The SS sends another PACKET DOWNLINK ASSIGNMENT message, instructing a Downlink Dual Carrier configuration, but the Frequency Parameters C1 field contains a different ARFCN than that used for the current uplink TBF. After 5 radio blocks, on the new downlink PDCH for carrier 1, SS sends a few RLC data blocks addressing the

MS, with the last data block containing a valid RRBP field. Verify MS does not send Packet Downlink Ack/Nack. SS sends Packet Downlink Dummy Control Block with the assigned USF on the uplink PDCH. Verify MS sends one RLC data block with the correct BSN value.

The SS sends another PACKET DOWNLINK ASSIGNMENT message, instructing a Downlink Dual Carrier configuration, but the Frequency Parameters C2 field doesn't exist. After 5 radio blocks, on the new downlink PDCH for carrier 1, SS sends a few RLC data blocks addressing the MS, with the last data block containing a valid RRBP field. Verify MS does not send Packet Downlink Ack/Nack. SS sends Packet Downlink Dummy Control Block with the assigned USF on the uplink PDCH. Verify MS sends one RLC data block with the correct BSN value.

The SS sends another PACKET DOWNLINK ASSIGNMENT message, instructing a Downlink Dual Carrier configuration, but the Frequency Parameters C1 field contains an unknown MA_NUMBER. After 5 radio blocks, on the new downlink PDCH for carrier 1, SS sends a few RLC data blocks addressing the MS, with the last data block containing a valid RRBP field. Verify MS does not send Packet Downlink Ack/Nack. SS sends Packet Downlink Dummy Control Block with the assigned USF on the uplink PDCH. Verify MS sends one RLC data block with the correct BSN value.

The SS sends another PACKET DOWNLINK ASSIGNMENT message, instructing a Downlink Dual Carrier configuration with all valid parameters. After 3 radio blocks, on the new downlink PDCH for carrier 1, SS sends a few RLC data blocks addressing the MS, with the last data block containing a valid RRBP field. Verify MS acknowledges the previously received RLC data blocks.

Complete the uplink data transfer.

Maximum Duration of Test

5 minutes.

Expected Sequence

58b.3.4 DLMC Assignment abnormal Flexible resource assignment

58b.3.4.1 Conformance requirement

During uplink transfer, the network may initiate the establishment of one or more downlink TBFs by sending a downlink assignment message (e.g. PACKET DOWNLINK ASSIGNMENT, MULTIPLE TBF DOWNLINK ASSIGNMENT, PACKET TIMESLOT RECONFIGURE, MULTIPLE TBF TIMESLOT RECONFIGURE, PACKET CS RELEASE INDICATION) to the mobile station on the PACCH.

If the information in the PACKET TIMESLOT RECONFIGURE or MULTIPLE TBF TIMESLOT RECONFIGURE message does not properly specify an uplink and downlink PDCH or violates the mobile station's multislot capabilities, the mobile station shall perform an abnormal release with access retry (see sub-clause 8.7.2 and 3GPP TS 44.160);

References

3GPP TS 44.060, subclause 8.1.1.1.3, and 8.1.1.1.3.1.

3GPP TS 45.005 Annex B1 and Annex B.6

58b.3.4.2 Test purpose

To verify that the MS, in downlink TBF establishment during uplink transfer, performs an abnormal release with random access, when the information in the PACKET TIMESLOT RECONFIGURE message violates the mobile station's DLMC - Maximum Number of Downlink Timeslots capabilities but not violate the multislot class defined in Annex B.1 with respect to the RAC signalled by the mobile station, as defined in of Annex B.1 and B.6 in 3GPP TS 45.002.

58b.3.4.3 Method of test

Initial Conditions

System Simulator:

1 cell, EGPRS supported, Downlink Multi Carrier supported.

DLMC Bandwidth: 5MHz.

Mobile Station:

Support for Downlink Multi Carrier indicated in MS Radio Access Capabilities IE.

The MS is in the state "idle, GMM-registered" with a P-TMSI allocated, SPLIT PG CYCLE negotiated, and PDP context 3 activated.

Specific PICS Statements

-

PIXIT Statements

-

Test Procedure

The EGPRS capable MS is made to transmit uplink RLC data blocks in EGPRS TBF RLC unacknowledged mode. The SS sends a PACKET TIMESLOT RECONFIGURE message, instructing a Downlink Multi Carrier configuration, but the sum of TIMESLOT_ALLOCATION for the 4 Carriers violate the mobile station's DLMC - Maximum Number of Downlink Timeslot but not the MS multislot class. To verify that the MS did not consider the downlink multi carrier assignment, a polled downlink rlc data block is sent on carrier 1 and the SS checks that the MS does not acknowledged it.

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|---|
| 1 | | {Uplink dynamic allocation two phase access} | n = 440 octets, without starting time, USF_GRANULARITY = 1 block, RLC_DATA_BLOCKS_GRANTED = open-end TLLI_BLOCK_CHANNEL_CODING: MCS1 EGPRS CHANNEL CODING COMMAND: MCS1 |

58b.3.5 DLMC Assignment abnormal case single carrier fallback

58b.3.5.1 Conformance requirement

For a mobile in DLMC configuration, fallback to reception of a single carrier, irrespective of the number of assigned carriers, is performed with regular periodicity. The periodicity is based on BS_PA_MFRMS, which indicates the number of 52-multiframes between two fallback periods. A mobile belongs to a particular single carrier fallback group which identifies a specific basic radio block period.

A mobile station in DLMC configuration where the continuous timing advance procedure is used shall fall back to single carrier configuration for PTCCH reception during each PTCCH frame occurring on the corresponding radio frequency channel (see sub-clause 7.1.2.5). In addition, the mobile station shall fall back to single carrier configuration for radio block reception according to a regular pre-determined interval (see 3GPP TS 45.002 [13]) using the radio frequency channel of its assigned PTCCH or using the radio frequency channel of the lowest numbered carrier (see sub-clause 8.1.1.1.3) if it has not been assigned a PTCCH.

References

3GPP TS 45.002, subclause 6.5.1, and 6.5.8.

3GPP TS 45.060 subclause 5.13.

58b.3.5.2 Test purpose

To verify the MS report lost blocks if transmitted from NW using a non-fallback carrier during the single carrier fallback.radio block period. Verify that a poll sent using a non-fallback carrier during the single carrier fallback radio block.

58b.3.5.3 Method of test

Initial Conditions

System Simulator:

1 cell, EGPRS supported, Downlink Multi Carrier supported.

DLMC Bandwidth: 5MHz.

Mobile Station:

Support for Downlink Multi Carrier indicated in MS Radio Access Capabilities IE.

The MS is in the state "idle, GMM-registered" with a P-TMSI allocated, SPLIT PG CYCLE negotiated, and PDP context 3 activated.

Specific PICS Statements

-

PIXIT Statements

-

Test Procedure

The EGPRS capable MS is made to transmit uplink RLC data blocks in EGPRS TBF RLC unacknowledged mode. The SS sends a PACKET TIMESLOT RECONFIGURE message, instructing a Downlink Multi Carrier configuration with 4 carriers and 16Ts. Send Downlink data on all 4 carriers at the single fallback period, PDAN shall only include Acked blocks for single carrier 1.

Poll for a PDAN on carrier 2 at the single fallback period, the PDAN shall arrive on lowest Carrier 1.

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|--|
| 1 | | {Uplink dynamic allocation two phase access} | n = 440 octets, without starting time, USF GRANULARITY = 1 block, RLC_DATA_BLOCKS_GRANTED = open-end TLLI_BLOCK_CHANNEL_CODING: MCS1 EGPRS CHANNEL CODING COMMAND: MCS1 |
| 2 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| 3 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDTCH SS verifies that the BSN starts from 0, and the correct MCS is used. |
| 4 | SS -> MS | PACKET TIMESLOT RECONFIGURE | Sent on PACCH of the PDTCH assigned in Step 1. Addressing the MS using the UL TFI assigned in Step 1. 4 Carriers Assigned. |
| 5 | SS | | Wait for at least 3 block periods |
| 6 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | On carrier 1 with next in sequence BSN (Start with BSN 0). USF Assigned. MCS-1. Valid RRB field Sent on the single fallback period according to 45.002 subclause 6.5.8 |
| 7 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | On carrier 2 with next in sequence BSN Send on same Radio Block as Data Block Send on Carrier 1. MCS-1. Sent on the single fallback period according to 45.002 subclause 6.5.8 |

58c EGPRS2

58c.1 Concurrent EGPRS2 TBF

58c.1.1a Concurrent EGPRS2A TBF using RTTI Latency reduction

58c.1.1a.1 Conformance Requirement

If a mobile station is assigned concurrent TBFs, these shall be in the same TBF mode.

A TBF in EGPRS mode operates using one of four groups of modulation and coding schemes:

- EGPRS-GMSK only (applicable to uplink TBFs only): this comprises MCS-1 to MCS-4
- EGPRS: this comprises MCS-1 to MCS-9
- EGPRS2-A: for uplink TBFs, this comprises MCS-1 to MCS-6 and UAS-7 to UAS-11; for downlink TBFs, this comprises MCS-1 to MCS-4, MCS-6 (only for retransmissions of blocks originally transmitted using EGPRS), MCS-7, MCS-8 and DAS-5 to DAS-12
- EGPRS2-B: for uplink TBFs, this comprises MCS-1 to MCS-4 and UBS-5 to UBS-12; for downlink TBFs, this comprises MCS-1 to MCS-4, MCS-6 to MCS-9, DAS-5, DAS-6, DAS-8, DAS-9, DAS-11 and DBS-5 to DBS-12.

The group of modulation and coding schemes to be used on a PDTCH associated with a TBF is indicated in the assignment message.

The use of the EGPRS2-A group for uplink or downlink is only supported by MSs which are capable of EGPRS2-A or EGPRS2-B in that direction.

If a mobile station indicates support of Reduced Latency (see 3GPP TS 24.008), it may be assigned TBFs with FANR activated (see sub-clause 9.1.14), either in BTTI configuration or in RTTI configuration. The network shall ensure that, if a mobile station is assigned a TBF with FANR activated, FANR shall be activated for all concurrent TBFs assigned to that mobile station.

References

3GPP TS 44.060, subclauses 5.2.1

GPRS, EGPRS and EGPRS2 capable mobile stations can be multiplexed dynamically on the same PDCH.

- For a mobile station supporting EGPRS2-A in the downlink, the network may use either GMSK, 8-PSK, 16-QAM or 32-QAM modulation with normal symbol rate, i.e. CS-1 to CS-4, MCS-0, MCS-1 to MCS-9 or DAS-5 to DAS-12 in those blocks.

3GPP TS 44.060, subclauses 5.2.4a

58c.1.1a.2 Test Purposes

To verify that the MS

- can operate concurrent uplink and downlink EGPRS2-A TBFs
- can operate with EGPRS2A TBF using RTTI

58c.1.1a.3 Method of Test

Initial Conditions

System Simulator:

1 cell with EGPRS support, default setting,

Mobile Station:

The MS is EGPRS updated with a P-TMSI allocated, SPLIT_PG_CYCLE negotiated and the test PDP Context 2 activated.

Specific PICS Statements**PIXIT Statements**

-

Test Procedure

An EGPRS2A MS receives a PACKET DOWNLINK ASSIGNMENT message on its PACCH allocating resources for carrier 1. SS transmits downlink RLC data blocks. MS responds by sending a PACKET DOWNLINK ACK/NACK. MS then triggered to perform uplink data transfer in EGPRS2A to establish a concurrent uplink TBF. MS sends uplink data blocks and SS acknowledges. SS then send a PACKET TIMSLOT RECONFIGURE message to MS and to change the TTI configuration to RTTI in RTTI USF mode. A new EGPRS2A channel coding scheme is chosen for downlink. MS sends and receives data in new RTTI configuration. The uplink data transfer is completed.

Maximum Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|--|
| 1 | SS -> MS | PACKET DOWNLINK ASSIGNMENT | Sent on PACCH triggers the MS to assigned PDTCH. |
| 2 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on assigned PDCH with DAS-5 assigned to the MS. A valid RRBP is indicated. |
| 3 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | In the uplink block specified by the RRBP field, MS acknowledges the previously received RLC data blocks. |
| 4 | | {Uplink dynamic allocation two phase access} | n = 2000 octets, USF GRANULARITY = 1 block EGPRS2 Channel Coding Command: UAS-11 |
| 5 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| 6 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDTCH |
| 7 | SS -> MS | PACKET UPLINK ACK/NACK | SS acknowledges receiving all RLC data blocks. |
| 8 | SS -> MS | PACKET TIMESLOT RECONFIGURE | Sent on downlink PACCH. RTTI Configuration (Changing TTI configuration from BTTI to RTTI) Assigns a single uplink PDTCH pair. The corresponding downlink PDTCH pair uses the same timeslots as the assigned uplink pair. USF Mode = RTTI USF Mode. USF Granularity = 1 block EGPRS2 uplink channel coding command arbitrarily chosen between UAS 7 to UAS-11. Assigns a single downlink PDTCH pair. EGPRS2 downlink channel coding chosen to be DAS-12. |
| 9 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on downlink PACCH of the corresponding downlink PDCH pair of the uplink Ink PDCH assigned at Step 8 USF assigned to the MS. |
| 10 | MS -> SS | EGPRS UPLINK DATA BLOCK | Received on uplink PDTCH pair assigned in Step 8 UAS as specified in Step 8 |
| 11 | SS -> MS | EGPRS DOWNLINK DATA BLOCK | Sent on downlink PDTCH pair assigned in Step 8. Contains the PAN field which acknowledges the radio block received in Step 10. CES/P = 011 |
| 12 | MS -> SS | EGPRS UPLINK DATA BLOCK | Received on uplink PDTCH pair assigned in Step 8 |
| 13 | MS-> SS | EGPRS PACKET DOWNLINK ACK/NACK | Received on the uplink PDCH pair corresponding to the downlink PDTCH pair assigned at Step 8. |
| 14 | SS-> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on corresponding downlink PDCH pair of the uplink PDCH pair assigned at Step 8. USF assigned to the MS |
| 15 | MS-> SS | EGPRS UPLINK DATA BLOCK | Received on the uplink PDTCH pair assigned in Step 8. |
| 16 | | {Completion of uplink RLC data block transfer} | |

Specific Message Contents

None.

58c.2.1a Acknowledged Mode/ Uplink TBF/ Countdown Value, in EGPRS2A

58c.2.1a.1 Conformance requirements

1. The mobile station shall send the Countdown Value (CV) in each uplink RLC data block to indicate to the network the absolute BSN (BSN') of the last RLC data block that will be sent in the uplink TBF.
2. When a radio block for EGPRS2-A data transfer consists of two RLC data blocks, the CV value of the RLC/MAC header refers to the second RLC data block.

References

3GPP TS 44.060, subclause 9.3.1.

58.2.1a.2 Test purpose

1. To verify that when a radio block for EGPRS2-A data transfer consists of two RLC data blocks, the CV value is calculated based on BSN of the second RLC data block.

58.2.1a.3 Method of test

Initial Conditions

System Simulator:

1 cell with EGPRS2-A support, default setting, PBCCH not present, BS_CV_MAX = 15.

Mobile Station:

The MS is EGPRS2-A updated with a P-TMSI allocated, SPLIT PG CYCLE negotiated and the test PDP context2 activated.

Test Procedure

The MS is made to transmit uplink RLC data blocks in an acknowledged mode uplink EGPRS2-A TBF to transmit N octets to calculate TBC value. Uplink RLC data block transfer is completed.

The MS is made to transmit uplink RLC data blocks in an acknowledged mode uplink EGPRS2-A TBF to transmit TBC uplink RLC data blocks. EGPRS2-A Channel Coding Scheme is UAS-7. N is less than Window Size.

The SS assigns resources for the mobile station to transmit data blocks. Each time one radio block is assigned.

The SS observes the CV value in the uplink blocks. BSN' = Absolute BSN of the second RLC data block is calculated upon each radio block is received.

The SS verifies that when $x = \text{round}((TBC - BSN' - 1) / NTS * 2)$ is greater than BS_CV_MAX, CV equals to 15, otherwise, CV=x.

UAS-8, UAS9, UAS10 and UAS-11 shall be applied.

Maximum Duration of Test

50 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|---|
| 1 | | {Uplink dynamic allocation two phase access} | N = 56*60 octets K=2 USF_GRANULARITY = 1 block EGPRS2-A Channel Coding Scheme: UAS-7 (Suppose timeslot capability is 1) |
| 2 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| 3 | MS -> SS | EGPRS2-A UPLINK RLC DATA BLOCK | Received on the assigned PDTCH |

58c.2.2a Acknowledged Mode/ Uplink TBF/ Retransmission/ Split RLC Data Block, in EGPRS2-A

58c.2.2a.1 Conformance requirements

- In RLC acknowledged mode, each RLC endpoint transmitter shall have an associated acknowledge state array (V(B)).
- The transmitter shall transmit the oldest RLC data block whose corresponding element in V(B) indexed relative to V(A) has the value NACKED. As each RLC data block is transmitted the corresponding element in V(B) is set to the value PENDING_ACK.
- In EGPRS2-A uplink, depending on the modulation and coding one to three RLC data blocks are contained in one RLC/MAC block as follows:
 - One RLC data block per RLC/MAC block: MCS-1, MCS-2, MCS-3, MCS-4, MCS-5 and MCS-6.
 - Two RLC data blocks per RLC/MAC block: UAS-7, UAS-8 and UAS-9.
 - Three RLC data blocks per RLC/MAC block: UAS-10 and UAS-11.
- A re-segment bit is included within each PACKET UPLINK ACK/NACK, PACKET UPLINK ASSIGNMENT and PACKET TIMESLOT RECONFIGURE message. For initial transmissions of new RLC blocks the channel coding commanded is applied. The re-segment bit is used to set the ARQ mode to type I or type II (incremental redundancy) for uplink TBFs.

5. For retransmissions, setting the re-segment bit to 1 (type I ARQ) requires the mobile station to use an MCS within the same family as the initial transmission and the payload may be split.
6. If the RLC data block to be transmitted is split over two radio blocks, both radio blocks shall be transmitted
7. RLC data blocks initially transmitted with MCS4, MCS-5, MCS-6, UAS-7, UAS-8, UAS-9, UAS-10 or UAS-11, can optionally be retransmitted with MCS-1, MCS-2 and MCS-3 respectively, using two radio blocks. In this case, the split block field in the header shall be set to indicate that the RLC data block is split, and the order of the two parts.

Test Procedure

The EGPRS2-A capable MS is made to transmit uplink RLC data blocks in EGPRS2-A TBF RLC acknowledged mode. The EGPRS2-A Channel Coding Command IE indicates UAS-7 in the Packet Uplink Assignment message.

After BS_CV_MAX block periods the SS sends a Packet Uplink Ack/Nack message to negatively acknowledge some RLC data blocks. In the message EGPRS2-A Channel Coding Command IE is set to MCS-1 and Re-segment IE should be set to '1'B.

The MS shall retransmit the NACKED RLC data blocks using MCS-1 in spitted radio blocks. Observe the uplink RLC data block header. Both of split blocks shall be received, the first one shall contain a SPB field equals to '10'B while the second shall be '11'B.

Maximum Duration of Test

8 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|--------------------|-----------|--|--|

58c.2 Uplink EGPRS2 TBF

58c.2.1 to 58c.2.4 Void

58c.2.4a Acknowledged Mode/ Uplink TBF/ Verification of new coding schemes for EGPRS2A

58c.2.4a.1 Conformance requirements

A TBF in EGPRS mode operates using one of four groups of modulation and coding schemes:

- EGPRS-GMSK only (applicable to uplink TBFs only): this comprises MCS-1 to MCS-4
- EGPRS: this comprises MCS-1 to MCS-9
- EGPRS2-A: for uplink TBFs, this comprises MCS-1 to MCS-6 and UAS-7 to UAS-11; for downlink TBFs, this comprises MCS-1 to MCS-4, MCS-6 (only for retransmissions of blocks originally transmitted using EGPRS), MCS-7, MCS-8 and DAS-5 to DAS-12
- EGPRS2-B: for uplink TBFs, this comprises MCS-1 to MCS-4 and UBS-5 to UBS-12; for downlink TBFs, this comprises MCS-1 to MCS-4, MCS-6 to MCS-9, DAS-5, DAS-6, DAS-8, DAS-9, DAS-11 and DBS-5 to DBS-12.

A RESEGMENT bit is included within each PACKET UPLINK ACK/NACK, PACKET UPLINK ASSIGNMENT, MULTIPLE TBF UPLINK ASSIGNMENT, PACKET TIMESLOT RECONFIGURE, MULTIPLE TBF TIMESLOT RECONFIGURE or PACKET CS RELEASE INDICATION messages. For initial transmissions of new RLC blocks the channel coding commanded is applied. The RESEGMENT bit is used to set the ARQ mode to type I or type II (incremental redundancy) for uplink TBFs. For retransmissions, setting the RESEGMENT bit to '1' (type I ARQ) requires the mobile station to use an MCS within the same family as the initial transmission and the payload may be split (refer to table 8.1.1.1). For retransmissions, setting the RESEGMENT bit to '0' (type II ARQ) requires the mobile station to use an MCS within the same family as the initial transmission without splitting the payload even if the network has commanded it to use MCS-1, MCS-2 or MCS-3 for subsequent RLC blocks (refer to table 8.1.1.2), see note. In RLC unacknowledged mode, RESEGMENT bit shall be ignored and default value 0 should be used.

Test Procedure

The EGPRS capable MS is made to transmit uplink RLC data blocks in EGPRS TBF RLC acknowledged mode. The EGPRS Channel Coding Command IE is commanded in the Packet Uplink Assignment message. The resegment IE is set to 1.

The SS checks that the Uplink RLC Data Blocks are transmitted by the mobile using the channel coding scheme commanded by the SS.

The SS negatively acknowledges the received data blocks. The Coding scheme to be used by the mobile is commanded in the EGPRS Channel Coding Command IE.

The SS checks that the Uplink RLC data blocks are retransmitted using the channel coding scheme commanded by the SS.

Maximum Duration of Test

5 minutes.

Expected Sequence

MS supporting 'EGPRS capable of 8PSK and 16 QAM in Uplink, of all Multislot classes' should run the test for $k=0$, $k=1$, $k=2$, $k=3$, $k=4$.

58c.2.5a Acknowledged Mode/ Uplink TBF/ Recalculation of CV on MCS change for EGPRS2A

58c.2.5a.1 Conformance requirements

- The mobile station shall send the Countdown Value (CV) in each uplink RLC data block to indicate the current number of remaining RLC data blocks for the uplink TBF. The CV shall be calculated as follows:

$$\text{Let integer } x = \text{round}\left(\frac{TBC - BSN' - 1}{NTS \times K}\right).$$

$$\text{then, } CV = \begin{cases} x, & \text{if } x \leq BS_CV_MAX, \\ 15, & \text{otherwise.} \end{cases}$$

where:

TBC = total number of RLC data blocks currently to be transmitted in the TBF.

BSN' = absolute block sequence number of the RLC data block, with range from 0 to (TBC - 1).

NTS = number of timeslots assigned to the uplink TBF in the assignment message, with range 1 to 8 when operating in BTTI configuration. In RTTI configuration this parameter shall be equal to the number of assigned uplink PDCH pairs, with the range 1 to 4.

K =2 when commanded MCS is MCS-7, MCS-8, MCS-9, UAS-7, UAS-8, UAS-9, UBS-7 or UBS-8

3 when commanded UAS-10, UAS-11, UBS-9 or UBS-10

4 when commanded UBS-11 or UBS-12 otherwise K=1

the function round() rounds upwards to the nearest integer.

BS_CV_MAX is a parameter broadcast in the system information,

the division operation is non-integer and results in zero only for (TBC - BSN' - 1) = 0.

The countdown procedure starts when RLC data blocks include CV values different from '15'. When the mobile station transmits the last RLC data block currently in the send buffer for the TBF (i.e. the RLC data block with BSN' = TBC - 1), the RLC data block shall have CV set to the value '0'.

When an EGPRS or EGPRS2 RLC/MAC block for data transfer consists of two or more RLC data blocks, a CV value is calculated for each block and the CV of the RLC/MAC header refers to the last RLC data block.

2. If the mobile station receives a change in the Channel Coding Command in a PACKET UPLINK ACK/NACK message during the countdown procedure, the mobile station shall act upon the new Channel Coding Command. The mobile station shall then recalculate the CV for any untransmitted RLC data block using the new RLC data block size.

In EGPRS TBF mode, a MS may choose an alternate MCS than the one commanded, for the initial transmission of the last RLC data blocks of the TBF under the following conditions:

- the alternate MCS is more robust than the commanded MCS;
- the alternate MCS has already been commanded by the network during the TBF or was available for selection by the MS during the TBF according to the MCS selection rules for retransmissions; and
- the TBF requires no more radio blocks for initial transmission of the RLC data blocks using the alternate MCS than would be required when using the commanded MCS.

58c.2.5a.2 Test purpose

To verify that the mobile station correctly recalculates the CV values when the MCS is changed during countdown procedure.

58c.2.5a.3 Method of test

Initial Conditions

System Simulator:

1 cell with EGPRS support, default setting, PBCCH not present, BS_CV_MAX = 15.

Mobile Station:

The MS is EGPRS updated with a P-TMSI allocated, SPLIT PG CYCLE negotiated and the test PDP context2 activated.

Specific PICS Statements

- Support of PSK in uplink (TSPC_Type_EGPRS_8PSK_uplink)
- Support of 16QAM in uplink (TSPC_Type_EGPRS_16QAM_uplink)

PIXIT Statements

Test Procedure

The EGPRS capable MS is made to transmit uplink RLC data blocks in EGPRS TBF RLC acknowledged mode. UAS-10 is commanded. Total number of Data Blocks is taken to be a minimum of 20 blocks.

SS acknowledges all the Data Blocks upon reception.

SS monitors the CV of the data blocks sent.

SS sends a PACKET UL ACK/NACK message acknowledging the RLC data block with CV =14 or CV =13 and ordering a change of MCS to MCS-5.

The Mobile might send a new Data Block with UAS-10 which could have been stored in the Transmit buffer.

SS notes the BSN of the last RLC data block, received with UAS-10 as BSN2. SS verifies that $CV=15$ till $BSN=BSN2+3*CV1-15$, $BSN2+3*CV1-16$ or $BSN=BSN2+3*CV1-17$ (MS can select alternate MCS)

where $CV1 = CV$ in the last radio block received with UAS-10

SS verifies that CV decreases progressively in further blocks.

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|-------------------|-----------|--|---|
| 1 | | {Uplink dynamic allocation two phase access} | N chosen to transmit minimum 20 blocks USF GRANULARITY = 1 block EGPRS Channel Coding Command: UAS-10 |
| 2 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| 3 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDTCH. SS verifies that the BSN starts from 0, and the correct MCS is used. |
| 4 | SS -> MS | PACKET UPLINK ACK/NACK | Wait for BS_CV_MAX block periods before sending this message. SS Acknowledges the UL RLC Data Block USF assigned to the MS. |
| 5 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDTCH. SS verifies that the BSN values are in sequence, and the correct MCS is used. |
| 6 | - | | Repeat steps 4 and 5 until CV = 14 or CV = 13. SS notes the BSN of the last RLC data block as BSN2, and the CV as CV1. |
| 7 | SS -> MS | PACKET UPLINK ACK/NACK | Wait for BS_CV_MAX block periods before sending this message. SS Acknowledges the UL RLC Data Block EGPRS CHANNEL CODING COMMAND: MCS-5 |
| 8 | - | | Wait for 6 blocks with no USF |
| 9 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| Optional Step 10a | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | The MS may send a data block already in the buffer using coding scheme UAS-10. If received, the value of CV1 and BSN2 shall be updated by this radio block according to the rule in step 6, for further calculation. |
| Optional Step 10b | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| 10 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDTCH. SS verifies that coding scheme MCS-5 is used; BSN=BSN2+1 and CV = 15. |
| 11 | SS-> MS | PACKET UPLINK ACK/NACK | Wait for BS_CV_MAX block periods before sending this message. SS Acknowledges the UL RLC Data Block USF assigned to the MS. |
| 12 | - | | Repeat steps 10 and 11 until BSN= BSN2+ 2*CV1 – 15; SS verifies that CV remains 15 until BSN= BSN2+ 3*CV1 – 17 CV may be 14 for BSN= BSN2+ 3*CV1 – 15, or CV may be 13 for BSN= BSN2+ 3*CV1 – 15, in case MS have 3*CV1-1 RLC data blocks, or 3*CV1-2 RLC data blocks, respectively, after sending the RLC data block of BSN2, or in case MS choose to use an alternate coding scheme to transmit the last block of the TBF. Else CV=15 for BSN= BSN2+ 3*CV1 – 15 |
| 13 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDCH. SS verifies that the BSN = BSN2+ 3*CV1 – 14 In case CV=14 was received for BSN= BSN2+ 3*CV1 – 15, CV=13 in the received Data block. In case CV=13 was received for BSN= BSN2+ 3*CV1 – 15, CV=12 in the received Data block. else CV=14 in the received Data Block. |
| 14 | SS-> MS | PACKET UPLINK ACK/NACK | Wait for BS_CV_MAX block periods before sending this message. SS Acknowledges the UL RLC Data Block USF assigned to the MS. |

| Step | Direction | Message | Comments |
|------|-----------|---|--|
| 15 | MS->SS | EGPRS UPLINK RLC DATA BLOCK | Received on the assigned PDCH. SS verifies that BSN is incremented by 1 and CV is decremented by 1 |
| 16 | | [Completion of RLC Data Block Transfer] | |

58c.2.6 Void

58c.2.7 Void

58c.2.7a EGPRS Acknowledged mode / Uplink TBF / Retransmission/ UAS or MCS Selection with Re-segmentation, in EGPRS2A

58c.2.7a.1 Conformance requirements

In EGPRS TBF mode, RLC data blocks that are transmitted for the first time shall be transmitted with the commanded MCS, except if the commanded mode is MCS-5-7, in which case the data block shall be transmitted with MCS-5, or if the commanded mode is MCS-6-9, in which case the data block shall be transmitted with MCS-6. In the case of a Downlink Dual Carrier configuration the commanded MCS shall apply to both of the carriers. In EGPRS TBF mode, a MS may choose an alternate MCS than the one commanded, for the initial transmission of the last RLC data blocks of the TBF under the following conditions:

- the alternate MCS is more robust than the commanded MCS;
- the alternate MCS has already been commanded by the network during the TBF or was available for selection by the MS during the TBF according to the MCS selection rules for retransmissions; and
- the TBF requires no more radio blocks for initial transmission of the RLC data blocks using the alternate MCS than would be required when using the commanded MCS.

For a TBF with FANR activated, if the commanded MCS is MCS-9 (respectively MCS-4), the initial transmission of the RLC data block(s) shall be done with MCS-8 (respectively MCS-3) if a PAN field is included in the radio block.

When EMST is used, the commanded MCS shall apply to the RLC entity on the TBF identified by the TFI included in the header of the RLC/MAC block.

A RESEGMENT bit is included within each PACKET UPLINK ACK/NACK, PACKET UPLINK ASSIGNMENT, MULTIPLE TBF UPLINK ASSIGNMENT, PACKET TIMESLOT RECONFIGURE, MULTIPLE TBF TIMESLOT RECONFIGURE or PACKET CS RELEASE INDICATION messages. For initial transmissions of new RLC blocks the channel coding commanded is applied. The RESEGMENT bit is used to set the ARQ mode to type I or type II (incremental redundancy) for uplink TBFs. For retransmissions, setting the RESEGMENT bit to '1' (type I ARQ) requires the mobile station to use an MCS within the same family as the initial transmission and the payload may be split (refer to table 8.1.1.1). For retransmissions, setting the RESEGMENT bit to '0' (type II ARQ) requires the mobile station to use an MCS within the same family as the initial transmission without splitting the payload even if the network has commanded it to use MCS-1, MCS-2 or MCS-3 for subsequent RLC blocks (refer to table 8.1.1.2), see note. In RLC unacknowledged mode, RESEGMENT bit shall be ignored and default value 0 should be used.

NOTE: This bit is particularly useful for networks with uplink IR capability since it allows combining on retransmissions.

Table 8.1.1.3: Choice of modulation and coding scheme for retransmissions with re-segmentation (EGPRS2-A)

| Scheme used for Initial transmission | Scheme to use for retransmissions after switching to a different modulation and coding scheme (MCS or UAS) | | | | | | | | | | |
|--------------------------------------|--|------------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
| | UAS-11 Commanded | UAS-10 Commanded | UAS-9 Commanded | UAS-8 Commanded | UAS-7 Commanded | MCS-6 Commanded | MCS-5 Commanded | MCS-4 Commanded | MCS-3 Commanded | MCS-2 Commanded | MCS-1 Commanded |
| UAS-11 | UAS-11 | UAS-8 | UAS-8 | UAS-8 | MCS-6 (pad) | MCS-6 (pad) | MCS-3 (pad) | MCS-3 (pad) | MCS-3 (pad) | MCS-3 (pad) | MCS-3 (pad) |
| UAS-10 | UAS-10 | UAS-10 | UAS-7 | UAS-7 | UAS-7 | MCS-5 | MCS-5 | MCS-2 | MCS-2 | MCS-2 | MCS-2 |
| UAS-9 | UAS-9 | UAS-9 | UAS-9 | MCS-6 | MCS-6 | MCS-6 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 |
| UAS-8 | UAS-11 | UAS-8 | UAS-8 | UAS-8 | MCS-6 (pad) | MCS-6 (pad) | MCS-3 (pad) | MCS-3 (pad) | MCS-3 (pad) | MCS-3 (pad) | MCS-3 (pad) |
| UAS-7 | UAS-10 | UAS-10 | UAS-7 | UAS-7 | UAS-7 | MCS-5 | MCS-5 | MCS-2 | MCS-2 | MCS-2 | MCS-2 |
| MCS-6 | UAS-9 | UAS-9 | UAS-9 | MCS-6 | MCS-6 | MCS-6 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 |
| MCS-5 | UAS-10 | UAS-10 | UAS-7 | UAS-7 | UAS-7 | MCS-5 | MCS-5 | MCS-2 | MCS-2 | MCS-2 | MCS-2 |
| MCS-4 | MCS-4 | MCS-4 | MCS-4 | MCS-4 | MCS-4 | MCS-4 | MCS-4 | MCS-4 | MCS-1 | MCS-1 | MCS-1 |
| MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 | MCS-3 |
| MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 | MCS-2 |
| MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 | MCS-1 |

In EGPRS2, if these rules require a transmission (either original transmission or retransmission) in a modulation and coding scheme where there are fewer than the maximum number of RLC blocks that can be transmitted, the mobile station shall use the modulation and coding scheme specified in tables 8.1.1.7 and 8.1.1.8.

Table 8.1.1.7: Retransmissions with fewer RLC blocks (EGPRS2-A)

| Modulation and Coding Scheme specified | Modulation/Coding scheme to be used (only 1 block can be transmitted) | Modulation/Coding scheme to be used (only 2 blocks can be transmitted) |
|--|---|--|
| UAS-7 | MCS-5 | n/a |
| UAS-8 | MCS-6 (with padding) | n/a |
| UAS-9 | MCS-6 | n/a |
| UAS-10 | MCS-5 | UAS-7 |
| UAS-11 | MCS-6 (with padding) | UAS-8 |

Test Procedure

The EGPRS2A capable MS is made to transmit uplink RLC data blocks in EGPRS TBF RLC acknowledged mode. The EGPRS Channel Coding Command IE in the Packet Uplink Assignment message is set according to the execution counter K described as below.

After BS_CV_MAX block periods the SS sends a Packet Uplink Ack/Nack message to negatively acknowledge some RLC data blocks. In the message EGPRS Channel Coding Command IE is set to a different UAS or MCS and Resegment IE should be set to '0'.

The MS shall then retransmit the negatively acknowledged RLC data blocks using the UAS or MCS specified in table 8.1.1.3, 3GPP TS 44.060.

Test procedure is repeated for K = 1 to 7 with:

K = 1: UAS-11 to be used at step 1,

K = 2: UAS-10 to be used at step 1,

K = 3: UAS-9 to be used at step 1,

K = 4: UAS-8 to be used at step 1,

K = 5: UAS-7 to be used at step 1,

K = 6: MCS-6 to be used at step 1,

K = 7: MCS-5 to be used at step 1,

Maximum Duration of Test

30 minutes.

58c.2.9 Void

58c.2.9a Acknowledged Mode/ Uplink TBF/ Retransmission/ MCS or UAS Selection without Re-segmentation, in EGPRS2A

58c.2.9a.1 Conformance requirements

In EGPRS TBF mode, RLC data blocks that are transmitted for the first time shall be transmitted with the commanded MCS, except if the commanded mode is MCS-5-7, in which case the data block shall be transmitted with MCS-5, or if the commanded mode is MCS-6-9, in which case the data block shall be transmitted with MCS-6. In the case of a Downlink Dual Carrier configuration the commanded MCS shall apply to both of the carriers. In EGPRS TBF mode, a MS may choose an alternate MCS than the one commanded, for the initial transmission of the last RLC data blocks of the TBF under the following conditions:

- the alternate MCS is more robust than the commanded MCS;
- the alternate MCS has already been commanded by the network during the TBF or was available for selection by the MS during the TBF according to the MCS selection rules for retransmissions; and
- the TBF requires no more radio blocks for initial transmission of the RLC data blocks using the alternate MCS than would be required when using the commanded MCS.

For a TBF with FANR activated, if the commanded MCS is MCS-9 (respectively MCS-4), the initial transmission of the RLC data block(s) shall be done with MCS-8 (respectively MCS-3) if a PAN field is included in the radio block.

When EMST is used, the commanded MCS shall apply to the RLC entity on the TBF identified by the TFI included in the header of the RLC/MAC block.

A RESEGMENT bit is included within each PACKET UPLINK ACK/NACK, PACKET UPLINK ASSIGNMENT, MULTIPLE TBF UPLINK ASSIGNMENT, PACKET TIMESLOT RECONFIGURE, MULTIPLE TBF TIMESLOT RECONFIGURE or PACKET CS RELEASE INDICATION messages. For initial transmissions of new RLC blocks the channel coding commanded is applied. The RESEGMENT bit is used to set the ARQ mode to type I or type II (incremental redundancy) for uplink TBFs. For retransmissions, setting the RESEGMENT bit to '1' (type I ARQ) requires the mobile station to use an MCS within the same family as the initial transmission and the payload may be split (refer to table 8.1.1.1). For retransmissions, setting the RESEGMENT bit to '0' (type II ARQ) requires the mobile station to use an MCS within the same family as the initial transmission without splitting the payload even if the network has commanded it to use MCS-1, MCS-2 or MCS-3 for subsequent RLC blocks (refer to table 8.1.1.2), see note. In RLC unacknowledged mode, RESEGMENT bit shall be ignored and default value 0 should be used.

NOTE: This bit is particularly useful for networks with uplink IR capability since it allows combining on retransmissions.

