# Our language Zaza

# © Faruk İremet, September 1996

Publisher: İremet Förlag, Stockholm

Book cover: Baba Qef

ISBN: 91 - 97 20 69 - 8 - 9

Why this work? One might ask. It's all because our language Zaza is said to be a dialect. Through my work I want to show the big difference between our language Zaza and other languages.

The little dictionary after the article may be helpful for various authorities and others, so that the Zaza language not will be mixed up with other languages. I hope my little work will be helpful, and it's my duty as a Zaza to make the facts known.

# The difference between Zaza, Kurdish and Turkish

To find similarities between two languages, you have to check which languages they come from and developed from. You do that by studying old words and expressions. It's for that reason linguistic researchers always investigate the original words, such as the names of flowers, animals, natural phenomena and the grammar structure. In that way the research-workers define and reinforce their theories about a language's origin.

A language's development starts with images. Mankind developed the written language through images. The pictures became the foundation of the written language. At the same time language has become the key for communication among people.

Mankind's social life begins with the clan. People who landed up in remote regions, away from the clan, took with them their language's character. Banishments, coercion transfers, exile or pure love of adventure are some of the factors that have made people meet other cultures. When mankind entered unknown provinces, it also caused the spread of the language.

**Thomas Young**, linguistic researcher, submitted in 1813 his theory in the following way: "Sanskrit, Greek, Latin, Celtic, Germanic, and Persian (Iranian) are from the same group of languages". He has given this group the name "The Indo-European language". According to Young, those who speak Indo-European languages are "Aryan"

| <b>Examples:</b> |         |             |          |  |  |
|------------------|---------|-------------|----------|--|--|
| English          | Zaza    | Swedish     | Turkish  |  |  |
| There            | is Esto | (estå)Est   | (är) Var |  |  |
| Egg              | Hag,    | hak Ägg     | Yumurta  |  |  |
| Horse            | Hestor  | Häst        | At       |  |  |
| Navel            | Nak,    | navik Navel | Göbek    |  |  |
| Hair             | Por     | (pår) Hår   | Saç      |  |  |
| Salt             | Sol     | Salt        | Tuz      |  |  |
| Wolf             | Verg    | Varg        | Kurt     |  |  |
| What             | Va      | Vad         | Ne       |  |  |

The Zaza language has borrowed words and has been affected by ethnic groups who have settled down between the Euphrates and the Tigris (Mesopotamia) in front of and behind the Zaza people. These following languages, for example, have had influence on the Zaza: Persian, Armenian, Hurish, Hitish, Sumerian, Greek and Turkish. In contemporary Zaza, borrowed words exist and are used. That doesn't mean that Zaza is a dialect of these languages. The presence of borrowed words in a language doesn't prove that it is a dialect. The land of the Zaza people has been at the centre of wars and capitulations, the Silk Road and a place for rest for nomadic people. This is the reason why the Zaza has been enriched

with words from other languages. Neither the Zaza people's cultural life nor their language has been substantially affected, and the changes have not been lasting ones.

In Europe some "intellectual" Zaza people attempt to form theories about the Zaza language. They want to see the Zaza as a dialect of some other languages. This shows that they haven't fully understood the Zaza language and the culture. If they really want to see Zaza as a dialect, and if they do their research properly, they cannot overlook the fact that Zaza is close to the Persian language (because it belongs to the Indo-Iranian language-group). So, is it not more logical to say that Zaza is a Persian dialect? There remains just one more thing; they would have to prove this with historical research. Researchers in the Indo-European language have, with their work, presented and proved that Zaza is one of the older languages spoken in the Middle East. If one reads the works of Oscar Mann, Karl Hadank, CI.J.Rich, A.V.Le Coq and Peter Lerch about languages, one can see that according to these linguistic researchers Zaza is a separate language.

