a smaller scale the architecture of the main building, now the only structure surviving in situ. The second building phase also included construction of the apse: the back wall was demolished to raise a new one equipped with the apse. A pediment, similar in ornament to that on the façade, was also raised. Both pediments are marked by a motif of acanthus tendrils from which a foliated and apicated Latin cross emerges, with grapes hanging from the arms.

An entablature running continuously around the monument has the evident purpose of

Detail of the pediment on the façade portico

The pediment over the external apse

Portico's columns

tying together the new parts of the building to the original construction. A shed roof covered the main building as well as the entrance porticoes. All of the columns are *spolia*, which are also abundantly present in the brick wall, in the pavement, in the cornices and architectural ornamentation of the cella, especially in the marble *aedicula*. The careful reuse of *spolia* to create uniformity and regularity belongs to the tradition of reuse in Theodoric's age, but also indicates an abundant availability of typologically homogenous material from ancient buildings. The four pediments surmounting the two doors (now lost), the facade and the back wall (both in situ), were new elements produced for the building according to a unified design, with a standard motif of acanthus foliate fronds. The motif stems from the classical tradition but appears continuously throughout the Late Antiquity, the Early Middle Ages and the full-blown Middle Ages, in the ellenistic Orient, the roman-ellenistic east world, the Byzantine world, the Roman West, the Goth West and over. The lasting presence of the

Detailed survey of the façade

Tempietto' right side

motif, even if christianized through the insertion of the *chrismon*—the leafed tree of life dating to Constantine—is scarcely characteristic of a specific period. Dating based on formal observations is thus not secure -as the varying periods to which the building has been assigned show. Only through an exhaustive analysis of the building will a firm dating be possible. Such an analysis will have to include a series of characteristic cultural elements: from the reuse of ancient material, in both the functional and symbolic sense, to structural and decorative practices, as well as worship traditions. In other words, it will be necessary to reflect on longobard patronage and look closely at the culture of the period -one very permeable to cultural stimuli and the influence of local traditional building practices.

Northern side of the monument

The Clitunno Tempietto represents a remarkable manifestation of the heterogeneous culture of the longobard age. The components of the extraordinary cultural tradition of Spoleto are perceivable in its palimpsest. The Tempietto embodies a complex language comprising a series of strata, from ancient roman to syrian monasticism, not excluding an indigenous component. For example, the frescoes in the cella that Valentino Pace attributes to the 7th century, confirming Jäggi's dating, are related to the roman context. They represent the Christ *Pantocrator* in the apse conch, flanked by the apostles Peter and Paul on the sides of the *aedicula* protruding from the apse. A *velum* with floral motifs fills the space below, while palms decorate the side walls of the apse. Above the tympanum surmounting the apse conch are three symmetrically disposed clipei; the central one, known from copies, is only barely discernible but is similar to the image in the apse niche of the Basilica of San Salvatore; it encloses a bejewelled cross, flanked by the apocalyptic letters *A* and *Ω*. The lateral clipei frame two haloed angels. A 'falsa cortina' motif —incised lines that simulate brickwork— covers both the interior and exterior sides of the cella walls.

A homogenous layer of plaster covers the walls of the cella and of the rooms within the podium —a feature that indicates, together with the stylistic uniformity of the pictorial decoration, a single phase of the whole painting complex. The extraordinary marble *aedicula* on the back wall of the cella, however, dates to the Augustan age: it was dismantled from its original site and adapted to fit the apse. The masters that carried out the work carefully cut the architectural ornamentation, mounting the pieces back together so as to minimize cuts and caesuras. They polished off the work by adding three slabs in the spaces that had been created between the arch and the tympanum surmounting it. The central slab

includes a clipeus with Christ's monogram surrounded by a vegetal motif that continues over the other two slabs, and is similar to the motif on the external pediments. The motif persisted until the full-blown Middle Ages in the area of Spoleto. Prominent examples are in the architectural reliefs of San Salvatore; more common ones are in the small pediment, now lost, of the pieve, or parish church, of Sant'Angelo, or in the architrave of Santa Maria Assunta, the Cathedral of Spoleto. Finally, the epigraphy is a remarkable component of the monument. The famous

dedicatory inscription of the Tempietto still runs along the trabeation of the facade pediment (*SCS DEUS ANGELORUM QUI FECIT RESURRECTIONEM*). Two inscriptions on the lateral accesses are known from 16th and 17th century copies: *SCS DEUS PROFETARUM QUI FECIT REDENTIONEM*; and *SCS DEUS APOSTOLORUM QUI FECIT REMISSIONEM*. Recently, the "dual soul of the monumental inscription" has been pointed out. On the one hand, it is in line with the epigraphy of the longobard capital, marked by tall, narrow letters; on the other, an antiquarian tendency is clearly perceived.

Detail of portico's columns

The *Aedicula* protruding from the apse

Detail of the tympanum surmounting the apse

The dualism reflects the ideological choices of longobard ruling *élites*, such as those of Theodoric's age, who sought to legitimize their power through recourse to the prestige of Antiquity.

Further, on the frescoes depicting saints Peter and Paul, numerous graffiti represent names of longobard origin —pointing to the popularity of the site, and the intention of the devotees who visited it and practiced its cults, to leave a mark of their presence. The concurrent presence of significative elements such as: a) a therapeutic tradition connected to the waters, b) the dedication to the angels -whose cult started precisely in connection to miraculous waters- c) the existence of a sort of grotto -partly made out of the podium and partly cut in the rock- with cavities that seem destined to the collection of water, form a picture with strong analogies to that of the sanctuary dedicated to St. Michael in Monte Sant'Angelo, which the Longobards of Benevento raised to the status of primary place of cult. To conclude, the general style of the Tempietto, and the extraordinarily classicizing aspect constituted by reused materials and ornamentation designed and executed for the project suggest that the patrons were members of the ducal family, proclaiming their social *status* by connecting themselves to the grandeur of Rome.

CRITICAL ANALYSIS

There is an extensive critical bibliography on the Tempietto that starts from when, as from the 18th century, an awareness of the pseudo antiquity of the monument matured. In his comments on the Clitunno River in 1753, Ridolfino Venuti formulated what was to become a theory supported by most scientific historiography, that is, a pagan foundation restored and converted for Christian worship. This erudite expert

recalls the descriptions of Palladio and Scotto, and shows an elevation and plan again by R. Wilson, engraved by the Vasi. In 1841 Rutili picked up on Venuti again, confirming the origin of the Tempietto as a *sacellum* on the Clitunno and drew a parallel between the portal of the Romanesque Church of Bovara and the gable on the Tempietto, concluding that a common medieval craftsman was involved. De Rossi also agrees on the pagan origin, but claims that the conversion was at the time of Theodosius. Holtzinger confirms the change to Christianity, pointing out the stylistic similarity of the architectural finds with those of the Spoleto churches of San Salvatore and San Pietro. Grisar, Venturi, and Gavini took up Rutili's theory again of a fully medieval reconstruction, but, in essence, the date most agreed on –by Sacconi, Hoppenstedt, Haseloff, and Lavagnino– was that it was around the end of the 4th and the 5th century as claimed, much later, by De Angelis D'Ossat as well who muted a transformation during construction, so that initially the *sacellum* was intended for the playful celebrations authorised by the Constantinian rescript of Spello.

A further, decisive change came about with Deichmann who moved the dating to the 8th–9th century, in line with the chronological proposal made for San Salvatore, two monuments believed to be the result of a single work. The German scholar also excluded the presence of the side stairs for access to the ambulacra and proposed a funerary purpose for the building, as a mausoleum for the Dukes of Spoleto, a purpose proposed again in 1982 by Jastrzbowska, albeit with a less advanced chronology. A few years before, in 1977, Torp confirmed a chronology of the Carolingian age – between the end of the 8th and beginning of the 9th century – seeing the Tempietto as a planned repositioning of a Roman model. The most recent studies by Judson Hemerick and Carola Jäggi set the timing at

the Longobard age, between the start of the 7th (Jäggi) and height of the 7th century (Hemerick). The chronology proposed by Jäggi seems the most reliable, which is also confirmed by the 7th century dating of the frescos in the cella, put forward very recently by Valentino Pace.

The façade portico

BENEVENTO

THE SANTA SOFIA COMPLEX

“... There are the towns of Chieti, Aufidena, Isernia, and Sannio, now exhausted by its antiquity, from which the whole province takes its name, and the capital of this province, the very rich Benevento ...”

(Paul the Deacon, *Historia langobardorum*, II, 20)

THE CITY BEFORE THE LONGOBARD ERA

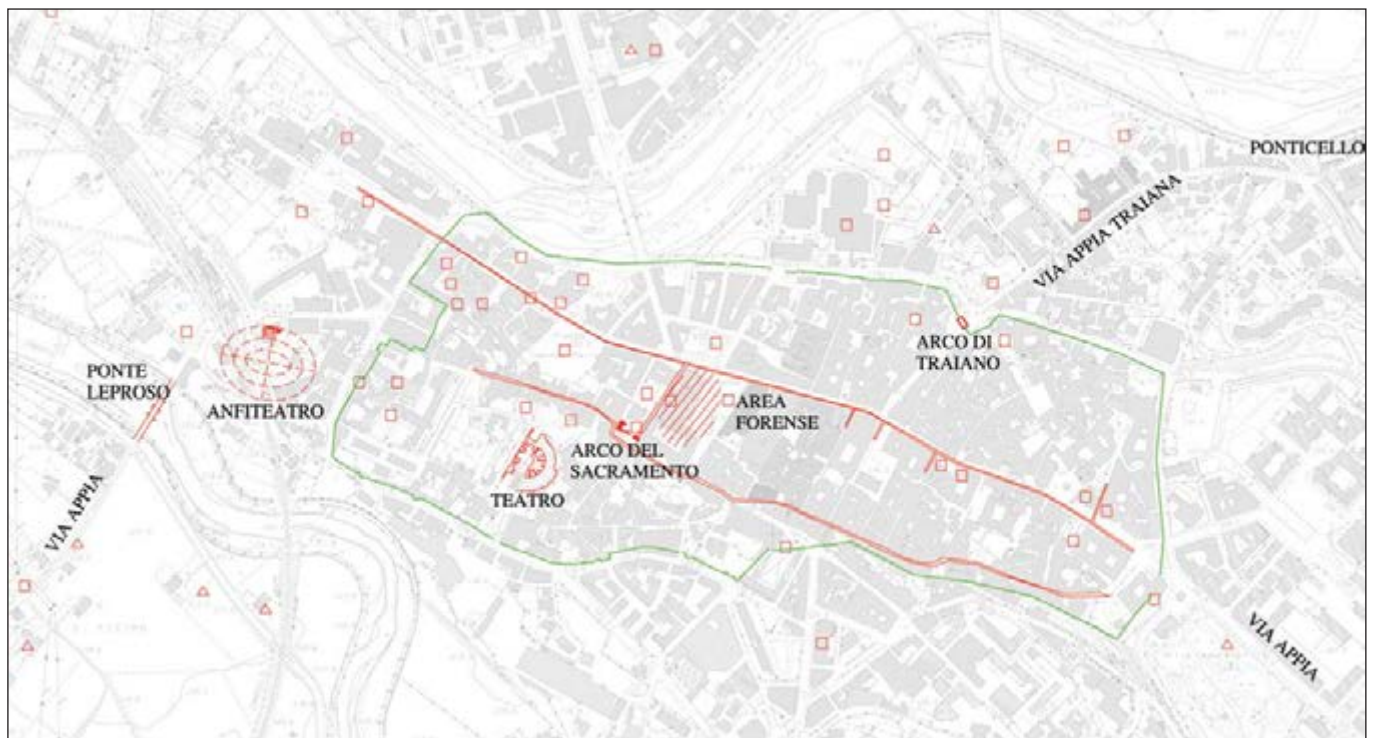

The exceptional geographic position of Benevento, at a crossroads between the Tyrrhenian and Ionian seas, must surely have favoured permanent settlements here from the earliest times of history. Its setting between the Calore and Sabato rivers, both navigable in ancient times, guaranteed not only its constant supply of water but also a position along important arterial roads.

The city spread over a series of terraces,

formed naturally as the result of flooding which, at the point where the two rivers joined, rose progressively towards the north and east, reaching a peak in the east, the site of the Church of St. Sophia and the fourth century Castle of Benevento, best known as the Rocca dei Rettori.

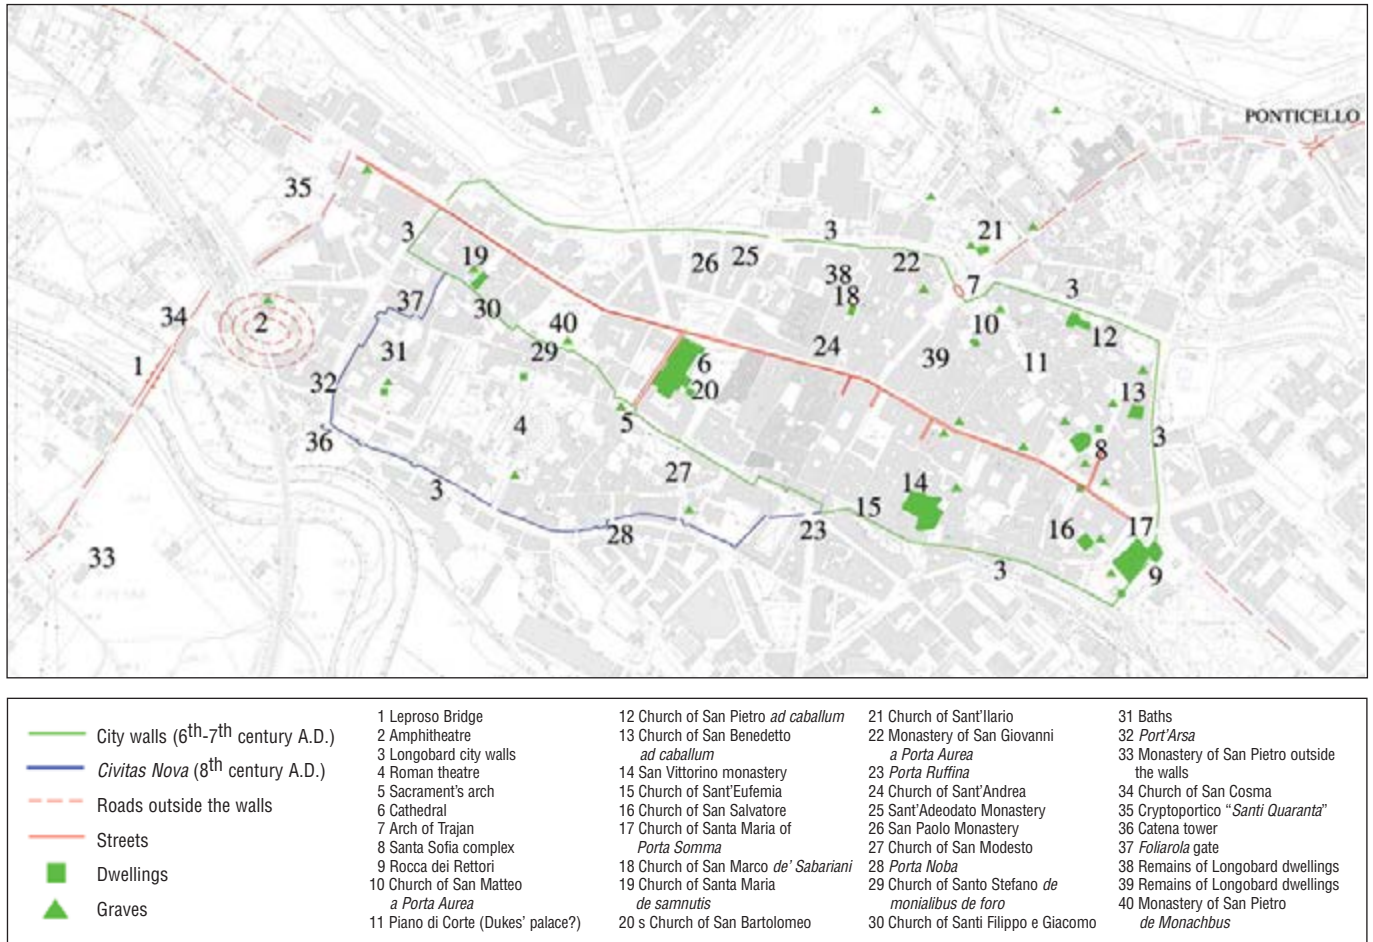

The area now occupied by the historic centre provides a wealth of evidence vouching for early presence dating back to the ancient Neolithic period (sixth – fifth millennium B.C.), the Eneolithic period (3000- 300 B.C.) and the Bronze age (2000-1800 B.C.). Burial groups unearthed in the eastern part and the remains of dwellings brought to light in the northern section, on the other side of the river Calore, bear testament to the area being densely populated between the iron age and that of the Orientalizing Period (latter half of the eighth-seventh centuries B.C.). During the Samnite era, the Benevento area became one of the most influential centres of samnite-irpinian culture, possibly identifiable with the settlement which, towards the

end of the fourth century B.C., minted coins bearing the wording “*MALIES*”. The settlement comprised scattered groups of dwellings interspersed with necropolises. Once Rome had established relations with the local aristocracy, urban construction processes got underway from the latter half of the fourth century B.C. onwards, culminating in 268 BC with the founding of the Latin colony, at which time the Romans changed the name of the samnite centre from *Maleventum* to the more auspicious *Beneventum*. Roman city planning can still be distinguished in the octagonal-shaped street pattern of modern times. The two principle *decumana*, or east-west oriented main road axes -one of which comprised the urban section of the *Via Appia*-, were cut through from North to South thus creating long, narrow, regularly shaped blocks having a length-width ratio of 1:3. As was customary in Latin colonies, the Forum was located at the centre of the city, at the point of the main crossroads. Recent extensive digs and

The city in Roman times

The city during the Longobard era

restoration carried out in the area contained between the Cathedral and Vicolo San Geatano has made it possible to unearth and enhance structures that were part of monumental buildings, certainly of public importance. Nearby the Forum there was a large thermal bath complex, possibly the 'Commodiane Baths' recorded by literary and epigraphic sources.

We are still lacking definite archaeological data vouching for the location of numerous sanctuaries known to have been dedicated to *Vesta*, *Diana*, *Minerva Berecynthia*, *Hercules* and *Isis*. The most spectacular buildings were situated in the southern part of the city, namely the amphitheatre and the theatre, where numerous decorative sculptural and architectural finds have been made, some of

which, along with numerous other *spolia*, were re-used in the construction of palaces in the historic centre as late as the Middle Ages. The best-preserved roman structure is the Arch of Trajan, erected in his honour in 114 A.D. to celebrate the inauguration of the *Via Traiana*, a more rapid, alternative route to the ancient *Via Appia*, linking Rome with *Brindisi*. The Roman city extended well beyond the confines of the city walls, both to the West and North, providing space for dwellings and areas of industry. The main necropolises were situated outside the urban centre, along the main access roads. That south-west of the Leproso Bridge was certainly monumental, of which there are still significant remains of the mausoleums that were located along the two sides of the *Via Appia*.

HISTORY AND CITY PLANNING DURING THE LONGOBARD ERA

The southern Duchy of Benevento was founded shortly after 568, the year of the Longobards' arrival in Italy, and the city's origins pre-date the invasion of Italy in 568: Benevento and the Beneventano area (and perhaps also the Area of Spoleto) were in fact settlements for the groups of Longobard *foederati* -allies (basically mercenaries)- that, in the midst of a complex affair, had found with the Byzantines in the war against the Ostrogoths in 535-552/3 and that Narsete had difficulty "governing" due to their lack of discipline (referred to by *Procopius of Cesarea*), assigning (and strategically spreading) them in various

areas of the Apennines. After the invasion and occupation of the peninsula, settlements of recently arrived Longobards would then have been joined to that of their countrymen, consolidating a Germanic presence in the South that had probably already acquired 'political weight'. It should be pointed out that this made the Duchy of Benevento and its capital a very special place in the complex history of the Longobard people.

The Longobard settlement occupied a smaller area than that of the Roman city, resulting in previously inhabited areas to the east and north of today's historic centre being abandoned. The main thoroughfares continued to be used, however, most importantly the *Via Appia* which, leading into the city from the bridge known as the Ponte Leproso, constituted the *decumanus maximus*, corresponding with the modern-day Via Magistrale and more approximately with Corso Dante and Corso Garibaldi. The lesser road, comprising *trasendae*, *strictolae* and *plateae*, followed the pre-existing road in part, whilst in others created new routes.

The Longobard city was encircled by a city wall, large sections of which possibly predate this period, which was re-built and fortified following its destruction during the Greek-Gothic war by the Ostrogoth king Totila (545). Recent excavations have thrown up evidence confirming that certain sections of the wall, in the vicinity of the Rocca dei Rettori and the brick arch called 'Arco del Sacramento' may date to the latter half of the sixth century.

During the eighth century the city benefited from wide-spread building activity, commissioned by duke Arechi II who, after the fall of the Longobard kings in northern Italy and aware of the important role to be assumed by Benevento as a consequence, undertook a series of substantial works aimed at exalting the monumental form of the duchy capital. The new quarter which

developed in the southern section of the city, towards the *Via Appia* and known as the *civitas nova*, resulted in the city walls being extended southwards, from *Porta Somma*, then incorporated into the fourteenth century Rocca dei Rettori, the city wall continued for more than 3,400 metres as far as the Arch of Trajan which, re-named the *Port'Aurea*, became one of the city's most important gateways.

The main poles of political and religious power were situated within the city walls: firstly the ducal residence, possibly located from the sixth century onwards in today's piazza Piano di Corte, which was extended and renovated by duke Arechi II, also attributed with commissioning the *sacrum palatium*¹.

A short distance away lies the Church of St. Sophia, also commissioned by duke Arechi II between 758 and 760 A.C., and proposed for inscription on the World Heritage List. Recent excavations carried out under the flooring of the Cathedral have brought to light remains from the building's early Christian phase renovated in the Longobard period. The three-naved building had a porticoed area near the entrance that can be identified with the *paradisus* referred to in

literary sources – which was the burial place for the more representative personages of the Longobard community. This gave rise to the funerary epigraphs for Princes Sicone and Radelchi, and the latter's wide Caretruda, as well as Bishop David. Recent investigation of this area has brought to light the tomb of a child, with gold thread for the clothing and a silver astylar cross that can be dated to the 6th-7th century.

The city was home to several religious buildings, however, many of which were part of monasteries: the churches of Sant'Angelo *de Caballo*, San Benedetto *ad Caballum* and San Pietro *ad Caballum* were all located in the area adjoining the present-day piazza Piano di Corte, which housed a marble equestrian monument from the Roman period. The crypt of the Cathedral, preserving frescoes from the Early Middle Ages (one depicting the Bishop, *St. Barbatus*), must originally have constituted a place of worship in itself. The original layout of the Church of SS. Salvatore also dates to the Longobard era, where recent excavations have unearthed some important tombs from between the eighth and ninth centuries, amongst them a painted tomb in the Auderisio presbytery,

The Arch of Trajan (Piranesi drawing)

¹By other scholars the Palace stood up on the Rocca dei Rettori area, close to the Church of San Salvatore, identifiable with the Palatine Chapel

bearing witness to the high artistic standards achieved by the Beneventan longobard community.

Another recent discovery has been made in the crypt of the Church of San Marco dei Sabariani (situated to the south-west of the Arch of Trajan, destroyed by the earthquake of 1668 and subsequently re-built in another location), where the oldest paintings, dating to the Early Middle Ages, have greatly enriched our documentation of the longobard era in Benevento, along with the well-preserved paintings in the Church of

Santa Sophia and the Cathedral crypt. The churches of S. Stefano, San Gennaro and San Nazzaro *de Iudeca* bear witness to the presence of communities of eastern origin residing in the city. Other religious buildings were constructed outside the city walls along major arterial roads, such as the church of S. Ilario at Port'Aurea, situated along the trait of the *Via Traiana* just outside the city, and the monastery of S. Sofia a Ponticello.

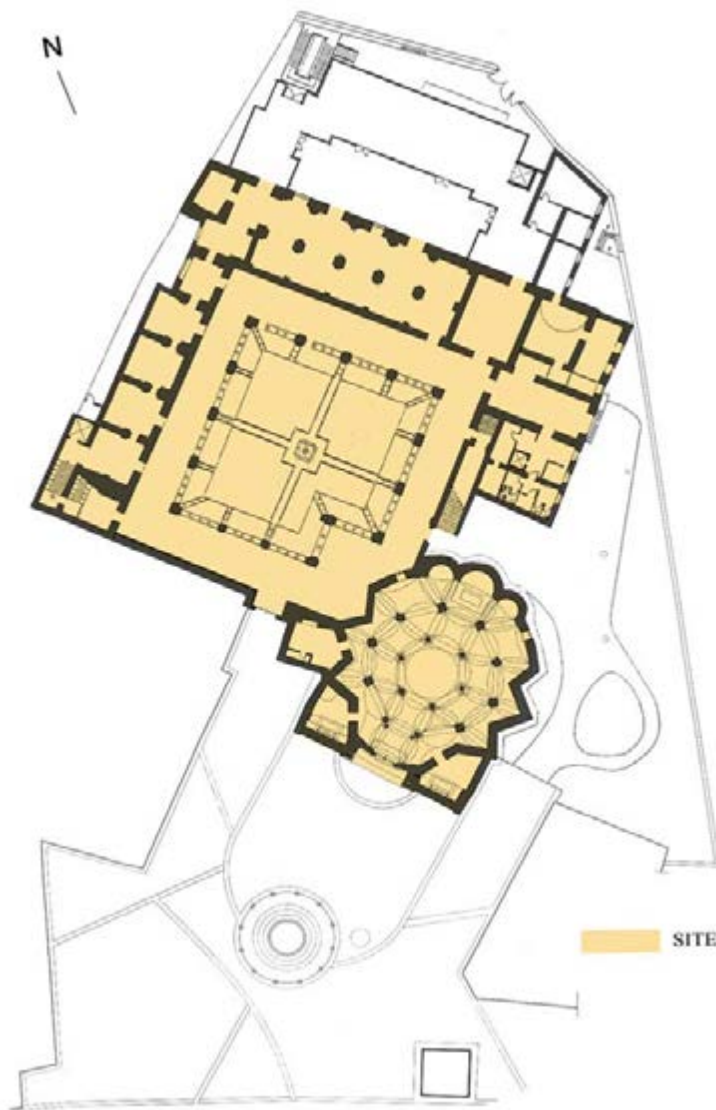

Material evidence of dwellings and artisan structures from the longobard era are more

fragmentary. as to residential buildings, written sources document the presence of houses in wood and stone, comprising a single room on the ground floor (*terraneae*) or built on more than one level (*solariatae*). Fixtures from *fabritae solariatae* houses are noted in the remains of staging levels preserved within the structure of later buildings, still visible in certain areas of the historic centre (known as the “arch of San Gennaro”). It was rare for the dwellings to have baths, unlike the monastic complexes of Santa Sofia and the monastery of San Paolo, both of which were connected to the public aqueduct. Sources vouch for the presence of public baths, some of which probably dated back to the classical age evidence documenting the use of ancient buildings and monuments for residential purposes during the longobard era is provided by the roman theatre which was densely populated and used as living quarters from late antiquity onwards.

Written sources bear testimony to a range of different production activities (coppersmiths, shoemakers, carpenters, joiners, masons and goldsmiths) in addition to a number of mills situated along the Sabato river. Recent excavations carried out at the ‘Museo del Sannio’ have brought to light a glassmaker’s workshop, in operation between the end of the sixth and the start of the seventh century.

We should also recall the highly-prized *scriptoria* of the monasteries, especially that of Santa Sofia, producing written and illuminated manuscripts in the renowned Beneventan Script.

From Late Antiquity onwards, the presence of burial sites within an urban setting marks a distinct break with the customs of Roman times. Single tombs and groups of graves, situated both within and without the inhabited areas of the city, date back to the longobard era, many possessing a wealth of

General lay-out of Santa Sofia complex

gold or armoury and providing a clear indication of the high social status of the deceased.

THE SITE

The area proposed for nomination comprises the monumental complex including the longobard Church of Santa Sofia, together with the adjoining cloister and part of the ancient abbey, now home to the 'Museo del Sannio'. This is the most important and original religious building from the longobard period, and its star layout makes it unique. It is the maximum expression of the ideology of power, having been founded by duke Arechi II to serve as a national temple and votive chapel for the longobard people.

The church, with its star layout, is extremely original and is the result of a blend of Roman-Hellenist and Byzantine tradition (the characteristic eastern architecture with a centred plan from the 5th and 6th centuries) align with the tendency to experiment that was part of longobard culture, and in this building it comes through once again by the intentional use of recycled *spolia*.

The ancient church also shows the renewed interest in buildings with centred plans that spread especially in Northern Europe from the Carolingian period and mainly for palace chapels.

Its original purpose was the maximum expression of longobard sovereignty and of the link with local Christian *élites*, which was also behind the dedication in line with that of St. Sophia in Constantinople. Costantinopoli

The church of S. Sophia

Founded by duke Arechi II immediately after his election (758) as a national temple and votive chapel for the longobard people, it was somewhat significantly dedicated to Santa Sofia (Holy Wisdom), possibly upon the suggestion of Paul the Deacon so as to

resemble the Justinian church in Constantinople (*Haghia Sophia*).

The building was probably completed by May 760, when in the course of a most solemn ceremony, the relics of the twelve Holy martyr Brothers were moved to the apse from various cities around Italy. In 768 the temple, symbol of longobard spirituality, became the resting place for the relics of St. Mercurius and later for a further thirty-one martyr saints and confessors.

It was the wish of Arechi II that a women's

cenoby be added to the church, entrusted to the mother superior Gariperga. Remains of the cenoby –founded in 774 and conveniently equipped by duke-princess Arechi II, as the deeds in *Chronicon Sanctae Sophiae* make it clear; moreover mentioned in the writings of the Benedictine monk Erchemperto, narrator of the most important vicissitudes of southern Italy during the ninth century- are now an integral part of the 'Museo del Sannio'.

The new institution, on a site above the

Aerial view of Santa Sofia complex

Interior of the Santa Sofia Church

External view apses' side

decumanus maximus (the present-day Corso Garibaldi), constituted a sizable monastic complex which initially came under the jurisdiction of Montecassino.

The architectural composition of the modestly-sized church (contained within a circle measuring just 23,5 metres in diameter) is of great interest. its unique star-shaped ground plan, converging at the entrance towards the three opposite apses, must be considered a rare example of longobard architecture.

The central plan layout, probably of Byzantine influence, is highly dynamic in fashion, featuring a series of innovations aimed at continually changing the internal spaces in relation to the changing perspective

Interior of the Santa Sofia Church

of the viewer. This is illustrated by the irregular progression of the outside wall, the use of a starshaped ground plan and the three relatively shallow conches. To these features are added the complex organization of interior space, with its two concentric ambulatories. The innermost of the two, marked out by an hexagonal circle of columns, describes a regular hexagon directly surmounted by the original dome, contained within a six-sloped segmental dome, positioned on a lower level than that re-built after the 1668 earthquake.

The outermost, ten-sided ambulatory is marked out by four-sided pillars which, oriented irregularly in keeping with the directional changes of the outside walls, offer excellent directional axes for an inter-

The Santa Sofia Church, vaults

The Santa Sofia Church, valuts

pretation of the architectural structure. The columns of the hexagon are surmounted by capitals re-utilized from the classical period, whilst the bases are constructed using upturned and modified classical capitals,

further embellished with decorative patterns.

The eight, four-sided pillars –constructed in alternate layers of limestone blocks and full brickwork – and the two columns with

ancient capitals which make up the decagon, are surmounted by dossierets from the Early Middle Ages, eight of which decorated with elongated reels and pearl couples, similar to the work produced by

The central dome of vaulted system

Capital re-used from the classical period

Detail of a re-used capital

Fragment of fresco

southern longobard goldsmiths and found in the friezes framing the sculpted scenes on the altar of duke Ratchis and the Baptismal Font (*Tegurium*) of Callisto in Cividale (providing an important link of cultural continuity between *Langobardia major* and *minor*). Brickwork arches, partly re-built in the eighteenth century, offload the weight of the square, triangular and trapezoidal vaults over the two ambulatories onto the columns, pillars and zig-zag walls via shelves, set high up into the buttresses and decorated with rushes. The large quantity of material stripped from classical sources and re-utilized in the Santa Sofia church serve structural as well as decorative purposes, as testified by the respect and consideration attributed to these relics from the past and the important uses to which they are put. The outside walls, 95 cm thick, were realized

in bordered brickwork with two rows of bricks interspersed with a row of irregularly-hewn tufa blocks, visible from the outside on the south-west side and in the area around the apse. The foundations are 1,10 metre deep and wide and follow the exact line of the building's upper walls. the façade shows baroque influences, mirroring the configuration given to the whole building over the years following the 1668 earthquake, and features a joined gable with a slightly curved peak. The central section of the façade, including the entrance, preserves part of the four-sided structure added in the eighteenth century, with its exquisite doorway having marble door posts and lintels, surmounted by a lunette embellished with beautiful sculptures in high relief on a gilded background. The intrados of the arches positioned to the

side of the main doorway bear testimony to painted decorations which, under longobard construction, would have covered the entire outer hangings or possibly the walls of a porch or narthex; decorations such as these typically featured semi-circular leaf patterns, partially overlapping and coloured in parts and representing a variant of a pattern popular during imperial roman times and late antiquity, yet rarely used during the middle ages.

The church interior must have been frescoed in its entirety, as suggested by the fragments still visible today in the apses as well as on one of the pillars, at the feet of the segmental dome and on the pointed edges of the star-shaped walls.

The frescoes found on the apse walls are one of the most important but also most controversial evidences of longobard

The main façade

artwork in southern Italy. The original cycle, as suggested by the scenes surviving today, would have focused on episodes from the life of Christ, more precisely his incarnation (Incarnazione) and childhood (Infanzia). In the eastern section of the church, in the three little apses, certain scenes have been preserved which, although only fragmentary, bear testimony to longobard workmanship of the highest standard. In the north little apse is a depiction of the annunciation to Zaccharia, father of John the Baptist (Annunciazione a Zaccaria). The scene is split into two episodes: on the left we have the archangel Gabriel, his arm extended forwards and his hand positioned as if giving

Fragment of Longobard fresco on the façade wall

word, announcing news of his paternity to Zaccharia, of whom we only catch a glimpse of part of his heavy cloak due to a vast gaping hole in the fresco. On the right, Zaccharia, dumbstruck by the incredible news given him by the angel, points to his mouth before the faithful gathered in front of the temple.

The stories of Zaccharia, extremely uncommon in western iconographic representations, follow the text of the first chapter of the Gospel of Luke word for word, with the frescoes illustrating many of the narrated details: the angel appearing to Zaccharia, standing and to the right of the incense altar, and the faithful looking on in

wonder with Zaccharia gesturing to make himself understood. Even the clothes of the Beneventan Zaccharia are perfectly in keeping with the description given in the gospel, and although the lower hem of his cloak lacks the pomegranates it does feature at least five bells.

In the southern little apse are depictions of episodes from the annunciation (Annunciazione) and the visitation (Visitazione). These also keep to the exact chronological order of the Gospel and the resulting cycle provides an accurate illustrated narration of the first chapter of Luke. The scene of the visitation is highly original, its strong interpretation both

Left apse's fresco. Annunciation to Zaccharia, Archangel Gabriel

affectionate and realistic: “Elizabeth is depicted whilst touching the Madonna’s belly, heavy with child, kneeling before her whilst Mary, making a move to kiss her, caresses her face and, leading her by the head, her hand beneath her chin, encourages her to rise” (Bologna).

Whilst in the past scholars did not agree over the dating of the Santa Sofia frescoes, widespread opinion now places them in the eighth century, thus dating back to the same period as the building’s construction. Agreement over the frescoes’ dating has granted “Beneventan painting” a role within the context of an artistic movement of great significance, one including the important monastic centres of Montecassino and San Vincenzo in Volturno.

Santa Sofia represents an “artistic episode able to transform the prototypes of Hellenistic learning into an existential truth”

(Bologna), along with decisive syrian-palestinian influences introduced by eastern monks, exiled as a result of iconoclastic persecution.

Attached to the church was the **cloister** of the women’s cenoby. References to the longobard cloister, probably destroyed by the earthquake on 25th October 989, are found in some ancient written sources (Leone Ostiense writes of a *clastrum* where Arechi II went to pray) and in the remains of some decorative sculptural elements (a group of capitals featuring recessed geometric decorations), reutilized in the cloister which was re-built in the twelfth century and now considered one of the most important Romanesque monuments in southern Italy.

The cloister is laid out as a four-sided structure, with a recess in the southern corner

level with the church. The portico has 15 four-lancet windows and a three-lancet window cut through by a great dead arch, lowered and projecting over shelves. The ambulatory has lowered cross vaulting, at one time decorated with frescoes, a few poorly preserved fragments of which are still visible today, depicting geometric floral patterns, possibly from the thirteenth century. The rounded arches of the four-lancet windows (known as horse-shoe arches) illustrate the iberian-islamic influences which would have penetrated the Benevento area after the Norman invasion. The sculptures on the capitals illustrate a reworking of the classical repertoire of late antiquity popular during the Early Middle Ages. An inscription carved into the middle of a small column has identified the abbot of St. Sophia, John IV, as having commissioned the cloister, and allowed

Left apse's fresco. Annunciation to Zaccharia

Right apse's fresco. Visitation, Elisabeth and the Madonna

Cloister of the Santa Sofia complex

scholars to date its construction somewhere between the years 1159 and 1182. Since 1964, the cloister and its adjoining convent buildings have housed the **Museo del Sannio** where a wealth of archaeological and historic-artistic exhibits are on display, most importantly the group of egyptian and egypt-inspired finds from the temple of *Isis*, extended and rendered more monumental by Domitian Emperor in 88 A.C., and representing the most significant discovery of its kind ever to have been made outside of Egypt. The museum also houses an interesting section devoted to roman necropolises, including a series of funeral shrines and statues coming from city cemeteries, especially from the wealthy mausoleums situated along the *Via Appia*, and a section devoted to the Longobards, featuring a series of epigraphs, tomb fittings and a

valuable collection of medals which run from the first coins minted by Romualdo II (706 – 731) to those commemorating the inclusion of the Duchy of Capua. An artistic lighting system has recently been set up to promote the cloister. This project, named “Benevento, City of Light” includes a series of guided tours in which an unseen actor’s voice illustrates the stories told by the capitals and, gradually the visitor’s route is lit up.

The museum is currently being re-fitted in order to house finds from the burial sites excavated both in the cloister and Church of Santa Sofia (see annexed Management Plan).

CRITICAL ANALYSIS

The church of S. Sophia has been the focus of attention of art and architecture historians like Pietro Toesca, Emile Berteaux, and Roberto Pane. The first two in particular, considered it a very significant expression of the architectural culture of the Early Middle Ages.

The restoration intervention carried out in the 1950s by Antonio Rusconi, greatly criticised by Roberto Pane who started a fierce battle with the perpetrator, attracted attention to the monument and especially the daring ‘central’ plan partly circular and partly star-shaped. Roberto Pane challenged the – in his view – arbitrary nature of the restoration by Rusconi, and especially the reconstruction of the zig-zag

brickwork demolished at the end of the 1600s, as part of a restoration backed by cardinal Orsini to repair the damage caused by the earthquake of 5th June 1688. In relation to that restoration, the record “*Of the handover of the Church and impressive Monastery of S. Sophia of Benevento [...] by the Eminent, Very Reverend, Cardinal Orsini,, Archbishop of that City [...] to the Very Reverend Abbot Alessandrini [...] on 8th February 1708*” indicates how Carlo Buratti, the architect tasked with the works completed by 19th March 1701, the day on which Archbishop Orsini solemnly consecrated the church. The record states that Orsini, “*in the year 1696 had repairs to the [...] Church started and to reduce it to the necessary symmetry, by demolishing part of it as superfluous and irregular*”.

Santa Sofia cloister during "Benevento, city of light" event

Returning to the restoration in the 1950s, according to those that oversaw the works and graphic and photographic records put together at the time, it can be seen that the zig-zag walls were rebuilt by Rusconi on the 8th century foundations, despite the restoration culture at the time seeing this as being too daring, whereas in the 1950s it was tolerated more. Some authors like Paolo Delogu have raised founded claims that Rusconi had never published the dig and therefore did not provide adequate proof of finding the foundations on which he based his reconstruction work: on the basis of these comments and an interpretation that in many regards is forced by the miniatures depicting Arechi II that presided over the construction of S. Sophia (in code 4539 of the *Chronicon Sanctae Sophiae* in the Vatican), Delogu criticised Rusconi's restoration.

For other experts this restoration seemed to be devoid of the arbitrary nature claimed by Pane and, in his wake, by some others in the 1950s: Mario Rotili, Ferdinando Bologna, and Marcello Rotili maintained that Rusconi basically offered a correct reconstruction of that part, which does not make up a great part of the building. The dig document, examined again by Monica Costagliola and Marcello Rotilli appears not to contradict what Rusconi produced with his work. It should also be stated that Rusconi's

restoration brought to light particularly significant elements of the 8th century façade, clarifying its profile.

In terms of the ideology that presupposes that the church was built by Arechi II, P.

Delogu and Marcello Rotili found that the dedication was to Christ as "Holy Wisdom" rather than "Saviour", which ties in which Arechi's great devotion to the latter, and also bears testimony to the building of the Church of the Saviour in the Alifano area,

Santa Sofia cloister during "Benevento, city of light" event

declaring the prince's wish to bring about a plurality of cultural and religious references for practicing this devotion in private and in public. As to the theory of the Santa Sofia having been founded by duke Gisulfo II (742-751), work on which was completed by Arechi II, this appears to be linked to a late re-reading of the events (Leone Ostiense) to which Erchemperto, author of the *Historia Langobardorum Beneventanorum*, does not associate himself when referring to the fact that towards the end of the 9th century Arechi “*infra Beneventi autem moeniam templum Domino opulentissimum condidit, quod Greco vocabulo Agian Sojian, id est sanctam sapientiam, nominavit*”² and finally agrees with the claims and sources that attribute the foundation of the church to Arechi in terms of a document provided by cardinal Stefano Borgia in the 18th century that also saw to the foundation of the S. Sofia monastery.

Rusconi proposes two cautious comparisons for the church: one with the church of S. Donato in Zara, and the other

with the church of Santa Maria delle Pertiche in Pavia, demolished at the beginning of the 19th century but known due to an eighteenth century inscription and a sketch by Leonardo that seems to have been drawn by memory. As to the legitimacy for this comparison, which would better document relations between Benevento and Pavia, Antonio Peroni has expressed some reservations. The comments by experts on the substantial difference between the two bodies, despite some undeniable and significant overlapping especially in relation to the central hexagon on columns, are pertinent for showing once again the peculiar nature of the church in Benevento, inspired, as we have seen, on both eastern taste and on the ideology of the power of the great Longobard sovereign.

In relation to the frescos that originally decorated all the walls of the building, F. Bologna has dated the Santa Sofia cycle at within the first decade of the duchy of Arechi. Mario Rotilli agreed with this (in the 1970s) as did Marcello Rotili in 1986: different opinions were expressed by Belting in 1967 and 1968 and, in the 1980s, by Carlo Bertelli who considered that the Benevento frescos were later than those in the crypt of Abbot Epifanio of San Vincenzo al Volturno that, as is known, date to the 826-842 period. According to Bologna and the two Rotili, the figurative culture behind the cycle belongs to the syriac-palestinian area where late-ancient art was revived in a very expressive dimension and with a highly realistic intonation. Relationship between the duchy of Benevento and Syria-Palestine, that have been pointed out, made it possible for these frescos to be done, authoritatively representing a very high point at the start of “Benevento painting” and the main point to a culture that, in the same period, resulted in the formation of “Beneventan Script”, another essential point.

Bologna and Marcello Rotili maintained that the origin of the cultural themes are to be found in the court of Arechi II, connected with the frescos of Santa Sofia. The *Sacrum Palatium* was the centre of culture at the highest level in Europe; apart from Paul the Deacon, Arechi and Adelperga were personages not poorly instructed and it was therefore maintained that it was Arechi who wanted, with Santa Sofia, the pictorial decoration as well, according to the taste for fresco decoration to which indirect reference is made in a juicy episode narrated in the *Chronicon Salernitanum*.

Duke Arechi II presides over the construction of the Church

¹ According to some scholars, the palace was situated in the vicinity of the Rocca dei Rettori, next to the church of San Salvatore, which can be identified as the *Cappella Palatina*

² “Within the walls of Benevento he founded a temple to God and dedicated it to Santa Sophia, that is the Holy Wisdom”.

MONTE SANT'ANGELO

THE SANCTUARY OF S. MICHELE

“Now that you are sure, take the journey, whoever you may be, pilgrim from western lands; go to the city of the venerable Peter and the Gargano slope of the venerable cavern; ...there will be no need to fear the arrows of predators, nor the cold, nor the clouds of the dark night: indeed, for you, [Queen Ansa] has prepared abundant food and shelter”.

This is how Paul the Deacon speaks of the Sanctuary of San Michele in the Gargano in the Epitaph of Queen Ansa.

THE SITE BEFORE THE LONGOBARDS

From the time of its colonization by the Greeks until the arrival of Christianity, the site witnessed the spreading of various pagan cults closely related to the environmental configuration of the area. In particular, certain water divining cults present in the area, venerating the diviner *Calchas* and the physician *Podalirius*, are both mentioned by *Strabo* in his description of their respective rites, characterized by the use of healing waters and the ritual practice of the *incubatio*, typical of the sanctuary of *Asclepio* at Epidaurò, which provided that the participants spent the night in a sacred place, wrapped in animal skins, awaiting the morning to receive revelations and replies from the divinity.

Between the middle and the end of the fifth century, the cult of St. Michael, having spread from East, was introduced onto the Apulian headland, to a cave which for centuries had been the site of pagan worship and which was particularly well-suited to host ceremonies of a sacred nature.

The veneration of angels in general, and that of Michael in particular, despite the distrust

Gargano mountain and Siponto (Lucano da Imola, Bergamo, San Michele al Pozzo Bianco, 1550)

and suspicion of the early Christian church, was already extremely widespread throughout the East in the fourth century; Archangel Michael was venerated especially amongst the less affluent classes, as a physician and patron saint of healing waters, but also as psychopomp and warrior, often taking the place of indigenous pagan divinities. Emperor Constantine re-consecrated a temple in honour of Michael which had previously been dedicated to *Vesta*. There are a number of particularly relevant similarities to be noted between the sanctuary of Constantinople and the Gargano temple. Both are situated on headlands, surrounded by atmospheric natural landscapes, and both were originally home to pagan worships and *incubatio* rites: they all are shared distinctive ele-

ments. The one element not present in the Byzantine example, which is however found in the Gargano temple, is the grotto.

Mountains, woodland, water and cave are therefore the main themes which, together with the apparition of the Angel, characterized the cult of St. Michael in Gargano from its earliest days. It is these apparitions and revelations which form the very basis of the cult, venerating a saint who performs miracles with water, his powers manifested through miraculous natural phenomena, defending the sanctuary and making the site a popular destination for pilgrims. Reconstructions of the development of the cult of St. Michael on the Gargano peninsula are based mainly on the *Liber de apparitione Sancti Michaelis in Monte Gargano* (= *Apparitio*), a hagiographic,

Crypt B. Inscription of Peter and Paul

anonymous piece of writing dating to the end of the eighth century. The writing describes three episodes –“the bull tale“, “the battle tale“, “the church consecration tale”- which shed light on some of the most significant moments in the history of the cult of St. Michael and the sanctuary. The first and third sections have been viewed as the most salient, describing the first centuries of sanctuary life (fifth-sixth century), when the dedication of the cave shifted from pagan cults worship to the self-consecration of the Archangel; this was later followed by the dedication of the new site of worship by the bishop and the people of Siponto. An

analysis of relevant data from the first and third episodes along with an interpretation of the monument in its current state of conservation provide an indication of the original lay-out of the cave -as described in the *Apparitio- cripta e domus angulosa*.

The cave comprised two cavities separated by a rock partition: a smaller one (= *ecclesia apodonia*) -to the North of the larger cave and on a lower level than that-, where the Archangel purportedly left his footprints and where, at a later date, an altar was erected, known as the altar of the “Footprints”. The larger of the two caves (= *basilica grandis*) which penetrates eastwards into the very

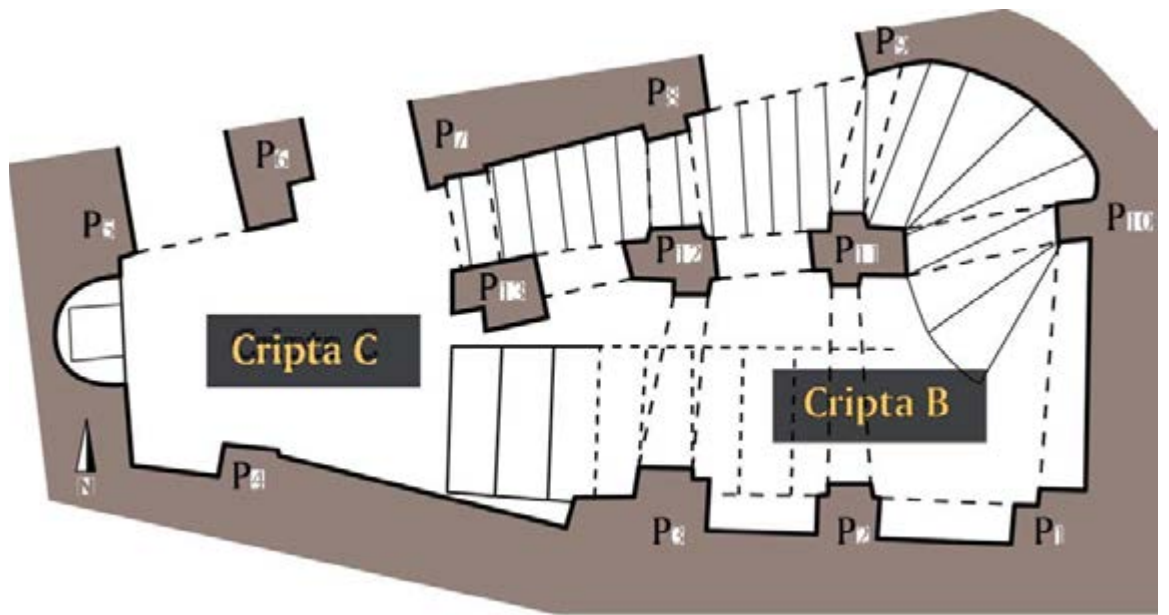

bowels of the mountain, was home to the altar upon which Michael is said to have lain his cloak, and a pitcher holding miraculous water (= *vitreum vas*).

At a later date, a *longa porticus* (crypt A) was created on the northern side of the cavity, a tunnel comprising two bays, each measuring eight metres across, which provided direct access to the altar of the Footprints. The so-called pre-Longobard nave (crypt B) may be dated to a slightly later period, yet prior to the middle of the seventh century.

Having a trapezoidal layout, the nave comprised two rows of arches, access to which was from the North through the archway known as the arch of Peter and Paul, due to the inscription to this effect. This entranceway, which replaced those to the South and North, led up to the altar by means of a flight of stone steps rising to the left of the archway, some of which are still visible today. Along the walls of crypt B there are a number of pillars with shelves decorated with vertical carvings of simple and more complex patterns, allowing these constructions to be dated to the earliest period of habitual visits to the sanctuary (between the end of the sixth century and no later than middle of the following century).

THE SANCTUARY DURING THE LONGOBARD ERA

The end of the sixth century witnessed the arrival of the Longobards on the social and political scene of southern Italy. After the duke Zotton founded the duchy of Benevento in 572, they sought to gain footholds on the Tyrrhenian and Adriatic coasts on a number of occasions in order to take control of the fertile plains of Apulia and Campania. As part of their expansionist drive, the Longobards thrust forwards repeatedly as far as *Sipontium*, at that time still under Byzantine rule, and home of the diocese of the sanctuary of St. Michael, to

Planimetry of Longobard crypt

Façade of Longobard gallery

which the Longobards were immediately drawn. The Longobards, indeed, must have found St. Michael particularly attractive, recognizing in him certain characteristics and attributes of the pagan god *Wodan*, considered by Germanic peoples to be the supreme being; god of war, protector of heroes and warriors. The Byzantines were

concerned by the expansionist aspirations of the Longobards and, according to the accounts of Paul the Deacon, attacked the sanctuary towards the end of 650 but were harshly defeated by the Longobard, Grimoaldus I, duke of Benevento (647-671), who promptly rushed to the Gargano peninsula. This event greatly influenced the

history of relations between the Longobards and the cult of St. Michael. Indeed, when in the ninth century, alongside the traditional date of September 29, May 8 started to emerge as a *dies festus* for the dedication of the church of St. Michael on the Gargano peninsula, Longobard historiography set the apparition of Michael to that precise day, along with the victory of Grimoald over the Byzantines, in so doing creating a tradition which has been carried out uninterruptedly through the centuries.

After 650 A.D., the Gargano region became part of the Duchy of Benevento, coming under the political rule first of the Longobard dukes and then the Longobard princes until the end of the ninth century. The lands of the Siponto diocese were placed under the jurisdiction of Barbatus, Bishop of Benevento, and the Gargano sanctuary started to be viewed as the national sanctuary of the Longobards and the Archangel their Guardian. Its alliance with the Longobards led to certain changes being brought to the cult of St. Michael which, when it had initially arrived on the Gargano peninsula, had been a predominantly iatric cult. Indeed the Longobards, a warrior population *par excellence*, facilitated the rediscovery of the Saint's other dimension, namely his role as the head of the celestial militia, making him a warrior, the patron of combatants.

Grimoaldus, Romualdus I, Romualdus II, Cunipert and Ansa (wife of Desiderius, King of Longobards) are some of the greatest exponents of the Longobard dynasty of Pavia and Benevento whose vicissitudes are closely linked with Gargano and the veneration of the Archangel who actually foretold and determined bellicose events for them, headed their army, assisted them during battle and struck fear into the hearts of their enemies. They were indeed responsible for the major rebuilding and extension of the sanctuary, so as to welcome and accommodate the large number of pilgrims

Crypt B. Winding staircase

visiting the site. From the mid-seventh until the eighth century, the sanctuary became the object of large-scale building programmes commissioned and financed by the Longobard dukes. It is somewhat difficult to ascertain the precise nature and scale of individual interventions, although one date in particular is supported by epigraphic and literary records, namely the works

undertaken by Romualdus I (66 -687) and Ansa (latter half of the eighth century).

The first building work carried out under Romualdus involved the construction of a new flight of steps leading up to the altar of the Footprints which then veered off to the South and joined with the walkway leading to the *basilica grandis*. At a later date, the rock partition dividing the two caverns was demolished, thus creating a single large space which was reached by means of a new monumental flight of steps: this was built on a higher level than that constructed under Romualdus I, starting from the ancient southern entrance and flanked by two rows of arches which allowed an overall view of the cavern. At the same time, the monumental flight of steps was linked by two spans, at the central body by a structure comprising five spans; an eighth span on the opposite side of the steps served as an entranceway into the structure which took the form of a 40-metre long arcade, a sort of cryptoporticus which also served the purpose of offering temporary shelter to pilgrims (*hospitium*).

The epitaph on the tomb of Queen Ansa, wife of Desiderius, King of the Longobards (756-774), recalls various works carried out under the Queen for the purpose of assuring *ampla tecta pastumque* to the pilgrims:

*Securus iam carpe viam, peregrinus ab oris
Occiduis quisquis venerandi culmina Petri
Garganiamque petis rupem venerabilis antri.*

*Huius ab auxilio tutus non tela latronis
Frigora vel nimbos furva sub nocte timebis:
Ampla simul nam tecta tibi pastumque paravit.*

“In certainty, embark upon this journey, whosoever you might be, pilgrim from the lands of the West, who set off towards the city of the venerable Peter and the Gargano rock of the venerable cavern. Safeguarded through her intervention (scil. of Ansa) you will have no need to fear either the arrows of pillagers, or the cold, or the dark night

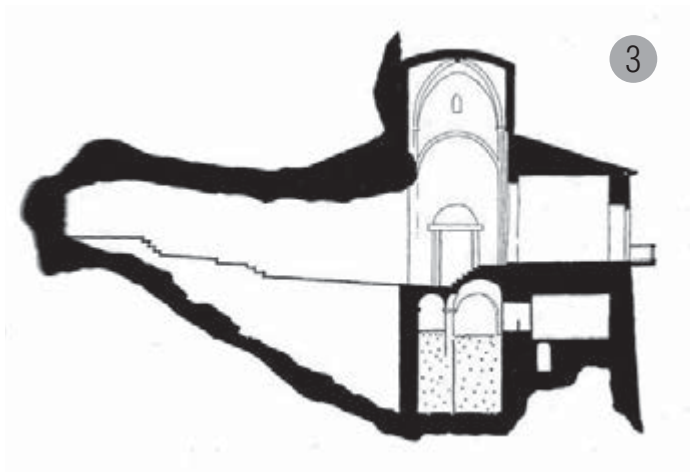

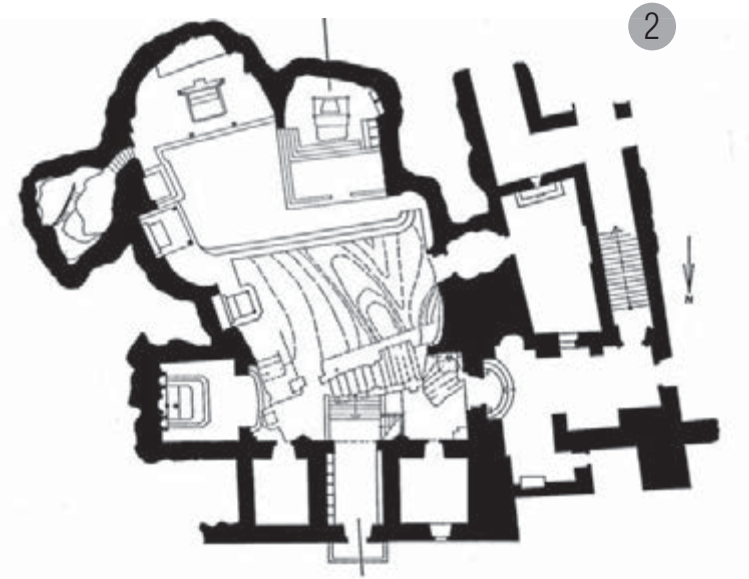

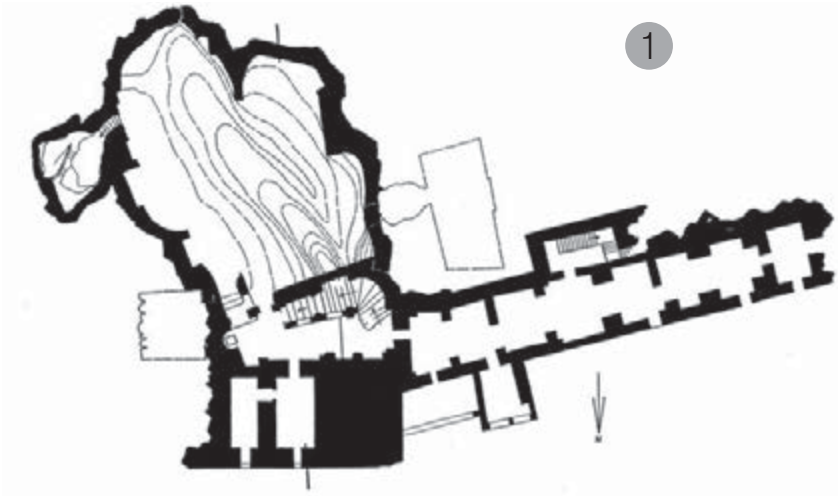

clouds: for you (scil. the Queen Ansa) provided ample refuge and food”.

This epitaph, probably composed by Paul the Deacon, bears witness to the fact that pilgrims hailing from Central-Southern Europe (*occiduae orae*) customarily visited Culmina Petri (Rome) and *Garganiam rupem*, where they found both aid and hospitality.

THE SITE

The area proposed for nomination is the Sanctuary of San Michele, a complex which, along with architectural finds made in the substructure, later additions to the sanctuary and a rich body of Early Middle Ages epigraphic works, bears witness to Longobard presence in the sanctuary.

The historical-cultural heritage that can be ascribed to the Longobard period represents a unique evidence in the definition of Longobard history in Italy. The anthropic structures that redefined for liturgical reasons the natural cave and the exceptional epigraphical body on display on the sanctuary's columns and capitols, allow to reconstruct an extraordinary context, a meeting place of different realities.

It was a heterogeneous environment from the social point of view, by ethnicity, by the pilgrims' provenance, that shows how central the role of the Apulian sanctuary was, in relation to not only the Longobards, but also to all European devotees. The cult of S. Michael the Archangel gave rise to a conspicuous heritage of faith, art and culture between the sixth and eighth centuries, leaving evidences in the folk traditions – still alive in the never ended devotion to the Angel – in the anthroponym, in the material culture.

Remains of the structures described in the *Appartio* were unearthed in the 1950s during the course of archaeological excavations carried out beneath the floor level of St. Michael's cave, in the atrium and adjoining spaces. In the spaces which were brought to light, indicated as crypts A, B and C, a vast number of objects, fragments and frescoes were discovered, but most important were the wall writings and graffiti, dating back to the time when these places were in use.

The graffiti, which in parts overlapped, are found on the walls of crypts B and C, and on

the pillars supporting the arches flanking the remains of the two flights of steps leading into the cave.

Crypt A, already identified with the early Middle Ages *longa porticus* leading into the sanctuary, is the modern point of entry situated beneath the atrium. It features eight rectangular spans, linked together by means of large transverse arches. Certain masonry structures, brought to light during excavations in the 1950s in the area featuring a raised section of the tunnel, have led to the supposition that another space may be present, presumably of the same size as that on the ground floor. This complex of structures did, after all, have to fulfil the dual function of providing pilgrims with shelter as well as access to the cave. Crypt B is found roughly 20 metres beneath the modern-day floor level of the cave, as far as today's Basilica choir stalls and the steps of the altar of the sacrament. It is divided into two separate spaces by means of arches and pillars, on which fragments of pictorial decoration are still visible and a vast number of inscriptions are carved. The remains of a flight of steps provide access between crypts B and C, which is on a higher level and also divided into two spaces. Held to be the oldest part of the sanctuary, this is the section closest to the sacred cave, where numerous frescoes have been discovered dating from a variety of different periods, amongst which that depicting the *Custos Ecclesiae*.

The three monumental inscriptions of Longobard origin conserved in the sanctuary have allowed scholars to clearly ascertain both the chronology of the monument's construction and the authority who ordered it, in addition to shedding light on the motivation behind the decision of the Court of Benevento to embark on an undertaking of such immense dimensions which, as may be deduced from the inscriptions themselves, must have called for the

financial commitment not only of the dukes themselves but also other high-ranking figures close to the curial entourage.

The first inscription, in the same position (western side of pillar P11), immediately denounces the dedicatee function which was attributed to it. Indeed, the inscription occupies a highly visible surface: the western face of the dossier of the pillar, at the feet of the twisting staircase, a point of passage through which all pilgrims had to pass on their way to the sacred cave.

The writing, in somewhat misshapen capital letters and carved deeply into the stone, would have faced the pilgrims head on, who could certainly not have failed to notice it. The lines of writing are surrounded by heavy

Custos ecclesiae (fresco, first half of 11th century)

Inscription of *Romualdus dux*

underscoring and outlining so as to highlight the message which was held to be of great importance and needed to be perceived by one and all. The writing reads:

*d[e] donis d(e)i et [san]c(t)i a[rcha]n
Geli fiere iusse et don[avit] Romouald
dux age[r]e pietate Gaidemari fecit*

“Urged by his devotion, giving thanks to God and the Archangel Saint, duke Romuald called for the construction of this sanctuary and supplied the means to do so. Gaidemari did so”.

The Romualdus dux in the inscription is certainly Romualdus I who, after his father’s ascension to the throne of Pavia as King Grimoald I, held the duchy of Benevento until 687. The epigraphy clearly stresses not only the devotion of the Beneventan line to the warrior Archangel but also their wish to record the rousing victory of Grimoald I over the Byzantines in 650 on the Gargano peninsula.

Duke Romuald I would appear to have been the chief commissioner of the Gargano monument to St. Michael, although a number of high-ranking subjects of the

Beneventan court would also have played a role in its realization: these are the four *virii honesti* bearing typically Longobard names (*Raduni*, *Theospardu*, *Gaidemari*) mentioned in the inscription from the same period of that dedicated to Romualdus I, indeed carved into the same pillar and written in the same hand:

*[—]n [—] v (ir) h (onestus) b (i)b (a) in
d (e)o Raduni v (ir) h (onestus) b (i)b (a)
in d (e)o Teospardu vir honestus biba
in deo Gaidemari [v (ir)] h (onestus)
b (i)b (a) in [d (eo)]*

Inscription of *virii honesti*

Inscription of Duke *Romualdus II*

The second inscription of this group clearly fulfils a votive-celebratory function. Carved into the straight, main flight of steps, it was positioned to the left of those who were returning back down the steps after having visited the cave of the Archangel.

“May the Angel Gabriel guard over you, duke Romualdus, Gunperga. God gives the king your judgement and to the king’s son, your justice”. The writing, carved in the very early years of the 8th century in misshapen, greatly elongated capital letters, commemorates a visit made to the sanctuary by Romuald II and his first wife, Gunperga.

The third inscription of the group, carved into the wall of the sanctuary, is once again in capital letters and three lines long:

*h(i)c patri eius [r]egni [c]umsor[t]ior
e[re]ctor sic terre[na] su[m]tsit
[c]elestia n[um]q[ua]m delinquit*

“These, sharing with the father, he who built his kingdom, thus took on an earthly nature, yet never abandoned the celestial”. The figures referred to in this epigraph may be Grimoaldus I and his son, Romualdus I, or possibly Pertaritus and Cunipert. In both cases, as suggested by the term *erector*, the writing refers to some

- + Gabriel [a]ng[el]us qui b[lo]s protegad
- + Rumuualdu dux
- + Gunperga

sort of building work carried out within the
sanctuary.

The rebuilding works carried out by the
Longobard dynasty and the spread of the
cult of St. Michael, initiated by the dukes
and princes, through the North and the
South of the Italian peninsula encouraged
pilgrimages to the sanctuary, the faithful
making the journey for devotional and
penitential reasons, or to ask for healing,
also attracted by the atmospheric natural
setting of the sanctuary, perfectly suited to
encounters with the divine.

Evidence for the presence of pilgrims visiting
the sanctuary between the end of the sixth
and the mid-ninth century is provided
through roughly two hundred inscriptions,
carvings and scratched sketches executed
on the surfaces inside the cave. These
represent a true corpus of Early Middle Ages
Longobard epigraphy, the first of its kind to

Runic inscription of Hereberecht

be found in Italy, providing short phrases, simple anthroponymes and a wealth of lines, segments, knots, stars, misshapen geometric figures and various symbols, the most recurrent being the *signum crucis*. Here we have a rich, complex documentation of pilgrims, from both high ranks and lower social classes, men and women, clericals, monks and laymen, educated and uneducated people from Italy and other regions of Europe. Within this rich *corpus* of high-medieval epigraphy, five inscriptions (one a fragment only) are particularly outstanding, written in the runic alphabet, they are the first of their kind to be discovered in Italy. They give the anthroponymes of Anglo-Saxon pilgrims (*Hereberegct*, *Herraed*, *Wigfus*, *Leofwin*) who, between the end of the seventh and the mid-eighth century, visited the sanctuary, confirming the interest of people of Germanic lineage in the site. They are deeply-scored sketches on eye-level, scratched into the wall coverings of limestone slabs which form the façade of the long tunnel leading into the sanctuary. All the autographs were written in keeping with the “*futhorc*” system, comprising 28

Runic inscription of Wigfus

Runic inscription of Herraed

Runic inscription of Leofwini

signs and used in Anglo-Frisian ambits between the sixth and ninth centuries.

The runic inscriptions from the Gargano sanctuary and others by Anglo-Saxon pilgrims throw new light on relations existing between England and Italy in the seventh-eighth centuries and which, on the basis of other literary sources, would have appeared to have almost exclusively

involved the cities of Rome, Montecassino and on occasions, also Pavia.

These inscriptions, however, indicate without a shadow of a doubt that pilgrims from England arriving in Rome, to whom reference is made by both the venerable Bede and Paul the Deacon, frequently extended their journey in order to visit the sanctuary of the Angel which by that time had become

an important stopping place on the road to the East.

The Longobard tunnel (cripta A) is now home to the Lapidary Museum, exhibiting various sculptures taken from excavations of the sanctuary, the former Church of San Pietro and the remains of the Benedictine abbey of Santa Maria di Pulsano. Dating from between the seventh and end of the eighth century, the most outstanding of these finds must be the Lectern of Ambone di *Acceptus* (eleventh century) and a lustral fountain decorated with scenes from the Bible.

Construction phases over the years after the Early Middle Ages have established extremely strong ties with the original features and increased the value of the entire complex, indeed the sanctuary has maintained its distinct layout over the centuries, highlighting its extraordinary architectural stratification in an immediate, atmospheric fashion. The various building works undertaken at a later date have in fact guaranteed the preservation of the most ancient remains, halting their decay and crystallizing the profound, religious connotations with which this place is imbued.

The main sections of the sanctuary today, known as the Angevin Nave and the cave, are placed within a dramatic yet perfectly balanced setting, where human endeavour lies respectfully alongside that of nature. The Angevin Nave, running from East to West, is punctuated by three spans divided by lancet arches with ribbed cross vaulting. On the left there are three rooms giving onto the northern external front; whilst on the right, the pillars of the cross vaulting are interrupted at the point of the upper entrance to the cave. At the end is the Chapel of the most Holy sacrament, dating from the baroque period, which on the lower level is parallel with the alter of the Footprints, situated in the cave at the end of

Longobard Gallery. Lapidary museum

The bronze doors from Costantinople (1076)

the steps dating from the Longobard era. In the southern part of the cave lies the presbytery, surrounded by a balustrade, where the fifteenth century statue of Archangel Michael, attributed to Andrea Ferrucci da Fiesole, is found along with the bishop's throne, dating from between the eleventh and twelfth centuries. Along the left hand side of the cavern are three altars and an opening, known as the "cave of stones", from which fragments of rock from the walls would have been taken as "relics". This was purportedly also the site where the widely renowned, gold-plated copper icon of Archangel Michael was discovered, now housed in the museum of devotions, originally attributed with Byzantine origins but in the light of more recent studies now thought to date to the Longobard era.

Access to the Angevin Nave is gained through a door by the high historical-artistic and documentary value. It is one of the four doors brought to Italy from Constantinople and realized between 1060 and 1076 upon order by the rich family of the *Mauronis* from Amalfi which, with such donations, aimed at the protection for the Republic of Amalfi which was facing disappearance because of the Normans' invasion. The door is made of a wooden structure with a bronze frame formed by four vertical elements (two for each shutter), that encompass 24 panels showing episodes from the Old and the New Testament, whose protagonists are the Archangels Michael and Gabriel, and some images of apparitions of the Archangel at the presence of Laurence, bishop of Siponto.

On the first panel of the fourth register of the right shutter, an inscription reveals the name of the donor; on the upper frame of the last two panels of the left shutter, a famous inscription urges the Sanctuary's rector for periodical polishing of the doors, so that they are always glossy and clear. On the corresponding frame of the opposite

Bronze doors- Detail of a panel

shutter, appears the inscription that states the door be realized in 1076 in Constantinople. Monte Sant'Angelo's door, inappropriately called "bronze door", is made of a totally different alloy, already known by the Romans and called by Pliny "*auricalchum*", an alloy similar to bronze, but with zinc in the place of tin. It must be considered that the orichalc has the possibility of being easily cold-engraved, thus allowing for a series of pictorial artifices that

can be hardly obtained with bronze: damascening -the thin notches forming the image are filled with cold-beaten silver wires or plates- and *niello*, whose notches are filled with amalgams of different metals, depending on the desired colour, which are melted and hot-cast.

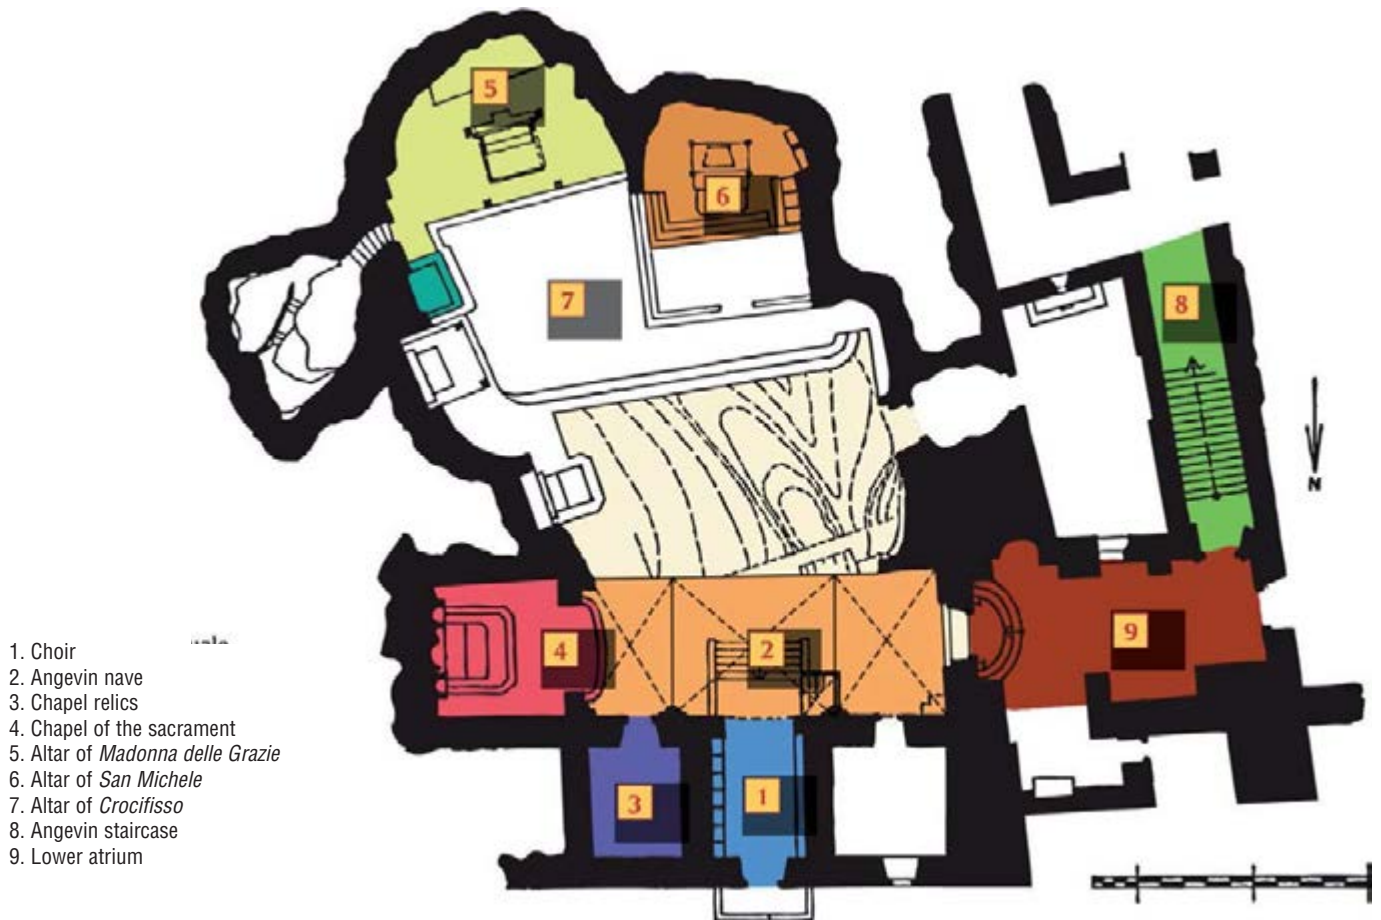

A monumental staircase connects the courtyard that gives access to the church, to the nineteenth century-old atrium at the upper level, marked by the bell-tower, an

evidence of the works by the Angevins. It is an octagonal tower in four levels, with frames outside marking the floors. The frame that juts out the most is at half height and is sustained by decorated brackets. The floors are all vaulted and show single and double lancet windows and are connected by a spiral staircase.

The Sanctuary hosts the *Devotional Museum*, whose last setting was inaugurated on 5th July, 2008. The Museum collects evidences left across the centuries by illustrious pilgrims and common people as signs of devotion. Two souls cohabit the Museum: the historical-artistic one, which is precious for the intrinsic value of the objects, and the anthropological one, which is precious for the devotional value of the gifts, the common traits being the unconditioned faith in the Archangel Michael. The liturgical furnishings, the silver, the vestments represent the surviving core of the immense heritage left by emperors, popes, bishops and kings across the centuries, what remains of a history of donations and dispossessions that climaxed with the sack by the French in 1799.

The other part of the treasure, the votive one, is made of *ex-voto* in silver laminae, votive tablets painted with the scene of the miracle, large candles, small statues of the Archangel for domestic devotion, objects of common use, precious ornaments offered in thanks for grace received. With the passing of time, private collections of single devotees have joined these objects: the archaeological collection, coins, chemist's vases. The objects, on display under cold lights to highlight their visibility, speak the history of the sanctuary and the phases of the cult. Captions and bilingual panels guide the visitor through the museum, showing the historical, devotional and anthropological contexts of fifteenth centuries of Michaelic cult.

CRITICAL ANALYSIS

The excavations which occurred in the sanctuary between 1949 and 1950, ordered by Monsignor Nicola Quitadamo, which led to the discovery of the Early Middle Ages crypts, and the investigations carried out on the Longobard inscriptions that were found, gave rise to a new season of studies and definitely clarified the relation between the sanctuary and the Longobards in Benevento. Italian and foreign scholars showed their interest in the sanctuary and in the last 30-40 years, they re-wrote its history across the centuries, identifying in the Longobard period its most important historical phase. On the basis of the finds which occurred in 1949-50, new sectors of

investigations appeared, such as the linguistic-epigraphic one (C. Carletti, C.A. Mastrelli, R. Derolez, U. Schwab, M.G. Arcamone, A.E. Felle, M. D'Arienzo), the historical-hagiographical one (G. Otranto, A. Campione, C.D. Fonseca, P. Bouet, N. Everett, J.C. Arnold, i. Aulisa), the archaeological-monumental one (N. Tomaiuoli, G. Bertelli, D. Nuzzo, P. De Santis, M. Trotta), the historical-artistic one (P. Belli D'Elia), and the social-anthropological one (G.B. Bronzini, A.M. Tripputi). These researches join the previous bibliography (F. Hirsch, G.P. Bognetti, A. Petrucci) which only knew the richness of the Longobard documentation in part.

The debate on the sanctuary already started in the twelfth century, when theologian Jean

Beleth from Paris wrote that the model of the Garganic settlement had inspired the construction of many churches consecrated to the Angel. German protestant historian Ferdinand Gregorovius (1821–1891) defined the sanctuary “western metropolis of the Archangel's cult”.

In the fifth century, from the Byzantine East the cult for the Archangel Michael reached the Gargano, in an highly striking natural scenario; the mountain, the cave, the wood, the water, all these elements characterised the following history of the cult itself and contributed to the creation of a typology of Michaelic settlement, which spread from the Gargano towards other European countries, especially France and the Anglo-Saxon area. Gradually, the Michaelic cave made a name

Golden foil representing San Michele (11th century)

for itself as epiphanic sanctuary, starting a very interesting phenomenon of popular faith and religiousness, involving men and women, the humble and the high-rank

people (kings, emperors, bishops, abbots, popes) and that went on uninterruptedly until today.

The enormous success of the sanctuary was undoubtedly determined by the contact with the Longobards from Benevento who, under their duke Grimoaldus, contended it with the Byzantines and, past its conquest, renovated it to help the pilgrims' access. Besides, with a number of initiatives they spread its knowledge in the other Longobard dukedoms, from Cividale to Spoleto and above all in the capital of the kingdom, Pavia. Here Grimoaldus, who had become king, ordered the construction of the palatine church of St. Michael, thus making the link between the Longobards across Italy deeper and more stable; the Garganic sanctuary and St. Michael became respectively the sanctuary and the national saint of the Longobard people.

After Grimoaldus, other Longobard dukes, kings, queens and princesses (Romualdus I, Romualdus II, Pertaritus, Cunipert, Ansa,

Atalperga) supported the devotion to the Angel and the privileged relation with the Garganic sanctuary; various hagiographical papers testify to this: the Longobard historiography, starting from Paul the Deacon (720-799), and many among the 200 epigraphies carved between the sixth and the ninth centuries on the structures of the sanctuary by pilgrims coming from central-northern Europe. Among these epigraphies, four inscriptions in Futhork (a runic alphabet used in Old English of England and in Holland as well between the sixth and the ninth centuries, mostly in the holy sphere) have an exceptional historical value and represent the first runic epigraphies ever found and acknowledged as such in Italy; they gave rise to an animated debate among some runologists (R. Derolez, U. Schwab, C.A. Mastrelli, M.G. Arcamone).

Overall, the 200 epigraphies from Monte Sant'Angelo represent the sole Longobard epigraphical body found so far in Italy, that projects new light on the relation between the Archangel, the Garganic sanctuary and the Longobard ethnos, confirming the role of the Apulian settlement in the religious history of the Longobards, a role that historiography has evidenced more and more, especially in the last decades, highlighting how the sanctuary represents one of these few Early Middle Ages sacred places which resisted through the centuries, contributing to the development of pilgrimage, joining the Byzantine Mediterranean Sea to Central-Northern Europe and to the Germanic world. Lately the sanctuary and its induced traditions have been the focus of the attention of a number of scholars from various countries (A. Heinz, G. Jones, V. Juhel, C. Vincent, J.M. Martin, H. Pátkova, J.M. Picard, M. Zimmermann) who studied deep in detail aspects such as the pilgrimage and the typology of Michaelic settlements, under a European perspective.

CIVIDALE DEL FRIULI

EVOLUTION OF THE CITY AFTER THE LONGOBARD PERIOD

The city maintained its role as an administrative hub and power centre also after the Carolingian conquest of the Kingdom; the seat of the Longobard Duchy of *Forum Iulii* – from which derives the modern name of the region of Friuli – at this time was known as *Civitas Austriae*: the city ruling over the Western territory of the Carolingian Empire, from which derives the modern name of Cividale. This role was surely due also to the presence of the seat of the Patriarch of Aquileia, a post taken by Paolinus (787-80), born in Cividale, who became one of the most influential advisers of Charlemagne himself.

At this time the city centre was the focus of busy renovation and decoration, which particularly concentrated on such places of worship as the basilica of Santa Maria Assunta and San Giovanni in Valle. The scarce data concerning the situation of the city areas of normal habitation does not seem to describe any remarkable buildings or reveal any signs of large scale developments.

Cividale's layout in the Late Medieval period substantially remained those of earlier periods, organized within wall enceinte, which over a long period preserved their role as well as their capacity to shape the urban context. A transformation can be clearly seen in the area to the North-West of Piazza Paolo Diacono, where there was a partial shift in street axes and a change in the use of spaces: the location of the Late Antique and Early Medieval palace and the area of the privileged burial of the so-called Duke Gisulf a large open space appeared, later to become a proper piazza with a fountain in its centre.

Between the 13th and the 14th century therefore one must imagine that there were still non-urbanized areas within the heart of the city, a situation not uncommon also in previous times. This view is supported by

Cividale map with extension to quarters

documentary evidence which suggest a landscape of houses interspersed with kitchen gardens and cultivated areas.

Patriarch Berthold von Andechs (1218-1251) begun important plans to renew and remodel the main monuments and the urban space in its entirety, indicating the main direction which the city's development then followed during the centuries.

The construction of a new set of walls which included in the city limits also those hamlets which had developed over time around the ancient city's outskirts, particularly along the main access routes on all four sides. The new urban area thus included also Borgo San Pietro to the West, Borgo San Silvestro to the North, Borgo Brossana to the East and Borgo di Ponte to the South, on the opposite bank of the river Natisone. Berthold's successors further contributed to the city's monumental development, particularly regarding the patriarch's palace, the religious buildings, the monasteries, thus marking a flourishing and growth in the architectural field.

However, at the start of the 14th century though, Cividale progressively lost its pivotal role as an administrative centre and a power centre, as these functions were gradually

assumed by the city of Udine, which over time became the new seat of the patriarch. The patriarch's palace in Cividale, probably the most important city building, seems already closed down at the beginning of the 15th century (1425) and was finally destroyed by the earthquake of year 1511.

On the other hand however, there are clues which prove that the city kept its dignity and prestige also from the architectural point of view. In the 15th century the Basilica of Santa Maria Assunta (the Duomo), was completely rebuilt and enlarged. Instead in 1515, under venetian rule, the walls around the outlying hamlets were completed – this being a sign of the important role Cividale still played, as the new walled-in area was much larger and more densely inhabited than the enceinte of the ancient city. The area of Palazzo Pretorio became the site of the new Palazzo dei Provveditori Veneti.

The features and the background of Cividale's ancient urban tradition strongly influenced the urban structure of the most central areas, as testified by the survival of some of the main elements of its glorious past.

THE SITE

The Gastaldaga area

The area of the Longobard royal court had already been partly incorporated into a monastery during the last years of Longobard rule. It was ceded to the patriarch of Aquileia in 830, and maintained its role as an administrative centre for fiscal issues also in the years following the Carolingian conquest, for a period which certainly included the whole of the 9th century. The old *Gastaldaga*, including the church of San Giovanni, was definitively assigned to the monastery only in the time of issue of Berengarius's diploma¹. Probably this was due to a need for greater space, following the arrival of nuns previously living at the convent of Salt. This was probably because Salt was no longer considered an autonomous entity, but simply a dependency of the monastery of Sesto al Reghena, as suggested by a document dated to year 888.

This urban sector of Longobard Cividale thus played an important part as a seat of power during Longobard rule. From the time of Berengarius's donation, its history fused with the history of the monastery of Santa Maria and its religious buildings.

The Tempietto Longobard

Oratory of Santa Maria in Valle

The first work inside the so-called Longobard Tempietto was carried out after the arrival of the nuns from salt, who joined Cividale's religious community at the end of the 9th century. This new situation is linked to the placing of a sarcophagus in the presbytery. This artefact, comprising two sculptured slabs belonging to an 8th century ambo, was believed to contain the precious relics of Piltrude, who had founded the monastery of Salt, and who had had three sons named Erfo, Anto and Marco (responsible for founding the monastery of

The Tempietto longobardo: the presbyterial area with the so-called "sepolcro di Piltrude", below on the right

Sesto al Reghena). The sarcophagus remained in place up to the restoration campaign which ended in year 1970. Today the two slabs are placed on the North wall of the apse.

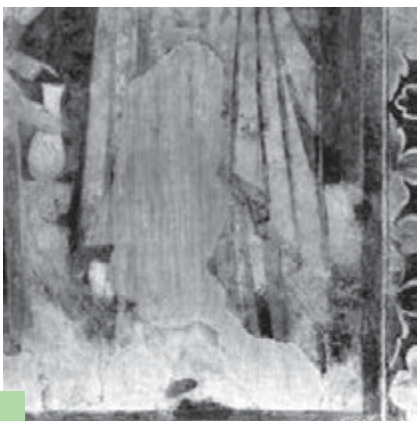

The use of the Tempietto as the nuns' oratory meant the interior was carried out with particular care. Up to the 13th century no efforts were undertaken to renew the Early Medieval decoration. The frescoes

which were later superimposed over the Early Medieval wall decoration should date to a period following the traumatic earthquake of year 1222, although one cannot totally rule out the possibility that two of the lunettes on the North and South walls (showing stories from Genesis, and Saints), might have been given new paintings before this time. Among the new frescoes, the earliest is the one showing

figures of female Saints on the South wall (which include a Mary Magdalen and an allegory of Faith). Presumably, the building's restoration was completed sometime around mid-13th century, when frescoes were also carried out in the presbyterial area (a Nativity of Christ), but only a few fragments have survived.

New frescoes were executed in the 14th century on the presbytery's central vault (Adoration by the Three Kings, the Three Kings, Saints) and on its walls (Annunciation, Crucifixion, Saints Peter and Paul). Very probably the fresco work was interrupted when the wooden choir stalls were built. The oldest surviving example in all Friuli, these stalls can be dated to the rule of Abbess Margherita della Torre, and can be dated to a time before 1384. The choir cov-

Longobard Tempietto I, southern inside wall of the entrance and presbytery: the frescoes date to the late Middle Ages and The Renaissance. Graphical scheme and details of detached frescoes

ered all the lower section of the nave, partly covering also the frescoes which had been completed only a few decades before. Almost all decorative fresco work following the initial phase of decoration have been detached from the walls, during the restoration campaigns conducted in the 1950s and 1960s, and are now partly placed in the former sacristy of the Tempietto, where the ticket office is today, and partly in the *Museo Cristiano del Duomo* and in the National Archaeological Museum. At the moment studies are underway for their placement in the cloister of Santa Maria in Valle, close to the Tempietto (see 5.d.1 and Management Plan). Some sculptures placed in the Tempietto in Medieval times have been placed in different locations: the statues belonging to the Calvary scene, placed on a beam which divides the main body of the church from the presbyterial area; the two statues of sorrowing figures flanking the Crucifix. These works are now held at Museo di Palazzo de Nordis. In the story of the development of the Tempietto, one must also consider the buildings erected in front of the building, which were later incorporated in the complex reserved for the use of the cloistered nuns, and comprising traces of 12th century frescoes (part of a Crucifixion

scene), and of the 13th century (particularly a scene showing Christ as Cherubim, flanked by Saint Francis and Saint Benedict), others dating from the end of the 13th century, executed by painters of the Austrian school, are among the earliest representations of Saint Francis extant in Friuli.

The Tempietto was subjected to a complex series of conservation efforts during the course of time. These were partly focused on gaining greater knowledge of its historical layers, while others were meant to solve conservation problems. They begun in the mid-19th century, and were first implemented by a body called Commissione Centrale austriaca. Of these conservation works, those carried out in 1859-1860 under the direction of G. Uberto Valentinis included restoring the wooden pews, cleaning the frescoes, and “repairing” the statues by inserting iron and copper strips to improve their adhesion to the wall. These works also included replacing some lacunae in the arch decorated with vines and in the statues; these additions were subjected to a careful stratigraphic survey, as part of the initial investigations carried out prior to initiating the project for maintaining the external surfaces (see Management Plan).

At the end of the 19th century a new means

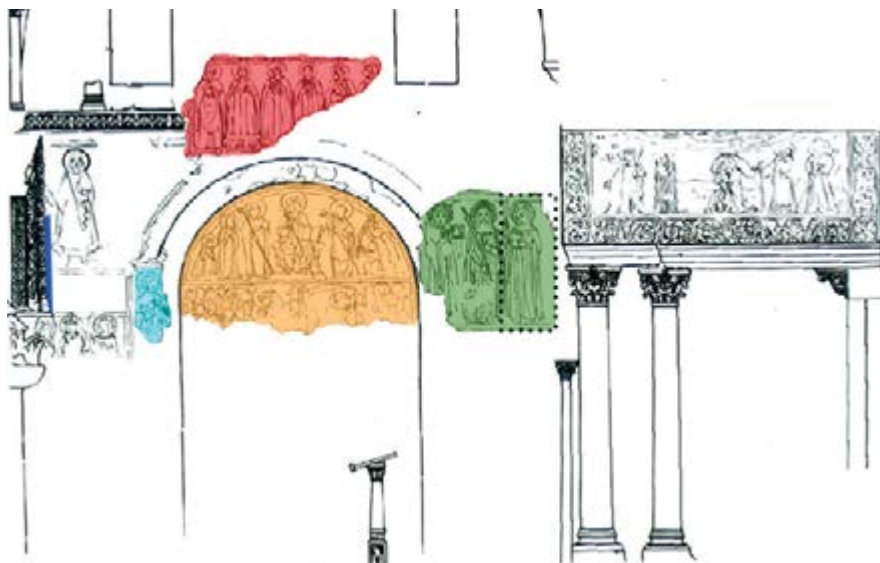

of access to the Tempietto was created from the River Natisone, and is still in use today. The work involved also a conservation intervention carried out on the floors, particularly in the presbyterial area. Archaeological excavations were carried out for the first time at the beginning of the 20th century (campaigns: 1917-1918, excavations in the main body of the church by the Isonzo-Armee; 1918-1919, excavations in the presbyterial area; 1970s excavations carried out by Belluno in the sacristy and excavations by Torp in the presbyterial area). Restoration work was also carried out on the wall structures, starting with those conducted by Ferdinando Forlati (1915 and 1916), up to those executed in the wake of the 1976 earthquake; the small building has been consolidated by inserting metal rods and an anti-seismic cement support system.

Moreover, to prevent any problems relating to geological decay which might affect the Tempietto, between 2006 and 2007 special geostatical work was carried out in the area known as Forra del Natisone.

The operations leading to the detachment of Medieval frescoes have also resulted in maintenance work on the Longobard period paintings, and on the stuccoes. The last

Longobardo Tempietto, northern inside wall of the entrance and presbytery: the frescoes date back to the late Middle Ages and The Renaissance. Graphical scheme and details of detached frescoes

campaign was carried out in 1976 and led to the present *status quo*.

The last ten years witnessed a series of maintenance and research activities aimed at increasing conservation and knowledge of the materials. In particular, work was undertaken in 1996 on the stucco parts of the large arch of the west wall, to pinpoint composition and execution techniques, while work in 2003 concentrated on the frescoes.

Already in 1950 Luigi Coletti published the results of research on stuccoes, which revealed similarities with the stuccoes at the Alhambra, in Granada, Andalusia, Spain. The Tempietto has been the focus of

in-depth studies, especially from the 1950s. These marked the beginning of a heated debate concerning the Tempietto's chronology and the cultural background of its decorators. The most important studies (Coletti 1952, Gioseffi 1974, Gaberscek 1977, Degani 1981, Tavano 1990, Lusuardi 2005) include more recent work carried out by H.P. l'Orange e H. Torp (1977-1979), who are jointly responsible for an exhaustive stylistic and technical analysis of the building, and for the definition of the main building and decoration phases.

The Monastery of Santa Maria in Valle

After the end of Longobard era, the monastery's importance within the context of ecclesiastical institutions ensured it attracted many privileges and donations. These helped increase its power and prestige, and led to its representatives gaining a seat in the Parlamento della Patria del Friuli, which involved the supply of men and horses to the Patriarch, in view of the monastery's status as a large feudal and landowning vassal. It always remained a convent for nuns, as well as a privileged place of refuge for the women of the man noble families of Cividale.

From the 13th century onwards Santa Maria in Valle reached a particular importance when certain relics were rediscovered at the Tempietto, which led the patriarch Berthold von Andechs to grant indulgencies to those visiting the oratory. The resulting revenues, together with those resulting from various ownerships and gifts, allowed the nuns to promote restructuring work and especially ensured they could play a more prominent role in the city's life, also by offering funds, as in the case of the rebuilding of the city walls.

An important renewal campaign also affected the Church of San Giovanni which was completely rebuilt and enlarged at the time of Abbess Margherita della Torre (14th century). A further spurt of development took place in the 16th century, when the large West apse was erected, conferring to the building its present appearance.

The 2008-2009 restoration work in the monastery (see Management Plan) made it possible to understand some important dynamics of how the complex was transformed over time. Stratigraphic studies and analyses of the construction of the façade of the Church of San Giovanni, and the discovery of an early sixteenth century two-way timber floor in the vestibule of the monastery, indicated that there had previously existed very ancient and particu-

Longobard Tempietto: wooden choir (14th century) and detail of the Abbess Margherita della Torre coat of arms

larly valuable rooms here, which influenced how the church was built. And in fact the alterations made to San Giovanni in the fourteenth century by the abbess Margharita della Torre took account of the remains of a pre-existing building that were then incorporated into the spaces of the new church: these were the Early Medieval Palace of the *gastaldus* (the royal chancellor); its east and south external walls, at the level of the foundations, were surveyed during excavations carried out by J. Torp in the 1970s. As a result of recent restoration works, these remains have now been left partly visible in the external walls of the church. The current configuration of the church is the result of raising and widening works that were carried out to the main front during the late 17th and early 18th centuries. In the 16th century other parts of the convent were also renovated and enlarged. The cloister was widened, and occupied an area previously occupied by a Jewish community and by a synagogue. The Medieval and Renaissance periods witnessed continual works on the monastery which gradually acquired its present appearance. During the last three hundred years however the monastery's ascent was checked by a downturn which affected a number of other religious institutions. However, it never lost its monumental relevance and its role in the urban landscape, although it became public property. In 1812 it was acquired by the Comune di Cividale, which restored it and installed a public school for girls of Cividale, supervised by the Benedictine nuns. Since 1843 the Benedictines were supported by a new Ursuline community from Gorizia, which remained at the monastery up to recent times. The complex falls under the protection of Italy's national conservation laws, and has recently been the focus of restoration work; among these, the work of the 1960s to ensure educational and teaching activities were updated. These have principally affected the area closest to Borgo

Church of San Giovanni: scheme of the building phases of the Church to be read on the façade

Brossana, while later consolidation work was carried out in the aftermath of the 1976 earthquake, and was concluded in 1980. During the last five years the institution which owns the property has carried out

maintenance work. In particular in 2004 the roof tiling was improved, while the 2005-2006 period witnessed the extraordinary maintenance work carried out on the school adjacent to the monastery, a more recent

Detail of the late 15th century ceiling

building, where the headquarters of the new Scuola di Specializzazione in Storia dell'Arte dell'Università degli Studi di Udine were installed. At the moment a project is being considered which should result in the whole complex being turned into a centre for a range of cultural purposes as well as into a museum of its own history, linked to the Tempietto and to the visitors' centre of the site for which inscription on the World Heritage List is requested.

The Episcopal complex

The basilica of Santa Maria Assunta (Duomo) and Christian Museum.

The ancient basilica was destroyed by fire in 1186 and rebuilt five years later. The buildings to the South of the Duomo (known as the Canons' Houses today) probably date from this period, and consist in a beautiful cloister section which probably ran around an area corresponding today to the Duomo's courtyard. Another fire ruined the building in 1343, and further damage was caused by an earthquake in 1348. The building was definitively destroyed by another seismic disaster, in 1448. In 1451 it was decided that a new church should be built, but the new building, which was being carried out in the gothic style and included three naves, progressed rather slowly under the direction of different architects, and was only completed a hundred years later.

The ample façade of roughly hewn stone

Church of San Giovanni and entrance of the Monastery's cloister: scheme of the building phases from the Early Middle Ages to the 20th century

clearly shows the succession of different work phases, its lower section being carried out in the Gothic style and including an elegant, finely decorated portal, and the upper section having a Renaissance structure, enhanced by agile volutes. Near the façade rises a hefty bell tower, begun in 1631 and completed in 1671.

A comprehensive restructuring of the interior was carried out in the second half of the 18th century, conferring to the church its present aspect. A vast hall, divided into three naves by imposing columns, a central presbyterial area, raised to hold a main marble altar where one of the masterworks of Italian Medieval jewellery holds pride of place, namely, the silver altarpiece (or *pala*), carried out for Patriarch Pellegrinus II in year 1200.

At the end of the 19th century some iron rods which linked the arches in the nave were returned to their original function, having been cut during the 18th century, as they were considered “ugly”; this had caused a detachment of the façade walls over time, which resulted in the walls leaning off axis for about 20 cm, and in the shifting of some of the wooden trusses of the roof. During the period between 1894 and 1985 the roof structures were also restored, ten trusses being substituted, and the remaining ones being repaired. In 1888 the walls were given a new coat of paint, and all the floor paving was substituted – both the one in the nave, comprising white and red marble square slabs, from 1509, as well as the terracotta tile paving in the side naves, consisting in white and grey marble squares. In years 1968-1969 new static consolidation work was carried out on the building, while further work became necessary under supervision of the Soprintendenza to repair the damage caused by the earthquake of 1976 to the Duomo and to its bell tower. The metal rod system in particular was allowed to function again, in correspondence with the arches in

View of the Monastery of Santa Maria in Valle from the Natisone Banks

1947 in the space close to the basilica was used by the Soprintendenza ai Monumenti di Trieste to create the *Museo Cristiano* (Christian Museum), to place in a worthy location two of the main masterpieces of Longobard jewellery: the altar of Ratchis and the baptistery of Callixtus (*tegurium*). The two works, which were carried out to decorate the baptistery connected to the Basilica of Santa Maria Assunta, remained in their original location up to year 1457. That year the baptismal structure was demolished to make space for the new church, and the two works were placed in a new building, also dedicated to Saint John the Baptist, on the Southern flank of the Duomo. They were once again moved in 1631, when this church too was pulled down, in order to build the bell tower. After 1645 the *tegurium* appears to be re-erected inside the Duomo, in a niche opening into the right nave, while the altar was transferred to the apse of the church of San Martino, in the Borgo di Ponte neighbourhood, immediately outside the city, on the opposite bank of the river Natisone. In the years 1946-47, when the works had been dismantled to preserve them from

danger during the war years, the two masterpieces were transferred and recomposed in the shape they still have today, in the *Museo Cristiano*, close to the duomo, where they can still be admired today. They constitute the most important Longobard works of the whole collection. In particular, the re-composition of the *tegurium* was enriched by inserting in the parapet of the font some Early Medieval marble slabs which date to a slightly later date: the *paliotto* (altar front) of Sigwald (756-786) and the marble slab of Patriarch Paolinus (787-80).

The altar of Ratchis at the moment is the subject of a diagnostics and conservation project being carried out by the relevant authorities. The first research data reveal interesting traces of polychrome pigmentation. In the *Museo Cristiano* some frescoes detached from the so-called Tempietto Longobardo were also placed, as well as sculptural elements originally included in the so-called “Tempietto collection”, as well as other paintings which had been recovered during restoration carried out in other religious buildings of

Facade of the Cathedral of Santa Maria Assunta

Cividale (the possibility of these works' removal to a nearby monastery, closer to their original location, is presently being considered). In 2006 and 2007 the court and the Christian Museum were heavily restructured, to further enhance the 13th century cloister, which had been rediscovered in 1990, and to enlarge the museum. In the museum is also the Patriarchal throne, or *Cathedra*, - in which twenty-six patriarchs, from 1077 to 1412 received their solemn investiture. The museum is also home to a picture collection and other artwork, and to the Duomo's treasury, a high ranking collection because of the high quality and uniqueness of the jewellery belonging to different historical periods, starting in the 9th century.

The Patriarch's Palace

The Palazzo dei Provveditori Veneti Museo Archeologico Nazionale

The Patriarchal Palace renewed under Callixtus was almost totally destroyed by the earthquake of 1511, and its ruins were pulled down to build the residence of the Provveditore, namely, the representative of the Venetian Republic, assigned to Cividale in 1553. The palace design is ascribed to Andrea Palladio and its building should date to the years around 1565 and 1596.

It became Italian state property in the 1970s and was the subject of prolonged conservation work – carried out by the Soprintendenza BAAS of the Friuli Venezia Giulia (the local branch of the Ministry for cultural heritage and activities). The work

was carried out as of year 1972, when the ceilings and roofs were rebuilt, a cement support system was put in place and the building's infrastructure was brought up to date. In 1976 archaeological excavations were carried out in the semi-interred basement area, including strengthening of the foundations in the areas where the excavations were being carried out; while in the years 1987-1988 the archaeological area adjacent to the palace was investigated, and subsequently covered with a flat structure resting on iron piers.

The complex opened in 1990, with a great Longobard exhibition, and from that date is the seat of the *National Archaeological Museum*, which includes materials of interest to the fields of archaeology, art

1935 project for the realization of the Museum Cristiano

Baptismal fount of Patriarch Callisto: 1930's arrangement

history and ethnography, once in the Ethnographical Museum, already held in the nearby Palazzo de Nordis. Following the excavations carried out in Cividale by Canon Count Michele della Torre Valsassina, who acted on behalf of Emperor Francis I of Austria in the years between 1817 and 1816. The collections increased thanks to donations, but were especially enhanced by finds discovered during the excavations of the city's many Longobard necropolises.

As of year 2002 the museum depends from the Soprintendenza per i Beni Archeologici del Friuli Venezia Giulia. Its didactic facilities have been recently updated. At the moment, a project to supply information materials in the English language is underway, and will integrate the panels created at the time of the exhibition of year 1990. The remains of the patriarchal palace, discovered in the areas underneath and adjacent to the Archaeological Museum have been restored and updated during the '80s and '90s; at the moment work is underway to gain greater

knowledge of the stratigraphy and to enhance the museum's facilities inside the complex, by perfecting a visitors' itinerary (see Management Plan). At the moment a new research is underway to examine the possibility of moving the ancient collections of codexes and documents, now kept at the top floor of the museum, to a new location at the Monastery of Santa Maria in Valle (see Management Plan).

1. The Diploma was published in Desiderius's third year as King of Italy (889-90) or possibly in the third year of his reign as Emperor (917-918) – however, the inscription has not reached us in its original form, but through a 16th century transcription.

Monastery of Santa Maria in Valle: view of the cloister

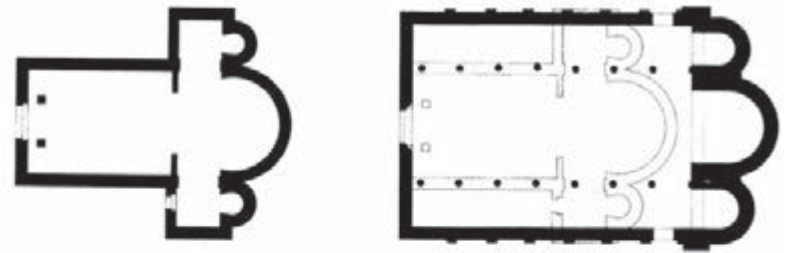

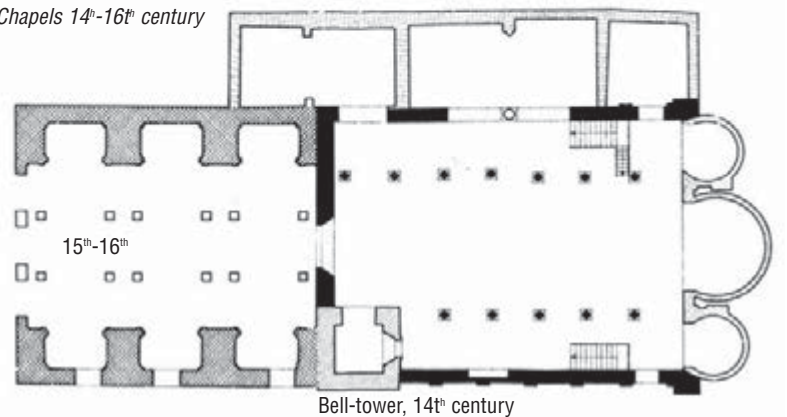

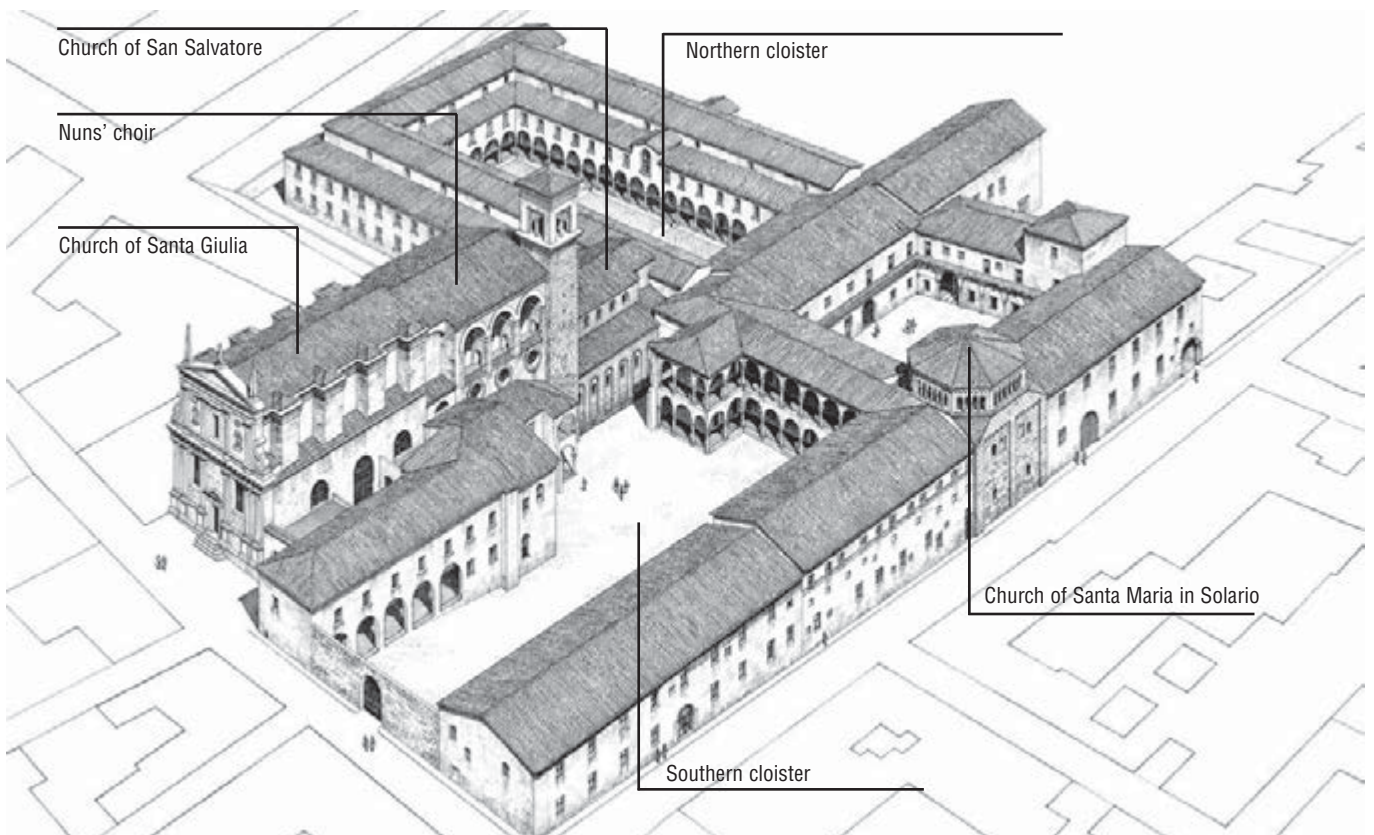

BRESCIA

Following Charlemagne's defeat of Desiderius, the Santa Giulia-San Salvatore monastery passed under the control of the Franks and like the one at Sirmione, it became dependent from Charlemagne's favourite monastery at Saint Martin of Tours. The monastery at Brescia, however, continued to play a first-rate role, as testified by the monumental size, and the wealth of the next few centuries' architecture and artwork produced there.

During the Late Middle Ages the church crypt was enlarged to house an ever-growing number of relics. New buildings were added to the whole monastic complex, including the oratory of Santa Maria in Solario (12th century) and a shrine to guard the "treasury" and to celebrate fundamental ceremonies during the liturgical year. The

San Salvatore, inside. Frescoes by Girolamo Romani, named "il Romanino", at the base of the bell-tower

Romanesque building, was erected upon a square plan, and was surmounted by an octagonal drum; its limestone masonry includes many re-used blocks formerly belonging to Longobard and Roman buildings. These include inscriptions which are easily visible on the outside wall overlooking Via dei Musei. This oratory was organized so as to include two large halls placed on two different floors. In this building the hall lower floor's ceiling consisted in four cross barrel vaults, with a central support including a Roman tomb stone with an inscription to the Sun God. This is probably where the most precious objects of the treasury were held. The whole

of the upper floor was taken up by one large square hall ending in three absidioles, and here the ceiling was built in the shape of a hemispherical dome. The nuns' liturgical ceremonies took place here. Frescoes were executed between 1513 and 1524 by the Brescian painter Floriano Ferramola and his workshop. The frescoes represented scenes from the life of Christ, male and female Saints whose stories were linked to the Benedictine Order, or to the relics held in the monastery, as well as scenes from the life and martyrdom of Santa Giulia. This hall is where the so-called "Cross of Desiderius" is held. At the end of the 16th century a bell tower was erected for the use of the church of San

Salvatore, which was further enlarged by adding chapels on its Northern flank. During the 15th century changes in liturgical and monastic functions due to the introduction of the Reform of the Benedictine Order meant the whole monastery was reorganized. A new building was placed against the façade of San Salvatore, and divided in two floors, to ensure the enclôstered nuns' seclusion: the building's lower floor had access to the church, while the upper floor allowed access to the nuns' choir. The large Northern cloister was also built at this time. Between 1593 and 1599 a new church was erected and dedicated to Santa Giulia according to architect Giulio Todeschini's

Santa Maria in Solario, lower floor

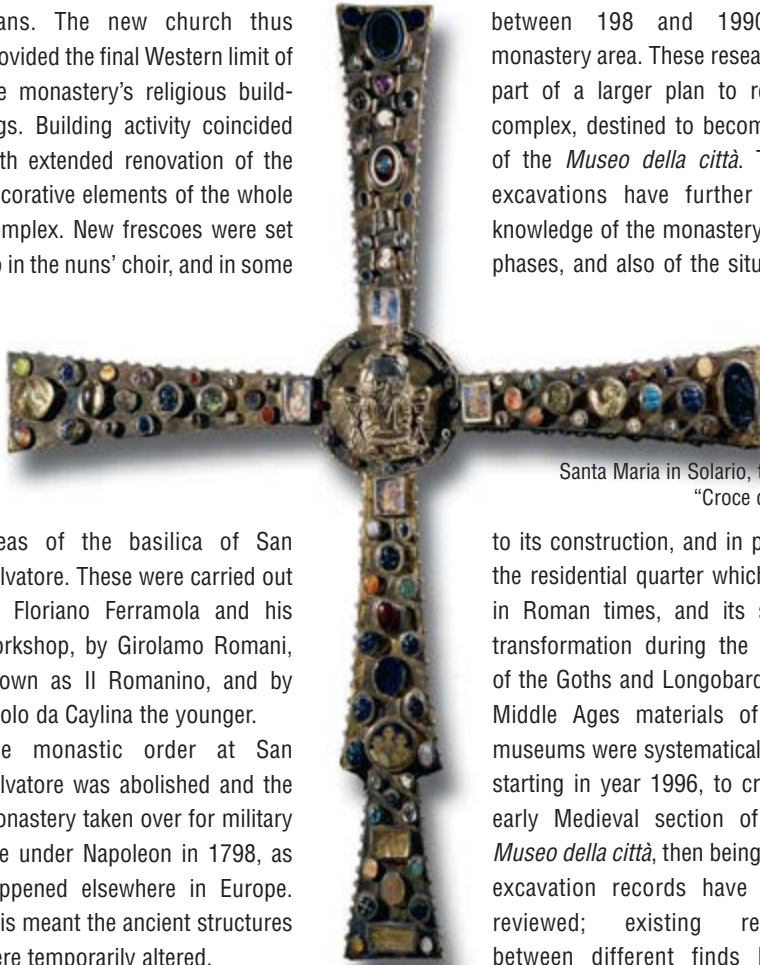

San Salvatore, frescoes by Girolamo Romani, called "il Romanino", on the bell-tower of the Church

Romanesque widening of the crypt of San Salvatore

plans. The new church thus provided the final Western limit of the monastery's religious buildings. Building activity coincided with extended renovation of the decorative elements of the whole complex. New frescoes were set up in the nuns' choir, and in some

Santa Maria in Solario, the so-called "Croce di Desiderio"

areas of the basilica of San Salvatore. These were carried out by Floriano Ferramola and his workshop, by Girolamo Romani, known as Il Romanino, and by Paolo da Caylina the younger.

The monastic order at San Salvatore was abolished and the monastery taken over for military use under Napoleon in 1798, as happened elsewhere in Europe. This meant the ancient structures were temporarily altered.

After Italy's Unification (1861), the monumental complex was progressively acquired by the Municipality Administration. Under its auspices in 1882, the *Museo dell'Età Cristiana* was opened in the church of Santa Giulia; the church of San Salvatore was opened to visitors together with the Romanesque cloister of Santa Maria in Solario. The acquisition of the whole monastery by the Comune only occurred after World War II.

The earliest archaeological investigations had started already at the end of the 19th century, especially focusing on the area over which the church of San Salvatore was built. These digs were continued during the 1950s.

Extensive and systematic investigations employing stratigraphy were conducted

between 198 and 1990 in the monastery area. These researches were part of a larger plan to recover the complex, destined to become the seat of the *Museo della città*. These new excavations have further increased knowledge of the monastery's different phases, and also of the situation prior

to its construction, and in particular of the residential quarter which rose here in Roman times, and its subsequent transformation during the domination of the Goths and Longobards. All Early Middle Ages materials of the city's museums were systematically reviewed starting in year 1996, to create a new early Medieval section of the city's *Museo della città*, then being set up. Old excavation records have thus been reviewed; existing relationships between different finds have been established, as well as an organic restoration campaign. This all led to very interesting results regarding the techniques of ceramic production and decoration, as well as those used to produce and decorate metalwork and bone objects during the Longobard period.

The *Museo della città* was inaugurated in July 1998, and includes about 13,000 exhibits from Brescia and from the surrounding area, which illustrate the various phases of urban habitation ranging from prehistory up to modern times.

The local authority, Lombardia Region, recognized in 2004 that the museum fully possessed the required quality standards set out in the relevant law entitled 'delibera regionale del 20 dicembre 2002' (n.7/11643).

Museum of the Christian age inside the Church of Santa Giulia (end of 19th century)

In view of the opening of the *Museo della città*, a general review of studies and an overall restoration campaign were set up to address the basilica of San Salvatore, which is also part of the early Medieval section of the museum itinerary. Pictorial and stone surfaces were cleaned and the stratigraphic relations between architectural and decorative elements were carefully evaluated; meanwhile part of the original stuccoes decorating the voussoir and intrados of the arches were carefully studied and partly replaced *in situ*, and fragments of frescoed

Town Museum, Early Middle Ages section

View of the southern courtyard during excavations (1982-1990)

View of the *viridarium* from the archeological area of the Ortaglia domus

plaster were recomposed. The definitive dating of the church to the rule of Desiderius have ensured its position as a privileged point of observation and reference for knowledge of Longobard culture at both national and international level. Also for this reason the monastic complex has promoted and played host to fundamental exhibitions on Longobard civilization: the exhibition entitled the future of the Longobards promoted in year 2000 by the Comune of Brescia and by the Fondazione CAB, within the context of the European project entitled "Charlemagne and the making of Europe"; the exhibition entitled *M'illumino d'immenso. Brescia, le sante croci*, an exhibition which opened in 2001 and dealt with these objects of religious devotion, a theme closely related to the so-called "Cross of Desiderius"; the exhibition entitled *Bizantini, Croati e Carolingi. alba e tramonto di regni e imperi* ("Byzantines, Croats and Carolingians. rise and fall of kingdoms and empires"), in 2001, focused on the Early Medieval period in the Eastern Adriatic area. One part of the monumental complex of San

One of the small Longobard crosses in golden foil

Salvatore-Santa Giulia has been refunctionalized with the particular purpose of holding temporary exhibitions as well as permanent museum services. In particular, in the last few years the complex has played host to a project entitled "*Lo splendore dell'arte*" ("the splendour of art"), thanks to which extensive and highly significant temporary modern art exhibition were placed on show

in the monastery. Among these were: *Monet, la Senna, le ninfee. Il grande fiume e il nuovo secolo* (2004); *Gauguin Van Gogh. l'avventura del colore nuovo* (2005); *Turner e gli impressionisti* (2006); *America! Storie di pittura dal nuovo mondo* (2007) *Van Gogh. Disegni e dipinti* (2008). A new cycle of temporary exhibitions was opened on December 4th 2009, with the exhibition *INCA. Origini e misteri della civiltà dell'oro*. As already described in detail in the section describing the site (2.a.2), the Longobards installed their habitations, burials and production facilities over the Roman buildings which lie to the West of the monastic complex San Salvatore-Santa Giulia, as well as other buildings, erected much later. The new buildings were erected over the semi-interred ruins, partially still emerging from the ground after having been gradually abandoned and despoiled.

Only the Roman theatre's *cavea* maintained a role as a public assembly meeting place up to year 1076. Other buildings' walls were

superimposed over time, and eventually constituted what is today Palazzo Maggi Gambara; this building's foundations were built directly over the Roman walls, and the walls themselves include many re-used blocks originally belonging to the Roman theatre. This Palazzo was enlarged over the course of time until it occupied almost all the *cavea* up to the outer perimeter of the theatre's hemicycle. Inside it there are still fragments of earlier decorative elements, dating back to the Middle Ages, including figures of musicians, dancers, the seasons, and various other motifs. Most however date to the Renaissance period, and include portraits and ornamental motifs inspired by Andrea Mantegna's subjects. The 18th century enlargement which incorporated earlier structures is easily visible from Via dei Musei; this façade, entirely restored (1998-2005), is covered with faux rustication on its ground floor. Above the windows run a series of *clipea* showing portraits of the Roman Emperors. During the 19th century it was deemed necessary to demolish the whole of the interior of the building, which is part of the estate belonging to the Brescia Municipality, to bring to light the ancient theatre's structures, and to carry out archaeological excavations; the building is involved in a program to refurbish and enhance the whole of this area (see below). It is not unlikely that the family which now owns the Palazzo actually descends from the noble Longobards mentioned by Paul the Deacon, who describes these aristocrats as residing in Brescia. The Gambara family used to own land in the small town of the same name and used to live in the Western area of the city, close to the ancient Forum.

Near the *Capitolium's* Western portico, above the Late Republican Sanctuary, a less grand residence was built: Casa Pallaveri, which still shows rooms and decorative elements whose dates range from the 16th to the 18th century. It too belongs to the

Exhibition: The future of the Longobards (2000)

Municipality and is the seat of the Fondazione Brescia Musei.

In the area of these two buildings it is thus possible to view the stratigraphic layers which tell us the story of Brescia from Roman times to Early Medieval times and from Renaissance to our own times.

As of 1822 the whole area has been subjected to archaeological excavations promoted by the Municipality and by the Ateneo di Scienze, Lettere ed Arti, undertaken thanks to a public subscription. At the time only the upper section of a column of the *Capitolium* was visible, which is entirely visible today. The excavations brought to light the remains of the Capitoline Temple – including a cache of large bronzes, now held in the *Museo della città* (including the Winged Victory, the city's symbol, and some busts of Roman Emperors), as well as a number of original furnishings belonging to the same period. Archaeologists also revealed part of the Republican Sanctuary and of the Roman theatre, which lies within the properties which belonged to the Maggi Gambara Counts.

Immediately following the discovery of the ancient *Capitolium*, its reconstruction was attempted, and a museum was placed

Engraving by L.Basiletti, remains of the ancient theatre next to the Temple of Vespasiano

inside it, and entitled “Museo Patrio”, which became Brescia’s first museum, including a series of very important inscriptions, a collection remarkable both for the number of its items, as well as for their contents, and for the exhibition criteria which were followed. The Museum was first opened in year 1830; in 1882 the most recent exhibits were moved to the

“Museo dell’Età Cristiana”, inaugurated in that year within the church of Santa Giulia. In the 1930s new work was carried out at the *Capitolium*, namely the building assumed its present shape and the original stone fragments belonging to the architrave and bearing a dedication to Emperor Vespasian were recomposed. During the 1950s new exhibition areas were opened on

Remains of the Roman Theatre, re-used in Palazzo Maggi Gambara's foundations

Palazzo Maggi Gambara, façade on via dei Musei

Engraving by L. Basiletti, remains of the ancient temple of Vespasiano, before the 1823 excavation

the upper floor, to grant visitors a more satisfying range of exhibits. Further maintenance and improvement work was carried out over the years. Since the 19th century therefore the city's ancient monumental area was open to visitors in its entirety thanks to projects which have ensured the overall enhancement of the site. Since 1998, the year in which the *Museo della città* opened in Santa Giulia, the most important exhibits of the *Museo Romano* were transferred to the new museum area. Therefore, the area comprising the Republican Sanctuary, the *Capitolium*, the Roman theatre, the Palazzo Maggi Gambara and Palazzo Pallaveri, namely, both the archaeological area and the buildings connected to it, could finally be subjected to an organic and extensive refurbishment and enhancement project, to ensure this city sector is turned into a large unitary museum complex. In particular, new archaeological excavations are under way, as well as conservation and presentation improvements, to reorganize and optimize visitors' itineraries, which is to be viewed in a seamless progress including the monastic complex of San Salvatore-Santa Giulia. The plan ensures not only the opening of new monumental areas at present not open to visitors, but also the reorganization of the museum organization, to ensure the exhibits are redistributed between the San Salvatore-Santa Giulia area and the archaeological area, to grant visitors an ever richer and more satisfying visit of the great unitary museum complex (see paragraph 5d of the Management Plan).

CASTELSEPRIO-TORBA

With the advent of the Carolingians, the territorial and administrative role of the *castrum* of Castelseprio was not weakened: the diplomatic sources refer to the *cursus honorum* of Leone, Count of Seprio; during his career as officer of the new empire founded by Charlemagne, he was the envoy (*missus*) of the Emperor Lotharius, who appointed him Count of Milan, and he handled the notarial activities at the Farfa monastery in Lazio. At his death his son Giovanni inherited the title (between 841 and 844), but at the same time Castelseprio became part of the County of Milan, despite this being a noble centre of ancient tradition. Involved in the battles between the major milanese families, the Della Torre and the Visconti, Castelseprio joined forces with the former and became one of their main strongholds. In 1287, having defeated their adversaries, Ottone Visconti destroyed the *castrum*, saving only the churches and their accessory buildings and the Monastery of Torba and issued a decree prohibiting any form of residency in the place "...Castelseprio must be dismantled and kept so perpetually, nor should anyone dare to inhabit it or resume living there".

Thus, the site only retained the role of religious centre, guaranteed above all, by the existence of the Basilica of San Giovanni, parish church of a large territory with canonry and accessory buildings. Development of the Monastery of San Giovanni (future seat of the archaeological museum of Castelseprio) dates back to the 15th century, a building which, owing to its modest dimensions, must only have had a role as a territorial colonisation cell rather than as an abbey mother church. The state of abandon of the town, which became a quarry for the nearby towns, and the solitude of the place forced the clergy to move their dwellings elsewhere, so that the

pastoral visit of 1566 highlighted the state of decay and abandon of the Basilica of San Giovanni; a few years later, in 1582, the church even lost its parish *status*, which was transferred to the parish church of Carnago. From this moment onwards the worship function of the area of the ancient *castrum* Castelseprio was limited to receiving processions on special feast days and celebration of a few masses.

Construction material continued to be plundered in the subsequent centuries, contributing to the process of decay of the buildings. During the pastoral visit of 1566, at the time of Archbishop Carlo Borromeo, even the small church of Santa Maria *foris portas*, which was considered "ancient", stood in a state of precariousness and poverty in terms of resources and

furnishings; since the church still had three altars which stood away from the wall, and which did not correspond to contemporary liturgical protocol, their destruction and reconstruction was ordered, and the rear wall was to be decorated with an altarpiece and "paintings" were to be added to the most important walls. Parts of the ancient painted decorations were probably still visible, since the fresco of the Nativity in the central apse is cited –with wooden frame and protected by glass– in the 1621 documents concerning the visit of Cardinal Federico Borromeo. The church was still

standing in the 19th century and on 5 March of each year, the "day of the Annunciation", a large fair was held. At the start of the 20th century, however, Santa Maria *foris portas*

Fresco of the Nativity from Santa Maria *foris portas*.
Carnago, Church of San Martino

was turning to ruins, such that, in 1936 the renaissance fresco of the Nativity by the lombard school was removed and transferred to the Church of San Martino in nearby Carnago.

Even the Monastery of Torba, cited in two documents from 1049 and 1203, saved by Ottone Visconti continued to exist. Owing to the poverty of the places and the lack of security there, in 1426 the nuns were obliged to abandon Torba and move to the Monastery of Luvinata. After several years of difficult cohabitation, also due to the unconventional conduct of some of them, the nuns returned to Torba for a short period, until their final transfer to Tradate in 1482.

The transformation of the monastery into a rural complex involved a series of modifications to the structures. to name a few examples, the walls painted in the lower room of the tower, used as a kitchen, were damaged and a cart passage was opened in the south wall of the Church of Santa Maria, used as a deposit for equipment. during the napoleonic period, with the suppression of the religious orders, Torba permanently lost its monastery *status*. It was permanently abandoned in 1970.

Although the first archaeological excavations at Castelseprio –probably only carried out in the area of the Basilica of San Giovanni– date back to 1846, the great discovery of the site occurred only in 1944, when G.P. Bognetti, who was its first and most important scholar, was wandering through the woods of the Olona Valley. The castle remains were semi-destroyed, the walls of the buildings of worship were half collapsed and piles of rubble from collapse and despoilment filled the central area of the *castrum*. In the burg area, now invaded by the woods, the Church of Santa Maria *foris portas* no longer had its side apses, and the frescoes were covered in an insipid

Santa Maria *foris portas* before the conservation interventions

layer of white. Immediately realising the unique historical and artistic/architectural importance of the site, Bognetti began interdisciplinary research, which involved historians, archaeologists, architects and art historians working side by side. The first results were published as early as 1948. From then on, there began a process of rediscovery which saw archaeological excavations, explorations of materials and conservation work on the structures and decorations. In the 1950s, the first

conservation work was carried out in the area of the *castrum* and on the Complex of San Giovanni. The walls of the church and the baptistery were consolidated and rebuilt where possible, showing re-integrations with brickwork. Further maintenance work was carried out in the 1980s and in 2000, together with diagnostic analyses on binding materials and construction and decorative materials. New work in the San Giovanni area and on the wall fortifications, towards the western slope towards Torba,

is currently in progress. To date, most of the structures of the *castrum* have been restored and made visible to the public; work is now in progress to reorganise the information so far acquired (from the digs in the 1950s to the most recent explorations) with a review of all existing documentation. Furthermore, new interdisciplinary research are being carried

out related to the review programmes of the artefacts uncovered during the various archaeological explorations.

The results of the studies and research carried out on the site were recently put on display in the *Antiquarium* of Castelseprio, which opened in May 2009 in the Monastery of San Giovanni. Using as evidence the material culture of the settlement, the

exhibition seeks to provide an account of the long succession of events in this place, whose rich history lasted through all the epochs from its beginnings until its abandonment.

This was a process of development that began with the first settlements in the pre- and proto-historical periods (10th-19th/8th centuries B.C.), and ended in the late

Basilica of San Giovanni before the conservation interventions

Antiquarium - entrance

sixteenth century when the parochial functions of the church and baptistry of San Giovanni were extinguished following a general abandonment of the site, and were transferred to the nearby church of Carnago.

This was a long and glorious epic that had its high points in the Gothic period (5th-6th centuries), when Castelseprio became an important *castrum* in the sub-alpine fortified system, with connections that covered great

distances; and then in the Longobard era (from the late 6th century until the year 774) and still later in the Carolingian period, when it became the legal and administrative centre of a large area (at first under the

Plastic model and panel in the Antiquarium

The tower of Torba before the conservation interventions

Giudicaria form of government, and then the *Comitato*).

By the seventh century the *castrum* had become a city with an urban type of structure. The city walls were equipped with trenches and watchtowers; internal roads connected the dwellings, which were mainly concentrated near the south-western walls; there was a religious centre consisting of the basilica of San Giovanni Evangelista, near the baptistery of San Giovanni with an attached cemetery; and the 'casaforte' (the fortified house of a noble family), which was probably the headquarters of the local authority (*dux*?, *comes*?).

Under the Longobard king Desiderius, Castelseprio was a *Flavian City*, a royal seat directly subject to the central power and its functionaries; in the Carolingian period it was ruled by Count Leo, who worked as a notary in Milan and Farfa (in Lazio) and left the government of Castelseprio to his descendants.

So it was not a coincidence that in the thirteenth century Castelseprio became a place of strife between the Della Torre and the Visconti, two noble families that were contending for the domination of Milan and its hinterland. The victory of the Visconti was fatal for Castelseprio but whilst the victors decreed the destruction of its castle, they did not extinguish its worship and religious functions, as attested by the construction of a house for collegiate priests and a service building (14th century)

at the basilica of San Giovanni, and construction of a Franciscan friary (which now houses the *Antiquarium*) on the eastern edge of the flat plateau.

As in many other similar early medieval situations, a large town developed outside the walls, where there arose the church of Santa Maria *foris portas*, famous for its frescoes recounting the childhood and life of Christ according to the tradition of the apocryphal gospels, which were painted by

an artist of extraordinary skill and freshness of interpretation. The fortified extension of Torba also went through its own transformations, and was incorporated into the Benedictine nunnery, also built in the early medieval period. The tower of the walls of Torba then became the mausoleum and chapel of the monastery, and was embellished with frescoes of great iconographic richness; the new church of Santa Maria was built opposite the tower.

The complex of Torba, yesterday and today

The good fortune of Castelseprio was largely determined by its elevated geographical situation, which enabled it to control a very extensive surrounding territory, particularly the transportation networks (by land and water) that connected the main towns of a region that extended towards the lakes Maggiore, Lugano and Como and included the areas of the present-day Canton Ticino, the Comasco, Milan, and Pavia. To these intrinsic advantages were added Castelseprio's

access to a wealth of natural resources and raw materials (water, timber, stone, and all their derivatives).

With regards to Santa Maria *foris portas*, on the basis of the archaeological explorations that uncovered the foundations and the elevation marks in the side apses destroyed between the 18th and 19th centuries, at the end of the 1940s the triple apse layout of the building was reconstructed, leaving the *opus sectile* floor

section visible, having been uncovered during the excavations. The dull layers on the wall fortifications were cleaned to reveal an important series of late mediaeval frescoes.

During the 1980s, a full excavation of the entire chamber and lengthways excavations carried out on the outside of the church uncovered most of the cemetery area connected to the church, as well as recovering information on the phases prior to the late Middle Ages.

In 1996-97 the Province of Varese carried out a new conservation project on the church to eliminate infiltrations of water and start a monitoring plan with a view to planning maintenance activities.

The Provincial Administration of Varese has also recently carried out a photographic campaign to document this important building, and is about to initiate further research to define the chronological seriation of the building and its famous fresco cycle, by means of further diagnostic investigations (of the plaster, the pigments, and the wooden elements); this work will be coordinated with other planned investigations at the church of San Salvatore in Brescia and the Tempietto Longobardo at Cividale del Friuli.

In extreme decay, the complex of Torba was purchased in 1976 by Giulia Maria Mozzoni Crespi, who donated it to the FAI (Italian National Trust). The restoration and conservation work, which began immediately, allowed full integration of the freed structures; in particular, removal of the thick layer of lime and plaster laid during the period of its use for agricultural purposes, revealed important early and late mediaeval frescoes on the tower, which were studied in detail by Carlo Bertelli. Conservation work is currently underway on the structures and painted decorations, as well as work carried out to improve the presentation and enhancement of the entire complex.

The Church of Santa Maria *foris portas* before and after the conservation interventions

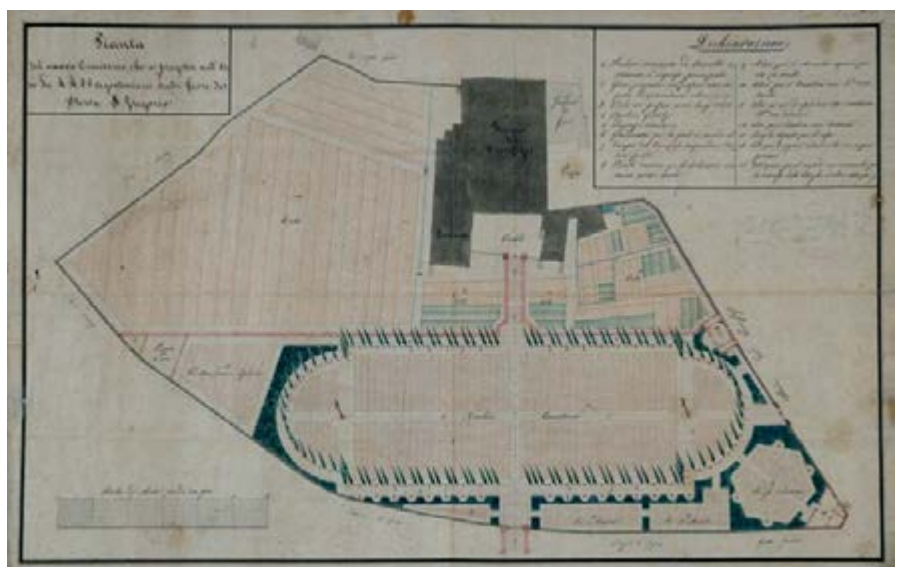

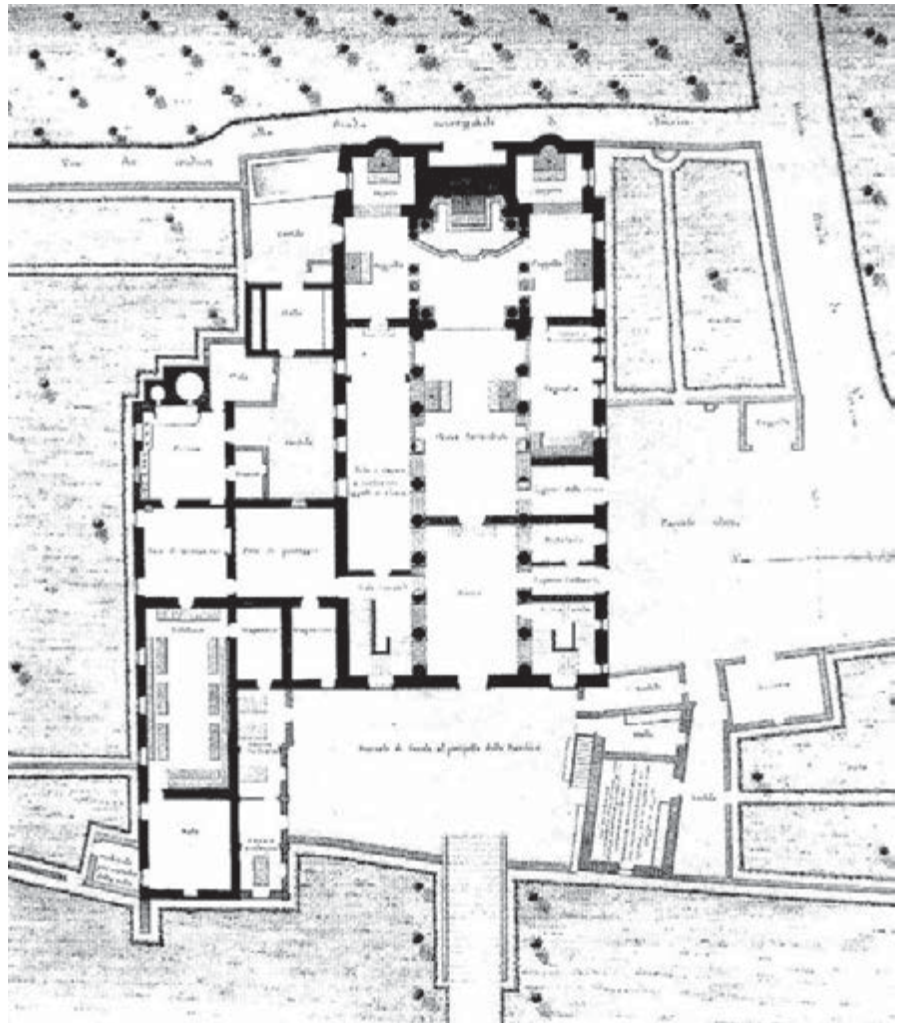

SPOLETO

The Basilica of San Salvatore is a masterpiece of religious architecture and a unique construction from both the structural and aesthetic points of view owing to the type and quality of its architectural sculpture and the reuse of *spolia*, greatly admired during the Renaissance by architects and artists.

It is recorded in a Benedictine document dating from 815, in which it is referred to as the Church of St. Salvatore, a title that in all probability was given by the Lombard dukes. In 1064, 1236 and again in 1285 the same building is referred to as the "*monasterium Sancti Concordii*".

The Basilica of San Salvatore and the Clitunno Tempietto are affected by similar events over the centuries. During the Renaissance, the two extraordinary Spoletine monuments started to be studied and surveyed. To date, the first known documentation is a drawing made by Francesco di Giorgio (Siena) dating back to the 1470s, followed by Antonio di Sangallo the Younger with his drawings of the Tempietto and an incomplete drawing of the Basilica of San Salvatore, showing the doorframe and a portion of the architrave on of the main portal, undoubtedly the most widely studied detail of this religious complex. Michele Sanmicheli is the author in Verona of works that were inspired by the Basilica of San Salvatore (the door of his house, the door of the Pellegrini Chapel -1536-37- in San Bernardino, the side openings of the Palio door, those of the Madonna della Campagna door). In the sixteenth century Sebastiano Serlio, in the fourth book of his *Treaty on Architecture*, made a simplified drawing of the main portal, although it is attributed with a pagan temple. Andrea Palladio makes a detailed drawing of it, which is now kept by the *Royal Institute of British Architects*, London, and uses its motif for the door, antirefectory and interior frames in the refectory of San Giorgio Maggiore in Venice

San Salvatore, planimetry (Cherubini 1860)

San Salvatore in 1921

and the northern door of the Duomo in Vicenza.

During the sixteenth century, a number of frescoes were executed on the interior walls of the basilica, bearing witness to the increasing popularity of the cult of the Crucifixion. This gave rise to the new name first recorded in this period, the “Church of the Crucifixion”, which replaced the previous dedication. The dome, as seen today, was built in the eighteenth century when a large, marble high altar was also constructed. In 1860 the church still counted six altars, two halls, a sacristy, two main flights of steps, two side entrances and a convent parlour.

With ecclesiastical property being brought under State ownership following the unification of Italy in 1870, the church and surrounding lands passed from the hands of the discalced Augustinians, under invocation to the Crucifixion, into those of the town Council, which promptly undertook restoration work on the building itself and converted the area within the walls, previously used as a vegetable garden, into a cemetery.

The restoration works, which were completed in 1905 in accordance with “purist” expectations typical of the time, freed the original fabric of the building from the “superfetations” which had been added over

San Salvatore, façade. Detail of the windows before the intervention in the 90s

Main portal's architrave. Disassembly (90s)

San Salvatore, façade

time, including the demolition of liturgical features added over the ages (such as the eighteenth century marble altar). At this time, the building was brought its present state of preservation. The entrance to the cemetery was placed, somewhat theatrically, on the same axis as the façade of the Basilica of St. Salvatore, which was entered, as indeed it still is today, by means of a long flight of steps.

It would appear that plans for the integration of the ancient building were put forward by

Aleandri, a designer-architect who exhibited a great deal of sensitivity and succeeded in exalting the building's prospect, positioned on high at the end of an avenue of thick cypresses which, from lower down, would have shielded the tombs from the view of passers by.

In the 1990s, important preservation works were carried out on the Basilica of St. Salvatore, in response to earthquake damage and inadequate maintenance in previous times. The works aimed specifically at

remediating static damage to architectural, sculptural elements on the façade (the windows, in particular), the reduced legibility of the frescoes in the three apses, which showed such advanced signs of decay that sections of the frescoes might have been permanently lost, and water damage in the presbytery area.

This project, funded by the Superintendence for Fine Arts of the Umbria Region (local Office of Ministry for cultural heritage and activities) and the Savings Bank Foundation of Spoleto, was preceded by in-depth historical studies and the drafting of a new critical survey, both of which provided essential information useful for understanding the form, the static quality, the causes of decay and the most suitable methodologies to be adopted in ensuring the building's correct preservation.

Whilst work was in progress and then also whilst dismantling some of the elements of the façade, it was possible to integrate new finds with previously collected data, leading to a series of immensely important discoveries which threw new light on certain aspects of the building's original construction and decoration techniques.

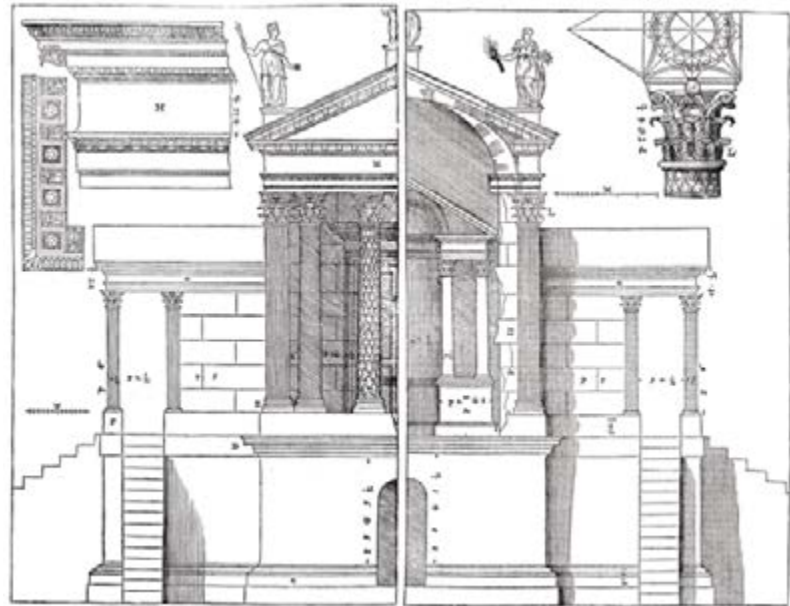

In particular, it was possible to ascertain the way in which the *spolia* were initially laid, and likewise the frieze over the church's main doorway, perfectly sculpted on the back of a huge, monolithic slab originally coming from a roman sepulchral monument dating to the first century ad, a mould of which is now on display at the Foundation. Any systematic understanding of the building has always been rendered problematic due to the complexity of the building itself and the fact that it was never actually finished, the extreme solidity of the *spolia* and the various interventions carried out in the past. These factors have contributed to the building being attributed with vastly differing dates in the field of critical historiography, as variously stressed in the description of the asset.

CAMPELLO SUL CLITUNNO

The Clitunno Tempietto was known in the fourteenth century as the “*Ecclesia S. Salvatoris*,” which came under the jurisdiction of the parish of Sant’Angelo *in Capite*. The shrine was also described in the course of pastoral visits from the sixteenth to the eighteenth century as a rural church, ennobled however by its great antiquity and splendid decorations in marble.

The remarkable style of the building, tending towards the classic, inevitably captured the attention of numerous artists from Renaissance times. As regards San Salvatore, the oldest documentation known today is a drawing by Francesco di Giorgio, dating back to the years around 1470, which shows an improbable architectural treatment of the monument that included the addition of the access wings, evidently already damaged, setting them parallel to the two lateral ambulatories.

Antonio da Sangallo the Younger, among all the Renaissance artists the one most faithful to the original, in a sketch at the Uffizi shows the two outer stairs, this time in the façade, and he was followed by Andrea Palladio who, in a drawing now at the Royal Institute of British Architects in London and in his treatise on Architecture, completes the

Drawings by A. Palladio, 17th century. A.C.

lateral prospects by adding a further stair in front of the ambulatories.

In the eighteenth century Piranesi confirms, in his engraving, the status of the monument with one of the two wings in ruins. In fact, after a violent earthquake and the ensuing spoliation, the building was violated and lost part of the small lateral colonnades. Fortunately, the intervention of local historians and of Cardinal Rezzonico (1767) enabled the recovery of part of the stolen stonework.

In the eighteenth and the first half of the

nineteenth century, the shrine became a favoured venue for travellers and artists, and was even described by Byron in his verses. The first inspections of the Tempietto were carried out in 1894, followed by proposals for its restoration and purchase by the Italian State. In 1899, a bakery adjoining a mill below the shrine was acquired to enable easier access to the monument.

The first scientific surveys of the building go back to the period 1900-1910 and were supervised by Viviani, the architect in charge of the historical buildings of Umbria. All the sculpted pieces in the area and held in the collections of Spoleto were catalogued, enabling the reconstruction of the lateral passageways.

In 1926, steps were built to grant access to the *cella*, while the monument was given the protection of a fence and connected to street level by an earthen ramp. In 1927, Giosuè Carducci, the poet who cited the shrine and the Clitunno springs in his *Odi Barbare*, induced the local authorities to pay greater attention to the vegetation of the place, and convinced them not to plant willows (trees not native in the region) but to plant instead

Engraving by G. Rosaspina, drawing by Minardi. 19th century A.C.

Tempio di Clitunno tra Fuligno e Poletti alle Vene, (drawings by Giovan Battista Piranesi, 1793)

the noble cypress, now quite ubiquitous. The building received structural consolidation in the nineteenth century entailing the addition of chains to the portico and architrave, has more recently undergone conservation works aiming to conserve and enhance the architectural stonework and wall paintings inside the *cella*. This work has reinstated the clarity of these wall paintings, without however interfering with them in a material fashion either by reintroducing colour or reconstructing the missing sections. The unusual depiction in a composition, which calls to mind the temples of Graeco-Roman Antiquity, has led to widely disparate conjectures regarding the original purpose and dating of the building, with suggested dates ranging from the fourth to the twelfth century A.D.

For an essential bibliography one should refer to the description of the asset. The most recent studies carried out by Judson Hemerick and Carola Jäggi have dated the building more precisely to Longobard times, with estimates differing between the early years of the seventh century (Jäggi) and the middle of the eighth century (Hemerick); the earlier date claimed by Jäggi would appear the more reliable, confirmed also by the frescoes of the *cella*, which have been very recently dated to the seventh century by Valentino Pace. It should also be mentioned, in conclusion, that as of today the examination of the samples of mortar have not provided satisfactory (and reliable) results in terms of a more precise dating, the oldest phase apparently going back to the year 712, the most recent to 658!

Church, piazza and bell-tower

BENEVENTO

In 968, the Santa Sofia cenoby of Arechi was destroyed by a violent earthquake, and although its effects on the church are not documented, there is little doubt that this too was damaged.

In 1022 Pope Benedict VIII granted St. Sophia independence from the abbey of Montecassino and, during the twelfth century, the convent must have flourished thanks to the multitude of donations it received and the income it created, both from the rental of its various properties and its artisan and commercial activities. The monastery therefore came to occupy a position of great prestige, as reflected by the activities undertaken in its "*scriptorium*", where manuscripts were written and illustrated in a manner later to enjoy world-renown and known as the "Beneventan Script".