Table 8.1.1.4: Choice of modulation and coding scheme for retransmissions without re-segmentation (EGPRS2-A)

| Scheme used for Initial transmission | Scheme to use for retransmissions after switching to a different modulation and coding scheme (MCS or UAS) | | | | | | | | | | |

58c.2.9a.2 Test purpose

1. To verify that if the re-segment bit is not set, the mobile station shall use a MCS or UAS within the same family as the initial MCS or UAS without splitting the payload for retransmission in accordance with subclause 8.1.1 table 8.1.1.4, 3GPP TS 44.060.

58c.2.9a.3 Method of test

Initial Conditions

System Simulator:

1 cell with EGPRS2A support, default settings

Mobile Station:

The MS is EGPRS2A updated with a P-TMSI allocated and the test PDP context2 activated.

Specific PICS Statements

-

PIXIT Statements

Test Procedure

The EGPRS2A capable MS is made to transmit uplink RLC data blocks in EGPRS TBF RLC acknowledged mode. The EGPRS Channel Coding Command IE in the Packet Uplink Assignment message is set according to the execution counter K described as below.

After BS_CV_MAX block periods the SS sends a Packet Uplink Ack/Nack message to negatively acknowledge some RLC data blocks. In the message EGPRS Channel Coding Command IE is set to a different MCS or UAS and Resegment IE should be set to '0'.

The MS shall then retransmit the negatively acknowledged RLC data blocks using the MCS or UAS specified in table 8.1.1.4, 3GPP TS 44.060.

Test procedure is repeated for $K = 1$ to 7 with:

K = 1: UAS-11 to be used at step 1,

K = 2: UAS-10 to be used at step 1,

K = 3: UAS-9 to be used at step 1,

K = 4: UAS-8 to be used at step 1,

K = 5: UAS-7 to be used at step 1,

K = 6: MCS-6 to be used at step 1,

K = 7: MCS-5 to be used at step 1,

Maximum Duration of Test

30 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------------------------|-----------|--|---|
| 1 | | {Uplink dynamic allocation two phase access} | N = for K = 1: 4600 octets. (K = 2: 4250, K = 3: 3500, K = 4: 3000, K = 5: 2500, K = 6: 3500, K = 7: 2500.) USF_GRANULARITY = 1 block. EGPRS Channel Coding Command is set according to execution counter K (e.g., K=1: UAS-11). |
| 2 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| 3 | MS -> SS | EGPRS2A UPLINK RLC DATA BLOCK | Received on the assigned PDTCH. The SS verifies that the BSN starts from 0, and verifies the correct MCS or UAS is used. |
| 4 | - | | Repeat steps 2 and 3 until RLC data block BSN = 31. |
| 5 | - | | Wait for BS_CV_MAX block periods relative to the last received RLC data block. |
| 6 | SS -> MS | PACKET UPLINK ACK/NACK | The SS acknowledges RLC data blocks from BSN 10 to 31 with RBB set to 1 and negatively acknowledges RLC data blocks from BSN 1 to 9 with RBB set to 0, SSN = 1 (Note: This is NACK for BSN = 0). USF not assigned to the MS. EGPRS Channel Coding Command is set to UAS-11. Resegment IE is set to '0'. |
| 7 | - | | Wait for 6 blocks with no USF. |
| 8 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Sent on the PACCH of the PDCH assigned, containing USF assigned to the MS. |
| A9 (optional step) | MS -> SS | EGPRS2A UPLINK RLC DATA BLOCK | MS may transmit new data block if it has already been scheduled while Packet Uplink Ack/Nack is being processed. |

Test Procedure

The MS is made to transmit uplink RLC data blocks in an acknowledged mode uplink EGPRS TBF. EGPRS Coding Command is set to indicate UAS-11.

The SS sends a PACKET UPLINK ACK/NACK message and NACK all blocks received. UAS-7 is commanded in the message.

The SS checks that the retransmitted blocks are received in MCS-6, PS1.

Repeat the above steps with different allowed MCS and PS combinations.

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |

58c.3.2 Void

58c.3.2a Acknowledged Mode/ Downlink TBF/ Split RLC Data Block, in EGPRS2A

58.3.2a.1 Conformance requirements

1. Each RLC endpoint receiver shall have an associated receive state array $V(N)$. $V(N)$ is an array of SNS elements indicating the receive status of WS RLC data blocks that are supposed to follow the block $BSN=V(Q)-1$. The array is indexed relative to the receive window state variable $V(Q)$ modulo SNS. When an RLC data block is received with BSN within the receive window, the corresponding element in $V(N)$ is set to the value RECEIVE
2. If the RLC data block is split over two radio blocks, the element shall be set to the value RECEIVED if and only if both radio blocks have been received.
3. The elements in $V(N)$ shall be set to the value INVALID at the beginning of each TBF. During the TBF, an element in $V(N)$ that falls outside the receive window, shall be set to the value INVALID.

References

3GPP TS 44.060, subclause 9.1.7

58.3.2a.2 Test purpose

To verify that in case an RLC data block is split over two radio blocks:

1. When an RLC data block is received with BSN within the active window i.e. such that $[V(Q) \leq BSN < V(Q) + WS]$ modulo SNS, the corresponding element in $V(N)$ is set to the value RECEIVED (the RLC data block has passed FCS).
2. The corresponding $V(N)$ element shall not be marked as RECEIVED if any of the two radio blocks is not received.
3. The corresponding $V(N)$ element shall be marked as RECEIVED if both of the radio blocks are received.

58.3.2a.3 Method of test

Initial Conditions

System Simulator:

1 cell with EGPRS support, default setting,

Mobile Station:

The MS is EGPRS updated with a P-TMSI allocated, SPLIT PG CYCLE negotiated and the test PDP Context2 activated.

Specific PICS Statements

-

PIXIT Statements

-

Test Procedure

The SS establishes a downlink EGPRS TBF.

The SS sends a RLC data block $n > N$, $n < WS$ using DAS-10. The SS sends the first part of a spitted RLC data block using DAS-7, with $BSN=N$ ($N < \text{window size}$), $SPB='10'B$, and polls for the EGPRS PACKET DOWNLINK ACK/NACK message from the MS. The MS shall respond with an EGPRS PACKET DOWNLINK ACK/NACK message indicating the block $BSN=N$ is not received.

The SS then sends the second part of the spitted RLC block with the same $BSN=N$ ($N < WS$), $SPB='11'$ using DAS-7, and polls for the EGPRS PACKET DOWNLINK ACK/NACK message from the MS. The MS shall respond with an EGPRS PACKET DOWNLINK ACK/NACK message with the $BSN=N$ acknowledged.

Maximum Duration of Test

30 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--------------------------------|---|
| 1 | | {Downlink TBF establishment} | Acknowledged Mode EGPRS2 Window Size: arbitrarily chosen |
| 2 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | With DAS-10, $BSN=6$, $RRBP = '00'B$ |
| 3 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | The SS verifies that RBB is set to 0 for RLC data blocks with $BSN = 0, 1, 2, 3, 4$ and 5 and RBB is set to 1 for $BSN=6$. |
| 4 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | With DAS-7, BSN starts from 0 $ES/P = '00'B$, $SPB='10'B$ |
| 5 | | | Repeat step 4 until $BSN = 3$ |
| 6 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | With DAS-7 $BSN = 5$, $ES/P = '01'B$, $RRBP = '00'B$, $SPB='11'B$ |
| 7 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | The SS verifies that the bits in RBB for $BSN=0, 1, 2, 3, 4, 5$ are set to '0'B. |
| 8 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | With DAS-7 $BSN = 4$, $SPB = '10'B$, $ES/P = '01'B$, $RRBP = '00'B$ |
| 9 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | The SS verifies that the bit for $BSN=4$ in RBB is set to '0'B. |
| 10 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | With DAS-7 $BSN = 4$, $SPB = '11'B$, $ES/P = '01'B$, $RRBP = '00'B$ |
| 11 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | The SS verifies that the bit for $BSN=4$ in RBB is set to '1'B. |
| | | | {Completion of downlink data transfer} |

58c.3.3a Acknowledged Mode / Downlink TBF / Decoding of Coding Schemes, in EGPRS2-A

58c.3.3a.1 Conformance requirements

1. In EGPRS TBF mode, the transfer of RLC Data Blocks in the acknowledged RLC/MAC mode can be controlled by a selective type I ARQ mechanism, or by type II hybrid ARQ (Incremental Redundancy: IR) mechanism, coupled with the numbering of the RLC Data Blocks within one Temporary Block Flow.
2. According to the link quality, an initial Modulation and Coding Scheme (MCS) is selected for an RLC block (see note). For the retransmissions, the same or another MCS from the same family of MCSs can be selected.
3. The selection of MCS is controlled by the network.
4. In EGPRS header, the Coding and Puncturing Scheme indicator field is used to indicate the kind of channel coding and puncturing used for data blocks.(see 3GPP TS 05.03)

58c.3.4a Acknowledged Mode / Downlink TBF / Retransmission / Padding in EGPRS2-A

58c.3.4a.1 Conformance requirements

According to the link quality, an initial Modulation and Coding Scheme (MCS) is selected for an RLC block (see note). For the retransmissions, the same or another MCS from the same family of MCSs may be selected. E.g. if MCS-7 is selected for the first transmission of an RLC block, any MCS of the family B may be used for the retransmissions. Further, RLC data blocks initially transmitted with MCS-4, MCS-5, MCS-6, MCS-7, MCS-8 or MCS-9, may be retransmitted with MCS-1, MCS-2 or MCS-3 as appropriate, by sending the different parts of the RLC data block in different radio blocks. In this case, the split block field in the header shall be set to indicate that the RLC data block is split, and the order of the two parts. For blocks initially transmitted with MCS-8 which are retransmitted using MCS-6 or MCS-3, padding of the first six octets shall be applied before each RLC data block, and the CPS field shall be set to indicate that this has been done (see an informative example in annex J).

References

3GPP TS 44.060, subclause 9.3.2.1

58c.3.4a.2 Test purpose

To verify that the MS correctly decodes the CPS field of EGPRS Downlink RLC Data Block header.

To verify that the MS correctly decodes a retransmitted data block this contains first six octets of padding.

58c.3.4a.3 Method of test

Initial Conditions

System Simulator:

1 cell with EGPRS support, default setting,

Mobile Station:

The MS is EGPRS updated with a P-TMSI allocated, SPLIT PG CYCLE negotiated and the test PDP context2 activated.

Specific PICS Statements

- EGPRS Multislotclass (TSPC_Type_EGPRS_Multislot_ClassX where X = 1...45)

PIXIT Statements

-

Test Procedure

The SS initiates the establishment of a downlink EGPRS2-A TBF, setting window size to the largest value WS corresponding the number of timeslots assigned to TBF.

The SS sends two EGPRS2-A RLC radio blocks with BSN=0 BSN=1 and BSN=4 BSN=5 using DAS-9. In the last block FBI is set to 1 and the MS is polled for Acknowledgement.

The MS shall send a EGPRS Packet Downlink Ack/Nack type 2 message acknowledging BSNs 0,1,4 and 5 and negatively acknowledging BSN=2 and BSN=3. SS verifies that FAI is set to 0.

The SS sends EGPRS RLC data block with BSN=2 using DAS-6, setting first 6 octets of the data block to padding, and setting CPS field to indicate the same and polls the MS for acknowledgement.

The MS shall send EGPRS Packet Downlink Ack/Nack type 2 message acknowledging BSNs 0,1,2,4 and 5 and negatively acknowledging BSN=3. SS verifies that FAI is set to 0.

The SS sends first part of BSN=3 using MCS-3 with first six octets of the data block set to padding and polls the MS for acknowledgement. CPS is set correctly in the data block header to indicate that the block is first part of split block and that the data block is padded.

The MS shall send EGPRS Packet Downlink Ack/Nack message acknowledging BSNs 0,1,2,4 and 5 and negatively acknowledging BSN=3. SS verifies that FAI is set to 0.

The SS sends second part of BSN=3 using MCS-3 and polls the MS for acknowledgement. CPS is set correctly in the data block header to indicate that the block is second part of split block and that the data block is not padded.

The MS shall send EGPRS Packet Downlink Ack/Nack Type 2 message acknowledging BSNs 0 to 5. SS verifies that FAI is set to 1.

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--------------------------------------|--|
| 1 | | {Downlink TBF establishment} | Acknowledged Mode, EGPRS level = 01 EGPRS Window Size = Maximum for the MS according to the number of timeslots assigned to TBF. |
| 2 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Using DAS-9 Sent on the assigned PDTCH, with BSN = 0 and BSN=1. |

58c.3.5a Acknowledged Mode / Downlink TBF / First Partial Bitmap and Next Partial Bitmap in EGPRS2-A

58c.3.5a.1 Conformance requirements

1. In EGPRS downlink TBFs, an additional poll bit is added to the S/P field in every downlink RLC block so that the network can request the following:

- First Partial Bitmap (FPB) segment with $SSN = (V(Q) + 1) \bmod 2048$ where SSN denotes the Starting Sequence Number.
 - Next Partial Bitmap (NPB) segment with $SSN = (PBSN + 1) \bmod 2048$ where PBSN denotes a Partial Bitmap Sequence Number variable stored at the receiver.
2. SSN is determined by the receiver as a function of ES/P, V(Q) and PBSN. The FPB and NPB are specific instances of the *EGPRS Ack/Nack Description Information Element* within the EGPRS PACKET DOWNLINK ACK/NACK message, EGPRS PACKET DOWNLINK ACK/NACK TYPE 2 message. The mobile station shall respond to ES/P field according to table 9.1.8.2.1.1 (non-MBMS). For a mobile station with one or more downlink TBFs using EGPRS2, the mobile station shall send the EGPRS PACKET DOWNLINK ACK/NACK TYPE 2 message. Otherwise, the mobile station shall send the EGPRS PACKET DOWNLINK ACK/NACK message.
 3. Based on PBSN, V(Q) and the ES/P field set by the network, SSN and PBSN shall be determined according to table 9.1.8.2.2.1. For EGPRS2, SSN and PBSN shall be determined based on PBSN, V(Q) and CES/P fields according to table 9.1.8.2.2.2. For EGPRS2 the Combined EGPRS Supplementary/Polling field describes the feedback request and specifies a single uplink block in which the mobile station shall transmit a PACKET CONTROL ACKNOWLEDGEMENT message, a PACCH block see table 9.1.8.2.1.3. The single uplink block is defined by a delay relative to the first TDMA frame (N) of the downlink block containing the CES/P value. If ordered to send a EGPRS PACKET DOWNLINK ACK/NACK message or EGPRS PACKET DOWNLINK ACK/NACK TYPE 2 message, a mobile station with one or more downlink TBFs using EGPRS2 shall send the EGPRS PACKET DOWNLINK ACK/NACK TYPE 2 message. Otherwise, the mobile station shall send the EGPRS PACKET DOWNLINK ACK/NACK message.

Test Procedure

The SS establishes a downlink EGPRS2-A TBF setting EGPRS window size to 256, FANR disabled and in BTTI mode.

The SS sends a series of RLC data blocks with BSN=0, 1...5, CES/P = '000'B using DAS-7 coding scheme.

The SS sends a RLC data block with BSN=21, CES/P = '001'B and using DAS7. MS responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message with CQR and FPB within radio period (N+8 or N+9) mode 2715648.

The SS sends a RLC data block with BSN=32, CES/P = '010'B and using DAS-5. MS responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message with CQR and FPB within radio period (N+13) mode 2715648.

The SS sends a RLC data block with BSN=22, CES/P = '011'B and using DAS-6. MS doesn't responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message.

The SS sends a RLC data block with BSN=24, CES/P = '100'B and using DAS-5. MS doesn't responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message.

The SS sends a RLC data block with BSN=26, CES/P = '101'B and using DAS-7. MS responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message with CQR and NPB within radio period (N+8 or N+9) mode 2715648.

The SS sends a RLC data block with BSN=29, CES/P = '110'B and using DAS-5. MS responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message with CQR and NPB within radio period (N+13) mode 2715648.

The SS sends a RLC data block with BSN=31, CES/P = '111'B and using DAS-5. MS responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message with CQR and NPB within radio period (N+8 or N+9) mode 2715648.

The SS sends RLC data blocks with BSN=256, 116,241. CES/P = '000'B using DAS-5 coding scheme

The SS sends a RLC data block with BSN=237, CES/P = '111'B and using DAS-5. MS responds back with EGPRS PACKET DOWNLINK ACK/NACK TYPE2 message with no channel quality report and NPB within radio period (N+8 or N+9) mode 2715648.

Maximum Duration of Test

10 minutes.

58d EFTA

58d.1 Concurrent EFTA TBF

58d.1.1 EFTA / Extended Dynamic Allocation/Concurrent TBF

58d.1.1.1 Conformance Requirement

For a mobile station with an uplink TBF for which EFTA is used transmissions shall be performed on the uplink PDCHs or PDCH-pairs allocated by the USF as specified in Annex N. In case the mobile station also has one or more concurrent downlink TBF(s), but does not have enough RLC/MAC blocks ready for transmission to fully utilize the total number of allocated resources for uplink radio block transmission during the corresponding radio block period(s), then it shall immediately begin monitoring its assigned downlink PDCHs or PDCH-pairs after transmitting its last available RLC/MAC block taking into account the switching requirements of its multislot class (see 3GPP TS 45.002).

References

3GPP TS 44.060, subclause 8.1.1.2.1

A mobile station with an uplink TBF operating in BTTI configuration for which EFTA is used shall perform transmissions on a subset of the uplink PDCHs allocated by the USF. If the mobile station has P RLC/MAC blocks ready for transmission, then this subset is defined as the first P number of the allocated uplink PDCHs arranged according to the specific timeslot numbers order as specified in Table N.1 below. T_{ra} or T_{rb} , whichever is applicable, is the switching time from transmission to reception (see 3GPP TS 45.002).

Table N.1: Uplink timeslots transmission order for EFTA

| Lowest Numbered Downlink Timeslot the MS Needs to Monitor | T_{ra} or T_{rb} , whichever is applicable | | |
|---|--|-----------------|-----------------|
| | 0 | 1 | 2 |
| TN0 | 4,3,2,1,0,5,6,7 | 3,2,1,0,4,5,6,7 | 2,1,0,3,4,5,6,7 |
| TN1 | 5,4,3,2,1,0,6,7 | 4,3,2,1,0,5,6,7 | 3,2,1,0,4,5,6,7 |
| TN2 | 6,5,4,3,2,1,0,7 | 5,4,3,2,1,0,6,7 | 4,3,2,1,0,5,6,7 |
| TN3 | 7,6,5,4,3,2,1,0 | 6,5,4,3,2,1,0,7 | 5,4,3,2,1,0,6,7 |
| TN4 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 6,5,4,3,2,1,0,7 |
| TN5 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 |
| TN6 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 |
| TN7 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 |

A mobile station with an uplink TBF operating in RTTI configuration for which EFTA is used shall perform transmissions on a subset of the uplink PDCH-pairs allocated by the USF in the same manner as specified above. For

this case the specific timeslot number order shall be seen as indicating the lowest numbered timeslot of the uplink PDCH-pair.

NOTE: The above described rule determine the subset of the allocated uplink PDCHs or PDCH-pairs on which uplink transmissions shall be performed when EFTA is used. This procedure however, does not define which uplink PDCHs or PDCH-pairs that shall be allocated by the USF. Nor does the procedure define the individual ordering of any transmitted RLC/MAC blocks on these resources, which shall remain the same as for the case when EFTA is not used.

A mobile station with an uplink TBF for which EFTA is used shall perform the transmission of any uplink PACCH message allocated via the polling mechanism (see sub-clauses 10.4.4b and 10.4.5) on the first of the assigned uplink PDCHs or PDCH-pairs arranged according to the specific timeslot number order as described by Table N.1 above, regardless of which resources are allocated by the USF. The switching time T_{ra} or T_{rb} shall be interpreted according to its value at the time the poll was received.

References

3GPP TS 45.002, Annex B.1 and B.5

3GPP TS 45.002 Table 6.4.2.2.1

58d.1.1.2 Test Purposes

The test purpose is to verify that the EFTA capable MS indicating support for an Alternative EFTA Multislot Class supports as many downlink timeslots per TDMA frame as indicated with the multislot classes. Especially it's verified that the Sum parameter is not used in the conditions where Sum is not applicable according to TS 45.002 Annex B.5.

1. T_{tb} , the minimum number of slots allowed between the end of the previous transmit or receive TS and the next transmit TS when measurement is to be performed for type 1 MS.
2. T_{ra} , the minimum number of slots allowed between the previous transmit or receive TS and the next receive TS when measurement is to be performed for type 1 MS.
3. The maximum number of Rx and Tx supported.
4. Check that MS transmit according to 44.060 Table N.1.
5. MS shall if uplink data is ongoing then for these overlapping instances prioritize uplink radio block transmission over attempting to read downlink radio blocks.

58d.1.1.3 Method of Test

Initial Conditions

System Simulator:

1 cell with EGPRS support, default setting,

Mobile Station:

The MS is EGPRS updated with a P-TMSI allocated, PDP Context 2 activated.

Specific PICS Statements

-

PIXIT Statements

Test Procedure

Establish a concurrent uplink downlink TBF using max number of Tx and Rx timeslot according to multislot class and alternative EFTA multislot class, EDA used, USF_GRANULARITY=4 blocks, MCS-5.

Transmit on all downlink timeslots and check that all data is Ack'd correctly.

Transmit on all uplink timeslots while downlink transmission on all timeslot also is ongoing, check that the uplink always gets transmitted correctly and that only overlapping downlink data is Nacked.

Send 2 RLC blocks on uplink assign USF on lowest TN, while downlink transmission on all timeslots also is ongoing, check that uplink is transmitted according to 44.060 Table N.1.

Maximum Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|---|---|
| 1 | SS -> MS | {Downlink TBF establishment} | Acknowledged Mode. SS Commands MS to use mobile coding scheme MCS-5. Max number of timeslots are assigned according to MS multislot class (TS 45.002 Annex B.1) and Alternative EFTA multislot class (TS 45.002 Annex B.5): - TN ₁ to TN _x . |
| 2 | SS -> MS | 30 RLC data blocks | SS sends data, last block is polling. |
| 3 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | Sent on PACCH. Check all blocks Acked ok. |
| 4 | SS -> MS | PACKET UPLINK ASSIGNMENT | Sent on downlink PACCH. The uplink TBF is assigned. MCS-5, EDA used, USF_GRANULARITY=4. Max number of timeslots are assigned according to MS multislot class (TS 45.002 Annex B.1) and Alternative EFTA multislot class (TS 45.002 Annex B.5): - TN ₁ to TN _x . |
| 5 | SS -> MS | 30 RLC data blocks | SS sends data, last block is polling. |
| 6 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | Sent on PACCH. SS checks that all data blocks are Acked. |
| 7 | SS <-> MS | {Downlink data transfer},{Uplink data transfer} | 2000 octets of data in downlink and SS checks that Acked/Nack is according to EFTA requirements: - Downlink packets are Nacked if simultaneous as uplink. - Downlink packets are Nacked related to T _{tb} and T _{ra} . 1000 octets of data in uplink and SS checks that all data blocks are Acked. Downlink and uplink data transfers are simultaneous. |
| 8 | SS -> MS | 30 RLC data blocks | SS sends data, last block is polling. |
| 9 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Assigned USF on PACCH on lowest TN. |
| 10 | MS -> SS | 2 RLC data blocks | Trigger 2 UL data blocks while SS sends data on all assigned downlink timeslots in step 9. SS checks that MS send the data according to TS 44.060 Table N.1. |
| 11 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | Sent on PACCH. |
| 12 | SS -> MS | PACKET UPLINK ACK/NACK | SS acknowledges receiving all RLC data blocks. Final Ack Indicator = '1' containing valid RRBP. Sent on the PACCH of the assigned PDCH. |
| 13 | MS -> SS | PACKET CONTROL ACKNOWLEDGEMENT | Received on the block specified by RRBP on PACCH of the assigned PDCH. |

58d.1.2 EFTA / Acknowledge mode/ Concurrent TBF/ pre-emptive retransmission

58d.1.2.1 Conformance Requirement

When Enhanced Flexible Timeslot Assignment, EFTA, is used, and the applicable conditions for pre-emptive retransmission are true, the mobile station shall not prioritize uplink radio block transmission over attempting to read downlink radio blocks.

References

3GPP TS 44.060 subclause 9.1.3.2.1

For a mobile station with an uplink TBF for which EFTA is used transmissions shall be performed on the uplink PDCHs or PDCH-pairs allocated by the USF as specified in Annex N. In case the mobile station also has one or more concurrent downlink TBF(s), but does not have enough RLC/MAC blocks ready for transmission to fully utilize the total number of allocated resources for uplink radio block transmission during the corresponding radio block period(s), then it shall immediately begin monitoring its assigned downlink PDCHs or PDCH-pairs after transmitting its last available RLC/MAC block taking into account the switching requirements of its multislot class (see 3GPP TS 45.002).

Test Procedure

Establish a concurrent uplink downlink TBF using max number of Tx and Rx allowed timeslots according to multislot class and alternative EFTA multislot class for K=1 (DL with minimum 6 TS) and for K=2 (5 DL TS should be used), EDA used, USF_GRANULARITY=1 blocks, MCS-5.

Transmit on all downlink timeslots.

Send 30 RLC block on uplink while downlink transmission on all timeslot also is ongoing. 15 RLC blocks neither acked nor nacked by SS.

Check if K=1 that MS not tries to resend RLC blocks while downlink ongoing.

Check if K=2 that MS resend RLC blocks while downlink ongoing.

Maximum Duration of Test

5 minutes

Expected Sequence

The test sequence is repeated for K = 1: DL using max number of TS allowed, minimum 6 TS, K=2: DL using 5 TS.

| Step | Direction | Message | Comments |
|------|-----------|--------------------------------|--|
| 1 | SS -> MS | {Downlink TBF establishment} | Acknowledged Mode. SS Commands MS to use mobile coding scheme MCS-5. timeslots are assigned for K=1: according to MS multislot class (TS 45.002 Annex B.1) and Alternative EFTA multislot class (TS 45.002 Annex B.5) for K=2: 5 TS is assigned: - TN ₁ to TN _x |
| 2 | SS -> MS | PACKET UPLINK ASSIGNMENT | Sent on downlink PACCH. The uplink TBF is assigned. MCS-5, EDA used, USF_GRANULARITY=1 Max number of timeslots are assigned according to MS multislot class (TS 45.002 Annex B.1) and Alternative EFTA multislot class (TS 45.002 Annex B.5) : - TN ₁ to TN _x |
| 3 | SS -> MS | {Downlink data transfer} | 2000 octets of data in downlink. Downlink data transfer are simultaneous with steps 4 to step 6 |
| 4 | MS -> SS | 30 RLC data blocks | Trigger 30 UL data blocks while SS sends data on all assigned downlink timeslots in step 3. . |
| 5 | SS -> MS | PACKET UPLINK ACK/NACK | SS acknowledges 15 RLC data blocks, the other 15 RLC data blocks SS neither Ack nor NACK. PRE_EMPTIVE_TRANSMISSION bit in PUAN message set to '1'. |
| 6a | SS | | For K=1: SS checks that MS does not try to resend RLC blocks while downlink data transfer ongoing. Downlink transfer ends |
| 6b | MS -> SS | 15 RLC data blocks | For K=2 SS checks that MS resends outstanding Pending Ack blocks while downlink data transfer ongoing. Downlink transfer ends |
| 7 | SS -> MS | PACKET UPLINK ACK/NACK | SS sets Final Ack Indicator = '1' containing valid RRBP. Sent on the PACCH of the assigned PDCH. |
| 8 | MS -> SS | PACKET CONTROL ACKNOWLEDGEMENT | Received on the block specified by RRBP on PACCH of the assigned PDCH. |

58d.1.3 EFTA / Concurrent TBF / PAN Polling

58d.1.3.1 Conformance Requirement

In case EFTA is used at the time the CES/P field is received, the mobile station shall transmit the uplink radio block according to the uplink radio block transmission order as described in Annex N regardless of the timeslot or PDCH pair where the block containing the CES/P field was received

References

3GPP TS 44.060, subclause 10.4.4b

A mobile station with an uplink TBF operating in BTTI configuration for which EFTA is used shall perform transmissions on a subset of the uplink PDCHs allocated by the USF. If the mobile station has P RLC/MAC blocks ready for transmission, then this subset is defined as the first P number of the allocated uplink PDCHs arranged according to the specific timeslot numbers order as specified in Table N.1 below. T_{ra} or T_{rb} , whichever is applicable, is the switching time from transmission to reception (see 3GPP TS 45.002).

Table N.1: Uplink timeslots transmission order for EFTA

| Lowest Numbered Downlink Timeslot the MS Needs to Monitor | T_{ra} or T_{rb} , whichever is applicable | | |
|---|--|-----------------|-----------------|
| | 0 | 1 | 2 |
| TN0 | 4,3,2,1,0,5,6,7 | 3,2,1,0,4,5,6,7 | 2,1,0,3,4,5,6,7 |
| TN1 | 5,4,3,2,1,0,6,7 | 4,3,2,1,0,5,6,7 | 3,2,1,0,4,5,6,7 |
| TN2 | 6,5,4,3,2,1,0,7 | 5,4,3,2,1,0,6,7 | 4,3,2,1,0,5,6,7 |
| TN3 | 7,6,5,4,3,2,1,0 | 6,5,4,3,2,1,0,7 | 5,4,3,2,1,0,6,7 |
| TN4 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 6,5,4,3,2,1,0,7 |
| TN5 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 |
| TN6 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 |
| TN7 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 | 7,6,5,4,3,2,1,0 |

A mobile station with an uplink TBF operating in RTTI configuration for which EFTA is used shall perform transmissions on a subset of the uplink PDCH-pairs allocated by the USF in the same manner as specified above. For this case the specific timeslot number order shall be seen as indicating the lowest numbered timeslot of the uplink PDCH-pair.

NOTE: The above described rule determine the subset of the allocated uplink PDCHs or PDCH-pairs on which uplink transmissions shall be performed when EFTA is used. This procedure however, does not define which uplink PDCHs or PDCH-pairs that shall be allocated by the USF. Nor does the procedure define the individual ordering of any transmitted RLC/MAC blocks on these resources, which shall remain the same as for the case when EFTA is not used.

A mobile station with an uplink TBF for which EFTA is used shall perform the transmission of any uplink PACCH message allocated via the polling mechanism (see sub-clauses 10.4.4b and 10.4.5) on the first of the assigned uplink PDCHs or PDCH-pairs arranged according to the specific timeslot number order as described by Table N.1 above, regardless of which resources are allocated by the USF. The switching time T_{ra} or T_{rb} shall be interpreted according to its value at the time the poll was received.

References

3GPP TS 44.060, Annex N

For a mobile station with an uplink TBF for which EFTA is used transmissions shall be performed on the uplink PDCHs or PDCH-pairs allocated by the USF as specified in Annex N. In case the mobile station also has one or more concurrent downlink TBF(s), but does not have enough RLC/MAC blocks ready for transmission to fully utilize the total number of allocated resources for uplink radio block transmission during the corresponding radio block period(s), then it shall immediately begin monitoring its assigned downlink PDCHs or PDCH-pairs after transmitting its last available RLC/MAC block taking into account the switching requirements of its multislot class (see 3GPP TS 45.002).

3GPP TS 45.002 Table 6.4.2.2.1

58d.1.5.2 Test Purposes

The test purpose is to verify that an EFTA capable MS indicating the support for alternative EFTA multislot class 3:

1. Is capable to receive and acknowledge correctly on a maximum of 8 timeslots while no frequency hopping is used.
2. Is capable to receive and acknowledge correctly on a maximum of 7 timeslots (if PICS TSPC_Fast_Downlink_Freq_Switch_Cap is supported then a maximum of 8 timeslots should be used instead) while frequency hopping is used.

58d.1.5.3 Method of Test

Initial Conditions

System Simulator:

1 cell with EGPRS support, default setting,

Mobile Station:

The MS is EGPRS updated with a P-TMSI allocated, PDP Context 2 activated.

Specific PICS Statements

TSPC_Fast_Downlink_Freq_Switch_Cap

PIXIT Statements

-

Test Procedure

Establish a downlink TBF using:

- K=1: 8 timeslots should be assigned for downlink using no frequency hopping
- K=2: 7 timeslots should be assigned for downlink using frequency hopping and TSPC_Fast_Downlink_Freq_Switch_Cap not supported
- K=3: 8 timeslots should be assigned for downlink using frequency hopping and TSPC_Fast_Downlink_Freq_Switch_Cap supported

Transmit on all downlink timeslots and check that all data is Ack'd correctly.

Maximum Duration of Test

5 minutes

Expected Sequence

The test sequence is repeated for K = 1, 2 and 3

| Step | Direction | Message | Comments |
|------|-----------|------------------------------|---|
| 1 | SS -> MS | {Downlink TBF establishment} | Acknowledged Mode. SS Commands MS to use mobile coding scheme MCS-5. K=1: 8 timeslots assigned with no frequency hopping K=2: 7 timeslots assigned with frequency hopping K=3: 8 timeslots assigned with frequency hopping - TN ₁ to TN _x |
| | SS -> MS | {Downlink data transfer} | 2000 octets of data in downlink. and SS checks that Acked correctly. |

Specific Message Contents

None.

58e DTR

58e.1 DTR with Uplink TBF / PACKET UPLINK ACK/NACK message with DTR information / Resumption to normal operation

58e.1.1 Conformance requirements

[3GPP TS 44.060, 8.1.8.2]

During an uplink TBF, the network may transmit the DTR information within a PACKET UPLINK ACK/NACK message. If DTR information is received in a PACKET UPLINK ACK/NACK message and an RLC data block in the same block period, the mobile station shall ignore the DTR information received in the RLC data block.

A mobile station not already in DTR mode shall enter DTR mode and start monitoring only the indicated PDCH or PDCH-pair (and if applicable, carrier) within the reaction time specified in 3GPP TS 45.010, when:

- DTR information was included in whichever of the following was the most recently received:
 - i) any PACKET UPLINK ACK/NACK message (applicable if the mobile station has an ongoing uplink TBF) and

[3GPP TS 44.060, 8.1.8.3]

The mobile station shall exit DTR mode within the reaction time specified in 3GPP TS 45.010:

- when an RLC data block with BSN equal to V(S) is transmitted and the medium access mode is Dynamic Allocation;

References

3GPP TS 44.060, subclause 8.1.8

58e.1.2 Test purpose

1. To verify that MS enters DTR mode when PACKET UPLINK ACK/NACK message with DTR information is received during an uplink TBF.
2. To verify that MS resumes the RLC data block transfer on all the timeslots configured when a new LLC PDU is received from upper layers, after exiting the DTR mode.

58e.3 Method of test

Initial Conditions

System Simulator:

1 cell, NW_EXT_UTBF = 1, EXT_UTBF_NODATA = 1, BS_CV_MAX = 15

Mobile Station:

MS is in Packet Idle mode, GPRS attached with support of GERAN Feature Package 1 indicated in MS Radio Access Capabilities, and PDP context 2 established.

Specific PICS Statements

- DTR Supported (TSPC_DTR)

PIXIT Statements

-

Test Procedure

The MS is triggered to transfer user data. A TBF of dynamic allocation in acknowledged mode is assigned. SS assigns an USF to MS until MS has sent CV = 0. SS acknowledges all received data with Final Ack Indicator bit set to '0'. SS continues to assign USF to MS. As the EXT_UTBF_NODATA = 1, MS refrains from transmitting the Packet Uplink Dummy Control Blocks. SS transmits PACKET UPLINK ACK/NACK message with DTR information. SS transmits PACKET POLLING REQUEST on PACCH on TN2. Verify that MS does not respond with PACKET CONTROL ACK, as the MS is in DTR mode and it shall not monitor TN2. Then MS is triggered to send more data. Verify that MS shall send data blocks with a recalculated CV on both TN1 and TN2. Then the uplink TBF is continued and completed.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|---|
| 1 | | {Uplink dynamic allocation two phase access} | n = 400 octets, without starting time, USF_GRANULARITY = 1 block, EGPRS channel coding command: MCS 1, RLC acknowledged mode (PDP context2), Two slots, USF1 on TN1 and USF2 on TN2 are assigned. |
| 2 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF1 assigned to the MS. Sent in TN1 on PACCH of PDCH assigned in step 1. |
| 3 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF2 assigned to the MS. Sent in TN2 on PACCH of PDCH assigned in step 1. |
| 4 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₁ on the PDTCH assigned in step 1. |
| 5 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₂ on the PDTCH assigned in step 1. |
| 6 | | | Repeat step 2 and 3 until CV=0 |
| 7 | SS -> MS | PACKET UPLINK ACK/NACK | Final Ack Indication = 0. Sent on PACCH of the assigned PDCH. Acknowledge all data blocks received. |
| 8 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | Received on TN ₁ on the PDTCH assigned in step 1. |
| 9 | SS | | Verify that MS does not transmit any data as EXT_UTBF_NODATA = 1 |
| 10 | SS -> MS | PACKET UPLINK ACK/NACK | Sent on TN1 of the uplink PDTCH, with DTR information. |
| 11 | SS -> MS | PACKET POLLING REQUEST | Sent on TN2 of the uplink PDTCH, with a valid RRBP=N+13 |
| 12 | SS | | Verify that there is no PACKET CONTROL ACKNOWLEDGEMENT received, as the DTR is active for TN2. |
| 13 | MS | | Trigger the MS to send 400 octets of data. Verify that UPLINK RLC DATA BLOCK is transmitted by the MS on both TN0 and TN1 and has recalculated the CV. |
| 14 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF1 assigned to the MS. Sent in TN1 on PACCH of PDCH assigned in step 1. |
| 15 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF2 assigned to the MS. Sent in TN2 on PACCH of PDCH assigned in step 1. |
| 16 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₁ on the PDTCH assigned in step 1. |
| 17 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₂ on the PDTCH assigned in step 1. |
| 18 | | | Repeat step 12 and 13 until CV=0 |
| 19 | SS -> MS | PACKET UPLINK ACK/NACK | Final Ack Indication = 1 containing valid RRBP. Sent on PACCH of the assigned PDCH. Acknowledge all data blocks received. |
| 20 | MS -> SS | PACKET CONTROL ACKNOWLEDGEMENT | Received on the block specified by RRBP on PACCH of the assigned PDCH. |

58e.2 DTR with Downlink TBF / RLC data block with DTR information / Resumption to normal operation

58e.2.1 Conformance requirements

[3GPP TS 44.060, 8.1.8.2]

During a downlink TBF, the network may transmit the DTR information within downlink RLC data blocks of the TBF (see sub-clause 10.3a.1).

A mobile station not already in DTR mode shall enter DTR mode and start monitoring only the indicated PDCH or PDCH-pair (and if applicable, carrier) within the reaction time specified in 3GPP TS 45.010, when:

- DTR information was included in whichever of the following was the most recently received:
 - ii) the RLC data block with BSN equal to $V(Q) - 1$ modulo SNS (applicable if the mobile station has an ongoing downlink TBF) and

[3GPP TS 44.060, 8.1.8.3]

The mobile station shall exit DTR mode within the reaction time specified in 3GPP TS 45.010:

- when an EGPRS RLC/MAC block for data transfer including BSN higher than $V(R)$ modulo SNS is received;

References

3GPP TS 44.060, subclause 8.1.8

58e.2.2 Test purpose

1. To verify that MS enters DTR mode when RLC data block with LLC UI dummy command is received during a downlink TBF.
2. To verify that MS resumes the RLC data block transfer on all the configured timeslots, when an EGPRS RLC/MAC block for data transfer including BSN higher than $V(R)$ modulo SNS is received.