In page 4780 in the book "Encyclopaedia of languages and linguistics" one finds the following "The languages spoken in Turkey are Turkish, Kurdish (Kurmanchi), ZAZA, Cherkess, Ayhbas, Laz, Georgian, Arabic, Armenian e.t.c". Further down on the same page one can read "Turkish is spoken throughout the country. Kurdish, with its dialects, and Zaza are spoken mainly in eastern and south-eastern Anatolia". In the same book one can read this sentence: "the illiterate speakers (principally women and children) of Kurdish, Zaza etc in rural regions, are generally monolingual". In other words, they speak Zaza or Kurdish and they don't understand each other. If one opens at "Zaza" in this ten-volumed encyclopaedia, one sees Zaza in the list of world languages, in other words, not among the dialects. Under "Zaza" it says "see Dimli" and there it says briefly that it is an Iranian, Indo-Arian or Indo-European language. Accordingly the Zaza is not a Kurdish, Turkish, Assyrian, Armenian, Persian or Arabic dialect. When they speak about Zaza they speak about a language, not a dialect.

One should not think that we are just copying the ideas of European linguistic researchers and relying on their works to convince the public that our language is not a dialect. On the contrary we turn to our people. If we ask about our "dialect" Zaza the answer will indeed be interesting. If we ask such a question to a Zaza ( who doesn't speak either Turkish nor Kurdish):

- -Ti bi kamcin lehçeya qısey kenê/kena? (Which dialect do you speak?). The first reaction from the Zaza will most likely be a smile, and he/she will ask this question back:
- -Lehce cici yo? (What's a dialect?). But if we change the question and put it this way:
- -Ti bi kamcin ziwana qisey kenê/kena? (Which language do you speak?). The answer will be:
- -Ez bi ziwanê Zazaki qisey kena. (I speak Zaza). This question I myself have asked and their laughter over the word dialect I still can't forget. Can they who have Zaza as a mother tongue without manipulation put such a question to their parents?

Now we shall see which answer our "intellectual" university graduate will give.

**Language:** What the people think and feel can bring a mutual communication key. If one uses the theory of Stalin one explains language in this way: "Jointly language is the foundation of a nation". In other words, a people who are a nation also have a joint language.

**Dialect:** Language in local design. A dialect is a part of a language and doesn't differ so much from its mother tongue. What differs is the pronunciation and some local expressions. (**E.g. Sausage/Körv, Good/ Gött).** 

The Swedish and the Norwegian languages are so close to each other that it would be better to say they are one language with different dialects. But, when the Swedes talk about the Norwegian language, they don't say that Norwegian is a dialect of Swedish, but a totally separate language.

Another example is the Finnish language. Finns never say that Estonian, Lettish and Lithuanian are dialects of Finnish. (These languages are very close to each other). This is because these countries have their own states. If I should give a simple explanation of how I perceive the modern definition of a language to be, I would say as follows:

**Language**: The communication key between a people who have a state, a flag and an army is called language.

**Dialect**: A people that don't have a state, a flag (maybe exists but is not accepted) or an army is called a dialect.

I can't avoid joking here. I know it is a very interesting explanation, but it seems to fit in to today's society.

In order to explain my attitude I'm forced to go back in time. Maybe in such a way that you, at first, might not understand what all this history has to do with this. I have to rely on your patience, dear reader. The pieces of the puzzle will fall into place. Before the renaissance in Europe, before the reforms in the 16th century, **Copernicus** (1473-1543) wrote his theories about the solar system. When he wrote down his theory and publicised it, he provoked the church and was sentenced to death. Copernicus just said this: "The world doesn't stand still on its location, on the contrary it twists in its course and in the suns course. The orbit around the sun takes a year." Copernicus, like Galileo, couldn't rescue himself out of the clutches of the church, the priests and the fundamentalists. After Copernicus, Galileo Galileo (1564-1642) with his research, helped and given his time renewal?? (I don't understand what this sentence is supposed to mean). The standpoint of his research was "Dynamics". In one way Copernicus and Galileo were able to rescue themselves from the courts of inquisition. Their destiny was not that of Giordano Brunos. After seven years in prison, G.B. was burned alive. Up until the year 1835 it was forbidden to print or publish books that claimed that the earth turns around the sun. Books that nonetheless succeeded to reach the readers were burned. For 200 years the church forbade such ideas.