It was during this time that the complex underwent an important phase of architec-

Lunette on the portal showing Christ, Madonna and S. Mercurio

tural transformation, due in part to the fact that it had to be brought into line with the monastic requirements of the Benedictine order. In 1150, under abbot John IV, the whole of the old monastery was totally renovated. this was when the beautiful

Romanesque cloister, still standing today, was built, as well as other works carried out on the church in the area of the central hexagon, the two arches spanning the altar and the replacement of two columns with the two pillars supporting the decagonal

Church, square and bell-tower

The external walls of the monastery of S. Sofia in the 18th century (Labruzzi)

ambulatory just inside the entrance, probably introduced to make the altar more easily visible. John IV also commissioned the construction of a building facing the church, featuring a great archway supported by two lions beneath the columns (on exhibition in the museum). The church façade today still carries the signs of the original front of the building which collapsed following the earthquakes of 1688 and 1702, at the point where the two re-utilized columns stand, supporting the slight overhang created by the middle section of the façade. Within the recess is an impressive doorway with marble doorposts and lintels, surmounted by a **lunette** depicting 'Christ on His throne between the Madonna and St. Mercurius presenting a Commissioner'; who, according to some

Map of Benevento (Casselli, 18th century)

Map of S. Sofia with the archeological excavations

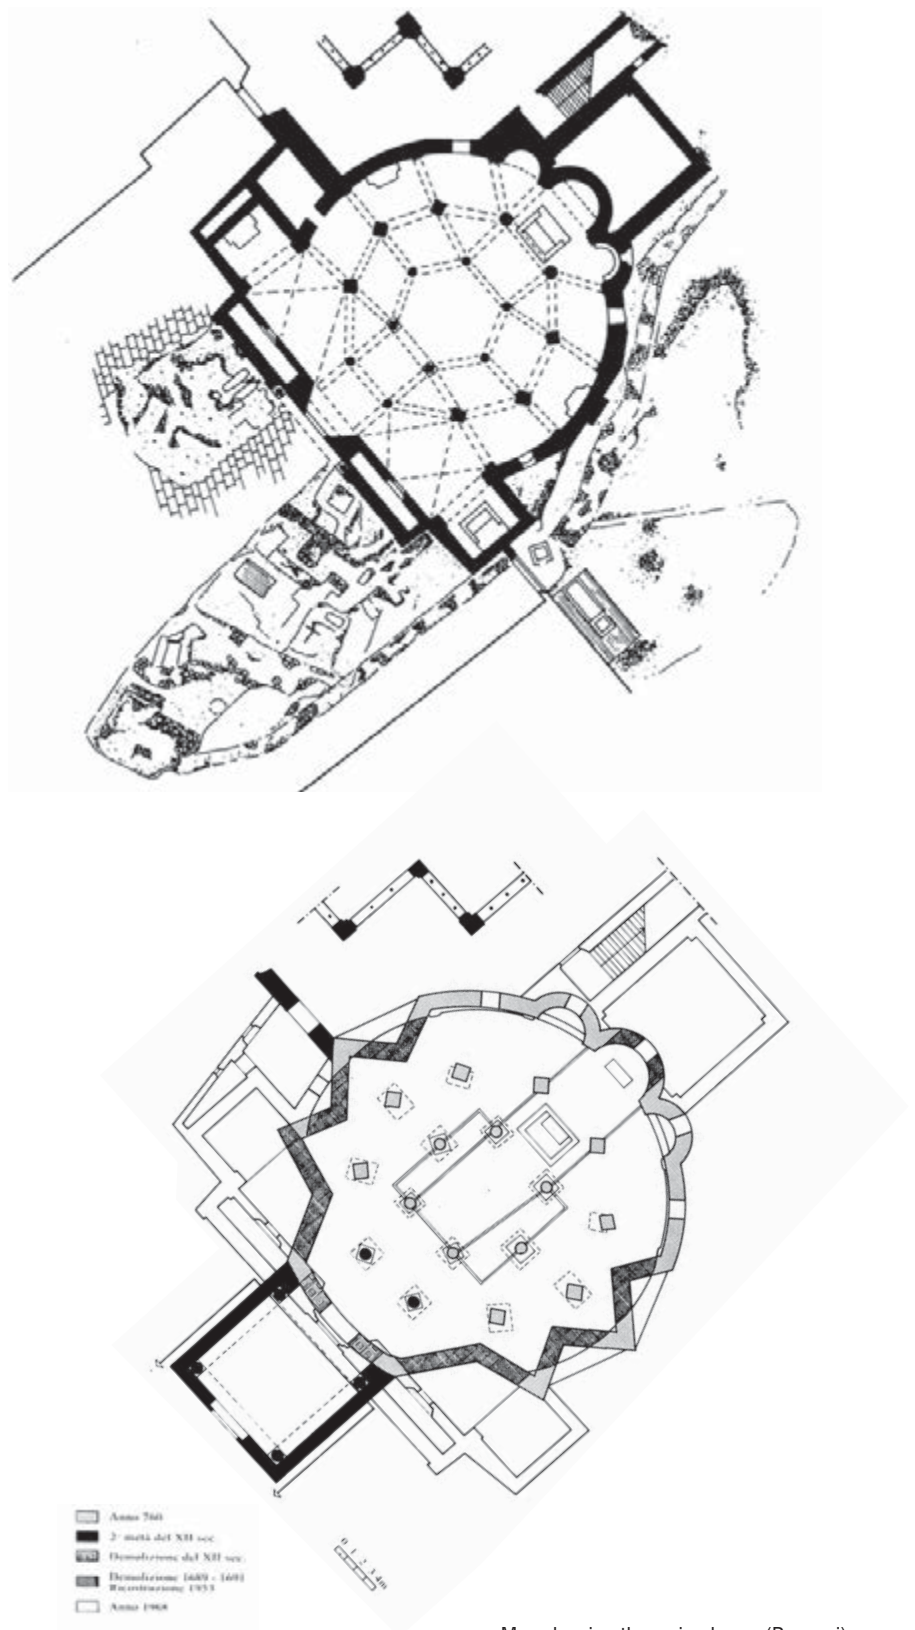

scholars, represents abbot John IV himself, although the most substantiated theory suggests it to be duke Arechi II, who was a great devotee of St. Mercurius. At this time the church had a bell-tower situated on the site of today's left side chapel.

The agreement of Ravenna (1514), which abolished the practice of benefices held in commendam, was followed by a period of decline: at the end of the sixteenth century the building was abandoned and passed into the hands of the Augustinian Canon Regulars of SS. Salvatore until its dissolution by Napoleon.

In 1688, a devastating earthquake hit the Samnium region, the effects of which were certainly felt by the church which lost a section of its original dome as a result of the falling bell-tower. Although it would have been possible to carry out the necessary repair-work without undertaking major interventions, Cardinal Vincenzo Maria Orsini (later Pope Benedict XII) opted for the radical transformation of the church's architectural *facies*, rendering it more in keeping with the tastes of the day. The collapsed dome was replaced and raised onto a high tambour, rising above the surrounding rooftops, whilst the central altar was replaced with a new rectangular choir in so doing, the church partially lost its original layout dating back to the longobard era.

No sooner had it been inaugurated then the church was once again hit by an earthquake, in 1702, damaging the original vaults and the new stucco decorations.

Further restoration works were then embarked upon, involving the construction of a new bell-tower set at some distance from the church, to the side of the facing square where it is still found today, the creation of a new chapel on the site previously occupied by the bell-tower, symmetric to the chapel of relics, and the removal of some irregular traits of outside wall which had disrupted the building's

Map showing the main phases (Rusconi)

Opus sectile flooring, most likely coming from the Church at S. Sofia (Museum del Sannio)

overall symmetry, replaced instead with a new wall giving the whole structure an oval shape.

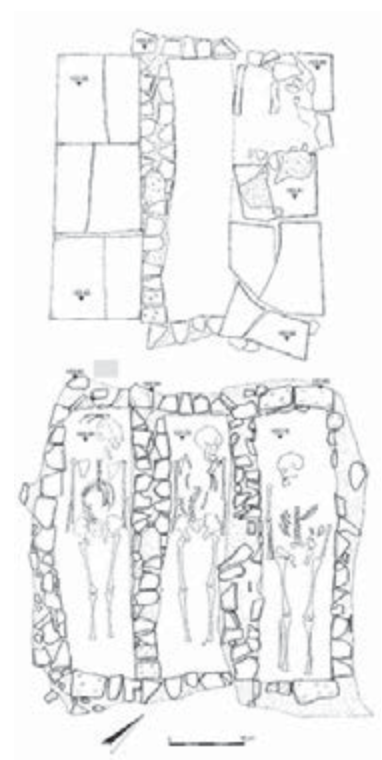

In 1834 the monastery was given to the Brothers of Christian schools who occupied it until 1928 when it became the property of the provincial Council of Benevento. It was then allocated to house the 'Museo del Sannio' and the council's Historic Archives.

Research into the church's history got underway in 1947, when sections of previously hidden original wall decorations were brought to light. Excavations a few years later and the removal of all the plaster from the interior surfaces revealed structures dating to the longobard period and confirmed that the building might be restored to its "original" form. Restoration

works followed, involving the re-introduction of the zig-zag outside walls, partially preserved within the curving walls added during the eighteenth century and partially on the level of the segmented sections under the floor level. The two side apses were cleared, bringing to light frescoes from the eighth century, and the central apse was also restored, previously

Complex of S. Sofia: Longobard graves excavated in the cloister

Longobard golden jewels

Golden solidus from the Benevento mint (8th century)

demolished by monks at the end of the seventeenth century in order to create an area for mass to the rear of the altar. The baroque dome was left, due to a lack of information documenting its history and, for practical reasons of worship, the two side bodies behind the façade were also left as found.

The renovations were preceded by an archaeological survey of the below-floor levels which revealed a section of flooring in hexagonal and triangular *opus sectile*, probably dating to the time of construction work. The maintenance works in recent years made it possible to document the authenticity of the original parts.

In particular, during the 2008/2009 works it was possible to extend the structural survey of the structure and the stone materials, and some of the documentation on the works can be consulted in MIBAC's database (SICAR and ARISTOS System).

The Municipality of Benevento, in collaboration with the owner Body, Archdiocese, and Heritage Commission, is planning work to enhance the sacred building, commission-

ing internationally prestigious artists for new liturgical furnishings. The project, which will see a new altar, baptismal font, ambo, and celebrant's chair, involving artists that, apart from originally being from the town have already done some of the major sacred art in the world.

With respect to the Benedictine Abbey of Santa Sofia Sophia, it was also certainly restored following the earthquakes of 1688 and 1702, the outcomes of which in terms of architectural structures and moulding decorations in the cloister are rather more difficult to ascertain.

From the eighteenth century onwards, the vicissitudes of the abbey intertwined with those of the city in general, first occupied by Ferdinand IV, the Bourbon King, and then in 1799 by the Parthenopean Republic. In 1806 it came into the possession of Napoleon, who placed it under the rule of the prince of Talleyrand, who later had the abbey dissolved. The same prince decreed the constitution of the first municipal archaeological museum, later sanctioned in

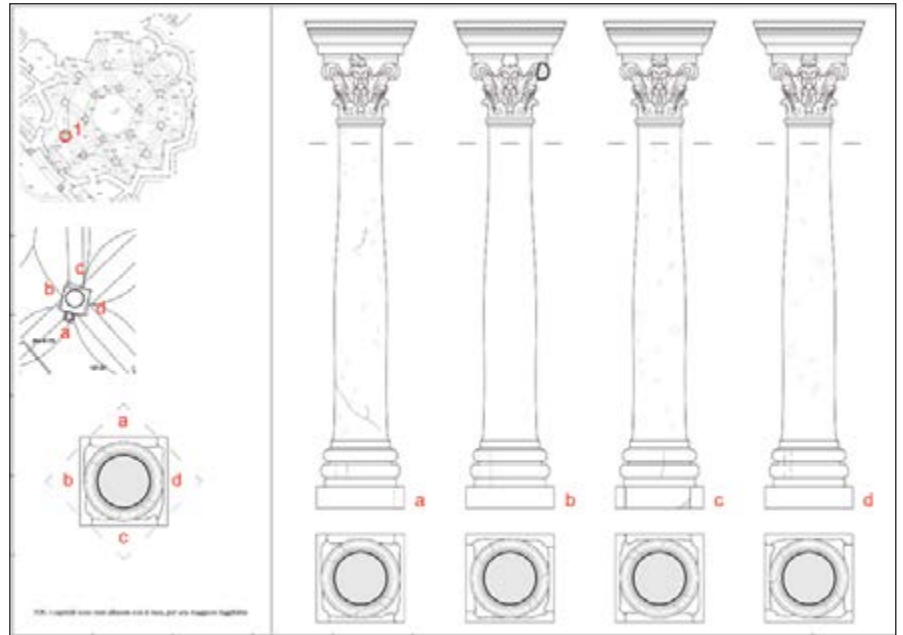

Museo del Sannio: Roman section

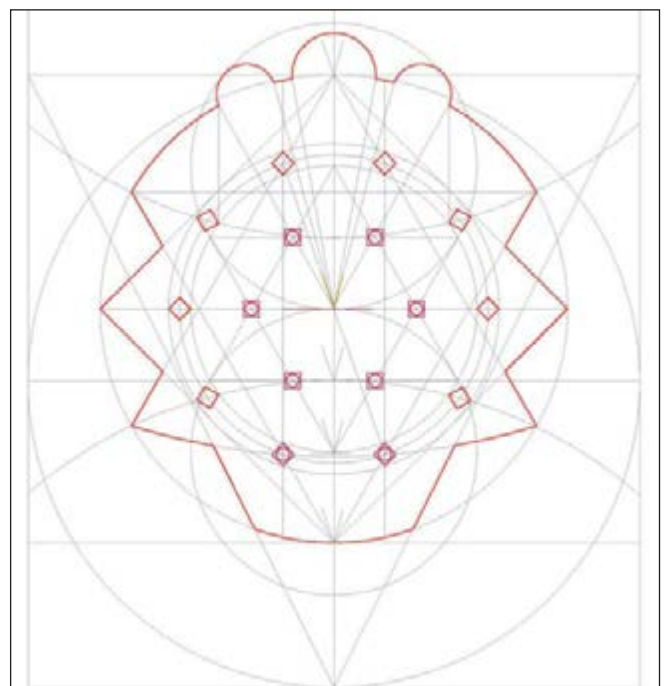

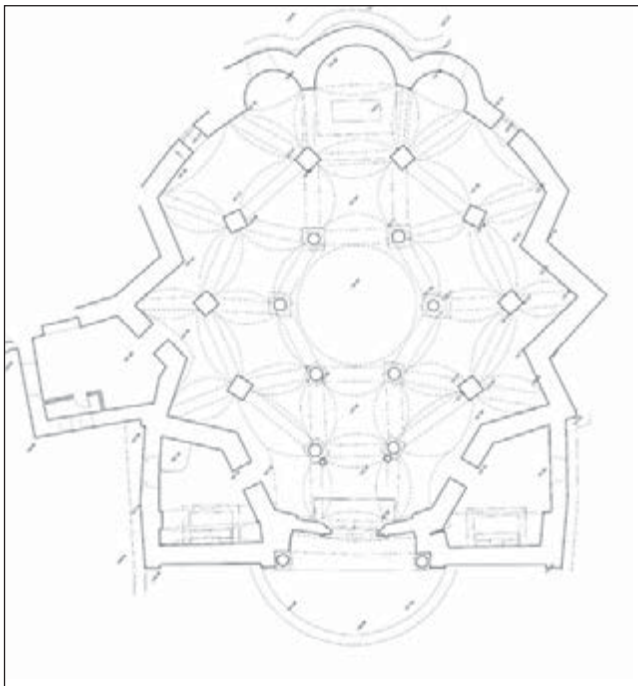

A cross from Longobard grave (Museo del Sannio)

1873 by the regional Council of Benevento which oversaw the exhibition of materials collected from the fourteenth century Rocca dei Rettori. The rapid growth of this collection encouraged the Provincial Council to purchase the present-day exhibition venue of Santa Sofia in 1928, to which the archaeological, medieval and modern collections were then transferred. For the same reason, conservation works were undertaken on the cloister in 1933, restoring this exceptional Romanesque building and removing the various superfetations which had masked the original structures. Indeed, pictures taken at the turn of the twentieth century show how, at that time, the upper portico was closed off, barbicans had been placed at the junctions between the lowered dead arches and heavy plastering covered the walls.

MONTE SANT'ANGELO

Between the end of the ninth century and the early years of the tenth, the sanctuary of St. Michael came under repeated attacks by the Saracens, the most serious of which took place in 869. The sanctuary was so badly damaged, probably as a result of this raid, that emperor Ludovic II (825-875) provided the archbishop of Benevento, Aione, on whom the sanctuary depended, with the financial means to restore it. Despite further Saracen raids in 910 and 952 and the consequent derelict state of the sanctuary, the flow of pilgrims to the site showed no sign of abating. Between the tenth and the eleventh century a *castrum* set up, around which the town Monte Sant'Angelo developed later on.

Between the end of the tenth and the mid-eleventh century, Southern Italy was the stage of changeable vicissitudes, witnessing the break-up of the Lombard principalities, the revival and then definitive overturning of Byzantine rule and finally, the Norman conquest. During the second half of the eleventh century the church-cave certainly underwent a series of reconstruction works which can be dated to the times of Robert Guiscard, evidence for which is provided by the entrance door to the church and the bronze doors smelted in Constantinople and donated to the sanctuary by the nobleman from the Amalfi coast, Pantaleon, in 1076. It has also been suggested, on the basis of certain tracks left in the masonry facings, that as far back as Norman times there was an entrance into the cave in the form of a long flight of steps, cut out of the rock, which would have connected the sanctuary with the growing conurbation of Monte Sant'Angelo.

The second half of the thirteenth century records new and substantial building works involving the entire complex, at a time when the sanctuary started to attract the attention

The bell-tower at the beginning of the 20th century.

The Angevin staircase

History and development of the first Angevin kings. A number of radical interventions were commissioned by Charles I: the need for more practical means of connecting the sanctuary with the city led to the creation of a many-ramped flight of steps; after 1271, three high ribbed spans were grafted onto the mouth of the cave (the Angevin Nave), supported by the probably Norman structures beneath.

As part of this vast programme, aimed at renovating and adapting the spaces used by pilgrims, work was also executed in the outdoor areas; a square was built in front of the entrance in addition to the octagonal-shaped bell-tower.

Started in 1274 under the supervision of the local protomagister Giordano and his brother Marando -as recorded on a memorial plaque above the small trabeated entrance- the bell-tower mirrored the shape of the corner towers of the Castel del Monte, and possibly replaced an earlier bell-tower.

The square in front of the sanctuary has undergone a series of changes over the centuries. It took on its present-day form in 1865, with the addition of the façade featuring two arches, the left hand arch being a stylistic copy of the original.

Architectural finds from the Longobard period are currently organized on the basis of archaeological excavations started in the 1950s, later investigations carried out during the 1970s and academic papers written at the end of the 1990s.

The first series of excavations brought to light structures dating back to the most ancient phases of the sanctuary's history. The immediate purpose of these interventions involved the restoration of finds from the Swabian-Angevin period and the creation of facilities for visitors to the sanctuary.

The excavations concerned areas both within the modern sanctuary and those in its

The upper atrium and the bell-tower

immediate surroundings. Inside, the discovery of rooms beneath the floor of the presbytery led to the discovery of the “*Longobard tunnel*” which, following the plague outbreak of 1656, had been used as a mass grave. The original façade of the “*tunnel*” only came to light in 1974 when the wall covering it, dating from a later period, was demolished.

In 1999, further essays on the excavation were written by scholars from the department of Classical and Christian studies at the University of Bari, which aimed at identifying and describing the sanctuary’s *ad limina* graves. These finds bear witness to the fact that, at the height of the Lombard era, when the sanctuary first took on a more complete structural form, tombs were placed within the “Lombard tunnel” and in the area opposite the façade. The first papers of scientific value were

published in the Sixties. Over the decades that followed, epigraphers, archaeologists, linguists and historians carried out more in-depth analyses of the initial researches. The results were presented at two international conferences, held in Monte Sant’Angelo in 1978 and 1992. Over time, further individual and collective studies have promoted a considerable growth in research and publication of numerous papers on the subject, not only by epigraphers and archaeologists but also historians and hagiographers (V. Schwabe-R. Derolez, M.G. Arcamone, G.B. Bronzini, G. Bertelli, P. Belli D’Elia, M.S. Calò Mariani, A. Campione, C. Carletti, G. Otranto).

1993 was the year of the Fifteenth Centenary anniversary of the apparition of the Angel on the Gargano Pensinsula, which tradition would place in the years 490-492-493, and

this coincided with the setting up of new initiatives, coming under a much broader research programme entitled “Apulia between Late Antiquity and the Early Middle Ages period”. New developments in the field had led to the emergence of new issues but also new perspectives which encouraged collaboration between Italian and French historians, hagiographers, archaeologists and epigraphers. These joint efforts came together formally in a series of conferences, between 2000 and 2008, aimed at reviving research into the cult of St. Michael, the Gargano sanctuary and two other sanctuaries built later in imitation: Mont Saint-Michel in Normandy (eighth century) and the sacred church of St. Michael in Piedmont (tenth century).

Renewed interest in the study of St. Michael has led to the emergence of a vast range of issues linked with the cult of St. Michael and

The cave and the Augenin nave

The Angevin nave in the 18th century

the importance on a scientific and cultural level of this rich – and in certain respects rare – epigraphic, archaeological and historic-hagiographic heritage.

The Sanctuary hosts the *Devotional Museum*, whose last setting was inaugurated on 5th July, 2008. The Museums collects evidences left across the centuries by illustrious pilgrims and common people as signs of devotion.

3.a Criteria for which inscription is proposed

(ii) to exhibit an important interchange of human values, over a span of time or within a cultural area of the world, on developments in architecture and technology, as well as in monumental arts, town-planning and landscape design;

The serial property is of the utmost importance as an excellent model of the interchange of values, artistic and cultural expressions established by the historical and cultural group of the Longobards in the epoch-making transition phase between the Antiquity and the Middle Ages.

Among all the peoples, even nomad and semi-nomad peoples, who lived in the time frame considered (6th - 8th century A.D.), the Longobards stood out for their extraordinary capacity to disseminate their pregnant cultural, artistic, political and religious marks. They left their deep and permanent imprint in Italy and then in the rest of Europe, not only on the subsequent *Carolingian* rule, but also on the following 1,000 years of European History.

The Site bears the most significant testimony to the fundamental contribution the Longobards made to the forging of Medieval culture. The series components represent the creative responses of the long integration and assimilation process the Longobards were involved in.

The series shows with extraordinary completeness:

- the excellent cultural synthesis the Longobards made between their own values and traditions and those ones of the peoples they encountered during

their long migration, and the values belonging to the Classical civilization, to the Christian-Roman-Byzantine civilization, which led to the development of a new and genuine civilization;

- the reception, the conservation, the enhancement and the dissemination of architectural, monumental and artistic form and content of the Classical, Roman and Hellenistic cultures;
- the reception, the transformation and the processing of a number of contents and expressions of the Christian tradition, which the Longobards disseminated all over the world; in particular they deeply influenced the spread of the worship to St. Michael in Western Europe, which led to the construction of dedicated sanctuaries all over Europe, including the most famous, Mont Saint Michel on the borders with Brittany;
- the fundamental contribution the Longobards made to pilgrimage, which led in the Middle Ages to an intense interchange of values and the development of a sense of unity between different peoples.

Therefore the series testifies the importance of the cultural interchange the Longobards were involved in, underlining on the one hand the specificity of their culture in the Early Middle Ages and on the other hand the universality of their contribution to the formation of Medieval Europe.

(iii) to bear a unique and exceptional testimony to a cultural tradition or civilization which is living or which has disappeared;

The serial property, which includes seven component parts -all belonging to the same historico-cultural group- bears a unique and exceptional testimony to the disappeared Longobard civilization,

witnessed by new monumental, architectural and artistic forms, the product of the reception and the integration of the highest developed local traditions. The Longobards expressed themselves in such forms only after their arrival to Italy.

The serial property bears the clearest testimony to the strong determination of a semi-nomad barbarian people – with no previous artistic and architectural traditions – to embrace and to portray themselves as the heirs of Classical culture and civilization.

The properties of the series are the highest and most widely recognized expressions of the new and peculiar artistic culture developed by the Longobards, which spread to all the Duchies of the Kingdom, featuring a unified vision and divergent languages and objectives, according to the different customer *élites* (kings, dukes, aristocracy).

In its totality the series mirrors the universality of the Longobard culture at its climax, as it is fully representative of the cultural, religious and social systems, on which the articulated organisation of power was based and then modelled and determined by the Longobards in Italy. In this view the proposed series is not made up by homogeneous goods from the typological point of view, but rather by structures, which are heterogeneous in their function and morphology; those are indeed testimonies of an urban culture (Cividale), of military settlements (Castelseprio), of monastic complexes (Brescia), of buildings for the religious cults for the *élites* (Spoleto, Campello), of votive chapels of the Longobard people (Benevento), of national sanctuaries of the Longobards (Monte Sant'Angelo).

In its diversified artistic and architectural expressions, the serial property symbolizes and shows:

- the fundamental function performed by the Longobards in merging the cultural and architectural models of the classical Roman and Hellenistic civilizations with those of the Christian-Byzantine civilization;
- the new artistic and architectural trends established by the Longobards, together with Eastern European workers laid the foundations of the subsequent Carolingian “Renaissance” and –for the very first time in history– of a real “European” culture;
- conservation and survival of the cultural heritage dating back to Antiquity, which the Longobards handed down, since they portrayed themselves as the heirs of a past they knew, felt and perceived as present. One of the most typical elements of their architectural complexes is the ideological and conscious use of the *spolia* from Roman monuments, which were re-used and installed in places that emphasized their symbolic value, and integrated into high quality new elements produced for that purpose. The use of monumental inscriptions, sometimes in golden bronze letters, no longer used after the age of Constantine, is a further manifestation of their intent;
- the conceptual, religious and political value the Longobards and their innovative cultural system attributed to Christian religion and traditions. Christianity accompanied the establishment and the consolidation of the Longobard Kingdom and was supported by the royal court and the aristocracy, who were generous and faithful benefactors.

The series meets the criteria of integrity and authenticity both as a whole –since it represents the universality of the monu-

mental expressions of the historical and cultural group of the Longobards– and with reference to the single buildings and complexes and to the extraordinary decorations, including the rich graffiti and the inscriptions on the walls of the St. Michael’s Sanctuary in the Gargano area, the most important collection of existing Early Middle Age inscriptions.

(vi) to be directly or tangibly associated with events or living traditions, with ideas, or with beliefs, with artistic and literary works of outstanding universal significance;

The Longobard inheritance in Italy is remarkable: from the language we speak today to people’s and place names, even if more significant is their contribution to the handing down of forms and models –as well as the remains themselves– of Classical Antiquity, an indisputable point of reference for artists of all ages.

By the same token, the Longobards made a fundamental contribution to European culture with the foundation of great Monasteries, and the reconstruction and extension of existing ones, including Bobbio, Montecassino and Farfa Monasteries.

In so doing, they encouraged the transcription and survival of literary, artistic and scientific works, dating back to the Antiquity. The relevant handing down of iconographies through manuscripts in miniature made a further contribution to a *continuum* stretching from the Antiquity up to the present day.

Moreover, Longobard culture survives today in the ongoing importance attributed to their places of worship, in particular to a number of monasteries, where the architectural stratification, a sign of continuity, increases their value and authenticity.

The pilgrimage to the grotto of St. Michael – still partly accessible along the ancient route of the *Via Sacra Langobardorum*– is a prominent example of worship practices directly related to Medieval traditions.

The worship to St. Michael in the Gargano area, transformed and strengthened by the Longobards, led to the construction of numerous dedicated churches and other places of worship and as many statues of the Archangel Michael, with open wings, holding aloft his sword, on top of many bell-towers in Europe, a typically Longobard symbol in defence of local communities.

Notably, the history of the Longobards is featured in important literary works – including *Historia Langobardorum* written by Paul the Deacon in the 8th century, *Adelchi* written by Alessandro Manzoni in the 19th-century and *Rodelinda, Regina de’ Longobardi* (Rodelinda, Queen of Longobards), an opera by Georg Friedrich Händel. All the above-mentioned works portrayed the Longobard cultural experience and rendered it universal.

Pilgrimage to the Sanctuary of San Michele at the beginning of 20th century (Tancredi Archive)

3.b Proposed Statement of Outstanding Universal Value

The nominated serial property series bears a unique and exceptional testimony to the disappeared Longobard civilization at its acme during the Kingdom of Italy (568-774 A.D.).

The Longobards created architectural and monumental forms –which were completely alien to the traditions of nomad and semi-nomad peoples– on the Italian territory only, thanks to the reception conservation and enhancement of the form and content of Classical and Christian culture.

The extraordinary integration and interchange process between the original North Germanic culture, the local (Roman and Byzantine) culture and the contribution of the Mediterranean and Eastern European culture, is remarkably testified by the artistic and monumental expressions of the Late Longobard Age and finds its highest expression –thanks to its unique and exceptional nature- in the properties included in the nominated series.

They represent the creative response to the attempt made by the Longobards to reconcile diverging cultural and artistic expressions (syncretism) and stand out in the Early Middle Ages for their excellent artistic quality.

The serial property, therefore, has an exceptional and universal value as the highest expression of the fundamental historic function performed by the Longobards in the crucial transition phase from the Classical to the Medieval world; a transition phase which the most modern historiographical trends consider a *continuum* characterized by the integration of different civilizations.

The serial property exemplifies on the one hand the specificity of the Longobard culture in the background of the Early Middle Ages; on the other hand the universal nature of the contribution made by the historical and cultural group to the formation of Medieval Europe. Indeed, the Longobards played a pivotal role in the formulation and diffusion of those meaningful imprints - cultural, artistic, political and religious - which spread from Italy to Europe and anticipated the so called “*renovatio*” - traditionally associated with the Carolingian age.

The cultural heritage of the Longobards is still alive in many facets of art, law and the Christian religion, as well as in other intangible aspects.

3.c Comparative analysis

Comparative analysis for the criteria ii

The era unfolding between the fall of the Roman Empire and the birth of the Carolingian Empire has been re-evaluated on the basis of the development of European civilization that followed. Traditional notions of “decadence”, “end of civilization,” and “barbarism,” have given way to the idea that there was a strong continuity in historical progress (*continuum*), in a period characterized by the reciprocal influence –**inter-penetration of various civilizations**. The medieval archaeology, in particular, and especially starting from the Seventies, has allowed to renew the traditional chronological seriations and shifted the debate from the category of the “decline” to the category of “transformation” or “continuity”, in some aspects.

The Early Middle Ages, indeed, saw a long **transition/transformation process**: with

the economic, production and military crisis of the Roman Empire of the 3rd-4th centuries (see the Historic Introduction) an unstoppable process began, so that the “barbarian” people with their languages, institutions, laws, ways of social aggregation and their cultural expressions gave birth to a new mixture of people. Christianity spread as one common religious culture, which modified deeply the feelings of the people. The barycentre of political and economic life shifted from the Mediterranean towards the North and the East, thus developing Europe as we know it today, around some spaces, which were destined to originate future nations (Visigoth, Longobard and Frank nations). This was a long lasting historic moment, when the European identity in contrast with Islam and the Eastern Roman Empire is defined.

Among all the people, which contributed to the cultural transition between the Classicism and the Middle Ages, an **extraordinary proactive role** is today ascribed to the **Longobards**, who elaborated and spread those pregnant cultural, political, artistic and religious imprints, which crossed the Italian territory, where they had created their reign, and spread throughout Europe, and represented the basis for the development of the forthcoming millennium of western history.

Hence the Longobards contributed in an indelible way to the creation of the western Medieval civilisation.

Their contribution is the result of a **twofold cultural exchange process**, in which they played the main role. The first is represented by the **migration phase** and presents common traits with the history of other barbarian people; the second, more decisive for the influence exerted by the Longobards on the future European culture, was the **immigration/acculturation phase** and took place in Italy.

Migration phase

When the migration flows of the Germanic and central-Asian tribes became unrestrainable because of the decline of the Roman power, the great **migrations** assumed an ever growing function of **incubators of new collective identities**: the aggregation of different people within the single migration phenomena, indeed, favoured the creation of new people.

This was also the case of the **Longobards**, even if their ethno-genesis was very different from those of the Franks, the Goths, the Burgundians. Indeed, the particular duration and development of their migration process (from Scania towards Germany and from here to Bohemia, Moravia, Southern Austria, Roman Pannonia, Southern Hungary and actual Slovenia to end in Italy) determined the need to integrate other people in a new unity, which was progressively renewing itself. The Longobard people had the chance to assimilate other people and ensure diplomatic alliances –often guaranteed through marriages– with the Thuringies, Franks and Gepids, thus sharing their culture, traditions and customs.

Starting from the 4th-5th centuries the Germanic military *élites* were subject to the process of osmosis and cultural interaction with the Roman tradition, shown in particular in the deposition of the body of the dead with rich clothes and rich funerary equipment, with numerous weapons and precious objects, the result of gifts, exchanges and commercial transactions, which gave the start to those changes in the death rituals, which will find their development in the first centuries of the Early Middle Ages in many tribes and groups of migrating nobles.

The objects of the funerary equipment bear witness to a change also in the clothes, especially for the women, which

document the attraction of the Roman - imperial uses and fashion.

In the pre-italic phases, and especially in the Pannonic phase, the first connotative element of the Longobards was to be found in the funerary equipment, which has elements, similar to other Germanic people, but has also distinctive features, as for example the mould and polished pottery, which is attested only in the Gepids, and in particular the women clothes (stirrup shaped fibulas). Among these specificities we also count the monumentality of some burials, built with “wooden houses” (the houses of death), the burials of horses, laid on the side of the knights (for the nobles) and the necropolises, for nobles or soldiers, but only for men, which in the overall picture document a minor social distinction if compared to other traditions in Italy, especially for the burials between the end of the 6th and the beginning of the 7th century.

Their stay in the former Roman Province of Pannonia (Hungary) had enabled Longobards to come into contact with the cultures of the Eurasian steppes (Goths, Avars, Sarmatians, Scites), who left their signs in the Longobards’ culture, as for example the Mongolian custom of lengthen the skull by tightly bandaging the head, a tradition, which can be still seen in Italy in some burials of the Collegno necropolis.

The other contact, which marked the Longobard culture, was with the Eastern Roman Empire: the golden plate belts, often decorated with vegetable-flowers motives are a Byzantine production or imitation; from the shapes of the Byzantine metal and glass cases the Longobards together with the Gepids developed a peculiar pottery production with stampings.

From the cultural osmosis, which is typical for the cultures on the borders, the Longobards borrowed at least in part also the forms of power, so that the role of one single leader for the army and the simple people, charismatic for its noble origins, for the military and diplomatic abilities, became predominant.

The issue about the acceptance of the orthodox conciliar Christianity rather than Arianism, which is a distinctive feature of the Germanic people, especially those settled in Eastern Europe, is more complex. Some scholars believe, indeed, that after a first acceptance of orthodoxy, these people then shifted towards Arianism, probably for the political need to distinguish themselves from the Roman Imperial people. The question is still discussed, although Procopius mentions the orthodox religious rite celebrated by the Longobards. Nevertheless, when they came in Italy, they introduced themselves as Arians.

This first exchange process, which characterised the migration phase, resulted in the definition and in the consolidation of the socio-cultural features of the *gens Langobardorum*, who arrived in Italy.

Immigration/accluration phase

The funerary equipment is one of the most important indicators of the Longobard presence in Italy, followed by the evidence of ritual and building continuity: indeed, in these years the knowledge of the first settlements, characterised by half-buried wooden huts, by particular burial and power rites (graves with horses, death houses, bandaged skulls), has developed considerably.

The assimilation of the local culture (Roman-Byzantine-Christian) by this people show the first signs already in the last decades of the 6th century, when the

consolidated monarchic institution is more based on the territory and when the military campaigns are used to fix the borders of the Reign in the Alpine regions (conquest of the Isola Comacina – the isle on the Como lake, 590 cca.), and then to define the borders with the Byzantines along the Po river (conquers of Brescello, Mantova, Monselice, 602/603).

The kings, the court, the high aristocracy quickly understood the need to assimilate, through glamour or imitation, the lifestyles of the subdued governing classes in the country.

In the **integration/transformation** process the impact with local traditions and with Christianity is just as important, as proved by a series of productions at different levels: manufacture (brickworks, jewellery, building trade), written culture (*scriptoria*, Edictum Rothari, notorial), ceremonials (the raising to the throne), rituals (progressive reduction of the funerary equipment, use of the shroud for the deposition of bodies in the graves), economic choices and investment in the outer image (funerary chapels, donations, use of brocade clothes and of Byzantine jewels).

The differences encountered in the forms of the assimilation depend on the features of the occupied territory; the *Langobardia Major*, centred in Pavia and the duchy of Turin, Brescia, Verona and Cividale maintains a stronger link with the original tradition, even if it creates new forms, especially in the art of worked metals, which is evident in the golden funerary crosses, in the rings with seals, in the parade shields, decorated with layers of bronze.

The *Langobardia Minor*, had inevitable contacts with the Roman-Byzantine world, and therefore assumed more directly the decorative forms and techniques of the Mediterranean tradition (disc-shaped

fibulas with filigree or with the insertion of cameos and antique cornelians).

The circulation of models and styles is constant, it covers the paths of Roman tradition and sometimes involves also peripheral territories, where an autochthonous tradition, which is not as solemn as the imperial one, survives.

Integration and assimilation develop during the central decades of the 7th century, gaining maturity especially in the architecture production (which was completely unknown for the Longobards before the occupation of the peninsula), which is expressed in extraordinary works of monumental building trade: palaces (still mainly unknown), defence and religious buildings. Indeed, the majority of the scholars ascribe to this period the development of the aulic and representative Longobard architecture (buildings for the cults, monasteries, rich houses), which respond to the needs of the power and of the new *élites* and to the need of confrontation-competition with the Byzantine empire, the pontificate and the Merovingian court (the urban and rural landscape will be marked for other centuries with a poor architecture for the houses, partly or totally built with wood, earth and straw and/or with a great usage of recycled materials).

As the Edictum Rothari and the *Memoratorium* certify, the artistic bloom in architecture and in the decorative arts is the main sign of the assimilation and transformation of the Roman models and techniques.

The most mature results of the assimilation process expressed themselves fully only in the 8th century with the great monastic foundations, of which the San Salvatore in Brescia (753) is a highly significant example in an extremely variegated context, which stretches from

Potteries from the necropolis in Nocera Umbra

the San Silvestro in Nonantola monastery (752) to the monastery S. Maria d'Aurona in Milan (740) to the monasteries San Zeno and S. Maria in Organo in Verona (743, 745), to other monasteries, spread on the peninsula territory, such is Santa Sofia in Benevento.

The **migrations** phenomenon is still subject to numerous studies and historical debates. It characterises, with slightly differentiated periodisation, the Bavarian, Thuringian and Frank-Merovingian (and the Longobard) tribes, seen as *gentes* (as the recent historiography claims) with extremely various ethnical features, but united by the “awareness about forming a community based on the belief of common ancestors”. The *Origo gentis Langobardorum* is a qualified example, such as the constant trend in finding cohesion in the poli-ethnic heterogeneity through the figure of a king or of a charismatic leader.

As was already underlined, the ethno-genesis of the Longobards was very different from the ethno-genesis of the Franks, the Goths and the Burgundians. Because of the particular duration and articulation of the migration process first, and then because of the special conditions of the territory, where they had settled (the centre of the fallen Roman Empire, seat of Christianity, Byzantine garrison and cross-roads of different cultures), the

Longobards not only renewed themselves in a new structure, but were also able to unite the Germanic substrate – already modified because of the contacts during the long migration phase – with the Classical and Roman-Christian tradition. They elaborated a “new” and original culture, which spread its artistic, political, religious and cultural imprints from Italy to Europe and contributed to the formation of the Western Medieval society (as regards the creative responses of the new culture created by the Longobards, compare the following text, paragraph 3.c.2.).

The process in which they play the main role, indeed, in its specificity finds only a partial confirmation in the history of the Goths – in particular in those groups or tribes, which united under the name of Visigoths, first under the lead of Alaric (end of the 4th – beginning of the 5th century) and then of his successors, migrating from the Danube and Balkans area to the West, until they created the reign in the Iberian peninsula, from the 6th to the beginning of the 8th century – or in the history of the Merovingians, who then became the Franks and consolidated their power in Central-Western Europe and gave birth to a new empire, projected towards universality, which will become the basis for the Carolingian empire. Also the migration of the Huns was substantially different, as the impressive phase of military conquests was not followed by the creation of a sound government structure, as happened with other peoples of the steppe, as the Avars and, later, the Hungarians; the latter started from a nomadic tribal structure and then created the core of a modern nation.

The migration of the Mongolian peoples of Eurasia during the Middle Ages has other different features. This migration led to the creation of the great Mongol empire,

which imposed its power on the Chinese one. The nomad warriors of Mongolia, under the lead of *Gengis Khan* absorbed from the conquered people the structures, which were necessary for the survival of the power structures and for the control of the territory, but they never reached the assimilation of local uses and traditions.

The **migration of the Longobards** enters therefore in a widespread and universal process, which characterises the transformation of the antique people and power structures in several areas, and which is the basis, in the Christian West, of the formation of modern States, such as in the Middle East and in the Southern part of the Mediterranean the Arab conquests, similarly cemented by the acceptance of a common religion –the Islam– first gave birth to new empires (*Umayyad* and *Abbasid*) and then to a new system of territorial powers.

Also in this case the great difference in the modality of cultural interaction with the annexed peoples in the great Muslim empire needs to be underlined. Indeed, the Arabs acted differently than the Longobards and they sought no continuity with the local traditions, but they rather imposed their completely new social models, while putting into practice consent strategies through syncretic formulations or compromise solutions, such as for example in relation with local religious communities. In this regard we shall remind the case of Damascus, which we will write about more extensively in the following text, but also the liberalism showed for the sacred places of eastern Christianity, such as, for example, the great sanctuary of S. Sergius in *Resafa*, which continued to be attended way beyond the Arab conquest of the city.

In the process of **integration-exchange** also the aspect regarding the development

and the transformation of the expressions of **religiousness** from the late antique age to the Middle Ages (to which the barbarian civilisation gave its contribution) needs to be considered.

The Longobards, in particular, with the cult of the Archangel Michael, which had been modified, strengthened and spread at a national and international level, gave birth to the **garganic pilgrimage route**, which was one of the main factors of the “Brownian motion” (if we use the words of Marc Bloch), and namely the unending and contemporarily “inconstant and perpetual” motion of single individuals and groups, men and women, adults and children, which affected and united Northern Europe, the Germanic world and the Byzantine Mediterranean; it favoured an intense exchange of values and a strong sense of unity for different people, to the extent that Goethe wrote: “The conscience of Europe was born while wandering among Latin, Germanic, Celt, Anglo-Saxon and Slav people”.

Before the affirmation of the pilgrimage of Santiago de Compostela, indeed, on the basis of what was handed on between the 7th and the 8th century by Bede and Paul the Deacon, Rome and the sanctuary of St. Michael on Monte Sant’Angelo were the favourite destinations of numerous pilgrims, men and women, people of humble origins and of high rank, laics and ecclesiastics; the numerous (almost two hundred) inscriptions found inside the sanctuary show that in the period of maximum expansion and of the most incisive presence of the Longobards in Apulia, the pilgrimage to the sanctuary in the Gargano plateau was a phenomenon at a European level and that the Archangel Michael cave was an important stop in the way leading to the Holy Land.

The importance and the diffusion of the cult of Saint Michael, spread by the

Longobards, who developed it in a *instrumentum regni* for the political and cultural unification, determined the typological characterisation of the hundreds Michaelic settlements, which rose during the whole Middle Ages and in the following centuries all over Europe, thus almost completely mirroring the **Garganic model**. This is proven by the fact that several places of worship devoted to Michael were built in imitation of the Sanctuary in the Gargano Promontory, thus being considered its “filiations” or trying to be somehow linked to its tradition. Especially in the South of Italy, a thick network of settlements dedicated to the Archangel was created: among the Sin Michael’s cave – resembling, as to type and cult features, to the Gargano’s Sanctuary– the caves in Orsara, Gravina, Minervino Murge, Cagnano Varano and Mottola in the region Apulia are the most interesting examples. Between the 8th and 9th centuries, other places of worship dedicated to the Archangel were influenced – more or less directly – by the San Michele sul Gargano sanctuary, by adopting some typical features, first of all the natural architecture. One of these examples is mentioned in the *Chronica sancti Benedicti Casinensis* (9th century), where it is stated that in the Region Campania, between Capua, Teano and Alife, on Mount Maggiore, the Angel appeared as it did in the Gargano Promontory. Another place of worship dedicated to San Michele, is the San Michele Cave in Olevano in the Tuscia area, in Campania; the entire Region Campania is full of places of worship devoted to Saint Michael, which – for their style – remind of the structure in the Gargano Promontory: its was the Longobards, who were responsible for the dissemination of this sanctuary style, probably also in Sutri, a city renowned for its donation bearing the same name.

A very important example is the

foundation of the *Sacra di San Michele*, on Mount Pirchiriano, in the Susa Valley in the Region Piedmont, which witnesses a direct relation with the Sanctuary in the Gargano Promontory, as clearly proven by the *Chronica monasterii sancti Michaelis Clusini*. The settlement, though different in several features, is characterized by some typical features of the Gargano tradition: wood, rock, mount.

Following the desire for internalization of the Saint Michael pilgrimage during Longobard times, the Gargano model was exported also outside the Italian peninsula: at the beginning of the 8th century, on the French Western coast, on a promontory stretching out between Brittany and Normandy, a sanctuary was devoted to the Angel under the name of *Mont Saint-Michel au péril de la mer*, referring to the danger caused by high and low tides. This shows a clear filiation and dependence relation from the forms Italian sanctuary, which is proven by the *Apparitio sancti Michaelis in Monte Tumba*, the hagiographic work linked to its foundation, which refers to the Garganic *Apparitio*, and by analogous elements also found in other sanctuaries dedicated to Saint Michael in France (San Mihiel, S. Ricario).

Between the 8th and 9th centuries, the cult of Saint Michael in its Gargano-like connotation filtered and was adopted in many other European countries, especially Spain (San Michele de Cuxa), Germany, Belgium, the Netherlands and the United Kingdom, as shown by numerous church and sanctuary names (*agiotoponimi*). The dissemination of the cult is also witnessed by historical *martyrologies*.

Comparative analysis for the criteria iii

The serial property “The Longobards in Italy. Places of the power (568-774 A.D.)”, considered as a whole, bears an exceptional testimony to the cultural result of the civilization of the historical-cultural group of Longobards, as well as the component parts of the serial property represent the creative responses of the cultural process in which they played the main role.

The series on the one hand gives an example of the specificity of the Longobard culture in the Northern Adriatic area during the Early Middle Ages, and on the other hand shows the universality of its effects in the creation of Medieval Europe.

The properties included in the series, selected on the basis of extremely strict criteria (see point 3.d), represent, each for its specific typology, the most significant and the best conserved example among the numerous monumental testimonies spread on the Italian territory. In their totality they mirror the universality of the Longobard culture at its climax, as they are fully representative of the cultural, religious and social systems, on which the articulated organisation of power was based and then modelled and determined by the Longobards in Italy. In this view the proposed series is not made up by homogeneous goods from the typological point of view, but rather by structures, which are heterogeneous in their function and morphology; those are indeed testimonies of an urban culture (Civiale), of military settlements (Castelseprio), of monastic complexes (Brescia), of buildings for the religious cults for the *élites* (Spoleto, Campello), of votive chapels of the Longobard people (Benevento), of national sanctuaries of the Longobards (Monte Sant’Angelo).

Because of the **typological variety** of the included properties, the proposed series does not still find similar examples in the World Heritage List. Indeed, it is different from other series of monuments –as, for example, of the series of Norman architectures in Great Britain and in Sicily, or of those of Emperor Frederick II of Swabia in Italy, or of Oviedo and of the Asturias reign in Spain– as the other examples are the result of a codified, highly standardised language and therefore characterised by common features –an unknown requirement in the Longobard culture, which, instead, distinguishes itself also for its **formal variety** of the cultural products.

Moreover, the Longobard complexes presented have no parallels within the Longobard culture outside Italy, because the Longobards started building monumental complexes only after they arrived in Italy. In their places of origin, the only evidence of their artistic production is limited to jewellery and funerary equipment.

When the Longobards arrived in Italy, they had no architectural, sculptural or pictorial tradition of their own, yet they were experienced goldsmiths and thus created a special composite style where elements of different traditions were integrated. Even though the architectural complexes applying for WHL are featured with elements –single components or some specific elements– which can be found also in the Hellenistic-Roman, Byzantine or High-Germanic tradition, each complex is always considered unique due to the original way elements are combined in it. Monuments therefore feature elements of various traditions which are reworked in a very innovative way.

Elements characterising the serial properties

The recovery of the different cultures, which interacted on the territory of the

Langobardia, between the end of the 7th and the beginning of the 8th centuries, was for the Longobards a constant and direct confrontation with the antique world and was therefore determined by a specific geo-political situation:

a) they had settled in the heart of the former roman empire, which was extremely rich with material testimonies about the glorious past;

b) they had to confront the Pope and Rome, but also the bishops' powers, a situation that meant cultural and religious implications, but also relations of territorial and institutional politics;

c) the occupation of Italy had determined the internal borders with the Byzantine territories of the Exarchate and of the Pentapolis;

d) the Italian territory was the centre of an extraordinary crossroad of cultures, stretching from Middle East, *Ommayadi*, Byzantine, Iranian experiences on the southern-eastern front to the developments beyond the Alps, on the northern front.

The contact-confrontation with such a **variegated cultural frame** led the Longobards to different solutions, also relating with the geo-territorial context, subject to various influences in different places. During the 8th century the Longobards not only participated in the construction of the foundations for the Carolingian rebirth, but they also created a cultural, architectural and artistic movement, which was vital and autonomous, and which is not special for the development of a standardised typology of buildings, but rather for the **ability to modulate different variations of the wider multicultural theme**.

Joint aspects characterising the serial properties

In the monumental works of the late Longobard era (the best representations are presented in this candidature) we can

understand the complexity of the process started by the Longobards and mainly inherited by the Carolingians, who, on their side, acted under the momentum of a unifying pulse instinct, which should highlight the “Roman” character of the reborn Western Christian Empire.

The qualifying character of this cultural anticipation in architecture and in other crafts and arts manifestations, which characterises the Italian-Longobard tradition, differentiates it and renders it unique in the European context, is developed in the special **relation-recovery of the antique**, including also the **re-use phenomenon**, implemented in special and original ways.

The new Longobard artistic culture was deeply influenced by the will of the *élites*, who were determined to **legitimate their power** towards local aristocracy –religious and non-religious– by applying the most significant traditional models –essentially the **auctoritas antiquitatis**– so as to stress their **ethnos**, their traditional culture, especially as far as ceremonies –both religious and non-religious (and in particular funerals) are concerned. This attitude had a considerable impact on building policies of Longobards, that invested many of their resources in the construction of private places of worship. Besides their meaning in the process of Christianization, the promotion of churches, oratories, funerary places of worship and monasteries was intended also as a way to reinforce the assets of the aristocracy that, in this way, allocated their resources to an ecclesiastical body, which, in turn, ensured salvation of the soul, reinforcement of its descendents (by virtue of the irrevocability of the donation *pro anima and post obitum*) and support to the donator.

The process carried out by the Longobard *élites* was undoubtedly extremely impor-

tant for the whole Western world, with regard to the heritage left by these people and to the correlations that such choices have with what was developing in the same period in Merovingian France; a heritage, which was then inherited and widened also in Carolingian Europe, and to which some famous foundations refer, such as for example the *Benedictine Convent of St John at Müstair (Switzerland)*, the *Monastic Island of Reichnau (Germany)*, the *Abbey and Altenmünster of Lorsch (Germany)* – to cite only those included in the *World Heritage List*. These foundations witness and are the result of an already consolidated tradition, which drives its roots also in the Longobard Italy.

Therefore if the bishops (see Isidore of Seville, Gregory of Tours) and the monastic orders, with charismatic figures such as S. Benedict, S. Columbanus and S. Martin, have in the first-early-middle-ages Europe a primary role in politics and in the spread of the antique culture acting as a unifying element, on the other hand the Germanic reigning families implement a policy of alliances via marriage, which contributes to an additional circularity of ideas and solutions, which is parallel to the action carried out by the Church. The interrelations and the references are therefore manifold. The circularity levelled, at least in the forms of communication, the Germanic nobility to the bishops and the Pope, to the emperors and the Byzantine aristocracy, with a confrontation in the activity promoted in Gaul sovereigns, converted to Roman Christianity from the year 506 on, and in Spain with the Arian Visigoth monarchs. Some examples are: the use of the early Christian Basilica of S. Denis near Paris, constructed on a Roman aqueduct, as a mausoleum by the royal Merovingian family in the second half of the 6th century; the abbeys of Journe patro-

nised By Saint Columbanus, to whom we shall ascribe also the monastery of Bobbio (613), founded by the high aristocracy landowners in the first half of the 7th century, in Spain the edification of the churches of S. Pedro della Nave, Quintanilla de las Viñas, San Juan de Baños by the Visigoths, in particular Reccared, raised to the throne in 653 with the support of the Zaragoza bishop.

The will of the *élites* to promote a cultural policy with a strong ideological impact, or as an auto-representation of its *status*, was formally expressed through the **recovery of the antique**, or better of the Classical and Christian tradition, which are felt as influential, reference forms of legitimacy.

In Italy the experience of the Longobard monarchy is studded with numerous foundations of palaces, basilicas and monasteries, recalled by Paul the Deacon in a chronological sequence and by the name of the king, who founded them, starting from the King's palace and from the basilica of Monza (today destroyed), which were built at the beginning of the 7th century after the order of the Longobard queen Theodelinda, of Bavarian origin, who wanted the palace to be painted with frescoes about the history of the Longobard costumes and traditions and wanted the Basilica to be decorated in the ancient style. The attraction exerted by the Hellenistic and Roman culture on the new Longobard dominators has multiple aspects: a natural imitation process, the need to highlight the rank and the role, to have the elegance of a "universally" understandable culture, the need to show the economic power and to acquire the *status symbol* of the imperial tradition.

The dialectics with the antique world is a shared trait of numerous cultures in the phase of exchange; the news, which

distinguishes the Longobards, is to be found in the expression of this relation, in the way they introduced themselves as followers of a past, which is perceived and lived as the present.

The opportunity to verify the material solidity of the antique heritage post-mortem and to use-enjoy that past favoured indeed not only the knowledge and the critical-ideological use of the tradition, but also its **survival-transmission**. These facts made the Longobards –as Paul the Deacon himself wrote– the real followers of the Roman civilisation, much more than the Byzantines.

As regards the Longobards the **survival of the antique** rather than the recovery of the antique was rightly indicated. This fact implied important choices, basically limited to the mere power propaganda and namely to kings and dukes, who proposed themselves as commissioners of prestigious works. In this sense, for example, the construction of the *palatium* in Monza was ordered by Agilulf, who, in some way, went "against the trend" of the shared "*germanico more*" general rule to re-occupy the ancient official seats, such as Milan and Pavia. The intent to revitalise the antique subsequently led, in some cases, to a real imitation; in Monza we can still witness the custom of stamping in the building material used for the construction of the Saint James Basilica the Roman and Theodoric signs – a use that can not be compared to any situation in similar contexts and in other people.

In Italy the Longobard sovereigns, with the leading class and the clergy, started the restoration of the early Christian Basilicas, which were highly representative of the tradition, already at the beginning of the 7th century, by using bricks produced in the royal plants, with tiles marked with the King's name (see for example the case in Milan with the

restoration of the San Simpliciano Basilica, carried out by the kings Agilulf and Adaloald). The **attraction for the antique world** influenced also the choice of Agilulf to co-opt the son to the throne with a ceremony in a Byzantine style, carried out in the Milan circus (604) in front of a delegation of Frank diplomats. In the variegated dialectic play with the past, we also witness a kind of exploitation of the antique in a polemic – or propaganda, depending on the point of view – way, which can be seen for example in the transfer from Ravenna to Pavia of the equestrian statue of Theodoric, ordered by Liutprand to reaffirm the ethnic identity of the barbarians against the pressure of the Byzantines.

The great fortune of the **exposed writing**, which assumed an important and conscious social role in its “solemn” vocation, was one of the choices of the Longobard *élites*. The Longobard capital script became an important instrument of self-representation of the client. Rich epigraphic elements also accompany most of Longobard pictorial stages; for example, the captions of San Salvatore in Brescia, the inscriptions of the Tempietto in Cividale, the coeval structures in Torba. Inscriptions of middle-high level were found also in the capital Pavia and in the duchy of Spoleto, such as that of Duke Ilderico in Ferentillo, in the abbey commissioned by the Duke of San Pietro in Valle, and the dedication inscription of the Tempietto sul Clitunno, of exceptional graphic quality (moreover, it was the first inscription on a stone monument, with capital letters in bronze, after the inscription of the Arch of Constantine in Rome at the beginning of the 4th century B.C.). The same objective – though differently implemented – is found in the dedication inscription of *Abbot Giosuè in San Vincenzo al Volturno* and in the Arechi

inscription in *Santa Maria a Corte*, Salerno, both dating back to the period, which followed the fall of the Longobard reign, a sign of the continuity in the Carolingian period of the same customs.

At the level of the **re-use practice**, as was already highlighted in the description of the single goods of the series, the more or less spread trend was to use again the **spolia** with adaptations and new treatments, which are often difficult to be recognised. The intent has always been that of allowing the antique to survive through **imitation**. This surely implied the awareness deriving from the knowledge of the model, which is stronger when it is closer to Rome. The Clitunno Tempietto is a copy of a prototype, which was maybe built in the nearby area, as the funerary votive chapel of Camposalese seems to prove. In a similar way the new assembling of the supports and of the frames in San Salvatore di Spoleto tends towards the reconstruction of an antique space, also through the imitation of the Vitruvian architecture orders in the new, *ad hoc* prepared slabs.

Surely the tension in the reconstruction of the antique developed its direct and obvious consequence in the conservation of a great quantity of material, which in other circumstances would have been lost or used again in the limekilns, where starting from the end of the 6th century, every kind of marbles and plaques were transformed in lime. Therefore: **imitation and conservation** are the distinctive aspects of the Longobard re-use of the material, as they went beyond the exclusively utilitarian or justifying intent in the use of antique spaces or *spolia*. The Longobard walls in Benevento are an explicit witness. The gates for the access to the city are indeed constructed with the assemblage of architectural reliefs coming from various places (*Porta Somma* and

Porta Arsa), and the two Roman arches for the *Porta Aurea* and for the *Arco del Sacramento* arch had been re-built and re-used.

The Longobards were not the first in Italy, who had to confront an important past made of impressive monuments and of consolidated traditions: the Goths of Theodoric had just experienced the same situation, but with different results. The relation established with tradition by Theodoric, the **antiquitas**, was highly ideological and conceptual, in some ways turned into a myth without time, as a guideline of respect for the tradition. On the contrary, the immediate past is considered as *vetus*, senescence. The Goths, therefore, were not the continuators of the tradition, but they were rather inspired by it in the redefinition of the *novitas*. The ambivalence of the building policy of Theodoric, oscillating between *novitas* and *antiquitas*, was expressed on the basis of the expectations of a twofold society, formed by the Goths and the Romans, also as regards the overwhelming power of Byzantium.

The intent was to bring Rome back to the past prestige, and to a centrality that faded with the foundation of Constantinople through the restoration of the most prestigious buildings, for which the Emperor wanted to keep alive the memory of his generosities, through a careful information and through the use of stamps carrying his name. In Ravenna, on the other hand, Theodoric re-used the materials by imitating the fashion of Byzantium, which means that the *spolia* were re-elaborated so as to delete any trace of their origin. After all Ravenna was the capital city of the Goths reign and of the delegate power of Byzantium, for which Theodoric imposed himself as a legitimate authority.

The situation of the relation with the antique, which emerges also in other areas during the Early Middle Ages, for example in Rome, in the papal sphere, is different. The wide re-use of the material seems to follow a norm of utilitarian need rather than an ideological value; after all already with Gregory the Great, and probably also with his predecessor Pope Pelagius II, the *autocritas* of the past had clearly no more echo among the masses and the medium class. If this is true for the minor building enterprises (see, for example, the roman diaconates), is also clear how did the Roman Church manage the special re-use of antique buildings with a great ideological impact, which were reconverted to another use: among all let us recall just the mausoleum of Adrian or the *Pantheon*, which clearly show a programmed intent in proposing themselves as the only reference, and not only religious, for the whole West; a warrantor of the past but open to the real needs, ready to substitute Byzantium on the negotiation level, as was the case of the Longobards. Thus the completely new principle of the Christian interpretation of the past and of numerous Roman antiquities was developing. The popular belief that the Marco Aurelio group, set in the Laterano in front of the new *Patriarchio*, represented Constantine, the first Christian emperor, instead, is emblematic.

The Longobards stood out also for their respect of the strategies implemented in the Carolingian era, when the re-use of materials became functional to the legitimating of the role and to the equiparation of the power of the highest recognised offices: the papacy and the Emperor of the East. This happened through the acceptance of imperial and Roman models and with the re-use of *spolia*, which were deliberately taken from the former capital cities. Clearly these

were no imitation works, but rather initiatives, which had to compete in some way with the models themselves. The *Ingelheim* palace represents the intent to exceed the magnificence of the great architectures of the past. The palace was built on a Roman villa, which had been the residence of the Merovingian king, and rearranged on the bases of numerous prototypes with cross-references, which can be found inside a complex project; also the almost hundred re-used columns of the colonnade are an erudite quotation of an already surpassed past, which was no more understood as a known and shared heritage. The same conceptual framework is expressed in the *Torhalle* (the triumphal entrance door) of the *Lorsch Abbey*, with three vaults divided by composite semi-columns, emerging from a vital walling with red and white geometrical motives, which slightly resembled the Constantine Arco romani, with a completely new interpretation.

The Carolingian culture therefore shows an evident critical lack as regards the antique heritage, within which the early Christian buildings can not be distinguished from the classical ones and where the Latin of Cicero was known only thanks to the Fathers of the Church. The presence of just one column was therefore enough to recall the *autocritas* of Rome and to legitimate the context as an ideal copy.

On the contrary, a fundamental aspect, which distinguishes the Longobard culture in its privileged relation with the past, is the awareness of the models, the post-mortem knowledge of the tradition.

As regards the first Islamic period, strongly subject to the influences of the bordering cultures, the mosque of Damascus, built during the *Umayyad* caliphate, represents an emblematic example of the choices implemented by the Arab *élites* in the relation with a

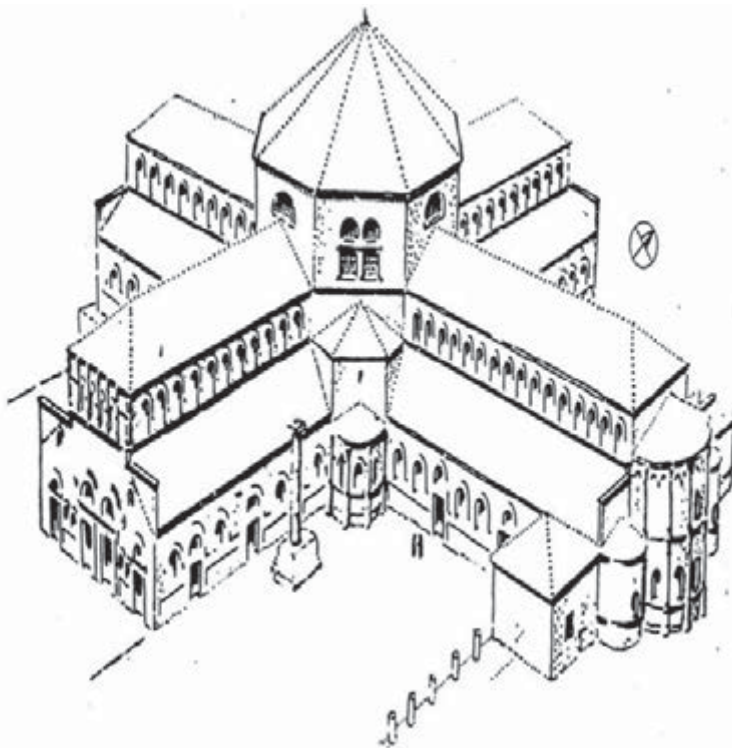

Interior of Damascus Mosque

consolidated cultural substrate; a relation, which was expressed not only at a political level, but also in the re-use of the antique spaces and of the *spolia*. The mosque was built in the place of the sacred barrier of the antique Roman temple of Jupiter, which had been the *themenos* of the Semitic *Haad* sanctuary and then, during the Byzantine era, it became the seat of the Cathedral linked to the place and the burial of the head of Saint John the Baptist. After the first initial phase, when the most ancient mosque and the church coexisted, during the reign of *Walid* (705-15) all the buildings in the *themenos* were seized and the new great mosque was built with the contribution of Syrian, Persian, Greek and Byzantine workers. While the vast re-use of the material from the Byzantine era – as in the supports, which divide in three parts the large room for the prayer – answers mainly utilitarian needs, in the choice of the place we can see a clear ideological intent, both in the

will to inherit the prestige of Christianity and in the emulation of the great monumental architectures, and even more in the special continuity with very antique structures. Also in this case we can not certainly talk about “conservation” of the past of continuity of tradition. These were choices made for a legitimation and a consent gained in relation to a civilisation, which essentially represented a news, even if it was open to syncretic developments, which in the specific case of Damascus, are well explained because of the presence *in loco* of a numerous community of Byzantines and Jews.

In the framework of the **recovery** of the antique, or better of the **Mediterranean tradition**, we find a series of cultural experimentations developed by the Longobards for the first time in Italy and which was elaborated by considering a consolidated heritage.

Qal'at-Sem'ân, Martyrium, isometric reconstruction

First of all in **architecture**. It's clear that the absence of any architectural tradition (both religious and non-religious) and of consequent usual procedures in the use of building material (the Longobards always used wood and not stones) inevitably led to the acquisition of shapes and structures which belonged to the most common current tradition. The tendency to use one type rather than another was determined mainly by the function of the place; therefore, the co-presence of places of worship both with a longitudinal plan, such as San Salvatore in Brescia, or with a centralized plan, such as Santa Maria *foris portas* or Santa Sofia in Benevento, is due to specific liturgical needs.

However, the ideological influence of the owner of the building on the “choice” of the architectural models, as well as of the liturgical use of the building and, last but not least, of the name of churches, should not be undervalued. Not accidentally, the dedication to the “Salvatore” (Saviour), for example, is found in most of the Longobard religious buildings commissioned by royal and ducal clients. In Pavia, during the second half of the 7th century a church of San Salvatore, commissioned by Aripert, i.e. by a royal client, was used as a mausoleum by the catholic dynasty, as was the San Salvatore in the monastery in Brescia, ordered by Desiderius and Ansa. The substantially aristocratic character of the Longobard culture can be easily seen – at architectural level – in the construction of San Salvatore in Brescia, dating back to the Longobard period and commissioned by the king. If analysed chronologically, it exemplifies the **process of formation of “aulic” religious architecture**, which retrieves the formulas of the traditional heritage.

From the T plan with reinforced apse during phase I of San Salvatore in Brescia, dating from the second half of the 7th

Qal'at-Sem'ân, St. Simeon Stylites Martyrium

century (similar constructions can be found in analogous complexes which date from the 6th to the 9th century and are located from the Adriatic to the Alps), there was a shift to phase II, by Desiderius and his wife Ansa, when the church was initially composed by a nave and two side aisles and just one apse. Soon after, between 760 and 762, a further intervention led to the realisation of three apses and the underlying crypt in order to place the relics of martyrs (documented since the diploma of Adelchi of 766), according to the martyr model codified in Rome in the Vatican Sanctuary and then widely spread in all Europe starting from the age of Charlemagne.

The special architecture of the three free apses represents, instead, one of the most original features of Northern-Italian Longobard architecture of the 8th century. This model no doubt comes from the renowned Syrian martyr prototypes of the 5th century – the most famous is San Simeon Stylites in *Qal'at-Sem'ân*. There are numerous replicas in the Longobard territory, many of which are located in monastic churches commissioned by royal or ducal authorities, or in funerary places of worship: Santa Maria alle Cacce in Pavia, founded by King Regimpertus, San Michele in the monastery of Santa Maria Teodote (or *della Pusterla*) in Pavia, the cemetery Church of San Michele *in insula* in Trino Vercellese, the church of the monastery San Salvatore in Sirmione, San Salvatore in Montecchia di Crosara, the church of the monastery Santa Maria *in Sylvis* a Sesto al Reghena in Pordenone, founded by Duke Erfo in 762. The same architectural model is found also in some churches in Reti of the Cantone dei Grigioni, dating from half of the 8th century, such as Santa Maria and San Martino di Didentis.

Another characteristic feature of the Longobard architecture culture was the use of centralized plans, as witnessed by many survived structures. The “tricora” of Santa Maria *foris portas* in Castelseprio – a centralized rectangular plan, three jutting ambulatories and narthex – goes back to Early-Christian tradition. The structure was supposed to be a privately-founded oratory. A similar building is found in the Longobard Tuscany, in Anghiari, under the present Pieve di Santo Stefano.

In Early-Christian architectural tradition, similar buildings were generally used for funerals. The persistence of these models in the West was probably due to the marked preference in the coeval Byzantine architecture (7th-9th centuries) for compact buildings, in particular the Greek-cross church with dome. As long ago as in the Justinian age, religious architecture tended to emphasize the presbytery thanks to a number of structural devices for liturgical purposes.

The most important example of central Longobard architecture is no doubt the

Church of Santa Sofia in Benevento, characterized by a complex and original plan and founded by the Duke of Benevento Arechi II. Even though it was not used as a chapel in the palace, its composition reminds of palatine churches, like San Vitale in Ravenna and Constantinople prototypes. Besides, the sanctuary was built for the duke and its people as a religious and political centre. This architectural model – with all possible variants of centralized forms, from rotundas to polygons – is mainly found in martyrial and devotional (*martyria*) places, among which the most illustrious are *Anastasys*, the Holy Sepulchre in Jerusalem of the 4th century; the *Martyrium* of San Filippo in Hierapolis of Frigia of the 5th century; San Sergio and Bacco of Constantinople of 536; San Vitale in Ravenna of 548.

After the 7th century, there seems to be no other example of this architectural style, at least in Western countries. Thanks to the revival of Early-Christian and Byzantine architecture promoted by Charlemagne, centralized plans regained favour especial-

ly in France from the 8th century within the framework of a wider political programme which envisaged the revival of the most significant elements of Old Christian culture for political-propaganda purposes. Therefore, the monument in Benevento is characterized not only by the exceptional composition but also by the precocious revival of ancient models.

The Longobards in Italy expressed a great originality also in laying the foundations for the development of an **urban culture**, which will find its fulfilment only in the middle of the Medieval era. The case of Cividale represents a prototype of a *forma urbis* in which we can find the characteristic aspects of this process, which starts from the dismantling of the Roman traditional town plan. The systematic excavations carried out in Brescia showed that the modalities of the re-use of antique spaces and structures, especially in the initial period of the settlement in Italy, highlight how did the complete lack of an urban culture in the migrants-Longobards jeopardize the ability to find a continuity with the already existing structures and how did this fact determine the fragmentation of the Roman urban space and the selection of just some areas with a mere strategic function and with modalities of occupation, which were alien to the Roman urban culture. Near the houses some spaces are destined to craft activities and to burials, which enter the city first in a isolated way, mainly within the highest aristocracy (see Cividale) and then also in the lower classes. In this first period the building typologies are simple, characterised by basic building techniques with the use of perishable (wood, earth, straw) and re-used materials.

Moreover, the most recent archaeological excavations have revealed that the Longobards (who settled in the ancient

Roman centres, declining due to wars and economic recession) placed their centres of power -the *curtis regia*, the seat of the royal representative; and the *curtis ducis*, the ducal seat- in the periphery of cities, in well-protected areas. In particular, they placed these seats near ruining public buildings over which they had fiscal rights, such as palatial *domus*, circuses and amphitheatres. This transfer of political and administrative functions from the ancient central forum areas to peripheral sectors is quite evident in Cividale, as well as in Brescia and Benevento.

The completion of this process is witnessed in an excellent way in Cividale, where we can see a re-composition of the spaces, based on a logic ruled by new political balances, linked to the presence of composite urban societies.

This happened through the polarisation of the structures of the “new” civil and clerical hierarchies, the Gastald and the *insula episcopalis*, thus anticipating the typical medieval morphology of the square, where the most important centres of the urban *élites* – the cathedral and the palace – concentrate.

The Carolingian period stands out of the Longobard dominion because of its will to refound an imperial state, which would impose its authority evenly on the territories and the cities through the alliance of government between state and church, at all levels. In this framework the city, as an expression of the concrete needs for a production place and society, is considered only as the seat of a delegated government, which is placed somewhere else in order to carry on a universal function. The effect of this ideology on the creation of the urban image is to be seen in the formal model chosen for the architectures of power, the church and the palace, which are physically linked,

similarly as happened in the Longobard *forma urbis*, but isolated from the context. These were whole building complexes protected by walls, as for example the Aachen place of Charles the Fat, the palace in *Ingelheim* or the ecclesiastic-palace complex of Frankfurt. In some ways the Carolingian experience is closer to the Muslim urbanism, which, for this reason, diverges from the solutions developed in the Longobard age, even if they both derive from a nomadic tradition.

The ideal structure of the Muslim city is the product of a profound meditation, which brings back the space to universal models, with a great geometrical clearness, elaborated for a strong and original religious understanding of the life in community, and based on the distinction between the public-representative and the private-utilitarian space. The spaces were built in consideration of the Roman-Byzantine planning technique (fortifications, *cardo-decumanus*, great handi-works) and on the basis of the oriental model of the circular city.

The fortified system is part of the experimentations of the Longobard culture, also in those cases, when already existing structures, mainly the result of the system developed in the late-Roman age, after the first barbarian invasions of the 3th - 4th centuries, were used.

The Longobards occupied Italian territory according to a specific strategy of military control—of population, agricultural resources, pasture- and woodlands, as well as trade routes. The *castrum* of Castelseprio is a prominent example: like several other castles it is mentioned in 7th-century Byzantine sources that refer to it as *Civitas*, and therefore it recalls the urban quality of the site. Between the 7th and the 8th century, these fortified citadels became juridical and administrative centres for vast royal and fiscal districts.

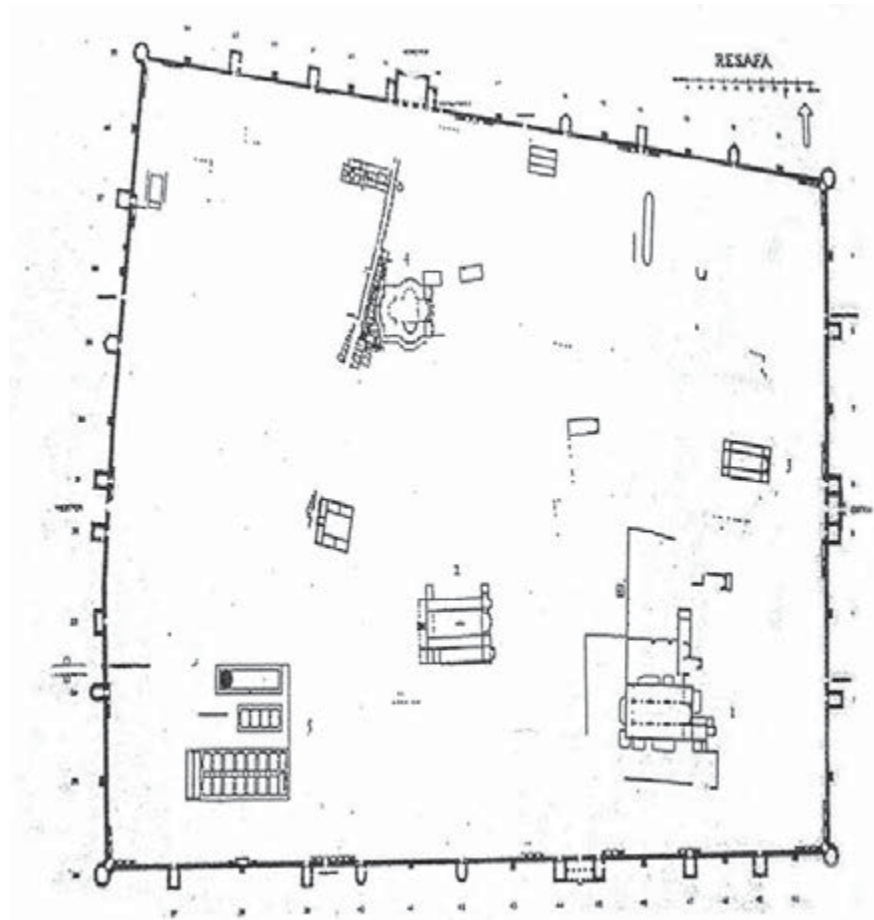

Resafa, *castrum* plan

Perhaps they were the seat of mints or temporary residences for the royal court, along wide range road paths, ensuring a rapid military response to possible Frankish invasions. Some of the citadels, such as Castelseprio, are distinguished by their city walls equipped with towers, raised for the protection of the population, and often reused as convenient supports to dwellings that were built within and attached to the towers.

Castelseprio, in particular, represents an extraordinary example of a military camp, which stands out for the special organization, the monumentality and the typological variety of the buildings in it. It is a complex and articulated settlement model, which, because of its prominent double protective and demic task, represented a fundamental reference in the development of the most typical medieval settlement system: the "castle".

The articulated functional organisation of the spaces and structures and the high formal level of the decorative ornaments, are the expression of the social prestige of the commissioner – the king himself. The consistent presence of the cult buildings with differentiated functions, both private and public, show the importance and the great meaning of the relation of the Longobard *élites* with the Church also in the development of a "new" model for the territorial settlement, where the spaces of the sacred buildings had an extremely important role in the strategies of power.

On the contrary, the castle of *Ibligo Invillino* in Friuli Venezia Giulia is less articulated as to the distribution of its buildings within the wall and bears scarce traces of the Longobard presence, while the castle of Bellinzona, on the river Ticino, was mainly used as a defensive and enclosure area.

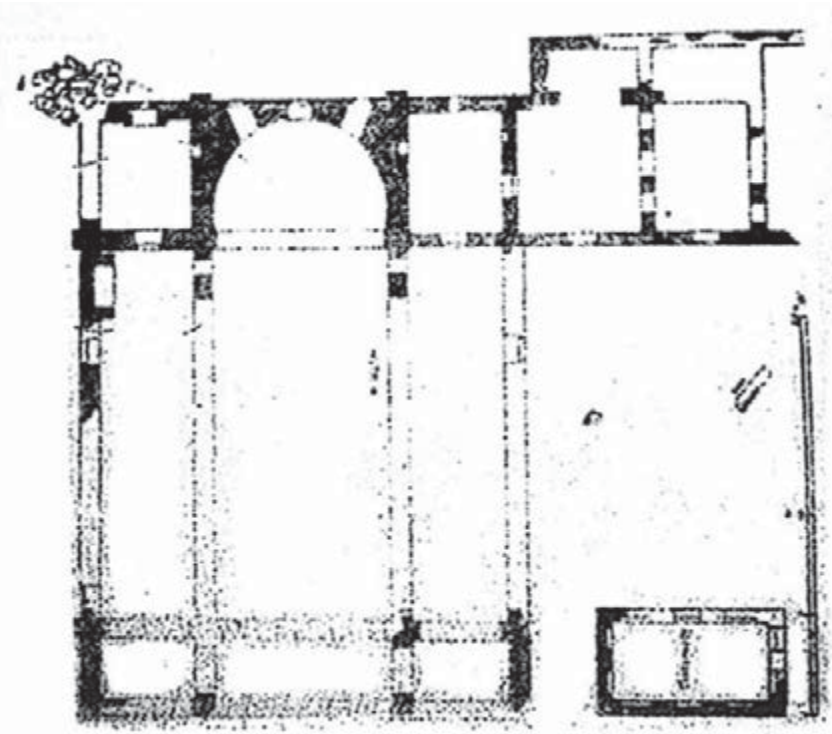

The urban quality of the Longobard *castrum* seems to have no matching examples in the West, where the territories witness a spread and almost exclusive military function of the *castra*. Vice versa in the East, along the *limina* of the Byzantine empire, during the course of the 6th century, we can witness the development of a network of *castra* with highly urban features, such as, for example, in Zenobia, Resafa, Dara, Palmira, where the functional organisation of the urban space reproduces the space of the most important centres of the Empire, also in the spectacular will of the laic and ecclesial architectures.

Diversifying aspects, which characterise the serial properties

As was often highlighted, the Longobard culture presents heterogeneous features because of various causes.

First of all the diversity of the cultural and productive features in the various territories of the former provinces of the Western Roman empire, crossed by the Longobards-migrants, determined the differences witnessed by the artistic products already in the 6th and 7th century. Some metal productions deriving from the craft continuity of the late antique shops are particularly peculiar. The most significant iconographic and technological examples are: the parade shields,

Resafa, Western Church: Presbytery with *pastophoria*

decorated with thin bronze plates, with shapes, which conserve the zoomorphic style of the German tradition, with a rich parallel production of classical compositions with leaves and weaving vegetables, or more clearly peacocks flanking trees of life and *chantaroi*, extremely popular themes in the Byzantine, Mediterranean and Middle East artistic culture; the crosses with gold plates for the burials, borrowed from the

Cross in gold foil

Mediterranean world, have decorations of the Germanic tradition and Christian and classical images and themes. This is a syncretism, which distinguishes the metal manufacturing culture of the Longobard age from the Visigoth and Frank tradition. These and other jewels, laid in the Longobard burials, witness the meaning of the *atelier* in the Cripta Balbi in Rome in the relations between the local handicraft and the Longobard purchaser.

In the heterogeneity of the artistic results found in the **Longobard architectural productions**, beyond the cultural influences deriving from the long lasting migration, influenced also the production of the workers of different origin and culture, the influence of the local specificities, the will of the commissioning *élites* to distinguish themselves in the framework of the autonomist boost, which involved the dukedoms as against the reign's overwhelming authority. Nonetheless, the dialectic, which animated

the relation between the Longobards and the local powers, both laic and religious, shall not be underestimated. Sometimes it influenced the choice of the reference models; let us just recall the case of Santa Sofia in Benevento, which looks at Byzantium both for the adoption of the architecture model and for the naming of *Haghia Sophia* in memory of the Justinian church of Constantinople.

Also the chronology influenced the cultural results; indeed, the monuments in Spoleto, which are older than the other "Longobard places" in the serial site, show a lower originality in the elaboration of an autonomous language and, viceversa, a greater adhesion to the traditional models (autochthonous and allochthonous). The significant presence of *pastoforia* in the church of San Salvatore (Spoleto) is unequivocally linked to Syrian models, as is the use of a dome to cover the presbytery and the typical bottom wall with continuous profile which includes the apse's curve; these are typical features of Byzantine church architecture. Also the architectural decorative elements which characterize the exceptional façade are influenced by the same tradition: the spirals decorations and the volute shelves are among the features of late Roman tradition in Syria. The decoration of the façades of the places of worship is totally extraneous to Western culture, whilst it is typical for Syrian religious architecture (as is seen in the places of worship dating back to the 6th century in the limestone plateau in the north of Syria). All these features are part of a more complex frame where Oriental artists, linked to the presence of Syrian monastic communities (witnessed by sources and the hagiographic tradition of the duchy), are commissioned by the Longobards who had not developed their own style yet; the Longobard *facies* of San Salvatore in

Spoletto still dates back to the 7th century. Similarly, the *Tempietto sul Clitunno*,— which is characterized by the same above-mentioned features.

As to **pictorial evidence**, present in many of the monuments applying for WHL, almost every element is attributed to the great and refined Roman-Byzantine school. The use of aulic traditional models was possible also thanks to the presence in Italy of Oriental artists, many of whom had flown from their countries owing to iconoclastic persecutions. These artists also painted the extraordinary pictorial cycle of *Santa Maria foris portas* in Castelseprio, depicting the history of Christ on the basis of the ProtoGospels, in accordance with Byzantine school models from towards the end of the 7th century. Even though there is chronological reference to analogous decoration cycles (for example, that of the monastery of *Müstair*, which however dates back to the 9th century), the paintings of Castelseprio are considerably different because of their special smoothness and extraordinary elegance; the only affinities could be found with previous or, at the most, coeval works, such as the paintings of *Santa Maria Antiqua* in Roma, of which scarce fragments remain.

Despite of its fragmentation, the decoration of *San Salvatore* in Brescia is no doubt one of the richest Early Medieval examples among those still existing, even richer than the *Tempietto Longobardo* in Cividale, analogous for historical circumstances and for style (the same method for the integration of ornamentation and relief through the insertion of colour and green and blue vitreous bulbs in the stucco flowers is used). However, the fusion among stuccos and paintings is totally original, with the outstanding figures with faces painted on stucco halos. The revival of stucco lacunar ceilings is

precocious. The eclectic approach in the fusion of Ravenna (*Sant'Apollinare in Classe*) and Roman models (*San Paolo foris portas*) is extraordinary especially as to the use of stuccos in the architectural elements (sub-arches and arch rings), of traditional decorations (naturalistic treatment of figures and attention to architectural and landscape backgrounds of Hellenistic-Roman tradition), British decorations (in the use of aniconic interlace themes, the same which are found in the Longobard miniature codes, such as the *Nonantola Code*) and German decorations (codes of the libraries of *St. Gallen* and *Einsiedeln*). As to the complex iconography of Brescia there are corresponding elements with the decoration of *Santa Maria foris portas* in Castelseprio, *San Martino ai Monti* in Roma, *San Vincenzo al Volturno*, *Malles*. Clear analogies, especially from the point of view of technical realisation, are found in the paintings of the Church of *Santa Sofia* in Benevento, to such an extent that it is thought that artists operating in the

Southern duchy had been trained in Lombardy.

However, the pictorial tradition of *Santa Sofia* appears original for the liveliness of narration, the naturalistic style and the expressionistic élan which have no parallel in the production of the *Langobardia Maior*, especially if compared to artefacts, such as the *Ratchis Altar* and the plastic and pictorial decorations of the Friulan *Tempietto Longobardo* in *Santa Maria in Valle*. Strong similarities are instead found with the painting of *San Vincenzo al Volturno*, with those of the *Crypt of the Original Sin* in *Matera*, while examples of Benevento painting are present in the churches of *San Biagio* in *Castellamare di Stabia*, *dei Santi Rufo* and *Carponio* in *Capua* and in *San Michele Cave* in *Olevano sul Tusciano*, dating from around the 9th-10th centuries.

As far as the frescos preserved in the presbytery of the *Clitunno Tempietto* are concerned, they belong to the most

current postclassical Roman tradition, for the accurate reference to the clipeum images of Santa Maria Antiqua dating back to the Giovanni VII period (705 – 707), to the mosaic decoration of the oratory of San Venanzio annexed to the Lateran Baptistery and that of the Triumph Arch of San Lorenzo *foris portas*.

Tradition and innovation are therefore the terms around which all Longobard artwork is developed, with preference to – depending on the contexts – the local or Oriental tradition, that is the new ideas coming from the “Barbarian” Europe or the Byzantine East, or also from coeval Arab culture.

Major innovation is found in the **stucco plastic decoration**; a unique example (*unicum* from artistic point of view) is found in the Tempietto Longobardo in Cividale. The renewed attention during the Longobard period for stucco architectural

decoration is probably due to an important analogous tradition, existing since Roman times in the Merovingian area, and also to the great availability of plaster in Paris.

From the half of the 6th century, the production of stucco sarcophaguses on wooden structures has been known in Paris and surroundings. Fragments of stucco frames with plant-like decorations coming from the funerary church of St. Pierre and St. Bartolomeo in the Merovingian necropolis of Saint Denis also date back to the end of the 6th century. Yet, the great development of plaster plastic between the 8th and the 9th century, with the presence of highly - specialized artists, is probably linked to Oriental tradition and to the *Umayyad* conquest of Spain in 756. It is common knowledge that the dynasty of the *Umayyad* adopted and spread many of the cultural ideas in the conquered Byzantine areas, among which the outstanding tradition of stuccos. Not accidentally, more than once the stuccos of Cividale have been compared to the analogous ornamentation of the *Umayyad* castles of *Khirbat al Mafjar* and of *Qasr al-Hayr al-Gharbi*, of the first half of the 8th century, where the first figures in the round realised with this technique are present. In particular, in the *Khirbat* Bath there is a wide repertoire of figures, with statues of the owner and of nude girls, while on the dome of the hearing hall there are clipeums containing heads.

The works of Cividale are also characterized by refined decoration with geometric and plant-like patterns on brick walls, which – as the aniconic plaster ornamentation, both plant-like and geometric, of the cenotaph of Agilbert in the Crypt of St. Paul in Jouarre – bear witness of the *Umayyad* (and Sassanid) influence. The same sequence of images within the arches with plant-like and geometric decorative elements is also found in decoration

plaster fragments in St. Martin in Disentis (Klostermus) and in Vouneuil sous Biard (Poitiers, Mus. Saint Croix) dating back to the first half of the 8th century.

Thus, also the “language” of the Early-Medieval stuccos of the Longobard period is composite (as is all Pre-Charlemagne Early-Medieval culture) and formed by various decorations which are still strongly linked to the Hellenistic-Roman tradition. This is proven by the fact that in the Church of San Salvatore in Brescia the sub-arch stuccos bear witness of strong affinities with Late-Antique-Byzantine models, such as those of Pore-, of the Justinian age.

Also regarding the composite character of **architectural sculpture** during the Longobard period, there had been important contacts with the Barbarian European tradition which, in a number of cases, seems to have changed and spread the most traditional themes of the Hellenistic-Roman and Byzantine tradition to reintroduce them in original forms.

Once more the Merovingian period played a fundamental role in the coeval production also on the Italian territory, by showing that the Alps were not an insurmountable barrier; conversely, they opened the way to cultural exchange. From the end of the 6th century to the end of the 8th century, the region of Aquitania was an economically flourishing, intellectually lively and religious area. This contributed to the development of a special “culture” which was especially expressed at artistic level in the manufacturing of stones, in particular capitals and marble sarcophaguses. From Toulouse, where marble was extracted and manufactured in specialized workshops, the products were exported through the Rhone (eastwards) and the Seine (northwards). Moreover, what

Stuccoes from Khirbat al-Mafjar (Jerusalem, Israel Museum)

Ravenna, Baptistery of the Orthodox, Stuccoes covering the dome

influenced Merovingian sculpture, especially reliefs decorating sarcophagi, was not the Western Early-Christian tradition, that is the Roman tradition, but rather the Syrian-Egyptian art of the 6th-7th century. The sarcophagus of Saint Drausius (Paris, Louvre), entirely decorated with vine shoots symmetrically placed at the sides of a *chrismon*, immediately reminds of the decoration on the pediment of the Clitunno Tempio, as the pediments of the Baptistery of Saint Jean in Poitiers, of the 7th century resemble the architecture of the façade of San Salvatore in Spoleto.

The Gallic tradition in the decoration of church façades was not totally extraneous to coeval culture, however: this was no isolated phenomenon if the Church of San Salvatore in Spoleto is taken into consideration. This also leads to the hypotheses that there were common cultural roots, particularly with reference to artists. The specialization of “Merovingian” marble sculptors is astonishingly exemplified by the architectural decoration of the Abbey of Jouarre, founded around 630 near Meaux in the Marna Valley, where ancient spoils are perfectly combined with newly-built capitals, coming from the Merovingian workshops of the Pyrenees.

Analogous expertise in the integration between spoils and new architectural elements is seen in the Clitunno Tempio and the near Church of San Salvatore in Spoleto, as well as in the Tempio Longobardo in Cividale and the Church of San Salvatore in Brescia. Coptic artists were asked to explain the high artistic level of Merovingian sculpture, as Syrian and Byzantine artists were the authors of the architectural sculptures belonging to several Spanish churches of the 7th century, such as the Church of San Juan

Bautista de Banos, in the province of Palencia, of 661, San Pedro de la Nave in the province of Zamora, the Church of Quintanilla de la Vinas, in the province of Burgos. The latter, in particular, is characterized by a carving style, in the architectural reliefs, which is very similar to that of the *Ratchis* Altar in Cividale, an original artefact combining the great Longobard jewellery tradition with European-Barbarian tradition.

The *Tegurium di Callisto*, in the above-mentioned Baptistery of the Episcopal complex in Cividale, representing the most renowned and important work of the classical sculpture production of the “Liutprand revival”, with Late-Antique and Early-Christian themes, belongs to a very different style.

The marble slabs which are part of the liturgical furnishings of San Salvatore in Brescia, in particular the slab with peacock reminding of Ravenna models of the 5th and 6th century, belong, instead, to the same current.

Comparative analysis for the criteria vi

The critic historiography of the latest decades has showed how can the influences of the Longobards in Italy be considered more numerous than it was believed in the past, as witnessed by the survived evidences in many sectors of human expression and of everyday life, from language to names, place names, laws and some aspects of religion and traditions (see the historic introduction).

More significant, because it is universal, is the heritage of the Longobards in the artistic and literary fields. Certainly the Longobards, together with other “barbarian” people, as highlighted by Julius Schlosser in his thick volume *Magistra Latinitas und magistra*

Barbaritas (1937), contributed to a great extent to the late antique and early medieval civilisation. Their influences are the result of what Braudel defined as “cultural pollen”, which influenced the Mediterranean civilisations and contributed to the definition of the historical-cultural identity of modern Europe through the centuries.

First of all the Longobards, because of their different “feeling” and “re-using” the antique elements, allowed the survival of numerous materials and classical architecture artistic forms and models, which for centuries represented the universal reference for European and Western artists (just think about the numerous classic reprisals in art and architecture, which characterised the western history).

Moreover, they contributed in a fundamental way to the transmission of literary, scientific, technical, historic and juridical works of the antiquity up to today. They used to be copied by the monks amanuensis also in the monasteries founded or re-used by the Longobards. These works, which are at the basis of the cultural and scientific reprise of Renaissance (just think about the *De Architectura* of Vitruvius – found in 1414 in Montecassino by Poggio Bracciolini – the only text about architecture integrally survived from antiquity, which became the theoretical basis of western architecture, from Renaissance to the 19th century, the principal reference of Leon Battista Alberti, Palladio Sangallo, etc.), still live in the contemporary culture and are the basic elements in the formative programmes in the school and advanced courses in many countries.

Within the contribution which the Longobard culture in Italy gave to the

creation of Medieval Europe, the role assumed for the development of the Christian tradition by the cult of San Michele sul Gargano must be taken into account. Most historians believe that the spread of the cult of San Michele in Medieval Western countries represented nothing but the starting point of a process which saw the Sanctuary of San Michele sul Gargano, which has some unique elements both as to the configuration of the site and the continuity in the spread of the cult which characterized the cave from Pre-Christian times to the contemporary period.

No other Late-Antique sanctuary – excluding a few Roman examples – reveals the same continuity in the cult, witnessed by literary, epigraphic and monumental sources. In particular as to epigraphic sources, the sanctuary is the only example in its genre, thanks to the Semitic, Greek, Latin, but also Germanic, from Gothic to Longobard, Frankish, Ancient German, Saxon and Ancient English inscriptions found on its

structures. The Garganic sanctuary in Monte Sant'Angelo, strengthened and internationalised by the Longobard dynasties, is still a place of cult and a pilgrimage destination, which, with medieval connotations, still attracts people from Italy and abroad.

The Longobard experience was immortalised in literary historical and musical works in various ages, which contributed to keep the event alive, as happened also with the legends developed around this people. Beyond the most famous *Origo gentis Langobardorum* (7th century) and *Historia Langobardorum* (8th century) by Paul the Deacon – which paved the way to the various national historiographies of the European people, together with the *Histories* of other Germanic *gentes* – let us recall the *Adelchi*, the tragedy published in 1822 by Alessandro Manzoni, who narrates the end of the Longobard reign as experienced by Adelchi, the son of the last king Desiderius, and of his sister Ermengarda, rejected by Charlemagne for political reasons. Her tragic end is described in the famous verses:

« *Sparsa le trecce morbide
su l'affannoso petto,
lenta le palme, e rorida
di morte il bianco aspetto,
giace la pia, col tremolo
sguardo cercando il ciel* »

(“With silken tresses flowing / O'er anguished breast apace, / With listless palms and deadly / Dew on her pallid face, / She lies, pure soul, her trembling / Glance unto Heaven cast” – translated by Lorna De' Lucchi).

The legendary history of the Longobards is recalled also by Georg Friedrich Händel in his “Rodelinda, Regina de' Longobardi” (Rodelinda, Queen of the Longobards), one of his best lyric operas, which saw numerous representations in the 18th century.

3.d Integrity and Authenticity

The choice of monuments and places to be included in the nominated serial property has been also made according to integrity and authenticity criteria.

The **integrity** condition is intended to be the state of conservation of a property, under the twofold perspective of its material features and its urban context.

- Functional Integrity: it defines the continuity of use during times.

- Historic-structural integrity: it defines the state of conservation of the property in its present condition considering its transformations during times, as well as its genuine readability in relation with the subsequent modifications.

- Visual-aesthetic integrity: it defines the state of conservation of the property environment/context as well as its own relation with it.

The **authenticity** is intended as the truthfulness of the information sources which define the heritage nature and quality. We deal then with two main meanings of the term, which refer to the documentary evidence of the information sources, that is to say to their veridicity, being them based on a critical analysis.

The aforesaid criteria, as well as those concerning the integrity condition, have been taken into account for the properties selection/exclusion in the definition of the serial site “*The Longobards in Italy. The places of the power (568-774 AD)*”.

Therefore, the characteristics of the excluded Longobard monuments and sites in Italy are:

1. Buildings which could be ascribed to the Longobard period only through non-available or partially-available scarce archaeological remains.
2. Buildings which could be ascribed to

Rome, Castel Sant'Angelo, colossal bronze Angel

the Longobard period only through scarce portions of walls included in subsequent stratifications which completely changed the original context and do not allow to recognize a genuine artistic quality.

3. Buildings which are known only because of written sources.

4. Buildings which previous existence is testified only by the discovery of Longobard artifacts: structural elements, fragments of architectonic sculpture, liturgical equipment, burial or grave plates.

As mentioned in chapter 2, a further decision has been taken by limiting the CHRONOLOGY referred to the period which is conventionally ascribed to the Longobard hegemony in Italy, that is between their arrival in Italy (568 AD) and the end of the Kingdom (774 AD).

This fact clearly excluded from the nomination all the post-Desiderian expressions (subsequent to 774 AD) which could be referred only to the Duchy of Benevento. In fact this principality went on beyond the Early Middle Ages. The extension of the chronological period would have caused some troubles in respect of the transition period here considered, from two points of view: the comparative literature of the proposed monuments and the recognition-definition of a language which is, by its nature, extremely articulated and heterogeneous, yet coherent with the cultural pluralism expressed by the Longobards.

According to the aforesaid parameters, the excluded remains testifying the Longobard presence in Italy could be grouped together as follows:

1. Buildings which could be ascribed to the Longobard period only through non-available or partially-available scarce archaeological remains.

Sesto al Reghena (Pordenone): Church of S. Maria in Sylvis Monastery - This Monastery was established around the half of the VIII century by Erfo, Anto and Marco, Friulian nobles of ducal stock, and then tremendously transformed during times. Some dig data related to the Longobard phase show that there was a three-apse church in the Southern yard of the present abbey as well as some sculptural fragments among which there is the so called urn of S. Anastasia (excluded for the parameters 1 and 4).

Gazzo Veronese (Verona): S. Maria Church - This Monastery was established during Liutprand period, which knowledge is provided by written sources and scarce archaeological relics as well as by sculptural elements of the liturgical equipment dated back to the first half of the VIII century (excluded for the parameters 1, 3 and 4).

Nonantola (Modena): Abbey - It was founded in 752 by Longobard king Astolphus and was deeply transformed during the times; actual *facies* dates back to Romanesque age. Archaeological excavations have been carrying out (excluded for the parameter 1).

2. Buildings which could be ascribed to the Longobard period only through scarce portions of walls included in subsequent stratifications which completely changed the original context and do not allow to recognize a genuine artistic quality.

Sirmione (Brescia): S. Salvatore Monastic Church - The presence of the church, which is part of a monastic complex, is testified by documents dated back to the half of the VIII century (CDL) and by a pluteus fragment reporting the name of Desiderius and his son Adelchis. What remains from the original plan of the

Church, which was composed by one single hall with three contiguous apses with extradoses, is just a portion of the oriental wall, part of the hall and some ancient descriptions. Recent excavations and documentary evidences permitted to date the church back to 760 AD; these excavations revealed a crypt with the same dimension and shape of the Church Eastern side; the crypt is close to the side-walls, which thing suggests to date it back to the X century or to the period close to the erection of the Church (excluded for the parameter 2).

Pavia: S. Maria Teodote Monastery - The monastery, mentioned by Paul the Deacon, was built in proximity of the walls and deeply transformed during the subsequent centuries. The excavations conducted in 1970 uncovered, at the foundations level, the remains of a crypt with central plan and three-apse extremity, probably dating back to the half of the VIII century. Such remains have been then re-covered (excluded for the parameter 2).

Pavia: S. Maria delle Cacce Church - The Church was completely reconstructed during the fascist period. The only intact remains of the Longobard Ages are few portions of the outer walls of the crypt (excluded for the parameter 2).

Pavia: S. Eusebio Church - The remains of the Longobard period are just some capitals, re-used in the Romanesque crypt, and perhaps little portions of the outer perimeter of the crypt (excluded for the parameter 2).

Pavia: S. Felice Monastery - S. Felice Church, which was commissioned by Desiderius and his wife Ansa, was called Monastery of the Queen. For what concerns the Dark Ages Church, only the Southern side, reconstructed

approximately during the 1930s, and limited portions of the Southern apse walls have survived intact. Excavations conducted in 1996 uncovered some remains which permit to recognize in the Church plan the three-apse extremity. There is a crypt in phase with the three-apse structure. Inside the crypt there is a passage running through the three openings with apses, which contain reliquary-altars, probably dated back to the X century. On the walls, scanty traces of the painted decorations are visible (the study of such decorations has just begun). The modifications which underwent the Church, in particular those of the early XI century and subsequently of the XV-XVI century, deeply modified the building plan. An analytical outline of the buildings phases has not been accomplished yet (excluded for the parameter 2).

3. Buildings which are known only because of written sources.

Volturno (Isernia): S. Vincenzo al Volturno – S. Vincenzo al Volturno Monastery, centre of a great signory, was erected by three Longobard nobles from Benevento: Taso, Tato and Paldo. This complex has been subjected to excavations and researches for more than twenty years; initially they have been run by an Anglo-Italian team who uncovered considerable, even if fragmentary, remains belonging to the Longobard period. The most relevant find is still the underground crypt of Abbot Epiphanius, which contains IX century paintings (excluded for the parameter 3).

Leno (Brescia): S. Benedetto male Monastery – S. Benedetto di Leno Benedictine male Monastery was erected by the King Desiderio and his wife Ansa in 756, just after the erection of S. Salvatore di Brescia female Monastery. These

foundations were set up in order to control and develop trading and manufacturing activities, making Brescia – which was an artisan city – interact with the rural economy of Leno.

The partially excavated crypt, along with huge sculpture documentation – dated back to a period approximately included between the VIII and the IX century - and a tomb with a painted cross are the few portions of the Monastery *ad Leones* today survived. Only extended archaeological researches could implement the acquisition of other structures.

Leno is one of the greatest settling areas of Brescia middle-land, for two main reasons: the discovery of worship buildings, which vertical structures are not preserved, and the four cemetery areas, which surround the current residential area (excluded for the parameter 3).

Pavia: S. Salvatore Church – The Monastery was close to present S. Salvatore Church, popularly known as S. Mauro Church, while its extensions were in the area now occupied by the Military Engineers' Barracks.

The Church was erected in 657 by the Longobard King Aripert I, probably to celebrate the definitive conversion to Catholicism (*Historia Langobardorum*, IV 48). In 1782 the Monastery was destroyed and subsequently, in 1860, Pontoniers' Barracks were erected in the same area.

Pavia: S. Agata al Monte Monastery – Sources mention this place as a 7th century foundation; subsequently the Monastery was completely reconstructed according to Romanesque patterns. The Longobard Queen Conicperga was buried in the Church of the Monastery; the inscription on her gravestone is now kept

in the City Museums (excluded for the parameter 3).

Pavia: S. Maria delle Pertiche – S. Maria delle Pertiche Church, mentioned by Paulus the Deacon as being Queen Rodelinda's Mausoleum, was drawn in some of Leonardo da Vinci's famous sketches, which highlight its central plan. This Church is also represented in several '700-'800 reliefs. The Church was destroyed in 1815 (excluded for the parameter 3).

Pavia: S. Giovanni Battista Church – This foundation, subsequently destroyed, was erected by Gondibert, daughter of Theodolinda (excluded for the parameter 3).

Pavia: Royal Palace – It was the most important Longobard Civil Architectural work of the city of Pavia, which was the capital of the Longobard kingdom from 625 to the kingdom fall in 774 AD. The building, destroyed during the XI century, had been repeatedly reconstructed during the Longobard Ages (excluded for the parameter 3).

Milan: S. Maria d'Aurona Monastery – The Monastery, probably erected by King Liutprand around 740 AD in the city of Milan, was dedicated to Aurona, the daughter of the duke of Asti (Aurona is mentioned by Paul the Deacon in the *Historia Langobardorum*, IV, 22). The oldest documentary evidence of the Monastery, which was later on dedicated to S. Agata, dates back to 880 AD. During the XV century, the Monastery was joined to the adjacent S. Agostino Monastery, next to Porta Nuova. Once even the last nuns of S. Agostino moved away, the building was divided into lots and sold (excluded for the parameter 3).

Monza: S. Giovanni Battista Church – Royal Palace – Erected by the Queen

Theodolina as a royal residence, it later became the mausoleum of Agilulf and Theodolinda's daughter. Paul the Deacon mentioned the fresco cycle of this complex, which represented the Longobard saga, commissioned by Theodolinda.

The remains of the Dark Ages Church have been destroyed in order to erect the current Cathedral. Two slabs of the presbyterial enclosure belonging to the early medieval building have been embedded in the façade of the Church; they date back to the VI-VII century (excluded for the parameters 3 and 4).

4. Buildings which previous existence is testified only by the discovery of Longobard artifacts: structural elements, fragment of architectonic sculpture, liturgical equipment, burial or grave plates.

Milan: S. Simpliciano and S. Nazaro Basilicas – The reconstruction activities conducted on S. Simpliciano and S. Nazaro Basilicas by the Longobard monarchy are attested only by the discovery of tegulae labelled with kings' names (excluded for the parameters 3 and 4).

Milan: S. Giovanni in Conca – The basilica was finally destroyed in 1949 to build a road system; the only evidences of the complex are the crypt and part of the apse, which however date back to the XI century (excluded for the parameter 4).

Bobbio (Piacenza): Monastery – Unfortunately it is not possible to recognize traces of the Longobard period in the architectural complex which has been repeatedly violated.

The Longobard presence is, however, testified by the discovery of fragments of liturgical equipment as well as of other artifacts (excluded for the parameters 3 and 4).

Ferentillo (Spoleto): S. Pietro in Valle – A large number of undamaged sculptural evidences belongs to the original phase of the Monastery which dates back to the first half of the VIII century (excluded for the parameter 4).

Farfa (Rieti): Monastic complex – S. Maria di Farfa Abbey was erected around the half of the VI century and subsequently rebuilt after the destruction caused by the Longobards in the 7th century. The Monastery became economically and politically very important because of the great donations made first by the Longobard dukes of Spoleto and later on by Longobard Kings like Liutprand. This fact is attested by a huge written documentation. No Longobard structures have been recognized till now, except for a large number of re-employed supports which could be dated back to the half of the VIII century (excluded for the parameter 4).

Capitals such as **Monza, Milan and Pavia** have been excluded from the nomination for the same parameters. Despite the fact that these sites are important centres of power – which are also relevant in the history of the Longobard presence in Italy – the architectures built by the Longobards are known only through written sources or limited material evidences.

Paul the Deacon constantly recalls the city of **Monza** and Pavia as Theodolinda's resort. It was Theodolinda who commissioned a palace in the Roman style, which unfortunately did not survive up to the present time. It was abundantly frescoed with a series of images representing history and traditions of the Longobard people. A similar situation concerns S. Giovanni Church: its cruciform plan and magnificent furniture

are known only because of written sources.

Archaeological emergency excavations, conducted in the Cathedral during the second half of the last century, revealed the presence of sumptuous burials: one of these was so precious to be assigned to the Queen Theodolinda. Most of the liturgical ornaments, donated by Agilulf to the basilica (hanging crowns) have gone missing: they are known today through written sources and graphical reliefs only.

The royal city of **Milan** was a manufacturing and artisanal centre. It is mostly mentioned for the re-employment of Roman imperial public buildings, such as: the palace – the diploma issuing place of the King – and the Roman circus where the throne co-optation ceremony of Adoloald, son of Agilulf and Theodolinda, took place (604).

Paul the Deacon repeatedly recalls **Pavia**, from 571 AD capital of the Longobard Kingdom, as one of the most important confluence places between the Longobard Arian tradition and Roman Christianity, which was sponsored by missionaries directly sent by the Pope. It was not a coincidence if the Church of S. Eusebio became the seat of an Arian bishop then converted to orthodox Christianity. The Deacon's chronicle is full of information about the building activities of the Longobard Kings. This activity consisted in the erection of a large number of Churches – which were often employed as Royal family mausoleums –, Monasteries and fortifications. Among them, there is the royal palace commissioned by Cunipert, which was probably next to the one erected by the Goth King Theodoric and subsequently used by Alboin.

Written sources record it as a culturally brilliant city, rich in buildings, and crucial from the traders' point of view because of

the exploitation of two important rivers: Ticino and Po. The Comacchio treaty, drawn in 715 AD between Liuprand and the city merchants, is the best evidence of the role of the capital of *Langobardia Major*.

The existence of several Longobard buildings is unfortunately known only through the written sources records. We hope for urban archaeological researches and rescue interventions of the survived structures through projects of valorization, which could “re-construct” the urban frame and assign the City Museums evidences to their own specific contexts.

The monuments of **Capua** have been excluded for the low chronology, being the city founded in 856 during the Principality of Benevento.

With reference to Salerno, the city was founded by Arechis II and flourished after 774 A.D. under his successors. The Church of **S. Pietro a Corte** in Salerno has not been excluded only for the chronological criteria, but also for the difficulty to clearly identify its original phase within the present architectural pattern.

3.d.1. Series integrity and authenticity

The nomination of the serial site for the inscription on the World Heritage List follows integrity and authenticity criteria according to the *Nara Document* (1995). With regard to those properties of the series which have been used in the subsequent ages (the *Gastaldaga* area with the so called Tempietto Longobard and the Episcopal complex with the Patriarchal Palace remains in Cividale del Friuli; S. Salvatore-S. Giulia Monastery in Brescia; S. Salvatore Basilica in Spoleto; the Clitunno

Tempietto at Campello; S. Sofia Church in Benevento; S. Michele Sanctuary in Monte S. Angelo), the urban transformations and building works which took place after the Longobard period are still evident on the monuments. However, the history course did not prejudice the perception and readability of their most ancient periods; on the contrary, any epoch and culture which followed the Early Middle Ages did interact with pre-existing artistic complexes. In fact, it often happened that later interventions themselves guaranteed and assured the survival of many ancient remains which today belong to extraordinary historic-artistic settings.

Most of the buildings of Castelseprio-Torba castrense complex are instead excluded from the aforesaid phenomenon: they have been abandoned during the course of centuries. The non-urbanization of the monumental area, which spreads out a hillside terrace in front of Olona river, facilitated a close relationship between its ancient structures and the surrounding natural environment made of wooded areas with long-stemmed robinia, oak trees, chestnut trees, hornbeams as well as a dense underwood.

It should be noted that all the conservation and maintenance interventions on the properties nominated for the inscription on the WHL are preceded by deep and detailed researches both on their historical context and materials. These operations follow the authenticity criterion, in search of the highest maintenance level of the properties original characteristics, typologies, systems, building and decorative techniques, in accordance with the most sophisticated methodologies and procedures internationally approved.

Not an intervention, even those on monuments included in the proposed *buffer zones*, could be conducted without authorization and direct control of the local department of the Ministry for

Cultural Heritage and Activities (Superintendency of Cultural Heritage). These represent the competent body for the cultural heritage preservation, according to national rules.

The implementation of the national heritage preserving rules as well as the constant monitoring and the rigorous plans of preservation, conducted respectively by the national and local competent bodies and by the regional authorities (such as Municipality, Province and Region) permit to preserve the heritage during the course of time, ensuring the integrity and authenticity maintenance of any property.

In conclusion, the proposed series follows integrity and authenticity criteria for what concerns decorated complexes and buildings in both their specificity and totality. Indeed the series does represent the universality of the monumental expressions of the historico-cultural group of the Longobards.

3.d.1.1 Single properties integrity

Cividale del Friuli

The Longobard Little Temple accomplishes all those criteria which permit to recognize a high integrity level. From the point of view of the historic-structural integrity, the Longobard period is clearly readable in the transformations occurred during the course of time; it is well preserved both in its structure and decoration. The subsequent phases passed without compromising the monument totality: it was erected in the late Longobard period, which thing is still visible in its vertical structures up to the vault base. This one was reconstructed after the 1222 earthquake. The following components are ascribed to the original complex: architectonic elements (such as

pillars, capitals and corbels carrying the presbyterial vault), the mosaic flooring of the hall, with *opus sectile* geometrical patterns, and the partition marble wall between the hall and the presbytery. Stucco and fresco decorations as well accurately reflect the figurative pattern realized during the VIII century, which is possible since the subsequent transformations did not affect their readability and conservation. Indeed, late Middle Ages and Renaissance frescoes realized on the works of the VIII have just partially compromised the readability of the last ones. By the way, they have been refurbished by restoration works conducted during the 1960s. The preserved portion of stuccoes allows us to understand richness and artistic quality of the aesthetics proper of the original complex. In respect of the visual-aesthetic integrity, considered under the point of view of its context, it could be noted how the Little Temple, erected in the *gastaldaga*, was included in S. Maria in Valle Monastery construction. The transformation phases of the Monastery always followed the Little Temple architecture and spatiality, giving to the architectonic and environmental complex the high historic and artistic level which has well survived during times. Even the urban frame of both the *gastaldaga* and Episcopal complex changed during times, yet without compromising the genuine medieval structure of the city. On the contrary, these contexts, even if modified during the centuries, deeply conditioned Cividale urban development, showing a time constancy which is highlighted by their significant readability in the present urban setting.

Consequently, from the environmental conditions point of view, no integrity compromising factors are present, as provided by sec. 6 of "*Carta di Venezia*".

With reference to the Episcopal complex, the "*ara di Ratchis*" (Ratchis' Altar), it is intact from the historic-structural and aesthetic point of view. The four marble slabs framing the altar are entirely preserved. The Callistus Hole, restored in 1946, remained essentially intact and shows seven of the eight original small arches with allegoric figures and decorations. All pillars and capitals are the original ones; the parapet only was modified during the last restoration work, with the inclusion of further Dark Ages sculptural slabs which compromises neither its aesthetic integrity nor its readability. As for the Ratchis Altar, the structural integrity is guaranteed by the well preserved status of the property.

The preserved structural portions of Callistus Patriarchal Palace present a non-constant visible height of about 1 meter. The remains are stored in the lower-ground of the *Palazzo dei Provveditori Veneti* (house of the Archaeological Museum). They form a partially readable level which permits to recognize the original phase of the palace where Callistus set during the Longobard period. This phase is represented by wall portions which extension and complexity is not comparable to any other partially available Longobard architecture. Cobble and scappled stone masonry were restored during the '70s. After that only few consolidation works have been conducted on them.

Brescia

S. Salvatore Church, included in the monastic complex of S. Salvatore – S. Giulia, belongs to the Desiderian period; its structural integrity level suggests to consider this monument as one of the most important and well preserved structural evidences of the Dark Ages religious architectures, together with the Longobard Little Temple. The Church has

a three-nave pattern with pillars built by re-employed materials of Classical Antiquity and Byzantine period. Such a pattern is clearly visible despite subsequent transformations, such as the chapels and the steeple erections (respectively in the XIV-XVI and in the XIV centuries), the construction of a new façade against the old one, the complex enlargement through the erection of the great northern cloister-garth in the XV century, and S. Giulia Church in the XVI century. The fresco and stucco decorations, today preserved on the northern and southern walls of the nave, clearly prove the spatial and architectural continuity of the Longobard period despite the subsequent transformations. They were realized respecting the plan of S. Salvatore Church and the present urban context. With particular reference to this last point, it should be reported that part of the urban context is occupied also by the huge archaeological area of the Roman *domus*, with a high level of visual-aesthetic integrity and conservation.

The adjacent monumental area, with its majestic buildings, allows us to recognize immediately the presence of the ancient city centre inside the contemporary one, which follows a good part of the old levels and spaces. This is an Italian rare example of highly preserved Roman monuments inside urban centres. In the Italian scenario, indeed, the most ancient evidences did not survive because of the built-up area continuity. The original remains are today visible, except for the portion of *Capitolium* walls; this building, restored between 1823 and 1830, was completed also to host the National Museum, the first city museum. In 1935 the pronaos was also restored with part of the discovered original blocks reporting the empire epitaph. The internal furnishings are currently stored in S. Giulia City Museum, waiting for a

replacement in the temple once the ongoing archaeological researches and upgrading works will be finished.

The Dark Ages evidences which were discovered on abandoned levels of the classical monuments seem to be extremely important from the documentary point of view. They have been stored, for the most part, *in situ*. Just remains in bad conditions have been removed from the original place, upon proper and detailed documentation. They are now stored either in S. Giulia Museum or in the premises of the Superintendency of Cultural Heritage of Lombardia Region.

Castelseprio – Torba

The historic, archaeological and architectonic aspects of this complex are extremely interesting because here the conservation and readability levels of the Longobard period are differently visible, even if present in the monumental complexes of many sites.

At the Longobards arrival, the *castrum* surrounded by walls was already furnished with its monumental structures. Furthermore it displayed an urban style pattern which core was formed by the most important worship buildings: S. Giovanni Basilica with the adjacent Baptistery and the Torba Tower.

The structural integrity level of S. Maria *foris portas* Church is so high that it is possible to recognize its original phase both in the walls, except for the two side apses restored during the '40s, and in the *opus sectile* marble flooring. The original phase is also evident in the apse frescoes, which conservation grade allows us to clearly enjoy the pictorial cycle. A similar readability can be noticed in the Torba Tower frescoes discovered in its two levels. It should be mentioned that the tower wall structure is ascribed to the V-VI century.

With particular reference to the walls of S.

Giovanni complex, restored during the VII century, their structural integrity level allows us to clearly identify the original architectonic structure of the complex itself, as well as the baptistery.

The Longobard phase of S. Maria di Torba Church, ascribed to the Dark Ages and transformed during the XI century, concerns the crypt with the VIII century frescoes which have been discovered during the archaeological excavations.

Spoletto

The Basilica of San Salvatore, despite its inner paintings and stucco decorations went destroyed, shows a structural integrity and readability high level of the Longobard phase in both the walls and the *spolia* complex, which extensions and high conservation grade univocally distinguish the site.

The complex structural and aesthetic integrity has not been prejudiced by the works accomplished after the Longobard period, such as the closure of the nave passages, the erection of the dome during the XVIII century, and the restoration and reinforcement works. For instance, due to liturgical reasons in this period (1700 AD) the areas next to the apsis were opened as well.

The restoration conducted between the end of '800 and the beginning of '900 was aimed at removing "superfetations" from the building, according to the custom of the time.

This intervention uncovered the walls faces, which appear well preserved despite the large number of consolidation works – because of the seismicity of the area – and their re-exploitations during times. The walls, which had closed the nave passages along the centuries, are partially intact.

Campello Sul Clitunno

The Clitunno Tempietto is a monument

which Longobard period architecture is very well preserved, with the exclusion of the partially documented restoration of the left gate portico and the tabernacle - reliquary pillars modified during the XVIII century.

The isolation of the Clitunno Tempietto from the inhabited area, together with the recognition of the extraordinary building interest since the Renaissance epoch, preserved the monument from violations and radical transformations.

Benevento

The architectonic complex of S. Sofia Church allows us even today to partially identify its intricate historical stratifications starting from the original Longobard level.

Even if the entire complex has been repeatedly restored both to adapt it to the contemporary style and to repair the tremor-caused damages, the various transformations, included those conducted during the last century, had not produced significant modifications of the original complex. The Longobard phase is readable in the spatial pattern, which by the way is characterized by different levels of preservation for what concerns materials and constituent elements.

The structural integrity of the well preserved pillars, capitals, basements, pilasters and pulvinos – which support the vaults and the central dome – as well as of the Church side-wall portions, presents a high level of permanence of Longobard materials, how the restorations of the 1950s highlighted.

These renovation works revealed a large number of architectonic evidences and precious decorations, ascribed to the Longobard period, hidden and included in the subsequent baroque structures. Such a discovery allowed to reconstruct the genuine architectonic compound of the buildings and to clearly identify its

spatiality. The apse frescoes, belonging to the Dark Ages original complex, are well preserved.

Façade and steeple partially follow the building restoration conducted after the 1688 earthquake. Inside the embedded surface of the façade there is a XIII century precious portal with a high-relief carved lunette. The cloister-garth is instead ascribed to the Romanesque phase of the complex; during the last century it was restored with the removal of the later transformations, revealing significant traces of the 8th century *claustrum* in the “crutch capitals” which had been re-employed in the Romanesque reconstruction.

Monte S. Angelo

Monte S. Angelo Cave Sanctuary represents a functional integrity case which should be considered from both tangible and intangible points of view. In fact, under the structural perspective, the modifications conducted on the cave during the course of time had been considerable, yet keeping the genuine compound of the cave which remained the religious complex *fulcrum*. Turning to immaterial issues, the site represents the continuity of a worship tradition began inside the Gargano cave and spread out in Italy and Europe without interruptions.

We can find the main reason for the Angel worship inception in this secular place, through the very words of S. Michael the Archangel. They are mentioned in the *Liber de apparitione sancti Michaelis in monte Gargano (Apparitio)*, which helps us to understand the history and worship of the Angel.

The Angel himself indicated the Gargano cave as his earthly place, proclaiming to be its patron and guardian.

This fact has conditioned those who had to run structural works in the Sanctuary: they felt such an absolute respect for the

cave that the religious complex *fulcrum* remained intact.

This is confirmed by the historical reading of the Sanctuary architecture, which shows an extraordinary stratification composed by modifications and structural works; the aim of these interventions, conducted all over the centuries respecting the cave, was substantially oriented to both create a cave protection system and improve the way to enter it.

The Sanctuary-Cave integrity and authenticity has never been threatened either by the erection of new spaces for the Convent structures, or by the pilgrims reception implementation, conducted during the '40s and '50s of the last century and during the 2000 Jubilee.

We could state that the cave natural peculiarities have surely contributed to preserve the worship *facies originaria* which has been always performed in the sacred space of vast deep cave. The cave is still a pilgrimage destination as it was during the Early Middle Ages.

3.d.1.2 Single properties authenticity

Cividale del Friuli

After a primitive historiographical season in favour of dating artefacts and decorations to the 7th century or to the early medieval period (10th-11st century), the tradition of the historical studies on the Longobard Tempio – which origin as palatine chapel is already ascertained (Torp) – is now oriented towards two interpretative frames. The first of them proposes the late Longobard period, that is to say middle-third quarter of the VIII century (Dyggve, Torp, L'Orange, Mor, Tavano, Lomartire, Brogiolo, Jäggi, Pace, Lusuardi Siena). The second one suggests the early Carolingian period, i.e. end of the 8th-beginning of the 9th century

(Lorenzoni, Peroni, Bertelli).

The attribution to the Carolingian epoch, which is more concerned with the decorative aspect rather than with the architectural one, is not grounded on direct and supporting evidences. Furthermore, the latest dating of S. Salvatore in Brescia leads back to the Desiderian period (Brogiolo), causing the fall of what has always been the main term of comparison for the Little Temple dating to the Carolingian time. The elements which allow to assign the Little Temple to the last Longobard period consist in a range of evaluations on style, stratigraphical sequences and architectural conceptions. The capitals of the colonnade are imitations of those realized by Callistus for the cathedral font in the first half of the VIII century. Likewise, the capitals of the bower resemble those of the 8th century (S. Salvatore in Brescia, S. Maria d'Aurora in Milan). The frescoes are dated back to the first half of the 8th century on the ground of stylistic elements which testify an artistic code of absolute quality, comparable, for instance, to the frescoes in S. Maria Antiqua in Rome. Stratigraphical observations have revealed that the frescoes were realized after the stucco works, being them led back to the same phase as well, beyond any stylistic evaluation. Furthermore, the building construction seems to be strictly consistent with the conceiving and accomplishment of the ornamental setting, so that architecture and decoration are linked together and support each other in the space development, as many authors state (Torp, Tavano, Lomartire, Jäggi).

As regard to the bishop's complex, several sources support the attribution of the wall remains coming from the basement of the *Palazzo dei Provveditori Veneti* to Callistus' Patriarchal Palace. We are acquainted by Paul the Deacon with

the existence of the bishop's seat erected by Callistus in Cividale. Any medieval source places the bishop's palace in proximity of the Cathedral where today the *Palazzo dei Provveditori* lies.

The stratigraphical analysis of the wall remains has identified a phase which can be led to the early medieval period and characterized by the probable re-employment of more ancient structures with mosaic flooring.

For what concerns the furnishings of the Baptistery of the Bishop's Complex in Cividale, the four carved marble slabs of the Ratchis' Altar, which compose the altar sides, are entirely preserved. The integrity of the inscription running along the upper border of the four slabs, where the name of both Ratchis and his father Duke Pemmon are mentioned, being him the dedicatee of the work, proves that we are dealing with a genuine Longobard work of art. There are still traces of the original polychromy covering the altar. The *tegurium* with small arches on columns, which was built on the christening font of the 8th century cathedral, can be certainly assigned to Patriarch Callistus, as it is recorded by the dedicatory inscription on the top, where Callistus name itself appears. It was recomposed in 1946 and is almost entirely preserved, with seven of the eight original small arches carved with allegorical figures and decorative patterns. All columns and capitals are original; the parapet only has been enriched with the insertion of other early medieval sculptural slabs during the past re-composition intervention.

Brescia

After the restoration works run in the '50-'60s by Gaetano Panazza (1958), which revealed two different structural phases, the debate on the building stages of S. Salvatore complex in Brescia is based on

two main interpretative frames. The first of them is inclined to lead the first phase back to the Desideran period. The second one, to which the fresco and stucco decorated surviving structures currently belong, dates back to the Carolingian time (Panazza, Peroni, Bognetti, with evidences coming from the transalpine and German historiographical criticism as well). The last hypothesis, lacking in references to other Carolingian monuments and specific data, was mainly grounded on the interpretation of the decorative setting of the hall. It apparently leads back to Lothar, or better to Ludovic the Pious, who might have renovated the monastery in the beginning of the 9th century. Such a hypothesis is now doubly questioned on epigraphic grounds – the inscription characters might be not referable to the Carolingian epoch, yet to the Longobard one - and for the presence of reconstructions and integrations which make its authenticity doubtful.

On the contrary, the first hypothesis, which benefits from the most trustable and recent confirmations, is based on a wider interpretative frame, where the data from the historical reconstruction of the complex, the new archaeological data and the review of architectural and decorative stages find integration (Brogiolo). In this way, two phases have been outlined. The first one, as already argued in the past (Bona Ruggii, Zaccaria, Giosefi, Torp, Tavano), is characterized by a church with cruciform plan or "T" plan ascribable to the circle of the royal court of Brescia. The second one, having a basilica-type plan with three naves and apse extremities, was built by Desiderius from the '60s of the 8th century.

The crypt was added in the course of works. The internal fresco and stucco decoration leads back to this phase as well on the ground of historical evaluations

and observations of building techniques and constituent elements.

Indeed, the hypothesis that the Longobard king left his own dynastic mausoleum devoid of ornaments does not seem plausible, especially in the light of the high quality of liturgical ornaments. Furthermore, the iconographic patterns of the frescoes resemble narrative scenes referable to Saints and Martyrs' relics deposited by the Longobard kings in the crypt.

As shown by recent researches, the stuccoes have been realized soon after the frescoes, according to the same decorative plan, and are characterized by the same construction system which could not have been accomplished if not in phase with the Desiderian church building yard. This confirms the relation of contemporaneity between decorations and architecture.

Castelseprio-Torba

For what concerns S. Maria *foris portas* complex, there are several chronological hypotheses either for the church and the frescoes' dating. Some scholars suggested that the frescoes could be contemporaneous to the church construction; others hold the church more ancient than the frescoes. The analysis of the building elements of the structure and the observation of the stratigraphical sequence of the facings of the apse walls seem to confirm this hypothesis.

As regard to the church, its plan and some of its architectural traits (the shape of both the window arches and of the arches which mark the apse areas) find parallels in the architecture of the 6th-7th century. On the contrary, some technical analyses applied on bricks used for the setting both of the flooring and of the roof coverage, such as the thermoluminescence, have revealed a chronology dating back to the 8th century (787 +/- 65/70 for the flooring)

and the 9th century (828 +/- 90 on average for the roof tiles). However, such analyses do not seem to provide with any relevant element to outline the building origin. It is possible though to lead the roof tiles to a coverage reconstruction possibly occurred during the building life, so that the 9th century dating would represent an *ante quem* term of reference. Moreover, we are not certain of the relation of contemporaneity between the flooring and the perimetrical structures of the church, since the first could be related to a later phase of monumentalization.

Among the several chronological hypotheses proposed by the scholars (the highest being referable to the 6th, 7th and 8th; the middle one to the first half of the 8th century; the lowest to the 8th /9th -10th century), the most convincing one seems to be offered by the comparison with S. Maria Antiqua in Rome, between the 7th and the 8th century.

The later chronological frame is based also on the apse timber beam dating, deriving from the C 14 analysis (865, +/- 90). It must be noted however that the beam insertion belongs to the later super-elevation phase of the apse and that, according to stratigraphical researches on the frescoes, it is subsequent to the first lay of the walls facings, having no contacts with the second painted lay. In the light of these considerations, there are not certain evidences in favour of the assignment of the church building and decoration to the Carolingian period. On the contrary, the distinction of three phases seems more credible: 1) building foundation between the 6th-7th century; 2) subsequent embellishment in the 8th century, through the realization of the more complex paintings cycle; 3) later modifications, mainly of the highest levels.

If we turn to the frescoes, such a interpretative hypothesis finds further

confirmation in the represented subjects, connected to stories from the Apocryphal Gospels, which enjoyed great favour between the VI and the 8th century especially in Orient. We can mention in particular: "*The trial of the bitter waters*", referable to the cycle known as "*Mary's Childhood*", which disappears from the depictions following the VIII century (F.P. Massara, *Themes of Paleochristian iconography [Temi di iconografia paleocristiana]*, 2000; ID., *Apocrypha. Memoirs and legends beyond the Gospels [Apocrifi. Memorie e leggende oltre i Vangel]*, 2009). This subject finds parallels, within the VI-VIII century time period, in the ivory panel of the bishop throne's back of Massimiano in Ravenna (520-550 ca.); in the cover of the Gospel Book (or Diptych of Paris) in S. Lupicino; in the cover of the Gospel Book from Etschmiadzin; in the Diptych of *Uwaroff* collection; in the plaque of the rearward volet of the Murano Diptych (6th-8th century).

The pictorial cycles which represent this episode belong to the cultural-figurative sphere of the Byzantine tradition. Indeed, a comparison is possible with the frescoes of Deir Abu Hennis in Antinoe of Egypt (7th century), as well as with the prototype recently identified in the cubiculum A of the catacomb of Via Dino Compagni in Rome.

For what concerns the Torba Tower, the masonry is the result of several construction phases. The analysis on the building techniques allows to put in connection the first two levels with the remains of the defensive architectural compound of the 5th-6th century; meanwhile, the upper part is referable to various periods following the Longobard one. The phase of Longobard monumentalization dates back to the interventions for the construction of the female

monastery.

The change of the first floor into nobles and abbesses cemetery and the adaptation of the second floor into a nun chapel are two events referable to that same phase. Most of the scholars place the fresco decorations of these areas within a time period included between the 8th and the 9th century. The presence of epigraphic dedications and long captions in both of the cycles permits to be in favour of the Longobard period, on the grounds of the writing style, being its characteristics anterior to Charlemagne's writing reformation.

In the *castrum* the Longobard presence is clearly testified by the grave epigraph of the Longobard Wideram, by the knight tomb with Longobard grave goods, and by the renovation works of S. Giovanni Church in the 7th century. This intervention employed particular building manners which are visible both in the apse, displaying a half-circular shape provided with wide openings, and in the presbyterial enclosure, where the slab with crosses dated between the 6th and the 7th century was located.

Spoletto

In regard to the original plan of S. Salvatore Monument in Spoleto, various chronological hypotheses have been formulated (some of them out of date) concerning its date, the building structure of the foundation phase and the subsequent modifications. The original complex was divided by two Dorian architraved colonnades formed by eight re-employed columns and two half-columns leaning against the front side walls. They run up to the presbytery with Corinthian columns. The original complex had been modified during the medieval age with the removal of the Dorian trabeation and the erection of an arch system. During the 18th century the

octagonal barrel vault was reconstructed. The most updated historiography (Jäggi; Pardi) brings into question the date proposed by Salmi (1951) as well as the one suggested by Deichmann (1946). Salmi dates the building foundation back to the end of the 4th century, arguing that the present complex is a restored basilica with an early Christian foundation which façade, presbytery and the beginning of naves remained intact. The second hypothesis proposes to ascribe the foundation back to the 8th-9th century, according to studies mainly referring to its structural aspects. The most accredited chronology ascribes the monument back to the end of the 7th century – first half of the 8th considering its construction as part of Liutprand's Renaissance in the Northern Italy (Jäggi).

The archaeological surveys conducted by Perkins in 1946 pointed out two constructing phases: the first is distinguished by a rectangular plan. Its presbytery was subsequently enriched with apse and chapels. The second constructing phase is distinguished by the corner columns of the presbytery, as it is possible to deduce from their foundations leaning against the original one. We could also ascribe to this second phase the central baldachin, formed by four big Ionic columns, with trabeation and *soprassesti*. Originally, this baldachin supported a cross vault rather than the present dome. While capitals and columns were spoils, the *soprassesti* dados were made *ad hoc* for the impost of the cross vault. Similarly, the capitals were modified in accordance with the same height of the triumphal arch supports, through re-employed materials to form socles and plinths which were set under the Attic basements.

According to these archaeological evidences, put into relation with a global analysis of the previous studies as well as of the 1919-21 restorations results, Salmi

and Torp claim the presence of a most ancient phase, followed during the VIII century by the Longobard one. The aforesaid second phase has to be ascribed to the Longobard period where the *spolia* methodic employment is predominant. The same hypothesis could be formulated for the façade, which is characterized by wide sculptured parts (Italic marble and calcareous stone). During the 1997 restoration works, it was noted that a large number of the carved elements had been obtained from blocks coming from classical buildings and subsequently re-employed.

Accepting the most update and credited chronological hypothesis that dates the monument erection back to the end of 7th century - first half of 8th and considering the consistency of the *spolia* system employment in the apse, we could assume that the two constructing phases are part of one single building yard made to Longobard order and extended over times.

Campello Sul Clitunno

Since the 18th century studies, the chronological collocation of Clitunno Little Temple varies from the 4th-5th century (Sacconi, Hoppenstedt, Haseloff, Lavagnino) to the 8th-9th century (Deichmann, Torp) up to the 12th century (Rutili, Venturi).

According to the most updated studies (Hemerick e Jäggi), Clitunno Little Temple was erected during the Longobard epoch within a period of time which goes from the beginning of the 7th century (Jäggi) to the mature 8th century (Hemerick). The 7th century reference seems to be more plausible, considering that the cella frescoes has been ascribed to this same century, as recently reaffirmed by Valentino Pace. Both the previous chronological hypotheses by Mario Salmi (i.e. early Christian period) and Deichmann (who dated the building

erection back to the dawning of the Carolingian epoch) have been dropped.

Benevento

On the ground of written sources, the critical literature about S. Sofia Church in Benevento agrees upon the assignment of the Church erection to the period of Arechis II, soon after his election in 758 (Delogu, M.Rotili), rather than upon the hypothesis which relates its construction to the Duke Gisulf II in 742-751, and its subsequent completion by Arechis himself.

As regards the frescoes chronological collocation, few scholars sustained in the past that they should have been dated back to the 9th century (Belting, Bertelli); on the contrary, today a large number of scholars date them back to the first decade of Arechis Kingdom, putting them in phase with the church erection (M.Rotili, Bologna, M.Rotili). That was indeed a very prosperous period for the Benevento duchy, which was able to give rise to a highly significant artistic phenomenon that represents the starting point of the "Benevento painting".

The church changed during centuries according to the liturgical ritual modifications and to the earthquake - following restoration works. The excavations conducted in 1947, however, allowed us to study the structures of the Longobard period. Moreover, the restoration works run by Antonino Rusconi brought to light the original shape of the Dark Ages building, permitting us to clarify the monument size. Many scholars (M.Rotili, Bologna, M.Rotili, Castagnola) have expressed positive opinions on the accuracy of such a restoration, while others (Pane and Delogu) have taken a critical position.

The recent extraordinary maintenance works, conducted in 2008-2009, allowed us to verify and to furtherly increase on

the value of the Longobard evidences, subjected to a new and detailed documentation and analysis.

Monte S. Angelo

The most ancient phase of Monte S. Angelo Sanctuary Cave frequentation needs to be dated back to the 6th century. The presence of the Longobards and their interest for the sanctuary is unanimously accepted because of the epigraphic evidences on the crypt structures referring to Grimoaldus I, Romualdus I and Romualdus II. The Longobard dukes of the Pavia and Benevento dynasties commissioned important restoration works and the system enlargement of the crypts between the half of the 7th and the 8th century. These works are testified by the inscriptions discovered mostly in proximity of the monument staircase, such as the one which makes reference to the activity sponsored by Romualdus I.

Beyond the inscriptions still *in loco*, the written sources as well testify the interest of Longobard kings, queens and princesses (Grimoaldus I, Romualdus I, Romualdus II, Pertaritus, Cunipert, Ansa, Atalperga) for the Sanctuary: they actually sponsored the Angel worship and its special relationship with the Gargano holy place. In particular, written sources consist of: a) the most important hagiographical text, the *Liber de Apparitione Sancti Michaelis in Monte Gargano* (anonymous, dating back to the 8th century), that describes the worship history and the Sanctuary structure as it appeared during the excavations of the '50s: two caves respectively named *ecclesia apodonia* and *basilica grandis* and by the *longa porticus*; b) Longobard historiography, starting from Paul the Deacon's *Historia Langobardorum* (720-799). He probably wrote the Queen Ansa epitaph, testifying in this way her sponsorship of the works for the

reception and hospitality of Centre and Northern Europe incoming people. Among the approximate 200 inscriptions carved or scratched between the 6th and the 9th century on the Sanctuary structure, the runic ones confirm the pilgrims' provenance as described by the epitaph. They also prove that the Gargano Sanctuary, together with Rome and Jerusalem, was one of the privileged destinations of the early medieval and medieval pilgrimage.

After the excavations conducted in 1949 and 1950, a new season of studies definitely clarified the relationship between the Sanctuary and the Longobards of Benevento. Previous analyses (F. Hirsch, G. P. Boggetti, A. Petrucci) have been partially substituted by new research activities conducted in various fields: the linguistic-epigraphic

sector (C. Carletti, C. A. Mastrelli, R. Derolez, U. Schwab, M. G. Arcamone, A. E. Felle, M. D'Arienzo); the historic - hagiographic sector (G. Otranto, A. Campione, C. D. Fonseca, P. Bouet, N. Everett, J. C. Arnold, I. Aulisa); the archaeological - monumental sector (N. Tomaiuoli, G. Bertelli, D. Nuzzo, P. De Santis, M. Trotta); the historic-artistic sector (P. Belli D'Elia), and the socio-anthropological sector (G. B. Bronzini, A. M. Tripputi). Finally, the Sanctuary and its induced traditions have covered a central place in the studies of several scholars from different nationalities. Indeed, they focused on some core aspects in the light of a European perspective, such as pilgrimage and typology of Michaelic settlements (A. Heinz, G. Jones, V. Juhel, C. Vincent, J.M. Martin, H. Pátková, J.M. Picard, M. Zimmermann).

4.a

Present state of conservation

The state of conservation of the properties included in the series – which stands as a nomination in the World Heritage List – is good.

The serial property comprises buildings and monumental complexes subject to national law on protection (see Annex 7) and therefore subject to constant control and monitoring by the competent bodies. Consequently, all properties are also subject to periodical maintenance activities. Conservation and maintenance activities are always carried out directly or under the supervision of the territorial Offices of the Ministry for cultural heritage and activities (Superintendences) responsible for the areas; this guarantees a methodological and homogenous approach to the conservation activities applied to properties. This approach meets the criteria and the principles of the Italian restoration school.

Because the properties of the series went through different conservation phases, are located in different geographical areas –very distant one from the other– and were kept under different exposition conditions –both as far as climatic factors and specific collocation are concerned (great urban areas, small historical centres, suburban areas)– and were therefore subject to various environmental and human related factors, a separate description of the single aspects (present state of conservation and factors affecting the property) will be provided for each one.

4.a1

Present state of conservation CIVIDALE DEL FRIULI

THE GASTALDAGA AREA

The so-called Longobard Tempietto

The overall conservation level of the Longobard Tempietto is good.

The macroscopic observation of the conditions of the various types of surfaces (plaster, frescoes and stuccoes) and walls has revealed that the building does not suffer from any particular form of decay.

The parts made of stucco, which is composed of gesso, and some parts of the fresco decoration show here and there some small-scale fractures, which appeared after the 1976 earthquake. This is supported by the photographic documentation collected at that time.

There are also small areas of efflorescence due to humidity present in the (east) wall overlooking the river Natisone and along the north wall.

This condition was already present in the 1920s and was the focus of maintenance works carried out in 2001 and 2009 in order to improve the resistance to the penetration of water of the east wall and to protect it.

From the point of view of the building's structure, the masonry work is generally well preserved, there being no signs of stability-related decay.

At the moment the wall structure includes supports, such as iron rods, as well as cement supports put in place during the restoration work of 1925-26 and after the 1976 earthquake. Even though the most recent anti-seismic research has questioned the use of cement supports, this approach is still considered valid in Italy and their removal is therefore not being considered.

In some areas of the stone slab paving of the presbytery, the mortar courses

between the slabs is in some places either crumbling or missing.

The wooden choir stalls were the focus of a systematic maintenance campaign to eradicate woodworm between 1998 and 1999. Some traces of alteration on earlier restoration attempts have been pinpointed.

Presently an integrated diagnostic plan is being completed, whose aim will be to monitor the conservation level of different materials (stuccoes, frescoes, plaster, marble, stone and wood), as well as the building's environmental conditions, so that an adequate maintenance program can be set up. Works are expected to start at the beginning of 2010 under a special funding of the Friuli Venezia Giulia Region (see Management Plan). The relevant surveys are under way in order to better characterise the state of conservation of these decoration systems. So far, a first set of surveys has already been performed using a mobile scaffolding: a stratigraphic survey of a portion of stuccoes aimed at identifying the restoration works carried out in the 19th century (under the general direction of G.U. Valentini in 1860); a survey of the state of conservation that showed that the phenomenon of micro-cracks is very limited.

Agreements have been entered into with a laboratory specialising in the analysis of ancient materials in order to take a set of samples from stuccoes and frescoes (LAMA, Laboratory for Ancient Materials Analysis, IUAV University of Venice). These analyses will be aimed at improving the knowledge of the composition of materials and forms of deterioration. This stage will be performed according to a project of knowledge shared by all the assets of this lot. With reference to stuccoes, a first analysis campaign based on textural and mineralogical characterisation was performed in 1996 on the

shoot only: all samples were essentially made of gypsum and fine natural sand including limestone, quartz, flint and rare magnetite.

With reference to frescoes, in 2003 a set of samples was collected, which revealed the presence of cotton fibres conglomerated with lime grains.

Lastly, with reference to environmental conditions, in 2009 a maintenance work was performed. It mainly involved the east wall of the Tempietto and stopped the penetration of water from the outside; an instrumental monitoring of environmental thermo-hygrometric is being set up.

Moreover, the ancient wooden doors at the entrance to the Tempietto hall have been restored.

The monastic complex of Santa Maria in Valle

The Monastery of Santa Maria in Valle is a highly articulated complex, including many buildings and spaces of different sizes. Its general state of conservation can be considered good. This is also thanks to continual maintenance work carried out under the Ursuline nuns who inhabited the complex from the mid 19th century up to the end of the 20th century. In 2001, the Monastery was acquired by the Municipality of Cividale.

The church of San Giovanni is affected by humidity-related problems (diffuse moulds) that have caused partial crumbling of the plaster at the base of the walls and in part of the base of the Altars. From the point of view of conservation, the façade frescoes reveal a limited degree of problems (i.e. detachment and erosion).

Concerning the rest of the Monastery, the walls are generally covered with plaster and reveal lesions of limited size and importance. The surface and exterior and interior plaster quality is generally good

from the point of view of conservation, excepting only some areas affected by humidity.

The ceilings are mostly made of wood except for those restored between 1982 and 1985.

Floor paving at different levels present a range of quality (different types of terracotta and flagstones) and conservation level, which however can be considered generally as good. The different door and window frames' condition is highly diverse, comprising elements which differ as to material, type and state of preservation; some amount of decay, such as failure to close, between wooden parts and some shutters due to the lack of wood parts. The following issues are being addressed:

- a program of surveys that should lead to a more in-depth knowledge of the Monastery's history;
- a general maintenance program is being set up to gradually allow the complex to be put back into function (see Management Plan);
- some restoration work will be carried out on frescoes and canvases belonging to the Church of San Giovanni and to the Monastery.

In 2009, the first phase of interventions aimed at improving the conservation and enhancement of the Monastery and the Tempietto was completed (see Management Plan). With reference to conservation, the most fragile plaster surfaces were cleaned, consolidated and protected. Shutters on the façades of the Monastery were cleaned and ancient wood doors at the entrance to the Cloister were restored.

THE EPISCOPAL COMPLEX

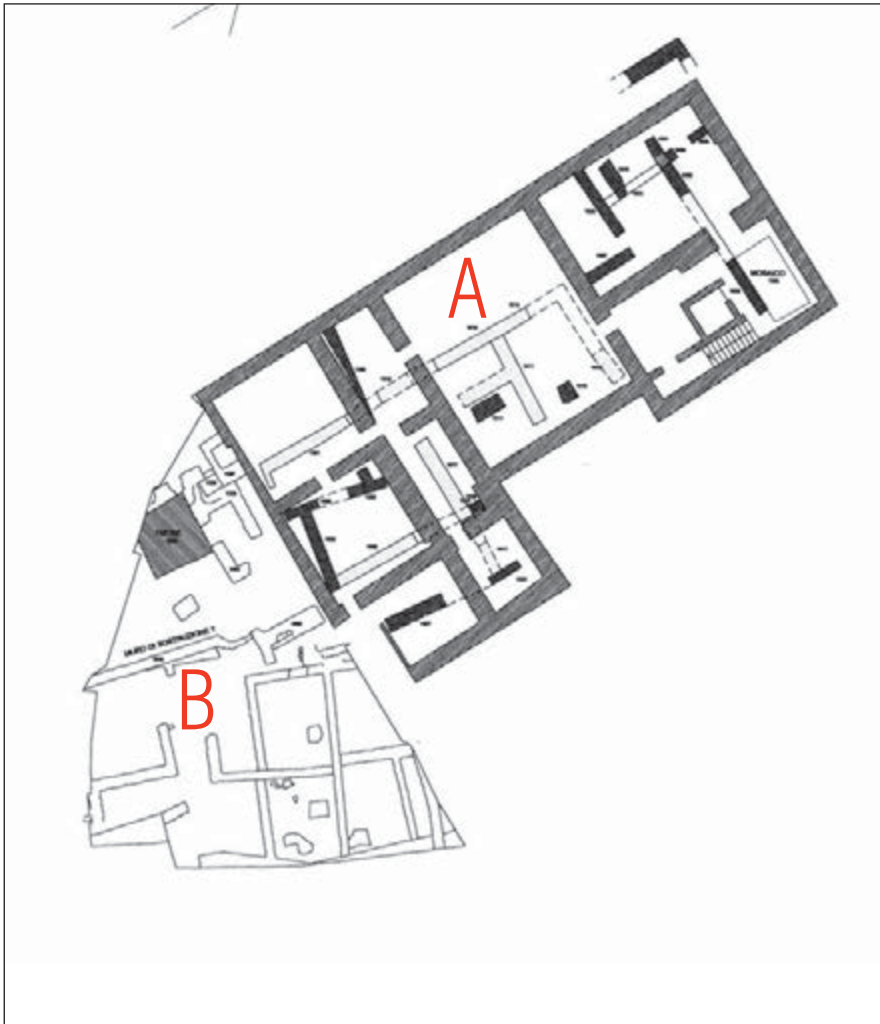

The Cathedral of Santa Maria Assunta and the 'Museo Cristiano'

Today, the conservation level of the Cathedral of Santa Maria Assunta can be considered good, except for a few areas of the side nave vaulting. This is where there are limited signs of decay, due to roof leaks that have occurred in the past. During the 20th century the Cathedral was subject to a series of restoration and maintenance campaigns that helped to ensure its conservation is relatively good. At this time maintenance work is under way, to renew the church's interior surfaces – the plasterwork has become very dark– and also to solve small-scale water leakage problems. The work includes carrying out preliminary excavations to investigate the plaster stratification, a project which is financed by the *Ministero per i Beni e delle Attività Culturali* (Ministry of Cultural Heritage and Activities).

The complex now housing the *Museo Cristiano* (Christian Museum), where the Altar of Ratchis and the Baptismal Font of Callixtus are kept, is the result of a restoration and furnishing project completed in 2008. The work had begun in spring of 2006, with funding from the region of Friuli Venezia Giulia, and included the museum's inner courtyard.

The **Altar of Ratchis**, an artefact made of Aurisina stone, enjoys an overall state of conservation that can be considered good. A macroscopic observation of stone surface condition does not reveal any particular condition of decay; the surfaces do show light traces of film - producing materials, used as detachment agents when executing plaster during the 20th century. On the slabs that form part of the Altar there are traces of polychrome finish belonging to the original phase and to later work phases, and to different stucco layers. These

The Patriarchal Palace structures located in the Archaeological Museum basement

The Palazzo dei Provveditori Veneti, housing the National Archaeological Museum, and the Patriarch's Palace

The Palazzo dei Provveditori Veneti was the subject of consolidation and restoration work starting in the first half of the 1970s up to 1990 – the year in which the palace became home to the National Archaeological Museum. Its state of conservation is good.

The exterior courtyard holds the Jewish and *Post-medieval Lapidarium*, which is not well preserved, on account of the residing pigeon colony: it has recently been cleaned up and equipped with nets to safeguard against these birds.

The building is equipped with all necessary security facilities, and is subject to 24-hour a day surveillance. The closed circuit TV system was set up during the 1990s and is presently under revision.

Patriarch's Palace

The archaeological area is located in the museum basement (area A: stratification refers to the remains of the Patriarch's Palace of the Longobard period and to the later late medieval phases), and on the building's south side (area B: stratification refers to the development of an area of habitation within the city's late antique and medieval context), its walls are generally well preserved as to the stone, pebble and brick structures.

In area A the mortar parts instead show limited problems related to crumbling, which however do not influence the stability of the remains themselves.