58e.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, NW_EXT_UTBF = 1, EXT_UTBF_NODATA = 1, BS_CV_MAX = 15

Mobile Station:

MS is in Packet Idle mode, GPRS attached with support of GERAN Feature Package 1 indicated in MS Radio Access Capabilities, and PDP context 2 established.

Test Procedure

A downlink TBF is established and in progress. SS continues the downlink TBF when the supply of downlink data is exhausted, the RLC entity on the network side shall transmit a RLC data block with LLC UI dummy command with DTR information (as in specific message content). SS transmits PACKET POLLING REQUEST on PACCH on TN2. Verify that MS does not respond with PACKET CONTROL ACK, as the MS is in DTR mode and it shall not monitor TN2. EGPRS RLC/MAC block for data transfer including BSN higher than V(R) modulo SNS is transmitted by the SS. SS transmits PACKET POLLING REQUEST on PACCH on TN2. Verify that UE responds with PACKET CONTROL ACK and has exit the DTR mode. Then the downlink TBF is continued and completed.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|--|
| 1 | | {Downlink TBF establishment} | RLC mode: acknowledged, without starting time. Assigning the timeslots TN ₁ and TN ₂ . |
| 2 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₁ of the downlink PDTCH.FBI=0. First RLC data block, is sent on the third block after the last radio block containing the downlink assignment. |
| 3 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₂ of the downlink PDTCH.FBI=0, ES/P field set to 01 and a valid RRBP. |
| 4 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | Received on the specified RRBP of downlink PACCH. |
| 5 | | | Repeat step 2 and 3 - 5 times |
| 6 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₁ of the downlink PDTCH.LLC UI dummy command, with DTR information |
| 7 | SS -> MS | PACKET POLLING REQUEST | Sent on TN ₂ of the downlink PDTCH, with a valid RRBP=N+13. |
| 8 | SS | | Verify that there is no PACKET CONTROL ACKNOWLEDGEMENT received, as the DTR is active for TN ₂ . |
| 9 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₁ of the downlink PDTCH.FBI=0. Including BSN higher than V(R) modulo SNS |
| 10 | SS -> MS | PACKET POLLING REQUEST | Sent on TN ₂ of the downlink PDTCH, with a valid RRBP=N+13 |
| 11 | MS -> SS | PACKET CONTROL ACKNOWLEDGEMENT | Verify that PACKET CONTROL ACKNOWLEDGEMENT is received, as the MS has exit the DTR mode. |
| 12 | SS | {Completion of downlink RLC data block transfer} | Macro |

58e.3 DTR with Concurrent TBF / RLC data block with DTR information / Resumption to normal operation

58e.3.1 Conformance requirements

[3GPP TS 44.060, 8.1.8.2]

During a downlink TBF, the network may transmit the DTR information within downlink RLC data blocks of the TBF (see sub-clause 10.3a.1). During an uplink TBF, the network may transmit the DTR information within a PACKET UPLINK ACK/NACK message. If DTR information is received in a PACKET UPLINK ACK/NACK message and an RLC data block in the same block period, the mobile station shall ignore the DTR information received in the RLC data block.

A mobile station not already in DTR mode shall enter DTR mode and start monitoring only the indicated PDCH or PDCH-pair (and if applicable, carrier) within the reaction time specified in 3GPP TS 45.010, when:

- DTR information was included in whichever of the following was the most recently received:
 - ii) the RLC data block with BSN equal to $V(Q) - 1$ modulo SNS (applicable if the mobile station has an ongoing downlink TBF) and
- $V(R) = V(Q)$, if the mobile station has an ongoing downlink TBF, and
- if the mobile station has an ongoing uplink TBF, the RLC data block with BSN = $V(S)$ is not available and either:
 - $V(A) = V(S)$, or
 - $V(A) < V(S) \bmod SNS$, the most recently received pre-emptive transmission bit is set to '0', and no element of $V(B)$ has the value NACKED (for RLC acknowledged mode).

[3GPP TS 44.060, 8.1.8.3]

The mobile station shall exit DTR mode within the reaction time specified in 3GPP TS 45.010:

- when an RLC data block with BSN equal to $V(S)$ is transmitted and the medium access mode is Dynamic Allocation;

References

3GPP TS 44.060, subclause 8.1.8

58e.3.2 Test purpose

1. To verify that MS enters DTR mode when RLC data block with LLC UI dummy command is received during a concurrent TBF.
2. To verify that MS resumes the RLC data block transfer on all the timeslots configured when a new LLC PDU is received from upper layers, after exiting the DTR mode.

58e.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, NW_EXT_UTBF = 1, EXT_UTBF_NODATA = 1, BS_CV_MAX = 15

Mobile Station:

MS is in Packet Idle mode, GPRS attached with support of GERAN Feature Package 1 indicated in MS Radio Access Capabilities, and PDP context 2 established.

Test Procedure

An uplink TBF is established and in progress. After the MS sends an uplink data block the SS assigns a downlink TBF on the same timeslot as the uplink TBF. Uplink and downlink data transfer are in progress until $CV = 0$. SS transmits a RLC data block with LLC UI dummy command with DTR information. SS transmits PACKET POLLING REQUEST on PACCH on TN2. Verify that MS does not respond with PACKET CONTROL ACK, as DTR is active for TN2. Then MS is triggered to send more data. Verify that MS shall send data blocks with a recalculated CV on both TN1 and TN2. Then the uplink TBF is continued and completed.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|--|--|
| 1 | | {Uplink dynamic allocation two phase access} | n = 440 octets, without starting time, USF_GRANULARITY = 1 block, TLLI_BLOCK_CHANNEL_CODING: MCS1 EGPRS CHANNEL CODING COMMAND: MCS1 Two uplink timeslots TN1 and TN2 assigned. |
| 2 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF ₁ assigned to the MS. Sent in TN ₁ on PACCH of PDCH assigned in step 1. |
| 3 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF ₂ assigned to the MS. Sent in TN ₂ on the same radio block as step 2, on PACCH of PDCH assigned in step 1. |
| 4 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₁ on the PDTCH assigned in step 1. |
| 5 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₂ , on the same radio block as step 4, on PDTCH assigned in step 1. |
| 6 | SS -> MS | PACKET DOWNLINK ASSIGNMENT | Sent on PACCH of PDCH assigned in step 1. Assign a downlink TBF, MAC mode = dynamic allocation, RLC mode = acknowledged mode, TFI _d , no starting time, assigning the timeslots TN ₁ and TN ₂ . |
| 7 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₁ of the downlink PDTCH, RRBP invalid, the assigned USF ₁ addressing the MS. |
| 8 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₂ of the downlink PDTCH, RRBP invalid, the assigned USF ₂ addressing the MS. |
| 9 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₁ on the next radio block from step 7. |
| 10 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₂ on the next radio block from step 8. |
| 11 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₁ of the downlink PDTCH, RRBP invalid, the assigned USF ₁ addressing the MS. |
| 12 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | Sent on TN ₂ of the downlink PDTCH, with FBI= 0, ES/P set to 01 and a valid RRBP. Sent on downlink PDTCH. |
| 13 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₁ . |
| 14 | MS -> SS | EGPRS PACKET DOWNLINK ACK/NACK | Received on the specified RRBP of the downlink PACCH. |
| 15 | | | Repeat step 7 to 14, until CV=0 in step 9, 10 or 13. |
| 16 | SS -> MS | PACKET UPLINK ACK/NACK | Final Ack Indication = 0. Sent on PACCH of the assigned PDCH. Acknowledge all data blocks received. |
| 17 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | USF assigned to the MS |
| 18 | SS | | Verify that MS does not transmit any data as EXT_UTBF_NODATA = 1 |
| 19 | SS -> MS | EGPRS DOWNLINK RLC DATA BLOCK | LLC UI dummy command, with DTR information |
| 20 | SS -> MS | PACKET POLLING REQUEST | Sent on TN2 of the uplink PDTCH, with a valid RRBP=N+13 |
| 21 | SS | | Verify that there is no PACKET CONTROL ACKNOWLEDGEMENT received, as the DTR is active for TN2. |
| 23 | MS | | The MS is triggered to send 440 octets of user data. Verify that UPLINK RLC DATA BLOCK is transmitted by the MS on both TN1 and TN2 and has recalculated the CV. |
| 24 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF assigned to the MS. Sent in TN1 on PACCH of PDCH assigned in step 1. |
| 25 | SS -> MS | PACKET DOWNLINK DUMMY CONTROL BLOCK | The USF assigned to the MS. Sent in TN2 on PACCH of PDCH assigned in step 1.(NOTE 1) |
| 26 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₁ . |
| 27 | MS -> SS | EGPRS UPLINK RLC DATA BLOCK | Received on TN ₂ . |
| 28 | | | Repeat step 24 to 27 until CV=0 |
| 29 | SS -> MS | PACKET UPLINK ACK/NACK | Final Ack Indication = 1 containing valid RRBP. Sent on PACCH of the assigned PDCH. Acknowledge all data blocks received. |

| Step | Direction | Message | Comments |
|------|-----------|-----------------------------------|--|
| 30 | MS -> SS | PACKET CONTROL ACKNOWLEDGEMENT | Received on the block specified by RRBP on PACCH of the assigned PDCH. |

NOTE 1: The mobile stations shall be ready to receive on TN2 in step 25 in TDMA frame $(N+9) \bmod 2715648$ where N is the last TDMA frame of block sent in step 24 (3GPP TS 45.010).

60 Inter-system hard handover from GSM to UTRAN

Clause 60 contains test procedures to be used for executing Inter-system Handover from GSM to UTRAN tests. Table 60-1 contains a summary of the different combinations of parameters being tested, together with a reference to the appropriate generic test procedure. If a test uses a parameter which the MS under test does not support, the test shall be skipped. Test cases in this clause are applicable only to the MS supporting both UTRAN and GSM. The test USIM shall support service 27 to carry out these test cases.

60.1 Inter system handover to UTRAN/From GSM/Speech/Success

60.1.1 Definition

60.1.2 Conformance requirement

The MS shall be able to receive a INTERSYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANDOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.1.3 Test purpose

To test that MS supporting both GSM and UTRAN hands over to the indicated channel in the UTRAN target cell when it is in the speech call active state in the GSM serving cell and receives a INTERSYSTEM TO UTRAN HANDOVER COMMAND. It is also verified that the MS performs measurements on the target UTRAN cell before the handover.

60.1.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GPRS, Cell 2 is UTRAN (cell selection conditions in favour of the GPRS cell).

The present document subclause 40 shall be referenced for the default parameters of cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation.

3GPP TS 34.108, subclause 6.1 shall be referenced for default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

- MS supports GSM FR (TSPC_AddInfo_Full_rate_version_1).
- MS supports GSM AMR (TSPC_AddInfo_Full_rate_version_3).
- MS supports GSM EFR (TSPC_AddInfo_Full_rate_version_2).
- MS supports GSM HR (TSPC_AddInfo_Half_rate_version_1).
- Support of UTRAN FDD (TSPC_Type_UTRAN FDD)
- Support of UTRAN TDD (TSPC_Type_UTRAN TDD)

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

The SS brings the MS into the call active state (CC state U10) according to settings for execution counter M (with FR speech call for execution counter M = 1). The SS configures the UTRAN dedicated channel corresponding to the UTRAN FDD/TDD mode to default configuration 3. The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell. The SS verifies that the MS includes the UTRAN cell in the MEASUREMENT REPORT and then sends INTERSYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. After the MS receives the command it shall configure itself accordingly and switch to the dedicated channel of UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

Depending on the PIXIT parameters, the above procedure is executed each time for different initial conditions:

For MS following procedures are executed:

- if the MS supports GSM FR, the procedure is executed for execution counter M = 1 (UTRAN_FDD);
- if the MS supports GSM EFR, the procedure is executed for execution counter M = 2 (UTRAN_FDD);
- if the MS supports GSM AMR, the procedure is executed for execution counter M = 3 (UTRAN_FDD);
- if the MS supports GSM HR, the procedure is executed for execution counter M = 4 (UTRAN_FDD);
- if the MS supports GSM FR, the procedure is executed for execution counter M = 5 (UTRAN_TDD);
- if the MS supports GSM EFR, the procedure is executed for execution counter M = 6 (UTRAN_TDD);
- if the MS supports GSM AMR, the procedure is executed for execution counter M = 7 (UTRAN_TDD);
- if the MS supports GSM HR, the procedure is executed for execution counter M = 8 (UTRAN_TDD).

Expected sequence

This sequence is performed for a maximum execution counter M = 1, 2, 3, 4, 5, 6, 7, 8 depending on the PIXIT parameters.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | MS | SS | | |
| 1 | MS | | | The SS bring the MS into GSM U10 state in cell 1 and for M = 1 and 5: the MS is in GSM FR speech call; for M = 2 and 6: the MS is in GSM EFR speech call; for M = 3 and 7: the MS is in GSM AMR speech call; for M = 4 and 8: the MS is in GSM HR speech call. on a hopping traffic channel |
| 2 | SS | | | The SS configures the dedicated channel with the configuration: conversational/speech/UL:12.2 DL:12.2 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs in UTRAN cell. |
| 3 | ← | | MEASUREMENT INFORMATION | |
| 4 | → | | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4 |
| 5 | ← | | INTERSYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 6 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTERSYSTEM TO UTRAN HANDOVER COMMAND |
| 7 | SS | | | The SS waits for uplink physical channel in synchronization |
| 8 | → | | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

60.1.5 Test requirement

At step 4 the MEASUREMENT REPORT should include details of the UTRAN cell. At step 8 a HANDOVER TO UTRAN COMPLETE command should be received on DCCH of the UTRAN cell.

60.1a Inter system handover to UTRAN/From GSM/Speech/Success with A5/3 and UEA2/UIA2 ciphering

60.1a.1 Definition

The A5/3 ciphering algorithm is applied in the GERAN cell. UEA2/UIA2 algorithms are applied in the UTRAN cell.

60.1a.2 Conformance requirement

Identical to 60.1.2

60.1a.3 Test purpose

Identical to 60.1.3 but the ciphering /integrity algorithms are defined in 60.1.1.

60.1a.4 Method of test

Identical to 60.1.4

Specific message contents

Similar to the specific message contents in 60.1 except the Rel-7 IE are used and the MS/UE capability to support A5/3 and UEA2/UIA2 is checked, instead.

60.1a.5 Test requirement

Identical to 60.1.5

60.1b Inter system handover to UTRAN/From GSM/Speech/Success with A5/4 and UEA2/UIA2 ciphering

60.1b.1 Definition

The A5/4 ciphering algorithm is applied in the GERAN cell. UEA2/UIA2 algorithms are applied in the UTRAN cell.

60.1b.2 Conformance requirement

Identical to 60.1.2

60.1b.3 Test purpose

Identical to 60.1.3 but the ciphering /integrity algorithms are defined in table 60-1.

60.1b.4 Method of test

Identical to 60.1.4

Specific message contents

Similar to the specific message contents in 60.1 except the Rel-9 IE are used and the MS/UE capability to support A5/4 and UEA2/UIA2 is checked, instead.

60.1b.5 Test requirement

Identical to 60.1.5

60.2a Inter system handover to UTRAN/From GSM/Data/Same data rate/Success

60.2a.1 Definition

60.2a.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANDOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.2a.3 Test purpose

To test that the MS hands over to the indicated UTRAN target cell and the data rate of the target channel is the same as the old channel when it is in the data call active state in the GSM serving cell and receives a INTER SYSTEM TO UTRAN HANDOVER COMMAND. It is also verified that the MS performs measurements on the target UTRAN cell before the handover.

60.2a.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GPRS, Cell 2 is UTRAN (cell selection conditions in favour of the GPRS cell).

The present document subclause 40 shall be referenced for the default parameters of Cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation.

3GPP TS 34.108, subclause 6.1 shall be referenced for default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

- Support of UTRAN FDD (TSPC_Type_UTRAN FDD)

- Support of UTRAN TDD (TSPC_Type_UTRAN TDD)

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

The SS brings the MS into the call active state (CC state U10) with a 14.4 kbps CS data call. The SS configures a dedicated channel corresponding to the UTRAN FDD/TDD mode (default configuration 7 - streaming/unknown/UL:14.4 DL:14.4 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBS) in the UTRAN cell. The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell. The SS verifies that the MS include the UTRAN cell in the MEASUREMENT REPORT and then sends INTER SYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. After the MS receives the command it shall configure itself accordingly and switch to the dedicated channel of the UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

For MS following procedures are executed:

- if the MS supports UTRAN_FDD the procedure is executed for execution counter M = 1;
- if the MS supports UTRAN_TDD the procedure is executed for execution counter M = 2.

Expected sequence

This sequence is performed for a maximum execution counter M = 1, 2 depending on the PIXIT parameters.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | MS | SS | | |
| 1 | MS | | | The SS bring the MS into GSM U10 state in cell 1 - GSM 14.4 kbps CS data call on a hopping traffic channel. |
| 2 | SS | | | The SS configures a dedicated channel in the UTRAN cell with the configuration: streaming/unknown/UL:14.4 DL:14.4 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs. |
| 3 | | ← | MEASUREMENT INFORMATION | |
| 4 | | → | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4. |
| 5 | | ← | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 6 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 7 | SS | | | The SS waits for uplink physical channel in synchronization |
| 8 | | → | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

Specific message contents

MEASUREMENT INFORMATION

Same as in 60.1 according UTRAN FDD/TDD mode.

INTER SYSTEM TO UTRAN HANDOVER COMMAND

For M = 1:

Same content as in 60.1 (UTRAN FDD mode) with the following exceptions in the content of the "HandoverToUTRANCommand-r3-IEs":

60.2a.5 Test requirement

At step 4 the MEASUREMENT REPORT should include details of the UTRAN cell. At step 8 a HANOVER TO UTRAN COMPLETE command should be received on DCCH of the UTRAN cell.

60.2b Inter system handover to UTRAN/From GSM/Data/Same data rate/Extended Rates/Success

60.2b.1 Definition

60.2b.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANDOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.2b.3 Test purpose

To test that the MS hands over to the indicated UTRAN target cell and the data rate of the target channel is the same as the old channel when it is in the data call active state in the GSM serving cell and receives a INTER SYSTEM TO UTRAN HANDOVER COMMAND. It is also verified that the MS performs measurements on the target UTRAN cell before the handover.

60.2b.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GSM, Cell 2 is UTRAN (cell selection conditions in favour of the GSM cell).

The present document subclause 26.6.5.1 or subclause 26.13.1.3 (for HSCSD) shall be referenced for the default parameters of Cell 1.

3GPP TS 34.108, subclause 6.1 shall be referenced for default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

Specific PICS statements

- MS supports UTRAN Streaming/unknown/UL:14.4 DL:14,4 kbps/CS RAB + UL:3.4 DL:3,4 kbps SRBs.
- MS supports UTRAN Streaming/unknown/UL:28.8 DL:28,8 kbps/CS RAB + UL:3.4 DL:3,4 kbps SRBs.
- MS supports UTRAN Streaming/unknown/UL:57.6 DL:57,6 kbps/CS RAB + UL:3.4 DL:3,4 kbps SRBs.

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

The SS brings the MS into the call active state (CC state U10) with a CS data call (14.4 kbps HSCSD for execution counter M = 1). The SS configures an appropriate dedicated channel(default configuration 7 - streaming/unknown/UL:14.4 DL:14.4 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBS for M = 1) in the UTRAN cell. The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell. The SS verifies that the MS include the UTRAN cell in the MEASUREMENT REPORT and then sends INTER SYSTEM

TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. After the MS receives the command it shall configure itself accordingly and switch to the dedicated channel of the UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

Depending on the PIXIT parameters, the above procedure is executed maximum three times, each time for different initial conditions:

- if the MS supports GSM 14.4 kbps HSCSD and UTRAN streaming/unknown/UL:14.4 DL:14.4 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs, the procedure is executed for execution counter M = 1, using Default configuration 7;
- if the MS supports GSM 28.8 kbps CS data and UTRAN streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs, the procedure is executed for execution counter M = 2, using Default configuration 8;
- if the MS supports GSM 57.6 kbps CS data and UTRAN streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs, the procedure is executed for execution counter M = 3, using Default configuration 9.

Expected sequence

This sequence is performed for a maximum execution counter M = 1, 2, 3, depending on the PIXIT parameters.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|--|
| | MS | SS | | |
| 1 | MS | | | The SS bring the MS into GSM U10 state in cell 1 and for M = 1: the MS is in GSM 14.4 kbps HSCSD call; for M = 2: the MS is in GSM 28.8 kbps CS data call; for M = 3: the MS is in GSM 57.6 kbps CS data call; |
| 2 | SS | | | The SS configures a dedicated channel in the UTRAN cell with the configuration: For M = 1: (streaming/unknown/UL:14.4 DL:14.4 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs); For M = 2: (streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs); For M = 3: (streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs) |
| 3 | | ← | MEASUREMENT INFORMATION | |
| 4 | | → | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4 Received within 5 sec + 10% from Step 4. |
| 5 | | ← | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 6 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 7 | SS | | | The SS waits for uplink physical channel in synchronization |
| 8 | | → | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

60.2b.5 Test requirement

At step 5 the MEASUREMENT REPORT should include details of the UTRAN cell. At step 9 a HANDOVER TO UTRAN COMPLETE command should be received on DCCH of the UTRAN cell.

60.3a Inter system handover to UTRAN/From GSM/Data/Data rate upgrading/Success

60.3a.1 Definition

60.3a.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANDOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.3a.3 Test purpose

To test that the MS being in the data call active state hands over from the GSM serving cell to the indicated channel of a higher data rate in the UTRAN target cell after it receives a INTER SYSTEM TO UTRAN HANDOVER COMMAND. It is also verified that the MS performs measurements on the target UTRAN cell before the handover.

60.3a.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GPRS, Cell 2 is UTRAN (cell selection conditions in favour of the GPRS cell).

The present document subclause 40 shall be referenced for the default parameters of cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation.

3GPP TS 34.108 subclause 6.1 shall be referenced for default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

- MS supports UTRAN Streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs.
- MS supports UTRAN Streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs.

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

Then the SS brings the MS into the call active state (CC state U10) with a 14.4 kbps CS data call . The SS configures an appropriate dedicated channel in the UTRAN cell (default configuration 8 streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBS for M = 1). The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell. The SS verifies that the MS include the UTRAN cell in the MEASUREMENT REPORTs and then sends INTER SYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. After the MS receives the command it shall configure itself accordingly and switch to the new channel of the UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

Depending on the PIXIT parameters, the above procedure is executed maximum two times, each time for different conditions:

- if the MS supports GSM 14.4 kbps CS data and UTRAN streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs, the procedure is executed for execution counter M = 1, using Default configuration 8;
- if the MS supports GSM 14.4 kbps CS data and UTRAN streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs, the procedure is executed for execution counter M = 2, using Default configuration 9;

Expected sequence

This sequence is performed for a maximum execution counter $M = 1, 2$ depending on the PIXIT parameters.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | MS | SS | | |
| 1 | MS | | | The SS bring the MS into GSM U10 state in cell 1 and the MS is in GSM 14.4 kbps CS data call on a hopping traffic channel |
| 2 | SS | | | The SS configures a dedicated channel in the UTRAN cell with the configuration: For $M = 1$: (streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs); For $M = 2$: (streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs); |
| 3 | | ← | MEASUREMENT INFORMATION | |
| 4 | | → | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4 |
| 5 | | ← | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 6 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 7 | SS | | | The SS waits for uplink physical channel in synchronization |
| 8 | | → | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

Specific message contents

For execution1 ($M = 1$):

Same as the default message contents in subclause 60.2b for $M = 2$.

For execution2 ($M = 2$):

Same as the default message contents in subclause 60.2b for $M = 3$.

60.3a.5 Test requirement

At step 4 the MEASUREMENT REPORT should include details of the UTRAN cell. At step 8 a HANDOVER TO UTRAN COMPLETE command should be received on DCCH of the UTRAN cell.

60.3b Inter system handover to UTRAN/From GSM/Data/Data rate upgrading/Extended Rates/Success

60.3b.1 Definition

60.3b.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANDOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.3b.3 Test purpose

To test that the MS being in the data call active state hands over from the GSM serving cell to the indicated channel of a higher data rate in the UTRAN target cell after it receives a INTER SYSTEM TO UTRAN HANDOVER COMMAND. It is also verified that the MS performs measurements on the target UTRAN cell before the handover.

60.3b.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GSM, Cell 2 is UTRAN (cell selection conditions in favour of the GSM cell).

The present document subclause 26.6.5.1 or subclause 26.13.1.3 (for HSCSD) shall be referenced for the default parameters of cell 1.

3GPP TS 34.108 subclause 6.1 shall be referenced for default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

Specific PICS statements

- MS supports UTRAN Streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs.
- MS supports UTRAN Streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs.

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

Then the SS brings the MS into the call active state (CC state U10) with a CS data call (14.4 kbps HSCSD for execution counter M = 1). The SS configures an appropriate dedicated channel in the UTRAN cell (default configuration 4 streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBS for M = 1). The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell. The SS verifies that the MS include the UTRAN cell in the MEASUREMENT REPORTs and then sends INTER SYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. After the MS receives the command it shall configure itself accordingly and switch to the new channel of the UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

Depending on the PIXIT parameters, the above procedure is executed maximum three times, each time for different conditions:

- if the MS supports GSM 14.4 kbps HSCSD and UTRAN streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs, the procedure is executed for execution counter M = 1, using Default configuration 8;
- if the MS supports GSM 14.4 kbps HSCSD and UTRAN streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs, the procedure is executed for execution counter M = 2, using Default configuration 9;
- if the MS supports GSM 28.8 kbps CS data and UTRAN streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL:3.4 kbps SRBs, the procedure is executed for execution counter M = 3, using Default configuration 9.

Expected sequence

This sequence is performed for a maximum execution counter M = 1, 2, 3, depending on the PIXIT parameters.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|--|
| | MS | SS | | |
| 1 | MS | | | The SS bring the MS into GSM U10 state in cell 1 and for M = 1: the MS is in GSM 14.4 kbps HSCSD call; for M = 2: the MS is in GSM 14.4 kbps HSCSD call; for M = 3: the MS is in GSM 28.8 kbps CS data call; |
| 2 | SS | | | The SS configures a dedicated channel in the UTRAN cell with the configuration: For M = 1: (streaming/unknown/UL:28.8 DL:28.8 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs); For M = 2: (streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs); For M = 3: (streaming/unknown/UL:57.6 DL:57.6 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs) |
| 3 | ← | | MEASUREMENT INFORMATION | |
| 4 | → | | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4 Received within 5 sec + 10% from Step 4. |
| 5 | ← | | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 6 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 7 | SS | | | The SS waits for uplink physical channel in synchronization |
| 8 | → | | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

Specific message contents

For execution1 (M = 1):

Same as the default message contents in subclause 60.2b for M = 2.

For execution2 (M = 2):

Same as the default message contents in subclause 60.2b for M = 3.

For execution3 (M = 3):

Same as the default message contents in subclause 60.2b for M = 3.

60.3b.5 Test requirement

At step 5 the MEASUREMENT REPORT should include details of the UTRAN cell. At step 9 a HANDOVER TO UTRAN COMPLETE command should be received on DCCH of the UTRAN cell.

60.4 Inter system handover to UTRAN/From GSM/SDCCH/CC Establishment/Success

60.4.1 Definition

60.4.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANDOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.4.3 Test purpose

To test that the MS supporting both GSM and UTRAN handovers from the GSM serving cell to the indicated channel in UTRAN target cell when the MS is on SDCCH during call establishment phase and receives an INTER SYSTEM TO UTRAN HANDOVER COMMAND. It is also verified that the MS performs measurements on the target UTRAN cell before the handover.

60.4.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GPRS, Cell 2 is UTRAN (cell selection conditions in favour of the GPRS cell).

The present document subclause 40 shall be referenced for the default parameters of cell 1. Except for SI3 indicating SI2quater on BCCH norm, and SI2quater is broadcasted on BCCH of Cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation..

3GPP TS 34.108, subclause 6.2 shall be referred to default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

- Support of UTRAN FDD (TSPC_Type_UTRAN FDD)
- Support of UTRAN TDD (TSPC_Type_UTRAN TDD)

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U1 on cell 2.

Test Procedure

The UTRAN cell is set up corresponding to the UTRAN FDD/TDD mode. The MS reads SI2quater indicating presence of the UTRAN cell. The MS is triggered to make an MO speech call. After the SS received SETUP message it configures a dedicated channel corresponding to the default configuration 1 (UL:13.6 DL13.6 kbps SRBs) corresponding to the UTRAN FDD/TDD mode and then the SS sends INTER SYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel to the MS through the GSM serving cell. After the MS receives the command and it shall configure itself accordingly and switch to the new channel of UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

For MS following procedures are executed:

- if the MS supports UTRAN_FDD the procedure is executed for execution counter M = 1;
- if the MS supports UTRAN_TDD the procedure is executed for execution counter M = 2.

Expected sequence

This sequence is performed for a maximum execution counter M = 1, 2 depending on the PIXIT parameters.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|--|
| | MS | SS | | |
| 1 | | SS | | The MS reads SI2quater indicating presence of the UTRAN cell. |
| 3 | | → | SETUP | The SS brings the MS to GSM U1 state in Cell 1 |
| 4 | | SS | | The SS configures a dedicated channel with the default configuration 1: UL:13.6 DL13.6 kbps SRBs in UTRAN cell. |
| 5 | | → | MEASUREMENT REPORT | |
| 6 | | | | Step 5 is repeated until the MEASUREMENT REPORT contains the measurement result on the UTRAN cell |
| 7 | | ← | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 8 | | MS | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 9 | | SS | | The SS waits for uplink physical channel in synchronization |
| 10 | | → | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

INTER SYSTEM TO UTRAN HANDOVER COMMAND

For M = 1:

Same as the default message contents in subclause 60.1 for M = 1 with the following exceptions:

| Information Element | Value/remark |
|----------------------------------|--------------------------|
| CHOICE specification mode | Preconfiguration |
| CHOICE preconfiguration mode | Default configuration |
| - Default configuration identity | 1 (13.6 kbps signalling) |
| RAB information list | Not Present |

For M = 2:

Same as the default message contents in subclause 60.2a for M = 2 using the configuration defined in TS 34.108 [149] clause 6.10.2.4.1.2:

60.4.5 Test requirement

At step 5 the MEASUREMENT REPORT should include details of the UTRAN cell. At step 10 a HANOVER TO UTRAN COMPLETE command should be received on DCCH of the UTRAN cell.

60.5 Inter system handover to UTRAN/From GSM/Speech/Blind HO/Success

60.5.1 Definition

60.5.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANOVER COMMAND message from GSM and perform an inter-system handover, even if no prior MS measurements have been performed on the target UTRAN cell and/or frequency.

If the MS succeeds to establish the connection to UTRAN, it shall transmit a HANOVER TO UTRAN COMPLETE message on the uplink DCCH.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.5.3 Test purpose

To test that the MS handovers from the GSM serving cell to the indicated channel of UTRAN target cell when it is in the speech call active state without any knowledge of the target system (blind handover) and receives an INTER SYSTEM TO UTRAN HANOVER COMMAND.

60.5.4 Method of test

Initial conditions

2 cells - Cell 1 is GPRS, Cell 2 is UTRAN (cell conditions favour the GPRS cell).

The present document subclause 40 shall be referenced for the default parameters of cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation.

3GPP TS 34.108 subclause 6.1 shall be referred to for default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

No SYSTEM INFORMATION TYPE 2quarter or MEASUREMENT INFORMATION indicating presence of the UTRAN cell are broadcasted in the GSM cell. The SS brings the MS into the call active state (CC state U10) with FR speech. The SS configures a dedicated channel (conversational/speech/UL:12.2 DL:12.2 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBS), then sends INTER SYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. After the MS receives the command it shall configure itself accordingly and switch to the dedicated channel of UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell.

Expected sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | MS | SS | | |
| 1 | MS | | | The SS bring the MS into GSM U10 state in cell 1, on a hopping traffic channel, and the MS has no pre-configuration information stored or received any information of presence of the UTRAN cell. |
| 2 | SS | | | The SS configures dedicated channel with the configuration: conversational/speech/UL:12.2 DL:12.2 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs in UTRAN cell. |
| 3 | ← | | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 4 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 5 | SS | | | The SS waits for uplink physical channel in synchronization |
| 6 | → | | HANDOVER TO UTRAN COMPLETE | The SS receives this message on DCCH of cell 2 (UTRAN cell). It implies that the down link physical channel has synchronised with UTRAN. |

Specific message contents

INTER SYSTEM TO UTRAN HANDOVER COMMAND

Same as the specific message contents in subclause 60.1 for M = 1.

60.5.5 Test requirement

At step 6 the HANDOVER TO UTRAN COMPLETE shall be received on UTRAN cell.

60.6 Inter system handover to UTRAN/From GSM/Speech/Failure

60.6.1 Definition

60.6.2 Conformance requirement

The MS shall be able to receive a INTER SYSTEM TO UTRAN HANDOVER COMMAND message from GSM and perform an inter-system handover.

If the MS can not establish the connection to UTRAN, it shall reactivate the old channel and transmit a HANDOVER FAILURE message on the old channel.

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.6.3 Test purpose

To test that the MS reactivates the old channel and transmits HANDOVER FAILURE message to the network on the old channel in the GSM cell when it received INTER SYSTEM TO UTRAN HANDOVER COMMAND towards a non-existing UTRAN cell.

60.6.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GPRS, Cell 2 is UTRAN (cell selection conditions in favour of the GPRS cell).

The present document subclause 40 shall be referenced for the default parameters of cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation.

3GPP TS 34.108, subclause 6.1 will be referenced for the default parameters of Cell 2.

MS:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 1.

Test Procedure

The SS brings the MS into the call active state (CC state U10) with FR speech call. The SS does not configure a dedicated channel corresponding to the default configuration 3. The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell. The SS verifies that the MS include the UTRAN cell in the MEASUREMENT REPORT and, then sends INTER SYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell. The MS will not be able to establish the connection to UTRAN dedicated channel. The SS checks that the handover is failed by checking that the MS returns to the old channel and transmits HANDOVER FAILURE to the SS through the old channel.

Expected sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | MS | SS | | |
| 1 | MS | | | The SS brings the MS into GSM U10 state in cell 1 on a hopping traffic channel |
| 2 | SS | | | The SS configures the Physical channel of the UTRAN cell but here is no dedicated channel with the configuration: conversational/speech/UL:12.2 DL:12.2 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs in UTRAN cell. |
| 3 | ← | | MEASUREMENT INFORMATION | Including Measurement Results on the UTRAN cell in Step 4 |
| 4 | → | | MEASUREMENT REPORT | |
| 5 | ← | | INTER SYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 1 (GSM cell) |
| 6 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTER SYSTEM TO UTRAN HANDOVER COMMAND |
| 7 | MS | | | The MS fails to configure to the indicated RAB in Step 6 and fails to establish a connection to UTRAN cell |
| 8 | → | | HANDOVER FAILURE | The SS receives this message on DCCH of cell 1 (old channel in GSM cell) |

Specific message contents

Same as the specific message contents in subclause 60.1 for M = 1.

60.6.5 Test requirement

At step 8 the HANDOVER FAILURE shall be received on GSM cell.

60.7 Inter system handover to UTRAN/From GSM/Failure/Cause: Frequency not implemented

60.7.1 Definition

60.7.2 Conformance requirement

The MS shall be able to receive a HANDOVER TO UTRAN COMMAND message from GSM and perform an inter-system handover, even if no prior MS measurements have been performed on the target UTRAN cell and/or frequency.

The HANDOVER TO UTRAN COMMAND message instructs the mobile station to use frequency that it is not capable of, and then the MS shall return a HANDOVER FAILURE message with cause "frequency not implemented" (Reference 3GPP TS 04.18 subclause 3.4.4a.3).

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.7.3 Test purpose

To test that the MS reactivates the old channel and transmits HANDOVER FAILURE message to the network on the old channel in the GSM cell when it received HANDOVER TO UTRAN COMMAND and the handover to UTRAN failed because of frequency not implemented.

60.7.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GSM, Cell 2 is UTRAN. TS 51.010-1 subclause 26.6.5.1 shall be referenced for the default parameters of Cell 1.

MS:

CC State U10 in cell 1.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 1.

Test Procedure:

The SS starts the GSM cell and UTRAN cell with the cell selection condition in favour of GSM cell. The MS selects the GSM cell.

SS brings the MS into the call active state (CC state U10) with FR speech call. The SS configures the dedicated channel corresponding to the default configuration (conversational/speech/uplink: 12.2 DL: 12.2 kbps/CS RAB + uplink: 3.4 DL3.4 kbps SRBS), then sends HANDOVER TO UTRAN COMMAND the MS through the GSM serving cell. The HANDOVER TO UTRAN COMMAND message instructs the mobile station to use frequency that it is not capable of, and then the MS shall return a HANDOVER FAILURE message with cause "frequency not implemented" (Reference 3GPP TS 04.18 subclause 3.4.4a.3) and continue the voice call on the old channel.

Expected sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | | SS | | The SS starts GSM and UTRAN cells; the UTRAN cell broadcasts SIB16 containing pre-configuration information. MS camps on GSM cell and received SIB 16 from UTRAN cell. |
| 2 | | MS | | The SS brings the MS into GSM U10 state in cell 1. |
| 3 | | SS | | The SS configures dedicated channel with the configuration: conversational/speech/uplink:12.2 DL:12.2 kbps/CS RAB + uplink:3.4 DL3.4 kbps SRBs in UTRAN cell. |
| 4 | | ← | HANDOVER TO UTRAN COMMAND | Handover message is sent on cell 1 (GSM cell) with unsupported frequency. |
| 5 | | MS | | The MS fails to establish a connection to UTRAN cell |
| 6 | | → | HANDOVER FAILURE | The SS receives this message on DCCH of cell 1 (old channel in GSM cell) with RR Cause "frequency not implemented". |

Specific message contents

Same as the specific message contents in subclause 60.1 for $M = 1$ except that the INTER SYSTEM TO UTRAN HANDOVER COMMAND indicates a frequency not supported by the MS.

60.7.5 Test requirement

At step 7 the HANDOVER FAILURE shall be received on GSM cell.

60.8 Inter system handover to UTRAN/From GSM/Failure/Cause: UTRAN configuration unknown

60.8.1 Definition

60.8.2 Conformance requirement

The MS shall be able to receive a HANDOVER TO UTRAN COMMAND message from GSM and perform an inter-system handover, even if no prior MS measurements have been performed on the target UTRAN cell and/or frequency. The HANDOVER TO UTRAN COMMAND message instructs the mobile station to use preconfiguration that the mobile station has not read or instruct to use default reconfiguration not implemented by MS, then the MS shall return a HANDOVER FAILURE message with cause "UTRAN configuration unknown" (3GPP TS 04.18 subclause 3.4.4a.3).