"When mankind thinks then it is free or can become free" says Albert Bayet. What a beautiful explanation of the whole. When mankind can't freely think and develop its opinions, and when new theories cannot be developed from free thoughts, then mankind is not free. Therefore free thoughts and theories must be expressed, be brought up for discussion without obstacles. Then one can develop the thoughts even more and maybe see what what is correct or wrong. The other important question is whether opinions can be correct or wrong? No, correct or wrong do not exist. Here I think as J.P. Satre and Shakespeare. "Correct or wrong do not exist. What is wrong for me can be correct for somebody else and what is correct for me can be wrong for somebody else." If we accept this theory, we can understand each other and then we can sit down and proceed with our discussion. When we speak badly of each other, calling each other traitors, speak about each other without knowledge, we just show a

person's empty innate quality. Reading books or getting an employment in government service doesn't mean that one is automatically an intellectual person. In order to become a renewer and an intellectual one has to be able to listen without prejudice and really want to try to understand other people's opinions. Only in being together and in a constant discussion with other people can one's thoughts be developed. Furthermore it demands a big portion of courage. Courage to express one's opinions and courage to take in others opinions. It also demands courage to stand up for the opinions one really believes in. Just saying 'yes' all the time doesn't help anybody, because then nothing can develop further, intellectualism indeed put its demands on the intellectuals.

We just try to express opinions that many not have dared to express for years, other than in close friends company. From the night's treacherous dark deep, from the tyrants blood-sucking claws, from the mist we will pull out our free thoughts and tell where our roots come from. This can just be done with the courage to express our opinions and the courage to listen.

During the 13th century **Aristotle**'s ideas and thoughts were forbidden. Those who read the philosopher's publications got the death sentence like a gift. What happened during this long period? What changes did we experience? Could the ideas of Aristotle, Galileo, Copernicus, Copernic, Nicolas d'Autrecourt, Civan Aucassin, Michel Servet and Giordano Brunos be destroyed? (Not forgetting the fact that the free thoughts of Michel Servet and Giordano Brunos and their longing for free thoughts led to their burning). No! Could oppression and torture change mankind's free thoughts? Were not these philosophers called the children of Satan and morons? Now it's time to look at the following question a little closer. -Yes, what happened during these years? Who judges history today? The young knight La Barne was killed by order of the church. What had he done? His crime was that he had read "The dictionary of philosophy", which the church had banned. Do you know what happened to the young knight? First his tongue was cut out and then his head was separated from his body. Thereafter his dead body was tossed on the fire. The young man who was treated so cruelly, was guilty of reading a banned book. We are not equally bestial today, or?

In this way some of the European intellectuals express themselves over the reactionary opinions and fanatic political ideas:

**Montesquieu**; "A reactionary opinion is a backward opinion."

Voltaire; "Reactionary opinions have coloured the world with blood."

**Diderot**; "A reactionary opinion is a opinion that make me sick."

Helvetius; "A reactionary opinion means, like a knife, worries for mankind."

I think that those who put obstacles in the way of the development of the Zaza language and culture are equally reactionary. I think that the statements of these European philosophers are still true today.

Voltaire also says; "If mankind not can say its opinions freely in a society, then the people can not talk about freedom." Dear reader, now you maywonder; -Why do you write about these things we already know about? If you are wondering just this, I answer you; -That which was experienced in the 13th and the 19th century is actually not just of historic interest. It still continues today in our developed society. In todays society, it is however not only the spokesmen of God who ban opinions, but above all the great god of the ageCapitalism. It is said that we learn from history, but occasionally one wonders.

I will now try to abbreviate my discussion. Despite "mud-throwing philosophy", new modern torture methods and oppression methods during history, it has not been possible to kill free thought. Our work for the language and culture of the Zaza people has already caused disturbances in many reactionary and nationalistic circles. Let me answer those who do not want to listen to what I want to say. I want to say to those who, rather than objectively discuss, begin a "pie-throwing contest"; we don't want to throw back. We want to cooperate and expose the whole truth. I also want to say these words to those who want to blacken our name by saying that we are spies, that we receive support from the Turkish security police (MIT) and that we work together with them - it's not true. Instead of developing lies about people who work with the Zaza-question, it's better to go to mass media with the documents you have (such a presentation of documents will give pleasure also to us Zazas). Once more I want to put my question: - The people who come with their humiliating spy-theories about us Zazas - How can they get such secret documents from MIT? First they have to show how they have been able to find such documents about us Zazas. Here I don't want to discuss "who" can obtain such documents. The matter must be left open how one can produce required information from the security police, that's up to the reader's own fantasy.