One part of the wall structures rests on a cement base support executed after the excavations of the 1970s, which today shows a rough plaster covering.

The mosaic pavement, after being sampled, was subject to some conservation work completed in September 2009 that included cleaning and consolidation of all remaining pieces and replacement of

fragments, presenting a different conservation quality both as to their adhesion to the stony base and as to the alteration of the impasto, also show limited levels of uncohesiveness in the polychrome decoration. They were subject to laboratory analysis in 2004, which resulted in a characterisation of the pigment types used to paint the Altar, of the composites they created and the way they were applied to surfaces.

These analyses were performed within the framework of the restoration work of Ara completed in 2008.

The general state of preservation of the

Tegurium of Callistus is good.

Macroscopic observation of its surface's condition does not reveal the presence of any particular situation of decay; some stucco surfaces are affected by an alteration of the impasto, or limited adhesion problems, for instance in the joints between the slabs of the octagonal base, which had been executed using an undercutting technique.

A diagnostic project focused on in-depth knowledge of the material history of the work should be carried out in order to set up a specific maintenance programme.

missing ones (see Management Plan).

Part B of the archaeological area, which was investigated in the 1987-88 period, was equipped with a flat cover, supported on iron piers and with facilities for visitors' itineraries. The ancient wall remains, which have been restored and consolidated, do not show any traces of decay, and simply need some revision work. At the moment there is a small water leak along the south wall, which has caused limited damage, such as the appearance of a biological patina on the mortar joining, and water imbibing in the section where the leak is located. Some iron joints of the covering do not work properly.

The competent authorities are carrying out a first phase of work on the whole archaeological area to improve visitors' museum fruition. A second phase is under way, which provides for the enhancement of this itinerary through the improvement of the lighting system.

4.a2

Present state of conservation BRESCIA

Both the monastic complex of Santa Giulia and the single monuments enjoy an optimal state of conservation. An organic conservation plan has been implemented for the site in the years 1979-2005, after in-depth studies and stratigraphic archaeological excavations that addressed the subterranean structures, the buildings' elevation as well as the interior and exterior decorated surfaces.

This intervention plan has been implemented according to the most advanced criteria and respecting the highest quality standards, and has led to an increase of knowledge of the **Monastery**, revealing the many phases of the area occupied by the building complex. For example:

- extensive archaeological excavations

have revealed the Roman neighbourhood beneath the Monastery;

- two Roman *domus* from imperial times have been excavated and inserted within the exhibition area;
- the sequence of phases at the church of San Salvatore has been clarified;
- many stucco elements which had become detached and collapsed, were excavated and replaced in their original position;
- restoration work has led to the discovery of re-used ancient stone elements;
- new frescoes that had once formed part of the Monastery's interiors were discovered;
- at Santa Maria in Solario the building was excavated to return to the ancient levels of access and use.

At the moment the only area in the entire complex in need of further work is the façade overlooking Via dei Musei, which includes the façade of **Santa Maria in Solario**, which had been restored at the end of the 1980s. The porous plaster and stonework have been affected by traffic, which is progressively lessening as the street has been partly closed to vehicles. The Municipality's budget for 2010 already provides for the revision of these surfaces.

The state of the **archaeological area** nearby is also good; since 1823 it has been subject to several archaeological survey and conservation campaigns. From 1998 an organic project has been launched to restore and enhance the area, which is still under way, under the direction of the Ministry for cultural heritage and activities and the Municipality of Brescia.

Owing to the state of monuments and the amount of remains, it is one of the richest and most important archaeological site in northern Italy.

Thanks to special works (studies, archae-

ological surveys, conservative maintenance, monitoring of micro-climatic conditions) an in-depth knowledge has been gained on the various Roman building and the events occurs in the area from Late Antiquity to Early Middle Ages. In particular, in the area of the **Late Roman Republic Sanctuary**:

- the completion of archaeological surveys allowed the building plan to be identified in a precise manner; numerous architectural elements relative to the monument have been retrieved;
- the micro-climatic monitoring of the building has been started in cooperation with the Istituto Centrale del Restauro di Roma (Central Institute for Restoration) in order to identify the best conditions for conservation and consider a possible opening to the public;
- the restoration of decorated surfaces (mosaic floors, frescoed walls) carried out between 2007 and 2008 according to the most modern criteria of sustainability and compatibility provided numerous information on the execution technique of those decorations;
- the remains of the Longobard ceramic manufacturing plant were consolidated on site. Presently the whole building is being surveyed. This survey should be completed by the end of 2011.

In the **Capitolium**:

- the conservation maintenance and survey of floor remains dating back to the 1st century, very well preserved in the central and western cells, allowed their polychrome marbles to be characterised and the execution techniques of the floor to be understood. Moreover, they showed ancient conservation works, thus giving an important contribution to the dating of the abandonment of the building;
- the global survey of the numerous architectural and decoration materials found during the archaeological survey

campaigns that have involved the building since the 19th century allowed missing fragments and new pieces belonging to the building to be discovered. Conservative maintenance of the elevation is under way.

In the **Roman theatre**:

- archaeological surveys have given an important contribution to the reconstruction of the stratigraphic sequence of the area, especially with reference to Late Antique and Early Medieval levels.

The conservation state of all structures and decorative furnishings are constantly monitored by technical and scientific staff. Any intervention is carried out at an early and timely stage, and is carried out by the in-house staff of the Settore Musei (Museums Department) of the Municipality, in cooperation with the competent Soprintendenze (Local Office of Ministry), and conducted by purposely appointed specialists.

4.a3

Present state of conservation CASTELSEPRIO-TORBA

The state of conservation of the monuments composing the archaeological area of Castelseprio-Torba is good, thanks to the constantly planned action of monitoring and conservation carried out by owners and managers.

All interventions are carried out by qualified professionals (restorers, architects, engineers, etc.) and by adopting advanced intervention methods, which meet the requirements established by the Istituto Centrale del Restauro di Roma (Central Institute for Restoration) of the Ministry for cultural heritage and activities).

In particular, on the **Church of Santa Maria foris portas**, in addition to periodic

maintenance, at the end of the 90s, a conservation intervention was carried out on walls. Roofs and rainwater drainage system were rebuilt and a chemical barrier against rising moisture in masonry was created. In any case, interventions did not concern the walls of the central apse, where the famous frescos are kept, because the intervention carried out in the 1950s for the elimination of rising moisture still works efficiently. At the moment, no conservation problems are present on structures or frescos.

In the **Basilica of San Giovanni complex** (basilica, baptistry, cistern, bell Tower, cemetery), subject to routine maintenance, in 2005 a revision intervention was started on masonry. It is scheduled to be completed by the end 2008 (funds are already allocated).

As to the building of the 14th century, called Farmhouse-Monastery of San Giovanni, in 2004-2005 an overall renovation intervention was started to transform the building into the *Antiquarium* of the Park opened in May 2009.

The whole **wall system**, hit by landslides in 1989 and 1993, was fixed and further enhanced, through the re-outlining of the sides, the adequate drainage of rainwater, the restoration of some parts of the walks which had slid down, the recovery of the foundation of some of the complex's Towers and of some sections of the walls slid down on sides in the past. At the moment no problems on exposed areas of the walls are revealed. Archaeological surveys carried out in the spring of 2009 allowed building characters of fortified walls from Torba to the overlooking *castrum* to be identified. The intervention showed building techniques relevant for the chronological analysis of these defensive structures. Moreover, it is an

important step towards the construction of the itinerary that will connect the overlooking area to the defensive extension at the bottom of the valley, where Torba is located. The area of walls was cleaned, reclaimed and freed from bushes and planted that prevented from accessing to it. Consolidation works on walls are planned.

As to the area of Torba, over the last few years, the FAI (Environmental National Trust) has promoted an overall intervention project, aimed at completing the recovery of the complex and improving its cultural offer. At the moment, conservation interventions on the structure and frescoes of the 18th century preserved in the **Torba Tower** are under way. Structures and frescos had already been subject to a first intervention carried out in the 1980s. Current interventions are aimed at eliminating deterioration signs on paintings (earth moving, lifting and flaking off of the painting layer and biological damage) due to moisture. Interventions also include operations aimed at increasing the level of enhancement of the Tower: new lighting system, protection system for frescos. Renovation of information boards and signs should be completed by the end of 2010.

Another intervention in progress concerns the fragments of plaster on the paintings in the **Church of Santa Maria in Torba**; this intervention will not only improve the state of conservation and the presentation of paintings in situ, but also reposition those which had been taken off around twenty years ago in order to protect them from deterioration. In 2010, the new lighting system for the Church should be completed. Conservation interventions are also planned in the short term on the external plaster of the Farmhouse.

4.24**Present state of conservation****SPOLETO**

The general state of conservation of the Basilica of San Salvatore is good; the façade is in excellent shape, since – in recent years – it has been subject to accurate conservation work based on the cleaning and the consolidation of the stone decorative elements of the windows and the portals.

As excellent is the level of truss covers of the three aisles, in which the inner space is divided; a careful observation of the wall surfaces does not reveal the need for any urgent conservation treatments. From the structural point of view, the stonework is in a good state of conservation and there are no signs of degradation related to stability problems. Moreover, the system to consolidate columns and stonework, connected to structural units dating back to the last century (tie rods and iron hoops), proved to be highly resilient even under the considerable seismic strain of 1997.

The frescoes decorating part of the three apses, although fragmentary, are in a good conservation state and one might think, at the most, of restoration for cosmetic purposes.

The terracotta tile floor, too, is in a good state of conservation and requires some slight maintenance.

The Town Council established –since 2008- a workgroup composed by a member of staff of the Culture and Tourism Department, an police officer, an expert of the Environment and Territory Planning Department, whose task will be to periodically verify routine and supplementary maintenance intervention, as well as structural interventions which the artistic -monumental heritage of Spoleto needs, in cooperation with the competent State Superintendence for

monitoring and conservation activities (see management plan).

4.25**Present state of conservation
CAMPELLO SUL CLITUNNO**

The Clitunno Tempietto is in a good state of conservation. It has been subject to several recent interventions that guaranteed its correct conservation. In particular, the last intervention was structured in a series of operations that concerned both external and internal areas, i.e. both stone and fresco surfaces.

At the moment, however, there are slight signs of damage that will be fixed with the next maintenance intervention.

In particular, damage is mainly related to moisture –both due to capillarity and condensation– caused by the environmental condition to which the building is exposed, i.e. it partially leans against an earthen wall.

For this reason, in the past, a perimeter drainage system and a meteoric water drainage system were created; however, moisture is still present, especially in the northern wing, along the external part of the apse's plinth, where capillarity has caused some biological patina, such as moss and efflorescence.

On the stone surfaces of the southern side, the doorjambs and architraves and near the pronaos, there are some localised heterogeneous deposits, rare encrustation and dark stains; incoherent deposits are also present on whole surfaces.

Localised crumbling phenomena of mortar bed of stone ashlars are visible in some areas both on the external and internal surfaces of the building.

From a structural point of view, there are no stability problems. At the moment walls are linked to old iron structures that

proved to have good resistance against seismic activity (the last intense earthquake took place in 1997).

As to frescos, the last intervention restored the intelligibility of paintings with no intervention on chromatic reintegration, unless by light watercolour veils.

The terracotta-tiled floor is in a good state of conservation and needs only little maintenance.

The monument is constantly monitored by the competent Superintendence.

4.26**Present state of conservation
BENEVENTO**

The monumental complex of Santa Sofia and the single monuments composing it are in an excellent state of conservation and no serious deterioration process urging intervention is reported.

Starting from the restoration conducted in the 1950s, the site was subject to a number of conservation and requalification projects and interventions which aimed at providing an adequate response to functional needs (both worship and tourism needs) and sought to counter possible signs of wear due to use.

In particular, the property was included in an organic intervention plan in the years 1991-2000 –preceded by thorough studies and stratigraphic archaeological surveys concerning the Cloister court, hypogeum surfaces and ancient walls-. Interventions, carried out according to the most modern criteria in the field and the highest qualitative standards, allowed to enrich knowledge on the Monastery thus shedding light on the different phases the monumental complex went through:

- an hypogeum environment that could belong to the Longobard age was discovered;
- the reservoir/cistern belonging to the

internal court of the Cloister was explored and drained thus retrieving ancient stone and ceramic material belonging to the phases the Cloister and the Convent went through;

- the construction phases of the Cloister were elucidated thanks to the discovery of the plan for the placement of columns dating back to the period before the restoration – carried out during the Orsini period (18th century) – and of some reused Roman inclusions;
- the monastic and aristocratic necropolis was discovered; it is located under the terracotta-tiled floor in the Cloister and its material will be exhibited in the museum that is now being renovated.

In particular, as far as the state of conservation of the **Church of Santa Sofia** at the beginning of 2009, the macroscopic analysis of the different surfaces and walls did not reveal severe decay conditions. The valuable parts in stone material (capitals, plinths and columns) showed a slight alteration of the surface caused by small deposits; on plinths small gaps and some inadequate reintegrations were detected.

The frescos on the lateral apses showed only limited damage, which were especially related to aesthetic aspects. Modest portions of the internal plaster finishing layer – dating back to the 1950s – had partially come off on the bottom of counter-façade and external walls. Moreover, the modern floor made of travertine showed scarce care in laying slabs, especially in the areas where column and pillar plinths are placed.

On the façade there were partial loose portions of plaster located at the septum bottom next to the entrance, while along the plinth of the main prospectus and the S-W prospectus all-pervading moisture traces could be detected.

In order to solve the abovementioned problems, a new intervention was launched and completed at the beginning of 2009. The intervention was aimed at cleaning stone elements and improving the layout of church frescos, besides the requalification of the complex's modern finishes (plaster, replaced with lime plaster, and flooring, replaced with stone agglomerates and bricks), including a new lighting system, in compliance with the typological and architectural characteristics of the monument.

Requalification activities were partially published online through two information systems devoted to restoration, implemented on behalf of Ministry for cultural heritage and activities by University of Pisa: the SICAR (Informatic System for Cataloguing Restoration Yards) and ARISTOS (Informatic Archive for the History of Works of Art Protection) systems.

In order to complete the maintenance intervention, an agreement is being negotiated between the Municipality of Benevento and the Campania Region for the funding of liturgical furniture to be created by international renowned artists (see Management Plan).

The state of conservation of the **Cloister** is generally good. There are only limited problems due to humidity on spouts caused by the flow of meteoric water from upper terraces: in particular, some biological alterations and surface deposits – more or less homogenous – are reported on stone elements (pulvinos, cornices and arches).

On small external walls supporting Cloister columns, some damage on plaster can be detected.

4.27

Present state of conservation MONTE SANT'ANGELO

The Sanctuary of San Michele is in a good state of conservation. In the last 10 years, the site was subject to a series of planned conservation interventions, preceded by thorough studies, which concerned the structural and restoration aspect of internal and external surfaces. This plan of interventions, conducted by the competent Superintendence of Bari, according to the most modern criteria in the field and the highest qualitative standards, guaranteed the integrity of the architectural complex. In particular:

- the load-bearing structure of the Angevin stairs were consolidated;
- the octagonal bell tower and the stone covering of the cave were subject to conservation routine and supplementary interventions.

The macroscopic analysis of the condition of different surfaces (plaster, frescos, stuccos) and of wall hangings do not reveal any special degradation condition. Only in the Longobard Gallery halls, the formation of mould on walls and exposed stone remains could be detected. Mould was caused by the internal microclimate characterised by a high moisture rate due to location (north wing). Measures aimed at protecting the property from moisture-related phenomena have been implemented. Today, thanks to dehumidification, these phenomena have significantly decreased.

The state of conservation of all structures is constantly monitored by technical and scientific staff directly appointed by San Michele Fathers and by the Superintendence of Bari, in addition to purposely appointed experts.

Moreover, the Superintendence and the University of Bari have jointly developed a general distribution plan for a better

regulation of the flows of visitors with the objective of protecting the architectural structures and preserving them from tourism impact.

In particular, visits to the Longobard Gallery are upon request and its halls can be only accessed by a limited number of people at any one time.

4.b1

Factors affecting the property CIVIDALE DEL FRIULI

(I) Socio-economic development pressures

Risks relating to urban context and environment transformation

The site for which inscription on the World Heritage List is requested and its buffer zone are located in the historical centre of Cividale del Friuli and both enjoy adequate safeguard from any possible modification and/or transformation of their context (e.g. demolition, reconstruction, new building work, unsuitable use of buildings, etc.), which might diminish their authenticity and integrity (see 5.b).

Anthropic risks related to theft or vandalism

To this day no particular events linked to human presence, such as thefts or vandalism, can lead to any relevant risk factor. The assets are anyway have been placed under surveillance and monitoring by the relevant institutions; in particular, for the Monastery/Tempietto and for the Cathedral/Museo Cristiano (Font of Callixtus, Altar of Ratchis), daytime surveillance and a break-in alarm system, while for the Museo Archeologico Nazionale/Palazzo Patriarcale (National Archaeological Museum/Patriarch's Palace) there is a night time surveillance and a closed circuit TV system (presently

undergoing revision and maintenance work). Agreements have been signed to ensure shared surveillance of the assets at the site.

(II) Environmental Risks

Air pollution

In the site and its buffer zone there is no particular risk factor connected to environment pollution. The area of interest is located in the heart of Cividale del Friuli's historical centre, far from the main production areas – the main one of these, the XI Zona Industriale e Artigianale (the 11th Industrial and Artisanal Zone) is at a linear distance of about three kilometres from the Tempietto Longobardo. Therefore, no particular problem arises regarding air quality, also thanks to the dispersion and abatement effects on pollutants exercised by the winds, which prevalently refers to the northeast sector with a minimal component of winds from other octants.

Part of the historical centre, including the area where the nominated assets are located, is completely or partially banned to traffic; the Municipality's programme includes the progressive extension of the closing of the historical centre to traffic.

The area where the Tempietto and the Monastery are located, which can be accessed from a very narrow street, which is typical of ancient town centres, provides for special conditions for the parking of residents, thus encouraging the parking of vehicles outside the monumental complex.

Soil and water pollution

No critical levels of pollution have been registered either regarding surface waters (of the river Natisone, which marks the southern boundary of the area) or of groundwater, or in relation to the soil. The rules for the urban plan implementation concur to ensure the safeguard and

enhancement of the river Natisone and its *forra* (gorge), by prescribing conservation of the waterway and of the vegetation, also through periodical control of the healthiness and environmental quality of its waters. This ensures facilities can be built to ensure water safety and to ban the reduction of the water flow, regulating water discharge and safeguarding sites from the threat of morphological transformation.

(III) Natural disasters

Risk of earthquakes

The whole Municipality of Cividale del Friuli is classified as seismic zone grade 2, in a scale of four decreasing seismic levels, according to a law called 'Delibera of the Giunta Regionale del Friuli Venezia Giulia' (n. 2325 of August 1st, 2003).

A regional updating of anti-seismic regulations is under way. So far, the Legge Regionale no. 16/2009 has been adopted, whose implementing regulation will shortly be approved and which pursues the objectives of protection of public safety and reduction in seismic risk. It details the tasks of the Region and Municipalities with reference to buildings located in seismic areas and physical protection of the territory.

More specifically, the Law entrusts the Region with the task of classifying seismic areas in the regional territory, maintaining and updating lists of seismic areas, identifying the types of buildings and works having a strategic value, defining the application of technical rules as well as the presentation and submission of projects, and identifying criteria for the determination of the function of limited importance in the static context of the work. Municipalities are entrusted with the activities connected with the filing of structural projects and monitoring of compliance with technical rules on the physical

protection of the territory.

The Law pursues the protection of the territory through the compliance with hydro-geological safety requirements and assessment of the limits resulting from the vulnerability of the territory and its assets. The territorial classification system is confirmed in areas characterised by a different degree of dangerousness from the geological, hydraulic and avalanche points of view for the purposes of risk prediction and prevention.

These areas are determined by the Municipality through geological and hydraulic surveys already provided for by the previous legislation. Planning tools consistent with the territory from the geological, hydraulic and avalanche points of view are made available. The following areas are identified:

- safe areas for buildings or infrastructure;
- areas that in case of use for buildings or infrastructure are likely to become dangerous from the geological, hydraulic and avalanche points of view;
- dangerous areas for buildings or infrastructure.

In any case, the area proposed as core zone and the related buffer zone, are classified as homogeneous zone of the type "A" by the urban planning instrument of the Municipality's Piano Regolatore Generale (Urban Development Plan), which prescribes that all building work should respect anti seismic regulations. These regulations prescribe that all building projects should be carried out following specific geological studies, and must respond to specific national rules relating to the updating and/or improvement of buildings' anti-seismic structures. In particular, monumental resources comprised in the site have been the subjects over time of focused anti seismic intervention, which have proved their

usefulness during the last earthquake that occurred in 1976. This earthquake's magnitude caused quite remarkable devastation in other towns. The walls of the Tempietto Longobardo are linked to supports, such as the iron rods, and to cement supports, built during the restoration campaign of 1925-26 and again after the 1976 earthquake. The Cathedral of Santa Maria Assunta, following the 1976 earthquake, had been subject to a consolidation effort that completed the ancient system of iron rods, which had been eliminated in the 18th century and partially re-instated during the 19th century. The Palazzo dei Provveditori Veneti was subject to a series of consolidation efforts during the 1970s and in 1990, which comprised the rebuilding of the ceilings and of the roofing and the implementation of a cement supporting element.

The Civil Protection Department of the Ministry has set up two earthquake monitoring centres, which are located within a public local facility of strategic value (premises of a Health Unit) and one site in the historical centre, in a location close to the *forra* of the river Natisone, which has a special importance for the hydro-geological balance of the area. The constant work of the team of volunteers of the Civil Protection of the Municipality of Cividale also concurs in ensuring prevention of seismic risk.

Lastly, also with reference to the seismic risk, a vulnerability sheet as provided for the *Risk Map of cultural heritage* was drawn up for all the resources proposed for inclusion according to the directions of the Istituto Centrale per il Restauro (Central Institute for Restoration) (see section 6.a). Currently, the updating of these vulnerability sheets is under way according to the Directives of the President of the Council of Ministers (dat-

ed October 12th, 2007) on the assessment and reduction in seismic risk of cultural heritage (published with the relevant guidelines on January 29th, 2008).

Hydro-geological risk

The waters of the river Natisone flow through a *forra* –a gorge, typical element of this area–, a deep chasm affecting the surrounding strata constituted by successive floods, and forming lime-based conglomerates, being more or less cohesive, and with different liabilities to erosion. The liability to erosion of terrains, associated with the river's action, ensures that the *forra*'s sides form sheer drops –measuring a maximum of twenty metres–, with many types of cave formations, of larger and smaller size, and at different heights, which have locally caused collapse related landslides. A notable collapse took place in mid 1980s, (not far from the western boundary of the buffer zone).

Part of the river Natisone, included in the buffer zone and adjacent to the site proposed for inclusion for a small part of its course, has been classified as a flood risk area. This classification refers to areas with a high likelihood of flooding, in which geostatic-related problems related to decay and to the risk of landslides. The system prescribes a series of limitations on maintenance of existing buildings, the banning of new ones, and the execution of consolidation work along the riverbanks. The Friuli Venezia Giulia Region had already begun consolidation work on the rocky cliffs of the *forra* in the early 1970s, concentrating on the areas where the danger for habitations, historical landmarks and public areas was greatest. Later work was carried out in 1991 and 1992. The work to ensure safety and consolidation were given greater continuity as of year 2002 up to the present.

More recently, the Municipality of Cividale

was allocated extra funds totalling € 630,000 (by the agency called Direzione Centrale Ambiente e Lavori Pubblici of Friuli Venezia Giulia Region), to be spent on consolidation work.

On completing such work, the Municipality of Cividale will be allotted a further € 716,000. These works will also include the completion of the consolidation of the *forra* of the river Natisone in the area between the *Ponte del Diavolo* and the dam located downstream with a high hydro-geological risk and characterised by the presence of the inhabited historical centre.

All work focuses on safeguarding hydraulic works present in the riverbed, on avoiding dangerous erosion of the riverbanks and ensuring smooth water discharge. It is being carried out according to naturalistic engineering methodology, with techniques that strive to preserve the areas' environmental value.

The constant work of the team of volunteers of the Civil Protection of the Municipality of Cividale also concurs in ensuring prevention of risk.

Risk of fire

The Monastery/Tempietto complex is equipped with a system comprising fire-extinguishers placed at intervals along the walls, which is constantly maintained; plans are being considered to upgrade the fire-safety system of the whole complex (see Management Plan). At the *Museo Cristiano* (Font of *Callixtus*, Altar of Ratchis), and at the Archaeological Museum, there are both fire extinguishers and early warning systems involving smoke detection.

In 2006, the Municipality definitively allocated a building to the Fire Brigade Headquarters, at less than one kilometre from the Tempietto, where a new fire-fighting unit has been operational since October 1st, 2007.

(IV) Visitor/tourism pressures

Tourism pressures

Visitors to Cividale del Friuli have so far not involved any risk of damage or deterioration of its historical, artistic and architectural heritage: there are no particular signs indicating any wearing down of the areas of interest, or changes in temperature or humidity levels of enclosed areas, nor particular disturbance to residents, or disruption of traditional lifestyles.

In particular, in the area comprising the Monastery and the Tempietto Longobardo, the Cathedral and the *Museo Cristiano* (Christian Museum), the *Museo Archeologico Nazionale* (National Archaeological Museum) and the remains of the Patriarch's Palace, which is subject to the request for inscription on the World Heritage List, there are no particular risks due to tourism pressures. A greater pressure might be recorded at the so-called Tempietto Longobardo, which is today the most visited of the city's monuments (see also visitor statistics, 5.h), but the building's fruition by visitors is limited by the following conditions:

- to avoid erosion damage caused by visitors walking over the original *opus sectile* paving, the public can only access the presbyterial area (so at the moment, visitors are only admitted to the building through a side entrance, via an adjacent building, rather than through the original main entrance);
- the monument can be accessed by a maximum of 15 people at any one time.

Moreover an agreement protocol is being defined among the different owner-manager entities in charge of the assets proposed for the World Heritage List. The result would be an integrated tourism offer, comprising a visitor's card, allowing a more homogeneous distribution of visitors over a range of sites; this will

alleviate tourism pressure, which would be especially a benefit for small size areas, such as the Tempietto Longobardo, in case of an increase in tourist trends. Moreover, the first phase of a project aimed at valorising and preserving the Monastery and the Tempietto (see Management Plan) has been completed. This project provided for a huge increase in the areas open to visitors' fruition on the ground floor of the Monastery as a "museum of itself" where reference is made, for instance, to the Cloister, the archaeological area musealised following the excavations in 2008-2009 and the garden of the Ursuline nuns. This increase in open areas allows the flow of visitors to be better organised and controlled. Visitors are offered options before their visit to the Tempietto, which can be accessed by a maximum of 15 people at any one time. The access to the Tempietto was also modified: the entrance to the complex is along Via Monastero Maggiore and the exit is on a passage way parallel to the river Natisone; the tourist pressure on the building is further reduced, thus improving access and control of visitors. The access to the *Museo Cristiano* and the Treasury of the *Duomo*, where the Ara di Ratchis and the *Tegurium* of *Callixtus* can be visited, is limited to a maximum of 25 people at any one time.

4.b2

Factors affecting the property BRESCIA

(I) Socio-economic development pressures

Risks relating to urban context transformation

The site for which inscription on the World Heritage List is requested and its buffer zone are located in the historical centre of

the city of Brescia, and are thus adequately protected from any possible change (demolition, rebuilding, new building work, improper use of buildings, etc.) that could diminish their authenticity and integrity (see 5.b).

Anthropic risks related to theft or vandalism

The Monastery of San Salvatore-Santa Giulia is staffed by one in-house caretaker and one security guard 24 hours a day. Surveillance staff is composed of 15 members. The staff numbers are varied in relation to real needs, during exhibitions and other temporary events. The number of areas assigned to each staff member is based on the size of the exhibition area. During the hours in which the buildings are open to the public, each entrance is guarded.

The whole exhibition area and the museum deposits are all equipped with a closed circuit television cameras linked to recording facilities, which is monitored by specialised personnel 24 hours a day. During the hours in which the buildings are closed to the public, the area is subject to security inspection rounds by personnel which operates 24 hours a day, and by means of closed circuit television cameras.

During opening hours the archaeological area is controlled by one security guard (11 am – 4 pm excluded Monday, which is the closing day). The staff numbers are increased for visits or special events. The area is enclosed and equipped with an alarm and video surveillance system linked to the central control staff in service 24 hours a day.

Industrial risk

Various industries are based in the territory of the Municipality of Brescia; however, all are equipped with a PEI (Piano di Emergenza Interna, internal emergency

plan), and with a PEE (Piano di Emergenza Esterna, External Emergency Plan), which have been approved by the relevant authorities and drawn up according to the laws in force and to the guidelines of the document entitled 'Pianificazione di emergenza esterna per impianti industriali a rischio'.

As the area of the medieval monuments lies outside the range of potential damage, there are no particular risks related to accidents that might affect the asset nominated.

(ii) Environmental Pressures

Air pollution

Air quality in the Municipality of Brescia is daily monitored by 5 permanent stations, which belong to the monitoring network managed by the *Agenzia Regionale per la Protezione dell'Ambiente -ARPA-* (Regional Agency for Environmental Protection). One of these is placed at about 500 metres' distance from the Monastery of Santa Giulia, near the Palazzo Broletto.

The maximum levels prescribed by the Law called Decreto Ministeriale 60/2002 for the medium daily concentration of PM10 (a mix of solid and liquid particles present in the air, and measuring a diameter of less than 10 µm) were exceeded in the city of Brescia on 133 days in 2005 and on 146 days in 2006, 94 days in 2007 and 77 days in 2008. The problem of environmental pollution is common to the whole of the region of Lombardy, and to the basin of the river Po. It must also be noted that the weather conditions typical of the river Po basin is characterised by no wind and by atmospheric stability, which does not allow the dispersion of these particles.

As to the asset for which inclusion in the List is requested, namely, the monastic complex of San Salvatore-Santa Giulia, it

must be noted that the site is located in a limited traffic area; moreover the gradual, total closure of Via dei Musei is programmed.

Therefore the environmental pollution of this area of the city centre should be significantly lower during the next few years.

Electro-magnetic pollution

Data supplied by ARPA indicates that within the site the limits of electro-magnetic pollution have not been exceeded.

Noise pollution

For the area of *Via dei Musei*, the location of the Santa Giulia complex, the most recent data collected by the Municipality of Brescia (2004) record a level of noise pollution above the levels deemed acceptable by law. This in spite of the fact that the site had been included in an acoustic zoning plan, where it ranked in a class "2" and was therefore subject to special protection (class II is described as: "Areas destined to prevalently residential use: urban areas of largely local vehicle traffic, low population density, limited commercial activity, absence of industrial and artisanal activity").

Meanwhile however, further measures have been taken to reduce this type of pollution; at this time (2007) the 'ZTL, i.e. Zona a Traffico Limitato' or limited traffic zone, (including the site) has been subject to video-surveillance by the so-called "electronic policeman" (a camera which verifies the number plates of vehicles and the existence of an access permit); vehicle traffic has thus been further reduced of a percentage estimated at 70% or 80% of the traffic recorded in 2004.

Soil and water pollution

In the site area no activity leading to pollution has ever been recorded. Therefore, no plans to analyse the soil and

the underground areas have been implemented.

(iii) Natural disasters

Risk of earthquakes

The territory of the Municipality of Brescia is already classified in the seismic risk scale as a third category area, following monitoring and data collection implemented by the body called Servizio Civil Protection, which completed and transmitted research data to the Lombardy Region. According to this class system, the area belongs to zone 3 according to a document called O.P.C.M. 20.3.2003 no. 3274, which corresponds to a low seismic risk level, as described in the explanatory note dated 4.6.2003 within the document. The city falls within one of the areas most liable to seismic risk according to recent studies. This is because it rises in an area corresponding to two very evident seismic

lines. However the history's city of the last 800 years does not include earthquakes of damaging or catastrophic effect for the city.

In 2008 and 2009, the Municipality of Brescia, in cooperation with an expert, conceived and organised meetings and courses especially devoted to the protection of art works in case of earthquakes and other natural disasters; courses were followed by practice with the Civil Protection Department at the *Museo di Scienze Naturali*. A selected group of staff members from the Municipality also took part in this initiative.

Risk of fire

In the whole area of the Monastery of San Salvatore-Santa Giulia (exhibition and storehouse areas) a permanent automatic smoke detection plant is in operation, as well as a manned signalling facility and a fire alarm based on CERBERUS-SIEMENS technology (dynamic apparatus for the

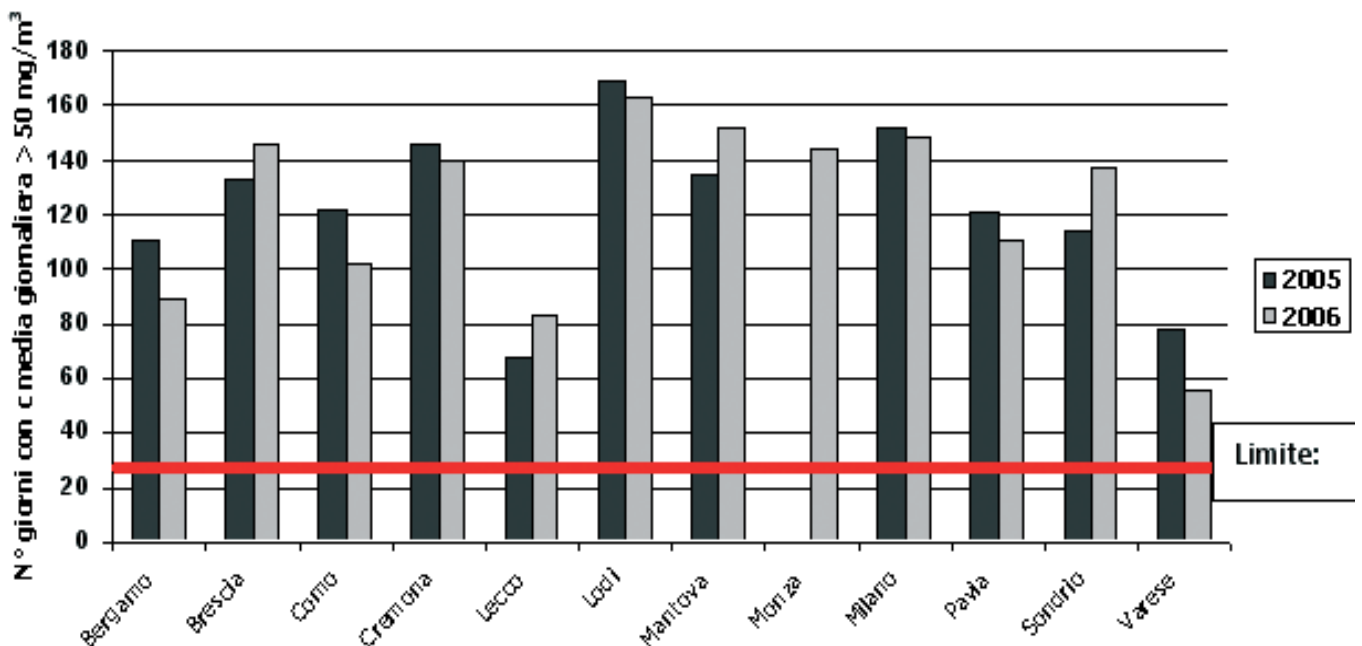

dynamic measurement of heat) according to UNI 9795 and UNI-EN standards. A luminous and acoustic alarm system is in place to signal fires, which are connected to a central office staffed 24 hours a day. The alarm is immediately relayed to the closest Fire House.

In the area set up as exhibition, deposit and museum space, hand held fire extinguishers (using powder and water), where the number of fire extinguishers per square meter is as follows: no. 30/1,500 sq.m. = 1/50. The surveillance personnel have been adequately trained in fire emergency procedures and in using fire extinguishers. Mobile fire-fighting devices are also available in archaeological areas.

Risks related to terrorist attacks

After September 11th, 2001, the monumental complex including the Monastery San Salvatore-Santa Giulia, as many other Italian cultural sites, is protected with

Superi PM10 nelle principali città Lombarde

particular care and surveillance, as envisaged for certain sensitive targets. At the moment the risk is rather remote.

Also, for security reasons, visitors are required to hand in bags, backpacks and suitcases.

(iv) Visitor/tourism pressures

Tourism pressures

During the last twenty years a large number of recovery and enhancement activities have been carried out in Brescia, based on careful programming in view of sustainable development, and focusing on the wealth of its cultural heritage.

This has determined a remarkable increase in visitors, which has been adequately managed by the local administration and by competent agencies. In general therefore, especially because of the very nature of these locations, and because of the number and type of visitors involved, Brescia's tourism has not involved the risk of damage or deterioration of the historical, artistic and architectural heritage: no particular damage has been detected in the locations, nor temperature or humidity level variations in the indoor areas, nor has the residents' life or traditional lifestyle been affected in any way.

As to the monumental complex including the Monastery San Salvatore-Santa Giulia, for which inscription on the World Heritage List is requested, there are no signs indicating particular risks due to tourism pressures.

The ample size of the area and the high quality of the organised visitors' facilities ensure the impact of tourism on the monumental complex is minimised, even in the case of temporary exhibitions hosted by the museum.

As to the buffer zone proposed for the site, corresponding to the whole of the Longobard city –today's historical centre–

tourism is not expected to affect the area negatively during the next few years, principally because of the size of the area over which the assets are scattered, and because of the present level of development of the receptive facilities in place.

Local administrations (Municipality of Brescia, Superintendencies, province of Brescia) have correctly and carefully managed tourism policies, and specific policies have been implemented by the Lombardy Region. Among the objectives set out in the programme entitled *Programma Triennale di Promozione Turistica della Regione* (Three-year Plan of Tourist Promotion of the Region), conservation of sensitive components in Lombardy's tourism areas, e.g. valuable terrains, landscapes, natural aspects, ecosystems, are recognised first rank priority. The Region thus focuses its support of agenda 21 protocols on an improvement of environmental efficiency of venues, the promotion of environmental management systems, the use of low impact transport, and on the maintenance of a high resource quality, which attract tourism.

In particular, the Lombardy Region has activated an agreement protocol entitled "Promozione e diffusione della Carta europea del turismo sostenibile nelle aree protette".

4.b3

Factors affecting the property CASTELSEPRIO-TORBA

(I) Socio-economic development pressures

Risks relating to urban context and environment transformation

The ancient *castrum* is located far from inhabited areas on a hill surrounded by

woods overlooking the valley of the river Olona.

There are no risks resulting from the socio-economic development for the site of Castelseprio-Torba and the relevant buffer zone, because they cannot be modified or built by virtues of numerous instruments (see 5.b.3) that protect both the archaeological area and its landscape restricting the use of soil and setting management criteria for the whole territorial area.

Industrial risk

In the Municipality of Castelseprio, though in an area that has no impact on landscape heritage, there are two chemical companies that might cause potential risks for the heritage in the event of a catastrophe. This risk appears to be a remote one, however, as both companies have high-level safety systems.

Anthropic risks related to theft and vandalism

In the past there have been sporadic cases of vandalism in the area. Presently the most vulnerable parts of the site (Santa Maria *foris portas* and the Farmhouse-Monastery of San Giovanni, housing the *Antiquarium*) have been equipped with an alarm system radio linked to a surveillance service; moreover, the frescoes of Santa Maria *foris portas* are protected by intrusion detectors.

The Monastery of Torba is equipped with an alarm system radio linked to a surveillance service and with a closed circuit television system for the external control of the access to the Monastery.

(II) Environmental Pressures

Forestry risk

A large part of the *castrum* area and the village (Borgo) area is subject to forestry risk, due to the fact that the woodland is very strong growing.

The copse (locust trees, chestnut), in fact, contributes to starting up and/or aggravating the regular breakdown phenomena –mostly on surface– that mostly entail flowing or lava, mostly apparent by adulteration of the land.

The copse is currently being constantly cut on the public land; that on private land, however, is not maintained. The Archaeological Heritage Superintendence (local Office of Ministry) has already arranged, however, for the drawing up of a forest appearance management plan. The area of the Monastery of Torba is regularly maintained, in terms of management of green areas, by qualified companies. In particular, the area surrounding the excavation of the portion of walls towards the *castrum*, recently discovered, has been the subject of special attention owing to the natural proliferation of infesting plants, especially along the slopes.

(III) Natural Disasters

Hydro-geological risk and landslides

The land that includes the area of Castelseprio is at hydro-geological risk. This risk is determined by the decohesion of the land on the slopes, with consequent landslides; in 1992 –after heavy rain that caused damage to various areas of Lombardy and Piedmont– damage was caused to the pathways, the pedestrian routes and some parts of the walls.

A detailed preliminary study for the draining and creation of an irrigation system using the waters has already been carried out, ordered by the Archaeological Heritage Superintendence of Lombardy, in order to stabilise the breakdowns, for maintenance and for the renewal of the wood on the slopes and the lightening of the slopes. The Forestry Management Plan (2004-2013) was drawn up based on this study. At the moment, work has already been carried out on the State-owned

slopes, which cover a large portion of the site, with appropriate consolidation actions. Actions are also under way on the slopes belonging to the Province. They shall be completed by the spring of 2010.

Risk of fire

Given the significant presence of trees in the area, especially in the proposed buffer zone, there is a high possibility of fires. Control systems are being set up.

The Municipality of Castelseprio is however, a member of the “Città sicura” (Safe City) project, which also includes the archaeological area, and which foresees a night surveillance services from 9 pm to 1 am.

There are currently about 30 patrols per year, but an attempt is being made to increase this service. The archaeological area is also subject to patrols by the local police and the Carabinieri.

The Municipality of Olona adopted a set of orders that prohibit open-air combustion on the municipal territory in order to protect woods from the risk of fire.

During the closing hours of the area the fire-fighting system and, in general, all safety alarms are linked to a rapid intervention surveillance service.

(IV) Visitor/Tourism Pressures

Tourism pressures

As for the site proposed for the inscription on the World Heritage List and its buffer zone, no particular risks from tourism pressure area to be recorded. The remarkable extension of the area in fact allows for high tourism flows.

Sporadic cross-country motorbike sports in the woods surrounding the archaeological site, where paths are used as racetracks. The provincial police have been called in for this purpose and checks have been increased. In this regard, the PIF plan (Piano di Indirizzo Forestale of

the Province of Varese) provides for each municipality to rule the use of its network of paths in agro-forestry areas.

4.b4

Factors influencing the conservation of cultural heritage SPOLETO

(I) Social and economic development pressures

Risks relating to urban context and environment transformation

The basilica of San Salvatore stands next to the graveyard, as already stated in paragraph 1e.; which ensures the protection of the surrounding area from any risk of urban and/or landscape transformation. According to the legislation in force, there has to be an appropriate “respect area” between the graveyard and the urban area. The “respect area” is only covered with vegetation (the graveyard, therefore, is hygienically and spiritually separated – and justly so – from the urban area). Several protection provisions preserve the area opposite the basilica from any modification and/or transformation (see paragraphs 5.b4).

Anthropic risks related to theft or vandalism

No risk factors related to the presence of man (theft, vandalism) have materialized up to now. The area is watched 24 hours a day by the caretaker, who lives in the adjacent building.

Moreover, the basilica stands within the area of the municipal graveyard, which is protected by a gate and an early warning system. However, the sculptures once kept in the church are now kept in a museum. Procedures are underway to install a surveillance and anti-theft warning system using wireless connections (see manage-

ment plan). Once the above-mentioned devices have been installed and the surveillance reinforced, it will be possible to set up an exhibition of the stone sculptures in the basilica.

(II) Environmental risk factors

The municipality of Spoleto constantly adopts environmental measures to protect the town and the surrounding areas. In 2005, in the framework of the Community Initiative *Leader+*, the Municipality of Spoleto decided to certify the quality of its environment and is currently establishing an Environmental Management System, in conformity with the scheme envisaged by the UE Regulation *Emas 2*, to further enhance and develop the area in an integrated and environmentally-friendly way.

Air, electromagnetic and noise pollution

Considering its position and the highly-valued naturalistic content, no particular risk factors related to pollution have been identified on the site and in the related buffer zone. Following the approval of the Regional Plan for the Improvement and Maintenance of Air Quality, the Regional Technical Committee was set up. The Committee includes a representative of the Municipality of Spoleto and has the objective to implement the plan. To manage the monitoring network, the Municipality of Spoleto has reached an agreement with the Regional Agency for Environmental Protection (ARPA) of the Umbria Region, according to which an annual report on air quality is drawn up, to disseminate the monitoring results as well as to promote initiatives for the reduction of pollutants (www.spolveriamolara.it). The agreement with ARPA also envisages the implementation of the Electromagnetic Pollution Reduction Project (RIE); the objective is identifying – in line with the

planning activities – appropriate sites for the installation of Based Transceiver Stations (BTS) and consequently the sites where the installation should be ruled out. Moreover, the municipality of Spoleto (with decision No. 78 of the Municipal Council of 2nd July 2007) adopted the draft Plan on Noise Classification. Noise zoning follows a series of other phonometric measurements and enables the development and consequent implementation of a regeneration plan, to comply with the noise limits imposed by the legislation.

Soil and water pollution

No pollution problems have been identified with reference to surface and ground-water (there are no rivers in the buffer zone) and to the soil on the site concerned. During the updating of the Regional Plan for Water Treatment, no sensitive or vulnerable area has been identified in the Spoleto area of the Umbrian valley.

The assessment relates to the qualitative traits of water, which is linked to human activities. In particular, the concentration of nitrates in the Spoleto area in the years 2005 to 2006 was insignificant or non-existent.

(III) Natural disasters

Risk of earthquakes

The whole area of the municipality of Spoleto –with reference to the “basic seismic hazard degree”– is considered an high seismicity area (level 1). Spoleto is one of the towns of the Apennine and pre-Apennine belt which were most hit by the earthquakes that took place in Umbria from September 1997 and June 1998. The most recent high-intensity earthquake (magnitude 5.8) took place in September 1997 and showed the effectiveness of the consolidation work carried out in the basilica of San Salvatore in the 90s; no

structural damage to the church was identified.

The latest earthquakes have led to the reconsideration of all spatial planning activities, with greater attention devoted to the prevention of seismic risk. The main objective is to the minimum the negative effects through preparation, coordination, appropriate equipment, knowledge of the territory and the related risks. The Provincial Civil Protection Plan (adopted by the provincial council in the 12th July 2006 session with No. 72) governs the management of emergencies and risks related to seismic, hydrogeological and meteorological events, forest fires, accidents at industrial plants, also with regard to the safeguard of the cultural heritage.

The town planning scheme envisages that all construction work has to be subject to the compliance with seismic legislation: all design work needs to be based on specific geological studies and comply with the national provisions related to building adaptation and/or improvement to counteract seismic risk factors. Contributing to the development of measures to protect buildings in the historic town centre from seismic risk was exactly the objective of the Community project “S.I.S.M.A.” (Integrated system for the protection of historic buildings from and the prevention of risks), promoted by the Umbria region, as the leader region, in the framework of the UE Programme Interreg III B.

Lastly, the Perugia “Bina” observatory - one of the oldest observatories in Italy- is studying a complex system made up devices including sensors and computers, able to prevent or mitigate the negative effects of high-intensity earthquakes, if placed in strategic places. In 2007, the Comune di Spoleto obtained the ISO 14001 certification of environmental quality for the Heritage, Environment and Territory Dept., which in 2010 will be

extended to all other Departments

Hydro-geological risk

This type of risk factors is an important component of territorial management, which has characterized the history of the Spoleto valley since antiquity and has led to the plain reclamation and the reconsideration of the water supply network, drainage canals and finally of the embankments, which are still up and running today. A flood of the Tessino river, the only river flowing by the Spoleto urban area, could not possibly hit the church of San Salvatore, which stands up on a hill.

Risk of fire

Up to now, no anti-fire systems have been installed in the basilica of San Salvatore; the caretaker lives there and can immediately inform the Fire Brigade, which is less than a mile away, in case of necessity. However, in view of a more intense tourist flow and the consequently of a higher fire risk, the municipality of Spoleto is developing the necessary measures to install an appropriate anti-fire system on the site (see management plan).

(IV) Visitor/tourism pressures

Tourism pressures

Spoleto has been a place of transit for years and is known all over the world as a city of art and the City of the Festival. Its image was enhanced in 1958 when the Festival of the Two Worlds was founded and therefore with the inclusion of Spoleto in the national and international tourist circuits.

The intense tourist flow (the number of registered guests in the tourist accommodation facilities amounted to 187,645 in 2008), which is of seasonal nature, with peaks in summer and on holidays, has led the municipal authorities of Spoleto to implement measures to improve tourist hospitality, rendering tourism the most

vital and thriving sector of the town's economy. However, tourism in Spoleto has not posed any risks related to the damage and the deterioration of the historic, artistic and architectural heritage so far; with regard to the basilica of San Salvatore, in particular, it is off the beaten tracks and consequently the tourist flow is very modest.

4.b5

Factors affecting the property CAMPELLO SUL CLITUNNO

(I) Socio-economic development pressures

Risks relating to urban context and environment transformation

The Clitunno Tempietto –applying for WHL– and the relative buffer zone are properly protected against any possible alteration and / or transformation of the context (demolition, reconstruction, new buildings, incorrect use of buildings, etc.) (see 5.b).

Risks caused by urbanisation are therefore low, because of the property location but also thanks to the great sensibility shown by local people towards the conservation of cultural heritage.

Anthropic risks related to theft or vandalism

Up to now, no event connected to human presence (theft, vandalism) such as to give rise to serious risk factors for the Tempietto has occurred. The property is however protected by a fence, a video surveillance system and an alarm system, which is active 24 hours a day. During the day, the building is also guarded by custodians who are equipped with phone connection.

Industrial risk

In November 2006, in the industrial area of Campello, located upstream of the Clitunno river which flows close to the Tempietto, a serious accident occurred, causing a considerable fall of oily material into the draining system of the area and later into the river thus creating deposits on the banks and having a sizeable impact on surrounding areas. Immediate interventions for the safety of the area prevented major damage and thorough reclamation operations promptly started. To avoid similar events in the future, a new main sewer was linked to the plant where the accident occurred and another sewer will be soon created in order to drain industrial waste from the concerned area.

(II) Environmental pressures

Air and noise pollution

Owing to special environmental conditions, atmospheric and noise pollution in the Tempietto area can be considered virtually absent.

The only source of pollution, though modest, is the Flaminia trunk road. However, the recently built dual carriageway Spoleto-Perugia, with the consequent redistribution of heavy goods vehicle traffic, considerably reduced the risks linked to the presence of the trunk road.

In addition to this, the Municipality of Campello sul Clitunno is carrying out a far-reaching project which aims at enhancing the entire area and eliminating the historical route of Flaminia, parallel to the trunk road, which passes just a few meters away from the apse. Even though this road is used only occasionally, this project will contribute to improve the exposition conditions of the property.

(III) Natural disasters*Risk of earthquakes*

The territory of the Municipality of Campello belongs to area 1, which corresponds to a “high seismic” area according to a document called O.P.C.M. (Ordinanza del Presidente del Consiglio dei Ministri – Dipartimento della Civil Protection no. 3274 of March 20th, 2003 laying down “General criteria on the seismic classification of the national territory and technical regulations on building in seismic areas”. Seismic events – which hit the areas at intervals of around 20 years – are the most dangerous source of damage for the monument.

The monument was not damaged by the earthquake of 1997, of magnitude 5.8, which proves that the building has good resistance against seismic activity; however, in order to minimise the risk, along with a thorough analysis of its structure and the verification of its reaction to seismic events, it would be important to carry out an analysis of the slits so as to plan the installation of anti-seismic devices.

With reference to prevention activities at the regional level, see 4.b4 (Spoleto).

Risk of fire

Within the area, near the ticket office, there is one fire extinguisher. The existing video surveillance systems allow constant monitoring of the building. Near the deposit/ car park of the Municipality, there is a vehicle equipped with all devices needed in case of a fire. The nearest Firearm Station is located in Spoleto (around 13 km).

(IV) Visitor/tourism pressures*Tourism pressures*

No risks linked to tourism are reported on the Tempietto. Although the building is

very small, the area in which it is located has great open spaces and walks with a good capacity. The number of tourist groups is always set in advance.

4.b6**Factors affecting the property
BENEVENTO****(I) Socio-economic development
pressures***Risks relating to urban context and environment transformation*

The site -for which the inscription on the World Heritage List is requested- and the relative buffer zone are located in the historical centre of Benevento and are therefore properly protected from any possible alteration (demolition, reconstruction, new buildings, incorrect use of buildings, etc.) that could reduce their authenticity and integrity (see 5.b).

*Anthropic risks related to theft
or vandalism*

As to the human-related damage caused by thefts and vandalism, no damage has been inflicted to the property in the last few years. The special location of the complex in the historical centre – which is always kept under strict surveillance by law enforcement forces –, along with the sensibility shown by the local community, do not give rise to concerns for the future. The Church, during working time is controlled by the Parish staff.

The Cloister, which is part of the complex of the *Museo del Sannio*, takes advantage of the surveillance system of the latter: in the museum 7 guardians work (one is present day and night at the museum), a chief-guardian and two policemen of the province who are assigned high-surveillance tasks.

The surveillance staff is integrated with more staff of the provincial police when

necessary, as, for example, during exhibitions or temporary events.

During the day, the Cloister and the museum are also protected by a dropdown alarm system for the exhibits and by a closed-circuit television system linked to a recording system (TVCC) that controls internal and external areas. As for night hours, the museum is equipped with a sensor night alarm system, connected to the Command Centre of the Carabinieri of Benevento. If maintenance is needed or if the alarm system does not work, external night surveillance is provided by provincial Police.

Risks related to terrorist attacks

After September 11th, 2001, Santa Sofia, as many other Italian cultural sites, is protected with particular care and surveillance, as envisaged for certain sensitive targets. At the moment the risk is rather remote. Also, for security reasons, visitors are required to hand in bags, backpacks and suitcases.

(II) Environmental Pressures*Environmental and noise pollution*

Damage due to environmental (atmospheric, ground, electromagnetic, radioactive, etc.) and noise pollution appears rather limited, although the site is located in the urban centre of the city.

The monumental complex that is part of the ancient centre of the city, overlooks the main street of the city (Corso Garibaldi), which is a pedestrian area and thus completely banned to cars.

(III) Natural disasters*Risk of earthquakes*

The territory of the city of Benevento belongs to the level 1 area, which corresponds to a “high seismic” area according to a document called O.P.C.M.

(Ordinanza del Presidente del Consiglio dei Ministri – Civil Protection Department no. 3274 of March 20th, 2003) laying down “General criteria on the seismic classification of the national territory and technical regulations on building in seismic areas”. In the past, this area was hit by violent earthquakes; the complex of Santa Sofia itself was considerably damaged owing to particularly violent earthquakes that hit Benevento at the end of 1600 and again in the 18th century. However, conservation and seismic adjustment interventions carried out both in the church, in the Cloister and in the new *Museo del Sannio* building –besides the constant static monitoring conducted by competent bodies– guarantee a high-level resistance to earthquakes. The area was hit in the 1980s by a high-magnitude earthquake that did not cause any structural damage to the monumental complex. Moreover, the staff responsible for security in the *Museo del Sannio* was purposely trained in following the procedures in case of an earthquake. The complex is also provided with a sign system in compliance with law 626/94 on the conduct of the Civil Protection (security regulations, indication of evacuation routes and evacuation plan).

Risk of fire

The Cloister of Santa Sofia and the *Museo del Sannio*, renovated with fireproof material are equipped with the following security devices:

- smoke detectors
- portable fire extinguisher (pressurised, renewed every six months)
- fire hoses
- fire sign system in compliance with the law (no. 626/94)
- arrangement of evacuation routes and evacuation plan

As to the Church, inflammable items are rather limited (the only inflammable

materials are the benches, the confessionals and the entrance inner door); in addition to that, votive open-flame lamps are used in very limited numbers.

(IV) Visitor/tourism pressures

Tourism pressures

The Cloister of Santa Sofia and the *Museo del Sannio*, thanks to a specific policy that extended normal working hours, welcomed twice the number of visitors in the last three years (from 9,000 to 20,000 visitors). Nevertheless, no sign of wear is reported on the properties that could welcome an even greater number of visitors thanks to all-day opening (6 days out of 7, from 9 am to 7.30 pm) and to the wide exhibition area (1,500 sq.m.). In any case, for temporary exhibitions or mass cultural events, controls are increased and visitors are spread into groups so that the number of visitors does not exceed 50 in the museum and 80-100 in the area of the Cloister at a time.

For the Church of Santa Sofia an agreement between the Diocese and the Prefecture on integrated management has been finalised.

Also, as to the buffer zone proposed for the site, which would correspond to the extension of the Longobard city –current historical centre– and taking into consideration the dimension of the area where the properties are located and the current development level of accommodation facilities, tourism flows will not cause negative consequences in future years.

4.b7

Factors affecting the property MONTE SANT'ANGELO

(I) Socio-economic development pressures

Risks relating to urban context and environment transformation

The effectiveness of direct restrictions, controls and constant monitoring of the structures of the Sanctuary and all its elements does not allow for possible interventions (demolition, reconstruction, new buildings, improper use of buildings, etc.) that could reduce their authenticity and integrity.

Similarly, no transformations are permitted in the buffer zone, which is covered by various protection measures “zone A” of the PRG (Urban Development Plan), “zone 2” of the National Park of Gargano, urban park area, etc.) that ensure its preservation over the time (see item 5.b).

Anthropic risks related to theft or vandalism

Up to now, no events connected to human presence such as to give rise to serious risk factors have taken place. The Sanctuary is, however, constantly guarded by appointed staff, in charge of daytime surveillance on the whole area, as well as and by an intruder alarm system. Moreover, the presence of the order of San Michele Fathers on the premises is another direct method to supervise the property.

(II) Environmental Pressures

Air pollution

There is no atmospheric pollution in the area of the Sanctuary, neither due to local nor indirect factors. The city of Monte Sant'Angelo enjoys a particularly favourable microclimate, thanks to its geographic position on a mountain crest

that is natural border and thus a meeting point of two different climatic areas.

The first area stretches from SE to SW, including the gulf of Manfredonia and the plain at the foot of Gargano's Tavoliere delle Puglie; the second, stretching from NE to NW, is characterised by a vast mountainous area covered with woods and forests stretching beyond the Carbonara valley. This causes a substantial exposure to climatic variability, which is characterised by the total exposure of the city to all air currents of the compass rose that guarantee continuous clear air throughout the year. Moreover, there is no intense traffic that could damage or threaten the structures of the Sanctuary. However, in the busiest days, the Sanctuary is included in the pedestrian area and in the limited traffic area, as established by the Town Council with specific provisions.

(III) Natural disasters

Risk of earthquakes

The entire municipality of Monte Sant'Angelo is included in the classification pursuant to the Regional Council Decree no. 153 of 02/03/2004 and is therefore considered a 2-level seismic area in a 4-level scale in descending order. The Gargano promontory is covered by seismic currents that originate from a complex network of faults. The seismic activity recorded on the long term in the Gargano promontory is the main reason for the continuous attention and monitoring of the territory by the national institute of geophysics, which is implementing a local reading system with the installation – in the Municipality of Monte Sant'Angelo and suburban areas – of technological instrumentation able to record and transmit the data in real time regarding the slightest seismic activity. This is followed by specific correspondence between the

National Institute of Geophysics and the Municipality's Technical Office in order to assess the impact on the territory. The immediate signalling allows continuous monitoring of the Sanctuary. This is carried out by municipal experts and, when and if necessary, also by experts of the Fireman Service, the staff of the Protezione Civile and the technical staff of the Superintendences.

At the moment, according to the historical data regarding seismic events which hit the site, the high seismic risk in the areas corresponds to a good resistance of the architectural structures composing the monument, since, in the history of the Sanctuary, there have been no earthquakes that caused serious damage or collapse to load-bearing walls. In any case, following the intervention operations on the occasion of the Jubilee in 2000, all routes open to the general public within the Sanctuary are equipped with technical devices and specific signs indicating the escape routes, purposely created for emergencies. Moreover, all members of staff operating in the Sanctuary, both employed and volunteers, are duly trained to manage any kind of emergency.

Risk of fire

Within the structures of the Sanctuary, all routes open to the general public are regularly equipped with technological systems to signal fires and to extinguish them. The rooms that are not open to the public are in any case provided with an electric system in conformity with the law and are adequately isolated with fire-resistant doors from the areas open to the public. The main structure of the complex of the Sanctuary, corresponding to the covering of the cave, is adjacent to a modest green area that is well kept and fenced. Its access is regulated and in any case it is not included in the areas with free access to visitors: all these factors

prevent any potential fire risk that could be caused by the presence of this green area. Public roads around the site are provided with several fire hoses to be used in case of fire.

Risks related to terrorist attacks

At the moment this risk is rather remote. However, during the most important religious events, Monte Sant'Angelo and, in particular, the area of the Sanctuary are included in the list of sensitive targets where the Prefecture of Foggia imposes the systematic presence of law enforcement forces in support to the local Carabinieri station and the municipal police, who provide daily surveillance to the tourist areas of the city.

(IV) Visitor/tourism pressures

Tourism pressures

Tourism and pilgrimage flows do not represent any form of threat to the Sanctuary. The recent redistribution of spaces and rationalisation of differentiated routes, managed under the direct surveillance of the Superintendence of Bari – and realised thanks to State funds supplied on the occasion of the Jubilee –, aimed at protecting the property. The intervention consisted in:

- Creation of routes for people with special needs;
- Creation of escape routes equipped with adequate emergency signs;
- Creation of areas external to the Sanctuary system and creation of a wide place of penance which allowed the protection and enhancement of underground structures, as well as the creation of routes and exhibition spaces connecting the original centre of the Sanctuary to the accommodation centre "Casa del Pellegrino" (Pilgrim's House). These works, carried out with no demolition and/or distortion of original struc-

tures, made it possible to increase the level of usability of the Sanctuary and the services, since, in the new area annexed to the original area, 3 high capacity lifts, internal routes connecting the new library, the Devotional Museum, the Lapidary Museum and the Conference Hall are now available to visitors.

This new circulation system was placed on pre-existing natural openings in the grotto's access system; already in the past, these openings represented a connection point between the Angevin stairs and the external secondary and

isolated areas, which could not be used earlier. Tourism impact on the property, though considerable owing to pilgrimage flows, does not entail any risk condition for the structures of the Sanctuary.

Moreover, no promotional or religious tourism management strategy that could represent a threat to the monument was adopted, since the mystic atmosphere is the main factor of attraction.

Recent interventions introduced further escape routes in the Sanctuary that are absolutely sufficient to guarantee safety to visitors in case of evacuation due to

critical events. The critical collocation of the Lapidary Museum required the control of visitor flows that was guaranteed by guided tours, upon request of a limited number of people. The continuous and vigilant presence of volunteers in all internal routes guarantees efficient assistance to visitors.

Lastly, a thick network of close circuit camera ensures, along with surveillance on the property, constant control on possible critical events of different nature.

(v) Number of inhabitants within the property and the buffer zone

Site element No.	Name	Estimated population located within			
		Area of nominated property	Buffer zone	Total	Year
1	The Gastaldaga area and the Episcopal complex	0	1.067	1.067	2009
2	The monumental area with the monastic complex of San Salvatore-Santa Giulia	5	6.250	6.255	2009
3	The castrum with the Torba Tower and the church outside the walls, Santa Maria foris portas	2		2	2009
4	The basilica of San Salvatore	0	3.613	3.613	2009
5	The Clitunno Tempietto	0	98	98	2009
6	The Santa Sofia complex	1	1.710	1.711	2009
7	The Sanctuary of San Michele	13	1.583	1.596	2009
	The Longobards in Italy. Places of the power (568-774 d.C.)	21	14.321	14.342	

People living inside the monumental complex of San Salvatore - Santa Giulia in Brescia, inside the Torba complex in Castelseprio- Torba and inside the Santa Sofia complex correspond to the guardians' families.

People living inside the Sanctuary of San Michele is composed by the Order of the San Michele Fathers, managing the sanctuary.

The sites included in the serial property “The Longobards in Italy. Places of the power (568-774 AD)”, for which inscription on the World Heritage List is requested, are characterised not only by the different geographical location which sees them distributed in different regions from the north to the south of the Italian peninsula, but also by the fact that they are the object of very diverse ownership and management situations.

In order to attain the integrated and coordinated management of the Site as a whole, first and foremost a number of agreements have been entered into:

- on January 2008 in Rome, a national-level Memorandum of Understanding was signed by all owners and operators of the properties included in the application, as well as all the stakeholders that have been involved in drawing up the Site Management Plan and that will take part in its implementation (see section 7.b and annex 1);
- other agreements were signed at local level, where the ownership and management of the applicant properties were under several institutions/organisations: one agreement concerning the properties in Cividale del Friuli and one concerning the properties of Castelseprio-Torba (see section 7.b and annexes 2 e 3).

An agreement has been also entered into for the properties of Brescia and its Province (see section 7.b and annex 4). Further agreements are to be defined, aimed at involving further different stakeholders in local or network projects, concerning specific themes for valorising the resources of the reference territories of the places included in the Site (c.f. Management Plan).

In order to ensure an efficient, effective and dynamic management of the serial property, in 2007 a specific **Management**

Plan was designed and shared by all the stakeholders that had entered into the aforementioned institutional Memorandum of Understanding at the national level (see section 5.e and Management Plan enclosed herewith); the implementation of the Plan started in January 2008. Furthermore, for ensuring the co-ordinated management of the separate components of the serial property, as well as for ensuring the coordinated implementation of the networking actions provided for by the Management Plan and the integration of the actions planned for each site, in 2008 a pro-tempore Network Authority was set up. In 2009, this body led to the “*Italia Langobardorum Association*”, which is the current managing structure of the whole network (see section 5.e and Socio-economic Development Plan – objective 1 – project 1.1 of the Management Plan enclosed herewith).

There now follows the specific information regarding the individual properties entered in the application.

5.a1 Ownership CIVIDALE DEL FRIULI

The candidate assets belong to one of the following three institutions:

- the Municipality of Cividale del Friuli owns the so-called Tempietto Longobardo (since 1893) and the Monastery of Santa Maria in Valle (since 2001);
- the Parish of Santa Maria Assunta owns the Duomo and its annexes – namely, the Winter Chapel and Sacristies, the Chapter Archives, the *Museo Cristiano* and the Bell Tower;
- the Italian State owns the remains of the Patriarch’s Palace, the Palazzo dei Provveditori Veneti and the National Archaeological Museum.

5.a2 Ownership BRESCIA

The complex proposed for inscription on the World Heritage List includes a series of buildings, which are all public property.

5.a3 Ownership CASTELSEPRIO-TORBA

The property in the area of the ancient settlement of Castelseprio-Torba, stretching over around 250,000 m between the quarter and the fortification at the bottom of the valley (Torba), is divided among:

- the Province of Varese, owner of the Church of Santa Maria *foris portas*, the general building located at the entrance to the *castrum*, used as a surveillance and welcoming point and the neighbouring complementary areas (located in the Municipality of Castelseprio);
- Ministry of cultural heritage and activities, owner of the *castrum* and the slopes of the plateau (located in the Municipality of Castelseprio);
- Municipality of Castelseprio, owner of the access road to the *castrum*;
- FAI – Italian Environmental Trust, owner of the Monastery of Torba and its premises located in the underlying Olona valley (in the Municipality of Castelseprio and Gornate Olona);
- private owners of small lots.

5.a4 Ownership SPOLETO

La Basilica of S.Salvatore was acquired by the State at the end of the nineteenth century and today it is owned by the Municipality of Spoleto.

5.a5 Ownership CAMPELLO SUL CLITUNNO

The Clitunno Tempietto is owned by the State.

5.26 Ownership BENEVENTO

The complex – which applies for the inclusion in the WHL – is composed by three architectural properties: the Church of Santa Sofia owned by the State (FEC – Italian Fund for Places of Worship), the adjacent Cloister and the Abbey which today hosts the *Museo del Sannio*, which belongs to the Province of Benevento.

5.27 Ownership MONTE SANT'ANGELO

The property applying for the inscription in the WHL belongs to a legally autonomous ecclesiastical authority run by the order of St. Michael fathers (Ordine dei padri Micaeliti).

5.b Protective designation

All the properties included in the current nomination are subject to the protection due to monuments. That means that they are recognised as being a public concern and part of the cultural heritage of the Country and, as such, subject to special law.

That law, the *Codice dei Beni Culturali e del Paesaggio* - Code of the Cultural and Landscape Heritage, Legislative Decree January 22nd, 2004, no. 4 (see section 7.b and annex 7), which applies to the entire national territory, establishes that on such objects no alterations or modifications that might be disruptive of their intrinsic characteristics are admissible and that, furthermore, all works that aim to preserve, enhance, or restore the monument are in all cases subject to authorisation from the appropriate departments of the Ministry for Cultural Heritage and Activities (the

Superintendencies), or are to be directly managed by those offices.

According to the same national law, each intervention involving landscape that has been recognised as a public concern has to be previously authorised by the State through the Ministry of Cultural Heritage and Activities and/or the Regions, or the appropriate authorities (Provinces and Municipalities).

5.b1 Protective Designation CIVIDALE DEL FRIULI

All monuments comprised in the area of the site for which inscription on the World Heritage List is requested, as well as the movable works therein are subject to safeguard according to Italy's national law.

Monumental historical buildings were placed under special tutelage by the *Soprintendenza per i Beni Architettonici per il Paesaggio e per il Patrimonio Storico-Artistico e Demoetnoantropologico* (Architectural, Landscape, Historical, Artistic and Demoethnoanthropological Heritage Department); the *Palazzo dei Provveditori* and the underlying archaeological remains belong to the State. By law, any restoration work must be directly designed and performed by the Soprintendenze (local branches of the Ministry of Cultural Heritage and Activities) or approved and authorised by them. Moreover, the core zone (as well as all that included in the buffer zone proposed –which corresponds to the city's historical centre), is subject to special safeguard and conservation limitations enshrined in the main urban planning instruments of the Municipality of Cividale del Friuli, and in particular to those enshrined in the PRGC Piano

Regolatore Generale Comunale (Urban Development Plan), approved by decree by the President of the Regional Council of Friuli Venezia Giulia no. 19/press on January 31st, 2007 – and also to the rules enshrined in the Piano Particolareggiato (Detailed Urban Plan) - “Ambito del Centro storico” (Piano Attuativo – Zona A) approved with a Delibera of the Consiglio Comunale no. 57 on October 28th, 1998.

The methodology followed to draw up this new plan was based on analytical and descriptive research involving demographics, history of the territory and existing architectural heritage, socio-economic aspects as well as the infrastructure and legislation; it was also based on direct inquiries carried out in the field. The result of the analysis is explained in a series of charts, which highlighted in synthesis on one side the special limitative laws and their strictness and the lack of flexibility in the areas of research, and on the other showed up the areas' vocation and potential.

The PRGC involves building work, urban conservation and environmental protection, to be carried out by means of different implementation laws. The plan sets out different types of context amongst which is the historical centre. For this area, which is the location of the site and buffer zone, a detailed plan called Piano Particolareggiato d'Iniziativa Pubblica (the relevant implementation law being approved on October 28th, 1998), focus is based on “revitalizing” the urban centre of Cividale del Friuli by means of conservation and enhancement of the urban area's historical and monumentally relevant sections and the restructuring of the surrounding areas.

In particular, the Piano Particolareggiato “Ambito del Centro Storico” is meant to preserve and enhance the still extant historically relevant characteristic types,

to grant the historical centre a primary role in the commercial and service sectors, by recuperating the ancient economic, settlement and functional model at the base of the city's history. The Piano Particolareggiato "Ambito del Centro Storico" involves specific architectural rules which must be followed when dealing with building transformation, and deal with roofing, proportions, finishing of openings and wall areas, window and door structures as well as protective and decorative treatment.

The implementation plan's scope is subdivided into units called UMI (Unità Minime d'Intervento, or Minimal Units of Intervention). For each of these units, there are different types of intervention and use which are allowed; the area of the Monastery of Santa Maria in Valle with the Tempietto Longobardo and the Church of San Giovanni are all comprised within UMI "Q1", where the only type of intervention allowed is restoration, regulated by further prescriptions imposed by the Municipality. This procedure, which ensures a protection based on the awareness of the urban context, is also applied to building that are not subject to restrictions provided for the national legislation, but that are identified in the Piano Particolareggiato del Centro Storico as a symbol of the building characters of the local tradition. The same attention for the protection of historical building evidences is extended outside the historical centre to the villages and the municipal territory as a whole. Likewise, in areas UMI 123-124, corresponding to the Palazzo dei Provveditori Veneti (seat of the *Museo Archeologico Nazionale* and the remains of the Patriarch's Palace) and to the area of the Cathedral (and the *Museo Cristiano*), the only type of intervention allowed is restoration.

The buffer zone is subject to other protection laws, such as those imposing that

archaeological areas should be respected. In these areas the same laws apply as those for the homogeneous area of reference except in those cases in which a pre-emptive evaluation of work has been carried out by the Soprintendenza. This body would thus prescribe pre-emptive essay excavations to acquire knowledge about the state of the areas.

The current version of the PRGC provides for the transcription of the updated designations of sites of archaeological value on the graphical zoning tables so that operators and citizens may become aware of them and, therefore, strengthen their protection. The municipal authorities have recently updated the municipal Regolamento Edilizio, which is a building regulation that sets, inter alia, the provisions applicable to buildings in seismic areas, environmental and building decoration, air, light and noise pollution, energy saving, renewable sources and sustainable building (see paragraph 5.d).

The buffer zone is also protected from the environmental point of view thanks to a series of protection laws, or restrictions, which aim to safeguard the landscape, according by laws called Legislative Decree no. 42/2004 and Ministerial Decree dated 01/07/1955; these ensure the respect of a series of specific prescriptions meant to safeguard what is of public interest in the area. The landscape preservation and enhancement focus on the most relevant natural traits, particularly the river Natisone and its *forra*, which are protected also by the implementation norms of the *Piano Regolatore* (Urban Development Plan), by prescribing conservation work for the river and its vegetation, by periodical monitoring of the healthiness and environmental quality requirements of the river's water, allowing work which aims to ensure water safety and banning reduction of the

water flow, regulating water discharge and ensuring against the threat of morphological transformation. Building work on existing buildings and on areas in which building work is allowed must also submit to prescriptions that impose respect for the surrounding landscape, by minimising the impact of such work.

A further limitation refers to the section of the river Natisone included in the buffer zone. It is a restriction enshrined in a law entitled Legge Regionale no. 42/1996, which defines the perimeter of the ARIA (namely, Area di Rilevante Interesse Ambientale, or Area of Relevant Environmental Interest) no. 17, that is, an area characterised by a remarkable importance for its environmental and landscape value. The objectives of conservation, safeguard and enhancement of this territory are regulated by imposing specific uses, as described by the implementation rules of the *Piano Regolatore*, as well as implementation protocols and listing types of work allowed, conditional to urban and building values, to the observance of certain boundaries around the areas of interest; particular attention is also devoted to buildings of architectural and environmental value.

5.b2 Protective Designation BRESCIA

The monumental area including the Monastery of San Salvatore-Santa Giulia is placed under the protection of the Italian laws in force.

Moreover, the buildings and the buffer zone fall within an area called "Zona A" a of the *Piano Regolatore Generale* – PRG (Urban Development Plan), which is an area characterised by the highest protection standards.

In the Brescia's *Piano Regolatore*

(approved on April 6th, 2004, G.R. no. 7/17074) these zones include the area inscribed within the walls, as well as those centres of ancient municipalities which were incorporated into the city, the neighbourhoods which have maintained their urban form, the rural complexes, the early examples of industrial activities, the architectures described as being of notable importance for the city and worthy of preservation.

In the areas classified as “Zona A” the only work allowed is restoration or conservation; all types of masonry work must focus exclusively on the conservation of the building, and ensure its functionality by means of a series of systematic interventions which must respect the typological, formal and structural elements and allow it to be used in ways compatible with those same elements. These interventions include consolidation, reorganisation and renewal of the building’s constituent elements, the insertion of accessory elements and of the facilities required by the purposes for which it is used, as well as the elimination of any elements which are foreign to the building’s organism. These areas are characterised by the degree of conservation required, the degree of transformation allowed (A1 buildings to be restored – a buildings to be renewed – A3 buildings to be restructured) and by the use to which they can be put. The main use that is allowed is “residential” (R). There is also provision for “service-producing activity” (T), “services and equipment” (S), while “agricultural activity” (A), and “industrial and artisanal activity” (I), as well as “Fuel stations” (Td) are banned. The ground floor areas can in any case be occupied by service and artisanal service activities if such areas are found to be inadequate as living quarters. Restructuring work is allowed only up to a maximum height, corresponding to the height of the eaves

of the original building or to the summit of the original. In the case of a restoration, mandatory pre-emptive essay work must be carried out on the structures. The relevant photographic documentation must be supplied to the Municipality.

All intervention applications must be documented with surveys, sections, environmental surveys (indicating species and relative dimensions) and any external qualifying element (walls, half-circle structures, fountains, differences in height, flooring), volume data, historical and historiographic documentation with plans, prints, ancient surveys, land registry maps for the properties concerned; photographic documentation of the external and internal conditions, significant particulars, measurements and description of internal and external finishes (frames, banisters, stairs, windowsills, floors, coatings, etc.); executive project; report indicating planned operations of restoration, consolidation, renewal and use of each floor.

5.b3 Protective designation CASTELSEPRIO-TORBA

The entire monument site has been declared to be of particularly important interest pursuant to national protection legislation for its high archaeological-architectural, historical-artistic and landscape-environmental values (woodland areas) by a Ministerial Decree dated October 18th, 1963.

Moreover, the entire area is protected by the town-planning instruments (PRG, Urban Development Plan) of the two Municipalities of Castelseprio and Gornate Olona, which implement the State restrictions. In particular:

- the whole area of the *castrum* is classified as A1 (i.e. “of historical and archaeological value”) and exclusive use of

monumental heritage for cultural purposes is admitted, including respectful events on the site (conferences, public shows, etc). In order to allow this main allocation of use, the following complementary allocations of use are permitted: guardianships, offices, small-scale sale of goods linked to the site’s characteristics and for the administration of drinks. The preparation of temporary car parks on the green areas is also permitted;

- the areas surrounding the *castrum* are classified as A/E2 (i.e. “agricultural woodland area of historical and archaeological value”);
- other areas, located around the archaeological park, are activated as A/E1 (i.e. “agricultural area of historical and archaeological value”), on which prior permission is necessary from the superintendence office if earth is moved.

The Monastery of Torba, which is located within the municipal territory of Gornate Olona (excluding the Church of Santa Maria, which falls within the municipal territory of Castelseprio), with all its minor buildings, is subject to the monumental restriction under the Law dated June 1st, 1939 no. 1089), whereas the whole surrounding area the complex is subject to a landscape restriction under the Law dated June 29th, 1939 no. 1497). Other restrictions imposed in this area concern:

- the environmental protection restriction on the course of the river Olona, which runs downstream the settlement, and its banks for a strip of 150 meters, thus marginally touching the area of the Monastery for a grassland strip along the provincial route SP 42;
- the environmental protection restriction on the woodland territories beyond the said provincial route along the course of the river, and the woodland slope uphill towards Gornate;
- lastly, the archaeological restriction

mainly affecting the area to the west of the provincial route SP 42 (letter c, letter g and letter m of art. 1 of the Law dated August. 8th, 1985 no. 431, respectively). With reference to the PRG zoning in force, the Monastery and the whole grassland area around the complex belong to the so-called “special areas under direct regulation”. In this case, it is an “S2” zone, which is an “area with monumental buildings and archaeological sites of primary importance subject to priority protection action”. For any intervention to be carried out in this area prior authorisation is to be requested from the *Soprintendenza per i Beni Ambientali e Architettonici* (Architectural and Environmental Heritage Superintendence) and the *Soprintendenza per i Beni Archeologici* (Archaeological Heritage Superintendence). The sole use admitted is the fruition for cultural purposes of the assets. New buildings are not admitted. Moreover, the area of the Monastery of Torba is classified as an “Ambito di Paesaggio”, i.e. landscape ambito, subject to the special prescription no. 3/AP1, which lays down special provisions mainly aimed at preserving the area in the field of types, urban morphologies, building and architectural characters, structural characters and external arrangements. It should be added that this “Ambito” is attributed a class of sensitivity 4 (high on a scale from 1 to 5, see D.G.R. of the Lombardy Region no. 7/11045 dated November 8th, 2002 entitled “Linee guida per Esame Paesistico dei Progetti”, or Guidelines on the Landscape Assessment of Projects).

In addition, the fact that the whole area is part of the PLIS (*Parco Locale di Interesse Sovracomunale*, Local Park of supra-Municipal Interest) is a further guarantee of heritage protection, especially from an environmental and landscape point of view. Some of the park’s several purposes are, in fact, the preservation, recovery,

safeguarding and social use of the territory. The agreement stipulated between the municipalities belonging to the PLIS, in fact, refers to the “connection between the various protected areas with green corridors and dedicated paths” and, more specifically, foresees “the recovery of the ancient paths as an eco-compatible improvement of the nature and environmental routes included as part of the dynamic use of leisure time that respects landscape and historical matrixes of the area”.

Moreover, the site of Castelseprio-Torba is included within a larger area along the course of the river Olona, which has a special naturalistic, historical and cultural value, belongs to the Municipalities of Castiglione Olona, Gornate Olona e Castelseprio and was declared in 1984 an Area of High Public Interest (pursuant to art. 136 of a law called *Decreto Legislativo* no. 42/2004), recently (2008) validated and partially modified with reference to its perimeter by a Resolution of the Province of Varese (no. 3/08 of July 22nd, 2008), lastly declared, in these terms, a landscape asset with a high public interest by the *Giunta Regionale Lombarda* (D.G.R. dated August 7th, 2009 no 8/10135). This area is subject to strict use prescription and management criteria (see Annex 2 of D.G.R.) that essentially aim at

- a) protecting woodland and surface waters;
- b) protecting and valorising ancient built centres, traditional building techniques and, in particular, the areas close to the Monastery of Torba (new buildings are banned, as well as extensions of the industrial area at the east of the provincial route SP 42, for which restructuring criteria are also laid down,
- c) carefully managing recent settlements,
- d) protection perceptive/visual aspects,
- e) developing enhancement actions,
- f) minimising the impact of technological

networks.

The Municipality of Gornate Olona has recently transposed the law called *Legge Regionale* no. 13/2009 dated July 16th, 2009, on “special actions for the development and qualification of building and urban heritage in Lombardy” (the so-called Piano Casa), thus significantly restricting the possibility to build by way of exception to the legislation in force: in particular, the areas of the historical centres are protected, as well as the rural areas and, especially, the area of comonumental archaeological value of Torba.

5.b4 Protective designation SPOLETO

Apart from the protective provisions in line with the national legislation for the safeguard of cultural heritage (Code of the Cultural and Landscape Heritage) focusing on core zone and its buffer zone, the whole of the buffer zone –including most of the historic town centre, the bed of the Tessino river and the Ciciano hill – at the foot of which stands the basilica of San Salvatore- is also subject to the protective and safeguard provisions by the most important urban instrument of the municipality of Spoleto, the PRGC Piano Regolatore Comunale (Urban Development Plan).

The Urban Development Plan subdivides the buffer zone into three homogeneous areas: zone A, monumental construction or buildings of considerable historical and architectural interest;

the graveyard area;

the agricultural and environmental area.

Within the historic town centre –zone A– restoration and restructuring work as well as the launching of new projects are all possible; any type of work, though, carried out by either private companies or public institutions -the repair of a sign, the colour

of the façade, design or restructuring work- needs to be compatible with the urban tissue; any type of work needs to obtain:

1. the go-ahead of the municipal architectural and landscape quality commission, made up of experts on cultural heritage,
2. the go-ahead of the Umbria Superintendence for architectural heritage and landscape and for historic, artistic and demo-ethno-anthropological heritage,
3. the go-ahead of the Superintendence for archaeological heritage, following all the necessary inspections and research work to detect any remains of archaeological interest.

As to the area of the graveyard area, there is a 100,000 linear metre (respect area) belt unsuitable for building, within which only restoration and conservation work of the existing buildings can be authorized. Furthermore, in conformity with the Urban Development Plan in the agricultural and environmental area, in addition to restoration interventions, building extensions to houses are also possible; yet the project must obtain an opinion from the Municipal Commission for Architecture and Landscape Quality and the Superintendence of Architectural, Landscape, Historical, Artistic and Demo-Ethno-Anthropological Heritage of the Region Umbria.

The *buffer zone* is also protected by the hydrogeological (Royal Decree 3267/23) and the landscape restrictions. Biotic and landscape components in the area make up an interactive and interconnected system, a geographically adjacent to and an environmental continuum of the Site Nature 2000 (SIC – site of Community interest identified by the European Community) IT5210064 “Monteluco di Spoleto”. The system and the historic town centre can be seen as a single entity.

The system supports and is the continuation of the historic town centre itself.

Moreover, since 50% of the wooded areas and pastures belonging to the municipality property are included in the sites Nature 2000, in special protection areas and in the sites of Community interest, the municipality of Spoleto is currently developing its forest management plans for the sustainable use of the forests themselves.

Therefore the *buffer zone* of the basilica is protected for landscape, historic and naturalistic reasons, not only by the Spoleto Urban Development Plan, but also by the Territorial Coordination Plan and the Regional Planning Scheme of the Umbria Region (see 5.b). The area is therefore protected from any modification and/or transformation (demolition and reconstruction work, new construction work, unsuitable use of buildings and so on) undermining its authenticity and its integrity.

Within the buffer zone, further restrictions are in place for the protection of archaeological sites, namely a preventive assessment of the work to be done on the part of the Archaeological Superintendence. The latter may arrange for preventive surveys to further knowledge on the state of the sites.

The Ministry for Cultural Heritage and Activities has started a direct procedure, designed to protect the area surrounding the San Ponziano Monastery, to establish a ‘respect area’, unsuitable for construction work, and to contain the area suitable for construction work in conformity with the Urban Development Plan.

5.b5 Protective designation CAMPELLO SUL CLITUNNO

The Clitunno Tempietto, which is at any rate protected in compliance with the

national legislation in force (as a monument of historical and artistic value and as a part of a cultural landscape subject to restrictions) is included, along with the proposed buffer zone, in a highly protected area for its extraordinary environmental characteristics.

The area characterised by the river Clitunno and its *Fonti* (Springs) is included in the “areas of remarkable naturalistic value of the Umbria Region” (D.G.R. no. 4271/98) for the purposes of improved protection and enhancement. The same area corresponds to one of the 4 sites of UE interest (SCI) identified in the territory of the Municipality of Campello under the Bioltaly Project, launched by the Ministry of the Environment and promoted by the European Union pursuant to the Habitat Directive EEC 92/43.

Pursuant to the provisions laid down in the Framework Law entitled “Legge Quadro sulle Aree Protette” (no. 394/91), the *Fonti* with the river Clitunno are therefore included in the international network “Natura 2000”, which is a system of protected areas aimed at protecting habitats and biodiversity at the European level (Orsomando, 1998). The whole buffer zone is moreover covered, as stated above, by a landscape restriction and therefore included in the *Piano Territoriale di Coordinamento Provinciale* (Territorial Plan for Provincial Coordination) and the *Piano Urbanistico Territoriale* (Territorial Urban Development Plan) of the Umbria Region, which protect it from any change and/or transformation of context that can jeopardise its authenticity and integrity.

5.b6 Protective designation BENEVENTO

The complex of Santa Sofia, besides protection in compliance with the national protection regulation in force, must

comply with safeguard provisions of the Urban Development Plan (PGR) of the city of Benevento; the complex is –along with the proposed buffer zone– located in the “area A” of the PRG, and thus must meet the highest protection standards.

In area A only restoration and conservation interventions are allowed, that are construction works which only aim at preserving the buildings, thus ensuring their functionality through a methodological system of works which –by respecting the typological, formal and structural elements of the building itself– guarantee their appropriate use. These interventions include consolidation, restoration and renewal of the elements composing the building, the addition of accessories and plants requested by use and the elimination of the elements considered extraneous.

Preliminary knowledge tests must be carried out before starting restoration on the buildings subject to intervention.

The documentation relative to these tests must be given to the Municipality.

All intervention applications must be documented with surveys, sections, environmental surveys (indicating species and relative dimensions) and any external qualifying element (walls, half-circle structures, fountains, differences in height, flooring), volume data, historical and historiographic documentation with plans, prints, ancient surveys, land registry maps for the properties concerned; photographic documentation of the external and internal conditions, significant particulars, measurements and description of internal and external finishes (frames, banisters, stairs, windowsills, floors, coatings, etc.); executive project; report indicating planned operations of restoration, consolidation, renewal and use of each floor.

Authorisation to intervention is given by the Municipality, after the competent

Superintendence of the Ministry of Cultural Heritage and Activities has expressed its opinion on the matter.

The PRG also envisages specific protection provisions for the “Longobard walls” which limit most of the buffer zone proposed.

The same provisions are also laid down in the new proposal for Piano Regolatore (PUC), which as a further protection significantly extends the protected perimeter of the Historical Centre far beyond the buffer zone.

5.b7 Protective designation MONTE SANT'ANGELO

The area, already protected by national legislation (Code of Cultural and Landscape Heritage, Legislative Decree of January 22nd, 2004, no. 42), is also part of zone A of the *Piano Regolatore Generale* (PRG or Urban Development Plan) of the Municipality of Monte Sant'Angelo (approved by the Regional Council Decision no. 982 of 25.02.1986), zone 2 of the National Park of Gargano (established by the State Law no. 394 of 1991), and finally the Thematic Territorial Urban Plan for Landscape (established by the Apulia Region after the Decision no. 1748 of 15.12.2000).

The urban area “A1 - Centro Storico” (historical centre) of the Municipality of Monte Sant'Angelo, which includes the property applying for WHL and the entire buffer zone, is subject to detailed provisions for protection and maintenance (included in the building law and the technical regulations for the implementation of the Urban Development Plan), which envisage that all interventions must be authorised by the Municipality.

The urban development plan envisages specific architectural provisions as far as intervention of technical nature is

concerned, including change in the intended use, for which also the binding opinion by the competent Superintendence for the protection of building techniques, typical building material and types of construction is needed.

The Municipality of Monte Sant'Angelo also includes part of zone of the National Park of Gargano, classified as an area characterised by human presence and action. The regulation for the urban development plan requires the binding opinion of the park authority for each urban conversion in the territory, and that of the competent Superintendence, which is in charge of supervising maintenance and improvement of the quality of landscape in the northern area of the Sanctuary in order to protect the current view. In the Territorial Thematic Urban Plan for Landscape, established by the Apulia Region, the area of the Sanctuary of San Michele is included in the area classified by technical standards as extended territorial scope “E”. Although it does not have specific influence on the structure of the Sanctuary, its action of protection directly contributes to the protection of the area located in the north of the structures themselves, outside the urban area, which has high landscape value.

The bodies entrusted with the task of supervising the compliance with the restrictions set on the Sanctuary, its artistic and cultural heritage and the buffer zone as a whole are:

- Ministry of Cultural Heritage;
- Regional Directorate of Cultural Heritage and Landscape Assets of Apulia;
- Superintendence for Architectural and Landscape Heritage – Provinces of Bari and Foggia;
- Superintendence for Historical, Artistic and Ethno-Anthropological Heritage – Provinces of Bari and Foggia;

- Superintendence for Archaeological Heritage of Apulia in Taranto;
- Superintendence for Archives of Apulia;
- State Archives of the Province of Foggia;
- National Park of Gargano;
- Apulia Region – Councillorship of Urban Development, Environment and Landscape;
- Municipality of Monte Sant'Angelo.

5.c Means of implementing protective measures

The protection measures currently in force are comprehensive and effective and therefore no further integrations are necessary. Concerning Castelseprio-Torba, the Soprintendenza Archeologica of Lombardy is however proposing to complete the acquisition of the areas that are still privately owned, which fall inside the area of the *castrum* and the Borgo, in order to be able to protect the entire complex even more efficiently. Similarly, the FAI intends to proceed with the acquisition of the meadow area next to the Monastery, to avoid any work that may be inconsistent with the values of the area. As regard the Clitunno Tempio, in order to increase protection, the Municipality of Campello is working on a project which will enable the widening of the area belonging to the monument, thus including the route of the ancient *Via Flaminia*, currently owned and managed by the local administration; this will make it possible to equip the fenced area with better services. Furthermore, in order to connect the ancient building to the river Clitunno, so as to better appreciate the ancient monument, the competent Superintendence launched a request for the acquisition of the existing cave-cellar located under the park in front of the Tempio (see Management Plan).

5.d1 Existing plans relating to Municipality and region in which the proposed property is located CIVIDALE DEL FRIULI

The site proposed for inscription on the WHL is subject to various intervention plans, some of which have already been implemented, while other are still at the planning stage. These plans all focus on the enhancement of the monuments, and on offering facilities with which to guarantee a greater cultural experience.

A development plan has been drawn up by the city administration for the Monastery of Santa Maria in Valle (see Management Plan), which means to transform the complex into a centre to welcome and coordinate visitors to the city, the seat of different activities and cultural institutions.

In this regard, the Friuli Venezia Giulia Region has adopted a special law, the L.R. no. 17/2008 (art. 7, sub-pars. 52/53) under which it supports with a funding amounting to € 3,000,000.00 enhancement and conservation interventions for the Monastery of Santa Maria in Valle and the Tempio.

In 2009 a first lot of works was carried out, which involved the reorganisation of the way visitors access the site through a different access system and an extension of the areas that can be visited in the Monastery. The objective was to define new areas in the Monastery to be used as “museum of itself” before entering the Longobard Tempio.

A plan to set up by the *Soprintendenza per i Beni Architettonici per il Paesaggio e per il Patrimonio Storico Artistico e Demoetnoantropologico* (BAPPSAE) is meant to monitor the state of conservation of the Tempio. The preliminary studies have started, and focus on improving knowledge of the execution technique of the stuccoes and frescoes.

The Museo Cristiano and the Treasury of the Duomo, where the Altar of Ratchis and the Tegurium of Callixtus are kept, has been refurbished during the last year in such a way as to double the size of the exhibition area, which will allow an easier visit of the two masterworks of Longobard sculpture.

At the moment the monitoring of the surfaces of the Altar of Ratchis, which still preserve their pictorial decoration is being implemented by the Soprintendenza for BAPPSAE. The same institution is overseeing the renaissance aspect of the architectural surfaces of the *Duomo*, to ensure the notable artefacts there are adequately enhanced.

As to the National Archaeological Museum located in the Palazzo dei Provveditori Veneti, built over the site of the ancient Patriarch's Palace, there are plans to bring the exhibition areas up to the standards described in the prescriptions contained in the “Atto di Indirizzo del Ministero per i Beni Culturali” (included in a law called *Decreto Ministeriale* dated May 10th, 2001); this should result in a larger exhibition area, an increase of the didactic equipment, the updating of the security facilities, the rationalization of the museum's depots (this last item is part of a larger regional program for the reorganisation of archaeological storing areas and of restoration laboratories of the *Soprintendenza per i Beni Archeologici* del Friuli Venezia Giulia).

The Library next to the museum is also involved in a project, which enjoys the support of the Parish of Cividale, which aims to digitalize the ancient codexes of the Chapter Archives that are most often requested by scholars. This should ensure their conservation and make these works accessible to a larger public.

A project that aims to set up an integrated museum system at Cividale, with a single

ticket and a single welcoming facility at the Monastery of Santa Maria in Valle, linked to cultural tourism itineraries in the surrounding area (see Management Plan).

The Friuli Venezia Giulia Region has activated guidelines for a sustainable tourism policy. These focus on enhancing both natural resources (protected areas), environmental resources, historical, artistic and archaeological assets, as well as agricultural and food of high quality. In particular, according to the law entitled “Legge Regionale 2/1983 per la valorizzazione dei centri storici”, Cividale receives for the enhancement of historical centres a yearly fund of € 293,000 with which the Municipality ensures the streets and squares are refurbished and improved. In this framework the interventions affecting the *Ponte del Diavolo* were carried out in June 2009) and those involving Via Mons. V. Liva will be shortly started in an area intended for public parking at the northern entrance to the historical centre, Via Largo Boiani and the viewpoint area called Belvedere, which from the left bank of the river Natisone overlooks the historical centre, as well as the enhancement of sites within the buffer zone through the requalification of the public lighting system.

A further fund of € 850,000, thanks to the same law, was also available to refurbish an area called Foro Giulio Cesare; this work was completed.

The municipal authorities have updated by their Delibera Consiliare no. 28 dated September 3rd, 2009, the municipal Regolamento Edilizio, which is the tool ruling at the urban level physical and functional transformation and building activities to be performed according to technical, aesthetical, hygienic, health, safety and viability requirements for buildings. These regulations help achieving at both private and community level

high standards of living in compliance with local historical and environmental values. More specifically, these regulations lay down the technical and architectural requirements of building works and provisions to be applied, *inter alia*, for seismic areas, building decoration, air, light and noise pollution, energy saving, renewable sources and sustainable building.

5.d2 **Existing plans relating to Municipality and region in which the proposed property is located** **BRESCIA**

The site proposed for inscription on the WHL falls within the scope of many intervention plans set up by Municipality of Brescia, some of which are completed, while others are under way or in progress. These plans focus primarily on the preservation of the Monastery of San Salvatore-Santa Giulia and its historical, archaeological and architectural value, in view of safeguarding the monastic complex and of preserving and valorising the archaeological area of the *Capitolium*, including the whole of the public buildings of the Roman city, and including the shrine, dating to 1st century B.C., the Capitoline temple of 1st century A.D., the Roman theatre, the Forum, and the Basilica. This complex constitutes a monumental archaeological area, and is the only one of its kind in northern Italy, which adds completeness to the context illustrated by the *Museo della Città*; the inclusion of this area in the museum’s exhibition area guarantees a highly specialised archaeological value to the city museum, helps disseminate knowledge concerning its offerings and concerning the services connected to the area itself (see Management Plan).

The monumental complex with the Monastery fall within the area A of the PRG Piano Regolatore Generale (Urban Development Plan) of the Municipality of Brescia, which is the main urban planning tool of the city laying down general directions for the arrangement of the whole municipal territory together with restrictions and conditions for the use of private land ownership. The plan also aims at guaranteeing a better urban composition of each single settlement and describes the future configuration of the municipal territory. Also in Brescia, as for the whole national territory, the Piano Regolatore will be replaced by the Piano di Governo del Territorio (Territorial Regulation Plan), to be shortly adopted by the Municipality of Brescia.

Secondly, articulated and diversified plans concur to ensure the site’s promotion and enhancement, aiming to coordinate initiatives promoted by entities and associations within the city (e.g. proposals drawn up by the Municipality’s Ufficio Marketing (Marketing Department), Ufficio Manifestazioni (Events Department) and Settore Mobilità (Mobility Department), included in the Management Plan). The town of Brescia lies within Lombardy region. Like the Municipality, the region has also adopted specific policies to develop sustainable tourism; the region in the specific three-year program poses the protection of tourist areas as a first-degree priority. The same body has also activated an agreement protocol for the “promotion and dissemination of the European Charter for sustainable tourism in protected areas”.

5.d3

Existing plans relating to Municipality and region in which the proposed property is located CASTELSEPRIO-TORBA

The area of Castelseprio-Torba, in addition to being part of the town-planning instruments of the two municipalities of Castelseprio and Gornate Olona (PRG, Piani Regolatori Generali, or Urban Development Plans), is also included in the government territorial plans, both provincially (PTCP, Piano Territoriale di Coordinamento Provinciale, Territorial Plan of Provincial Coordination) and regionally (PTR, Piano Territoriale Regionale, Regional Territorial Plan), as an area of historical, artistic, archaeological and landscape interest for which only allocations of use linked to conservation and use are foreseen.

Both the Municipality of Castelseprio and the Municipality of Gornate Olona are preparing the PGT (Piano di Governo del Territorio, Territorial Regulation Plan), which is the new municipal planning tool provided for by the Regional Law of Lombardy no. 12/2005, art. 7), where the municipal restrictions on the archaeological area laid down in the PRGs in force will be confirmed. Both municipalities should complete the procedure for the preparation of the PGT by the end of 2010. The site area is also a part of the Rile-Tenore-Olona Local Park of Supra-municipal Interest (PLIS). Set up in 001 between eight municipalities, the park is has its geographical boundaries along the catchment basin of the Rile, Tenore and Olona rivers and extends over about 1500 hectares. The park, which was acknowledged by the Province of Varese in 2006, is included in the list of local parks of supra-municipal interest as foreseen by the Regional Law no. 86, dated 1983. The park territory has several outcrops of miocenic gonfolite, whose geological

importance was acknowledged in 2008 by the Lombardy Region, which with its DRG no. 8/6957 dated April 2nd, 2008 officially recognised the creation of the “Natural Monument of Gonfolite and Forre of the Olona River”.

The park is managed directly by the municipalities, which promote projects and work programmes. Some of the several goals of conservation, safeguarding and social use of the territory are included in the agreement stipulated between the member municipalities that refers in particular to the “recovery of ancient paths, as an eco-compatible optimisation of natural and environmental routes”, to allow walks, horse-rides, cycling tracks etc.

The park is therefore a privileged interlocutor for the setting up of a profitable collaboration for the management, optimisation and promotion of the territory (http://www.comune.castiglioneolona.va.it/Parco_RTO/PLisRTO/index.html). With regards to the conservation of the site, it is part of the planning of the various competent institutions (Soprintendenza Archeologica, Province of Varese, FAI - the Italian Environmental Fund). The planned activities do not only concern the monitoring and maintenance of the monuments on the site, but also a series of specific interventions aimed at the best conservation and enhancement of some structures in particular.

In Torba, after completing the conservative work on the frescoes in the Tower and the Church of Santa Maria, ordinary and extraordinary maintenance works are continued to enhance the site (see 5.f3).

In addition, work is being carried out aimed at improving the presentation and use of the entire area (see 5.i3). With regards to the *castrum*, conservative work is about to be started on some stretches of the fortress walls on the Baptistery of the Church of San Giovanni (that will have a new protective cover),

whereas the restoration work on the Church of San Paolo has been completed. Based on the Memorandum of Understanding signed in 2004 between the competent institutions for the site (Province of Varese, Ministry of Cultural Heritage and Activities – Lombardy Superintendence for Archaeological Heritage and FAI – the Italian Environmental Fund), a coordinated intervention plan for the enhancement and the promotion of the whole archaeological area is currently being drawn up (see 7.b). The general aims of the plan to be pursued via integrated management are: the reconfiguration of the historical and artistic unit of the complex by recovering historical connection routes between the areas, the best enhancement of the existing monumental heritage and the expansion and development of public services.

With regards to tourist development, there are several plans that concern the archaeological area and the territorial context that it is part of. A specific work group has been set up for this purpose, coordinated by the Lombardy Region Headquarters (of the Ministry of Cultural Heritage and Activities), which counts a number of bodies and associations involved in promoting the area for which it is responsible. The main ongoing projects are:

1. “Ciclovia dei Laghi. Feasibility Study for the Creation of a Cross-Frontier Insubria Cycling Ridge” - interregional PIC Project IIIa, measure 1.3 integrated development of tourism (jointly financed by the European Union), that aims to enhance the value and promote tourism in the areas involved and plan a cycling-tourist route with three itineraries for each of the provinces involved (Province of Varese, Province of Como, Canton Ticino). The project is in the second phase of implementation and promotional material such as a general map of

the routes (distributed free of charge), a tour guidebook with historical-artistic explanations, a detailed map with three itineraries for each province involved (distributed free of charge) and the website www.cicloviadeilaghi.it have already been created and are available.

2. "Naturalness and Communication in the Contado of Seprio" (Italy – Switzerland), inter-regional project, jointly financed by the European union in two measures: measure 1.3 (integrated development of tourism): "Rediscovering the Contado del Seprio by Culture and Nature", and measure 2.2 (enhancement of artistic, cultural and building heritage): "The Pedestrian Communication Routes"
- The aim of the project is the optimisation and tourist promotion, and mapping of the path network and creation of a cycling-pedestrian route in seven stages in the areas involved. The project is about to be completed and promotional material such the landscape—tourist guide book "Discovering the Contado del Seprio (distributed free of charge), the trilingual (Italian, French and German) tourist map (distributed free of charge); the website, the tourist package "Nature and Culture in a Corner of Insubria", also using the Historical Valmorea Railway (steam train), and guided historical-artistic and nature tours have already been created and made available. Tourist signs and learning panels are currently being designed. Moreover, the project is being developed and will be focused on the creation of an integrated system for promotion and reception, which is a very important aspect to be dealt with. The new project will be submitted for funding under Interreg in 2010.

The territorial marketing strategy set up by the Province of Varese in recent years has shown how tourism is one of the most dynamic economic sectors in the area. In

particular, in addition to taking part in the European Community projects described above, the Province works continuously on updating the "Tourist System", which comes from the commitment to promoting and optimising the entire area of the Province of Varese, also through actions that are co-financed by the Lombardy Region, such as the "Varese Land of Tourism" project.

Both the Municipality of Olona and the Municipality of Castelseprio joined the project in September 2006. The latter submitted two projects as part of the system, both with maximum priority level:

- the widening of the road leading to the Castelseprio archaeological park, with the creation of parking spaces and refurbished green areas with the aim of improving accessibility, usability, and quality of access to the archaeological area;
- upgrading of a public area in the old town centre, with the aim of refurbishing the urban area for tourist and leisure accommodation, and for the organisation of historical, cultural and tourist events.

The Municipality of Castelseprio, in agreement with the Province of Varese and with the contribution of the Lombardy Region, is also preparing a plan to increase road and tourist signs that will allow visitors to easily reach the archaeological park from the various approach roads. A series of bilingual explanatory panels will also be created that will be spread throughout the Municipality and along the access road to the *castrum*, as a further contribution to the use and optimisation of the archaeological park.

In 2004 the Municipalità of Gornate Olona, together with the Lombardy Region, the Province of Como, the Province of Varese and the Province of Milan, as well as 77 municipalities belonging to three different areas, AdBPo (Autorità di Bacino Po, Authorities of the Po Area), AIPO (Agenzia

Interregionale del Fiume Po, Interregional Agency for the river Po), Ambiti Territoriali Ottimali (ATO, Optimal Territorial Areas) of Milan, Varese and Como, ARPA Lombardy and Ufficio Scolastico Regionale per la Lombardia (Regional Education Office for Lombardy), entered into the il "River Agreement: Olona-Bozzente-Lura". This agreement can be considered a Framework Agreement on Territorial Development between the Region, Local Authorities and users of water resources and relevant areas. It is an action tool provided for by the legislation of the Lombardy Region (L.R. no. 26/2003) aimed at implementing the aims and objectives provided for by the European Community in the field of environment and especially of water, as detailed in the European Framework Directive on Water (2000/60/EC). The strategic objectives identified in the said agreement are as follows: reduction in water pollution, reduction in hydraulic risk, sharing of information and dissemination of water culture, requalification of environmental and landscape systems and settlements. The three river corridors are organised as "local subsystems" in order to identify the relevant project themes in view of complying and valorising the various multiform local identities. The key theme for the Olona section between Castiglione and Lonate Ceppino, the so-called "subsystem of art centres" is the enhancement of art centres (Castiglione, Castelseprio and Torba) as crucial elements for the reorganisation of cultural and tourist fruition of the valley. The objectives and directions for which financial resources are available to be spent on the territory, as stressed by regional representatives in the recent meeting (October 13th, 2009) "River Agreement: Meeting between Municipalities of the area of Seprio", organised by the Municipality of Gornate Olona, include the enhancement of the

cultural, fruition and landscape role of the historical and architectural heritage of the area.

In order to reinforce the communication of historical, artistic and landscape values of its territory, the Municipal Authorities of Gornate Olona launched the implementation of a project aimed at cataloguing assets and activities in progress, whose results are published on the new municipal website (www.comune.gornateolona.va.it/unesco). In the near future, information will be translated in English, French and German so that they become accessible by a larger public.

5.d4 Existing plans relating to Municipality and region in which the proposed property is located SPOLETO

La basilica of San Salvatore is one of the monuments and places protected by spatial planning through coordination instruments of local authorities: the Spoleto town planning scheme, adopted in 2008 (see 5.b4), the provincial territorial coordination plan and the regional planning scheme of the Umbria region mentions the area comprising the identified site and its buffer zone, protected by virtue of their historic and naturalistic features.

In 2008, the Municipality of Spoleto, - thanks to the funds allocated by Umbria regional authorities, amounting to € 300,000- started conservation and regeneration work on the former monastery, the building standing next to the basilica of San Salvatore, in a bad state of conservation and virtually unfit for use. A feasibility study is currently being carried out to restore the building, -which will become a documentation and information centre in the service of the basilica- and for the

regeneration of the area bordering the site. The various initiatives taken by the municipality – some have already materialized, some are currently being implemented, some are in the offing - include the alternative mobility project. The third part of the project envisages the building of a ground level car park, what is known as “Rifle-range car park”, with 152 park spaces for cars, caravans and buses, not very far from the buffer zone, which will be used in the service of the basilica. Moreover, a route will directly connect the basilica of San Salvatore and the church of San Ponziano with the *National Museum of the Duchy of Spoleto* and will also include escalators. With regard to sustainable mobility, plans are currently drawn up to complete the approach roads to the town, eliminating the stretch of the State Road 3 Flaminia, from the town south junction to the north junction, passing by the basilica of San Salvatore.

The implementation of the plans will enable to connect the basilica and the buffer zone with the historic town centre, in conformity with the ancient routes interrupted by the building of the flyover in the '60s.

The Umbria region is the leader of the Community project “S.I.S.M.A.” (integrated system for the prevention of and the protection of historic buildings from risks) <http://www.protezionecivile.regione.umbria.it> financed in the framework of the Community programme Interreg III B. The project was launched in 2004 and has the objective to develop measures to counteract seismic risk and protect the buildings of historic town centres. The project has been joined by other Mediterranean regions, characterized by a high seismic risk and by the presence on their territory of a rich architectural and cultural heritage, mostly situated within historic town centres (the regions Emilia Romagna, Marche and Abruzzo in Italy,

the Prefecture of Athens, the Peloponnese region and the municipality of Homeropolis on the island of Kios in Greece, Slovenia, the Slovak Republic and the Civil Protection Department). The project enabled partners to identify common methodologies and assess the risk level in the historic town centre and the consequent development of prevention measures. The dissemination of prevention measures was effected through experimentation, training courses for the technical staff of public administrations, as well as the production and the dissemination of information material on the issues of seismic prevention.

The Umbria Region -with the regional law No. 18 of 23rd October 2002, implemented by the regional law No.1 of 2004 norms governing construction work- was the first region in Italy to develop specific legislation, promoting the implementation of measures to reduce seismic risk and to disseminate the culture of prevention through:

- studies on the degree of hazard of the area and the vulnerability of buildings;
- micro-zoning inquiries;
- grants and other fiscal and/or wage incentives to allocate to initiatives designed to reduce the seismic vulnerability of buildings (intervention measures on private buildings);
- information and training activities to increase awareness of the public on the issues at stake.

With reference to the APQ (regional framework agreement between the central state authorities and regional authorities), the regional authorities are bringing forward a series of projects for the protection and the preservation of cultural heritage. The above-mentioned projects are based on the linkage between cultural heritage and civil protection and focus on the start-up of the COBC “operational centre of Umbria region for the conservation, the

maintenance and the enhancement of artistic and historic cultural heritage, and of books and archives”, designed as a system with three distinct centres, each characterized by specific skills, objectives and specialized tasks: one in Foligno for early intervention measures, one in Spoleto for conservation and restoration and one in Narni for enhancement. The planned initiatives have the objective to ensure the availability in the region of specialized structures for early intervention measures, civil protection, safeguard of cultural heritage. The projects support the establishment of a unified information system for the setting up of an observatory; the monitoring of the architectural vulnerability of cultural heritage; the research on and the design of specific equipment for the protection of operators in emergency situations (robots); the development of innovative technologies for protection from seismic risk; the design of mobile containers and packagings to be used in emergency situations when cultural heritage is removed; development of the diagnostic chain-early intervention measures-monitored conservation of cultural heritage.

The Perugia “Bina” seismic observatory is one of the oldest observatories operating in this field in Italy and is developing a project to establish a complex system made up of equipment including sensors and computers, which –if put in strategic places- will enable to mitigate the damage caused by high intensity earthquakes. In particular, the system, which is driven by seismic sensors, will enable the remote control and the management of the valves supplying gas, water and electricity to end users, avoiding the breakdowns as well as all the damage caused by seismic tremors (floods, fires, explosions).

5.d5

Existing plans relating to Municipality and region in which the proposed property is located CAMPELLO SUL CLITUNNO

The Clitunno Tempietto, protected by National Law, is included in the Urban Development Plan (PRG) of the Municipality of Clitunno, in the Territorial Plan for Provincial Coordination, in Territorial Development Plan for the Umbria Region: in each of these plans the entire area is mentioned and protected for historical and naturalistic reasons.

The Municipality of Campello is working on a vast project for the enhancement of the area comprising both the Tempietto and the Fonti del Clitunno, with all monuments included in the area along the river. This plan envisages a pedestrian route between the monuments, which will be included in a single park, through the transformation of the historical route of Via Flaminia into a pedestrian area; it also envisages the creation of a cycle track, equipment and services for visitors as well as the renovation of the green area (see Management Plan).

The area of Campello is included, like Spoleto, in the plans of the Umbria Region aiming at the prevention of seismic risk (see 5.d4).

5.d6

Existing plans relating to Municipality and region in which the proposed property is located BENEVENTO

The site was included in numerous intervention plans already implemented, ongoing or future, aimed at favouring tourism development in the inner areas of the Campania Region and at enhancing cultural, landscape and food and wine heritage.

The PTR (Regional Territorial Plan) has the

task to design the layout of the regional territory and to provide guidelines for provincial and municipal planning, as well as to identify the structure of the territorial architecture on a wide scale, with reference to great communication lines, port and airport structures, energy and telecommunication networks, great production and commercial settlements, reclamation of polluted sites at regional level, etc.

This plan is subdivided into five reference territorial sections. Among these, the network section is specifically dedicated to the planning of measures for the protection of the territory’s physical integrity and cultural identity, in connection with the regional ecological network, by providing criteria and guidelines also for the landscape and environmental protection for provincial planning.

Benevento belongs to the development territorial system (STS) D1 – Benevento urban system. This STS envisages, among its objectives, the increase of accessibility to important cultural and landscape sites. The planning of structural funds in Campania is conducted through regional operational programmes.

In the period 2000-2006 the city of Benevento was involved in the integrated projects “Pietrelcina” and “*Benevento: il futuro nella storia*”. The latter, in particular, is an intervention programme strictly oriented to the enhancement of the historical features of the city, mainly the historical centre. The main intervention operations concerned the creation of a pedestrian area in the historical centre, the recovery of monuments and historical buildings, the discovery of archaeological finds, the requalification of commercial and craft activities in the historical centre. With the structural funds 2007-2013 (POR FESR), Benevento will be involved in the PIU Europa (Urban Integrate Programme), aimed at requalifying the degraded areas

of the city and at improving the standard of living of the population.

The Campania Region is also working on an ongoing Territorial Integrated Plan *Regio Tratturo Benevento*, which is part of the regional project MIR (online museums) – co-financed by axis II, measure 2.1 of the POR (regional operational project) Campania 2006-2012).

The PTCP (Territorial Plan for Provincial Coordination) of the province of Benevento identifies general intervention strategies on the provincial territory – in the different fields of competence of the province – urban development planning, guidelines and criteria for municipal urban development plans. In relation to the protection and enhancement of the historical-landscape system and the historical-cultural identity, the programme objectives identified by the PTCP are the conservation and enhancement of farming and forestry areas and the revival of typical traditional landscapes, the protection and the enhancement of suburban historical and architectural properties and historical centres.

With reference to the protection and enhancement of the system of historical-archaeological properties, the general objectives come from the idea of enhancing the areas and the visibility of traces and historical presence of different nature, with the recovery of ancient roads or traditional historical layouts and the creation of archaeological sites – also non visible – , with future scientific and study explorations.

The Municipality of Benevento is building its own Strategic Plan, with the objective of outlining a shared vision on the development of the city in 10 years. The general objective of the plan is “Benevento as a connecting area between great European corridors and internal areas; centre for culture, research and experimentation of sustainable development models”. In the

plan the pivots of development are identified, among these the “enhancement of the historical identity of the city, its inclusion in international circuits of art cities, resources and local production as attraction elements”. The objectives of the strategic plan match with the different sector plans – ongoing or future – by the Municipality, among which the reorganisation of territorial mobility concerning the city which will considerably benefit visitors; the organisation of a series of thematic routes on the areas (*Via Traiana* and *Via Appia, Regio Tratturo Pescasseroli - Candela* and minor tracks) which connect the city to the widest ape network (Apennines Park of Europe).

The Municipality of Benevento is also working on a number of initiatives for tourism-related business, with the objective of improving services while preserving rural hospitality tradition.

As far as visits to the areas are concerned, integrated ticketing plans are already under way or are about to be implemented, such as the membership to the *Campania Artec card* (the regional museum-transport integrated system, <http://www.artecard.it>) and the creation of a provincial museum network, (http://www.provincia.benevento.it/arte_e_turismo/rete) promoting, along with the *Museo del Sannio*, other museums of the territory through a single website, a customer service centre and a combined ticket.

5.d7

Existing plans relating to Municipality and region in which the proposed property is located MONTE SANT'ANGELO

The Sanctuary of San Michele and the historical centre of Monte Sant'Angelo, included in the proposed buffer zone, are mentioned in the PRG Urban Development Plan, in the Territorial Plan of the National

Park of Gargano and in Territorial Thematic Urban Plan for Landscape as areas requiring utmost attention for their historical, artistic and landscape value. For the same reason, they are included in the areas of competence of the local Superintendencies of the Ministry for Cultural Heritage and Activities that are in charge of the protection and conservation of the heritage in compliance with the national legislation.

Some interventions on the Sanctuary of San Michele provided for in the five-year plan have been already completed:

- 1) Extension of the access to the Pilgrim's House; the new system created a new internal route.
- 2) Adjustment and extension of the kitchens used by the catering service of the Pilgrim's House. These interventions were carried out with funds made available by the Sanctuary (see 5.f7).
- 3) Installation of a dehumidification and air-conditioning system in the halls of the so-called Longobard Gallery. Thanks to this intervention, the Longobard structures with their engravings and finds are better protected.
- 4) Setting up of the Devotional Museum opened on July 5th, 2008. These new halls were built within the framework of the extension of the Pilgrim's House and fall within the itineraries open to the public with direct access also from outside the Sanctuary. The new “pilgrim's route” is connected with the existing internal routes.

In this way:

- The Devotional Museum and the Lapidary Museum can be visited independently;
 - A new incoming and outgoing route has been created for pilgrims visiting the Sanctuary;
 - New routes to escape the Sanctuary in case of emergencies are now available.
- In particular, these interventions have per-

manently reduced the load of pilgrims and considerably increased the potential hosting capacity of the Sanctuary complex as a whole. In turn, this lightened the load of the Angevin stairs, which now works effectively two-way and has emergency routes (that cannot be accessed by tourists during their visit).

Other interventions are planned and will be carried out when public funds will be allocated to replace and/or supplement the direct financing from the ownership.

These interventions concern both the most ancient structures of the Sanctuary and the central cores that were added to the complex over the last centuries thus ensuring its current appearance.

The list of the abovementioned interventions is as follows:

- Supplementary maintenance of the last stretch of the northern wall of the Sanctuary. This is a type of maintenance interventions that does not involve interventions on the static resistance of the structure; rather it concerns the cleaning and preservation at full capacity of the exposed external stonewalls, to ensure continuity to the work that has already been carried out.
- Renewal of archaeological surveys in the external area located in the north of the Sanctuary. As a result of previous campaigns of excavations and archaeological tests, there is the general assumption that a new archaeological route could be created in the area that once faced the sacred cavity, before the first interventions were carried out to make the original structures progressively more monumental. The interventions started under the Byzantines, were amplified by the Longobards, continued in the Norman-Swabian period and the Sanctuary acquired the current appearances during the Angevin period.
- Routine, supplementary maintenance and re-functionalisation intervention on

available spaces currently not in use. Intervention will concern: the Church of *Madonna della Libera*, next to the Angevin stairs; the rooms of the old library; the numerous internal spaces that were previously intended for the orphanage college and various ecclesiastical activities.

-Completion of the layout of the Devotional Museum and the Sanctuary Library. Interventions have been planned so that they are no limitation to the routes currently open to the general public for the visit of the Sanctuary and therefore these activities will cause no limitation to the current hosting capacity of visitors and the safety of the complex.

The Municipality of Monte Sant'Angelo implements direct and indirect strategies for tourism promotion, aiming at better enhancing the monumental complex and its cultural offer. First of all, the Municipality supports and directly intervenes in the organisation of the initiatives aiming at enhancing, overall and in each and every aspect, its heritage in the territory that has a historical, artistic, cultural, architectural, landscape and religious value. Moreover, the Municipality takes active part in the different activities of planning, promotion and management of the territories that are strictly tourist-oriented but have a wider territorial scope, in coordination with other administrative bodies and in compliance with the legislation in force at national and local level. Lastly, as far as tourism development is concerned, the promotional action by supra-municipal authorities, such as the Mountain Community of Gargano, the National Park Authority of Gargano, the Authority of the Province of Foggia and the Apulia Region, sees in the Sanctuary of San Michele one of the strongest points for the enhancement of their tourism offer; this means that Monte Sant'Angelo and the Sanctuary of San Michele are included in all promo-

tional packages on the market regarding the Apulia Region and/or directly linked to the spirituality of the site.

5.e Property Management Plan or Other Management System

The serial property "Italia Langobardorum. Centri di potere e di culto (568-774 d.C.)" - nominated in 2008- was accompanied by the elaboration of a specific **Management Plan**. That Management Plan (completed in December 2007) is still valid for the nomination of the Serial Site "The Longobards in Italy. Places of the power (568-774 AD)", which comprises the same assets as those previously selected. The small differences in the current configuration of the Site (which meet the ICOMOS Recommendations and refer to an extension of core zone of Brescia and buffer zones of Spoleto and Campello, besides the exclusion of the modern building to the north-east of Santa Sofia in Benevento) have no influence on the Management Plan objectives which concern the same reference areas. That Management Plan was shared and approved - by means of the aforementioned national-level Memorandum of Understanding - by all the stakeholders falling within the network:

- Ministry for Cultural Heritage and activities (5 Regional Directions and more than 15 territorial Superintendencies, competent for the 6 provinces in which the selected sites are),
- 5 Regions (Lombardy, Friuli Venezia Giulia, Umbria, Campania, Apulia),
- 6 Provinces (Udine, Brescia, Varese, Perugia, Benevento, Foggia),
- 8 Municipalities (Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno,

- Benevento, Monte Sant'Angelo),
- 4 Ecclesiastical Bodies (Archdiocese of poletto and Norcia, Basilica of San Michele Arcangelo, Parish of Santa Maria Assunta, Archdiocese of Benevento),
- Gargano National Park,
- 2 Mountain Communities (Comunità Montana del Gargano, Comunità Montana dei Monti Martani e del Serano),
- 2 private Institutions (Foundation CAB - Institute of Culture Giovanni Folonari, FAI -Italian Environmental Fund),
- 2 Study Centres (CISAM-Italian Study Centre on Early Middle Ages, Michaelic and Garganic Study Centre).

The implementation of the Management Plan started in January 2008. A copy of the said Plan is enclosed with the documentation submitted for the nomination (see section 7.b, item 5), together with another document (see section 7.b, item 6), which is an update on the progress of projects and actions as of December 2009 and also lists a series of “new” activities and projects added during the two years of operation to those provided for by the 2007 Management Plan.

The great number of subjects reflects the territorial extension and the articulation of the Serial Property, that represent therefore an experimentation, also regarding managing aspects.

On the basis of the above mentioned national-level institutional agreement, a **pro-tempore Network Authority** (with a representative for each one of the 7 sites of the network and a member from the Ministry) was established and is active starting from 2008.

During the last plenary meetings, which occur almost monthly, the legal form of the **final managing structure** was identified: set up in January 2009, the “*Italia*

Langobardorum Association” started its activity in May 2009 (see Socio-economic Plan, objective 1, project 1.1. of the Management Plan enclosed herewith).

Moreover, the setting up of the Association will also favour the “virtual” network integration with and extension to other sites in Italy and other European countries, where the presence of Longobard “*gentes*” has been recorded. In this regard, many contacts have been established and several agreements have been entered into with France, the Archäologisches Museum in Hamburg, the University of Hamburg, the Rheinisches Landesmuseum in Bonn, the University of Munich, the Ministry of Culture of Slovenia, the Archdiocese of Klagenfurt in Austria. Further agreements are being defined with the Ministry of Culture of Hungary, the Ministry of Culture of the Czech Republic and the University of Brno.

Lastly, with reference to the special management arrangements of the seven sites belonging to the network proposed for inscription on the World Heritage List, a detailed description of each asset follows. It is self-evident that, since the network is very articulated from a territorial point of view, the managing structure will not affect any local managing and proprietary arrangement. It will only ensure the coordination required at a higher level. Therefore, the assets of each site will continue to be managed by the relevant competent institutions, although activities will be synergically integrated with those performed by all other stakeholders. Agreements and memorandums of understanding entered into at the local level within the network demonstrate that this level is also coordinated.

Moreover, for some sites of the network, appropriate Offices have been established within Municipal Administrations.

5.e1 Property Management Plan or Other Management System CIVIDALE DEL FRIULI

The Monastery of Santa Maria in Valle is managed directly by the Municipality authority, which had acquired the property in year 2001, and which supplies the security, conservation, and ordinary and extraordinary maintenance staff, and the staff in charge of the gardening. This is a temporary measure, as the activation of an overall enhancement plan (see Management Plan) is now in its early stages and should be funded through the Municipality’s 2007 and 2008 budget and the Friuli Venezia Giulia Region’s L.R. 17/2008 (art. 7, sub-pars. 52/53), which provides for a grant amounting to € 3,000,000.00.

Under the plan, the following items should be set up:

- a) museum halls for the stonework and sculptural archaeological finds and for the frescoes linked to the so-called Tempietto Longobardo and to the history of the Monastery itself;
- b) a study centre for early medieval art, which should connect to the graduate course offering a master’s degree in History of Art at the University of Udine, which has been activated in the new wing of the Monastery for the academic year 2006-2007;
- c) a centre specialised in archives, documentation, and bibliography;
- d) an osteological-archaeological laboratory;
- e) areas devoted to multimedia;
- f) a multimedia operational centre;
- g) a visitors’ centre;
- h) a ticket office and bookshop;
- i) theme-based itineraries inside and outside the monastic complex;
- j) other museum and meeting halls.

The Tempietto Longobardo – which be-

longs to the Municipality of Cividale since 1983 – is equipped with security, ticket sale and bookshop facilities, which have been entrusted to a cooperative called Adelaide, based in Cividale del Friuli.

This asset will also be the focus of conservation, safeguard, monitoring and enhancement work (see Management Plan), also covered by the Municipality's 2007 and 2008 budget, as well as other possible sources of funds, including the said L.R. 17/2008.

The *Museo Cristiano* – which belongs to the Parish of Santa Maria Assunta – was monitored until 2007 by the surveillance staff of the Cividale Cathedral, with no ticket charges.

The museum was closed during year 2007 for restoration and enlargement work and was reopened in 2008 to enshrine the Altar of Ratchis, the Baptismal Font of Callixtus and its extraordinary Tegurium, as well as other precious Christian artefacts, such as the patriarchal throne and the prestigious Treasury of the Duomo, which has not been on show for public viewing for various decades. Services including ticket sale, surveillance, and a museum shop are allocated to Adelaide following a call for tenders. In the nearby Chapter Archives also managed by the Parish of Santa Maria Assunta and entrusted to an archives' director, with a degree in safeguard and Conservation of Cultural resources, ancient parchments, historical documents and ancient music scores dating from the 1100 and later are kept. The structure also boasts a website, ensuring online access to materials belonging to the Regestum (www.patriarcatoaquileia.it), which at the moment includes over 22,000 files.

The Palazzo dei Provveditori, which is home to the MAN *Museo Archeologico*

Nazionale, and includes the remains of the Palazzo Patriarcale - Patriarch's Palace, is managed directly by the state, by means of the relevant Soprintendenze (Soprintendenza per i Beni archeologici e Soprintendenza BAPPSAE / Beni Architettonici, Paesaggio e Patrimonio Storico, Artistico ed Etnoantropologico) which are in charge of the following services: daily and night surveillance, safeguard, conservation, surveillance of the itineraries for visitors, promoting activity, exhibition set up, organisation of special events, tour guide stage sessions, regular and special publishing activities.

At this time an agreement is being drawn up between three institutions that own and manage the assets in question (namely, the Municipality of Cividale, the State and its local branches, the Soprintendenze, the Parish). This agreement should ensure the integrated management of all monumental and museum areas for which candidacy is proposed (see 7.b2); this agreement also includes the reorganisation of each museum area following certain main themes.

The agreement will include also Palazzo de' Nordis, seat of the art and History museum, which comprises art work ranging from the 9th to the 18th century, and which should shortly reopen to the public following restoration work.

5.e2 Property Management Plan or Other Management System BRESCIA

The seat and museum's collections of the San Salvatore-Santa Giulia complex are part of public property known as *demanio comunale* (municipal demesne) and are managed directly by the Municipality through its office called Settore Musei; services are managed by a foundation called *Fondazione Brescia Musei*. The

management guidelines are defined and shared between the Municipality and Brescia Musei, and are supervised by the state and region; each institution pinpoints the most adequate instruments to ensure the proper and most efficient management of the asset, while fully respecting its archaeological, historical and artistic value (see Management Plan). In particular the Municipality's *Settore Musei* by means of its facilities entitled "*Servizio Musei d'Arte e Storia*", provides for the protection, increase and restoration of the archaeological, historical and artistic heritage, in cooperation with state and region institutions in charge of conservation of the city's cultural heritage.

The Municipality has contracted out the management of the following museum services to *Fondazione Brescia Musei*:

- surveillance of museum areas open to the public;
- surveillance of the different museums;
- cleaning services at the museums;
- publishing, sale of reproduction, design of catalogues and souvenir objects;
- museum bookshop and cloakroom services;
- promotional services;
- catering services;
- welcome and guiding facilities;
- didactic services;
- information services;
- ticket sale;
- ordinary maintenance of museum structures;
- ordinary gardening services of the museum grounds.

The contract also includes the possibility for *Fondazione Brescia Musei* to organise:

- promotional, communication and marketing activity aimed at achieving a greater fruition of the city museums;
- particular exhibitions of significant artistic value, also in cooperation with other public and private entities;
- special cultural events connected to par-

particular aspects of assets or to recovery, restoration or acquisition of assets.

5.e3

Property Management Plan or Other Management System CASTELSEPRIO-TORBA

At the moment, the vast area occupied by the ancient settlement of Castelseprio is mainly managed by two Bodies:

- a) the Soprintendenza per i Beni Archeologici di Lombardy (branch of the Ministry of Cultural Heritage and Activities) as to the state-owned areas and those areas belonging to the Province of Varese (Bailment agreement of 19/4/1994);
- b) FAI (Italian Environmental Trust) for its areas.

Also other institutions contribute to the management of the area; first of all, the Province of Varese which guarantees supplementary maintenance of the areas and buildings belonging to it (Church of Santa Maria *foris portas*, the building which will be used as welcoming point and is placed near the entrance to the *castrum* and surrounding areas); the Municipality of Castelseprio, which deals with routine and supplementary maintenance of the access road to the *castrum*, with lighting system and routine and supplementary maintenance of green areas relative to the access road.

In 2004, the Province of Varese, the Ministry of Cultural Heritage and Activities –Soprintendenza per i Beni Archeologici di Lombardy– and FAI (Italian Environmental Fund) drew up a Memorandum of Understanding for the development of a joint intervention plan for the enhancement and promotion of the entire archaeological Complex of Castelseprio which is defined in the memorandum as “the group of the three buildings for public use: the

complex of Torba, the archaeological area of Castelseprio, Santa Maria *foris portas*” (see 7.b, and annex 3).

Giving impetus to the cultural role that such an area must play and enhancing its precious cultural heritage at best requires coordinated and synergic management in order to achieve objectives.

The project is actually being enhanced and redefined and aims at improving the cultural offer and at restructuring the historical and artistic heritage of the different areas through the reopening of connection routes and the strengthening of public transport that must be redistributed among main junctions.

5.e4

Property Management Plan or Other Management System SPOLETO

The management of the Basilica of San Salvatore is in the hands of the municipality of Spoleto. The municipality ensures the daily opening of the Basilica - thanks to the caretaker staff -, and in agreement with the relevant Superintendence, its maintenance and the compatibility of its intended use with guided visits, teaching and other activities. A revision of the present management activities in view of the widening of the range of services offered to the public – because of the re-functioning of the adjacent building – is currently being planned and is designed to reinforce and improve cultural supply. The above-mentioned activities will probably be entrusted to the company managing museum services in Spoleto.

The church is still consecrated and regularly hosts funeral ceremonies and the celebrations held on 2nd November (All Souls’ Day) to honour the memory of the dead, in the presence of civic and religious authorities.

5.e5

Property Management Plan or Other Management System CAMPELLO SUL CLITUNNO

The Clitunno Tempietto is directly managed by the State, through the Soprintendenza per Beni Architettonici, Paesaggio e Patrimonio Storico, Artistico ed Etnoantropologico ed Etnoantropologico of Umbria (local Office of the ministry for cultural heritage and activities), which guarantees, along with the conservation and protection of the property, also its opening to the general public.

5.e6

Property Management Plan or Other Management System BENEVENTO

The Church of Santa Sofia is currently managed by the Curia of Benevento and is used for worship purposes and as a Parish.

As far as the Cloister is concerned, included in the *Museo del Sannio*, the current management guidelines are determined by the Province of Benevento (Department for Services to Citizens) and are implemented following to the approval by the provincial Council, with the supervision of State and regional bodies. The *Museo del Sannio*, through the Cultural institutions service, directly deals with the conservation of architectural artefacts and properties.

Art Sannio Campania s.p.a (a partially State-owned agency of the Province) will be assigned additional services of the museum, namely, economic survey services, marketing, tourism and cultural promotion. With an appropriate service contract this Company will therefore manage the following services at the museum:

- customer service in the museum;

- publishing services, sale of reproductions, creation of catalogues and souvenirs;
- bookshop and cloakroom services;
- promotional services;
- catering services;
- welcome and guiding services;
- didactic services;
- information services;
- ticket sale.

The contract will envisage, among other things that the company *Art Sannio Campania* also organises:

- promotional, communication and marketing activities aimed at increasing the number of visitors to city museums, and the creation and management of a mu-

seum customer service centre and combined ticket;

- special artistic exhibitions, also in cooperation with other public and private bodies;
- special cultural events linked to particular aspects of the heritage or recovery, restoration or purchase operations.

The provincial library and the provincial museum network –under way– also belong to the Cultural Institutions Service of the Province.

The Rocca dei Rettori Pontifici and the Longobard Church of Sant’Ilario a *Port’Aurea* are considered within the competence of the *Museo del Sannio*.

5.67

Property Management Plan or Other Management System MONTE SANT’ANGELO

The Sanctuary is directly managed by the order of San Michele Fathers that, on an annual basis, provides with its funds the ongoing management of interventions to keep systems and routes open to the public in perfect working condition, as for the interventions of routine maintenance when necessary.

Sources and levels of finance
CIVIDALE DEL FRIULI

In 2001, the Municipality of Cividale acquired the **Monastery of Santa Maria in Valle** (6,000,000,000 Italian Liras) thanks to funds offered by the Autonomous Friuli Venezia Giulia Region. It then promoted extraordinary maintenance work on the roof of the Monastery (€ 14,280) and to solve the problem of water leakage at the so-called **Tempietto Longobardo** it embarked on roof waterproofing, on the re-alignment of the north wall and ensured that the façade stonemasonry be covered with a protective

coating (€ 15,000). As of year 2005 the following activities had been undertaken, funded by the Municipality itself or through other agencies:

- yearly, ordinary maintenance and care of the structures, including maintenance costs and the gardening, with the participation of the University in the management costs of the area set aside for the Scuola di Specializzazione (a centre for post-graduate studies);
- extraordinary maintenance of the buildings formerly used as a school annexed to the Monastery of Santa Maria in Valle; the buildings were destined to house the Scuola di Specializzazione in Storia

dell'Arte of University of Udine. The work is complete (€ 210,000);

- reorganisation of the Ursuline nuns' crèche (€ 40,000);
- pre-emptive work against geo-static decay in the forra of the river Natisone, with funds belonging to the Friuli Venezia Giulia Region and the Municipality of Cividale. Work completed in year 2006 (€ 66,582.76).

In 2007 the following activity was implemented:

- work to improve Piazzetta San Biagio, close to one of the access points of the Longobard Tempietto (€ 163,241 .60);
- restoration of the façade frescoes of the

church of San Giovanni (Annunciate Madonna, Archangel Gabriel, three saints), and of three canvases (Sorrowing Virgin, Saint Veronica, Archangel Michael, Saints Benedict and Claire, Crucified Christ between Blessed Benvenuta Boiani and Saint Ursula); restoration of the frescoes in the Monastery Refectory (Annunciation, Stories from the Lives of Saint Scolastica and Saint Benedict) (€ 18,636).

Moreover, other conservation, safeguard, monitoring and enhancement activities are being carried out on the Monastery and on the Tempietto (see Management Plan), which are covered by the Municipality's budget for 2007 and 2008 (globally € 282,228.00). From 2009 € 3,000,000.00 will be available under the funding granted by the Friuli Venezia Giulia Region (L.R. 17/2008, art. 7, sub-pars. 52/53).

As to the cost of staff, there is a personnel in charge of opening the Tempietto to visitors and opening the Cloister during the summer season (by means of special types of contracts called "borsa lavoro"), and there is a personnel in charge of surveillance and ordinary maintenance. Resources also provide for the sharing out of costs between the Municipality of Cividale and the University of Udine for that section of the Monastery housing the Scuola di Specializzazione in Storia dell'Arte.

The past overall resources for investments have not led to large expenditures, also because the study phase to decide the role of the complex was still in progress. Now the necessary funds have been provided so the buildings can be put to a new use (see Management Plan). Funds for staffing also focused on conservation and specific use of the asset, and were thus particularly targeted to ensure the Tempietto and the Monastery's Cloister were accessible to visitors. The new management plans, on

the other hand, strive to ensure the whole complex is put to good use, and that the whole monastic complex, as well as the Tempietto, can be properly enhanced and revitalised.

National Archaeological Museum, archives and library (Patriarch's Palace)

- These institutions can function thanks to the staff and yearly funding by MiBAC (the Italian Ministry of Cultural Heritage and Activities); modest resources offered by private sponsors cover scientific activities and communication.

The operational costs of the Superintendency of Archaeological Heritage – National Archaeological Museum were:

In 2007:

Emoluments € 667,763. 00
Operating costs € 35,410. 20
Works and restorations € 31,177. 16
Maintenance € 10,937. 26

In 2008:

Emoluments € 707,029. 00
Operating costs € 39,645. 14
Works and restorations € 48,998. 52
Maintenance € 22,158. 91

In 2009 (till the third quarter)

Emoluments € 518,275. 00
Operating costs € 36,639. 92
Works and restorations € 10,895. 48
Maintenance € 4,095. 69

The operational costs of the Superintendency of the Historical, Artistic and Ethno-Anthropological Heritage (B.S.A.E.) - - Archives and library of Cividale del Friuli were:

In 2007:

- Operating costs borne by the Superintendency of Cultural Heritage
- Emoluments € 26,270. 51

In 2008:

Operating costs borne by the Superintendency of Cultural Heritage

Emoluments € 25,096. 75

Works € 3,000. 00

In 2009 (till the third quarter)

Operating costs borne by the Superintendency of Cultural Heritage

Emoluments € 23,583. 71

Works € 48,000. 00

The operational costs of the Superintendency of Architectonic and Landscape Heritage (B.A.P.) -

- Palazzo de Nordis were:

In 2007:

Operating costs € 2,924. 69

Maintenance € 2,515. 30

Works € 17,826. 24

In 2008:

- Operating costs € 4,061. 63

- Maintenance € 23,390. 00

With reference to the Museum financing, and considering the transference reduction ordered by the Ministry, maintenance, restoration and operating activities should be granted greater funds.

Parish of Santa Maria Assunta (*Museo Cristiano e Tesoro del Duomo*)

Let us now address the work carried out to overhaul the area of the Museo Cristiano, or Christian Museum:

- restoration and refurbishing of the halls that house the Museo Cristiano. The work was initiated in spring of 2006 with funds from the Friuli Venezia Giulia Region (€ 437,000; L.R. 53/1985), and ended in 2007;

- setting out of the inner courtyard of the Duomo, to guarantee a new access point to the museum and archives (€ 130,000; 70% of cost was covered by regional funds);

- setting up of the museum, still underway thanks to private funds (Fondazione CRUP, Banca Popolare Friuladria-Crédit Agricole, Banca di Cividale) (€ 120,000).

- restoration and cleaning of exhibition ob-

jects, underway thanks to private funds (€ 15,000).

For the Altar of Ratchis a diagnostic project is underway, to guarantee in-depth knowledge of the material history of the artwork, covered by regional funds (€ 50,000) and the Soprintendenza (€ 20,000).

The Chapter Archive headquarters have been restructured and documents sanitised; since 2005 specialised staff has been working to reorganise and reclassify its materials, (€ 25,000 in 2005; € 45,000 in 2006 and 2007). Funds to cover recovery work on the wall surfaces of the Duomo interior are insufficient; after the early essay and monitoring, work has been suspended because of lack of funds.

The works completed between 2008 and 2009, aimed at improving the protection and urban decoration of the **historical centre**, which is included in the buffer zone of the site, were the following:

- restoration and refurbishing of Piazza Foro Giulio Cesare;
- requalification of Piazza San Biagio in Borgo Brossana, which is adjacent to the exit of the Longobard Tempietto;
- restoration and requalification of the former Q8 area and Piazza Picco, northern entrance to the historical centre;
- supply and installation of urban design elements such as benches, flower holders and speed bumps.

The works planned between the end 2009 and the beginning of 2010 are:

1. Restoration of the historical centre (draft project of 10.07.2009): Lot 1 – erection of parking places in Via Mons. Valentino Liva (global funding for works € 149,000.00), area located at the northern entrance to the historical centre, close to the public gardens: the project provides for rationalisation of all areas and conveying of rain water, restoration of the existing green area and the creation of tree

beds, including the demolition of an accessory building; Lot 2 – Restoration of the street in Largo Boiani. Intervention on a street located at the very heart of the historical centre that is extremely important for traffic flows and the width of its section, as well as for the historical buildings located along the street. The project provides for the recovery of all existing ancient stone blocks, the execution of a new cover and the construction of a new sidewalk section made of stone, like the existing one, together with the restoration of existing sidewalks;

2. Lighting system in Belvedere (global funding for works € 141,101.34):

the project involves a panoramic area on the left bank of the river Natisone close to the Ponte del Diavolo, behind the Church of San Martino; it provides for the installation of a lighting system to supplement the existing one;

3. Requalification of the lighting system of the historical centre and urban design (execution plan dated September 2009): requalification of the lighting system of the areas belonging to the historical centre (global funding for works € 293,412.00):

Location of works

- Piazza Duomo, including the historical buildings of the Palazzo dei Provveditori (Museo Archeologico) and Palazzo de' Nordis
- Ancient Town Hall
- Via Monastero Maggiore up to Piazza San Biagio, included

Objectives

- enhancing the night vision of historical sites;
- creating a comfortable lighting system for those who use those places, both citizens and tourists;
- making systems compliant according to the L.R. 15/07 and minimising energy consumption;
- providing solutions that suit the urban

context with the lowest number of systems;

5.f2

Sources and levels of finance BRESCIA

Annual funds are provided for in the Municipality of Brescia's budget, which would be employed at the site to cover certain work.

As of 2004, year in which *Brescia Musei* s.p.a. was established, the service contract between Municipality of Brescia and the Fondazione includes the payment of a yearly sum to set up services relating to opening, management and ordinary management of the museums.

Therefore, in 2007 € 2,500,000 (including VAT) were allocated to provide for operational costs of ordinary management, as well as separate funding, meant to cover cultural initiatives and cultural programmes (exhibitions, etc.). The Municipality of Brescia covers expenses relating to: restoration, temporary exhibitions, enrichment of the permanent exhibition space, studies and publications.

5.f3

Sources and levels of finance CASTELSEPRIO-TORBA

Management and maintenance operations for the archaeological structures and green areas of the State-owned area of the *castrum* and that of the quarter including Santa Maria *foris portas* owned by the Province of Varese are carried out thanks to the funds that the Ministry of Cultural Heritage and Activities allocates every year. The ordinary funds are combined with special funds for cataloguing and surveys on monuments, researches, studies, (scientific, didactic, information-

promotional) publications and events.

The Province of Varese carries out only extraordinary operations (such as the restoration of the walls of the Church of Santa Maria *foris portas* and the rearrangement of the building where offices and welcoming services of the park are located, completed in the 1990s) on the properties managed by the Soprintendenza Archeologica through bailment agreement. At the moment the province is providing funds for the widening of the welcoming structure of the park. In 2005, a special fund amounting to € 956,000 was allocated by the Ministry to accomplish the interventions envisaged by the project "Recovery of the Archaeological Area of the *castrum* of Castelseprio" (total funds required € 2,222,982.50) aimed at the:

- renovation of the building Farmhouse-Monastery of San Giovanni to be transformed into *Antiquarium* of the archaeological park,
- conservation of ruins and replacement of some parts of the covering (Basilica of San Giovanni, Church of San Paolo),
- continuation of rearrangement interventions on the northwest wing,
- layout of the *Antiquarium* in the Farmhouse-Monastery of San Giovanni.

For the period 2008-2010 more funds amounting to € 900,000.00 have been allocated to carry out other enhancement interventions on the area (restoration of ruins, new information boards, lighting system of the park for events and night visits, reopening of the path which was hit by the earthquake in 1992) to allow the unification of the upper *castrum* with the area of Torba.

In recent years, FAI (Italian Environmental Trust) has promoted interventions aimed at the completion of the renovation and restoration of the complex of Torba and the improvement of the cultural offer of

the area, starting from a survey of the state of conservation of buildings. In 2008, it completed the restoration of the 8th century frescoes kept in the Tower (first and second floor) and the internal plaster and fragments of the fresco in the Church of Santa Maria, dating back to the 9th-13th centuries. In 2007, the ceiling of the restaurant hall and kitchen was consolidated. In the same year, the Lombardy Region adopted the project submitted by the FAI under the Bando Patrimonio Archeologico Lombardo – year 2007 LL.RR. no. 39/84 and no. 39/91; the funded actions are:

- archaeological excavations and cleaning of the fortress walls (carried out in 2008);
- restoration and consolidation of the archaeological structures along the itinerary leading to the archaeological area of Castelseprio (planned to be carried out in 2010).

Thanks to a new regional funding obtained in 2008, in 2009 the following activities were performed:

- draining trench for the Church of Santa Maria;
- new lighting system and protection of the frescoes of the Tower.

The actions planned in 2010 are the following:

- new lighting system for the Church of Santa Maria (regional co-funding in 2008)
- raising of funds to transform the premises of the farmhouse into exhibition areas, consolidate the external structures of the Tower and restore the external plaster of the Tower, the Church, the Farmhouse and the Barn.

The Municipality of Castelseprio covers with its own funds the ordinary maintenance of the road that leads to the *castrum*. In 2007 and 2008, it allocated extraordinary resources in order to improve the lighting system of the road

and create resting areas with benches. Thanks to the co-funding granted by the Lombardy Region, the Municipality improved the information system over an area covering about 30 km with 70 signboards (see Management Plan) and carried out enhancement interventions (free bilingual information panels and leaflets; the latter were published with a contribution granted by the FAI).

The Municipality of Gornate Olona has recently improved the lighting system at the entrance to the parking area of the Monastery. Moreover, the hydraulic-environmental arrangement project for the torrent Vallone and the artificial canal of Mulini, which constitute the minor hydrographic system close to the area of the Monastery is about to be completed. The actions that requalified the whole area mainly consisted of: forestry cleaning, rearrangement of slopes, riverbed stabilisation, cleaning and rearrangement of the crossing at the junction with the provincial route SP 42, setting up of wooden fences, requalification of the parking area in Via Marconi. The Municipality also deals with the cleaning and management of the green areas adjacent to the entrance to the Monastery, beyond the provincial road SP 42, which belongs to the Municipality.

5.f4

Sources and levels of finance SPOLETO

The conservation work carried out in 2000 required considerable investments. Annual ordinary maintenance expenditure is not covered since it is included in the more general budget items of the Municipality of Spoleto to be allocated to the conservation of the artistic heritage of the town. Moreover, the conservation works are generally carried out by internal staff.

5.f5**Sources and levels of finance
CAMPELLO SUL CLITUNNO**

The financing envisaged by the competent Soprintendenza for routine maintenance programmes amounts to € 8,000.00 on the average per year. Many maintenance activities are carried out by the staff of the Soprintendenza itself and therefore cannot be computed.

5.f6**Sources and levels of finance
BENEVENTO**

Since 2004, when the *Museo del Sannio* was restored to its full activity and reopened after the works carried out in 2001, the Province of Benevento has arranged the payment of an annual sum for the implementation of the services concerning the opening, management and routine maintenance of the museum. This amount – after staff expenses have been deducted – is sufficient for the daily management of the museum and allows some restoration works during the year that are partially funded by a sponsorship programme started in 2005. Yet, allocated funds do not allow the implementation of important restoration interventions, for which targeted funds by the Province and the Campania Region are exclusively used. The funds at the disposal of the site are expected to increase thanks to the implementation of additional services and to the stable growth trend in the number of visitors.

5.f7**Sources and levels of finance
MONTE SANT'ANGELO**

The Sanctuary of San Michele has a system of direct and indirect revenues linked to the sale of historical and cultural

information and devotional material as well as to the offerings of believers. These annual revenues enable the Sanctuary to cover the costs of routine maintenance and the management of the Sanctuary complex. As far as the interventions of supplementary maintenance, and particularly complex projects, are concerned, the ecclesiastical authority managing the property relies on external financing from authorities that, from time to time, are involved, such as the Superintendency or directly the Ministry of Cultural Heritage and Activities. No detailed summary of the revenues of the Sanctuary is available; yet, if only the annual reprint of images depicting the statue of the Archangel is taken into account as a benchmark, it is reasonable to estimate an average annual revenue between a minimum of € 500,000.00 and € 1,000,000.00. Over the past years, the increase in the flows of pilgrims, especially from northern European countries, considerably improved the economy of the municipal territory as a whole, from small artisanal businesses to industrial companies. Therefore, an increase in the financial resources to be allocated for the conservation of the San Michele complex and other Longobard monuments in the town centre can be expected.

5.g**Sources of expertise and training
in conservation and management
techniques**

Several special central institutes are in place providing experts and training in conservation and management techniques at national level at the Ministry for Cultural Heritage and Activities, namely the ICR, OPD and ICCD.

