INTERNATIONAL ACADEMY OF SCIENCE

Concerned with the failure of science to fulfil its potential in alleviating the miseries of the human condition we here suggest a possible way of achieving a more multidimensional, integral and humanitarian approach to science by improving international and interdisciplinary cooperation and communication in scientific research and education. This project is intended to forge a link between all those who desire positive changes in the practice of science, and to complement and build upon the efforts of others in this direction. Aware of the enormousness of our undertaking, and of the difficulties involved, we nevertheless hope that our initiative will serve to engender real and constructive change in the practice of science.