Those who write and are politically active have to be very careful with their statements. Otherwise they will cause needless doubts. Through handing over false information the confidence in that person will disappear. The most important thing is that they not will think that the people are morons that not can think for themselves. Our people haven't forgotten these people's hostile behaviour in old times.

We are not incapable of developing new thoughts, politics and a new history for us. On the contrary, with our work we elaborate a new methodology with a new systematic work. With this work we will maintain our people's identity. With our democratic perspective we will be defenders to world fraternisation. We will not tire of defending and calling out our brotherhood-slogan. We knew what awaited us when we came through with our Zaza people's identity-wish, and we knew well which obstacles we would come up against regarding our language theory. We knew that what we wrote and expressed would bother and disturb many nationalists (they who think they are humanists and socialists). The national identity of minority people and languages and dialect theories in the Middle East have a dirty state tradition that only serves to exterminate minorities. The Turks, Iranians and Arabs have, for centuries, been saying: -We are not different people. We are a single people. We haven't got different languages. Kurdish is our dialect. (What irony of fate that the Kurds now say the same thing to the Zaza).

Thanks to our work for our people and for our language we will not become a toy for the Middle East states, nor play in their political games. The game is over. Thanks to us, a new era will begin for the Zaza. That is how it is, my ladies and gentlemen, we have also awoken to the dream of being a people. We have also ascertained that those who write about the Zaza have learned the game from their colonialist rulers, and they have had a good teacher. This they prove through writing and disceiving the mass media with false theories and this they do with great pride. BRAVO...

"The one who knows why one lives, also knows how to live" says **Nietzsche**. Of todays 6000 different languages there are at most 600 that can be considered to have such vitality that their futures are secured, predicts **Michael Kraus**, linguist at the University in Fairbanks, Alaska. In the periodical New Scientist (96.01.06) he put out his research about these 600 languages and proves this scientifically. Of these languages, many are spoken by such a limited group of

people that they are under threat of extermination. The world's smallest language, Aoreish, is spoken in the Island State Vanuatu in the Pacific Ocean.

Some languages disappear, but many renew themselves. The renewal is influenced by the achievements in the field of technology and science. The development of technology and science doesn't just change mankind's everyday life. Simultaneously it affects and changes mankind's language; new terminology is created. The new terminology usually becomes international. The European countries wanted for centuries to create a common language. Thanks to the development of technology and science, this ideology has almost succeeded. In todays research, scientists from several countries cooperate and then it's natural to find common terms. This I personally think is a very wise concentration (but I don't mean that a language should not defend its origin). E.g. in Zaza we can say "bewnayox" for TV, or "gosdayox" for radio, but these words are so artificial that they will not live long in spoken and written language. Because they can be difficult to pronounce and they can change the words meaning. This is not good for a language. The door of the language has to be kept open for foreign words. There are thousands of examples of foreign words that work in the language in its original shape and only have to change to the language's grammatical shape. Some words can fit to another language without customs duty. This doesn't mean that the language is poor, on the contrary this language is rich. For example, in the Swedish language Turkish words still are preserved in their original form: kalabalik, kiosk and dolma. Todays English does not just have hundreds of foreign words, it has thousands from different languages. These words come from Latin, Greek, Gaelic, French, Spanish etc, and have been adopted by the English language. It's not only a linguistic alteration, but also a change that is reflected in food customs and culture. Mankind is a animal of the flock, and in a modern society communication has enabled us to associate more easily, and then the different languages and cultures begin to influence eath other. Each influence renews the culture and the language. The renewal of the language is like a blood transfusion. This is like blood running through the language's veins; the people are the veins and the language is the blood. The blood in the veins and the language among the people receive vitality. Therefore each human being has to think, write and speak in their own language. People who are educated and conscious of their heritage and culture will never be ashamed of their language.. Those who are ashamed of their language, transfer their shame to their own children and the children grow up with their shame. Children who grow up with this way of thinking in society, lose their roots from the past and thereby a big part of their identity. Obviously this is not the children's fault, the fault is the parents'. The families who have Zaza as a mother tongue and teach their children another language preventtheir children from learning to speak, write or read their mother tongue, and these children lose their connection with their historical roots. In this way a language is erased. When the parents don't use the language, the children don't want to use it either, and nor can they learn it. For me that means denying ones roots and language. In other words, it's disrespectful.