Reference(s)

3GPP TS 25.331 subclause 8.3.6.

3GPP TS 04.18 subclause 3.4.4a.

60.8.3 Test purpose

To test that the MS reactivates the old channel and transmits HANDOVER FAILURE message to the network on the old channel in the GSM cell when it receives HANDOVER TO UTRAN COMMAND and the handover to UTRAN failed because of UTRAN configuration unknown.

60.8.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GSM, Cell 2 is UTRAN. TS 51.010-1 section 26.6.5.1 shall be referenced for the default parameters of cell 1.

MS:

CC State U10 in cell.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 1.

Test Procedure

The SS starts the GSM cell and UTRAN cell with the cell selection condition in favour of GSM cell, SIB16 is not broadcast in UTRAN cell and MS has no predefined configuration stored.

The MS selects the GSM cell. SS brings the MS into the call active state (CC state U10) with FR speech call. The SS configures a dedicated channel (conversational/speech/uplink: 12.2 DL: 12.2 kbps/CS RAB + uplink: 3.4 DL3.4 kbps

SRBS). The SS sends a HANOVER TO UTRAN COMMAND message through the GSM cell that instructs the MS to use a preconfiguration that the mobile station has not read or instructed to use default configuration not implemented by MS. The MS shall return a HANOVER FAILURE message with cause "UTRAN preconfiguration unknown" and continue the voice call on the old cell.

Expected sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------|---|
| | MS | SS | | |
| 1 | | SS | | The SS starts GSM and UTRAN cells; SIB16 is not broadcast in the UTRAN cell. |
| 2 | MS | | | The SS brings the MS into GSM U10 state in cell 1 and MS has not any pre-configuration stored. |
| 3 | | SS | | The SS configures dedicated channel with the configuration: conversational/speech/uplink:12.2 DL:12.2 kbps/CS RAB + uplink:3.4 DL3.4 kbps SRBs in UTRAN cell. |
| 4 | | ← | HANOVER TO UTRAN COMMAND | Handover message is sent on cell 1 (GSM cell) with unknown preconfiguration. |
| 5 | MS | | | The MS fails to establish a connection to UTRAN cell |
| 6 | | → | HANOVER FAILURE | The SS receives this message on DCCH of cell 1 (old channel in GSM cell) with RR Cause "UTRAN configuration unknown". |

60.8.5 Test requirement

At step 7 the HANDOVER FAILURE shall be received on GSM cell.

60.9 Inter system handover to UTRAN/From GSM/Failure/Cause: Protocol Error

60.9.1 Definition

60.9.2 Conformance requirement

The MS shall be able to receive a HANOVER TO UTRAN COMMAND message from GSM and perform an inter-system handover, even if no prior MS measurements have been performed on the target UTRAN cell and/or frequency. The HANOVER TO UTRAN COMMAND message, which contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set TRUE according to subclause 9 of 3GPP TS 25.331.

3GPP TS 04.18 subclause 8.5

When on receipt of a message,

- an "imperative message part" error; or
- a "missing mandatory IE" error

is diagnosed or when a message containing:

- a syntactically incorrect mandatory IE; or
- an IE unknown in the message, but encoded as "comprehension required" (see clause 3GPP TS 24.007); or
- an out of sequence IE encoded as "comprehension required" (see clause 3GPP TS 24.007)

is received,

- the mobile station shall proceed as follows:

If the message is not one of the messages listed in clauses 8.5.1, 8.5.2, 8.5.3 the mobile station shall ignore the message except for the fact that, if an RR connection exists, it shall return a status message (RR STATUS) with cause # 96 "Invalid mandatory information".

Reference(s)

3GPP TS 25.331 subclause 8.3.6 and 9.

3GPP TS 04.18 subclause 3.4.4a and 8.5.

60.9.3 Test purpose

To test that the MS reactivates the old channel and transmits RR Status message to the network on the old channel in the GSM cell when it receives HANOVER TO UTRAN COMMAND and the handover to UTRAN failed because of protocol error.

60.9.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GSM, Cell 2 is UTRAN. TS 51.010-1 section 26.6.5.1 shall be referenced for the default parameters of cell 1.

MS:

CC State U10 in cell 1.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 1.

Test Procedure

The SS starts the GSM cell and UTRAN cell with the cell selection condition in favour of GSM cell. The MS selects the GSM cell. SS brings the MS into the call active state (CC state U10) with FR speech call. The SS configures the dedicated channel corresponding to the default configuration 3 (conversational/speech/uplink: 12.2 DL: 12.2 kbps/CS RAB + uplink: 3.4 DL3.4 kbps SRBS), then sends HANOVER TO UTRAN COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell.

The SS sends a HANOVER TO UTRAN COMMAND message, that contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set TRUE according to 3GPP TS 25.331 subclause 9. Then the MS shall return an RR STATUS message on DCCH of cell 1 (old channel in GSM cell) with RR cause #96 "Invalid mandatory information".

Expected sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------|---|
| | MS | SS | | |
| 1 | | SS | | The SS starts GSM and UTRAN cells; The MS camps on GSM cell |
| 2 | | MS | | The SS brings the MS into GSM U10 state in cell 1 |
| 3 | | SS | | The SS configures dedicated channel with the configuration: conversational/speech/uplink:12.2 DL:12.2 kbps/CS RAB + uplink:3.4 DL3.4 kbps SRBs in UTRAN cell. |
| 4 | | ← | HANOVER TO UTRAN COMMAND | Handover message is sent on cell 1 (GSM cell) with missing mandatory IE. |
| 5 | | → | RR STATUS | The SS receives this message on DCCH of cell 1 (old channel in GSM cell) with RR cause #96 "Invalid mandatory information". |

Specific message contents

Same as the specific message contents in subclause 60.1 for M = 1 except that in the INTER SYSTEM TO UTRAN HANOVER COMMAND a mandatory IE is missing causing a protocol error.

60.9.5 Test requirement

At step 5 the RR STATUS shall be received on GSM cell.

60.10 Inter system handover to UTRAN/From GSM/Integrity Protection Activation

60.10.1 Definition

60.10.2 Conformance requirement

The MS shall include the Security START values in INTER RAT HANOVER INFO in the RR message UTRAN CLASSMARK CHANGE -definition and in the RRC message HANOVER TO UTRAN COMPLETE.

If the MS succeeds to establish the connection to UTRAN after reception of an INTERSYSTEM TO UTRAN HANOVER COMMAND, the NW may start Integrity protection using the previously received CS START value by sending a SECURITY MODE COMMAND message to the MS.

Reference(s)

3GPP TS 25.331 subclause 8.1.12 and 8.3.6.

3GPP TS 04.18 subclause 3.4.4a and 3.4.11.

60.10.3 Test purpose

To test that MS supporting both GSM and UTRAN applies the correct CS Security START value after a successful handover from GSM to UTRAN when Integrity protection is activated by the NW.

60.10.4 Method of test

Initial conditions

System Simulator:

2 cells - Cell 1 is GSM, Cell 2 is UTRAN.

The present document subclause 40 shall be referenced for the default parameters of cell 1, and subclause 26.6.5.1 shall be referenced for cell allocation.

3GPP TS 34.108, subclause 6.1 shall be referenced for default parameters of Cell 2.

Mobile Station:

"idle, updated", channel released mode with TMSI allocated.

For MS supporting GPRS:

The MS is GPRS attached with a P-TMSI allocated, SPLIT PG CYCLE negotiated.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

The MS is in CC state U10 on cell 2.

Test Procedure

The SS brings the MS into the call active state (CC state U10) with FR speech call.

The SS starts the UTRAN cell, configures the UTRAN dedicated channel corresponding to default handover configuration 3 and sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell.

The SS verifies that the MS includes the UTRAN cell in the MEASUREMENT REPORT. The SS then sends a CLASSMARK ENQUIRY requesting an UTRAN CLASSMARK CHANGE from the MS. The MS responds with a UTRAN CLASSMARK CHANGE and the SS verifies that the INTER RAT HANDOVER INFO includes a START value for the CS domain.

The SS sends an INTERSYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS. After the MS receives the command, it shall switch to the dedicated channel of the UTRAN cell. The SS checks whether the handover is performed by checking that the MS transmits HANDOVER TO UTRAN COMPLETE to the SS through DCCH of the UTRAN cell. It is also verified that the START value for the CS domain in the HANDOVER TO UTRAN COMPLETE message is the same as the START value received in the INTER RAT HANDOVER INFO.

The SS attempts to activate Integrity protection by sending an Integrity protected SECURITY MODE COMMAND on the DCCH with an incorrect IE "Integrity check info". It is verified that the MS does not respond with a SECURITY MODE COMPLETE message.

The SS retransmits the SECURITY MODE COMMAND on the DCCH with a correct IE Integrity Check Info and the MS responds with an Integrity protected SECURITY MODE COMPLETE. Both SS and MS shall use the START value for the CS domain for Integrity protection that the MS has indicated in UTRAN CLASSMARK CHANGE and HANDOVER TO UTRAN COMPLETE.

Expected sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | MS | SS | | |
| 1 | MS – SS | | | The SS brings the MS into GSM U10 state in cell 1 on a hopping traffic channel |
| 2 | SS | | | The SS configures the UTRAN cell with a dedicated channel configuration: conversational/speech/UL:12.2 DL:12.2 kbps/CS RAB + UL:3.4 DL3.4 kbps SRBs in UTRAN cell (default handover configuration 3). |
| | | | | The following messages are sent and received on the GSM cell |
| 3 | ← | | MEASUREMENT INFORMATION | |
| 4 | → | | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4. |
| 5 | ← | | CLASSMARK ENQUIRY | |
| 6 | → | | UTRAN CLASSMARK CHANGE | Verify that the ue-SecurityInformation is present. |
| 7 | ← | | INTERSYSTEM TO UTRAN HANDOVER COMMAND | |
| 8 | MS | | | The MS accepts the handover command and configures its lower layers using the parameters contained in the INTERSYSTEM TO UTRAN HANDOVER COMMAND |
| 9 | SS | | | The SS waits for uplink physical channel in synchronization |
| | | | | The following messages are sent and received on the UTRAN cell. |
| 10 | → | | HANDOVER TO UTRAN COMPLETE | Received on DCCH of the UTRAN cell. Verify that the same CS-domain START-Value is indicated as in step 6. |
| 11 | ← | | SECURITY MODE COMMAND | Integrity protected with a different CS-domain START value than the indicated in step 6 is applied. |
| 12 | SS | | | Verify that no SECURITY MODE COMPLETE is sent by the MS for 5 sec. |
| 13 | ← | | SECURITY MODE COMMAND | Integrity protected with the CS-domain START value indicated in step 6 is applied. |
| 14 | → | | SECURITY MODE COMPLETE | Verify that Integrity protection is applied using the CS-domain START value indicated in step 6. |

SECURITY MODE COMMAND message AM, in step 11

| Information Element | Value/remark |
|--|--|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - Message authentication code | Set to MAC-I value computed by the SS using a different START value for the CS domain from the indicated in the INTER RAT HANDOVER INFO. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| UE system specific security capability | |
| - Inter-RAT UE security capability | |
| - CHOICE system | GSM |
| - GSM security capability | The indicated algorithms must be the same as the algorithms supported by the UE as indicated in the IE " Mobile station classmark 2 " in the LOCATION UPDATING REQUEST message. |

SECURITY MODE COMMAND message AM, in step 13

| Information Element | Value/remark |
|--|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - Message authentication code | Set to MAC-I value computed by the SS using the indicated START value for the CS domain from the INTER RAT HANDOVER INFO. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| UE system specific security capability | |
| - Inter-RAT UE security capability | |
| - CHOICE <i>system</i> | GSM |
| - GSM security capability | The indicated algorithms must be the same as the algorithms supported by the UE as indicated in the IE " Mobile station classmark 2 " in the LOCATION UPDATING REQUEST message. |

60.10.5 Test requirement

After step 14, the ongoing call shall continue on UTRAN cell with Integrity protection using the CS Security START value indicated in the UTRAN CLASSMARK CHANGE.

61-69 Void

70 Location Services

This sub clause contains test cases for Location Services (LCS).

70.1 Default conditions during LCS tests

During signalling tests in sub clause 70, default conditions from sub clause 26 shall apply, if not otherwise stated within the test descriptions, with the following exception.

SYSTEM INFORMATION TYPE 3:

as default except:

| Information Element | value/remark |
|---|-------------------------------------|
| SI 3 rest octets - Early Classmark Sending Control | 1 (perform early classmark sending) |

70.1.1 Default conditions during EOTD tests

For EOTD testing the serving cell shall provide a BCCH for the duration of the test to enable the MS to make the required measurements.

70.1.2 Default conditions during A-GPS signalling tests

During A-GPS signalling tests defined in sub clause 70.7 to 70.9 the SS shall generate the six satellite signals and shall provide assistance data as defined in sub TS 51.010-7 subclasses 5.1.3 to 5.1.8. The levels of the simulated satellites shall all be at -125dBm +/- 6dB.

70.1.3 Default conditions during A-GNSS signalling tests

During A-GNSS signalling tests defined in sub clause 70.12 to 70.15 the SS shall generate all the MS supported GNSS satellite signals defined in TS 51.010-7 sub clause 6.1.2 and shall provide assistance data, dependent on the MS capabilities, defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. The levels of the simulated satellites shall all be at -125dBm +/- 6dB.

70.2 EOTD Network Induced Location Request

The test cases in this sub clause focus on Network Induced Location requests. Although normally associated with Emergency Calls, it is possible for an MS to receive a NI-LR at any time during idle or dedicated mode by a PLMN operator LCS client.

70.2.1 LCS Network Induced Emergency Call on an SDCCH / idle, no IMSI for Mobiles supporting MS-Assisted EOTD

70.2.1.1 Conformance requirement

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in the USA), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in Mexico) has been entered by the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct IMEI and a non-available CKSN, with CM Service Type "emergency call establishment". The ES_IND bit in the Mobile Station Classmark 2 information element shall be set to "Controlled Early Classmark Sending is implemented".
3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.

4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. On receiving the RRLP MEASURE POSITION REQUEST message the MS will perform position measurements and respond with an RRLP MEASURE POSITION RESPONSE message. The RRLP Measure Position Response message shall contain either an EOTD Measurement Information element or a Location Information Error element.
6. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.

3GPP TS 04.31 Annex A sub clause 2.2.1.

70.2.1.2 Test Purpose

To verify when an emergency call is initiated by an MS which does not have a SIM fitted, the network instigates the LCS positioning procedure by sending RRLP (Measure Position Request) message and the mobile responds with RRLP (Measure Position Response) containing E-OTD measurement values.

70.2.1.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: Default parameters.

Neighbor Cells: 2 neighbor cells are used with a minimum configuration of a BCCH. This is to allow the MS to perform the required timing measurements.

Mobile Station:

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

An Emergency Call is initiated with the MS, with no SIM inserted in the MS.

Directly after sending EMERGENCY SETUP the MS receives a RR APPLICATION INFORMATION message containing an RRLP Measure Position Request.

The MS then performs positioning measurements and responds with a RR APPLICATION INFORMATION message containing a RRLP Measure Position Response.

The emergency call is then established as normal with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum duration of the test

3 minutes.

Expected Test Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The appropriate "emergency called number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". The mobile identity IE specifies the IMEI of the MS. The cipher key sequence number IE indicates "no key is available". |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7 . |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS-> MS | RR APPLICATION INFORMATION | (RRLP Measure Position Request) |
| 9 | MS -> SS | RR APPLICATION INFORMATION | (RRLP Measure Position Response indicating either EOTD Measurement Information or a Location Information Error) |
| 10 | SS -> MS | CALL PROCEEDING | |
| 11 | SS -> MS | ALERTING | |
| 12 | SS -> MS | ASSIGNMENT COMMAND | |
| 13 | MS -> SS | ASSIGNMENT COMPLETE | |
| 14 | SS -> MS | CONNECT | |
| 15 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.2.2 Void

70.2.3 Network Induced Location Request Emergency Call on an SDCCH for MS-Assisted EOTD Mobiles

For Mobiles supporting speech, emergency call establishment will be initiated by the MS whether location updating has been successful or not and whether a SIM is inserted into the MS or not.

A Network Induced Location Request could occur at any point during emergency call setup (Ref 3GPP TS 03.71 sub clause 7.6.4.1). This could occur during an emergency setup before connection to a traffic channel.

70.2.3.1 Conformance requirements:

The following requirements apply for this test:

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in the USA), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in Mexico) has been entered by the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. After assignment of a dedicated channel, the MS shall send a CM SERVICE REQUEST message specifying the correct CKSN and TMSI with CM Service Type "emergency call establishment". The ES_IND bit in the Mobile Station Classmark 2 information element shall be set to "Controlled Early Classmark Sending is implemented".
3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. On receiving the RRLP Measure Position Request message the MS will perform position measurements and respond with an RRLP Measure Position Response message. The RRLP Measure Position Response message shall contain either an EOTD Measurement Information element or a Location Information Error element.
6. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.

70.2.3.3 Test Purpose

To verify when an emergency call is initiated by the MS, the network instigates the LCS positioning procedure by sending RRLP (Measure Position Request) message and the mobile responds with RRLP (Measure Position Response) containing E-OTD measurement values.

Specific PICS statements

-

PIXIT statements

-

70.2.3.4 Method of Test

Initial Conditions:

System Simulator:

Serving cell: Default parameters

Neighbor Cells: 2 neighbor cells are used with a minimum configuration of a BCCH. This is to allow the MS to perform the required timing measurements.

Mobile Station:

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Test Procedure:

An Emergency Call is initiated with the MS. SIM card is included in the MS.

Directly after sending EMERGENCY SETUP the MS receives a RR APPLICATION INFORMATION message containing an RRLP Measure Position Request.

The MS then performs positioning measurements and responds with a RR APPLICATION INFORMATION message containing a RRLP Measure Position Response.

The emergency call is then established as normal with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum duration of the test:

3 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The appropriate "emergency call number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7 . |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS-> MS | RR APPLICATION INFORMATION | (RRLP Measure Position Request) |
| 9 | MS -> SS | RR APPLICATION INFORMATION | (RRLP Measure Position Response indicating either EOTD Measurement Information or a Location Information Error) |
| 10 | SS -> MS | CALL PROCEEDING | |
| 11 | SS -> MS | ALERTING | |
| 12 | SS -> MS | ASSIGNMENT COMMAND | |
| 13 | MS -> SS | ASSIGNMENT COMPLETE | |
| 14 | SS -> MS | CONNECT | |
| 15 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.2.4 Emergency Call NI-LR while Voice is Through Connected for Mobiles supporting MS-Assisted EOTD

A Network Induced Location Request could occur at any point during emergency call setup (Ref 3GPP TS 03.71 sub clause 7.6.4.1). In this case the voice call is established before the MS receives the location request.

70.2.4.1 Conformance requirements:

The following requirements apply for this test:

1. With the MS in the "idle, updated" state, the user shall initiate an emergency call after the number 112 (GSM 900 and 1800 MSs), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 in the USA), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 in Mexico) has been entered by the user. The MS shall end a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. After assignment of a dedicated channel, the MS shall send a CM SERVICE REQUEST message specifying the correct CKSN and TMSI with CM Service Type "emergency call establishment". The ES_IND bit in the Mobile Station Classmark 2 information element shall be set to "Controlled Early Classmark Sending is implemented".
3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call, the MS shall indicate that the TCH is through connected in both directions.
6. On receiving the RRLP Measure Position Request message the MS will perform position measurements and respond with an RRLP Measure Position Response message. The RRLP Measure Position Response message shall contain either an EOTD Measurement Information element or a Location Information Error element.

70.2.4.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: Default parameters.

Neighbor Cells: 2 neighbor cells are used with a minimum configuration of a BCCH. This is to allow the MS to perform the required timing measurements.

Mobile Station:

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Test Procedure:

An Emergency Call is initiated by the MS. SIM card is present in the MS.

The emergency call is established with a late assignment.

After receiving the CONNECT ACKNOWLEDGE message from the MS, the SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request on the FACCH.

The MS then performs positioning measurements and responds with a RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The call is then cleared by the SS.

Maximum duration of the test:

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS | | The appropriate Emergency Called number is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |

| | | | |

70.3 Mobile Originating Location Request

The test cases in this sub clause focus on Mobile Originating Location Request. A MO_LR could occur by a MS to request the network to start location procedure, which is used for either its own location, location assistance data or deciphering keys for broadcast assistance data message.

70.3.1 MO_LR Basic Self Location Request

Basic Self Location Request is only applicable for requesting its own location by using MS Assisted E-OTD positioning..

70.3.1.1 MO_LR Basic Self Location Request In Idle Mode (Normal Case)

70.3.1.1.1 Conformance requirements:

The MS sends a DTAP LCS MO-LR invoke to the VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component with MO_LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References

3GPP TS 03.71, sub clause 7.6.6.

3GPP TS 04.30 sub clause 5.1.1.

3GPP TS 04.80 sub clauses 2.4, 2.5 and 4.

70.3.1.1.2 Test Purpose

Verifies that a MS sends a correct LCS-MOLR Invoke message with the component MO_LR TYPE set to LocationEstimate and LCS_QoS value on the initiation of MOLR. On receipt of a RRLP Measure position request from SS to start the measurement, MS shall send back RRLP Measure Position Response to SS after finishing the measurement.

70.3.1.1.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: Default parameters, in SYSTEM INFORMATION TYPE 3 (SI3 Rest Octet) the early classmark sending control is implemented in the SS.

Neighbor Cells: at least 2 neighbor cells are used with a minimum configuration of a BCCH. This is to allow the MS to perform the required timing measurements.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to LCS-MOLR Invoke. The SS sends RRLP Request to start the measurement. Once the measurement is done, RRLP response is sent back to SS with the measurement data. The SS returns location estimate to MS through LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message.

Maximum duration of the test:

3 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (Basic Self Location Request) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "call independent supplementary Services". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the IMSI. "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. This includes support of LCS VA Capability. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR MOLR-Type set to LocationEstimate |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE |
| 14 | SS -> MS | FACILITY | LCS MO-LR RETURE RESULT (locationEstimate) |
| 15 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.80 sub clauses 2.4, 2.5 & 4

70.3.1.2.2 Test Purpose

Verifies that a MS sends a correct LCS-MOLR Invoke message on already established speech call related SACCH with the component MO_LR TYPE sets to LocationEstimate and LCS_QoS value on the initiation of MO_LR. On receipt of a RRLP Measure position request from SS to start the measurement, MS shall send back RRLP Measure Position Response to SS after finishing the measurement.

70.3.1.2.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: Default parameters.

Neighbor Cells: 2 neighbor cells are used with a minimum configuration of a BCCH. This is to allow the MS to perform the required timing measurements.

Mobile Station:

The MS has valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/3.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS on the existing SACCH channel. After received CM SERVICE ACCEPT message, MS sends a REGISTER message with Facility IE containing a component set to a LCS-MOLR Invoke. The SS sends RRLP Request to start the measurement. Once the measurement is done, RRLP Response is sent back to SS with the measurement data. The SS returns location estimate to MS through LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message.

Maximum duration of the test:

3 minutes.

-

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a LCS-MOLR Invoke. The SS sends RRLP Request to start the measurement. Once the measurement is done, RRLP response is sent back to SS with the measurement data. The SS may then transfer the location information to the internal or external LCS client.

Maximum duration of the test:

3 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (Transfer to 3 rd Party) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "call independent supplementary Services". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the IMSI. "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. This includes support of LCS VA Capability. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|----|----------|-------------------------------|--|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR MOLR-Type set to LocationEstimate LCSCClientExternalID present RRLP MEASURE POSITION REQUEST |
| 12 | SS -> MS | RR APPLICATION INFORMATION | |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE |
| 14 | SS | | SS may return the location estimate result to the LCS client as MAP subscriber location report |
| 15 | SS -> MS | RELEASE COMPLETE | Confirmation of successful transfer to 3 rd Party |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.3.3 MO_LR Autonomous Location

70.3.3.1 Conformance Requirement

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting location assistance data, the message specifies the type of assistance data and the positioning method for which the assistance data applies.

The MS invokes a MO_LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO_LR TYPE set to AssistanceData, Location-Method set to MS-AssistedEOTD, LCS QoS value and other optional field if it is needed.

The MS acknowledges the reception of each assistance data component to network with a RRLP ASSISTANCE DATA Ack before the next Assistance Data component is received.

70.3.3.2 Test Purpose

Verifies that a MS sends a correct LCS-MOLR Invoke message with the component MOLR Type set to Assistance Data, Location-Method sets to MS-Assisted EOTD, and LCS-QoS on the initiation of MO_LR. The MS shall acknowledge the reception of each assistance data component.

70.3.3.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: Default parameters, in SYSTEM INFORMATION TYPE 3 (SI3 Rest Octet) the early classmark sending control is implemented in the SS.

Mobile Station:

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

70.3.4 MO_LR Positioning Measurement

70.3.4.1 MO_LR Positioning Measurement / Protocol Error

70.3.4.1.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO_LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO_LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS sends a RRLP PROTOCOL ERROR message to network if there is a problem that prevents the MS to receive a complete and understandable RRLP MEASURE POSITION REQUEST component.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

70.3.4.4 MO_LR Positioning Measurement / Multiple RRLP REQUEST with different Reference Number

70.3.4.4.1 Conformance requirement

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO_LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO_LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts activity for the former RRLP MEASURE POSITION REQUEST component and starts to act according to the later RRLP MEASURE POSITION REQUEST component if the old and new RRLP MEASURE POSITION REQUEST components have different Reference Number.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 subclause 7.6.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.31 sub clause 2.5.5

3GPP TS 04.80 sub clause 2.4, 2.5 & 4

70.3.4.4.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with a different REFERENCE NUMBER. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.3.4.4.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: Default parameters, in SYSTEM INFORMATION TYPE 3 (SI3 Rest Octet) the early classmark sending control is implemented in the SS.

Neighbor Cells: at least 2 neighbor cells are used with a minimum configuration of a BCCH. This is to allow the MS to perform the required timing measurements.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke. The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST to start the measurement. Before the current positioning measurement finishes, the MS receives the second RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER as in the first one. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement. The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

3 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates " call independent supplementary Services". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the IMSI. "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. This includes support of LCS VA Capability. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 |
| 13 | MS | | MS is performing the measurement |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 2 (with different reference number as in Request 1) |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE 2 (otd-measureInfo) Check reference number is 2 |
| 14 | SS -> MS | FACILITY | LCS MO-LR RETURE RESULT (locationEstimate) |
| 15 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.3.4.5 MO_LR Positioning Measurement / RR Management Commands

70.3.4.5.1 Conformance requirement

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO_LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO_LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts the measurement procedure and starts on the RR MANAGEMENT procedure if a RR MANAGEMENT command is received during the measurement procedure. The MS sends RR MANAGEMENT RESPONSE message upon completion.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

70.4 Mobile Terminated Location Request for Mobiles supporting MS-Assisted EOTD

The test cases in this sub clause focus on Mobile Terminated Location Request. A MT-LR occurs when an external LCS client requests the position of an MS by sending the SS REGISTER message. This may be sent to request verification for a particular MT-LR or simply to notify the user about an MT-LR that has already been authorized.

70.4.1 MT-LR Location Notification for MS-Assisted EOTD

Location notification takes place to inform the MS user that a particular LCS client is requesting their position without seeking the user's permission.

70.4.1.1 Conformance requirements:

The following requirements apply for this test:

1. On receipt of a REGISTER message containing the LCS Notification Invoke component with notificationType set to notifyLocationAllowed. The MS shall notify the MS user of the location request using the method defined in the manufacturers' specification.
2. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Test References

3GPP TS 03.71, sub clause 7.6.1,

3GPP TS 04.30, sub clause 4.1.1,

3GPP TS 04.80, sub clauses 2.4 and 2.5.

70.4.1.2 Test Purpose

Verifies that when the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyLocationAllowed, the MS displays information about the LCS client correctly (as defined by the individual manufacturer) and sends a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

70.4.1.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: Default parameters, in SYSTEM INFORMATION TYPE 3 (SI3 Rest Octet) the early classmark sending control is implemented in the SS.

Mobile Station:

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed as defined by the Manufacturer. The MS then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

Maximum duration of the test:

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM "Mobile identity" IE contains the IMSI. "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. This includes support of LCS VA Capability. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|----|----------|----------------------------|--|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 12 | MS -> SS | RELEASE COMPLETE | Contains a LocationNotification return result to terminate the dialogue |
| 13 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.4.2 MT-LR Privacy Options for Mobiles supporting MS-Assisted EOTD

Privacy options are used in conjunction with the MS subscription profile on the VLR. They give the MS user the option to grant or withhold permission for individual location requests as they occur.

70.4.2.1 MT-LR Privacy Options/ Verification – Location Allowed If No Response for mobiles supporting MS-Assisted EOTD

The case occurs when the target MS subscription profile on the VLR is set to location allowed if no response is sent. This is the default option if the VMSC does not receive verification from the target MS within a predetermined time.

70.4.2.1.1 Conformance requirements

The following requirements apply for this test:

1. On receipt of a REGISTER message containing the LCS Notification Invoke component with notificationType set to notifyAndVerify-LocationAllowedIfNoResponse. The MS a) notifies the user of the request and b) indicates the default is location allowed if no response is received within a predetermined period, while c) providing the opportunity to accept or deny the request by the method defined in the manufacturer's specification.

2.

Option 1:

The user accepts the location request using the method specified by the manufacturer.
The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2:

The user denies the location request using the method defined by the manufacturer.
The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3:

The user takes no action and the verification process times-out.
The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Test References

For conformance requirement 1:

3GPP TS 03.71, sub clause 7.6.1.

3GPP TS 24.030 sub clause 4.1.1.

3GPP TS 24.080 sub clause 2.4, 2.5.

70.4.2.1.2 Test Purpose

Verifies that when the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationAllowedIfNoResponse, the MS displays information about the LCS client correctly and indicates that the default response is location allowed if no response is sent. Gives the user the option to accept or reject the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with the verificationResponse set to permissionDenied or permissionGranted as appropriate.

70.4.2.1.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: Default parameters, in SYSTEM INFORMATION TYPE 3 (SI3 Rest Octet) the early classmark sending control is implemented in the SS.

Mobile Station:

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message with a Facility IE containing a LCS Location Notification Invoke set to notifyAndVerify-LocationAllowedIfNoResponse. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed with the option to accept or deny the request, as defined by the Manufacturer. The MS also indicates that location will be allowed if a response is not received within a predetermined time.

Option 1:

The user then accepts the location request by the method defined by the manufacturer. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2:

The user then denies the location request by the method defined by the manufacturer. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3:

The user ignores the location request by taking no action, allowing the verification process timer to time-out. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Maximum duration of the test:

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message with a Facility IE containing a LCS Location Notification Invoke set to notifyAndVerify-LocationNotAllowedIfNoResponse. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed with the option to accept or deny the request, as defined by the Manufacturer. The MS also indicates that location will not be allowed if a response is not received within a predetermined time.

Option 1:

The user then accepts the location request by the method defined by the manufacturer. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2:

The user then denies the location request by the method defined by the manufacturer. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3:

The user ignores the location request by taking no action, allowing the verification process timer to time-out. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Maximum duration of the test:

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM |
| 5 | MS -> SS | CLASSMARK CHANGE | "Mobile identity" IE contains the IMSI. "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. This includes support of LCS VA Capability. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE LCS Location Notification Invoke set to notifyAndVerify-LocationNotAllowedIfNoResponse |
| 12 | MS -> SS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted or permissionDenied as appropriate. |
| 12A | MS | | MS displays location request and info about LCS client. The MS accepts location request. |
| k=1 | | | |
| 13A | SS -> MS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted. |
| k=1 | | | |
| 12B | MS | | MS displays location request and info about LCS client. The MS rejects location request. |
| k=2 | | | |
| 13B | SS -> MS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionDenied |
| k=2 | | | |
| 12C | MS | | MS displays location request and info about LCS client. The MS does not reply |
| k=3 | | | |
| 13C | SS -> MS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted |
| k=3 | | | |
| 14 | SS->MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

PAGING RESPONSE

| Information element | Value/remark |
|---|---|
| Protocol Discriminator | RR management |
| Ciphering Key Sequence number - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available |
| Mobile station Classmark 2 - ES IND CM3 Mobile Identity - odd/even - Type of identity - Identity digits | "Controlled Early Classmark Sending" option is implemented in the MS. The MS Supports options that are indicated in classmark 3 IE in the Classmark Change message. Even TMSI TMSI previously allocated to MS |

REGISTER

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | Call independent SS message (1011) |
| Transaction identifier Message type Facility | Xx REGISTER (0x11 1011) invoke = lcs-LocationNotification locationNotificationArg <i>notificationType</i> -> notifyAndVerify-LocationNotAllowedIfNoResponse, <i>nocationType</i> -> current Location, <i>lcsClientExternalID</i> -> externalAddress <i>lcsClientName</i> -> dataCodingScheme nameString |

RELEASE COMPLETE (option 1)

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | Call independent SS message (1011) |
| Transaction identifier Message type Facility | Xx RELEASE COMPLETE (0x10 1010) return result = lcs-LocationNotification locationNotificationRes <i>verificationResponse</i> -> permissionGranted |

RELEASE COMPLETE (options 2 and 3)

70.5 Void

70.6 E-OTD Timing Measurement Accuracy

Scope of Tests

This test procedure plan is intended verify the operation of Enhanced Observed Timing Difference (E-OTD) measurement functionality from an E-OTD capable GSM Mobile Station (MS).

The scope of this test plan is limited to verification of the MS physical layer against 3GPP TS 05.05, Release 1999, version 8.7.1, annex I. Specifically, this includes validation of MS observed timing measurement accuracy only.

The recommended measurement test environment is shown in the present document annex 6.

70.6.1 E-OTD Accuracy, Sensitivity Performance Tests using GMSK Signals

70.6.1.1 Definition

Enhanced Observed Timing Difference is a mechanism intended to provide location information from an MS within a GSM network. E-OTD measures the burst timing alignment between the serving cell for the MS and a minimum of two neighbor cells. The observed timing difference, along with the BSIC or Cell ID of each neighbor cell that can be received and measured by the MS, is reported to the network. Using this information, an E-OTD capable network can calculate the location of the MS using triangulation techniques.

Although an E-OTD capable MS must receive a minimum of two neighbors in order to provide the network with useable data for E-OTD positioning, only one neighbor is required for the timing measurement tests described in this procedure.

70.6.1.2 Conformance requirement

The RMS₉₀ measurement error of an E-OTD capable MS receiving a neighbor shall not exceed 100 nanoseconds and 300 nanoseconds at a minimum neighbor carrier signal strength relative to relative sensitivity levels of 12 dB and -8 dB respectively, as specified in 3GPP TS 05.05, annex I, sub clause I.2.1, table I.2.1

70.6.1.3 Test purpose

E-OTD measurement accuracy is heavily influenced by the type of RF environment available to the MS at the time a Measure Position Request is received from the network. Nearby neighbor stations that provide a relatively high C/N to the MS receiver should result in greater measurement accuracy than those further away with a low C/N.

The purpose of this test case is to verify that an E-OTD capable MS can provide an observed timing difference (OTD) measurement of sufficient accuracy when measuring against a GMSK neighbor. During this test, there shall be no co-, adjacent-, or alternate-channel interference.

70.6.1.4 Method of Test

Initial Configuration

Neighbor Cell: One neighbor cells with a minimum configuration of a BCCH in order to allow the MS to perform the required measurements. The neighbor BCCH shall be included in the serving BCCH System Information Neighbor List.

Assistance Data: The assistance data listed in Table 70.6.1-1 and Table 70.6.1-2 shall be provided by the serving base station simulator. Without assistance data, successful validation of the MS physical layer may be impossible due to limitations imposed by the device's upper protocol layers.

Table 70.6.1-4: RRLP Measure Position Request Field Values, E-OTD Reference BTS for Assistance Data Element

| Field Name | Value | Comments |
|------------------|------------------------------|--|
| BCCH Carrier | Range 0-1023 | ARFCN of Serving BCCH |
| BSIC | Range 0 to 65 | BSIC of Serving BCCH |
| Time Slot Scheme | Either 0 or 1, as applicable | 0=All time slots 156.25 bits long 1=Time slots 0 and 4 are 157 bits long, all other time slots are 156 bits long. |
| BTS Position | None | Not applicable for timing accuracy measurements |

Table 70.6.1-2: RRLP Measure Position Request Field Values, E-OTD Measurement Assistance Data for System Information List Element

| Field Name | Value | Comments |
|-----------------------------|------------------------------|--|
| Number of Neighbors | 1 | |
| E-OTD Neighbor Present | 1 | |
| BSIC | Range 0 to 63 | BSIC of neighbor BCCH |
| Multiframe Offset | Range 0-51 | The value of this field is specific to the test configuration, and shall be calculated according to 3GPP TS 04.31, Annex A, Section A.2.2.3. |
| Time Slot Scheme | Either 0 or 1, as applicable | 0=All time slots 156.25 bits long 1=Time slots 0 and 4 are 157 bits long, all other time slots are 156 bits long. |
| Rough RTD | Range 0-1250 | Set to rough RTD value for the specific test configuration |
| Expected OTD | None | Not Applicable |
| Uncertainty of Expected OTD | None | Not Applicable |
| Fine RTD | None | Not Applicable |
| Relative North | None | Not Applicable |
| Relative East | None | Not Applicable |

70.6.1.5 Test procedure

- a) Configure serving base station simulator to transmit GMSK dummy bursts in time slots 1 through 7.
- b) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dB.
- c) Disable the interfering signal generator.
- d) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -90 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.
- e) The serving base station SS initiates a Measure Position Request RRLP message. Begin logging E-OTD Measure Position Response RRLP message from the MS under test. The Measure Position Request is repeated a minimum of 250 times at 5 s intervals and the response RRLP messages are logged.
- f) The SS calculates each trial's error relative to the known RTD, sort the data in ascending order, develop the 90 % subset M and calculate the RMS₉₀ error.
- g) Disable the interfering signal generator.
- h) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -110 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.

- i) The serving base station SS initiates a Measure Position Request RRLP message. Begin logging E-OTD Measure Position Response RRLP message from the MS under test. The Measure Position Request is repeated a minimum of 250 times at 5 second intervals and the response RRLP messages are logged.
- j) After transmitting 250 Measure Position Request RRLP messages to the MS under test, calculate each trial's error relative to the known RTD, sort the data in ascending order, develop the 90 % subset M and calculate the RMS₉₀ error.