The *ICR - Istituto Centrale per il Restauro*

(Central Institute for Restoration), founded in 1939 by Cesare Brandi, provides scientific and technical advisory services to the peripheral bodies of the ministry, and to the regions, for the conservation and restoration of cultural heritage properties. It directs, coordinates or participates in restoration work across the nationwide ns abroad, for particularly complex interventions or those responding to the purposes of research or the educational objectives of its school of restoration. The ICR promotes projects for the experimentation of conservation methodologies and materials and is involved in the formulation of standards and technical specifications with regards to conservation and restoration interventions. Furthermore the ICR promotes opportunities for investigating activities carried out, by organising and taking part in national and international exhibitions, conferences and seminars. The ICR publishes a six-monthly Bulletin and publications dedicated to the restoration and research interventions in which it takes part. Moreover the ICR offers a diploma course in art restoration that covers the following areas:

- mural paintings, paintings on panels, canvas, fabrics, leather and paper, polychrome wooden sculptures, architectonic surfaces and materials;
- metals, ceramic, glass, enamels, jewellery, ivory, bone, amber and objects from excavations;
- mosaics, natural and artificial stone materials and stuccoes;
- textiles.

A restorer of cultural heritage diploma is awarded at the end of the quadriennial course. (Istituto Centrale per il Restauro - Piazza San Francesco di Paola 9, 00184 Rome, Tel. +39 06488961 Fax +39 064815704; <http://www.icr.beniculturali.it>).

The Opificio delle Pietre Dure (also known

as OPD in its abbreviated form) is an autonomous Institute of the Ministry of Cultural Heritage and Activities, whose operational, research and training activities find expression in the field of conservation of works of art.

The Institute's composite origins, already indicated by its unusual name, are on the one hand the result of an old and illustrious tradition and on the other of a modern, well-organised activity. Established at the desire of Ferdinando I de' Medici for the production and workmanship of semiprecious stone furnishings, the Opificio began in the late 19th century to transform its artistic activities into conservation practice, first on artefacts produced throughout its centuries-old history and later on analogous materials (stonework, mosaics, etc.). Following the 1975 law establishing the Ministry of Cultural Heritage, all of the Florentine State restoration laboratories converged in the historic Opificio, which had taken on new importance after the 1966 catastrophic floods. Architectural and archaeological heritage conservation laboratories are not however under the responsibility of the Opificio.

The OPD currently publishes an annual review ("OPD Restauro"). It is, furthermore, the seat of one of the Italian State conservation schools (the other is annexed to the *Istituto Centrale per il Restauro* in Rome), a museum displaying samples of its artistic semiprecious stone production, a scientific laboratory for diagnostics and research, a highly specialised library in the field of conservation, extremely rich archives documenting conservation projects, a research centre and a public climatology service. It is the largest institutions in Europe with 50 conservators, 6 art historians, 1 archaeologists, 7 scientific experts and 4 photographers. The institute's activities are carried out in different conservation and research

departments, depending on the materials of the art works concerned. The laboratory is divided into three main sectors: the historic headquarters in Via Alfani (furthermore, seat of the museum, library and school), the modern allocation in Fortezza da Basso and the one in Palazzo Vecchio. A large proportion of the institute's work also takes place outside of its laboratories, not only on worksites but also in the sphere of consultation and technical-scientific planning, both on a national scale, throughout Italy, and on the international level. (Opificio delle Pietre Dure e Laboratori di Restauro - Via Alfani, 78 - 50125 Florence (Italy), Viale F. Strozzi, 1 Fortezza da Basso - 50129 Florence (Italy), Tel: +39 55 26511, fax: +39 55 287123 , <http://www.opificio.arti.beniculturali.it>)

The ICCD - Central institute for Cataloguing and Documentation - is the body within the Ministry of Cultural Heritage and Activities (MiBAC) which defines the standards and tools for the Cataloguing and documentation of national archaeological, architectural, art history and ethno-anthropological heritage in agreement with the regions. It also manages the general information system for cataloguing and carries out high-level training and research in the cataloguing sector. The institute conserves and values collections of photography and aerial photography held in their own archives, which are open for public consultation. The cataloguing standards consist of regulations, specific support and inspection tools (vocabulary, lists of values) as well as the overall rules and methodical directions to follow for the acquisition of knowledge of heritage and for the production of relevant documentation. They also cover the registration of the data according to uniform and nationally shared criteria. Compliance with the communally agreed regulations, thanks to the application of specific procedures,

allows for the exchange of information between the different bodies that operate in the cataloguing sector.

the Central Institute for Cataloguing and Documentation is institutionally responsible for the general information system for Cataloguing, the SIGEC, the national system for the acquisition and integrated management of knowledge of Italian cultural heritage.

The system has been developed with the objective of optimising the processes connected to cataloguing of cultural heritage, this assures, thanks to specific procedures, the quality of data produced and its correspondence with the standards defined at a national level, and guarantees in such a way a uniformity of information, considered indispensable for correct usage and sharing.

The structure of SIGEC is of modular construction, with specific components for the management of different typologies of information – alphanumeric, multimedia, geographic - necessary for the identification of the different heritage and their correct documentation, in turn essential tools for the guardianship and security of the said heritage. (Istituto Centrale per il Catalogo e la Documentazione, Via di San Michele, 18 - Rome 00153 - phone +39 6 585521 fax +39 6 58332313; <http://www.iccd.beniculturali.it>).

In 2005, a new national conservation centre was set up: the "la Venaria Reale" Centre for the Conservation and restoration of Cultural Heritage by joint initiative between the Ministry of Cultural Heritage, the Piedmont Region, the University of Turin, the Fondazione per l'Arte della Compagnia di San Paolo and the Fondazione Cassa di Risparmio di Torino. These five founding bodies were later joined by: Politecnico of Turin, the Provincial and Municipal Councils of Turin

and the Municipal Council of Venaria Reale. Located in the grand complex of Venaria Reale Castle in Turin, the centre is equipped with restoration laboratories, science laboratories, a library, archives and a documentation centre. A highly specialised training school has been set up there (<http://www.centrorestaurovenaria.it>).

Other national bodies that carry out research activities in the field of cultural heritage include:

- the CNR - national research Council is the greatest research public body in Italy. It was founded in 1923 and it has mainly carried out training, promotion and research coordination activities in every scientific and technological sector. In 2003 CNR became a “national public organisation” committed to carry out, promote, spread, transfer and improve research activities in the main sectors of knowledge growth and of its applications for the scientific, technological, economic and social development of the Country (<http://www.cnr.it>).
- ENEA, the Italian national agency for new technologies, energy and the environment is a public undertaking operating in the fields of energy, the environment and new technologies to support competitiveness and sustainable development. ENEA is mainly called upon:
 - to promote and carry out basic and applied research and innovation technology activities;
 - to disseminate and transfer technologies, encouraging their use in productive and social sectors;
 - to provide high-tech services, studies, tests and evaluations to both public and private bodies and enterprises (<http://www.enea.it>).

As regards conservation techniques and methods, other organisations are available to the property, at national level, as the IC-

CROM -International Centre for the Study of the Preservation and Restoration of Cultural Property- that was established in Rome in 1959 (ICCROM, Via di San Michele 13, I-00153 Rome, phone: +39 06.585-531; fax: +39 06.585-53349; <http://www.iccrom.org>).

As regards the management techniques of cultural heritage, in 2005 in Italy there were at least 78 training courses available organised by the main Italian universities and public and private training agencies nationwide (<http://www.eccom.it> “Cultural Administration and Management Training Centres in Italy. Inventory“).

As far as sources of expertise and training in conservation and management techniques at local level, see below.

5.g1

Sources of expertise and training in conservation and management techniques CIVIDALE DEL FRIULI

The management and conservation of the asset is guaranteed firstly by cooperation with national level agencies and specialists of the relevant sector, and by the technical expertise offered by the Cividale’s various institutions and operators, and those present in the region of Friuli Venezia Giulia, which also deal with the training of specialised staff.

Among the latter are: experts in the management of cultural assets, diagnostic experts, restorers, archaeologists, art historians, archivists, librarians, museology experts, docents, teachers, graphic designers, cataloguing experts, photographers, experts in it applications focusing on cultural assets, experts in promoting tourism, and economists. These professional profiles are mostly linked to:

- the Soprintendenze of Friuli Venezia Giulia (the local branches of the Ministry

of Cultural Heritage and Activities), which operate in the context of the National Archaeological Museum and of the History of Art Museum of Palazzo de’ Nordis;

- the University of Udine, where the following resources are available: specialised units and conservation laboratories, safeguard and restoration of cultural resources; archival and bibliographical sciences; engineering; information technologies; specialization in environmental, agrarian and enological sciences; the graduate course entitled Scuola di Specializzazione in Storia dell’Arte is located in Cividale itself, in one wing of the Monastery of Santa Maria in Valle;
 - the University of Trieste, where the following resources are available: specialised archaeology units and laboratories; geological and geophysical sciences; specialization in environmental sciences and in biodiversity; informatics;
 - the Centro Regionale di Catalogazione e Restauro di Villa Manin/Autonomous Friuli Venezia Giulia Region, which comprises a restoration school and laboratory; an operational unit of the Ministry of Cultural Heritage and Activities specialised in cataloguing;
 - the Comitato Promotore Progetto Patriarcato di Aquileia, based in Cividale, focusing on cataloguing of documents of historical and documentary value, and in archival and bibliographical cataloguing;
 - scientific and experimental technology centres, such as the area science park of Trieste, affiliated to the laboratories of MIT in Boston, Mass.
- Moreover, direct links are entertained with other advanced technology laboratories specialised in material research and diagnostics:
- scientific and technology park “Luigi Danieli”, Udine;

- CATAS, specialised laboratories for wood analysis;
- the network of the experimental geo-physical observatory.

Most of these institutions are represented in the “Institutional Committee”, set up in 2003 by the Municipality of Cividale to support UNESCO candidacy.

5.g2

Sources of expertise and training in conservation and management techniques

BRESCIA

Archaeologists, art historians, museum experts, diagnostic specialists, restorers, cataloguing experts, graphic designers, archivists, librarians, museum didactical experts, teachers, photographers, promotion and communication experts, administration officers and promotion experts are employed in the office called Settore Musei of the Municipality of Brescia, as well as by the Soprintendenza per i Beni Archeologici of Lombardy and the *Fondazione Brescia Musei*. Institutions also benefit of the cooperation of university institutions at local and national level.

5.g3

Sources of expertise and training in conservation and management techniques

CASTELSEPRIO-TORBA

The Soprintendenza per i Beni Archeologici of Lombardy (Ministry of Cultural Heritage and Activities), the FAI, and the Province of Varese have archaeologists, art historians, architects, diagnostic experts, restorers, cataloguers, designers, archivists, librarians, photographers, computer experts and communications and promotion experts available.

The institutions that are responsible for Castelseprio-Torba also cooperate with local, national and international research institutions, including the Istituto Pontificio, the State University of Padua (archaeology, epigraphy, history of settlements), the State University of Milan (mainly for Roman world studies), the Catholic University of the Sacred Heart in Milan (archaeology), the Eastern Piedmont University (Institute of History of Art), the Universities of Lausanne and Mendrisio. There are also close connections with institutes of research and diagnostics for materials (e.g. CNR National Research Centre – Gino Bozza Centre in Milan).

5.g4

Sources of expertise and training in conservation and management techniques

SPOLETO

The Umbria region can avail itself of high-level technical skilled professionals in the field of handicraft and restoration. The Umbria Superintendence employs top-level technical staff and restorers able to carry out conservation and maintenance work at any level. The municipality of Spoleto itself operates with its qualified internal staff (architects, engineers, surveyors), involved in the monitoring of the state of conservation of cultural heritage and in the management of any maintenance or restoration work.

With regard to research work, the presence in Spoleto of the world-renowned CISAM, Italian Centre for the Study of the Early Middle Ages, is worth mentioning. The Study Centre was founded on 7th June 1952 upon the initiative of Professor Giuseppe Ermini, Chancellor of the University of Perugia and Education

Minister. In 1957 a law was passed, according to which the Study Centre acquired legal personality under public law. The CISAM is unanimously considered the most prestigious backdrop in the world for conferences and interdisciplinary studies devoted to the history and the culture of the early Middle Ages. Its activities include the Study Weeks and national and international conferences, the papers of which have been published and are characterized by the comparison between different approaches to Middle Age historiography.

The University of Perugia, too, gives a contribution to the definition of qualitative standards for the management and the implementation of curricula and research programmes, from archaeological studies at the Faculty of Arts to scientific studies. The decision taken by the Spoleto municipal authorities to establish a Centre of Excellence for the storage of cultural heritage in the event of natural disasters is particularly welcome since it will be of the utmost relevance and a point of reference for the whole Umbria region. The Centre of Excellence will be involved in the following scientific activities:

- cataloguing of photographs and inventories;
- early intervention measures (cleaning and securing of the works of art);
- storage in ad hoc racks/shelves/shrines and so on;
- ongoing monitoring of the state of conservation.

5.g5

Sources of expertise and training in conservation and management techniques

CAMPELLO SUL CLITUNNO

Craft, technical and restoration skills of excellent level are available in the region.

The Soprintendenza relies on adequate technical staff and restorers able to support any maintenance and improvement intervention. As to other bodies or institutions at regional level see section 5.g4.

5.g6

Disponibilità di competenze specialistiche e di formazione nelle tecniche di conservazione e gestione BENEVENTO

The Soprintendenza per i Beni Architettonici Artistici e Storici ed Etnoantropologici of the Provinces of Caserta and Benevento, responsible for the protection and the conservation of the complex of Santa Sofia, has an operational centre in Benevento, whose aim is to protect local heritage; moreover, the Soprintendenza per i Beni Archeologici of the Provinces of Salerno, Avellino and Benevento has a local Soprintendenza per i Beni Archeologici responsible for the protection of the cities' archaeological heritage. Both departments belong to the Ministry of Cultural Heritage and Activities and are provided with specialised technical experts (architects, art historians, archaeologists) and administrative experts, as well as surveyors, photographers, data collectors and restorers.

At the Cultural Institutions Service of the Province of Benevento, there are also archaeologists, art historians, experts in museum management, experts in diagnostics, restorers, cataloguers, designers, archivists, librarians, experts in museum didactics, teachers, photographers, it experts, communication experts, administrative experts and experts in promotion. The aforementioned institutions also work alongside local and national university institutes. In particular, with regards to the reference territory: the Unisannio di Benevento, part of the University of

Benevento, where two important sectors are active: the Centro Regionale di Competenze sulle Tecnologie dell'Informazione e della Comunicazione, and the Research Centre on Software Technology.

There are 4 university centres in nearby Naples, (the Federico II University, founded in 1224, the Second University of Naples, the Suor Orsola Benincasa University Institute, the "l'Orientale" University of Naples) with courses in archaeology, history of art, architecture and conservation.

5.g7

Disponibilità di competenze specialistiche e di formazione nelle tecniche di conservazione e gestione MONTE SANT'ANGELO

As far as the management and conservation of the property is concerned, on top of the collaboration with authorities and specialists in the sector at national level, it is possible to rely on the technical advice of a number of institutions and experts based in Monte Sant'Angelo and in the region, dealing with the training of specialised staff. Reference is here made to the following professional figures: experts in diagnostics, restorers, archaeologists, art historians, experts in museum management, didactic operators, teachers, designers, cataloguers, photographers, experts in tourism promotion and economists.

These professionals pertain to:

- The Superintendency for Architectural and Landscape Heritage of the Provinces of Bari and Foggia;
- The Superintendency for Architectural, Artistic, Historical and Ethno-anthropological Heritage of the Provinces of Bari and Foggia;
- The Superintendency for Archaeological

Heritage of the Apulia Region;

- The Superintendency for Archives of the Apulia Region;
- The State Archives of the Provinces of Foggia;
- The National Park of Gargano;
- The University of Bari.

In particular, since the 1970s, a number of professors of the university of Bari have devoted themselves to the study and development of the history of the Sanctuary from a historical-religious, monumental-epigraphic, folkloric and documentary point of view.

In 1995, based on the agreements concluded between the University of Bari, the Municipality of Monte Sant'Angelo and the Mountain Community of Gargano, the University established the *Centro di Studi micaellici e garganici*, or Centre for San Michele and Gargano Studies, a branch of the Department of Classical and Christian Studies; this Centre is based in the medieval convent of the Poor Clares, recently restored with European funds. The Centre is committed to the study and the enhancement of the complex historical, archaeological, architectural, epigraphic, literary, hagiographical, artistic, ethno-anthropological documentation linked to the Sanctuary of the Archangel San Michele and the Gargano area especially during the Early Middle Ages.

As integration and completion of the scientific research carried out by the scholars, the Centre offers work experiences, conferences and seminars among which the annual Weeks of Late Antique and Roman Barbarian Studies plays a central role. The initiative, that this year celebrated its 12th edition, is dedicated to young scholars that have been granted scholarships. Over the years a number of conferences have been held on the topic of the cult of San Michele as well as on Late Antiquity and the Early Middle Ages.

In April 2006, the Department of Classical and Christian Studies organised an international conference in Bari under the title *Worship and Sanctuaries of San Michele in Western Europe*. Particular attention has been dedicated over the past years to the study of the relationships between the Sanctuary complex and other San Michele settlements in Italy and Europe, in particular Mont-Saint-Michel Abbey in Normandy or the Sacra di San Michele in the Susa valley. In this perspective, the Centre has a number of ongoing scientific cooperation and operational links with other Italian and foreign universities and institutions such as the University of Caen Basse-Normandie, the Paris X-Nanterre University, the École Française de Rome, the University of Mar Del Plata (Argentina), the European Centre of Norman Studies of Ariano Irpino (AV).

5.h Visitor facilities and statistics

5.h1 Visitor facilities and statistics CIVIDALE DEL FRIULI

The Tempietto Longobardo is open seven days a week, and at its entrance are placed educational panels, and documentation and audio-guides are offered free of charge (this service so far has been in Italian only, but an English and a German version are being prepared).

At the Monastery of Santa Maria in Valle the *ancient crèche of the Ursuline nuns* is also open to visitors, and comprises 18th century small wax statuettes. Free guided tours of the city and of the Tempietto are organised in summer by the Municipality of Cividale's structure in charge of the management of tourist activities, with the cooperation of the region's tour guide associations (this association is also involved in a project on the management of organised tour groups together with the Parish).

In some seasons of the year, particularly in summer, special visits are organised to areas inside the Monastery of Santa Maria in Valle not normally open to the public. In the Monastery close to the Tempietto the following work is scheduled for completion before 2009 (see 5.d and Management Plan):

- the opening of a new exhibition area focusing on the history of the Monastery and of the Tempietto itself, where works and archaeological finds relating to this important area of the Longobard city will be on show;
- the creation of a centre to coordinate and inform visitors to the site and to the city, which will be set up within the new structure placed at the access of the Monastery of Santa Maria in Valle and of the Tempietto.

In the Cathedral an audio guide is being installed to illustrate the historical and artistic value of the area. The annexed *Museo*

Site element No.	Name	Visitors					Estimated visitors
		2004	2005	2006	2007	2008	2009
1	Cividale del Friuli The Gastaldaga area with the so-called Tempietto Longobardo	46.261	46.656	47.829	45.887	46.010	47.300
	Cividale del Friuli The <i>Museo cristiano</i> (1a)	20.000	20.000	-	-	-	-
	Cividale del Friuli The Patriarchal Palace and the <i>Museo Archeologico Nazionale</i> (1b)	21.591	19.895	22.494	19.351	18.227	20.000
2	Brescia The monastic complex of S.Salvatore - Santa Giulia (2)	247.329	473.289	479.596	320.839	259.699	280.000
3	Castelseprio – Torba The <i>castrum</i> , the complex of S.Giovanni and the Church of S.Maria <i>foris portas</i> (3)	15.000	15.000	15.000	12.000	12.500	15.000
	Castelseprio – Torba The Torba Tower and the Church of S.Maria	22.142	21.777	17.424	15.939	16.911	12.151
4	Spoletto The Basilica of San Salvatore (4)	1.474	2.689	2953	3118	3632	3790
5	Campello sul Clitunno The Clitunno Tempietto	9.088	9.600	9.257	9.500	8.510	8.450
6	Benevento The cloister of S.Sofia and the <i>Museo del Sannio</i> (5)	8.900	15.500	17.450	18.639	19.330	20.000
7	Monte Sant'Angelo The Sanctuary of San Michele (6)	15.000	17.000	20.000	25.000	30.000	32.000

(1a) Cividale del Friuli – The number of visitors in 2004/05 is an estimate, since entry to the museum was free. In 2006/07 it was closed for restoration works and has been open again in 2009

(1b) Cividale del Friuli – The number includes paying visitors and no-paying ones, that have right of free enter by National law.

(2) Brescia – The number includes visitors to temporary exhibitions in the *Museo della città*. Referring to the archaeological area visitors statistics are not available because entry is free.

(3) Castelseprio-Torba – The entry to the archaeological park is free; the number shown refers to signatures left by visitors at Santa Maria *foris portas*.

(4) Spoleto – The entry to the church is free; the number refers to signatures left by visitors

(5) Benevento – The number includes only visitors to the *Museo del Sannio*. It is not possible to estimate visitors' number to the Church of Santa Sofia, since this is still currently a place of worship.

(6) Monte Sant'Angelo – The number refers to an estimate of only pilgrims visiting the *Museo Lapidario* located in the Longobard gallery which can be visited only on request. It is difficult to estimate pilgrims' number to the Sanctuary, since this is still currently a place of worship (nearly 2 million by the Michaelite Fathers).

Cristiano e Tesoro del Duomo has recently been refurbished and equipped with a ticket office and bookshop.

The *Museo Archeologico Nazionale* holds the main Roman artefacts plus a large number of funerary artwork belonging to the period of Longobard rule in Italy. It is open every day from Tuesday to Sunday from 8.30 am to 7.30 pm; on Mondays it is open from 9 am to 2 pm. The museum is equipped with a ticket office, a bookshop, toilets, and facilities for disabled visitors. Visitors can rely on didactic itineraries on main themes, organised in recent years, and illustrated by explanatory texts set out on panels. In the archaeological museum's Lapidarium section the following areas are already active: Jewish Lapidarium (2004); Roman Cividale (2004); Cividale during the Byzantine, Longobard, Carolingian period (2006); Patriarchal Cividale (2008). The itinerary including the remains of the Patriarch's Palace of Callistus, in the museum basement, is presently being remodelled. The national Heritage days on September 29th-30th, 2007 marked the inauguration of the first sector, equipped with a wide range of didactic materials.

During recent years new exhibition layouts have been set up, further enriching the museum's range of offerings: these include gold Longobard coins ("Aurea"), the reconstruction of two of the most important Longobard tombs belonging to the Longobard necropolis of San Mauro, known as number 43 and 21; the reconstructions are equipped with didactic materials including graphic life size models showing the clothing originally worn by the tombs' occupants and the noble floor was reorganised by dividing the exhibits on a necropolis basis.

During the European Heritage Days in 2009 the restoration of the mosaic in the Patriarch's Palace was presented. Now it can be visited.

Educational activities

As from year 2005 the National Archaeological Museum houses the so-called "Archeoscuola", the didactic and archaeological laboratory, which focuses on elementary and middle schools (elementary school students ranging from 5 to 10 years old, middle school students' age ranging from 10 to 13).

The laboratory is managed through a concession by the association called "Amici dei Musei e delle Biblioteche di Cividale", and the activities take place in the didactic hall of the museum, which opened at the same time as the *Archeoscuola*. From time to time the museum is home to exhibitions of significant archaeological and historical and artistic value, also in cooperation with the University and qualified national and international cultural centres, while special events linked to anniversaries, particularly important acquisitions, recoveries and restorations. The museum promotes regular and special publications and refresher stage sessions for tour guides. Free promotional material is also available, and is distributed by the Municipality's facilities, as well as at the Tempietto and at the National Archaeological Museum. The attractiveness and the cultural offerings of the site, - enhanced by an environmentally valuable surrounding area, the nearby eastern alps - is further supported by a wide range of services to the public, which are already in place, or under way, and involve the whole of the historical centre of Cividale, including the buffer zone.

Services to the public in the city

The Tourist Office of the Municipality acts as a reference point for visitors, as its offices are located in the city centre, and supplies all necessary information; the office also offers free Internet access.

An information line, called *Infoline Turismo* is also available by dialling +39

432 710422-710460. A series of other sources of specific information services are also on offer:

- Sportello Informacittà: available seven days a week, located in the historical centre of Cividale, this service offers all types of information regarding the city, events, information on places where to stay, transport, as well as a place for speedy e-mail consultation, booking and confirmation of flight and hotel bookings. Information is supplied by experienced operators, fluent in a range of languages such as English, German and Spanish. Other information brochures and material on the Cividale area and other areas nearby is also available, together with an information and booking service through which visitors can choose where to stay.
- Sportello Informagiovani: this facility supplies information on activities for young people.

Useful information can also be obtained by visiting the following websites:

- Municipality of Cividale's website (www.cividale.net; www.comune.cividaledelfriuli.ud.it; e-mail turismo@cividale.net)
- Website of the Progetto Patriarcato di Aquileia (www.patriarcatoaquileia.it)
- Website "Italia Langobardorum", about to be completed.

Transport

The city and the assets that are subject to nomination have lately been improved by implementing a range of works and services, which are already up and running or about to reach final completion:

- updating of the Cividale-Udine railway track (a 14 minute trip), the acquisition of two new engines, the building of a new railway station at Cividale, which is now complete;
- a city bus service;
- bicycle rental service and bicycle excursion

sions with a docent to the City and its surroundings (the offering of free bicycles is planned).

For motorcars six free parking areas are available in the immediate surroundings of the buffer zone nucleus. Among these a parking area for caravans is available at Via delle Mura close to the access route to the Tempietto. In the urban centre there are four large toll payment parking areas (Piazza Picco, Piazza Duomo, Piazza San Francesco, Piazzale delle Scuole).

Facilities for visitors

Facilities for tourism are guaranteed by three hotels and a good number of other types of accommodation, ranging from the bed and breakfast type, to agritourism facilities, to holiday homes (about 490 beds). As to venues offering food, the 87 facilities available in the area include 50 bars and 37 restaurants. In addition, there are 18 agritourism facilities and 43 accommodation facilities totalling 490 beds. These venues can offer visitors the best wines of the region and the excellent typical local cooking, as well as traditional Italian cuisine and some international specialities.

As to toilets, these are present in most venues in the city, while the possibility of installing public toilets in the historical centre is being studied, and will soon be available also at the Visitors' Centre at the Monastery (see Management Plan). An emergency first aid service and medical service are guaranteed by the structures belonging to the Presidio Ospedaliero of Cividale.

The city centre is home to the Fire Brigade Headquarters (close to the Town Hall, or Municipio), the police station, the Headquarters of the Carabinieri and of the Guardia di Finanza. A detachment of the Fire Brigade has recently been placed in the city outskirts. In the city centre, at the Francescotto barracks, is also the head-

quarters of the eighth regiment of the Alpini.

5.h2 Facilities for visitors and visitor statistics BRESCIA

As recalled several times, an organic and comprehensive restoration and enhancement plan involving both the monastic complex of San Salvatore-Santa Giulia and the archaeological area located at the west will transform the town into a single large, open, organised museal complex managed as a whole.

The Monastery of Santa Giulia-*Museo della Città* was completely opened to the public in 1988. Before this, the three churches of San Salvatore, Santa Maria in Solario and Santa Giulia and the nuns' Choir were open to the public, and included works belonging to the treasury. The complex is open from Tuesday to Sunday, at the following times: winter 9.30 am to 5.30 pm, summer 10 am to 6 pm (extended in case of temporary exhibitions and special events).

All areas of the museum and Monastery are open to the disabled.

The following facilities are available in the Museo della Città:

Information facilities

Explanatory panels in Italian and English, with graphic reconstructions and plans are present in the following locations:

- in the most significant areas of the Monastery, to illustrate the monument's history;
- in every museum hall, to illustrate the theme of the exhibits and the exhibits themselves;
- a leaflet in Italian, English, French, German, Spanish and Japanese;
- publications on the Monastery's history,

the archaeological area occupied by the site, and the museum set up in each asset.

Guided tours

- Specific and thematic visits are conducted by personnel instructed and coordinated by the Municipality of Brescia and by the Fondazione Brescia Musei;
- ordinary visits are conducted by professional tour guides.

Educational activity

School parties can choose from a range of 28 types of workshop, including hands-on activities and visits comprising specific sections of the Museum and/or Monastery, and relevant exhibits. In the Museum there are four classrooms exclusively reserved for school parties' activity.

Other 41 laboratories are spaces set aside for activities relating to other buildings in the buffer zone (Pinacoteca Tosio Martinengo, the Castle, including the Weapons Museum and the Risorgimento Museum).

Facilities areas

- Conference hall (total capacity 216 seats);
- four workshop and projection halls;
- library;
- public facilities (information and cafeteria);
- information and booking services, including two telephone numbers reserved for this purpose;
- information booth;
- cloakroom;
- separate washrooms for male, female, disabled visitors, also including baby's changing table;
- cafeteria offering light refreshments;
- self-service cafeteria;
- ATM facilities;
- wheel chairs;

- bicycle rental service;
- first aid kit.

The archaeological area, where archaeological excavation and conservative maintenance work is under way, is freely accessible by the public on all days, except Mondays, from 11 am to 4 pm. Presently the uncovered space and the pronaos of the temple can be visited. From there, cells can be seen with the 19th century epigraphic collection. As a temporary measure, the disabled cannot visit the pronaos of the temple since the itinerary was changed owing to the archaeological surveys under way in order to ensure the safety of Visitors.

Visitors can rely on the following services:

Information tools

- Italian and English explanatory panels with plans, sections, historical iconography and reconstructions;
- Italian printed guide sold at the bookshop of the nearby Museo della Città;

Guided tours

- Thematic guided tours (by staff trained and coordinated by the Municipality of Brescia and the *Fondazione Brescia Musei*);
- General guided tours by professional guides.

Schools can benefit from special teaching activities following the same format chosen for the activities organised for the Monastery and the *Museo della Città*.

Services for the public

- Lavatory men-ladies-disabled.

Online Services

Two Internet sites deal with the monastic complex, addressing the subject from different points of view:

- www.museiarte.brescia.it - This website supplies information of scientific importance regarding the museum sites, the

collections and the research facilities (library and photo-archive). The site also includes a database on the city collections with in-depth files and an overview of the museum's main publications.

- www.bresciamusei.com - This multi-language website contains information regarding the services available at the museum, opening times, ticket prices, booking facilities and cultural events, as well as information on how to reach the historical centre and the museum (including information on means of approach, the limited traffic zone or ZTL, parking, city and suburban transport, and a map of the city); information on other city museums, visitors' itineraries in the city and the surrounding area; addresses of hotels and restaurants; useful telephone numbers;

- possibility of buying publications online. The museum also plays host to events on request, while fully respecting the asset itself. The Monastery of San Salvatore-Santa Giulia, is located in the historical centre of the city in an area where vehicle traffic is limited by law. It can be reached using public transport (urban bus service). In its immediate vicinity there are public parking areas.

Services for the public in town

There are three main reference points in town for tourists and visitors:

1. The Tourist Office of the Municipality of Brescia, which is located at the heart of the city, Piazza della Loggia 13/b, and is open throughout the week, Monday to Saturday, from 9.30 am to 6.30 pm and on Sunday from 10 am to 6 pm. This office provides information and welcome services to Italian and foreign tourists.
 - Multilingual staff is available.
 - Information materials are available in five languages for sightseeing.
 - It distributes promotional materials on cultural, artistic, sports, recreational and

oenogastronomic events organised in the town and the province.

- It hires free of charge audio-guides in five languages for sightseeing (phone or e-mail booking is required).
 - It shares its premises with the Public Relations Office and the Urban Public Transport Information Office. Useful information to organise the stay and the visit to the town are also available on the website of the Municipality of Brescia. Please visit www.comune.brescia.it/turismo. All texts are translated into five languages. The same information can be obtained by dialling +39.030.2400357 or sending an e-mail to info-point@comune.brescia.it.
2. The IAT Office of the Province of Brescia. The Province of Brescia has a network of 11 tourist information and welcome offices for those who wish to organise a holiday in the area. The IAT Office of Brescia is located in Via dei Musei 32, in front of the nominated site, and is open Monday to Thursday from 9 am to noon and from 2 pm to 4.30 pm; on Fridays from 9 am to noon. The office is a meeting point between the needs of tourists and the rich offer available on the whole provincial territory. It provides tourist information on its own website at www.provincia.brescia.it/turismo. The same information can be obtained by dialling +39.030.3749916 or sending a message to promozione.turismo@provincia.brescia.it. Moreover, it is home to A.G.T.A., the Association of Authorised Tourist Guides, where guided tours in town or in the provincial centre can be booked with the help of one hundred guides in seven different languages
 3. Infopoint Santa Giulia. Located within the Monastero of Santa Giulia close to the entrance, it provided tourist information in five languages for the visit to the town and distributes promotional mate-

rials on events in town and in the province. It is open, as the *Museo della Città*, Tuesday to Sunday, from 9.30 am to 5.30 pm (in winter) or from 10 am to 6 pm (in summer). With reference to tourist information available online, in addition to the websites mentioned above, there is a very good portal managed by the *Bresciatourism consortium*, which promotes tourism in the city and the province of Brescia, at www.bresciatourism.it. This trilingual website provides information on reception capacity, territory, culture, restaurants and alike, sport and well-being. Moreover, it contains a constantly updated calendar of the main events.

Hotel and other types of accommodation

In the city's historical centre, which is for the most part included in the buffer zone of the site proposed as World Heritage list candidate, there is a wide and diversified range of possible places to stay.

Restaurants and bars

In the area of the historical centre there are about 500 venues available to visitors; about half that number of venues is available in the buffer zone, where there is a wide variety of types of venue, ranging from small scale restaurants to cafeteria style self-service venues, as well as ethnically diverse restaurants, and venues offering local and regional cuisine.

5.h3

Facilities for visitors and visitor statistics CASTELSEPRIO-TORBA

The archaeological area of Castelseprio-Torba is an area of notable archaeological-historical-artistic and monumental interest being of undeniable value and tourist attraction. The archaeological park

managed by the Soprintendenza Archeologica of Lombardy – which includes the *castrum* and the village with the Church of Santa Maria *foris portas* – is open to students and visitors, free of charge, all year round, 6 days a week (closed on Mondays); during weekdays from 8.30 am to 7.30 pm, and at weekends from 9.30 am to 6.30 pm. The area of Torba, which is run by the FAI, opened to the public in 1986, and is open every day, except Mondays and Tuesdays and except bank holidays, from March to September (from 10 am to 6 pm), from October to mid-December and in February (from 10 am to 5 pm). There is an entrance fee. Reductions for children and groups. The agreement stipulated between the managing bodies (5.e7), for which the operational definition is currently being drawn up, has the main aims of achieving an integrated and coordinated management of the entire archaeological-monumental complex, the creation of a single park, physically linked and furnished with the same services for the public.

To date, the visitors' route in the park managed by the Soprintendenza has explanatory panels in Italian (texts will also be translated into English), but guide brochures are also available for visitors in several languages (English, French, German and Spanish), which are distributed at the entrance. Visitors can also use scientific publications on the site. Support material and general information sheets have been prepared, in particular, on the Church of Santa Maria *foris portas*, in Italian, which are accompanied by guides in English and Spanish.

There are explanatory panels at the Monastery entrance in Torba, containing the history of the site. Teaching panels are also located on the first floor of the Tower. Bilingual panels will be created for the Tower, the church, the walls, restoration interventions, the links with the territory

and the network of Longobard sites in Italy. By the end of 2009/the beginning of 2010, an Italian guide with an abstract in English will be published. The guide will be devoted to the complex of the Monastery of Torba (co-funding granted by the Lombardy Region in 2007 for studies and research).

There is a small shop by the ticket office, which sells, publications, guidebooks, postcards, stationery, gadgets and local products.

The Municipality of Castelseprio has compiled in cooperation with FAI and with the contribution of the Lombardy Region an information brochure that illustrates the entire site (*castrum*, Church of Santa Maria *foris portas* and the Monastery of Torba). Moreover, in three strategic area of its territory, with the contribution of the Lombardy Region, it posted bilingual thematic panels describing the candidacy, its territory, its environmental characteristics and the archaeological area. A forth panel with the same graphical layout was installed by the FAI in the parking area of Torba. The archaeological park can be visited freely, but the Soprintendenza per i Beni Archeologici of Lombardy organises, in cooperation with cultural associations, visits for schools.

School trips can make use of an initial illustrative guide to the visit and the route. Guided tours can be booked for individuals and school groups can enjoy active visits at Torba. The FAI organises special school visits to the Monastery for students of all ages, from pre-school to high school, with the visits including the heritage and also the entire Castelseprio area. The area also has a laboratory for learning activities.

There are two nature paths in the woodland and boundary areas to the site: the "Owl" and the "Tawny Owl" paths; nature walks with a specific theme are organised, accompanied by geologists and nature ex-

perts from PLIS RTO (local park of the municipalities of Castelseprio and Gornate Olona). The PPI (Programma Pluriennale degli Interventi, or Multi-year Plan of Interventions) for the period 2007-2009 of the Park provides as a priority the restoration of the system of historical itineraries through the protected area so that it can be used for tourist and recreational purposes.

Historical, artistic, style and architectural information about the walls and buildings in the *castrum* are available on the website (www.archeologia.beniculturali.it; www.castelseprio.net; www.provincia.va.it/patrimonio). The FAI website (www.fondoambiente.it) has a section dedicated to the Monastery of Torba, full of historical-artistic and practical information for visitors (opening times, contact numbers, how to reach the site, how to book).

The FAI also has a special site for schools (www.fondoambiente.it/faiscuola).

Parking: about 140 parking spaces and some spaces for coaches are a short distance from the archaeological park (from 1 to 2.5 km). A parking area is close to the Monastery of Torba.

The area of Castelseprio-Torba can be reached by car and coach along the Autostrada dei Laghi A8 (exits for Solbiate Arno and Gazzada, distance 5 km); the nearest railway station is at Tradate (5 km from the site). For tourist facilities, there is a restaurant at the Monastery of Torba.

Other restaurants are available in the area. Hotel accommodation in the area is rather lacking, but it is developing (5 bed and breakfast facilities, out of which one belongs to a higher category, is equipped with a restaurant and can host meetings, conferences, receptions and exhibitions, 3 hotels).

The Municipality of Castelseprio has allocated an area for this purpose in the PRG (Piano Regolatore Generale, General

Development Plan) and some projects are currently being discussed for the conversion of the Cascina Ronché (private property) into a country house hotel, which is located about 1 km from the archaeological park. It is not currently possible to estimate the number of visitors who come to the archaeological park, as no entrance tickets are issued; the attendance monitoring system is currently based on the signatures left inside the Church of Santa Maria foris portas and the Antiquarium. About 20,000 people visit the area of Torba each year.

The attendance level is monitored by counting the tickets issued, which differ depending on the type of visitor and the various discount agreements activated. This system allows real time monitoring and relative segment statistics, forming an essential tool for evaluating the renewal and/or the extension of discount agreements. Statistics on tourist flows based on various periods of time also allow an analysis of the efficacy and/or the possibility of drawing up special offers dedicated to students and/or tour operators in order to make annual presence trends to the site more homogeneous.

5.h4

Tourist services and statistical data SPOLETO

The exact number of visitors of the basilica of San Salvatore is unknown, since no tickets are issued. Therefore it is certainly underestimated because it is only based on the number of people voluntarily signing the book at the entrance of the church and the signatures collected during the "Adopt a monument" project (see 5.i4). The years between 2005 and 2008 saw a considerable increase in the number of visitors; 74% of tourists were

Italians and 26% foreigners. The highest peaks were during Easter holidays, summer holidays (mid August) and the trough (minimum level) in the month of February. The basilica can be reached on foot from near-by Spoleto; there are two near-by car parks: the San Ponziano car park, just 100 metres (109 yards) away and the Via Nursina car park, 500 metres (546 yards) away. Further parking spaces will be available on the approach road to the graveyard. The parking spaces will be joined – as already stated in the previous paragraphs – by a new car park, which will enable buses and caravans to park in the proximity of the buffer zone. At present, the site does not offer any tourist services, since the area is used as a graveyard; the relevant municipal departments, though, organize guided visits for school-children and visitors. As described in detail in paragraphs 5 and 4 a revision of the management activities, leading to the supply of further tourist services is currently being planned.

Public services in the buffer zone

The visitors' point of reference in town is the I.A.T. – the Municipal Tourist Information Office of the Associated Tourist Services of the District (Campello sul Clitunno, Castel Ritaldi, Giano dell'Umbria and Spoleto) - situated in the historic town centre, Piazza della Libertà, No. 7, Tel. 0743218620, fax 0743218641, e-mail info@iat.spoleto.pg.it. The I.A.T. performs the following functions: welcomes and provides information to tourists, thereby steering their choices and facilitating their stay. The staff speak the 4 main languages as well as Russian fluently; moreover, trainees coming from Eastern European countries can be hosted for some time and give their valuable contribution to service supply. Useful information is also available on the municipality portal: www.comune.spoleto.pg.it and

on the website of the specific nomination: www.italialangobardorum.it.

Tourist hospitality

Spoletto has 138 restaurants. Tourist hospitality is guaranteed by 34 hotels and 99 accommodation facilities other than hotels; the number of available beds amounts to 3,591 (data refer to 31st December 2008; in 2009 figures are on the increase thanks to the opening of new accommodation facilities other than hotels). In 2005 a working team was established to protect consumers' fundamental rights, with specific monitoring tasks related to quality, safety and hygiene of the services supplied by accommodation facilities.

An adequate number of car parks connected to shuttle buses or escalators (see management plan, "alternative road practicability" project). First Aid and health care services are provided by the Spoletto hospital. Spoletto also hosts the headquarters of the municipal police, the police station, a State Police Academy, the headquarters of the Carabinieri and of the Guardia di Finanza (the financial police), the barracks 'G. Garibaldi'. The headquarters of the Fire Brigade are about a mile from the town centre.

5.h5

Facilities for visitors and visitor statistics CAMPELLO SUL CLITUNNO

The Clitunno Tempietto, accessible to people with special needs, is open to visitors each day of the year with the following working times: winter from 8.45 am to 5.45 pm, summer from 8.45 am to 7.45 pm. At the small ticket sale point no information material or services are available at the moment, yet these are available throughout the year at the near Fonti del Clitunno, where during summer

time a tourist information point is established 900 m away from the site. A project is being developed to create a welcome point.

Services to the general public

The cultural offer of the site – enhanced by the high naturalistic value of the territory – is combined with a series of services to the general public, partially completed and partially under way, which concern the entire neighbouring territory of the buffer zone. The Info-point of the Municipality promotes the entire territory of Campello sul Clitunno, including neighbouring towns and main regional attractions. The promotion activity can therefore be summed up as follows:

- providing historical-cultural information on architectural properties of the Municipality and relative information material;
- distributing information material concerning the area and neighbouring areas, which is provided by the two main tourist offices (Spoletto and Foligno), each within its competence. The general guides are instead offered by the Region. Most of the promotional material which is distributed free of charge by the municipal Info point is available in several languages (English, French, German and Spanish). The ticket office of the Fonti offers instead paid tourist guides;
- providing information on accommodation and catering facilities (restaurants, hotels, rural accommodation, etc.);
- hotel booking;
- providing information on roads (road system, limited traffic areas, car parks, urban and suburban transport, city maps);
- providing information on cultural initiatives and events (festival, events, concerts) relative to the entire territory, working times, ticket prices, city tourist itineraries, provincial and regional territory.

The tourist information point mainly

works during summer time: working times (open all day, Saturdays and Sundays included, as well as national holidays) are the following: 9.30 am- 1.30 pm/2 pm; 4.30 pm-7.30 pm/8 pm.

Throughout the year, the ticket office of the Fonti del Clitunno provides information and paid guides to tourists. The Municipality launched a tourism info-line service, which is always active throughout the year, at +39 0743.275558. Further information is also available on the website of the Municipality: (www.comune.campello.pg.it e-mail: info@comune.campello.pg.it).

The municipal police station is located at the Town Hall while the Carabinieri station, the post office and the station of the volunteers of Civil Protection are in the centre of the city. First aid service and medical assistance are ensured by the hospital of Spoletto (13 km) and Foligno (17 km).

Transport

The Tempietto can be reached by bus from the railway station and neighbouring towns. In the area near the monument two small rest areas are available, and in the vicinity of the Fonti del Clitunno there is a wide car park, as well as two sectors equipped for camper vans (San Sebastiano and San Cipriano and Giustina).

Welcoming services

The Municipality of Campello sul Clitunno boasts an excellent tradition in the tourist-accommodation sector and has numerous accommodation and catering facilities. All structures offer high quality services, which is essential to be competitive on the market. There are numerous and differentiated facilities available for tourists: catering facilities offer the best wine production in the region and an excellent local cuisine.

Taking into account the small dimension

of the municipal territory, accommodation capacity is large and differentiated: four hotels are complemented by a good number of rural accommodation facilities, lodging houses and holiday houses which ensure around 210 beds.

Picnic areas

Behind the buffer zone, in front of the Water Garden of the *Fonti del Clitunno* (Clitunno Springs), a vast area, equipped with benches and tables is available for tourists. Other small similar areas are scattered around the green area of San Cipriano, sport plants, around the health circuit. In the mountainous area, available for tourists, along with picnic areas, small wood fires are provided.

5.h6

Visitor facilities and statistics BENEVENTO

The monumental complex of Santa Sofia is open to the public that also have access to the Church and the Museo del Sannio, as well as benefit from the services and the internal activities of the museum: the library and the historical archive with reading room and conference hall.

The Monastery of Santa Sofia, *Museo del Sannio*, was totally open to the public in 2001, but complete organic data are available only from 2004. The Church of Santa Sofia is open every day from 7.30 am to 12.30 am and from 4 pm to 7 pm. The *Museo del Sannio* is open every day, except Monday, from 9 am to 6.30 pm. The reading room is open from Tuesday to Friday from 9.30 am to 1.30 pm (also from 3 pm to 6 pm on Tuesdays and Thursdays). An agreement between the Diocese of Benevento – that manages the Church – and the Province of Benevento is being negotiated in order to apply the same working hours in the Church and the

museum thus guaranteeing that the Church is guarded by province staff (see Management Plan).

Services for the public

At the museum, completely accessible to people with special needs, are available:

- ticket office (with cloakroom for bags and rucksacks), where visitors receive a brochure and orientation plan at no charge;
- information and booking service, also for groups and school trips;
- information service on the booking office; a museum service centre with dedicated telephone lines is planned to be established in the future;
- information boards in each room of the museum that focus on the topic and finds exhibited in that room (information boards are now being adjusted to add the English translation);
- leaflets in Italian with orientation map about the premises and the collection (the English version is now being printed while the French translation in unde way);
- publications on the history and the collections of the museum located in the site (a bilingual catalogue of the Longobard section is now process);
- lavatory men-ladies-disabled;
- first aid box.

Guided tours and didactic activity

- Special and thematic tours, with advance booking, conducted by guides authorised by the Ministry of Cultural Heritage; upon the occasion of special events, walking tours for all the public, including people with special needs, are organised and carried out by the experts of Art Sannio Campania;
- general tours are conducted by professional guides;
- a plant for the didactic section is now being realised; it was experimented in 2006 with laboratories for all the public,

including people with special needs, and school groups.

An equipped didactic room is also envisaged.

Service areas

- Conference hall (seats 149);
- catalogue room with no. 4 positions for electronic cataloguing and study of materials;
- photographic laboratory equipped with photo-printing and video equipment;
- library/ reading room for accredited visitors, with photo-printing services upon request;
- restoration and maintenance room attached to the deposits;

Services and activities in the process of planning and experimentation

- School didactics (Project Esplorarte);
- special didactics for people with disabilities (Project Open May);
- tour assistance (Project LPU);
- publishing line (Public Notice);
- production of information material and gadgets (orientation map, cards, bookmarks and calendars);
- combined ticket of the Benevento museum network;
- artistic light system with guided tour of the main monuments of the town (see "Benevento Città Luce" items 2.a6 and 5.i6).

On-line services

Purchase of tickets through ARTECARD (<http://www.artecard.it>).

An Internet website for the Museo del Sannio www.museodelsannio.it was studied and realised. It provides information on the museum, on working hours and on entry fees. Moreover, it contains all scientific information on the museum, collections and research tools (library, photographic archive).

At the moment it is being tested on-line

and off-line and it will soon be launched. Information on the Museo del Sannio is also available on the website of the Province of Benevento www.provinciabenevento.it. An interactive portal for the Benevento network of museums is under way. It is expected to be published within 2008. The site will contain information on the premises and the archaeological, historical-artistic, natural, demoehtnoanthropological and food and wine heritage and will allow on-line booking for the services. The website will also have an English version and will provide information on tourism offers, hotel and restaurant addresses and public utility numbers; the museum can also host events by external partners, upon request, while fully respecting the property.

Partnership:

- In-house agency *ArtSannio Campania*;
- association *Amici dei Musei*;
- private partners (e.g. Rotary Club).

Accessibility

The complex of Santa Sofia is located in the historical centre of the city, in a pedestrian area, closed to traffic that can be reached by public transport (urban bus). The buffer zone parking which is accessible only to residential and commercial traffic has around 1500 places. In the city centre there are also numerous parking places on the streets that comply with Municipality rules. Parking per-hour tariffs differ according to location (central areas next to Corso Garibaldi and suburban areas).

Accommodation and hospitality

Benevento historical centre, which is almost entirely included in the proposed buffer zone, is equipped with several four-star hotels (4) and others (5) of different level. In total, around 425 beds are available (around 253 rooms).

Moreover, 11 complementary buildings offer accommodation, among which 9 are rural tourism facilities offering around 44 beds.

In the province of Benevento there are numerous accommodation facilities; in recent years the whole province has seen an increase in rural tourism that in 2004 already numbered 87 units (ISTAT data). In the city of Benevento and in the buffer zone catering options are numerous and various: restaurants, pizzerias, self-service restaurants, bars, and pastry shops. The food and wine offer meets high standards: from local typical products (fruits, vegetables, oil, wine, liquors, nougat, etc.) to regional and national cuisine.

In Paolo V Palace, in the historical centre, the Municipality established a multilingual desk that provides information on monuments, museums, walking tours, accommodation, offices and public utility places and on specific transport and assistance services. In the same office a multimedia info point is planned.

5.h7

Visitor facilities and statistics MONTE SANT'ANGELO

Open all weekdays, the Sanctuary offers illustrative boards as well as audio guides and other informative material printed in different languages which can be bought in the two bookshops located at the entrance and in the internal hall. Fixed-number guided tours are organised by the staff of the Sanctuary in the crypts – containing finds of the Longobard period – where the Lapidary Museum is established.

The *Devotional Museum*, which has been recently inaugurated, is open all weekdays and guided tours can be organised upon request of visitors. These structures are equipped with lavatory and facilities for

people with special needs. The Sanctuary is directly connected to the accommodation facilities of the Pilgrim's House, its restaurant and bar; events and conferences can be held in the auditorium, the conference hall and any of the three reading rooms. Every year conferences are held on the topic of the spread of the cult of San Michele and weeklong workshops are dedicated to the practice of spiritual exercises.

Inside the Sanctuary, San Michele Fathers can welcome pilgrims of different nationalities as they speak Italian, French, German, English and Polish. In the northern area of the Sanctuary there is a car park available for visitors.

Referring to 2005-2006 years, overnight stays in Monte Sant'Angelo registered by the Apulia Region on data provided by APTs (tourist information offices) are as follow:

Italian visitors:

	Arrivals	Overnight stays
2005	7859	27778
2006	2894	25835

Foreign visitors:

2005	3753	9186
2006	2894	5997

Total

2005	11594	36964
2006	10742	31832

The tourists in Monte Sant'Angelo according to the number of vehicles parked in municipal parking areas were on the increase: 1,500,000 in 2005 and 2006, 2,000,000 in 2007, 2,500,000 in 2008.

Clearly, the figures provided by APTs do not account for the attendance of daily tourists that in the summertime arrive from the coasts of the Gargano promontory on an excursion to Monte Sant'Angelo. Moreover, the data provided by San

Michele Fathers suggest that every year some 1,500,000 tourists visit the Sanctuary.

At any rate, attendance is increasing, as proven by the number of tourists in 2008, increased by about 20%. Services to visitors are provided by the Municipality of Sant'Angelo for the visits to the Castle, which has been reopened to the public on 3/08/2009 after some restoration interventions started in 2007 and has been visited by about 7,000 tourists in the first two months of activity.

Public services in town

In the historical centre, inside the buffer zone, there are cultural structures, such as the *Museum of Popular Arts and Traditions of Gargano* (with the most important G.Tancredi pictures' collection), the Town Library and the Library of the Centre for San Michele and Gargano Studies.

The tourist office managed by the "Proloco", the local authority that organises events in town, is a point of reference for visitors. The office for the public is located in the town centre and offers all useful information on the site.

The accommodation capacity is ensured by 6 hotels, 3 of which are located near the Sanctuary; catering is ensured by 15 restaurants and 10 bars as well as shops specialised in typical local products. As far as lavatory facilities are concerned, these are currently available for tourists in three points along the busiest routes. Located on the borders of the town historical centre, the Sanctuary is easy to reach also in case of an emergency by the ambulances of the nearest Civil Hospital.

5.11 Policies and programmes related to the presentation and promotion of the property CIVIDALE DEL FRIULI

The city –already known as *Forum Iulii* and later as *Civitas Austriae*– is the focus of a spontaneous and constant stream of visitors, who come to Cividale for cultural purposes, as well as on study tours or for religious reasons, and who are just as likely to be Italian as non-Italian. International tourism is due largely to the persistence in the memory and culture of the eastern and north European areas of the name and of the important historical, cultural and religious influence that this ancient capital exercised during the early medieval and medieval period for almost 500 years. The promotion and presentation of the asset and of the main aspects of the site focus on a number of scientific and promotional publications, published by the Municipality and by the National Archaeological Museum:

- multilingual fliers (in Italian, English and German) on the Tempietto and city guides, edited and distributed by the Municipality of Cividale at the Tempietto entrance;
- promotional brochures on aspects and artefacts of the National Archaeological Museum: namely the Longobard coins called "Aurea"; the new layout of the CRUP numismatic collection; Roman Cividale. Thematic routes in the Friulan Lapidarium; Cividale during the Byzantine, Longobard and Carolingian period. Thematic routes in the Friulan Lapidarium; Patriarchal Cividale 1077-1420. History, urban layout and findings.
- Thematic routes in the Lapidarium of Cividale.
- New leaflet on the Longobard section plan.

A more in-depth publication describing the Tempietto longobardo is on sale at the entrance to the monument. There one can also find a recent study by Hjalmar Torp, the monument's greatest expert can also be found, published by the Municipality of Cividale in 2006, entitled "*Tempietto Longobardo, la Cappella Palatina di Cividale*". Informative material in three different languages describing the Tempietto and the Cloister was developed: this initiative was financed by the Province of Udine. The reprint of the guide to Cividale in three languages (Italian, English and German) was completed.

Since 1977, the Soprintendenza and the association "Amici dei Musei e delle Biblioteche di Cividale" are publishing a yearly magazine, *Forum Iulii*, which is then freely distributed at the National Archaeological Museum. The magazine, sponsored by Banca di Cividale, includes scientific and educational articles, on the archaeology, on ancient and medieval history, on art history, on issues linked mostly to Cividale. It also contains a bulletin of activities and excavations in and around Cividale.

More recently an editorial project has been inaugurated, which will lead to the publication of a series of monographs, and will be entitled "*Archeologia a Cividale. Studi e Ricerche*" (or "Archaeology at Cividale. Studies and Research"). Its first volume, now almost completed, focuses on the excavations at the Longobard necropolis of San Mauro di Cividale. There is also another series entitled "*Cataloghi di mostre e guide brevi*" ("Catalogues of exhibitions and short guides") (see annex xxx).

As to the National Archaeological Museum and the Patriarch's Palace, the programmes for the presentation of this asset include the setting up of didactic itineraries with explicatory panels in differ-

ent languages and an increase of activity for the didactic laboratory for young people and students.

The Italian State and the Soprintendenza have launched initiatives to match the activities of the National Archaeological Museum, and which are meant to promote the site and of the city of Cividale which also comprise the re-opening of the new exhibition space in the History of Art Museum of Palazzo de' Nordis in Piazza Duomo. The various institutions that operate in Cividale contribute to the dissemination of knowledge of the assets of the site and of the city itself, also thanks to the organisation of exhibitions and symposia. The Archaeological Museum organises exhibitions and conferences every year for the Cultural Heritage days and for Culture Week. Conferences and meetings on Cividale and its surrounding areas are organised jointly by the Municipality and by the Scuola di Specializzazione in Storia dell'Arte dell'Università di Udine. They take place at the Auditorium of the Monastery of Santa Maria in Valle.

The Municipality of Cividale del Friuli has initiated specific initiatives in the last few years to promote the Monastery and the Oratory (or Tempio) of Santa Maria in Valle (see Management Plan).

The Parish of Santa Maria Assunta has also activated various programs to promote the Duomo and the Christian Museum.

5.i2

Policies and programmes related to the presentation and promotion of the property BRESCIA

The Monastery of San Salvatore-Santa Giulia, home to the Museo della Città, offers many facilities to ensure the asset's optimal presentation to visitors. It also

boasts a series of different rooms and laboratories used for educational work to promote interest in the museum and which focuses on schools (see 5.h).

One particular didactic activity is entitled "*Museo e Scuola*", and has been set up by the Brescia's city museums. This educational project has been encouragement and endorsed by the agency called Ufficio Scolastico Provinciale of Brescia. It employs scientific methods to ensure the comprehension of artistic language, and its proposals may be incorporated into school programs. Expert docents are in charge of the museum's educational activities, and teachers can choose among a large variety of different choices, which are set up to address many different fields of learning. The museum's relationship with schools is constantly upheld by addressing teachers through permanent initiatives. Routine cultural promotion work takes advantage of traditional and modern communication.

The books published by the Municipality are mainly compiled by the scientific personnel of the museums and those who are responsible for educational activities. They describe both the permanent heritage (monuments and collections) and temporary activities or new findings of research or conservative maintenance works. Therefore, the material includes:

- illustrative brochures on museal itineraries or single works;
- guide to the museum and the archaeological area;
- guide to each single museal section;
- collections of monographs on specific artefacts;
- proceedings of scientific conferences;
- books for children on the main historical events and characters of Brescia.

The Soprintendenza ai Beni Archeologici di Lombardy, through its yearly Newsletter provides information on the main archaeological survey activities and the relevant

findings. A whole range of different activities for the dissemination of knowledge of the site and the diffusion of its image.

Many lecture series are held in the Monastery of San Salvatore-Santa Giulia, Museo della Città, mostly dealing with the history, archaeology, art history, architecture and history of religions (for a complete list, please refer to the Management Plan). Other events are set up which rely on the context itself, which add to visitors' experience and guarantee a strong sense of participation.

5.i3

Policies and programmes related to the presentation and promotion of the property CASTELSEPRIO-TORBA

The promotion and announcement of the many initiatives promoted by the Archaeological Park run by the Soprintendenza per i Beni Archeologici di Lombardy are aimed at various types of visitors, for whom suitable, information-providing material is created and distributed free of charge.

Scientific and popular publications are prepared for all types and level of school on several archaeological and historical-artistic matters, used over periods of time and distributed to teachers and students. The intention that an uninterrupted study relationship is created between the park and schools has often led to exhibitions organised by the park director together with teachers, and has seen students as the main players in research and communication. Educational-scientific archaeological exhibitions, conferences, guided tours, theatre evenings, concerts, poetry and prose reading sessions connected with the site are held, days dedicated to the local population to illustrate the latest

new items in research and therefore set up a sense of belonging with the territory. This last aspect has produced the publication of several studies in information-providing local and national magazines. During special events (e.g. Women's Day, Seprio September) and on request from local associations and organisations, various types of initiatives and exhibitions are organised (nature, modern sculpture etc).

All national events planned by the Ministry of Cultural Heritage are acknowledged at Castelseprio: in particular, the park always takes part in the "Week of Culture" and the "European Heritage Days", for which suitable scientific-educational material is used. In addition to traditional channels, the ministry website (www.beniculturali.it), the Soprintendenza per i Beni Archeologici di Lombardy website, and local websites (Province, Municipalities, and local newspapers) are used as promotion vehicles. Today, the *Antiquarium*, opened in May 2009, is another attractive element of the site and favours its understanding through an exhibition that tells its long history (see 2.b3).

At present, the compilation of a CD-ROM is under way. It will enable to access specific information especially targeted to schools. The Municipalities of Castelseprio and Gornate Olona take part in promotion and awareness-raising activities for the local monumental and landscape heritage, including the Longobard heritage, history and culture, through exhibitions, conferences and presentations of studies and projects for schools and the population in general.

The PLIS RTO promotes the knowledge of the archaeological and naturalistic values of the territory with a periodic calendar of guided walks.

Tickets will be sold to visit the Antiquarium and the Church of Santa Maria foris portas.

The FAI - the Italian Environmental Trust - carries out intensive promotion activity for the Monastery of Torba in the area, involving local, national and international operators. The organisation also plays a role of active interlocutor in relations with the 'Varese Convention Bureau' and 'Federalberghi Varese'. Due to specific conventions, the Monastery is included in the touring Club and CTS - Centro Turistico Studentesco e Giovanile guidebooks and enjoys the advantages of the promotion of all FAI Heritage at the National Trust and the International Council of Museum (ICOM).

The Lombardy Regional Headquarters and FAI also interact actively with the Rile-Tenore-Olona Park, with Castiglione Olona (Managing Body and Head Municipality of the PLIS) and with all local municipal administrations included in the park's territory, from which it receives help and collaboration for its own events, in the form of municipal police service, tourist information offices, groups of Civil Protection, cooperatives and voluntary groups that contribute to their success in various ways.

A collaboration between the FAI and the Sistema Bibliotecario dei Laghi is currently being considered and evaluated, a collaboration which, while not yet formalised, would entail joint efforts in the communication, promotion and distribution of information material concerning events, in particular those of a cultural nature or dedicated to children. As of last year, the FAI has started up a tourist development project aimed at optimising its own properties as an integral part of the respective territorial areas. A main goal is to set up a promotional and commercial policy that aims to favour incoming to the respective area, while focused on FAI heritage, and to stop the seasonal nature of tourist flows. By using the FAI logo, therefore, together with the top-level historical-cultural her-

itage so typically linked to it and the interest that FAI Heritage can arouse among a specific public, the project "Welcome to Lombardy, the land of FAI treasures" intends to create an area logo that identifies and enhances the FAI heritage in the region as tourist catalysers that can attract visitors to places but also to guide them towards using the facilities provided by the other realities present in the area, favouring and growing tourist, cultural and economic development. The FAI's strategic action wishes to become tangible by creating a networking strategy that places all the elements that complement their offers at the disposal of the suppliers-partners. The project, currently under development, foresees direct presence at the main tourist trade fairs (BIT, GLOBE, TTG, TTI, WTM, etc...), with the aim of supporting the FAI strategy of promoting heritage as a "tourist magnet".

As is the case with all FAI property regularly open to the public, the Monastery of Torba also offers its visitors a wide range of events that provided added value to the usual visit to the site, at all times of year, being an opportunity to feel the historical value from different points of view. Events that conjure up the intimate vocation of the place and area that it is part of. Some of these events are: Narnia: stories from inside the wardrobe; Easter Monday Picnic; Torba Flowers; a Day in the Middle Ages; a Day at the Circus; Country Fair; Torba Fantasy; Torba in the Autumn, Chestnuts and guided tours; Torba Doni.

The FAI is about to start up a series of actions aimed at the improved presentation of the site, which will include new lighting for the Tower area; the setting up of new signs, renovation and preparation of the basement floor of the Cascina for temporary exhibitions, the renovation and preparation of the barn for as a conference room/educational classroom for groups, the creation of a new ticket-of-

fice/bookshop, the tidying up of the outdoor green areas with furniture and lighting, the organisation of the parking area the construction of the final stretch of path that connects Torba to the archaeological park, as for foreseen in the agreement stipulated between the managing bodies, is essential for the understanding of the entire monumental complex. These works will be completed in 2010 (according to available funds).

5.14 Policies and programmes related to the presentation and promotion of the property SPOLETO

The need for young people and adults to acquire greater awareness on the artistic heritage motivated the municipality of Spoleto and the secondary school (focusing on humanities) "Pontano Sansi" to develop the "Adopt a monument" project, approved in 1998 with a memorandum of understanding. The school-boys and school-girls voluntarily joining the memorandum, ensure the opening to the public of important town monuments, including the basilica of San Salvatore, during the summer. The management of the churches is in the hands of the school-boys and school-girls, who organize their work in shifts and ensure guided visits in foreign language when they are inside the monuments.

Prior to the launching of the initiative in the summer of 2009, school-boys and school-girls were trained by their teachers and – as regards the basilica of San Salvatore – they had the opportunity to listen to a lecture of an expert of the University of Perugia. The lecture was held in the church and dealt with the most relevant features of the Spoleto church and outlined the subject of the Longobard

culture in Italy and in particular in the Spoleto duchy.

Through the implementation of the "Adopt a monument" project, the Municipality of Spoleto and the secondary school intend to increase the awareness of young people on the safeguard of cultural heritage. To be effective, safeguard needs a deep knowledge on the issues related to the multi-faceted artistic and cultural heritage. Safeguard needs above all "tomorrow's citizens" who commit themselves to the cultural heritage of our urban environment and become informed guardians of cultural heritage itself.

The municipality of Spoleto has also endeavoured to promote the study of history and of the Longobard culture in all the primary and secondary schools, which have joined the initiative and included it in their curricula of the school-year 2008/2009.

- The pupils of the gold-ware class of the secondary school (focusing on art) "Leoncillo Leonardi" of Spoleto, were involved in the analysis and the study of the embossing, enamel and lost wax casting processes used to produce Longobard-style crosses and jewels. With reference to scenery and set construction class of the same school, what is planned is the making of a 3D wooden model of the basilica of San Salvatore, as well as the scenery design and construction and the making of stage costumes for Händel's opera "Rodelinda, Queen of the Longobards". The same schools participated in the School Expo event in 2008 and in 2009 and joined the training twinning programmes together with other schools of *Langobardia Major* and *Minor* (see management plan). The experience acquired at the Expo and the project on educational trips and cultural exchanges between the school-boys and school-girls of Longobard Italy are available on the

website www.langobardiamino-r.altervista.org.

- The IPSSART, a Spoleto secondary school focusing on gastronomy and catering carried out research work on food dishes dating back to the Longobard times, endeavouring to increase the awareness of children and teenagers and involving them in the preparation of age-old recipes, which have been handed over from generation to generation.
- The Spoleto secondary school (focusing on sciences) "A. Volta" joined the project "Italia Langobardorum" promoted by the Umbria Superintendence for Historic, Archaeological and Ethno-Anthropological Heritage; the project envisaged lessons carried out in class as well as guided visits to the main monuments witnessing the Longobard presence in the Spoleto area. The publication of a guide on the Longobards, the result of the work done by the school is currently been planned.

The Superintendence for Historic, Archaeological and Ethno-Anthropological Heritage, in the framework of the "Italia Langobardorum" project, organized a training course for teachers of both primary and secondary schools to disseminate knowledge on Longobard culture and heritage.

With regard to cultural promotion and enhancement, the municipality of Spoleto is planning to launch a public competition among Italian and foreign playwrights, to select a Longobard-inspired play. An ad hoc jury will announce the winner, who will be able to stage the play in all the network towns appearing on the nomination website.

What is also planned is the publication on the part of the CISAM of a box set with the most important studies carried out on the

Longobards in Spoleto, as well as a box set collecting the most significant publications on the basilica of San Salvatore.

Apart from the various scientific editions, all the guides and the brochures published by private publishing companies as well as by public administrations make mention of the basilica. Recently, new multilingual books (in Italian, English, French and German), brochures and maps of the town of Spoleto and its tourist district, with the description of different itineraries, including the basilica of San Salvatore (a number of brochures were published in Japanese, too) have been published.

To disseminate the editorial products, different communication channels were used:

- multimedia products in the following languages: Italian, English, French and German;
- short films in the English language on the tourist offer of Spoleto and its district, viewed in the regional context;
- cd-roms on the tourist offer of the district;
- a photographic archive with the images related to the most urgent needs to be met as regards monuments, culture and the environment in the district; - 23 poster series for the promotion of the area with the images related to the most urgent needs to be met as regards monuments, culture and the environment.

Most of the recent publications are also available in digital format to ensure easy portability. Moreover the municipality is currently working on a plan for the reconsideration of communication modalities regarding tourist and cultural activities, to be developed *on line* (see management plan).

As to the Basilica of San Salvatore, the Municipality of Spoleto is planning a reconsideration of the management activities, to ensure a widening of the range of

services, as the response to visitors' needs. The needs will be met with the creation of a cosier environment in tourist information centre, the setting up of a documentation centre and of a bookshop in the historic environment of the former convent, next to the basilica. The coordination functions of the teaching activities, currently performed in the offices of the municipal building, will be performed in the former convent in the future.

Given the architectural and spatial characteristics of its internal space, the Basilica of San Salvatore is the perfect backdrop for temporary art exhibitions, subject to an accurate selection of artists and works of art. A successful experiment to this regard was carried out in 2006, with contemporary sculpture; the initiative was acclaimed by citizens and tourists alike; what was particularly intriguing was the coexistence of seemingly distant symbols related to matter and to formal elements. The Municipality is planning the setting up of a new temporary exhibition, verging on the fortunes of the basilica down the centuries. The exhibition will include the works of artists who portrayed the monument in the Renaissance period.

In the last few years, further and considerable rehabilitation and restoration work has been carried out; the main monuments have been returned to the town and new cultural initiatives in the field of culture and leisure have been launched. The tourist offer of the town has therefore further widened: the town has boasted world-renowned events and initiatives since the 40s including the Experimental Opera House, founded in 1947; the Spoleto Painting Prize founded in 1953, which has seen the participation of Italy's most prominent artists, whose works of art are currently kept in the Gallery of Modern Art of the town; the

Festival of the two Worlds, founded in 1958 by Maestro Giacomo Menotti.

With regard to the promotion of the Longobard culture, it is worth noting that Spoleto hosts the head office of the prestigious CISAM (Italian Centre for the Study of Early Middle Ages), founded in 1952 upon the initiative of Professor Giuseppe Ermini, Chancellor of the University of Perugia and later Education Minister. Thanks to the role performed by the Centre, which is internationally acclaimed for the excellent contribution given to the studies on the early Middle Ages, the town of Spoleto was chosen – among all the places belonging to the Longobard network of the site to be included in the World Heritage List – as the head office of the association '*Italia Langobardorum*' bringing together all the network stakeholders (see point 5 and management plan).

5.15

Policies and programmes related to the presentation and promotion of the property

CAMPELLO SUL CLITUNNO

The Direzione Regionale per i Beni Architettonici, il Patrimonio Storico Artistico ed Etnoantropologico of Umbria in cooperation with the competent Soprintendenza PSEA and the Soprintendenza BA have created a specific information board (Italian and English) within the framework of the Mirabilia project, which is placed in the area of the Clitunno Tempio. At the moment, visitors are given a free map containing main information. Publications, brochures and guidebooks provided by the region contribute to the promotion of the property.

The Soprintendenza per i Beni

Architettonici, il Paesaggio, il Patrimonio Storico, Artistico Etnoantropologico of Umbria has a didactics department that deals with relations with schools and any kind of institutions and organises thematic meetings as refresher courses for teachers.

Within the framework of the Culture Week, the ‘*Giornate del FAI*’ or FAI days and the ‘*Giornata della cultura*’ or national heritage day, guided tours and meetings are organised by the staff of Soprintendenze.

Numerous other initiatives and events contribute to the dissemination of knowledge on the property and the territory. Among these: the initiative “*Voler bene all’Italia*”, promoted each may by Legambiente to enhance properties and resources of small Italian towns; the Antiques, Second Hand and Collectors’ Market, with already 250 exhibitors, takes place every first Sunday of the month in Pissignano around 500 m away from the buffer zone; the festival “*la Falce e la Croce*” of popular songs ranging from the passion to may songs; the festival “*Sere d’Estate*”; the event “*Medi@evo*” in the very ancient castle of Campello Alto. This event, which reproduces the old medieval festival, combines music, dance, art, exhibitions, performances and concerts.

“*Bianco Natale*”: a long series of cultural events which during Christmas time range from pipers’ music, Father Christmas and Befana that give presents to children, to music events and choir concerts in the churches.

As to the events linked to local products and traditional cuisine, it is worth mentioning the following: in August “*Sagra del tartufo estivo*”, in the village La Spina; in June and August the “*Festa della montagna e Sagra della lenticchia di Pettino*”; in November the participation in the national event “*Frantoi aperti*”; in January the “*Festa dei frantoi*”, when conferences, guided tasting tours of products

and food are held and when the ancient ritual of the “*Frasca*” is performed along with traditional dances and songs.

The “*Festa dei frantoi*” in Campello is one of the first events held in the south of Umbria valley to promote and enhance oil production and, in particular, extra-virgin olive oil.

5.16 Policies and programmes related to the presentation and promotion of the property BENEVENTO

Between 2004 and 2007, the *Museo del Sannio* acquired a new collection of golden and silver coins dating back to the Longobard age and coming from the Benevento mint, rearranged the Roman and medieval Lapidarium of the Cloister and added new showcases. A project for the rearrangement of the Longobard section is under way and it is co-financed by the region Campania. The project could be subject to changes according to recent ideas, so as to further specialize the cultural offer of the museum. With the cooperation of the Soprintendenze it is planned to:

- create an information and documentation centre about the Church of Santa Sofia in the museum, thus giving wider space to the exhibition *Langobardia Minor* within the already exhibited collection;
- create a targeted didactic tour that could allow visitors to perceive the culture and art of the Longobards, in accordance with what is being planned and implemented in the other sites of the Langobardorum Italy site;
- widen the exhibition areas of the *Museo del Sannio*, by moving the 19th century section to the adjacent Rocca dei Rettori, a monument of the 14th century

that was established in the Longobard site of the *Porta Somma* Convent and in the *Castellum Aquae* of the Augustus Aqueduct, where some Longobard graves have been found. This areas already hosted the museum before it was moved to the Convent of Santa Sofia;

- accelerate the creation of the Benevento museum network which is under way, through the creation of the combined ticket and the museum operational Centre.

As to promotion, the museum is carrying out two pilot programmes that will be implemented again as official programmes for the launch of the management plan for museum activities and additional services:

- the open may programme, an experimental project concerning museum didactics for the people with special needs, with a tour dedicated to Longobards, in cooperation with Unione Italiana Ciechi (Italian Organisation for Blind People), Associazione Italiana Non Uidenti (Italian Organisation for Deaf People) and Associazione Italiana Persone Down (Italian Organisation for Down People). The programme, launched in 2006, led to the experimentation of integrated museum communication laboratories for global access to the collection and is published on the web TV of the province of Benevento; http://www.provincia.benevento.it/webtv/Open_May_01
- the project-competition “*BENEVENTO ESPLORARTE*”, a didactic programme dedicated to the schools of the province of Benevento, which offers scholarships and money prizes for research and creative activities inspired by educational walks linked to the history and heritage of the territory. Relations with schools are constantly taken care of as is dialogue with teachers who can benefit from a tutoring service conducted by didactic museum experts.

The opening of an exhibition called “*Langobardia Minor. Images and Documents of Benevento Duchy*” -placed in the former Convent San Felice-Paolo V Palace- has proposed a reinterpretation of the events and vestiges of the Longobard age in Benevento, through the exhibition of new archaeological data and through different sections dedicated to the in-depth analysis of specific topics: fortifications, religious buildings, necropolis and funerary rituals, epigraphic documents, craft activities, artistic culture. In the exhibition, along with the exceptional documentation relative to the frescos of San Marco dei Sabariani, which has recently been discovered, the materials found in the most recent urban excavation will be presented. Along with the ordinary cultural promotional activity, which benefits from traditional and innovative means (publications, brochures, guides, website, etc.), other numerous initiatives help disseminating knowledge on the site and spread its image.

In the Auditorium of the *Museo del Sannio* cultural events of different nature, book presentations and didactic initiatives relative to local history, the territory, the cultural heritage and the promotion of art and music take place, as well as events which – thanks to the place where they are set – are rich in fascination and guarantee a strong emotional impact on participants. Among these events are: the reception held in the Cloister every year upon the occasion of the Republic Day and the great regional events *Quattro Notti e più di Luna Piena* and *Benevento Città Spettacolo*, when the museum hosts temporary exhibitions and contemporary art installations, as well as conferences and projections.

From the end of 2009 until the beginning of 2010, light works will be created for the promotion of the Santa Sofia Cloister. The

project, called “*Benevento Città Luce*”, provides for a series of guided tours during which a voice-over will tell the stories on the capitals that are progressively lit as visitors pass by. The Municipality has purchased the equipment and know-how to replicate this event on special occasions or in some seasons of the year (see Management Plan).

5.17 Policies and programmes related to the presentation and promotion of the property MONTE SANT'ANGELO

The Centre for San Michele and Gargano Studies has a number of projects in progress aiming at promoting the enhancement and use of the Sanctuary in the Gargano area with a view to disseminating the knowledge and catching the attention of national and international tourists. Rich in monuments and finds linked to the history of the Sanctuary since the Early Middle Ages, Monte Sant'Angelo offers many opportunities: the Sanctuary looks like a museum where craftworks and works of art going back to different periods and styles can be found (statues, frescos, paintings on wood, ex votos, the Episcopal see of the famous writer *Acceptus* (11th century), the bronze gate cast in Constantinople in 1076 and a Longobard copper icon of San Michele), and the museums located in the upper part of the Sanctuary itself.

Through a close cooperation with the Centre for San Michele and Gargano Studies, the Department of Classical and Christian Studies aims at enhancing the cultural heritage on the whole and is therefore implementing a three-year Italian-French programme: the Cult of San Michele from Gargano to Europe. The

project intends to enhance the Sanctuary for its own value as cultural heritage and involves scholars of the other two San Michele sanctuaries (Sacra di San Michele in the Susa valley, Mont Saint-Michel Abbey) in a fruitful exchange between different research methodologies and scientific experiences. In particular, in view of the links between peoples of Germanic origin and the Gargano area, the Centre focuses on the dissemination of the abovementioned heritage in European countries (Germany, Spain, France, England, Belgium).

So far the project, which involves scholars from the University of Bari and other European institutions and universities, has organised three international conferences in Bari – Monte Sant'Angelo (April 2006), Turin and the Sacra di San Michele (September 2007) and in France, Mont Saint-Michel Abbey (September 2008).

At the end of one of these events, aware of the importance of the cult of San Michele in the history of medieval Europe, the scientific community drew up a document asking the Council of Europe to declare “San Michele’s medieval route” European Heritage. This is an itinerary of history, faith and culture running from Mont Saint Michel, through the Sacra in the Susa valley, to the Gargano area, linking northern Europe and the Byzantine Mediterranean area. The proceedings of the first two conferences have been published by Bibliotheca Michaelica (the proceedings of the third one are being edited), which is a new collection by the Department of Classical and Christian Studies of the University of Bari, especially devoted to national and international contributions about the cult of the Angel, San Michele settlements and pilgrimage itineraries, also at the European level, with regional insights (Bibliotheca Michaelica 2: A. Campione, *Il Culto di San Michele in Campania. Antonino e Catello*) or special contributions

on the *Via Sacra Langobardorum* (Bibliotheca Michaelica 5: R. Infante, *I Cammini dell'Angelo nella Daunia Tardoantica e Medievale*).

The Centre for San Michele and Gargano Studies, in cooperation with the Department of Classical and Christian Studies of the University of Bari, has been working on the CUSTOS (Culture, University, History, Territory, Organisation, Dramatisation) project in the field of edutainment: a digital animation for the enhancement of the history and traditions of the cult of San Michele in Gargano between the Byzantine Mediterranean area and Central-northern Europe, co-funded by the European Union and the Apulia Region.

The project, which also relies on the cooperation of training and multimedia communications experts, promoters of popular traditions, ICT experts (Information & Communications Technology) and contents enhancers, synergically promoted the cultural and historical heritage of the Gargano area that in the Middle Ages, owing to the presence of the Sanctuary of San Michele, contributed to the dissemination of the knowledge of Apulia at the international level. The outputs of this project are:

(www.custos.unibari.eu), a thematic portal containing textual information sheets with pictures and videos;

A documentation volume containing a comprehensive overview of the project (G. Otranto - I. Aulisa);

A digital animation film (entitled *Il Giorno dell'Angelo*) for a young audience (12-15 years old);

Two scientific documentaries, produced in cooperation with RAI (Italian National TV and Radio Corporation) under the direction of Raffaele Nigro (entitled *E l'Angelo Volò sul Gargano* and *L'Angelo dal Gargano all'Europa*), focussed on the Sanctuary of San Michele and its inter-

national perspective, as well as the phenomenon of pilgrimage and its itineraries from Central-northern Europe;

A travelling exhibition of pictures entitled *I Tre Monti Consacrati all'Angelo. Storia e Iconografia: il Gargano in Puglia, il Tumba in Normandia e il Pirchiriano in Piemonte* - 50 panels with reproductions of finds, inaugurated in Bari and transferred to Monte Sant'Angelo, France (Mont Saint-Michel Abbey) and Piedmont (Turin, Sacra di San Michele, Cuneo);

The exhibition catalogue (G. Otranto-A. Laghezza).

January – June 2009: Update of the CUSTOS project with reference to its portal and travelling exhibition, focussed on the third main medieval monument consecrated to San Michele, the Sacra in the Susa valley, the symbol of Piedmont. In addition to this dissemination activity, an intensive awareness-raising activity on the Italia Langobardorum application for inclusion in the WHL was performed with the promotion of the site in Monte Sant'Angelo through conferences, meetings, workshops, debates and seminars in cooperation with Italian and foreign universities, bodies and cultural institutions:

October 2008 – April 2009: Bari – Meetings with teachers and students from the lower secondary school Tommaso Fiore, the higher secondary school for scientific studies Scacchi, the higher secondary school for classical studies Orazio Flacco (speeches by G. Otranto; I. Aulisa; A. Campione; L. Carnevale; A. Laghezza)

November 28th, 2008: Castellammare di Stabia (speech by A. Campione)

January 20th, 2009: University La Sapienza of Rome - *Neg/otia Nostra*: Workshop organised by the Department of Historical and Religious Studies - (speeches by G. Otranto; A. Campione)

March 11th, 2009: University of Perugia (speeches by G. Otranto – A. Campione)

April 16th-18th, 2009: Cremona “Festival Nazionale del Racconto” Reading and dramatisation of a text by Raffaele Nigro entitled “*Memorie di un Barbaro*”. The reading of this text will be also included in the cultural programmes of various sites belonging to the Italia Langobardorum network

May 6th, 2009 Cagnano Varano, Conference (speeches by A. Campione; L. Carnevale)

May 7th, 2009: Conference organised in cooperation with the University of Foggia and the Opera Romana dei Pellegrinaggi entitled *La via Francigena del Sud. Dallo Sviluppo del Cammino al Cammino dello Sviluppo*

May 23rd, 2009: Monte Sant'Angelo, contest entitled “*In Dialogo con la Tua Montagna*” for the students of the last literary year of the higher secondary schools of the 13 municipalities of the Gargano area (speeches by G. Otranto and R. Nigro);

June 3rd, 2009: Bari, Secondary school Tommaso Fiore: Contest awards (speeches by A. Campione; R. Nigro)

June 9th, 2009: Turin – Regional Council of Piedmont (Chairman Prof. Davide Gariglio); Artistic and Cultural Association of Piedmont; Regional Council of Apulia (Chairman Prof. Pietro Pepe) Inauguration of the exhibition entitled *I Tre Monti Consacrati all'Angelo. Storia e Iconografia* (June 9th – July 4th)

June 25th, 2009: Turin – Palazzo Lascaris, Conference entitled *Sulle Alpi e fra Due Mari: Pellegrinaggio Internazionale nel Medioevo* (speeches by G. Otranto; R. Nigro)

July 8th, 2009: Monte Sant'Angelo – Preliminary meeting with Juliane Hervieu, President of the Association “*Les Chemins du Mont-Saint Michel*” to prepare the conference and workshop to

be held in October 2009

September 29th, 2009: Dramatisation of the “consecration” of the Sanctuary by the Bishop Lorenzo. This initiative organised by the Municipality of Monte Sant’Angelo in cooperation with local associations will be considered an annual “event” to rediscover and enhance facts and episodes belonging to the secular tradition of the Sanctuary of San Michele.

October 9th-10th, 2009: Nice – International conference organised by the Institut de France and entitled *Les Sanctuaires et leur Rayonnement dans le Monde Méditerranéen, de l’Antiquité à l’Époque Moderne* (speech by G. Otranto)

October 16th-18th, 2009 Aiguilhe – Le Puy-en-Velay (France): International conference entitled *San Michele nella Storia* and inauguration of the exhibition entitled *Fra Cielo e Terra sui Monti Sacri Dedicati all’Angelo in Europa*

October 19th: Workshop for the representatives of the sites consecrated to San Michele in Europe, aimed at creating a “network” involving these sites starting from the Sanctuary of Monte Sant’Angelo and a web portal

In addition to these initiatives, Monte Sant’Angelo hosted the 11th and 12th Weeks of Late Antique and Roman Barbarian Studies focussed on the history of Longobards in Italy between the 6th and the 8th centuries (October 13th-17th, 2008; October 12th-16th, 2009). These two weeks of studies organised in Monte Sant’Angelo at the Centre for San Michele and Gargano Studies recorded the presence of young Italian and foreign scholars who were granted every year 20 scholarships by the Centre and the Basilica. The speeches by highly qualified experts from many Italian universities dwelled upon the various phases of the settlement of Longobards from Cividale

del Friuli to the southernmost regions of Italy and analysed various aspects from social history to political and institutional events, religion, law and material production (archaeology, epigraphy, iconography, numismatics, etc.).

The Centre for San Michele and Gargano Studies is also considering the opportunity for organising in its own premises and other centres located in the region, cultural meetings to screen documentaries on the cult of San Michele with the objective to arouse the interest of the largest number of people possible also through RAI (Italian National TV and Radio Corporation) and other local TV channels. Moreover, the documentaries will be broadcast in other countries, especially France, Germany and Argentina, where for different reasons the topic has already generated a lot of excitement both from a scientific and a historical-religious perspective.

5.j1**Staffing levels****CIVIDALE DEL FRIULI**

The complex articulation of the structures of the site/location is staffed by personnel of the following institutions:

- Municipality of Cividale del Friuli (Tempietto and Monastery): 28 staff members
- State/Soprintendenze (Patriarch's Palace; National Archaeological Museum, archives, library): 51 staff members
- Parish of Santa Maria Assunta (Christian Museum: Font of Callixtus and Altar of Ratchis; archives; Duomo): 9 staff members.

Breakdown of staff and their qualifications area specified in the table.

Qualification	Agencies	Full time	Part time	External staff	Total
Scientific staff (art historians, archaeologists, architects, geologists, botanists, archivists, environmental expert)	Municipality		- 1 Architect, heritage sector; - 1 Engineer, environmental sciences sector	- 1 Architect specialized in conservation - 1 Archeologist skilled in Middle Ages - 1 Art historians	5
	State		- 1 Archaeologist Superintendent; - 1 Archaeologist director; - 1 Restorer director - 1 Architect director - 1 Librarian - 2 Art historians		7
	Parish		1- Museum curator	- 3 Archivists - 1 Architect	5
Technical staff (staff in charge of secretarial work, photoarchive, exhibition office, library, IT expert, graphic designer, restorer, maintenance programmer)	Municipality	- 1 Head of maintenance			1
	Stato	- 1 Museum technical assistant - 1 Librarian	- 1 Head technician - 2 Librarians - 3 Museum technical assistant		8
	Parish	- 1 Caretaker (Duomo) - 2 Museum caretakers			3
Administration staff	Municipality		- 4 Officers in charge of cultural and tourist units		4
	State		- 4 Operators clerks - 2 Administrative assistants		6
	Parish			- 1 Clerck	1
Operative Staff (didactic staff, caretakers, surveillance staff, workmen, maintenance staff; staff in charge of the book-shop, information office)	Municipality	- 2 Maintenance staff; - 1 Caretaker	- 2 Addetti manutenzione verde		5
	State	- 24 Personnel in charge of reception and security - 2 Personnel in charge of administrative sector an auxiliary sector	- 1 Driver - 2 Technical assistants		29
Press office	Municipality		- 1 Secretary		1
Tour guides	Municipality			- 12 Technical staff	12
Total		35	32	20	87

5.j2**Staffing levels****BRESCIA**

The following staff is employed to guarantee the Monastery of San Salvatore-Santa Giulia is regularly open, maintained, enhanced and managed:

- Municipality di Brescia (Settore Musei Civici d'Arte e Storia; - Settore Manutenzione e Adeguamento Edifici Pubblici; Settore Attività Promozionali)
- Fondazione Brescia Musei
- Fondazione CAB
- Soprintendenza per i Beni Archeologici di Lombardy

5.j3**Staffing levels****CASTELSEPRIO-TORBA**

The staff from: the Municipality of Castelseprio, the Municipality of Gornate Olona, the Province of Varese, the Soprintendenza per i Beni Archeologici di Lombardy, the FAI -or Italian Environmental Trust- contribute to the opening, protection, conservation, maintenance, optimisation, and management of the Castelseprio-Torba area. With regards to promotion, cleaning and minor maintenance work, preservation activities and event organisation, specialised external companies are used.

In the year 2008, the following courses were scheduled for staff training (also held in previous years):

- training course for maintenance of green areas;
- first aid course;
- fire prevention course.

5.j4**Staffing levels****SPOLETO**

The staff employed to guarantee the Basilica of San Salvatore is regularly open, maintained, enhanced and managed is specified in the table.

Qualification	Full Time	Part Time	External Staff	Total
Scientific staff in charge of protection and conservation (art historians, archaeologists, architects, conservators)	2	3	2	7

outsourced. Therefore no information in this regard is included in the table, where only the in-house staff is mentioned.

5.j6 Staffing levels BENEVENTO

In the Church of Santa Sofia, along with the priest and the vice-priest, there are a sacristan and several volunteers – in variable number, from two to four people – which cooperate in order to control and protect the monument. As to the museum staff, both the people employed by the province and the managing company *Art Sannio Campania* must be taken into consideration.

The owner - since 2005 - benefits from the cooperation of an external specialised scientific consultant (archaeologist) responsible for scientific management; the owner is now looking for a permanent scientific manager who complies with ICOM standards.

The owner plans to carry out the adjustment of the organic plan to the increasing needs for specialised staff, in particular an art historian and an archaeologist.

5.j7 Staffing levels MONTE SANT'ANGELO

The listed staff from Sanctuary is employed to guarantee the maintenance, supervision and management of Sanctuary of San Michele; in addition to it there are the functionaries and technicians from the Ministerial Superintendences responsible for protection and conservation of the property.

Situazione al 1 /10/2007

6.a Key indicators for measuring state of conservation

As already stated in chapter 4, the state of conservation of the properties entered for inscription is generally good, as they have all undergone conservation work in recent years and are all subject to routine maintenance by the competent bodies/institutes.

Given the specific features due to different formal and material characteristics and to the various conditions of location and exposure, in order to obtain comparable numerical indicators, it was useful to adopt the instruments devised by the Central Restoration Institute in Rome in the *Risk Map of Italian Cultural Heritage* project.

The project known as *Risk Map of the Italian Cultural Heritage*, was implemented in 1990 and is the result of thirty years of studies and research accomplished by ICR in the field of conservation and restoration. The project was aimed at identifying the level of risk endangering cultural heritage on Italian territory, and focused particularly on the need to plan cultural heritage conservation through prevention of damage.

The idea at the basis of the *Risk Map* is to identify systems and procedures allowing an effective planning of conservation and restoration treatment to be carried out on architectonic, archaeological, historical and artistic properties, according to their respective state of conservation and to the aggressiveness of their environment. The philosophy of **periodic monitoring** and **preventive actions** applied to cultural heritage is meant to provide the authorities responsible for cultural heritage protection with an effective instrument to support scientific and administrative activities, an instrument that may favour the

“supervision” of the state of conservation of the properties and, at the same time, allow a better coordination of conservation and restoration activities.

Risk is the possibility that an undesired event may damage something that is considered as having cultural heritage value. Obviously, risk is correlated to two different aspects, dangerousness and vulnerability, where **dangerousness** is the presence or likelihood that damaging events may occur, what is referred to as factors of territorial danger, and **vulnerability** is the extent to which a property is prone to damage.

The *Risk Map* is, therefore, a selection of thematic data systematically correlated so as to identify specific causal relationships between the cultural property, its state of conservation, and the factors of territorial danger that bring about its deterioration. These data are collected, processed and managed in a vast alphanumeric and cartographic data bank, (GIS), updatable and interactive; it covers the national territory as a whole and manages data referred to physical, chemical and social phenomena involved in the deterioration process, as well as data on the state of conservation of single properties. Thanks to this system it is possible to determine specific danger “indices” referred to the distribution of properties and the distribution of danger phenomena over the whole territory; said indices are visible on computerized thematic maps that can be superimposed to provide a first estimate of risk on the territory.

As mentioned earlier, risk is a function of two different aspects dangerousness and vulnerability. The basic assumption of the *Risk Map* is that it is possible to measure each single aspect of risk, including **vulnerability**, which may be considered a latent dimension, and is approximately measurable through different aspects of deterioration: the more a property is dete-

riorated, the more it is vulnerable to danger factors present in its environment. By associating the vulnerability to the territorial danger indices, a specific calculation procedure allows to determine the “individual risk” of each single monument.

Appropriate **data forms** were drawn up, following standard cataloguing instruments in use in ICCD (Italian Central Institute for Catalogue and Documentation), to identify the state of conservation of monuments, archaeological areas, decorations and works having artistic and historical value. These forms represent a low cost method to evaluate the extent (as a percentage of the property under examination) and the seriousness and urgency (as the acceleration of the phenomenon expressed with different degrees) of damages observed; they also allow an evaluation of the management conditions and of the monument’s urban surroundings.

The assessment of the state of conservation of an archaeological monument is therefore based, i.e., on the semiotics of traditional damages – described using standardized terminology – but also on the characteristics of materials used and on the presence and efficiency of a number of “external” elements that are considered essential for the conservation of a monument: active and passive protection systems, temporary protection measures, rain-water flow and drainage systems, ordinary maintenance and weed killing, security systems and custody. An information processing algorithm – especially thought out for the *Risk Map* – allows to quantify and weight diagnostic-prognosis judgements based on collected data, and to calculate the vulnerability index of both ancient and historical monuments. In particular, the algorithm for the architectural properties calculates three different indicators: one for static-structural vulnerabil-

ity, one for superficial vulnerability and one for overall vulnerability. The values go from $-\infty$ a $+\infty$: the higher the value the more vulnerable the property. For archaeological properties a single indicator is calculated in terms of quality. The values go from 0 to 10: the higher the value the more Vulnerable the property. In the case of building complexes or particularly large

or articulated properties, for a more efficient and in-depth analysis of the state of conservation, information is collected and analysed separately for each different component. The *Risk Map* system (risk maps and property conservation files, including reliefs, maps and images) can be managed and consulted online (www.cartadelrischio.it).

In the 1990s, the *castrum* buildings and the Church of Santa Maria *foris portas* in Castelseprio were already subjected to conservative monitoring by the Central Institute for the Restoration of Rome, as part of the project *Risk Map* of the Italian cultural heritage.

Vulnerability key indicators for properties included in the serial Site

	COMPLEX PROPERTIES	INDIVIDUAL PROPERTIES AND COMPONENT PARTS	Architectural properties Archaeological properties	Vulnerability key indicators Architectural properties (November 2007)			Vulnerability key indicators Archaeological properties (November 2007)	Vulnerability key indicators Architectural properties (November 2009)

		Angevine Basilica			-1,35	-1,23	-1,19				
		Structures of Longobard Sanctuary			-0,02	-1,30	-0,50				

According to the methodological directions of the *Risk Map*, the assets belonging to the serial property should be monitored from the point of view of conservation every 4-5 years unless events that positively or negatively affect their state of conservation occur. For this reason, after the extraordinary maintenance work carried out in 2008-2009, a further collection of conservative data was performed for the Church of Santa Sofia in Benevento. These data were entered into the national system to calculate new vulnerability indicators, whose results (see table) show an improvement in the state of conservation of the Church.

Besides **key conservation indicators** - numerically expressed according to Risk Map- it is to be noted that a constant monitoring of the reserved and protected areas is daily carried out by personnel of the State-Superintendencies responsible for cultural heritage and by personnel of the Institutions responsible for the management of the properties.

Constant monitoring of the territory is carried out by the police forces, and the offices of surveillance and control. We would particularly like to point out:

The “Carabinieri” Headquarters for the Protection of the Environment, with tasks of protecting the environmental landscape and monitoring sound, atmospheric, water, ground and electromagnetic pollution.

The “Carabinieri” Police Force - Cultural Heritage Protection Squad. This is the first police squad in the world for monitoring and protecting the artistic heritage, set up in 1971 according to the UNESCO recommendations of 12th -14th November

1970. The squad works under the Ministry for Cultural Heritage and Activities, forming a constant reference point in this field, and carries out Criminal Investigations, with the coordination of the Magistrature, opposing all the violations of law concerning the cultural heritage. In particular it deals with the following crimes:

- the theft of and the receiving of stolen works of art;
- damage to monuments and archaeological sites;
- illegal export;
- counterfeiting and imitating works of paintings, graphics, sculpture and antique objects;
- illegal commerce;
- it has the task of coordinating the Departments of the “Carabinieri” Police Force in this subject-matter;
- it carries out informative activities in this sector;
- it pursues crimes committed by criminal organizations dealing with the traffic of works of art; recycling and investing the proceeds of other criminal activities;
- it prevents and represses unauthorized excavations and research in land and sea archaeological sites with the contribution of the personnel of the “Carabinieri” Helicopter Headquarters, the Mounted “Carabinieri” Regiment as well as the territorial organization and the naval units of the Force;
- it carries out constant monitoring and observation activities at exhibitions, fairs and auctions, both in Italy and abroad, as well as regards to antique dealers, second-hand dealers, art restorers and dealers;
- it works in close contact with the ecclesiastical authorities for the protection of the religious patrimony;
- it works abroad through Interpol and is in contact with the other international police forces.

The Provincial Police Force and the Municipal Police Force, who monitor and control modification activities of the territory and the assets, to assist the provincial and municipal Technical Offices.

6.C

Results of previous reporting exercises

Reports were drawn up during the work carried out on the movable and unmovable parts of the Site proposed for the nomination; these reports were equipped with accounts and documentation of any archaeological stratigraphic investigation that might have been carried out, with documentation concerning the results of historical and diagnostic research carried out to in-depth examination of the constituent materials and of the techniques of execution, and specialized analyses of various types. These reports constitute the base for all past and future work.

Therefore, the relevant entities which carry out or supervise the work have collected documents of different type (planimetries, sections, reliefs, reports, images, mapping of the state of conservation of structures and artefacts, graphics), which document the situation of the monuments at the Site and of the artefacts, and chart the development of their state of conservation as well as all studies and research carried out on the structures and on the artefacts (institutions and bodies holding inventories, records and archives are listed at item 7.d)

Two information systems, *ARISTOS* (Informatic Archive for the History of Works of Art Protection) and *SICAR* (Informatic System for Cataloguing Restoration Yards) -which are the subject of a national project by the Ministry for Cultural Heritage and Activities- were used to publish on line the reports - both graphic papers and photographs- o recent maintenance interventions on Santa Sofia Church in Benevento and other documents preserved in historical

archives referring to previous conservation and restoration activities on the same property (<http://aristos.mbigroup.it>, <http://www.liberologico.com>). The project was carried out by the BAPPSAE - Superintendence of Caserta and Benevento thanks to the collaboration of the Municipality of Benevento (see item 4.a6).

AUTHORIZATION

1.1, _____

the undersigned, hereby grant free of charge to Unesco the non-exclusive right for the legal term of copyright to reproduce and use in accordance with the terms of paragraph 2 of the present authorization throughout the world the photographs, slides and CD described in paragraph 4.

2. I understand that the photographs, slides and CD described in paragraph 4 of the present authorization will be used by Unesco to disseminate information on the sites protected under the World Heritage Convention in the following ways:

- a) Unesco publications;
- b) co-editions with private publishing houses for World Heritage publications: a percentage of the profits will be given to the World Heritage Fund;
- e) postcards - to be sold at the sites protected under the World Heritage Convention through national parks services or antiquities (profits, if any, will be divided between the services in question and the World Heritage Fund);
- d) slide series - to be sold to schools, libraries, other institutions and eventually at the sites (profits, if any, will go to the World Heritage Fund);
- e) exhibitions, etc.

3. I also understand that I shall be free to grant the same rights to any other eventual user but without any prejudice to the rights granted to Unesco.

4. The list of photographs, slides and CD for which the authorization is given, is in item 7.a of the format for the Nomination of "Italia langobardorum. Places of power and worship (568-774 d.C.)" Site for inscription on the World Heritage List.

5. All photographs, slides and CD will be duly credited. The photographer's moral rights will be respected. Please indicate the exact wording to be used for the photographic credit.

6. I hereby declare and certify that I am duly authorized to grant the rights mentioned in paragraph 1 of the present authorization.

7. I hereby undertake to indemnify Unesco, and to hold it harmless of any responsibility, for any damages resulting from any violation of the certification mentioned under paragraph 6 of the present authorization.

8. Any differences or disputes which may arise from the exercise of the rights granted to Unesco will be settled in a friendly way. Reference to courts or arbitration is excluded.

(Place date Signature, title or function of the person duly Authorized)

7.b **TEXTS RELATING TO PROTECTIVE DESIGNATION, COPIES OF PROPERTY MANAGEMENT PLANS OR DOCUMENTED MANAGEMENT SYSTEM AND EXTRACTS OF OTHER PLANS RELEVANT TO THE PROPERTY**

1. Memorandum of Understanding for the implementation of the Site Management Plan (photocopy of original document and translation enclosed herewith)
2. Agreement between Institutions in charge of Cividale del Friuli Museums (photocopy of original document and translation enclosed herewith)
3. Agreement between Institutions in charge of Castelseprio-Torba complex (photocopy of original document and translation enclosed herewith)
4. Agreement between Institutions in charge of Municipality and Province heritage (photocopy of original document and translation enclosed herewith)
5. Management Plan for the serial property "The Longobards in Italy. Places of the power (568-774 d.C.)" (annexed in separate publications -two volumes- and on CD)
6. Advancement State (December 2009) of the Management Plan for the serial property "The Longobards in Italy. Places of the power (568-774 d.C.)" (annexed in separate publication and on CD)
7. *Code of the Cultural and Landscape Heritage* - Legislative Decree no. 42 of 22 January 2004 (annexed on CD)

7.c **FORM AND DATE OF MOST RECENT RECORDS OR INVENTORY OF PROPERTY**

Many researches and studies have been carried out and published concerning the Site's monuments and their decorative aspects (see 7.e Bibliography).

A certain number of records and catalogues have also been drawn up according to national catalogue standards set up by ICCD - Central Institute for Cataloguing and Documentation of the Ministry for Cultural Heritage and Activities (<http://www.iccd.beniculturali.it>). Similarly, there are researches and specific studies, as well as inventory and catalogue files for each of the movable objects held in the exhibition areas and for all archaeological materials discovered at the Site over the years.

The local Offices of the Ministry for Cultural Heritage and Activities have drawn up catalogues and inventories, as also the Offices of the Regions and the other institutions responsible for the Site. The monumental properties and artefacts belonging to the Church were also subject to a programme to catalogue of movable objects, promoted by the CEI Conferenza Episcopale Italiana (Italian Bishops' Conference), and carried out by the competent offices of the Dioceses of Udine, Spoleto-Norcia, Benevento and Foggia.

IL CENTRO ITALIANO DI STUDI SULL'ALTO MEDIOEVO
E IL CENTRO DI STUDI MICAELICI E GARGANICI

PER L'ATTUAZIONE DEL PIANO DI GESTIONE DEL SITO

"Italia langobardorum: centri di potere e di culto (568-774)"

candidato per l'inserimento nella Lista del Patrimonio Mondiale dell'UNESCO

VISTA la Convenzione sulla tutela del patrimonio mondiale, culturale e naturale (Parigi, 16 novembre 1972);

VISTO il DPR 15 gennaio 1972, n. 8 "Trasferimento delle funzioni in materia urbanistica";

VISTO il Decreto legislativo 20 ottobre 1998, n. 368 recante "Istituzione del Ministero per i Beni e le Attività Culturali a norma dell'art. 11 della legge 15 marzo 1997, n. 59";

VISTO il decreto legislativo 8 gennaio 2004, n.3 recante "Riorganizzazione del Ministero per i beni e le attività culturali" e successive modificazioni;

VISTO il decreto del Presidente della Repubblica 10 giugno 2004, n.173, recante il regolamento di organizzazione del Ministero per i beni e le attività culturali;

VISTO il decreto legislativo 22 gennaio 2004 n. 42 "Codice dei beni culturali e del paesaggio" e in particolare l'art. 143, comma 2 lettera b);

VISTA la legge 20 febbraio 2006, n. 77 "Misure speciali di tutela e fruizione dei siti di interesse culturale, paesaggistico e ambientale, inseriti nella "lista del patrimonio mondiale", posti sotto la tutela dell'UNESCO" e in particolare l'art. 3 ("Piani di gestione");

Ministero per i Beni e le Attività Culturali - Direzione Generale del Patrimonio Culturale

Ministero per i Beni e le Attività Culturali

VISTO il Decreto del Ministro per i Beni Culturali e Ambientali del 15 ottobre 1997 recante Costituzione in via permanente del Gruppo di lavoro incaricato di coordinare le istanze connesse con gli adempimenti derivanti dalla *Convenzione sulla tutela del patrimonio mondiale, culturale e naturale* (Gruppo di lavoro permanente per la Lista del Patrimonio Mondiale dell'UNESCO);

CONSIDERATO che il coordinamento e la consulenza tecnico-scientifica per la redazione dei dossier di candidature italiane, dei relativi piani di gestione e per gli adempimenti successivi all'iscrizione dei siti culturali rientrano tra le competenze dell'Ufficio Lista del Patrimonio Mondiale dell'UNESCO costituito in seno al Segretariato Generale del Ministero per i Beni e le Attività Culturali;

Visto il Decreto 19 giugno 2006 con il quale il Ministro per i Beni e le Attività Culturali Onorevole Francesco Rutelli ha delegato la Dott.ssa Danielle Mazzonis a coadiuvare il Ministro nelle iniziative in materia di patrimonio mondiale dell'UNESCO;

VISTE le normative attualmente vigenti in materia di tutela e conservazione dei beni culturali e naturali, ed in particolare:

- vincoli *ex lege* 1089/39 (oggi D.Lgs. 42/2004 Art. 10, così come modificato dai D.Lgs. 24 marzo 2006, n.156 e n.157) per gli edifici monumentali e le strutture archeologiche presenti nelle aree dei comuni di Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno, Benevento e Monte Sant'Angelo, comprese nella candidatura UNESCO;
- vincoli *ex lege* 1497/39 e vincoli *ex lege* 431/85 (oggi D.Lgs. 42/2004 Art. 136, così come modificato dai D.Lgs. 24 marzo 2006, n.156 e n.157), che dichiarano di notevole interesse pubblico diversi ambiti delle aree suddette;

CONSIDERATO che nell'anno 2008 l'Italia presenterà al Centro del Patrimonio Mondiale dell'UNESCO la candidatura del sito *Italia langobardorum: centri di potere e di culto (568-774)*;

CONSIDERATO che uno dei requisiti fondamentali richiesti per l'inserimento del sito nella Lista del Patrimonio Mondiale è che esso sia dotato di un adeguato *Piano di Gestione* e considerato che la Legge 77/06 ha previsto che per tutti i siti UNESCO italiani siano approvati piani di gestione che ne assicurino la conservazione e creino le condizioni per la loro valorizzazione.

CONSIDERATA la necessità di predisporre il *Piano di Gestione* per il sito *Italia langobardorum: centri di potere e di culto (568-774)* e di individuarne la "zona tampone" secondo quanto indicato nelle *Operational Guidelines* fornite dall'UNESCO;

CONSIDERATO che il Ministero per i Beni e le Attività Culturali (attraverso l'Ufficio Lista del Patrimonio Mondiale dell'UNESCO, la Direzione Regionale per la Lombardia, la Direzione Regionale per il Friuli Venezia Giulia, la Direzione Regionale dell'Umbria, la Direzione Regionale della Campania, la Direzione Regionale della Puglia e le Soprintendenze competenti), la Regione Lombardia, la Regione Friuli Venezia Giulia, la Regione Umbria, la Regione Campania, la Regione Puglia, le Province di Udine, Brescia, Varese, Perugia, Benevento, Foggia, i Comuni di Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno, Benevento, Monte

MODULARIO
B.A.C. - 88

MOD. 5

Ministero per i Beni e le Attività Culturali

Sant'Angelo, l'Arcidiocesi di Spoleto e Norcia, la Basilica di San Michele Arcangelo, la Parrocchia di S. Maria Assunta, l'Ente Parco Nazionale del Gargano, la Comunità Montana del Gargano, la Comunità Montana dei Monti Martani e del Serano, la Fondazione CAB- Istituto di Cultura Giovanni Folonari, il FAI-Fondo per l'Ambiente Italiano, il CISAM-Centro Italiano di Studi sull'Alto Medioevo e il Centro di Studi Micaelici e Garganici in vista della candidatura stanno concludendo la predisposizione del *Piano di Gestione* per le aree per le quali si chiede l'iscrizione, in cui vengono definite e coordinate tutte le attività di tutela, conservazione e valorizzazione in atto e in programma nelle suddette aree;

CONSIDERATA l'esigenza di estendere il suddetto *Piano di Gestione* anche alle "zone tampone" delle aree per le quali si richiede l'iscrizione nella Lista del Patrimonio ed ai relativi territori di riferimento;

CONSIDERATA l'esigenza di coordinare le attività dei soggetti firmatari e di incrementare la collaborazione ai fini della tutela e riqualificazione urbanistica, paesaggistica e della valorizzazione socio-economica dei territori interessati, attraverso la promozione del patrimonio archeologico, storico artistico, architettonico e paesaggistico, nonché del patrimonio culturale immateriale e del patrimonio naturale;

CONSIDERATA l'esigenza emersa di sottoscrivere un *Protocollo d'Intesa* ai fini dell'attuazione del Piano di gestione del sito *Italia langobardorum: centri di potere e di culto (568-774)*;

SI CONCORDA QUANTO SEGUE

Art. 1

Il Ministero per i Beni e le Attività Culturali (attraverso l'Ufficio Lista del Patrimonio Mondiale dell'UNESCO, la Direzione Regionale per la Lombardia, la Direzione Regionale per il Friuli Venezia Giulia, la Direzione Regionale dell'Umbria, la Direzione Regionale della Campania, la Direzione Regionale della Puglia e le Soprintendenze competenti), la Regione Lombardia, la Regione Friuli Venezia Giulia, la Regione Umbria, la Regione Campania, la Regione Puglia, le Province di Udine, Brescia, Varese, Perugia, Benevento, Foggia, i Comuni di Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno, Benevento, Monte Sant'Angelo, l'Arcidiocesi di Spoleto e Norcia, l'Arcidiocesi di Benevento, la Basilica di San Michele Arcangelo, la Parrocchia di S. Maria Assunta, l'Ente Parco Nazionale del Gargano, la Comunità Montana del Gargano, la Comunità Montana dei Monti Martani e del Serano, la Fondazione CAB- Istituto di Cultura Giovanni Folonari, il FAI-Fondo per l'Ambiente Italiano, il CISAM-Centro Italiano di Studi sull'Alto Medioevo e il Centro di Studi Micaelici e Garganici si impegnano a coordinarsi e a collaborare, ciascuno nell'ambito delle proprie competenze, per la valorizzazione delle aree ricadenti nel sito per il quale si chiede l'inserimento nella Lista del Patrimonio Mondiale dell'UNESCO, nonché per la tutela e la riqualificazione urbana e paesaggistica e la valorizzazione socio-economica dei territori di riferimento delle aree candidate.

Art. 2

L'attività di collaborazione è volta a realizzare, nel contesto degli strumenti normativi vigenti, la massima sussidiarietà tra i soggetti coinvolti, con l'obiettivo di ottenere un efficace coordinamento

STAMPATO PRESSO L'OFFICINA REGIONALE DEL BENEVOLO

Ministero per i Beni e le Attività Culturali

e di evitare sovrapposizioni e duplicazioni degli interventi e la dispersione di risorse che potrebbero derivare dalla molteplicità dei soggetti preposti alla gestione dei singoli beni.

Art. 3

L'attività di collaborazione, in particolare, è volta all'attuazione del *Piano di Gestione*, ai sensi della legge n. 77/2006, utile all'azione dei numerosi soggetti interessati alla salvaguardia del patrimonio, alla promozione culturale e valorizzazione economica del sito da presentare all'UNESCO.

In particolare, tra le prime iniziative d'attuare, previste dal *Piano di Gestione*, i soggetti firmatari del presente protocollo concordano sulla opportunità di creare un sito web di presentazione della rete dei siti longobardi, avviare una collana editoriale specifica per la promozione culturale della stessa rete e dei singoli siti (guide, pubblicazioni scientifiche e divulgative a diversi livelli), intraprendere l'approfondimento di studi specifici e nuovi progetti di ricerca sulla civiltà longobarda e su alcuni siti in particolare, nonché l'organizzazione di una serie di convegni per la diffusione delle conoscenze acquisite, potenziare ed integrare le attività di sensibilizzazione già in atto.

A tal fine il Ministero per i beni e le attività culturali si rende disponibile a fornire ogni utile collaborazione.

Art. 4

I soggetti firmatari del presente protocollo concordano sul fatto che intorno al sito *Italia langobardorum: centri di potere e di culto (568-774)* si compone un più ampio sistema interattivo di relazioni articolate con le altre risorse dei territori di riferimento, con le risorse umane e sociali, con i servizi di accessibilità ed accoglienza e con il sistema delle imprese. Pertanto il *Piano di gestione* del sito potrà orientare le scelte della pianificazione urbanistica ed economica attraverso la conoscenza, la conservazione e la valorizzazione delle risorse di carattere storico, culturale e ambientale.

Art. 5

I soggetti firmatari del presente protocollo convengono che il *Piano di Gestione*, se da un lato si pone l'obiettivo strategico di mantenere nel tempo l'integrità dei valori che consentiranno l'iscrizione del sito *Italia langobardorum: centri di potere e di culto (568-774)* nella Lista del Patrimonio Mondiale UNESCO, dall'altro ridefinisce e rende compatibile un processo locale condiviso, per coniugare la tutela e la conservazione del sito medesimo con lo sviluppo integrato delle risorse dei territori di riferimento. In tal senso il *Piano di Gestione* si propone come una sorta di dichiarazione di principi, per i quali Autorità e Comunità dovranno impegnarsi ad una tutela attiva e alla conservazione e alla valorizzazione compatibile.

Art. 6

Per raggiungere gli obiettivi di cui sopra i soggetti firmatari potranno attivare collaborazioni con altri soggetti, a livello nazionale o internazionale, che operano nei settori d'attività connessi con la gestione del patrimonio culturale, storico e architettonico.

I soggetti firmatari concordano sulla opportunità di costituire una struttura tecnica dedicata al coordinamento e monitoraggio del *Piano di gestione*, nonché, nel caso di buon esito della candidatura e di iscrizione del sito nella Lista del Patrimonio Mondiale UNESCO, all'attuazione delle attività concernenti lo *status* di sito UNESCO, ai conseguenti adempimenti, alla salvaguardia dei valori del sito e alla protezione dei beni che lo compongono.

MOD. 5

Ministero per i Beni e le Attività Culturali

IN COMPLIANCE WITH the Decree of the Ministry of Cultural Heritage and Activities of 15 October 1997 defining the permanent Constitution of the Workgroup appointed for co-ordinating the petitions connected with the formalities deriving from *the Agreement on the protection of world cultural and natural heritage* (permanent Workgroup for the UNESCO World Heritage List);

HAVING CONSIDERED that the co-ordination and technical-scientific consultancy for compiling dossiers on Italian candidates, the relative management plans and formalities following inscription of the cultural sites are part of the competence pertaining to the UNESCO World Heritage List Office constituted within the Secretariat General of the Ministry of Cultural Heritage and Activities;

In compliance with Decree of 19 June 2006 with which the Minister of Cultural Heritage and Activities the Honourable Francesco Rutelli delegated the Honourable Danielle Mazzonis as an aid for the Minister in the initiatives regarding UNESCO world heritage;

IN COMPLIANCE WITH the norms currently in force in relation to the protection and conservation of cultural and natural heritage, in particular:

☐ restrictions by law 1089/39 (presently Legislative Decree 42/2004 Art. 10, as amended by Legislative Decrees 24 March 2006, no.156 and 157) for monumental buildings and archaeological structures in the areas of the municipalities of Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno, Benevento and Monte Sant'Angelo, included in the UNESCO candidature;

☐ restrictions by law 1497/39 and by law 431/85 (presently Legislative Decree 42/2004 Art. 136, as amended by Legislative Decree 24 March 2006, no. 156 and 157), which state considerable public interest in various environments of the aforesaid areas;

CONSIDERED that in 2008 Italy will present the nomination of the site *Italia Langobardorum: centres of power and culture* to the UNESCO World Heritage Centre (568-774);

CONSIDERED that one of the fundamental requirements requested for insertion into the World Heritage List is that of being equipped with an appropriate *Management Plan* and considered that Law 77/06 has foreseen that, for all Italian UNESCO sites, management plans have been approved which ensure their conservation and create the conditions for their valorisation.

HAVING CONSIDERED the necessity to prepare the *Management Plan* for the site *Italia langobardorum: centres of power and culture (568-774)* and to identify a so-called Buffer Zone pursuant to that shown in the *Operational Guidelines* supplied by UNESCO;

CONSIDERED that the Ministry of Cultural Heritage and Activities (through UNESCO's World Heritage List Office, the Regional Direction of Lombardy, the Regional Direction of Friuli Venezia Giulia, the Regional Direction of Umbria, the Regional Direction of Campania, the Regional Direction of Puglia and competent Superintendencies), the Region of Lombardy, the Region of Friuli Venezia Giulia, the Region of Umbria, the Region of Campania, the Region of Puglia, the Provinces of Udine, Brescia, Varese, Perugia, Benevento, Foggia, the Municipalities of Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno, Benevento, Monte

Sant' Angelo, the Archdiocese of Spoleto and Norcia, the Archdiocese of Benevento, the Basilica di San Michele Arcangelo, the parish of S. Maria Assunta, Gargano National Park, the Mountain Community Gargano, the Mountain Community of Monti Martani and Serano, the CAB Foundation – Giovanni Folonari Institute of Culture, FAI – the Italian National Trust, CISAM- Italian Centre for Studies on the Early Middle Age and the Centre for Michaelic and Garganic Studies, in consideration of the nomination are completing the preparation of the *Management Plan* for the areas for which inscription is to be requested, in which all the activities of protection, conservation and valorisation in progress are defined and co-ordinated and programmed in the above mentioned areas;

HAVING CONSIDERED the need to also extend the aforesaid *Management Plan* to the so-called “buffer zones” of the areas for which inscription into the Heritage List has been requested, together with the relative areas of reference;

HAVING CONSIDERED the need to co-ordinate the activities of the signatories and to increase collaboration for the purpose of the protection and urban redevelopment and the landscape and the social-economic valorisation of the involved territories through the promotion of archaeological heritage, as well as immaterial cultural heritage and natural heritage;

HAVING CONSIDERED the need that has emerged to undersign a *Memorandum of Intent* for the purpose of actuating the Management Plan of the site *Italia Langobardorum. Centres of power and culture (568-774)*:

THE PARTIES AGREE AS FOLLOWS

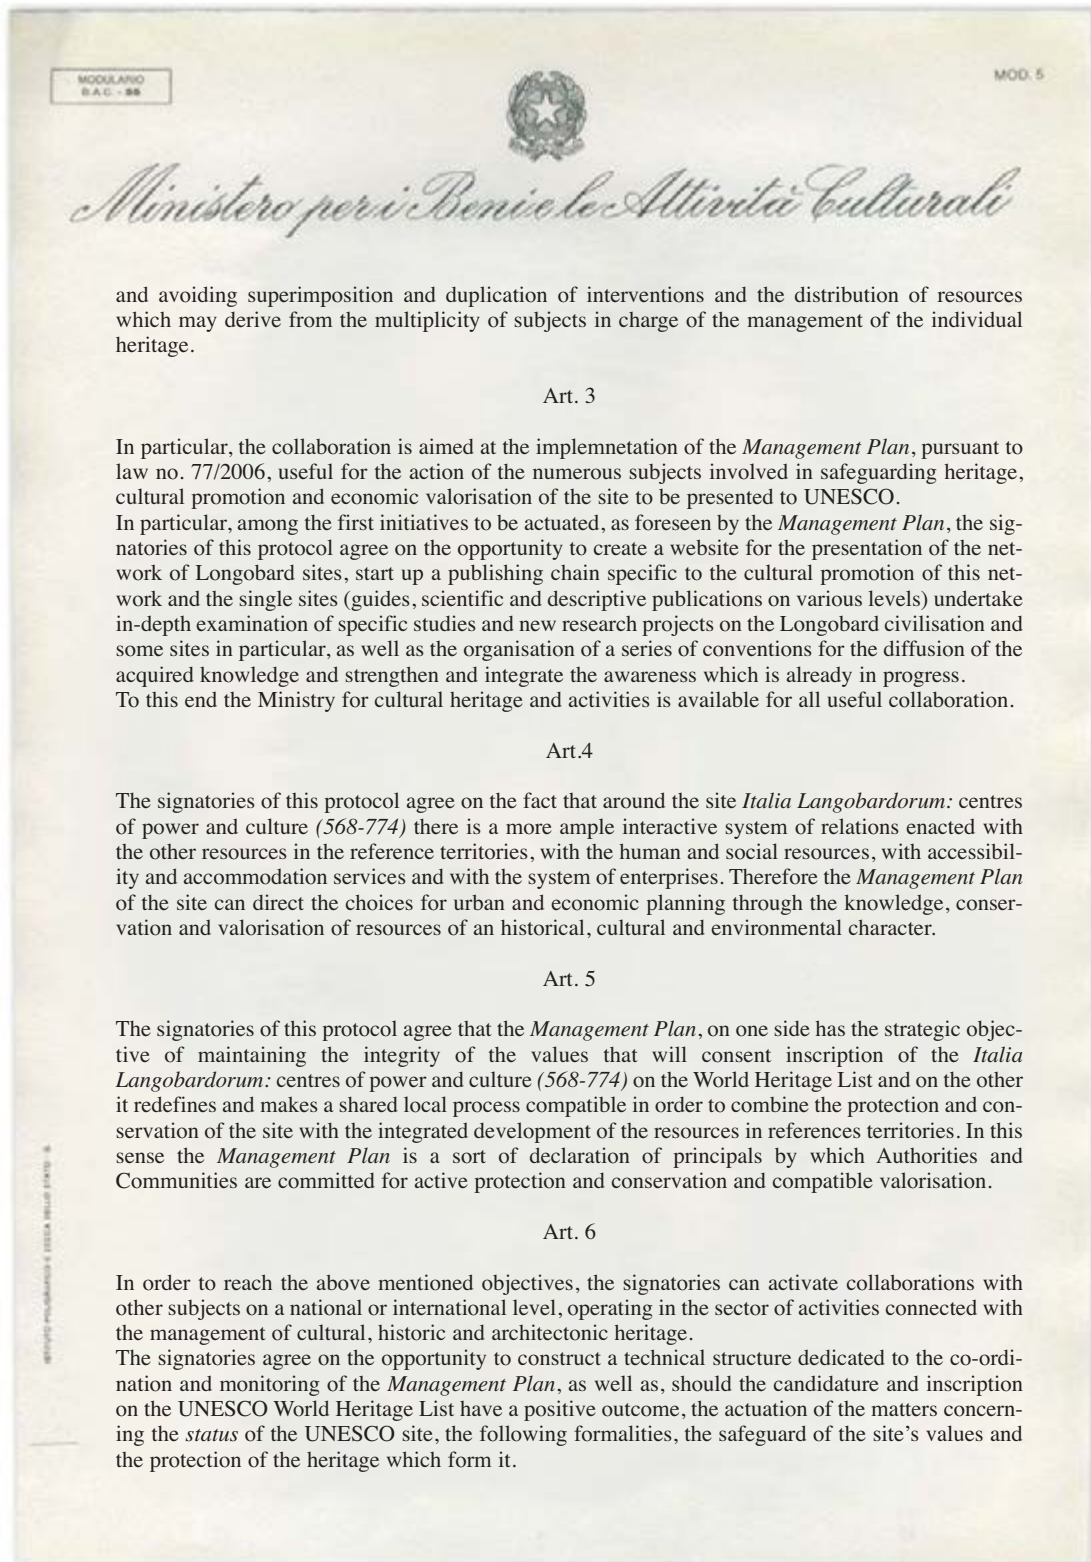

Art. 1

The Ministry for Cultural Heritage and Activities (through UNESCO's World Heritage List Office, the Regional Direction of Lombardy, the Regional Direction of Friuli Venezia Giulia, the Regional Direction of Umbria, the Regional Direction of Campania, the Regional Direction of Puglia and competent Superintendencies), the Region of Lombardy, the Region of Friuli Venezia Giulia, the Region of Umbria, the Region of Campania, the Region of Puglia, the Provinces of Udine, Brescia, Varese, Perugia, Benevento, Foggia, the Municipalities of Cividale del Friuli, Brescia, Castelseprio, Gornate Olona, Spoleto, Campello sul Clitunno, Benevento, Monte Sant' Angelo, the Archdiocese of Spoleto and Norcia, the Archdiocese of Benevento, the Basilica di San Michele Arcangelo, the parish of S. PREMESSO CHE:

- il Comune ha individuato e promosso la candidatura per l'inserimento delle principali testimonianze longobarde presenti nella città nella World Heritage List dell'UNESCO;

SR

Stefano Rezzi

F. Lo Schiavo

Attilio Vuga

- la candidatura UNESCO – elaborata e proposta dall'Amministrazione comunale di Cividale e sostenuta dalle Soprintendenze del FVG – è stata accettata e inserita dal Ministero per i Beni Culturali (MiBAC) nella apposita "tentative list" con il titolo "Italia Langobardorum – Centri di potere e di culto / 568-774" ed è strutturata "a rete" nazionale con il conferimento a Cividale del prestigioso ruolo di capofila nazionale;
- lo stesso MiBAC ha comunicato la intenzione di proporre ufficialmente nel gennaio 2008 all'UNESCO di Parigi la candidatura longobarda "a rete" (che, oltre a Cividale, comprende Brescia, Castelseprio, Spoleto, Campello sul Clitunno, Benevento, Monte S. Angelo);
- Il ruolo di coordinamento della "rete" nazionale affidato dal MiBAC a Cividale comporta la facoltà di elaborare studi, proposte operative e servizi di rete con ciò contribuendo ad offrire innovative opportunità di tutela, conservazione, riqualificazione e di pubblica fruizione del complessivo Patrimonio storico, artistico-monumentale, archivistico-documentario, bibliografico e paesaggistico di Cividale;
- La candidatura ufficiale prevede la realizzazione di un Dossier Scientifico e di un Piano di Gestione, quest'ultimo introdotto come obbligatorio dall'UNESCO e dal MiBAC dopo il 2002, e di fatto costituente un piano coordinato di sviluppo d'area e di marketing territoriale
- Nel Piano di Gestione di prevedono più strumenti di intervento (Piani della Conoscenza, Tutela, Valorizzazione, Sensibilizzazione, Promozione) ciascuno dei quali deputato a definire un insieme di Obiettivi, Progetti ed Azioni, il cui insieme è comunque finalizzato a riorganizzare, razionalizzare, riqualificare e rendere fruibile in modo sistemico e organico il Patrimonio complessivo di Cividale e del suo Territorio
- La città di Cividale è caratterizzata dalla candidatura alla World Heritage List di un imponente complesso artistico-monumentale dato dall'insieme del Monastero di S. Maria in Valle (Tempietto longobardo e costituendo Museo del Monastero e del Tempietto), dal Duomo con annesso ambito espositivo della Cultura cristiana (Ara di Ratchis e Fonte battesimale di Callisto), dal Palazzo Patriarcale-Palazzo dei Provveditori (sede del Museo Archeologico Nazionale – MAN) e, inserita nella buffer-zone, dalla rinnovata sede museale del Museo di Arte Medioevale e Moderna di Palazzo de' Nordis (di imminente riapertura);
- Nel Piano di Gestione per quanto attiene Cividale sono fissati, relativamente alla valorizzazione e fruibilità del Patrimonio, alcuni obiettivi primari finalizzati alla definizione al più alto livello di qualificazione scientifica di un sistema coordinato di offerta e proposto alla pubblica fruibilità
- I firmatari del presente Accordo quadro considerano questo documento come uno strumento di lavoro utile a rafforzare forme comuni di collaborazione eventualmente anche con soggetti terzi, nazionali ed esteri, che operano con le medesime finalità e offrono delle garanzie di pari dignità scientifica;

Handwritten signature

A. Vuff

SI CONVIENE E SI STIPULA QUANTO SEGUE:

ART. 1 – Le premesse fanno parte integrante della presente Intesa.

ART. 2 – I firmatari della presente Intesa, con il presente atto, instaurano un rapporto ampio di collaborazione volto alla attuazione delle azioni definite nel Piano di Gestione per la candidatura longobarda all'UNESCO e per la elaborazione e/o partecipazione a progetti a breve, medio, lungo termine in esso inseriti e/o di progetti con cui lo stesso PdG potrà essere successivamente arricchito

ART. 3 – In particolare i firmatari della presente Intesa concordano sulla attuazione congiunta e contestuale delle seguenti linee operative:

- o procedere al coordinamento del sistema museale cittadino

Handwritten signature

- o specializzare le singole realtà museali riorganizzando la distribuzione dei manufatti
- o procedere a un sistema organico di scambi e di depositi di manufatti e opere per realizzare una condivisa logica espositiva in accordo con le finalità delle singole realtà museali e istituzionali;
- o realizzare e/o partecipare alla realizzazione del "Museo del Monastero e del Tempietto" all'interno del complesso di S. Maria in Valle con il conferimento a questa realtà di manufatti e opere della Collezione del Tempietto e del Monastero presenti presso il MAN e il Museo cristiano.
- o ospitare presso il Monastero di S. Maria in Valle un Laboratorio osteo-archeologico negli spazi e con le modalità e tempi che saranno successivamente definiti
- o dar vita nel complesso di S. Maria in Valle alla costituzione di un Polo storico-archivistico e bibliografico-codicologico in cui far confluire gli elementi, oggi suddivisi dell'antico Archivio Capitolare (oggi depositato presso il MAN e presso l'Archivio del Duomo), dell'Archivio storico del Comune (oggi depositato in parte presso il MAN), dell'Archivio storico dell'Ospedale di Cividale e di altri rilevanti archivi storici pubblici e privati, osservando la direttiva generale di ricongiungere i materiali archivistici prodotti dal medesimo Ente che si trovino collocati ora in sedi diverse
- o rafforzare le specializzazioni del MAN e di Palazzo de' Nordis

ART. 4 - L'Intesa si attuerà mediante:

- a) verifica dei titoli di proprietà dei manufatti e opere di cui al presente accordo
- b) classificazione dei manufatti e delle opere di cui sopra in relazione alla loro destinazione espositiva
- c) definizione della tempistica per lo spostamento dei beni designati nei precedenti punti a) e b) anche in relazione alla disponibilità fisica di luoghi e attrezzature idonee alla custodia

ART. 5 - I firmatari si impegnano ad informarsi, in modo regolare sui programmi delle attività e dei progetti definiti nel PdG

ART. 6 - L'Intesa si rinnoverà tacitamente, salvo disdetta di una delle parti, da comunicare all'altra con preavviso di 30 (trenta) giorni prima della scadenza. In caso di disdetta dovrà comunque essere garantito il completamento delle attività che hanno già avuto inizio.

ART. 7 - Nel caso che le Parti intendano ampliare la portata della presente Intesa ed assumere nuovi e più estesi impegni, rispetto a quanto previsto nel presente documento, ovvero nel caso che intendano estendere l'accordo a soggetti terzi esterni, italiani ed esteri, per il miglior raggiungimento degli scopi in essa descritti, saranno siglati da entrambe le parti degli specifici accordi aggiuntivi.

ART. 8 - Le parti nominano quali referenti per l'attuazione della presente Intesa:

per la Soprintendenza BAPPSAE : Dott. Paolo Casadio
 per la Soprintendenza Archeologica: Dott.ssa Serena Vitri
 per la Soprintendenza Archivistica: Dott.ssa Renata Da Nova
 per il Comune: Dott. Attilio Vuga
 per la Parrocchia: Mons. Guido Genaro

Ciascuna parte potrà, nel corso di vigenza dell'accordo, sostituire il proprio referente, dandone comunicazione scritta all'altro contraente.

- the **MUNICIPALITY OF CIVIDALE DEL FRIULI**, from herein referred to as the “Municipality”, (Taxpayers’ code n. 00512830308), with legally registered head office in Cividale del Friuli, via Paolino d’Aquileia n. 2, represented by the Mayor, Dr. Attilio VUGA, born in CIVIDALE on 06.09.1956 and domiciled for the purposes of this appointment at the above stated Municipality of Cividale del Friuli

- the **PARISH OF S. MARIA ASSUNTA** in Cividale del Friuli, from herein referred to as the “Parish”, (Taxpayers’ code n80002770305) with legally registered head office in vicolo Nicoletti 2, Cividale del Friuli, represented by the *pro-tempore* parish priest, Mons. Guido Genero, born in S.Vito di Fagagna (UD) on 15.10.1947, and domiciled for the purposes of this appointment at the above stated Parish of S. Maria Assunta, authorized to enter into this deed of agreement following resolution of the Diocesan Sacred Art Commission of Udine

WHEREAS:

– the Municipality has identified and promoted the nomination of the main Longobard sites present in the city for inscription on the UNESCO World Heritage List;

- the UNESCO nomination – drafted and written by the Municipal Administration Offices of Cividale and supported by the Monuments and Fine arts Office of FVG
- has been accepted by the Ministry of Cultural Heritage (MiBAC) and introduced into the appropriate “tentative list” with the title “*Italia Langobardorum – Centres of power and worship / 568-774*” , structured as a national “network” with Cividale being conferred the prestigious role of national leader;
- the above stated Ministry has made public its intention to officially propose the Longobard “network” nomination to UNESCO in Paris, January 2008 (which, in addition to Cividale, also includes Brescia, Castelseprio, Spoleto, Campello sul Clitunno, Benevento and Monte S. Angelo);
- the role of co-ordinating this national “network”, which Cividale has been appointed by the Ministry of Cultural Heritage, entails its being granted the authority to draw up research projects, operative proposals and network services for the creation of innovative programmes of protection, conservation, upgrading and the public usage of the historic, artistic-monumental, archival-documentary, bibliographic and landscape heritage of Cividale;
- the official nomination entails the drafting of a Scientific Dossier and a Management Plan, the latter having become a compulsory requirement of UNESCO and the Ministry of Cultural Heritage in 2002, constituting a coordinated plan of area development and territorial marketing;
- the Management Plan makes provision for additional management systems (Knowledge, Protection, Optimization, Awareness-Raising and Promotion Plans), each setting out a group of Objectives, Projects and Actions which, taken as a whole, are designed to reorganize, rationalize, upgrade and increase the usability, in a systematic and organic fashion, of the heritage of Cividale and its territory, in its entirety;
- the city of Cividale’s nomination for inscription on the World Heritage List is based on its remarkable artistic-monumental heritage, comprising the Monastery of *S. Maria in Valle* (Tempio Longobardo and Monastery and Temple Museum), the Cathedral and adjoining exhibition area of Christian culture (Altar of Duke Ratchis and the Baptismal Font of Callisto), the Palazzo Patriarcale-Palazzo dei Provveditori (seat of the National Museum of Archaeology – MAN) and, in the buffer-zone, the renowned Museum of Ancient Art, housed in the Palazzo de’ Nordis (soon to be reopened);
- as far as Cividale is concerned and in connection with the optimization and increased usability of heritage properties, the Management Plan sets out a series of primary objectives, drawn up in keeping with the highest scientific standards, for a coordinated system of proposals aimed at improving usability;
- the signatories of this Framework Agreement shall consider it a working document, drawn up to reinforce common forms of collaboration, possibly with national and foreign third parties working for the same purposes and assuring scientific standards of a similar level;

THE FOLLOWING ARTICLES ARE AGREED:

ART. 1 – the preambles are an integral part of this Agreement.

ART. 2 – the signatories of this Agreement, with this deed, shall establish a broad relationship of collaboration for the implementation of actions set out under the Management Plan for the Longobard nomination in the UNESCO World Heritage List and the drafting and/or participation in short, medium and long-term programmes included therein and/or programmes which may later be added to the Management Plan.

ART. 3 – in particular, the signatories of this Agreement shall agree on the combined and concomitant implementation of the following operational guidelines:

- to proceed with the coordination of the City’s museums

- to specialize individual museums, reorganizing the distribution of artefacts
- to proceed with the creation of an organic system of exchange and storage for artefacts and works, establishing a shared form of reasoning underpinning all exhibitions, in accordance with the objectives of individual museums;
- to realize and/or participate in the realization of the “**Monastery and Tempietto Museum**” within the complex of S. Maria in Valle, transferring to this new museum artefacts and works from the Tempietto and Monastery Collection currently held at the National Museum of Archaeology and the Christian Museum (*see annexes*);
- to house, within the Monastery of S. Maria in Valle, an Osteo-archaeological Laboratory, within spaces and under conditions yet to be defined;
- to create an historic-archival and bibliographic-codicological centre within the complex of S. Maria in Valle, housing items which are at present located in the ancient Capitulary Archive (currently held at the National Museum of Archaeology and the Cathedral Archives), the Municipal Historic Archive (currently partially held at the National Museum of Archaeology), the Historic Archive of the Cividale Hospital and other relevant historic archives, both public and private, in full observance of the general directive on reuniting archival material belonging to the same Body and currently housed in various locations;
- to reinforce specialization within the National Museum of Archaeology and the Palazzo de' Nordis.

ART. 4 – the Agreement shall be implemented through:

- a) the verification of ownership of artefacts and works stated in this agreement;
- b) the classification of the above stated artefacts and works, in terms of their destination within museum exhibitions;
- c) the definition of time scales for the transferral of property designated in points a) and b) above, also the availability and suitability of both space and facilities for their custody.

ART. 5 – the signatories shall undertake to keep themselves informed, on a regular basis, of the activity programmes and projects laid out in the Management Plan.

ART. 6 – this Agreement shall be renewed by tacit agreement, unless one of the parties should give notice; this shall be sent to the other parties no later than 30 (thirty) days before its expiry. Should notice be given, a guarantee for the completion of activities previously embarked upon shall be provided.

ART. 7 – should the Parties decide to extend the range of this Agreement, assuming new and greater undertakings than those provided for in this document, or should the Agreement be extended to include external, Italian or foreign third parties in order to ensure the more successful achievement of the objectives described herein, the specific additional agreements shall be signed by both parties.

ART. 8 – the following persons, appointed by the parties concerned, shall be responsible for implementing this Agreement, :

For the BAPPSAE Office:...	Dr. Paolo Casadio
For the Archaeological Office:	Dr. Serena Vitri
For the Archives Office:	Dr. Renata Da Nova
For the Municipality	Dr. Attilio Vuga
For the Parish	Mons. Guido Genero

Whilst this Agreement is in force, each party may replace its person responsible, informing the other parties of such changes in writing.

PROTOCOLLO D'INTESA

OGGETTO: Complesso archeologico di Castelseprio – Gestione integrata

...

L'anno duemilaquattro il giorno 13 del mese maggio in Varese, presso la sede della
 Provincia di Varese – Piazza Libert , 1;

PREMESSO CHE:

- ai fini del presente protocollo di intesa si intende per "complesso archeologico di Castelseprio" l'insieme delle tre propriet  destinate alla pubblica fruizione costituite da:
 - a) la propriet  della Provincia di Varese che comprende la Chiesa di Santa Maria Foris Portas, il fabbricato di servizio sito all'imbocco del Castrum e adibito a corpo di guardia ed accoglienza per il pubblico e le aree complementari;
 - b) la propriet  del Ministero per i Beni e le Attivit  Culturali, gestita dalla Soprintendenza Archeologica della Lombardia che comprende il Castrum, le sue pendici e i terreni mediani limitati ad est dalle propriet  del FAI e ad ovest dalle propriet  della Provincia di Varese
 - c) la propriet  del FAI - Fondo per l'Ambiente Italiano - che comprende il Monastero di Torba e le sue pertinenze, allocato nella sottostante Valle dell'Olona.
- l'area   stata interessata nel corso degli anni 90 da numerosi interventi di recupero funzionale, restauro architettonico e scavi archeologici svolti da tutti i soggetti soprarichiamati, interventi che hanno certamente contribuito, sia pur in misura non esaustiva, alla complessiva valorizzazione del luogo;
- in considerazione del fatto che l'area archeologica di Castelseprio   un unicum sia dal punto di vista storico architettonico che della complessiva fruizione,   necessario un coordinamento tra i soggetti proprietari sia per quanto attiene le spese in conto capitale (investimenti) sia per le iniziative gestionali, di valorizzazione e promozione;
- "l'art. 111 del Codice dei beni Culturali e del Paesaggio prevede che alle attivit  di valorizzazione dei beni culturali finalizzate all'esercizio delle funzioni ed al perseguimento delle finalit  indicate all'art. 6 del medesimo Codice possano concorrere, operare e partecipare soggetti privati";
- "l'art. 112, co. 4 co. 7 e co. 8 del Codice prevede che al fine di coordinare, armonizzare ed integrare la valorizzazione dei beni del patrimonio culturale di appartenenza pubblica, gli enti pubblici territoriali stipulino accordi su base regionale al fine di definire gli obiettivi e

fissarne i tempi e le modalità di attuazione nonché le adeguate forme di gestione ai sensi del successivo art. 115 del Codice. A tali accordi possono partecipare anche soggetti privati e il contenuto dell'intesa può riguardare beni di proprietà privata. Si prevede espressamente che i soggetti pubblici interessati possono stipulare convenzioni con le associazioni culturali che svolgono attività di promozione e diffusione della conoscenza dei beni culturali"

- le parti prendono atto che il FAI è una fondazione privata, riconosciuta come Persona Giuridica con DPR 941/1975 e con statuto modificato con iscrizione nel Registro Prefettizio di Milano in data 29/5/2002, avente finalità pubbliche, ben descritte nel suo Statuto, mirate a soddisfare bisogni della collettività che svolge attività senza scopi di lucro che possono essere armonizzate e coordinate con quelle dello Stato e degli Enti Locali;

- "che l'art.118 del Codice prevede espressamente che tra i compiti del Ministero e degli Enti territoriali, anche in concorso con soggetti pubblici e privati, rientrano quelli della promozione e sostegno, anche congiunto, di ricerche, studi ed altre attività conoscitive aventi ad oggetto il patrimonio culturale";

- l'art 119 del Testo Unico degli Enti Locali che disciplina i contratti di sponsorizzazione, accordi di collaborazione e convenzioni tra soggetti pubblici o privati diretti a fornire consulenze o servizi aggiuntivi;

TUTTO CIO' PREMESSO

Il FAI – Fondo per l'Ambiente Italiano rappresentato dal Direttore Generale Dott. Marco Magnifico

SI CONVIENE E SI STIPULA QUANTO SEGUE

Art. 1) le premesse assertive fanno parte del presente atto:

Art. 2) La Provincia di Varese, il Ministero per i Beni e le Attività Culturali e il FAI – Fondo per l'Ambiente Italiano - si impegnano a redigere entro il 31/12/2004 un complessivo studio di fattibilità che definisca un piano coordinato di interventi per la valorizzazione e la promozione di tutta l'Area Archeologica di Castelseprio da inserire in un accordo di programma quadro;

Art. 3) Tale studio di fattibilità dovrà essere sottoposto alla Commissione Regionale di cui all'art. 144 del DPR 112/98;

Art. 4) Lo studio di fattibilità dovrà contenere tutte le indicazioni in merito ai criteri di recupero e valorizzazione dell'area compreso il piano economico per la gestione integrata e coordinata tra tutti i soggetti proprietari;

Art. 5) Gli Enti sottoscrittori del presente Protocollo di intesa sono concordi nell' affidare al Ministero per i Beni e le Attività Culturali l'incarico di redigere lo studio di fattibilità di cui al precedente Art. 2), ed oneri derivanti, fermo restando la partecipazione e collaborazione in itinere di Provincia di Varese e FAI alla definizione dello studio stesso.

Art.6) Con successivi atti la Provincia di Varese, il Ministero per i Beni e le Attività Culturali e il FAI si impegnano a definire compiutamente tutti gli aspetti tecnici, amministrativi ed economici connessi all'obiettivo del recupero, valorizzazione e promozione dell'area archeologica di Castelseprio;

Art. 7) Gli Enti sottoscrittori del presente Protocollo di intesa si impegnano altresì, una volta definito lo studio di fattibilità di cui ai commi precedenti alla verifica della possibilità di accedere a finanziamenti regionali, nazionali ed europei e a mettere in atto tutte le azioni necessarie ad ottenere tali finanziamenti.

GENERAL PROTOCOL
0009255 of 26/01/2005
Classification 99/99/G 2002/10014

PROVINCIA
di VARESE

AGREEMENT

SUBJECT: Archaeological complex of Castelseprio – Integrated Management

In the year 2004, on the 13th day of the month of May in Varese, at the offices of the Province of Varese – Piazza Libertà, 1;

WHEREAS:

– for the purposes of this memorandum of agreement, the meaning of “archaeological complex of Castelseprio” is the whole of the three properties destined to public use constituted by:

- a) the property of the Province of Varese which includes the Church of Santa Maria Foris Portae, the service block located at the entrance of the Castrum and used as a guard-house and reception for the public and the complementary areas;
- b) the property of the Ministry of Cultural Assets and Activities, managed by the Archaeological Superintendency of Lombardy which includes the Castrum, its slopes and the median lands limited to the east by the FAI property and to the west by the property of the Province of Varese.
- c) the FAI – the Italian National Trust – property which includes the Monastery of Torba and its pertinences, located in the underlying Valle dell’Olona.

– during the 90s the area was involved in numerous interventions of functional restoration, architectural renovation and archaeological digs carried out by all the subjects named above; interventions which have certainly contributed, even if not exhaustively, to the total valorisation of the place;

– in consideration of the fact that the archaeological area of Castelseprio is unique both from the architectonic historical point of view and that of total use, co-ordination between the owners is necessary both attaining capital expenditure (investments) and for the initiatives regarding management, valorisation and promotion;

– “art.111 of the Code of Cultural assets and Landscape foresees that private subjects may contribute to the activities of valorisation of cultural assets finalised to the operation of functions and continuation of the purposes shown in art.6 of the same Code may compete, operate and participate”

– “art. 112, paragraph 4, paragraph 7 and paragraph 8 of the Code foresees that in order to coordinate, harmonise and integrate the valorisation of the assets of cultural heritage pertaining to the public, the territorial public bodies stipulate agreements on a regional basis in order to define the objectives and

fix the times and methods of actuation as well as the appropriate forms of management pursuant to the subsequent art.115 of the Code. Private subjects can also participate in these agreements and the content of the memorandum can concern assets pertaining to private property. It is expressly foreseen that the public subjects involved can stipulate agreements with the cultural associations which carry out activities of promotion and distribution of the knowledge of cultural assets”.

– the parties acknowledge that FAI is a private foundation, recognised as Legal Person by Presidential Decree 941/1975 and by statute amended with inscription in the Prefectorial Registry of Milan on 29/5/2002 being for public purpose, well described in its Statute, aimed at satisfying the needs of the community which carries out non-profit activities which can be harmonised and co-ordinated with those of the State and Local Bodies;

– that art. 118 of the Code expressly foresees that among the tasks of the Ministry and the territorial Bodies, also with the contribution of public and private subjects, there are those of promotion and support, also combined, of research, studies and other cognitive activities having cultural heritage as subject matter”;

– art. 119 of the Consolidation Act of the Local Bodies which governs sponsorship contracts, collaboration agreements and agreements between public or private subjects directed at supplying consultancy or added services;

NOW, THEREFORE

between

The Province of Varese represented by the President Mr Marco Reguzzoni

AND

The Ministry of Cultural Assets and Activities represented by the Archaeological Superintendent for Lombardy Mr Angelo Maria Ardovino

FAI – Italian National Trust represented by the Managing Director Mr Marco Magnifico

THE PARTIES AGREE AS FOLLOWS

Art. 1) The assertive recitals are part of this act;

Art. 2) The Province of Varese, the Ministry of Cultural Assets and Activities and FAI – the Italian National Trust – are committed to drawing up no later than 31/12/2004 a total feasibility study that defines a co-ordinated plan of interventions for the valorisation and promotion of the whole Archaeological Area of Castelseprio to be inserted into a programme framework agreement;

Art. 3) This feasibility study must be submitted to the Regional Commission pursuant to art. 144 of Presidential Decree 112/98;

Art. 4) The feasibility study must contain all the indications regarding criteria of restoration and valorisation of the area including the economic plan for management, integrated and coordinated between the owners;

Art. 5) The Bodies undersignees of this Memorandum of Understanding are in agreement concerning the appointment of the Ministry of Cultural Assets and Activities to the task of compiling the feasibility study pursuant to the previous Art. 2) and deriving charges, without prejudice to the ongoing participation and collaboration of the Province of Varese and FAI in the definition of the study.

Art. 6) By the following acts the Province of Varese, the Ministry of Cultural Assets and Activities and FAI are committed to fully defining all technical, administrative and economic aspects linked to the objective of restoration, valorisation and promotion of the archaeological area of Castelprio;

Art. 7) The undersigning Bodies of this Memorandum of Understanding are also committed, once the feasibility study pursuant to the previous paragraphs has been defined, to verifying the possibility to access regional, national and European financing and to take all action required in order to obtain the aforesaid financing.

PROTOCOLLO D'INTESA PROGRAMMATICA

Addì 26 settembre 2008 in Brescia, tra:

Provincia di Brescia, rappresentata dall'arch. Alberto Cavalli, Presidente e dal sig. Riccardo Minini, Assessore alle Attività, Beni culturali e Turismo;

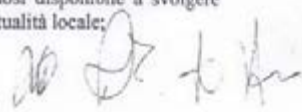

Comune di Brescia, rappresentato dall'avv. Adriano Paroli, Sindaco di Brescia e dall'avv. Andrea Arcai, Assessore alla Cultura e all'Istruzione;

Fondazione Cab, rappresentata dal dott. Alberto Folonari, Presidente e dal dottor Agostino Mantovani segretario;

di seguito, se non indicate singolarmente, definite anche "parti".