In Europe all languages and dialects (e.g. Sorani and Kurmanji in Sweden) have the right to be taught in school. The families who want their children to learn their mother tongue, receive immigrant language teaching. Even if one of the parents is from Europe, the children have the right to immigrant language teaching, to keep both parts of their identity alive. The parents however often choose the language that is spoken in the country where they live. The reason for this is that there are no Zaza teachers or education in the schools. Here I want to point out another thing: some Zazas that I know who are married to people with other nationalities and have another language as mother tongue, also have other problems. For example one of the Zazas I know is married to a Turkish woman, the second is married to a Zaza woman, and the

third is married to a Kurdish woman. In the family where the father is Zaza and the mother is Turkish, the child speaks the respective language with the respective parent. With the Zaza who is married to a Zaza woman, they speak just Zaza. For the Zaza who is married to a Kurdish woman, the matter is a little different. There are conflicts. In that family, only Kurdish is spoken, and the immigrant language teaching is in Kurdish. I can give more examples of such conflicts. E.g. where both parents speak Zaza, but for political reasons choose to send their children to Turkish or Kurdish schools. Where this is the case, it means that one loses contact with one's mother tongue. The children learn one language entirely, or mix it with all these languages. But what happens to these children? Which identity do these children have? To which nationality do they belong? Obviously it's not the children who should be answering all these questions. But one shall not forget that in the children it creates a psychological identity crisis. When the children are among other nationalities, they feel themselves that they don't have a nationality. This is where their "-Who am I?" conflict begins. This conflict makes the children aggressive, violent and hard to get close to. The children, our flowers of the future, the hope of the future and our future generation in this way become totally destroyed. At the root of the children's bad future is unfortunately ignorant parents.

When I began to write, I took Nietzsche's words: "The one who knows why one lives, also knows how to live". Maybe you wonder why I wrote this. I wrote down these words to point out an important thing. What will be left after us when we die areour deeds. With deeds, I mean our children and our written documents in our language. Therefore we always have to defend our language to the utmost, and in this way prevent the Zaza language from dying. In our day-to-day speech we use at most 300-500 words and I think that it will not be hard to teach our children these everyday words. Give the children their Zaza roots. Give them their national identity and pride. Ally yourselves with the Zaza language and its dialects. Teach your children to play with Zaza children and create contacts between children. From to today this is the investment you shall make for your children. It's an investment for the future, and one of the wisest you can make. The words I write can be understand as nationalistic. I don't myself see it as nationalistic to protect one's language. Then the world's countries' language institutions would be nationalistic. Here I would like to quote the philosopher and thinker Bertrand Russell. This quotation is Bertrand Russell's answer to Woodrow Wyatt's question.

**Wyatt** - "Do you think that nationalism is good or bad?"

**Russell** - "...You have to separate the nationalism in cultural- and political in certain respects. In the cultural way it's insipidly that the world is so one-coloured...." and then he continues; "- Within literature, art, languages and all culture you can accept nationalism. But if you look on the thing from the political way nationalism is obviously not good. You can't show one sole thing that can prove that nationalism is good".

One will not find nationalism in our obvious nationalistic identity wishes and the right to use our language. The nationalism can be found in the theories that want to extinguish us, our language and our culture. To deny us Zaza our rights, that's nationalism.

Now we will compare our "dialect" (so that the person who calls our language a dialect can check properly) and other "DIALECTS". We will now look together at the similarities and dissimilarities.

English Zazaish Kurdish Turkish