70.6.1.6 Test Requirements

Verify that the RMS₉₀ error calculated for each procedure in 70.6.1.5 is within the test conformance requirements listed in Table 70.6.1-3

Table 70.6.1-3, Test Conformance Requirements

| Procedure | RMS ₉₀ error, 3GPP TS 05.05, Annex I, Minimum Performance Requirement | RMS ₉₀ error, 3GPP TS 51.010, 70.6.1, Test Conformance Requirement |
|-----------|--|---|
| Step f | ≤ 100 nanoseconds | ≤110 nanoseconds |
| Step j | ≤ 300 nanoseconds | ≤310 nanoseconds |

70.6.2 E-OTD Accuracy, Interference Performance Tests

70.6.2.1 Definition

Enhanced Observed Timing Difference is a mechanism intended to provide location information from an MS within a GSM network. E-OTD measures the burst timing alignment between the serving cell for the MS and a minimum of two neighbor cells. The observed timing difference, along with the BSIC or Cell ID of each neighbor cell that can be received and measured by the MS, is reported to the network. Using this information, an E-OTD capable network can calculate the location of the MS using triangulation techniques.

Although an E-OTD capable MS must receive a minimum of two neighbors in order to provide the network with useable data for E-OTD positioning, only one neighbor is required for the timing measurement tests described in this procedure.

70.6.2.2 Conformance requirement

The RMS₉₀ measurement error of an E-OTD capable MS receiving a neighbor with a co-channel interference ratio of 0 dB shall not exceed 300 nanoseconds, 10dB not exceeding 100 nanoseconds, adjacent channel interference ratio of –18dB not exceeding 500 nanoseconds, –8 dB not exceeding 200 nanoseconds, as well as an adjacent channel (400 kHz) interference ratio of –41dB not exceeding 100 nanoseconds, as specified in 3GPP TS 05.05, Release 99, Annex I, Section I.2.1, Table I.2.2

70.6.2.3 Test purpose

E-OTD measurement accuracy is heavily influenced by the type of RF environment available to the MS at the time a Measure Position Request is received from the network. As the C/I ratio due to neighbor cell co-channel interference is reduced, E-OTD measurement accuracy may be reduced as well.

The purpose of this test case is to verify that an E-OTD capable MS can provide an observed timing difference (OTD) measurement of sufficient accuracy when measuring against a GMSK neighbor in the presence of a channel interference with a 0 dB, 10dB, –18dB, –8dB, and –41dB C/I.

70.6.2.4 Method of Test

Initial Configuration

Neighbor Cells: at least two neighbor cells with a minimum configuration of a BCCH in order to allow the mobile to perform the required accuracy measurements. The neighbor BCCH shall be included in the serving BCCH System Information Neighbor List.

70.6.2.5 Test procedure

Co-Channel test procedure at 0dB C/I:

- a) Configure serving base station simulator to transmit GMSK dummy bursts in time slots 1 through 7
- b) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm
- c) Enable the interfering signal generator on the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -80 dBm
- d) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.
- e) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- f) After transmitting 250 Measure Position Request RRLP messages to the MS under test, calculate each trial's error relative to the known RTD, sort the data in ascending order, develop the 90% subset M and calculate the RMS_{90} error.

Co-Channel test procedure at 10dB C/I:

- g) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm
- h) Enable the interfering signal generator on the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -90 dBm
- i) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.
- j) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- k) Repeat Step f) and calculate the results.

Adjacent channel test procedure at -18dB C/I:

- l) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -70 dBm
- m) Enable the interfering signal generator on either of the channels adjacent to the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -62 dBm. The RF channel used by the interfering signal generator during this test must not be the same as that used by the serving base station simulator.
- n) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.
- o) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- p) Repeat Step f) and calculate the results.

Adjacent channel test procedure at - 8dB C/I:

- q) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -70 dBm
- r) Enable the interfering signal generator on either of the channels adjacent to the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -72 dBm. The RF channel used by the interfering signal generator during this test must not be the same as that used by the serving base station simulator.
- s) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.
- t) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- u) Repeat Step f) and calculate the results.

Adjacent channel (400kHz) test procedure at -41dB C/I:

- v) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -70 dBm
- w) Enable the interfering signal generator on either of the channels alternate (400 kHz offset) to the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -39 dBm. The RF channel used by the interfering signal generator during this test must not be the same as that used by the serving base station simulator.
- x) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting GMSK dummy bursts in time slots 1 through 7.
- y) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- z) Repeat Step f) and calculate the results.

70.6.2.6 Test Requirements

Verify that the RMS₉₀ error calculated for each procedure in 70.6.2.5 is within the test conformance requirements listed in Table 70.6.2-1.

Table 70.6.2-1, Test Conformance Requirements

| Procedure | RMS ₉₀ error, 3GPP TS 05.05, Annex I, Minimum Performance Requirement | RMS ₉₀ error, 3GPP TS 51.010, 70.6.2, Test Conformance Requirement |
|-----------|--|---|
| Step f | ≤ 300 nanoseconds | ≤310 nanoseconds |
| Step k | ≤ 100 nanoseconds | ≤110 nanoseconds |
| Step p | ≤ 500 nanoseconds | ≤510 nanoseconds |
| Step u | ≤ 200 nanoseconds | ≤210 nanoseconds |
| Step z | ≤ 100 nanoseconds | ≤110 nanoseconds |

70.6.3 E-OTD Accuracy, Multipath Performance Test using GMSK Modulated Signals.

70.6.3.1 Definition

Enhanced Observed Timing Difference is a mechanism intended to provide location information from an MS within a GSM network. E-OTD measures the burst timing alignment between the serving cell for the MS and a minimum of two neighbor cells. The observed timing difference, along with the BSIC or Cell ID of each neighbor cell that can be received and measured by the MS, is reported to the network. Using this information, an E-OTD capable network can calculate the location of the MS using triangulation techniques.

Although an E-OTD capable MS must receive a minimum of two neighbors in order to provide the network with useable data for E-OTD positioning, only one neighbor is required for the timing measurement tests described in this procedure.

70.6.3.2 Conformance requirement

The RMS₉₀ measurement error of an E-OTD capable MS receiving a TU3 Rayleigh-faded neighbor shall not exceed 1.5 microseconds, as specified in 3GPP TS 05.05, Release 99, Version 8.7.1, Annex I, Clause I.2.3, Table I.2.3

70.6.3.3 Test purpose

E-OTD measurement accuracy is heavily influenced by the type of RF environment available to the MS at the time a Measure Position Request is received from the network. Rayleigh fading to the neighbor cell will reduce E-OTD measurement accuracy.

The purpose of this test case is to verify that an E-OTD capable MS can provide an observed timing difference (OTD) measurement of sufficient accuracy when measuring against a TU3 Rayleigh fading GMSK distant neighbor. During this test, there shall be no co-, adjacent-, or alternate-channel interference.

70.6.3.5 Test procedure

- a) Configure serving base station simulator to transmit GMSK dummy bursts in time slots 1 through 7
- b) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm
- c) Disable the interfering signal generator
- d) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the EOTD MS under test) is -110 dBm with Rayleigh fading disabled. The neighbor shall be transmitting GMSK dummy bursts in time slots 1 through 7
- e) Configure the fading simulator for Rayleigh fading corresponding to a velocity of 3 kph, with a 12-tap delay and amplitude spread in accordance with 3GPP TS 05.05, Release 99, Rev. 8.7.1, Annex C, Section C.3.3.
- f) With the carrier from the serving base station simulator disabled, enable TU3 Rayleigh fading on the neighbor cell, and verify an average RSSI (at the antenna connection of the MS) of -110 dBm
- g) Re-enable the serving base station simulator carrier, verify an RSSI (at the antenna connection of the MS) of -80 dBm
- h) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- i) After transmitting 250 Measure Position Request RRLP messages to the MS under test, calculate each trial's error relative to the known RTD, sort the data in ascending order, develop the 90% subset M and calculate the RMS₉₀ error.

70.6.3.6 Test Requirements

Verify that the RMS₉₀ error calculated in Step i) is < 1.5 microseconds

70.6.4 E-OTD Accuracy, Interference Performance Tests, 8PSK BCCH

70.6.4.1 Definition

Enhanced Observed Timing Difference is a mechanism intended to provide location information from an MS within a GSM network. E-OTD measures the burst timing alignment between the serving cell for the MS and a minimum of two neighbor cells. The observed timing difference, along with the BSIC or Cell ID of each neighbor cell that can be received and measured by the MS, is reported to the network. Using this information, an E-OTD capable network can calculate the location of the MS using triangulation techniques.

Although an E-OTD capable MS must receive a minimum of two neighbors in order to provide the network with useable data for E-OTD positioning, only one neighbor is required for the timing measurement tests described in this procedure.

70.6.2.2 Conformance requirement

The RMS_{90} measurement error of an E-OTD capable MS receiving an 8PSK neighbor with a co-channel interference ratio of 0 dB shall not exceed 300 nanoseconds, 10dB not exceeding 300 nanoseconds, adjacent channel interference ratio of -18dB not exceeding 500 nanoseconds, -8 dB not exceeding 200 nanoseconds, as well as an adjacent channel (400 kHz) interference ratio of -41dB not exceeding 100 nanoseconds, as specified in 3GPP TS 05.05, Release 99, Annex I, Section I.2.1, Table I.2.2

70.6.2.3 Test purpose

E-OTD measurement accuracy is heavily influenced by the type of RF environment available to the MS at the time a Measure Position Request is received from the network. As the C/I ratio due to neighbor cell co-channel interference is reduced, E-OTD measurement accuracy may be reduced as well.

The purpose of this test case is to verify that an E-OTD capable MS can provide an observed timing difference (OTD) measurement of sufficient accuracy when measuring against a neighbor modulated with 8PSK in time slots 1-7, in the presence of a channel interference with a 0 dB, 10dB, -18dB, -8dB, and -41dB C/I.

Specific PICS statements

-

PIXIT statements

-

70.6.4.4 Method of Test

Initial Configuration

Neighbor Cells: at least one neighbor cell with a minimum configuration of a BCCH in order to allow the mobile to perform the required accuracy measurements. The neighbor BCCH shall be included in the serving BCCH System Information Neighbor List.

70.6.4.5 Test procedure

Co-Channel 8PSK test procedure at 0dB C/I:

- a) Configure serving base station simulator to transmit in time slots 1 through 7
- b) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm
- c) Enable the interfering signal generator on the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -80 dBm
- d) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting 8PSK bursts modulated with pseudo-random data in time slots 1 through 7.
- e) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- f) After transmitting 250 Measure Position Request RRLP messages to the MS under test, calculate each trial's error relative to the known RTD, sort the data in ascending order, develop the 90% subset M and calculate the RMS_{90} error.

Co-Channel 8PSK test procedure at 10dB C/I:

- g) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm
- h) Enable the interfering signal generator on the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -90 dBm
- i) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting 8PSK bursts modulated with pseudo-random data in time slots 1 through 7.
- j) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- k) Repeat Step f) and calculate the results.

Adjacent channel 8PSK test procedure at -18dB C/I:

- l) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -70 dBm
- m) Enable the interfering signal generator on either of the channels adjacent to the frequency of the neighbor cell at a power (at the antenna connection of the EOTD-capable MS) of -62 dBm. The RF channel used by the interfering signal generator during this test must not be the same as that used by the serving base station simulator.
- n) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting 8PSK bursts modulated with pseudo-random data in time slots 1 through 7.
- o) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- p) Repeat Step f) and calculate the results.

Adjacent channel 8PSK test procedure at - 8dB C/I:

- q) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -70 dBm

- r) Enable the interfering signal generator on either of the channels adjacent to the frequency of the neighbor cell at a power (at the antenna connection of the E-OTD-capable MS) of -72 dBm. The RF channel used by the interfering signal generator during this test must not be the same as that used by the serving base station simulator.
- s) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting 8PSK bursts modulated with pseudo-random data in time slots 1 through 7.
- t) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- u) Repeat Step f) and calculate the results.

Adjacent channel (400kHz) 8PSK test procedure at -41dB C/I:

- v) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -70 dBm
- w) Enable the interfering signal generator on either of the channels alternate (400 kHz offset) to the frequency of the neighbor cell at a power (at the antenna connection of the E-OTD-capable MS) of -39 dBm. The RF channel used by the interfering signal generator during this test must not be the same as that used by the serving base station simulator.
- x) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -80 dBm, and that it is transmitting 8PSK bursts modulated with pseudo-random data in time slots 1 through 7.
- y) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- z) Repeat Step f) and calculate the results.

70.6.4.6 Test Requirements

Verify that the RMS₉₀ error calculated for each procedure in 70.6.4.5 is within the test conformance requirements listed in Table 70.6.4-1

Table 70.6.4-1, Test Conformance Requirements

| Procedure | RMS ₉₀ error, 3GPP TS 05.05, Annex I, Minimum Performance Requirement | RMS ₉₀ error, 3GPP TS 51.010, 70.6.4, Test Conformance Requirement |
|-----------|--|---|
| Step f | ≤ 300 nanoseconds | ≤310 nanoseconds |
| Step k | ≤ 100 nanoseconds | ≤110 nanoseconds |
| Step p | ≤ 500 nanoseconds | ≤510 nanoseconds |
| Step u | ≤ 200 nanoseconds | ≤210 nanoseconds |
| Step z | ≤ 100 nanoseconds | ≤110 nanoseconds |

70.6.5 E-OTD Accuracy, Multipath Performance Test, 8PSK BCCH

70.6.5.1 Definition

Enhanced Observed Timing Difference is a mechanism intended to provide location information from an MS within a GSM network. E-OTD measures the burst timing alignment between the serving cell for the MS and a minimum of two neighbor cells. The observed timing difference, along with the BSIC or Cell ID of each neighbor cell that can be received and measured by the MS, is reported to the network. Using this information, an E-OTD capable network can calculate the location of the MS using triangulation techniques.

Although an E-OTD capable MS must receive a minimum of two neighbors in order to provide the network with useable data for E-OTD positioning, only one neighbor is required for the timing measurement tests described in this procedure.

70.6.5.2 Conformance requirement

The RMS₉₀ measurement error of an E-OTD capable MS receiving a TU3 Rayleigh-faded 8PSK-modulated neighbor shall not exceed 1.5 microseconds, as specified in 3GPP TS 05.05, Release 99, Annex I, Clause I.2.3, Table I.2.3

70.6.5.3 Test purpose

E-OTD measurement accuracy is heavily influenced by the type of RF environment available to the MS at the time a Measure Position Request is received from the network. Rayleigh fading to the neighbor cell will reduce E-OTD measurement accuracy.

The purpose of this test case is to verify that an E-OTD capable MS can provide an observed timing difference (OTD) measurement of sufficient accuracy when measuring against a TU3 Rayleigh fading distant neighbor modulated with 8PSK in time slots 1-7. During this test, there shall be no co-, adjacent-, or alternate-channel interference.

70.6.5.4 Method of Test

Initial Configuration

Neighbor Cells: At least one neighbor cell with a minimum configuration of a BCCH in order to allow the mobile to perform the required accuracy measurements. The neighbor BCCH shall be included in the serving BCCH System Information Neighbor List.

Assistance Data: The assistance data listed in Table 70.6.5-1 and Table 70.6.5-2 shall be provided by the serving base station simulator. Without assistance data, successful validation of the MS physical layer may be impossible due to limitations imposed by the device's upper protocol layers.

**Table 70.6.5-6: RRLP Measure Position Request Field Values,
E-OTD Reference BTS for Assistance Data Element**

| Field Name | Value | Comments |
|------------------|------------------------------|--|
| BCCH Carrier | Range 0-1023 | ARFCN of Serving BCCH |
| BSIC | Range 0 to 65 | BSIC of Serving BCCH |
| Time Slot Scheme | Either 0 or 1, as applicable | 0=All time slots 156.25 bits long 1=Time slots 0 and 4 are 157 bits long, all other time slots are 156 bits long. |
| BTS Position | None | Not applicable for timing accuracy measurements |

**Table 70.6.5-2: RRLP Measure Position Request Field Values,
E-OTD Measurement Assistance Data for System Information List Element**

| Field Name | Value | Comments |
|-----------------------------|------------------------------|--|
| Number of Neighbors | 1 | |
| E-OTD Neighbor Present | 1 | |
| BSIC | Range 0 to 63 | BSIC of neighbor BCCH |
| Multiframe Offset | Range 0-51 | The value of this field is specific to the test configuration, and shall be calculated according to 3GPP TS 04.31, Annex A, Section A.2.2.3. |

70.6.5.5 Test procedure

- a) Configure serving base station simulator to transmit 8PSK bursts modulated with pseudo-random data in time slots 1 through 7
- b) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm
- c) Disable the interfering signal generator
- d) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the EOTD MS under test) is -110 dBm with Rayleigh fading disabled. The neighbor shall be transmitting 8PSK bursts modulated with pseudo-random data in time slots 1 through 7
- e) Configure the fading simulator for Rayleigh fading corresponding to a velocity of 3 kph, with a 12-tap delay and amplitude spread in accordance with 3GPP TS 05.05, Release 99, Rev. 8.7.1, Annex C, Section C.3.3.
- f) With the carrier from the serving base station simulator disabled, enable TU3 Rayleigh fading on the neighbor cell, and verify an average RSSI (at the antenna connection of the MS) of -110 dBm
- g) Re-enable the serving base station simulator carrier, verify an RSSI (at the antenna connection of the MS) of -80 dBm
- h) The SS initiates a Measure Position Request RRLP messages and begins logging E-OTD Response messages from the MS under test. The Measure Position Request message is repeated 250 times at 5-second intervals and the response RRLP messages are recorded.
- i) After transmitting 250 Measure Position Request RRLP messages to the MS under test, calculate each trial's error relative to the known RTD, sort the data in ascending order, develop the 90% subset M and calculate the RMS₉₀ error.

70.6.5.6 Test Requirements

Verify that the RMS₉₀ error calculated in Step i) is < 1.5 microseconds

70.6.6 E-OTD Accuracy, Sensitivity Performance Tests for 8PSK Modulated signals

70.6.6.1 Definition

Enhanced Observed Timing Difference is a mechanism intended to provide location information from an MS within a GSM network. E-OTD measures the burst timing alignment between the serving cell for the MS and a minimum of two neighbor cells. The observed timing difference, along with the BSIC or Cell ID of each neighbor cell that can be received and measured by the MS, is reported to the network. Using this information, an E-OTD capable network can calculate the location of the MS using triangulation techniques.

Although an E-OTD capable MS must receive a minimum of two neighbors in order to provide the network with useable data for E-OTD positioning, only one neighbor is required for the timing measurement tests described in this procedure.

70.6.6.2 Conformance requirement

The RMS_{90} measurement error of an E-OTD capable MS receiving a neighbor shall not exceed 100 nanoseconds and 300 nanoseconds at a minimum neighbor carrier signal strength relative to relative sensitivity levels of 12 dB and -8 dB respectively, as specified in 3GPP TS 05.05, annex I, sub clause I.2.1, table I.2.1

70.6.6.3 Test purpose

E-OTD measurement accuracy is heavily influenced by the type of RF environment available to the MS at the time a Measure Position Request is received from the network. Nearby neighbor stations that provide a relatively high C/N to the MS receiver should result in greater measurement accuracy than those further away with a low C/N.

The purpose of this test case is to verify that an E-OTD capable MS can provide an observed timing difference (OTD) measurement of sufficient accuracy when measuring against an 8PSK neighbor. During this test, there shall be no co-, adjacent-, or alternate-channel interference.

| Expected OTD | None | Not Applicable |
| Uncertainty of Expected OTD | None | Not Applicable |
| Fine RTD | None | Not Applicable |
| Relative North | None | Not Applicable |
| Relative East | None | Not Applicable |

70.6.6.5 Test procedure

- a) Configure serving base station simulator to transmit 8PSK bursts in time slots 1 through 7.
- b) Establish RF connectivity between the E-OTD compatible MS and its serving base station simulator, verify RSSI of -80 dBm.
- c) Disable the interfering signal generator.
- d) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -90 dBm, and that it is transmitting 8PSK bursts in time slots 1-7.
- e) The serving base station SS initiates a Measure Position Request RRLP message. Begin logging E-OTD Measure Position Response RRLP messages from the MS under test. The Measure Position Request is repeated a minimum of 250 times at 5-second intervals and the response RRLP messages are logged.
- f) The SS calculates each trial's error relative to the known RTD, sort the data in ascending order, develop the 90 % subset M and calculate the RMS₉₀ error.
- g) Disable the interfering signal generator.
- h) Configure the neighbor base station simulator such that its power (as measured at the antenna terminal of the E-OTD MS under test) is -110 dBm, and that it is transmitting 8PSK bursts in time slots 1-7.
- i) The serving base station SS initiates a Measure Position Request RRLP message. Begin logging E-OTD Measure Position Response RRLP messages from the MS under test. The Measure Position Request is repeated a minimum of 250 times at 5 s intervals and the response RRLP messages are logged.
- j) After transmitting 250 Measure Position Request RRLP messages to the MS under test, calculate each trial's error relative to the known RTD, sort the data in ascending order, develop the 90 % subset M and calculate the RMS₉₀ error.

70.6.6.6 Test Requirements

Verify that the RMS₉₀ error calculated for each procedure in 70.6.6.5 is within the test conformance requirements listed in Table 70.6.6-3

Table 70.6.6-3, Test Conformance Requirements

| Procedure | RMS ₉₀ error, 3GPP TS 05.05, Annex I, Minimum Performance Requirement | RMS ₉₀ error, 3GPP TS 51.010, 70.6.6, Test Conformance Requirement |
|-----------|--|---|
| Step f | ≤ 100 nanoseconds | ≤110 nanoseconds |
| Step j | ≤ 300 nanoseconds | ≤310 nanoseconds |

70.7 Assisted GPS Network Induced Tests

70.7.1 Void

70.7.2 Void

70.7.3 Void

70.7.4 Network Induced Location Request Emergency Call on TCH Radio Channel

70.7.4.1 Network Induced Location Request Emergency Call on TCH Radio Channel for Mobiles Supporting MS-Based GPS

70.7.4.1.1 Conformance requirements

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM900 and 1800 MS), or 911 (for PCS 1900 MS in the USA), or 08 (for PCS 1900 MS in Mexico) has been entered by the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the "Controlled Early Classmark Sending" option. A mobile station which implements the "Controlled Early Classmark Sending" option shall indicate it in the classmark (ES IND bit).
3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
6. On receiving the MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements, and calculates its own position. It sends the results in the RRLP MEASURE POSITION RESPONSE message.

70.7.4.1.2 Test Purpose

To verify when a network instigates the LCS positioning procedure by sending RRLP (Measure Position Request) message, after a traffic channel has been established during an emergency call, the mobile responds with RRLP (Measure Position Response) containing MS location estimate.

70.7.4.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

SIM:

Normal SIM

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure

An Emergency Call is initiated with the MS. SIM card is included in the MS.

The emergency call is established with a late assignment.

After receiving the CONNECT ACKNOWLEDGE message from the MS, the SS sends RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request on FACCH including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The call is cleared by the SS.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The appropriate "emergency call number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 2 is set to 1 (MS-Based GPS) |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS -> MS | CALL PROCEEDING | |
| 9 | SS -> MS | ALERTING | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | CONNECT | |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 16 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 17 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 18 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 19 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationInfo (Option 1) or locationError with gpsAssDataMissing and additionalAssistanceData (Option 2) |
| 19a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 19 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 19b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 19a, the MS acknowledges the received assistance data. |
| 19c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 19 that is available in the SS, this message may include further assistance data. |
| 19d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 19, this message contains locationInfo. |

| | | | |
|----|----------|------------------|---------------------------------------|
| 20 | SS -> MS | DISCONNECT | |
| 21 | MS -> SS | RELEASE | |
| 22 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.7.4.2 Network Induced Location Request Emergency Call on TCH Radio Channel for mobiles supporting MS-Assisted GPS

70.7.4.2.1 Conformance requirements

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM900 and 1800 MS), or 911 (for PCS 1900 MS in the USA), or 08 (for PCS 1900 MS in Mexico) has been entered by the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the "Controlled Early Classmark Sending" option. A mobile station which implements the "Controlled Early Classmark Sending" option shall indicate it in the classmark (ES IND bit).

3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. After receipt of a CONNECT ACKNOWLEDGE message during establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
6. On receiving the RRLP MEASURE POSITION REQUEST the MS tries to perform the requested location measurements. It sends the results in the MEASURE POSITION RESPONSE message.

70.7.4.2.2 Test Purpose

To verify when a network instigates the LCS positioning procedure by sending RRLP (Measure Position Request) message, after a traffic channel has been established during an emergency call, the mobile responds with RRLP (Measure Position Response) containing A-GPS measurement values.

70.7.4.2.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure

An Emergency Call is initiated with the MS. SIM card is included in the MS.

The emergency call is established with a late assignment.

After receiving the CONNECT ACKNOWLEDGE message from the MS, the SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request on FACCH including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance

data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The call is cleared by the SS.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | The appropriate "emergency call number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 3 is set to 1 (MS-Assisted GPS) |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS -> MS | CALL PROCEEDING | |
| 9 | SS -> MS | ALERTING | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | CONNECT | |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 14 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: gps-MeasureInfo (Option 1) or locationError with gpsAssDataMissing (Option 2) |
| 15a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 15 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 15b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 15a, the MS acknowledges the received assistance data. |
| 15c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 15 that is available in the SS, this message may include further assistance data. |
| 15d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 15, this message contains gps-MeasureInfo. |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.7.4.3 Network Induced Location Request Emergency Call on TCH Radio Channel, no IMSI for Mobiles Supporting MS-Based GPS

70.7.4.3.1 Conformance requirements

1. With the MS (no SIM inserted) in the "idle, no IMSI" state, the user shall initiate an emergency call by dialling the number 112 (for GSM 900 and 1 800 MSs), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in the USA 1 900 MS), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS MS in Mexico). The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the "Controlled Early Classmark Sending" option. A mobile station which implements the "Controlled Early Classmark Sending" option shall indicate it in the classmark (ES IND bit).
3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
6. On receiving the RRLP MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements, and calculates its own position. It sends the results in the RRLP MEASURE POSITION RESPONSE message.

70.7.4.4 Network Induced Location Request Emergency Call on TCH Radio Channel, no IMSI for mobiles supporting MS-Assisted GPS

70.7.4.4.1 Conformance requirements

1. With the MS (no SIM inserted) in the "idle, no IMSI" state, the user shall initiate an emergency call by dialling the number 112 (for GSM 900 and 1 800 MSs), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in Mexico). The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the

“Controlled Early Classmark Sending” option. A mobile station which implements the “Controlled Early Classmark Sending” option shall indicate it in the classmark (ES IND bit).

3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
6. On receiving the RRLP MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements. It sends the results in the RRLP MEASURE POSITION RESPONSE message.

| extended-reference | SEQUENCE | Rel 5 and later |

70.8 Assisted GPS Mobile Originated Tests

70.8.1 Basic Self Location

70.8.1.1 Conformance requirements

- 1) The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
- 2) The MS invokes self-location request by sending REGISTER message containing Facility IE LCS MO-LR with MOLR-TYPE set to locationEstimate.
- 3) The MS needs to interact with the network for each separate location request.
- 4) On receiving an RRLP MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements. It sends the results in an RRLP MEASURE POSITION RESPONSE message.
- 5) The network returns an LCS result to the MS carrying location estimate requested by the MS in FACILITY message.
- 6) The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

70.8.1.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing the Facility IE LCS MO-LR. When the MS receives a FACILITY message containing a Facility IE MO-LR LCS result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

70.8.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valid TMSI and CSKN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure

The MS invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering. Then the MS invokes an MO-LR request.

The SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When MS receives FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | Initiate LCS MOLR Procedure (location estimation) |
| 2 | MS -> SS | CHANNEL REQUEST | establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | The CM service type IE indicates "Supplementary service activation". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 3 is set to 1 (MS-Assisted GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request with MOLR-Type set to locationEstimate |
| 12 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: gps-MeasureInfo (Option 1) or locationError with gpsAssDataMissing (Option 2) |
| 13a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 13 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 13b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 13a, the MS acknowledges the received assistance data. |
| 13c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 13 that is available in the SS, this message may include further assistance data. |
| 13d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 13, this message contains gps-MeasureInfo. |
| 14 | SS -> MS | FACILITY | LCS MO-LR result message containing location estimate |
| 15 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.8.2 Basic Self Location in Dedicated Mode

70.8.2.1 Conformance requirements

The MS sends a DTAP LCS MO-LR invoke to the VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component with MO_LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request with MOLR-Type set to locationEstimate with LCSCientExternalID present |
| 11 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: gps-MeasureInfo (Option 1) or locationError with gpsAssDataMissing (Option 2) |
| 12a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 12 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 12b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 12a, the MS acknowledges the received assistance data. |
| 12c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 12 that is available in the SS, this message may include further assistance data. |
| 12d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 12, this message contains gps-MeasureInfo. |
| 13 | SS | | SS may return the location estimate result to the LCS Client as identified by the LCSCientExternalID provided in the REGISTER message |

| | | | |
|----|----------|------------------|---|
| 14 | SS -> MS | FACILITY | LCS MO-LR Return Result message as confirmation that the position estimate was transferred to the requested LCS client. |
| 15 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

REGISTER (Step 10):

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | REGISTER (xx11 1011) |
| Facility | Invoke = LCS-MOLR LCS-MOLRArg Molr-Type -> locationEstimate lcsClientExternalID -> externalAddress |
| SS version indicator | Value 1 or higher |

RR APPLICATION INFORMATION

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | RR Management Protocol (0110) |
| Skip Indicator | |
| Message Type | Application Information Message type |
| APDU ID | APDU ID -> RRLP => 0000 |
| APDU Flags | Bit1=0 -> Last or only segment Bit2=0 -> First or only segment Bit3=0 -> Command or Final Response Bit4=spare |
| APDU Data | 2-N Byte -> ASN.1 Coded Step 11 and 12c: RRLP Measure Position Request Step 12 and 12d: RRLP Measure Position Response Step 12a: RRLP Assistance Data Step 12b: RRLP Assistance Data Ack. |

RRLP Measure Position Request (Step 11):

| Information element | Type | Value/remark |
|---------------------|-----------------|----------------------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |

70.8.4 MO-LR Positioning Measurement

70.8.4.1 MO-LR Positioning Measurement / Protocol Error

70.8.4.1.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS sends a RRLP PROTOCOL ERROR message to network if there is a problem that prevents the MS to receive a complete and understandable RRLP MEASURE POSITION REQUEST component.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References

3GPP TS 03.71 sub clause 7.6.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS04.31 sub clause 2.2, 2.5

3GPP TS 04.80 / 3GPP TS 24.080 sub clause 2.4, 2.5, 3.4 & 4

70.8.4.1.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. The MS shall send a RRLP PROTOCOL ERROR message to SS with specific error code if RRLP MEASURE POSITION REQUEST is incomplete. On receipt of second RRLP MEASURE POSITION REQUEST from SS to start the measurement, MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.8.4.1.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST with missing information element. The MS shall send RRLP PROTOCOL ERROR as it fails to decode RRLP MEASURE POSITION REQUEST. The SS repeats RRLP MEASURE POSITION REQUEST with correct message contents including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|----------|----------------------------|--|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR request with MOLR-Type set to locationEstimate |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 (with missing final octet) |
| 12 | MS->SS | RR APPLICATION INFORMATION | RRLP PROTOCOL ERROR |
| 13 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2 |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: gps-MeasureInfo (Option 1) or locationError with gpsAssDataMissing (Option 2) |
| 14a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 14 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 14b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 14a, the MS acknowledges the received assistance data. |
| 14c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 14 that is available in the SS, this message may include further assistance data. |
| 14d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 14, this message contains gps-MeasureInfo. |
| 15 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 16 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke. The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST with a method type not supported by the mobile. (Type not supported to be EOTD).

The MS sends RRLP MEASURE POSITION RESPONSE to SS containing a Location Error component (Request Method not Supported) as the requested method is not supported. The SS repeats RRLP MEASURE POSITION REQUEST with correct message contents including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS returns location estimate to MS through LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

70.8.4.2.2 Location Error: GPS Assistance Data Missing

70.8.4.2.2.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS sends a RRLP MEASURE POSITION RESPONSE to network containing a Location Error component with an error indication if the measurement is not possible.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 subclause 7.6.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.31 sub clause 2.2

3GPP TS 04.80 / 3GPP TS 24.080 sub clause 2.4, 2.5, 3.4 & 4

70.8.4.2.2.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall send back RRLP MEASURE POSITION RESPONSE message with Location Error component if GPS assistance data is missing. On receipt of second RRLP MEASURE POSITION REQUEST (with GPS assistance data included) from SS to start the measurement, the MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.8.4.2.2.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

The A-GPS assistance data stored in the MS is reset.

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST without GPS assistance data.

The MS requests additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. The SS provides the requested assistance data that is available in the SS in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data.

The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS returns location estimate to MS through LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | MS | | Reset all stored A-GPS assistance data |
| 2 | MS | | Initiate MOLR Procedure (location estimate) |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 6 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|----|----------|----------------------------|---|
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR request with MOLR-Type set to locationEstimate |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 (without GPS assistance data) |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response 1: locationError with gpsAssDataMissing |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. The SS provides the requested data from step 13 that is available in the SS in zero, one or more RRLP Assistance Data delivery messages. |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 14, the MS acknowledges the received assistance data. |
| 16 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2. This message may include further assistance data. |
| 17 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE 2 (gps-measureInfo) |
| 18 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 19 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 20 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.8.4.3 MO-LR Positioning Measurement / Multiple RRLP Requests with Same Reference Number

70.8.4.3.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS ignores the later component if the old and new RRLP MEASURE POSITION REQUEST components have the same Reference Number.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 subclause 7.6.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.31 sub clause 2.5.5

3GPP TS 04.80 / 3GPP TS 24.080 sub clause 2.4, 2.5, 3.4 & 4

70.8.4.3.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall ignore the second RRLP MEASURE POSITION REQUEST if the second RRLP MEASURE POSITION REQUEST has the same REFERENCE NUMBER as in the previous one. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the current measurement.

70.8.4.3.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke. The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the first one (this delay shall be cancelled in the event of option 2). The MS shall ignore the second RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the second one. The MS shall ignore the third RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|--|---------------------------------------|--|

70.8.4.4 MO-LR Positioning Measurement / Multiple RRLP Requests with Different Reference Number

70.8.4.4.1 Conformance requirement

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts activity for the former RRLP MEASURE POSITION REQUEST component and starts to act according to the later RRLP MEASURE POSITION REQUEST component if the old and new RRLP MEASURE POSITION REQUEST components have different Reference Number.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 subclause 7.6.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.31 sub clause 2.5.5

3GPP TS 04.80 / 3GPP TS 24.080 sub clause 2.4, 2.5, 3.4 & 4

70.8.4.4.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with a different REFERENCE NUMBER. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.8.4.4.3 Method of Test

Test Procedure

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke. The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER from the first one (this delay shall be cancelled in the event of option 2). The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER from the second one. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST,

including the possibility of repeating the request for more assistance data (Option 2b). The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|--|---------------------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to locationEstimate. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 |
| 12 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1) The SS continues to step 13. If the MS sends RRLP Measure Position Response: locationError with gpsAssDataMissing (Option 2) within 8 seconds, then the SS continues to step 12a. |
| 12a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 12 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 12b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 12a, the MS acknowledges the received assistance data. |
| 12c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2. If the MS requested additional assistance data in step 12 that is available in the SS, this message may include further assistance data. |
| 12d | MS (Option 2) | | MS is performing the measurement (Option 2) |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 2 with different reference number from Request 1 (Option 1) or RRLP MEASURE POSITION REQUEST 3 with different reference number from Request 2 (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: gps-MeasureInfo (Option 1 or 2a) Check reference number is 2 or locationError with gpsAssDataMissing (Option 2b) Check reference number is 2 |
| 14a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 14 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 14b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 14a, the MS acknowledges the received assistance data. |
| 14c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 14 that is available in the SS, this message may include further assistance data. |
| 14d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 14, this message contains gps-MeasureInfo. |
| 15 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |

| | | | |
|----|----------|------------------|---------------------------------------|
| 16 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| Message Type | RELEASE COMPLETE (xx10 1010) |

70.8.4.5 MO-LR Positioning Measurement / RR Management Commands

70.8.4.5.1 Conformance requirement

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts the measurement procedure and starts on the RR MANAGEMENT procedure if a RR MANAGEMENT command is received during the measurement procedure. The MS sends RR MANAGEMENT RESPONSE message upon completion.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 sub clauses 7.6.6, 10.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.80 / 3GPP TS 24.080 sub clauses 2.4, 2.5, 3.4 & 4

70.8.4.5.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if a RR MANAGEMENT command is received during the measurement procedure. The MS shall send a RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST and send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.8.4.5.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP

LCS-MOLR Invoke. The SS determines the positioning method and instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends an RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends an RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends a RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends a RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS either sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST or requests more assistance data and then sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|--|---------------------------------------|--|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to locationEstimate. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 |
| 12 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 13. If the MS sends RRLP Measure Position Response: locationError with gpsAssDataMissing (Option 2) within 8 seconds, then the SS continues to step 12a. |
| 12a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 12 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 12b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 12a, the MS acknowledges the received assistance data. |
| 12c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2. If the MS requested additional assistance data in step 12 that is available in the SS, this message may include further assistance data. |
| 12d | MS (Option 2) | | MS is performing the measurement (Option 2) |
| 13 | SS -> MS | RR MANAGEMENT COMMAND | |
| 14 | MS -> SS | RR MANAGEMENT COMPLETE | MS terminates the measurement procedure and act on the RR management command |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 2 (Option 1) or RRLP MEASURE POSITION REQUEST 3 (Option 2) Note: The satellite signals should be made available to MS after sending this message |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: gps-MeasureInfo (Option 1 or 2a) or locationError with gpsAssDataMissing (Option 2b) |
| 16a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 16, this message contains gps-MeasureInfo. |
| 17 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 18 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.8.5 MO_LR Basic Self Location Request for MS-Based AGPS

The test cases in this sub clause focus on Mobile Originating Location Request using MS-Based AGPS method. A MO_LR procedure could occur for requesting assistance data for mobile's own location.

70.8.5.1 MO_LR Basic Self Location Request in Idle Mode (Normal Case)

70.8.5.1.1 Conformance requirements:

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes self-location request by sending a REGISTER message containing a LCS-MOLR invoke component with MO_LR TYPE set to ASSISTANCE DATA, LOCATION_METHOD TYPE set ASSISTEDGPS, and GPS_ASSISTANCE_DATA TYPE set to the type of ASSISTANCE_DATA requested.
3. The MS sends RRLP ASSISTANCE DATA ACK. for each RRLP ASSISTANCE DATA component.
4. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References

3GPP TS 03.71, sub clause 7.6.6,

3GPP TS 04.30 sub clause 5.1.1,

3GPP TS 04.80 / 3GPP TS 24.080 sub clause 2.4, 2.5, 3.4 and 4

70.8.5.1.2 Test Purpose

To verify that a MS invokes a self-location request by sending the network a REGISTER message containing FACILITY IE LCS-MOLR REQ. On receipt of each of RRLP ASSISTANCE DATA from SS with the requested assistance data, MS shall send RRLP ASSISTANCE ACK for each component to SS. When the MS receives a FACILITY message containing a FACILITY IE LCS-MOLR return result for the acknowledgement of completing assistance data delivery, it clears the transaction by sending a RELEASE COMPLETE message.