Premesso che:

- il territorio bresciano è candidato al riconoscimento mondiale Unesco, quale "patrimonio dell'umanità", relativamente all'area archeologica e monumentale cittadina che si estende dal nucleo capitolino romano fino al complesso monastico di Santa Giulia con la Chiesa di San Salvatore, nell'ambito del progetto a rete denominato "Italia Langobardorum: centri di potere e di culto", il cui accoglimento è atteso entro il 2009. Di detta struttura a rete fanno parte le realtà di Brescia, Cividale del Friuli, Castelseprio, Benevento, Spoleto e Monte Sant'Angelo (Fg). Che all'articolato progetto partecipano complessivamente: il Ministero per i Beni e le Attività Culturali, 5 regioni compresa la Regione Lombardia, 6 province, 8 comuni, 3 diocesi, 3 comunità montane, 1 ente parco, il Fai ed oltre 50 diverse istituzioni;
- nel territorio bresciano sussistono aree di rilevante interesse storico, artistico ed architettonico, con particolare riferimento alla presenza longobarda, le cui principali evidenze riguardano specificatamente il territorio dei comuni di Bornato, Cazzago San Martino, Calvisano, Carpendolo, Chiari, Ghedi, Leno, Manerbio, Montichiari, Poncarale, Remedello, Sirmione e Verolavecchia;
- Brescia si è candidata per ospitare la società di indirizzo di gestione dell'intera Rete di cui al precedente punto a) e che, per funzionare idoneamente, tale società necessita di partnership e competenze adeguate a partire dal proprio contesto istituzionale, socio-economico e culturale territoriale;
- la Fondazione Cab intende sostenere e facilitare, sulla base delle proprie disponibilità, un percorso di crescita e qualificazione del progetto, specie in ambito territoriale Bresciano, che veda partecipi il Comune e la Provincia di Brescia, dichiarandosi disponibile a svolgere eventuali funzioni di supplenza nel coordinamento e per la progettualità locale;

- le intese oggetto del presente protocollo hanno valore di per sé, in virtù dei patrimoni storici ed artistici di matrice longobarda presenti nel territorio bresciano, indipendentemente dall'auspicato esito favorevole della candidatura Unesco.

Tutto ciò premesso, le parti convengono quanto segue:

Art. 1

Le parti si impegnano a coordinarsi ed a collaborare, ciascun soggetto nell'ambito delle proprie competenze, per la valorizzazione delle aree ricadenti nel sito bresciano candidato all'Unesco nonché per la tutela e la riqualificazione urbana e paesaggistica e la valorizzazione socio-economica dei territori di riferimento dell'area candidata, con massima estensione nella città e nel territorio provinciale identificato al punto b) delle premesse al presente accordo.

A tal fine concordano di costituire un Comitato di coordinamento composto da un rappresentante per ciascun soggetto sottoscrittore iniziale e la cui direzione spetterà alla Fondazione Cab; detto comitato opererà in sinergia con la società di gestione dell'intera rete "Italia Langobardorum: centri di potere e di culto".

Art. 2

L'attività di collaborazione è volta a realizzare, nel contesto degli strumenti normativi vigenti e delle strutture esistenti, la massima sussidiarietà tra i soggetti coinvolti, con l'obiettivo di ottenere un efficace coordinamento e di evitare sovrapposizioni e duplicazioni degli interventi e la dispersione di risorse che potrebbero derivare dalla molteplicità dei soggetti preposti alla gestione dei singoli beni.

Art. 3

L'intesa programmatica, in particolare, si prefigge:

- l'attuazione del Piano di Gestione, specie in ambito territoriale bresciano, della rete "Italia Langobardorum: centri di potere e di culto", ai sensi della legge n. 77/2006.
- di ottimizzare l'azione dei numerosi soggetti interessati alla salvaguardia del patrimonio ed alla promozione culturale e valorizzazione economica del sito candidato all'UNESCO.
- di attivare un processo di coinvolgimento dei soggetti istituzionali delle aree di rilevante interesse dal punto di vista della presenza longobarda al fine di costituire la "Rete provinciale dei siti longobardi".

In particolare, tra le iniziative da attuare, previste dal Piano di Gestione stesso, i soggetti firmatari del presente protocollo concordano sulla opportunità di contribuire al sito web della rete dei siti longobardi, avviare iniziative socio-economiche, turistiche ed editoriali, di interesse del territorio, compresi i necessari supporti divulgativi e di segnaletica.

Art. 4

I soggetti firmatari del presente protocollo concordano sul fatto che intorno alla rete "Italia Langobardorum: centri di potere e di culto" si compone un più ampio sistema interattivo di relazioni articolate con le altre risorse dei territori di riferimento, con le risorse umane e sociali, con i servizi di accessibilità ed accoglienza e con il sistema delle imprese. Pertanto il Piano di gestione

del sito potrà orientare le scelte della pianificazione urbanistica ed economica attraverso la conoscenza, la conservazione e la valorizzazione delle risorse di carattere storico, culturale ed ambientale.

Art. 5

I soggetti firmatari del presente protocollo convengono che il Piano di Gestione generale, se da un lato si pone l'obiettivo strategico di mantenere nel tempo l'integrità dei valori che consentiranno l'iscrizione del sito a rete "Italia Langobardorum: centri di potere e di culto" nella Lista del Patrimonio Mondiale, dall'altro ridefinisce e rende compatibile un processo locale condiviso, per coniugare la tutela e la conservazione del sito medesimo con lo sviluppo integrato delle risorse del territorio. In tal senso il presente protocollo d'intesa delinea i principi di fondo, per i quali le Parti dovranno impegnarsi ad una tutela attiva, alla conservazione ed alla valorizzazione compatibile, anche mediante un'attiva partecipazione all'interno della costituenda società di gestione dell'intera rete "Italia Langobardorum: centri di potere e di culto"

Art. 6

Per raggiungere gli obiettivi di cui sopra i soggetti firmatari potranno attivare collaborazioni con altri soggetti, a partire dalla rete "Italia Langobardorum: centri di potere e di culto" ed anche con soggetti terzi nazionali o internazionali, che operano nei settori d'attività connessi con la gestione del patrimonio culturale e storico e architettonico.

Art. 7

Il comitato di coordinamento di cui all'Art. 1 ha il compito di:

- coordinare e monitorare prioritariamente il Piano di gestione, come previsto all'art.1, nonché all'attuazione degli eventuali adempimenti concernenti lo status di sito UNESCO, alla salvaguardia dei valori del sito stesso ed alla protezione dei beni che lo compongono.
- coordinare e monitorare le attività nelle principali aree di interesse storico, artistico ed architettonico con riferimento specifico alla presenza longobarda sul territorio bresciano.

Il Comitato di coordinamento, per lo svolgimento dei suoi compiti, potrà avvalersi di esperti per il supporto tecnico-scientifico.

Art. 8

Per quanto concerne l'attuazione della presente intesa, le parti si impegnano, nell'ambito del Comitato di coordinamento, a concordare un comune programma di lavoro per l'implementazione del Piano di gestione generale e con riferimento specifico al contesto territoriale locale. La presente intesa comporta oneri finanziari che saranno sollecitamente definiti a seguito della specifica del suddetto programma di lavoro.

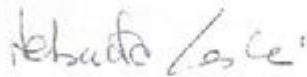

Art. 9

Il presente Protocollo d'Intesa nel rispetto e, fermo restando, quanto previsto all'art.1, è estendibile a tutti i soggetti istituzionali così come individuati in premessa nonché alla Regione Lombardia ed alla Direzione Regionale per i Beni Archeologici. A tal fine i soggetti sottoscrittori del presente

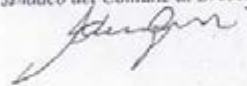

accordo si impegnano ad organizzare un tavolo di confronto con i soggetti istituzionali
summenzionati.

Letto, approvato e sottoscritto oggi.

Dott. Agostino Mantovani
Segretario della Fondazione Cabl

AGREEMENT
BETWEEN
- PROVINCE OF BRESCIA
- MUNICIPALITY OF BRESCIA

- CAB FOUNDATION

On 26 September 2008 in Brescia, between:

- Province of Brescia, represented by the President architect Alberto Cavalli and by Mr. Riccardo Minini, Councilor for Cultural Heritage and Activities and Tourism;
- Municipality of Brescia, represented by Prof. Paolo Corsini, Mayor of Brescia and responsible for Culture and Tourism;
- Cab Foundation, represented by President Alberto Folonari;

hereinafter called “Parties” – unless separately indicated.

Whereas:

- the territory of Brescia applies for Unesco world acknowledgement as “human heritage”, in relation to the archaeological and monumental area of the city which stretches from the Roman area to the monastic complex of Santa Giulia with the Church of San Salvatore, within the network project called “*Italia Longobardorum: centres of power and worship*”. The application is expected to be accepted within 2009. This network is composed by properties in Brescia, Cividale del Friuli, Castelseprio, Benevento, Spoleto and Monte Sant’ Angelo (Foggia). In total, in this structured project participate: the Ministry for Cultural Heritage and Activities, 5 Regions including the Region of Lombardy, 6 provinces, 8 municipalities, 3 dioceses, 3 mountain communities, 1 park authority, Fai (Italian Environmental Fund) and more than 50 organizations;
- the territory of Brescia is characterized by areas of considerable historical, artistic and architectural value, with particular reference to Longobard vestiges, which are mainly found in the Municipalities of Bornato, Calvisano, Carpendolo, Chiari, Ghedi, Leno, Manerbio, Montichiari, Poncarale, Remedello, Sirmione and Verolavecchia;
- Brescia offered to host the managing company for the entire Network in compliance with the previous paragraph a) which – in order to work in a proper way – requires partnerships and adequate competences as to the institutional, socio-economic and cultural context of the area;
- Cab Foundation intends to support and facilitate the development of the project – according to its availability – with particular emphasis on the territory of Brescia and with the participation of the Municipality and the Province and is available for temporary replacement for coordination and local planning activities;

- the agreement described in the present memorandum is valid in itself, in virtue of the Longobard historical and artistic heritage present on the territory of Brescia, regardless of the longed-for positive result achieved as candidate for Unesco WHL.

HAVING SAID THAT, THE PARTIES AGREE AS FOLLOWS:

Article 1

The parties undertake to coordinate and cooperate – each subject within its own competences – for the enhancement of the areas belonging to the territory of Brescia, applicant for Unesco, as well as for the protection and the urban and landscape requalification and the socio-economic enhancement of reference territories in the designated area, within the territorial limits listed in paragraph b) of the present agreement.

To this end, they agree to establish a coordination Committee composed by one representative for each initial signatory and which will be managed by Cab Foundation; this committee will operate in cooperation with the managing company of the entire network “*Italia Langobardorum: centres of power and worship*”.

Article 2

Cooperation activities aim at providing maximum subsidiarity among the subjects concerned – in accordance with rules in force and existing structures – with the objective of achieving effective coordination and avoiding overlapping and duplication of intervention and the dispersion of resources which could be caused by the presence of various partners responsible for the management of single properties.

Article 3

The programmatic agreement, in particular, aims at:

- implementing the Management Plan – especially in the territory of Brescia – of the network “*Italia Langobardorum: centres of power and worship*”, pursuant to Law no. 77/2006.
- optimizing the action of the numerous stakeholders as to the protection of the heritage and to cultural promotion and economic enhancement of the site applying for UNESCO.
- activating a process to involve the institutions located in the areas concerned by the presence of Longobards in order to create the “Provincial network of Longobard sites”.

In particular, among the initiatives to be implemented, envisaged by the Management Plan, the signatories to the present memorandum agree on the opportunity to contribute to the website of the network of Longobard sites, to launch socio-economic, tourism, publishing and linked-to-the-territory initiatives and to provide the necessary information and sign support.

Article 4

The signatories to the present memorandum agree that, along with the network “*Italia Langobardorum: centres of power and worship*”, there is a wider interactive system of complex relations involving other resources of the reference territory, human and social resources, accessibility and accommodation services and companies. Therefore, the Management Plan

of the site will be able to orientate urban and economic planning through the knowledge, conservation and enhancement of historical, cultural and environmental resources.

Article 5

The signatories to the present memorandum agree that the general Management Plan, if on one hand aims at strategically preserving the integrity of those values which will allow the inscription of the network "*Italia Langobardorum: centres of power and worship*" in the World Heritage List, on the other, it redefines and enables a shared local process for the combination of protection and conservation of the site with the integrated development of territorial resources. Thus, the present memorandum of understanding defines the guidelines which the Parties will follow for an active protection, conservation and adequate enhancement, also through active participation in the soon-to-be managing company of the entire network "*Italia Langobardorum: centres of power and worship*"

Article 6

In order to achieve the abovementioned objectives, the signatories will be entitled to benefit from the cooperation of other subjects, starting from the network "*Italia Langobardorum: centres of power and worship*" and also of national and international third parties operating the fields related to the management of cultural, historical and architectural heritage.

Article 7

The coordination committee described in Article 1 has the following tasks:

- coordinating and properly monitoring the Management Plan, in accordance with Article 1, as well as complying with the obligations concerning the status of UNESCO site, protecting the values of the site and properties
- coordinating and monitoring the activities in the main areas of historical, artistic and architectural value with specific reference to the Longobard presence on the territory of Brescia.

The coordination committee – in order to fulfil its obligations – will be entitled to benefit from the support of technical- scientific experts.

Article 8

As to the implementation of the present memorandum, the Parties undertake – through the coordination Committee – to agree on a joint working programme for the implementation of the general Management Plan and with specific reference to the local territorial context. The present memorandum of understanding entails financial expenses which will be promptly defined after the abovementioned working programme has been drawn up.

Article 9

The present memorandum of understanding, in compliance with Article 1, can be extended to all the abovementioned institutions, as well as to the Region Lombardy and the Regional Department for Archaeological Heritage. To this end, the signatories to the present

agreement undertake to organize a meeting with the abovementioned institutions within March 2008.

LAWS AND OTHER REGULATORY ACTS

LEGISLATIVE DECREE no. 42 of 22 January 2002

Code of the Cultural and Landscape Heritage, pursuant to article 10 of law no. 137 of 6 July 2002

THE PRESIDENT OF THE REPUBLIC

Having regard to articles 76, 87, 117 and 118 of the Constitution;

Having regard to article 14 of law no. 400 of 23 August 1988;

Having regard to legislative decree no. 368 of 20 October 1998, establishing the Ministry for Cultural Heritage and Activities, in accordance with article 11 of law no. 59 of 15 March 1997, and subsequent modifications and additions;

Having regard to legislative decree no. 490 of 29 October 1999, containing the consolidated text of the legislative provisions pertaining to the cultural and environmental heritage, in accordance with article 1 of law no. 352 of 8 October 1997;

Having regard to article 10 of law no. 137 of 6 July 2002;

Having regard to the preliminary resolution of the Council of Ministers adopted in the meeting of 29 September 2003;

Having obtained the opinion of the Unified Conference, established under legislative decree no. 281 of 28 August 1997;

Having obtained the opinion of the competent Commissions of the Senate of the Republic and of the Chamber of Deputies;

Having regard to the resolution of the Council of Ministers, adopted in the meeting of 16 January 2004;

On the recommendation of the Minister for Cultural Heritage and Activities, in accord with the Minister for Regional Affairs;

EMANATES

the following legislative decree:

Art. 1

1. The consolidated code of the cultural and landscape heritage, composed of 184 articles and annex A is approved, with the endorsement of the recommending Minister.

This decree, affixed with the State Seal, will be included in the Official Collection of the regulatory acts of the Italian Republic. All persons who are obliged to do so, must abide by it and ensure that it is complied with.

Dated at Rome, 22 January 2004

CIAMPI

BERLUSCONI, *President of the Council of Ministers*
URBANI, *Minister for Cultural Heritage and Activities*
LA LOGGIA, *Minister for Regional Affairs*

APPROVED, Minister of Justice: CASTELLI

FIRST PART
General Provisions

Article 1
Principles

1. In implementation of article 9 of the Constitution, the Republic shall protect and enhance the cultural heritage in accordance with the powers set out in article 117 of the Constitution and according to the provisions of this Code.
2. The protection and enhancement of the cultural heritage shall concur to preserve the memory of the national community and its territory and to promote the development of culture.
3. The State, the Regions, the Metropolitan Areas, the Provinces and Municipalities shall ensure and sustain the conservation of the cultural heritage and foster its public enjoyment and enhancement.
4. Other public bodies shall, in carrying out their activities, ensure the conservation and the public enjoyment of their cultural heritage.
5. Private owners, possessors or holders of property belonging to the cultural heritage must ensure its conservation.
6. The activities concerning the conservation, public enjoyment and enhancement of the cultural heritage indicated in paragraphs 3, 4 and 5 shall be carried out in accordance with the laws on protection.

Article 2
Cultural Heritage

1. The cultural heritage consists of cultural property and landscape assets.
2. Cultural property consists of immovable and movable things which, pursuant to articles 10 and 11, present artistic, historical, archaeological, ethno-anthropological, archival and bibliographical interest, and of any other thing identified by law or in accordance with the law as testifying to the values of civilisation.
3. Landscape assets consist of the buildings and areas indicated in article 134, which are the expression of historical, cultural, natural, morphological and aesthetic values of the land, and any other assets identified by law or in accordance with the law.
4. Cultural heritage property belonging to the government shall be designated for public enjoyment, compatibly with the needs of government use and on condition that no protection reasons to the contrary persist.

Article 3
Protection of the Cultural Heritage

1. Protection consists in the exercise of the functions and in the regulation of the activities aimed at identifying, on the basis of adequate investigative procedures, the properties constituting the cultural heritage and at ensuring the protection and conservation of the aforesaid heritage for purposes of public enjoyment.
2. Protection functions are also carried out by means of provisions aimed at conforming or regulating rights and behaviour inherent to the cultural heritage.

Article 4
Functions of the State in the Protection of the Cultural Heritage

1. In order to ensure the unified exercise of the functions of protection, under article 118 of the Constitution, the same functions are attributed to the Ministry for Cultural Heritage and Activities, hereinafter referred to as "Ministry", which shall exercise the aforesaid functions directly. It may also confer their exercise on the Regions, through forms of agreement and co-ordination pursuant to article 5, paragraphs 3 and 4. Functions which have already been conferred on the Regions under paragraphs 2 and 6 of the same article 5 shall not be affected.
2. The Ministry shall exercise the functions of protection on cultural property belonging to the State even when such property has been placed under the care of or granted in use to administrations or subjects other than the Ministry.

Article 5
Co-operation of the Regions and of Other Territorial Government Bodies in the Protection of the Cultural Heritage

1. The Regions as well as Municipalities, Metropolitan Areas and Provinces, hereinafter referred to as "other territorial government bodies", shall co-operate with the Ministry in the exercise of its protection functions in accordance with the provisions of Title I of the Second Part of this Code.
2. The protection functions provided for by this Code concerning manuscripts, autographs, papers, documents, incunabula, and book collections not belonging to the State and not subject to State protection, as well as books, prints and engravings not belonging to the State, shall be exercised by the Regions.
3. On the basis of specific agreements or arrangements and subject to the prior opinion of the Permanent Conference for Relations between the State, the Regions and the autonomous provinces of Trento and Bolzano, hereinafter referred to as "State-Regions Conference", the

Regions may also exercise the functions of protection on private book collections, as well as geographical maps, musical scores, photographs, films or other audio-visual material, with the relative negatives and matrixes, not belonging to the State.

4. In the forms provided for in paragraph 3 and on the basis of the principles of differentiation and suitability, additional forms of co-ordination with the Regions which request it with regard to protection may be identified.
5. Agreements or arrangements may provide for particular forms of co-operation with other local government bodies.
6. The administrative functions for the protection of landscape assets shall be conferred on the Regions according to the provisions set out in the Third Part of this Code.
7. With regard to the functions referred to in paragraphs 2, 3, 4, 5 and 6, the Ministry shall have the power to direct and supervise, and shall have substitutive power in cases of persistent inaction and non-fulfilment of tasks and responsibilities.

Article 6

Enhancement of the Cultural Heritage

1. Enhancement consists in the exercise of the functions and in the regulation of the activities aimed at promoting knowledge of the cultural heritage and at ensuring the best conditions for the utilization and public enjoyment of the same heritage. Enhancement also includes the promotion and the support of conservation work on the cultural heritage.
2. Enhancement is carried out in forms which are compatible with protection and which are such as not to prejudice its exigencies.
3. The Republic shall foster and sustain the participation of private subjects, be they single individuals or associations, in the enhancement of the cultural heritage.

Article 7

Functions and Tasks relating to the Enhancement of the Cultural Heritage

1. This Code establishes the fundamental principles concerning the enhancement of the cultural heritage. The Regions shall exercise their legislative powers in compliance with these principles.
2. The Ministry, the Regions and the other local government bodies shall pursue the co-ordination, harmonisation, and integration of the activities for the enhancement of public property.

Article 8

Regions and Provinces with Special Autonomy

1. In the matters regulated by this Code, the powers attributed to the special statute Regions and the autonomous provinces of Trento and Bolzano by statute law and by the relevant implementation regulations, shall remain in effect.

Article 9

Cultural Property of Religious Interest

1. The Ministry and, where applicable, the Regions shall attend to the exigencies of cultural property of religious interest belonging to bodies and institutions of the Catholic Church and of other religious denominations, according to the needs of worship, and in agreement with the respective authorities.
2. Likewise, the provisions established in the agreements concluded under article 12 of the Agreement for the Modification of the Lateran Agreement signed on February 18, 1984, ratified and made enforceable with law no. 121 of 25 March 1985, or by the laws issued on the basis of agreements underwritten with religious denominations other than the Catholic Church, under article 8, paragraph 3 of the Constitution, shall also be complied with.

SECOND PART
Cultural Property

TITLE I
Protection

Chapter I
Object of Protection

Article 10
Cultural Property

1. Cultural property consists in immovable and movable things belonging to the State, the Regions, other territorial government bodies, as well as any other public body and institution, and to private non-profit associations, which possess artistic, historical, archaeological or ethno-anthropological interest.
2. Cultural property also includes:
 - a) the collections of museums, picture galleries, art galleries and other exhibition venues of the State, the Regions, other territorial government bodies, as well as any other government body and institute;
 - b) the archives and single documents of the State, the Regions, other territorial government bodies, as well as of any other government body and institute;
 - c) the book collections of libraries of the State, Regions, other territorial government bodies, as well as any other government body and institute.
3. Cultural property shall also include the following, when the declaration provided for in article 13 has been made:
 - a) immovable and movable things of particularly important artistic, historical, archaeological or ethno-anthropological interest, which belong to subjects other than those indicated in paragraph 1;
 - b) archives and single documents, belonging to private individuals, which are of particularly important historical interest;
 - c) book collections, belonging to private individuals, of exceptional cultural interest;
 - d) immovable and movable things, to whomsoever they may belong,

- which are of particularly important interest because of their reference to political or military history, to the history of literature, art and culture in general, or as testimony to the identity and history of public, collective or religious institutions;
- e) collections or series of objects, to whomsoever they may belong, which through tradition, renown and particular environmental characteristics are as a whole of exceptional artistic or historical interest.
4. The things indicated in paragraph 1 and paragraph 3, letter a) include:
- a) the things which pertain to palaeontology, prehistory and primitive civilisations;
 - b) things of numismatic interest;
 - c) manuscripts, autographs, papers, incunabula, as well as books, prints and engravings with their relative matrixes, of a rare or precious nature;
 - d) geographical maps and musical scores of a rare and precious nature;
 - e) photographs, with their relative negatives and matrixes, cinematographic films and audio-visual supports in general, of a rare and precious nature;
 - f) villas, parks and gardens possessing artistic or historical interest;
 - g) public squares, streets, roads and other outdoor urban spaces of artistic or historical interest;
 - h) mineral sites of historical or ethno-anthropological interest;
 - i) ships and floats possessing artistic, historical or ethno-anthropological interest;
 - j) types of rural architecture possessing historical or ethno-anthropological interest as testimony to the rural economy tradition.
5. Without prejudice to the provisions of articles 64 and 178, the things indicated in paragraph 1 and paragraph 3, letters a) and e), which are the work of living authors or which were not produced more than fifty years ago, are not subject to this Title.

Article 11
Property Subject to Specific Protection Provisions

1. Without prejudice to the application of article 10, the following shall, whenever the premises and conditions occur, be considered cultural property, insofar as they are the object of specific provisions of this Title:

- a) frescoes, escutcheons, graffiti, plaques, inscriptions, tabernacles and other building ornaments, whether or not they be exhibited to public view, referred to in article 50, paragraph 1;
- b) artists' studios, referred to in article 51;
- c) public areas referred to in article 52;
- d) works of painting, sculpture, graphic art and any art created by a living author or which was not produced more than fifty years ago, referred to in articles 64 and 65;
- e) the works of contemporary architecture of particular artistic value, referred to in article 37;
- f) photographs, with their relative negatives and matrixes, samples of cinematographic works, audio-visual material or sequences of images in movement, the documentation of events, oral or verbal, produced by any means, more than twenty-five years ago, referred to in article 65;
- g) means of transport which are more than seventy-five years old, referred to in articles 65 and 67, paragraph 2;
- h) property and instruments of interest for the history of science and technology which are more than fifty years old, referred to in article 65;
- i) the vestiges identified by the laws in force pertaining to the protection of the historical heritage of World War I, referred to in article 50, paragraph 2.

Article 12

Verification of Cultural Interest

1. Immovable and movable things indicated in article 10, paragraph 1, which are the work of artists who are no longer living and which were produced more than fifty years ago, shall be subject to the provisions of this Title until such time as the verification referred to in paragraph 2 has been carried out.
2. The competent organs of the Ministry shall, ex officio or upon request accompanied by the relative identifying information made by the parties to whom the things belong, verify the presence of artistic, historical, archaeological and ethno-anthropological interest in the things indicated in paragraph 1, on the basis of guidelines of a general nature established by the Ministry itself in order to ensure uniformity of assessment.
3. For immovable property belonging to the State, the request referred to in paragraph 2 shall include lists of the properties and the relative descriptive information sheets. The criteria for the preparation of the lists, the modalities for drawing up the descriptive information sheets and the transmission of lists and information sheets shall be established

by means of a ministerial decree adopted in accord with the State Property Agency and, for buildings granted in use to the Defence administration, also in agreement with the competent directorates general for works and State property. The Ministry shall, with its own decrees, fix the criteria and the procedures for the preparation and submission of the request for verification and of the relative identifying documentation, on the part of the other parties referred to in paragraph 1.

4. Should the interest mentioned in paragraph 2 not be found in the things subjected to verification, the same things shall be excluded from the application of the provisions of this Title.
5. In the case of a negative assessment for things belonging to the State, the Regions and other territorial government bodies, the file containing the relative information shall be forwarded to the competent offices so that they may order the release of the property from State ownership, should, according to the assessment of the administration concerned, no other reasons persist to the contrary in the public interest.
6. The things referred to in paragraph 3 and those referred to in paragraph 4 for which release from public ownership has been ordered may, for the purposes of this Code, be freely alienated.
7. The ascertainment of artistic, historical, archaeological or ethno-anthropological interest, carried out in accordance with the general guidelines referred to in paragraph 2, shall constitute declaration under article 13, and the relative measure shall be registered in the manner provided for by article 15, paragraph 2. The properties shall remain definitively subject to the provisions of this Title.
8. The descriptive information sheets for immovable properties belonging to the State which have been assessed positively, along with the measure referred to in paragraph 7, shall be stored in a computerised archive accessible to the Ministry and the State Property Agency, for the purposes of monitoring immovable property assets and planning work according to their respective institutional competences.
9. The provisions of this article shall apply to the things referred to in paragraph 1 even when the subjects to whom they belong in any way change their legal status.
10. The provisions of article 27, paragraphs 8, 10, 12, 13 and 13-*bis*, of decree law no. 269 of 30 September 2003, converted, with modifications into law no. 326 of 24 November 2003, shall remain in force.

Article 13

Declaration of Cultural Interest

1. The declaration shall ascertain the existence, in the thing in question, of the interest required under article 10, paragraph 3.

2. The declaration is not required for properties referred to in article 10, paragraph 2. Such properties remain subject to protection even when the subjects to whom they belong in any way change their legal status.

Article 14
Declaration Procedure

1. The superintendent shall initiate the procedure for the declaration of cultural interest, and may also do so in response to a motivated request from the Region or any other interested territorial government body, notifying the proprietor, possessor or holder, by whatever legal right, of the thing in question.
2. The notification shall contain the elements for the identification and assessment of the thing resulting from preliminary investigations, the indication of the effects referred to in paragraph 4, as well as the indication of the time limit, which in any case may be no less than thirty days, for the presentation of any observations.
3. If the procedure concerns building complexes, the notification shall also be forwarded to the Municipality or Metropolitan Area.
4. Notification shall, as a preventive measure, entail the application of the provisions set out in Chapter II, in Section I of Chapter III, and in Section I of Chapter IV of this Title.
5. The effects indicated in paragraph 4 shall cease upon expiry of the time limit for the declaration procedure, which the Ministry shall establish in accordance with article 2, paragraph 2 of law no. 241 of 7 August 1990.
6. The declaration of cultural interest shall be adopted by the Ministry.

Article 15
Notification of Declaration

1. The declaration provided for under article 13 shall be notified to the owner, possessor or holder, by whatever legal right, of the thing in question, by a process server or by means of registered letter with receipt of delivery notification.
2. Where things subject to public notice with regard to immovable or movable property are concerned, the declaration measure shall, at the request of the superintendent, be recorded in the relative registers and shall have efficacy for any subsequent owner, possessor or holder by whatever legal right.

Article 16
Administrative Appeal against Declaration

1. Appeal against the declaration referred to in article 13 may be made to the Ministry, on grounds concerning legitimacy or the merits, within thirty days of the declaration notification.
2. The proposition of appeal shall entail the suspension of the effects of the measure contested. As a precautionary measure, the application of the provisions established under Chapter II, under Section I of Chapter III and under Section I of Chapter IV of this Title shall remain in force.
3. After consulting the competent advisory body, the Ministry shall rule on the appeal within the time limit of ninety days from receipt of the same.
4. Should the appeal be granted, the Ministry shall annul or modify the contested measure.
5. The provisions of decree no. 1199 of the President of the Republic of 24 November 1971 shall apply.

Article 17 *Cataloguing*

1. With the participation of the Regions and other territorial government bodies, the Ministry shall ensure the cataloguing of cultural property and shall co-ordinate related activities.
2. The procedures and modalities for cataloguing shall be established by ministerial decree. To this end, the Ministry shall, with the collaboration of the Regions, identify and define common methodologies for gathering, exchanging, accessing and processing data at the national level and for the computerised integration of the same into the databanks of the State, the Regions and other territorial government bodies.
3. The Ministry and the Regions, which may also avail themselves of the collaboration of universities, shall work together for the definition of programmes concerning studies, research and scientific initiatives regarding cataloguing and inventory methodologies.
4. Following the modalities set out in the Ministerial decree referred to in paragraph 2, the Ministry, the Regions and other territorial government bodies shall be responsible for cataloguing the cultural property in their possession and, in agreement with the proprietors, other cultural property as well.
5. The data referred to in this article shall be gathered into the national catalogue of cultural properties.
6. The consultation of the information concerning the declarations issued in accordance with article 13 shall be regulated so as to guarantee the safety of the property and the safeguarding of confidentiality.

Chapter II *Supervision and Inspection*

Article 18
Supervision

1. The supervision of cultural property is the task of the Ministry.
2. The supervision of the things indicated in article 12, paragraph 1, belonging to the State, irrespective of the party holding them in use or having them in their care, shall be carried out directly by the Ministry. For the exercise of supervisory powers over the things indicated in article 12, paragraph 1, belonging to the Regions and to other territorial public bodies, the Ministry shall also proceed by availing itself of forms of agreement and co-ordination with the regions.

Article 19
Inspection

1. The superintendents may at any time proceed to carry out inspections for the purpose of ascertaining the existence and the state of conservation and conditions of custody of the cultural properties, with prior notification of no less than five days, with the exception of cases of extreme urgency.

Chapter III
Protection and Conservation

Section I
Protection Measures

Article 20
Forbidden Actions

1. Cultural properties may not be destroyed, damaged or adapted to uses not compatible with their historic or artistic character or of such kind as to prejudice their conservation.
2. The archives cannot be dismembered.

Article 21
Actions subject to authorisation

1. The following actions are subject to the authorisation of the Ministry:
 - a) the demolition of things constituting cultural property, even with subsequent reconstitution;

- b) the removal of cultural properties, even when temporary, without prejudice to the provisions of paragraphs 2 and 3;
 - c) the dismemberment of collections and series;
 - d) the discarding of documents in the public archives and in private archives for which a declaration under article 13 has been issued;
 - e) the transfer to other corporate entities of organised sets of documentation belonging to public archives, as well as of archives belonging to private persons.
2. The removal of cultural properties, as a result of a change in the holder's residence or place of business, shall be declared in advance to the superintendent, who may, within thirty days of receipt of notification, prescribe the measures necessary to prevent damage to the properties during transportation.
 3. The removal of current archives of the State and of government bodies and institutions shall not be subject to authorisation.
 4. In cases other than those set out in the above paragraphs, the execution of work of any kind on cultural properties is subject to authorisation by the superintendent.
 5. The authorisation shall be granted on the basis of the project drawing or, when sufficient, on the basis of the technical description of the work presented by the applicant, and may contain prescriptions.

Article 22

Authorisation Procedure for Construction

1. In cases other than those set out in articles 25 and 26, the authorisation provided for in article 21, paragraph 4, relating to public and private construction shall be issued within the time limit of one hundred and twenty days of receipt of application on the part of the Superintendency.
2. Whenever the Superintendency requests clarification or additional elements for assessment, the time limit indicated in paragraph 1 shall be suspended until the requested documentation is received.
3. In cases where the Superintendency proceeds to carry out verifications of a technical nature, having notified the applicant in advance, the time limit indicated in paragraph 1 shall be suspended until the results of the official verification are acquired and in any case for not more than thirty days.
4. When the time limit established in paragraphs 2 and 3 has elapsed with no response, the applicant may enjoin the administration to take action. The request for authorisation shall be deemed granted should the administration fail to take action within thirty days following receipt of the enjoinder.

Article 23
Simplified Building Permit Procedures

1. When works authorised under article 21 also require a building permit, it is possible to resort to declaration of the start of works, in the cases provided for by the law. To this end, the interested party shall forward the acquired authorisation, along with the related project design, to the Municipality when the declaration is made.

Article 24
Work on Public Property

1. For work on public cultural properties to be carried out on the part of administrations of the State, Regions, other territorial government bodies, as well as any other government body and institution, the authorisation necessary under article 21 may be expressed within agreements between the Ministry and the government body concerned.

Article 25
Conference of Services

1. In procedures related to projects and works affecting cultural properties, in which a conference of services is used, the authorisation necessary under article 21 shall be issued during the conference session by the competent organ of the Ministry with a reasoned declaration, shall be recorded in the minutes of the conference and shall include any prescriptions established for the realisation of the project.
2. Should the Ministerial organ express justified dissent, the acting administration may request the President of the Council of Ministers to rule on the conclusion of the proceeding, following deliberation of the Council of Ministers.
3. The recipient of the favourable conclusive decision adopted in the services conference shall inform the Ministry of the fulfilment of the prescriptions established by the conference.

Article 26
Assessment of Environmental Impact

1. For work projects to be subjected to environmental impact assessment, the authorisation provided for in article 21 shall be expressed by the Ministry in a joint session of the government bodies concerned for the decision on environmental compatibility, on the basis of the final project plan to be submitted for the purpose of the aforesaid assessment.

2. When an examination of the plan effected in accordance with paragraph 1 shows that the project is not in any way compatible with the protection exigencies of the cultural properties which would be affected, the Ministry shall take a negative decision, notifying the Ministry of the Environment and Land Protection. In such case, the environmental impact assessment procedure shall be deemed to have been concluded negatively.
3. If, while the work is being carried out, actions occur which conflict with the authorisation expressed in the forms set out in paragraph 1, and are such as to put at risk the integrity of the cultural properties subject to protection, the superintendent shall order suspension of the work.

Article 27
Emergency Situations

1. In cases of absolute urgency, temporary work which is indispensable to avoiding damage to the protected property may be carried out, on condition that the Superintendency be immediately notified. The project design of the definitive work must be forwarded to the Superintendency in due time for the necessary authorisation.

Article 28
Precautionary and Preventive measures

1. The superintendent may order the suspension of works begun contrary to the provisions of articles 20, 21, 25, 26 and 27 or of those carried out in a manner that fails to conform with the authorisation.
2. The superintendent shall also have the power to order the interdiction or suspension of work relative to the things indicated in article 10, even when the assessment referred to in article 12, paragraph 2 has not yet been carried out, or the declaration referred to in article 13 has not yet been issued.
3. The order referred to in paragraph 2 shall be deemed to be revoked if, within thirty days of receipt of the same, notification of the start of the assessment or declaration procedure has not been communicated by the superintendent.
4. In cases of public works carried out in areas of archaeological interest, even when assessment referred to in article 12, paragraph 2 has not been carried out, or the declaration referred to in article 13 has not been issued, the superintendent may request that preventive archaeological sample analysis be carried out on the aforesaid areas at the expense of the principal commissioning the public work.

Section II
Conservation Measures

Article 29
Conservation

1. The conservation of the cultural heritage is ensured by means of a consistent, co-ordinated and programmed activity of study, prevention, maintenance and restoration.
2. Prevention is defined as the set of activities capable of limiting situations of risk connected to the cultural property within its context.
3. Maintenance is defined as all the activities and work carried out for the purpose of controlling the conditions of the cultural property and maintaining the integrity, functional efficiency and identity of the property and its parts.
4. Restoration is defined as direct intervention on a property by means of a set of operations aimed at the material integrity and the recovery of the aforesaid property, the protection and the transmission of its cultural values. In the case of immovable property situated in areas declared to be at risk of earthquake on the basis of the laws and regulations in effect, restoration shall include work for structural upgrading.
5. The Ministry shall define guidelines, technical regulations, criteria and models for the conservation of cultural properties, and in doing so may avail itself of the participation of the Regions and the collaboration of universities and competent research institutes.
6. With the provisions of existing laws and regulations regarding the design and execution of works to be carried out on architectonic property remaining in effect, the work of maintenance and restoration of movable cultural properties and the decorated surfaces of architectonic properties shall be carried out exclusively by those who are qualified restorers of cultural property in accordance with the regulations in this regard.
7. The job descriptions of restorers and other workers who carry out activities which are complementary to restoration or to other activities of conservation of movable cultural property and of decorated surfaces of architectonic properties are defined by the Minister's decree adopted under article 17, paragraph 3, of law no. 400 of 23 August 1988, in agreement with the State-Regions Conference.
8. The criteria and quality control levels to be met by the teaching of restoration are defined by the Minister's decree pursuant to article 17, paragraph 3, of law no. 400 of 1988 in accord with the Minister of

Education, Universities and Research, and with prior consultation of the State-Regions Conference.

9. Instruction in restoration is provided by schools of higher education and training established under article 9 of legislative decree no. 368 of 20 October 1998, as well as by the centres referred to in paragraph 11 and other public and private bodies accredited by the State. The Minister's decree adopted in accordance with article 17, paragraph 3 of law no. 400 of 1988 in accord with the Ministry of Education, Universities and Research, and with prior consultation of the State-Regions Conference, identifies the procedures for accreditation, the minimum requirements for the organisation and functioning of the educational bodies referred to in the present paragraph, the procedures for the supervision of teaching activities and of the final examination, which must include the participation of at least one Ministry representative, as well as the characteristics of the teaching staff.
10. The training of professional figures who carry out activities which are complementary to restoration or other activities of conservation is ensured by public and private entities in accordance with Regional regulations. The relative courses shall meet the criteria and quality control levels defined by agreement in the State-Regions Conference, pursuant to article 4 of legislative decree no. 281 of 28 August 1997.
11. By means of special arrangements or agreements, the Ministry and the Regions, with the participation of universities and other public and private entities as well, may together establish centres, which may also be of an inter-regional nature, and which are endowed with corporate personality and entrusted with activities in research, experimentation, study, documentation and execution of conservation and restoration work on cultural property, of particular complexity. Schools of superior training for the teaching of restoration may likewise be established within these centres, under paragraph 9.

Article 30

Conservational Obligations

1. The State, the Regions, and other territorial government bodies as well as any other government body and institution must ensure the safety and conservation of the cultural property in their possession.
2. The bodies indicated in paragraph 1 and private non-profit associations shall, with the exception of current archives, collocate the cultural properties in their possession in the place of their destination and in the manner indicated by the superintendent.
3. Private proprietors, possessors or holders of cultural properties must ensure the conservation of the aforesaid properties.
4. The bodies indicated in paragraph 1 must conserve and organise their archives in their entirety, and compile an inventory of their historical archives, consisting of documents relating to matters concluded over

forty years ago. Proprietors, possessors or holders by whatever legal right, of private archives for which a declaration has been issued under article 13 are subject to the same obligation.

Article 31

Voluntary Conservation Work

1. Restoration and other conservation work carried out on cultural property on the initiative of the proprietor, possessor or holder by whatever legal right shall be authorised under article 21.
2. In issuing the authorisation, the superintendent shall, at the request of the interested party, give his opinion as to the eligibility of the work for State funding provided for under articles 35 and 37 and may certify the necessary nature of the aforesaid work for the purpose of eligibility for the tax deductions provided for by law.

Article 32

Obligatory Conservation Work

1. The Ministry may oblige the proprietor, possessor or holder by whatever legal right, to carry out work necessary to ensure the conservation of cultural property, or it may take direct action.
2. The provisions in paragraph 1 shall also apply to the obligations set out in article 30, paragraph 4.

Article 33

Procedures for the Execution of Obligatory Conservation Work

1. For the purposes of article 32, the superintendent shall compile a technical report and declare the necessary nature of the measures to be carried out.
2. The technical report shall be sent, along with notification of start of procedure, to the proprietor, possessor or holder of the property, who may submit his/her observations within thirty days of receipt of the documents.
3. If the superintendent does not deem direct execution of the measures to be necessary, he/she shall assign the proprietor, possessor or holder a time limit for the presentation of the plans for the work to be carried out, in execution and pursuance of the technical report.
4. The plan presented shall be approved by the superintendent with any prescriptions that may be deemed necessary and a time limit shall be fixed for the start of work. For immovable property, the plan presented shall be forwarded by the superintendent to the Municipality or to the Metropolitan Area, which may express a reasoned opinion within thirty days of receipt of notification.

5. If the proprietor, possessor or holder of the property fails to fulfil the obligation to present the plan, or fails to take action to modify it according to the indications of the superintendent within the time limit fixed by the latter, or if the project is rejected, the Ministry shall proceed to direct execution.
6. In cases of urgency, the superintendent may immediately adopt the necessary conservation measures.

Article 34

Charges for Obligatory Conservation Work

1. The expenses incurred for measures carried out on cultural properties, whether they have been imposed or directly executed by the Ministry under article 32, shall be paid by the proprietor, possessor or holder. Nevertheless, if the measures are of particular significance or if they are carried out on properties granted in use to, or for enjoyment by, the public, the Ministry may participate in the expenses in whole or in part. In this case, it shall determine the amount of the expenses it intends to sustain and shall notify the party concerned.
2. If the expenses of the measures have been sustained by the proprietor, possessor or holder, the Ministry shall proceed to their reimbursement, and may also do so by part payments on account under article 36, paragraphs 2 and 3, keeping within the amount determined under paragraph 1.
3. With regard to expenses incurred in direct action measures, the Ministry shall determine the amount to be charged to the proprietor, possessor or holder and shall pursue recovery of the expenses in the forms provided for by the laws in force regarding the compulsory collection of government property revenues.

Article 35

Financial Contribution by the Ministry

1. The Ministry may contribute to the expenses borne by the proprietor, possessor or holder of the cultural property for the execution of measures provided for in article 31, paragraph 1, for a sum not exceeding half of the same. If the measures are of particular significance or if they concern property used or enjoyed by the public, the Ministry may contribute to the expenses for up to the entire amount.
2. The provision in paragraph 1 shall also apply to measures taken with regard to historical archives provided for in article 30, paragraph 4.

3. In determining the percentage of the funding contributions referred to in paragraph 1, other public funding and any private funding for which taxation benefits have been obtained shall be taken into account.

Article 36

Disbursement of Funding

1. Funding shall be granted by the Ministry after the work has been completed and the costs effectively borne by the beneficiary have been verified.
2. Payments on account may be disbursed on the basis of the regularly certified progress of the work.
3. The beneficiary must return amounts received if the work has not been -completely or in part - properly carried out. The recovery of the relative sums shall be achieved following the procedures provided for by the laws in force regarding the compulsory collection of government property revenues.

Article 37

Interest Subsidies

1. The Ministry may grant interest subsidies for mortgages granted by credit institutions to proprietors, possessors or holders by whatever legal right of immovable cultural properties, for carrying out authorised conservation works.
2. The funding is granted in the maximum amount corresponding to the interest calculated at an annual rate of six percentage points on the capital disbursed as mortgage.
3. The funding is disbursed directly to the credit institution following procedures to be established by agreement.
4. Funding under paragraph 1 may also be granted for conservation work on works of contemporary architecture for which the superintendent has, at the request of the owner, acknowledged particular artistic value.

Article 38

Opening to the Public of Buildings That Have Undergone Conservation Work

1. Buildings that have been restored or on which other conservation measures have been carried out with the State participating in the expenses in whole or in part, or for which interest subsidies have been granted, shall be made accessible to the public according to procedures established, for each individual case, by special arrangements or agreements to be stipulated between the Ministry and the individual

proprietors upon the assumption of the burden of expenses under article 34 or upon granting of funding under article 35.

2. The arrangements and agreements shall establish the time limits for the obligation to open to the public, taking into consideration the type of work done, the artistic and historical value of the buildings and of the cultural property contained therein. Arrangements and agreements shall be forwarded, by the superintendent, to the Municipality or the Metropolitan Area in which the buildings are located.

Article 39

Conservation Work on State Property

1. The Ministry shall provide for the conservation exigencies of cultural properties belonging to the State, even when these are committed to the care of - or granted in use to - other administrations or other entities, following consultation with the aforesaid administrations or entities.
2. Except in cases where a different agreement has been stipulated, the planning and execution of the measures referred to in paragraph 1, relative to immovable property, shall be taken on by the aforesaid administration or entity, with the Ministry retaining competence for issuing the authorisation for the project and for supervising the work.
3. For the execution of work referred to in paragraph 1, relative to immovable property, the Ministry shall forward the plan and notify start of work to the Municipality or Metropolitan Area.

Article 40

Conservation Work on Property Belonging to the Regions and Other Territorial Government Bodies

1. For cultural properties belonging to the Regions and to other territorial government bodies, the measures provided for under article 32 shall be established, except in cases of absolute urgency, on the basis of agreements with the interested body.
2. The agreements may also pertain to the contents of the prescriptions referred to in article 30, paragraph 2.
3. Conservation measures on cultural property involving the State, the Regions and other territorial government bodies, as well as other public and private entities, are ordinarily the object of preventive planning agreements.

Article 41

Obligation to Deposit Documents Kept by State Administrations with

the State Archives

1. The judicial and administrative organs of the State shall deposit with the Central Archive of the State and with the State Archives the documents concerning matters concluded more than forty years ago, along with the instruments which ensure their consultation. Military service and extraction rolls shall be deposited seventy years after the birth year to which they refer. Notary archives shall deposit notary deeds received by notaries who retired from the exercise of the profession prior to the last one hundred-year period.
2. The superintendent of the Central Archive of the State and the directors of the State Archives may accept the deposits of more recent documents when there is danger of dispersal or damage.
3. No deposit may be received unless discarding operations have been carried out. Deposit expenses are charged to the depositing administrations.
4. The archives of government offices which have been abolished or of public bodies which have been extinguished shall be deposited with the Central State Archive and with the State Archives, unless their transferral, in whole or in part, to other bodies becomes necessary.
5. Commissions, which are to include representatives of the Ministry and the Ministry of Internal Affairs as members, shall be established within the organs indicated in paragraph 1, with the tasks of supervising the proper keeping of current and deposited archives, of collaborating in the definition of criteria for the organisation, management and conservation of documents, of proposing the discarding of documents referred to in paragraph 3, of managing the deposits provided for in paragraph 1, and of identifying documents of a confidential nature. The composition and functioning of the Commissions shall be regulated by a decree adopted by the Minister for Cultural Heritage and Activities in agreement with the Minister of Internal Affairs, under article 17, paragraph 3 of law no. 400 of 23 August 1988. Discarding shall be authorised by the Ministry.
6. The provisions of the present article shall not apply to the Ministry for Foreign Affairs, nor shall they apply to the General Staff of the Army, the Navy and the Air Force as concerns documentation of a military and operational nature.

Article 42

Conservation of the Historical Archives of Constitutional Organs

1. The Presidency of the Republic shall conserve its documents in its own historical archives, according to the rules and regulations adopted by the President of the Republic by his own decree, on the recommendation of the General Secretary of the Presidency of the Republic. The procedures for consultation and access to the documents preserved in the historical archives of the Presidency of the Republic shall be established by the same decree.

2. The Chamber of Deputies and the Senate of the Republic shall conserve their documents in their own historical archives, in accordance with the rules and regulations of their respective presidential offices.
3. The Constitutional Court shall conserve its documents in its own historical archives, in accordance with the provisions established by the regulation adopted under the laws in force pertaining to the constitution and functioning of the same Court.

Article 43
Obligatory Custody

1. The Ministry shall have the power to have movable cultural property transferred and temporarily conserved in public institutions, in order to guarantee its safety and ensure its conservation pursuant to article 29.

Article 44
Gratuitous Loan and Deposit of Cultural Property

1. The directors of archives and of institutions which administer or have on deposit artistic, archaeological, bibliographical and scientific collections may, with the prior consent of the competent Ministerial organ, receive movable cultural property from private owners on gratuitous loan for the purpose of permitting its enjoyment by the public, when property of particular importance or which represents a significant addition to public collections is concerned, and on condition that the conservation of the aforesaid property in public institutions does not prove to be particularly onerous.
2. The term of the gratuitous loan cannot last less than five years and shall be deemed to be tacitly extended for a period equal to the agreed term whenever one of the contracting partners has not communicated notification of cancellation to the other at least two months prior to the expiry of the term. The parties may consensually dissolve the gratuitous loan before expiry as well.
3. The directors shall adopt any measure necessary for the conservation of the property received on gratuitous loan, notifying the lender. The related expenses shall be borne by the Ministry.
4. The properties shall be protected by suitable insurance coverage at the expense of the Ministry.
5. The directors may, with the prior consent of the competent Ministerial organ, also receive on deposit cultural properties belonging to government bodies. The costs of conservation and custody referred specifically to the deposited properties are borne by the depositing body.

6. With regard to what is not expressly provided for by the present article, the provisions regarding gratuitous loans and deposits shall apply.

Section III *Other Forms of Protection*

Article 45 *Prescriptions for Indirect Protection*

1. The Ministry shall have the power to prescribe the distances, measures and other regulations aimed at preventing that the integrity of immovable cultural property be put at risk, that their perspective or natural light be damaged or that conditions of the setting or decorous aspect of the buildings be altered.
2. The prescriptions referred to in paragraph 1, adopted and notified under articles 46 and 47, shall be immediately enforceable. The territorial government bodies concerned shall incorporate the same prescriptions into building regulations and urban planning instruments.

Article 46 *Indirect Protection Proceeding*

1. The superintendent shall initiate the proceeding for indirect protection, which he may also do at the request of the Region or other interested territorial government bodies, and shall notify the proprietor, possessor or holder by whatever legal right of the building to which the prescriptions refer. If the number of recipients is such that personal notification is not possible or proves particularly burdensome, the superintendent shall communicate the start of proceeding by means of suitable forms of advertising.
2. The notification of start of proceeding for indirect protection shall identify the building for which there is intent to adopt prescriptions for indirect protection and shall indicate the essential contents of such prescriptions.
3. In the case of complexes of buildings, notification shall also be sent to the Municipality or the Metropolitan Area.
4. As a precautionary measure, notification shall entail the temporary prohibition to modify the building with regard to the aspects referred to in the prescriptions contained in the aforesaid notification.
5. The effects indicated in paragraph 4 shall cease upon expiry of the term of the relative proceeding, established by the Ministry under article 2, paragraph 2 of law no. 241 of 7 August 1990.

Article 47

Notification of Prescriptions for Indirect Protection and Administrative Appeal

1. The provision containing the prescriptions for indirect protection shall be notified to the proprietor, possessor or holder by whatever legal right of the buildings concerned, by a process-server or by means of registered letter with notification of receipt of delivery.
2. The provision shall be recorded in the building registers and shall have efficacy for any successive proprietor, possessor or holder by whatever legal right of the buildings to which the same prescriptions refer.
3. Administrative appeal against the provision containing the prescriptions for indirect protection shall be admissible under article 16. The intent to appeal, however, shall not entail the suspension of the effects of the provision contested.

Article 48

Authorisation for Exhibits and Expositions

1. The loan of the following for exhibits and expositions is subject to authorisation:
 - a) movable things indicated in article 12, paragraph 1;
 - b) movable properties indicated in article 10, paragraph 1;
 - c) movable properties indicated in article 10, paragraph 3, letters a) and e);
 - d) collections and individual items pertaining to them, referred to in article 10, paragraph 2, letter a); book collections indicated in article 10, paragraph 2, letter c) and paragraph 3, letter c); as well as archives and single documents indicated in article 10, paragraph 2, letter b), and paragraph 3, letter b).
2. When authorisation concerns properties belonging to the State or which have been placed under State protection, the request shall be presented to the Ministry at least four months prior to the start of the event and shall indicate the party responsible for the safekeeping of the works on loan.
3. The authorisation shall be issued taking into consideration the conservation exigencies of the properties and also, for those belonging to the State, the exigencies of public enjoyment; it shall be subject to the adoption of measures necessary to ensure the integrity of the properties. The criteria, procedures and modalities for issuing the authorisation shall be established by ministerial decree.
4. The granting of authorisation is moreover subject to the insurance of the things and properties on the part of the applicant, for the value

indicated in the application, with prior verification of its adequacy by the Ministry.

5. For exhibits and events within the national territory promoted by the Ministry, or with the participation of the State, or government bodies or institutions, the insurance provided for in paragraph 4 may be substituted by the assumption of the relative risks on the part of the State. Government guaranty is issued according to the procedures, modalities and conditions established by ministerial decree, in consultation with the Ministry for the Economy and Finance. The relevant costs will be provided for through the utilisation of the resources available in the reserve fund for obligatory and routine expenses established in the statement of expenditure estimates of the Ministry for the Economy and Finance.
6. The Ministry shall, at the request of the party concerned, have the power to declare the important cultural or scientific interest of exhibits or expositions of cultural properties and of any other initiative of a cultural nature, for purposes of the application of tax relief measures provided for under tax law.

Article 49

Advertising Bills and Hoardings

1. It is forbidden to place or affix hoardings or other means of advertising on buildings or in areas protected as cultural property. The superintendent may nevertheless authorise placement or posting when no harm ensues to the appearance, decorous aspect or public enjoyment of the said buildings or areas. The authorisation shall be forwarded to the Municipality for the purposes of any authorising provision to be granted under its competence.
2. It shall be forbidden to place hoardings or other means of advertising along roads located within or near the properties indicated in paragraph 1, unless authorisation is granted in accordance with the laws and regulations regarding road traffic and advertising in the streets and on vehicles, with the prior favourable decision of the superintendent with regard to the compatibility of collocation and type of means of advertising with the appearance, decorous aspect and public enjoyment of the properties under protection.
3. In relation to the properties indicated in paragraph 1, the superintendent may, after assessing compatibility with their artistic or historical nature, authorise or permit the use for advertising purposes of the coverings of the scaffoldings mounted for the execution of conservation or restoration work for a period of time that does not exceed the duration of the work. For this purpose, the tender contract for the aforesaid works must be attached to the application for the permit or assent.

Article 50
Detachment of Cultural Properties

1. It is forbidden to order and carry out, without the authorisation of the superintendent, the detachment of frescoes, escutcheons, graffiti, tablets, inscriptions, tabernacles and other ornaments, whether or not they be displayed to public view.
2. It is forbidden to order and carry out, without the authorisation of the superintendent, the detachment of escutcheons, graffiti, tablets, inscriptions, and tabernacles, and to remove memorial stones and monuments, constituting vestiges of World War I under the laws and regulations in this regard.

Article 51
Artists' Studios

1. It is forbidden to change the designated use of artists' studios, or to remove their contents, consisting of works, documents, relics and the like, when such contents, considered as a whole and in relation to the context within which they are contained, are declared to be of particularly important interest for their historical value, under article 13.
2. It is moreover forbidden to change the designated use of artists' studios which fall within the traditional studio with skylight typology and which have been adapted to this use for at least twenty years.

Article 52
Commercial Activity in Areas of Cultural Value

1. With the resolutions provided for in the laws on the reform of the regulations pertaining to the commercial sector, the Municipalities shall, with prior consultation of the superintendent, identify the public areas having archaeological, historical, artistic and environmental value in which commercial activity is to be forbidden or subject to particular conditions.

Chapter IV
Circulation Within the National Territory

Section I
Alienation and Other Means of Transferral

Article 53
State Cultural Property

1. Cultural properties belonging to the State, the Regions and other territorial government bodies which correspond to the characteristics of the typologies indicated in article 822 of the civil code constitute the cultural property of the State.
2. The properties of the State cultural heritage may not be transferred, nor may they be the object of rights in favour of third parties, except in the ways set out in this Code.

Article 54
Non-alienable Properties

1. The following cultural properties belonging to the State cannot be alienated:
 - a) buildings and areas of archaeological interest;
 - b) buildings recognised as national monuments by measures having the force of law;
 - c) the collections of museums, picture galleries, art galleries and libraries;
 - d) archives.
2. The following cannot equally be alienated:
 - a) immovable and movable things belonging to subjects indicated in article 10, paragraph 1, which are the work of non-living artists and whose production goes back more than fifty years, until release from State ownership occurred, if necessary, following the verification procedures set out in article 12;
 - b) movable things which are the work of living artists or whose production does not go back more than fifty years, if these are included in collections belonging to the bodies indicated in article 53;
 - c) single documents belonging to the bodies referred to in article 53, as well as the archives and single documents of government bodies and institutions other than those indicated in the aforesaid article 53;
 - d) immovable things belonging to the bodies indicated in article 53 which have been declared to be of particularly important interest, testifying to the identity and history of public, collective or religious institutions as set out in article 10, paragraph 3, letter d).
3. The properties and things referred to in paragraphs 1 and 2 may be transferred between the State, the Regions and other territorial government bodies.

4. The properties and things indicated in paragraphs 1 and 2 may be used exclusively according to the modalities and for the purposes provided for in Title I of this Part.

Article 55

Alienability of Buildings Belonging to State Cultural Property

1. Immovable cultural properties which are part of the State's cultural property and which are not included among those listed in article 54, paragraphs 1 and 2, cannot be alienated without the authorisation of the Ministry.
2. The authorisation referred to in paragraph 1 may be granted under the following conditions:
 - a) alienation must ensure the protection and enhancement of the properties, and in any case must not hinder public enjoyment;
 - b) the authorisation provision must indicate designated uses that are compatible with the historical and artistic nature of the buildings and
must be such that no harm is done to their conservation.
3. The authorisation to alienate entails the release from State ownership of the cultural properties to which it refers. These properties remain subject to protection under article 12, paragraph 7.

Article 56

Other Types of Alienation Subject to Authorisation

1. The following are also subject to authorisation by the Ministry:
 - a) the alienation of cultural properties belonging to the State, the Regions and other territorial government bodies, other than those indicated in article 54, paragraphs 1 and 2, and article 55, paragraph 1.
 - b) the alienation of cultural properties belonging to government bodies other than those indicated in letter a) or to private non-profit associations, with the exception of the things and properties indicated in article 54, paragraph 2, letters a) and c).
2. Authorisation is also required in cases of partial sale of collections or series
of objects and of book collections by bodies and associations indicated
in
in paragraph 1, letter b).
3. The provisions of the preceding paragraphs shall also apply to the constitution
of mortgages and pledges and to legal transactions which may entail
the transfer of the cultural properties indicated therein.

4. The deeds which entail the transfer of cultural properties to the State, including transfers in payment of taxes owed, shall not be subject to authorisation.

Article 57

Regulations for Authorisation to Alienate

1. The application for authorisation to alienate shall be submitted by the body to which the properties belong and shall be accompanied by the indication of the current designated use and the programme of necessary conservation measures.
2. With regard to the properties indicated in article 55, paragraph 1, the authorisation may be issued by the Ministry at the recommendation of the Superintendency, after consultation with the Region and, through the Region, with other interested territorial government bodies, under the conditions established in paragraph 2 of the aforesaid article 55. The prescriptions and the conditions contained in the authorisation provision shall be included in the deed of transfer.
3. The alienated property may not undergo work of any kind unless the relative project has had prior authorisation under article 21, paragraph 4.
4. With regard to the properties indicated in article 56, paragraph 1, letter *a*), and the properties of the government bodies and institutions indicated in article 56, paragraph 1, letter *b*) and paragraph 2, authorisation may be granted when the same properties bear no interest for public collections and alienation does not seriously harm their conservation or impair public enjoyment.
5. With regard to the properties indicated in article 56, paragraph 1, letter *b*) and paragraph 2, belonging to private non-profit organisations, authorisation may be granted when no serious harm ensues from the transfer to the conservation or the public enjoyment of the aforesaid properties.

Article 58

Authorisation to Exchange

1. The Ministry may authorise the exchange of properties indicated in articles 55 and 56, and of single properties belonging to government collections, with others belonging to bodies, institutions and private individuals, including foreign bodies, institutions and individuals, when an increase in the national cultural patrimony or an enrichment of public collections ensues from the exchange.

Article 59
Declaration of Transfer

1. Deeds which transfer, in whole or in part, by whatever legal right, property or the possession of cultural properties shall be reported to the Ministry.
2. The declaration shall be made within 30 days:
 - a) by the alienor or the transferor of possession of the property, in the case of alienation made for a money consideration or not for value, or of transferral of possession;
 - b) by the purchaser, in the case of transferral occurring in procedures of forced or bankruptcy sale or by force of an adjudication which produces the effect of a transfer contract which is not concluded;
 - c) by the heir or the legatee, in the case of succession because of death. For the heir, the time limit begins with the acceptance of the inheritance or with the presentation of the declaration to the competent tax offices; for the legatee the time limit begins with the opening of the will, except in the case of renunciation under the provisions of the civil code.
3. The declaration shall be presented to the competent superintendent in the
place where the properties are located.
4. The declaration shall contain:
 - a) identification of the parties and the signature of the same or of their legal representatives;
 - b) the information identifying the properties;
 - c) the indication of the place where the properties are located;
 - d) the indication of the nature and conditions of the deed of transfer;
 - e) the indication of the habitual residence in Italy of the parties concerned for the purposes of any communications provided for by the present Title.
5. A declaration lacking any of the indications provided for in paragraph 4
or with incomplete or imprecise indications shall be deemed not to have
been submitted.

Section II
Pre-emption

Article 60
Purchase by Pre-emption

1. The Ministry or, in the case provided for in article 62, paragraph 3, the Region or another interested territorial government body, shall have the power to purchase by pre-emption cultural properties alienated for a money consideration at the price established in the deed of transfer.
2. When the property is alienated with other properties for a single money consideration or is transferred without a money consideration or is exchanged, its monetary value shall be officially determined by the party which proceeds to pre-emption under paragraph 1.
3. When the alienor does not wish to accept the assessment established under paragraph 2, the monetary value of the thing shall be determined by a third party, designated by agreement between the alienor and the party exercising pre-emption. If the parties do not agree on the appointment of the third party, or on a replacement should the nominee not wish or not be able to accept the appointment, the designation shall, at the request of one of the parties, be made by the president of the court in the area in which the contract was concluded. The relative costs shall be advanced by the alienor.
4. The assessment of the third party may be contested in the case of error or manifest inequity.
5. Pre-emption may be also exercised when the property is by any legal right given in payment.

Article 61
Conditions of Pre-emption

1. Pre-emption shall be exercised within sixty days of the date of receipt of the declaration provided for in article 59.
2. In the case in which the declaration is omitted or presented late or proves incomplete, pre-emption shall be exercised within one hundred and eighty days from the time that the Ministry receives the late declaration or in any case acquires all the elements constituting the same under article 59, paragraph 4.
3. The pre-emption provision shall be notified to the alienor and the purchaser within the time limits indicated in paragraphs 1 and 2. The property shall pass to the State from the last notification date.
4. When the time limit prescribed in paragraph 1 is still pending, the effects of the deed of transfer are suspended until the exercise of pre-emption occurs and the alienor is forbidden to carry out delivery of the thing.
5. The State is not bound by the clauses of the contract of alienation.
6. In the case in which the Ministry exercises its right of pre-emption on part of the things alienated, the buyer is entitled to rescind the contract.

Article 62
Pre-emption Procedure

1. Upon receipt of declaration of a deed subject to pre-emption, the superintendent shall give immediate notification to the Region and the other territorial government bodies in whose territory the property is located. Where a movable property is concerned, the Region shall inform the public through its own Official Bulletin and, if necessary, through any other suitable means of advertising at the national level, with the description of the work and the indication of its price.
2. The Region and other territorial government bodies shall, within thirty days of the declaration, present a recommendation for pre-emption to the Ministry, accompanied by the resolution of the competent organ which shall order the necessary financial coverage for the costs, to be provided for in the budget of the body concerned.
3. When the Ministry does not wish to exercise its right of pre-emption, it shall notify the interested body within forty days of receipt of declaration. The aforesaid body shall take on the relative expenses, adopt the pre-emption provision and notify the alienor and the purchaser within and not beyond seventy days of the aforesaid declaration. Ownership of the property shall be transferred to the body which has exercised right of pre-emption, from the last notification date.
4. In the cases referred to in article 61, paragraph 2, the time limits indicated in paragraph 2 and in the first and second sentences of paragraph 3 are respectively, ninety, one hundred and twenty, and eighty days from the late declaration or from the date of the acquisition of the elements constituting the same declaration.

Section III
Commercial Activity

Article 63

Obligation to Report Commercial Activity and Keep a Register. Obligation to Declare Sale or Purchase of Documents

1. The local authority for public safety authorised, under the laws pertaining to the matter, to receive preventive declaration of commercial trade in antique or used objects, shall forward to the

- superintendent and to the Region a copy of the aforesaid declaration, presented by the dealer in the things included in the categories indicated in letter A of Annex A of the present legislative decree.
2. Those who deal in the things indicated in paragraph 1 shall make daily entries of the operations carried out in the register prescribed by the regulations pertaining to public safety, and shall describe the characteristics of the aforesaid things. The value limits above which a detailed description of the things commercially traded becomes obligatory shall be defined by decree adopted by the Ministry in agreement with the Ministry of Internal Affairs.
 3. The superintendent shall verify the fulfilment of the obligation indicated in the second sentence of paragraph 2 by means of periodical inspections, which may also be carried out by officers delegated for the purpose by him/her. The verification shall be carried out by officers of the Region in cases where protection under article 5, paragraphs 2, 3 and 4 is exercised. The inspection report shall be notified to the concerned party and to the local public safety authorities.
 4. Dealers in documents, the owners of auction houses, as well as public officials charged with the sale of real estate must forward to the superintendent the list of documents of historical interest offered for sale. Private owners, possessors or holders by whatever legal right of archives who purchase documents having the aforementioned interest, shall be subject to the same obligation within ninety days of acquisition. The superintendent may start the procedure referred to in article 13 within ninety days of notification.
 5. The superintendent may in any case ascertain ex officio the existence of archives or single documents of which private individuals are proprietors, possessors or holders by whatever legal right, or for which a particularly important historical interest may be presumed.

Article 64

Certificates of Authenticity and Provenance

1. Whosoever conducts activities of sale to the public, of exposition for commercial purposes or of mediation for the purpose of selling works of painting, sculpture, graphic art or of antique objects or objects of historical or archaeological interest, or whosoever in any case habitually sells the aforesaid works or objects, must provide the buyer with documentation certifying authenticity, or at least probable attribution, and provenance; or, lacking such, declaration must be provided containing all the information available with regard to the authenticity of the work or object or to its probable attribution and provenance, according to the procedures provided for by the legislative and

regulatory provisions pertaining to administrative documentation. Such a declaration, where the nature of the work or the object permits, shall be affixed upon a photographic copy of the same.

Chapter V
Circulation Within International Territory

Section I
Exit from National Territory and Entry into National Territory

Article 65
Definitive Exit

1. The definitive exit of movable cultural property indicated in article 10, paragraphs 1, 2 and 3 from within the territory of the Republic is forbidden.
2. The exit of the following is also forbidden:
 - a) movable things belonging to the subjects indicated in article 10, paragraph 1, which are the work of no longer living artists and whose production goes back more than fifty years, until the verification provided for by article 12 is carried out.
 - b) properties, to whomsoever they may belong, which are included in the categories indicated in article 10, paragraph 3, and which the Ministry, after consultation with the competent advisory body, has preventively identified and for which it has excluded exit, for defined periods of time, because it would be harmful for the cultural heritage in relation to the objective characteristics and the provenance of the aforesaid properties and to the milieu to which they belong.
3. Apart from the cases provided for in paragraphs 1 and 2, the definitive exit of the following from the territory of the Republic are subject to authorisation according to the procedures established in the present

Section

and in Section II of this Chapter:

- a) things, to whomsoever they may belong, which present cultural interest and which are the work of no longer living artists and whose production goes back more than fifty years;
- b) archives and single documents, belonging to private individuals, which present cultural interest;
- c) properties included in the categories indicated in article 11, paragraph 1, letters *f)*, *g)* and *h)*, to whomsoever they may belong:

4. The exit of the things referred to in article 11, paragraph 1, letter *d*) is not subject to authorisation. The interested party must nevertheless demonstrate to the competent export office that the things to be transferred abroad are the work of a living artist or that their production does not go back more than fifty years, according to the procedures and modalities established by Ministerial decree.

Article 66
Temporary Exit for Events

1. The temporary exit from the territory of the Republic of the things and cultural properties indicated in article 65, paragraphs 1, 2, letter *a*), and paragraph 3, may be authorised for art events, exhibits or expositions of great cultural interest, on condition that the integrity and safety of the aforesaid things are ensured.
2. The following may not, in any case, be removed from national territory:
 - a*) properties which are susceptible to damage during transportation or in unfavourable environmental conditions;
 - b*) properties which constitute the principal collection of a determined and integral section of a museum, picture gallery, art gallery, archive or library or of an artistic or bibliographical collection.

Article 67
Other Cases of Temporary Exit

1. The things and cultural properties indicated in article 65, paragraphs 1, 2, letter *a*), and 3 may also be authorised to exit temporarily when:
 - a*) these constitute the private furniture of Italian citizens who, in diplomatic and consular seats, European Union institutions or international organisations, fill offices which require the persons concerned to move abroad, for a period of time which is not to exceed the duration of their mandate;
 - b*) they constitute the interior décor of diplomatic and consular seats abroad;
 - c*) they must undergo analysis, investigations or conservation work which must necessarily be carried out abroad;
 - d*) their exit is requested in the implementation of cultural accords with foreign museum institutions under reciprocity agreements, for the duration established in the same accords, which may nevertheless not exceed four years.

2. The temporary exit from the territory of the Republic of means of transportation over seventy-five years old for participation in international exhibits and meetings is not subject to authorisation except when a declaration has been made for them under article 13.

Article 68

Certificate of Free Circulation

1. Whosoever wishes to definitively remove the things and properties indicated in article 65, paragraph 3, from the territory of the Republic, must make a declaration to that effect and present them to the competent export office, indicating at the same time the market value for each item, in order to obtain the certificate of free circulation.
2. Within three days of presentation of the things or properties, the export office shall notify the competent offices of the Ministry, which within the following ten days shall furnish it with any useful cognitive element with regard to the objects presented for definitive exit.
3. Having ascertained the fairness of the indicated value, the export office shall, with a reasoned decision, which may also be based on information received, issue or deny the certificate of free circulation, notifying the party concerned within forty days of the presentation of the thing or property.
4. In assessing granting or denial of the certificate of free circulation the export offices shall abide by the general guidelines established by Ministry, after consultation with the competent advisory body.
5. The certificate of free circulation is valid for a three-year period and shall be issued in three original copies, one of which shall be filed in the official documents archive; the second shall be consigned to the party concerned and must accompany the circulation of the object; the third shall be forwarded to the Ministry for the formation of the official certificates register.
6. Denial shall entail the start of declaration proceedings, under article 14. To this purpose, contemporaneously with denial, the elements indicated in article 14, paragraph 2, shall be communicated to the party concerned and the things or properties shall be subject to the provisions of paragraph 4 of the aforesaid article.
7. For the things or properties belonging to bodies subject to Regional supervision, the export office shall consult the Region, whose opinion shall be delivered within the peremptory term of thirty days from the date of receipt of the request and, when the aforesaid opinion is negative, it shall be binding.

Article 69

Administrative Appeal Against Denial of Certificate

1. Appeal to the Ministry against a denial of certificate is admissible, within the thirty days following, on grounds of legitimacy or merits.
2. After consulting the competent advisory body, the Ministry shall rule on the appeal within the term of ninety days from the presentation of the same.
3. The declaration proceedings shall be suspended from the date of presentation of administrative appeal and until the expiry of the term indicated in paragraph 2, but the properties shall remain subject to the provisions indicated in article 14, paragraph 4.
4. When the Ministry acknowledges the appeal as valid, it shall return the relative documents to the export office, which shall take action accordingly within the following twenty days.
5. The provisions of decree no. 1199 of the President of the Republic of 24 November 1971 shall apply.

Article 70
Compulsory Purchase

1. Within the time limit indicated in article 68, paragraph 3, the export office may recommend to the Ministry the compulsory purchase of the thing or the property for which the certificate of free circulation has been requested, contemporaneously notifying the Region and the party concerned, to whom it shall moreover declare that the object subject to the purchase recommendation shall remain in the custody of the aforesaid office until the conclusion of the relative procedure. In such case, the time limit for issuing the certificate is extended to sixty days.
2. The Ministry shall have the option to purchase the thing or property for the value indicated in the declaration. The purchase provision shall be notified to the party concerned within the peremptory term of ninety days from the declaration. Until such time as notification of the purchase provision occurs, the party concerned may decide against the exit of the object and take action to withdraw the same.
3. Should the Ministry not wish to proceed to purchase, it shall, within sixty days of the declaration, notify the Region in whose territory the recommending export office is located. The Region shall have the option to purchase the thing or the property in accordance with the provisions of article 62, paragraphs 2 and 3, pertaining to the financial coverage of the costs and the assumption of the relative promise to purchase. The relative provision shall be notified to the party concerned within the peremptory term of ninety days from the declaration.

Article 71
Certificate of Temporary Circulation

1. Whosoever intends, under articles 66 and 67, to temporarily remove from the territory of the Republic the things and properties indicated therein, must declare such intention and present the items to the competent export office, indicating at the same time the market value for each item and the party responsible for its safekeeping abroad, in order to obtain the certificate of temporary circulation.
2. Having ascertained the fairness of the value indicated, the export office shall, with a reasoned decision, issue or deny the certificate of temporary circulation, dictating the prescriptions necessary and notifying the party concerned within forty days of the presentation of the thing or property. Administrative appeal against denial of temporary circulation shall be admissible following the procedures set out in article 69.
3. When the thing or property presented for temporary exit possesses the interest required under article 10, the elements indicated in article 14, paragraph 2 shall be communicated to the party concerned, contemporaneously with the positive or negative decision, for the purposes of the start of declaration proceedings, and the object shall be subject to the measures set out in article 14, paragraph 4.
4. In assessing the granting or denial of the certificate, the export offices shall abide by the general guidelines established by the Ministry, after consulting the competent advisory body. For cases of temporary exit regulated by article 66 and article 67, paragraph 1, letters *b*) and *c*), the granting of the certificate shall be subject to authorisation under article 48.
5. The certificate shall also indicate the time limit for the return of the things or properties, which may be extended at the request of the party concerned, but may not in any case exceed eighteen months from the time of their removal from the national territory, with the exception of the provisions of paragraph 8.
6. The granting of the certificate shall always be conditional to the insurance of the properties on the part of the party concerned for the value indicated in the application. For exhibits and events promoted abroad by the Ministry or, with State participation, by government bodies, by Italian Cultural Institutes abroad or by supra-national organisations, the insurance may be substituted by the assumption of the relative risks by the State, under article 48, paragraph 5.
7. For cultural properties indicated in article 65, paragraph 1, as well as for the things or properties indicated in paragraph 3, temporary exit shall be guaranteed by means of a security bond, which may consist of a surety policy, issued by a banking institution or an insurance company, for a sum exceeding by ten per cent the value of the property or thing as assessed when the certificate was issued. The surety shall be seized by the administration when the objects admitted for temporary exportation do not return to the national territory within the time limit established. Surety is not required for properties belonging to the State and to public administrations. The Ministry may exonerate institutions of particular cultural importance from the obligation to provide surety.

8. The provisions of paragraphs 5 to 7 do not apply to the cases of temporary exit provided for in article 67, paragraph 1.

Article 72
Entry into National Territory

1. The shipment to Italy by a Member State of the European Union or the importation from a third country of the things or properties indicated in article 65, paragraph 3, shall, upon application, be certified by the export office.
2. Certificates declaring that shipment and importation have occurred shall be issued on the basis of documentation suitable for identifying the thing or the property and for proving provenance from the territory of the Member State or third Country from which the thing or property has been respectively shipped or imported.
3. The certificates declaring that shipment and importation have occurred shall be valid for five years and may be extended upon request by the party concerned.
4. Conditions, modalities and procedures for granting and extending certificates may be established by ministerial decree, with particular regard for the ascertainment of the provenance of the thing or property shipped or imported.

Section II
Exportation from European Union Territory

Article 73
Denominations

1. In the present Section and in section III of this Chapter the following denominations shall be used:
 - a) "EEC Regulation" shall mean Council Regulation (EEC) no. 3911/92 of 9 December 1992, as modified by Council Regulation (EC) no. 2469/96 of 16 December 1996 and by Council Regulation (EC) no. 974/01 of 14 March 2001.
 - b) "EEC Directive" shall mean Council Directive 93/7/EEC of 15 March 1993, as modified by Directive 96/100/EC of the European Parliament and of the Council, of 17 February 1997, and by

Directive 200/38/EC of the European Parliament and of the Council, of 5 June 2001;

- c) "requesting State" shall mean the Member State of the European Union which initiates the action for restitution under Section III.

Article 74

Exportation of Cultural Properties from the European Union

1. The exportation outside European Union territory of the cultural properties indicated in Annex A of this Code is governed by the EEC Regulation and the present article.
2. The export licence provided for in article 2 of the EEC Regulation shall be issued by the export office contemporaneously with the certificate of free circulation, or not more than thirty months from the granting of the latter on the part of the same office. The licence shall be valid for six months.
3. In the case of temporary exportation of a property listed in Annex A of this Code, the export office shall issue the temporary export licence under the conditions and according to the modalities established in articles 66, 67 and 71.
4. The provisions of Section I of this Chapter shall not apply to cultural properties which have entered State territory with an export licence which has been issued by another European Union Member State in accordance with article 2 of the EEC Regulation, for the duration of the validity of the same licence.
5. For the purposes of the EEC Regulation, the Ministry's export offices shall be the authority responsible for granting export licences for cultural properties. The Ministry shall compile and keep the list of export licences granted, notifying the Commission of the European Communities of any changes within two months of their occurrence.

Section III

Restitution of Cultural Properties Illegally Taken out of the Territory of a Member State of the European Union

Article 75

Restitution

1. Cultural properties illegally taken out of the territory of a European Union Member State after 31 December 1992 shall be returned in accordance with the provisions of the present section.

2. Cultural properties are deemed to be those properties which, even after their exit from the territory of the requesting State, are defined, on the basis of the laws in force therein, as belonging to the national cultural heritage, in accordance with article 30 of the Treaty Establishing the European Economic Community, substituted by article 6 of the Treaty of Amsterdam, and by the relative laws and regulations of ratification and execution.
3. Restitution is admissible for the properties included in one of the following categories:
 - a) properties indicated in Annex A;
 - b) properties which are part of public collections inventoried in museums, archives and collections of books for conservation. Public collections are defined as the collections owned by the State, the Regions, other territorial government bodies and any other public body and institution, as well as collections which are significantly financed by the State, the Regions or the other territorial government bodies;
 - c) properties included in ecclesiastical inventories.
4. The exit of cultural properties shall be deemed illegal when aforesaid exit occurs in violation of the EEC Regulation or of the legislation of the requesting State on the protection of the national cultural heritage, or when the property has not been returned upon expiry of the temporary exit or export term.
5. The exit of properties for which temporary exit or export has been authorised shall be deemed illegal when the prescriptions established under the provision set out in article 71, paragraph 2 have been violated.
6. Restitution shall be admissible if the conditions indicated in paragraphs 4 and 5 subsist when the application is brought forward.

Article 76

Assistance and Collaboration for European Union Member States

1. For Italy, the central authority established under article 3 of the EEC Directive is the Ministry. In carrying out the various tasks indicated in the Directive, the Ministry shall avail itself of its central and branch organs, as well as of the co-operation of other Ministries, other organs of the State, the Regions and other territorial government bodies.
2. For the discovery and restitution of cultural properties belonging to the heritage of another European Union Member State, the Ministry shall:
 - a) ensure its collaboration with the competent authorities of the other Member States;
 - b) arrange for investigations within its national territory with the aim of localising the cultural property and identifying the possessor or holder. The investigations shall be ordered upon request of the requesting State, which is to be accompanied by any useful

- information or documents for facilitating the investigation, with particular attention paid to the location of the property;
- c) notify the Member States concerned of the discovery on national territory of a cultural property whose illegal exit from a Member State may be presumed on the basis of precise and concordant evidence;
- d) facilitate the operations which the Member State concerned carries out, with regard to the property which is the object of the notification referred to in letter c), to verify the existence of the premises and conditions indicated in article 75, on condition that such operations be carried out within two months of aforesaid notification. When the verification fails to be carried out within the established term, the provisions contained in letter e) shall not apply;
- e) order, where necessary, the removal of the property and its temporary safekeeping in public institutions, as well as any other measure necessary to ensure its conservation and prevent its removal from the restitution process;
- f) promote the amicable settlement of any dispute concerning restitution between the requesting State and the possessor or holder by whatever legal right of the cultural property. To this purpose, and taking into consideration the character of the parties concerned and the nature of the property, the Ministry may recommend to the requesting State and the possessing or holding parties the settlement of the dispute by means of arbitration, to be carried out according to Italian law, and it shall to this end acquire the formal agreement of both parties.

Article 77 *Action for Restitution*

1. For cultural properties illegally taken out of their territory, European Union Member States may bring an action for restitution before the ordinary courts of law, in accordance with article 75.
2. The action shall be brought before the court which has jurisdiction over the area in which the property is located.
3. In addition to the prerequisites established in article 163 of the civil procedures code, the summons must contain:
 - a) a document describing the item claimed which certifies it as cultural property;
 - b) the declaration by the competent authorities of the requesting State regarding the illegal exit of the property from national territory.
4. The summons shall, in addition to the possessor or the holder by whatever legal right of the property, be notified to the Ministry in order

to be filed in the special register for recording judicial claims for restitution.

5. The Ministry shall immediately notify the central authorities of the other Member States that the summons has been filed in the register.

Article 78

Lapse of Time-limit for Action

1. The action for restitution shall be brought within the peremptory term of one year, starting from the day when the requesting State knew that the property illegally taken out of its national territory is to be found in a determined place and identified the possessor or holder of the property by whatever legal right.
2. The action for restitution is limited in any case within the term of thirty years from the day of the illegal exit of the property from the territory of the claimant State.
3. There is no time limit for action for restitution for the properties indicated in article 75, paragraph 3, letters *b)* and *c)*.

Article 79

Compensation

1. In ordering the restitution of the property, the court may, upon request of the party concerned, award compensation determined on the basis of equitable criteria.
2. In order to obtain the compensation provided for in paragraph 1, the party concerned must demonstrate that, in the act of purchasing he/she exercised due diligence under the circumstances.
3. The possessor of the property through donation, inheritance or bequest may not enjoy a more favourable position than that of the person from whom he/she acquired the object.
4. The requesting State which is obliged to pay compensation may recoup its losses from the party responsible for illegal circulation residing in Italy.

Article 80

Payment of Compensation

1. Compensation is paid by the requesting State contemporaneously with the restitution of the property.
2. Payment and delivery of the property shall be transcribed in a procès verbal by a notary public, a court official or a public officer designated

for the purpose by the Ministry which shall receive a copy of the aforesaid procès verbal.

3. The procès verbal shall constitute title for the cancellation of the registration of the claim.

Article 81

Charges for Assistance and Collaboration

1. The expenses related to the search for, removal and temporary custody of the property to be returned, as well as other expenses ensuing from the application of article 76, and those inherent to the implementation of the ruling which orders restitution, shall be borne by the requesting State.

Article 82

Action for Restitution on Behalf of Italy

1. The action for restitution of cultural property which has been illegally taken from Italian soil shall be brought by the Ministry, in accord with the Ministry for Foreign Affairs, before the judge of the European Union Member State in which the cultural property is found.
2. The Ministry shall avail itself of the law officers of the State.

Article 83

Destination of the Returned Property

1. In cases where the returned cultural property does not belong to the State, the Ministry shall provide for its custody until it is delivered to the person having legal right to it.
2. The delivery of the property is subject to reimbursement to the State of the expenses incurred for the action for restitution process and custody of the property.
3. When it is not known who has the right to delivery of the property, the Ministry shall inform the public of the action for restitution through notice published in the *Official Gazette* of the Republic of Italy and through other forms of advertising.
4. In cases where the person having a right to the property fails to request its delivery within five years of the date of publication in the *Official Gazette* of the notice provided for in paragraph 3, the item shall become government property. After consulting the competent advisory body and the Regions concerned, the Ministry shall order that the property be assigned to a museum, library or archive of the State, a Region or another territorial government body, in order to best ensure protection for it and public enjoyment within the most suitable cultural context.

Article 84

Information to the European Commission and the National Parliament

1. The Ministry shall inform the Commission of the European Community of the measures adopted by Italy to ensure implementation of the EEC Regulation and shall receive the corresponding information forwarded to the Commission by other Member States.
2. On an annual basis, the Ministry shall, in an annex to the budgetary expenditure estimates of the Ministry, forward to Parliament a report on the implementation of this Chapter as well as the implementation of the EEC Directive and EEC regulation in Italy and in the other Member States.
3. Every three years, after consultation with the competent advisory body, the Ministry shall prepare a report for the Commission on the application of the EEC regulation and the EEC directive indicated in paragraph 1. The report shall be forwarded to Parliament.

Article 85

Databank of Stolen Cultural Property

1. A databank of stolen cultural property is established within the Ministry, according to modalities established by ministerial decree.

Article 86

Agreements with other European Union Member States

1. For the purpose of encouraging and fostering greater reciprocal knowledge of the cultural heritage, as well as of the legislation and the way in which protection is organised in the other European Union Member States, the Ministry shall promote suitable agreements with the corresponding authorities of the other Member States.

Section IV

UNIDROIT Convention

Article 87

Stolen or Illegally Exported Cultural Properties

1. The restitution of cultural properties indicated in the annex to the UNIDROIT Convention on the international return of stolen or illegally exported cultural properties is governed by the provisions of the aforesaid Convention and the related laws of ratification and enforcement.

Chapter VI *Findings and Discoveries*

Section I *Searches and Fortuitous Discoveries within the National Territory*

Article 88 *Search Activities*

1. Archaeological searches and, in general, activities for finding the things indicated in article 10 in any part of the national territory shall be reserved to the Ministry.
2. The Ministry may order the temporary occupation of the buildings where the searches and activities indicated in paragraph 1 are to be carried out.
3. The proprietor of the building shall be entitled to compensation for the occupation, which shall be determined in accordance with the modalities established by the general provisions for expropriation for public use. The compensation may be paid in money, or, upon request of the proprietor, by releasing the things found or part of them when these are not of interest to the collections of the State.

Article 89 *Search Concession*

1. The Ministry may grant concession to public or private subjects to carry out the search activities and work indicated in articles 88, and may on behalf of the concessionaire issue the order for occupation of the buildings where the work is to be carried out.
2. In addition to the prescriptions set out when concession is granted, the concessionaire must comply with all other prescriptions which the

Minister shall deem necessary. If the concessionaire fails to comply with the prescriptions, the concession shall be revoked.

3. The concession may also be revoked when the Ministry wishes to take over the execution or continuation of the works. In such case, the expenses incurred by the concessionaire for work hitherto carried out shall be reimbursed to the aforesaid concessionaire and the amount shall be established by the Ministry.
4. When the concessionaire decides not to accept the assessment of the Ministry, the amount shall be established by a qualified assessor appointed by the president of the tribunal. The related costs shall be advanced by the concessionaire.
5. The concession provided for in paragraph 1, may also be granted to the proprietor of the buildings in which the works are to be carried out.
6. The Ministry may, upon request, consent that the things found remain, in whole or in part, within the Region or other territorial government body for exhibition purposes, on condition that the body should possess a suitable venue and can ensure the conservation and custody of the aforesaid things.

Article 90

Fortuitous Discoveries

1. Whosoever fortuitously discovers immovable or movable things indicated in article 10 shall report the discovery to the superintendent or mayor or to the public security authorities within twenty-four hours and shall provide for the temporary conservation of the things, leaving them in the condition and place in which they were found.
2. When movable things are concerned for which it is not possible to ensure custody otherwise, the discoverer shall have the power to remove them in order to better ensure their safety and conservation until such time as the visit of the competent authorities occurs and, if need be, the discoverer may ask for the assistance of public authorities.
3. Every holder of things discovered fortuitously must abide by the provisions for conservation and custody set out in paragraphs 1 and 2.
4. Costs incurred for custody and removal shall be reimbursed by the Ministry.

Article 91

Ownership and Qualification of the Things Found

1. The things indicated in article 10, found underground or in sea beds by whomsoever and howsoever, shall belong to the State and, depending on whether they be immovable or movable, shall become part of government property or of its inalienable assets, pursuant to articles 822 and 826 of the civil code.

2. Whenever demolition of a building is carried out on behalf of the State, the Regions, other territorial government bodies or other public bodies or institutions, the by-product material which by contract has been reserved for the demolition firm shall not include the things found as a result of the demolition which possess the interest indicated in article 10, paragraph 3, letter *a*). Any agreement to the contrary shall be null and void.

Article 92
Finding Reward

1. The Ministry shall offer a reward not exceeding one quarter of the value of the things found to:
 - a*) the proprietor of the building in which the finding occurred;
 - b*) the concessionaire of the search activities, pursuant to article 89;
 - c*) the accidental discoverer who has fulfilled the obligations set out in article 90.
2. The proprietor of the building who has obtained the concession provided for in article 89 or is the discoverer of the thing in question, shall be entitled to a reward which may not exceed half of the value of the things found.
3. A discoverer who has entered and searched the property of another person without the consent of the proprietor or holder shall not be entitled to a reward.
4. The reward may be paid in money or with the release of a part of the things found. In lieu of the reward, the interested party may obtain, upon request, a tax credit for the same sum, in accordance with the modalities and with the limits established by decree adopted by the Ministry of the Economy and Finance in accord with the Ministry, pursuant to article 17, paragraph 3 of law no. 400 of 23 August 1988.

Article 93
Assessment of Reward

1. The Ministry shall provide for the assessment of the reward for the persons or parties entitled pursuant to article 96, following assessment of the value of the things found.
2. During the assessment process, each of the persons or parties entitled shall receive partial payment of the reward in an amount not exceeding one fifth of the value, assessed on a provisional basis, of the things found.
3. If the persons or parties entitled do not accept the definitive assessment of the Ministry, the value of the things found shall be determined by a third party, appointed by agreement of the parties concerned. If they do not reach agreement for the appointment of a third party or for its replacement, whenever the third party appointed

does not wish to or cannot accept the appointment, the appointment shall be made, upon request of one of the parties, by the president of the court having jurisdiction over the area in which the things were found. The costs of the assessment shall be advanced by the person or party entitled to the reward.

4. The assessment of the third party may be contested in case of error or manifest inequity.

Section II

Searches and Fortuitous Findings in Areas Adjacent to National Waters

Article 94

UNESCO Convention

1. Archaeological and historical objects found in the seabed of areas of seawaters extending for twelve marine miles from the external boundary of national waters are protected under the "Rules pertaining to measures for underwater cultural heritage" annexed to the UNESCO Convention on the protection of the underwater cultural heritage, adopted in Paris on November 2, 2001.

Chapter VII

Expropriation

Article 95

Expropriation of Cultural Property

1. Immovable and movable cultural property may be expropriated by the Ministry for reasons of public use, when the expropriation responds to an important need to improve the conditions of protection for the purposes of public enjoyment of the aforesaid properties.
2. The Ministry may, upon request, authorise the Regions and other territorial government bodies, as well as other public bodies and institutions, to carry out the expropriation referred to in paragraph 1. In such case it shall declare public use for the purposes of expropriation and shall transfer the deeds to the interested body for the prosecution of the procedure.
3. The Ministry may also order expropriation on behalf of a public non-profit association, taking direct responsibility for the relative procedure.

Article 96

Expropriation for Instrumental Purposes

1. Buildings and areas may be expropriated for reasons of public use when this is necessary for insulating or restoring monuments, for ensuring natural light or perspective, for protecting or improving their decorous aspect or increasing public enjoyment, or for facilitating access to them.

Article 97

Expropriation for Archaeological Interest

1. The Ministry may proceed to the expropriation of buildings for the purpose of carrying out work of archaeological interest or search activities for the discovery of the things indicated in article 10.

Article 98

Declaration of Public Use

1. Public use shall be declared by ministerial decree or, in the case of article 96, by a provision adopted by the Region and communicated to the Ministry.
2. In the cases of expropriation provided for under articles 96 and 97, the approval of the project shall be equivalent to the declaration of public use.

Article 99

Compensation for Expropriation of Cultural Property

1. In the case of expropriation provided for by article 95, compensation shall consist of the fair price that the property would have in a free contract of sale within the State.
2. Payment of compensation shall be made in accordance with the modalities established by the general provisions for expropriation for public use.

Article 100

Reference to General Laws

1. In the cases of expropriations governed by articles 96 and 97, the general provisions for expropriation for public use shall apply, insofar as they are compatible.

TITLE II
Enjoyment and Enhancement

Chapter I
Enjoyment of Cultural Property

Section I
General Principles

Article 101
Institutions and Places of Culture

1. For the purposes of this Code, museums, libraries and archives, archaeological parks and areas, and monumental complexes are deemed institutions and places of culture.
2. The following definitions apply:
 - a) "museum" shall mean a permanent facility which acquires, conserves, arranges and exhibits cultural property for the purposes of education and study;
 - b) "library" shall mean a permanent facility which gathers and conserves an organised collection of books, materials and information, written or published on any kind of support, and ensures consultation for the purposes of promoting reading and study;
 - c) "archive" shall mean a permanent facility which collects, inventories, and conserves original documents of historical interest and ensures consultation for purposes of study and research;
 - d) "archaeological area" shall mean site characterised by the presence of remains of a fossil nature or of artefacts or prehistoric or ancient structures;
 - e) "archaeological park" shall mean a land area characterised by important archaeological evidence and the presence of historical, landscape or environmental values, organised as an open-air museum;
 - f) "monumental complex" shall mean a collection of a number of structures which may have been built in different periods, and which over time have, as a whole, acquired autonomous artistic, historical or ethno-anthropological importance.
3. The institutions and places indicated in paragraph 1 which belong to government bodies are designated for public enjoyment and offer a public service.

4. The exhibition and consultation facilities as well as the places indicated in paragraph 1 which belong to private individuals and are open to the public offer a private socially useful service.

Article 102

Enjoyment of Publicly Owned Institutions and Places of Culture

1. The State, the Regions, other territorial government bodies and any other public body and institution shall ensure the enjoyment of the properties present in the institutions and places indicated in article 101, in compliance with the fundamental principles established by this Code.
2. In the respect of the principles indicated in paragraph 1, regional legislation shall govern the enjoyment of the properties present in the institutions and places of culture not belonging to the State or for which the State has transferred use on the basis of the laws in force.
3. The enjoyment of public cultural properties outside the institutions and places indicated in article 101 shall be ensured in accordance with the provisions of the present Title and compatibly with the implementation of the institutional purposes to which the aforesaid properties are designated.
4. For the purposes of co-ordinating, harmonising and increasing enjoyment in relation to the publicly owned institutions and places of culture, the State, and, on its behalf, the Ministry, the Regions and other territorial government bodies shall define agreements in this sphere, with the procedures set out in article 112. Where no agreement exists, each public body must guarantee the enjoyment of the properties under its jurisdiction.
5. By means of the agreements indicated in paragraph 4, the Ministry may also transfer jurisdiction of cultural institutions and places to the Regions and other territorial government bodies, on the basis of the principle of subsidiarity, for the purpose of ensuring adequate enjoyment and enhancement of the properties located therein.

Article 103

Access to Cultural Institutions and Places

1. Access to public cultural institutions and places may be free of charge or by admission fee. The Ministry, the Regions and other territorial government bodies may stipulate agreements for co-ordinating access to them.
2. Access to libraries and public archives for purposes of reading, study and research is free of charge.
3. In cases where access involves an admission fee, the Ministry, the Regions and the other territorial government bodies shall determine:
 - a) the cases of free access and free admission;

Article 106
Individual Use of Cultural Property

1. The Ministry, the Regions and other territorial government bodies may grant the use of cultural properties - committed to their care - to individual applicants, for purposes which are compatible with their original cultural designation.
2. For properties which are committed to the care of the Ministry, the superintendent shall establish the fee to be paid and adopt the relative procedures.

Article 107
Instrumental and Temporary Use and Reproduction of Cultural Property

1. The Ministry, the Regions and other territorial government bodies may permit the reproduction as well as the instrumental and temporary use of the cultural properties committed to their care, without prejudice to the provisions in paragraph 2 and those with regard to copyright.
2. The reproduction of cultural properties is generally forbidden when it consists in producing casts from the originals of works of sculpture or of works in relief in general, regardless of the material from which such works are made. Casts from already existing copies of the originals are ordinarily permitted, with the authorisation of the superintendent. The procedures for reproducing casts are regulated by ministerial decree.

Article 108
Concession Fees, Payment for Reproduction, Security Deposits

1. Concession fees and payments connected to the reproduction of cultural properties are established by the authority to whose care the property is committed, also taking into account:
 - a) the nature of the activities to which concession of use refers;
 - b) the means and modalities for producing the reproduction;
 - c) the use the spaces and property will be put to and for what period of time;
 - d) the use and purpose for which the reproductions are made, as well as the economic benefits which will accrue to the applicant.
2. The fees and payments shall as a rule be paid in advance.
3. No fee is owed for reproductions requested by private individuals for personal use for purposes of study, or by public bodies for purposes of enhancement. The applicants shall nevertheless reimburse the administration granting concession for any costs incurred.

4. In cases where the activities granted in concession may harm the cultural properties, the authorities to whose care the properties are committed shall establish the amount of security deposit, which may be made through a bank or insurance surety. For the same reasons, the security deposit is also required in cases of exemption from payment of fees.
5. The security deposit is returned when it has been ascertained that the property granted in concession has not suffered damage and that expenses incurred have been reimbursed.
6. The minimum amounts of the fees and payments for use and reproduction of the property shall be established by a provision on the part of the administration granting concession.

Article 109

Catalogue of Photographic Images and of Films of Cultural Property

1. When the concession concerns the reproduction of cultural property for purposes of collections and catalogues of photographic images and films in general, the concession provision shall prescribe:
 - a) the deposit of an original duplicate of each film or photograph;
 - b) the restitution, after use, of the original colour photograph with the relevant code.

Article 110

Cash Receipts and Division of Proceeds

1. In the cases provided for in article 115, paragraph 2, the proceeds deriving from the sale of tickets for admission to cultural institutions and sites, as well as concession fees and payments for the reproduction of cultural property, shall be paid to the government bodies to which the institutions, sites or individual properties belong or to whose care they are committed, in conformity with the respective public accounting provisions.
2. Where institutions, sites or properties belonging to or committed to the care of the State are concerned, the proceeds indicated in paragraph 1 shall be paid to the provincial section of the State treasury. Payment may also be deposited into a postal current account registered to the aforesaid treasury, or into a current account opened by each cultural institution or site officer at a credit institution. In this last hypothesis the banking institution shall deposit the amounts received into the section of the provincial treasury of the State, not more than five days after receipt. The Ministry for the Economy and Finance shall re-assign the sums received to the competent base budget units for the Ministry's

expense budget, according to the criteria and measures established by the same Ministry.

3. The proceeds from the sale of tickets for admission to institutions and sites belonging to or committed to the care of the State are designated for the realisation of works for the safety and conservation of the aforesaid sites, pursuant to article 29, as well as to the expropriation and purchase of cultural properties, which may also be carried out by means of the exercise of pre-emption.
4. The proceeds from the sale of tickets for admission to the institutions and sites belonging to or committed to the care of other government bodies are designated for the increase and enhancement of the cultural patrimony.

Chapter II

Principles of Enhancement of the Cultural Heritage

Article 111

Enhancement Activities

1. The activities for the enhancement of the cultural heritage consists in the stable constitution and organisation of resources, facilities or networks, or in providing technical skills or financial or instrumental resources, designed for carrying out the functions and pursuing the aims indicated in article 6. Private subjects may concur, co-operate or participate in such activities.
2. Enhancement may be carried out by public or private initiative.
3. Enhancement carried out by public initiative shall conform to the principles of freedom of participation, plurality of participants, continuity of activity, equality of treatment, economic feasibility and management transparency.
4. Enhancement carried out by private initiative is deemed a socially useful activity and its aims of social solidarity are recognised.

Article 112

Enhancement of Publicly Owned Cultural Property

1. The State, the Regions and other territorial government bodies shall ensure the enhancement of the property held in institutions and in the places indicated in article 101, in observance of the fundamental principles established by this Code.

2. In observance of the principles referred to in paragraph 1, regional legislation shall govern the enhancement of properties held in institutions and places of culture not belonging to the State or of those for which the State has transferred use on the basis of the laws in force.
3. The enhancement of publicly owned cultural properties outside the institutions and places referred to in paragraph 1 shall, in accordance with the provisions of this Title, be ensured compatibly with the institutional uses for which the said properties have been designated.
4. For the purposes of co-ordinating, harmonising and supplementing enhancement activities for properties forming the cultural heritage belonging to the government, the State shall, through the Ministry, the Regions and other territorial government bodies, stipulate agreements on a regional basis, in order to define objectives and establish the timetable and modalities for achieving them. Suitable forms of management, pursuant to article 115, shall be identified through the same agreements.
5. When, within the fixed term, the agreements indicated in paragraph 4 have not been reached among the competent organs, their definition shall be referred back to joint decision of the Ministry, the president of the Region, the president of the Province and the mayors of the Municipalities concerned. Where there is no agreement, each government body must guarantee the enhancement of the properties under its jurisdiction.
6. The State, through the Ministry, the Regions and other territorial government bodies may, within a Unified Conference, define the general guidelines and procedures for harmonising the agreements indicated in paragraph 4 throughout the national territory.
7. Private persons may also participate in the agreements indicated in paragraph 4, and, with the consent of the interested parties, the same agreements may pertain to privately-owned properties.
8. Interested public bodies may also enter into special agreements with cultural or volunteer associations which carry out activities of promotion and dissemination aimed at knowledge of cultural property.

Article 113

Enhancement of Privately Owned Cultural Property

1. Privately initiated activities and facilities for the enhancement of privately owned cultural property may obtain public support from the State, the Regions and other territorial government bodies.
2. The extent of the support shall be established by taking into account the importance of the cultural properties to which it refers.

3. The modalities of enhancement shall be established by an agreement to be stipulated with the proprietor, possessor or holder of the property, when the support measures are adopted.
4. The Region and other territorial government bodies may also concur in the enhancement of the properties indicated in article 104, paragraph 1, by participating in the agreements provided for therein under paragraph 3.

Article 114

Enhancement Quality Control

1. The Ministry, the Regions and other territorial government bodies, with the possible participation of universities, shall establish standard levels of quality for enhancement, which shall be revised periodically.
2. The quality control levels referred to in paragraph 1 shall be adopted with a decree of the Ministry, after agreement is reached within a Unified Conference.
3. The parties which, under article 115, detain management of enhancement activities must ensure observance of the levels established.

Article 115

Forms of Management

1. Enhancement of cultural property undertaken by private initiative are managed directly or indirectly.
2. Direct management is carried out by means of organisational structures within the administrations, which are endowed with suitable scientific, organisational, financial and accounting autonomy, and provided with proper technical staff.
3. Indirect management is carried out by:
 - a) direct assignment of such management to institutions, foundations, associations, consortiums, corporations or other entities, which to a prevalent extent are incorporated by the public administration to which the property pertains or in which the said administration holds a major interest;
 - b) concession to a third party, on the basis of criteria indicated in paragraphs 4 and 5.
4. The State and the Regions may resort to indirect management in order to ensure an adequate level of enhancement for cultural property. The choice between the two forms of management indicated in letters a) and b) of paragraph 3 shall be made following a comparative assessment, in terms of efficiency and efficacy, of the aims to be pursued and the relative means, methods and timetables.

5. When, following the comparative assessment referred to in paragraph 4, it is preferable to resort to concession to a third party, the same is provided for through open competition procedures, on the basis of a comparative assessment of the projects presented.
6. Other territorial government bodies ordinarily resort to indirect management as referred to in paragraph 3, letter *a*) except where, because of the limited extent or of the type of enhancement activity, direct management proves to be economically advantageous or more suitable.
7. By means of prior agreement between the parties having legal title to the activities of enhancement, the assignment or concession provided for in paragraph 3 may be arranged on a shared and joint basis.
8. The relationship between title-holder of the activities and the party to whom they have been entrusted or granted in concession is governed by a services contract, which shall specify, among other things, the qualitative levels of services provided and the professional level of the staff, as well as the powers of direction and control to be detained by the title-holder of the activity or the service.
9. The title-holder of the activity may share in the assets or capital of the parties indicated in paragraph 3, letter *a*), which participation may also consist in the conferral of use of the cultural property to be enhanced. The effects of the conferral of use shall end, without indemnity, in all cases of the total cessation of sharing on the part of the title-holder of the activity or service, of the discharge of the participating party, or of the cessation, for whatever cause, of the assignment of the activity or the service. The properties granted in use are not subject to specific financial security unless by virtue of their equivalent economic value.
10. The concession in use of the cultural property to be enhanced may be linked to the assignment or concession referred to in paragraph 3. The concession loses efficacy, without indemnity, in any case whatsoever of cessation of assignment or concession of the service or activity.

Article 116

Protection of Cultural Property Conferred or Granted in Use

1. Cultural properties which have been conferred or granted in use under article 115, paragraphs 9 and 10, shall remain to all effects subject to their own legal regulations. The functions of protection shall be exercised by the Ministry, which may also provide for protection at the request of or with regard to the parties on which use of the same properties have been conferred or to which they have been granted.

Article 117

Additional Services

1. Services of cultural assistance and hospitality for the public may be established in the institutions and places of culture indicated in article 101.
2. Included in the services referred to in paragraph 1 are:
 - a) publishing and sales services related to catalogues and to catalogue, audio-visual and computer aids, to all other informational material, and to the reproduction of cultural property;
 - b) services related to book and archival properties for the provision of reproductions and library lending delivery;
 - c) the management of record, slide and museum library collections;
 - d) the management of sales outlets and the commercial utilization of the reproduction of cultural properties;
 - e) public relations services, including assistance and entertainment for children, information and educational guidance and assistance services, meeting places;
 - f) cafeteria, restaurant and cloakroom services;
 - g) the organisation of cultural exhibits and events, as well as promotional initiatives.
3. The services referred to in paragraph 1 may be managed in conjunction with cleaning, security and box office services.
4. The management of the aforesaid services shall be effected in the forms provided for by article 115.
5. The fees from the concession of services shall be received and shared out as set out in article 110.

Article 118

Promotion of Study and Research Activities

1. The Ministry, the Regions and other territorial government bodies shall, with the possible participation of universities and of other public and private entities, carry out, promote and support research, studies and other cognitive activities related to the cultural heritage, and may do so jointly.
2. For the purpose of ensuring the systematic gathering and dissemination of the results of studies, research and other activities referred to in paragraph 1, including cataloguing, the Ministry and the Regions may enter into agreements to create, on the regional or inter-regional level, permanent centres for the study and documentation of the cultural heritage, providing for the participation of universities and other public and private entities.

Article 119

Dissemination of Knowledge about the Cultural Heritage in the Schools

1. The Ministry, the Ministry for Education, Universities and Research, the Regions and other interested territorial government bodies may conclude agreements to spread knowledge of the cultural heritage and promote its enjoyment on the part of students.
2. On the basis of the agreements provided for in paragraph 1, the directors of the institutions and the places of culture referred to in article 101 may, with schools of every type and level belonging to the national educational system, enter into special agreements for the development of didactic programmes, the preparation of audio-visual material and aids, as well as for the education and training of teachers. The programmes, materials and teaching aids shall take into account the specific nature of the applicant school and any particular needs resulting from the presence of disabled students.

Article 120

Sponsorship of Cultural Property

1. Sponsorship of cultural property is defined as any form of contribution in goods or services on the part of private subjects to the planning or carrying out of initiatives of the Ministry, the Regions and other territorial government bodies, or of private subjects, in the field of protection and enhancement of the cultural heritage, with the aim of promoting the name, brand, image, activity or the product of the aforesaid subjects.
2. The promotion referred to in paragraph 1 occurs through the association of the name, brand, image, activity or product with the initiative which forms the object of the contribution, in forms which are compatible with the artistic or historical nature, the appearance and the decorous aspect of the cultural property to be protected or enhanced, and which are to be established under the sponsorship contract.
3. The sponsorship contract shall also define the modalities for the disbursement of funding as well as the forms of supervision, on the part of the disbursing party, over the realisation of the initiative to which the funding refers.

Article 121

Agreements with Bank Foundations

1. The Ministry, the Regions and the other territorial government bodies may, each within its own sphere of competence and jointly as well, enter into memoranda of understanding with the granting foundations referred to in the provisions for the restructuring and regulation of

credit institutions, which by statute pursue socially useful aims in the sector of the arts and cultural heritage and activities, for the purpose of co-ordinating work for the enhancement of the cultural heritage and, within this context, of ensuring the balanced utilisation of the financial resources made available. The government may participate with its own financial resources in order to ensure the pursuit of the aims set out in the memoranda of understanding.

Chapter III

Consultation of Archive Documents and Safeguarding of Confidentiality

Article 122

State Archives and Historical Archives of Public Bodies: Consultation of Documents

1. The documents kept in the archives of the State and in the historical archives of the Regions, of other territorial government bodies as well as those of any other public body and institution, may be freely consulted, with the following exceptions:
 - a) those declared confidential under article 125, relative to the foreign or domestic policies of the State, which may be consulted fifty years after their date;
 - b) those containing sensitive information as well as information relative to measures of a penal nature expressly indicated in the laws on the use of personal data, which may be consulted forty years after their date. The term is seventy years if the information is such as to reveal state of health, sexual experiences or private family relationships.
2. Prior to the expiry of the time limitations indicated in paragraph 1, the documents shall remain accessible in accordance with the regulations on access to administrative documents. The petition for access is dealt with by the administration which held the document before its filing or deposit.
3. Also subject to the provisions of paragraph 1 are privately-owned archives and documents deposited in the archives of the State or in the historical archives of public bodies, or in the same archives which have been donated or sold or left as inheritance or bequest. Depositors and those who donate or sell or leave as inheritance or make a bequest of the documents may also establish a condition of non-consultation of all or part of the documents of the last seventy-year period. Such limitation, like the general limitation established in paragraph 1, does not apply to the depositors, donators, sellers and any other person they designate; nor does the said limitation apply to assignees of the

depositors, donators and sellers, when documents related to property are concerned, in which they have an interest by right of purchase.

Article 123

State Archives and Historical Archives of Public Bodies: Consultation of Confidential Documents

1. The Ministry of the Interior, after acquiring the advisory opinion of the director competent for State Archives and having heard the Commission on questions pertaining to the consultation of confidential archival documents, which has been established within the Ministry of the Interior, may authorise consultation for historical purposes of documents of a confidential nature preserved in the archives of the State, even before expiry of the terms indicated in article 122, paragraph 1. Authorisation is granted, under equal conditions, to each applicant.
2. The documents for which consultation is authorised under paragraph 1 shall maintain their confidential nature and may not be disseminated.
3. Also subject to the provisions of paragraphs 1 and 2 is the consultation for historical purposes of documents of a confidential nature preserved in the historical archives of the Regions, other territorial government bodies, and any other public body and institution. The opinion referred to in paragraph 1 is given by the archival superintendent.

Article 124

Consultation of Current Archives for Historical Purposes

1. Without prejudice to the provisions of the laws in force on access to public administration documents, the State, the Regions and other territorial government bodies shall establish regulations for consultation for historical purposes of their current and deposited archives.
2. Consultation for the purposes of paragraph 1 of current and deposited archives of other public bodies and institutions, shall be regulated by the same bodies and institutions, on the basis of general guidelines established by the Ministry.

Article 125

Declaration of Confidentiality

1. The ascertainment of the existence and the nature of documents which may not be freely consulted indicated in articles 122 and 127 is carried out by the Ministry of the Interior, in agreement with the Ministry.

Article 126
Protection of Personal Data

1. When the owner of personal data has exercised the rights granted to him/her by the laws which govern their use, the documents of the historical archives shall be preserved and may be consulted along with the documentation pertaining to the exercise of the same rights.
2. At the request of the same owner, a freeze may be ordered on personal data which are not of great interest to the public, whenever their use involves a concrete danger of harming the dignity, privacy or personal identity of the individual concerned.
3. The consultation for historical purposes of documents containing personal data is also subject to the provisions of the code on ethics and good conduct established under the laws on the use of personal data.

Article 127
Consultation of Private Archives

1. Private proprietors, possessors or holders by whatever legal right of archives or of single documents declared under article 13 are obliged to permit scholars, who make a justified request through the archival superintendent, to consult the documents in accordance with the procedures agreed upon between the private parties themselves and the superintendent. The related expenses shall be borne by the scholar.
2. Excluded from consultation are the single documents declared to be of a confidential nature under article 125. Documents for which the condition of non-consultation has been ordered under article 122, paragraph 3, may also be excluded from consultation.
3. The provisions referred to in article 123, paragraph 3, and article 126, paragraph 3, shall apply to private archives used for historical purposes, even if they have not been declared in accordance with article 13.

TITLE III
Transitional and Final Provisions

Article 128
Notifications Served Under Prior Legislation

1. Cultural properties referred to in article 10, paragraph 3, for which notifications served in accordance with laws no. 364 of 20 June 1909 and no. 778 of 11 June 1922, have not been renewed and registered are subject to the procedure referred to in article 14. Until the conclusion of the same procedure, the said notifications shall in any case remain valid for the purposes of this Part.
2. Notifications served in accordance with articles 2, 3, 5 and 21 of law no. 1089 of 1 June 1939 and the declarations adopted and notified under article 36 of decree no. 1409 of the President of the Republic of 30 September 1963 and under articles 6, 7, 8 and 49 of legislative decree no. 490 of 29 October 1999, shall also remain in effect.
3. In the presence of elements which effectively occurred subsequently or which had not been previously known or had not been assessed, the Ministry may, ex officio or at the request of the proprietor, possessor or holder concerned, renew the procedure of declaration for properties which have been the object of the notifications referred to in paragraph 2, for the purpose of verifying the continuing presence of the premises for the subjection of the same properties to the provisions for protection.
4. Administrative appeal is admissible under article 16 against the decision of denial of the application to renew the procedure of declaration, produced under paragraph 3, or against the final declaration of the same procedure, even when it has been initiated ex officio.

Article 129

Particular Legislative Provisions

1. The laws pertaining to single cities or parts of them, architectonic complexes, national monuments, sites of historical, artistic or archaeological interest shall remain in force.
2. The provisions relating to *ex fideicommissum* artistic collections, issued with law no. 286 of 28 June 1871, law no. 1461 of 8 July 1883, royal decree no. 653 of 23 November 1891 and law no. 31 of 7 February 1892, shall also remain in force.

Article 130

Prior Regulatory Provisions

1. Until the emanation of the decrees and regulations provided for by this Code, the provisions of the regulations approved by royal decrees no. 1163 of 2 October 1911 and no. 363 of 30 January 1913, and any other regulatory provision pertaining to the laws contained in this part, shall remain in force, insofar as they are applicable.

THIRD PART
Landscape Assets

TITLE I
Protection and Enhancement

Chapter I
General Provisions

Article 131
Safeguarding of Landscape Values

1. For the purposes of this Code, the term landscape is defined as an integral part of the territory whose characteristics are derived from nature, the history of humanity or from their reciprocal inter-relationships.
2. The protection and enhancement of the landscape shall safeguard the values which it expresses in terms of perceptible identifying manifestations.

Article 132
Co-operation Between Public Administrations

1. Public administrations shall co-operate in the definitions of guidelines and criteria related to activities of protection, planning, reclamation, upgrading and enhancement of the landscape and the management of related works.
2. The guidelines and criteria shall also pursue the aims of safeguarding and re-integrating the values of the landscape environment, with a view to sustainable development as well.
3. For the purpose of disseminating and increasing knowledge about the landscape, the public administrations shall carry out training and educational activities.
4. The Ministry and the Regions shall define the policies for the protection and enhancement of the landscape, also taking into account studies, analyses and proposals made by the National Observatory for Landscape Quality, established by ministerial decree, as well as those made by Observatories established in each Region for the same purpose.

Article 133
International Agreements

1. The activities carried out for the protection and enhancement of the landscape environment shall conform to the obligations and principles of co-operation between States deriving from international agreements.

Article 134
Landscape Assets

1. Landscape assets include the following:
 - a) the immovable properties and areas indicated in article 136, identified under articles 138 to 141;
 - b) the areas indicated in article 142;
 - c) the immovable properties and areas in any case subjected to protection by landscape plans provided for in articles 143 and 156.

Article 135
Landscape Planning

1. The Regions shall ensure that the landscape is suitably protected and enhanced. To this purpose, they shall subject the territory to suitable zoning laws, by approving landscape plans or urban land plans with specific consideration for landscape values, concerning the entire regional territory, both of which shall hereinafter referred to "landscape plans".
2. With particular reference to the assets indicated in article 134, the landscape plan shall define transformations which are compatible with landscape values, initiatives for the reclamation and upgrading of immovable properties and of areas subjected to protection, as well as measures for the enhancement of the landscape, in relation to prospects for sustainable development as well.

Chapter II
Identification of Landscape Assets

Article 136
Buildings and Areas of Notable Public Interest

1. The following are subject to the provisions of this Title by virtue of their notable public interest:
 - a) immovable things of outstanding natural beauty or geological singularity;

- b) the villas, gardens and parks not protected by the provisions of the Second Part of this Code, which stand out for their uncommon beauty;
- c) complexes of immovable things which constitute a characteristic aspect having aesthetic and traditional value;
- d) beautiful views considered to be of picturesque quality as well as vantage points and belvederes which are accessible to the public and from which the spectacle of those beauties may be enjoyed;

Article 137
Provincial Commissions

1. A Commission with the task of making proposals for the declaration of notable public interest for the immovable property indicated in letters a) and b) and the areas indicated in letters a) and d) of article 136, shall be established for each Province by a Regional measure.
2. The Regional director, the superintendent for architectonic property and the landscape and the superintendent for archaeological property with competence for each area shall, by right, serve on the Commission. The remaining members, who are not to exceed six, shall be appointed by the Region among individuals with particular professional expertise and experience in the protection of the landscape. The Commission shall hear the opinion of the mayors of the interested Municipalities and may consult experts.

Article 138
Recommendation for Declaration of Notable Public Interest

1. On the initiative of the Regional director, of the Region or of other interested territorial government bodies, the Commission indicated in article 137 shall acquire necessary information through the superintendent and Regional and Provincial offices, assess the existence of notable public interest in the immovable properties and areas indicated in article 136, and recommend declaration of notable public interest. The recommendation shall include the grounds for the aforesaid declaration with reference to the historical, cultural, natural, morphological and aesthetic characteristics belonging to the immovable properties and areas which have identifying significance and value for the territory in which they are located and which are perceived as such by the population. The recommendation shall contain the prescriptions, measures and criteria for management indicated in article 143, paragraph 3.
2. The recommendations for declaration of notable public interest are aimed at establishing specific regulations for protection and

enhancement, which would be more responsive to the peculiar elements and the value of the specific landscape contexts and would be an integral part of the regulations provided for in the landscape plan.

Article 139

Participation in the Procedures for the Declaration of Notable Public Interest

1. The recommendation of the Commission for the declaration of notable public interest of immovable properties and areas, accompanied by the relative planimetric drawings drawn in a scale suitable to their identification, shall appear for ninety days on the municipal notice board and be deposited for public consultation with the offices of the Municipalities concerned.
2. Notice of the recommendation and its relative publication on the municipal notice board shall be published without delay in at least two dailies of wide circulation in the area concerned, as well as in a daily newspaper with nation-wide circulation and, where these have been established, on the Web-sites of the Region and of other territorial government bodies in whose jurisdiction the immovable properties or the areas to be subjected to protection are located.
3. Within the sixty days following publication of the Commission's recommendation on the municipal notice board, the Municipalities, the Metropolitan areas, the Provinces, associations for the common public interest identified under article 13 of law no. 349 of 8 July 1986 and any other interested parties may present their observations to the Regions, which shall likewise have the power to order a public enquiry.
4. Following fulfilment of the measures referred to in paragraphs 1, 2, and 3, the Region shall, for the immovable properties indicated in letters *a)* and *b)* of article 136, notify the start of the declaration procedure to the proprietor, possessor or holder of the property, and to the Metropolitan Area or Municipality concerned.
5. The notification referred to in paragraph 4 shall include the elements identifying the immovable property, including cadastral elements, as well as the indication of the consequent obligations to be taken on by the proprietor, possessor or holder.
6. Within sixty days of the date of receipt of the notification referred to in paragraph 4, the proprietor, possessor or holder of the immovable property may present observations to the Region.

Article 140

Declaration of Notable Public Interest and Relative Cognitive Measures

1. On the basis of the recommendation of the Commission and having examined the observations and taken into account the result of any

- public enquiry, the Region shall emanate the provision of declaration of notable public interest of the immovable properties indicated in letters *a)* and *b)* and of the areas indicated in letters *c)* and *d)* of article 136.
2. The provision of declaration of notable public interest of the immovable properties indicated in letters *a)* and *b)* of article 136 shall likewise be notified to the proprietor, possessor or holder, deposited in the Municipality, and recorded in the land registers by the Region.
 3. The provisions of declaration of notable public interest are published in the *Official Gazette* of the Italian Republic and in the Official Bulletin of the Region.
 4. A copy of the *Official Gazette* shall be displayed on the notice board of all the Municipalities concerned for the period of ninety days. A copy of the declaration and the relative planimetric drawings shall be deposited for public consultation with the offices of the Municipalities concerned.

Article 141 *Ministerial Measures*

1. When the Commission fails to carry out its assessments within the term of sixty days from the request made under article 138, or when the Regional provision of declaration of notable public interest is not in any case emanated within the period of one year from the aforesaid request, the Regional director may request the Ministry to proceed instead.
2. Having received a copy of any documentation which may have been acquired by the provincial Commission, the competent Ministerial organ shall carry out the preliminary investigation for the purpose of formulating the recommendation for the declaration of notable public interest.
3. The Ministry shall forward the recommendation to the Municipalities concerned so that they may fulfil the obligation set out in article 139, paragraph 1, and it shall directly fulfil the obligations indicated in article 139, paragraphs 2, 4 and 5.
4. The Ministry shall assess the observations presented under article 139, paragraphs 3 and 6, and shall make provision by decree. The decree of declaration of notable public interest shall be notified, deposited, registered and published in the forms provided for by article 140, paragraphs 2, 3 and 4.
5. The provisions set out in the preceding paragraphs shall also apply to recommendations for the integration of existing provisions for declaration of notable public interest, with reference to the contents indicated in article 143, paragraph 3, letters *e)* and *f)*.

Article 142
Areas Protected by Law

1. Until the landscape plan is approved under article 156, the following are in any case subject to the provisions of this Title by virtue of their landscape interest:
 - a) coastal territories including a swath of land to a depth of 300 metres from the waterline, and also land elevated over the sea;
 - b) territories conterminous with lakes, including a swath of land to a depth of 300 metres from the waterline and also land elevated over the lakes;
 - c) the rivers, streams and water courses indicated in the lists provided for in the consolidated law on provisions for waters and electric power plants, approved with royal decree no. 1775 of 11 December 1933, and the relative banks or base foundations of embankments for a swath of 150 metres each;
 - d) mountains for the part exceeding 1,600 metres above sea level as regards the Alpine chain and 1,200 metres above sea level as regards the Apennines and the islands;
 - e) glaciers and glacial cirques;
 - f) parks and national or regional reserves as well as the external protection areas of the parks;
 - g) territories covered with forests or woods, even if marked and damaged by fire, and areas subject to reforestation constraints, as defined by article 2, paragraphs 2 and 6, of legislative decree no. 227 of 18 May 2001;
 - h) areas assigned to agricultural universities and zones designated for civic uses;
 - i) marshlands included in the list provided for by decree no. 448 of the President of the Republic of 13 March 1976;
 - j) volcanoes;
 - k) zones of archaeological interest identified at the time this Code comes into force.
2. The provisions of paragraph 1 shall not apply to areas which on 6 September 1985 were:
 - a) defined in urban planning instruments as zones A and B;
 - b) defined in the urban planning instruments under ministerial order no. 1444 of 2 April 1968, with reference to only the parts included in the multiyear implementation programmes, as zones other than those indicated in letter a) and, in municipalities without such instruments, as zones situated in the built-up centres whose perimeters were fixed pursuant to article 18 of law no. 865 of 22 October 1971.
3. The provisions of paragraph 1 do not apply to places listed therein under letter c) which, in whole or in part, can be considered irrelevant for landscape purposes, and which as such have been entered in a

special list compiled and made public by the Region concerned. The Ministry may, with a measure adopted under the procedures provided for by article 141, nevertheless confirm the landscape importance of the aforementioned assets.

4. The regulations deriving from the actions and measures indicated in article 157 shall in any case remain in force.

Chapter III *Landscape Planning*

Article 143 *Landscape Plan*

1. On the basis of natural and historical characteristics and in relation to the level of relevance and integrity of the landscape values, the plan shall organise the territory into homogenous areas, from those of high landscape value to those which have been significantly compromised or degraded.
2. The plan shall assign corresponding objectives regarding landscape environment values to each area in function of the different levels of landscape values recognised. In particular, landscape quality objectives provide for:
 - a) the maintenance of the characteristics, constituting elements and morphologies, also taking into account architectonic typologies, as well as construction materials and techniques;
 - b) the preparation of lines of urban and construction development that are compatible with the different value levels recognised and which are such that they do not diminish the landscape value of the territory, with particular attention to the safeguarding of sites included in UNESCO's world heritage list, and of agricultural areas;
 - c) the reclamation and upgrading of the buildings and areas subject to protection which have been compromised or degraded, with the aim of recovering pre-existing values or of creating new landscape values which are consistent with and integral to the previous ones.
3. The landscape plan shall contain descriptive and prescriptive content and include recommendations and proposals. Its development shall include the following phases:
 - a) a survey of the entire land area, through the analysis of its historical, natural and aesthetic characteristics and their inter-relationship, and the consequent definition of the landscape values to be protected, reclaimed, upgraded and enhanced;
 - b) analysis of the dynamics of land transformation through the identification of risk factors and elements of landscape

- vulnerability, comparison with other land programming and planning and protection actions;
- c) identification of landscape areas and the relative aims of landscape quality;
 - d) definition of general and operative prescriptions for protection and use of the land included in the defined areas;
 - e) definition of measures for the conservation of the distinctive features of areas protected by law and, where necessary, definition of management criteria and work for landscape enhancement to be carried out on buildings and areas declared to be of notable public interest;
 - f) identification of work to be carried out for the reclamation and upgrading of areas that have been significantly compromised or degraded;
 - g) identification of the measures necessary to ensure that work changing the aspect of the territory be harmonised with the landscape context, with actions and investments for the sustainable development of the areas concerned being under the obligation to refer to the aforesaid measures;
 - h) identification, under article 134, letter c), of any categories of buildings or areas, different to those indicated in articles 136 and 142, to be subjected to specific safeguarding and use measures.
4. The landscape plan shall, in relation to the different typologies of projects and works transforming the territory, distinctly identify the areas in which such works and projects are permitted on the basis of verification of the compliance with the prescriptions, measures and management criteria established in the landscape plan under paragraph 3, letters d), e), f) and g), and those for which the landscape plan also defines binding parameters for the specific provisions to be introduced into land planning instruments when harmonisation and adjustment is effected under article 145.
5. The plan may likewise identify:
- a) the areas, protected under article 142, in which the realisation of projects and works permitted, in consideration of the level of excellence of the landscape values or the advisability of assessing impact on the planning scale, in any case requires the prior granting of the authorisation referred to in articles 146, 147 and 159;
 - b) the areas, to which actions and measures emanated under articles 138, 140, 141 and 157 do not pertain, and in which, instead, projects and works may be carried out on the basis of verification of conformity with the provisions of the landscape plan and of the urban planning instrument, carried out during the building permit procedure and with the modalities set out by the relative regulations, and which do not require the authorisation referred to in articles 146, 147 and 159:

- c) the areas which have been significantly compromised or degraded in which reclamation and upgrading work does not require the authorisation referred to in articles 146, 147 and 159.
6. The entry into force of the provisions set out in paragraph 5, letter *b*), shall be made conditional on the approval of the urban planning instruments adjusted to the landscape plan under article 145. The aforesaid authorisation shall entail the modification of the effects deriving from the provisions referred to in articles 157, 140 and 141, and from the inclusion of the area in the categories listed in article 142.
 7. The plan may make the entry into force of the provisions permitting works and projects under paragraph 5, letter *b*), conditional on the positive outcome of a period of monitoring which verifies effective conformity with the provisions in force pertaining to the transformations of the territory carried out.
 8. The plan in any case provides that in the areas referred to in article 5, letter *b*), sample checks be carried out on the work done and that ascertainment of a significant level of violation of the provisions in force shall determine the re-introduction of the obligation of authorisation referred to in articles 146, 147 and 159, with regard to the municipalities in which violations have been ascertained.
 9. The landscape plan shall also identify priority for projects for the conservation, reclamation, upgrading, enhancement and management of the regional landscape indicating the instruments to be used, including incentive measures.
 10. The Regions, the Ministry and the Ministry of the Environment and Land Protection may enter into agreements for the joint development of landscape plans. The agreement shall establish the time limit within which the joint plan will be developed, as well as the time limit within which the Region shall approve the plan. When the joint development of the plan is not followed by a Regional provision, the plan shall be approved in its stead by Minister's decree, after consultation with the Minister of the Environment and Land Protection.
 11. The agreement referred to in paragraph 10 shall likewise establish premises, procedures, and a timetable for the periodical revision of the plan, with particular reference to supervening provisions emanated under articles 140 and 141.
 12. When the agreement referred to in paragraph 10 is not entered into, or when it is not followed by the joint development of the plan, the provisions of paragraphs 5, 6, 7 and 8 shall not apply.

Article 144

Advertising and Participation

1. The procedures for the approval of landscape plans shall ensure concerted government action, participation of interested parties and of associations created for the protection of common public interests,

identified under article 13 of law no. 349 of 8 July 1986, and a wide variety of forms of advertising.

2. When from the application of article 143, paragraphs 3, 4 and 5 a modification of the effects of the actions and provisions referred to in articles 157, 140 and 141 ensues, the coming into force of the relative provisions of the landscape plan is conditional on the fulfilment of the forms of advertising indicated in article 140, paragraphs 3 and 4.

Article 145

Co-ordination of Landscape Planning with other Planning Instruments

1. Pursuant to article 52 of legislative decree no. 112 of 31 March 1998, the Ministry shall identify the fundamental lines for the organisation of the national territory as regards the protection of the landscape, with the aim of defining planning direction.
2. Landscape plans provide for measures of co-ordination with land and sector planning instruments, and with national and regional economic development instruments.
3. The provisions of the landscape plans referred to in articles 143 and 156 are compulsory for the urban planning instruments of the Municipalities, Metropolitan areas and the Provinces, have immediate prevalence over any non-conforming provisions contained in urban planning instruments, establish safeguarding regulations which may be applied until urban planning instruments conform, and are likewise binding for sector intervention. As regards protection of the environment, the provisions of landscape plans shall in any case prevail over the provisions contained in planning instruments.
4. Within the time-limit established in the landscape plan and in any case not more than two years after its approval, the Municipalities, Metropolitan Areas, Provinces and managing bodies of protected natural areas shall conform and adjust land and urban planning instruments to the provisions of the landscape plans, introducing, when necessary, additional conforming provisions which, in light of the specific characteristics of the territory, will prove useful in best ensuring protection of the landscape values identified in the plans. The limitations to property ensuing from such provisions shall not be eligible for indemnity.
5. The Regions shall regulate the procedures for conformation and adjustment of the urban planning instruments to the provisions of landscape planning, ensuring the participation of the Ministerial organs in the same procedures.

Supervision and Management of Properties Subject to Protection

Article 146 *Authorisation*

1. The proprietors, possessors or holders by whatever legal right of immovable property and areas to which pertain the actions and measures listed in article 157, or the recommendation formulated pursuant to articles 138 and 141, or which are protected under article 142, or subject to protection by the provisions of the landscape plans, may not destroy them, or introduce modifications which may harm the landscape values which are to be protected.
2. In order to obtain preventive authorisation, the proprietors, possessors or holders by whatever legal right of the properties indicated in paragraph 1, shall be obliged to submit the plans of the works they intend to carry out, accompanied by the required documentation, to the Region or the local body to which the Region has delegated the relative competence.
3. Within six months of the coming into force of the present legislative decree, the documentation necessary for the verification of the compatibility of the proposed works with landscape values shall be defined by decree of the President of the Council of Ministers, in agreement with the State-Regions Conference.
4. The application for authorisation of work shall indicate the current state of the property concerned, the elements of existing landscape values, the impact of the proposed changes on the landscape and the mitigating and compensatory elements necessary.
5. In examining the request for authorisation, the competent administration shall verify the conformity of the work with the prescriptions contained in the landscape plans and shall ascertain:
 - a) compatibility with respect to the landscape values recognised in the constraint order;
 - b) congruity with the management criteria of the building or area;
 - c) consistency with the objectives of landscape quality.
6. Having ascertained landscape compatibility of the work and acquired the opinion of the Commission for the Landscape, the administration shall, within the term of forty days from receipt of the application, forward the recommendation for authorisation, accompanied by the project plan and the relative documentation, to the competent Superintendency, notifying the parties concerned. This latter notification shall constitute notification of the start of the relative procedure, pursuant to and for the purposes of law no. 241 of 7 August 1990. Should the administration verify that the documentation attached does not correspond to the documentation requested in paragraph 3, it shall ask for the necessary additional documentation; in such case, the aforementioned term is suspended from the date of the request until receipt of the documentation. Should the administration

- deem it necessary to acquire documentation additional to that established in paragraph 3, or to carry out ascertainment, the term shall be suspended, once only, from the date of request until receipt of the documentation, or from the date of notification of the necessity of ascertainment to the date of carrying out the same, for a period which in any case may not exceed thirty days.
7. The Superintendency shall communicate its opinion within the peremptory term of sixty days from receipt of the recommendation referred to in paragraph 6. Should the term expire without receipt of the above communication, the administration shall in any case rule with regard to the request for authorisation.
 8. Authorisation shall be issued or denied by the competent administration within the term of twenty days from receipt of the superintendent's opinion and shall constitute a distinct action and the premise for concession or other titles legitimising the construction work. Work may not start if authorisation has not been issued.
 9. Should the term referred to in paragraph 8 expire without a decision being taken, power is granted to the parties concerned to request authorisation from the Region, which may also respond through an commissioner appointed for the purpose within the term of sixty days from the date of receipt of the request. Should it be deemed necessary to acquire additional documentation or to carry out ascertainment, the term shall be suspended once only until the date of receipt of the requested documentation or until the date on which ascertainment is carried out. In cases where the Region has not delegated competence to local bodies to issue landscape authorisation, the request for authorisation shall be made instead to the competent Superintendency.
 10. Landscape authorisation:
 - a) becomes efficacious after twenty days have elapsed from its emanation;
 - b) shall be forwarded without delay to the Superintendency which had given its opinion during the procedure, and, along with the opinion, to the Region and the Province and, where these exist, to the mountain community and to the park authority in whose territory the building or area under a constraint order is located;
 - c) may not be issued under any curative statute subsequently to the completion, even if partial, of the works.
 11. Landscape authorisation may be challenged with appeal to the Regional administrative court or with extraordinary appeal to the President of the Republic by the environmental associations created to protect common public interests identified under article 13 of law no. 349 of 8 July 1986 and by any other public or private entity which has an interest in doing so. A ruling with regard to the appeal shall be issued, even if after its presentation or during the appeal process, the party appealing declares that it withdraws appeal or that it no longer has an interest in it. The decisions and orders issued by the Regional administrative tribunal may be challenged by any party having the right

to appeal against a landscape authorisation, even if that party did not lodge the appeal in the first instance.

12. In every Municipality, a list shall be established in which the date of issue of each landscape authorisation is indicated, with a brief description of the relative property in question and indication of whether it was issued contrary to the opinion of the superintendent. The list shall be updated at least every seven days and may be freely consulted. A copy of the list shall be forwarded on a quarterly basis to the Region and the Superintendency, for the purpose of exercising the functions of supervision pursuant to article 155.
13. The provisions of the preceding paragraph shall also apply to the instances concerning mining activities of search and extraction.
14. The provisions of this article do not apply to authorisation for farming activities in quarries and peat bogs. For such activities the powers of the Ministry of the Environment and Land Protection shall remain in effect pursuant to the laws pertaining to such matters, which shall be exercised taking into account the assessment expressed by the competent Superintendency as regards landscape profiles.

Article 147

Authorisation for Works To Be Carried Out by State Administrations

1. When the request for authorisation provided for under article 146 concerns works to be carried out by State administrations, including service accommodation for military personnel, the authorisation shall be issued following a conference of services pursuant to articles 14 ff., of law no. 241 of 7 August 1990 and subsequent modifications and additions.
2. For work projects which are in any case subject to environmental impact assessment pursuant to article 6 of law no. 349 of 8 July 1986 and which are to be carried out by State administrations, the authorisation prescribed by paragraph 1 shall be issued according to the procedures established in article 26.
3. The modalities for the joint and preventive assessment of the works of national defence which affect buildings and areas subject to landscape protection shall be identified within six months from the date on which this Code comes into force, by decree of the President of the Council of Ministers, upon recommendation of the Ministry and in agreement with the Ministry of Defence and the other State administrations concerned.

Article 148

Landscape Commission

1. Within one year of the coming into force of this Code, the Regions shall take action to establish the Commission for the Landscape within the local bodies to which competence for landscape authorisation has been delegated.
2. The Commission shall be composed of individuals with particular and qualified experience in the protection of the landscape.
3. The Commission shall express an obligatory opinion with regard to the granting of authorisations provided for under articles 146, 147 and 159.
4. The Regions and the Ministry may enter into agreements which establish the modalities of participation of the Ministry in the activities of the Commission for the Landscape. In such case, the opinion referred to in article 146, paragraph 7, shall be expressed in that session according to the modalities established in the agreement, with the application of the provisions of article 146, paragraphs 10, 11 and 12 remaining in effect.

Article 149

Works Not Subject to Authorisation

1. Without prejudice to the application of article 143, paragraph 5, letter *b*) and of article 156, paragraph 4, the authorisation prescribed by article 146, article 147 and article 156 is in any case not required in relation to:
 - a*) works for ordinary and extraordinary maintenance, of consolidation and of restoration for purposes of conservation which do not alter the condition of the sites and the exterior appearance of the buildings;
 - b*) works related to the exercise of agricultural, forestry and pastoral activities which do not involve the permanent alteration of the condition of the sites with building structures and other civil works, and on condition that these are works and activities which do not alter the hydro-geological system of the territory.
 - c*) the cutting of the vegetation cover, and for works of forestation, reforestation, reclamation, fire prevention and conservation to be carried out in the woods and forests indicated in article 142, paragraph 1, letter *g*), on condition that these are provided for and authorised by the laws pertaining to the matter.

Article 150

Interdiction and Suspension of Works

1. Independently of the publication on the municipal notice board provided for by articles 139 and 141, of the notification prescribed by article 139, paragraph 4, the Region or Ministry shall have the power to:
 - a) interdict the execution of works without authorisation or which in any case are capable of harming the property;
 - b) order the suspension of works begun, even when the interdiction established in letter a) has not been applied.
2. The interdiction or suspension of work on buildings or areas which have not yet been declared to be of notable public interest shall cease to have efficacy if within the term of ninety days the recommendation of the Commission referred to in article 138 or the recommendations of the Ministerial organ provided for under article 141 have not been published on the municipal notice board, or if the notification provided for under article 139, paragraph 4 has not been received by the parties concerned.
3. The provision for interdiction or suspension of works impinging on a landscape property for which landscape planning foresees reclamation or upgrading measures ceases to have efficacy if within the term of ninety days the Region has not informed the parties concerned of the prescriptions to be observed in the execution of the works in order not to compromise planning implementation.
4. The provisions indicated in the preceding paragraphs shall also be notified to the Municipality concerned.

Article 151

Reimbursement of Expenses following Suspension of Works

1. For works on environmental assets which have not previously been the object of the provisions referred to in articles 138 and 141, or which have not previously been declared to be of notable public interest, and suspension of which has been ordered without the preventive interdiction order referred to in article 150, paragraph 1, the party concerned may obtain the reimbursement of expenses incurred until notification of suspension. The works already carried out shall be demolished at the expense of the authority which ordered the suspension.

Article 152

Works Subject to Particular Prescriptions

1. In the case of opening up of roads and quarries and in the case of conduits for industrial plants and of pilings within and in view of the areas indicated at letters c) and d) of article 136, or in proximity to the buildings indicated in letter a) and b) of the same article, the Region shall have the power to prescribe distances, measures and variations to

the work projects in the process of being carried out, which, taking into due account the economic utility of the works already completed, shall serve to prevent harm to the properties protected by this Title. The Ministry shall have the same power, which it shall exercise after prior consultation with the Region.

Article 153

Advertising Hoardings

1. Within and in the proximity of the landscape assets indicated in article 134, it is forbidden to collocate hoardings and other advertising means without prior authorisation by the competent administration identified by the Region.
2. Along the roads located within and in proximity of the assets indicated in paragraph 1, it is forbidden to collocate hoardings or other advertising means, except with the authorisation issued pursuant to article 23, paragraph 4, of legislative decree no. 285 of 30 April 1992 and subsequent modifications, with the prior favourable opinion of the competent administration identified by the Region regarding the compatibility of the collocation or of the type of advertising means with the landscape values of the buildings and areas subject to protection.

Article 154

Colour of Building Facades

1. The competent administration identified by the Region may order that, in the areas contemplated in letters *c)* and *d)* of article 136, the facades of the buildings whose colour jars with the beauty of the whole be given a different colour which is more in harmony with that beauty.
2. The provision of paragraph 1 shall not apply to buildings referred to in article 10, paragraph 3, letters *a)* and *d)*, declared under article 13.
3. For buildings which fall within the areas of archaeological interest listed in article 136, letter *c)* or in article 139, paragraph 1, letter *m)*, the administration shall as a precautionary measure consult the competent Superintendencies.
4. In case of non-fulfilment on the part of proprietors, possessors or holders of the buildings, the administration shall proceed to ex officio execution.

Article 155
Supervision

1. The functions of supervision of landscape assets protected by this Title are to be exercised by the Ministry and the Regions.
2. The Regions shall monitor compliance with the provisions contained in the present legislative decree on the part of the administrations they have identified for the exercise of the competences pertaining to landscape matters. Non-compliance or persistent inactivity in the exercise of such competences shall entail the activation of substitutive powers.

Chapter V
First Application and Transitional Provisions

Article 156
Verification and Adjustment of Landscape Plans

1. Within four years of the coming into force of the present legislative decree, the Regions which have drawn up the plans provided for in article 149 of legislative decree no. 490 of 29 October 1999 shall verify conformity between the provisions of the aforementioned plans and the provisions of article 143 and, when such conformity is lacking, they shall proceed to the necessary adjustments.
2. Within one hundred and eighty days of the coming into force of this Code, the Ministry, in agreement with the State-Regions Conference, shall prepare a general scheme of agreement with the Regions establishing methodologies and procedures for the survey, analyses, census and cataloguing of the buildings and areas subject to protection, including techniques for their cartographical representation and the features most suitable to ensuring the inter-operability of computer systems.
3. The Regions and the Ministry may enter into agreements to regulate the carrying out of joint activities for the verification and adjustment of land plans, on the basis of the general scheme of agreement referred to in paragraph 2. The agreement shall establish the term within which the Region shall approve the adjusted plan. When upon completion of activities no Regional provision follows, the plan shall be approved in its stead by Ministerial decree.
4. If, from verification and adjustment, in application of article 143, paragraphs 3, 4 and 5, a modification ensues of the effects of the actions and provisions referred to in articles 157, 140 and 141, the coming into force of the relative provisions of the landscape plan shall be conditional to fulfilment of the forms of advertising indicated in article 140, paragraphs 3 and 4.

5. When the agreement set out in paragraph 3 is not entered into, or when it is not followed by joint verification and adjustment of the plan, the provisions of paragraphs 5, 6, 7 and 8 of article 143 shall not apply.

Article 157

Notifications Served, Lists Compiled, Provisions and Actions Issued Under Pre-existing Laws

1. Without prejudice to the application of article 143, paragraph 6, of article 144, paragraph 2, and of article 156, paragraph 4, the following shall maintain efficacy to all intents and purposes:
 - a) the notification of important public interest of natural or panoramic beauties, served on the basis of law no. 778 of 11 June 1922;
 - b) lists compiled under law no. 1497 of 29 June 1939;
 - c) the provisions for declaration of notable public interest issued under law no. 1497 of 29 June 1939;
 - d) the provisions for the recognition of the areas of archaeological interest issued pursuant to article 82, fifth paragraph, of decree no. 616 of the President of the Republic of 24 July 1977, with the addition of article 1 of decree law no. 312 of 27 June 1985, converted with modifications into law no. 431 of 8 August 1985;
 - e) the provisions for declaration of notable public interest issued pursuant to legislative decree no. 490 of 29 October 1999;
 - f) the provisions for recognition of the areas of archaeological interest issued pursuant to legislative decree no. 490 of 29 October 1999.
2. The provisions of this Part shall also apply to buildings and areas regarding which, on the date of the coming into force of this Code, the recommendation was formulated or the perimeter defined for the purposes of the declaration of notable public interest or of recognition as area of archaeological interest.

Article 158

Regional Provisions for Implementation

1. Until special Regional provisions for the implementation of this Code are emanated, the provisions of the regulations approved with royal decree no. 1357 of 3 June 1940 shall remain in effect, insofar as they are applicable.

Article 159

Procedure for Provisional Authorisation

1. Until the approval of landscape plans, under 156 or article 143, and the consequent adjustment of the urban planning instruments is effected pursuant to article 145, the competent administration for granting the authorisation provided for under article 146, paragraph 2, shall give immediate notification of the authorisations granted to the Superintendency, forwarding the documentation produced by the interested party as well as the results of any verifications carried out. Notification shall be sent simultaneously to the parties concerned, for which said notification shall constitute notification of start of procedure, pursuant to and for the intents and purposes of law no. 241 of 7 August 1990.
2. The competent administration may produce a report describing the verifications indicated in article 146, paragraph 5. Authorisation shall be granted or denied within the peremptory term of sixty days from the relative request and shall in case constitute a separate and distinct action and the premise for the building permit or other titles authorising building activity. The works cannot be started without authorisation. In the case of a request for additional documentation or verifications the term shall be suspended once only until the date of receipt of the requested documentation or until the date when verification is carried out. The provisions established in article 6, paragraph 6-*bis*, of ministerial decree no. 495 of 13 June 1994 shall apply.
3. The Ministry may in any case, by means of a justified provision, annul the authorisation within the sixty days following receipt of the relevant and complete documentation.
4. When the term indicated in paragraph 2 expires with no action taken, the interested parties may submit a request for authorisation to the competent Superintendency, which shall take a decision within the term of sixty days from the date of receipt of request. The application, accompanied by the prescribed documentation, is presented to the competent Superintendency and the competent administration is notified. In cases where additional documentation or verifications are requested the term shall be suspended once, only until the date of receipt of the requested documentation or until the date verifications are carried out.
5. For landscape assets which on the date in which this Code comes into force are the object of provisions adopted under article 1-*quinquies* of decree law no. 312 of 27 June 1985, converted with modifications into law no. 431 of 8 August 1985 and published in the *Official Gazette* prior to 6 September 1985, the authorisation set out in paragraph 1 and in articles 146 and 147 may be granted only after approval of the landscape plans.

FOURTH PART *Sanctions*

TITLE I

Administrative Sanctions

Chapter I Sanctions Relative to the Second Part

Article 160 Order to Restore Places to Original State

1. If a cultural property is harmed as a result of violations of the protection and conservation obligations established by the provisions of Chapter III of Title I of the Second Part, the Ministry shall order the transgressor to carry out the work necessary to restore the property to its original state at his/her own expense.
2. When the works to be ordered pursuant to paragraph 1 have urban planning-building importance the start of procedure and the final provision shall also be notified to the Metropolitan area or Municipality concerned.
3. In case of non-compliance with the order issued pursuant to paragraph 1, the Ministry shall carry out the order ex officio at the expense of the transgressor. The collection of the relative expenses shall be effected in the forms established in the regulations on the compulsory collection of State property revenues.
4. When restoration to original state is not possible, the transgressor must pay to the State an amount which is equal to the value of the thing lost or to the reduction in the value of the thing.
5. If the assessment of the amount, made by the Ministry, is not accepted by the party obliged to pay, the same sum shall be determined by a commission composed of three members, one of which shall be appointed by the Ministry, one by the party obliged to pay and a third by the president of the court. The relative costs shall be advanced by the party obliged to pay.

Article 161 Damage to Things Found

1. The measures established in article 160 shall also apply to those who cause damage to the things referred to in article 91, in violation of the obligations indicated in articles 89 and 90.

Article 162 Violations Relating to Collocation of Advertising

1. Whosoever collocates hoardings or other advertising means in violation of the provisions set out in article 49 shall be punishable with the

sanctions established in article 23 of legislative decree no. 285 of 30 April 1992 and subsequent modifications and additions.

Article 163

Loss of Cultural Property

1. If, as the result of violation of the obligations established by the provisions of Section I of Chapter IV and Section I of Chapter V, a cultural property is no longer traceable or proves to have been taken out of the national territory, the transgressor shall be obliged to pay to the State a sum equal to the value of the property.
2. If the offence can be charged to more than one person, the persons shall be obliged to pay the sum jointly and severally.
3. If the assessment of the sum made by Ministry is not accepted by the party obliged to pay, the same sum shall be determined by a commission composed of three members, one of which shall be appointed by the Ministry, one by the party obliged to pay and a third by the president of the court. The relative costs shall be advanced by the party obliged to pay.
4. The assessment of the commission may be challenged in case of error or manifest inequity.

Article 164

Violations Relating to Jural Acts

1. Transfers, agreements and legal transactions in general, performed in violation of the prohibitions established by the provisions of Title I of the Second Part, or in non-compliance of the conditions and modalities prescribed therein, shall be null and void.
2. The power of the Ministry to exercise pre-emption pursuant to article 61, paragraph 2 shall stand.

Article 165

Violations of the Provisions Pertaining to International Circulation

1. Apart from the cases of complicity in a crime provided for in article 174, paragraph 1, whosoever transfers abroad the things or properties indicated in article 10, in violation of the provisions set out in Sections I and II of Chapter V of Title I of the Second Part, shall be punishable with administrative sanction consisting in the payment of a sum ranging from € 77.50 to € 465.00.

Article 166

Failure to Submit Exportation Documents

1. Whosoever effects the exportation of a cultural property beyond the territory of the European Union pursuant to EEC regulations and fails to submit to the competent export office 3 copies of the forms provided for in (EEC) Commission regulation no. 752/93 of 30 March 1993, in application of the EEC regulation, shall be punishable with administrative sanction consisting in the payment of a sum ranging from € 103,50 to € 620.00.

Chapter II
Sanctions Relative to the Third Part

Article 167
Order to Restore to Original State or to Pay Compensation

1. In case of violation of the obligations and orders set out in Title I of the Third Part, the transgressor shall, if the administrative authority responsible for landscape environment protection shall deem it more opportune in the interest of the protection of the properties indicated in article 134, be obliged to restore the cultural property to its original state at his/her own expense or pay a sum equivalent to the greater amount between the damage caused or the profit derived through the transgression. The sum shall be determined on the basis of an official assessment.
2. With the restoration to original state order the transgressor shall be assigned a term for complying with the order.
3. In case of non-compliance, the administrative authority responsible for landscape protection shall proceed ex officio through the prefect and make the bill of costs enforceable.
4. The sums received as a result of the application of paragraph 1 shall be utilised for safeguarding purposes, works for reclamation of landscape values and the upgrading of deteriorated areas.

Article 168
Violations Relating to Hoardings

1. Whosoever collocates hoardings or other advertising means in violation of the provisions referred to in article 153 shall be punishable with the sanctions set out in article 23 of legislative decree no. 285 of 30 April 1992 and subsequent modifications.

TITLE II
Penal Sanctions

Chapter I
Sanctions Relative to the Second Part

Article 169
Unlawful Works

1. The following shall be punishable by imprisonment for a period of six months to one year and by a fine ranging from € 775.00 to € 38,734.50:
 - a) whosoever without authorisation demolishes, removes, modifies, restores or carries out works of any kind on the cultural properties indicated in article 10;
 - b) whosoever, without the authorisation of the superintendent, proceeds to detach frescoes, escutcheons, graffiti, inscriptions, tabernacles or other ornaments decorating buildings, whether or not they be displayed to public view, even when no declaration under article 13 has been made;
 - c) whosoever carries out, in cases of absolute urgency, temporary works indispensable to avoiding substantial damage to the properties indicated in article 10, without immediately notifying the superintendent or without submitting for authorisation, in the briefest time possible, the project design for the definitive works.
2. The same punishment established in paragraph 1 shall apply in cases of non-compliance with an order to suspend works issued by the superintendent pursuant to article 28.

Article 170
Unlawful Use

1. Whosoever designates the cultural properties indicated in article 10 for a use that is incompatible with their historical or artistic nature or which is harmful to their conservation or integrity shall be punishable with imprisonment for a period ranging from six months to one year and a fine ranging from € 775.00 to € 38,734.50.

Article 171
Unlawful Collocation and Removal

1. Whosoever fails to collocate cultural properties belonging to the subjects established in article 10, paragraph 1 in their designated place and in the manner indicated by the superintendent shall be punishable

by imprisonment for a period ranging from six months to one year and a fine ranging from € 775.00 to € 38,734.50.

2. Subject to the same punishment is the holder who fails to notify the competent superintendent of the removal of cultural properties to another locality, due to a change in place of abode, or the holder who fails to comply with the prescriptions issued by the superintendent in order to avoid damage to the same properties during transport.

Article 172

Non-compliance with the Prescriptions of Indirect Protection

1. Whosoever fails to comply with the prescriptions issued by the Ministry pursuant to article 45, paragraph 1 shall be punishable by imprisonment for a period ranging from six months to one year and a fine ranging from € 775.00 to € 38,734.50.
2. Non-compliance with the precautionary measures contained in the action referred to in article 46, paragraph 4, is punishable under article 180.

Article 173

Violations Pertaining to Alienation

1. The following are punishable with imprisonment for a period of up to one year and fine ranging from € 1,549.50 to € 77,469.00 :
 - a) whosoever, without the prescribed authorisations, transfers cultural properties indicated in article 55 and 56;
 - b) whosoever, being under the obligation to present declaration of the deeds of transfer or of the detention of cultural properties, within the term indicated in article 59, fails to fulfil the aforesaid obligation;
 - c) the transferor of a cultural property subject to the right of pre-emption who effects delivery of the thing pending the term set out in article 61, paragraph 1.

Article 174

Unlawful Exit and Exportation

1. Whosoever transfers abroad things of artistic, historical, archaeological, ethno-anthropological, bibliographical, documental or archival interest, as well as the things indicated in article 11, paragraph 1, letters *f*), *g*), and *h*), without certificate of free circulation or export licence, shall be punishable by imprisonment for a period of one to four years or with a fine ranging from € 258.00 to € 5,165.00.
2. The punishment established in paragraph 1 shall likewise apply to whosoever, upon expiry of term, fails to return to national territory

cultural properties for which temporary exit or exportation was authorised.

3. The judge shall order confiscation of the things, except when these belong to a person extraneous to the crime. Confiscation shall take place in accordance with the regulations of the customs laws pertaining to contraband.
4. If the offence is committed by a person who carries out activities of sale to the public or of exhibition for the purposes of sale of objects of cultural interest, the sentence is followed by the prohibition established under article 30 of the penal code.

Article 175

Violations Relating to Archaeological Research

1. The following are punishable by imprisonment of up to a year and a fine ranging from € 310.00 to € 3,099.00:
 - a) whosoever carries out archaeological searches or, in general, works for the discovery of things indicated in article 10 without concession, or fails to comply with the prescriptions established by the administration.
 - b) whosoever, being under such obligation, fails to declare within the term prescribed by article 90, paragraph 1, the things indicated in article 10, found fortuitously, or fails to provide for their temporary conservation.

Article 176

Unlawful Appropriation of Cultural Property Belonging to the State

1. Whosoever appropriates cultural property indicated in article 10 belonging to the State under article 91 shall be punishable by imprisonment for a term of up to three years and with a fine ranging from € 31.00 to € 516.50.
2. Punishment shall be imprisonment for a period of one to six years and a fine ranging from € 103.00 to € 1,033.00 if the offence is committed by a person who has obtained the search concession provided for in article 89.

Article 177

Collaboration in the Recovery of Cultural Property

1. The punishment applicable for the crimes set out in articles 174 and 176 shall be reduced by one to two thirds when the offender offers collaboration that is decisive or at any rate of substantial importance for the recovery of properties unlawfully removed or transferred abroad.

Article 178
Forgery of Works of Art

1. The following shall be punishable by imprisonment for a period of three months to four years and with a fine ranging from € 103.00 to € 3,099.00:
 - a) whosoever, for purposes of gain, counterfeits, alters or reproduces a work of painting, sculpture or graphic art, or an antique object or an object of historical or archaeological interest;
 - b) whosoever, even if he/she did not participate in the counterfeiting, alteration or reproduction, puts on sale, or holds for purposes of sale, or introduces into the territory of the State for such purpose, or in any case puts into circulation, as authentic, counterfeited, altered or reproduced samples of works of painting, sculpture, graphic art or antique objects, or objects of historical or archaeological interest;
 - c) whosoever, knowing them to be false, authenticates works or objects, indicated in letters a) and b) which have been counterfeited, altered or reproduced;
 - d) whosoever, through other declarations, evaluations, publications, affixation of stamps or labels or by any other means, certifies as authentic or contributes to the certification as such of works or objects indicated in letters a) and b) which have been counterfeited, altered or reproduced, knowing them to be false.
2. If the offences are committed in the exercise of a commercial activity punishment shall be increased and conviction shall be followed by the prohibition established under article 30 of the penal code.
3. Conviction for offences set out in paragraph 1 shall be published in three daily newspapers with national circulation to be designated by the judge and published in three different localities. Article 36, paragraph 3, of the penal code shall apply.

Article 179
Non-punishable Cases

1. The provisions of article 178 shall not apply to whosoever reproduces, holds, puts on sale or otherwise distributes copies of works of painting, sculpture or graphic art, or copies or imitations of antique objects or objects of historical or archaeological interest which are expressly declared to be inauthentic when exhibited or sold, by means of a written annotation on the work or on the object or, when this is not possible because of the nature or size of the copy or imitation, by means of a declaration issued upon exhibition or sale. Nor do the provisions apply

to artistic restorations which do not reconstruct the original work in a determinant manner.

Article 180

Non-compliance with Administrative Measures

1. Except in cases where the offence constitutes a more serious crime, whosoever fails to comply with an order issued by the authority responsible for the protection of cultural properties in accordance with this Title shall be punished with the penalties set out in article 650 of the penal code.

Chapter II

Sanctions Relative to the Third Part

Article 181

Works Carried Out Without Authorisation or Contrary To Its Provisions

1. Whosoever, without the prescribed authorisation or contrary to it, carries out works of any kind on landscape assets shall be punishable with the penalties provided for in article 20 of law no. 47 of 28 February 1985.
2. The judgment convicting the guilty party shall rule that the sites be restored to their original state at the party's expense. A copy of the judgement shall be forwarded to the Municipality in whose territory the violation has been committed.

FIFTH PART

Interim provisions, abrogation and coming into effect of laws

Article 182

Transitional Measures

1. Article 7, paragraph 1, of ministerial decree no. 294 of 3 August 2000, as substituted by article 3 of ministerial decree no. 420 of 24 October 2001, shall continue to apply restrictively to those who, as of the date of this law coming into effect, are enrolled in State university degree courses or schools of restoration therein established.
2. The provisions set out in article 7, paragraph 2, letters *a)*, *b)* and *c)*, of decree no. 294 of 2000, as substituted by article 3 of decree no. 420 of 2001 shall remain in effect. The provisions set out in article 7,

paragraph 2, letters *a*) and *c*) of decree no. 294 of 2000, as substituted by article 3 of decree no. 420 of 2001, shall also apply to those who, on the date when such latter decree came into force, were enrolled, even if not yet in possession of a diploma, in a State or Regional school for restoration established therein until the 2002-2003 academic year.

3. Within sixty days of this Code coming into effect, the Regions and other territorial government bodies shall adopt the necessary provisions for adjustment to the prescription set out in article 103, paragraph 4. In the case of non-fulfilment, the Ministry shall proceed to act in their stead, pursuant to article 117, fifth paragraph, of the Constitution.

Article 183 *Final Provisions*

1. The provisions set out in articles 13, 45, 141, 143, paragraph 10, and 156, paragraph 3, are not subject to preventive control pursuant to article 3, paragraph 1, of law no. 20 of 14 January 1994.
2. The implementation of articles 5 and 44 shall not entail new and greater burdens for the public purse.
3. Service on the commissions established by this Code is intended to be proffered free of charge, and such service shall in any case not entail new or greater burdens for the public purse.
4. The costs ensuing from the exercise on the part of the Ministry of the powers set out in articles 34, 35 and 37 shall be taken on within the limitations of the budget allocation for the relative items of expenditure.
5. The sureties provided by the State in the implementation of article 48, paragraph 5, are listed in an annex to the budgetary provisions of the Ministry of the Economy and Finance, pursuant to article 13 of law no. 468 of 5 August 1978. In the case of discussion of the said surety the Ministry shall forward the pertinent report to Parliament.
6. The laws of the Republic may not introduce forms of derogation to the principles of this legislative decree except through the express modification of its provisions.
7. This Code shall come into effect on the first day of May 2004.

Article 184 *Abrogated Laws*

1. The following provisions are abrogated:
 - law no. 1089 of 1 June 1939, article 40, in the text last substituted by article 9 of law no. 237 of 12 July 1999;
 - decree no. 1409 of the President of the Republic of 30 September 1963, restrictively: to article 21, paragraphs 1 and 3, and paragraph 2, in the text, respectively, modified and substituted by

- article 8 of legislative decree no. 281 of 30 July 1999; to articles 21-*bis* and 22, paragraph 1, in the text, respectively, integrated and modified by article 9 of the same legislative decree;
- decree no. 3 of the President of the Republic of 14 January 1972, restrictively to article 9;
 - legislative decree no. 285 of 30 April 1992, restrictively to article 23, paragraph 3 and the first sentence of paragraph 13-*ter*, integrated by article 30 of law no. 472 of 7 December 1999;
 - law no. 127 of 15 May 1997, restrictively to article 12, paragraph 5, in the text modified by article 19, paragraph 9, of law no. 448 of 23 December 1998; and paragraph 6, first sentence;
 - law no. 352 of 8 October 1997, restrictively to article 7, as modified by articles 3 and 4 of law no. 237 of 12 July 1999 and by article 4 of law no. 513 of 21 December 1999;
 - legislative decree no. 112 of 31 March 1998, restrictively to articles 148, 150, 152 and 153;
 - law no. 237 of 12 July 1999, restrictively to article 9;
 - legislative decree no. 281 of 30 July 1999, restrictively to article 8, paragraphs 2 and 9;
 - legislative decree no. 490 of 29 October 1999 and subsequent modifications and additions;
 - decree no. 283 of the President of the Republic of 7 September 2000;
 - legislative decree no. 196 of 30 June 2003, restrictively to article 179, paragraph 4;
 - law no. 172 of 8 July 2003, restrictively to article 7.

Approved, *Minister for Cultural Heritage and Activities*
URBANI

Annex A

(Provided for by articles 63, paragraph 1; 74, paragraphs 1 and 3; 75, paragraph 3, letter a)

A. Categories of cultural property:

1. Archaeological finds dating back more than one hundred years and found in:
 - a) terrestrial and marine excavations and discoveries;
 - b) archaeological sites;
 - c) archaeological collections.
2. Elements, that are an integral part of artistic, historical or religious

monuments and are the result of dismemberment of monuments which date back more than one hundred years.

3. Paintings and pictures other than those belonging to categories 4 and 5, entirely created by hand on any base and with any material (1).

4. Watercolours, gouaches and pastels, entirely painted by hand on any base.

5. Mosaics, other than those of categories 1 and 2, entirely made by hand with any material (1) and drawings made entirely by hand on any base.

6. Original engravings, prints, serigraphs and original lithographs and their relative matrices, as well as original posters (1).

7. Original works of statuary art or sculpture and copies obtained with the same procedures as the original (1), other than those in category 1.

8. Photographs, films and relative negatives (1).

9. Incunabula and manuscripts, including geographical maps and musical scores, singly or in collections (1).

10. Books over a hundred years old, singly or in collections.

11. Printed geographical maps dating back more than two hundred years.

12. Archives and supports, including elements of any nature dating back more than fifty years.

13. a) Collection and samples from zoological, botanical, mineralogical and anatomical collections:

b) Collections of historical, paleontological, ethnographical or numismatic interest

14. Means of transport dating back more than seventy-five years.

15. Other antique objects not contemplated by categories 1 to 14, dating back more than fifty years.

Cultural properties which fall into categories 1 to 15 are governed by this Consolidated Text only if their value is equal to or exceeds the values indicated in letter B.

B. Values applicable to the categories indicated in letter A (in euros).

- 1) of any value
 1. Archaeological finds
 2. Dismemberment of monuments
 9. Incunabula and manuscripts
 12. Archives

- 2) 13,979.50
 5. Mosaics and drawings
 6. Engravings
 8. Photographs
 11. Printed geographical maps

- 3) 27,959.00
 4. Watercolours, gouaches and pastels

- 4) 46,598.00
 7. Statuary art
 10. Books
 13. Collections
 14. Means of transport
 15. Other objects

- 5) 139,794.00
 3. Oil paintings

Compliance with the conditions relative to the values must be ascertained when the request for restitution is presented.

(1) Dating back more than fifty years and not belonging to the author.

Approved, *Minister for Cultural Heritage and Activities*
URBANI

NOTES

Notice:

The text of the notes published herein was written by the administration competent for each matter pursuant to article 10, paragraph 3 of the consolidated text of the provisions for the enactment of laws, the

emanation of decrees of the President of the Republic, and the official publications of the Italian Republic, approved by decree no. 1092 of the President of the Republic of 28 December 1985, for the sole purpose of facilitating the reading of the legal provisions to which the note refers. The value and efficacy of the legislative acts recorded herein remain inviolate. For EEC directives, essential particulars of publication are furnished in the *Official Gazette* of the European Communities (OGEC).

Notes to the premises:

- Articles 76, 87, 117 and 118 of the Constitution of the Italian Republic, published in the extraordinary edition of the *Official Gazette* of the Italian Republic no. 298 of 27 December 1947, as modified by constitutional law no. 3 of 18 October 2001, published in *Official Gazette* no. 248 of 24 October 2001, establish:

<<Art. 76. – The exercise of the legislative function may not be delegated to the Government without the determination of principles and directive criteria and only for a restricted period of time and for definite purposes.

Art. 87. – The President of the Republic is the head of state and represents national unity.

He/she may send messages to the Chambers.

He/she announces the election of the new Chambers and fixes the dates of their first meetings.

He/she authorises the presentation to the Chambers of draft laws initiated by the Government.

He/she enacts the laws and emanates the decrees having the force of law, and regulations.

He/she announces popular referendums in the cases established by the Constitution.

He/she appoints, in the cases established by law, the functionaries of the State.

He/she accredits and receives diplomatic representatives, ratifies International treaties, with the prior authorisation, when necessary, of the Chambers.

He/she detains command of the Armed Forces, presides over the Supreme Council of Defence constituted in accordance with the law, declares state of war deliberated by the Chambers.

He/she presides over the Superior Council of Magistrates.

He/she may grant pardons and commute sentences.

He/she confers the honours of the Republic.

Art. 117. – Legislative power shall be exercised by the State and the Regions in the respect of the Constitution, as well as the constraints deriving from European Community regulations and international obligations.

The State shall have exclusive legislation in the following matters:

- a) foreign policy and international relations of the State; relations of the State with the European Union; right to asylum and legal status of citizens of States which do not belong to the European Union;
- b) immigration;
- c) relations between the Republic and religious denominations;
- d) defence and the Armed Forces; security of the State; arms, munitions and explosives;
- e) currency, protection of savings and financial markets; protection of competition; monetary system; tax and accounting system of the State; equalisation of financial resources;
- f) organs of the State and relative electoral laws; State *referenda*; election of the European Parliament;
- g) administrative regulation and organisation of the State and the national government bodies;
- h) public order and safety, with the exception of the local administrative police;
- i) citizenship, marital status and birth and death registry offices;
- j) trial jurisdiction and regulations; civil and penal system; administrative justice;
- k) determination of essential levels of services concerning civil and social rights which must be ensured throughout the national territory;
- l) general regulations on education;
- m) social security;
- n) electoral legislation, government organs and fundamental functions of Municipalities, Provinces and Metropolitan Areas;
- o) customs, protection of national borders and international disease prevention;
- p) weights, measures and determination of time; statistical and electronic co-ordination of State, Regional, and local administration data; intellectual property;
- q) protection of the environment, the ecosystem and cultural property.

Matters of concurrent legislation include those relative to: international relations and relations with the European Union of the Regions; foreign

trade; job security and safety; education, without prejudice to the autonomy of scholastic institutions remaining, and with the exception of vocational education and training; professions; scientific and technological research and support for innovation in the productive sectors; safeguarding of health; food and nutrition; sports regulations; public safety; management of the territory; civil ports and airports; major transportation and navigation networks; communications regulations; national production, transportation and distribution of energy; complementary and supplementary social security; harmonisation of public budgets and co-ordination of public finances and the tax system; enhancement of the cultural and environmental heritage and promotion and organisation of cultural activities; savings banks, rural savings banks, credit institutions of a regional nature; land and agricultural credit institutions of a regional nature. In matters of concurrent legislation, the legislative power belongs to the Regions, except for the determination of the fundamental principles, reserved to the legislation of the State.

The Regions shall have legislative powers with reference to any matter not expressly reserved to the legislation of the State.

The autonomous Regions of Trento and Bolzano shall, in matters under their competence, participate in the decisions aimed at the formation of European Community regulatory instruments and provide for the implementation and execution of international accords and instruments of the European Union, in compliance with the rules of procedure established by the laws of the State, which govern the modalities for the exercise of substitutive powers in cases of non-compliance.

Law-making powers shall belong to the State in matters of exclusive legislation, except in cases of delegation to the Regions. Law-making powers shall belong to the Regions in all other matters. The Municipalities, the Provinces and the Metropolitan areas shall have law-making powers with regard to the regulation of the organisation and the exercise of the functions attributed to them.

Regional laws shall remove any obstacle which prevents full equality between men and women in social, cultural and economic life and shall promote equal opportunity between women and men for elected office.

Regional law shall ratify the agreements of a Region with other regions in order to improve the exercise of their functions, and may also do so with the identification of common bodies.

In matters under its competence, the Region may conclude accords with other States and agreements with territorial bodies within other States in the cases and forms governed by the laws of the State.

Art. 118. – The administrative functions are assigned to the Municipalities, except in cases where, in order to ensure their unified exercise, these are conferred on Provinces, Metropolitan areas, Regions and the State, on the basis of the principles of subsidiarity, differentiation and appropriateness.

The Municipalities, Provinces and Metropolitan Areas are the title-holders of their own administrative functions and those conferred upon them by State or Regional law, according to their respective competences.

State law governs forms of co-ordination between the State and the Regions in matters set out in letters *b)* and *h)* of the second paragraph of art. 117, and also governs forms of agreement and co-ordination between the State and the Regions in matters of cultural heritage protection.

The State, Regions, Metropolitan areas, Provinces and Municipalities shall promote autonomous initiative on the part of the citizens, both as individuals and in association, for carrying out activities of general interest, on the basis of the principles of subsidiarity >>.

– Article 14 of Law no. 400 of 23 August 1988, containing “Rules and Regulations for Government Activities and the Regulations of the Presidency of the Council of Ministers”, published in the ordinary supplement to *Official Gazette* no. 214 of 12 September 1988 establishes the following:

<<Article 14 (*Legislative decrees*). – 1. The legislative decrees adopted by the Government under article 76 of the Constitution shall be emanated by the President of the Republic with the denomination of “legislative decree” and with the indication, in the preamble, of the law of delegation, of the resolution of the Council of Ministers and of the other fulfilments of the procedure prescribed by the delegation law.

2. The emanation of the legislative decree must occur within the term fixed by the delegation law; the text of the legislative decree adopted by the Government shall be forwarded to the President of the Republic, for emanation, at least twenty days before the expiry date.

3. If the enabling statute refers to a plurality of distinct matters which may be dealt with separately, the Government may exercise it by means of several successive instruments for one or more of the aforementioned matters. With regard to the final term established by the law of delegation, the Government shall periodically inform the Chambers on the criteria it is following in the organisation of the exercise of the legislative power.

4. In any case, when the term established for the exercise of legislative power exceeds two years, the Government must ask for the opinion of

the Chambers on the schemes for the delegated decrees. The opinion shall be expressed by the permanent Commissions of the two Chambers competent for each matter within sixty days, indicating specifically any provisions which are deemed not to correspond to the directives of the law of delegation. In the thirty days following, the Government, having examined the opinion, shall send back the texts, with observations and any changes, to the Commissions for a final opinion which must be expressed within thirty days>>.

– Legislative decree no. 368 of 20 October 1988, containing: “Creation of the Ministry for Cultural Heritage and Activities, pursuant to article 11 of Law no. 59 of 15 March 1997”, is published in *Official Gazette* no. 250 of 26 October 1998.

– Legislative decree no. 490 of 29 October 1999, containing “The Consolidated Text of the Legislative Provisions for Cultural Heritage and Activities, in accordance with art. 1 of law no. 352 of 8 October 1997” is published in the ordinary supplement to *Official Gazette* no. 302 of 27 December 1999.

– Art. 10 of law no. 137 of 6 July 2002 containing “Enabling Statute for the Reform of the Organisation of the Government and of the Presidency of the Council of Ministers, and of Public Bodies”, published in *Official Gazette* no. 158 of 8 July 2002, as modified by art. 1-*bis* of law decree no. 24 of 18 February 2003, published in *Official Gazette* no. 40 of 18 February 2003 and converted, with modifications, into law no. 82 of 17 April 2003, published in *Official Gazette* no. 92 of 19 April 2003, establishes:

– Article 10 (*Enabling Statute for the Re-organisation and Codification of Cultural and Environmental Assets, Entertainment, Sports, Literary Property and Copyright*). – 1. With the enabling statute referred to in art. 1, as regards the Ministry for Cultural heritage and Activities, remaining in force, the Government is empowered to adopt, within eighteen months of the date of the coming into force of the present law, one or more legislative decrees for the re-organisation and, restrictively to letter *a*), the codification of the legislative provisions for:

- a) cultural and environmental assets;
- b) cinematography;
- c) theatre, music, dance and other forms of live entertainment;
- d) sport;
- e) literary property and copyright;

2. The legislative decrees referred to in paragraph 1 shall, without determining new or greater burdens for public purse, adhere to the following guiding principles and criteria:

- a) compliance with articles 117 and 118 of the Constitution;
- b) compliance with European Community regulations and international agreements;

- c) improvement of the effectiveness of measures concerning the cultural heritage and activities, including the aim of bringing about best possible use of the resources granted and increase in revenues; clear indication of public policy in the sector, in order to also achieve a significant and transparent budget accounting system; streamlining and abbreviation of procedures; conformity of the procedures to the new computer technologies;
- d) with reference to the matter referred to in letter a) of paragraph 1: update the tools for identification, conservation and protection of cultural and environment assets, also through the creation of foundations open to participation by Regions, local bodies, bank foundations, private and public associations, without establishing further restrictions to private property, nor abrogation of current instruments and, in an case, in complete respect of international agreements, above all as regards the circulation of cultural property; re-organise services offered, which may also be effected by means of concession to parties other than the State, by establishing foundations open to participation by Regions, local bodies, bank foundations, public and private associations, in line with the provisions set out in letter *b-bis*) of paragraph 1 of art. 10 of legislative decree no. 368 of 2 October 1998, and subsequent modifications; adapt the regulations for public tenders concerning cultural properties, modifying the thresholds for using the different procedures to identify contractors so as to permit the participation of firms of artisans of proven specialisation and experience, redefining the levels of planning necessary for awarding contracts, defining the awarding criteria and foreseeing the possibility of variations beyond the percentage limits ordinarily established, in relation to objective characteristics and the needs of protection and conservation of cultural property; redefine the modalities for the formation and functioning of the advisory organisms which intervene in the procedures for granting funding and facilitations to cultural bodies and institutions, for the purpose of a precise definition of the responsibilities of the technical organs, according to the principle of separation between administration and policy and with particular attention to profiles of incompatibility; identify forms of collaboration, during the procedures process, between the administrations for cultural heritage and activities and defence, for the realisation of works for military defence;
- e) with reference to matters set out in letters *b*) and *c*) of paragraph 1: rationalise the advisory organisms and their relative functions, in ways which may include suppression, merging of and reduction in the number of organisms and their components; streamline the procedures for paying out funding and redefine the modalities for the creation and functioning of the organisms which participate in the procedures for the identification of associations and individuals that may receive funding and the quantification of such funding; reform the organisational structure of the organisms and the bodies in the sector; revise the

system of checks and balances on the use of resources assigned and the effects produced by the measures;

- f) with reference to the matter set out in letter d) of paragraph 1: harmonise the legislation with the general principles which inspire the States belonging to the European Union as regards doping; re-organise the tasks of the Sport Credit Institute (Istituto per il credito sportivo), ensuring that the Regions and autonomous local bodies are represented in the organs as well; guarantee funding instruments to private subjects;
- g) with reference to the matter set out in letter e) of paragraph 1; reorganise, in the respect of the guiding principles and criteria indicated in article 14, paragraph 1, letter b) of law no. 59 of 15 March 1997, the Italian Society of Authors and Publishers (SIAE), whose statute must ensure an adequate presence of authors, publishers and other creative individuals in the organs of the Society and maximum transparency in the sharing out of the proceeds from the levy of copyrights among those entitled to them; harmonise the legislation relative to the production and dissemination of digital and multimedia content and software with the general principles followed by the European Union in matters pertaining to copyright and related rights.

3. The legislative decrees referred to in paragraph 1 explicitly indicate the provisions which have been substituted or abrogated, with the exception of the application of article 15 of the provisions on the law in general in the premise to the civil code. The legislative decrees referred to in paragraph 1 are adopted, after consultation with the Unified Conference referred to in article 8 of legislative decree no. 281 of 28 August 1997, with the prior opinion of the Parliamentary Commissions competent in each matter, which shall be expressed within the term of sixty days of receipt of the relative request. Upon expiration of such term, the legislative decrees may in any case be adopted.

4. Provisions which are corrective and supplementary to the legislative decrees referred to in paragraph 1 may be adopted, respecting the same guiding principles and criteria and with the same procedures referred to in the present article, within two years of the date of their coming into force.

Notes to art. 1:

– Art. 9 of the Constitution of the Italian Republic, published in the extraordinary edition of *Official Gazette* no. 298 of 27 December 1947, establishes:

<<Art. 9. – The Republic shall promote the development of culture and scientific and technological research.

It shall protect the landscape and the historical and artistic heritage of the Nation”.

– For the text of art. 117 of the Constitution of the Italian Republic, see note to the premise.

Note to art. 4:

– For the text of art. 118 of the Constitution of the Italian Republic, see note to the premise.

Notes to art. 9:

– Art. 12 of the Accord signed at Rome on 18 February 1984, which introduces modifications to the Lateran Treaty of 11 February 1929 between the Italian Republic and the Holy See, ratified and implemented with law no. 121 of 25 March 1985, published in the ordinary supplement to *Official Gazette* no. 85 of 10 April 1985, establishes:

<<Art. 12. – 1. The Holy See and the Italian Republic, within their respective spheres, shall collaborate for the protection of the historical and artistic heritage. For the purpose of harmonising the application of Italian law with exigencies of a religious nature, the competent organs of the two Parties shall agree upon suitable provisions for the safeguarding, enhancement and enjoyment of cultural properties of religious interest belonging to ecclesiastical bodies and institutions. The conservation and consultation of the archives of historical interest and of the libraries of the same bodies and institutions shall be fostered and facilitated on the basis of agreements between the competent organs of the two Parties.

2. The Holy See shall continue to have at its disposal the Christian catacombs located on Roman soil and other parts of the Italian territory along with the consequent burden of their custody, maintenance and conservation, surrendering the use of the other catacombs. In compliance with the laws of the State and notwithstanding any rights of third parties, the Holy See may proceed to necessary excavations and to the transferral of sacred relics>>.

– Art. 8 of the Constitution of the Italian Republic, published in *Official Gazette* – extraordinary edition – no. 298 of 27 December 1947, establishes:

<<Art. 8. – All religious denominations shall be equally free before the law.

Religious denominations other than the Catholic denomination shall have the right to organise themselves according to their own statutes, insofar as the same are not contrary to Italian laws.

Their relations with the State shall be governed by law on the basis of agreements with the relative agencies of representation>>.

Note to art. 12:

– Art. 27 of decree law no. 269 of 30 September 2003, containing: “Urgent Provisions for Promoting Development and for the Correction of Public Accounts”, published in the ordinary supplement to *Official Gazette* no. 229 of 2 October 2003 and converted, with modifications, into law no. 326 of 24 November 2003, published in the ordinary supplement to *Official Gazette* no. 274 of 25 November 2003, establishes:

<<Art. 27 (*Verification of Cultural Interest of Immovable Government Property*). – 1. The immovable and movable things belonging to the State, the Regions, the Provinces, Metropolitan Areas, Municipalities and to any other public body or institution, referred to in art. 2 of legislative decree no. 490 of 29 October 1999, shall be subject to the provisions for the protection of the cultural heritage until such time as the verification referred to in paragraph 2 is carried out.

2. The verification of the existence of artistic, historical, archaeological or ethno-anthropological interest in the things referred to in paragraph 1, shall be carried out by Superintendencies, ex officio or upon request by the parties to whom the things belong, on the basis of guidelines of a general nature established by the Ministry for Cultural Heritage and Activities.

3. When in the things subjected to verification the interest referred to in paragraph 2 is not found to exist, the same things are excluded from the application of the provisions for protection set out in legislative decree no. 490 of 1999.

4. The negative outcome of the verification of things belonging to the State, the Regions and other territorial government bodies, shall be notified to the competent offices so that they may order their release from State ownership, when there are no other reasons of public interest to be assessed on the part of the Ministry concerned.

5. [*paragraph suppressed by the law of conversion*].

6. The properties in which artistic, historical, archaeological or ethno-anthropological interest has been found to exist, in accordance with the general guidelines referred to in paragraph 2, shall remain definitively subject to the provisions for protection. Positive ascertainment shall constitute declaration pursuant to articles 6 and 7 of the Consolidated Text referred to in legislative decree no. 490 of 1999 and shall be registered in the ways provided for by art. 8 of the aforesaid Consolidated Text.

7. The provisions of the present article shall apply to the things referred to in paragraph 1 even when the subjects to whom they belong change their legal status in any way.

8. Upon the first application of the present article, the competent branch of the State Property Agency shall, within thirty days of the emanation of the decree referred to in paragraph 9, forward to the Regional Superintendency, the lists of the buildings owned by the State or belonging to State property for which verification is to be carried out, accompanied by descriptive information sheets containing the cognitive data relative to the individual buildings.

9. The criteria for the preparation of the lists and the manner in which the descriptive information sheets are to be compiled, as well as the procedures for the transmission of the aforesaid lists and descriptive information sheets, which may also occur through the agency of other administrations concerned, shall be established by decree by the Ministry for Cultural Heritage and Activities, to be emanated in accord with the State Property Agency and with the Directorate General of Public Works and State Property of the Ministry of Defence for real estate assets in use by the administration of defence within thirty days of the coming into force of the present decree law.

10. On the basis of the investigation carried out by the competent Superintendencies and on the basis of the opinion formed by the aforesaid Superintendencies, the regional Superintendency shall, within the peremptory term of thirty days from the request, conclude the process of verification as regards the existence of cultural interest in the building in question with a reasoned provision and shall notify the requesting agency, within sixty days of receipt of the relative descriptive information sheet. Non-notification within the comprehensive term of one hundred and twenty days from receipt of the information sheet shall be deemed equivalent to a negative verification outcome.

11. The descriptive information sheets for buildings owned by the State with a positive verification outcome, along with the measure referred to in paragraph 10, are collected in a computer archive accessible to both administrations, for the purposes of monitoring real estate assets and of planning measures according to their respective institutional competences.

12. For buildings belonging to the Regions and other territorial government bodies, as well as those owned by other public bodies and institutions, the process of verification shall be initiated upon request on the part of the interested bodies, which along with the application shall provide the descriptive information sheets for each building. The provisions of paragraphs 10 and 11 shall be applied to procedures thus initiated.

13. The procedures for enhancement and divestment provided for by paragraphs 15 and 17 of art. 3 of law decree no. 351 of 25 September 2001, converted, with modifications, from law no. 410 of 23 November 2001, as

well as from paragraphs 3 to 5 of art. 80 of law no. 289 of 27 December 2002, shall also apply to real estate assets referred to in paragraph 3 of the present article, as well as to those identified under paragraph 112 of art. 3 of law no. 662 of 23 December 1996, and subsequent modifications, and of paragraph 1 of art. 44 of law no. 448 of 23 December 1998. In art. 44 of law no. 448 of 23 December 1998, and subsequent modifications, paragraphs 1-*bis* and 3 are suppressed.

13-*bis*. The State Property Agency, in concert with the Directorate General of Public Works and State Property of the Ministry of Defence, shall identify real estate assets in use by the administration of defence which are no longer useful for institutional purposes and are to be included in divestment programmes for the purposes referred to in art. 3, paragraph 112, of law no. 662 of 23 December 1996, and subsequent modifications>>.

Note to art. 14:

– Art. 2 of law no. 241 of 7 August 1990, containing: “New Rules and Regulations for Administrative Procedures and Right of Access to Administrative Documents”, published in *Official Gazette* no. 192 of 18 August 1990 establishes:

<<Art. 2. – 1. Where the procedure is the obligatory consequence of an application or must be initiated ex officio, the public administration is obliged to conclude it through the adoption of a special measure.

2. The public administrations shall, for each type of procedure, determine the term within which it is to be concluded, insofar as the said term has not already been directly established by law or regulation. Such term begins with the ex officio start of the procedure or from receipt of the request if the procedure is initiated by another party.

3. When the public administrations do not act pursuant to paragraph 2, the term shall be for a period of thirty days.

4. The decisions adopted pursuant to paragraph 2 shall be made public in accordance with the provisions of the single regulations>>.

Note to art. 16:

– The decree of the President of the Republic no. 1199 of 24 November 1971, containing: “Simplification of Administrative Appeal Procedures”, is published in *Official Gazette* no. 13 of 17 January 1972.

Notes to art. 29

– Art. 17 of law no. 400 of 23 August 1988, containing: “Regulation of Government Activity and Rules for the Presidency of the Council of Ministers”, published in the ordinary supplement to *Official Gazette* no. 214 of 12 September 1988, as modified by art. 74 of legislative decree no. 29 of 3 February 1993 published in the ordinary supplement to *Official Gazette* no. 30 of 6 February 1993, and by art. 11 of law no. 25 of 5 February 1999, published in the ordinary supplement to *Official Gazette* no. 35 of 12 February 1999; and supplemented by art. 13 of law no. 59 of 15 March 1997, published in the ordinary supplement to *Official Gazette* no. 63 of March 1997, establishes:

<<Art. 17 (*Regulations*) – 1. Following resolution by the Council of Ministers, and consultation of the Council of State which must give its opinion within ninety days from the request, regulations may be emanated by decree of the President of the Republic to govern the following:

- a) the enforcement of laws and legislative decrees, as well as European Community regulations;
- b) the implementation and integration of laws and legislative decrees containing rules and regulations of principle, excluding those pertaining to matters reserved to Regional competence;
- c) matters in which no regulations exist by law or by acts having force of law, on condition that matters which are in any case reserved for legal regulation are not concerned;
- d) the organisation and functioning of public administrations according to the provisions dictated by law;
- e) [*suppressed*].

2. By decree of the President of the Republic, following resolution of the Council of Ministers and consultation with the Council of State, regulations shall be emanated for the regulation of matters, not covered by absolute reservation of law provided for by the Constitution, for which the laws of the Republic, authorising the exercise of the regulatory powers of the Government, shall determine the general rules regulating the matter and order the abrogation of laws in force, with the effect of the regulatory laws coming into force.

3. Regulations for matters under the competence of the Ministry or of an authority subordinated to the Ministry may be adopted by ministerial decree when the law expressly confers such power. For matters under the competence of more than one Ministry, such regulations may be adopted by inter-ministerial decree, on condition that proper authorisation is provided by law. Ministerial and inter-ministerial regulations may not dictate rules contrary to the regulations emanated by the Government. They must be notified to the President of the Council of Ministers before emanation.

4. The regulations referred to in paragraph 1 and ministerial and inter-ministerial regulations, which must carry the denomination of “regulation”,

are adopted following the opinion of the Council of State, subject to approval and registration by the Court of Audits and published in the *Official Gazette*.

4-*bis*. The organisation and regulation of the Ministry offices shall be determined, with regulations emanated pursuant to paragraph 2, at the recommendation of the competent Minister in agreement with the President of the Council of Ministers and with the Minister of the Treasury, and in the respect of the principles established by legislative decree no. 29 of 3 February 1993, and subsequent modifications, with the contents of and in compliance with the following criteria:

- a) re-organisation of the offices directly collaborating with the Ministers and the Undersecretaries of State, establishing that such offices have exclusive support competence for the policy direction organ and for the lines of communication between the policy organ and the administration;
- b) identification of the offices at the general, central and peripheral management levels, through diversification between structures with final functions and instrumental functions and their organisation for homogenous functions, according to criteria of flexibility eliminating duplication of functions;
- c) establishment of instruments for the periodical verification of organisation efficiency and results;
- d) periodical indication and revisions of the consistency of staff plans;
- e) provision for ministerial decrees of a non-regulatory nature for the definition of tasks of managerial staff within the general management offices>>.

– Art. 9 of legislative decree no. 368 of 20 October 1998, containing: “Institution of the Ministry for Cultural Heritage and Activities, pursuant to art. 11 of law no. 59 of 15 March 1997”, published in *Official Gazette* no. 250 of 26 October 1998, establishes:

<<Art. 9 (Schools of training and study). – 1. Schools of specialised training and study operate in the following institutes: Istituto Centrale di Restauro (Central Institute for Restoration); Opificio delle pietre dure (Semiprecious Stones Workshop); Istituto centrale per la patologia del libro (Central Institute for Damaged Books).

2. The Institutes referred to in paragraph 1 organise training and specialisation courses, and may avail themselves of the collaboration of universities and other institutions and Italian and foreign bodies, and may, in their turn, participate in and contribute to the initiatives of such institutions and bodies.

3. The regulations regarding the courses offered by the schools, admission requirements and criteria for the selection of the teaching staff are established by ministerial regulations adopted, under article 17, paragraph 3,

of law no. 400 of 23 August 1988, by decree of the Minister, in agreement with the Presidency of the Council of Ministers – Civil Service Department and with the Minister of the Treasury, Budget and Economic Planning. Branches of schools previously established may be established by decree of the Minister.

4. The re-organisation of the schools referred to in art. 14 of decree no. 1409 of the President of the Republic of 30 September 1963 shall be carried out with a regulation adopted with the modalities referred to in paragraph 3>>.

– Art. 4 of legislative decree no. 281 of 28 August 1997, containing: “Definition and Enlargement of the Functions and Tasks of the Permanent Conference for Relations between the State, the Regions and the Autonomous Provinces of Trento and Bolzano and Unification, in matters and tasks of common interest, of the Regions, Provinces and Municipalities with the State-Cities Conference and Local Autonomies”, published in *Official Gazette* no. 202 of 30 August 1997, establishes:

<<Art. 4 (*Accords between the Government, Regions and Autonomous Provinces of Trento and Bolzano*). – 1. The Government, the Regions and the Autonomous Provinces of Trento and Bolzano may, in the application of the principle of fair collaboration and in the pursuit of objectives for the efficacious functioning, economy and effectiveness of administrative action, may conclude accords within the State-Regions Conference, for the purpose of co-ordinating the exercise of respective competences and of carrying out activities of common interest.

3. The accords shall be concluded with the expression of assent on the part of the Government and of the Presidents of the Regions and of the Autonomous Provinces of Trento and Bolzano.

Note to art. 77:

– Art. 163 of the civil procedures code, approved by royal decree no. 1443 of 28 October 1940, published in the ordinary supplement to *Official Gazette* no. 253 of 28 October 1940, as modified by art. 7 of law no. 581 of 14 July 1950, published in the ordinary supplement to *Official Gazette* no. 186 of 16 August 1950, and by art. 7 of law no. 353 of 26 November 1990, published in the ordinary supplement to *Official Gazette* no. 281 of 1 December 1990, establishes:

<<Art. 163 (*Contents of the Summons*). – The application shall be made through a summons to appear at a fixed hearing.

The president of the court [*tribunale*] shall, at the beginning of the judicial calendar year, by decree approved by the first president of the appellate court, establish the days of the week and the times of the hearings designated exclusively for the first appearance of the parties in the court.

The summons must contain:

- 1) the indication of the court before which application is made;
- 2) the name, surname and the residence of the plaintiff; the name, surname, residence or domicile or home of the defendant and of

- the persons who respectively represent or assist them. If the plaintiff or defendant, is a corporate entity, a non-recognised association or a committee, the summons must contain its denomination or the company name, with the indication of the organ or office which is to represent it in court;
- 3) the determination of the thing which is the object of the application;
 - 4) the exposition of the facts and elements which by law constitute the reasons for the application, with relative conclusions;
 - 5) the specific indication of the means of evidence of which the plaintiff intends to avail him/herself and in particular of the documents he/she wishes to provide;
 - 6) the name and surname of the attorney and indication of the power of attorney when the latter has already been issued;
 - 7) the indication of the day of the hearing; summons to the defendant to appear twenty days before the hearing indicated pursuant to and in the forms established by art. 166, or ten days before in case of abridgement of time, and to appear, in the hearing indicated, before the judge designated under art. 168-*bis*, with the warning that the appearance after the aforesaid terms constitutes forfeiture under art. 167.

The summons, undersigned in accordance with art. 125, shall be delivered by the party or by the attorney to the court officer, who shall notify it in accordance with articles 137 following>>.

Note to art. 84:

Note to art. 128:

– Law no. 364 of 20 June 1909, “which establishes and fixes regulations for the inalienability of antiquities and fine arts”, is published in *Official Gazette* no. 150 of 28 June 1909.

– Law no. 778 of 11 June 1922 containing: “Measures for the protection of natural beauties and buildings of particular historical interest”, is published in *Official Gazette* no. 148 of 24 June 1922.

– Articles 2, 3, 5 and 21 of law no. 1089 of 1 June 1939, concerning the “Protection of things possessing artistic and historical interest”, published in *Official Gazette* no. 184 of 8 August 1939, establish:

<<Art. 2. – Likewise subject to the present law are immovable things which, because of their reference to political or military history, to literature, art and culture in general, have been recognised to possess particularly important interest and as such have formed the object of notification, in administrative form, of the Minister for National Education.

At the request of the Minister, the notification shall be recorded in the Land Register and shall have efficacy with regard to each successive proprietor, possessor or holder of the thing by whatever legal right.

Art. 3. – The Minister for National Education shall notify in administrative form private proprietors, possessors or holders by whatever legal right of the things indicated in art. 1 which possess particularly important interest.

Where buildings by nature or appurtenance are concerned, the provisions established in the second paragraph of the preceding article shall apply.

The list of movable property, for which notification of particularly important interest has been served, shall be conserved in the Ministry of National Education and copies of the same shall be deposited in the Préfectures of the Kingdom.

Any interested person may consult the list.

Art. 5. – The Minister for National Education, following consultation with the National Council on Education, the Sciences and Arts, may proceed to notification of the collections or series of objects which, by tradition, renown and particular environmental characteristics, as a whole possess exceptional artistic or historical interest.

The notified collections and series may not, by virtue of any legal right, be dismembered without the authorisation of the Minister for National Education.

Art. 21. – The Minister for National Education shall have the power to prescribe distances, measures and other provisions in order to prevent harm to the integrity of the immovable things subject to the provisions of the present law, or to their perspective or natural light, or to prevent that conditions of their setting or their decorous aspect be altered.

The exercise of such power shall be independent of the application of building regulations or enforcement of town plans.

The prescriptions established on the basis of the present article must, at the request of the Minister, be recorded in the Land Register and shall have efficacy for each successive proprietor, possessor or holder, by whatever legal right, of the thing to which the aforesaid prescriptions refer >>.

– Art. 36 of decree no. 1409 of the President of the Republic of 30 September 1963 containing: "Provisions pertaining to the Organisation and Personnel of the Archives of the State", published in *Official Gazette* no. 285 of 31 October 1963, establishes:

<<Art. 36 (*Declaration of Notable Historical Interest*). – It is the task of the archival superintendents to declare, with a justified order to be notified under administrative procedure, the notable historical interest of archives or of single documents of which private individuals are the proprietors, possessors or holders, by whatever legal right.

Private individuals may, within the term of sixty days, appeal against the orders of the superintendents to the Minister for Internal Affairs who, following consultation with the Committee of the Superior Council of Archives, shall rule on the appeal>>.

– Articles 6, 7, 8 and 49 of legislative decree no. 490 of 29 October 1999, containing: “Consolidation Text of the Legislative Provisions pertaining to matters of Cultural and Environmental Property, under the provisions of art. 1 of law no. 352 of 8 October 1997”, published in the ordinary supplement to *Official Gazette* no. 302 of 27 December 1999, establish:

<<Art. 6 (*Declaration*). – 1. Without prejudice to the provisions of paragraph 4, the Minister shall declare the particularly important interest possessed by the things indicated in art. 2, paragraph 1, letter *a*), belonging to subjects other than those indicated in art. 5, paragraph 1.

2. The Minister shall likewise declare the particularly important interest possessed by the things indicated in art. 2, paragraph 1, letter *b*), the exceptional interest possessed by the collections or series of objects indicated in article 2, paragraph 1, letter *c*) and the notable historical interest possessed by the things indicated in article 2, paragraph 4, letter *c*).

3. The effects of the declaration are established by art. 10.

4. The Region locally competent shall declare the particularly important interest possessed by the things indicated in art. 2, paragraph 2, letter *c*) under private ownership. In the case of inaction on the part of the Region, the Ministry shall proceed under the provisions of art. 9, paragraph 3, of decree no. 3 of the President of the Republic of 14 January 1972.

Art. 7 (*Declaration proceeding*). – 1. The Minister shall start the declaration proceeding provided for by art. 6 either directly or on the recommendation of the superintendent, which recommendation may also be requested by the Region, the Province or the Municipality, and shall notify the proprietor, possessor or holder.

2. Notification shall include the identifying elements of the property and its assessed value resulting from the initiating action or the recommendation, the indication of the effects foreseen under paragraph 4, as well as the indication of the time limit, which in any case may not be less than thirty days, for the presentation of observations and comments.

3. When the proceeding regards real estate complexes, the notification shall also be forwarded to the Municipality concerned.

4. The notification shall, as a precautionary measure, entail the application of the provisions provided for in Section I of Chapter II and in Section I of Chapter III of this Title.

5. The effects indicated in paragraph 4 shall cease upon expiry of the term of declaration proceeding which the Ministry shall establish under the provisions of art. 2, paragraph 2 of law no. 241 of 7 August 1990.

6. The Regions shall apply the provisions indicated in the preceding paragraphs in the exercise of the functions indicated in art. 6, paragraph 4.

Art. 8 (Notification of Declaration). – 1. The declaration provided for in art. 6 shall be notified to the proprietor, possessor or holder of the things concerning which it was formulated.

2. Where things subject to the advertising of real estate are concerned, the declaration shall, at the request of the Ministry, be recorded in the land registries and shall have efficacy for every successive proprietor, possessor or holder by whatever right.

3. The declarations adopted by the Regions under the provisions of art. 6, paragraph 4, shall be forwarded to the Ministry.

Art. 49 (Prescriptions of Indirect Protection). 1. The Ministry, which may also act upon the recommendation of the superintendent, shall have the power to prescribe distances, measures and other rules and regulations aimed at preventing harm to the immovable things subject to the provisions of this title, and at avoiding damage to the perspective or natural light or alterations to conditions of their setting or their decorous aspect.

2. The exercise of such power shall be independent of the provisions of building codes and urban planning instruments.

3. Notification of the start of proceedings shall be carried out in accordance with the modalities set out in art. 2, paragraph 2, or, when the number of assignees makes personal notification impossible or proves particularly onerous, through suitable means of advertising. For personal notification, the administration shall have the power to adopt precautionary measures.

4. The prescriptions dictated on the basis of this article shall be recorded in the land registries and shall have efficacy for every successive proprietor, possessor or holder, by whatever legal right, of the thing to which the aforesaid prescriptions refer.

5. In the case of real estate complexes, the provision of art. 7, paragraph 3 shall also apply to the notification>>.

Notes to art. 129:

– Law no. 286 of 28 June 1871 “which extends to the Province of Rome articles 24 and 25 of the interim provisions for the implementation of the Civil Code”, is published in *Official Gazette* no. 174 of 28 June 1871.

– Law no. 1461 of 8 July 1883, “which provides for the conservation of galleries, libraries and other collections of art and antiquities”, is published in *Official Gazette* no. 162 of 12 July 1883.

– Royal decree no. 653 of 23 November 1891, “which approves the regulation for the implementation of art. 4 of law no. 286 (2nd series) of 28 June 1871, and of law no. 1461(3rd series) of 8 July 1883”, is published in *Official Gazette* no. 285 of 5 December 1891.

– Law no. 31 of 7 February 1892, “which contains provisions for galleries, libraries and collections of art and antiquities”, is published in *Official Gazette* no. 32 of 8 February 1892.

Notes to art. 130:

– Royal decree no. 1163 of 2 October 1911, containing “ Regulations for State Archives”, is published in *Official Gazette* no. 260 of 8 November 1911.

– Royal decree no. 363 of 30 January 1913, containing the “Regulation for the Implementation of law no. 364 of 20 June 1909 and law no. 688 of 23 June 1912, for Antiquities and Fine Arts”, is published in *Official Gazette* no. 130 of 5 June 1913.

Note to art. 139:

– Art. 13 of law no. 349 of 8 July 1986, containing: “Establishment of the Ministry of the Environment and Provisions in matters pertaining to Environmental Damage”, published in the ordinary supplement to *Official Gazette* no. 162 of 15 July 1986, establishes:

<< Art. 13. – 1. The associations of environmental protection on a national level and those present in at least five Regions shall be identified by decree of the Ministry of the Environment on the basis of programme aims and democratic internal regulations established by their statutes, as well as continuity of action and its external relevance, with the prior opinion of the National Council for the Environment, to be expressed within ninety days of

request. When the aforesaid term expires with no opinion being expressed, the Minister of the Environment shall decide.

2. For the sole purpose of obtaining the short list of three members indicated in the preceding art. 12, paragraph 1, letter c) for the preliminary composition of the National Council for the Environment, the Minister shall, within thirty days of the coming into force of the present law, carry out a preliminary identification of the associations on the national level and of those present in at least five Regions, according to the criteria set out in the preceding paragraph 1, and shall inform Parliament>>.

Notes to art. 142:

– Royal decree no. 1775 of 11 December 1933, containing the “Consolidation of the Statutory Provisions on Waters and Electrical Systems” is published in *Official Gazette* no. 5 of 8 January 1934.

– Art. 2 of legislative decree no. 227 of 18 March 2001, containing “Orientation and Modernisation of the Forestry Sector, under the provisions of art. 7 of law no. 57 of 5 March 2001”, published in the ordinary supplement to *Official Gazette* no. 137 of 15 June 2001, establishes:

<<Art. 2 (*Definition of woods and of wood arboriculture*). – 1. For the effects of the present legislative decree and of any other provision in force in the territory of the Republic the terms woods, forest and woodland are equalised.

2. Within twelve months of the coming into force of the present legislative decree the Regions shall establish the definition of wood for the territory within their jurisdiction and:

- a) the minimum values of width, extension and cover necessary for an area to be considered a wood;
- b) the size of clearings and vacant areas which interrupt the continuity of a wood;
- c) the cases in point which because of their particular nature are not to be considered woods.

3. The following are deemed woods:

- a) lands encumbered with the obligation of reforestation for the purposes of protecting the hydro-geological system of the territory and air quality, safeguarding water resources, conserving biodiversity, protecting the landscape and the environment in general;
- b) forest areas temporarily deprived of tree and bush cover as a result of forestry uses, biotic and non-biotic adversities, accidental events, fire;

c) clearings and all other surfaces with an area under 2000 square metres which interrupt the continuity of the wood;

4. The definition referred to in paragraphs 2 and 6 shall be applied for the purposes of identification of areas covered by woods referred to in art. 146, paragraph 1, letter *g*), of legislative decree no. 490 of 20 October 1999.

5. With the term arboriculture for wood is meant the cultivation of trees, in non-wooded lands, for the sole purpose of producing wood and biomass. Cultivation is reversible upon expiry of the growth cycle.

6. In default of the emanation of the Regional provisions referred to in paragraph 2 and where a different definition has not been established by the Regions themselves, woods are considered to be the lands covered by arboreal forest vegetation, whether or not it be associated with shrub vegetation of natural or artificial origin, in any stage of development, chestnut woods, corkwood plantations and Mediterranean brushwood, and excluding public and private gardens, trees lining streets, chestnut woods under cultivation and plantations of fruit trees and of arboriculture for wood referred to in paragraph 5. The aforesaid plant formations and the lands on which they grow must have an area under 2000 square metres and an average width of not less than 20 metres and cover of not less than 20 percent, with measurement being carried out on the external base of the trunks. The definition of cork-tree wood stands as referred to in law no. 759 of 18 July 1956. Likewise considered woods are the lands encumbered with the obligation of reforestation for the purposes of hydro-geological protection of the territory and air quality, safeguarding the water supply, conserving biodiversity, protecting the landscape and environment in general, as well as the clearings and all other surfaces with an area of less than 2000 square metres which interrupt the continuity of the wood>>.

– Decree no. 448 of the President of the Republic of 13 March 1976, containing: “Implementation of the Convention on Wetlands of International Importance, above all as the Habitat of Water-birds, signed at Ramsar on 2 February 1971”, is published in *Official Gazette* no. 173 of 3 July 1976.

– Ministerial decree no. 1444 of 2 April 1968, containing: “Mandatory Limits for Building Density, Height, Distance between Structures and Maximum Ratios between Areas Designated for Residential and Industrial Uses and Public Spaces or Spaces Reserved for Collective Activities, Public Green Areas or for Parking, to be Observed for the Purposes of the Formation of New Urban Planning Instruments or the Revision of Those Already in Existence, pursuant to art. 17 of law no. 765 of 6 August 1967” is published in *Official Gazette* no. 97 of 16 April 1968.

– Art. 18 of law no. 865 of 22 October 1971, containing “Planning and Co-ordination of Public Residential Building; Regulations on Expropriation for Public Use; Modifications and Additions to law no. 1150 of 17 August 1942;

law no. 167 of 18 April 1962 and law no. 847 of 29 September 1964; and Expenditure Authorisation for Extraordinary Works in the Residential Building Sector, Benefiting from Facilitations and Agreements”, published in *Official Gazette* no. 276 of 30 October 1971, establishes:

<<Art. 18. – Within the term of six months from the date of entry into force of this law, the Municipalities shall, for the purposes of the application of the preceding art. 16, proceed to the delimitation of the built-up centres with a resolution adopted in the City Council. When such resolution is pending, the Municipality shall, with Council approval, declare whether or not the area falls within the built-up centres, for the effects of the expropriation procedure being carried out.

The boundaries of the built-up centre shall, for each centre or inhabited area, be defined by the continuous perimeter which includes all the built-up areas continuously and with parcels of land enclosed. Scattered settlements and external areas may not be included in the perimeter of the built-up areas, even when they are affected by the process of urbanisation.

When the term established in the first paragraph of this article expires with no action taken, the Region shall establish the boundaries of the built-up centres.

Note to art. 144:

– For the text of art. 13 of law no. 349 of 8 July 1986 see note to art. 139.

Note to art. 145:

– Art. 52 of legislative decree no. 112 of 31 March 1998, containing “Conferral of Administrative Functions and Tasks of the State to the Regions and Local Bodies, in Implementation of Chapter I of law no. 59 of 15 March 1997”, published in the ordinary supplement to *Official Gazette* no. 92 of 21 April 1998, establishes:

<<Art. 52 (*Tasks of National Relevance*). – 1. Under art. 1, paragraph 4, letter *c*), of law no. 59 of 15 March 1997, tasks which have national relevance are those related to the identification of the fundamental lines of the organisation of the national territory with reference to natural and environmental values, the protection of the land, and the territorial organisation of infra-structural networks and of the works under State competence, as well as the system of the Cities and the Metropolitan Areas, and also for the purposes of developing the “Mezzogiorno” area and economically depressed areas of the country.

2. Within the competence of the State fall relations with international bodies and coordination with the European Union referred to in art. 1, paragraph 4, letter e), of law no. 59 of 15 March 1997, on matters pertaining to urban policy and land planning.

3. The tasks referred to in paragraph 1 of the present article shall be exercised by means of agreements established in the Unified Conference.

4. In art. 81, first paragraph, of decree no. 616 of the President of the Republic of 24 July 1977, letter a) is abrogated.

Note to art. 146:

– Law no. 241 of 7 August 1990 containing: “New Provisions on matters pertaining to Administrative Procedure and Right of Access to Administrative Documents”, is published in *Official Gazette* no. 192 of 18 August 1990.

– For the text of art. 13 of law no. 349 of 8 July 1986, see note to art. 139.

Note to art. 147:

– Articles 14, 14-*bis*, 14-*ter* and 14-*quater* of law no. 241 of 7 August 1990, containing “New Provisions on matters pertaining to Administrative Procedure and Right of Access to Administrative Documents”, published in *Official Gazette* no. 192 of 18 August 1990, establish:

– <<Art. 14. – 1. When it is advisable to carry out a contemporaneous examination of the various public interests involved in an administrative procedure, the proceeding administration shall as a rule convene a Conference of Services.

2. The Conference of Services shall always be convened when the proceeding administration must acquire agreements, concerted action, permits or waivers, or the consent, however denominated, of other public administrations, and, having formally requested the same, fails to obtain them, within fifteen days of the start of proceedings.

3. The Conference of Services may also be convened for the contemporaneous examination of interests involved in several connected administrative procedures, regarding the same activities or results. In such cases, the Conference shall be convened by the administration or, with prior informal agreement, by one of the administrations responsible for the prevalent public interest. For public works, art. 7 of law no. 109 of 11 February 1994 and subsequent modifications shall continue to apply. The Conference may be convened at the request of any other administration involved.

4. When activities in the private sector are subordinated to consent, however denominated, falling within the competence of several government administrations, the Conference of Services shall be convened, also at the request of the interested administration, by the administration with competence for the adoption of the final provision.

5. In cases where public works are granted in concession, the Conference of Services shall be convened by the grantor within fifteen days, without prejudice to the provisions of Regional laws with regard to environmental impact assessment.

Art. 14-*bis*. – 1. The Conference of Services may be convened for projects of particular complexity, at the reasoned and documented request of the interested party, before the presentation of a definitive application or project, for the purpose of verifying the conditions that must exist upon presentation in order to obtain the necessary permits. In such cases the Conference shall rule within thirty days of the date of the request and the relative costs shall be charged to the applicant.

2. In procedures dealing with the realisation of public works and with public interest, the Conference of Services shall express its opinion on the preliminary project for the purpose of establishing the conditions for obtaining for the definitive project the agreements, opinions, concessions, authorisations, licences, permits or waivers, however denominated, required by the laws in force. At the same time, the administrations responsible for environmental and landscape-territorial protection, for the protection of the historical and artistic heritage and of health, shall give their opinion, with regard to the interests protected by each, on the project solutions chosen. When, on the basis of the available documentation, no elements emerge which in any case preclude the realisation of the project, the aforesaid administrations shall, within forty-five days, indicate the conditions and elements necessary to obtain the deeds of permit when the definitive project is presented.

3. In cases where environmental impact assessment is requested, the Conference of Services shall express its opinion within thirty days of the conclusion of the preliminary phase in the definition of the contents of the environmental impact study, according to the provisions pertaining to environmental impact assessment. If such conclusion fails to occur within ninety days of the request referred to in paragraph 1, the Conference of Services shall in any case express its opinion within the next thirty days. Within such Conference, the authority responsible for environmental impact assessment shall indicate the conditions for the development of the project and of the environmental impact study. In this phase, which is an integral part of the environmental impact assessment procedure, the aforesaid authority shall examine the main alternatives, including the zero alternative, and, on the basis of the available documentation, shall verify the existence

of any elements of incompatibility, which may also relate to the planned location of the project, and, when such elements do not exist, shall indicate within the Conference of Services, the conditions necessary to obtain the necessary deeds of permit when the definitive project is presented.

4. In the cases referred to in paragraphs 1, 2 and 3, the Conference of Services shall express its opinion on the basis of the documents in its possession and the indications furnished on this occasion may be modified with grounds or added to only in the presence of significant elements which emerged in subsequent stages of the procedure, including those resulting from the observations of private persons on the definitive project.

5. In the case referred to in paragraph 2, the sole party responsible for the procedure shall forward to the administrations concerned the definitive project, drawn up on the basis of the conditions indicated by the same administrations during the Conference of Services on the preliminary project, and shall convene the Conference between the thirtieth and sixtieth day following submission of the definitive project. In the case of government contract for the procurement of goods and services or granting of a concession for public works, the administration awarding the contract or concession shall convene the Conference of Services on the basis of the preliminary project only, in accordance with the provisions of law no. 109 of 11 February 1994 and subsequent modifications.

Art. 14-*ter.* – 1. The Conference of Services shall take decisions relative to the organisation of its work on the basis of a majority vote of the members present.

2. The administrations concerned must receive notice of the convocation of the first meeting of the Conference of Services at least ten days before the relative date, and such notice may be sent through electronic mail. Within the next five days, the administrations convened may, when it is impossible for them to attend, request that the meeting be held at a different date; in such cases, the proceeding administration shall negotiate a new date, which must in any case be within ten days of the first date.

3. In the first meeting of the Conference of Services, or in any case in the meeting immediately following the forwarding of the application or the definitive project pursuant to art. 14-*bis*, the participating administrations shall determine the term for the adoption of the final decision. The work of the Conference may not exceed ninety days, excepting the provisions of paragraph 4. When such terms have expired with no action taken, the proceeding administration shall take action pursuant to paragraphs 2 ff., of art. 14-*quater*.

4. In cases where environmental impact assessment is requested, the Conference of Services shall express its opinion after having acquired the assessment. If the environmental impact assessment fails to occur within

the term established for the adoption of the relative provision, the administration responsible shall express its opinion within the Conference of Services, which shall conclude within thirty days following the aforesaid term. Nevertheless, when the majority of participants in the Conference of Services requests it, the term of thirty days referred to in the preceding sentence is extended by another thirty days when there is an evident need for further preliminary studies.

5. In procedures for which a decision has already been taken concerning environmental impact assessment, the provisions referred to in paragraph 3 of art. 14-*quater*, as well as those referred to in article 16, paragraph 3, and article 17, paragraph 2, shall apply only to the administrations responsible for safeguarding public health.

6. Each administration summoned shall participate in the Conference of Services through a single representative authorised, by the responsible organ, to give the binding expression of the wishes of the administration regarding all the decisions that fall within the competence of the same.

7. Consent shall be deemed to be granted by the administration whose representative has not definitively expressed the wishes of the administration represented and has not, within the term of thirty days from the date of receipt of the concluding decision of the proceeding, notified the proceeding administration, of its reasoned dissent, or when it has not, within the same term, contested the concluding decision of the Conference of Services.

8. During the sitting of the Conference of Services, the proponents of the application or the designers of the project may be asked, once only, for clarifications or additional documentation. If the latter are not furnished during the aforesaid sitting, the provision shall then be examined, within the following thirty days.

9. The final provision conforming to the favourable conclusive decision of the Conference of Services shall, to all intents and purposes, substitute any authorisation, concession, permit or waiver or deed of permit, however denominated, under the competence of the participating administrations, or of the administrations which were in any case invited to participate, in the aforesaid Conference.

10. The final provision concerning works subjected to environmental impact assessment shall be published by the proponent, along with the abstract of the aforesaid environmental impact assessment, in the *Official Gazette*, or the Regional Bulletin in the case of a Regional environmental impact assessment, and in a nationally circulated daily newspaper. The terms for any judicial appeal on the part of interested parties shall lapse from the date of publication in the *Official Gazette*.

Art. 14-*quarter*. – 1. The dissent of one or more administration representatives, regularly summoned to the Conference of Services must, on pain of inadmissibility, be expressed during the Conference of Services, must be adequately motivated, may not refer to related issues which are not the object of the Conference itself, and must contain the specific indications of the design modifications necessary for assent.

2. If one or more administrations have, during the Conference, expressed dissent on the proposal of the proceeding administration, the latter, within the peremptory time-limits indicated in art. 14-*ter*, paragraph 3, shall take the concluding decision of the proceeding on the basis of the majority of the positions expressed during the Conference of Services. The decision shall be immediately enforceable.

3. Should motivated dissent be expressed by an administration charged with environmental and landscape-territorial protection, protection of the historical-artistic heritage or the safeguarding of public health, the decision shall be remitted to the Council of Ministers, when the dissenting administration or the proceeding administration is a State administration, or to the competent governing organs of the territorial bodies, in other cases. The Council of Ministers or the governing organs of the territorial bodies shall deliberate within thirty days, except when, in assessing the complexity of the preliminary investigation, the President of the Council of Ministers or the President of the Regional Council or the President of the Province or the Mayor decide to extend such time limit for a further period not to exceed sixty days.

4. When dissent is expressed by a Region, the decisions under the competence of the Council of Ministers provided for in paragraph 3 shall be taken with the participation of the President of the Regional Council concerned, to whom an invitation is sent to participate in the meeting for this purpose, in order to be heard with no voting right.

5. In the event that the work is subjected to environmental impact assessment and in the case of a negative decision, art. 5, paragraph 2, letter *c-bis*) of law no. 400 of 23 August 1988, introduced by art. 12, paragraph 2 of legislative decree no. 303 of 30 July 1999 shall apply.

– Art. 6 of law no. 349 of 8 July 1986, containing, “Establishment of the Ministry of the Environment and Laws pertaining to Environmental Damage”, published in the ordinary supplement to *Official Gazette* no. 162 of 15 July 1986, establishes:

<<Art. 6. – 1. Within six months of the coming into force of this law, the Government shall present to Parliament the draft law pertaining to the implementation of the European Community directives on environmental impact.

2. Until such time as the European Community directives on environmental impact are implemented into law, the technical regulations and the categories of works capable of producing significant modifications to the environment and to which shall apply the provisions referred to in paragraphs 3, 4 and 5 which follow, shall be identified by decree of the President of the Council of Ministries, following resolution by the Council of Ministers, adopted on the recommendation of the Minister of the Environment, after consultation with the Scientific Committee referred to in article 11 which follows, in accordance with European Community Council directive no. 85/337 of 27 June 1985.

3. The project designs for the works referred to in the preceding paragraph 2 shall, before their approval, be communicated to the Minister of the Environment, to the Minister for Cultural and Environmental Heritage and to the Region concerned at the local level, for the purposes of environmental impact assessment. The notification shall contain the indication of the location of the work, the specification of liquid and solid waste, emission and introduction of pollution in the atmosphere and of noise emissions produced by the work, the description of the devices to be used for the elimination or resolution of damage to the environment and for environmental monitoring. The announcement of the notification served must be published, by the principal, in the daily newspaper most widely circulated in the Region whose area is concerned, as well as a nationally circulated daily.

4. After consulting the Region concerned and in accord with the Ministry for the Cultural and Environmental Heritage, the Minister of the Environment shall express a decision on environmental compatibility within the ninety days following, upon expiry of which the procedure for approval of the project design shall continue its course, except when the Council of Ministers decides to extend the term in cases of particular importance. For works affecting areas subject to ordinances of cultural or landscape protection the Minister of the Environment shall take a decision in agreement with the Minister for the Cultural and Environmental Heritage.

5. When the Ministry responsible for carrying out the work does not wish to conform to the assessment of the Ministry of the Environment, the question shall be remitted to the Council of Ministers.

6. In the event that, in carrying out the works referred to in paragraph 3, the Minister of the Environment perceives behaviour contrasting with the opinion on environmental compatibility expressed pursuant to paragraph 4, or such behaviour as is in any case likely to compromise the fundamental exigencies of ecological and environmental equilibrium, he shall order the suspension of the works and remit the question to the Council of Ministers.

7. The powers of the Ministry for the Cultural and Environmental Heritage shall stand in matters under its competence.

8. The Minister for the Cultural and Environmental Heritage in the case provided for in art. 1-*bis*, paragraph 2 of decree-law no. 312 of 27 June 1985, converted with modifications into law no. 431 of 8 August 1985, shall exercise the powers referred to in articles 4 and 82 of decree no. 616 of the President of the Republic of 24 July 1977, in accord with the Minister of the Environment.

9. Any citizen, in conformity with the laws in force, may present petitions, observations or opinions, in written form, on the work subject to environmental impact assessment, within the time limit of thirty days from the announcement of the notification of the project, to the Ministry of the Environment, the Ministry for the Cultural and Environmental Heritage and to the Region concerned>>.

Note to art. 153:

– Art. 23, paragraph 4, of legislative decree no. 285 of 30 April 1992, containing the “New Highway Code”, published in the ordinary supplement to *Official Gazette* no. 114 of 18 May 1992, as modified by article 13 of legislative decree no. 360 of 10 September 1993, published in the ordinary supplement to *Official Gazette* no. 217 of 15 September 1993, by art. 30 of law no. 472 of 7 December 1999, published in the ordinary supplement to *Official Gazette* no. 294 of 16 December 1999 and by art. 1 of decree law no. 151 of 27 June 2003, published in the *Official Gazette* no. 149 of 30 June 2003, and converted with modifications into law no. 214 of 1st August 2003, published in *Official Gazette* no. 186 of 12 August 2003, establishes:

<<4. The collocation of hoardings and other means of advertising along the roads or in view of the same is in all cases subject to authorisation by the body owning the road in conformity with the current laws. Within the built-up centres, competence belongs to the Municipality, without prejudice to the preventive technical waiver of the owning body if the road belongs to the State, the Region or the Province>>.

Note to art. 156:

– Article 149 of legislative decree no. 490 of 29 October 1999 containing: “Consolidation Text of the Legislative Provisions pertaining to Cultural and Environmental Property, in accordance with art. 1 of law no. 352 of 8 October 1997”, published in the ordinary supplement to *Official Gazette* no. 302 of 27 December 1999, establishes:

<<Art. 149 (*Landscape Planning*). – 1. The Regions shall subject the territory, including environmental assets indicated in art. 146, to specific regulations for environmental use and enhancement, by drawing up

landscape plans or urban land plans having the same purpose of safeguarding the values of the landscape and the environment.

2. Landscape planning prescribed in paragraph 1 is voluntary for the vast localities indicated in letters *c)* and *d)* of art. 139 included in the lists set out in art. 140 and by art. 144.

3. In the event that the Regions fail to fulfil the provisions set out in paragraph 1, the provisions set out in art. 4 of decree no. 616 of the President of the Republic of 24 July 1977, as modified by art. 8 of law no. 59 of 15 March 1997, shall be followed.

4. Without prejudice to the provisions of art. 164, the Minister, in agreement with the Minister of the Environment and with the Region, may adopt measures for the reclamation and upgrading of the assets protected under this title, whose values have in any case been compromised>>.

Note to art. 157:

– For law no. 778 of 11 June 1922, see note to art. 128.

– Law no. 1497 of 29 June 1939 concerning the “Protection of Natural Beauties”, is published in *Official Gazette* no. 241 of 14 October 1939.

– Art. 82 of decree no. 616 of the President of the Republic of 24 July 1977, containing: “Implementation of the Enabling Clause referred to in Art. 1 of Law no. 382 of 22 July 1975”, published in the ordinary supplement to *Official Gazette* no. 234 of 29 August 1977, as supplemented by art. 1 of decree law no. 312 of 27 June 1985, published in *Official Gazette* no. 152 of 29 June 1985, and converted with modifications, into law no. 431 of 8 August 1985, published in *Official Gazette* no. 197 of 22 August 1985, establishes:

<<Article 82 (*Environmental Assets*). The administrative functions exercised by the central and peripheral organs of the State for the protection of natural beauties as regards their identification, protection and relative sanctions shall be delegated to the Regions.

The enabling clause regards, among other things, the administrative functions concerning:

- a) the identification of natural beauties, without prejudice to the power of the Minister for the Cultural and Environmental Heritage to, following consultation with the National Council for the Cultural and Environmental Heritage, add to the lists of natural beauties approved by the Regions;
- b) the granting of authorisations and permits for their modification;
- c) the opening up of roads and quarries;
- d) the installation of hoardings or other means of advertising;

- e) the adoption of preventive measures, even when these assets are not included in the relative lists;
- f) the adoption of measures for demolition and the imposition of sanctions;
- g) the powers of the central and peripheral State organs inherent to the Provincial Commissions provided for in art. 2 of law no. 1497 of 29 June 1939 and in art. 31 of decree no. 805 of the President of the Republic of 3 December 1975;
- h) the authorisation provided for by law no. 1097 of 29 November 1971, for the protection of the Euganean Hills (Colli Euganei)

Notifications of the notable public interest possessed by natural and panoramic beauties served on the basis of law no. 1497 of 29 June 1939 may not be revoked or modified without the advice of the National Council for the Cultural Heritage.

The Minister of the Cultural and Environmental Heritage may prohibit works or order their suspension, when they harm environmental assets which may be defined as natural beauties, even if they are not included in the lists.

The following are subject to landscape constraint orders pursuant to law no. 1497 of 29 June 1939:

- a) coastal territories included within a swath of land 300 metres in depth from the waterline, including elevated land overlooking lakes;
- b) areas conterminous with lakes included within a swath of land 300 metres in depth from the waterline, including elevated land overlooking lakes;
- c) rivers, streams and water courses registered in the lists referred to in the consolidated text of the legal provisions for waters and electricity plants, approved by royal decree no. 1775 of 11 December 1933, and the relative shores or base foundations of the embankments for a swath of land of 150 metres each;
- d) mountains for the part exceeding 1600 metres above sea level for the Alpine chain and 1200 metres above sea level for the Apennine chain and the islands;
- e) glaciers and cirques;
- f) national or regional parks and reserves, as well as the areas of protection external to the parks;
- g) areas covered by forests and woods, even if swept or damaged by fire, and those under a reforestation constraint order;
- h) areas assigned to agricultural universities and zones encumbered for civic uses;
- i) wetlands included in the list referred to in decree no. 448 of the President of the Republic of 13 March 1976;
- j) volcanoes;
- k) areas of archaeological interest.

The constraint order referred to in the preceding paragraph does not apply to zones A, B and – restrictively to the parts included in the multiyear implementation plans – to other zones, as defined in the urban planning

instruments pursuant to ministerial decree no. 1444 of 2 April 1968, and, in Municipalities lacking such instruments, to the built-up centres with perimeters defined under art. 18 of law no. 865 of 22 October 1971.

Subject to landscape constraint as well are the assets referred to in no. 2) of art. 1 of law no. 1497 of 29 June 1939, even in the zones referred to in the preceding paragraph.

In the woods and forests referred to in letter *g*) of the fifth paragraph of the present article, the following are permitted: the cutting of cultivated vegetation, forestation, reforestation, and work for reclamation, fire prevention and conservation provided for and authorised on the basis of laws in force pertaining to the matter.

The authorisation referred to in art. 7 of law no. 1497 of 29 June 1939, must be granted or denied within the peremptory term of sixty days. The Regions shall immediately inform the Minister for the Cultural and Environmental Heritage of the authorisations granted and shall contemporaneously forward the relative documentation. When the aforesaid term expires without action taken, the interested parties may, within thirty days, request authorisation from the Minister for the Cultural and Environmental Heritage who shall take a decision within sixty days of the date of receipt of the aforesaid request. The Minister for the Cultural and Environmental Heritage may, in any case, annul, with a reasoned provision, the Regional authorisation within the sixty days following the relative notification.

Whenever the request for authorisation concerns works to be carried out by the State administrations, the Minister for the Cultural and Environmental Heritage may, in any case, within sixty days, grant or deny the authorisation referred to in art. 7 of law no. 1497 of 29 June 1939, even when such granting or denial differs from the Regional decision.

For the activities of search and extraction referred to in royal decree no. 1443 of 29 July 1927, the authorisation of the Ministry for the Cultural and Environmental Heritage, provided for by the preceding ninth paragraph, shall be granted following consultation with the Minister of Industry, Commerce and Crafts.

The authorisation referred to in art. 7 of law no. 1497 of 29 June 1939 is not required for works of ordinary and extraordinary maintenance, consolidation, and conservational restoration which do not alter the state of the sites and the exterior aspect of the buildings, nor is it necessary for carrying out agricultural, forestry or pastoral activities which do not permanently alter the condition of the sites for building structures or other civil works, and on condition that the activities and works are such that they do not alter the hydro-geological system of the territory.

The tasks of supervision with regard to the constraints referred to in the fifth paragraph of the present article are also exercised by the organs of the Ministry for the Cultural and Environmental Heritage>>.

– For legislative decree no. 490 of 29 October 1999, see note to the premises.

Note to art. 158:

– Royal decree no. 1357 of 3 June 1940, containing the “Regulation for the Application of Law no. 1497 of 29 June 1939”, is published in *Official Gazette* no. 234 of 5 October 1940.

Note to art. 159:

– For law no. 241 of 7 August 1990, see note to art. 146.

– Ministerial decree no. 495 of 13 June 1994, containing the “Regulation concerning Provisions for Implementation of Articles 2 and 4 of Law no. 241 of 7 August 1990, regarding the Time limits and Officials Responsible for the Procedures”, published in the ordinary supplement to *Official Gazette* no. 187 of 11 August 1994, as modified by art. 3 of ministerial decree no. 165 of 19 June 2002, published in *Official Gazette* no. 180 of 2 August 2002, establishes:

<<Article 6 (*Procedural Time Limits*). – 1. The time limits for the conclusion of the procedures refer to the date of adoption of the provision, or, in the case of provisions valid only upon declared receipt, to the date on which the recipient receives notification.

2. When during the procedure certain phases, apart from the cases provided for by articles 16 and 17 of law no. 241 of 7 August 1990, fall within the competence of administrations other than the administration for the cultural and environmental heritage the time limit for the proceeding shall be understood to include the period of time necessary for the completion of the aforesaid phases. To this end, the administrations concerned shall, within sixty days of the coming into force of the present regulation, together verify the adequacy or inadequacy of the time limits established, within the context of the final deadline, for the completion of the phases themselves. When verification demonstrates the inadequacy of the final time limit, the Ministry for the Cultural and Environmental Heritage shall proceed, within the prescribed regulatory form, to vary the term, unless the same is established by law.

3. The time limits referred to in paragraphs 1 and 2 constitute maximum time limits and their expiry does not exonerate the administration from the

obligation of acting with the greatest promptness, without prejudice to any other consequence of non-compliance with the time limit.

4. In cases where review of the actions of the proceeding administration is of a preventive nature, the period of time relative to the integration phase of the enforceability of the provision is not calculated for the purposes of the time limit for the conclusion of the proceeding. In a footnote to the action subject to review, the administration responsible for the proceeding shall indicate the organ responsible for the aforesaid review and the time limits, where established, within which the same must be exercised.

5. When not otherwise established, the same time limits indicated for the main procedures shall apply for the modification of orders previously emanated.

6. When the law establishes that the application of the interested party shall be deemed to be rejected or approved following the lapse of a determined period of time from the presentation of the application itself, the time limit established by law or by regulation for the constitution of silence-rejection or silence-consent shall likewise constitute the time limit within which the administration must adopt its decision. When the law establishes new cases or new time limits for silence-consent or silence-rejection, the time limits contained in the annexed tables are deemed to be integrated or modified accordingly.

6-bis. When, during the preliminary investigation, it becomes necessary to obtain clarifications or to acquire additional elements for judgement, or to proceed to verifications of a technical nature, the party responsible for the proceeding shall immediately inform those indicated in art. 4, paragraph 1, as well as, where advisable, the administration which has forwarded the additional documentation. In such case, the time-limit for the conclusion of the proceeding shall be interrupted, once only and for a period not exceeding thirty days, from the date of notification and shall begin to lapse again upon receipt of the documentation or the acquisition of the results of the technical verifications.

– Art. 1-*quinquies* of decree law no. 312 of 27 June 1985, containing: “Urgent Provisions for the Protection of Areas of Particular Environmental Interest. Supplement to art. 82 of decree no. 616 of the President of the Republic of 24 July 1977”, published in *Official Gazette* no. 152 of 29 June 1985 and converted, with modifications, into law no. 431 of 8 August 1985, published in *Official Gazette* no. 197 of 22 August 1985, establishes:

<<Art. 1-*quinquies*. – 1. The areas and properties identified under art. 2 of ministerial decree of 21 September 1984 published in *Official Gazette* no. 265 of 26 September 1984, are included among those in which, until the adoption by the Regions of the plans referred to in the preceding article 1-*bis*, is prohibited any modification of the organisation of the territory, as well as any

construction work, with the exclusion of the works of ordinary and extraordinary maintenance, static consolidation and conservational restoration which do not alter the condition of the sites and the exterior aspect of the buildings>>.

Note to art. 162:

– For the text of art. 23 of legislative decree no. 285 of 30 April 1992, see note to art. 153.

Note to art. 166:

– For Council Regulation (EEC) no. 3911/92 of 9 December 1992, see note to art. 71.

– Commission Regulation (EEC) no. 752/93 of 30 March 1993, containing “Application Provisions for Council Regulation (EEC) no. 3911/92, relative to the Exportation of Cultural Property” is published in *Official Gazette* – 2nd special series – no. 39 of 20 May 1993; it was modified by Commission Regulation (EC) no. 1526/98 of 16 July 1998, published in *Official Gazette* – 2nd special series – no. 87 of 5 November 1998.

Note to art. 168:

– For the text to art. 23 of legislative decree no. 285 of 30 April 1992, see note to art. 153.

Note to art. 180:

– Art. 650 of the penal code, approved by royal decree no. 1398 of 19 October 1930, published in the ordinary supplement to *Official Gazette* no. 251 of 26 October 1930, establishes:

<<Art. 650 (*Failure to Comply with Provisions of the Law*). – Whosoever fails to comply with a provision legally established by law for reasons of justice or public safety or public order or hygiene, shall, if the offence does not constitute a more serious crime, be punishable with arrest of up to three months and with a fine of up to four hundred thousand lire>>.

Note to art. 181:

– Art. 20 of law no. 47 of 28 February 1985, containing: “Provisions for the Control of Urban Planning and Building, Sanctions, Salvage and Curability of

Building Works", published in the ordinary supplement to *Official Gazette* no. 53 of 2 March 1985, as modified by article 7- *bis* of decree law no. 146 of 23 April 1985, published in *Official Gazette* no. 97 of 24 April 1985 and converted, with modifications, into law no. 298 of 21 June 1985, published in *Official Gazette* no. 146 of 22 June 1985, establishes:

<<Article 20 (*Penal Sanctions*). – Unless the offence constitutes a more serious crime and with administrative sanctions remaining in force, the following sanctions are applicable:

- a) a fine of up to 20 million lire for failure to comply with the laws, prescriptions and implementation modalities established by the present law, by law no. 1150 of 17 August 1942, and subsequent modifications and additions, insofar as they are applicable, as well as by building regulations, urban planning instruments and concessions;
- b) arrest of up to two years and a fine from 10 million to 100 million lire in cases of execution of works in total non-conformity with or in absence of concession or the continuance of the same in spite of a suspension order;
- c) arrest of up to two years and a fine from 30 million to 100 million lire in the case of illegal parcelling of land for building purposes, as established by the first paragraph of art. 18. The same punishment shall also apply in cases of construction in zones subject to historical, artistic, archaeological, landscape or environmental constraint orders, which are in essential variance with, in total variance with or in absence of concession.

The provisions referred to in the preceding paragraph substitute those referred to in art. 17 of law no. 10 of 28 January 1977 >>.

Note to art. 182:

– Art. 7 of ministerial decree no. 294 of 3 August 2000, containing: "Regulation concerning the Identification of Qualifications of Professionals carrying out Restoration and Maintenance Work on Movable Properties and on the Decorated Surfaces of Architectonic Properties", published in *Official Gazette* no. 246 of 20 October 2000, as substituted by ministerial decree no. 420 of 24 October 2001, published in *Official Gazette* no. 280 of 1 December 2001, establishes:

<<Article 7 (*Restorer of Cultural Properties*). – 1. For the purposes of the present regulation, as well as the purposes referred to in article 224 of decree no. 554 of the President of the Republic of 21 December 1999, by restorer of cultural properties is meant the person who has attained a diploma from a State school of restoration referred to in article 9 of legislative decree no. 368 of 20 October 1998, with a programme of studies lasting not less than four years, or a specialised university degree in the conservation and restoration of the historical-artistic heritage.

2. By restorer of cultural properties is likewise meant the person who on the date of the coming into force of the present regulation:

- a) has attained a diploma from a State or Regional school of restoration lasting not less than two years and has carried out restoration activities on the properties themselves, directly and on his/her own or as a permanent employee or under a continuous contract with direct responsibilities in the technical management of the work, with regular execution of the work certified by the authority responsible for the protection of the property or of the decorated surface, for a period of time which is at least double that of the school period lacking, and in any case not less than two years;
- b) has carried out restoration work on the aforesaid properties, directly and on his/her own or as a permanent employee or under a continuous contract with direct responsibilities in the technical management of the work, for not less than eight years with regular execution of the work certified by the authority responsible for the protection of the properties on which restoration work has been done;
- c) has attained a diploma from a State or Regional school of restoration lasting not less than two years or has carried out restoration work on movable properties or decorated surfaces for a period equalling at least four years, directly and on his/her own or as a permanent employee or under a continuous contract with direct responsibilities in the technical management of the work, with regular execution of the work certified by the protection authority, where qualifications have been certified or where a training programme has been completed according to modalities established by decree of the Minister for the Cultural Heritage and Activities, to be adopted by 31 December 2001 >>.

– For the text to art. 117 of the Constitution of the Italian Republic, see note to the premises.

Note to art. 183:

– For article 3 of law no. 20 of 14 January 1994, containing: “Provisions pertaining to Jurisdiction and Auditing by the Court of Auditors” published in *Official Gazette* no. 10 of 14 January 1994, as modified by art. 2 of decree law no. 543 of 23 October 1996, published in *Official Gazette* no. 249 of 23 October 1996 and converted, with modifications, into law no. 639 of 20 December 1996, published in *Official Gazette* no. 299 of 21 December 1996; by art. 43 of legislative decree no. 80 of 31 March 1998, published in the ordinary supplement to *Official Gazette* no. 82 of 8 April 1998; by art. 27 of law no. 340 of 24 November 2000, published in *Official Gazette* no. 275 of 24 November 2000; by art. 49 of law no. 388 of 23 December 2000, published in the ordinary supplement to *Official Gazette* no. 302 of 29 December 2000; and by art. 72 of legislative decree no. 165 of 30 March 2001, published in

the ordinary supplement to *Official Gazette* no. 106 of 9 May 2001, establishes:

<<Art. 3 (*Regulations on Auditing by the Court of Auditors*). – 1. The preventive review of legitimacy on the part of the Court of Auditors is exercised exclusively on the following measures not having the force of law:

- a) measures emanated after deliberation by the Council of Ministers;
- b) decisions of the President of the Council of Ministers and decisions of the Ministry with regard to the definition of structural plans, the appointment of management functions and general guidelines for directing and carrying out administrative action,
- c) regulatory measures with external relevance, planning decisions involving expenditures and general actions taken for implementing European community regulations;
- d) decisions of inter-ministerial department committees or the designation of funds and other deliberations emanated on matters referred to in letters b) and c);
- e) [*abrogated*];
- f) measures for the disposal of State property and real estate assets;
- g) decrees which approve the contracts of State Administrations, excluding public corporations; assets, of any value, excepting those falling within the hypothesis set out in the last paragraph of art. 19 of royal decree no. 2440 of 18 November 1923; government contracts for the procurement of goods and services, for sums exceeding the value in ECU established by European Community regulations for the application of the procedures for the adjudication of the aforesaid contracts; other liabilities contracts, if they are for amounts exceeding one tenth of the above-indicated value.
- h) decrees of variations in the State budget, of assessment of balances and of preventive consent of the Ministry of the Treasury for charging current expenditures to the following accounting period;
- i) actions for the initiation of which a written order has been issued by the Minister;
- j) actions which the President of the Council of Ministers requests be temporarily subject to preventive review or which the Court of Auditors decides to subject, for a determined period of time, to preventive review in relation to situations of widespread and repeated irregularities detected during subsequent inspection;

2. The provisions subjected to preventive review shall acquire efficacy if the competent inspection office does not remit examination to the inspection section within the time limit of thirty days from receipt. The time limit is interrupted if the office requests clarifications or additional elements for judgement. When thirty days have elapsed from receipt of the counter-arguments of the administration, the provision shall acquire efficacy if the office does not remit examination to the inspection section. The inspection section shall rule on the conformity to law within thirty days of the date of the referral of the provisions or from the date of arrival of the elements requested

with a judicial order. When this term has elapsed the provisions shall be enforceable.

3. The Sections of the Court of Auditors may in assembly, and with a grounded ruling establish that single actions of substantial financial importance, identified according to categories and State Administrations, be subjected to examination by the Court for a determined period of time. The Court may request a re-examination of the actions within fifteen days of receipt, with enforceability remaining valid. The administrations shall transmit the actions adopted following re-examination to the Court of Auditors which shall advise the Ministry when it detects irregularities.

4. The Court of Auditors shall, even within the accounting period currently in progress, carry out further inspections on the management of the budget and assets of public administrations, as well as extra-budgetary activities and on European Community funding, verifying the legitimacy and the regularity of management, as well as the effectiveness of internal inspections within each administration. It shall also, on the basis of other inspections as well, assess the conformity of the outcomes of administrative activity with the objectives established by law, comparatively assessing costs, means and times for carrying out administrative activities. The Court shall annually define the programmes and reference criteria for the inspection.

5. With regard to Regional administrations, inspection of management concerns the pursuit of the aims established by the laws pertaining to principles and programmes.

6. The Court of Auditors shall, at least annually, report to Parliament and to the Regional Councils on the results of the inspections carried out. The Court's reports shall also be sent to the administrations concerned, for which the Court, at any other time, formulates its observations. The administrations shall inform the Court and the elected organs of the measures adopted as a consequence.

7. Relative to local bodies, the provisions referred to in decree law no. 786 of 22 December 1981, converted, with modifications, by law no. 51 of 26 February 1982, and subsequent modifications and additions, shall remain in force, along with the provisions of law no. 259 of 21 March 1958, with relation to the bodies to which the State ordinarily contributes. The reports of the Court shall also contain assessments on the effectiveness of internal inspections.

8. In exercising the powers set out in the present article, the Court of Auditors may request any document or information from the public administrations and internal inspection organs and may carry out and order direct inspections and assessments. Paragraph 4 of art. 2 of decree law no. 453 of 15 November 1993 shall apply. The Court may request non-territorial public administrations to re-examine actions which are deemed not to

conform with the law. The administrations shall forward the provisions adopted following re-examination to the Court of Auditors, which shall notify the general management organ should irregularities be found. The laws concerning additional inspections established by legislative decree no. 29 of 3 February 1993, and subsequent modifications, and by legislative decree no. 39 of 12 February 1993, as well as by article 166 of law no. 312 of 11 July 1980, shall stand, insofar as they are compatible with the provisions of the present law.

9. For the exercise of the powers of inspection, the procedural rules set out in the consolidated law on the Court of Auditors, approved with royal decree no. 1214 of 12 July 1934, and successive modifications, shall apply, insofar as they are compatible with the provisions of the present law.

10. The inspection section is composed of the president of the Court of Auditors who is its presiding officer, by the presidents of the sections responsible for co-ordination and by all the magistrates who have been assigned inspection tasks. The section is annually divided into four committees of which, in any case, the president of the Court of Auditors and the presidents of the co-ordinating sections are members. The committees have specific competences according to the typology of inspection and matters under inspection and make decisions with a minimum of eleven voting members. The plenary assembly is presided over by the president of the Court of Auditors and is composed of the co-ordinating section presidents and of thirty-five magistrates assigned inspection tasks, who are identified annually by the Council of the Presidency on the basis of at least three for each section committee and one for each of the inspection sections for the administrations of the special statute Regions and of the autonomous provinces of Trento and Bolzano. The plenary assembly makes decisions with a minimum of twenty one voting members.

10-*bis*. In the plenary meeting the inspection section annually establishes the programme of activities and the tasks and responsibilities of the committees, as well as the criteria for their composition on the part of the president of the Court of Auditors.

11. With the possibility of referral established by art. 24 of the above-mentioned consolidated law on the Court of Auditors as substituted by art. 1 of law no. 161 of 21 March 1953, remaining valid, the inspections section shall rule in every case in which dissent occurs among the competent magistrates with regard to the legitimacy of actions. The magistrate who refers the question to the section is called upon to participate in the section as referee.

12. The magistrates assigned to the additional inspections referred to in paragraph 4 shall work according to the established annual programmes, but they may temporarily abandon these, for motivated reasons, for situations

and measures which require timely assessments and verifications, notifying the inspection section.

13. The provisions of paragraph 1 do not apply to the acts and measures emanated with regard to monetary matters, credit, movable property and currency.

– Art. 13 of law no. 468 of 5 August 1978, containing: “Reform of Some Regulations on Public Accounting pertaining to the State Budget”, published in *Official Gazette* no. 233 of 22 August 1978, establishes:

<< Article 13 (*Government guaranty*). – A list of the principal and subsidiary guarantees given by the State for government bodies and other subjects is included in an annex to the budgetary provisions of the Ministry of the Treasury>>.

Note to art. 184:

– Law no. 1089 of 1 June 1939, concerning the “Protection of Things Possessing Artistic and Historical interest”, is published in *Official Gazette* no. 184 of 8 August 1939.

– Decree no. 1409 of the President of the Republic of 30 September 1963, containing: “Regulations relative to Organisation and Staff of the State Archives”, is published in *Official Gazette* no. 285 of 31 October 1963.

– Decree no. 3 of the President of the Republic of 14 January 1972, containing: “Transfer to Ordinary Statute Regions of Government Administrative Functions for Assistance to Schools and to the Museums and Libraries of Local Bodies and their Relative Staff and Offices”, is published in the ordinary supplement to *Official Gazette* no. 15 of 19 January 1972.

– Law no. 127 of 15 May 1997, containing: “Urgent Measures for Streamlining Administrative Activities and Decision-making and Inspection Procedures”, is published in the ordinary supplement to *Official Gazette* no. 113 of 17 May 1997.

– Law no. 352 of 8 October 1997, containing: “Provisions for Cultural Properties”, is published in the ordinary supplement to *Official Gazette* no. 243 of 17 October 1997.

– Legislative decree no. 112 of 31 March 1998, containing: “Conferral of State Administrative Functions and Tasks to the Regions and Local Bodies, in Implementation of Chapter I of law no. 59 of 15 March 1997”, is published in the ordinary supplement to *Official Gazette* no. 92 of 21 April 1998.

– Law no. 237 of 12 July 1999, containing: “Establishment of the Centre for the Documentation and Enhancement of the Contemporary Arts and of New Museums, and Modifications to the Legislation on Cultural Property and Measures for Cultural Activities”, is published in *Official Gazette* no. 173 of 26 July 1999.

– Legislative decree no. 281 of 30 July 1999, containing “Provisions pertaining to the Treatment of Personal Data for Historical, Statistical and Scientific Research Purposes”, is published in *Official Gazette* no. 191 of 16 August 1999.

– For legislative decree no. 490 of 29 October 1999, see note to the premises.

– Decree no. 283 of the President of the Republic of 7 September 2000, concerning: “Regulation Containing Laws on the Alienation of Immovable Assets belonging to the Historical and Artistic Property of the State”, is published in *Official Gazette* no. 240 of 13 October 2000.

– Legislative decree no. 196 of 30 June 2003, containing the “Code on the Protection of Personal Data”, is published in the ordinary supplement to *Official Gazette* no. 174 of 29 July 2003.

– Law no. 172 of 8 July 2003, containing: “Provisions for the Reorganisation and Re-launching of Recreational Navigation and Marine Tourism” is published in *Official Gazette* no. 161 of 14 July 2003.

INTRODUCTION

The current Management Plan was worked out in 2007 within the request for recognition of the site called “*Italia Langobardorum* – Places of power and worship (568-774 A.D.)” as a world heritage site by UNESCO and **is still valid** for the site named “**The Longobards in Italy. Places of the power (568-774 A.D.)**” because this comprises the same assets as those previously selected [the small differences in the current configuration of the Site-which meet the ICOMOS Recommendations and refer to an extension of *core zone* of Brescia and buffer zones of Spoleto and Campello, besides the exclusion of the modern building to the north-east of Santa Sofia in Benevento- have no influence on the previous Management Plan objectives which concerned the same reference areas].

The Management Plan reflects the former name of the serial site, “**Italia Langobardorum**”, which has been and currently is the **umbrella brand** of the network used for all activities concerning promotion, cultural development and social economic relaunch of the nominate assets and their reference area.

The **Management Plan December 2007** was collectively drawn up and approved - through a relevant institutional agreement signed in Rome on 9 January 2008 (see annex 1 in the Nomination Format) by all institutions and stakeholders of the sites mentioned in the network, who referred to the Plan, each for its reference area, as a complex tool for short, medium and long term planning.

The Management Plan took effect in January 2008. The annex 6 **Advancement State (December 2009)** contains a further paper referring to the progress with the Management Plan.

ACTIONS CONTAINED IN THE MANAGEMENT PLAN 2007		
SECTORAL PLANS	OBJECTIVES	PROJECTS
KNOWLEDGE	32	85
PROTECTION & CONSERVATION	45	101
ENHANCEMENT	47	126
AWARENESS BUILDING & PROMOTION	31	76
SOCIAL ECONOMIC DEVELOPMENT	35	75

2007			
IN 2008			
ACTIONS TAKEN DURING THE YEAR	ONGOING ACTIONS	COMPLETED ACTIONS	ACTIONS ADDED TO MANAGEMENT PLAN
% of the 523 planned actions	140 33.26%	14 3.0%	-- --
IN 2009			
ACTIONS TAKEN DURING THE YEAR	ONGOING ACTIONS	COMPLETED ACTIONS	ACTIONS ADDED TO MANAGEMENT PLAN
% of the 449 remaining actions	188 35.9%	174 33.3%	60 11.5%

Table B

The Management Plan 2007 includes the implementation of 463 actions (see **table A**). The achievements obtained in the two-year implementation period in terms of network and single sites are shown in **table B**, which contains new projects added during implementation to the Management Plan 2007, as this latter is a dynamic tool (see chapter 2).

The stakeholders’ awareness of the relevant results achieved through the continuous implementation of planned actions is increasing thanks to the specific new shape and attractiveness of the “network” which involves other – National and European – areas as well as other institutional or private bodies with the same Longobard historical origins and interested in the cultural and social economic development goals contained in the Management Plan.

The awareness of a common Longobard dimension of present-day European

Cultures and participation for all in development are thus extraordinary characteristics enriching the original and innovative Management Plan of the nomination.

On the basis of the above, the Management Plan 2007 is made up of three volumes:

- Introduction, analysis of the Cultural Heritage sites and areas being referred to and analysis from a social economic point of view;
- Description of objectives and projects contained in 5 Sectoral Plans;
- Advancement State of the Management Plan, i.e. the update on progress with the Management Plan 2007 up to 31 December 2009 including the explanation and progress in implementing the added projects.

For details of the Network Managing Authority please refer to Social Economic Development Plan, section “network” Objective 1 Project 1.1.

1. PREFACE

The Management Plan for the Site “The Longobards in Italy. Places of the power (568-774 A.D.)”, which is presented for inscription on the UNESCO World Heritage List, cannot forego a preliminary, synthetic grading which illustrates and justifies the motivations which have led to the candidature, as well as the complexity and extension of the Site which have determined the methodological and projectual choices assumed by the promoters and the numerous stakeholders involved in the Plan.

1.1 NOMINATION OF THE SITE “THE LONGOBARDS IN ITALY. PLACES OF THE POWER (568-774 A.D.)”

The recent historical debate has revised traditional idea concerning the transition period between the classical age and the Middle Ages. The era unfolding between the fall of the Roman Empire and the birth of the Carolingian Empire has been reevaluated on the basis of the development of European civilization that followed. Traditional notions of “decadence,” “end of civilization,” and “barbarism,” have given way to the idea that there was a strong continuity in historical progress, in a period characterized by the reciprocal influence of various civilizations.

In particular, the role of the so-called “barbarian” Longobards has emerged as an important factor in the elaboration of Italian and European art and culture. Notwithstanding the possible divergence of opinions on the dating of specific monuments, or the interpretation of particular phenomena, there is now consensus that the Longobards revitalized and renovated the classical and post-classical artistic and literary heritage, and made important innovations in the field of

law. The *renovatio*, the renewal traditionally attributed to the Carolingian age largely started with the Longobards. Long before the developments emerging from the courts of Charlemagne, the Longobards had assimilated and had innovatively reinterpreted the forms of antiquity, assigning them newfound significance. The recent conversion to Christianity inspired the adoption of Roman and Byzantine architectural and decorative practices that were combined with the ethnic tradition. From the end of the seventh to that of the eighth century, that creative impulse led to a period of artistic flourishing that spread from the urban courts to the entire Italian territory. The monuments produced in the era of the Longobard domination, and whose candidacy we propose, manifest the complexity of the artistic and cultural process that they launched. The monuments represent evidence of how the Longobards transformed classical culture through the influence of their traditions, differentiating it with respect to other Mediterranean cultures and projecting it toward Europe—eventually, it was those developments that Charlemagne’s empire inherited.

The properties included in the nomination of the Site “**The Longobards in Italy. Places of the power (568-774 a.D.)**” represent the most significant or best preserved examples of their type among those present on the national territory. Together, the set of examples reflect the comprehensiveness of artistic and cultural Longobard production at its height.

The properties included in the nomination of the “**The Longobards in Italy. Places of the power (568-774 a.D.)**” Site, for inscription on the UNESCO World Heritage List, are the following:

- in **Cividale del Friuli**, the Gastaldaga area with the so-called Tempietto Longobardo and the Episcopal complex with the Palazzo Patriarcale below the National Archeological Museum;
- in **Brescia**, the monumental area with the monastic complex of San Salvatore-Santa Giulia, today housing the Museo della Città;
- in **Castelseprio**, the *castrum* area with the Torba Tower and the church outside the walls, Santa Maria *foris portas*;
- in **Spoletto**, the Basilica of San Salvatore;
- in **Campello**, the Clitunno Tempietto;
- in **Benevento**, the Santa Sofia complex with church and annexed cloister, part of the abbey, today housing the Museo del Sannio;
- in **Monte S. Angelo**, the Sanctuary of San Michele.

1.2 THE START UP OF THE CANDIDATURE AND IT’S EXTENSION TO THE ITALIAN “NETWORK”

The municipal Administration of Cividale del Friuli ancient capital of the Longobard Duchy in Italy and a place in which some of the most significant and well known artistic-monumental assets of Longobard people are kept had as early as 1996 put forward the request to the World Heritage List Office (Ministry for Cultural Heritage and Activities) for the insertion of Cividale in the Italian “Tentative list”. This initiative was perfected and relaunched during 2004 with the foundation, on the part of the municipal Administration of Cividale, of a workgroup made up of representatives assigned to the main Institutions and public bodies of the Region of Friuli Venezia Giulia competent in the management of the territory finalised at

directing and promoting actions and projects with the objective of valorising historical, artistic, monumental, archivist, documentary and environmental assets for which the extraordinary Cividalese heritage is substantiated.

Joined to Cividale by the train of thoughts of the Longobard matrix and the two international exhibitions on the history of the Longobards, the city of Brescia since 2003 put forward proposals of collaboration at the level of associations for the promotion of social tourism.

During 2005 the Mayors of the two cities and the Presidents of the Forum of Associations for the Promotion of Social Tourism of Brescia and Cividale established the “*Longobardia Association*” [Longobard Association] with the purpose of realising a “network” integrated tourist system, destined for the co-ordination in time of a larger European network “Longobardia Virtual European Region”, a “geo-cultural European corridor” to unite the matrix of Longobard sites from Scandanavia to the Ionian Sea, following the course of the Longobard people through history.

In 2006 work was initiated for the preparation of the candidature, including in the beginning the sole Longobard centres of power in the north of Italy (Cividale del Friuli, Brescia, Castelseprio-Torba). As work progressed it became necessary to extend the candidature to the locations of the most important “places of power and worship” in the areas of south-central Italy (Spoleto, Campello sul Clitunno, Benevento and Monte S. Angelo), in order to include the oldest evidence of Longobard culture at the time of its maximum ability of expression, before the fall of the territories of central and north Italy by the Franchi of Carlo Magno, in one serial Site.

1.3 THE METHODOLOGY APPLIED FOR THE SITE MANAGEMENT PLAN

The areas identified for candidature, other than the generic division of the Longobard matrix, are profoundly diversified between them in relation to their respective historical experience, traditions and natural environments, in situations of ownership and management and at times also regarding law.

Apart from this, the territorial extension of the Site, which runs from the north to the south of Italy, as well as its extraordinary formulation, have led to the direct involvement of very numerous institutions and public and private bodies in the work of preparation of the candidature: as many as 5 Regions, 6 Provinces, 8 municipal Administrations, 1 park Authority, 2 Mountain Communities, 4 ecclesiastic Bodies, 2 private-public Foundations, 2 study Centres, as many as 18 territorial Offices of the Ministry for Cultural Heritage (5 Regional Offices and 13 Superintendencies). Each one of these bodies-institutions have, furthermore, participated in the elaboration of the management Plan as they will then

collaborate in its implementation, with different sectors and offices.

These conditions have brought about considerable difficulties not only in the identification of a common strategy to be applied in the formulation of the Management plan, but also in the general progress of works, made operatively problematic also by the sole distance of each location in the Longobard “network”. For this reason we have proceeded with debates-meetings on a local, regional and national basis using Data Entry on a web application purposefully structured to contain data and text and specific dossiers and the management plan (<http://www.patriarcatoaquileia.it/>). By using this tool on line the almost 250 people involved in the work have been able to contribute to the preparation of the documentation for nomination in the UNESCO Site, having the possibility both to consult the technical documents in real-time as they are prepared and to exchange information with the people of reference in the other locations of the “network”. At the same time this has permitted the execution of a more effective action of co-ordination with the person in charge of candidature to the

Cividale del Friuli, 2007 May

UNESCO World Heritage List of the Ministry.

With regard to the methodology applied for the compilation of the Management plan, reference was made to that organised by the Office of the UNESCO World Heritage List which carries out, in the Ministry for Cultural Heritage and Activities, the function of co-ordination of the activities connected to the implementation of the *Convention for the protection of the world cultural and natural heritage* and the *Convention for the safeguarding of intangible cultural Heritage*:

<http://www.unesco.beniculturali.it>.

The methodology is described in the following Chap. 2.

Spoletto, 5th June 2009. Signature of the "Italia Langobardorum" Association

2. METHODOLOGY FOR THE MANAGEMENT PLAN

2.1 PREFACE

In order to encourage the protection and conservation of cultural and natural heritage of exceptional value to humanity at world level, in 1972 the General Conference of the Member States of UNESCO adopted the *Convention for the Protection of the World Cultural and Natural Heritage*. Through this international treaty UNESCO intended to stimulate all countries into ensuring the protection, conservation, valorisation and transmission to future generations of their cultural and natural heritage, while also sustaining sensitisation of the local population called upon to participate in the conservation of their property.

In particular, in art. 5 this *Convention* shows the measures to be taken in each Country in order to ensure a more effective protection and conservation and the most active valorisation possible of the cultural and natural heritage; amongst these, the definition of a general policy aimed at assigning defining functions in social life to the cultural and natural heritage and inserting the protection of this heritage in the general planning programmes, as well as the adoption of legal, scientific, technical, administrative and financial measures suited to the identification, protection, conservation, valorisation and restoration of this heritage.

In order to facilitate the actuation of this commitment, in the last few years the World Heritage Centre, together with its consultant organisations (ICOMOS, IUCN and ICCROM), wished to underline the importance of adequate management of the heritage. In 2002 during its 26th session, the World Heritage Committee adopted the *Budapest Declaration on World Heritage*

inviting all the partners to sustain the safeguarding of World Heritage through fundamental strategic objectives, attempting to ensure the right balance between conservation, sustainability and development, so that World Heritage assets can be protected by means of suitable activities that contribute to social-economic development and to the quality of life of the community a) through strategies of communication, education, research, training and sensitisation, b) searching for active involvement of local authorities, at all levels, in the identification, protection and management of world Heritage assets.

The relation between cultural heritage and territorial development tended to affirm itself in recent years as a recurrent theme in debate and reflection at international level. In Italy also the approach is changing with the attribution of an ever more significant role in the framework of development models founded on local identity and on the valorisation of endogenous resources in a territory. The “conservation” of the heritage from this new viewpoint has become the means to an end crucial to ensure development. The “Model for the definition of management plans for UNESCO sites” refers to this vision, on which the Ministry for Cultural Heritage and Activities worked in order to meet the requests of the World Heritage Centre.

2.2 THE MODEL FOR THE DEFINITION OF MANAGEMENT PLANS OF UNESCO SITES

Italy found itself in a very favoured position for continuing with the instructions given by the Convention on the protection of world cultural and natural heritage: in our Country particular attention has been given to conserving artistic and historical heritage for centuries, leading to

knowledge, policies, administrative and scientific structures in continuous development and perfecting, as required by the evolution of the concept of heritage itself.

Defining the method for elaborating management plans for UNESCO sites represented a new theme for reflection which was received by the Ministry for Cultural Heritage and Activities which activated itself on several fronts in order to arrive at the definition of a reference model useful to sites which Italy has already registered and those it will register in the World Heritage List.

Interesting management models were identified in the experience of Great Britain which has been developing this subject matter for a long time, especially in the management plan of the World Heritage Site of “Hadrian’s Wall” which represented the main reference point for the first Italian experience concerning the elaboration of the management plan for the Site “*The early baroque cities of Val di Noto*” for its candidature to UNESCO.

A second management plan, for the Site “*Etruscan Necropolises of Cerveteri and Tarquinia*” was elaborated directly by the Office of the UNESCO World Heritage List” in collaboration with the Superintendency of territorial competence for the Necropolis and with the territorial administrations involved.

At the same time the Ministry had established a consultant Committee of experts with the task of supplying orientations and addresses for drawing up and actuating management plans of the Italian sites registered into the World Heritage List and had initiated a study project for the “Definition of an operational model for a Management plan”. This project, borrowing from the first experimental applications in Italy and the best international experiences, had as its purpose the development of a sort of technical-operational manual for

the realisation of Management Plans for UNESCO sites applicable to the variegated Italian realities and therefore able to answer the national normative and administration reality, but also the cultural specifications of the national Heritage.

Without prejudice to the primary strategic objectives specified by UNESCO the preservation of the Sites inscribed and sensitisation of the population towards these values, the model which has been defined by the Ministry for Cultural Heritage and Activities moves, indeed from the choice of making these Sites attractors able to stimulate, in the territory of reference, a development process aimed at heightening economic potential, as well as the quality of life of the population. Basically this means activating a process of valorisation for each Site which is supported and promoted by the main “stakeholders” able to integrate cultural resources material and immaterial with the area’s natural assets and other sustainable resources, co-ordinating activities and programmes already in progress and identifying further plans necessary for reaching the preset objectives.

The proposed model validated the logical-methodological approach defined for the management Plan of the Site “*Etruscan Necropolises of Cerveteri and Tarquinia*”, which can be considered as the starting point of the operational model. According to this model the management Plan represents the tool that defines the method for managing resources of an historical, cultural and environmental nature in a territory and it is able to orientate urban and economic planning tools through knowledge, conservation and valorisation.

Synthetically, the plan defines a management system, which, starting from the universal values of exceptionality that have motivated or will motivate, inscription of a Site on the

UNESCO World Heritage List, carries out an integrated analysis of the state of the places identifying the strength of the change in progress, future objectives reachable through possible strategies and options of intervention, evaluates the probable impact on the local system, identifies and selects plans of action to continue the fixed goals, defines the methods of co-ordination and actuation and verifies their progression through a series of indicators which activate systematic monitoring of results over time.

The management Plan, therefore, is not to be confused with the normal development programmes, structural measures and interventions, or with the urban planning tools; it is independent and has a procedure aimed at defining the local development model based on the presence of the cultural and natural heritage and therefore carries out an action of co-ordination on all the other planning, realising the maximum horizontal and vertical integration among it.

2.3 METHODOLOGY FOR THE MANAGEMENT PLANS FOR UNESCO SITES: INTRODUCTORY PHASES

According to the proposed model, therefore, the “Management plan is a technical document which constitutes the tool necessary to define and make operative a process of protection and development, shared by several subjects and formalised by an agreement between the parties”; the Management plan thereby intends to rationalise and integrate a process of protection and development without doubt already in progress. In order to continue this objective, some fundamental moments are necessary which make up the preface of the compilation of the management Plan technical document. The preliminary deed is constituted by the precise recognition of values which

make the Site unique or of exceptional world value. In other words, it is the specification of the motives which will consent the insertion of a Site into the World Heritage List and which must always be taken into account to protect and valorise the characteristics and specifications belonging to that asset and not to others in the same territorial or cultural context. It is necessary to proceed with this type of analysis which is indispensable in order to set up an aimed management Plan and therefore also useful to understand and safeguard the “added value” signified by inscription in the World Heritage List.

A further passage consists of the identification of the area taken as a reference for the management Plan and of the competent subjects or carriers of interest for that area. As the management Plan is an integrated territorial tool based on a sustainable development model, it is clear that the area of reference, which will be identified according to different criteria (cultural, historical, geographic and physical, administrative, social and economic) may exceed, even considerably, the borders of the Site which is put forward for inscription in the UNESCO List and of its buffer zone, especially in the case of single monuments or archaeological areas. Consequently also the stakeholders will not only be those strictly competent for managing the site, but all those, public and private, in some way involved in the process of development of the territory. In the same way, on a larger scale, the normative framework and planning and programming tools in progress etc. are to be identified. The identification of the existing management system constitutes the specific picture of knowledge to define the actions aimed at rationalising it and optimising its effectiveness through the Plan.

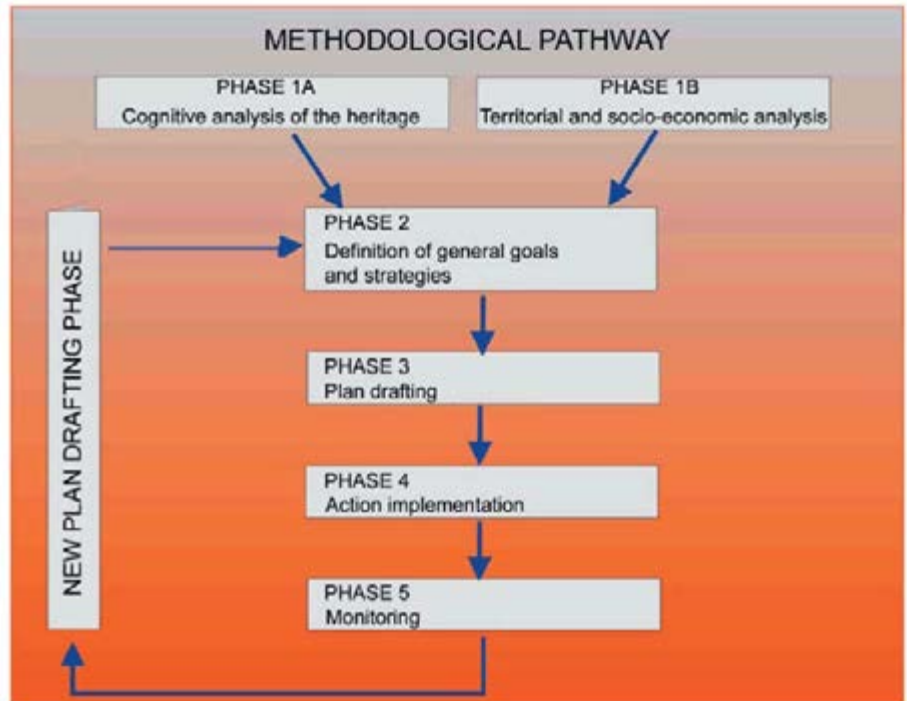

The introductory phase described above represents a moment that is

fundamental and binding to setting up the compilation of the technical document. It is, however, a phase that cannot be demanded solely from technicians; in fact at this moment the main players are the political deciders who must identify the potential and problems of their territory; the tools and structures concretely available; alliances, objectives and shared strategies.

2.4 METHODOLOGY FOR THE MANAGEMENT PLANS FOR UNESCO SITES: METHODOLOGICAL PATH

Only after the previous phase of political choices may the more technical phase of compiling the “management plan” start in order to render the choices made operative, but it must also permit a periodic evaluation of its effectiveness, therefore allowing any corrective actions to be applied so that new phases of actuation can be initiated.

In this technical phase the specialists who are to represent the various disciplines and the different sectors of intervention in which the plan can be divided intervene in the work. Naturally the type and number of experts can be reduced or increased according to the problems in the area and the objectives and strategies already defined and shared by the subjects involved. In any case would seem fundamental to be able to count at least on the historical-artistic experts linked to the values of the Site, experts on protection, conservation/re-qualification of the cultural heritage, experts in urban planning, experts in the sectors of marketing and communication of cultural assets, experts in the sector of economy and management of cultural assets and experts in administrative law with experience in the sector of negotiated programming or interventions involving various public and private subjects. These professional competences are, in fact, referable to the sectorial plans in

which the management plan model is articulated.

The methodological path built by the Ministry for Cultural Heritage and Activities foresees a series of actuating phases summarised in the schedule shown as follows.

- **PHASE 1 A** - The first working phase foresees an analysis of the knowledge on the heritage and starts from the acquisition of existing documents regarding the elements of cultural interest in the area; used are research, studies, censuses, studies on the market and the sector regarding cultural content including those that are traditional, environmentally naturalistic, immaterial assets such as folkloristic celebrations and traditions their state of protection, conservation and valorisation, as well as the methods used for their promotion and communication. The analysis therefore also foresees a critical analysis of the tools for protection and planning as well as the evaluation of risks and eventual systems of prevention.

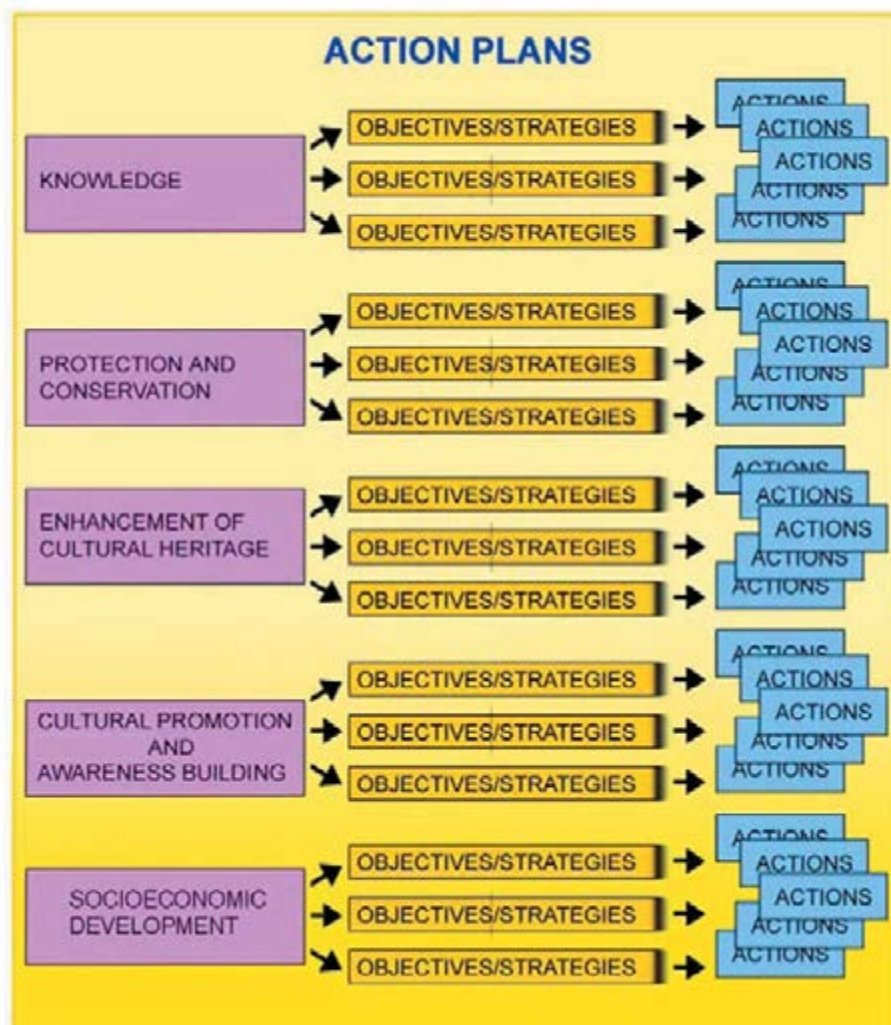

- **PHASE 1 B** - At the same time, again in

this first phase, there is the identification of the aspects which characterise the territorial and social-economic identity of the territory; that is to say, a moment of evaluation of the territorial resources aimed at defining the relative hierarchies and therefore, the positioning of the various elements on the reference market. In this phase technical specifications of statistical investigation can be applied, such as a SWOT (Strengths, Weaknesses, Opportunities, Threats) type analysis.

Also foreseen in this phase of analysis of the current situation, is an act of reconnaissance on subjects, financing, programmes and projects in progress or being prepared.

- **PHASE 2** - The second working phase foresees the definition of the objectives and operational strategies for a plan of interventions and actions which realise the general strategic directives formulated by the political deciders in the introductory phase. In particular the strategic guide lines and long term objectives are specified here, which

Management Plan structure

represent the fundamental reference points shared by the administrators and the resident population. Among these are cited as an example: the protection and conservation of heritage for future generations, the definition of lines of development compatible with conservation, promotion of tourism with awareness and ability to induce benefits for the resident population, etc.

The objectives to be continued in the short term must then be identified, which will constitute the formulation of the sectorial plans specified hereafter.

• **PHASE 3** - The third phase is that of building the plan. The aforesaid

strategies and objectives must produce the directives for designing the plan of interventions and actions to be actuated in order to reach the prefigured results; these directives must take into account on one side any limitations in compatibility and sustainability and on the other programmatic coherence with the national and local plans of intervention in progress, integrating the existing elements therein.

In the model shown here the management Plan is formulated in 5 sectorial plans relative to knowledge, protection and conservation, cultural valorisation, promotion and sensitisation

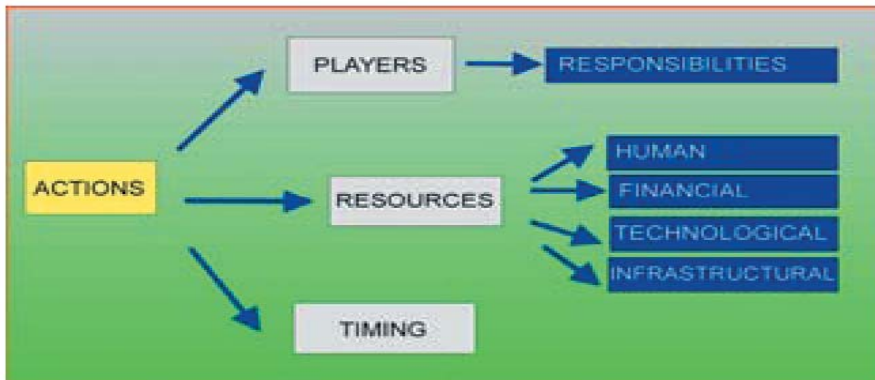

and social-economic development. In each sectorial plan some topical objectives are identified, to be carried forward through a series of concrete actions (projects).

• **THE KNOWLEDGE PLAN** - develops the topics connected to the knowledge of heritage, identifying the themes which need to be examined further, the methods of implementing the information and those for organising it and managing (possible topical objectives: start up new studies and research; build an informative system for managing and exploiting cognitive data, etc.);

• **THE PROTECTION AND CONSERVATION PLAN** identifies the methods for strengthening protection and heightening the state of conservation of the heritage (possible topical objectives: proposal of eventual corrections to the tools of protection and planning; activation or implementation of risk prevention systems; interventions of restoration or maintenance on specific types of assets; re-qualification of the landscape);

• **THE ENHANCEMENT PLAN** indicates the links between material and immaterial resources of the involved territories and declines strategic objectives because of their integrated and sustainable valorisation (possible topical objectives: interventions of valorisation on individual assets; creation of integrated networks of assets; improvement of services for visitors, etc.)

• **THE AWARENESS BUILDING AND PROMOTION PLAN** identifies actions of education and sensitisation for a process of growth and awareness on the part of the local population concerning their identity, expressed by the heritage system of the territory; identifies methods for external communication outside regarding these values (possible topical objectives: editorial and multimedia projects, didactic activities,

realisation of exhibitions, programming of cultural events, etc.);

• **THE SOCIO-ECONOMIC DEVELOPMENT PLAN** defines the potential of the integrated heritage system and includes objectives, strategies and programmes of intervention in order to realise a sustainable social-economic development founded on the conservation and valorisation of the heritage. The development of cultural tourism is allocated among the priority objectives of the programme of economic valorisation, but the important chains of production can be considered as the purposes of the objectives of development (possible topical objectives: strengthening of systems for accommodation, infrastructures and transport services, provisions for free time, valorisation of characteristic products etc.). The plan must therefore be co-ordinated with the cultural heritage valorisation plan, paying attention to the adaptation and strengthening of the services of accessibility and accommodation in the territory in order to strengthen the tourist sector and all the other connected economic chains.

The actions (projects) identified for continuing the objectives of each sectorial plan must be described in detail in apposite forms which will clearly identify: the subjects responsible for realisation, the necessary resources and the foreseen times.

• **PHASE 4** - The final success of the methodology proposed depends to a large extent on the level of integration and co-ordination which is realised in the process of managing the Site and ; c) the players, to favour co-operation within a common objective; d) policies, to create synergies between strategies which originally pertain to different decisional levels and sectors.

The elaborated model proposes some forms of consultation (e.g. institutional agreements, programme agreements and territorial pacts) and defines the structure and functioning of the

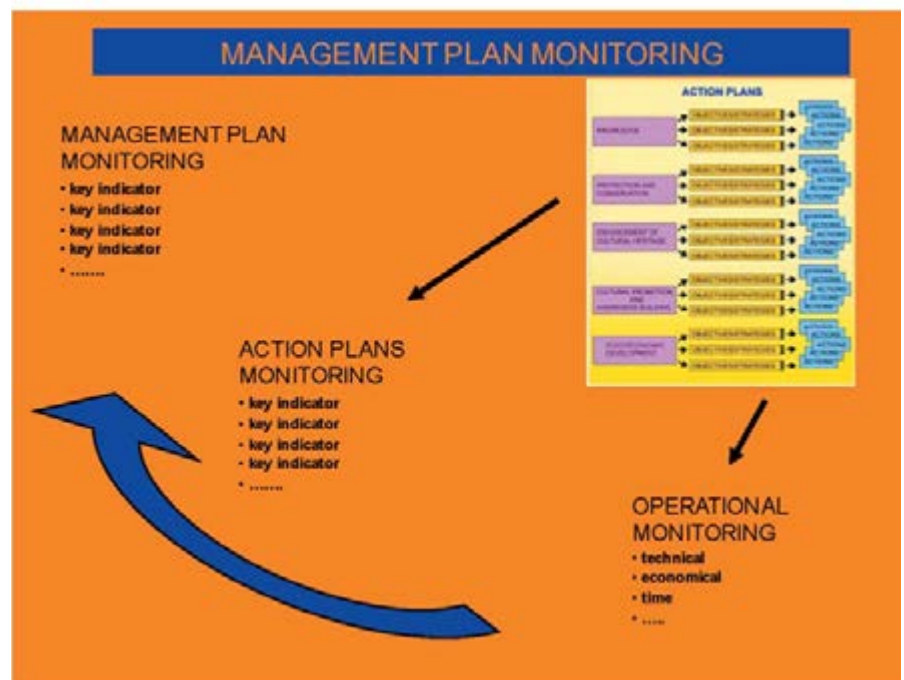

managerial organisation of co-ordination, analysing, according to Italian law, the most suitable legal form in order to guarantee the co-ordination and monitoring of the management Plan.

• **PHASE 5** - Once the management process is completed, the monitoring system is set which must be in the condition of evaluating the effective realisation of the programmed objectives and expected cultural, economic and social relapses.

By means of specific and distinctive indicators, the management plan can be evaluated and verified on several different levels which start from monitoring individual operative projects to reaching the monitoring of the objectives reached by each plan of action and finally that of the impact of the entire management plan.

The set-up given by the Ministry for Cultural Heritage and Activities for the Management plans complying with the directives supplied by UNESCO, meets the following purposes:

Conserve over time the integrity of the

values which have allowed or will allow inscription of a Site into the World Heritage List;

Combine and harmonise the requirements of protection and conservation of the heritage with the requirements of social-economic development of the relative territories;

Make a local development process sustainable, divided among several subjects.

3. MANAGEMENT PLAN FOR THE SERIAL PROPERTY “THE LONGOBARDS IN ITALY. PLACES OF THE POWER (568-774 A.D.)”

3.1 FOREWORD

The properties included in the nominated serial property “*The Longobards in Italy. Places of the power (568-774 AD.)*” -from now onwards called “*Italia Langobardorum*” that is the Name of the Network and the established Association- together with those present in the proposed buffer zones, have for decades been subject to control and attention by the numerous administrations and agencies that hold ownership or use. For years experts (archeologists, art and architecture historians, conservators, scientific experts, etc.) from numerous Italian and foreign institutions have interacted and operated in relation to these properties. This has also contributed to the realization of many initiatives and works that only ensured the level of conservation and protection of the single monuments and monument complexes but also raised their standard of valorization and presentation, thus making it possible to make the Longobard culture and the exceptional testimony that they left throughout the Italian territory known to a growing number of persons.

Moreover, much attention is being given to the same territories in which the candidate properties are located, territories in which for years the various public administrations, in agreement with private entities, carried out their activities in order to sustain and develop sustainable valorization initiatives, also in relation to a compatible development for the resident populations.

By virtue of this positive situation, and bearing in mind the ulterior

commitments that could derive from the inscription in the World Heritage List, it was decided to prepare a management plan for the site “*Italia Langobardorum* Center of power and worship (568-774 AD)”, aimed at coordinating and integrating the plans and initiatives already underway and to establish new and broader plans for study, conservation, valorization and promotion in the various locations included in the site. Sharing objectives and strategies, which is the foundation of the network that has been developed around the candidate site, in fact makes it possible to arrive at increased efficiency and effectiveness for the individual projects through economies and thus avoiding a dispersion of resources.

The organic and harmonized management of all the locations in the network is to be considered a complex process, in which the Management Plan, described herein, represents the technical implementation plan.

3.2 OBJECTIVES AND STRATEGIES OF THE MANAGEMENT PLAN FOR THE “ITALIA LANGOBARDORUM” SITE

The Management Plan for the *Italia Langobardorum* site was therefore conceived as a useful instrument to pursue a development model that would unite the requests for conservation of the exceptional cultural values of the Longobard evidence with their tourist fruition and with the need for transformation and growth of the national and local economies. Management of the site is consequently configured as a dynamic process to be implemented over time, with medium and long term deadlines.

The occasion of the UNESCO candidature represented a stimulus to enrich the proceedings already underway, through involving other public and private subjects with

competencies and interests in the reference areas of the properties, in order to perfect and extend the safeguarding and conservation policies of said properties, of the landscape as well as the additional cultural and natural heritage in the areas involved.

The Management Plan, therefore, intends to provide an instrument that, developing the capacities for attraction of the properties proposed for inclusion in the WHL, will be able to strengthen the sustainable development policies already underway, through an increased integration of the valorization activities for the heritage resources, whether material or immaterial, with the other endogenous resources in the territories (crafts, popular traditions, wine and food products, etc). The awareness, conservation and valorization of this heritage can in fact constitute additional segments of an economic system able to develop the potentials of the physical proof and knowledge handed down through time with specific and unrepeatable characteristics for each of the territories covered by the site’s network.

In light of the analyses conducted, as well as of the expectations and needs of the resident populations, development of the Management Plan followed these general guidelines:

- the first was aimed at formulating network projects that, based on the historical shared matrix of the various locations involved in the candidature and on the other common potentials, were able to raise the level of awareness, valorization and promotion of the heritage passed on by the Longobards, at the same time promoting common sustainable development procedures;
- the second was aimed at strengthening activities pertaining to knowledge, conservation and upgrading, promotion and awareness of the individual locations in the network through the integration of the programs already

underway, in order to reach higher and more homogenous standards of valorization and fruition of the territorial resources and at the same time increasing the benefits for resident populations;

- last but not least, aimed at guaranteeing participation of local communities in the development process, sustained by the strengthening of the quantity and quality of the social identities that said communities express. These are the general objectives, identified and shared by the numerous Stakeholders involved in the Management Plan, objectives which, starting with the principal goal of preserving and raising the values of the site and of the reference territories, aim to:

- exploit the potential contained in the network system that was created to provide more efficacy and effectiveness for the actions programmed;

- rationalize and reorganize the resource valorization procedures already underway in the various reference territories, in order to augment the offer of services and the capacity for fruition, at the same time reducing management costs;

- implement new activities for knowledge, conservation, valorization, promotion and awareness, preferring the realization of integrated action programs rather than punctual interventions, ensuring in the particular: a) the continuation and strengthening of the study and research activities on the Longobard sites and culture with the involvement and coordination of the more important centers and specialized institutions; b) the continuation and strengthening of the conservation and monitoring of the properties; c) the raising of the cultural offer and of the valorization standards; d) the growth of awareness and knowledge of cultural and identity values contained in the heritage, through the strengthening of

the promotion and information instruments;

- increase the capability of the cultural sector to absorb new qualified labor forces;

- strengthen the connection between the cultural industry and other production sectors present in the territories, ensuring that: a) promotion of the economic development will not under any circumstances constitute a risk for the heritage and for the quality of life of the resident populations; b) the economic benefits produced by the integrated development process also fall upon the local populations;

- adopt a homogenous upgrading system for the environment and the “knowledge” of the individual territories (mosaic landscape culture) and for the re-launching of the identities and of the distinguishing characteristics of each location in the site (bio-cultural fingerprint).

3.3 DEVELOPMENT OF THE MANAGEMENT PLAN FOR THE “ITALIA LANGOBARDORUM” SITE

As indicated in the foreword (Chapter 1) a Management Plan for the site was developed following the methodology defined by the Ministry of Fine Arts and Cultural Activities and explained in Chapter 2, with the required adjustments made necessary due to the specificity of the serial site that encompasses far-flung territories, diversified under many aspects.

The need to develop a single Management Plan was immediately accepted by all the institutional and non-institutional stakeholders, fully conscious of the uniqueness of the Longobard heritage and of the opportunities provided by an integrated management of such a broad and diversified territory.

Development of the Plan, according to the methodology described, witnessed:

- identification of the value and significance of the Site (Chapter 4)

- identification of the reference territories, intended as a unitary “cultural system” (Chapter 5);

- identification and involvement of the principal participants (Chapter 5);

- study analysis of the territories, with the recognition of the entirety of the identity values that distinguish them, implemented through the evaluation of the current status of the heritage resources, with the evaluation of the relative opportunities and critical factors (Chapter 6);

- the social/economical analysis of the territories (Chapter 7);

- the definition of the short-average term objectives, based on the macro objectives and on the strategies shared by the Stakeholders, and the definition of projects and measures to be realized, developed in the context of the five sectorial plans (knowledge, conservation and safeguarding, valorization, promotion and awareness, social/economical development). All the projects were conceived as part of a larger coherent and diversified project, aimed at realizing integration conditions in the context of each sectorial plan and among the various plans (Chapter 8). Definition of the management structure that must ensure coordination of the network is still underway, while potential sources of financing have been identified for the future network and local programs (Chapter 9).

With respect to monitoring the Plan, the principal conditions have been defined and the indicators for the evaluation and verification of the projects have already been identified; work is underway to define key numerical indicators to monitor the impact of the sectorial plans, taken individually and together, and of the entire Management Plan (Chapter 10).

3.4 STATE OF IMPLEMENTATION OF THE MANAGEMENT PLAN FOR THE "ITALIA LANGOBARDORUM" SITE

The support provided by the politicians in the territories involved, explicated in the Memorandum of Understanding signed by all the Stakeholders (see Nomination Format Annex 1) has already made it possible to commence certain of the specific initiatives planned for the site, in the context of the Management plan. Among these are:

- development and start-up of conservation and valorization projects for the Monastery of Santa Maria in Valle in Cividale;
- agreement signed by the managers of the Cividale del Friuli museums in order to improve the cultural initiatives, specializing the exhibitions and facilitating the creation of the future museum dedicated to Tempietto Longobardo (Annex 2);
- definition of an agreement between the Province of Brescia and the City of Brescia, aimed at the institution of a coordinating committee to optimize the actions of the numerous subjects involved in safeguarding the heritage and to promote culture and the economic valorization of the site, a UNESCO candidate (Annex 4);
- operating start-up of the activities required to arrive at the joint management of the Castelseprio-Torba area, pursuant to the agreement signed by the owners and managers (Annex 3)
- development and start-up of valorization projects for the Basilica of San Salvatore in Spoleto, for the creation of a visitors center;
- developing conservation projects for the Church of Santa Sofia in Benevento;
- preparation of the understanding (on the part of the Ministry of the Interior, Benevento Headquarters) in order to formalize the concession in use of the Church of Santa Sofia to the Diocese of Benevento, containing the provisions

appropriate for the public fruition of the property;

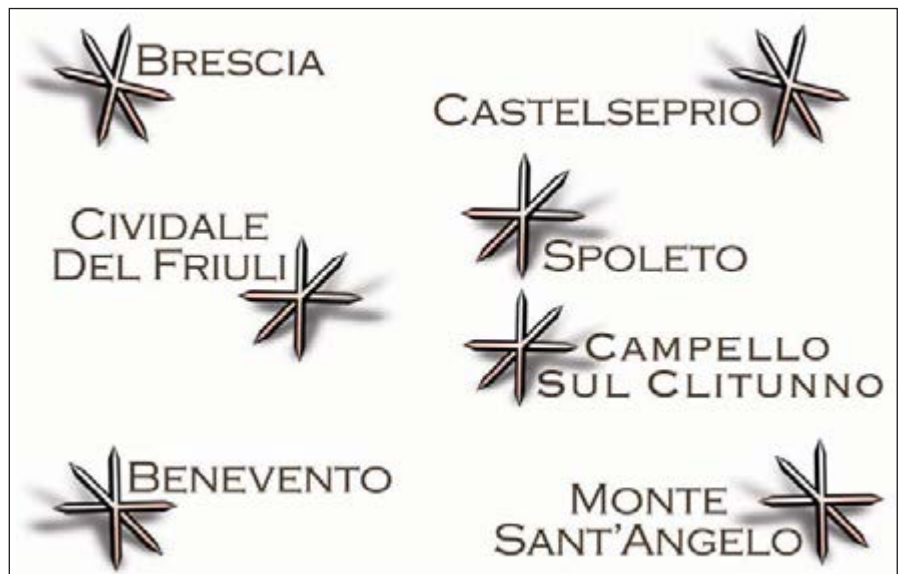

- development of the *umbrella brand* for the *Italia Langobardorum* site, fruit of a specific aesthetic study, which links: the starred tremisse (which recalls the economic and cultural power of the Longobards).

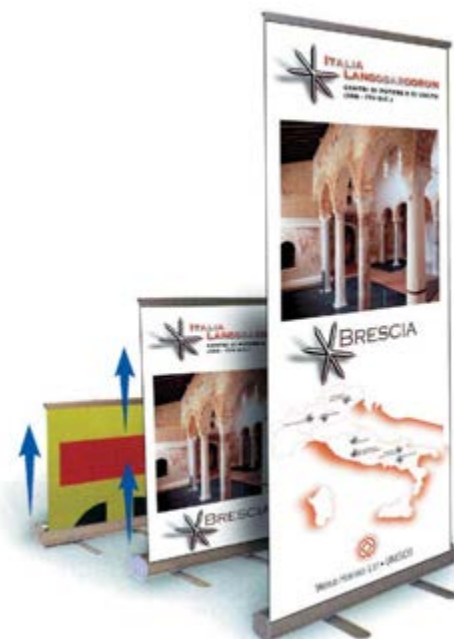

The *Chrismon* (monogram of Christ) contaminated by the *Triskeles* (which calls to mind the conversion to Christianity but also the pagan religiosity of Nordic origins of the Longobard peoples).

The Rose of the Winds (which calls to

mind the geographical position of the locations in the site, set out in diametrically opposite locations throughout the Italian territory). Accented by the sharp character of the graphics that evokes the conquest of Italy by the Longobard warriors.

The creative choice, linked to a chromatic and geometric direction, will then grow smaller for the network web site graphics, for publications relating to the Site, for road signs and panels to be erected in the locations included in the Site, as well as for the territorial mark of quality.

- creation of the web site, necessary for the construction of the *Italia Langobardorum* site organization system (preceded by the realization of an intranet site for the exclusive use of the Stakeholders for the simultaneous and comparative construction of the scientific dossier and the site's Management Plan), which will be implemented to support the coordination of the network and to provide visibility and to encourage awareness of the Longobard sites;
- publication of the scientific work by Prof. Hjalmar Torp in the *Tempietto longobardo di Cividale* and of the historical novel "Desiderata" by Isabella Vaj;
- other promotional activities for the site in the press and on television;
- etc.

3.5 PERSPECTIVES FOR THE MANAGEMENT PLAN OF THE "ITALIA LANGOBARDORUM" SITE

The history of the Longobards takes on a higher level of importance in light of an ulterior project consideration on the dimensions of the "voyage", which today takes on a specific value as an instrument

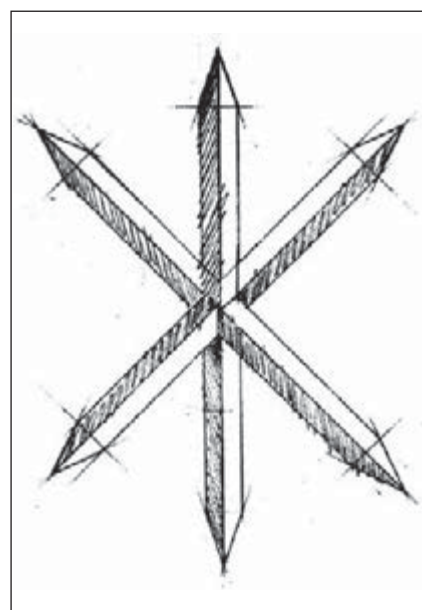

of growth of the single person and as a development factor, whether in an intercultural dialogue or in a "sustainable" and "eco-compatible" economy.

Since 2003, or since the first steps taken to facilitate the nascent start of a collaboration among the Longobard sites in northern Italy, the opportunity was identified to create, by virtue of the "voyage" undertaken by the Longobards throughout their history, a "European Geo-Cultural Corridor" that extends from Scandinavia in the North and Central Eastern Europe, as far as Italy.

The medium- and long-term objectives of the Management Plan are based on these premises, aimed at integrating into the "cultural system" of the network of the *Italia Langobardorum* Site not just all the Italian locations where the Longobards left their stamp in the field of monumental artistry but also those European countries that they traversed in the epochal migrations that brought them to Italy (Germany, Austria, Czechoslovakia, Hungary, Slovenia).

A second avenue considered as a possible extension of the Site, with respect to initiatives of a promotional and awareness

nature, is that linked to the itinerary of the cult of Saint Michael, which from the Gargano, at the hands of the Longobards, extends towards the central western part of Europe, establishing its key points in Val di Susa (the "Holy" of Mount Pirchiriano) and in Normandy (Mont Saint-Michel au péril de la mer Sanctuary).

4.2 DESCRIPTION OF THE SITE

PRELIMINARY REMARKS

The recent historiographical debate has definitely renewed the methodological fundamentals of the studies on the early Middle Ages thanks to the twofold reevaluation of the Germanic-Barbarian cultures role and of the archaeological contribution in the socio-historical reconstruction of a period which built the fundamentals of the medieval civilization.

The Longobards are among the main protagonists of the Germanic and Central Asian tribes migratory movement which involved the area between Western Europe and the Balkan-Danubian region in the historical period starting from the conclusive events of the Roman Empire. Yet, today it is right to the Longobards, among all the other populations, that we ascribe an extraordinary propulsive role in the cultural **transition between the Antiquity and the Middle Ages**. Indeed, they played a pivotal role in the formulation and diffusion of those meaningful imprints - cultural, artistic, political and religious – which spread from Italy to Europe and influenced the next millennium of Western History.

Therefore the Longobards indelibly contributed to the Western medieval civilization development.

The nomination format is consistent with the most updated tendencies of the research activity (which even today keeps dynamism and is characterised by various diverging interpretations) as it recognizes the most original and extraordinary value of the Longobard culture through the various expressions of their ethnic identity. Such an identity must be considered as an anthropological category that is to say as expression of a politico-cultural process, not as a Roman-antithetic racial factor.

The anthropological approach enables us to value some peculiar markers of their culture which otherwise, in the light of the Romans-Longobards simplistic dichotomy (even if considered in terms of fusion between the two elements), would not be taken into consideration.

Therefore in writing up the dossier we always considered – and underlined when possible – the impact of certain factors which appear to be determinant both in the elaboration of the Longobard culture as a whole and in the specific proposed artistic items. Particularly, the following criteria have been employed:

- continuity/discontinuity, as referred to both their own traditional culture and the Roman one;
- spontaneity/planning component in the performance;
- geographical and economic determinism in contrast with human intervention.

We are dealing with interpretative lines which are valid for all the phenomena included in the great system generated by the transformation of the ancient world. This event concerned the entire Mediterranean basin, where different forces operated and inter-operated, such as:

- the Germanic-Barbarian peoples migration,
 - the propagation of Christianity,
 - the establishing of the Arabic presence.
- All these factors were determinant, even if in different ways, in the elaboration of the “new” medieval culture.

The Longobards then accepted, preserved, enhanced and transmitted forms and contents of the Roman-Hellenistic tradition. In these terms we find the most original, creative and permanent contribute of the Longobard culture which makes it distinct from any

other civilization elaborated during the same historical context.

The proposed artistic items represent the physical evidence of this cultural process, which main factors, in the light of the above mentioned criteria, were:

- the physic-cultural environment as favourable condition (geographical determinism): the Longobards settled in Italy, which had been the centre of the Roman Empire, which was the Christianity seat, and which had been first a Goth site and subsequently Byzantine, as well as a strategic crossroads between West and East;
- the Longobard *élites* programmatic and strong will (planning quality) of being in line with the past, but also with the existing powers of their time, such as that of the Roman Church.

It should be underlined, however, that each component was predominant in a specific moment.

The environment variability aspect was more prominent during the immigration phase, whereas the planning aspect became outstanding after their settling in Italy; for this reason the cultural features, which were actively, intentionally and critically adopted by the Longobards, became the ground during the process of cultural elaboration and transformation.

Since the second phase it is registered a **dialectical relation with the ancient world and the classic tradition**, which the Longobard *élites* perceive as **authoritative and referential forms of legitimation**. By the way, this is a common trait of many cultures during the interchange phase; the Longobard distinguishing innovation lies in the expression of this dialectical relation, in the manner they considered themselves as heirs of a past which is intended and experienced as the present. The opportunity to autoptically verify the

material of the ancient heritage as well as to exploit it encouraged not only the knowledge of the tradition and its critical-ideological utilization but also its survival and transmission.

This makes the Longobards - as Paolo Diacono himself wrote - the true heirs of the Roman civilization, much longer than the Byzantines.

Therefore, the relationship of the Longobards with the *Antiquitate* was not a mythological appreciation, as during Teodorico's time, nor an uncritical idealization as during the subsequent Carolingian age.