70.8.5.1.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke for Assistance Data. The SS sends a number of RRLP Assistance Data components and MS sends RRLP Assistance Data Ack for each component. SS sends DTAP LCS-MOLR Return Result for acknowledgement of completion of assistance data delivery. The MS performs the measurement and calculates the position fix using the assistance data delivered. The MS terminates the dialogue by sending RELEASE COMPLETE message.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | Initiate LCS MOLR Procedure (assistance data request) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Establishment cause indicates "Supplementary service activation". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES_IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. Position method Capability is set to 1 and Bit 2 is set to 1 (MS-Based GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to assistanceData. |
| 11n | SS -> MS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA The number of instances of this message depends on the amount of assistance data requested in step 10 |
| 12n | MS -> SS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA ACK Each instance of RRLP ASSISTANCE DATA message in step 11 is acknowledged |
| 13 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT |
| 14 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

CLASSMARK CHANGE

| Information element | Value/remark |
|--|---|
| as default except: Mobile station Classmark 2 -ES_IND | "Controlled Early Classmark Sending" option is implemented in the MS. |
| CM3 | The MS Supports options that are indicated in classmark 3 IE |
| Mobile station Classmark 3 MS Positioning Method Capability | See below This bit indicates that the MS supports Positioning Method for the provision of Location Services. |
| Positioning Method(s) support, 5 bit field | Support of certain positioning method (3GPP TS 24.008, table 10.5.1.7), Bit 2 set to 1. |

REGISTER (Step 10):

| Information element | Value/remark |

70.8.5.2 MO_LR Basic Self Location Request in Dedicated Mode (Normal case)

70.8.5.2.1 Conformance Requirement:

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes self-location request by sending a REGISTER message containing a LCS-MOLR invoke component with MO_LR TYPE set to ASSISTANCE DATA, LOCATION_METHOD TYPE set ASSISTEDGPS, and GPS_ASSISTANCE_DATA TYPE set to the type of ASSISTANCE_DATA requested.
3. The MS sends RRLP ASSISTANCE DATA ACK. for each RRLP ASSISTANCE DATA component.
4. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 sub clause 7.6.6

3Gpp TS 24.30 sub clause 5

3GPP TS 24.80 sub clause 4

70.8.5.2.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing the FACILITY IE LCS-MOLR REQ on an already established speech call related main DCCH (FACCH). On receipt of a RRLP ASSISTANCE DATA from SS with the requested assistance data, MS shall send back RRLP ASSISTANCE ACK for each component to SS. When the MS receives a FACILITY message containing a FACILITY IE LCS-MOLR return result for the acknowledgment of completing assistance data delivery, it clears the transaction by sending a RELEASE COMPLETE message.

70.8.5.2.3 Method of Test**Initial Conditions:****System Simulator:**

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS has valid TMSI and CSKN.

The MS is brought into the state U10 by using table 26.8.1.2/3

Test Procedure:

A MOLR procedure as call independent supplementary services is initiated from the MS on the existing FACCH channel. After received CM SERVICE ACCEPT message, MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke for Assistance Data. The SS sends a number of RRLP ASSISTANCE DATA components and MS sends acknowledgement of RRLP ASSISTANCE DATA ACK for each component. SS sends DTAP LCS-MOLR Return Result for acknowledgement of completion of assistance data delivery procedure. MS performs the measurement and calculates the location estimate using the assistance data delivered. The MS terminates the dialogue by sending RELEASE COMPLETE message.

Maximum duration of the test:

5 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate LCS MOLR Procedure (assistance data request) on existing FACCH channel |
| 2 | MS -> SS | CM SERVICE REQUEST | "Mobile identity" IE contains the TMSI. Establishment cause indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to assistanceData. |
| 5n | SS->MS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA The number of instances of this message depends on the amount of assistance data requested in step 4 |
| 6n | MS -> SS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA ACK Each instance of RRLP ASSISTANCE DATA message in step 5 is acknowledged |
| 7 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT |
| 8 | MS->SS | RELEASE COMPLETE | Terminates the session |
| 9 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

REGISTER (Step 4):

70.8.5.3 MO_LR Basic Self Location Request in Idle Mode (Alternative Case)

70.8.5.3.1 Conformance requirements:

The following requirements apply for this test:

1. If the MS is in idle mode, the MS requests an SDCCH and sends a DTAP CM service request indicating a request for call independent supplementary services to the BSC.
2. The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.
3. On receiving an RRLP MEASURE POSITION REQUEST message, the MS tries to perform the requested location measurements, and possibly calculates its own position. When the MS has location measurements, location estimate, or an error indication (measurements/location estimation not possible), it sends the results in the Measure Position Response component to the SMLC.

5. The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.
6. After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References

3GPP TS 03.71 sub clause 7.6.6

3GPP TS 04.30 sub clause 5.1.1

3GPP TS 04.31 sub clause 2.2

70.8.5.3.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing an MO-LR Request of type "locationEstimate". When the MS receives a FACILITY message containing a MO-LR return result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

Specific PICS statements

70.8.5.3.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure:

The MS invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering. Then the MS invokes an MO-LR request of type "locationEstimate".

The SS orders an A-GPS positioning measurement by sending RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages followed by an RRLP Measure Position Request including further assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When the MS receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS | | Initiate MOLR Procedure (location estimation) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | The CM Service Type IE indicates "Supplementary service activation". |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method support. In the position method support (5 bit field), bit 2 is set to 1 (MS-based GPS). |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |

| | | | |
|-----|----------|----------------------------|--|
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request and MO-LR Type set to "locationEstimate". |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 16 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 17 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationInfo (Option 1) or locationError with gpsAssDataMissing and additionalAssistanceData (Option 2) |
| 17a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 17 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 17b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 17a, the MS acknowledges the received assistance data. |
| 17c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 17 that is available in the SS, this message may include further assistance data. |
| 17d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 17, this message contains locationInfo. |
| 18 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT message containing location estimate |
| 19 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 20 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.8.5.4 MO_LR Basic Self Location Request in Dedicated Mode (Alternative Case)

70.8.5.4.1 Conformance requirements:

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.
3. On receiving an RRLP MEASURE POSITION REQUEST message, the MS tries to perform the requested location measurements, and possibly calculates its own position. When the MS has location measurements, location estimate, or an error indication (measurements/location estimation not possible), it sends the results in the Measure Position Response component to the SMLC.
5. The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.
6. After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

3GPP TS 04.31 sub clause 2.2

70.8.5.4.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing an MO-LR Request of type "locationEstimate" on an already established speech call related SACCH. When the MS receives a FACILITY message containing a MO-LR return result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

PIXIT statements

-

70.8.5.4.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS has valid TMSI and CKSN.

The MS is brought into state U10 by using table 26.8.1.2/3.

Test Procedure:

The MS invokes call independent supplementary service on an existing SACCH channel. After receiving a CM SERVICE ACCEPT message, the MS invokes a self location request by sending a REGISTER message containing an MO-LR request of type "locationEstimate".

The SS orders an A-GPS positioning measurement by sending RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages followed by an RRLP Measure Position Request including further assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When the MS receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate MO-LR procedure (location estimation) on existing SACCH channel |
| 2 | MS -> SS | CM SERVICE REQUEST | The CM Service Type IE indicates "Supplementary service activation". |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request and MO-LR Type set to "locationEstimate". |
| 5 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 6 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 7 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 8 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 9 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 10 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationInfo (Option 1) or locationError with gpsAssDataMissing and additionalAssistanceData (Option 2) |
| 10a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 10 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 10b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 10a, the MS acknowledges the received assistance data. |
| 10c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 10 that is available in the SS, this message may include further assistance data. |
| 10d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 10, this message contains locationInfo. |
| 11 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT message containing location estimate |
| 12 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 13 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.8.6 MO-LR Transfer to 3rd Party for MS-Based A-GPS

70.8.6.1 Conformance requirements

The following requirements apply for this test:

1. If the MS is in idle mode, the MS requests an SDCCH and sends a DTAP CM service request indicating a request for call independent supplementary services to the BSC.
2. The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.
3. If the MS is requesting that its location be sent to another LCS client, the message shall include the identity of the LCS client and may include the address of the GMLC through which the LCS client should be accessed.
4. On receiving an RRLP MEASURE POSITION REQUEST message, the MS tries to perform the requested location measurements, and possibly calculates its own position. When the MS has location measurements, location estimate, or an error indication (measurements/location estimation not possible), it sends the results in the Measure Position Response component to the SMLC.
5. The VMSC returns a DTAP LCS MO-LR Return Result to the MS carrying any location estimate requested by the MS, ciphering keys or a confirmation that a location estimate was successfully transferred to the GMLC serving an LCS client.
6. The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.
7. After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

3GPP TS 04.31 sub clause 2.2

70.8.6.2 Test Purpose

To verify that the MS invokes a transfer of its own location to a 3rd party LCS Client by sending the network a REGISTER message containing the Facility IE LCS MO-LR with LCSCClientExternalID present. After receiving a FACILITY message as confirmation that the location estimate has been transferred to the requested LCS client, the MS terminates the dialogue by sending a RELEASE COMPLETE message.

70.8.6.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure

The MS invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering. Then the MS invokes an MO-LR request of type "locationEstimate" with "LCSClientExternalID" present.

The SS orders an A-GPS positioning measurement by sending RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages followed by an RRLP Measure Position Request including further assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result to confirm that the location estimate has been transferred to the LCS client. When the MS receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate MOLR Transfer to 3 rd Party Procedure |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates, "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 2 is set to 1 (MS-Based GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request with MOLR-Type set to locationEstimate with LCSCientExternalID present |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 16 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 17 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationInfo (Option 1) or locationError with gpsAssDataMissing and additionalAssistanceData (Option 2) |
| 17a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 17 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 17b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 17a, the MS acknowledges the received assistance data. |
| 17c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 17 that is available in the SS, this message may include further assistance data. |
| 17d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 17, this message contains locationInfo. |

| | | | |
|----|----------|------------------|--|
| 18 | SS | | SS may return the location estimate result to the LCS Client as identified by the LCSClientExternalID provided in the REGISTER message |
| 19 | SS -> MS | FACILITY | LCS MO-LR Return Result message as confirmation that the position estimate was transferred to the requested LCS client. |
| 20 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.9 Assisted GPS Mobile Terminated Tests

70.9.1 MT-LR Location Notification

70.9.1.1 MT-LR Location Notification for Mobiles Supporting MS-Based GPS

70.9.1.1.1 Conformance requirements

1. The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the MS with notificationType set to notifyLocationAllowed. The MS shall notify the MS user of the location request.
2. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

References

- 3GPP TS 03.71 sub clause 7.6.1.
- 3GPP TS 04.30 sub clause 4.1.1.
- 3GPP TS 04.80 / 3GPP TS 24.080 sub clauses 2.4, 2.5, and 3.4.

70.9.1.1.2 Test Purpose

To verify that when the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to NotifyLocationAllowed, the MS displays information about the LCS client correctly and sends a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

70.9.1.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The MS then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 2 is set to 1 (MS-Based GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 12 | MS | | MS displays information about LCS client |
| 13 | MS -> SS | RELEASE COMPLETE | |
| 14 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

PAGING RESPONSE

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | RR management |
| Ciphering Key Sequence number - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available |
| Mobile station Classmark 2 - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |

70.9.1.2 MT-LR Location Notification for Mobiles Supporting MS-Assisted GPS

70.9.1.2.1 Conformance requirements

1. The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the MS with notificationType set to notifyLocationAllowed. The MS shall notify the MS user of the location request.
2. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

- 3GPP TS 04.30 sub clause 4.1.1.
- 3GPP TS 04.80 / 3GPP TS 24.080 sub clauses 2.4, 2.5, and 3.4.

70.9.1.2.2 Test Purpose

To verify that when the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to NotifyLocationAllowed, the MS displays information about the LCS client correctly and sends a RELEASE

COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

70.9.1.2.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The MS then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 3 is set to 1 (MS-Assisted GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 12 | MS | | MS displays information about LCS client |
| 13 | MS -> SS | RELEASE COMPLETE | |
| 14 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

PAGING RESPONSE

| Information element | Value/remark |

70.9.2 MT-LR Privacy Options/Verification – Location Allowed If No Response

70.9.2.1 MT-LR Privacy Options/Verification– Location Allowed If No Response for mobiles supporting MS-Based GPS

70.9.2.1.1 Conformance requirements

1. On receipt of a REGISTER message containing the LCS Notification Invoke component with notificationType set to notifyAndVerify-LocationAllowedIfNoResponse. The MS: a) notifies the user of the request, b) indicates the default is location allowed if no response is received within a predetermined period, and c) providing the opportunity to accept or deny the request if allowed by subscription or if barred by subscription.

2.

Option 1: The user accepts the location request. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2: The user denies the location request.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3: The user takes no action and the verification process times-out. The SS shall terminate the dialogue.

70.9.2.1.2 Test Purpose

To verify that the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationAllowedIfNoResponse, the MS displays information about the LCS client correctly and indicates that the default response is location allowed if no response is sent. Gives the user the option to accept or reject the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with the verificationResponse set to permissionDenied or permissionGranted as appropriate.

70.9.2.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters.

Mobile Station (MS):

The MS is in MM-state “idle, updated” with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

- MS LCS Notification timeout timer

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message with a Facility IE containing a LCS Location Notification Invoke set to notifyAndVerify-LocationAllowedIfNoResponse. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed with the option to accept or deny the request, if allowed by subscription or if barred by subscription respectively. The MS also indicates that location will be allowed if a response is not received within a predetermined time.

Option 1:

The user then accepts the location request. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2:

The user then denies the location request. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3:

The user ignores the location request by taking no action, allowing the verification process timer to time-out. The SS responds with RELEASE COMPLETE.

Maximum duration of the test

5 minutes.

Expected Sequence

The test sequence is repeated for $k = 1 \dots 3$.

| Step | Direction | Message | Comments |
|--------------|-----------|-------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |

70.9.4 MT-LR / RRLP Error Handling for MS-Based A-GPS

70.9.4.1 RRLP Protocol Error

70.9.4.1.1 Conformance requirement:

The MS sends an RRLP PROTOCOL ERROR message to the network if there is a problem that prevents the MS to receive a complete and understandable RRLP MEASURE POSITION REQUEST component.

Test References

3GPP TS04.31 sub clause 2.2, 2.5

70.9.4.1.2 Test Purpose

To verify that the MS sends the correct positioning capability via controlled early classmark sending. The MS shall send a RRLP PROTOCOL ERROR message to SS with specific error code if RRLP MEASURE POSITION REQUEST is incomplete. On receipt of second RRLP MEASURE POSITION REQUEST from SS to start the measurement, MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.9.4.1.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RRLP MEASURE POSITION REQUEST message with missing information element.

The MS shall send RRLP PROTOCOL ERROR as it fails to decode RRLP MEASURE POSITION REQUEST. The SS repeats RRLP MEASURE POSITION REQUEST with correct message contents.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 2 is set to 1 (MS-Based GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 15 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 1 (with missing final octet) |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP PROTOCOL ERROR |
| 17 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2 |
| 18 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationInfo (Option 1) or locationError with gpsAssDataMissing and additionalAssistanceData (Option 2) |
| 18a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 18 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 18b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 18a, the MS acknowledges the received assistance data. |
| 18c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 18 that is available in the SS, this message may include further assistance data. |
| 18d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 18, this message contains locationInfo. |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

RRLP Measure Position Response (Step 18 (Option 1) or 18d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 or 3 (Option 2, Step 18d) |
| component | CHOICE | msrPositionRsp (A valid response will contain LocationInfo otherwise LocationError will be returned) |
| locationInfo | SEQUENCE | Any value is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable except gpsAssDataMissing. |
| extended-reference | SEQUENCE | Rel5 and later The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Measure Position Response (Step 18 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements |
| extended-reference | SEQUENCE | Rel5 and later The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 18a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 3 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 18 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 5.1.3 to 5.1.8. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | R98, R99, Rel 4: 1 or 0. If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly. Rel 5 and later: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | Rel 5 and later |

RRLP Measure Position Request (Step 18c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 3 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 as requested by the MS in step 18 (Option 2). |
| extended-reference | SEQUENCE | Rel 5 and later |

70.9.4.2 RRLP Location Error – Requested Method Not Supported

70.9.4.2.1 Conformance requirement:

The MS sends an RRLP MEASURE POSITION RESPONSE message to the network containing a Location Error component with an error indication if the measurement is not possible.

Test References

3GPP TS04.31 sub clause 2.2, A.3.2.6

70.9.4.2.2 Test Purpose

To verify that the MS sends the correct positioning capability via controlled early classmark sending. The MS shall send a RRLP MEASURE POSITION RESPONSE message with Location Error component if the MS does not support the requested method. On receipt of second RRLP MEASURE POSITION REQUEST from SS to start the measurement, the MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.9.4.2.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

The SS sends an RRLP MEASURE POSITION REQUEST message with a method type not supported by the mobile (type not supported to be E-OTD).

The MS sends RRLP MEASURE POSITION RESPONSE to SS containing a Location Error component (Requested Method not Supported) as the requested method is not supported.

The MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages followed by a new RRLP MEASURE POSITION REQUEST with correct message contents including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|

70.9.4.3 RRLP Location Error – GPS Assistance Data Missing

70.9.4.3.1 Conformance requirement

The MS sends an RRLP MEASURE POSITION RESPONSE message to the network containing a Location Error component with an error indication if the measurement is not possible.

Test References

3GPP TS04.31 sub clause 2.2, A.3.2.6

70.9.4.3.2 Test Purpose

To verify that the MS sends the correct positioning capability via controlled early classmark sending. The MS shall send a RRLP MEASURE POSITION RESPONSE message with Location Error component if some GPS assistance data are missing. On receipt of second RRLP MEASURE POSITION REQUEST (with all necessary GPS assistance data to obtain a location estimate included) from SS to start the measurement, the MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.9.4.3.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure

The A-GPS assistance data stored in the MS is reset.

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS receives an RRLP MEASURE POSITION REQUEST message with Reference Time GPS assistance data.

The MS requests additional assistance data by sending an RRLP MEASURE POSITION RESPONSE message to SS containing a Location Error component with IE LocErrorReason set to gpsLocCalAssDataMissing or gpsAssDataMissing.

The SS provides the requested assistance data that is available in the SS in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data.

The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Reset all stored A-GPS assistance data |
| 2 | SS->MS | PAGING REQUEST TYPE I | |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 6 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 2 is set to 1 (MS-Based GPS) |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | CIPHERING MODE COMMAND | |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | |
| 11 | SS | | SS starts ciphering. |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 1 (with Reference Time GPS assistance data) |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response 1 (location error with gpsLocCalAssDataMissing or gpsAssDataMissing) |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. The SS provides the requested data from step 13 that is available in the SS in zero, one or more RRLP Assistance Data delivery messages. |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 14, the MS acknowledges the received assistance data. |
| 16 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2. This message may include further assistance data. |
| 17 | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response 2. (LocationInfo) |
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

| locationError | SEQUENCE | Any error value is acceptable. |
| extended-reference | SEQUENCE | Rel5 and later The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

70.9.4.4 Multiple RRLP Requests with same Reference Number

70.9.4.4.1 Conformance requirement:

When after reception of a Measure Position Request component, but before responding with a Measure Position Response or Protocol Error Component, the MS receives a new RRLP message with the Measure Position Request component, the MS ignores the latter component if the old and new RRLP Measure Position Request components have the same Reference Number.

The SMLC may use the same Reference Number or different Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS04.31 sub clause 2.5.5

3GPP TS04.31 sub clause 3.2

70.9.4.4.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall ignore the second RRLP MEASURE POSITION REQUEST if the second RRLP MEASURE POSITION REQUEST has the same REFERENCE NUMBER as in the previous one. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the current measurement.

70.9.4.4.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay to of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the first one (this delay shall be cancelled in the event of option 2). The MS shall ignore the second RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the second one. The MS shall ignore the third RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

Maximum duration of the test:

5 minutes.

Expected Sequence

70.9.4.5 Multiple RRLP Requests with different Reference Number

70.9.4.5.1 Conformance requirement:

When after reception of a Measure Position Request component, but before responding with a Measure Position Response or Protocol Error Component, the MS receives a new RRLP message with the Measure Position Request component, the MS aborts activity for the former component, and starts to act according to the latter component, if the old and new RRLP Measure Position Request components have different Reference Numbers.

The SMLC may use the same Reference Number or different Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS04.31 sub clause 2.5.5

3GPP TS04.31 sub clause 3.2

70.9.4.5.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with a different REFERENCE NUMBER. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.9.4.5.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER from the first one (this delay shall be cancelled in the event of option 2). The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER from the second one. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST, including the possibility of repeating the request for more assistance data (Option 2b). The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

Maximum duration of the test:

5 minutes.

| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | |
| referenceTime | SEQUENCE | See TS 51.010-7 sub clause 5.1.3 |
| refLocation | SEQUENCE | See TS 51.010-7 sub clause 5.1.4 |
| extended-reference | SEQUENCE | Rel 5 and later |

RRLP Measure Position Response (Step 16 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements |
| extended-reference | SEQUENCE | Rel5 and later The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 16a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 5.1.3 to 5.1.8. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | R98, R99, Rel 4: 1 or 0. If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly. Rel 5 and later: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | Rel 5 and later |

RRLP Measure Position Request 2 (Step 16c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 as requested by the MS in step 16 (Option 2). |
| extended-reference | SEQUENCE | Rel 5 and later |

RRLP Measure Position Request 2 (Option 1) or Request 3 (Option 2) (Step 17):

| Information element | Type | Value/remark |
|---------------------|-----------------|----------------------------------|
| ASN.1 encoded | | |

| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 as requested by the MS in step 18 (Option 2b). |
| extended-reference | SEQUENCE | Rel 5 and later |

70.9.4.6 RR Management Commands

70.9.4.6.1 Conformance requirement

A target MS shall terminate any positioning procedure or the transfer of RRLP positioning assistance data without sending any response to the SMLC if any RR message is received from the BSC that starts some other RR management procedure, including a new positioning procedure. The new RR procedure shall then be executed by the MS.

Upon receiving the HO or other RR management command, the MS will stop the location procedure and start on handover or other RR management procedure, since this has higher priority than location. The MS will then send the HO complete or other RR management response message to BSC.

The SMLC may use the same Reference Number or different Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS 03.71 sub clause 7.11.5,

3GPP TS 03.71 sub clause 10.6

3GPP TS04.31 sub clause 3.2

70.9.4.6.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if an RR MANAGEMENT command is received during the measurement procedure. The MS shall send an RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST and send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.9.4.6.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds the SS sends an RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends an RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST (possibly by requesting additional assistance data first).

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends a RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends a RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a

new RRLP MEASURE POSITION REQUEST including assistance data and the MS either sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST or requests more assistance data and then sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|---|---------------------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 2 is set to 1 (MS-Based GPS) |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 1 |
| 16 | MS (Option 1) or MS->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 17. If the MS sends RRLP Measure Position Response: locationError with gpsAssDataMissing (Option 2) within 8 seconds, then the SS continues to step 17a. |
| 16a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS (Option 2) | | MS is performing the measurement (Option 2) |
| 17 | SS -> MS | RR MANAGEMENT COMMAND | |
| 18 | MS -> SS | RR MANAGEMENT COMPLETE | MS terminates the measurement procedure and act on the RR management command |
| 19 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 2 (Option 1) or RRLP Measure Position Request 3 (Option 2) Note: The satellite signals should be made |

| | | | |
|-----|----------|----------------------------|--|
| | | | available to MS after sending this message |
| 20 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationInfo (Option 1 or 2a) or locationError with gpsAssDataMissing (Option 2b) |
| 20a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 20 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 20b | MS -> SS | RR APPLICATION INFORMATION | RRLP assistanceDataAck. If the SS sent additional assistance data in step 20a, the MS acknowledges the received assistance data. |
| 20c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 20 that is available in the SS, this message may include further assistance data. |
| 20d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 20 this message contains locationInfo. |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

70.10 Conventional GPS Network Induced Tests

70.10.1 Void

70.10.2 Network Induced Location Request Emergency Call on TCH Radio Channel

70.10.2.1 Network Induced Location Request Emergency Call on TCH Radio Channel for Mobiles Supporting Conventional GPS

70.10.2.1.1 Conformance requirements

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM900 and 1800 MS), or 911 (for PCS 1900 MS in the USA), or 08 (for PCS 1900 MS in Mexico) has been entered by

the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").

2. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the "Controlled Early Classmark Sending" option. A mobile station which implements the "Controlled Early Classmark Sending" option shall indicate it in the classmark (ES IND bit).
3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS.
4. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
5. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
6. On receiving the MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements, and calculates its own position. It sends the results in the RRLP MEASURE POSITION RESPONSE message.

70.10.2.1.2 References

3GPP TS 04.08/44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 04.08/24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9, 10.5.1.6, 10.5.1.7.

3GPP TS 02.30 sub clause 4.

3GPP TS 04.31 sub clause 2.2.

70.10.2.1.3 Test Purpose

To verify when a network instigates the LCS positioning procedure by sending RRLP (Measure Position Request) message, after a traffic channel has been established during an emergency call, the mobile responds with RRLP (Measure Position Response) containing MS location estimate.

70.10.2.1.4 Method of Test

70.10.2.1.5 Initial Conditions

System Simulator (SS):

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

SIM:

Normal SIM

Specific PICS statements

- TSPC_MS_RRLP_RELEASE

PIXIT statements

-

70.10.2.1.6 Void

70.10.2.1.7 Test Procedure

An Emergency Call is initiated with the MS. SIM card is included in the MS.

The emergency call is established with a late assignment.

After receiving the CONNECT ACKNOWLEDGE message from the MS, the SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request on FACCH.

The MS then performs positioning measurements, and responds with a RR APPLICATION INFORMATION message containing a RRLP Measure Position Response.

The call is cleared by the SS.

70.10.2.1.8 Maximum duration of the test

5 minutes.

70.10.2.1.9 Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The appropriate "emergency call number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. In the position method support (5 bit field), Bit 1 is set to 1 (Conventional GPS) and Bit 2 is set to 0 (no support for MS-based GPS) |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS -> MS | CALL PROCEEDING | |
| 9 | SS -> MS | ALERTING | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | CONNECT | |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 14 | SS-> MS | RR APPLICATION INFORMATION | (RRLP Measure Position Request) |
| 15 | MS -> SS | RR APPLICATION INFORMATION | (RRLP Measure Position Response) |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| locationInfo | SEQUENCE | Any value is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable. |
| extended-reference | SEQUENCE | Rel5 and later The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

70.11 A-GPS Minimum Performance tests

This sub clause specifies the measurement procedures for the conformance test of the minimum performance requirements for GSM user equipment (MS) where the only Assisted Global Navigation Satellite System (A-GNSS) supported is Assisted Global Positioning System (A-GPS) L1 C/A. The procedures for MSs that support other or additional A-GNSSs are specified in sub clause 70.16.

70.11.1 Abbreviations

| | |
|--------|---|
| A-GPS | Assisted - Global Positioning System |
| A-GNSS | Assisted Global Navigation Satellite System |
| C/A | Coarse/Acquisition |
| ECEF | Earth Centred, Earth Fixed |
| GPS | Global Positioning System |
| GSS | GPS System Simulator |

| | |
|------|----------------------------------|
| HDOP | Horizontal Dilution Of Precision |
| LOS | Line Of Sight |
| WLS | Weighted Least Square |

70.11.2 GPS test conditions

70.11.2.1 GPS signals

The GPS signal is defined at the A-GPS antenna connector of the MS. For MS with integral antenna only, a reference antenna with a gain of 0 dBi is assumed.

70.11.2.2 GPS frequency

The GPS signals shall be transmitted with a frequency accuracy of ± 0.025 PPM.

70.11.2.3 GPS static propagation conditions

The propagation for the static performance measurement is an Additive White Gaussian Noise (AWGN) environment. No fading and multi-paths exist for this propagation model.

70.11.2.4 GPS multi-path conditions

Doppler frequency difference between direct and reflected signal paths is applied to the carrier and code frequencies. The Carrier and Code Doppler frequencies of LOS and multi-path for GPS L1 signal are defined in table 70.11.2.1.

Table 70.11.2.1: Multi-path Conditions for GPS Signals

| Initial relative Delay [GPS chip] | Carrier Doppler frequency of tap [Hz] | Code Doppler frequency of tap [Hz] | Relative mean Power [dB] |
|--|--|---------------------------------------|-----------------------------|
| 0 | Fd | Fd / N | 0 |
| 0.5 | Fd - 0.1 | (Fd-0.1) / N | -6 |
| NOTE: Discrete Doppler frequency is used for each tap. | | | |

$N = f_{\text{GPSL1}}/f_{\text{chip}}$, where f_{GPSL1} is the nominal carrier frequency of the GPS L1 signal (1575.42 MHz) and f_{chip} is the GPS L1 C/A code chip rate (1.023 Mc/s).

The initial carrier phase difference between taps shall be randomly selected between 0 and 2π radians. The initial value shall have uniform random distribution.

70.11.3 GSM test conditions

70.11.3.1 GSM frequency band and frequency range

The tests in this sub clause are performed on one of the mid range ARFCNs of the GSM operating frequency band of the MS. The ARFCNs to be used for mid range are defined in Table 3.3

If the MS supports multiple frequency bands then the Sensitivity tests in sub clause 70.11.5 shall be repeated in each supported frequency band.

70.11.3.2 GSM frequency

For all tests the GSM frequency shall be offset with respect to the nominal frequency by an amount equal to the sum of +0.025 PPM and the offset in PPM of the actual transmitted GPS carrier frequency with respect to the nominal GPS frequency.

70.11.4 A-GPS test conditions

70.11.4.1 General

This sub clause defines the minimum performance requirements for both MS based and MS assisted A-GPS terminals. If a terminal supports both modes then it shall be tested in both modes.

70.11.4.2 Measurement parameters

70.11.4.2.1 MS based A-GPS measurement parameters

In case of MS-based A-GPS, the measurement parameters are contained in the RRLP LOCATION INFORMATION IE. The measurement parameter is the horizontal position estimate reported by the MS and expressed in latitude/longitude.

70.11.4.2.2 MS assisted A-GPS measurement parameters

In case of MS-assisted A-GPS, the measurement parameters are contained in the RRLP GPS MEASUREMENT INFORMATION IE. The measurement parameters are the MS GPS Code Phase measurements. The MS GPS Code Phase measurements are converted into a horizontal position estimate using the procedure detailed in sub clause 70.11.4.3.

70.11.4.2.3 2D position error

The 2D position error is defined by the horizontal difference in meters between the ellipsoid point reported or calculated from the MS Measurement Report and the actual simulated position of the MS in the test case considered.

70.11.4.2.4 Response time

Max Response Time is defined as the time starting from the moment that the MS has received the final RRLP MEASURE POSITION REQUEST sent before the MS sends the MEASURE POSITION RESPONSE containing the Location Information or the GPS Measurement Information, and ending when the MS starts sending the MEASURE POSITION RESPONSE containing the Location Information or the GPS Measurement Information on the Air interface. The response times specified for all test cases are Time-to-First-Fix (TTFF), i.e. the MS shall not re-use any information on GPS time, location or other aiding data that was previously acquired or calculated and stored internally in the MS. A dedicated test message 'RESET MS POSITIONING STORED INFORMATION' has been defined in TS 44.014 for the purpose of deleting this information.

70.11.4.3 Converting MS-assisted measurement reports into position estimates

To convert the MS measurement reports in case of MS-assisted mode of A-GPS into position errors, a transformation between the "measurement domain" (code-phases, etc.) into the "state" domain (position estimate) is necessary. Such a transformation procedure is outlined in the following sub clauses. The details can be found in [ICD-GPS 200], [P. Axelrad, R.G. Brown] and [S.K. Gupta]

70.11.4.3.1 MS measurement reports

In case of MS-assisted A-GPS, the measurement parameters are contained in the RRLP GPS MEASUREMENT INFORMATION ELEMENT (sub clause A.3.2.5 in 3GPP TS 44.031). The measurement parameters required for calculating the MS position are:

- 1) Reference Time: The MS has two choices for the Reference Time:
 - a) "Reference Frame";
 - b) "GPS TOW".
- 2) Measurement Parameters: 1 to <maxSat>:
 - a) "Satellite ID (SV PRN)";
 - b) "Whole GPS chips";
 - c) "Fractional GPS Chips";
 - d) "Pseudorange RMS Error".

Additional information required at the system simulator:

- 1) "Reference Location" (sub clause A.4.2.4 in 3GPP TS 44.031):
Used for initial approximate receiver coordinates.
- 2) "Navigation Model" (sub clause A.4.2.4 in 3GPP TS 44.031):
Contains the GPS ephemeris and clock correction parameters as specified in [ICD-GPS 200]; used for calculating the satellite positions and clock corrections.

- 3) "Ionospheric Model" (sub clause A.4.2.4 in 3GPP TS 44.031):
Contains the ionospheric parameters which allow the single frequency user to utilize the ionospheric model as specified in [ICD-GPS 200] for computation of the ionospheric delay.

70.11.4.3.2 WLS position solution

The WLS position solution problem is concerned with the task of solving for four unknowns; x_u , y_u , z_u the receiver coordinates in a suitable frame of reference (usually ECEF) and b_u the receiver clock bias. It typically requires the following steps:

Step 1: Formation of pseudo-ranges

The observation of code phase reported by the MS for each satellite SV_i is related to the pseudo-range/c modulo 1 ms (the length of the C/A code period). For the formation of pseudo-ranges, the integer number of milliseconds to be added to each code-phase measurement has to be determined first. Since 1 ms corresponds to a travelled distance of 300 km, the number of integer ms can be found with the help of reference location and satellite ephemeris. The distance between the reference location and each satellite SV_i is calculated and the integer number of milliseconds to be added to the MS code phase measurements is obtained.

Step 2: Formation of weighting matrix

The MS reported "Pseudorange RMS Error" values are used to calculate the weighting matrix for the WLS algorithm [P. Axelrad, R.G. Brown]. According to 3GPP TS 44.031, the encoding for this field is a 6 bit value that consists of a 3 bit mantissa, X_i and a 3 bit exponent, Y_i for each SV_i :

$$w_i = RMSError = 0.5 \times \left(1 + \frac{X_i}{8} \right) \times 2^{Y_i}$$

The weighting Matrix \mathbf{W} is defined as a diagonal matrix containing the estimated variances calculated from the "Pseudorange RMS Error" values:

$$\mathbf{W} = \text{diag} \left\{ 1/w_1^2, 1/w_2^2, \dots, 1/w_n^2 \right\}$$

Step 3: WLS position solution

The WLS position solution is described in reference [P. Axelrad, R.G. Brown] and usually requires the following steps:

- 1) Computation of satellite locations at time of transmission using the ephemeris parameters and user algorithms defined in [ICD-GPS 200], sub clause 20.3.3.4.3.
- 2) Computation of clock correction parameters using the parameters and algorithms as defined in [ICD-GPS 200], sub clause 20.3.3.3.3.1.
- 3) Computation of atmospheric delay corrections using the parameters and algorithms defined in [ICD-GPS 200], sub clause 20.3.3.5.2.5 for the ionospheric delay, and using the Gupta model in reference [S.K. Gupta], p. 121 equation (2) for the tropospheric delay.
- 4) The WLS position solution starts with an initial estimate of the user state (position and clock offset). The Reference Location is used as initial position estimate. The following steps are required:
 - a) Calculate geometric range (corrected for Earth rotation) between initial location estimate and each satellite included in the MS measurement report.
 - b) Predict pseudo-ranges for each measurement including clock and atmospheric biases as calculated in 1) to 3) above and defined in [ICD-GPS 200] and [P. Axelrad, R.G. Brown].
 - c) Calculate difference between predicted and measured pseudo-ranges Δp

d) Calculate the "Geometry Matrix" \mathbf{G} as defined in [P. Axelrad, R.G. Brown]:

$$\mathbf{G} \equiv \begin{bmatrix} -\hat{\mathbf{1}}_1^T & 1 \\ -\hat{\mathbf{1}}_2^T & 1 \\ \vdots & \vdots \\ -\hat{\mathbf{1}}_n^T & 1 \end{bmatrix} \text{ with } \hat{\mathbf{1}}_i \equiv \frac{\mathbf{r}_{si} - \hat{\mathbf{r}}_u}{\|\mathbf{r}_{si} - \hat{\mathbf{r}}_u\|} \text{ where } \mathbf{r}_{si} \text{ is the Satellite position vector for } SV_i \text{ (calculated in 1)}$$

above), and $\hat{\mathbf{r}}_u$ is the estimate of the user location.

e) Calculate the WLS solution according to [P. Axelrad, R.G. Brown]:

$$\Delta \hat{\mathbf{x}} = (\mathbf{G}^T \mathbf{W} \mathbf{G})^{-1} \mathbf{G}^T \mathbf{W} \Delta \rho$$

f) Adding the $\Delta \hat{\mathbf{x}}$ to the initial state estimate gives an improved estimate of the state vector:

$$\hat{\mathbf{x}} \rightarrow \hat{\mathbf{x}} + \Delta \hat{\mathbf{x}} .$$

5) This new state vector $\hat{\mathbf{x}}$ can be used as new initial estimate and the procedure is repeated until the change in $\hat{\mathbf{x}}$ is sufficiently small.

Step 4: Transformation from Cartesian coordinate system to Geodetic coordinate system

The state vector $\hat{\mathbf{x}}$ calculated in Step 3 contains the MS position in ECEF Cartesian coordinates together with the MS receiver clock bias. Only the user position is of further interest. It is usually desirable to convert from ECEF coordinates x_u, y_u, z_u to geodetic latitude ϕ , longitude λ and altitude h on the WGS84 reference ellipsoid.

Step 5: Calculation of "2-D Position Errors"

The latitude ϕ / longitude λ obtained after Step 4 is used to calculate the 2-D position error.

70.11.5 Sensitivity

70.11.5.1 Sensitivity Coarse Time Assistance

70.11.5.1.1 Definition

Sensitivity with coarse time assistance is the minimum level of GPS satellite signals required for the MS to make an A-GPS position estimate to a specific accuracy and within a specific response time when the network only provides coarse time assistance.

70.11.5.1.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.11.5.1.2 for the parameters specified in table 70.11.5.1.1.

Table 70.11.5.1.1: Test parameters for Sensitivity Coarse Time Assistance

| Parameters | Unit | Value |
|--|---------|------------|
| Number of generated satellites | - | 8 |
| HDOP Range | - | 1.1 to 1.6 |
| Propagation conditions | - | AWGN |
| GPS Coarse Time assistance error range | seconds | ± 2 |
| GPS Signal for one satellite | dBm | -142 |
| GPS Signal for remaining satellites | dBm | -147 |

Table 70.11.5.1.2: Conformance requirement for Sensitivity Coarse Time Assistance

| Success rate | 2-D position error | Max response time |
|--------------|--------------------|-------------------|
| 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, sub clause M.2.1.1.

70.11.5.1.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GPS satellite signal conditions that represent weak signal conditions and with only Coarse Time Assistance provided by the SS.