Concluding, the Longobards were protagonists of a unique and extraordinary experience which resembles other "Roman-Barbarian" kingdoms contexts - particularly, those set by the Merovingian kings in Gaul and by the Visigoth Kings in Spain (see 3.3). Nevertheless they were able to express something different and universal: if anything, this is what makes their experience closer to that of other migrant populations which in different periods and contexts opened the path to definitive cultural transformations and historic evolutions.

Despite different interpretations which could still be noted on certain aspects of their productions, it is now widely considered that the Longobards anticipated the so called "*renovatio*" - traditionally associated with the Carolingian age - saving, continuing and renewing the classic and post-classic Roman Antiquity in the arts, in the written culture and in the law. Well before the school of Charlemagne's court, the Longobards were able to assimilate the ancient forms, giving them new meanings as well as deeply innovating elements.

Supported by a strong creative activity inspired by the conversion to Christianity,

but still grounded to the conservation of their own ethnic identity, they recovered architectural and ornamental models of the Roman-Byzantine culture. **Between the end of VII - VIII century**, they gave rise to an artistic production which flourished in the Northern, Central and Southern Italy spreading from the urban courts to a large part of Italian territories. In the late Longobard monuments, which masterpieces are proposed hereby, it is possible to catch the complex changing process of the ancient culture, now brought to a European dimension. Such a process was undertaken by the Longobards and inherited by the Carolingian Empire.

The properties included in the nominated Site: "***The Longobards in Italy. The places of the power (568-774 A.D.)***" are the result of the Longobard civilization, intended as creative responses of the cultural process they were protagonists of.

Such properties - **selected on a very scrupulous basis** (see below) - represent, each one according to its own specific category, the most indicative or the best preserved sample of the numerous testimonies in Italy. The whole of them embodies the universality of the Longobard culture at its climax, given by the fact that they fully represent the Longobard articulated organization of both power and worship in Italy.

In this perspective, **nominated serial property is not composed by homogeneous elements from a typological point of view**, but by structures which differ in function and morphology. Indeed, we deal with evidences of urban culture (Cividale), of castrensian settlement (Castelseprio), of monastic complex (Brescia), of *élites* worship buildings (Spoleto, Campello), of Longobard votive chapel (Benevento) and of Longobard national sanctuary (Monte Sant'Angelo).

They are artistically perfect and refined monumental complexes, expressing the Longobards monarchy or aristocracy. In this perspective they all are "***places of power***" which well demonstrate the ruling *élites* will of legitimating their own authority, promoting their interests and expressing their own *status*. Worship complexes such as Sanctuaries, private Churches and Monasteries should hence be considered "***places of power***" through which the Longobards not only expressed their support to Christianity, but performed their accord strategies in respect of the Roman Church and the local clerical *élites*, assured their control on the population as well as on the economy, and secure themselves the transmission of their own goods (moreover, the Monasteries were important centres of culture where the transcription activities of literary, technical, legal, artistic and scientific works of antiquity took place, guaranteeing their preservation up to the present).

The serial property, therefore, illustrates from one side the specificity of the Longobard culture during the Dark Ages, and from the other the universality of its results in the formation of medieval Europe.

Serial Site composition/selection

The artistic properties included in the Site "***The Longobards in Italy. The places of the power (568-744 AD)***", which aim to be inscribed in the UNESCO's World Inheritance List, are the following:

In **Cividale del Friuli**, the *Gastaldaga* area with the so-called Tempietto Longobardo and the Episcopal Complex with the *Palazzo Patriarcale* below the National Archeological Museum.

In **Brescia**, the monumental area with the monastic complex of San Salvatore - Santa Giulia, today housing the *Museo della Città*

In **Castelseprio-Torba**, the *castrum* with the Torba-Tower and the church outside the walls, Santa Maria “*foris portas*”.

In **Spoleto**, the Basilica of San Salvatore.

In **Campello sul Clitunno**, the Clitunno Tempietto.

In **Benevento**, the Santa Sofia complex with church and annexed cloister, part of the abbey, today housing the *Museo del Sannio*.

In **Monte Sant’Angelo**, the Sanctuary of San Michele.

Given the choice of representing, through the proposed series, the specificity and universality of the Longobard culture during the Early Middle Ages, the artistic items selection has been performed within all the contexts which mark out the Longobard culture in Italy. For this reason, the proposed Site brings together the two Sites of the Tentative List submitted by Italy: “*Cividale and the first places of Longobard power in Italy*” and “*Monte Sant’Angelo and the Via Sacra Langobardorum*”.

It could be noted that S. Michele Sanctuary, located in the Gargano peninsula, represents the highest expression of the Longobards peculiar behavior towards spirituality and support to Christianity. Indeed, accepting and transforming the worship of Michael Archangel, the Longobards did reaffirm their people identity through the syncretism they created between the original Germanic beliefs and the new religion, and at the same time they set a “*universal*” referring point through the modern proposal of such a worship, now revitalized and internationalized, which is still experienced.

Sporadic documentary evidence suggests that the Longobard *élites* in Italy commissioned prestigious buildings right from their arrival (palaces and residences, but also churches and basilicas), along the lines of their Roman predecessors, in order to affirm their position and authority. Since the century before the Carolingian annexing of the north and centre of the peninsula (second half of the 7th-first half of the 8th century A.D.), the Longobard kings and dukes began more frequently and more systematically to commit themselves especially to the construction of churches and monasteries. The monastery, in particular, is a typical foundation of this period, an expression not only of the strength of the faith of the Longobard nobles, but also a place of refuge for themselves and their families and, above all, an institution that guaranteed the continuation of their assets. King Desiderio alone, together with his wife Ansa, founded three monasteries (in addition to San Salvatore in Brescia, there were those in Leno and Sirmione) and all the dukes of the peninsula conformed to this model, undertaking ambitious architectural enterprises unparalleled in Europe at that time.

Sources testify – and monument evidence confirms – that the construction industry was well organised with guilds of specialised craftsmen who could carry out complex commissions to high standards. Not having an architectural, pictorial or sculpture tradition of their own, the Longobards used the existing skills of the local craftsmen. This is one of the reasons that the Longobard artistic style in Italy is extremely composite and presents specific characteristics in different parts of the kingdom. Faced, therefore, with a clear unity of intent which brings together all the monument complexes – owing to the desire for self-determination of the Longobard *élites* and legitimization before the indigenous population – we find heterogeneous artistic creations which, for example, in Lombardy seem to be more

conspicuously subject to the Merovingian influence, as in Friuli the influence is more Byzantine and Syriac. The language in different areas of Italy was therefore different, but the various formal dialects were mutually comprehensible.

Today’s region of Friuli is the area of Longobard settlement in Italy that is richest in testimonies and findings; in particular, one of the most complex and original buildings of Longobard architecture is preserved at **Cividale del Friuli**, the so-called “*Tempietto Longobardo*”, Oratory of Santa Maria in Valle, with a single chamber, square-plan, covered in a spacious cross-vault, which terminates in a lower presbytery, divided by pairs of columns in three parts covered in barrel vaults. The sumptuous decorative scheme, including mosaics on the vaults, stucco figures and ornaments, and a series of frescoes painted in aulic style and skilfully refined, make this one of the most splendid and ambitious works to reach us today from 8th-century Europe, probably the work of the Royal couple Astolfo (749-756) and Giseltrude. In particular, the stucco tondo figures of female saints show the refined and high level of artistic production achieved in Italy in the late Longobard era.

The Temple, together with San Giovanni, the Palatine Church of the royal court, stands in the urban area belonging to the castle, next to the early Christian Church of Santa Maria, which became an Episcopal church with annexed Palace in the late Longobard era.

The Episcopal complex, renovated and extended by the patriarch Callisto, consisted of a set of communicating buildings, which included the Basilica, the Baptistery of Saint John the Baptist and the Patriarchal Palace. From the Baptistery, discovered at the start of the 20th century beneath the Duomo, come two of the most important works of Longobard sculpture, currently preserved in the *Museo Cristiano e Tesoro del Duomo*, a

short distance from their original location. The high level of craftsmanship explains the excellent quality of Callisto's "*tegurio*" – an octagonal aedicule which covered the baptismal font, with columns and arch vaults finely sculpted with symbolic images and rich decorative motifs – and the altar commissioned by King Ratchis – the only sculptural piece from the Longobard era featuring a biblical narrative theme, achieved using a linear and calligraphic language that invert the standards of classical naturalism, and enriched by a vivid chromatism and a precious set of mounted stones.

The remains of the Patriarchal Palace were uncovered beneath the 16th-century Palazzo dei Provveditori Veneti, designed by Andrea Palladio, today home to the *Museo Archeologico Nazionale* which houses the burial items from urban and suburban necropolises of Cividale, real treasures of Longobard artistic craftsmanship.

The exceptional nature of the proposed artistic item is provided by the preservation of the most representative structures and spaces of the secular and religious *élites*. This offers a clear proof of the socio-cultural composition of the urban *civitas* – the Longobard ruling one – as well as of the strategies performed by the dominant classes in the power management. Indeed, the site includes evidences of the rich artistic production ascribed to Longobard period and to a secular customer base. It is a unique repertory, for it displays the ubiquitous creativity and experimentation attitude of workers who elaborated a new original language as result of the confluence of different traditions: the indigenous, Barbarian, Byzantine and Arabic ones.

The monumental area of San Salvatore-Santa Giulia in **Brescia** is an extraordinary architectural palimpsest that incorporates the female convent built by Duke Desiderio of Brescia, with his wife Ansa in 753 A.D. before becoming king. The Church of San

Cividale del Friuli, the "Tempietto Longobardo"

Salvatore is one of the most important testimonies of late mediaeval architecture: the building, with triple apse transept, had three naves with a series of columns and capitals, some recycled from the classical era and from Byzantium, others made for this purpose. The church was entirely decorated with stuccoes and frescoes; the decorations, along with those of the Cividale Tempietto, are one of the richest and best preserved collections of the Early Middle Ages. A complex play of stucco reliefs and wall paintings probably decorated the crypt, which also had the three-apse system of the upper floor. Within the church, enhanced by a marble liturgical assemblage of which numerous elements are intact, can be found a

number of tombs of the privileged, one of which is thought to be that of Desiderio's wife, Ansa.

The complex somehow recalled architectural and ornamental models already used in the Capital Pavia, and subsequently in Cividale. Nevertheless it became a referring point for the prestigious architectures ordered by the secular and religious purchasers. As a whole, it is possible to recognize here traditions of North-European (British and Alemannic), Mediterranean (Ravenna's and Roman) and Oriental ascendancy.

The Monastery had service structures for the pilgrims reception and the poor housing. Historical sources recall the *Xenodochio*, which hosted the pilgrims,

and the so called *Peresindo's Hospital*. The monastic complex area spread Westward with houses, burial places and productive plants. The walls evidences still visible *in situ* testify the presence of the large number of Longobard buildings, with different functions and structural quality. Such evidences were uncovered in what is still considered to be the most complete medieval urban excavation, within an area where the most important pre-existing Roman remains in Northern Italy are preserved.

S. Salvatore - S. Giulia Monastery, which had reception structures for pilgrims and accommodation for the poor, played a fundamental role in the society of the time, both in religious terms and in political and economic terms. Its importance did not diminish after the fall of the Longobards: its richness and high prestige over the centuries led to new important architectural interventions, extending Desiderio's complex until it became the

structure that we see today, which, in addition to three cloisters from different eras, includes the Romanesque Church of Santa Maria in Solario, the 15th-century choir and the 16th-century church of Santa Giulia. The entire complex, the result of an exceptional recovery and valorisation project, is currently home to the *Museo della città*, which houses the finest artistic testimonies of the long history of Brescia and its territory.

While Cividale and Brescia, like Benevento, demonstrate the settlement methods of the Longobards within the most important cities in the urban system created by the Romans, **Castelseprio-Torba** is excellent testimony of how high altitude fortified systems, which developed during the late Roman era following the first Barbarian invasions, were re-used. The *castrum*, destroyed by the Visconti in the late 13th-century – with the exception of buildings of worship – and following its

abandonment, retained the fundamental features that characterised it: the imposing wall circuit, a place of shelter for the inhabitants in times of peril, the high quality of the housing system and of the main worship complex of San Giovanni Evangelista, with basilica and annexed octagonal baptistry, completely reconstructed by the Longobards in the 7th century and used internally and externally for the burial of important local personages.

A particularly significant example of military architecture is the Torba tower, placed at the summit of the fortified site of Castelseprio, which led down to Valle dell'Olona, and which, in late Longobard times, was used as a female convent. The rooms on the first and second floors of the tower, used by the nuns as a sepulchre and oratory respectively, preserve noteworthy remains of paintings which, in some iconographic respects, are reminiscent of the stucco work in the Cividale Tempietto.

The Church of Santa Maria *foris portas* in Castelseprio, a private aristocratic building with annexed cemetery, placed in the area of the burg which developed westwards of the *castrum*, preserves one of the finest pictorial texts of the whole of the Early Middle Ages; the scenes dedicated to the story of the childhood of Christ are presented in the central apse of the small triple-apse structure enriched with an inlaid marble floor. The series of figures is complex and dense with episodes and references, alternated with symbolic images; the style is free and animated which renews and revitalizes the expressiveness and Hellenistic pictorial quality and is unequalled by other creations of the time.

The *Wideramn* epitaph probably comes from the church and is one of the first testimonies of written Longobard funeral culture. Conquering the written culture of the victors went hand in hand with assimilation of architectural and decorative cultures. Having first entered the funeral ritual with the purpose of evoking the

Brescia, the Church of San Salvatore

Castelseprio, Christ Pantocrator in S. Maria *foris portas*

memory of the personality rather than merely the physical aspects of the deceased, writing soon took on new functions of celebrating the image and status of the Longobard *élites*: it is in this function that we encounter it in the most extraordinary architectural works, the painted dedicatory inscriptions of San Salvatore and Brescia and the Cividale Tempietto, the inscriptions on the *tegurio* of Callisto and on the altar of Ratchis, again in Cividale, in the epigraphs in the Sanctuary of Saint Michael on the Gargano Coast, the architectural inscriptions on monuments in the duchies of Spoleto and Benevento, clear references to Imperial Roman customs.

The complex as a whole represents an extraordinary example of castrensian settlement which stands out for its spatial organization, monumentality and typological variety of its buildings. The great number of worship buildings, characterized by different functions, public and private, is a proof of the influential relationship of the Longobard *élites* with the Church, to the extent of creating a “new” model of settlement where the sacred places played a primary role in the power strategies.

Again in the duchy of Spoleto there is the same tendency for the prestigious architecture conveyed in the monuments of the northern duchies. One of the best preserved examples is the Basilica of San Salvatore in **Spoleto** and the Clitunno Tempietto in Campello, both outstanding edifices designed using classic Roman style features. Most of the sculpted ornaments are new works rather than recycled *spolia* from ancient buildings, designed and realised in such a convincing, skilful and credible way that they also convinced Palladio that the Tempietto was a Roman temple and it still puzzles and astounds scholars to this day. The Church of San Salvatore, which probably had funerary functions originally, has a three-aisle basilica floor plan, with

presbytery divided into three parts, and central vaulted covering with octagonal base. The semi-circular apse is closed on the outside by a straight wall and flanked by two apsed, cross-vaulted rooms. One characteristic element on the interior, which has lost almost all of its pictorial and stucco decorations, is the rich entablature with Doric frieze set on Doric columns in the nave and Corinthian columns in the presbytery. Of the original rich decorations of the façade, alternated by pillars and divided into two orders by a cornice, which must have terminated with a triangular

fronton, remain the window cornices and three portals with skilfully elaborate classical motifs.

S. Salvatore Church is an early architectural evidence of the Longobard period, as expression of the ruling *élites* ideology. It inaugurates a model for the medieval religious architecture. As original products of different attitudes (Roman-Hellenistic, Byzantine Longbards, indigenous, Syriac), it precociously embodies the cultural pluralism which is the Dark Ages peculiar trait and the ground of the Medieval Europe.

Spoleto, the Basilica of San Salvatore

Campello sul Clitunno, the Clitunno Tempietto

The design of the recomposed spoils is common to the extraordinary marble works of San Salvatore and those of the Clitunno Tempietto, a small *sacellum* in the form of a tetrastyle Corinthian temple with two side porticoes *in antis*, located in **Campello sul Clitunno**. The façade features splendid columns covered in leaves from the portico, whose architrave bears an inscription in extraordinarily carved square Roman capital letters invoking God, complementing the

inscription on the side porticoes. This is one of the rare examples of monument epigraphs of the Early Middle Ages; the practice of placing monument inscriptions on the façade of a building had been abandoned in late antiquity and was not re-introduced until the 14th century when Leon Battista Alberti created one for the Malatesta Temple in Rimini. Inside the Temple, painted murals of remarkable quality, which have been compared to the frescoes in the presbytery of Santa Maria

Benevento, the Church of Santa Sofia

Antiqua in Rome, framed a small marble aedicule in the apse, which is also partly the product of the assemblage of recycled Roman material and purpose-designed decorations.

The little temple represents a masterpiece of religious and commemorative architecture, to the extent of being a pilgrimage destination (see graffiti). Its structures and decorations together with the surrounding landscape make of it a unique work where artificial elements and natural environment (Clitunno river and the holy *locus*) perfectly merge.

Like the dukes of Spoleto, Arechi II, son-in-law of the Friulan Desiderio and the duke of **Benevento** also carried out prestigious monumental initiatives, trying to develop their own aulic construction style and court art with marked ancient features. The clearest and highest expression of this intention is the Church of Santa Sofia, one of the most complex and best preserved complexes of its era. The dedication to Holy Wisdom, *Haghia Sophia*, which is expressly influenced by the Great Church in Constantinople which stood near the imperial palace, offers another example of the ambitions of its sponsor patron

The church was built in around 760 A.D. as a personal chapel and national sanctuary by the duke, for redemption of his soul and salvation of his people and nation. The quality and inspiration represented by Santa Sofia are testified by its complex central structure and by the intricate vaulted roof; the interior space is divided by columns and pillars laid out to form a central hexagon and a concentric decagon; the columns of the hexagon bear recycled, but carefully selected, capitals from the classical era, also placed in an upturned position to form bases. The circular perimeter wall, which becomes fragmented beyond the presbytery area, terminates in the three apses. In the two minor apses are preserved the most important pieces of the pictorial series dedicated to stories of the life of Christ,

which probably covered the entire interior surface of the church. The fragmentary nature of the images partly limits the effectiveness of the painting, which is nevertheless the highest testimony of “Benevento painting”, an art movement of considerable importance (also involving the two monastic centres of San Vincenzo in Volturno and Montecassino), parallel to the *scriptura beneventana* phenomenon, the national script of the Longobards in southern Italy, also used in monasteries to transcribe works from antiquity.

Annexed to the church of Santa Sofia was a female convent, whose extraordinary cloister, with Roman-style forms, re-uses a number of elements of the original Longobard construction. The cloister and the convent structures are currently home to the *Museo del Sannio*, which houses some extraordinary exhibits from the city. This peculiar star-shaped Church is a sophisticated, extremely peculiar product of both Roman-Hellenistic and Byzantine tradition (because of the central plan, typical of the V-VI cent. oriental architecture) meeting the Longobards attitude towards experimentation, which in this building is realized once again by a thought out exploitation of the *spolia*. Moreover, the Church anticipates the renewed interests in central planned buildings, which will spread mostly in Northern Europe starting from the Carolingian time especially in the palace chapels.

After 650 A.D., the Benevento Longobards incorporated into the territory of the duchy the Gargano region, where, worship of the Archangel Michael was established the 4th century onwards, thanks to ongoing intense relations between the Greco-Byzantine world and Apulia. Worship of the Archangel was, in some aspects, congenial to the sensitivity of the Longobards; indeed they were now converted to Christianity, and must have felt a particular attraction for Saint Michael, in whom they found attributes

Icon of San Michele, golden foil

and characteristics of the pagan *Wodan*, considered the supreme god by Germanic populations, the god of war, psychopomp, protector of heroes and warriors. From the 7th century, the Gargano sanctuary in **Monte Sant'Angelo** was considered a national Sanctuary by the Longobards and it soon became the most important place of worship of Saint Michael in the west, influencing all others.

The Longobard dynasties of Benevento, but also those of Pavia, as testified by Longobard inscriptions preserved in the buildings, gave life to vast monumental reconstruction works at the sanctuary, to facilitate access to the primitive cave and provide hospitality for pilgrims. With the Longobards it became one of the most important places of worship in Christendom and was an international destination of pilgrimage, one of the last stages on the road that lead to the Holy Land, coinciding in with the ancient route of the *Via Traiana* southern Italy, which since then took the name of *Via Sacra Langobardorum*.

In the centuries following the fall of the Longobards, the Normans, Swabians and the House of Anjou adopted worship of Saint Michael and became attached to the

Gargano sanctuary, and carried out important reconstruction works, changing the original architectural layout of the upper part of the sanctuary and enhanced it with new decorations and important treasures. Today the sanctuary is still a pilgrim destination, with morphological and ritual features dating date back to the Longobard period.

The sanctuary is one of the rare Dark Ages *loca sanctorum* preserved through the centuries. Particularly, the heritage possibly ascribed to the Longobard phase – with its exceptional epigraphical *corpus* – is a unique evidence for the Longobards history outline, being expression of a peculiar spirituality insofar as they combined the German pagan beliefs with Christianity. The Longobards, indeed, transformed and gave new life to S. Michael's worship, which so much contributed towards the development of the medieval pilgrimage – unifying factor of the Byzantine Mediterranean basin and the Northwestern Europe and the Germanic world. This became a universal reference, both for the Christian faith displays and the architectural setting of S. Michael's hundreds sanctuaries built in the West.

4.3 SIGNIFICANCE OF THE SITE

4.3.1 PROPOSED STATEMENT OF OUTSTANDING UNIVERSAL VALUE

The nominated serial property bears a unique and exceptional testimony to the disappeared Longobard civilization at its acme during the Kingdom of Italy (568-774 A.D.).

The Longobards created architectural and monumental forms –which were completely alien to the traditions of nomad and semi-nomad peoples– on the Italian territory only, thanks to the reception, conservation and enhancement of the form and content of Classical and Christian culture. The extraordinary integration and interchange process between the original North Germanic culture, the local (Roman and Byzantine) culture and the contribution of the Mediterranean and Eastern European culture, is remarkably testified by the artistic and monumental expressions of the Late Longobard Age and finds its highest expression –thanks to its unique and exceptional nature- in the properties included in the nominated series. They represent the creative response to the attempt made by the Longobards to reconcile diverging cultural and artistic expressions (syncretism) and stand out in the Early Middle Ages for their excellent artistic quality.

The serial property, therefore, has an exceptional and universal value as the highest expression of the fundamental historic function performed by the Longobards in the crucial transition phase from the Classical to the Medieval world; a transition phase which the most modern historiographical trends consider a *continuum* characterized by the integration of different civilizations.

The serial property exemplifies on the one hand the specificity of the Longobard culture in the background of the Early Middle Ages; on the other hand the universal nature of the contribution made by the historical and cultural group to the formation of Medieval Europe. Indeed, the Longobards played a pivotal role in the formulation and diffusion of

those meaningful imprints - cultural, artistic, political and religious – which spread from Italy to Europe and anticipated the so called “*renovatio*” - traditionally associated with the Carolingian age.

The cultural heritage of the Longobards is still alive in many facets of art, law and the Christian religion, as well as in other intangible aspects.

4.3.2 CRITERIA UNDER WHICH INSCRIPTION IS PROPOSED

(ii) *to exhibit an important interchange of human values, over a span of time or within a cultural area of the world, on developments in architecture and technology, as well as in monumental arts, town-planning and landscape design*

The serial property is of the utmost importance as an excellent model of the interchange of values, artistic and cultural expressions established by the historical and cultural group of the Longobards in the epoch-making transition phase between the Antiquity and the Middle Ages.

Among all the peoples, even nomad and semi-nomad peoples, who lived in the time frame considered (6th - 8th century A.D.), the Longobards stood out for their extraordinary capacity to disseminate their pregnant cultural, artistic, political and religious marks. They left their deep and permanent imprint in Italy and then in the rest of Europe, not only on the subsequent *Carolingian* rule, but also on the following 1,000 years of European History.

The Site bears the most significant testimony to the fundamental contribution the Longobards made to the forging of Medieval culture. The series components represent the creative responses of the long integration and assimilation process the Longobards were involved in.

The series shows with extraordinary completeness:

- the excellent cultural synthesis the Longobards made between their own values and traditions and those ones of the peoples they encountered during their long migration and the values belonging to the Classical civilization, to the Christian-Roman-Byzantine civilization, which led to the development of a new and genuine civilization;
- the reception, the conservation, the enhancement and the dissemination of architectural, monumental and artistic form and content of the Classical, Roman and Hellenistic cultures;
- the reception, the transformation and the processing of a number of contents and expressions of the Christian tradition, which the Longobards disseminated all over the world; in particular they deeply influenced the spread of the worship to St. Michael in Western Europe, which led to the construction of dedicated sanctuaries all over Europe, including the most famous, Mont Saint Michel on the borders with Brittany;
- the fundamental contribution the Longobards made to pilgrimage, which led in the Middle Ages to an intense interchange of values and the development of a sense of unity between different peoples.

Therefore, the series testifies the importance of the cultural interchange the Longobards were involved in, underlining on the one hand the specificity of their culture in the Early Middle Ages and on the other hand the universality of their contribution to the formation of Medieval Europe.

(iii) *to bear a unique and exceptional testimony to a cultural tradition or civilization which is living or which has disappeared*

The serial property, which includes seven component parts -all belonging to the same historico-cultural group- bears a unique and exceptional testimony to the disappeared Longobard civilization, witnessed by new monumental, architectural and artistic forms, the product of the reception and the integration of the highest developed local traditions. The Longobards expressed

themselves in such forms only after their arrival to Italy.

The serial property bears the clearest testimony to the strong determination of a semi-nomad barbarian people – with no previous artistic and architectural traditions – to embrace and to portray themselves as the heirs of Classical culture and civilization.

The properties of the series are the highest and most widely recognized expressions of the new and peculiar artistic culture developed by the Longobards, which spread to all the Duchies of the Kingdom, featuring a unified vision and divergent languages and objectives, according to the different customer *élites* (kings, dukes, aristocracy).

In its totality the series mirrors the universality of the Longobard culture at its climax, as it is fully representative of the cultural, religious and social systems, on which the articulated organisation of power was based and then modelled and determined by the Longobards in Italy. In this view the proposed series is not made up by homogeneous goods from the typological point of view, but rather by structures, which are heterogeneous in their function and morphology; those are indeed testimonies of an urban culture (Cividale), of military settlements (Castelseprio), of monastic complexes (Brescia), of buildings for the religious cults for the *élites* (Spoleto, Campello), of votive chapels of the Longobard people (Benevento), of national sanctuaries of the Longobards (Monte Sant'Angelo).

In its diversified artistic and architectural expressions, the serial property symbolizes and shows:

- the fundamental function performed by the Longobards in merging the cultural and architectural models of the classical Roman and Hellenistic civilizations with those of the Christian-Byzantine civilization;
- the new artistic and architectural trends established by the Longobards, together with Eastern European workers laid the foundations of the subsequent Carolingian "Renaissance" and –for the very first time in

history– of a real "European" culture;

- conservation and survival of the cultural heritage dating back to Antiquity, which the Longobards handed down, since they portrayed themselves as the heirs of a past they knew, felt and perceived as present. One of the most typical elements of their architectural complexes is the ideological and conscious use of the *spolia* from Roman monuments, which were re-used and installed in places that emphasized their symbolic value, and integrated into high quality new elements produced for that purpose. The use of monumental inscriptions, sometimes in golden bronze letters, no longer used after the age of Constantine, is a further manifestation of their intent;

- the conceptual, religious and political value the Longobards and their innovative cultural system attributed to Christian religion and traditions. Christianity accompanied the establishment and the consolidation of the Longobard Kingdom and was supported by the royal court and the aristocracy, who were generous and faithful benefactors.

The series meets the criteria of integrity and authenticity both as a whole –since it represents the universality of the monumental expressions of the historical and cultural group of the Longobards– and with reference to the single buildings and complexes and to the extraordinary decorations, including the rich graffiti and the inscriptions on the walls of the St. Michael's Sanctuary in the Gargano area, the most important collection of existing Early Middle Age inscriptions.

(vi) to be directly or tangibly associated with events or living traditions, with ideas, or with beliefs, with artistic and literary works of outstanding universal significance

The Longobard inheritance in Italy is remarkable: from the language we speak today to people's and place names, even if more significant is their contribution to the handing down of forms and models –as well as the remains themselves– of Classical

Antiquity, an indisputable point of reference for artists of all ages.

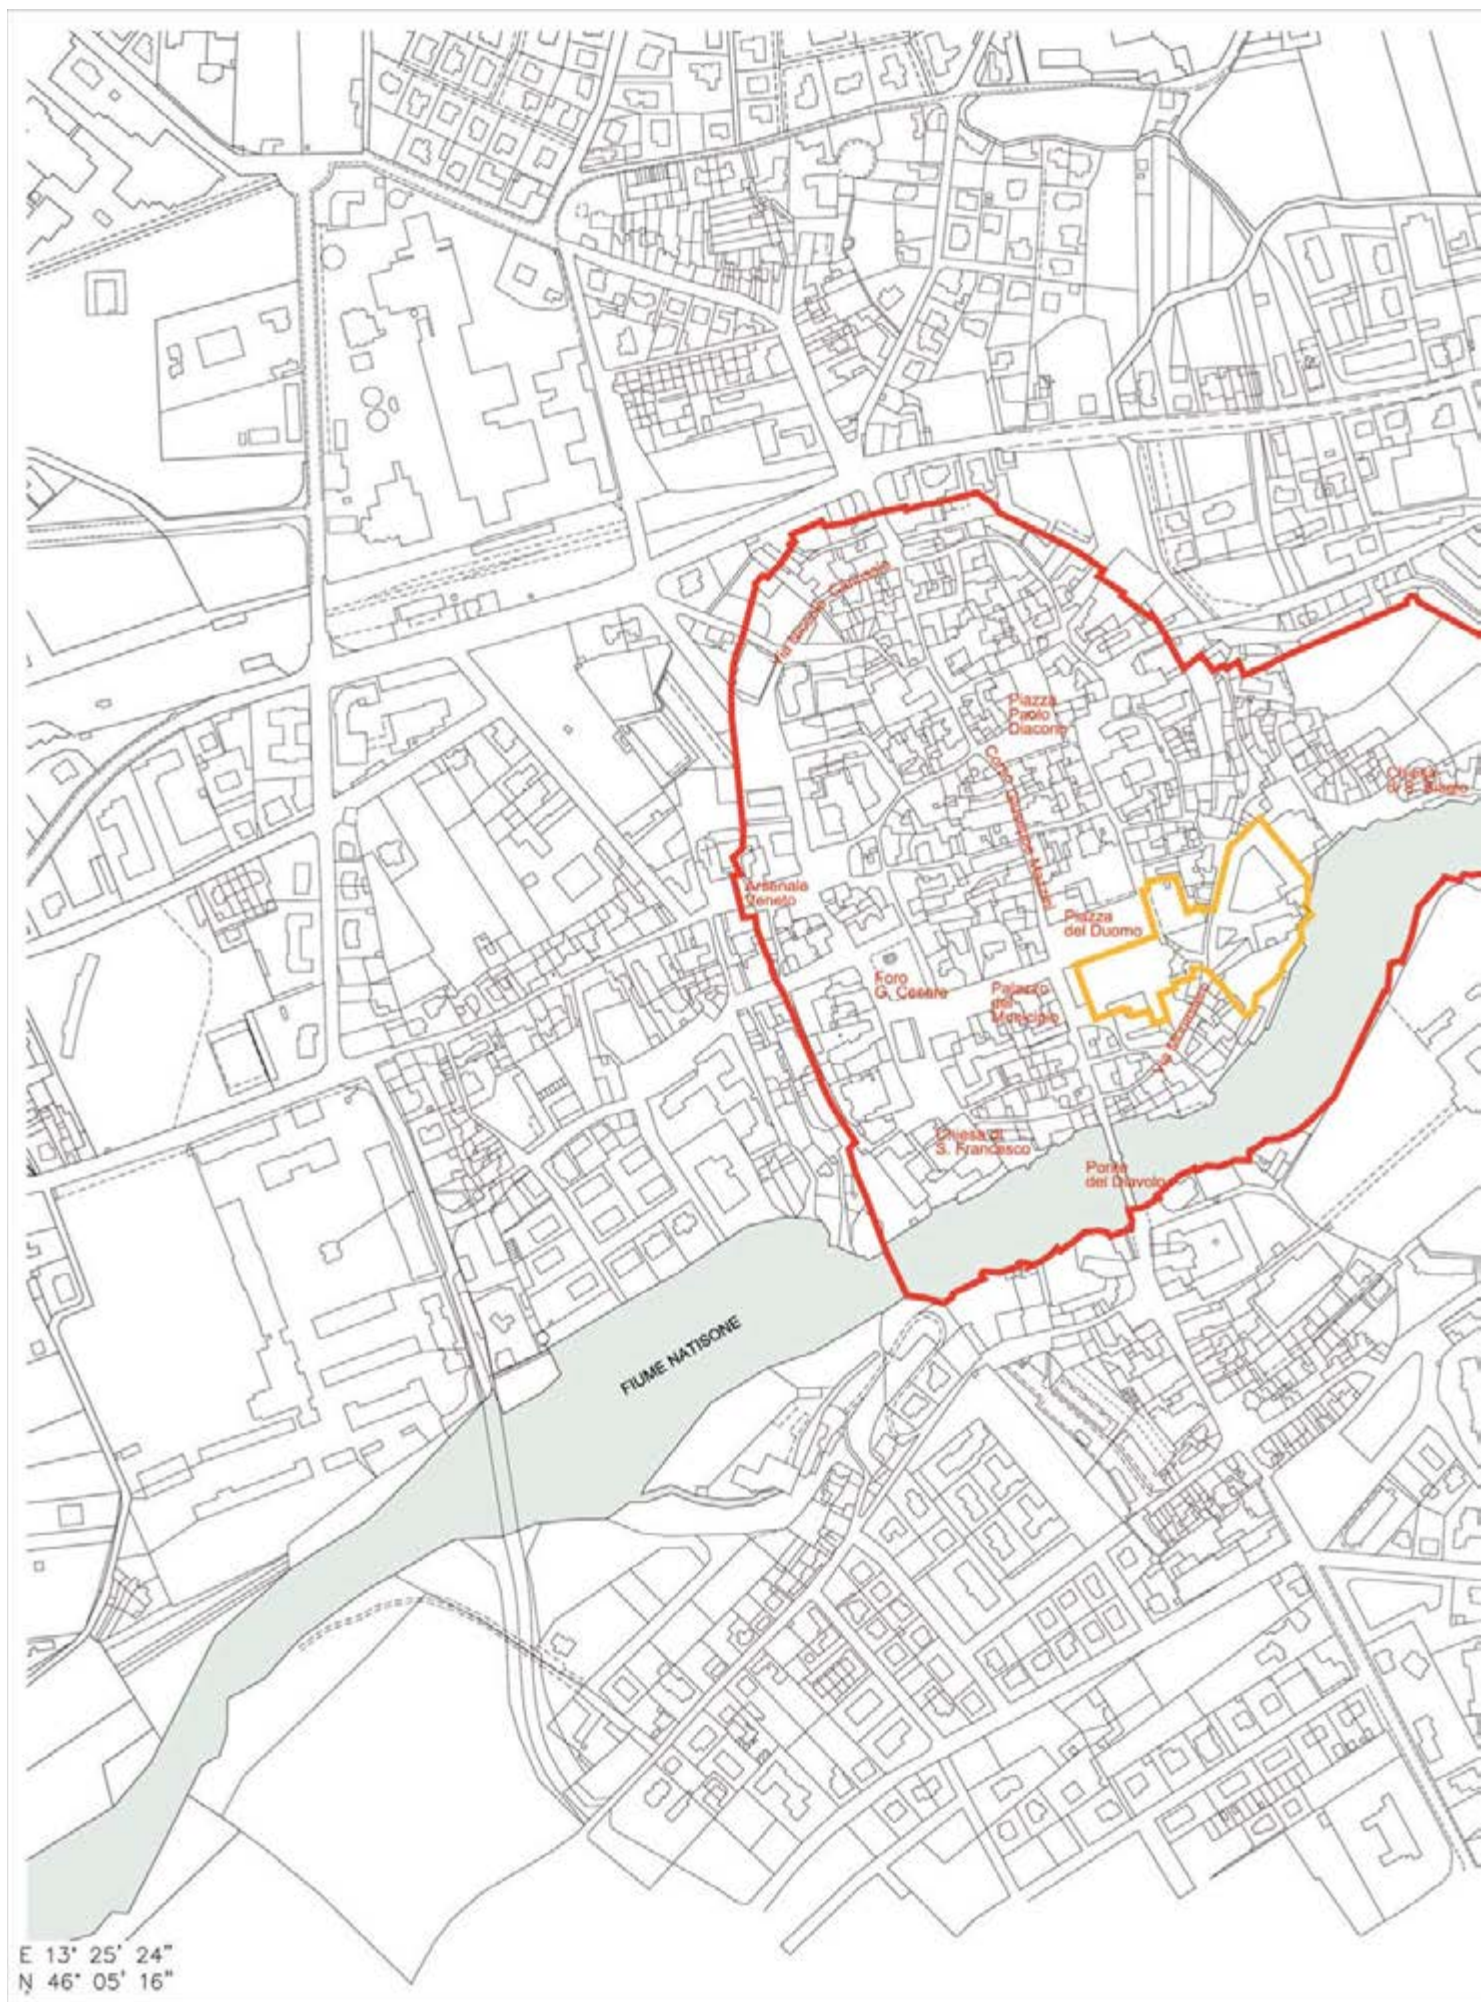

By the same token, the Longobards made a fundamental contribution to European culture with the foundation of great Monasteries, and the reconstruction and extension of existing ones, including Bobbio, Montecassino and Farfa Monasteries. In so doing, they encouraged the transcription and survival of literary, artistic and scientific works, dating back to the Antiquity. The relevant handing down of iconographies through manuscripts in miniature made a further contribution to a *continuum* stretching from the Antiquity up to the present day.

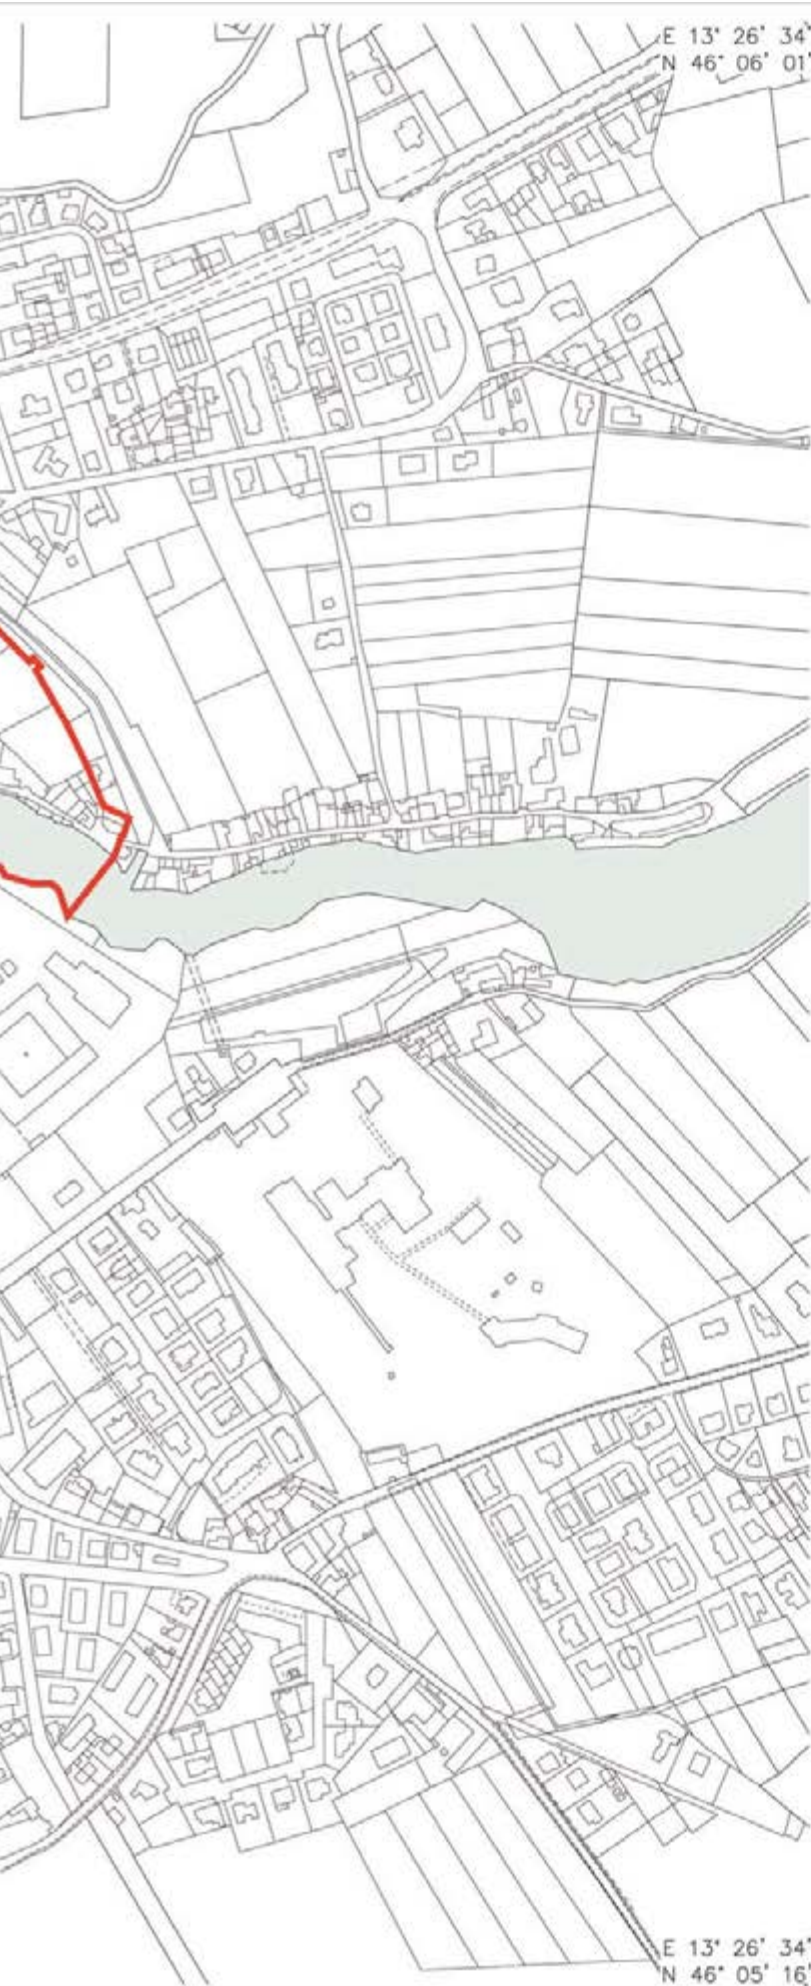

Moreover, Longobard culture survives today in the ongoing importance attributed to their places of worship, in particular to a number of monasteries, where the architectural stratification, a sign of continuity, increases their value and authenticity.

The pilgrimage to the grotto of St. Michael – still partly accessible along the ancient route of the *Via Sacra Langobardorum*– is a prominent example of worship practices directly related to medieval traditions.

The worship to St. Michael in the Gargano area, transformed and strengthened by the Longobards, led to the construction of numerous dedicated churches and other places of worship and as many statues of the Archangel Michael, with open wings, holding aloft his sword, on top of many bell-towers in Europe, a typically Longobard symbol in defence of local communities.

Notably, the history of the Longobards is featured in important literary works – including *Historia Langobardorum* written by Paul the Deacon in the 8th century, *Adelchi* written by Alessandro Manzoni in the 19th-century and *Rodelinda, Regina de' Longobardi* (Rodelinda, Queen of Longobards), an opera by Georg Friedrich Händel. All the above-mentioned works portrayed the Longobard cultural experience and rendered it universal.

5. IDENTIFICATION OF REFERENCE AREAS FOR THE MANAGEMENT PLAN AND RECOGNITION OF STAKEHOLDERS

5.1 CIVIDALE DEL FRIULI IDENTIFICATION OF REFERENCE AREA

Cividale and the Duchy of Friuli are the places where the most tangible evidence of the Longobard presence in Italy are concentrated. More than elsewhere, Cividale and its surroundings bear important and significant traces of the cultural traditions of the Longobards, which were brought here by the first generations of migrations whose funerary finds are still present. The town centre and other urban features date back the 6th and 7th century; they are privileged and paradigmatic elements speaking of the Longobard integration system in town and of the changes made to the urban fabric.

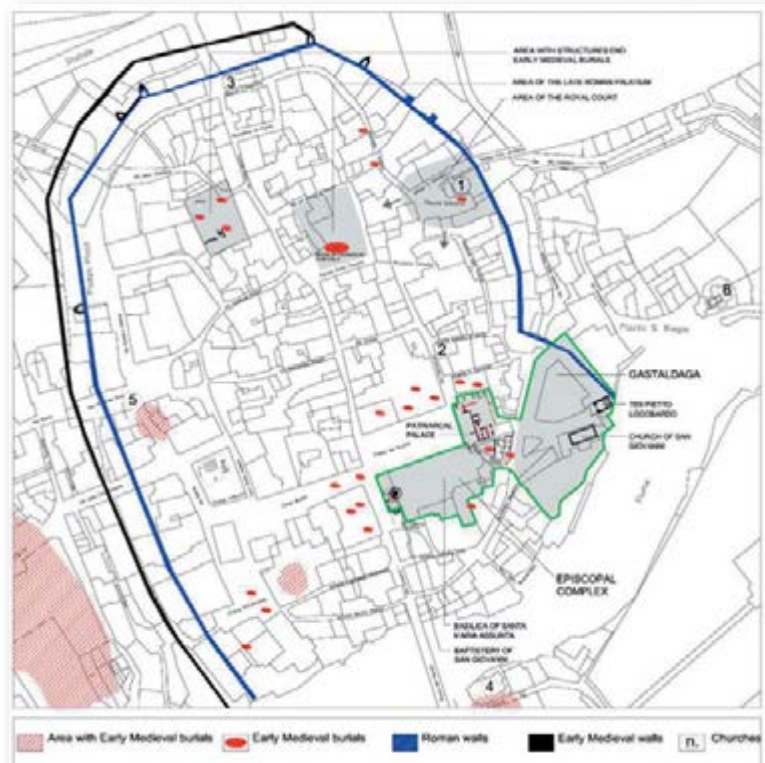

It is well known how large the Longobard City of Cividale was contained in its ancient walls, which are the limit of the proposed Buffer Zone as is the existence of a number of important monuments the main two being the Gastaldaga and the Episcopal Complex that constitute the Property applying for WHL.

THE BUFFER ZONE

The Walls

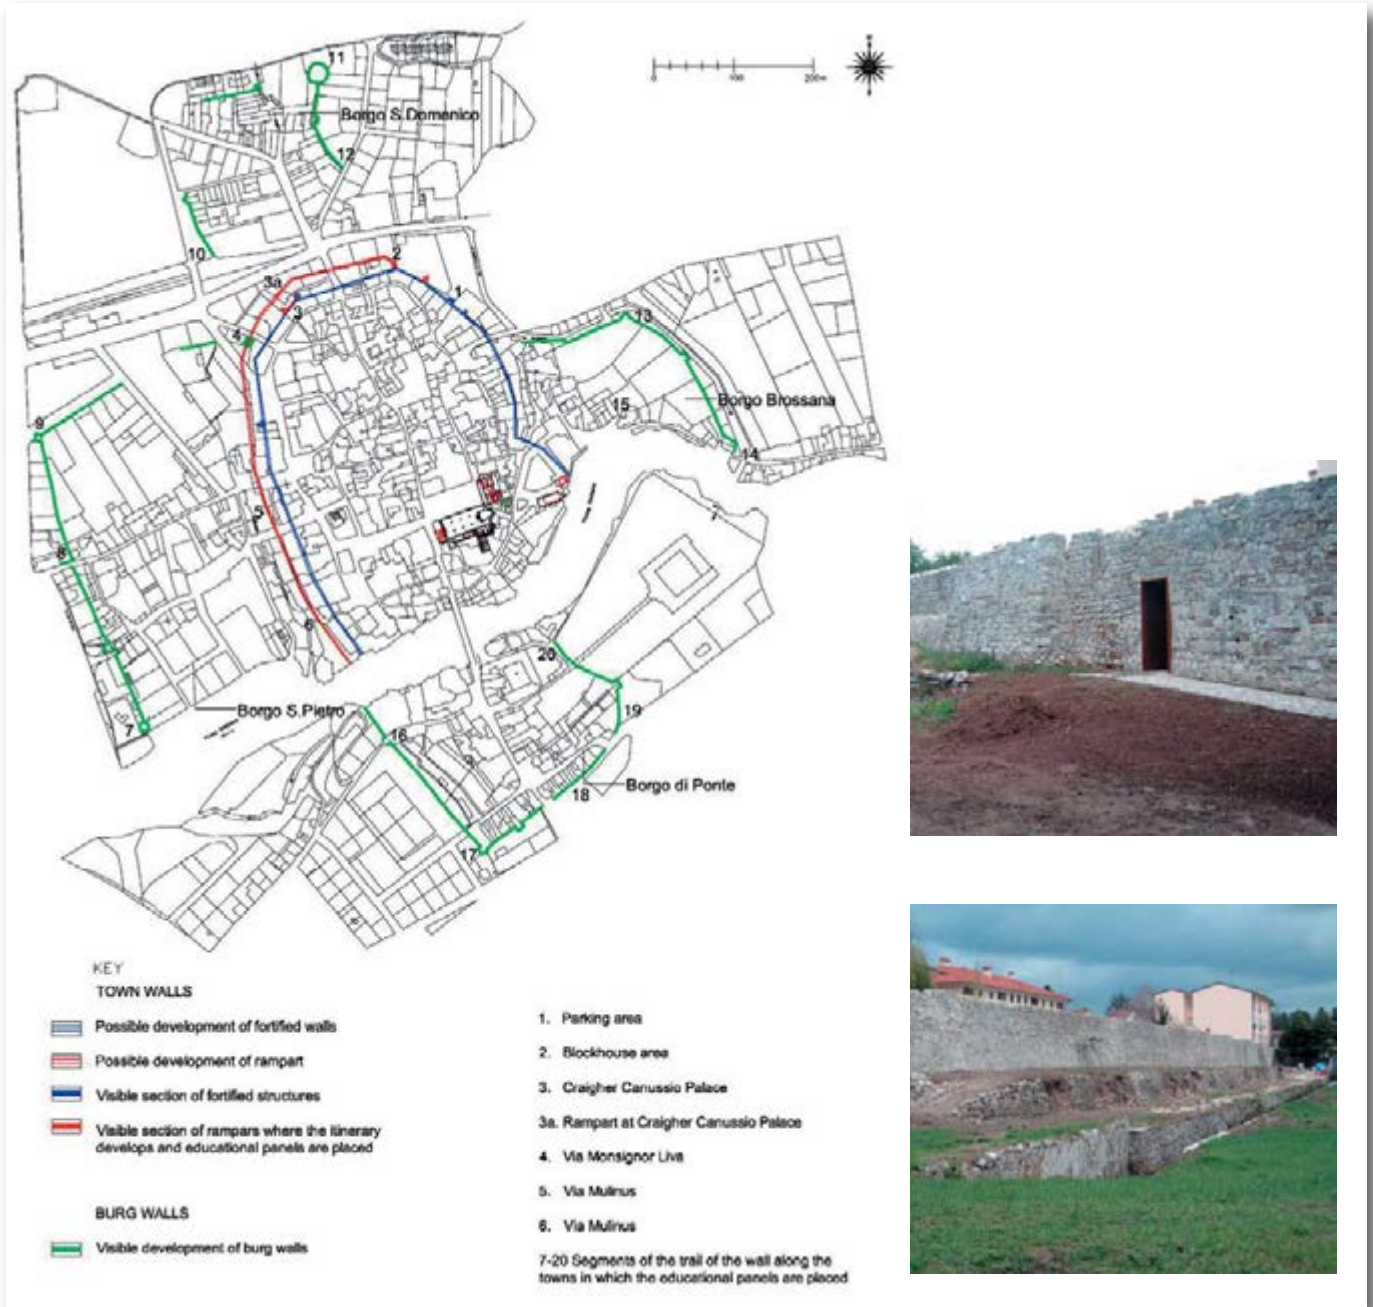

Thanks to a number of braces, the old walls of the Roman *Forum Iulii* continued to be used during Longobard times and determined the shape of the Early Medieval urban settlement that can still be perceived in the current topography of the build-up area: the orientation of some buildings and roads reflects that of the original fortification.

Little documentation remains on the ruins of the bailey that have been identified in the past in some places in

Forum Iulii during Longobard times

Plan of the city walls

the urban centre. One part, which has recently been investigated (in 1998 and in 2001), is still visible. In the Craigher Canussio palace, near the Northern city gate, some tens of meters of a section of the wall and a tower have been enhanced and can now be visited. They are likely to date back the Late-

Republican period and were reinforced in the Late-Antique Early Middle Ages by doubling the wall, adding a triangular bulwark to the old tower and building a new polygonal tower. This was a general reshaping of the town walls that enabled their use during the Longobard period.

Late roman Early Medieval pentagonal tower during the excavations in different periods

The area of the ducal court

There is another monument and centre of power in town, in addition to the Gastaldaga and the Episcopal Complex: the Longobard ducal court. Supposedly, it was located in the area near the church of San Giovanni Evangelista, close to the Xenodochio built by Duke Rodoaldo at the end of the 7th century, perhaps in an area that was under the duke's jurisdiction. Some think that the Duke's court extended southwards up to the Church of Santa Maria di Corte, whose name is supposed to come from the fact it was part of the court itself ['corte' is the Italian for 'court']. Others argue that, given the location of the church in the patriarchal court, the ducal premises were located in a more central area, near Piazza Paolo Diacono, where a leading dignitary's tomb was found the so-called Duke Gisulf was buried there towards the half of the 7th century.

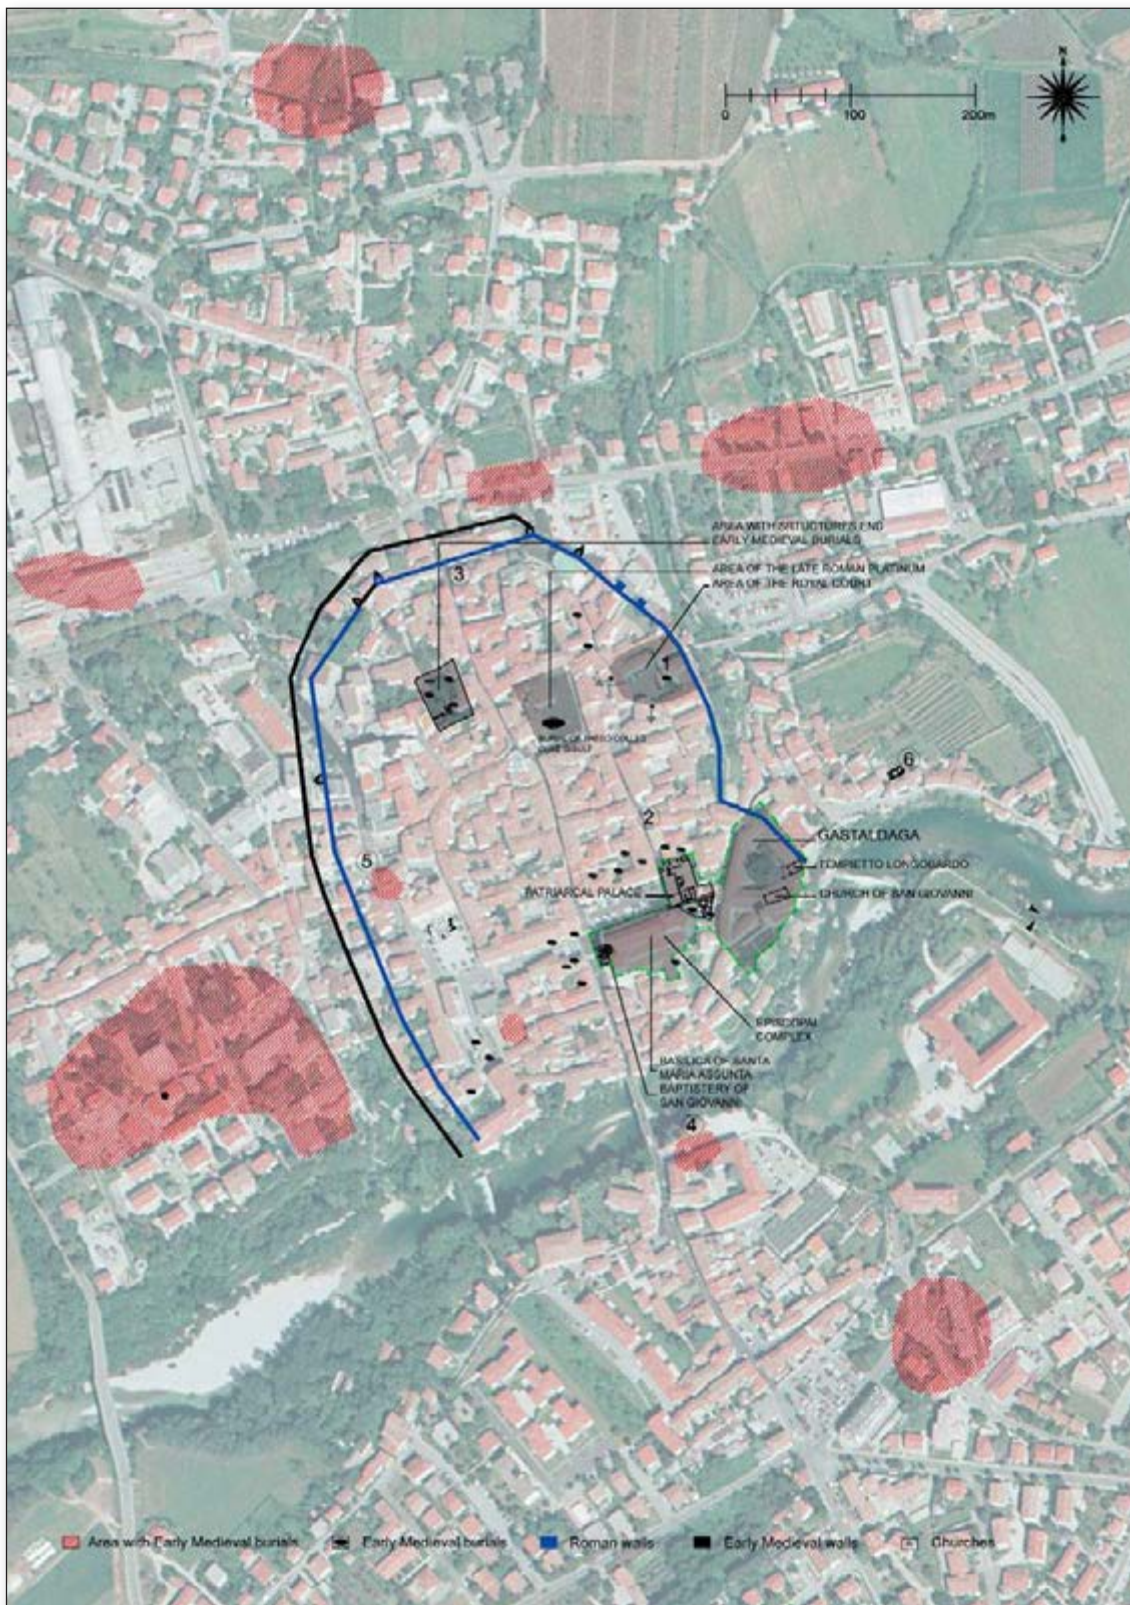

The churches of the Longobard aristocracy

In addition to the Duomo and the churches of the Gastaldaga, other places of worship were important among the many monuments of the town of Cividale. In some cases they were built by the Longobards, in others they were privileged burial places. They were renewed thanks to local notables, witness the 7th century statues exhibited in the Christian Museum and the National Archaeological Museum.

- Dedicated to Saint John the Evangelist, San Giovanni in Xenodochio was built in the ducal area probably during the Early Middle Ages. It was completely renovated in the 19th century and is currently undergoing restoration.

- Santa Maria di Corte, which can be related to the duke or the patriarch, was first mentioned in 1122. Its origin is not known, yet, in the vicinity, Early Middle Ages fragments of sculptures were

City plan with the Early medieval churches and Longobard necropolises

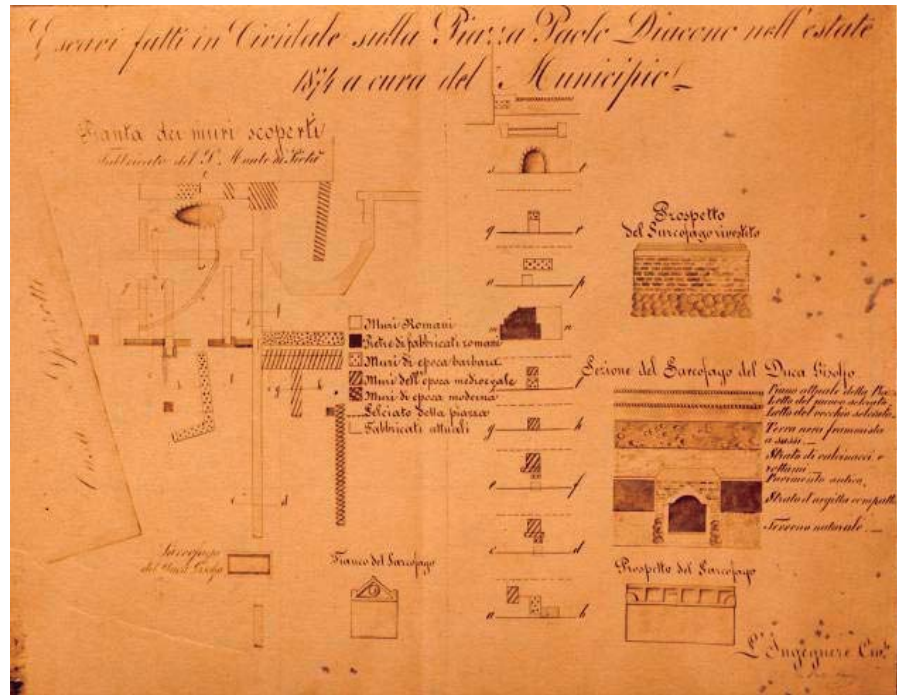

Drawing of the structures discovered in *Piazza Paolo Diacono* owing to 19th century excavations

found. They probably belonged to an ancient building of worship. The current cast of features is seventeenth-century: the interior's layout is rectangular and single-naved with a semicircular apse; the façade is divided in three parts by pilasters and finished with a triangular pediment. The bell tower and some frescoes in the nave witness the Romanesque period.

- San Salvatore is remembered to have been located in the proximity of a town gate (*porta sancti Salvatoris*) in the 11th and 12th century. In the church there is an inscription dedicated to Saint Sylvester, which is still visible and located along the walls. The old church of San Salvatore may have owned a number of sculptures dating from the Late Longobard period (8th century), discovered in this part of the town, among which supposedly there is a fragment of a "tegiurio" of a baptismal font and an important slab.

- San Martino was built immediately at the town gate along the ancient Roman way from Aquileia, where an important Longobard cemetery was found (the necropolis of Piazza della Resistenza). In 1661 two Longobard tombs were discovered by chance near the church. Their rich treasure went missing but were made up of arms, jewellery, gold threads, a bone comb and a gold cross. They are clear evidence of how old the building of worship is.

- San Pietro ai Volti was probably of very old origin, built over one of the pre-existing medieval gates which was built over a roman city gate. Elements of Longobard burials were found in the vicinity witnessing a sepulchral area used during the 7th century. The church was pulled down in the 18th century and its name refers to the seventeenth-century church dedicated to the Redeemer that was located in this same area, yet outside the walls.

View of the recent excavation in *Piazza Paolo Diacono*

- Santi Pietro e Biagio church rises on the layout of the road that goes out of the city and runs along the Natisone river in the North-East. Rebuilt in the 16th century, it maintains the

foundations of the original Early Middle Ages structure that were found in recent excavations. The structure is now marked on the floor of the church.

View of archaeological excavation of "Corte Romana" showing Roman dwelling reused in Longobard times

The build-up area

Particularly important are the structures that belonged to the palaces built between the 5th and 6th centuries in areas that were central also in the Longobard town planning. It is the case of the palace in Piazza Paolo Diacono where, as mentioned above, the tomb of Gisulf was placed or of the structures near the Palazzo Soberli, North of the Cathedral square, near the Episcopal complex. Recent investigation carried out in the context of building works in the area called Roman Court in the North-West sector of the town, has revealed an interesting integration of Longobard living and burial units in the Roman town fabric: in addition to the reuse of

the ancient structures and their adaptation with humble or perishable materials as was custom at the time, traces of a lower-floor hut (*Grubenhaus*) were discovered for the first time in town. This is a type of house that was very common in the Germanic culture, that can be found in Italy starting from the period of people's migrations.

Urban burials and Longobard periurbane necropolises

When they arrived in Cividale, the Longobards started burying the dead both in areas used by the local population and in new ones. The most ancient tombs (the last quarter of the 6th century beginning of the 7th century)

were located in the suburban area in the North-East (necropolis of Cella - San Giovanni), in the North (necropolis of San Mauro and in the nearby of the railway) and in the West of the city (necropolis of Gallo and San Stefano) and later in the 7th century they appeared in the town centre and in the South-East area (church of San Martino, necropolis of Piazza della Resistenza, San Pantaleone hill) and in the South-West of Cividale (Grupignano).

In the Longobard suburban necropolis there were three different situations: the continuous use of a Roman necropolis, at first used for cremation and later for burial (Cella San Giovanni), the creation of new necropolis (San Mauro, railway, Gallo and Santo Stefano) and the reuse of a Roman necropolis for cremation (in the area of the Piazza della Resistenza).

In town Longobard and Romance burials are well known both in indisuse structures (Piazza Paolo Diacono, Piazza San Francesco, Palazzo dei Provveditori, Residence of the Roman Court) and in sepulchral areas near the buildings of worship (Duomo, San Pietro) or inside churches (San Giovanni in Valle), as is the case for other places of worship located just outside the walls (San Martino and San Pietro and Biagio).

Among urban burials, the tomb of Gisulf plays a particularly important role. Dating back to the 7th century, it is a monumental burial that was accidentally found in 1874. The entombed had been buried in a wooden coffin inside a Late

Some gold elements of furnishing from the so-called "Tomb of Gisulf", Archaeological Museum

The so-called “Urna di Sant’Anastasia” and an aerial view of the Sesto al Reghena monastery

the Patriarchy of Aquileia. The latter, dealing with historical-documentary and archival-bibliographic cataloguing, created a website available for online consultation for recorded materials where 22,000 documentary files are inserted every year.

THE TERRITORY OF THE DUCHY OF FRIULI HISTORICAL AND CULTURAL FEATURES

In addition to the property and the buffer zone, the territory of the Duchy of Friuli is rich in evidence of Longobard presence that integrate

with other regional aspects and potential: of naturalistic, agricultural and food, production/ craft and, more in general, socio-economic nature. This contributes to the creation of sustainable development linked to the use and protection of the heritage in the context of the Network *Italia Longobardorum*.

The Longobard Duchy of Friuli included the four Roman *municipia* (Aquileia, Concordia, *Iulium Carnicum* and *Forum Iulii*) and covered almost the whole territory South of the Carnic Alps and West of the Julian Alps. It stretched towards West up to the Livenza river and towards North, in the province of Belluno, up to the Piave river where it bordered with the Longobard Duchy of Ceneda; in the South, instead, the ducal lands almost reached the Adriatic coast, up to Aquileia. The coastal belt between the lagoon and the sea (Grado and the islands) were under Byzantine rule. Duino, an important castle facing the sea along the way to Trieste and the Byzantine Istria, was under Longobard rule at least until the first decades of the 8th century.

The evidence of the settlement and the cornerstones of the territory organisation during the Longobard period (rural areas, fortresses, places of worship, monasteries, burials and necropolis) are a consistent and unique group that marks the enhancement of the power of the new Longobard ruling class which took place in the 7th and 8th century.

In his *Historia Langobardorum* (IV, 37) Paulus Diaconus mentions a system of castles in Friuli where, at the beginning of the 7th century, the Longobards took refuge from an attack by the Avars. Among these fortalices he explicitly mentions the name of what are probably the seven most important *castra*: Cormons, Nimis, Osoppo,

Detail of the “Egbert Psalter”

Artegna, Ragogna, Gemona and the impregnable Ibligo, identified by many with the site of Invillino. Indeed, these are the sites where the most significant Longobard evidence has been discovered.

In the Longobard Friuli, the creation of monasteries in rural areas goes hand in hand with that, maybe more important, in urban areas (in Cividale and Aquileia). In particular, those of Sal, in Povoletto, where the noble Piltrude was abbess, and of Sesto al Reghena, founded by her three children (Erfo, Anto and Marco) integrate in a series of noble foundations dating back to the second half of the 8th century and were able to become one of the main centres of attraction and economic organisation in the territory. While in the 9th century the monastery of Salt soon became part of Cividale's cenoby of Santa Maria and disappeared, the Abbey of Sesto played its role also afterwards, becoming one of the most prestigious institutions and economic powers of Friuli. Today the complex of the Abbey

is protected and is the result of a monumental evolution in the Romanesque period and of following changes.

The numerous burials discovered in the territory have not only revealed important aspects of Longobard customs and set of beliefs but are a clear example of the influences of Germanic elements in the region.

NATURALISTIC FEATURES

The natural and environmental context of the area of Cividale the historical mainstay of the Alpine-Adriatic area (Alpe Adria) is composed by the Prealps and Alps of the upper Isonzo river basin. It is an area of extraordinary botanic importance and a training ground for Italian, Slovenian and Austrian universities as here, especially in the Natisone, Torre, Judrio valleys, an incredibly high number of botanic species is concentrated, more than all species in Germany, or in England and Ireland combined.

The exceptionality of these places lies

in the fact that they underwent few changes over time, preserving most of, and integrating, natural resources after people quickly left the mountains and their cultivations during the 20th century.

Valleys and mountains have some exceptional highlights:

- hydrographical (uncontaminated waters);
- climatologic (meeting point of the Mediterranean and continental climates);
- archaeological and anthropological (presence of numerous Bronze and Iron Age settlements in the necropolis of San Lucia di Tolmino upper Isonzo river valley, Slovenia with more than 9,000 tombs discovered at the end of the 19th century and some other Longobard tombs found near Kanal ob So i, again in Slovenia);
- speleological;
- faunal and entomological.

The Natisone river

View of the Tagliamento river

View of Collio hills

One of the Natison valleys

SOCIO-ECONOMIC FEATURES

Up to 50 years ago the valleys were used for agriculture and zootecnics purposes (cereals, fruit and vegetables, grazing and forestry); later they were gradually abandoned to be characterized today as “marginal areas with high naturalistic value” that the European Union and the Italian Government undertake to protect, enhance and relaunch taking into consideration Sustainability and Eco-Friendliness on the basis of the claimed strategic guidelines aiming at recovering the Environment, the Traditions and the Heritage (agricultural, craftwork, food and wine) and the use of renewable energy sources.

The nature of Prealps Western Friuli and Collio hills is of high quality and has the ideal geomorphology for high

quality wine production, among which some of the best types of Italian white wines are produced, and where it is possible to preserve and enhance exclusive high value autochthonous grape varieties.

Friuli is also rich in food and wine production which combines the agricultural production Heritage with Italian and Central-Northern European traditions and their adoption, and with excellent wine production.

View of the Natison river near Cividale

5.1.1 CIVIDALE DEL FRIULI RECOGNITION OF STAKEHOLDERS

The candidate properties belong to one of the following three Institutions:

- the Municipality of Cividale del Friuli owns the so called Tempietto Longobardo (since 1893) and the Monastery of Santa Maria in Valle (since 2001);
- the Parish of Santa Maria Assunta owns the Duomo and its annexes namely, the Winter Chapel and Sacristies, the Chapter Archives, the Christian Museum and Duomo's Treasure and the bell tower;
- the Italian State owns the remains of the Palazzo Patriarcale, the Palazzo dei Provveditori and the National Archaeological Museum.

The Monastery of Santa Maria in Valle is managed by the Municipality of Cividale del Friuli, which had acquired the property in year 2001, and which supplies the security, conservation, and ordinary and extraordinary maintenance staff, and the staff in charge of the gardening. This is a temporary measure, as the activation of an overall Enhancement Plan is now in its early stages and should be funded through the Commune's 2007 and 2008 budget as well as through other sources of funds still being investigated. Over time, and within the range of the Plan mentioned above, the following items should be set up:

- Museum halls for the stonework and sculptural archaeological finds and for the frescoes linked to the so-called Tempietto Longobardo and to the history of the Monastery itself;
- a study centre for Early Medieval art, which should connect to the graduate course offering a Master's degree in History of Art of Udine University, which has been activated in the new wing of the Monastery for the academic year 2006-2007;
- a centre specialized in archives, documentation, and bibliography;
- an osteological-archaeological laboratory;
- areas devoted to multimedia;
- a multimedia operational centre;

- a visitors' centre;
- a ticket office and book shop;
- theme-based itineraries inside and outside the Monastic complex;
- other museum and meeting halls.

The Tempietto Longobardo which belongs to the Municipality of Cividale since 1983 is equipped with security, ticket sale and bookshop facilities, which have been entrusted to a cooperative called Adelaide, based in Cividale del Friuli, which won a tender for services, due to expire in year 2009. This asset will also be the focus of conservation, safeguard, monitoring and enhancement work, also covered by the 2007 and 2008 Commune budget, as well as other possible sources of funds.

The Christian Museum and Duomo's Treasure which belongs to the Parish of Santa Maria Assunta, and is closed at present has so far been monitored by the surveillance staff of the Duomo di Cividale, with no ticket charges.

The museum was closed during year 2007 for restoration and enlargement work now close to their completion. The structure will be reopened within the first half of 2008, to enshrine the Altar of Ratchis, the Baptismal Font of Callixtus and its extraordinary tegurium, as well as other precious Christian artefacts, such as the patriarchal throne and the prestigious Treasury of the Duomo, which has not been on show for public viewing for various decades.

Services including ticket sale, surveillance, and a museum shop will be allocated to a cooperative after a call for tenders.

In the nearby **Chapter Archives** (including ancient parchments, historical documents and ancient music scores dating from the 1100 and later) also managed by the Parish of Santa Maria Assunta, and entrusted to an Archives' Director, with a degree in Safeguard and Conservation of Cultural Resources. The structure also boasts a Website, ensuring online access to materials belonging to the regestum (www.patriarcatoaquileia.it), which at the moment includes over 22000 files.

The Palazzo dei Provveditori, which is home to the MAN Museo Archeologico Nazionale, and includes the remains of the Palazzo Patriarcale Patriarch's Palace, is managed directly by the State, by means of the relevant Soprintendenze which are in charge of the following services: daily and night surveillance, safeguard, conservation, surveillance of the itineraries for visitors, promoting activity, exhibition set up, organization of special events, tour guide stage sessions, regular and special publishing activities.

At this time an agreement is being drawn up between three institutions which own and manage the assets in question (namely, the Municipality of Cividale, the State and its local branches, the Soprintendenze, the Parish). This agreement should ensure the integrated management of all monumental and museum areas for which candidacy is proposed; this agreement also includes the reorganization of each museum area following certain main themes.

The agreement will include also Palazzo de' Nordis, seat of the Art and History Museum, which comprises art work ranging from the 9th to the 18th century, and which should reopen to the public in the course of year 2008, following conservation work.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage system, for institutional competences and partnership processes already underway. The main institutions and bodies, signatories for Cividale del Friuli of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site proposed for Unesco inscription (Friuli Venezia Giulia Region; Province of Udine; Direzione Regionale per i beni culturali e paesaggistici del Friuli Venezia Giulia Ministry for Cultural Heritage and activities).

5.2 BRESCIA

IDENTIFICATION OF REFERENCE AREA

THE BUFFER ZONE

The buffer zone of the area proposed for candidacy corresponds to the North-Eastern area of the city's historical centre, and includes the whole area occupied by the city in Longobard times, which was included in the wall enceinte dating back to Roman times (end of the 1st century B.C. to the beginning of the 1st century A.D.) and the subsequent Early Medieval enlargement, which comprised an additional area situated west, and including the Longobard power centre known as the *curia ducis*,

and eventually also the San Faustino monastic complex, which was founded during the Carolingian period.

To the North the limit proposed slightly exceeds the limits of the supposed route of the city walls of the Augustan period, and include the whole of the Cidneo Hill, a notable morphological element in the urban development and in the history of the city of Brescia.

A remarkable number of finds dating to the Longobard period, have been found all over this urban portion. They belong to residential and military buildings, productive structures, habitations and burials (see Table entitled "Buffer zone. Traces of Longobard presence"), some of which can be easily viewed, and can be

visited, while others are not always accessible, and have been detected during archaeological emergency excavations (that is, unscheduled archaeological excavations carried out due to the casual discovery of ancient remains).

In some cases the remains are visible *in situ* as they are incorporated within buildings of the post-Medieval period; in other cases they have been recuperated and exposed in the Longobard itinerary of the *Museo della Città*, housed in the monastic complex of Santa Giulia. Other structures have been left *in situ*, have been equipped with protective covering and re-buried.

Public buildings and defensive structures *Curia ducis*

The court of the Longobard duke who ruled the city was placed at the western end of the main street axis, and alterations were made to the Late Antique *Palatium*. It is recorded in a 761 AD document, and its memory lives on in the place name Cordusio (from *curia ducis*).

The building excavated in today's Piazza Vittoria between 1931 and 1932 comprised a large Late Antique structure with subsidiary buildings which was equipped with a large colonnade during the Longobard period. Near this palace was a church dedicated to Saint Ambrose.

Castrum

A fortified area on the summit of Cidneo Hill may have existed also during the Longobard period, in an area which lay to the north of the monastic complex of San Salvatore-Santa Giulia, where bishops' burials dating from the 7th century have been discovered within the two churches of San Pietro and Santo Stefano.

Habitations and production structures

The monumental area and the monastery rise along the axis constituted by via dei Musei, where Longobard buildings have

Aerial view of city of Brescia

Oven for pottery production, discovered in the Capitolium area

been discovered, sometimes within Roman buildings, which had originally been equipped with frescoes and mosaic floors, and whose walls still emerged from the debris. Longobard houses were erecting largely by re-using materials such as bricks and stones. Single homes comprised of one or more rooms, with a beaten earth floor and wood partitions; often the main room was equipped with a fire hearth.

Near these habitations rose facilities rose to produce metalwork, ceramics, and bone artefacts.

Kitchen gardens and pastureland

Archaeological excavations carried out in the city's eastern areas enclosed by

Longobard potteries

the walls have revealed the presence of many so-called “dark layers” lying over the ruins of Roman houses, that is, dark coloured earth, which is the main indication of the presence of agricultural activity and of pastures in urban areas.

Burials

The burials identified in the city are mainly concentrated within the buffer zone, and are mostly concentrated in areas close to the main public buildings of the Roman city, or else in or close to the San Salvatore-Santa Giulia monastic complex. The very simple tombs, sometimes comprising a stone slab coffin shaped structure, more often being depositions in the naked soil or showing a simple brick cover have been discovered by the *tabernae* or the Forum baths, or over the floors of the Imperial period houses. The presence of these burials also in neighbourhoods which do not possess the same strong characterization confirms the diffuse nature of the settlement.

Ceramic artefacts

Fragments of Longobard ceramics show they were executed using a technique to smooth out parts of the ceramic surface to create a contrasting colour effect between porous and opaque parts, or a repetitive decorative technique involving the impression of grouped abstract elements, and are diffusely found within the area. Except for the ceramic artefacts relating to productive structures, the ceramic artefacts have been found in association with levels of use, habitations and burials, and were sometimes included in the funerary furnishings.

Apart from the Longobard period finds, the buffer zone also includes the majority, and the most significant part of the city buildings and urban spaces. As most Italian cities, Brescia is a centre of where continuity has been key, so each historical period has made an imprint which is still visible today (see Table entitled “Monumental presences in the Buffer zone”).

The Palazzo Martinengo Cesaresco

Novarino dates from the second half of the 17th, and is now the seat of many provincial administrative institutions rises over some remains of the Forum of the Roman Period and of the ancient structures which predate it (the most ancient of these date back to the Augustan period, i.e., from the 1st century BC to the first century AD). The archaeological excavations carried out between 1989 and 1997 in the building's basement have brought to light materials datable between the 8th century B.C. up to the 16th-17th century A.D., that is to say, remains dating from the Iron Age (mostly remains of wood and clay habitations), to Roman times (an Augustan *domus* and Roman baths dating from the Flavian period), as well as monumental remains of the Forum and of buildings from the Early Medieval period. The majority of walls visible today date from this last period, as they were built between the 5th and the 7th century A.D., and testify the widespread re-use of architectural elements originally belonging to the

Longobard burial

Archaeological excavations under Palazzo Martinengo

ruins of the Roman baths and to the Forum porticoes.

Ample squares were and still are the main meeting place for the city dwellers: a good example is the ancient piazza del Duomo, today renamed Piazza Paolo VI, which includes the Romanesque church of the Duomo, a centrally planned building also known as the "Rotonda"), the 18th century Duomo Nuovo and the Medieval palazzo del Broletto, the seat of power during the Communal period. Another important square is Piazza della Loggia, created during the 15th century Venetian rule, dominated by Palazzo della Loggia, today the seat of the Comune di Brescia. Since year 1480 the façades of the palaces known as "delle Carceri", "del Monte Vecchio" and "del Monte Nuovo di Pietà" are graced by many Roman inscriptions, which constitute one of Italy's oldest public collections of epigraphical inscriptions. The most recent of Brescia's squares is Piazza della Vittoria, one of the most significant examples of Fascist architecture and

town planning, built during the 1930s by demolishing an old working class neighbourhood.

Near the monastery is Piazza Tebaldo Brusato, once known as Piazza del Mercato Nuovo, an ample public space, which occupies an area which once belonged to the monastery itself.

The Benedictine monastery, called *San Faustino Maggiore* was founded during Carolingian times and is now the seat of city university, Università degli Studi di Brescia. Apart from this institution, many churches exemplify the city's historical and artistic past, together with the many patrician palaces which ennobled the city's skyline; both in the churches and in the palaces there are still today frescoes and works of art created by the most important Italian artists, such as Titian, Romanino and Moretto.

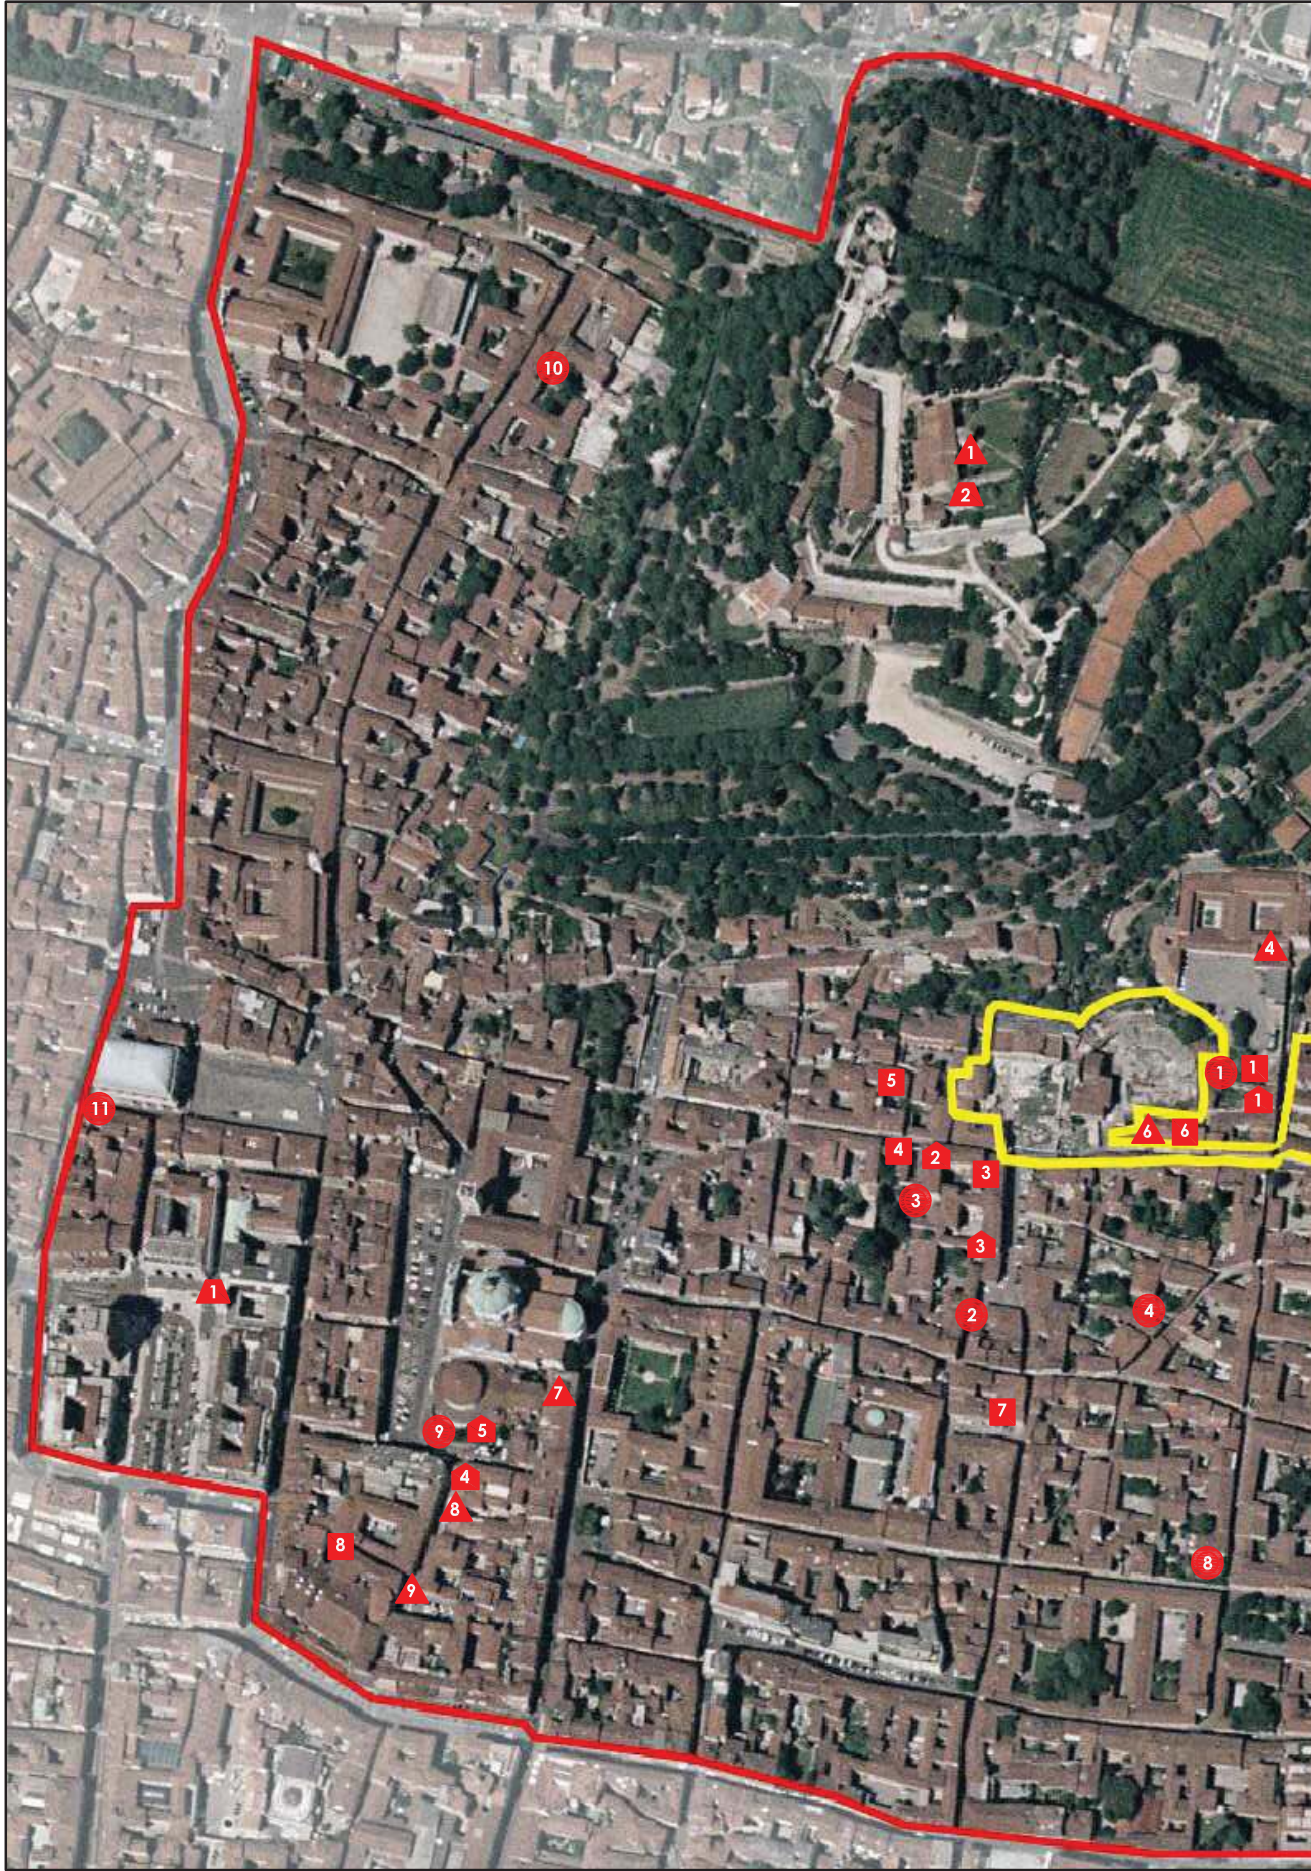

Finally, the city centre's dominating characteristic is the Cidneo Hill, where a castle was built and developed over the centuries, and which is today enclosed within an urban park and an ancient vineyard; the latter is owned by

the nuns of the Santa Giulia monastery and measures about 4 hectares, and sprawls over the lower reaches of the hill to the North, and constitutes Europe's largest productive urban vineyard.

The city boasts an ample museum network. Apart from the complex called San Salvatore-Santa Giulia. *Museo della città*, it includes many city museums which are housed within historical buildings: the *Museo Romano* (in the *Capitolium*), the picture gallery called *Pinacoteca Tosi Martinengo* (in Palazzo Martinengo da Barco), the *Museo del Risorgimento* (in the Grande Miglio in the city's castle), and the *Museo delle Armi "Luigi Marzoli"* (in the castle donjon), and the Natural History Museum or *Museo di Storia Naturale*. Moreover other museums which are not property of the Comune di Brescia are also located in the city: the *Museo Diocesano di Arte Sacra*, the *Museo Nazionale della Fotografia*, the *Collezione Arte e spiritualità*, the *Museo delle Mille Miglia* and a museum which is still being set up, called *Museo dell'Industria e del Lavoro*.

THE TERRITORY OF BRESCIA HISTORICAL AND CULTURAL FEATURES

The Longobards reached Italy in 569, and passing Verona, eventually entered Brescia's territory during that same year. Having reached *Sirmio*, today's Sirmione, they took control of the Late Antique walled *civitas* which dominated the lower reaches of Lake Garda's territory, and headed for the area of

Brescia from two different directions. One contingent approached the city from the North, following a route which skirted the foothills to the south, the same route of expansion of Christianity during the Late Antique period, and dotted with significant productive structures which had risen close to the remains of the great Late Antique villas. The Longobards reached a city whose population had slumped, but although its habitations and urban layout

downsized the city was still well defended, its power centres now rising close to the new Christian buildings, not far from the Late Antique *palatium*, which had become the new government seat under the Goths. A different Longobard contingent had meanwhile chosen a southern route, which set out across the mid-plane area, heading towards the areas today occupied by the modern towns of Montichiari and Carpenedolo, and once past the Chiese

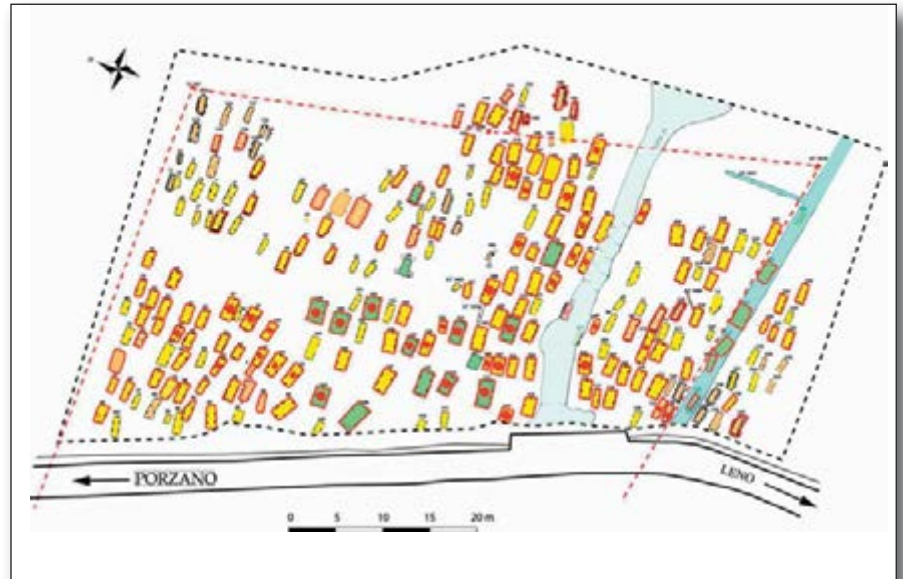

The main Longobard sites in the flat south Brescia

Necropolis's plan of Porzano di Leno

River, towards Calvisano and Leno, finally electing to establish themselves in close proximity to the productive and habitation centres which existed in the surviving Roman *villae*. Many towns rose in the area between the River Mella and the River Chiese: so far, nineteen are known to us, their presence mostly testified by necropolises. All are distributed at the same latitude, from east to west, in the territory of today's Communes of Carpenedolo, Montichiari, Visano, Calvisano and Leno. Instead, another large number of settlements (San Zeno Naviglio, Flero, Borgo Poncarale, Montirone, Bagnolo Mella and Manerbio) is scattered along a north to south axis along the *via Cremonensis*, and along the Garza watercourse and reveals how quickly the Longobards focused on the important communications artery which linked the cities of Brescia and Cremona.

The written sources concur with the geography of finds emerging from the most ancient Longobard necropolises. Both reveal a strategy dictated by the need to conquer and control sectors which on the one hand were crucial to the armed group's subsistence, but which could also guarantee the group's safety regarding the boundary

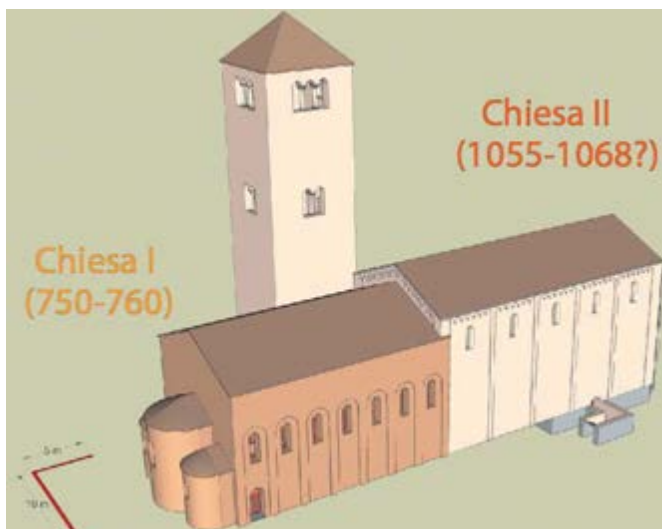

constituted by the basin of the river Oglio. This boundary marked the limits of the territory under the rule of the Byzantines, who controlled Cremona for many years.

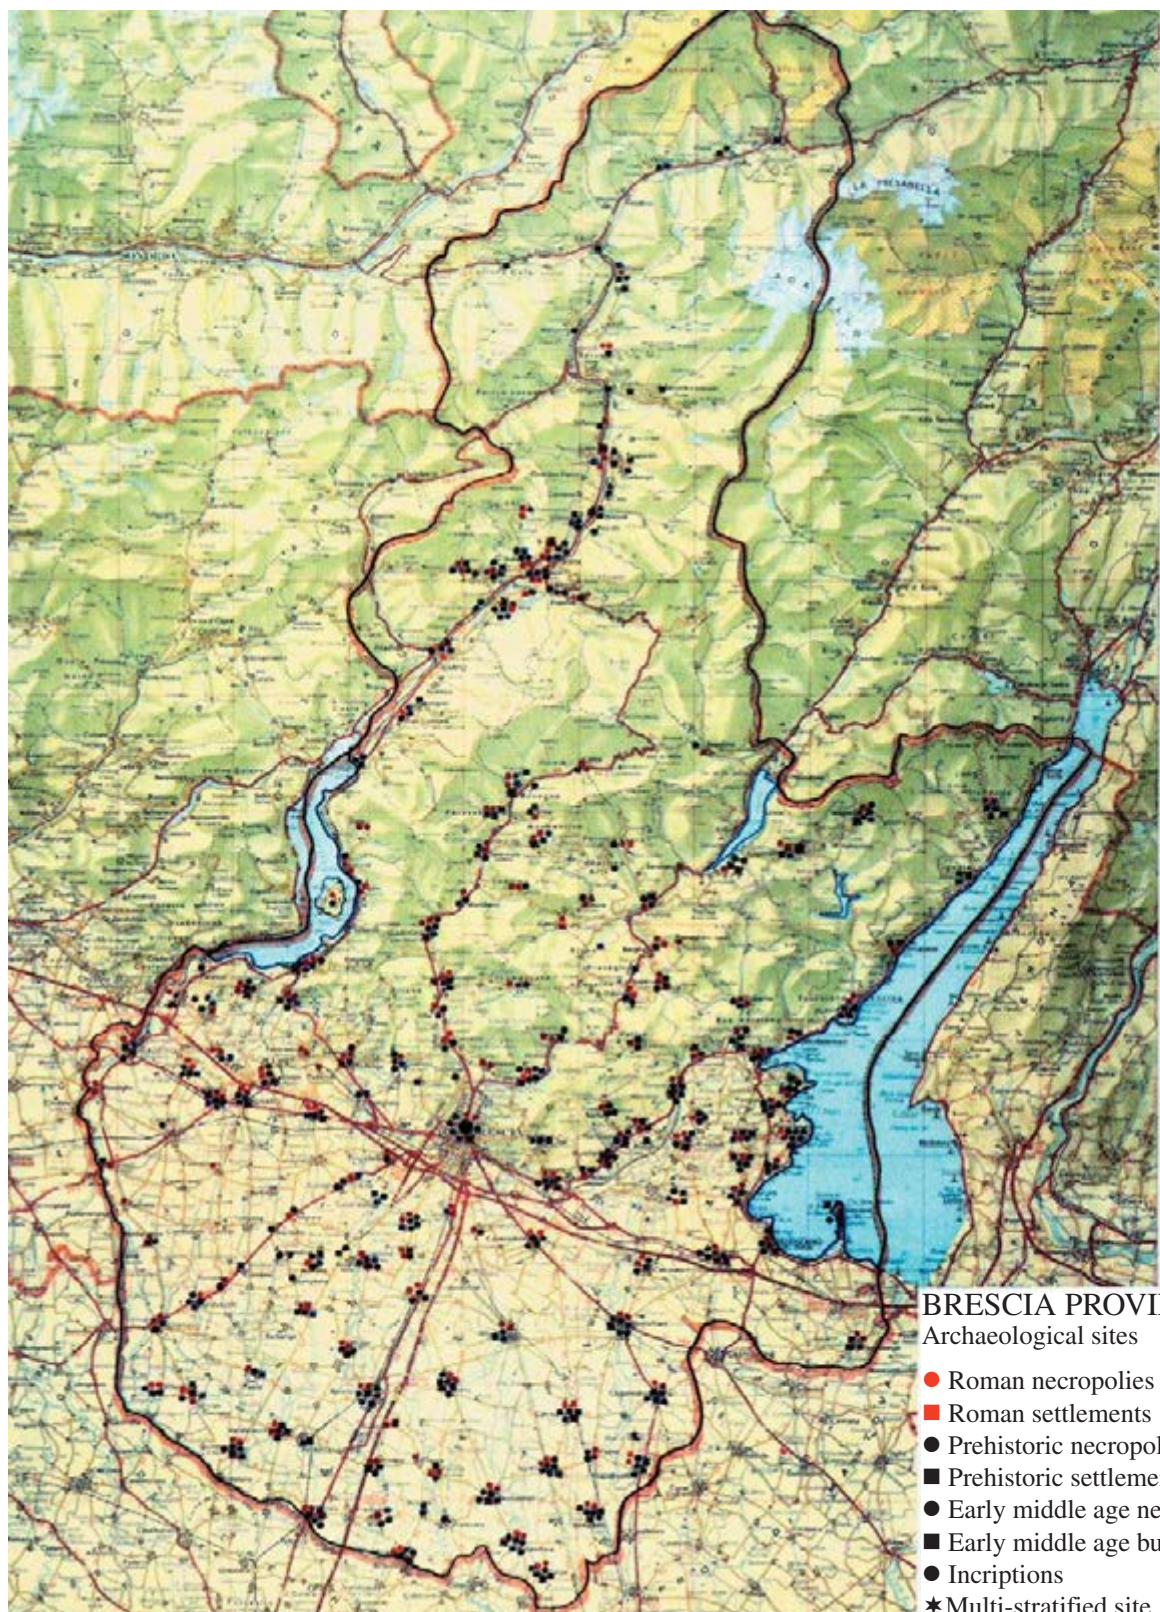

Excepting very rare traces of wooden buildings, the Longobard villages have completely disappeared. News of vast necropolises has offered attestation of the organizational assets and specific uses. The wealthy furnishings found in tombs excavated in the necropolises of Leno, Porzano, Milzanello, Calvisano and San Zeno Naviglio can be dated to

the end of the 6th and the beginning of the 7th century, and indicate the places in which these new arrivals built their villages.

The necropolises of Montichiari, San Zeno, Calvisano Santi di Sopra, and the settlements of Manerbio and Leno have surrendered furnishings which document the Longobard's second settlement phase in the central and eastern area of the Lower Po Valley. This was characterized by the constitution of communities, when Longobard presence became firmly routed in the

Three dimensional reconstruction of San Benedetto at Leno

territory in question, and quickly amalgamated into the local population.

This is the context in which the rule of Duke Rotari matured. Rotari went on to become a legislator King, whose Edict constitutes a visible synthesis of an advanced integration process, which fuses Longobards and local population and seems to mirror the situation at Brescia. The coexistence of the powers exercised respectively by the bishop and by the duke, whose task it is to implement the indications contained in the Edict, contributes to diffuse certain cultural models which can be easily detected in the burials dating from the second half of the 7th century, and especially in the burials dating from the first half of the 8th century. The same cultural models are at the base of the widespread diffusion of religious buildings sometimes erected over 6th and 7th century centres, as exemplified by the Early Medieval church of San Bartolomeo at Bornato.

The upswing of the integration process during the reign of Liutprand is marked by a large number of foundations of both churches and chapels, and from the mid-8th century onwards, by the founding of monasteries: first of all, the one at San Salvatore in Brescia, then San Salvatore at Sirmione, and San Benedetto at Leno, all due to the patronage of King Desiderius and of his relatives. At Leno in particular, in the time before his royal accession, King Desiderius had had a church built in honour of the Saviour, of the Virgin and of the Archangel Michael on his own land, close to the family palace.

In 758 the same Longobard King decided to institute the Monastery of San Benedetto *ad Leones* close to a private small church of the same name, and obtained from the Abbott of Montecassino twelve monks to be established there, who brought with them an important relic of Saint Benedict, while the same King brought to Leno from Rome the relics of martyrs

Saints Vitalis and Martialis, a gift of Pope Paul I.

The geographical context of this further phase of Longobard establishment in the Brescia area is that in which the city forms the centre of a district including the Lower Po valley, from Sirmione to Palazzolo, whose Southern boundary is marked by the Oglio River, and the Northern one by the settlements rising close to the mining basins of the Upper valley of the Trompia River, and the Scalve River valley.

The area thus comprised many well identified settlements, distributed over much of the area, linked to Brescia and to each other by a network of communications, whose nodes can be deduced thanks to archaeological evidence, as well as art historical sources. These allow us among other things to give a new interpretation of the statement made by Paul the Deacon, which refers to the presence of many noble Longobards in Brescia since the earliest phases. Up till now, this had been taken to mean only those present in the city, now we can instead take this to mean also those which resided in most of the surrounding area, and owned large estates there. This is proved for example by documents dating from the mid-8th century, which refer to assets in the territory of Sirmione, or to estates in the lower Po Valley along the Oglio River, which belonged to the large real estate belonging to the two monasteries of San Benedetto at Leno and San Salvatore at Brescia, the latter being chosen by its founders, Queen Ansa and King Desiderius, as the final resting place of the Longobard Kings.

The Garda area in the Longobard period

The surveys on the settlement and the institutional organization in the Garda area during the Longobard period already started by Gian Pietro Bognetti have led to an exhaustive, particularly rich historical and archaeological picture thanks to the excavations in burial areas and worship places.

The most important centre from a strategic and institutional point of view as well as for its historical documentation and material is Sirmione. It was the *iudiciaria* seat and theatre of the patrimonial vicissitudes of the royal warrior Cunimond and of Ansa's attention to the monastery of San Salvatore. In Sirmione the traces of the Longobard past are clearly visible both in the built-up area (with the remains of the late-ancient walls and the worship buildings) and in the Museo delle Grotte where sets and elements of sculptural furnishings are shown.

The important site of the church of San Pietro in Mavinis is now associated to the necropolis of Cortine that can be dated back to the first phases of the invasion and presumably pertaining to the villa of the Grotte di Catullo and to the findings of the early medieval built-up area. The church of San Pietro in Mavinis has been documented since the 8th century: the excavation revealed a first important building founded between the 5th and the first half of the 6th century and used as funerary church of the military elites established on the peninsula. As for the last phases of the Kingdom the foundation by Ansa of the *monasterium* of San Salvatore, which has recently been object of new excavation campaigns and arrangement, is quite remarkable.

The results of the historical and archaeological surveys on the area of the upper Garda, traditionally considered marginal, have revealed on the one hand complex geo-political dynamics with the probable maintenance of the control by the Byzantines, on the other hand have given back, for example with the excavation of San Pietro di Gardola, important evidences of the settlement between the 6th and 7th centuries. The hermitic settlements in caves are connected to the first aspect; it is a phenomenon explainable with border dynamics introduced by the Longobard

invasion and comparable to other contemporary case all over Italy. The most important site is the one relative to the Bishop of Brescia Ercolano, who took refuge in Campione because of the Longobard invasion. The analyses have confirmed the foundation of the site in the second half of the 5th century; so, it is associated with the contemporary settlements of Val Tignalga and of San Giorgio di Varolo.

The excavation of San Pietro di Gardola has given back a church of the 6th century, where during the 7th century some privileged burials with precious elements of belt made of damascened iron were included; the discovery of such precious objects has enabled to draw the vast map of the cultural and material exchanges between the Longobard elites and the neighbouring peoples.

The Franciacorta area

Once again, the archaeological surveys carried out in Franciacorta in the last ten

years have revealed a territory rich in early medieval worship centres and burial areas that even though they are not characterized by dating elements can be framed within a late ancient early medieval period (Cortefranca, Sant'Eufemia di Nigoline and San Vitale di Borgonato). San Bartolomeo di Bornato is particularly important since there the Roman villa sequence poor settlement of the Longobard period worship edifice with burials and the presence at Frankish Court of curtes of Santa Giulia, to which the presence of chapels with early medieval liturgical furnishings (Santa Giulia di Timoline) is connected, have been identified. Moreover, Franciacorta has given back the so-called sarcophagus of Gussago actually slabs of presbyteral enclosure one of the very few anthropomorphic representations (a knight accompanied by the inscription *Mavioranus* or *Mavi orans*) of the sculpture of the Longobard period.

NATURALISTIC FEATURES

From the naturalistic point of view the territory of Brescia is large and highly diverse. It is noted for presence of three lake basins (Lake Garda, Lake of Iseo and the Lake of Idro), which have a strong vocation for tourism, because of the natural beauty of the area and of its cultural heritage, which ranges from Roman times (there are Roman Villas at Desenzano and Sirmione, as well as production plants at Lonato), up to modern times (the so-called Vittoriale degli Italiani, the former residence of writer Gabriele D'Annunzio at Gardone Riviera). Three ample valleys called Valle Camonica, Valle Sabbia and Valle Trompia, all lead to the Alps. They constitute a vast area where to enjoy mountain and winter sports, the area boasts extensive National Parks (called Stelvio and Adamello), towns of remarkable cultural and ethnographic interest. In particular, in Valle Camonica there is a National Park of Rock face Artwork (Parco Nazionale delle Incisioni Rupestri) which was the first Italian site to be inscribed in the UNESCO World Heritage List, as well as other archaeological sites dating back to Roman times, located at Breno and Cividate.

SOCIO-ECONOMIC FEATURES

The large plain which extends to the south of the city of Brescia is bounded by the River Oglio and the River Mincio and has been historically characterized by intense activities in the fields of agriculture and cattle-raising. Large towns are known for their importance as markets as well as for their cultural heritage.

On the hills of the Lower Garda Lake area known as the Valtenesi hills, olive trees and vines are cultivated to produce high quality wine and oil. The wine production area of Franciacorta, south of the Lake Iseo is well established at international level especially for its *spumante* produced according to the *champenoise* method.

San Salvatore

From the hills to the east of the city comes a limestone variety known as “*marmo di Botticino*” (namely “Botticino marble” used since the 1st century A.D., which is exported worldwide today.

Over all the territory there is widespread industrial activity, and iron casting is one of the most long established of all.

5.2.1 BRESCIA RECOGNITION OF STAKEHOLDERS

The complex proposed for nomination in the World Heritage List includes a series of buildings, which are all public property. The Municipality of Brescia over the years acquired the whole of the monastery.

The seat and museum’s collections of the San Salvatore-Santa Giulia complex are part of public property known as *demanio comunale* (Communal demesne) and are managed directly by the Municipality of Brescia through its office called Settore Musei; services are managed by a foundation called Fondazione Brescia Musei.

The management guidelines are defined and shared between the Municipality and Brescia Musei, and are supervised by the State and Region; each institution pinpoints the most adequate instruments to ensure the proper and most efficient management of the asset, while fully respecting its archaeological, historical and artistic value.

In particular the Municipality’ Settore Musei by means of its facilities entitled “Servizio musei d’arte e storia”, provides for the protection, increase and restoration of the archaeological, historical and artistic heritage, in cooperation with State and region institutions in charge of conservation of the city’s cultural heritage.

The Municipality has contracted out the management of the following museum services to Fondazione Brescia Musei:

- surveillance of museum areas open to the public;

- surveillance of the different museums;
- cleaning services at the museums;
- publishing, sale of reproduction, design of catalogues and souvenir objects;
- museum book shop and cloakroom services;
- promotional services;
- cafeteria;
- information and guiding facilities;
- didactic services;
- information services;
- ticket sale;
- ordinary maintenance of museum structures;
- ordinary gardening services of the museum grounds;

The contract also includes the possibility for Fondazione Brescia Musei to organize:

- promotional, communication and marketing activity aimed at achieving a greater fruition of the city museums;
- particular exhibitions of significant artistic value, also in cooperation with other public and private entities;
- special cultural events connected to particular aspects of assets or to recovery, restoration or acquisition of assets.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage system, for institutional competences and partnership processes already underway.

The main institutions and bodies, signatories for Brescia of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site proposed for Unesco inscription (Lombardy Regional Authority; Province of Brescia; Regional Directorate for Cultural Heritage and Landscape Assets,- representing all relevant territorial offices: Lombardy Superintendency for the Archaeological Heritage, Superintendency for the

Historica, Artistic and ethno-anthropological Heritage for the provinces of Brescia, Cremona and Mantua; Superintendency for architectonic heritage and landscape assets of Brescia, Cremona and Mantua, CAB Foundation-Giovanni Folonari Institute of Culture).

Aerial view of the castrum remains

3D reconstruction of the castrum

5.3 CASTELSEPRIO-TORBA IDENTIFICATION OF REFERENCE AREA

Castelseprio and its territory of pertinence formed one of the most important bulwarks for the control and the defence of the area which allowed access to Pavia, capital of the Longobard kingdom, from the northern alpine passes, that is to say from the territories of the Franks and their allies.

The Castelseprio *castrum*, a *civitas flavia* during the Longobard era and seat of a Gastaldo (a king's Steward), is an important example of the creation of groups of power of urban character and prerogatives in the rural territory. A role which is also reflected in the promotion of architectures and works of value, as in the case of the Church of Santa Maria *foris portas* and its frescos, of the Monastery of Torba and of the other monuments of the *castrum*.

The mighty baileys define the precincts of the settlement which develops until Torba, in the valley floor of the Olona Torrent's plane. The area demarked by the fortifications and by the church of Santa Maria *foris portas* are included in the **SITE** for which the registration to the WHL is requested.

THE BUFFER ZONE

In the forest that develops around the *castrum's* western limit, near its entrance and that's included in the proposed *buffer zone's* perimeter, there are traces of the Castelseprio borough's settlement structures, a built-up area attested by medieval documental sources, inside of which a square (platea) is also remembered. It is an area that is currently very striking as far as the landscape is concerned, with banked areas, occupied by the complexes of the ancient settlement, furrowed by deep incisions in the soil where the ancient routes which conduced to Carnago, Gornate Olona and, at the south,

towards *Vico Seprio*, the area of the current Castelseprio settlement, developed.

The forest, which encloses the Archaeological Park and also occupies the borough's area, is of great naturalistic value, added to the context.

CASTELSEPRIO-TORBA **DESCRIPTION OF THE TERRITORY**

The territory considered in the management Plan includes the district which was governed by Castelseprio in the early middle ages the Seprio Giudicaria, which extended itself in a very vast area: at north it reached the entrance of the alpine valleys until the actual Ticino Canton, from the Lugano Lake towards Bellinzona in Switzerland, subsequently occupying the Varese province, until the Lake Maggiore and the Ticino, towards east, while at the west it reached the Severo torrent and it also included a part of the Como territory; at the south it pushed into Milanese territory.

The territory is particularly rich in findings of the longobard ages, which integrate with the variety of the landscape, which progressively changes when climbing from the lowland plain to the sub-alpine area, and that transforms itself depending if you are in the internal areas, or along the banks of the rivers and the shores of the lakes.

The nature of the testimonies of the settlement structure of the longobard period, shows the strategic relevance of the area, outlining an articulate peopling which distributed itself along the main road axes. A series of minor centres, fortified or not, are placed next to the main centres, localisable in the castrensian settlements (Castelseprio, Bellinzona, Castelnovate, also a *civitas flavia*), some of which display a particular vitality thanks to the richness of the socio-economic situation, often

The Church of S. Maria *foris portas* and fresco's details

View of the Torba complex

Lake of Varese

Industrial archaeology along the river Olona

related to the presence of important noble families, such as that of Toto at Campione d'Italia, documented by written sources and by archaeological findings.

Noble groups are also highlighted by grave findings, such as those of the important necropolis of Arsago Seprio, and those of Stabio, in the Ticino Canton. Many burials or privileged cemetery areas are also linked to places of cult and prove their longobard age origins, as private funerary chapels.

There is no shortage of important longobard buildings of worship, such as the early Christian baptistery at Riva San Vitale, with early middle age stages of renovation, which remembers the case of the basilica with adjoining baptistery of San Giovanni at Castelseprio.

NATURALISTIC FEATURES

The territories of the Municipalities of Castelseprio and Gornate Olona are placed in a naturalistic and hydrographical microsphere of great value, crossed by the Olona river and by minor water courses, like the Tenore and the Refreddo, and are rich in resurgences. But the entire territory of the Varese province presents extraordinary natural characteristics, witnessed first of all by the Ticino Valley (inserted in the List of Biosphere Reserves in 2002 by UNESCO), by the area of the great lakes (Lake Maggiore and, at the Swiss border, Lake Lugano), besides for the minor lakes of Varese, Comabbio and Monate, and a large series of swamps, like that of Gornate Olona, and numerous humid areas.

The pre-alpine and alpine panoramas at the borders between Lombardy and Piedmont made famous by the inclusion of the "Piedmont and Lombard Sacred Mountains" Site in the UNESCO World Heritage List (2003), are of equal suggestive power and importance.

SOCIO-ECONOMIC FEATURES

The Castelseprio-Torba longobard Heritage highlights the exceptional value of an area where next to the heights of the great early middle ages history the first clusters of the great Lombard industry (cotton mills, tanneries and dyeing plants) historically developed during the XIX century. The valley floor ploughed by the Olona is punctuated by abandoned industrial complexes and old hydraulic mills (the area was known during the Middle Ages as the “granary of Milan”). From 1980 and forth a crisis of the valley’s industries, often brought to their knees by the great economic damages caused by the furious and frequent overflowing of the Olona, commenced. With the end of the industrial activities, the Olona river was considerably recovered and the nature prevailed, re-establishing its integrity. The Olona valley floor is crossed by a stretch of a disused railway, the

Valmorea. In the year 2000 a complex recovery plan was initiated and has just recently brought back the train in the Olona Valley, at the Folla di Malnate station; from here the train reaches Medriso. Currently the Valmorea railway partially recovered for tourism functions along short stretches and during predetermined occasions.

Nature, history, economic activities (which are advanced nowadays, especially in the sectors of mechanics and avionics) are therefore the characteristics of the site’s territories, where interesting cultural, folklore and socio-economic initiatives are developed each year.

The initiatives of the “Sepriese September” at Castelseprio (events and historical exhibitions, regarding the figurative arts, religious initiatives, folklore and the exploitation of local handicraft, organization of naturalistic observation routes) are noteworthy.

Visitors on Torba complex

Castelseprio area

5.3.1 CASTELSEPRIO-TORBA RECOGNITION OF STAKEHOLDERS

The property in the area of the ancient settlement of Castelseprio-Torba, stretching over around 250,000 m² between the quarter and the fortification at the bottom of the valley (Torba), is divided among:

- The Province of Varese, owner of the Church of Santa Maria *foris portas*, the general building located at the entrance of the *Castrum*, used as a surveillance and welcoming point and the neighbouring complementary areas (located in the Municipality of Castelseprio);
- Ministry for Cultural Heritage and Activities, owner of the *castrum* and the slopes of the plateau (located in the Municipality of Castelseprio);
- Municipality of Castelseprio, owner of the access road to the *castrum*;
- FAI Italian Environmental Fund, owner of the Monastery of Torba and its premises located in the underlying Olona Valley (in the Municipality of Castelseprio and Gornate Olona);
- Private owners of small lots.

At the moment, the vast area occupied by the ancient settlement of Castelseprio is mainly managed by:

- the Soprintendenza per i beni archeologici della Lombardia (branch of the Ministry for Cultural Heritage and Activities) as to the state-owned areas and those areas belonging to the Province (Bailment Agreement of 19/4/1994);
- FAI (Italian Environmental Fund) for its areas.

Also other institutions contribute to the management of the area; first of all, the Province of Varese which guarantees supplementary maintenance of the areas and buildings belonging to it (Church of Santa Maria *foris portas*, the building which will be used as welcoming point

and is placed near the entrance of the *castrum* and surrounding areas); the Municipality of Castelseprio, which deals with routine and supplementary maintenance of the access road to the *castrum*, with lighting system and routine and supplementary maintenance of green areas relative to the access road;

In 2004, the Province of Varese, the Ministry for Cultural Heritage and Activities Soprintendenza per i beni archeologici della Lombardia and FAI (Italian Environmental Fund) drew up a Memorandum of understanding for the development of a joint intervention plan for the enhancement and promotion of the entire Archaeological Complex of Castelseprio which is defined in the Memorandum as “the group of the three buildings for public use: the complex of Torba, the archaeological area of Castelseprio, Santa Maria *foris portas*”. Giving impetus to the cultural role which such an area must play and enhancing its precious cultural heritage at best requires coordinated and synergic management in order to achieve objectives. The project is actually being enhanced and redefined and aims at improving the cultural offer and at restructuring the historical and artistic heritage of the different areas through the reopening of connection routes and the strengthening of public transport which must be redistributed among main junctions.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage system, for institutional competences and partnership processes already underway. The main institutions and bodies, signatories for Castelseprio-Torba of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site

proposed for Unesco inscription (Lombardia Region; Municipality of Gornate Olona; Direzione Regionale per i beni culturali e paesagistici della Lombardia - Ministry of Cultural Heritage, representing all relevant territorial offices: Soprintendenza per i beni architettonici e per il paesaggio delle province di Milano, Bergamo, Como, Pavia, Sondrio, Lecco, Lodi, Varese; Soprintendenza per il patrimonio storico, artistico e etnoantropologico per le province di Milano, Bergamo, Como, Pavia, Sondrio, Lecco, Lodi, Varese).

5.4 SPOLETO

IDENTIFICATION OF REFERENCE AREA

Although traces indicate that man has inhabited this place since prehistory, the city of Spoleto was founded by the Umbrians in the VIII Century B.C.

In the 3rd century BC the city came under the influence of Rome as a colony named *Spoletium*; it became *municipium* after 82 B.C. Under the Empire it seems to have flourished once again, also thanks to its strategic location on the *Via Flaminia*, but is not often mentioned in history (Martial speaks of its wine). The foundation of the Episcopal See dates from the 4th century A.D.

Owing to its elevated position it was an important stronghold during the Vandal

and Gothic wars; its walls were dismantled by Totila (*Procop., Bell. got.* III, 12).

Under the Longobard dominion (6th-8th century) Spoleto became the capital of an independent duchy, the Duchy of Spoleto (from 570), and its dukes ruled a considerable part of central Italy.

After having been a feudal stronghold of the Franks, at the fall of the Carolingian Empire, the Dukes of Spoleto namely Guido III (890) and his son Lamberto (892) succeeded in conquering the Imperial crown.

Even though Spoleto was involved in the struggling fights between the Papal seat and the Empire, to the point of being destroyed by Frederick I in 1155, and in spite of the fierce fights between the Guelfi and the Ghibellini, Spoleto

managed to continue its urban development during the Late Middle Ages and especially during the Romanesque period.

In 1213 it was definitely occupied by Pope Gregory IX. By 1296 a new circle of walls, which we see today, had to be built to include the larger city. During the absence of the papal court in Avignon, Spoleto was prey to the struggles between Guelphs and Ghibellines, until in 1354 Cardinal Albornoz brought it once more under the authority of the Papal States. Besides the vast Albornoz Fortress, erected between 1359 and 1370, numerous masterpieces of inestimable architectural and pictorial value were produced (the Cathedral, *S. Pietro*, *S. Eufemia*, *S. Paolo*, *S. Gregorio*, *S. Ponciano* and the frescoes in *S. Paolo*,

Spoleto landscape

San Salvatore, the façade

S. Gregorio and Ss. Giovanni e Paolo. The Renaissance bestows Spoleto another magnificent artistic period mainly for the pictorial art (the frescoes by Filippo Lippi and the Pinturicchio in the Cathedral, the frescoes by the Spagna). Between the 17th and 18th century the city's noble families employed a conspicuous quantity of architects and artists from Rome to renovate their family houses and the city's churches.

During the French occupation Spoleto was chosen as regional capital of the Trasimeno department and later became a Pontifical Delegation. With the unification of Italy (1861) the city's importance declined in favor of Perugia, which was appointed as the capital of Umbria Region.

THE BUFFER ZONE

The buffer zone lies from the North-Eastern side of the town -corresponding

to the area called "*Colle Ciciano*" or "*Luciano*" where is located the Basilica of San Salvatore- to the historical centre of Spoleto -including the whole area occupied by the city in Longobard times which was included in a impressive wall enceinte; it called "Cyclopic Walls" was built in cyclopean masonry in the fifth-fourth B.C. and further fortified in squared-stone masonry during Roman times.

The "*Colle Ciciano*" hill was crossed by the ancient *Via Nursina*. Some scholars have suggested the area belonged to the *Gens Caesia*, that used to own the *praedium* where the martyrial church of San Sabino was erected.

The funerary destination of the area in Roman times is witnessed by an isolated sepulchre, close to the church of San Ponziano; such usage survived uninterruptedly till the Late Antiquity and the Early Middle Ages, when the hill became an important martyrial pole for the longobard ethnic groups in Spoleto. The hill was then interested by monastic settlements for centuries (*San Ponziano, San Salvatore, Santa Maria inter Angelos*), that were connected to the religious communities on Monteluco, known for his hermitic settlements.

Church of San Ponziano

The church lies at the feet of *Colle Ciciano*, along with the contiguous Benedictine monastic complex. According to the sources, the martyr *Ponziano* from Spoleto, who eventually became patron saint of the town, was buried in the church (175 A.D.), and is represented as an armed knight on the arch that gives way to the courtyard before the church. Some sarcophaguses coming from the ancient graveyard of *San Ponziano*, that in the 10th century was still called *sacratissimus*, are kept in the crypt: on one of them the name *Agipertus* is recorded.

Before the year 1000, the existence of a

Monastery of *San Ponziano*

Project for the Graveyard (Arch. Ireneo Aleandri 1836)

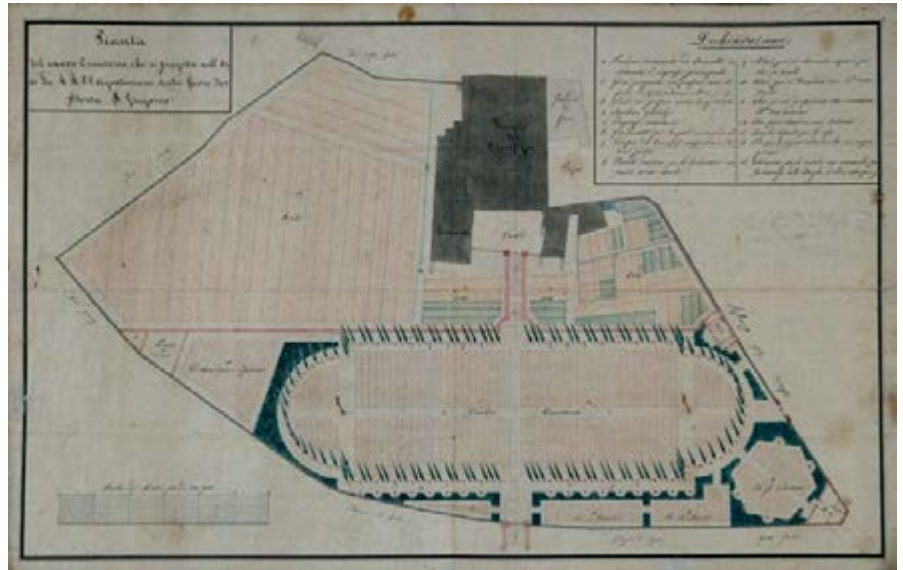

cenobium beatissimi martyris Pontiani is documented, that in the 11th century developed conspicuously, as evidenced by a very refined, miniated bible that dates back to 1080 about, maintained in the "Guarneriana Library" in *San Daniele del Friuli*.

The façade of the church of *San Ponziano* shows similarities with other churches in Spoleto from the second Roman period, yet they are still inspired by classicism, with a high gable lying on side pilasters. The symbols of the evangelists, soberly manufactured, placed around the rosette flanked by small double lancet windows, show similarities with those in the Cathedral and in the church of San Pietro. The inside has been rehandled by Valadier in the late 18th century (1788), while the crypt, divided into three small aisles by couples of pillars, shows paintings on the walls that date back to the 14th - 16th centuries.

In 1521, the Benedictine Nuns were substituted by the *Clarisse*, whose place would then be taken by the *Canonichese regolari lateranensi di S. Agostino*, who still occupy the monastery and observe the vow of seclusion.

Graveyard

In 1863, the town's graveyard was set up at the feet of the basilica of San Salvatore. The area, that was previously being cultivated by the Barefoot Augustinians residing in the convent close to the basilica, was chosen for its position, sufficiently distant from the town walls (500 metres) and on a slight slope, for the favourable geological conditions and for the vicinity of a fully served curial church. The project and the direction of the works were assigned to Ireneo Aleandri, who had already presented a first project in 1836. The inauguration of the graveyard was solemnly held with a consecration ceremony on August 1st, 1868.

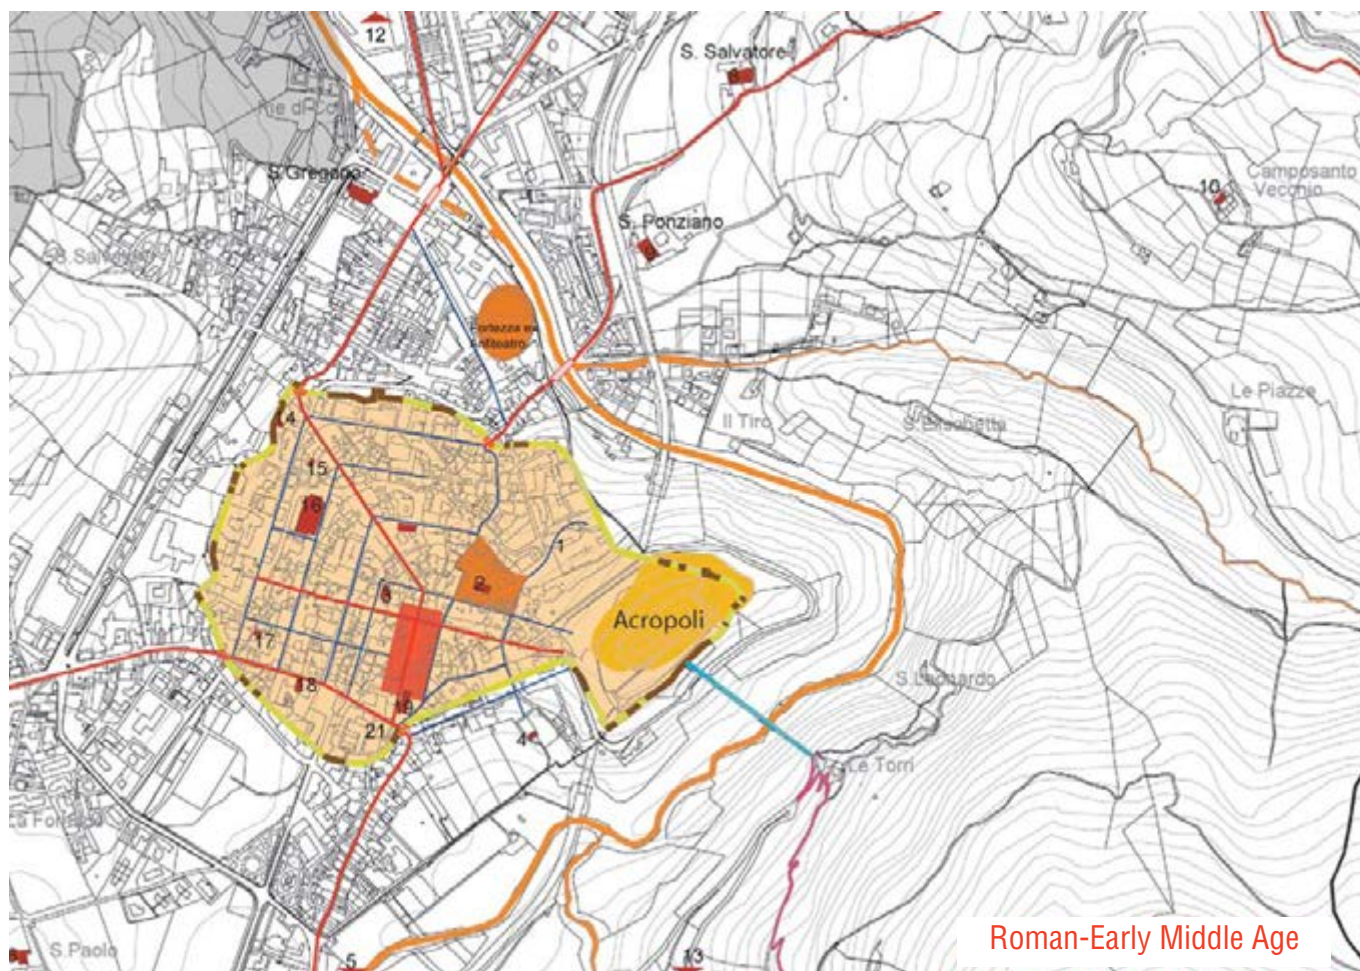

The buffer zone -on North-Eastern side- also includes a vast agricultural area, protected for its environmental and cultural features, of very high level. As the historical centre of Spoleto, it is characterized by an architecturally high quality urban fabric, that shows evidences of all phases of its development, starting from the remains from the pre-Roman and Roman times, to the churches and hamlets realized during the Middle Ages, to the contemporary Age.

Remains of the Longobard city

With regard to the Longobard city, our knowledge of urban organisation as well as public and residential architectural styles during the Longobard age is still in its early stages. Archaeological excavations carried out as part of restoration programmes involving historic buildings have, nonetheless, recently brought to light evidences which may allow a framework plan describing the urban layout of this Duchy capital to be identified. At first, two rooms discovered under *Palazzo Mauri*, part of a thermal bath complex; the second room features an exceptional mosaic

floor covering with a central drainage point in marble, sculpted in bass-relief and depicting plant motifs. The mosaic decoration, edged with a plaited strand encompassing triangles and rosettes, comprises vine-shoots bursting forth from four centrally positioned baskets, developing into large, elegant spirals which enclose bunches of grapes and vine leaves; amongst the vine-shoots a number of different animals are depicted; deer, birds, a horse and a hare. The mosaic work, recalling similar works in Ravenna and in the figurative culture of Constantinople, is of enormous interest since the quality of the figures depicted and suggests it was commissioned by a person of extremely high social *status*, as well as vouching for the presence of highly skilled builders and craftsmen in the area. The thermal bath building may, therefore, have been re-floored upon the commission of the first Longobard dukes, raising its standard and bringing it into keeping with their residence, or possibly that of the diocese, bearing in mind the Christian connotations of the depiction, which might reasonably lead to its allocation as part of a baptistery.

City Roman-Early Middle Age plan

The church of *Sant'Ansano*, the crypt

In the same area, in the vicinity of the *Palazzo Fontana*, impressive residential structures have also been brought to light, dating to the Roman period yet still in use until the late Longobard Age as suggested by the considerable quantity of pottery from the sixth and seventh centuries which have been found there. In the immediate vicinity of *Palazzo Mauri*, on the southern border of the *Forum*, there is a temple on a high podium that dates back to Augustus, precociously turned into a church dedicated to *Sant'Ansano*, a martyr from Siena. The temple was turned into a church before the Longobard phase, as evidenced by excavations during the 1950s that brought back to light the whole base of the temple. This early transformation of a pagan temple into Christian church, which occurred with little adaptation, on a building that was still very well preserved, may have contributed to orient the architectural choices in the Longobard period, in the peculiar *facies* of Spoleto. Singularly, the podium of the temple under the church

of Sant'Ansano is crossed by two transversal, flanked spaces, put underneath the pronaos and is in relation with water, as it contains a previously existing well. This very same architectural solution, in this case limited

to a single space, can also be observed in the Clitunno Tempietto, which also rose in relation to the water of the stream below.

*Palazzo Mauri*, the mosaic

The whole southern sector of the Roman settlement gains particular importance during the Early Middle Ages, in particular around the streets connecting the theatre to where the *Via Flaminia* crossed the *cardo maximus*. Such route corresponds to the southernmost among the minor *decumani* and not only the great Early Middle Ages complex under *Palazzo Fontana* and *Palazzo Mauri* used to gravitate around it, but also the former churches of *Sant'Apollinare* and *Sant'Agata*, a few meters away from each other, whose respective titling parties' origin, respectively the Ostrogoths and the

Longobards. The original buildings now have completely disappeared, their place being taken by later buildings. The Church of *Sant'Agata* was erected above the structures of the theatre's stage area; of the Early Middle Ages' building, some interesting crutch capitals remain, on display at the *Museo del Ducato di Spoleto*. The attractiveness of this axis continues across the centuries and leads to the overturning of the orientation of the Church of *Sant'Ansano*, when it was rebuilt during the Romanesque period. The identification in this area of the diocese explains the growing importance of this part of the town, where the *platea magna* becomes the

privileged stage for all public ceremonies and processions. It must be highlighted that in Spoleto, the denomination of *via magna* was given to the urban route of the *Via Flaminia*, as evidenced by the denomination of the church of San Sabino *de via magna*, given to a church, now demolished, that used to rise along the *Via Flaminia*, in the part which is now called *Via Salara Vecchia*, close to the northern entrance to the town.

Along the crossing axis of the *Via Flaminia* inside the town, further archaeological finds made in 2005 close to *Palazzo Pianciani* have allowed scholars to set out a possible framework of events extending into the darkest centuries (i.e. the seventh and tenth centuries). Beneath the *Palazzo*, a baptistery has been unearthed featuring a mosaic floor covering attributed with the eighth century, once again constructed over rooms pertaining to a thermal bath from the Roman period. The mosaic features a geometric design, encompassing two square decorative panels, one of which is illustrated and polychromatic. The scene depicted is clearly symbolic of the baptism rite: two

Palazzo Pianciani, the mosaic

Palazzo Pianciani, the mosaic. The peacock

deer and two doves on the borders of a *kantharos* out of which rivulets of water run, quenching the thirst of the deer and watering two berry-laden shoots on which the doves are feeding, the central section depicts a peacock with its tail feathers open, symbolising the renewal of the soul through the rite of baptism. The existence of a Longobard quarter in the northern section of the city was proposed some time ago, close to the amphitheatre that had previously been remodelled by Totila for military-defence purposes. Close to *Palazzo Mauri* and *Sant'Ansano*, there is the ruined Church of *San Marco in pomeriis*, where fragments of a mosaic dating back to Theodoric's age have been found.

Many are the sculptural and architectural manufactures from the Longobard period instead, the most significant of which are now being exhibited at the National Museum of the Longobard Duchy, opened in August, 2007 in the *Rocca Albornoziana*. The imposing structure, towering over the town's acropolis, was erected starting from 1359, by will of Pope Innocenzo VI; it always had military and residential

functions, pivoting respectively around the Courtyard of Arms and that of Honour. The *Rocca* was surely preceded by other structures, some of which dating back to the Early Middle Age; they are coming back to light following excavations supported by the Study Centre on High Middle Ages and the Municipality of Spoleto, along with the Department of Middle Ages Archaeology of the University of Perugia.

The *National Museum of the Longobard Duchy* aims at introducing the visitor to the complexity of the historical adventures of the territory of the duchy, and to the fundamental cultural unity of this vast area of Central Italy, that still

insists beyond all chronological limits of the existence of the duchy that rose after the Longobard conquest.

The *Rocca* is also seat of the 'European School of Book Restoration' and of the 'Cultural Heritage Diagnostic Lab'; temporary exhibitions are also being organized there.

Remains from Roman times

Among the most significant buildings and spaces from the Roman period, have to be noticed:

- the Theatre, built in the 1st century A.D. to host 3,000 spectators; it collapsed, was overlaid and dismembered several times till the latest restoration that began

Rocca Albornoziana, interior court-yard

The National Museum of the Duchy. Hall V, Longobard grave goods
Hall VI, Longobard architectural finds. Crutch capitals

The Roman Amphitheatre (2nd century A.D.)

in 1938. The theatre is still used for shows and it is now part of the *National Archaeological Museum*. This museum, located in the homonymous Benedictine monastery of *Sant'Agata* of the 14th century, hosts findings recovered from the town's excavations in the fortress area and surroundings (including Campello sul Clitunno). Among the epigraphs, a very important discovery for the town's history: the "*lex spoletina*", a law prohibiting the cutting of trees in two sacred woods of the area, an inscription dated 3rd century B.C.

- the Amphitheatre, built in the 2nd century, was turned into a fortress by Totila in 545 and in Middle Ages times was used for stores and shops, while in the *cavea* the church of *San Gregorio Minore* was built. The stones were later used to build the *Rocca Albornoziana*.

The Roman Theatre (1st century A.D.)

The *Tablinum* mosaic flooringThe Roman *Domus* (1st century A.D.)

- the Roman *Domus* (1st century A.D.) close to the Forum, discovered between the end of the 19th century and the beginning of the following one, in the past it was thought to have belonged to *Vespasia Polla*, mother of Emperor Vespasiano; such acknowledgement has nowadays been corrected in favor of an economically and socially prominent character of Spoleto in the 1st century. It is a valuable, high-class dwelling place, whose architectural scheme reflects the classic one of Roman *domus*. There is in fact the *atrium*, with a basin for rainwater, the *tablinum*, the *triclinium*, the *peristilium*, as well as *cubicula* and service rooms. All spaces show mosaics on the floors; here and there you can see traces of frescoes.

- the Arch of Druso and Germanico was the triumphal entrance to the Roman Forum, now *Piazza del Mercato*. Built in the 1st century A.D. in honour of Druso and Germanico, son and adoptive son of Emperor Tiberio, now is partly hidden by both the surrounding houses and by the present street level.

- the *Ponte Sanguinario* (Bloody Bridge -

1st century B.C.), just outside the buffer zone. Its name has been put in relation with the killing of Christian martyrs which often occurred here. The brook Tessino used to flow once under the bridge, to change its natural course with the passing of the centuries, so that the bridge became interred until 1817, when it was discovered; the *Via Flaminia* used to pass over the bridge, to branch off afterwards into two main axes; the most important one, in the direction of *Via Cerquiglia* (the ancient *Via Flaminia*), the other one in the direction of the present *Via Flaminia Vecchia* (the ancient *Via Plestia*).

Middle Age and Renaissance city

The many churches, risen or rebuilt between the 11th and the 13th centuries, testify the renewal and the expansion of the town that builds wider ring-walls at the end of the 13th century.

- The church of *Ss. Giovanni e Paolo* holds the oldest existing portrayal of the Martyrdom of Saint Thomas Becket; from there, Alberto Sotio's Painted Cross was transferred to the Cathedral.

- The Cathedral of *Santa Maria Assunta*, rebuilt at the end of the 12th century, took the place of the ancient building of *Santa Maria del Vescovado*, erected on the spot of a previous Christian temple, dedicated to the martyr *Primiano*. The façade, enlightened by a mosaic by Solsterno, is preceded by a Renaissance portico, to whom a recent restoration has given back its white and pink marbles. Inside the church there is a number of works of absolute value, from the Painted Cross by Alberto Sotio (1187), prototype of a peculiar production that counts many other samples in the town's museums, to the cycle on the apse with Stories of the Virgin, painted by Filippo Lippi between 1467 and 1469. The chapels "Eroli" and "dell'Assunta" with frescoes by Pinturicchio deserve particular attention, as well as the chapels "delle Reliquie" and "della Santa Icone", inside which there is a precious tablet, given in 1185 by emperor Frederick Redbeard to the town in sign of peace. The Capitular Archives preserve the important documents, including the "Leggendari"

The Cathedral, Filippo Lippi. Coronation of the Virgin (1467-1469)

The cathedral of Santa Maria Assunta

The church of *Sant'Eufemia*. The interior

by *S. Felice di Narco* (XII sec.) and *S. Brizio* (XIII sec.), with splendid miniatures, and a "Letter of S. Francis to Brother Leo," "written by the same saint, from *S. Simone*."

Inside the court of the Archbishop's Palace, here is the Church of *Sant' Eufemia*, among the most remarkable Romanesque buildings of Umbria, characterized by a nave and two aisles, and by the rare presence of the women's gallery. The complex also hosts the *Diocesan Museum*, born in the 70s of last century, to valorize the historical/artistic heritage of the vast diocese. Hosted in the ten halls of the wing of the "Cardinal's Apartment", the collection includes very interesting works, such as the series of moulded crosses and the paintings on wood dating back to the 13th and 14th century; there are also works by Filippino Lippi and Domenico Beccafumi, works from the 17th and 18th century (Sebastiano Conca, Cavalier d'Arpino). Lately, the Museum has acquired two sculptures by Gian Lorenzo Bernini and Alessandro Algardi.

- The churches of the Mendicant Orders, *San Simone and Giuda*, built by the Franciscan friars in the 13th century together with a convent, the church is enriched by a precious portal. Since the 19th century, it's been suited for civilian purposes. The structure was recently renovated and is apt for shows and events.

- The Church of *San Domenico*. Initially dedicated to the Saviour (from the ancient chapel around which the first Dominican convent was built – 1247), the building, erected between the end of the 13th and the beginning of the 14th century, shows a rare decoration in pink and white marble. The neat architecture inside and the frescoes are to be admired, among which the late 14th century ones showing *Stories of Magdalene* are particularly remarkable.

- The Church of *Sant'Agata*, partly

erected on what was once the stage area of the theatre, only the portico that used to introduce to the façade remains, as well as traces of a cycle of frescoes dating back to the end of the 13th century.

The *Ponte delle Torri* (13th-14th century), , a symbolic monument of the city is a Roman-Longobard aqueduct according to some, late-medieval according to others, and ancient way of communication between Spoleto and Monteluco.

A symbolic monument of the city is the *Ponte delle Torri*, erected between the 13th and 14th centuries, possibly on the remains of a Roman aqueduct that used to bring water to town from the Monteluco. Aqueduct and ancient way of communication between Spoleto and Monteluco, unique in its height of 82 m and 230 m long, making it the oldest stone bridge, Europe's highest. It is considered an anomaly for the era of its construction: in fact, rarely in the same period were built for civil works of such grandeur. The work is celebrated by W. Goethe in his "*Italian Journey*".

Finally, as regards Late Middle Ages buildings, we can note again the *Palazzo della Signoria* (14th century); the *Palazzo Racani-Arroni* (16th century) having a worn *graffito* decoration attributed to Giulio Romano; the majestic *Palazzo Vigili* (15th-16th centuries) that includes the *Torre dell'Olio* (13th century), the sole mediaeval city tower remaining in Spoleto.

During the Renaissance, the town underwent important changes in the urban fabric, especially evident in civil architecture, both public and private, with many formerly isolated houses, towers and structures that were unified, to form regular prospects, scanned by string-course cornices and by symmetrical openings, enriched by stone frames.

Modern and contemporary city

The *Teatro Nuovo*, by architect Ireneo Aleandri, is an emblematic sample of the 19th century renewal. It was inaugurated in 1864 and was a mainstay of the architectural/urban renewal plan of the town, as well as a

The *Caio Melisso* theatre

The Modern and Contemporary Art Gallery, Wall Drawing of Sol LeWitt

place for entertainment and meetings for the society.

Besides other important buildings (*Teatro Caio Melisso*, *Palazzo Ancaiani* - that is now the seat of *Centro Studi sull'Alto Medioevo*-, *Palazzo Leti Sansi*, *Palazzo Rosari Spada* -previously the seat of the Communal Pinacoteca,

within the next year will host the Textiles Collection of the Municipality of Spoleto-), we can note the *Palazzo Collicola*, built between 1717 and 1730, on a project by Roman architect Sebastiano Cipriani, which houses the *Modern and Contemporary Art Gallery*, opened in 2000, as a generous

donation by art critic Giovanni Carandente. A significant part of the Gallery, including also a specialized library and a didactic lab, is constituted by works by Italian and foreign artists whom Giovanni Carandente met along his long and passionate career as contemporary art critic and collector. The collection includes works by A. Calder, L. Chadwick, H. Moore, E. Colla, N. Franchina, P. Consagra, and a number of works that were acquired by the Municipality Administration through the formula of the prized acquisition, during the 13 editions of the *Premio Spoleto* (1953-1968). Among these, the remarkable group of works by Leoncillo stands out. A whole section of the gallery is entitled to him. The last space of the museum is totally painted by Sol Lewitt, as a propitiatory gift for the restoration works to go on and for other works, kept in the storerooms, to find their place in the gallery soon.

Even if placed outside the buffer zone, can not fail to mention the "Teodelapio" by Alexander Calder, the first of the stabile monumental sculptures realized in the world. It was created in 1962 by the American sculptor and placed in the railway station forecourt on the occasion of the art exhibition "*Sculptures in the city*", arranged by Prof. G. Carandente, during the ongoing *Festival of the two worlds*.

As well as boasting a startling array of architecture and art, the name of Spoleto has travelled the world also on account of the *Two Worlds Festival* The city also hosts the *Settimana di Studi sull'Alto Medioevo* (a week of studies focussing on the Middle Ages), organised in April by the University of Perugia, and the *Stagione del Teatro Lirico Sperimentale*, the international "Orpheus" competition.

The Polvani Square, Calder's Teodelapio and the *bozzetto* (Sculpture in città 1962)

DESCRIPTION OF THE TERRITORY

Spoletto and its territory are characterized by rich and important archaeological remains, as well as architectural, urban, historical/artistic, landscape and environmental ones.

If the town has given back few evidences of the Longobard presence so far, on the other hand the surroundings have proven to be richer in settlements, especially churches and monasteries, both new constructions and previously existing ones, strengthened under the duchy.

San Sabino rose in a funerary area and had a privileged relation with the Longobards, as shown in a passage of *Historia Langobardorum* by Paul the Deacon, in which Ariulfo reaches the

sanctuary to give thanks to the martyr Sabino for a favour received during the war.

The oratory of San Brizio rose seven kilometres away from Spoletto, with rural functions. The church of Sant'Angelo on Colle *Ciciano*, along the *Via Nursina*, rose probably in Longobard times, and was related to the cult of waters; the church of Sant'Angelo in Nece a.k.a. Sant'Angeletto and the settlements of *Beroide* and *Pié Beroide*, manifestly Longobard toponyms, rose along the *Via Flaminia*.

The presence of hermitical and monastic settlements in the territory of Spoletto, on the Monteluco, in Longobard times (the so-called *Tebaide Umbra*) is also extremely qualifying. They certainly had

a role by the utmost importance in the Longobard integration process. As for the foundation of monasteries in Longobard times instead, since the end of the 7th century we can already infer that the Dukes of Spoleto and the Court of Pavia supported the building of *coenobia*.

Besides, the widespread presence of buildings for the cult of the Angel, all on high positions, may provide for interesting information about the presence of defensive structures in Longobard times.

Among the sites that are worth a deep archaeological investigation, there are *San Brizio* with its *coenobium* and castle, *San Pietro di Longotorto*, *San Giovanni della Perchia di Baiano*, the *coenobium* of Micheco, the church of *Sant'Angelo in Nece*, but also the more famous *Sant'Angelo* and *San Ponziano* on *Colle Ciciano*, *San Sabino*, *Ss. Apostoli*.

Just outside the buffer zone following churches have to be noticed.

The Church of *San Gregorio Maggiore*, which dates back to the 12th century, but it has older origins. It was first built in honour of the Spoletino martyr by the same name, on a Christian cemeterial area, and was built by the pious widow *Abbondanza*, who, according to the tradition had picked up his body. Though the church has been often rehandled along the 16th and 18th centuries, it still shows an aspect which is similar to other churches in town (*Sant'Eufemia*, *San Giuliano* on Monteluco) and of the area (*San Brizio*, *San Felice di Giano*), an evidence of the penetration of Romanesque, Longobard architectural motifs. The inside is widely frescoed and has a crypt which is similar to that in *San Ponziano* (in a small space by the entrance there are human remains that were first kept in the ancient cemetery). *San Paolo inter vineas*, a typical Spoletine Romanesque church (10th

Church of *San Pietro*, the façade

century). Its main feature is the rose-window of the façade.

San Pietro extra Moenia, founded in 419 to house Peter's relics over an ancient necropolis. It was rebuilt starting in the 12th century (though the work dragged on until the 15th century), when a remarkable Romanesque façade was added: this has three doors with rose-windows, with a splendid relief decoration by local artists; with *San Rufino* in Assisi, it is the finest extant specimen of Umbrian Romanesque.

THE TERRITORY: ENVIRONMENTAL FEATURES

The territory of the Municipality of Spoleto is characterized by a flat central area, encompassed by the marly, arenaceous Monti Martani on the West and by a calcareous massif on the East, called *Montagna Spoletina*, that is part of the Central Apennines. The morphological diversity and the green of the territory determine an important landscape, considering that the woods

The church of *San Pietro*, basreliefs on the façade

represent 49% of the area and the secondary prairies are 7%, versus 40% of cultivated or cultivable surfaces and 3,4% of urban area. Six Areas in Umbria by the High Environmental Interest (Orsomando and others, 1998) four Zones of High Floristic-Vegetational Diversity, one Area of Peculiar Faunistic Interest (PUT), Six Sites of EU Interest (SIC)

and a Special Protection Area (ZPS) are all present in the territory of Spoleto (the "*lex luci Spoletina*" prohibited the cutting of trees in the Sacred Grove of Monteluco from the 3rd century BC, see above). Monteluco is certainly one of the environmental sites that connote the territory of Spoleto, being one of its exceptionalities, presenting very high

level peculiarities in terms of biotic and landscape components, that have qualified it as Nature 2000 Site (pSIC) IT5210064. Monteluco forms a "system" with downtown Spoleto, of which it represents a prosecution. The area was subject of important studies and interventions aiming at the "environmental rehabilitation", among which "LUCUS – Places of the Spirit",

“Recovery and Refunctionalization of *Giro dei Condotti* and of the Footpaths on Monteluco, with techniques of Environmental Engineering”.

THE TERRITORY OF THE LONGOBARD DUCHY OF SPOLETO: SOCIAL AND ECONOMIC FEATURES

After World War II, from the social and economic point of view, Spoleto tends to have another role, a new identity, starting a series of events to whom the prestige and development of the town are nowadays still strongly tied: *Teatro Lirico Sperimentale* was founded in 1947, *Centro Studi sull’Alto Medioevo* was inaugurated in 1952, while the first edition of the Festival of Two Worlds took place in 1958. Thanks to such events, the Town has conquered an international role in the world of art and culture, and the relevant activities have risen to prime columns of the local economy. Spoleto is nowadays one of the most important tourism centres of Umbria, of worldwide fame. Tourism, handicrafts, industry and agriculture, lately flanked by commerce and service industry, are the present solid basis of local economy. Handicrafts include fabric, embroidery, saddlery; agriculture, with the production of an excellent and well-known olive oil, continues an age-old tradition; the small and medium industry, with enterprises operating within the engineering, textile and graphic sectors, well supports the local economy.

The recovery and valorization of traditional activities linked to the identity of places gains more and more importance in the globalized world, where the quality of ancient productions, arts and crafts is projected into the future becoming a distinctive element of the territory and of its peculiarities. It is not by chance that the quality of the offer is more and

more important, both cultural and environmental or enogastronomic. Spoleto holds its cuisine and traditions in high consideration; it has a prestigious School for Hotel Services and Management and an important International School of Haute Cuisine, created and directed by Gianfranco Vissani; the territory of Spoleto has always been characterized by the typicalness of its productions, to the extent of becoming an enogastronomic pole of great importance for the protection and the valorization of its high-quality productions. Outstanding ones are: the Attorta (typical Christmas cake), and the Crescionda, which is typical of Carnival instead. While for the first one the technical file prepared by Regione Umbria for the identification of traditional food, speaks of Longobard times as its main ingredients are those of the strudel (see attachment 1), for the second the same file talks more generically of the Middle Ages, when the bitter-sweet contrast was preferred (see attachment 2).

5.4.1. SPOLETO RECOGNITION OF STAKEHOLDERS

La Basilica of S. Salvatore was acquired by the State at the end of the nineteenth century and today it is owned by the Municipality of Spoleto. The management of the Basilica of San Salvatore is entrusted to the Municipality of Spoleto, which ensures that the staff opens it every day and – by mutual consent with the Superintendence competent in the territory – provides maintenance interventions and the compatibility of uses and activities carried out (guided tours and didactic activities). Nevertheless a revision of the current management activities has been planned and the services inside the Basilica will be expanded thanks to the re-functionalisation of the former

monastery building and will probably be entrusted to the company that manages museum services in town.

The church is still consecrated and funeral services are conducted as are the ceremonies for 2 November, in remembrance of the dead, in the presence of civil and religious authorities.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage system, for institutional competences and partnership processes already underway. The main institutions and bodies, signatories for Spoleto of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site proposed for Unesco inscription (Umbria Region; Perugia Province; Comunità Montana dei Monti Martani e del Serano; Arcidiocesi di Spoleto-Norcia; CISAM-Centro Italiano di Studi sull’Alto Medioevo; Direzione Regionale per i beni culturali e paesaggistici dell’Umbria - Ministry of Cultural Heritage-, representing all relevant territorial offices: Soprintendenza per i beni architettonici e per il paesaggio e per il patrimonio storico artistico ed etnoantropologico dell’Umbria and Soprintendenza per i beni archeologici dell’Umbria).

View of the Clitunno Tempietto from the “Vecchio Molino”

5.5 CAMPELLO SUL CLITUNNO IDENTIFICATION OF REFERENCE AREA

THE BUFFER ZONE

The area identified as the “*buffer zone*” extends along the River Clitunno, from the boundary with the Municipality of Trevi to the Springs of the Clitunno. According to some historians, the name *Clitumnus*, passed on from Latin writers and from several tombstones, would indicate the Etruscan origin of the worship; other believe it is a corruption of the words *inclytus amnis* i.e. great river. In the Roman Republican and Imperial Age, historians and poets celebrated it for its charming beauty, for the poetry, grace and gaiety of its landscape, the freshness and purity of its waters. From the sixteenth century onwards, the river and the Temple of Clitunno became popular due to the large number of engravings, prints, drawings and paintings that celebrated them. The naturalistic fame of the river is mainly linked to its environmental characteristics, that come from the fact that it was in part formed by immediately running waters and

The famous Springs of Clitunno

Campello Alto, emotions

partly by waters that fill a depression in the land, stagnating. The Clitunno is rich in many aquatic plants; there are many trees along its banks and the sides of the springs the most common being the characteristic cypress poplar tree; however, the main part is given by the biological content, blue algae, diatoms, green algae that lend the water its particular iridescent colour.

The Clitunno water mass was used in the past to power two mills, one built by the municipality of Spoleto under the temple and the other by the community of Trevi. In spite of the technical problems to create a waterfall from the normal, quiet, slow flow, in order to activate the mill's mechanisms, the "Vecchio Molino", situated immediately below the Temple of Clitunno, was already completed in 1441, according to the date engraved on the stone architrave over the large entrance door. The water inlet system is made up of two channels from the almost parallel river, a main channel or adductor and a secondary channel or service and outlet channel that brought about an "overall modification" of the environmental and geomorphologic set up of the entire river system that goes from the springs to the temple of Clitunno. The "Vecchio Molino" was home to mills for grinding wheat and extracting oil. The building underwent various interventions to expand it and modernise it, so that it now appears to be a large, complex construction. The mill building and its adjacent buildings, recently underwent restoration with the aim of making it usable for accommodation purposes and still has a large part of the original architectural structures, and some mechanisms and cogs from the ancient mills. The original building is a large rectangular room, diagonal to the river, covered by a single, wonderful barrel vault, which is entered by a large door, finely sculpted at the top of the fanlight which opens in the east wall in the room underneath the

temple square. The bas-relief carries the stems of the municipality of Spoleto and the governor of the era *Amorotto Condulmer*, an advocate of the construction of the mill as can be read on the inscription underneath the two stems.

Along the river, near the Temple, there are two buildings registered by the Municipality of Campello as places of historical, architectural and cultural interest, that are valuable and for which protection and safeguarding are to be considered as a reason for quality and promotion of the territory's identity. They are a water pumping plant and an electricity sub-station that represent interesting examples of industrial archaeology and which, in the enhancement project for the entire area from the Springs of Clitunno to the buffer zone (see item 19.5 Improvement plan), are destined to become permanent exhibition centres of the territorial system named Eco-Museum.

A stretch of the ancient Via Flaminia also lies within the buffer zone, which borders the area pertaining to the Temple, along which there were several temples and chapels, villas and public buildings, part of the famous "*Mutatio Sacraria*", which was once an important stop-off point along the route of the Roman Consular road.

The entire context of the *buffer zone* coincides with one of the 4 Sites of Community Interest (SCI) that, within the Project BioItaly, has been identified in the territory of the Municipality of Campello, which is characterized by the River Clitunno and the Water Garden of the Springs and has unique characteristics and high value thanks to the flora and fauna present.

Within the buffer zone are the well-known Springs of the Clitunno. The Giardino Storico d'acqua (Historical Water Garden) is a version of the natural English-style garden, with its romantic atmosphere, so popular in Europe at

View of olive trees' land

the beginning of the 19th century. The Springs of the Clitunno, before merging into the river of the same name, enlarge in a flat expanse surrounded by grassy banks, high poplars and weeping willows. There is a lovely small lake formed by the famous spring waters. In ancient times the waters of the river and lake were much more abundant, indeed the Roman emperor Caligola sailed up the river by his boat many times. The same waters were sacred for the Romans who built temples, villas and baths along the river, in honour of Clitunno, God of the Harvest.

CAMPELLO SUL CLITUNNO

DESCRIPTION OF THE TERRITORY

In addition to the heritage of the site and the buffer zone, the territory of Campello appears to be especially rich in architectural sites that mix with the other natural, agricultural-food, productive/craftwork and socio-economic aspects and potential of the region.

HISTORICAL AND CULTURAL FEATURES

On the slope of the hill above the Tempietto and the Springs of the Clitunno stands the Castle of Pissignano, 11th century. The perimeter of its walls is still undamaged and is alternated by polygonal towers and by two gate-towers, which

provided access to the village and the fortified donjon.

The ancient pavements made of river pebbles and bricks, the houses leant one against the other and the ancient municipal small palace of the 15th century are really characteristic. The castle has a triangular shape, a typical shape of the hillside castle, having the top up the hill and the towers at the corners and on the two sloping sides in an intermediate position. The top tower is very high and slim; however, the most important defence functions were surely concentrated in the intermediate pentagonal tower, utilized since ancient times as a bell tower and apse of the church of S. Benedict. The houses are

arranged in sloping terraces and, partially, still have medieval features. From the castle of Pissignano, along a path through the olive trees, it is possible to reach the Franciscan Hermitage that dominates the hill of St. Benedict, a real haven of peace and tranquillity through the woods. Inside the enclosure, on a rock, stand the remains of an impressive Sillian tower and the small church with a small 15th century cloister.

The hermitage, named after St. Anthony the Abbott, is dated back to the year one thousand. The first sure information dates back to the Fourteenth century. By 1370 it was inhabited by Franciscan Friars and it seems that San Francesco visited it.

Surely, St. Bernardino of Siena lived there and from there evangelized the Umbra Valley. The tradition tells that already in the 5th century the cave where the hermitage stands received hermits coming from Syria and Egypt like the other caves of the area.

At present it receives visitors and pilgrims and offers listening service, human and sympathetic welcome to whom asks for support or advice and particularly wants to be helped in a path of reconciliation and research of the peace with him/herself and the others.

Just one hundred metres from the Springs of Clitunno, along the Via Flaminia, there are the ruins of the

Romanesque church of *Santi Cipriano e Giustina*, built in the 11th-12th centuries in honour of the Bishop Cipriano. It belonged to Benedictine monks and was the parish church for several villages spread in the foothills of Campello. The perimeter walls and the apse wall of the old church can still be seen. The single nave church was completely covered with Giotto-style frescoes from the 14th-15th centuries, of which only faint traces can now be seen. The church ruins, covered for decades by thick vegetation and almost all underground, were brought to light and restored by the Mountain Communities of the Monti Martani e del Serano in 1995. The architectural

restoration of the apse was supervised by the Superintendence for environmental, architectural, artistic and historical heritage of Umbria.

Near the Church of S.S. Cipriano e Giustina, there is also a small church, the church of *San Sebastiano*, which was built in the early 16th century with the money of the local community as a “ex voto” for the ceasing of a plague epidemic. Inside it was entirely covered with religious paintings showing Saint Sebastian, traditionally called upon, together with Saint Rocco, against plagues. “La Madonna con il Bambino in gloria e i SS. Sebastiano e Rocco” on the back wall is one of the last works by Giovanni di Pietro, known as lo Spagna, who in 1528, helped by his son-in-law Jacopo Siculo, left the delicate new fresco on the wall, in a style that, while less sophisticated, reminds one of Raffaello’s style, who was a companion of his at the school of the Perugino. The

church façade dates back to the late 18th century, similar in form to Valadier’s style, who worked in this area in the same period.

The town of Campello su Clitunno, now the Municipal centre, was built around the Sanctuary called *Santuario della Madonna della Bianca*, built in the 16th century. The church, which still has the important door built by Maestro Cione da Como; the interior, designed by Valadier, is decorated with seventeenth century canvases and Renaissance frescoes by Angelucci and Spagna.

There are also interesting centres along the mountain ridge, including the villages of Acera and Spina, charming medieval villages that are hidden by the surrounding woodland.

The Castle known as *Castello di Campello Alto* is an especially interesting and charming site. On top of a hill full of olive trees, it still has its powerful defence walls, the large entrance gate,

the Romanesque Church of San Donato and the 16th century Municipal Palace.

The *Barnabiti Monastery*, is close to the castle. Inside there are several medieval and Renaissance artistic finds, such as two Giotto-style frescoes and a Madonna by lo Spagna.

In the area of Lenano, located on the road from Spoleto to Castello di Campello, one finds a church dedicated to *San Lorenzo*, a rural chapel from the Romanesque period. The oldest layer of frescoes on the back wall, only visible through the missing fourteenth century plaster, can be dated back to the second half of the 12th century, while the latest one, now preserved, dates back to the 14th century.

NATURALISTIC FEATURES

Located in the central-eastern part of Umbria, the Municipality of Campello sul Clitunno mostly occupies an irregular jagged area on the western side of the Umbria-Marche Apennines and a limited band of flat land at the foot of the mountain, a small part of the vast Spoletina Valley or Plains. The municipal area has a small flat area and a large hilly and mountainous area. The various morphological aspects of the land provide various landscapes: from the flat plains with the Marroggia river and the exceptional presence of the Springs of Clitunno; the low hills with their medieval castles and Franciscan hermitages, that are distinguished by the olive groves on the terraces built in dry stone walls so typical of Campello; as far as the mountain region, where woodland and pasture land dominates the scenery (woodland areas cover 80% of the municipal territory). The morphological variability and the vegetation covering the area make it an important natural landscape where the built-up areas are limited and mainly constituted by ancient buildings. The wealth of the landscape is underlined by

Interior of the church of Santa Maria della Bianca

the thick network of pedestrian paths, donkey-tracks and lanes that thread through the entire area, allowing even the wildest and characteristic sites to be used in a particular manner.

SOCIO-ECONOMIC FEATURES

One of the most typical aspects of mountainous areas is those types of collective use of the land: the Commonality (a well-known one is in Pettino) and the so-called “civic use” (pasturing, wood collection etc) that the population can carry out on the municipal assets. In recent times, the “rediscovery of the mountain” opened up new possibilities for development. Growing olive trees, in particular, has taken over land from the woods over the centuries, rising to the slopes of the mountains and extending its dominion up to where climate allows it to, with patient, hard work to adapt and model the soil to this

use. The small winding terraces that form small circular or semi-circular area (lunettes) are typical of this area, that host a single tree, made with dry stone support walls.

5.5.1 CAMPELLO SUL CLITUNNO RECOGNITION OF STAKEHOLDERS

The Clitunno Tempietto is owned by the State.

The Clitunno Tempietto is directly managed by the State, through the Umbria Superintendency for Architectonic Heritage and Landscape Assets and for the Historical, Artistic and Ethno-Anthropologic heritage, which guarantees, along with the conservation and protection of the property, also its opening to the general public.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage

system, for institutional competences and partnership processes already underway. The main institutions and bodies, signatories for Campello sul Clitunno of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site proposed for Unesco inscription (Umbria Regional Authority; Perugia Province; Municipality of Campello sul Clitunno; Comunità Montana dei Monti Martani and del Serano; CISAM-Centro Italiano di Studi sull'Alto Medioevo; Umbria Regional Directorate for Cultural Heritage and Landscape Assets -- representing all relevant territorial offices: Umbria Superintendency for Architectonic Heritage and Landscape Assets and for the Historical, Artistic and Ethno-Anthropologic Heritage and Umbria Superintendency for Archaeological Heritage).

The Tempietto and the water-mills in the 18th century

5.6 BENEVENTO IDENTIFICATION OF REFERENCE AREA

The southern Duchy of Benevento was created only a few years after 568, date of the Lombards' arrival in Italy. In a short time the new rulers occupied a large area, previously governed by the Byzantines, corresponding to most of the southern part of the Italian peninsula from Molise to Lucania, much of Apulia and the south of Calabria. The city of Benevento was chosen as capital of the Duchy because of its geographic position an obligatory point of passage on the routes connecting the Tyrrhenian and Adriatic seas, "hinge of the two seas" and the importance of its structures.

Reorganisation of the territory of Langobardia Minor, which, after years of war and devastation, had seen cities abandoned, dioceses suppressed, depopulation of entire territories taken over by swamps and wilderness, came to a turning point with the conversion of the Lombards to Catholicism. The close alliance between the Benevento episcopate and leaders of power in the duchy brought about the founding of monasteries in strategic locations for religious conquest and reorganisation of the surrounding territory. These monasteries became the fulcrum of gradual repopulation and socio-economic growth. Examples of this were Montecassino and San Vincenzo al Volturno, founded at the time of Romualdo II (706-731) by three noble Lombards, the brothers Tato, Taso e Paldo as narrated by Paul the Deacon in his *Historia Langobardorum* (VI, 40).

THE BUFFER ZONE

The Lombard town occupied a smaller area than the Roman city of *Beneventum* thus causing the previously inhabited areas to the east and north of the present historical centre to be abandoned. The city was surrounded by a wall, large tracts of which were probably pre-existing but which, given the destruction suffered during the Greek-Gothic wars, was rebuilt and strengthened. In the 8th Century, Arechis II was responsible for much new building in the city. He was aware of the importance of the Duchy of Benevento following the collapse of the Lombard kingdoms in the north of Italy and promoted the construction of many monumental works to enhance the capital of the Duchy. Among the first constructions sponsored by Arechis II is the Church of Saint Sophia, one of the most important religious monuments of

Lombard civilisation which, together with its Cloister, constitute the candidate Site. It is included in the route of the first Lombard city wall which more or less coincides with the limits of the proposed Buffer Zone.

The Walls

At the end of the 6th Century, at the time when the Benevento Duchy was being constituted, the Lombards rebuilt the Roman wall to include the hill to the east where the ducal seat, or court, was constructed, the "*Piano di Corte*". This first defensive work, aimed at rectifying the destruction wreaked by Totila during the Greek-Gothic war, excluded the south-western part of the Roman city. It is a work of fortification carried out with emergency materials and techniques, with no regular wall device and extensive

The ancient city Walls

The Rocca dei Rettori

use of looted Roman marble. The fortification had numerous doorways of which Porta Somma, included in the *Rocca dei Rettori* (Fort of the Rectors), is an example, together with the Arch of Trajan, which was incorporated in the wall and took the name of Porta Aurea. A second Roman arch, the Sacrament Arch, was incorporated in the city wall in the 6th Century. This arch was erected in the 2nd Century A.D. along the road which leads from the lower part of the city to the area of the Forum. The arch, currently undergoing restoration, was flanked by two pentagonal towers of which only one remains.

Under the government of Arechis II (758-787) the new quarter which developed in the southern part of the city towards the Via Appia, the so-called *civitas nova*, determined expansion of the wall towards the south, and built with more regular and precise techniques.

Rocca dei Rettori or *Fort of the Rectors*
A short distance from the Church of St. Sophia to the south-east is the *Rocca dei Rettori*, built in 1321 as the seat of the papal Rectors. The imposing building, which re-uses a large number of exquisitely fashioned Roman sculptures and architectural elements, was founded on a fortress dating back to Lombard times. Recent excavations have unearthed some parts of the fort

and part of a polygon-shaped tower that can be seen in the garden. The settlement stratification in this area goes back at least to the orientalisising and archaic era (burial sites dating to between the end of the 8th and the 6th Centuries B.C.), with important evidence of the Sannite period (fortification works with earth mounds and walls in calcareous blocks) and the Roman period (aqueduct from the time of Augustus).

Church of San Salvatore

A little more to the west, behind the

Palace of the Prefect, is the Church of San Salvatore, built in the High Middle Ages and identified by several scholars as the Palatine Chapel of the court of the Lombard duchy. Recent excavations carried out during restructuring works have allowed construction of the building to be dated at the 8th Century and to unearth several burial sites from the Lombard period. Among these is a tomb with frescoed walls belonging to the presbyter Auderisius as seen from the inscription painted on one of the long sides of the tomb. Apart from a small

Church of San Salvatore

bone cross, two gold and silver threaded tassels were found inside the tomb, the only remains of the precious garments worn by the deceased. The importance of this burial place lies above all in its pictoric decoration comprising, besides the inscription, two red, white and yellow crosses that reveal the status of the deceased person. There are very few painted tombs from the Lombard period. One of the most famous is that of the Abbess Aripurga at Pavia in the church of the ex-monastery of San Felice.

Church of San Marco dei Sabariani

A short distance from the Arch of Trajan in a south-east direction, in Piazzetta Sabariani the crypt of the ancient Church of San Marco dei Sabariani was recently brought to light. This church was destroyed by an earthquake in 1688 and then rebuilt elsewhere. The find is of great interest in light of the paintings that decorate the crypt dating back to the Middle Ages, and perhaps even to the Lombard period. An examination of the paintings has recently been started and, for the time being, it is possible to state

only that the scenes depict the lives of the saints or, in any case, scenes from the Holy Scriptures. The interest in this discovery has induced the Municipal Authorities, in agreement with the Superintendencies, to prepare a restoration project that will leave the building uncovered and open to the public.

Cathedral

The Cathedral, destroyed during bombing in 1943, has preserved its splendid façade and bell tower from the Romanic period, and the famous bronze door decorated with carved panels. The building is currently undergoing archaeological investigations resulting in much interesting information covering a

vast chronological period from prehistoric times to the present. From the Lombard period, part of a building has been discovered with three naves and a semicircular apse, perhaps part of the church that was extended between 825 and 829 by the Lombard prince Sicone. In the crypt of the cathedral there are frescoes from the High Middle Ages one of which depicts the Benevento bishop, Saint Barbato. Archaeological investigations have recently recommenced in the area of the ancient basilica of Saint Bartholomew in Piazza Orsini, immediately to the east of the Cathedral. The project currently in progress foresees entry to the adjacent Diocesan Museum, then to the Cathedral Crypt, through the Church of Saint

An old image of the Cathedral and the Cathedral today

Leproso Bridge

Bartholomew decorated with frescoes and containing the remains of a beautiful floor in cosmatesco style.

The setting-up of a large historical-archaeological-monumental complex open to the public between Piazza Orsini, Via Carlo Torre and Vicolo San Gaetano, including an underground route to the Cathedral where the archaeological structures emerging from the excavations will be visible, will certainly represent a major attraction in Benevento in the immediate future.

Church of Sant'Ilario at Porta Aurea

The Church of Sant'Ilario at *Porta Aurea* constitutes a significant example of Longobard religious architecture and is situated in an area immediately outside the so-called Longobard walls, opposite the Triumphal Arch of Emperor Trajan. The church has been the object of systematic investigations, conservation and enhancement work. A series of stucco fragments belonging to the church decoration are being studied in view of their possible re-placing in the building.

In recent years highly profitable work has been carried out regarding knowledge of the Longobards, relating to the legacy they have left in the

Sant'Ilario Church

Benevento area in the field of architecture, urban development, painting, sculpture and even in the field of jewellery, in spite of the fact that in this sector studies have merely re-considered objects casually found between the end of the 19th and the beginning of the 20th century.

The Town

The urban formation in the Lombard period to a large extent preserved the layout of the roman city with two main decumans oriented an E-W direction, more or less identifiable with the axis of Corso Dante/Corso Garibaldi which centrally cuts the entire historic centre in an E-W direction, and the route of Via S. Filippo/Via Annunziata to the south. The main poles of political and religious power were within the city walls. First of all, the seat of the dukes, located since the 6th Century in the present-day Piazza Piano di Corte which was extended and renovated by Arechis II to whom tradition

attributes the construction of the *sacrum palatium*. According to another theory, the palace was erected in the area of the *Rocca dei Rettori*, near the church of San Salvatore, identifiable with the Palatine Chapel. Strolling through the lanes and squares of the historic centre you can easily come across inscriptions, funeral sculptures, Roman architecture incorporated in the façades of houses or inside courtyards, or in other constructions such as the little bridges or arches connecting facing buildings. The so-called arch of San Gennaro and the bridges of Via Francesco Pacca, one of which in *opus caementicium* with a lining of bricks and support arches in tuff blocks alternated with bricks, best testifies to the transmittal of Roman building techniques. The bridges were built to connect houses, *fabricae solaratae*, on different sides of the same street. They were, however, built with authorisation from the sovereign powers and under the obligation to preserve the public nature of the street.

Re-use of ancient buildings and monuments during the Lombard period is well documented; the Roman theatre was intensely used as a dwelling place from late ancient times onwards.

There must also have been areas for craftsmen within the town, given the numerous activities described in literary documents (coppersmiths, cobblers, carpenters, joiners, stone cutters, goldsmiths) and the presence of mills along the banks of the river Sabato. Recent excavations near the Museum of Sannio have unearthed a plant for crafting glass, operative between the end of the 6th and the beginning of the 7th Century. We must also remember the important illuminated manuscripts produced in the *scriptoria* of the monasteries, particularly at St. Sophia.

Burial Places

Single tombs and groups of tombs found both inside and outside the town, such as that found in Pezzapiana to the north of the present-day historical centre, or those found in the area of the Museum of Sannio and the *Rocca dei Rettori*, can be traced back to the Lombard period. Numerous prestigious items such as gold jewellery and armour have been found testifying to the high status of the deceased. A gold seal ring bearing the initials *AVTO* has recently been found and which must surely have belonged to an important member of the ducal court. It is the only example in the south of Italy of a type of object found in northern Langobardia. It is also worth remembering that a second gold seal ring currently preserved at the Ashmolean Museum of Oxford, was found at Benevento. Many illustrious members of the Lombard community were also buried in the Cathedral of Santa Maria, as may be seen from the inscriptions on the Romanic façade relative to the Bishop David and an unknown gentlewoman and those recovered after the bombings

Manuscript in 'Beneventana Script' from a Benevento monastery (Benevento, Record Office)

Santa Sofia façade

of 1943, belonging to Prince Sicone, Radelchi and his wife Caretruda. The inscription commemorating Chisa, the Duke of Sicone's nephew, dating back to the middle of the 9th Century is preserved at the Museum of Sannio. The high level reached by the Lombard community of Benevento is also seen by the painted tomb of the presbyter Auderisius, found in the Church of San Salvatore, representing one of the few examples of frescoed burial places in southern Longobardia.

Apart from those found in the centre of the town, during the Lombard period other religious buildings were located outside the city along important routes of communication. Examples of this are the monastery of St. Sophia at Ponticello and the Church of St. Hilary at Port'Aurea, situated immediately outside the city along the Via Traiana in front of the Arch of the same name. The *ecclesia vocabulo Sancti Ylari* is an important example of Lombard architecture. The building comprises an apsidal hall founded between the end of the 7th and the first half of the 8th Century on imposing Roman structures. It must have been richly decorated originally as can be seen from the finely crafted stuccoes recovered during the excavation works. These works also unearthed buildings and burial places belonging to the medieval monastery, referred to in documents starting from 1148, that developed outside the Church. The remains are visible within the monumental complex of St. Hilary, which opened to the public in 2005. It is currently home to the "Museum of the Arch" where the stories and episodes depicted on the Arch of Trajan are narrated, thanks to a multimedia installation using simple, suggestive language.

Notwithstanding the heavy bombing that devastated it during the Second World War, the city of Benevento still

has many important monuments testifying to its long history, apart from evidence from the Lombard period.

The Arch of Trajan is one of the most significant examples of Roman artistic culture. It was built in 114 A.D. to celebrate the inauguration of the Via Traiana, an alternative route, constructed by Trajan, to link Rome and Brindisi and faster than the old Via Appia. This road, defined by ancient historians as the “*regina viarum*”, the “noblest of roads”, has profoundly affected the history of his area highlighting its strategic role and the central position of Benevento. It has also left important traces in the area and the city itself, such as the Ponte Leproso, which with its arches still

crosses the waters of the River Sabato. Over the centuries travellers, merchants, armies and pilgrims have journeyed along the Appia: under the Lombards, it was the main route from Benevento to the shrine of St. Michael at Mount Gargano and, for this reason, was known as the *via Sacra Langobardorum*.

HISTORICAL AND CULTURAL FEATURES

The building of monasteries and abbeys was particularly important in the Lombard territory of Benevento. During the Lombardic principality in the 8th century, the Abbey of St Anastasia was built at the side of the ancient Via Latina. In 1964 this splendid abbatial church was declared a national monument. It was built on the

remains of a Roman villa and ancient settlements from the Neolithic and iron ages. The Church is referred to in a document dated in 980, by means of which Lombard Prince Pandolfo Capodiferro donated it to Giovanni the abbey of the Monastery of Sts Lupolo and Zosimo in Benevento.

Architectural investigations carried out in 1983 confirmed the Lombard origins of the complex, which can be dated to the 7th and 8th century. The building, characterised by significant architectural decoration that is partly sculpted and in stucco, recovered during the excavations, and the currently has a plan with a single nave and apse. Inside three burial sites were found dating back to the 8th century, one of which is decorated with a relief that is particular due to the inclusion of iron arms, an iron cross, bronze fibula, and a series of silver studs with traces of gilding that belonged to a leather belt. A small sepulchre annexed to the Abbey, with simply pit tombs and a casing with a limestone lid, was partly explored outside the Church.

In the nearby territory of the Municipality of S. Salvatore Telesino one finds the remains of Telesia, an ancient Samnitic settlement, which was then Roman and later Castaldo Lombardic, and was destroyed by the Saracens in the 9th century. Dating back to the Lombard period in the territory of S. Salvatore was the foundation of the Abbey of S. Salvatore, the origins of which date back to a few years before 1000 A.D., a real farm, and seat of expansion and political reinforcement in the territory. It was in the Abbey of S. Salvatore that Carmen was written, probably between 1142 and 1154. In valle Caudina there is a significant testimony to the Lombard period in the form of the city walls of Arpaia, dating back to the 8th century, of which some stretches with towers are still to be found today.

Although they do not fall within the province of Benevento, it is worth

The Arch of Trajan

remembering the great monasteries of the Duchy - S. Vincenzo of Volturno and Montecassino, dating back to the period following the conversion of the Lombards from Aryanism to Catholicism - great centres of conversion and the development of culture.

From its founding the Duchy of Benevento remained separate from the rest of Lombard Italy due to the fact that it included possessions of the Papal Pontiffs in the centre of the peninsula. For this reason the Duchy was independent of the realm and formally subject to the dominion of the pontiffs. In this autonomous setting the form of writing known as Beneventana was developed, which was used to write Latin and a different type of liturgical

chant, the Beneventano chant, which withstood the spread of the Gregorian chants up to the 11th century. Examples of both the chants and the writing are kept in library at Benevento's Diocesan Museum and the Benevento State Archives.

The change from Duchy to Principality came about under Arechi II. A writer referred to Benevento as Ticinum Geminum (Ticino's twin). In fact, it was considered a second Pavia.

NATURALISTIC FEATURES

The territory of the province of Benevento, whose natural borders coincide almost exactly with the natural boundaries of the mountain chains of Partenio, Matese and

the Fortore area reaching more than 1,000 metres above sea level, has wonderful environmental and naturalistic qualities. The landscape is extremely varied with steeply sloping hills and valleys scored by rivers and small streams. Dotted over the hills and mountains there are shepherds' huts and enclosures built in dry-stone and blending perfectly with the natural surroundings. There is also a historically important network of paths.

High up in the mountains there are interesting grottoes, gullies and cliffs hidden among woods of oak and beech trees. The hills are covered with oak, chestnut, elm, elderberry and hawthorn and there is a rich undergrowth of mushrooms and wild asparagus. The largely uncontaminated natural habitat is

home to a remarkable number of animal species. Peregrine falcons, buzzards, Mediterranean falcons, red kites and many migratory species can be seen in the mountains.

The reference territory has a very evolved hydrographical system with the rivers Volturno, Calore, Sabato and their relative tributaries, and can be considered a single geographical-political entity comprising various common factors of a cultural and historical-economic nature.

A precious element in the cultural heritage of the Benevento area is the richness of its wine and gastronomic production. The province is particularly famous for its numerous, high-quality DOC wines. The names of the most important wines are Taburno, Aglianico del Taburno, Guardiolo, Solopaca, Sannio, Sant'Agata. Among the other distinctive produce of the area, two varieties of oil (certification in progress), "Sannio Caudino Telesino" and "le Colline Beneventane" are worth noting together with a range of cheeses and cold meats, fruits and vegetables, honey and "taralli" (small dry bagels), and not forgetting the "torrone", the typical sweet nougat speciality.

5.6.1 BENEVENTO RECOGNITION OF STAKEHOLDERS

The complex which applies for the inscription in the WHL is composed by three architectural properties:

- Church of Santa Sofia owned by the state (FEC Italian fund for places of worship);
- the adjacent cloister and the abbey which today hosts the Museum of Sannio which belongs to the Province of Benevento.

The Church of Santa Sofia is currently managed by the Curia of Benevento and is used for worship purposes and as a parish. Yet, visitors and routine maintenance are managed by the

Province of Benevento. The Province intends to cooperate to the management of the church in order to allow with the help of its own staff all-day opening and free entry (see Management Plan).

As far as the Cloister is concerned, included in the Museum of Sannio, the current management guidelines are determined by the Province (Department for Services to Citizens) and are implemented following to the approval by the Provincial Council, with the supervision of state and regional bodies. The *Museo del Sannio*, through the Cultural Institutions Service, directly deals with the conservation of architectural artefacts and properties, the purchase of artefacts, the protection and restoration of the archaeological, artistic and historical heritage which belongs to the Province; it also promotes scientific, historical and artistic research and ensures, by cooperating with competent state and regional bodies, the protection of the city's cultural heritage.

Art Sannio Campania s.p.a (a partially state-owned Agency of the Province) will be assigned Additional Services of the Museum, namely, economic survey services, marketing, tourism and cultural promotion. With an appropriate service contract this Company will therefore manage the following services at the Museum:

- customer service in the museum;
- publishing services, sale of reproductions, creation of catalogues and souvenirs;
- bookshop and cloakroom services;
- promotional services;
- catering services;
- welcome and guide services;
- didactic services;
- information services;
- ticket services;

The contract will envisage, among other things that the company *Art Sannio Campania* also organizes:

- promotional, communication and marketing activities aimed at increasing

the number of visitors to city museums, and the creation and management of a Museum Customer Service Centre and Combined Ticket;

- special artistic exhibitions, also in cooperation with other public and private bodies;
- special cultural events linked to particular aspects of the heritage or recovery, restoration or purchase operations.

The Provincial Library and the Provincial Museum Network under way also belong to the Cultural Institutions Service of the Province. The Rocca dei Rettori Pontifici and the Longobard Church Sant'Ilario in Port'Aurea are considered within the competence of the *Museo del Sannio*.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage system, for institutional competences and partnership processes already underway.

The main institutions and bodies, signatories for Benevento of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site proposed for Unesco inscription (Campania Region; Municipality of Benevento; Direzione Regionale per i beni culturali e paesaggistici della Campania Ministry of Cultural Heritage representing all relevant territorial offices: Soprintendenza per i beni archeologici per le province di Salerno, Avellino e Benevento Soprintendenza per i beni architettonici, il paesaggio e per il patrimonio storico artistico e etnoantropologico per le province di Caserta e Benevento).

Aerial view of Monte Sant'Angelo with castle

5.7 MONTE SANT'ANGELO IDENTIFICATION OF REFERENCE AREA

The origins of Monte Sant'Angelo are closely linked to the worship of Saint Michael, which took on a precise nature and type in this very Gargano headland and then spread during the middle Ages to other European countries. The Longobards were responsible for the development and growth of the worship of the Archangel. The names of the Queen Ansa, of Romualdo II, of Gisulfo II which are found on the walls of the sanctuary, are proof of a privileged relationship between the Longobards and Saint Michael. The same story of the apparitions of Saint Michael is linked to the chain of events relating to their arrival. The Longobards were the most faithful and enthusiastic followers of Saint Michael and spread his worship throughout Europe. An almost compulsory destination along the itinerary of the *Via Langobardorum* which took pilgrims to the Holy Land from central and northern Europe, the Gargano grotto was, during the Middle Ages, a true sanctuary model. The fact that several places of worship dedicated to Michael were built to imitate the Gargano sanctuary and were presented as filiations is proof of this fact : if we think of the famous sanctuary of Mont Saint-Michel in Normandy or the charming "Sacra" of San Michele in Val di Susa.

THE BUFFER ZONE

Inside the boundaries of the proposed Buffer Zone, a short distance from the sanctuary, there is the second religious centre made up of the three buildings of San Pietro, Santa Maria Maggiore and the baptistry of San Giovanni, and the architectural site of the castle.

Today, only the apse and some traces of structures that emerge from the

Monumental complex of San Pietro, Santa Maria Maggiore and of the Baptistry of San Giovanni

modern-day floor of the area lying in front of the church are visible of San Pietro, which probably refer to the high middle ages building. This was stated for the first time in *Liber de apparitione sancti Michaelis in monte Gargano*, written in the later 8th century, according to which the Bishop of Siponto, commonly identified with Lorenzo, had a church built for the blessed Pietro. From the *Vita* of Lorenzo, in two editions the *Vita minor* written at the beginning of the 11th century and the *maior* by the end of the same century we know that, in this space of time, the buildings had become three: one on honour of the Holy Virgin (the modern day Santa Maria), the second for San Giovanni Battista, the third for San Pietro.

Recent studies have hypothesised that the oldest building, mentioned in the *Liber de apparitione*, may have stood on the site where San Giovanni now stands. In the high Middle Ages, dedication to San Pietro would then have been transferred to the building built ex novo to the west and the old church was dedicated to San Giovanni Battista, becoming the baptismal building of the new religious centre.

The semi-circular apse, enriched by a series of high, narrow niches is still standing from the High Middle Age building with an aisle and two naves divided by columns. At the sides there are capitals with a double row of thick leaves moved by the wind, bordered

top and bottom by a frieze of various sizes with twisted wicker ribbons.

In the Lapidario Museum housed in the *Longa Porticus* of the sanctuary of San Michele it is possible to see a large range of late antique, High Middle Age and Medieval sculptures belonging to the church.

Around the church of San Pietro, that was probably renovated between the 11th and 12th centuries, there was a monumental site containing two buildings, the baptistery of San Giovanni in Tumba and the church of Santa Maria Maggiore, linked to each other by a corridor. The baptistery, known as the "tomba di Rotari" due to the incorrect interpretation of the term *tumba*, which appears in an epigraph inside the building partly in the rock and partly in

Baptistry of San Giovanni in Tumba: map, section and interior

the apse of San Pietro, probably belonged to the latter church. The construction is formed by a cubic apse to the east, with walls framed by strong concentric lancet arches on which a series of pointed geometric shapes are set: an octagonal prisma, two ellipsoid cylinders and a dome with concentric rings. The bas-relief work over the entrance, depicting the capture of Jesus, the deposition, the Marias at the burial site and ascension, is precious work.

To the right of the entrance to San Pietro, through an atrium, one enters the church of Santa Maria Maggiore, which is one of the most important Romanesque buildings in Puglia. It is probably a Paleo-Christian church, rebuilt in the 11th century and again in the 12th century. The church has a narrow hall with an aisle and two naves, developed on three bays standing on cross-shaped pillars that support the raised arches. The current building is covered by a lunetted barrel and cross vault, probably the result of eighteenth century work, while the original is a hemispheric dome on the third bay of the central aisle. Some people believe it to be the cathedral of Monte Sant'Angelo, and the building is traditionally attributed the patronage of the Bishop Leone, and his desire to transfer the distant echo of the Siponta cathedral (at least with regards to the original structure of the façade, that is echoed in the current one) to the Archangel's mountain. The original foundations stand on rocky sloping land, previously the cemetery area for the church of San Pietro. Traces of work from the 11th century could be seen in the apse and in the pilasters inside the façade. During renovation work, which began in 1198 the floor, was lowered to emphasise the size of the support pillars and at the same time, the hall was extended downhill, up to the limit allowed by the apse of

the San Pietro. When work was completed, the new façade was created, which presumably preserved the layout of the original one five blind arches on pilasters, with precious lozenges between them and the base decorated with floral patterns enriching the door with the overhanging prothyrum supported by griffins.

The castle is also situated near to the sanctuary, which dominates the town and the sanctuary. Its original centre is documented by the Longobard period. The oldest part is commonly identified as the so-called Torre dei Giganti (Giants' Tower), with an irregular pentagonal shape, that was incorporated into trapezoid walls with corner towers during the Norman period. Other work was carried out in the Frederick age and then by the Anjevins and Aragons, mainly in relation to the Turkish threat along the Italian coasts, culminating in the siege of Otranto in 1480. Some ashlar with

interesting graffiti referring to Slavic pilgrims can be seen in the chapel of an unknown era, which is accessed from the archway of a door.

The inhabited town

Monte Sant'Angelo is the highest centre on the Gargano headland, which develops along the mountainous ridge from where it is possible to admire a splendid panorama as far as the sea. The history of the town is connected to that of the sanctuary and grew in importance due to the pilgrimages linked to the worship of the Archangel Michael. The town, a typical ridge settlement, is arranged in terraces along the hilltop; the quarter of Junno, built by a thick network of two-floor houses with sloping façades, doors and one single window, usually with a balcony is rather unusual to see. There are several streets that have been transformed into wide staircases, made of large roughly hewn stones.

Santa Maria Maggiore, portal's detail

MONTE SANT'ANGELO DESCRIPTION OF THE TERRITORY

The territory surrounding the town of Monte Sant'Angelo appears to be full of artistic-architectural features that integrate with the other landscape-natural, demographic and socio-environmental aspects.

The "*Via Sacra Langobardorum*" is proof of the presence of the Longobards in the Gargano and their policy of spreading the worship of Saint Michael. The Via Sacra of the Longobards was an important traffic route, but above all it was the route that brought pilgrims from the northern plateau and, through the Valley of Stignano, led to San Marco in Lamis, San Giovanni Rotondo and Monte Sant'Angelo. The Longobard presence in the area surrounding Monte Sant'Angelo is rather evident; it is also possible to find traces of pilgrims from Ireland, Northern Europe, bearing

witness to the diffusion of the worship of Saint Michael. Therefore the *Via Sacra Langobardorum* was found to be a crowded crossroads for pilgrims, but also for warriors during the Crusades as the geographic position of the Gargano made journeys to the Holy Land easier. Several monasteries, churches and refuges for pilgrims were built along the Holy Route equipped with wells that often lay over more ancient structures: Santa Maria in Stignano, San Giovanni de Lama, Sant'Egidio, San Nicola al Pantano, San Lorenzo di Siponto. Once the Fratta Valley was passed, the road continued near to a late-antique or high middle ages settlement in the Cassana area, and then led to the abbey of Santa Maria in Pulsano and to Monte Sant'Angelo. The pilgrims could then continue to the plateau and visit the church of Santa Maria in Siponto, the abbey of San Leonardo in Siponto, the cathedral of Santa Maria Icona Vetere in

Foggia and the sanctuary of the Incoronata in Foggia.

The abbey of Santa Maria di Pulsano in Pulsano is a few kilometres from the town of Monte Sant'Angelo, to the southwest, on a large plain that looks over the sheer valley towards Siponto. A road partly on the flatland and partly in the mountains led to this centre that, in the past, also led to the basilica of San Michele. According to tradition, towards the end of the 6th century, the community of the Equizi built a monastery in the same place, which was then passed to the Cluniacensi and was destroyed by the Saracens.

In 1129 San Giovanni Salcione da Matera, after leading a life as a hermit in southern Italy, moved to Pulsano and founded the Benedictine Congregation of the Pulsano hermits, also known as the "Barefooted".

In the 12th century, the abbey achieved its maximum splendour, becoming one of the most powerful monasteries in the south of Italy, thanks to the large donation from benefactors, including monarchs such as Ruggero II d'Altavilla and Frederick II. It also became a famous centre for producing illuminations.

The most important part of the monastery site is the Romanesque style church, partly hewn from a natural grotto, occupied by the apse. The church has a single nave with barrel vaults interspersed with large cross arches on semi-pillars near to the walls. It has a wonderful oval door, finely decorated by animal relief works and ancient coats of arms that are very similar to the side door of the abbey of San Leonardo di Siponto. The most precious elements of the abbey are probably attributed to the extension work carried out by the Abbot Gioele (1144 - 1177).

Some excellent fragments of sculptures and remains of the furnishing of the monastery in Pulsano, currently preserved in the museum of the

Sanctuary of San Michele Arcangelo,
lustral fountain

San Leonardo in Lama Volara
portal with prothyrum

sanctuary of San Michele in Monte sant'Angelo, are considered to be the work of the same artists in Siponto, Foggia master craftsmen who worked in both Capitanata and in Abruzzo (S. Clemente in Casauria, S. Pelino in Corfinio) in the second half of the 12th century. The abbey church was dedicated to the Holy Virgin Mary, Mother of God and the altar was consecrated by Pope Alexander III after work was completed, The Pope moved the holy remains of some Roman martyrs for the occasion, such as Lorenzo, Ippolito, Nicandro and Valeriano, the reliquary, (in bronze) and the Papal seal in leather are kept in the abbey church.

The monastery is surrounded by thick walls.

In the Middle Ages, this monastery played a primary role in reorganising the area and in founding new centres in the Gargano. The limestone walls of the three gorges surrounding the monastery are filled with grottoes, cells and dwelling places, where hermits, saints and monks met for centuries to live near to the great Sanctuary of the Archangel Michael, searching for a vow of contemplation and ascent.

The monastery of San Leonardo in Lama Volara in Siponto was founded in the final years of the 11th century and the beginning of the 12th century by the Canon Regulars of Sant'Agostino as a hospice for the pilgrims coming to the Sanctuary of Saint Michael and for the crusading knights who, after praying, at the sanctuary, left for the Holy Land. In 1261 it was entrusted to the Teutonic Knights by Pope Alexander IV, who made it the centre of their activities in Puglia up to the 1480s. The cross-bearing shields of these soldiers can still be seen inside the church.

The church has one aisle and two naves, with arches on semi-pillars and cross pillars in the centre. The central aisle is covered by two unequal domes. Outside,

the western façade has a door that is a simple architrave shape, with a plain fanlight above it and finished by an archivolt. On the side façade facing north, there is a wonderful door (one of the best Romanesque examples in Puglia) that was probably built at a later stage, perhaps in the Swabian period.. The decoration around this door are similar to those at Santa Maria di Pulsano. In the outer part, two columns stand on the back of two column-bearing lions, which in turn bear two winged animals that support the archivolt. The right hand lion is holding a human (sinner) in his mouth. The sinner holds his foot while begging for mercy; the left hand lion, injured, as it appears, seems to be biting a snake . The frames and posts of the door, arch and fanlight are sculpted with vegetable, animal and human decorations. The two inner capitals are made up of two trapezoid blocks with anecdote sculptures.

Ignazio Danti, detail of fresco

NATURALISTIC FEATURES

The naturalistic-environmental context of Monte Sant'Angelo is characterised by the presence of the National Park of Gargano, that covers about 121,118 hectares, including a series of unique habitats. From the thick, large forests, famous for the Mediterranean scrub, the karstic high plains rich in dolinas and swallow-holes the steep cliffs down to the sea, full of wonderful grottoes, the steep, woody valleys that descend towards the sea, the coastal lagoons in Lesina and Varano, the hills and steppe-like plains and the swamps of Federico II. The four Tremiti islands are also part of the park, surrounded by a crystal-clear sea and full of grottoes.

Each of these areas described has a varied flora. In particular, there are more than 2,200 botanic species, which represent about 35% of the entire national flora. Thanks to particular

View of the Gorge

Quarter Junno and peri-urban gardens

climatic conditions and northern winds that are full of humidity, about 1300 mm of rainwater falls each year on the headland, allowing the development of a special micro-climate in which some trees managed to survive in conditions that do not exist anywhere else in Italy and the world: beech groves in the inland and on the north side, Aleppo pine forests. Mediterranean scrub along the coast all interspersed with oak groves with turkey oaks and holm oaks, and mixed woods filled with manna ash trees, ash trees, elm trees, holly, chestnut trees, maple trees, oak trees, and beech trees etc. In the glades, there are prickly pears and the steppe-like areas are filled with wild orchids of which 85 species can be found inside the Gargano Park, making it the richest orchid area in Europe. The sun-kissed slopes are home to olive trees, pear trees and apple trees, hawthorn surrounded by mastic trees, brambles, junipers, thyme, prickly pears and a beautiful tree called the “devil’s tree” or the locust tree.

The foothills see a great change in the vegetation and the steppe is dominated by olive groves, vines and wheat fields. Other particular areas are the swamp areas in Frattarolo and the Salso Lake Oasis, together with the coastal lagoons in Lesina and Varano.

The lakes of Lesina and Varano are characterised by coastal woodland that grows along the strip of sand that separates them from the sea and where the *Cisto di clusio* and reeds grow, surrounding the banks. There are large areas of beech trees, holm-oaks, turkey oaks and sometimes elm trees, ash trees and Hungarian oaks further inland on the headland, with the Ischitellia, Manatecco, Ginestra, Sfilzi, Umbra, Bosco Quarto, Umereta delle Ripe and Lacotenente forests.

Monte Sant’Angelo stands on the edge of the Umbra forest, which with its 11.000 hectares of surface area entirely

Foresta Umbra

covered by woodland, is the green lung of the National Park of Gargano, and the largest forest of broadleaf trees in Puglia. In the heart of the Umbra Forest it is possible to visit the Naturalistic Museum made up of three sections indoors and one section outdoors. The internal arrangement comprises:

- a section on the Gargano flora, with various illuminated panels on the most precious species in the National Park of Gargano;
- a section on Gargano archaeology, with several artefacts dating to the Palaeolithic and Neolithic ages found in the Gargano;
- A section on the fauna, with almost two hundred animals (mammals and birds) on show, that live or stay in the humid areas of the National Park of Gargano during their migration.

The open-air section of the museum is dedicated to Gargano lumberjacks and miners. This section is made up of an educational path along which it is possible to visit the lumberjack's house and observe the tools he uses each day, a coal cellar and the tools and techniques used by the miners to carry out their work.

There are various types of fauna, corresponding to the large range of flora and landscape. About 170 species of birds nest in the park, out of a total of 237 species in the whole of Italy. Nesting birds of prey include: buzzards, kestrels, sparrow hawks, and peregrine falcons. Lanners, marsh harriers, minor harriers and the harrier eagle that hunts reptiles in the sunny areas. There are also some ospreys and rare lesser spotted eagles during the migration period. The night-flying birds of prey are the eagle owl, the long-eared owl, barn owls, tawny owl and scops owl.

In the humid North and South areas, there are about 46 of the more than 60 aquatic birds that nest in Italy. They include the red and grey herons, the little egret, the great bittern, the bearded tit, the tufted heron, and the night heron, the

mallard, the teal, the garganey, the tufted duck, the spoonbill duck, the little ringed plover, the Kentish plover, the stilt plover, the moorhen, the coot, and the grebe, etc. In the marshes near Frattarolo in the spring and autumn it is possible to admire ruffs, black-tailed godwits, redshanks and of various kinds, pratincoles, lapwings, plovers, curlews, snipes, jacksnipes etc. One of the most important initiatives is the reintroduction of the white-head duck under the patronage of L.I.P.U. (Italian Bird Protection League) funded by the park's body.

In the steppe pastures at the foot of the Gargano, the stone curlew and the little bustard survive amidst countless difficulties, and there are also skylarks, calandra larks, crested larks and European nightjars. In the olive groves, in addition to the several passerines, in spring it is also possible to find turtle doves and golden orioles. In the pastures and in the steppe areas, it is possible to hear the song of the corn bunting. Along the coasts and in the ancient parts of the Gargano towns, the skies are full of flights of swifts, red swallows, house martins, sand martins and Alpine swallows. Various species of bats live in the grottoes. The Italian roe deer, an endemic species of the Park is one of the mammals found in the area. There are also wild boar, deer, stone martens, badgers, wild cats, the magnificent preying feline that lives deep in the Umbra Forest, hares, hedgehogs, moles, foxes, dormice, and various types of mice and field voles. There are several tortoises and turtles present, due to their abandonment of rural areas, in addition to slow-worms, Aesculapius' snakes and adders, three-toed skinks, geckos, common vipers, lacepedes, grass snakes, green lizards, field lizards etc. Amphibians found in the area include tree frogs, green frogs and spotted frogs, toads and emerald toads and Italian and crested newts. These animals live in the

marsh areas, in the canals, the banks of the lakes, and in the woody areas of the park.

5.7.1 MONTE SANT'ANGELO RECOGNITION OF STAKEHOLDERS

The property applying for the inscription in the WHL belongs to a legally autonomous ecclesiastical authority run by the Order of St. Michael fathers (Ordine dei padri Micaeliti).

The Sanctuary is directly managed by the Order of San Michele fathers that, on a annual basis, provides, with its funds, the ongoing management of interventions to keep systems and routes open to the public in perfect working order, as for the interventions of routine maintenance when necessary.

The cultural richness of the buffer zone and of the reference territory shows the joint presence of further stakeholders in the management of the cultural heritage system, for institutional competences and partnership processes already underway. The main institutions and bodies, signatories for Monte Sant'Angelo of the Memorandum of Understanding for the implementation of the Site Management Plan, will be directly involved in the system of stakeholders managing the site proposed for Unesco inscription (Puglia Region; Province of Foggia; Municipality of Monte Sant'Angelo; Ente Parco Nazionale del Gargano; Comunità Montana del Gargano; Centro di Studi Micaelici e Garganici; Direzione Regionale per i beni culturali e paesaggistici della Puglia - Ministry of Cultural Heritage, representing all relevant territorial offices: Soprintendenza per i beni architettonici, il paesaggio e per il patrimonio storico artistico e etnoantropologico della Puglia; Soprintendenza per i beni archeologici della Puglia).

6. ANALYSIS OF THE HERITAGE

6.1 PRESENT LEVEL OF KNOWLEDGE ABOUT LONGOBARD CULTURE

Great advances in knowledge about Longobard civilization came about, at least in Italy, only over the last thirty years, thanks to the great impetus given by research and archaeological finds that provided significant new elements and put the Longobard era at the centre of the debate about the evolution from the classical to the medieval age in terms of settlement structures, economic-production factors, customs, and society.

Following the fortunate finding of Longobard tombs and necropolises that were irregular and poorly documented, which occurred on the Italian peninsula at the end of the 19th and beginning of the 20th century (in Cividale, Civezzano, Testona, Nocera Umbra, Castel Trosino, Chiusi and Fiesole), which aroused a limited amount of interest, mainly of an antiquarian nature, in these “barbarian” peoples, the Longobard question was more than sidelined in relation to the

general panorama of historical studies, especially in the area of archaeology.

Having been relegated to the realm of the darkest and inauspicious centuries of the first Italian Middle Ages, as a time of greatest decadence of the perfect, evolved Roman state and social system, Longobard culture had only been given some space in discussions between historians, especially those in institutional and in law, who did their research by analysing the little written documentation that existed starting from Ratiari's and Liutprando's laws to the accounts about the relations between the Lombards and the other institutions of the time (especially the Church of Rome and the Empire).

In the other European countries affected by the long migration that took the Lombards from Scandinavia to Italy, research into this people had a precocious stroke of fortune, at times intertwined with strong connotations of the ethnic distinction and recognizability of peoples and the question of the Germanic origins of the nations of Central Europe.

Finding of large necropolises in the

Danubian and Pannonian phase (5th - 6th century) in southern Germany, Upper Austria, and the Hungarian Plane led to a lively movement of studies that, although being based on a problematic interpretation of an ethnic type which tended to identify the Lombards in terms of their aspects “different from others” provided the starting point for more extensive archaeological research into the Middle Ages.

Thus, while in other European countries the problem of the ethnic distinction between invaders and the invaded was quickly overcome and the initial interest only in the necropolises spread to other material and settlement aspects, in Italy Longobard archaeology remained a “funerary archaeology of the invaders” for a long time.

It was only in the mid 20th century that restoration of important monuments like the Lombard Temple in Cividale, San Salvatore in Brescia, and the Church of Santa Maria *foris portas* in Castelseprio along with fortunate discoveries or rediscoveries of unparalleled works of art, contributed to rekindle interest in the Longobard culture in Italy. An initial

Golden foil of Agilulfo, Museo Nazionale del Bargello - Florence

Schield decoration, VII century, Bernisches Historisches Museum

important result of this is to be found in the study meetings promoted by the Italian Centre for Dark Ages Studies in Spoleto, especially the Longobard Studies Congresses, the first of which was organised in 1951.

But the approach to these studies in Italy was still almost exclusively of a historical-documentary or historical-artistic type, with little time for the value of material or archaeological relics, which in truth were still scarce.

Things changed quickly with the carrying out of the first planned archaeological research carried out in Castelseprio, and then in the Invillino *castrum* in Friuli, where German researchers from the Munich academy were busy working.

A series of exhibitions and conventions on the Lombards organised during the same years both on the other side of the Alps, in Marburg-Hamburg and Vienna, and in Italy (convention in Rome and Cividale in 1971 on "The Longobard civilization in Europe" and in Milan in 1978 on "The Lombards and Lombardy")

highlight this change of direction. New problems began to emerge in the studies, related to the Longobard presence, which went beyond the "funerary archaeology of the invaders" that had characterised the previous decades. The publication in 1982 of Alessandra Melucco Vaccaro's work "The Lombards in Italy", with its markedly archaeological approach, was then a clear sign of a new way of understanding research into the Lombards, integrating custom and funerary archaeological aspects into a more wide-ranging matter of relics, which were useful for defining the impact the Lombards had on the settlement and social fabric of the peninsula, affecting how these developed.

The manner and chronological scanning with which Longobard settlement inside the Italian territory took place then became one of the main objectives of Italian archaeological and historical research into the Early Middle Ages.

Multi-disciplinary research in the last

twenty years has enriched the tapestry of knowledge, especially as concerns major questions such as: funerary relics, the presence of settlements in the territory (both fortified sites and rural villages), the manner of moving into the cities and effects on urban living, the evolution of customs and society, and characteristics of artistic and architectural works.

This path is clearly shown by the exhibitions held between 1990 and today (*The Lombards*, in Cividale in 1990. *Longobard Umbria. The necropolis of Nocera Umbra in the century of discovery*, Nocera Umbra 1996-1997. *The Future of the Lombards*, Brescia 2000 and Turin 2007) and the significant editorial works in recent years dealing with these topics.

Despite the heap of relics and data available having been added to in a big way, one finds that some problematic points about the Longobard presence in Italy have not yet been fully clarified.

The funerary relics

The discovery of new large cemeteries, especially in *Langobardia Major*, and the reviewing of the findings in the necropolises excavated previously, without a doubt helped the understanding of the customs and funerary habits of the 6th and 7th century, also making it possible to achieve precise chronological information on the artefacts. Careful analysis of equipment and its relationship with other types of research, such as anthropological investigation of remains, made further in-depth investigation possible into the lifestyle and processes of social transformation, as well as production methods and the circulation of elements of costume and their meaning as status symbols.

In order to increase the value of the funerary source, in analysis of Longobard cemeteries more importance is being given not only to accurate digging and documentation of each

individual burial and what went with it, but also an evaluation of the layout of the entire burial area, marked by topographical distribution and the relationship of the various depositions. This latter aspect that had been very much neglected in the past, as was that of the actual extent of the funerary areas found, which was often marked by occasional tomb finds that were not followed up with further investigation.

In essence, there is often a lack of expressly dedicated studies that seek to understand the logic behind how burials of men, women, and children are reciprocally arranged, giving a clear indication of the social structure and gathering of groups (in terms of gender, age, and family nuclei).

However, still today in some settings, tombs finds still constitute the most evident or only trace of Longobard presence, once again leaving the question of the real relationship between funerary areas and settlements without an answer.

Therefore, grave goods are still one of the most important signs of the Longobards presence in Italy. Yet, it must be underlined that in the last years our knowledge of the first immigratory phase settlements, with their timber huts partly below the ground, has greatly improved as well. New and more updated excavation records have increased our knowledges even on particular power ceremonies and funerary rituals (horse burials, Houses of Death, bandaged skulls), which contribute to outline a more and more complete overview of this society.

The settlements

In addition to the usual approach of testifying to the Longobard presence in strategic positions within the territory, which is certainly valid for the early years of the occupation, archaeological finds in recent years have made it possible to cast light on the dynamics of

how the new dominators were distributed, also in relation to the organisation and control of territorial structures and the system for managing resources and agricultural property. These aspects, which have yet to be specifically clarified for each area, despite being linked to long-term transformation processes, which had already started before the Lombards arrived, certainly speeded up and came to their fulfilment in the Lombard period. Research of Castrensi sites shows that the Lombards tended to overlap with the previous Capisaldid network, which was made up of fortified sites, some of which saw the role of jurisdiction and administration grow in during the Lombard reign, taking on *civitates* functions, as happened in Castelseprio. But the situation in the fortified centres appears to be different in case and should be analysed in the specific territorial context. This is the only way that the occupation phases and extension also in the Longobard age, or the manner in which settlements were abandoned. These are aspects that need to be clarified by carrying out archaeological investigations, given that even still only a few situations have been studied in terms of extent and the material structures of these settlements, including the fortifications, about which we still do not know a lot.

In a rural environment it is also difficult to reconstruct the layout of how towns and production structures were distributed in the Longobard period. With the exception of a few fortunate cases, where not only a presence is found but it was also possible to find the existence of habitation structures, settlement in the countryside still defies definition, partly because there is a scarcity of structural evidence, due to the prevalent use of perishable materials for buildings erected by the Lombards.

In fact, in the Dark Ages the use of stone in building is normally associated with

the construction of places of worship that constitute important characterising points of the countryside, and in some cases, an attraction for inhabitation as well.

In general, as far as rural environments are concerned, to date a step back in terms of the distribution of settlements has emerged compared to the previous period, with partial occupation of Roman sites, especially Villas that, in some cases, show continued life up to the 6th and 7th century.

The diffusion of Longobard burials over vast areas of the territory, especially in the flat areas of *Langobardia Major*, and documentary evidence albeit a bit late, referring mainly to the 8th century of land holdings of Longobard personages also of high status, underline how the control and management of the land was of prime importance in this kingdom. The carrying out of archaeological research over large portions of land, using various techniques like analysing aerial and satellite images may make larger scale reconstruction of the agricultural and rural countryside in the Dark Ages possible, as has been suggested by some expenses in campaigns around Verona.

The cities

In recent years the debate about post-classical urban settlement has been very lively and full of newly acquired elements. It has been found in a number of locations that it was in the Lombard period that some processes of urban transformation came to fulfilment, leading to a decline in some centres and the increase in importance of others. In fact from the early stages of their conquest, the Lombards concentrated on controlling the cities, especially those that had taken on a central role in the new territorial equilibrium, as was the case in Cividale, Spoleto, and Benevento. The urban settlements in the Lombard period appear to be very different from

those of the classical period - less dense inhabitation, bigger open spaces, a proliferation of burials in residential areas, public infrastructures in decay, limited construction of places of worship and centres of (ducal and regal) power, which constituted the new attractions of the cities, changing the previous arrangements.

However, there is still a lack of clear bits of knowledge in order to specifically map out the characteristics of new buildings, both public and private, although in some cities both a phenomenon of reusing older structures for different functions and new lifestyles, and the addition of new types of dwellings like timber huts based on the German tradition, have been clearly identified.

The evolution of customs and society

An analysis of cultural material from the Lombard period, which now has a lot more data than in the past, has made it possible to put forward new comments on Longobard customs and society, giving pride of place to the questions: a) of the assimilation of those of the local populations, including that of adhering to Orthodox Christianity, b) of the various phases of organising the kingdom and of the formation of the nobility and the upper class, and c) the system for the production and distribution of products.

While, on the part of the Lombards there was a strong attachment to their traditional values that was also expressed in the holding on to some of their customs, the results of the more recent studies show how from the time they arrived in Italy the process of transforming the Longobard social structure speeded up on coming into contact with the widely differing and more complex social and economic-productive situation on the peninsula. This was resolved by reciprocal adaptation in order to satisfy the needs

of the new dominators and to facilitate inclusion in the new territorial context, with a stable control and administration function that gave rise to the need to create a system for governing the realm, which was very hierarchical and included various social levels.

In order to evaluate the effects of these changes a more direct comparison between this situation and that in the phase immediately prior to their coming to Italy would certainly be very interesting, but the sources documented are rather scarce in this regard, especially when one moves beyond the finding of tombs. However, this limitation is also true of the Italian situation, where the line taken by the studies concentrated for a long time solely on analysing tomb accessories as distinctive characteristics of the new dominators. Greater involvement in going in greater depth into the other aspects of the economy and the evolution of the production by craftsmen and distribution of goods, which shows greater assimilation between the various components in society in the Lombard realm, has already favoured a wider reading of the dynamics of integration between the "Romans" and the "Lombards". This is a matter of fundamental importance for understanding the social and cultural evolution of the peninsula.

Characteristics of artistic and architectural works

The question of the characteristics of artistic and architectural works specifically involves all the locations that were candidates for *Italia Langobardorum*, in which the major artistic and architectural works produced in the Longobard period were concentrated. Research into monuments proposed to UNESCO for candidature were very large and, in some cases, the discussion about certain specific aspects of each of these

is still ongoing, both because these are unique examples, and because the extent of works produced in the Lombard period is still in the process of being defined.

Having now abandoned the stereotype concept of the Lombards as a "barbarian" people only capable of goldsmith products for some time, the role they played in putting together the artistic expression of the Dark Ages, based on returning to the classical, paleochristian, and Byzantine tradition, now appears to be fundamental. Not only are we beginning to see the signs of a voluntary continuance of tradition as early as the 7th century, according to the new training trends, which should be specified, but, especially in the 8th century, one can see the results of a mature, knowing call to rediscover the ancient bequest making it possible to produce court art that was fundamental in renewing artistic and architectural language and transmitting its values. The great skill in the Lombard period of knowing how to take in and redevelop various stimuli and translate them in new forms, is now becoming more and more clear. This openness is clear in the commissioning of works in the final period.

Certainly, in light of the most recent studies, some aspects are being redimensioned, such as the taking on of Christianity, which up to now had been considered by Italian archaeology as being one of the elements that most qualified the Longobard artistic culture, while some factors are being re-evaluated that have a significant influence on the development of production, such as the role of commissions and the not secondary role of the masters that worked in close contact with the Longobard upper classes. Within the regional framework of Italy there are various phenomena, which have yet to be

better revealed and understood in terms of their historical and artistic significance, in relation specifically to these two elements (commissions and masters). The most recent examination of sculptural relics¹, for example, show how the artistic traits that can be identified are often at best regional, and are only part of a general common artistic climate. Thus under the Lombards, Italy was the scene of experimentation into various artistic languages, linked by general patterns that were similar and a common basic popular and Christian matrix, but the result of specific historical situations, individual local experiences, political and social balances, and economic and cultural relations with other areas. The creation of the network of *Sito Italia Langobardorum* locations, which has been put forward for inclusion in UNESCO's List of World Heritage Sites, may facilitate collaboration and exchanges between experts and speed up the cognitive process' making it possible to achieve better results. The fact that this network includes two of the most important study centres in the sector CISAM Italian Centre for Studies on the Dark Ages, and the Centre of Micaelican and Garganic Studies constitutes a further guarantee in this regard.

6.1.1 PRESENT LEVEL OF KNOWLEDGE ABOUT CIVIDALE DEL FRIULI AND ITS SURROUNDINGS

The interest for Early Medieval events and the discovery of Longobard findings in the Duchy of Friuli have long been at the heart of scholars' research. This is all the more true for Cividale del Friuli, where the historical and archaeological analysis of the city's "Longobard origins" dates back the 18th century and went into depth during the 19th and 20th century. Many findings from Longobard necropolises or more important tombs, main subjects of research, refer to excavations that were conducted many years ago.

This tradition of studying has been enhanced especially over the past two decades with the result that systematic research dealt with:

- the analysis of old funerary findings and the discovery of new sepulchral sites; this allowed the study of the change in attitudes and in funerary rites from the period of the first migrated

generations (end of the 6th century) up to their stable settlement and acculturation (7th century);

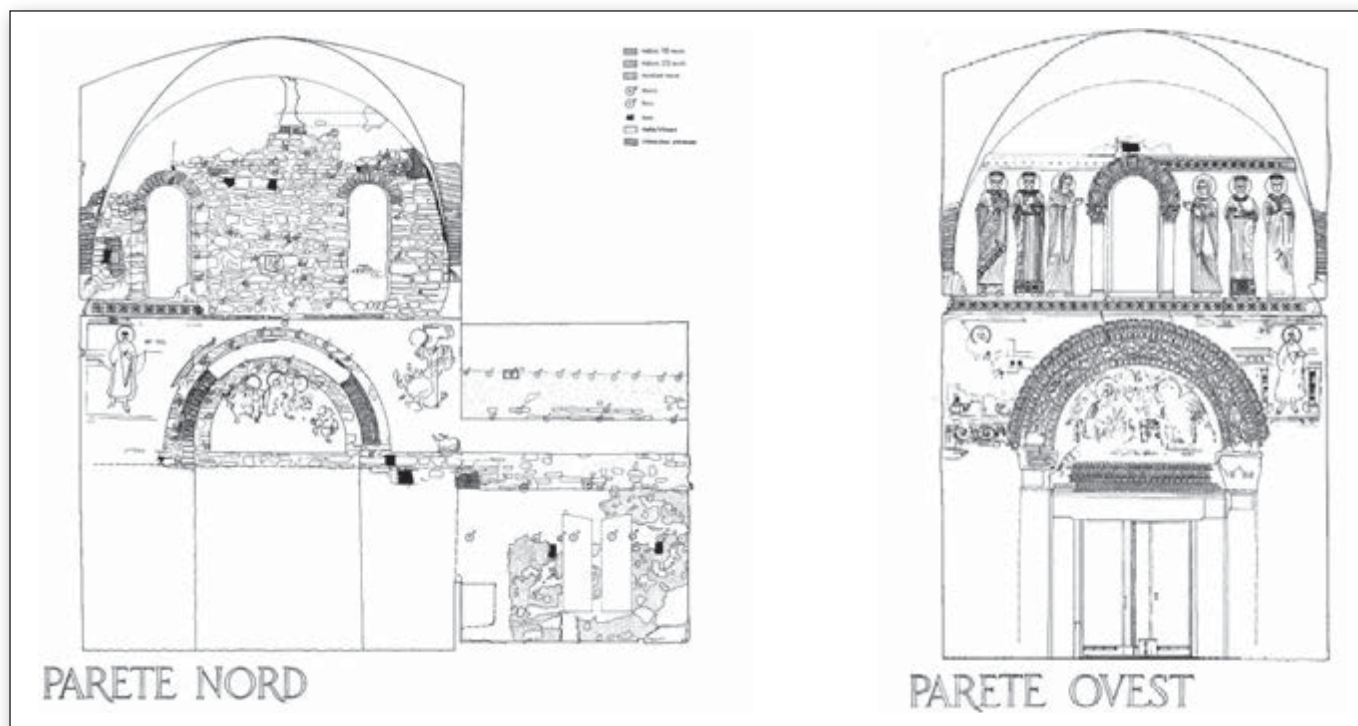

- the study of contexts that emerged from the past, in the light of the most recent knowledge developed, and the carrying out new archaeological urban research that contributed to better understand the layout of the build-up area in Longobard times, characterised by meeting places and monumental development, in particular the royal court and the Episcopal complex. In this respect, research has revealed important information on the process of settlement of the Longobards in the Roman urban fabric, from the first period of conquests, when spaces were reused and a concept of building and living was established. Moreover, the research showed the process of monumentalisation of the city during the 8th century through the promotion of works and artefacts of great architectural and artistic value, especially linked to places of worships.

Today there is great knowledge in the

properties, yet data still lack homogeneity and systematisation, also regarding works of great artistic and monumental value, which Cividale is very rich in.

For example, the Longobard Temple is the most known sight in town and has long been subject to analysis and research: archaeological research was carried out inside the temple from 1917 and up to 1968, in a discontinuous and incomplete way. Monographic studies by the Norwegian Academy of Sciences (together with Dygve, Torp and L'Orange), published between 1977 and 1979, are the most comprehensive analysis of the monuments and its components; in addition to these, there are more recent research that address specific topics. Nevertheless, there is a need to go in further depth with the research with the aim of checking the buried heritage and therefore the evolution of the structures, as well as better understanding the techniques used for stucco decorations.

The "Tempietto Longobardo": the arch with plaster archivolt in stucco

Longobard period, and particularly important in Cividale, have been the main subject of studies on Longobard times. The Tegurio of Callisto of the baptismal font in the Cathedral and duke *Ratchis's* Altar are products of the highest quality and are the results of workshops without comparison in the kingdom. Unique and well preserved, these works have been objects of historical and artistic analysis, that now can count on sophisticated systems to document artefacts and techniques: new research is under development on the *Ratchis's* Altar and aims at giving the original appearance to the artefact, which has signs of painted decoration and decorative sintered glass (an aspect that must have been quite common at that time but of which there are rare findings up to now). Similar research should be

carried out on the Tegurio of Callisto too. Outside Cividale, in the territory of the Longobard Duchy, the interest of research focused on a number of main topics.

As far as burials and necropolises are concerned, the most recent census reported some sixty places where Longobard funerary findings were discovered, covering the first period of migrations up until the late 6th century, when the tradition of burying the body with the dead's treasure ceased. In Romans d'Isonzo a necropolis with burials of the first migrated generation and in Lovaria, near Udine with tombs of the half-second half of the 7th century findings were the result of systematic and well documented research. However, many findings discovered in the past and occasionally, are not documented.

Among these there are at least two large necropolises, that of Romans d'Isonzo and San Salvatore di Majano, and other cemeteries of some importance, such as Porpetto and Lovaria. Important centres are those of Mereto di Tomba and San Vito di Magagna. At the moment some burials may look isolated yet they might belong to wider funerary areas that have not been investigated yet.

The general framework witnesses wide dissemination of Longobard funerary findings in the Duchy and in the plain of Udine, a sign of a widespread settlement system linked to the need to control the territory and manage resources. Less information is available about the area of Pordenone, West of the Tagliamento River, although documents highlight important Longobard presences.

It is difficult to establish a direct link

between the funerary findings and the settlements.

Findings linked to Longobard settlements in the territory are not numerous and research concerning the presence of Longobards in other urban centres of the region, outside Cividale, have never been studied in depth. Recent considerations on Aquileia and Concordia, thanks to the re-examination of some discoveries, have opened new windows of opportunities on the interest of Longobards in these sites.

The general framework for the rural area confirms the trend of the Longobards to overlap or settle in previous settlements. More often there is information linked to burials, but in some cases they are the proof of the occupation of ancient holdings by the new conquerors that replaced the previous class of *possessores* (like the occasional findings in the area of the Roman villas in Pavia di Udine and Coseano). Sometimes (for example in San Marco di Brasiliano) these shifts are made evident by the construction of places of private worship on holding lands: they are the gentilitial funerary chapels of the new land owners, as the Late Roman custom wants it.

However, the clearest sign of Longobard presence in the settlements of the Duchy emerges from the archaeological findings that mark the sites during the Early Middle Ages – starting from the Late 5th century – that have become the stronghold of territory control and management: the *castra*.

The data gathered up to now highlight the centrality of these settlements in the territory in a period when they become small executive centres, as happened in the case of Castelseprio. In particular, it happened in the *castra* mentioned by Paolo Diacono (*Historia Langobardorum*, IV, 37) with reference to Avars attack in 610: Cormons, Nimis, Osoppo,

Artegna, Ragogna, Gemona and the impregnable Ibligo, identified by many with the site of Invillino.

The archaeological research carried out up to this moment and still under development in this fortalice and in others (Udine, Buia, Col Monaco di Castenuovo del Friuli, Illeggio) have enabled the identification of the old origin and the presence of important period in Longobard times, often linked to important defensive structures and the build-up area (in Ragogna, Invillino, Artagna, Udine) or to important places of worship, in some cases with baptismal function (in Osoppo, Ragogna, Buia). The rich treasure of the Longobard tomb discovered in the Church of San Pietro in Ragogna witnesses the early presence of a Longobard notable: the predecessors of *Ansfred de castro Reunia* mentioned by Paolo Diacono on the occasion of the 693 battle against the duke of Friuli and the king.

The fortified Late-Roman Early-Medieval *castrum* of Artagna, with the ancient Church of San Martino, define the wide

and important castle area where a museum is being created. The Longobard findings in Cormons witness the presence of an important building that has been the residence of the Aquileia patriarch until the 7th century. The periods of renewal in the late 6th century of the build-up area of Invillino mark the new role of the site in this period. The *rupes osopi* with some findings dating back to the 7th century near the baptismal church, that now have become a museum, are the confirmation of the centrality of the settlement mentioned among the main sites of the Oriental area at the end of the 8th century by Patriarch Paolino on the occasion of Eric's death, the new Carolingian Duke of Friuli. The epigraph fragment with the name of LIUT(prando), in Pavia style, discovered in the church of Udine Castle, is the sign of the King's interest in this centre.

This system of fortified power centres in the territory forced the creation of an integrated circuit to promote deeper knowledge, enhancement and protection of sites which is now in progress thanks

Christian Museum and Duomo's Treasure, the Altar of Ratchis and the Tegurium of Patriarch Callisto

The Tegurium of Patriarch Callisto

to an agreement between the Province of Udine and the Municipality of Artegna. Last, the toponymy too, especially in the case of the recurring name *fara* (= tribal core) (Farra d'isonzo; Farella, near Aquileia, Ca Fara, in the municipality of Ragogna), suggests the existence of more recent Longobard settlements, yet no traces have been found so far.

As far as the artistic work during the Longobard period in the Duchy of Friuli, it flourished especially in places of worship and in the building of monasteries. Only fragments of liturgical equipment still exist.

Hardly were these fragments discovered thanks to systematic excavations (like in the case of San Martino a Rive d'Arcano, the Church of San Daniele in Castello in the hill town bearing the same name, or in the Abbey of Sesto al Reghena); more often they were found by chance (for example the Church of Santa Maria in the Castle of Udine or that of San Martino in Turrída) or were used in the masonry of successive buildings (like in San Mauro di Maniago). A quite comprehensive cataloguing of the pieces has been carried out in 1981 by Amelio Tagliaferri for the *Corpus* of the Early Middle Ages Sculpture of the Dioceses of Aquileia, published by the CISAM of Spoleto; that cataloguing, however, should now be updated with a view of redefining the functions and the characteristics of these sculptures and their relation with the *ex novo* building or the renovations of different places of worship by Longobard *élites*. The latter were strongly committed, towards the end of the kingdom, also to the creation of monasteries in rural areas, in particular in Sal di Povoletto and in Sesto al Reghena. For both places there is an important copy of a document where the three founding brothers Erfo, Anto and Marco, sons of the Longobard Pietro, Duke of Friuli, and Piltrude, donated their properties disseminated in the duchy to the cenoby. It is an important document on the nobility economic status during the

Drawing of the Baptistery remains discovery at the beginning of XX centuries

Late Longobard period. The Abbey of Salt was soon abandoned, in the 9th century, while that of Santa Maria in Sesto al Reghena had good fortune: it became prestigious in the successive centuries thanks to the donations of Charlemagne, Lothair, Berengar and was restored in the Romanesque Age. The Early Medieval complex was raised on a previous Late Roman settlement as recent archaeological research reveals and was surrounded by a deep moat; only remains of the original Early Medieval three-apse building still exist. They were found during the excavations on the Southern side of the abbey as well as important elements of liturgical sculptural equipment of the 8th and 9th century. Among these the beautiful Urn of Santa Anastasia, which is actually a lectern for holy books in Greek marble, stands out. It was created in the middle of the 8th century by reusing a Roman sarcophagus. It is one of the most important works of Early Medieval artistic culture in the Adriatic area and is unique in the Longobard artistic language. The abbey is still one of the most important monumental complexes and one of the main attractions in Friuli. It is also very interesting for its research potential and the opportunity to improve knowledge on

the vicissitudes of the Longobard period and the structure of the monastic complexes founded by Longobard nobles. The interest for Early Medieval events and the discovery of Longobard findings in the Duchy of Friuli have long been at the heart of scholars' research. This is all the more true for Cividale del Friuli, where the historical and archaeological analysis of the city's "Longobard origins" dates back the 18th century and went into depth during the 19th and 20th century. Many findings from Longobard necropolises or more important tombs, main subjects of research, refer to excavations that were conducted many years ago.

Similar research

should be carried out on the Tegurio of Callisto too.

Outside Cividale, in the territory of the Longobard Duchy, the interest of research focused on a number of main topics.

As far as burials and necropolises are concerned, the most recent census reported some sixty places where Longobard funerary findings were discovered, covering the first period of migrations up until the late 6th century, when the tradition of burying the body with the dead's treasure ceased. In Romans d'Isonzo a necropolis with

burials of the first migrated generation and in Lovaria, near Udine with tombs of the half-second half of the 7th century findings were the result of systematic and well documented research. However, many findings discovered in the past and occasionally, are not documented. Among these there are at least two large necropolises, that of Romans d'Isonzo and San Salvatore di Majano, and other cemeteries of some importance, such as Porpetto and Lovaria. Important centres are those of Mereto di Tomba and San Vito di Magagna. At the moment some burials may look isolated yet they might belong to wider funerary areas that have not been investigated yet.

The general framework witnesses wide dissemination of Longobard funerary findings in the Duchy and in the plain of Udine, a sign of a widespread settlement system linked to the need to control the territory and manage resources. Less information is available about the area of Pordenone, West of the Tagliamento River, although documents highlight important Longobard presences.

It is difficult to establish a direct link between the funerary findings and the settlements.

Findings linked to Longobard settlements in the territory are not numerous and research concerning the presence of Longobards in other urban centres of the region, outside Cividale, have never been studied in depth. Recent considerations on Aquileia and Concordia, thanks to the re-examination of some discoveries, have opened new windows of opportunities on the interest of Longobards in these sites. The general framework for the rural area confirms the trend of the Longobards to overlap or settle in previous settlements. More often there is information linked to burials, but in some cases they are the proof of the occupation of ancient holdings by the new conquerors that replaced the previous class of *possessores* (like the occasional findings

Maniago, Longobard sculptures

Udine, the inscription from the castle

in the area of the Roman villas in Pavia di Udine and Coseano). Sometimes (for example in San Marco di Basiliano) these shifts are made evident by the construction of places of private worship on holding lands: they are the gentilitial funerary chapels of the new land owners, as the Late Roman custom wants it.

However, the clearest sign of Longobard presence in the settlements of the Duchy emerges from the archaeological findings that mark the sites during the Early Middle Ages starting from the Late 5th century that have become the stronghold of territory control and management: the *castra*.

The data gathered up to know highlight the centrality of these settlements in the territory in a period when they become small executive centres, as happened in the case of Castelseprio. In particular, it happened in the *castra* mentioned by Paolo Diacono (*Historia Langobardorum*, IV, 37) with reference to Avars attack in 610: Cormons, Nimis, Osoppo, Artegna, Ragogna, Gemona and the impregnable Ibligo, identified by many with the site of Invillino.

The archaeological research carried out up to this moment and still under development in this fortalice and in others (Udine, Buia, Col Monaco di Castenuovo del Friuli, Illeggio) have enabled the identification of the old origin and the presence of important period in Longobard times, often linked to important defensive structures and the build-up area (in Ragogna, Invillino, Artegna, Udine) or to important places of worship, in some cases with baptismal function (in Osoppo, Ragogna, Buia). The rich treasure of the Longobard tomb discovered in the Church of San Pietro in Ragogna witnesses the early presence of a Longobard notable: the predecessors of *Ansfred de castro Reunia* mentioned by Paolo Diacono on the occasion of the 693 battle against the duke of Friuli and the king.

The fortified Late-Roman Early-Medieval *castrum* of Artegna, with the ancient Church of San Martino, define the wide and important castle area where a museum is being created. The Longobard findings in Cormons witness the presence of an important building that has been the

residence of the Aquileia patriarch until the 7th century. The periods of renewal in the late 6th century of the build-up area of Invillino mark the new role of the site in this period. The *rupes osopi* with some findings dating back to the 7th century near the baptismal church, that now have become a museum, are the confirmation of the centrality of the settlement mentioned among the main sites of the Oriental area at the end of the 8th century by Patriarch Paolino on the occasion of Eric's death, the new Carolingian Duke of Friuli. The epigraph fragment with the name of LIUT(prando), in Pavia style, discovered in the church of Udine Castle, is the sign of the King's interest in this centre.

This system of fortified power centres in the territory forced the creation of an integrated circuit to promote deeper knowledge, enhancement and protection of sites which is now in progress thanks to an agreement between the Province of Udine and the Municipality of Artegna.

Last, the toponymy too, especially in the case of the recurring name *fara* (= tribal core) (Farra d'isonzo; Farella, near

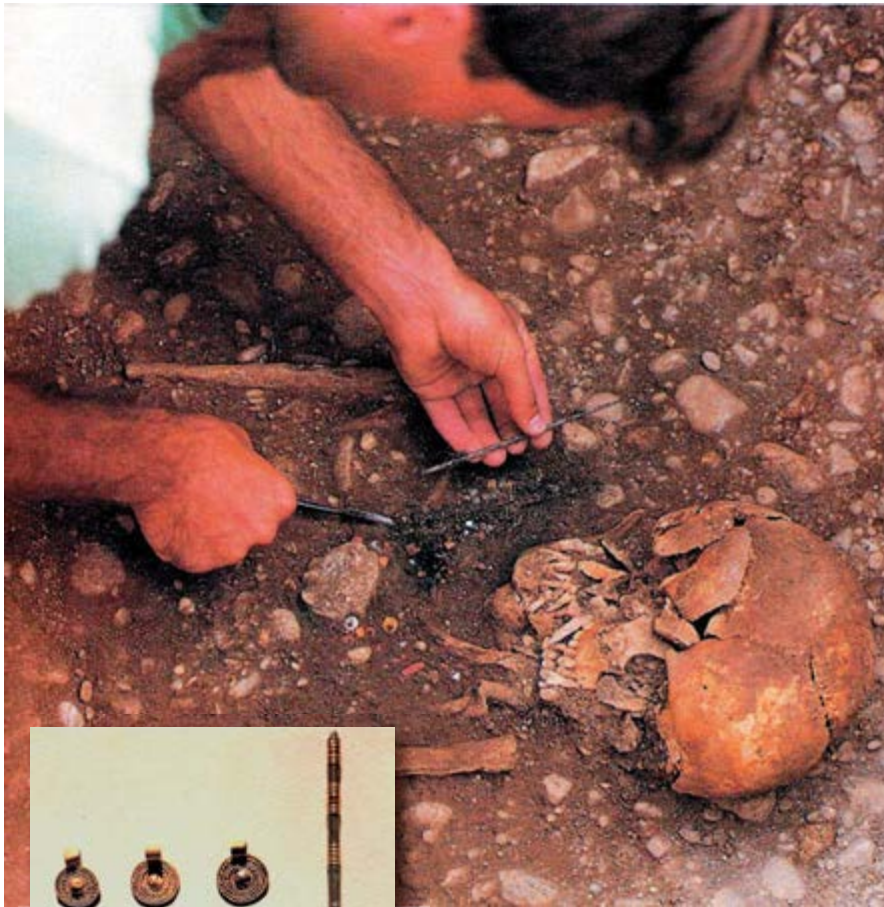

Artegna, aerial view of the San Martino's hill seat of the castle

Sesto al Reghena, the early medieval church remains of the monastery

Romans d'Isonzo, female tombs

Aquileia, Ca Fara, in the municipality of Ragogna), suggests the existence of more recent Longobard settlements, yet no traces have been found so far.

As far as the artistic work during the Longobard period in the Duchy of Friuli, it flourished especially in places of worship and in the building of

monasteries. Only fragments of liturgical equipment still exist.

Hardly were these fragments discovered thanks to systematic excavations (like in the case of San Martino a Rive d'Arcano, the Church of San Daniele in Castello in the hill town bearing the same name, or in the Abbey of Sesto al Reghena); more often they were found by chance (for example the Church of Santa Maria in the Castle of Udine or that of San Martino in Turrída) or were used in the masonry of successive buildings (like in San Mauro di Maniago). A quite comprehensive cataloguing of the pieces has been carried out in 1981 by Amelio Tagliaferri for the *Corpus* of the Early Middle Ages Sculpture of the Dioceses of Aquileia, published by the CISAM of Spoleto; that cataloguing, however, should now be updated with a view of redefining the functions and the

characteristics of these sculptures and their relation with the *ex novo* building or the renovations of different places of worship by Longobard *élites*. The latter were strongly committed, towards the end of the kingdom, also to the creation of monasteries in rural areas, in particular in Sal di Povoletto and in Sesto al Reghena. For both places there is an important copy of a document where the three founding brothers Erfo, Anto and Marco, sons of the Longobard Pietro, Duke of Friuli, and Piltrude, donated their properties disseminated in the duchy to the cenoby. It is an important document on the nobility economic status during the Late Longobard period. The Abbey of Salt was soon abandoned, in the 9th century, while that of Santa Maria in Sesto al Reghena had good fortune: it became prestigious in the successive centuries thanks to the donations of Charlemagne, Lothair, Berengar and was restored in the Romanesque Age. The Early Medieval complex was raised on a previous Late Roman settlement as recent archaeological research reveals and was surrounded by a deep moat; only remains of the original Early Medieval three-apse building still exist. They were found during the excavations on the Southern side of the abbey as well as important elements of liturgical sculptural equipment of the 8th and 9th century. Among these the beautiful Urn of Santa Anastasia, which is actually a lectern for holy books in Greek marble, stands out. It was created in the middle of the 8th century by reusing a Roman sarcophagus. It is one of the most important works of Early Medieval artistic culture in the Adriatic area and is unique in the Longobard artistic language. The abbey is still one of the most important monumental complexes and one of the main attractions in Friuli. It is also very interesting for its research potential and the opportunity to improve knowledge on the vicissitudes of the Longobard period and the structure of the monastic complexes founded by Longobard nobles.

The monastery southern cloister during excavations

6.1.2 PRESENT LEVEL OF KNOWLEDGE ABOUT BRESCIA AND ITS SURROUNDINGS

The site

The monumental area with the monastery San Salvatore-Santa Giulia has been subjected to in-depth studies over the last few years, because of the considerable importance and the excellent state of conservation. In particular, the studies have focused on the history of the monastery and monastic life, which can be pieced together thanks to the many documents which have come down to us, and by investigating the development of the buildings that reflects the history of the place; decorations; the stratigraphic sequence of the monumental archaeological area; the abandonment of the ancient buildings and the construction of the early medieval ones. The studies have also been always supported by archaeological investigations, stratigraphic analysis and diagnostic analysis. The large bibliography concerning the heritage testifies the interest the monument has always excited at national and international level, and includes monographers and specific contributions made within the context of specialist conferences. The studies and knowledge of Longobard Brescia began in the early 1800s, thanks to the initiative of the *Ateneo di Scienze Lettere ed Arti di Brescia*, and have recently enjoyed renewed impulse thanks to a wide range project focused on safeguarding the San Salvatore-Santa Giulia monastic complex in view of its new function as a museum centre.

Extensive archaeological and stratigraphic researches were carried out between 1982 and 1990, as well as careful study of the stratigraphy of the walls. These researches served to verify the sequential relations of the phenomena revealed in previous work campaigns,

and have enriched the overall knowledge of the whole monastic complex. At the church of San Salvatore in particular, the main development phases have been pinpointed, while studies of its rich decorations have led to the re-composition of the recovered fragments which now constitute an important comparison for other researches underway in the rest of Italy and in Europe.

Excavations in the courtyards and cloisters of the monastery have also revealed the way in which the population settled in Brescia in the Longobard period, but also the pattern followed by settlement under Gothic rule, while revealing the majority of the wealthy residential neighbourhood which rose here in Roman times.

In year 2000, at the time of the exhibition held in Brescia and entitled *Il futuro dei*

San Salvatore, southern nave and details of the stuccoes

Longobardi (namely, the Future of the Longobards), the integral study of the decorative stucco apparatus at the church of San Salvatore began. All known stucco fragments were examined and where possible the intradoses of the colonnades and the vausoirs facing the side naves have been reconstructed

and put in place.

In view of the setting up in the *Museo della città* of a section dealing with the Early Medieval period, a systematic revision of all Longobard period materials in the city museums begun in 1996. Old excavation data, reports describing the finds were studied, an

organic restoration campaign was begun and interesting results as to the knowledge of Longobard working and decoration techniques of ceramic, metal and bone artefacts. Many publications, as well as temporary exhibitions have illustrated the results of research and restoration campaigns to the wider public and to specialists. At the moment other aspects deserve to be further examined, and for this reason further research and study activity are underway.

As to the Basilica di San Salvatore the sequence of building and decorative campaigns in the crypt, the crypt's structure and access point is not yet clear. Therefore, the following activities have been decided: a campaign to obtain a technical graphic rendering of the crypt (including a planimetry, and graphics illustrating the decorations and the different building phases); a phase of study; restoration of the surviving fragments of the decoration. All these activities are now reaching the final phases. The results of these works will be the topic of a third volume in a series

The crypt of San Salvatore

dealing exclusively with the monastery area (see Knowledge Management Plan); the first volume had focused on finds recovered in the area (ceramics, glass, metals, coins), while the second concentrated on the habitation structures set up in the Roman period residences, and on the huts of the Longobard period (*S. Giulia di Brescia gli scavi dal 1980 al 1992, Reperti preromani, romani e alto medievali*, edited by G. P. Brogiolo, Firenze; *Dalle domus alla Corte Regia. Santa Giulia di Brescia. Gli scavi dal 1980 al 1992*, edited by G. P. Brogiolo, F. Rossi, F. Morandini, Florence). In the future volume the marble furnishings of the church will also be included, together with the so-called *tegurium*, the peacock and the many ledges, whose practical function is still unclear.

As to the archaeological area of Capitolium the excavations have brought to light productive structures (a small oven to produce Longobard ceramics,

located over the buried 1st century B.C. shrine, as well as burials and remains of habitations. The data gleaned by these excavations will ensure a better comprehension of the dynamics underlying urban settlement and of the promiscuousness of the areas of habitation, handicraft and burial areas, which are the hallmark of the post-Roman city. The work underway at the archaeological area of the *Capitolium* will certainly result in new data also for the Early Medieval period, which will thus complete the picture outlined by researchers during the previous excavation campaigns.

The Town

Traces of the Longobards' presence have been discovered also in other town areas, included the Buffer Zone, many of them in close proximity to ruins of the Roman period. In particular, during the 1930s, demolitions and digs in the western area of the Roman enceinte at the western end of the *decumanus maximus* had revealed portions of an enlargement of the walled area, and remains of a structure which was then identified as the *Curia Ducis*, the Ducal

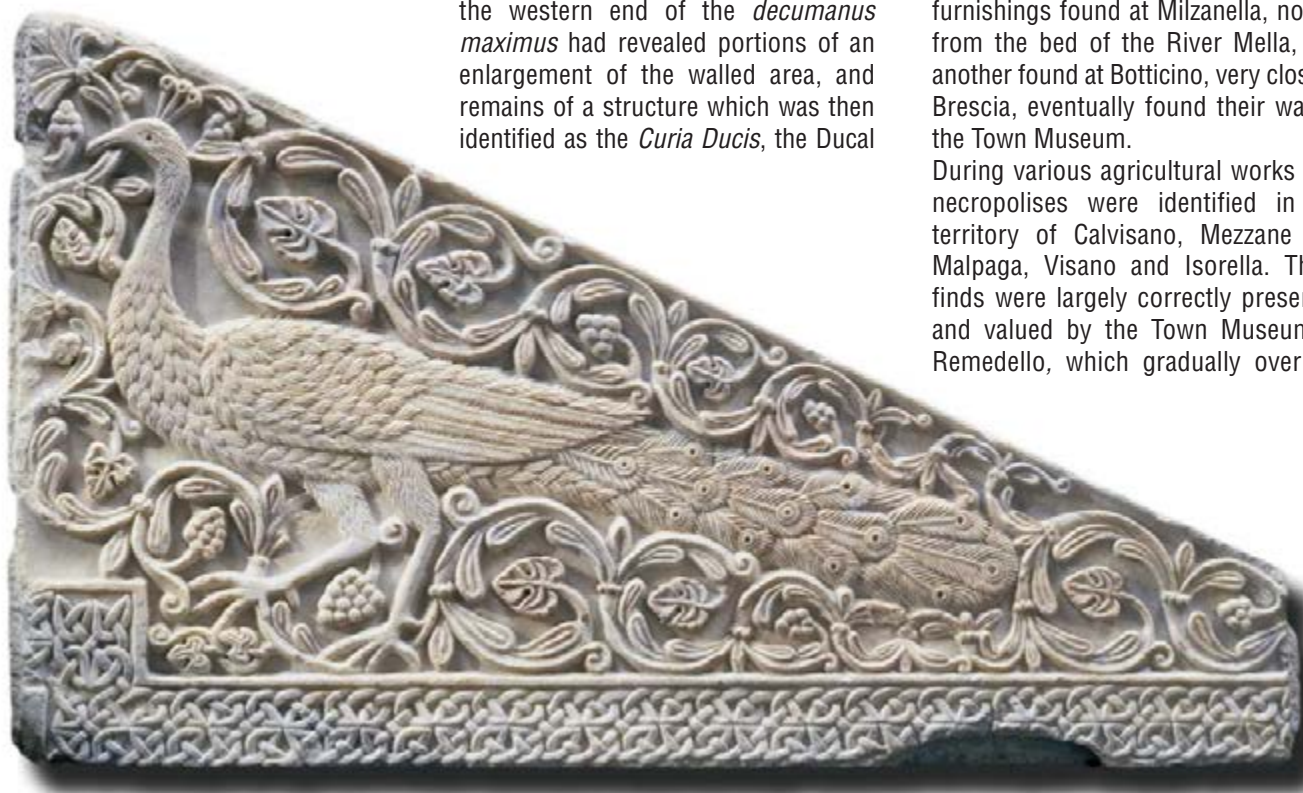

headquarters of the first Longobard settlement in the city dating to a time shortly after year 569 AD. New data relating to this area and to its buildings have been acquired during excavations carried out to set up Brescia's *metropolitana*, or underground subway system.

Keeping in mind the modern city's needs, it would be advisable to launch new systematic research in the area to corroborate the discoveries made during the 20th century excavations.

The territory

There is a wealth of data concerning Longobard presence in Brescia territory. During the course of the 1890s, during the work to set up the railway between Brescia and Parma excavations carried out between the towns of Calvisano and Remedello eventually revealed one of the most extensive Longobard necropolises of the whole plain area. Later, other important finds were made. The tomb furnishings found at Milzanella, not far from the bed of the River Mella, and another found at Botticino, very close to Brescia, eventually found their way to the Town Museum.

During various agricultural works vast necropolises were identified in the territory of Calvisano, Mezzane and Malpaga, Visano and Isorella. These finds were largely correctly preserved and valued by the Town Museum of Remedello, which gradually over the

Longobard marble slab from San Salvatore

Early medieval burial in Flero

View of the traces of the Longobard built-up area in Manerbio

years became a place where finds were collected, restored, studied and enhanced by specialists and experts which have operated in close cooperation with the Superintendency. At Leno, close to the funerary area, during the years immediately after the end of World War II, tombs of the Longobard period were found including furnishings of this people's first settlement phase. The furnishings were

acquired by the State and leased to the Municipality of Leno. During the early 1990s excavation work was preceded by excavations in the area close to the original ecclesiastical building of the area, known as a pieve, called Pieve di San Giovanni, and revealed a large 7th century necropolis set up over a productive settlement comprising ovens for metal casting, rejects and metalwork residues, which pointed to

the presence of a specialized glass workshop.

During the same period a vast necropolis was found between Leno and Porzano, in the locality known as Marchione. The cemetery revealed it had been a customary burial sight for a particularly lengthy period, and included first phase furnishings, traces of decorative elements to signal the presence of tombs, and funerary cases of Pannonian origin. The materials are being restored and studied, and will be placed on show at the exhibition now being set up at Leno by the Superintendency and by the Fondazione Dominato Leonese, a cultural institution promoting research, documentation, historical studies of the traditions and cultural legacy of the vast area which centered upon the monastery, and which included areas now part of the provinces of Brescia, Cremona, Parma, Mantova and Reggio Emilia.

During the 1990s at Montichiari five necropolises have been identified and excavated, all in areas close to the banks of the River Chiese or on the southern lower slopes of the hills of San Zeno and San Giorgio. The excavations revealed a large number of funerary furnishings dating from the 7th century. In particular the necropolis of San Zeno Hill has brought to light an unusual quantity of bone combs, which testify the existence of a busy handicraft production area, probably associated with the fact that the community was still settling in, and formed of second-generation individuals, who had not experienced in person the migration and the earlier settlement.

The furnishings in question are now on show at the exhibition entitled *Longobardi nel Bresciano. Gli insediamenti di Montichiari*, held at the *Museo Bergomi* of Montichiari.

Some very recent findings include burials in the church of San Pietro di Mavino at Sirmione. The first centre where the Longobards settled in the area of Brescia, Sirmione, its castle and

surrounding territory quickly became an important community which takes over a pre-existing settlement, whose presence is testified by the Early Christian church of San Pietro, where Longobard aristocrats were buried. The furnishings from these tombs are on show at the archaeological museum at the so-called Grotte di Catullo (or Caves of Catullus), where they will be undoubtedly one of the main attraction of an upcoming exhibition.

The data gleaned from the necropolises and cemetery areas allow us to trace a clear picture of the various phases of the early settlement and the subsequent stabilizing of the Longobards in the area of Brescia and of the area known as "Bassa Bresciana" (an area extending to the South and East of the town). We can chart the dynamics underlying these events, which eventually led to the rise of first rate protagonists, the duke of Brescia Rotari, and later duke Desiderius, who became King of the Longobards.

For the future we must aim at integrating existing data with fresh knowledge, by completing the survey of Brescia territory and of its surrounding Municipalities, while also engaging in conservation and enhancement activities focusing on both the structures and the archaeological finds.

Present state of the documentation

Paper and digitalized documentation (files, plans and images) of the archaeological investigations carried out in the area of the Site and of the buffer zone and on the surrounding territory are held by the Lombardy Superintendency for Archaeological Heritage (archives of the headquarters in Milan and Brescia). In particular, the documentation relative to the site is also held by the office entitled Settore Musei, in the Municipality of Brescia.

The finds from the excavations are held by the Lombardy Superintendency for Archaeological Heritage (in the deposits of the headquarters in Milan and

Brescia). Some contexts are held in the local museums: at Santa Giulia, also home to the city's historical collections, and at the museums in the towns of Manerba sul Garda and Manerbio.

The idea of reorganizing all existing documentation in a data bank linked to a GIS (Geographical Information System) is presently being considered to facilitate management and consultation, also by using Internet. It should be possible to include and make use of the GIS already set up by individual Communes for some portions of the territory, which were created to draw up the Territory Management Plans provided for in the new urban law, and link up to similar systems which exist at regional level. Lombardy Regional Authority has in fact set up a *Sistema Informativo Territoriale* (SIT) for the whole territory which allows the acquisition, update, process, representation and diffusion data and information referring spatially to the earth surface. In the SIT of Lombardy Regional

Authority, which is consultable on line (www.regione.lombardia.it), is where information is easily collected and retrievable for processing purposes; it constitutes an important knowledge tool, as well as a tool supporting decisions regarding programming and planning.

Lombardy Regional Authority also proposed and provided for a system to catalogue the cultural heritage of Lombardy that is diffusely present over the region, or preserved in museums and other cultural institutions. This catalogue can be consulted by visiting the following website www.lombardiabeniculturali.it. As well as in many other categories inside SIRBeC works of art and artefacts are catalogued as well as architectural heritage, archaeological finds, archaeological sites and monuments. Every asset is described by providing a range of information including: type, constituent materials, execution technique, name, author, location, and period.

Archaeological excavations in Sirmione

6.1.3 PRESENT LEVEL OF KNOWLEDGE ABOUT CASTELSEPRIO-TORBA AND SURROUNDINGS

The researches and knowledge about Castelseprio have long been the province of historians because of the prestigious location of the castle northwest to Milan in particular, because of the religious role played by the castrum in lower Middle Ages. Only in the 19th century did the archaeological and antiquarian interests of the noble Archinto family from Milan lead to the first archaeological surveys, especially in the area owned by the family close to the St. John's basilica.

It was in the 1840's that A. Corbellini carried out his initial excavations, which brought to light monumental burials with stone slabs bearing sculpted high-relief crosses and allowed retrieving Roman and medieval funerary inscriptions among them the inscription relating to Wideramn (6th-7th century), which testifies to the link between the German nobility of Seprio and the castle. In those years many sculpted decorations were also brought to light from Roman, lower medieval and later ages, pointing to the uninterrupted presence of man in this castle village that controlled the neighbourhood and the main roads leading to Alpine passes thanks to its commanding location halfway between the lower and the higher flatlands.

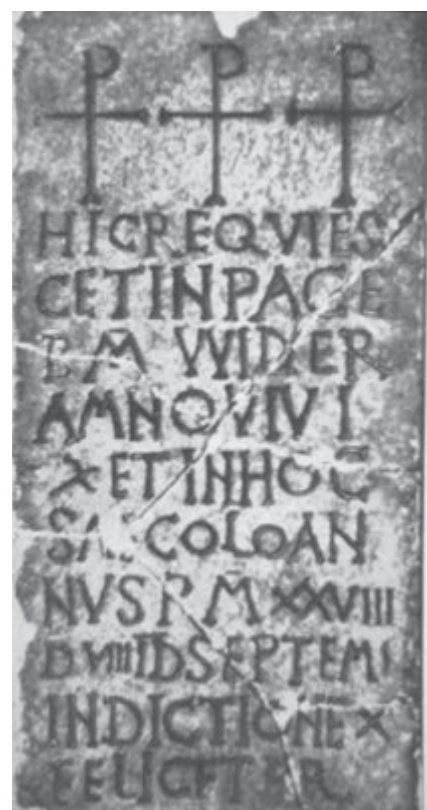

At all events, it was only in the 1940's that G.P. Bognetti, a law historian, started multi-disciplinary researches involving archaeologists, architects and art historians upon the discovery of the church of St. Maria *foris portas* and its extraordinary frescoes which have remained unique so far. Those researches resulted into publication of a book on St. Maria in 1946, where special consideration was given to the role played by Castelseprio and its district (*giudicaria*) under Longobards'

rule as a centre of administration and justice at times actually taking the lead over Milan.

Following the discovery of the church of St. Maria *foris portas*, the scholars' interest focused mainly on the frescoes. This gave rise to a long-standing debate, which is still in progress, on the whereabouts of the artist who had painted them some scholars believing him to be a Byzantine who had fled to the West during the iconoclastic turmoil as well as on the period of their painting which has been estimated to range from the end of the 6th century up to the 9th century.

Round the mid-20th century, M. Bertolone started bringing to light the remains of the castrum, in particular the central area where St. John's and St. Paul's were extant. However, only in the '60s of the past century did the first scientific archaeological excavations begin following the impulse given by M. Mirabella Roberti; they were carried out

Inscription of *Wideramn*

by the Polish archaeological school (whose initial findings were published in 1978-79) and concerned the area close to the walls and St. John's. They were followed by archaeological excavations carried out by the Superintendent's Office for Archaeological Heritage in Lombardy and the Catholic University of Milan (whose initial findings were published in 1980), whilst more limited researches were being performed by other scholars. This allowed bringing to light the walls and towers of the ramparts including portions of the fortifications leading to Torba. The excavations also concerned early-medieval dwellings, a graveyard close to the apse, and St. John's late-Roman tower. Investigations were extended to the areas outside the castrum, near the Tower and the Torba farm (cascina) including the Santa Maria di Torba

A tomb and the remains of original apse of San Giovanni

Archaeological exploration inside the apse of San Giovanni Church:
Longobard burial and evidences of the original apse

church and to a smallish area of the village, in particular close to St. Maria foris portas. Here, a team of English archaeologists under the direction of the Superintendent's office probed into the area inside and outside the church and unveiled a necropolis (these findings were first presented in 1984). Few researches were carried out over the past two decades, when mostly emergency excavations were performed; conversely, the activities aimed at documenting the structures brought to light and the analysis of certain building features continued uninterrupted. Of late, in the summer of 2007, soundings were taken for research purposes in the apse of St. John's, which yielded important findings such as to revise the interpretation of issues related to the origin and initial structure of the building which has long been a subject of scholarly debate. Exhaustive results will only be achieved if the

investigations continue and are expanded, which is actually already envisaged.

Therefore, the status of the researches concerning Castelseprio can be said to be multifaceted; however, it should be pointed out that there have not been extensive excavations yet based on the use of modern techniques so as to finally solve some of the issues arising out of both past findings and the accumulation of general knowledge. Additionally, the studies performed so far on the documents and the available excavated materials are not sufficient. Although initial data have already been published in respect of most researches, there has never been so far an exhaustive publication of the various findings except for those excavated by the Polish team in the 1960's. It would be desirable to review all the data gathered over the years in the light of the most recent findings; similarly, it would be necessary to carry out more

Showcase inside the new Antiquarium

in-depth researches on the findings of the individual excavations to get a full picture of the products and culture pertaining to the various sites.

It is necessary to take up the studies already performed and plan new investigations both in Castelseprio and in the surrounding areas to carry out more in-depth comparisons with the situation in Lombardy as well as at national and international level.

At all events, the ongoing researches and those already performed have resulted into several studies that could highlight the importance of the early-medieval period as regards this area along with its role in the broader context of the Longobards' rule over Lombardy. In this connection,

Castelseprio is on a par with the major castles that developed into practically urban areas - which is explicitly shown by its being referred to as a town (*civitas*) in the writings of the Anonymous from Ravenna (7th century) and its title of *flavia town* as visible on coins minted in the age of Desiderius (*Flavia sepria*). Starting a comparative analysis in respect of other fortified towns in northern Italy will be helpful to better outline both the history of power in the Lombards' kingdom and the relationships with local populations and territory; this will also shed light on the hierarchical system of towns and castles that developed especially following 590, when king Agylulph came to the throne and the

monarchial rule was ultimately strengthened.

From this viewpoint, carrying on the archaeological investigations will be of the utmost importance in order to establish when the castle turned from a defensive structure of military nature into a centre administering and exercising its power over the surrounding territory - which took place exactly during the Lombards' rule.

The issues at stake have to do first and foremost with the in-depth assessment of the building features of this centre starting from the expansion of the imposing fortifications, whose origins and development phases have yet to be clarified, up to the dwellings inside the fortifications and the possible identification of valuable buildings and/or buildings for the powerful, and ultimately to the most outstanding features, which can be found so far in the places of worship with their decoration. Valuable, significant frescoes can be seen in the church of St. Maria foris portas and the place of worship located inside the abbey of St. Maria di Torba; however, the monks' oratory that was built in what was formerly a tower of the Roman walls should also be mentioned. These paintings are still the subject of discussion exactly on account of their being unique, wide-ranging in nature and of outstanding quality; it is unquestionable that they testify to the existence of rich patrons that could attract artists from all areas of Italy, however they also draw on the artistic milieu of the Byzantine near-East via Brescia, Rome and Ravenna as well as on the areas across the Alps being reminiscent of works that can be seen in the abbeys of Münstair and Reichenau. Furthermore, the churches of Castelseprio, both inside and outside the walls, show different structures that point to the different functions performed by Castelseprio also on

Marble furnishing from S. Giovanni Church: a cancel and a capital of Longobard phase (7th and 8th cent. A.D.)

account of the hierarchically different power centres that were simultaneously present within the castrum.

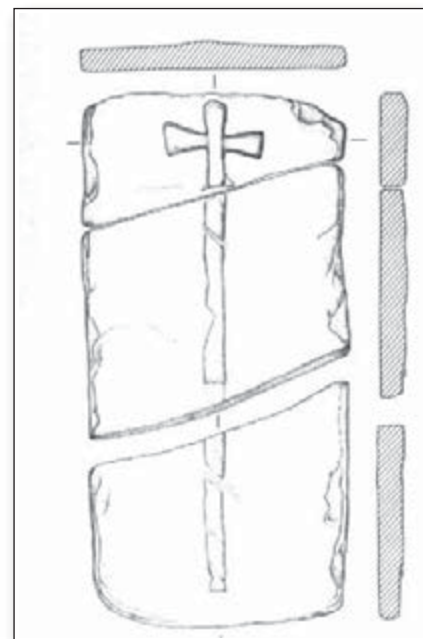

The wide gamut of social and cultural links exhibited by the places of worship ranging from the reuse of the walls as the fortifications for a monks' site up to the frescoes, which are among the most important ones from the early-medieval times in Lombardy would point to the need for considering possible connections not only with the area of Varese, but above all with Pavia, which was the capital city of the Longobards' kingdom, and its monasteries as well as with Milan and, first and foremost, with the main

components of the Longobards' age as included in the candidature.

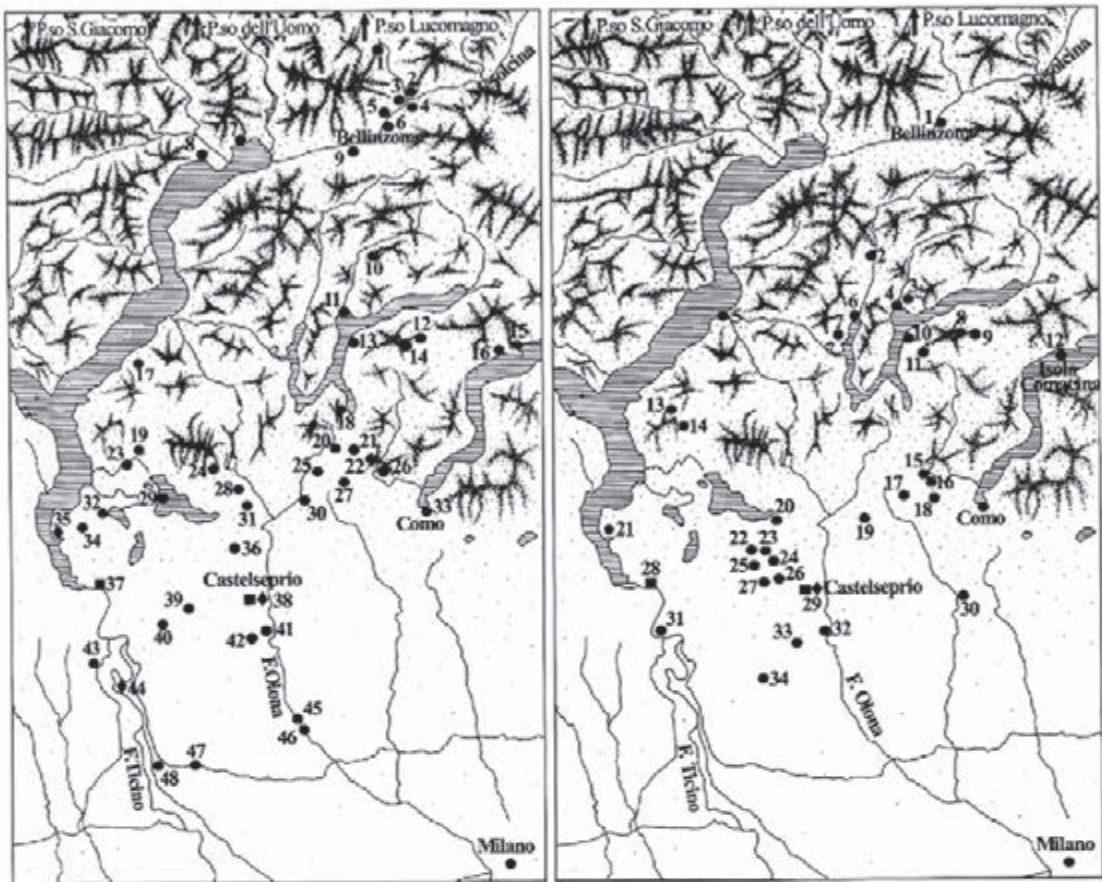

Sculpture manufacts, which are related once again to the decoration of churches and/or burial monuments, can afford fewer data for research purposes; however, the extant findings, in particular a marble basin with carved decorations dating from the 6th-7th century, testify to the renewal of the liturgical apparel in St. John's church that took place under Longobards' rule. Special importance should be attached, partly in order to better understand the relationships with the surrounding territory in the early-medieval age and the distribution of power, to the

monolithic slabs used in the burial grounds of St. Mary's and St. John's; each of them is decorated by a high-relief cross with three or more arms. These items were specially common in the "giudicaria" (district) of Seprio, as they have also been found in Arsago Seprio and Castelnovate - which clearly testifies to the high density of high-level manufacts in this area and accordingly to the important, key role played by Castelseprio and its territory in the early medieval age.

The Territory of the Seprio Giudicaria (District) The territory of the Giudicaria of Seprio covered an area ranging from

Monolithic slabs of a Tomb from cemetery near S. Giovanni Church

Map of the 'Giudicaria del Seprio' with the main evidences referring to Early Middle Ages

Bellinzona, in the north, to the Upper Region of Como and Severo, to the east, Lake Maggiore and the Ticino river to the west and the area of Milan close to Parabiago southwards. This area is known mainly thanks to written documents, which point to the existence of a few especially important sites: namely, Campione d' Italia, for which one of the most important as well as best known sets of documents from the Lombard and Carolingian ages is extant, Castelseprio, Sesto Calende and Arsago Seprio, Sumirago and Angera, and Cairate. The available sources provide a highly interesting picture for this whole area, and if matched with archaeological findings they show the key economic and commercial role played by this territory under Longobard' rule.

The findings concerning Longobards in the Seprio area, which actually include the Upper Region of Como and the southern Canton Ticino close to Bellinzona, consist in isolated tombs, necropolises, burial grounds next to places of worship; in some cases they were brought to light many years ago and are not accompanied by suitable documents, which is why additional investigations would be necessary. Jointly with other items of evidence related to the early medieval age in this area, they point to the widespread distribution of population also in Longobards' time; a hierarchical system of dwellings can be identified, including the main centres (Castelseprio, Bellinzona, Castelnovate, Pombia), smaller castles (Castel San Pietro, Laino d'Intelvi, Rodero/San Matteo, Velate), villages without defensive walls or fortifications (Stablio, Campione, Sesto Calende, Arsago Seprio, Sumirago), and small rural settlements - which, though mentioned in documentary sources and marked by isolated tombs, are difficult to locate.

As for the Giudicaria, in particular the territory of Varese, the findings are located mostly along the main roads: i.e. the Como-Novara road (Castelseprio, Gornate, Morazzone, Busto Arsizio, and Castelnovate) and the Milan-Lake Maggiore road (Legnano, Gallarate, Arsago Seprio, Sesto Calende). Here, recent excavations unveiled small necropolises and settlements that usually replaced pre-existing Roman and/or late Roman buildings - except for Arsago, which is so far the settlement with the most interesting features from an archaeological standpoint as regards the Lombard period, thanks to the excavations of a large necropolis, recently published, which shows the existence of a settlement inhabited by Harimanns.

The presence of Longobards is currently documented in Bogno Besozzo, Angera, Cocquio Trevisago, Lagozza, and Sesto Calende - in addition to Arsago Seprio. Additional investigations would be required with particular regard to the sites mentioned by diplomatic sources, which testify to a sparse though pervasive distribution of the population along the network of roads and rivers as well as along pre-historic routes.

The places of worship in this territory would also require more systematic analyses of the available information and more in-depth investigations; they have been the subject of excavations undertaken in the past decades on urgent grounds. Special importance should be attached to the churches of S. George's in Legnano, St. Mary's in Busto, St. Vittore in Arsago Seprio, St. Donato and St. Vincenzo in Sesto Calende, St. Maria and St. Alessandro in Angera, S. Maria in Sumirago, St. Maria in Cairate including the monastery, St. Vittore and St. Peter and Paul in Varese, St. Primo and St. Feliciano in Leggiuno, and the church

of St. Michael's which was the pivot for the cloisters of the monastery of Voltorre.

The multifaceted nature of the landscape in the Varese area, which changes stepwise by travelling from the lower flatlands to the subalpine regions and shows different features depending on whether one is in an inland area or along the banks of rivers or lakes, is an integral part of the history of the Seprio region. The wealth of natural resources, lush woods and abundant waters was consistently emphasized in historical sources and accounts for this being a "land subject to Royal privilege surrounded by rivers" as per the references contained in several charters. Documentary sources show that this area was rich in woods and forests; it is known that carpenters worked in the forests king Liutprand owned close to Besozzo (or Bizzozero), and there were vineyards next to the villages along with olive trees, chestnut trees and orchards. Additionally, archaeological findings testify to the presence of kilns where clay was baked, whilst other documents refer to the gold in the Ticino river and the quartz that could be extracted from the river to produce glass.

These natural riches are an integral part of the history of this territory; they should be safeguarded both via systematic geo-environmental and geological researches supplemented by historical and archaeological investigations and via the continuous monitoring of the sites that are especially valuable in terms of landscape and environmental features (views and bio-types) as well as by means of preservation and exploitation projects that can impact on territorial governance policies.

6.1.4-5 PRESENT LEVEL OF KNOWLEDGE ABOUT SPOLETO AND CAMPELLO SUL CLITUNNO AND THEIR SURROUNDINGS

THE SITE AND THE BUFFER ZONE

Faroaldus' foundation of the Longobard Duchy of Spoleto happened shortly after the arrival of the Longobards in Italy. As with the Duchy of Benevento, this one in central Italy with its capital in Spoleto was widely independent until 729 A.D. when it was subjected to the Longobard king. The Basilica of San Salvatore, located at the borders of this city and the Clitunno Tempietto, along the track of *Via Flaminia* a few kilometres north of Spoleto, both are exceptional buildings and extraordinarily conserved, studies show that they seem to be associated with Spoleto's period of independence; in any case, in evidence is the taste for prestigious architecture found in all the other duchies, in the north and the south, an expression of the aspiration of Longobard's *élites*.

Very little is known of the urban layout and public and residential architecture of the Longobard period, apart from some information deduced from documented sources.

Many Farfensi documents were found to be drawn up *in palatio*, or in the *curtis ducis* (the duke's premises) which historiographic tradition placed in the *insula* where the monastery of Sant'Eufemia was later inaugurated. In this area archaeological digs uncovered a large Roman building of the Silurian period, with re-adaptation phases of an uncertain time.

With regard to the location of the *curtis regia*, some scholars suggested the area where the theatre is in which there is still a visible structure with *fallen masonry*—interpreted as the surviving part of a fortified building, perhaps the Spoletine *gastaldaga*, connected to the church of Sant'Agata the creation of which, indeed,

was deemed to be in the Gothic or Longobard eras.

Archaeological digs carried out following renovation works on historical buildings recently uncovered evidence which is certainly significant for starting to form a picture of the urban situation of the capital of the Duchy.

In 2004, during the progress of post seismic recovery work on the sixth century *Palazzo Mauri*, near to the forum

of the Roman era, a complex of environments destined for a spa was found, of which two areas were uncovered: the first shows a semi-circular bath coated in *cocciopesto* (concrete with broken brick). The other, a square plan of about 6m a side with a central drainage grate made in marble and sculptured in bas-relief with vegetable motifs, has an extraordinary mosaic floor. Its decoration include

vines which spring from four central baskets and develop into ample, very elegant swirls enclosing bunches of grapes and shoots with leaves. Among the shoots there are various animals, deer, birds, a horse and a hare. Along the walls the mosaic is bordered by a plait containing triangles and rosettes. The depiction is mainly compiled using the colours red and black on a white background, embellished with blue, green and burgundy glazed tesseras for the representation of the animals. The decoration as a whole is of great elegance and formal balance, also in the coded effect of the elements. The mosaic seems to date back to the last decades of the 6th century, and in its clear reference to Christian symbology, it constitutes a document of exceptional interest as the quality of the representation reports a very high end patrons and at the same time certifies that a building complex of notable importance in the area. The pre-existent spa building, therefore, might have been the subject of interventions of re-flooring commissioned by the first Longobard dukes in relations to their residence, or, rather, with that of the archbishops' premises, taking the Christian nature of the representation into account, which may induce it to be considered as used as a baptistery.

The discovery of the important mosaic inside *Palazzo Mauri* undoubtedly confirms that this sector of the city was re-qualified by the Longobards. It would therefore be interesting to further examine the analysis of this sector, with new investigations on the church of Saints Ansano and Isaac, backing on to the Roman wall in relation to the city gate, established on the podium of a temple and by the very rich angiographic tradition.

In the same area, at *Palazzo Fontana*, further imposing residential structures of the Roman era were found which were used until an advanced Longobard era, as

the conspicuous quantity of 6th-7th century ceramics discovered and the high quality wall coating with glazed mosaics and marble sheet attest. The vicinity of a church dedicated to Saint Appolinare to the palazzo, because of the deducible relation with the Ravenna church, reinforces the hypothesis that placed the archbishop's premises in this area.

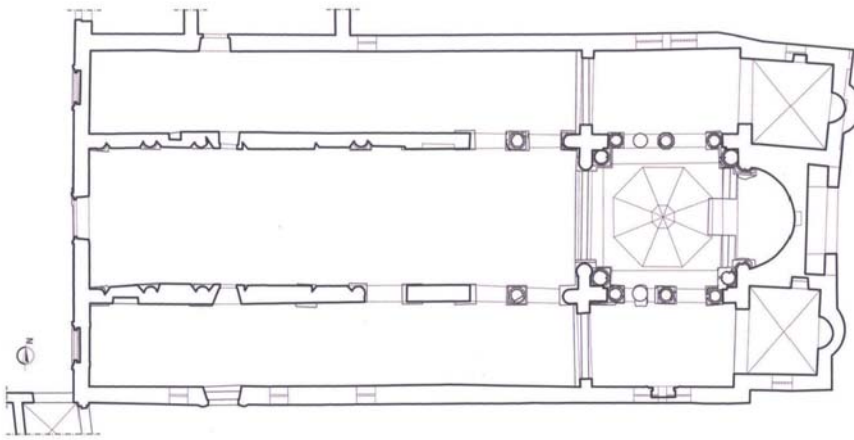

Further archaeological discoveries in 2005 corresponding to *Palazzo Pinciani*, also relative to post seismic recovery, have given a picture which also extends to the following centuries. A

baptistery with mosaic flooring attributable to the 8th century was found under the Palazzo, also in this case built over Roman spa environments which exploited the presence of a source of water. The mosaic floor shows geometric decoration inside which two square decorative panels are inserted, one of which is figured and polychrome. This depiction has a clear symbolic meaning linked to the rite of baptism: two deer and two doves are at the side of a *kantharos* from which trickles of water flow which quench the deer and two

Palazzo Mauri, the mosaic

San Salvatore, planimetry (by E. Rapetti 2001)

San Salvatore, from the Graveyard

shoots with fruit pecked by the doves, at the centre is a peacock displaying its feathers symbolising the soul renewed from the christening.

The presence of a Longobard district was hypothesised in the surroundings of the amphitheatre which was renovated by Totila and very probably used by the Longobards as barracks for the army, in particular for the cavalry. In the suburban area directly nearby, in fact, there are evident Longobard traces certified by the existence of cults particularly dear to that ethnicity: that of Saint Sabino to whom the sanctuary also mentioned by Gregoria Magno is entitled in which a large necropolis of post-classic era was uncovered in recent years;

The church of San Salvatore on the Ciciano hills for which the functions of a religious centre of the ducal centre was also proposed, possibly an Arian cult;

The church of *San Michele Arcangelo* with the function of *ecclesia baptismalis*;

The graveyard area of San Ponziano from which, among other, originates a tombstone pertaining to a person of undoubted Longobard ethnicity, *Agipertus*.

Further data is awaited from the dig in progress in the north courtyard of *Rocca Albornoziana*, located at the summit of the *Sant'Elia* hills, the Roman *arx* in strict topographic relation with the underlying *insula episcopalis* probably of the paleochristian era. The dig is uncovering a large single-apsed, single nave building of an exceptional size, which displays several building phases of which the oldest is probably of the high medieval era.

With specific regard to what is known of the Basilica of San Salvatore, put forward for inscription on World Heritage List, the proposals offered for dating it over time do not agree, varying from the paleochristian era to the Theodoric era, up to reaching what currently appears to be a date agreed upon by the majority which is the 7th

San Salvatore, Otfastade. Survey of the church's back (G. Nasoni, R. De Sio / Terni)

century -an earlier date also confirmed by the type of architectural surveys-. The building in its current *facies* is certainly the result of several interventions; with regard to this it would be worthwhile reconsidering all the data that emerged from the Sordini dig of 1906, that of Salmi in 1939, Ward Perkins in 1946, the Superintendency in 1951 and Archive documents as well as the interesting Viani descriptions dating back to 1860. A review of all these documents would be necessary in order to design a new aimed campaign of excavation which, no doubt, would better clarify the the relative chronology of identified phases, the original function of the building and its morphology. Basically it means intervening internally inside the presbytery in order to re-evaluate the structures notified by Sordini, also found in the site plan drawn by Montiroli in 1875 and documented in a photograph dated 1906. In effect Perkin's dig showed how the basement of the apse preceded its construction, moreover of the same period as the nave and presbytery. A site layout of 1790 furthermore shows a burial at the centre

San Salvatore, presbytery. External wall

of the presbytery. All these elements suggest the existence of a pre-existing structure, perhaps a memorial relating to the cult of Concordio onto which the tri-nave Longobard basilica was built. Other essays on the terrace facing the facade could then clarify the presumed existence of an esonarthex, hypothesised on the basis of the discovery of the foundation walls (Perkins' dig).

As far as the Clitunno Tempietto, the most recent studies of Judson Hemerick and Carola Jäggi also date this to the Longobard era, with an oscillation between the beginning of the 7th (Jäggi) and full 8th century (Hemerick). There are, however, still some doubts regarding its original destination and building phases. Probably at the start,

The Clitunno Tempio, northern side

before the intervention of Longobard patrons it was a building with one sole room with a barrel-shaped vault (corresponding to the cell of current construction). It is therefore necessary to examine all the existing data and documents in order to plan any in-depth investigations, directed, also in this case, to the identification of any pre-existences. A total re-read of the monument -which again more attentively examines the building in the light of methods of re-use (functional and ideological), of the structural, functional and decorative necessities- may moreover throw new light on a series of implicating aspects of the Longobard patrons, so extraordinarily permeable to the cultural reports, traditional heritage and technical abilities of the places in which it was allocated.

THE TERRITORY

The suburb of Spoleto received an articulated system of martyrial buildings very early on, these were topographically dispersed according to criteria of time scale and typology in order of the origin of the cults. The oldest, in fact, starting from the end of the 4th century are out of *Porta Romana* to the south of the city along the track of *Via Flaminia* towards Rome. They are sanctuaries dedicated to the Roman martyrs Peter and Paul and the Apostle Saints amongst which, for the former, a foundation was archeologically certified on a funeral area previously occupied by a villa. The sanctuaries dedicated to the Spoleatine martyrs - or the important ones -, on the other hand, date back to the 6th century, located along the western section of *Via Flaminia*. These

are San Gregorio at *Sanguinaro* bridge, which emerged in relation to a necropolis of Late Antiquity. Not far away, along *Via Nursina*, on the slopes of *Colle Ciciano*, is the church of San Ponziano and a little further *San Concordio* (the medieval San Salvatore included in the candidature).

A few kilometres from the urban centre was San Sabino, protector of the military, a destination of pilgrimage even from distant Spain. The building was still active in the Longobard era and rose from a funeral area, it encompasses the mausoleum of *gens Caesia*, the owner of the villa discovered here. The sanctuary had a privileged relationship with the Longobards which witnesses a step of the *Historia Langobardorum* by Paul the Deacon in which Ariulfus goes to the Spoleatine sanctuary to thank the martyr Sabino for a favour received during war.

Other cult buildings in the area can also be traced back to the Longobard era: the plebeian oratory founded by *San Brizio* on the road which lead to Bevagna, about seven kilometres from Spoleto and the church of *Sant'Angelo* on the Ciciano hillside along *Via Nursina*, which probably emerged in the Longobard era, in relation to a cult of waters, contextually to the presence of caves, of the Gargan model type of mount Sant'Angelo.

Along *Via Flaminia*, at Camporoppolo, there are the churches of *Sant'Angelo in Nece* or *Sant'Angeletto* and the settlements of *Beroide* and *Piè Beroide*, in the evident Longobard toponym.

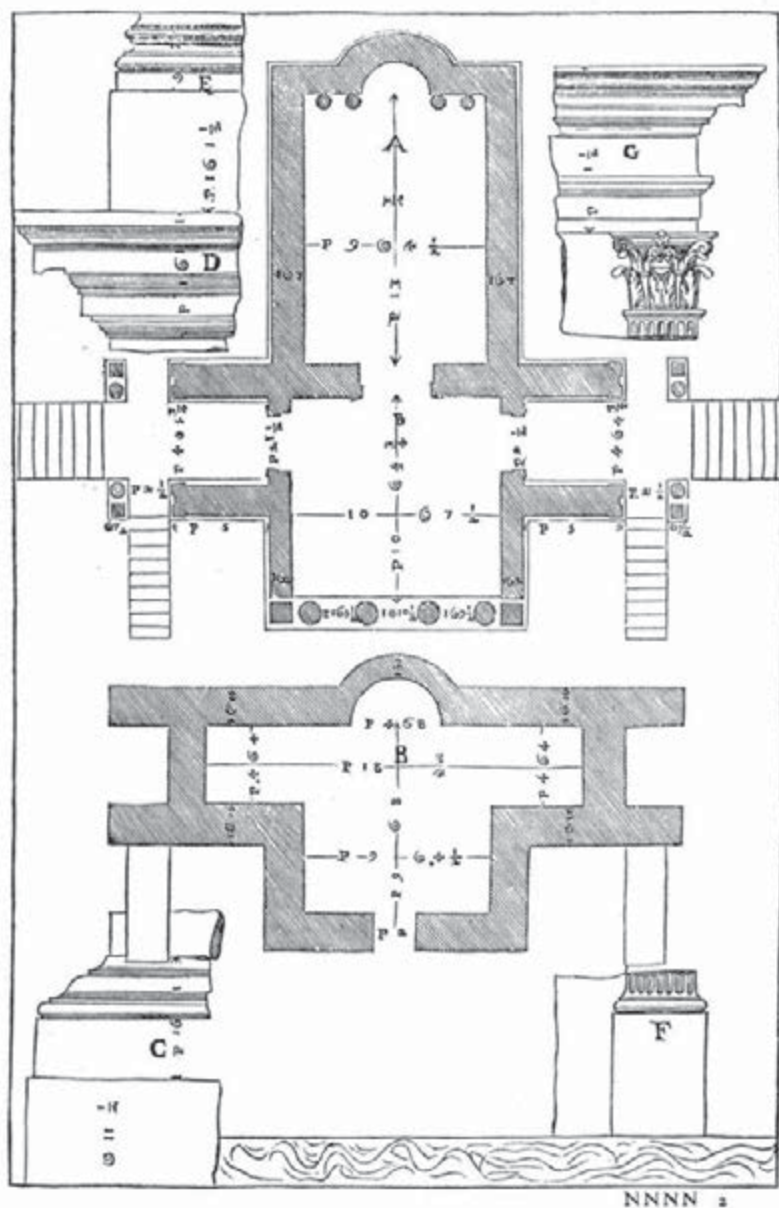

Proceeding northward, near to the Shrine of Clitunno, the complex of *Sant'Angelo in capite* and the baptistry annex of San Giovanni again recall the cult of waters as does the shrine on the Clitunno –this is also dedicated to the Angels– the structures of which are encompassed in the podium which until now have scarcely been considered, they probably refer to a primitive iatrogenic plant linked to the iatrogenic cult of waters, which are, furthermore, documented for this area from very ancient times.

Extremely qualifying in the Longobard period is also the presence of hermit and monastic settlements in the Spoletine territory, the so-called “Tebaide umbra” (Umbrian Thebaid) –that is, the *Monteluco*–, which definitely play a defining role in the process of Longobard integration. Pope Gregorio Magno in *Liber Dialogorum* recalls the matter of the Syrian ascetic monk Isaac who arrived in Spoleto at the time of the Goths and founded a hermit settlement in the woods of Monteluco, which quickly evolved into a *monasterium*. The complex of *San Giuliano* is recognised as part of this and in any case should not be the only one in the area as can once again be deduced by Gregorio in relation

to the creation of the monastery of *San Marco*, certainly located in the place of the current homonymous church of which some structures, dated to mid 6th century, were uncovered in essays on digs carried out between the end of 800 and the beginning of 900.

If, from the angiographic tradition, a decidedly articulated picture of cenobitic settlements founded by ascetic monks emerges, of which precisely *San Pietro*

di Longotorto, *San Giovanni della Perchia di Baiano*, the *cenobium* of Micheco, unfortunately at present the relative structures refer to fully medieval *facies*. Hopefully there will be systemic digs for these too and in-depth examinations on the existent structures in order to ascertain the original *facies*. As far as the foundation of monasteries in the Longobard era are concerned, on the other hand, it is legitimate to

Drawing by Palladio. 17th century A.C., planimetry

The *Aedicula* protruding from the apse

presume that from as early as the end of the 7th century Spoletine Dukes and probably the court of Pavia as well, promoted and favoured the construction of *cenobium*. With regard to this an ancient legend traced back to the initiative of duke Faroaldus II, the foundation of the *cenobium* of *San Pietro in Valle*, then destined to receive the ducal remains. Recent studies have confirmed the tradition, identifying the settlement with the homonym *monasterium* cited in *Constructio Monasterii Farfensis* and built by Martirio, *socius* of the founder of *Santa Maria di Farfa*, the *cenobium* wanted and sustained by Faroladus. New in-depth archaeological investigations could confirm the hypothesis of the presence of a hermitage in antiquity in the place where the church was then built, traditionally referred to the presence of *Lazzaro* and *Giovanni*, the ascetics pertaining to the group of three hundred Syrian monks who were in the area of Spoleto. To the latter was also traced the foundation of the monastery of *San*

The *Aedicula*, detail

Felice di Narco, more specifically to *Felice* and *Mauro*. Despite the fact that the current complex is in the *facies* of 12th century, recent digs have uncovered a necropolis with material dating from the 4th to the 7th century.

The question of the monasteries in the suburb of Spoleto is more problematic, many of these were only certified as such starting from the 10th century. This is the case of San Ponziano and San Sabino, for which nonetheless the existence of buildings of more ancient cults, probably funereal, cannot be excluded, given the graveyard vocation of the areas in which they lie.

The same situation appears valid for San Salvatore, which originally must have been a martyrial basilica, as the original dedication to san Concordio would indicate, also confirmed by the presence of a tomb exactly corresponding to the main altar, and of an underground room obliterated at the time of eighth century restorations. The building was in fact indicated as a *monasterium* in the diploma of 815 A.D., with which Ludovico il Pio confirmed his possession to the abbey of Farfa jointly to the monastery of San Marco.

Again in relation to the land near to Spoleto, the discovery of a rustic villa dating between the 6th-7th century – which came about during works on the new *Via Flaminia* in the district of Eggi-, confirms the economic potential of the city in that period, determined by the settlement of the political framework offered by the foundation of the Longobard duchy. Productive plant for wine and oil were found in the villa and various furnaces for producing canteen ceramics and lamps.

As is evident, Spoleto and above all its land, present an exceptional picture of the settlement between early antiquity and high medieval, extremely variegated, in part still linked to the ancient Roman scheme of organisation of the territory onto which new forms of management

of Longobard power intervene. Proof is also found in the obvious spatial and temporal continuity between villas, funeral areas, buildings of martyrial cult, in some cases transformed later into *monasteria*. This extraordinary archaeological power requires new, aimed and systematic dig campaigns

which, in some cases, could throw some light also relatively to sectors that until now surprisingly have not been investigated, such as funereal archaeology of the Longobard era. It is in fact known as that up to today significant findings in Spoleto relative to Longobard ethnicity are lacking; this

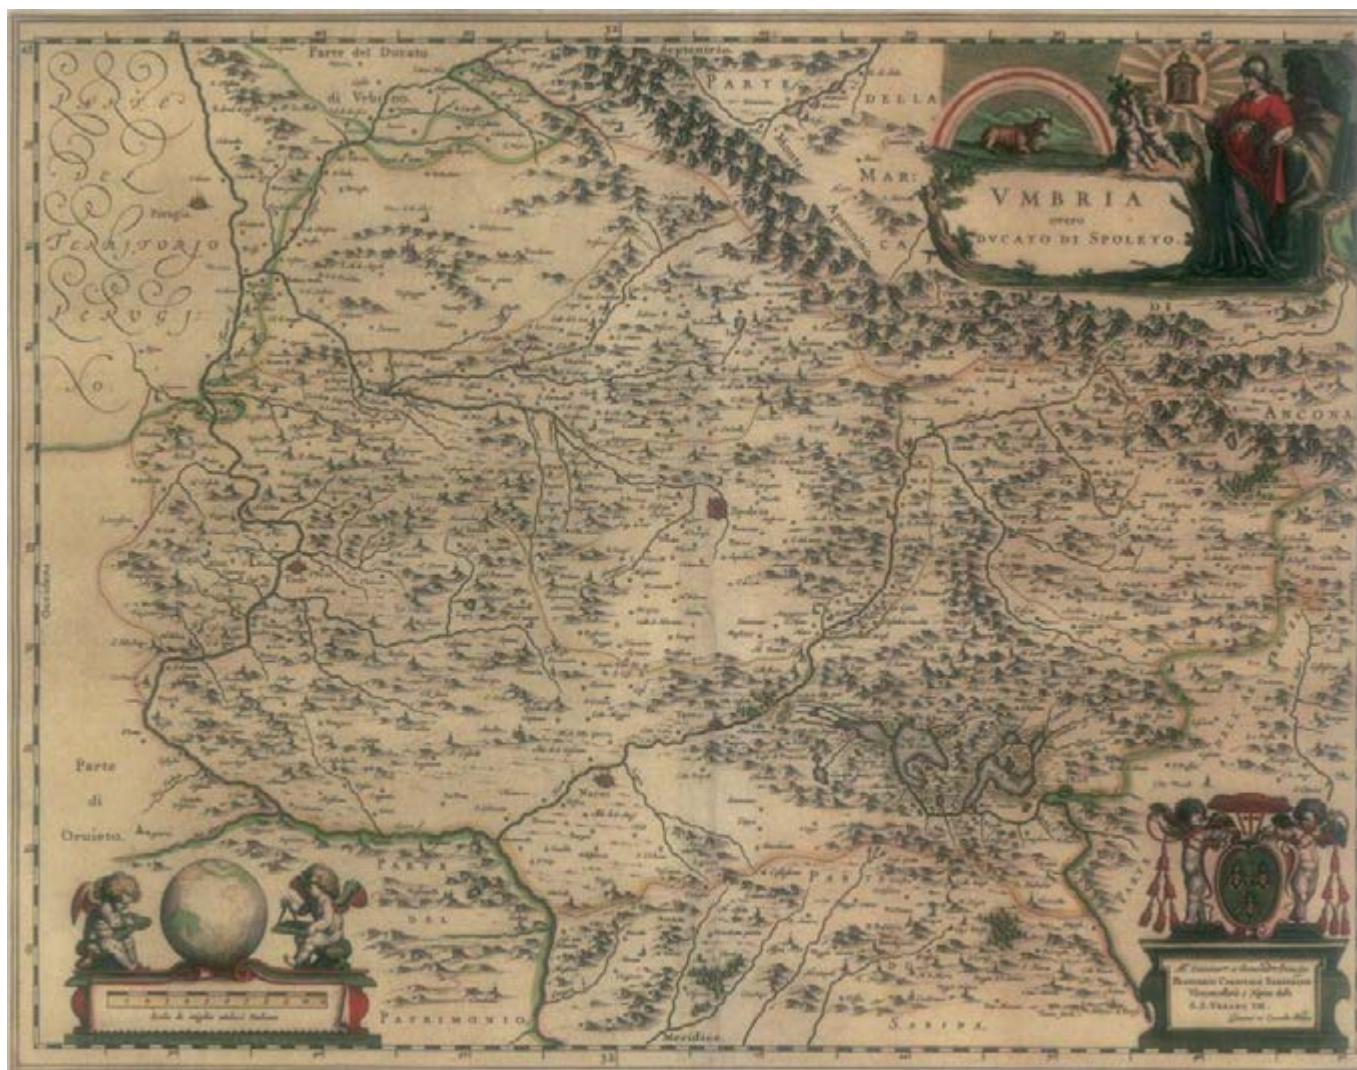

Detail of the figure of Apostle depicted in the apse

data is certainly worrying when one considers that at some kilometres from Spoleto, along *Via Flaminia*, there lies what is probably the most important and most ancient Longobard necropolis in Italy, that of Nocera Umbra, in the same way as the Longobard duchy of Spoleto pertains to the other extraordinary necropolis of Castel Trosino.

The consistent presence of cult buildings dedicated to the Angel, all located in sites high up, if investigated, could also supply interesting data regarding the presence of structures of a defensive nature of the Longobard era. Among the sites worthy of

archaeological investigation, those less known should definitely be acknowledged: *San Brizio* with its *cenobium* and castle; *San Pietro di Longotorto*, *San Giovanni della Perchia di Baiano*, the *cenobium* of Micheco; in Camporoppolo the church of *Sant'Angelo in Nece*. But also the better known: *Sant'Angelo*, *San Ponziano* on the Ciciano hillside; *San Sabino*, the *Ss. Apostoli*. Proceeding northwards, at the Shrine on the Clitunno, the complex of *Sant'Angelo in capite* and the baptistery annexe of *San Giovanni* and last but not least, *San Pietro in Valle a Ferentillo*.

6.1.6 PRESENT LEVEL OF KNOWLEDGE ABOUT BENEVENTO AND ITS SURROUNDINGS

Studies on Benevento and on *Langobardia Minor* in general have received a strong impulse by the discovery of the frescoes and the original structure of the church of Santa Sofia, during restorations carried out there in the 1950s. Critics have recently introduced the concept of Beneventan-Cassinense Art, referring to the painting and illumination which was produced during the Early Medieval period in an area historically known under the name of *Langobardia Minor*. The concept means to highlight primarily the existence of a deeply homogeneous culture in this area, as well as the role of focal centres played by the city of Benevento and by the Benedictine Abbey of Montecassino, whose influence and fortune rose and waned differently through over the centuries. Benevento was for many centuries the capital of the Longobard dominions in the South, while Montecassino, soon after its reconstruction in the 8th century, became a first rate cultural magnet, as its lively *scriptorium* was capable of attracting intellectual energies from all over Europe. The recognition of the exalted stylistic level of the Beneventan painting cycle at Santa Sofia and the subsequent exhaustive historical and critical investigation have ensured that Benevento and its court became an important focus point in these fields. This led to the definition of “Beneventan” painting, meaning a truly fully-fledged art movement of remarkable importance both for its chronological and geographically extensive range, parallel to the phenomenon known as *scriptura beneventana*, the “national” script style used by the Longobards in Southern Italy, whose formation has been ascribed by palaeographers to the 8th century. New, important studies should result in an

improved, greater knowledge of the history and life of the Longobards in the Duchy: this is now expected also because quite recently some ancient parchments which had become separated have been re-united to each other; this group of parchments are held in the State Archives of Benevento, close to the church of Santa Sofia in the city's historical centre. There remains the unsettled question of relationships between Benevento and Northern Italy, namely whether an active relationship ever existed between *Langobardia Minor* and the centres of *Langobardia Maior* and with the Carolingian cultural centres across the Alps, which played host to surprisingly similar artistic events during the 8th and 9th century.

As to the present state of knowledge of the city of Benevento in Longobard times the situation is as follows. At the moment, maintenance work is being carried out in the area of the ancient Longobard walls which constitute the perimeter of the buffer zone. This provides an opportunity to glean new knowledge thanks to the surveys and investigations presently underway. So far stratigraphical archaeological excavations have been carried out only in a few points

along the enceinte. It is thus necessary to carry out further in-depth work to establish the true chronology of the building of the walls.

The Romanesque cloister of Santa Sofia is also another issue which remains unresolved. Traces of this original Early Medieval cloister can be identified thanks to the presence of “crutch-shaped” capitals, bearing the typical geometrical decoration of the Longobard period. Apart from this, traces of a water cistern came to light during the excavations carried out in the convent's garden. Based on logical and structural reasons, it is possible that this structure could have belonged to the pre-existing cloister.

As to the identification of the *Sacrum Palatium*, the seat of the Longobard duke, its memory remains only in the place name *Piano di Corte*. But recent finds in the church of Santissimo Salvatore, under a layer of 18th century remodelling, seem to indicate there are more remains that was previously believed. This archaeological excavation revealed important burials, dating from the 8th to the 9th century, and the data is about to be published. A fortunate circumstance has led to the discovery of the crypt of the church called San Marco dei Sabariani,

revealing part of the original paintings which can be safely considered as Medieval.

Original paintings San Marco dei Sabariani
Archaeological investigations are still being carried out in Benevento Cathedral. A large number of structures have been identified under its floor, some of them belonging to the original Early Christian building and to its Early Medieval successor, which could be one which rose here under Longobard rule, in the 7th century and whose existence is known thanks to documentary evidence. Evidence concerning the presence of habitations and workshops is still fragmentary. As to residential building, literary sources document the presence of wood and tone houses, including only a ground room floor (thus called *terraneae*) or divided into may levels (and therefore known as *solariatae*). The remains of residences *fabricae solatariae* consist of the remains of wooden bridge-