70.11.5.1.4 Method of test

Initial conditions

Test environment: normal; see sub clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GPS test parameters as specified in table 70.11.5.1.3 for GPS scenario #1. Select the first satellite PRN defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7 for the one satellite with the higher level.
3. Switch on the MS.
4. Set up a voice call according to the generic call set up procedure in sub clause 10.1, or for a device not supporting a voice call set up a signalling connection according to the generic call set up procedure in sub clause 10.1a, on a channel in the Mid ARFCN range.

Specific PICS statements

-

PIXIT statements

-

Procedure

1. Start GPS scenario #1 as specified in TS 51.010-7 sub clause 5.2.1.2 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in TS 51.010-7 sub clause 5.2.1.2.4.
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in TS 51.010-7 sub clauses 5.2.2 and 5.2.6 for MS based testing; or sub clauses 5.2.4 and 5.2.6 for MS assisted testing with the value of GPS TOW offset by a random value as specified in TS 51.010-7 sub clause 5.2.6.2; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.11.5.1.4 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.11.5.1.4 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.5.1.4 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GPS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in sub clause 70.11.4.3 and then compare the result against the simulated position of the MS, used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.5.1.4 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GPS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Select the first satellite PRN defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7 for the one satellite with the higher level. Use new random values for the MS location and altitude in step 1 and for the GPS TOW offset in step 2.

6. Repeat steps 1 to 5 until the statistical requirements of sub clause 70.11.5.1.5 are met. Each time scenario #1 or #2 is used, the start time of the GPS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again. Each time scenario #1 or #2 is used select the next satellite PRN from the one used previously, defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7, for the one satellite with the higher level.

7. Terminate the call.

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in sub clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in sub clause A5.5.4.

70.11.5.2 Sensitivity Fine Time Assistance

70.11.5.2.1 Definition

Sensitivity with fine time assistance is the minimum level of GPS satellite signals required for the MS to make an A-GPS position estimate to a specific accuracy and within a specific response time when the network provides fine time assistance in addition to coarse time assistance.

70.11.5.2.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.11.5.2.2 for the parameters specified in table 70.11.5.2.1.

Table 70.11.5.2.1: Test parameters for Sensitivity Fine Time Assistance

| Parameters | Unit | Value |

70.11.6 Nominal Accuracy

70.11.6.1 Definition

Nominal accuracy is the accuracy of the MS's A-GPS position estimate under ideal GPS signal conditions.

70.11.6.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.11.6.2 for the parameters specified in table 70.11.6.1.

Table 70.11.6.1: Test parameters for Nominal Accuracy

| Parameters | Unit | Value |
|--|---------|------------|

2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in TS 51.010-

7 sub clauses 5.2.2 and 5.2.6 for MS based testing; or sub clauses 5.2.4 and 5.2.6 for MS assisted testing with the value of GPS TOW offset by a random value as specified in TS 51.010-7 sub clause 5.2.6.2; as required to obtain a fix.

3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.11.6.4 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.11.6.4 or reports a MS positioning error in the Measure Position Response message then record one Good Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.6.4 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GPS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in sub clause 70.11.4.3 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.6.4 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GPS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Use new random values for the MS location and altitude in step 1 and for the GPS TOW offset in step 2.
6. Repeat steps 1 to 5 until the statistical requirements of sub clause 70.11.6.5 are met. Each time scenario #1 or #2 is used, the start time of the GPS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again.
7. Terminate the call.

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

MEASURE POSITION REQUEST (3GPP TS 44.031 sub clause A.2) to the MS

| Information Element | Value/remark |
|--------------------------|--------------|
| Positioning Instructions | |
| Accuracy | 16m |
| Required Response Time | 20s |

70.11.6.5 Test Requirements

For the parameters specified in table 70.11.6.3 the MS shall meet the requirements and the success rate specified in table 70.11.6.4 with a confidence level of 95% according to annex A7.2.

Table 70.11.6.3: Test parameters for Nominal Accuracy

| Parameters | Unit | Value |
|--|---------|------------|
| Number of generated satellites | - | 8 |
| HDOP Range | - | 1.1 to 1.6 |
| Propagation conditions | - | AWGN |
| GPS Coarse Time assistance error range | seconds | ±1.8 |
| GPS Signal for all satellites | dBm | -130 |

Table 70.11.6.4: Test requirements for Nominal Accuracy

| Success rate | 2-D position error | Max response time |
|--------------|--------------------|-------------------|
| 95 % | 31.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in sub clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in sub clause A5.5.4.

70.11.7 Dynamic Range

70.11.7.1 Definition

Dynamic Range is the maximum difference in level of the GPS signals from a number of satellites that allows the MS to make an A-GPS position estimate with a specific accuracy and a specific response time.

70.11.7.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.11.7.2 for the parameters specified in table 70.11.7.1.

Table 70.11.7.1: Test parameters for Dynamic Range

| Parameters | Unit | Value |
|--|---------|------------|
| Number of generated satellites | - | 6 |
| HDOP Range | - | 1.4 to 2.1 |
| GPS Coarse Time assistance error range | seconds | ±2 |
| Propagation conditions | - | AWGN |
| GPS Signal for 1 st satellite | dBm | -129 |
| GPS Signal for 2 nd satellite | dBm | -135 |
| GPS Signal for 3 rd satellite | dBm | -141 |
| GPS Signal for 4 th satellite | dBm | -147 |
| GPS Signal for 5 th satellite | dBm | -147 |
| GPS Signal for 6 th satellite | dBm | -147 |

Table 70.11.7.2: Conformance requirement for Dynamic Range

| Success rate | 2-D position error | Max response time |
|--------------|--------------------|-------------------|
| 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, sub clause M.2.3.

70.11.7.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GPS satellite signal conditions that have a wide dynamic range. Strong satellites are likely to degrade the acquisition of weaker satellites due to their cross-correlation products.

70.11.7.4 Method of test

Initial conditions

Test environment: normal; see sub clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GPS test parameters as specified in table 70.11.7.3 for GPS scenario #1. Select the first three satellite PRNs defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7 for the three satellites with the higher levels.
3. Switch on the MS.
4. Set up a voice call according to the generic call set up procedure in sub clause 10.1, or for a device not supporting a voice call set up a signalling connection according to the generic call set up procedure in sub clause 10.1a, on a channel in the Mid ARFCN range.

PIXIT statements

-

Procedure

1. Start GPS scenario #1 as specified in TS 51.010-7 sub clause 5.2.1.2 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in TS 51.010-7 sub clause 5.2.1.2.4.
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in TS 51.010-7 sub clauses 5.2.2 and 5.2.6 for MS based testing; or sub clauses 5.2.4 and 5.2.6 for MS assisted testing with the value of GPS TOW offset by a random value as specified in TS 51.010-7 sub clause 5.2.6.2; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.11.7.4 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.11.7.4 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.7.4 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GPS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in sub clause 70.11.4.3 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.7.4 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GPS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Select the first three satellite PRNs defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7 for the three satellites with the higher levels. Use new random values for the MS location and altitude in step 1 and for the GPS TOW offset in step 2.
6. Repeat steps 1 to 5 until the statistical requirements of sub clause 70.11.7.5 are met. Each time scenario #1 or #2 is used, the start time of the GPS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again. Each time scenario #1 or #2 is used, increment the set of three satellite PRNs by one from the ones used previously, defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7, for the three satellites with the higher levels (i.e. if the set of satellites is a, b, c, d, e, f and the first set used was a, b, c, the second set shall be b, c, d and so on).
7. Terminate the call.

| GPS Signal for 1 st satellite | dBm | -128.2 |
| GPS Signal for 2 nd satellite | dBm | -134 |
| GPS Signal for 3 rd satellite | dBm | -140 |
| GPS Signal for 4 th satellite | dBm | -146 |
| GPS Signal for 5 th satellite | dBm | -146 |
| GPS Signal for 6 th satellite | dBm | -146 |

Table 70.11.7.4: Test requirements for Dynamic Range

| Success rate | 2-D position error | Max response time |
|--------------|--------------------|-------------------|
| 95 % | 101.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in sub clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in sub clause A5.5.4.

70.11.8 Multi-Path scenario

70.11.8.1 Definition

Multi-path performance measures the accuracy and response time of the MS's A-GPS position estimate in a specific GPS signal multi-path environment.

70.11.8.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.11.8.2 for the parameters specified in table 70.11.8.1.

Table 70.11.8.1: Test parameters for Multi-Path scenario

| Parameters | Unit | Value |
|---|---------|---|
| Number of generated satellites (see note) | - | 5 |
| GPS Coarse Time assistance error range | seconds | ±2 |
| HDOP Range | - | 1.8 to 2.5 |
| GPS signal for Satellite 1, 2 (see note) | dBm | -130 |
| GPS signal for Satellite 3, 4, 5 (see note) | dBm | LOS signal of -130 dBm, multi-path signal of -136 dBm |

NOTE: Satellites 1, 2 no multi-path. Satellites 3, 4, 5 multi-path defined in sub clause 70.11.2.4.

Table 70.11.8.2: Conformance requirement for Multi-Path scenario

| Success rate | 2-D position error | Max response time |
|--------------|--------------------|-------------------|
| 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, sub clause M.2.4.

70.11.8.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GPS satellite signal conditions that represent simple multi-path conditions.

70.11.8.4 Method of test

Initial conditions

Test environment: normal; see sub clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GPS test parameters as specified in table 70.11.8.3 for GPS scenario #1. Select the first two satellite PRNs defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7 for the two satellites with the higher levels.
3. Switch on the MS.
4. Set up a voice call according to the generic call set up procedure in sub clause 10.1, or for a device not supporting a voice call set up a signalling connection according to the generic call set up procedure in sub clause 10.1a, on a channel in the Mid ARFCN range.

Specific PICS statements:

-

PIXIT statements:

-

Procedure

1. Start GPS scenario #1 as specified in TS 51.010-7 sub clause 5.2.1.2 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in TS 51.010-7 sub clause 5.2.1.2.4. The initial carrier phase difference between taps of the multi-path model shall be randomly selected between 0 and 2π radians by selecting the next random number from a standard uniform random number generator, in the range 0 to 2π , representing radians with a resolution of 0.1, representing 0.1 radians.
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in TS 51.010-7 sub clauses 5.2.2 and 5.2.6 for MS based testing; or sub clauses 5.2.4 and 5.2.6 for MS assisted testing with the value of GPS TOW offset by a random value as specified in TS 51.010-7 sub clause 5.2.6.2; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.11.8.4 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.11.8.4 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.8.4 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GPS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in sub clause 70.11.4.3 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in sub clause 70.11.4.2.3. Compare the 2D position error against the value in table 70.11.8.4 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GPS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Select the first two satellite PRNs defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7 for the two satellites with the higher levels. Use new random values for the MS location and altitude, and the initial carrier phase difference between taps of the multi-path model in step 1 and for the GPS TOW offset in step 2.

6. Repeat steps 1 to 5 until the statistical requirements of sub clause 70.11.8.5 are met. Each time scenario #1 or #2 is used, the start time of the GPS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again. Each time scenario #1 or #2 is used, increment the set of two satellite PRNs by one from the ones used previously, defined in the table in sub clause 5.2.1.2.5 in TS 51.010-7, for the two satellites with the higher level (i.e. if the set of satellites is a, b, c, d, e and the first set used was a, b the second set shall be b, c and so on).

7. Terminate the call

The Test Parameter Relaxation for this test is defined in sub clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in sub clause A5.5.4.

70.12 Assisted GNSS General Procedures

70.12.1 Positioning Capability Transfer procedure

70.12.1.1 Conformance requirement:

When the MS receives a complete POSITIONING CAPABILITY REQUEST message, it shall send the POSITIONING CAPABILITY RESPONSE message. The message shall include the positioning capabilities of the MS and the types of supported assistance data. The message may include the types of assistance needed by the MS to obtain a location estimate or positioning measurements.

Test References

3GPP TS 43.059 sub clause 9.4.3a

3GPP TS 44.031 sub clauses 2.3a, 4.6, 4.7, A.7 and A.8

70.12.1.2 Test Purpose

To verify that the MS sends the correct positioning capabilities and the types of supported assistance data in the POSITIONING CAPABILITY RESPONSE message. Note: no positioning procedure is performed.

70.12.1.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending the CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION message containing an RRLP POSITIONING CAPABILITY REQUEST message.

The MS sends a POSITIONING CAPABILITY RESPONSE message. The message includes the positioning capabilities of the MS and the types of supported assistance data.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability, Positioning Method Support and Additional Positioning Capabilities. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 13 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

70.13 Assisted GNSS Network Induced Location Request (NI-LR)

70.13.1 NI-LR / Emergency Call on TCH Radio Channel for Mobiles Supporting MS-Based GNSS

70.13.1.1 Conformance requirements

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM900 and 1800 MS), or 911 (for PCS 1900 MS in the USA), or 08 (for PCS 1900 MS in Mexico) has been entered by the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
2. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the

“Controlled Early Classmark Sending” option. A mobile station which implements the “Controlled Early Classmark Sending” option shall indicate it in the classmark (ES IND bit).

3. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The “Mobile Station Classmark 3” information element shall correctly specify the positioning methods supported by the MS and shall indicate support for additional positioning capabilities which can be retrieved using RRLP.
7. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
8. After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
9. On receiving the POSITIONING CAPABILITY REQUEST message the MS responds with a POSITIONING CAPABILITY RESPONSE message indicating the positioning methods supported by the MS.
10. On receiving an ASSISTANCE DATA message the MS responds with an ASSISTANCE DATA ACKNOWLEDGEMENT message. The message contains the reference number of the ASSISTANCE DATA message received.
11. On receiving the MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements, and calculates its own position. It sends the results in the RRLP MEASURE POSITION RESPONSE message.

70.13.1.2 Test Purpose

To verify when a network instigates the LCS positioning procedure using GNSS by sending RRLP (Measure Position Request) message, after a traffic channel has been established during an emergency call, the mobile responds with RRLP (Measure Position Response) containing MS location estimate.

70.13.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state “idle, updated” with valued TMSI and CKSN.

SIM:

Normal SIM

Specific PICS statements

-

PIXIT statements

-

Test Procedure

This test case includes sub test cases dependent on the GNSS supported by the MS. Each sub test case is identified by a Sub Test Case Number as defined below:

| Sub Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

An Emergency Call is initiated with the MS. SIM card is included in the MS.

The emergency call is established with a late assignment.

After receiving the CONNECT ACKNOWLEDGE message from the MS, the SS sends RR APPLICATION INFORMATION messages containing a RRLP Positioning Capability Request message.

The MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS sends one or more RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages dependent on the GNSS positioning methods supported by the MS. The reception of each RRLP Assistance Data message is acknowledged by the MS by sending a RR APPLICATION INFORMATION message containing an RRLP Assistance Data Acknowledgement component.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request on FACCH including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The call is cleared by the SS.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The appropriate "emergency call number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The Additional Positioning Capabilities (1 bit field) is set to 1 (the mobile station supports additional positioning capabilities which can be retrieved using RRLP). |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS -> MS | CALL PROCEEDING | |
| 9 | SS -> MS | ALERTING | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | CONNECT | |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 16 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data The SS provides assistance data in one or more RRLP assistance data delivery messages as defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| 17 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack Each RRLP Assistance Data message is acknowledged by the MS. |
| 18 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request May contain further assistance data as defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. |
| 19 | MS -> SS | RR APPLICATION INFORMATION | Option 1: RRLP Measure Position Response: ganssLocationInfo Option 2: locationError with gpsAssDataMissing (Sub Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub Tests 3, 4 and 10) and/or ganssAssistanceData |

| | | | |
|-----|----------|----------------------------|--|
| 19a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data. If the MS requested additional assistance data in step 19 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 19b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 19a, the MS acknowledges the received assistance data. |
| 19c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Request. If the MS requested additional assistance data in step 19 that is available in the SS, this message may include further assistance data. |
| 19d | MS-> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Response. If the MS requested additional assistance data in step 19, this message contains ganssLocationInfo. |
| 20 | SS -> MS | DISCONNECT | |
| 21 | MS -> SS | RELEASE | |
| 22 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

RR APPLICATION INFORMATION

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | RR Management Protocol (0110) |
| Skip Indicator | |
| Message Type | Application Information Message type |
| APDU ID | APDU ID -> RRLP => 0000 |
| APDU Flags | Bit1=0 -> Last or only segment Bit2=0 -> First or only segment Bit3=0 -> Command or Final Response Bit4=spare |
| APDU Data | 2-N Byte → ASN.1 Coded Steps 18 and 19c: RRLP Measure Position Request Steps 19 and 19d: RRLP Measure Position Response Steps 16 and 19a: RRLP Assistance Data Steps 17 and 19b: RRLP Assistance Data Ack. Step 14: RRLP Positioning Capability Request Step 15: RRLP Positioning Capability Response |

RRLP Positioning Capability Request (Step 14):

| Information element | Type | Value/remark |
|---------------------|----------|--------------|
| ASN.1 encoded | | |
| extended-reference | SEQUENCE | |

RRLP Positioning Capability Response (Step 15):

| Information element | Type | Value/remark |
|-----------------------------|------------|--|
| ASN.1 encoded | | |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the Positioning Capability Request (Step 14). |
| posCapabilities | SEQUENCE | |
| nonGANSSpositionMethods | BIT STRING | May only be included for Sub Tests 3, 4 and 10. |
| gANSSPositionMethods | SEQUENCE | Included for each MS supported GANSS |
| ganssID | INTEGER | Sub Test 1: value 3 Sub Test 2: absent Sub Test 3: value 1 Sub Test 4: value 3 Sub Test 9: value 4 Sub Test 10: value 4 |
| gANSSPositioningMethodTypes | BIT STRING | Bit 1 (msBased) set to value 1 |
| gANSSSignals | BIT STRING | Dependent on MS capabilities |

RRLP Assistance Data (Step 16):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | Dependent on MS capabilities and defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message at step 16 the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. |

RRLP Assistance Data Ack (Step 17, 19b):

| Information element | Type | Value/remark |
|---------------------|----------------|-----------------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 19b) |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 18):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | Dependent on MS capabilities and defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub Test 1: bit 5 set to value 1 Sub Test 2: bit 1 set to value 1 Sub Test 3: bits 0 and 3 set to value 1 Sub Test 4: bits 0 and 5 set to value 1 Sub Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. |

RRLP Measure Position Response (Step 19 (Option 1) or 19d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 19d) |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssLocationInfo otherwise locationError will be returned) |
| locationError | SEQUENCE | Any error value is acceptable. |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssLocationInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 19 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing or ganssAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing GPS assistance data elements. This field may only be present for Sub Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 19a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | This field may only be present for Sub Tests 3, 4 and 10. If the MS requested further GPS assistance data in Step 19 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 19 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 19c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 19 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub Test 1: bit 5 set to value 1 Sub Test 2: bit 1 set to value 1 Sub Test 3: bits 0 and 3 set to value 1 Sub Test 4: bits 0 and 5 set to value 1 Sub Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 19 (Option 2). |

70.13.2 NI-LR / Emergency Call on TCH Radio Channel for Mobiles Supporting MS-Assisted GNSS

70.13.2.1 Conformance requirements

1. With the MS in the "idle, updated" state, the user shall initiate an emergency after the number 112 (for GSM900 and 1800 MS), or 911 (for PCS 1900 MS in the USA), or 08 (for PCS 1900 MS in Mexico) has been entered by the user. The MS shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
7. When a user requests an emergency call establishment the mobile station will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment and the correct CKSN and TMSI. A mobile station which implements the "LCS" option shall also implement the "Controlled Early Classmark Sending" option. A mobile station which implements the "Controlled Early Classmark Sending" option shall indicate it in the classmark (ES IND bit).
8. After sending the CM SERVICE REQUEST message the MS shall send a CLASSMARK CHANGE message. The "Mobile Station Classmark 3" information element shall correctly specify the positioning methods supported by the MS and shall indicate support for additional positioning capabilities which can be retrieved using RRLP.
9. After the CM SERVICE ACCEPT message is received from the network, the MS shall send an EMERGENCY SETUP message.
10. After receipt of a CONNECT ACKNOWLEDGE message during establishment of the emergency call the MS shall indicate that the TCH is through connected in both directions.
11. On receiving the POSITIONING CAPABILITY REQUEST message the MS responds with a POSITIONING CAPABILITY RESPONSE message indicating the positioning methods supported by the MS.
12. On receiving the RRLP MEASURE POSITION REQUEST the MS tries to perform the requested location measurements. It sends the results in the RRLP MEASURE POSITION RESPONSE message.

References

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.13.2.2 Test Purpose

To verify when a network instigates the LCS positioning procedure using GNSS by sending RRLP (Measure Position Request) message, after a traffic channel has been established during an emergency call, the mobile responds with RRLP (Measure Position Response) containing A-GNSS measurement values.

70.13.2.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

SIM:

Normal SIM

Specific PICSstatements

PIXIT statements

-

Test Procedure

This test case includes sub test cases dependent on the GNSS supported by the MS. Each sub test case is identified by a Sub Test Case Number as defined below:

| Sub Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

An Emergency Call is initiated with the MS. SIM card is included in the MS.

The emergency call is established with a late assignment.

After receiving the CONNECT ACKNOWLEDGE message from the MS, the SS sends RR APPLICATION INFORMATION messages containing a RRLP Positioning Capability Request message.

The MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request on FACCH including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The call is cleared by the SS.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The appropriate "emergency call number" is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The Additional Positioning Capabilities (1 bit field) is set to 1 (the mobile station supports additional positioning capabilities which can be retrieved using RRLP). |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | EMERGENCY SETUP | |
| 8 | SS -> MS | CALL PROCEEDING | |
| 9 | SS -> MS | ALERTING | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | CONNECT | |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | The MS indicates that the TCH is through connected in both directions. |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 16 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request Contains assistance data as defined in TS 51.010-7 sub clauses 6.1.3 and 6.1.4. |
| 17 | MS -> SS | RR APPLICATION INFORMATION | Option 1: RRLP Measure Position Response: ganssMeasureInfo and gps-MeasureInfo (Sub Tests 3, 4 and 10) Option 2: locationError with gpsAssDataMissing (Sub Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub Tests 3, 4 and 10) and/or ganssAssistanceData |
| 17a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data. If the MS requested additional assistance data in step 17 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 17b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 17a, the MS acknowledges the received assistance data. |

| | | | |
|-----|----------|----------------------------|---|
| 17c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Request. If the MS requested additional assistance data in step 17 that is available in the SS, this message may include further assistance data. |
| 17d | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Response. If the MS requested additional assistance data in step 17, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub Tests 3, 4 and 10). |
| 18 | SS -> MS | DISCONNECT | |
| 19 | MS -> SS | RELEASE | |
| 20 | SS -> MS | RELEASE COMPLETE | |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 17 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub Test 1: bit 5 set to value 1 Sub Test 2: bit 1 set to value 1 Sub Test 3: bits 0 and 3 set to value 1 Sub Test 4: bits 0 and 5 set to value 1 Sub Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 17 (Option 2). |

70.14 Assisted GNSS Mobile Originated Location Request (MO-LR)

70.14.1 MO-LR / Idle mode for Mobiles Supporting MS-Assisted GNSS

70.14.1.1 Conformance requirements

- 1) The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
- 2) The MS invokes self-location request by sending REGISTER message containing Facility IE LCS MO-LR with MOLR-TYPE set to locationEstimate.
- 3) The MS needs to interact with the network for each separate location request.
- 4) On receiving an RRLP MEASURE POSITION REQUEST message the MS tries to perform the requested location measurements. It sends the results in an RRLP MEASURE POSITION RESPONSE message.
- 5) The network returns an LCS result to the MS carrying location estimate requested by the MS in FACILITY message.
- 6) The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

References

3GPP TS 24.080, sub clauses 2.4, 2.5, 3.4 and 4.

3GPP TS 44.031

70.14.1.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing the Facility IE LCS MO-LR. When the MS receives a FACILITY message containing a Facility IE MO-LR LCS result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

70.14.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state “idle, updated” with valid TMSI and CSKN.

Specific PICS statements

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS invokes call independent supplementary service through a CM SERVICE REQUEST.

The SS initiates authentication and ciphering. Then the MS invokes an MO-LR request.

The SS sends an RR APPLICATION INFORMATION messages containing a RRLP Positioning Capability Request message.

The MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When MS receives FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | Initiate LCS MOLR Procedure (location estimation) |
| 2 | MS -> SS | CHANNEL REQUEST | establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | The CM service type IE indicates "Supplementary service activation". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The Additional Positioning Capabilities (1 bit field) is set to 1 (the mobile station supports additional positioning capabilities which can be retrieved using RRLP). |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request with MOLR-Type set to locationEstimate |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 14 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. Contains assistance data as defined in sub clause 70.1.3. |
| 15 | MS -> SS | RR APPLICATION INFORMATION | Option 1: RRLP Measure Position Response: ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10) Option 2: locationError with gpsAssDataMissing (Sub-Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData |
| 15a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 15 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 15b | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack. If the SS sent additional assistance data in step 15a, the MS acknowledges the received assistance data. |
| 15c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 15 that is available in the SS, this message may include further assistance data. |

| | | | |
|-----|----------|----------------------------|---|
| 15d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 15, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 16 | SS -> MS | FACILITY | LCS MO-LR result message containing location estimate |
| 17 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| extended-reference | SEQUENCE | |

RRLP Positioning Capability Response (Step 13):

| Information element | Type | Value/remark |
|-----------------------------|------------|--|
| ASN.1 encoded | | |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the Positioning Capability Request (Step 12). |
| posCapabilities | SEQUENCE | |
| nonGANSSpositionMethods | BIT STRING | May only be included for Sub-Tests 3, 4 and 10. |
| gANSSPositionMethods | SEQUENCE | Included for each MS supported GANSS |
| ganssID | INTEGER | Sub-Test 1: value 3 Sub-Test 2: absent Sub-Test 3: value 1 Sub-Test 4: value 3 Sub-Test 9: value 4 Sub-Test 10: value 4 |
| gANSSPositioningMethodTypes | BIT STRING | Bit 0 (msAssisted) set to value 1 |
| gANSSSignals | BIT STRING | Dependent on MS capabilities |

RRLP Measure Position Request (Step 14):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Response (Step 15 (Option 1) or Step 15d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 15d) |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 15 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing or ganssAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements This field may only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 15a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | This field may only be present for Sub-Tests 3, 4 and 10. If the MS requested further GPS assistance data in Step 15 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 15 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Assistance Data Ack (Step 15b):

| Information element | Type | Value/remark |
|---------------------|----------------|-------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 15c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 15 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 15 (Option 2). |

FACILITY (Step 16):

| Information element | Value/remark |
|------------------------|--|

| Note: | Any value for locationEstimate may be used. The SS shall not be required to calculate the value from the returned gps-MeasureInfo and/or ganssMeasureInfo values |

RELEASE COMPLETE (Step 17):

| Information element | Value/remark |
|------------------------|------------------------------|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.2 MO-LR / Idle mode for Mobiles Supporting MS-Based GNSS / Assistance Data Request

70.14.2.1 Conformance requirements

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes self-location request by sending REGISTER message containing Facility IE LCS MO-LR with MOLR-TYPE set to assistance data.
3. The MS sends RRLP ASSISTANCE DATA ACK for each RRLP ASSISTANCE DATA component

4. The network shall returns an LCS result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.
5. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

References

3GPP TS 24.080, sub clauses 2.4, 2.5, 3.4 and 4.

3GPP TS 44.031

70.14.2.2 Test Purpose

To verify that a MS invokes a self-location request by sending the network a REGISTER message containing an LCS-MOLR REQ of type "Assistance data". On receipt of each RRLP ASSISTANCE DATA from SS with the requested assistance data, MS shall send RRLP ASSISTANCE ACK for each component to SS. When the MS receives a FACILITY message containing a LCS-MOLR return result for the acknowledgement of completing assistance data delivery, it clears the transaction by sending a RELEASE COMPLETE message.

70.14.2.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valid TMSI and CSKN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS invokes call independent supplementary service through a CM SERVICE REQUEST.

The SS initiates authentication and ciphering. Then the MS invokes an MO-LR request, with MOLR- TYPE set to assistance data.

The SS sends a number of RRLP Assistance Data components and MS sends RRLP Assistance Data Ack for each component.

SS sends LCS-MOLR Return Result for acknowledgement of completion of assistance data delivery.

The MS terminates the dialogue by sending RELEASE COMPLETE message.

Maximum duration of the test

10 minutes.

Expected Sequence

Normal Case:

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate LCS MOLR Procedure (assistance data request) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Establishment cause indicates "Supplementary service activation". "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The Additional Positioning Capabilities (1 bit field) is set to 1 (the mobile station supports additional positioning capabilities which can be retrieved using RRLP). |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to assistanceData. |
| 11n | SS -> MS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA The number of instances of this message depends on the amount of assistance data requested in step 10 |
| 12n | MS -> SS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA ACK Each instance of RRLP ASSISTANCE DATA message in step 11n is acknowledged |
| 13 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT |
| 14 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.14.3 MO-LR / Idle mode for Mobiles Supporting MS-Based GNSS / Location Estimate Request

70.14.3.1 Conformance requirements

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes self-location request by sending REGISTER message containing Facility IE LCS MO-LR with MOLR-TYPE set to locationEstimate.
3. On receiving the POSITIONING CAPABILITY REQUEST message the MS responds with a POSITIONING CAPABILITY RESPONSE message indicating the positioning methods supported by the MS.
4. On receiving an RRLP MEASURE POSITION REQUEST message, the MS tries to perform the requested location measurements, and possibly calculates its own position. When the MS has location measurements, location estimate, or an error indication (measurements/location estimation not possible), it sends the results in the Measure Position Response component to the SMLC.
5. The network shall return an LCS result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.
6. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

References

3GPP TS 24.080, sub clauses 2.4, 2.5, 3.4 and 4.

3GPP TS 44.031

70.14.3.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing an MO-LR Request of type "locationEstimate". When the MS receives a FACILITY message containing a MO-LR return result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

70.14.3.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS is in MM-state “idle, updated” with valid TMSI and CSKN.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS invokes call independent supplementary service through a CM SERVICE REQUEST.

The SS initiates authentication and ciphering. Then the MS invokes an MO-LR request, with MOLR-TYPE set to locationEstimate.

The SS sends an RR APPLICATION INFORMATION messages containing a RRLP Positioning Capability Request message.

The MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When the MS receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test

10 minutes.

Expected Sequence

| Step | Direction | Message | Comments |

| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message at step 14 the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Assistance Data Ack (Steps 15, 17b):

| Information element | Type | Value/remark |
|---------------------|----------------|-----------------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 17b) |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 16):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Response (Step 17 (Option 1) or 17d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 17d) |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssLocationInfo otherwise locationError will be returned) |
| locationError | SEQUENCE | Any error value is acceptable. |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssLocationInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 17 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing or ganssAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing GPS assistance data elements. This field may only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 17a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | This field may only be present for Sub-Tests 3, 4 and 10. If the MS requested further GPS assistance data in Step 17 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 17 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 17c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 17 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 17 (Option 2). |

FACILITY (Step 20):

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | FACILITY (0011 1010) |
| Facility | Return Result = LCS-MOLR LCS-MOLRRes -> locationEstimate |

RELEASE COMPLETE (Step 22):

| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.4 MO-LR / Dedicated Mode for Mobiles Supporting MS-Assisted GNSS

70.14.4.1 Conformance Requirement:

The MS sends a DTAP LCS MO-LR invoke to the VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component with MO_LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

70.14.4.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing the Facility IE LCS MO-LR on an already established speech call related main DCCH (FACCH). When the MS receives a FACILITY message containing a Facility IE MO-LR LCS result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

70.14.4.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Satellite signals: default conditions.

Mobile Station (MS):

The MS has valid TMSI and CSKN.

The MS is brought into the state U10 by using table 26.8.1.2/3.

Specific PICS statements

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS invokes call independent supplementary service on an existing FACCH channel. After receiving a CM SERVICE ACCEPT message, the MS invokes a self-location request by sending a REGISTER message containing the Facility IE LCS MO-LR.

The SS sends an RR APPLICATION INFORMATION messages containing a RRLP Positioning Capability Request message.

The MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When the MS receives a FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate LCS MOLR Procedure (location estimation) on existing FACCH channel |
| 2 | MS -> SS | CM SERVICE REQUEST | The CM Service Type IE indicates "Supplementary service activation". "mobile station classmark 2" includes settings for ES_IND. |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request with MOLR-Type set to locationEstimate |
| 5 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 6 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 7 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request Contains assistance data as defined in sub clause 70.1.3. |
| 8 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: Option 1: ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10) Option 2: locationError with gpsAssDataMissing (Sub-Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData |
| 8a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 8 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 8b | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack. If the SS sent additional assistance data in step 8a, the MS acknowledges the received assistance data. |
| 8c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 8 that is available in the SS, this message may include further assistance data. |
| 8d | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 8, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 9 | SS -> MS | FACILITY | LCS MO-LR result message containing location estimate |
| 10 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 11 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

RRLP Measure Position Response (Step 8 (Option 1) or Step 8d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 8d) |
| Component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable except gpsAssDataMissing. |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 8 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| Component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing or ganssAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements This field may only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 8a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| Component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | This field may only be present for Sub-Tests 3, 4 and 10. If the MS requested further GPS assistance data in Step 8 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 5.1.3 to 5.1.8. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly. Except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 8 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Assistance Data Ack (Step 8b):

| Information element | Type | Value/remark |
|---------------------|----------------|-------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| Component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 8c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | Gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 8 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 8 (Option 2). |

FACILITY (Step 9):

| Information element | Value/remark |

| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | FACILITY (0011 1010) |
| Facility | Return Result = LCS-MOLR LCS-MOLRRes -> locationEstimate (Note) |
| Note: | Any value for locationEstimate may be used. The SS shall not be required to calculate the value from the returned gps-MeasureInfo values and/or ganssMeasureInfo values |

RELEASE COMPLETE (Step 10):

| Information element | Value/remark |
|------------------------|------------------------------|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.5 MO-LR / Dedicated Mode for Mobiles Supporting MS-Based GNSS / Assistance Data Request

70.14.5.1 Conformance Requirement:

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes self-location request by sending a REGISTER message containing a LCS MO LR invoke component with MO LR-TYPE set to ASSISTANCE DATA, LOCATION_METHOD TYPE set ASSISTEDGPS, and GPS_ASSISTANCE_DATA TYPE set to the type of ASSISTANCE_DATA requested.
3. The MS sends RRLP ASSISTANCE DATA ACK. for each RRLP ASSISTANCE DATA component.

4. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 03.71 sub clause 7.6.6

3Gpp TS 24.30 sub clause 5

3GPP TS 24.80 sub clause 4

70.14.5.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing the FACILITY IE LCS-MOLR REQ on an already established speech call related main DCCH (FACCH). On receipt of a RRLP ASSISTANCE DATA from SS with the requested assistance data, MS shall send back RRLP ASSISTANCE ACK for each component to SS. When the MS receives a FACILITY message containing a FACILITY IE LCS-MOLR return result for the acknowledgment of completing assistance data delivery, it clears the transaction by sending a RELEASE COMPLETE message.

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

A MOLR procedure as call independent supplementary services is initiated from the MS on the existing FACCH channel.

After received CM SERVICE ACCEPT message, MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke for Assistance Data.

The SS sends a number of RRLP ASSISTANCE DATA components and MS sends acknowledgement of RRLP ASSISTANCE DATA ACK for each component.

SS sends DTAP LCS-MOLR Return Result for acknowledgement of completion of assistance data delivery procedure.

The MS terminates the dialogue by sending RELEASE COMPLETE message.

Maximum duration of the test:

5 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | Initiate LCS MOLR Procedure (assistance data request) on existing FACCH channel |
| 2 | MS -> SS | CM SERVICE REQUEST | "Mobile identity" IE contains the TMSI. Establishment cause indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to assistanceData. |
| 5 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 6 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 7n | SS->MS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA The number of instances of this message depends on the amount of assistance data requested in step 4 |
| 8n | MS -> SS | RR APPLICATION INFORMATION | RRLP ASSISTANCE DATA ACK Each instance of RRLP ASSISTANCE DATA message in step 7n is acknowledged |
| 9 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT |
| 10 | MS->SS | RELEASE COMPLETE | Terminates the session |
| 11 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

70.14.6 MO-LR / Dedicated Mode for Mobiles Supporting MS-Based GNSS / Location Estimate request

70.14.6.1 Conformance requirements:

The following requirements apply for this test:

1. The MS sends CM SERVICE REQUEST to network for call independent supplementary service.
2. The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.
3. On receiving the POSITIONING CAPABILITY REQUEST message the MS responds with a POSITIONING CAPABILITY RESPONSE message indicating the positioning methods supported by the MS.
4. On receiving an RRLP MEASURE POSITION REQUEST message, the MS tries to perform the requested location measurements, and possibly calculates its own position. When the MS has location measurements, location estimate, or an error indication (measurements/location estimation not possible), it sends the results in the Measure Position Response component to the SMLC.
5. The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.
6. After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References

3GPP TS 44.031

70.14.6.2 Test Purpose

To verify that the MS invokes a self-location request by sending the network a REGISTER message containing an MO-LR Request of type "locationEstimate" on an already established speech call related SACCH. When the MS receives a FACILITY message containing a MO-LR return result carrying the requested location estimate, it clears the transaction by sending a RELEASE COMPLETE message.

PIXIT statements

-

70.14.6.3 Method of Test

Initial Conditions

System Simulator:

Serving cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS has valid TMSI and CKSN.

The MS is brought into state U10 by using table 26.8.1.2/3.

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS invokes call independent supplementary service on an existing SACCH channel. After receiving a CM SERVICE ACCEPT message, the MS invokes a self location request by sending a REGISTER message containing an MO-LR request of type "locationEstimate".

The SS sends an RR APPLICATION INFORMATION messages containing a RRLP Positioning Capability Request message.

The MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS orders positioning measurement by sending RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages followed by an RRLP Measure Position Request including further assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS responds with a FACILITY message containing an MO-LR result. When the MS receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | Initiate MO-LR procedure (location estimation) on existing SACCH channel |
| 2 | MS -> SS | CM SERVICE REQUEST | The CM Service Type IE indicates "Supplementary service activation". "mobile station classmark 2" includes settings for ES_IND. |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | Call Independent SS containing Facility IE with LCS-MOLR request and MO-LR Type set to "locationEstimate". |
| 5 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 6 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |

| | | | |
|-----|----------|----------------------------|---|
| 7 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 8 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 9 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 10 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 11 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: ganssLocationInfo (Option 1) or locationError with gpsAssDataMissing (Sub-Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2) |
| 12a | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. If the MS requested additional assistance data in step 12 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 12b | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack. If the SS sent additional assistance data in step 12a, the MS acknowledges the received assistance data. |
| 12c | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. If the MS requested additional assistance data in step 12 that is available in the SS, this message may include further assistance data. |
| 12d | MS-> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response. If the MS requested additional assistance data in step 12, this message contains ganssLocationInfo. |
| 13 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT message containing location estimate |
| 14 | MS -> SS | RELEASE COMPLETE | MS terminates the dialogue |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

REGISTER (Step 4):

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | REGISTER (xx11 1011) |
| Facility | Invoke = LCS-MOLR LCS-MOLRArg MOLR-Type->locationEstimate |
| SS version indicator | Value 1 or above |

RRLP Positioning Capability Request (Step 5):

| Information element | Type | Value/remark |
|---------------------|----------|--------------|
| ASN.1 encoded | | |
| extended-reference | SEQUENCE | |

RRLP Positioning Capability Response (Step 6):

| Information element | Type | Value/remark |
|-----------------------------|------------|--|
| ASN.1 encoded | | |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the Positioning Capability Request. |
| posCapabilities | SEQUENCE | |
| nonGANSSpositionMethods | BIT STRING | May only be included for Sub-Tests 3, 4 and 10. |
| gANSSPositionMethods | SEQUENCE | Included for each MS supported GANSS |
| ganssID | INTEGER | Sub-Test 1: value 3 Sub-Test 2: absent Sub-Test 3: value 1 Sub-Test 4: value 3 Sub-Test 9: value 4 Sub-Test 10: value 4 |
| gANSSPositioningMethodTypes | BIT STRING | Bit 1 (msBased) set to value 1 |
| gANSSSignals | BIT STRING | Dependent on MS capabilities |

RR_APPLICATION_INFORMATION

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | RR Management Protocol (0110) |
| Skip Indicator | |
| Message Type | Application Information Message type |
| APDU ID | APDU ID -> RRLP => 0000 |
| APDU Flags | Bit1=0 -> Last or only segment Bit2=0 -> First or only segment Bit3=0 -> Command or Final Response Bit4=spare |
| APDU Data | 2-N Byte → ASN.1 Coded Steps 11 and 12c: RRLP Measure Position Request Steps 12 and 12d: RRLP Measure Position Response Steps 7, 9, 12a: RRLP Assistance Data Steps 8, 10, 12b: RRLP Assistance Data Ack. |

RRLP Assistance Data (Step 7):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| Component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |
| moreAssDataToBeSent | ENUMERATED | 1 |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Assistance Data Ack (Steps 8, 10, 12b):

| Information element | Type | Value/remark |
|---------------------|----------------|-----------------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 12b) |
| Component | CHOICE | assistanceDataAck |

RRLP Assistance Data (Step 9):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| Component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly. 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Request (Step 11):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| Component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | Gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| Accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Response (Step 12 (Option 1) or 12d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 or 2 (Option 2, Step 12d) |
| Component | CHOICE | msrPositionRsp (A valid response will contain ganssLocationInfo otherwise LocationError will be returned) |
| locationError | SEQUENCE | Any error value is acceptable except gpsAssDataMissing or ganssAssDataMissing. |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssLocationInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 12 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| Component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing or ganssAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing GPS assistance data elements. This field may only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 12a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 12 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 to 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly. 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 12 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 12c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| Component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | Gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| Accuracy | Integer (0-127) | 127 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 as requested by the MS in step 12 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub-Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 12 (Option 2). |

FACILITY (Step 13):

| Information element | Value/remark |

| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.7

70.14.8 MO-LR / Location Error

70.14.8.1 MO-LR / Location Error / Requested Method not supported

70.14.8.1.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS sends a RRLP MEASURE POSITION RESPONSE to network containing a Location Error component with an error indication if the measurement is not possible.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.14.8.1.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall send back RRLP MEASURE POSITION RESPONSE message with Location Error component if the MS does not support the requested method. On receipt of second RRLP MEASURE POSITION REQUEST from SS to start the measurement, the MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.14.8.1.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

The SS then instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST with a method type not supported by the mobile. (Type not supported to be GPS for sub-tests 1, 2 and 9,, Galileo for sub-tests 3, 4 and 10). The MS sends RRLP MEASURE POSITION RESPONSE to SS containing a Location Error component (Request Method not Supported) as the requested method is not supported.

The SS then sends a RR APPLICATION INFORMATION message containing a RRLP Positioning Capability Request message, and the MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS repeats RRLP MEASURE POSITION REQUEST with correct message contents including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS returns location estimate to MS through LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|----------|----------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR request with MOLR-Type set to locationEstimate |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST (Request method not supported) |
| 12 | MS->SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE (location_error) |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP POSITIONING CAPABILITY REQUEST |
| 14 | MS->SS | RR APPLICATION INFORMATION | RRLP POSITIONING CAPABILITY RESPONSE |
| 15 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: ganssMeasureInfo and gps-MeasureInfo, (Sub-Tests 3, 4 and 10) (Option 1) or locationError with gpsAssDataMissing (Sub-Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2) |
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Response. If the MS requested additional assistance data in step 16, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 17 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 18 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Response (Step 16 (Option 1) or Step 16d (Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 or 3 (Option 2, Step 16d) |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 16 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 16a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | This field may only be present for Sub-Tests 3, 4 and 10. If the MS requested further GPS assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Assistance Data Ack (Step 16b):

| Information element | Type | Value/remark |
|---------------------|----------------|-------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 16c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 3 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 16 (Option 2). |
| extended-reference | SEQUENCE | Rel 5 and later |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 16 (Option 2). |

FACILITY (Step 17):

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | Call Independent SS message (1011) |
| Transaction Identifier Message Type Facility | FACILITY (0011 1010) Return Result = LCS-MOLR LCS-MOLRRes ->locationEstimate (Note) |
| Note: | Any value for locationEstimate may be used. The SS shall not be required to calculate the value from the returned gps-MeasureInfo values. |

RELEASE COMPLETE (Step 18):

| Information element | Value/remark |
|------------------------|------------------------------|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.8.2 MO-LR / Location Error / GNSS Assistance Data Missing

70.14.8.2.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS sends a RRLP MEASURE POSITION RESPONSE to network containing a Location Error component with an error indication if the measurement is not possible.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.14.8.2.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall send back RRLP MEASURE POSITION RESPONSE message with Location Error component if GNSS assistance data is missing. On receipt of second RRLP MEASURE POSITION REQUEST (with GNSS assistance data included) from SS to start the measurement, the MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.14.8.2.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The A-GNSS assistance data stored in the MS is reset.

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

On receiving the RR APPLICATION INFORMATION message containing a RRLP Positioning Capability Request message, the MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS then instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST without GNSS assistance data (GPS or GANSS according to the receiver capabilities).

The MS requests additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to gpsAssDataMissing or ganssAssDataMissing for sub-test cases 3, 4 and 10 and set to ganssAssDataMissing for sub-test cases 1, 2 and 9. The SS provides the requested assistance data that is available in the SS in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data.

The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

The SS returns location estimate to MS through LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | MS | | Reset all stored A-GNSS assistance data |
| 2 | MS | | Initiate MOLR Procedure (location estimate) |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 6 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|----|----------|----------------------------|---|
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR request with MOLR-Type set to locationEstimate |
| 12 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 13 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 14 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST (without GNSS assistance data) |
| 15 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: locationError with ganssAssDataMissingor gpsAssDataMissing (Sub-Tests 3, 4 and 10) |
| 16 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data. The SS provides the requested data from step 15 that is available in the SS in zero, one or more RRLP Assistance Data delivery messages. |
| 17 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16, the MS acknowledges the received assistance data. |
| 18 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request. This message may include further assistance data. |
| 19 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE (ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10)) |
| 20 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 21 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 22 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.9 MO-LR / Multiple RRLP Requests with Same Reference Number and Extended Reference Number

70.14.9.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS ignores the later component if the old and new RRLP MEASURE POSITION REQUEST components have the same Reference Number.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.14.9.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall ignore the second RRLP MEASURE POSITION REQUEST if the second RRLP MEASURE POSITION REQUEST has the same REFERENCE NUMBER and the same Extended Reference IE as in the previous one. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the current measurement.

70.14.9.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

On receiving the RR APPLICATION INFORMATION message containing a RRLP Positioning Capability Request message, the MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS then instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER and the same EXTENDED REFERENCE IE as the first one (this delay shall be cancelled in the event of option 2). The MS shall ignore the second RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing, and gpsAssDataMissing for sub-test cases 3, 4 and 10. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER and the same EXTENDED REFERENCE IE as the second one. The MS shall ignore the third RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|--|---------------------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to locationEstimate. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST |
| 14 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 15. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) within 8 seconds, then the SS continues to step 14a. |
| 14a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data. If the MS requested additional assistance data in step 14 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 14b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP assistanceDataAck. If the SS sent additional assistance data in step 14a, the MS acknowledges the received assistance data. |
| 14c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 14 that is available in the SS, this message may include further assistance data. |
| 14d | MS (Option 2) | | Option 2 only : MS is performing the measurement |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST with same reference number and same extended reference IE as in step 13 (Option 1) or RRLP MEASURE POSITION REQUEST with same reference number and same extended reference IE as in step 14c (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE (ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10) |
| 17 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 18 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| acquisAssist | SEQUENCE | See TS 51.010-7 sub clause 6.1.4 |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Response (Step 14 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: ganssAssDataMissing or gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 14a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 14 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 14 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the assistance data requested in step 14, if available data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Assistance Data Ack (Step 14b):

| Information element | Type | Value/remark |
|---------------------|-----------------|-------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 14c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 14 (Option 2). |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 14. |

RRLP Measure Position Request (Step 15 (Option 1 or Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | Enumerated | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | Enumerated | oneSet |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |

RRLP Measure Position Response (Step 16):

| Information element | Type | Value/remark |
|-------------------------------|----------------|--|
| ASN.1 encoded referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

FACILITY (Step 17):

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | Call Independent SS message (1011) |
| Transaction Identifier Message Type Facility | FACILITY (0011 1010) Return Result = LCS-MOLR LCS-MOLRRes ->locationEstimate (Note) |
| Note: | Any value for locationEstimate may be used. The SS shall not be required to calculate the value from the returned gps-MeasureInfo values. |

RELEASE COMPLETE (Step 18):

| Information element | Value/remark |
|------------------------|------------------------------|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.10 MO-LR / Multiple RRLP Requests with Different Reference Number

70.14.10.1 Conformance requirement:

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts activity for the former RRLP MEASURE POSITION REQUEST component and starts to act according to the later RRLP MEASURE POSITION REQUEST component if the old and new RRLP MEASURE POSITION REQUEST components have different Reference Number.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.14.10.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with a different REFERENCE NUMBER and the same EXTENDED REFERENCE IE as the first one. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.14.10.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

On receiving the RR APPLICATION INFORMATION message containing a RRLP Positioning Capability Request message, the MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS then instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER and the same EXTENDED REFERENCE IE as the first one (this delay shall be cancelled in the event of option 2). The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE

POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing, and gpsAssDataMissing for sub-test cases 3, 4 and 10. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER and the same EXTENDED REFERENCE IE as the second one. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST, including the possibility of repeating the request for more assistance data (Option 2b). The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|--|---------------------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to locationEstimate. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 |
| 14 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 15. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing for Sub-Tests 3, 4 and 10 within 8 seconds, then the SS continues to step 14a. |
| 14a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data. If the MS requested additional assistance data in step 14 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 14b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 14a, the MS acknowledges the received assistance data. |
| 14c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 14 that is available in the SS, this message may include further assistance data. |
| 14d | MS (Option 2) | | Option 2 only : MS is performing the measurement |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST with different reference number and same extended reference IE as in step 13 (Option 1) or RRLP MEASURE POSITION REQUEST 3 with different reference number and same extended reference IE as in step 14c (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10 (Option 1 or 2a). Check reference number is 2 or locationError with gpsAssDataMissing (Sub-Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2b) Check reference number is 2 |

| | | | |
|-----|----------|----------------------------|--|
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2b only : RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2b only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2b only : RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS -> SS | RR APPLICATION INFORMATION | Option 2b only : RRLP Measure Position Response. If the MS requested additional assistance data in step 16, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 17 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 18 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

REGISTER (Step 10):

| Information element | Value/remark |
|------------------------|---|
| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | REGISTER (xx11 1011) |
| Facility | Invoke = LCS-MOLR LCS-MOLRArg Molr-Type -> locationEstimate |
| SS version indicator | Value 1 or above |

| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | Dependent on MS capabilities and defined in sub clause 70.1.3. |

RRLP Measure Position Response (Step 14 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|-----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: ganssAssDataMissing or gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 14a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 14 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 14 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the assistance data requested in step 14, if available data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Assistance Data Ack (Step 14b):

| Information element | Type | Value/remark |
|---------------------|----------------|-------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 14c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 14 (Option 2). |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 14. |

RRLP Measure Position Request (Step 15 (Option 1 or Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | Enumerated | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | Enumerated | oneSet |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |

RRLP Measure Position Response (Step 16 (Option 1 or 2a) or Step 16d (Option 2b)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 16 (Option 2b)):

| Information element | Type | Value/remark |
|--------------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: ganssAssDataMissing or gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 16a):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Assistance Data Ack (Step 16b):

| Information element | Type | Value/remark |
|---------------------|----------------|-------------------|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceDataAck |

RRLP Measure Position Request (Step 16c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msAssisted |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clauses 6.1.3 and 6.1.4 as requested by the MS in step 16 (Option 2). |

| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.11 MO-LR / Multiple RRLP Requests with Different Extended Reference Number

70.14.11.1 Conformance requirements

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts activity for the former RRLP MEASURE POSITION REQUEST component and starts to act according to the later RRLP MEASURE POSITION REQUEST component if the old and new RRLP MEASURE POSITION REQUEST components have different Extended Reference Number.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.14.11.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with the same REFERENCE NUMBER as the first one and a different EXTENDED REFERENCE IE. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.14.11.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE

COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

On receiving the RR APPLICATION INFORMATION message containing a RRLP Positioning Capability Request message, the MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS then instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the first one and a different EXTENDED REFERENCE IE (this delay shall be cancelled in the event of option 2). The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing (subtests 3, 4 and 10). If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the second one and a different EXTENDED REFERENCE IE. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST, including the possibility of repeating the request for more assistance data (Option 2b). The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|--|---------------------------------------|---|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to locationEstimate. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST |
| 14 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 15. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing for Sub-Tests 3, 4 and 10 within 8 seconds, then the SS continues to step 14a. |
| 14a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data. If the MS requested additional assistance data in step 14 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 14b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 14a, the MS acknowledges the received assistance data. |
| 14c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 14 that is available in the SS, this message may include further assistance data. |
| 14d | MS (Option 2) | | Option 2 only : MS is performing the measurement |

| | | | |
|-----|----------|----------------------------|---|
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST with same reference number as in Step 13 and different extended reference IE (Option 1) or RRLP MEASURE POSITION REQUEST 3 with same reference number as in Step 14c and different extended reference IE (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10 (Option 1 or 2a). Check extended reference IE is the equal to the one contained in the request of step 15 or locationError with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2b) Check extended reference IE is the equal to the one contained in the request of step 15 |
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS -> SS | RR APPLICATION INFORMATION | Option 2b only : RRLP Measure Position Response. If the MS requested additional assistance data in step 16, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 17 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 18 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| Protocol Discriminator | Call Independent SS (1011) |
| Transaction Identifier | |
| Message Type | RELEASE COMPLETE (xx10 1010) |

70.14.12 MO-LR / RR Management Commands

70.14.12.1 Conformance requirement

The MS sends a DTAP LCS MOLR invoke to VMSC. If the MS is requesting its own location or that its own location be sent to another LCS client, this message carries LCS QoS information (e.g. accuracy, response time).

The MS invokes a MO-LR by sending a REGISTER message to network containing a LCS-MOLR invoke component with MO-LR TYPE set to LocationEstimate, LCS QoS value and other optional field if it is needed.

The MS aborts the measurement procedure and starts on the RR MANAGEMENT procedure if a RR MANAGEMENT command is received during the measurement procedure. The MS sends RR MANAGEMENT RESPONSE message upon completion.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Test References:

3GPP TS 44.018 sub clauses 3.3.1.1 and 9.1.11.

3GPP TS 24.008 sub clauses 4.5.1.5, 5.2.1, 9.2.9 and 10.5.1.6, 10.5.1.7.

3GPP TS 44.031.

70.14.12.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if a RR MANAGEMENT command is received during the measurement procedure. The MS shall send a RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST and send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.14.12.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

A MOLR procedure as call independent supplementary services is initiated from the MS. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS sends a REGISTER message with Facility IE containing a component set to a DTAP LCS-MOLR Invoke.

On receiving the RR APPLICATION INFORMATION message containing a RRLP Positioning Capability Request message, the MS responds with an RR APPLICATION INFORMATION message containing an RRLP Positioning Capability Response message indicating the GNSS(s) supported by the MS.

The SS then instigates the particular message sequence by sending RRLP MEASURE POSITION REQUEST including assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends an RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends an RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and, the SS sends a RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends a RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS either sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST or requests more assistance data and then sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2)

The SS returns location estimate to MS through DTAP LCS-MOLR Return Result. The MS terminates the dialogue by sending RELEASE COMPLETE message after receiving location estimate.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|--|---------------------------------------|---|
| 1 | MS | | Initiate MOLR Procedure (location estimate) |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM "Mobile identity" IE contains the TMSI. The CM Service Type IE indicates "Supplementary service activation" "mobile station classmark 2" including settings for ES IND and CM3 supported. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | MS -> SS | REGISTER | Call Independent SS containing Facility IE With the component of Invoke message set to LCS-MOLR with MOLR-Type set to locationEstimate. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Positioning Capability Request |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Positioning Capability Response |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 1 |
| 14 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 15. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing for Sub-Tests 3, 4 and 10 within 8 seconds, then the SS continues to step 14a. |
| 14a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data. If the MS requested additional assistance data in step 14 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 14b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 14a, the MS acknowledges the received assistance data. |
| 14c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 14 that is available in the SS, this message may include further assistance data. |
| 14d | MS (Option 2) | | Option 2 only : MS is performing the measurement |
| 15 | SS -> MS | RR MANAGEMENT COMMAND | |
| 16 | MS -> SS | RR MANAGEMENT COMPLETE | MS terminates the measurement procedure and act on the RR management command |

| | | | |
|-----|----------|----------------------------|---|
| 17 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST 2 (Option 1) or RRLP MEASURE POSITION REQUEST 3 (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 18 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10 (Option 1 or 2a). or locationError with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2b) |
| 18a | SS -> MS | RR APPLICATION INFORMATION | Option 2b only : RRLP Assistance Data. If the MS requested additional assistance data in step 18 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 18b | MS -> SS | RR APPLICATION INFORMATION | Option 2b only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 18a, the MS acknowledges the received assistance data. |
| 18c | SS-> MS | RR APPLICATION INFORMATION | Option 2b only : RRLP Measure Position Request. If the MS requested additional assistance data in step 18 that is available in the SS, this message may include further assistance data. |
| 18d | MS -> SS | RR APPLICATION INFORMATION | Option 2b only : RRLP Measure Position Response. If the MS requested additional assistance data in step 18, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests3, 4 and 10). |
| 19 | SS -> MS | FACILITY | LCS MO-LR RETURN RESULT (locationEstimate) |
| 20 | MS -> SS | RELEASE COMPLETE | Terminates the session |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.15 Assisted GNSS Mobile Terminated Location Request (MT-LR)

70.15.1 MT-LR / Location Notification

70.15.1.1 Conformance requirements

1. The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the MS with notificationType set to notifyLocationAllowed. The MS notifies the MS user of the location request.
2. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result.

References

3GPP TS 24.030 sub clause 4.1.1.

3GPP TS 24.080 sub clauses 2.4, 2.5, and 3.4.

70.15.1.2 Test Purpose

To verify that when the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to NotifyLocationAllowed, the MS notifies the MS user of the location request and sends a RELEASE COMPLETE message containing a LocationNotification return result.

70.15.1.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valued TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The MS notifies the MS user of the location request. The MS then responds with a RELEASE COMPLETE message containing a LocationNotification return result to terminate the dialogue.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support and Additional Positioning Capabilities |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 12 | MS | | MS notifies the MS user of the location request |
| 13 | MS -> SS | RELEASE COMPLETE | |
| 14 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

PAGING RESPONSE

| Information element | Value/remark |
|--|---|

70.15.2 MT-LR / Notification and Verification / Location Allowed If No Response

70.15.2.1 Conformance requirements

1. On receipt of a REGISTER message containing the LCS Notification Invoke component with notificationType set to notifyAndVerify-LocationAllowedIfNoResponse. The MS: a) notifies the user of the location request, b) indicates the default is location allowed if no response is received within a predetermined period, and c) provides the opportunity for the user to grant or withhold permission.
2. Option 1: The user accepts the location request. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2: The user denies the location request.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3: The user takes no action and the verification process times-out. The SS shall terminate the dialogue.

References

3GPP TS 23.271 sub clause 9.1.2.

3GPP TS 24.030 sub clause 4.1.1.

3GPP TS 24.080 sub clauses 2.4, 2.5, and 3.4.

70.15.2.2 Test Purpose

To verify that the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationAllowedIfNoResponse, the MS notifies the MS user of the location request, indicates that the default response is location allowed if no response is sent, gives the user the option to accept or reject the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with the verificationResponse set to permissionDenied or permissionGranted as appropriate.

70.15.2.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters.

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

- MS LCS Notification timeout timer

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message with a Facility IE containing a LCS Location Notification Invoke set to notifyAndVerify-LocationAllowedIfNoResponse. The MS notifies the MS user of the location request, indicates that the default response is location allowed if no response is sent and gives the user the option to accept or reject the request.

Option 1:

The user then accepts the location request. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2:

The user then denies the location request. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3:

The user ignores the location request by taking no action, allowing the verification process timer to time-out. The SS responds with RELEASE COMPLETE.

Maximum duration of the test

5 minutes.

Expected Sequence

The test sequence is repeated for $k = 1 \dots 3$.

| Step | Direction | Message | Comments |
|--------------|-----------|-------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support and Additional Positioning Capabilities. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE LCS Location Notification Invoke set to notifyAndVerify-LocationAllowedIfNoResponse |
| 12 | SS | | SS starts timer T(LCSN) set to 90% of MS LCS Notification timeout timer |
| 13A (k=1) | MS | | The MS notifies the MS user of the location request, indicates that the default response is location allowed if no response is sent and gives the user the option to accept or reject the request. The user accepts location request before timer T(LCSN) expires. |
| 14A (k=1) | MS -> SS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted. |
| 13B (k=2) | MS | | The MS notifies the MS user of the location request, indicates that the default response is location allowed if no response is sent and gives the user the option to accept or reject the request. The user rejects location request before timer T(LCSN) expires. |
| 14B (k=2) | MS -> SS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionDenied. |
| 13C (k=3) | MS | | The MS notifies the MS user of the location request, indicates that the default response is location allowed if no response is sent and gives the user the option to accept or reject the request. The user does not reply and waits for T(LCSN) to expire. |
| 14C (k=3) | SS->MS | RELEASE COMPLETE | SS terminates the dialogue after T(LCSN) expiry |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

PAGING RESPONSE (Step 4)

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | RR management |
| Ciphering Key Sequence number - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available |
| Mobile station Classmark 2 - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| Mobile Identity - odd/even - Type of identity - Identity digits | Even TMSI TMSI previously allocated to MS |

70.15.3 MT-LR / Notification and Verification / Location Not Allowed If No Response

70.15.3.1 Conformance requirements

- On receipt of a REGISTER message containing the LCS Notification Invoke component with notificationType set to notifyAndVerify-LocationNotAllowedIfNoResponse, the MS: a) notifies the user of the location request, b) indicates the default is location not allowed if no response is received within a predetermined period, and c) provides the opportunity for the user to grant or withhold permission.
- Option 1: The user accepts the location request. The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2: The user denies the location request.

The MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3: The user takes no action and the verification process times-out.
The SS shall terminate the dialogue.

References

3GPP TS 23.271 sub clause 9.1.2.

3GPP TS 24.030 sub clause 4.1.1.

3GPP TS 24.080 sub clauses 2.4, 2.5, and 3.4.

70.15.3.2 Test Purpose

To verify that if the MS receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationNotAllowedIfNoResponse, then the MS notifies the MS user of the location request, indicates that the default response is location not allowed if no response is sent, gives the user the option to accept or reject the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with the verificationResponse set to permissionDenied or permissionGranted as appropriate.

70.15.3.3 Method of Test

Initial Conditions

System Simulator (SS):

Serving Cell: default parameters

Mobile Station (MS):

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

- MS LCS Notification timeout timer

Test Procedure

The MS is paged with a PAGING REQUEST TYPE 1 message. After sending the CIPHERING MODE COMPLETE message the MS receives an SS REGISTER message with a Facility IE containing a LCS Location Notification Invoke set to notifyAndVerify-LocationNotAllowedIfNoResponse. The MS notifies the MS user of the location request, indicates that the default response is location not allowed if no response is sent and gives the user the option to accept or reject the request.

Option 1:

The user then accepts the location request. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

Option 2:

The user then denies the location request. The MS responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

Option 3:

The user ignores the location request by taking no action, allowing the verification process timer to time-out. The SS responds with RELEASE COMPLETE.

Maximum duration of the test

5 minutes.

Expected Sequence

The test sequence is repeated for $k = 1 \dots 3$.

| Step | Direction | Message | Comments |
|--------------|-----------|-------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support and Additional Positioning Capabilities. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | REGISTER | Call Independent SS containing Facility IE LCS Location Notification Invoke set to notifyAndVerify-LocationNotAllowedIfNoResponse |
| 12 | SS | | SS starts timer T(LCSN) set to 90% of MS LCS Notification timeout timer |
| 13A (k=1) | MS | | The MS notifies the MS user of the location request, indicates that the default response is location not allowed if no response is sent and gives the user the option to accept or reject the request. The user accepts location request before timer T(LCSN) expires. |
| 14A (k=1) | MS -> SS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted. |
| 13B (k=2) | MS | | The MS notifies the MS user of the location request, indicates that the default response is location not allowed if no response is sent and gives the user the option to accept or reject the request. The user rejects location request before timer T(LCSN) expires. |
| 14B (k=2) | MS -> SS | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionDenied. |
| 13C (k=3) | MS | | The MS notifies the MS user of the location request, indicates that the default response is location not allowed if no response is sent and gives the user the option to accept or reject the request. The user does not reply and waits for T(LCSN) to expire. |
| 14C (k=3) | SS->MS | RELEASE COMPLETE | SS terminates the dialogue after T(LCSN) expiry |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

70.15.4 Void

70.15.5 MT-LR / Location Error

70.15.5.1 MT-LR / Location Error / Requested Method not Supported

70.15.5.1.1 Conformance requirements

The MS sends an RRLP MEASURE POSITION RESPONSE message to the network containing a Location Error component with an error indication if the measurement is not possible.

Test References

3GPP TS04.31 sub clause 2.2, A.3.2.6

70.15.5.1.2 Test Purpose

To verify that the MS sends the correct positioning capability via controlled early classmark sending. The MS shall send a RRLP MEASURE POSITION RESPONSE message with Location Error component if the MS does not support the requested method. On receipt of second RRLP MEASURE POSITION REQUEST from SS to start the measurement, the MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.15.5.1.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

The SS sends an RRLP MEASURE POSITION REQUEST message with a method type not supported by the mobile (Type not supported to be GPS for sub-tests 1, 2 and 9, Galileo for sub-tests 3, 4 and 10).

The MS sends RRLP MEASURE POSITION RESPONSE to SS containing a Location Error component (Requested Method not Supported) as the requested method is not supported.

The MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages followed by a new RRLP MEASURE POSITION REQUEST with correct message contents including assistance data.

Option 1: The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Option 2: The MS may request additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing (sub-tests 3, 4 and 10). If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS repeats the RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES_IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | |

| | | | |
|-----|----------|----------------------------|--|
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST (Request method not supported) |
| 12 | MS->SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE (location_error) |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 16 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 17 | SS-> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 18 | MS -> SS | RR APPLICATION INFORMATION | RRLP Measure Position Response: ganssMeasureInfo and gps-MeasureInfo, (Sub-Tests 3, 4 and 10) (Option 1) or locationError with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2) |
| 18a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data. If the MS requested additional assistance data in step 18 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 18b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 18a, the MS acknowledges the received assistance data. |
| 18c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Request. If the MS requested additional assistance data in step 18 that is available in the SS, this message may include further assistance data. |
| 18d | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Response. If the MS requested additional assistance data in step 18, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 3 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | This field may only be present for Sub-Tests 3, 4 and 10. If the MS requested further GPS assistance data in Step 18 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | If SS sends more than one RRLP assistance data delivery message the moreAssDataToBeSent field shall be set accordingly: 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further GANSS assistance data in Step 18 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 18c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 3 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 18 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 18 (Option 2). |

70.15.5.2 Location Error: GNSS Assistance Data Missing

70.15.5.2.1 Conformance requirement

The MS sends an RRLP MEASURE POSITION RESPONSE message to the network containing a Location Error component with an error indication if the measurement is not possible.

Test References

3GPP TS 44.031

70.15.5.2.2 Test Purpose

To verify that the MS sends the correct positioning capability via controlled early classmark sending and that the MS sends a RRLP MEASURE POSITION RESPONSE message with Location Error component because the GNSS assistance data is missing. On receipt of second RRLP MEASURE POSITION REQUEST (with all necessary GNSS assistance data to obtain a location estimate included) from SS to start the measurement, the MS sends back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.15.5.2.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: default conditions.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The A-GNSS assistance data stored in the MS is reset.

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability. After sending the CIPHERING MODE COMPLETE message the MS receives an RRLP MEASURE POSITION REQUEST message with Reference Time GPS assistance data.

The MS requests additional assistance data by sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing (sub-test cases 3 and 4). The SS provides the requested assistance data that is available in the SS in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data.

The SS provides the requested assistance data that is available in the SS in zero, one or more RRLP Assistance Data delivery messages followed by an RRLP Measure Position Request message which may include further assistance data.

The MS then performs positioning measurements, and responds with an RR APPLICATION INFORMATION message containing an RRLP Measure Position Response.

Maximum duration of the test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 0 | MS | | Reset all stored A-GNSS assistance data |
| 1 | SS->MS | PAGING REQUEST TYPE 1 | |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 6 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |

| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 subclause 6.1.4 as requested by the MS in step 15 |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 subclause 6.1.4 as requested by the MS in step 15. |

RRLP Measure Position Response (Step 17):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionRsp A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable. |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

70.15.6 MT-LR / Multiple RRLP Requests with Same Reference Number and Extended Reference Number

70.15.6.1 Conformance requirement:

When after reception of a Measure Position Request component, but before responding with a Measure Position Response or Protocol Error Component, the MS receives a new RRLP message with the Measure Position Request component, the MS ignores the latter component if the old and new RRLP Measure Position Request components have the same Reference Number.

The SMLC may use the same Reference Number or different Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS04.31 sub clause 2.5.5

3GPP TS04.31 sub clause 3.2

70.15.6.2 Test Purpose:

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall ignore the second RRLP MEASURE POSITION REQUEST if the second RRLP MEASURE POSITION REQUEST has the same REFERENCE NUMBER as in the previous one. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the current measurement.

70.15.6.3 Method of Test

Initial Conditions

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay to of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the first one (this delay shall be cancelled in the event of option 2). The MS shall ignore the second RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing (sub-tests 3, 4 and 10). If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP

Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with the same REFERENCE NUMBER as the second one. The MS shall ignore the third RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2).

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |

| | | | |
|-----|--|---------------------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 1 |
| 16 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 17. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) within 8 seconds, then the SS continues to step 16a. |
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only : RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS (Option 2) | | Option 2 only : MS is performing the measurement |
| 17 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST with same reference number and same extended reference IE as in step 15 (Option 1) or RRLP MEASURE POSITION REQUEST with same reference number and same extended reference IE as in step 16c (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 18 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE (ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10) |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

RRLP Measure Position Response (Step 18):

| Information element | Type | Value/remark |
|-------------------------------|----------------|--|
| ASN.1 encoded referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

70.15.7 MT-LR / Multiple RRLP Requests with Different Reference Number

70.15.7.1 Conformance requirement:

When after reception of a Measure Position Request component, but before responding with a Measure Position Response or Protocol Error Component, the MS receives a new RRLP message with the Measure Position Request component, the MS aborts activity for the former component, and starts to act according to the latter component, if the old and new RRLP Measure Position Request components have different Reference Numbers.

The SMLC may use the same Reference Number or different Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS 04.31 sub clause 2.5.5

3GPP TS 04.31 sub clause 3.2

70.15.7.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with a different REFERENCE NUMBER. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.15.7.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER from the first one (this delay shall be cancelled in the event of option 2). The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing (sub-tests 3, 4 and 10). If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with a different REFERENCE NUMBER from the second one. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST, including the possibility of repeating the request for more assistance data (Option 2b). The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2).

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | |

| | | | |
|-----|--|---------------------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request 1 |
| 16 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 17. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) within 8 seconds, then the SS continues to step 16a. |
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only : RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS (Option 2) | | Option 2 only : MS is performing the measurement |
| 17 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST with different reference number and same extended reference IE as in step 15 (Option 1) or RRLP MEASURE POSITION REQUEST with different reference number and same extended reference IE as in step 16c (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 18 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10 (Option 1 or 2a). Check reference number is 2 or locationError with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2b) Check reference number is 2 |

| | | | |
|-----|----------|----------------------------|---|
| 18a | SS -> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data. If the MS requested additional assistance data in step 18 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 18b | MS -> SS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 18a, the MS acknowledges the received assistance data. |
| 18c | SS-> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Measure Position Request. If the MS requested additional assistance data in step 18 that is available in the SS, this message may include further assistance data. |
| 18d | MS -> SS | RR APPLICATION INFORMATION | Option 2b only : RRLP Measure Position Response. If the MS requested additional assistance data in step 18, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

RRLP Measure Position Response (Step 16 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|-----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10.. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 16a):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 16c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 16 (Option 2). |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 16 (Option 2). |

RRLP Measure Position Request (Step 17 (Option 1 or Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | Enumerated | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | Enumerated | oneSet |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |

RRLP Measure Position Response (Step 18 (Option 1 or 2a) or Step 18d (Option 2b)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable except gpsAssDataMissing or ganssAssDataMissing |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 18 (Option 2b)):

| Information element | Type | Value/remark |
|--------------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 18a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 18 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 18 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 18c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 18 (Option 2b). |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 18 (Option 2b). |

70.15.8 MT-LR / Multiple RRLP Requests with Different Extended Reference Number

70.15.8.1 Conformance requirement:

When after reception of a Measure Position Request component, but before responding with a Measure Position Response or Protocol Error Component, the MS receives a new RRLP message with the Measure Position Request component, the MS aborts activity for the former component, and starts to act according to the latter component, if the old and new RRLP Measure Position Request components have different Extended Reference Numbers.

The SMLC may use the same Extended Reference Number or different Extended Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS04.31 sub clause 2.5.5

3GPP TS04.31 sub clause 3.2

70.15.8.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if the second RRLP MEASURE POSITION REQUEST is received with a different EXTENDED REFERENCE NUMBER. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS shall send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.15.8.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds, the SS sends the second RRLP MEASURE POSITION REQUEST with a different EXTENDED REFERENCE IE and the same REFERENCE NUMBER as the first one (this delay shall be cancelled in the event of option 2). The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST. The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set to ganssAssDataMissing or gpsAssDataMissing (sub-tests 3, 4 and 10). If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends the third RRLP MEASURE POSITION REQUEST with a different EXTENDED REFERENCE IE and the same REFERENCE NUMBER as the second one. The MS shall terminate the current location measurement and perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST, including the possibility of repeating the request for more assistance data (Option 2b). The MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data after finishing the measurement.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2).

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS->SS | CLASSMARK CHANGE | "mobile station classmark 2" includes settings for ES_IND. "mobile station classmark 3" includes settings for Positioning. The setting for positioning specifies Positioning Method capability and Positioning Method Support. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | |

| | | | |
|-----|--|---------------------------------------|---|
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 16 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 17. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing for Sub-Tests 3, 4 and 10 within 8 seconds, then the SS continues to step 16a. |
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP assistanceDataAck. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS (Option 2) | | Option 2 only : MS is performing the measurement |
| 17 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST with same reference number and different extended reference IE as in step 15 (Option 1) or RRLP MEASURE POSITION REQUEST with same reference number and different extended reference IE as in step 16c (Option2) Note: The satellite signals should be made available to MS after sending this message |
| 18 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10 (Option 1 or 2a). Check extended reference IE is the equal to the one contained in the request of step 17 or locationError with ganssAssDataMissing or gpsAssDataMissing (Sub-Tests 3, 4 and 10) and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2b) Check extended reference IE is the equal to the one contained in the request of step 17 |

| | | | |
|-----|----------|----------------------------|---|
| 18a | SS -> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data. If the MS requested additional assistance data in step 18 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 18b | MS -> SS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 18a, the MS acknowledges the received assistance data. |
| 18c | SS-> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Measure Position Request. If the MS requested additional assistance data in step 18 that is available in the SS, this message may include further assistance data. |
| 18d | MS -> SS | RR APPLICATION INFORMATION | Option 2b only: RRLP Measure Position Response. If the MS requested additional assistance data in step 18, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 16c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 16 (Option 2). |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262143 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 16. |

RRLP Measure Position Request (Step 17 (Option 1 or Option 2)):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | Enumerated | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | Enumerated | oneSet |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262142 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |

RRLP Measure Position Response (Step 18 (Option 1 or 2a) or Step 18d (Option 2b)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 1 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable except gpsAssDataMissing or ganssAssDataMissing |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 18 (Option 2b)):

| Information element | Type | Value/remark |
|--------------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: ganssAssDataMissing or gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 18a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 18 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 18 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 18c):

| Information element | Type | Value/remark |
|---------------------|----------------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 18 (Option 2b). |
| extended-reference | SEQUENCE | |
| smlc-code | Integer, 0 to 63 | 63 |
| transaction-ID | Integer, 0 to 262143 | 262142 |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 18 (Option 2b). |

70.15.9 MT-LR / RR Management Commands

70.15.9.1 Conformance requirement

A target MS shall terminate any positioning procedure or the transfer of RRLP positioning assistance data without sending any response to the SMLC if any RR message is received from the BSC that starts some other RR management procedure, including a new positioning procedure. The new RR procedure shall then be executed by the MS.

Upon receiving the HO or other RR management command, the MS will stop the location procedure and start on handover or other RR management procedure, since this has higher priority than location. The MS will then send the HO complete or other RR management response message to BSC.

The SMLC may use the same Reference Number or different Reference Numbers for different RRLP components within the same pseudo-segmentation sequence.

Test References

3GPP TS 03.71 sub clause 7.11.5,

3GPP TS 03.71 sub clause 10.6

3GPP TS 04.31 sub clause 3.2

70.15.9.2 Test Purpose

Verifies that a MS sends a correct positioning capability via control classmark sending. MS shall terminate the current location measurement if an RR MANAGEMENT command is received during the measurement procedure. The MS shall send an RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The MS shall perform the measurement according to the newly received RRLP MEASURE POSITION REQUEST and send back RRLP MEASURE POSITION RESPONSE to SS after finishing the measurement.

70.15.9.3 Method of Test

Initial Conditions:

System Simulator:

Serving Cell: default parameters.

Satellite signals: No GPS signal available.

Mobile Station:

The MS is MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements

-

PIXIT statements

-

Test Procedure:

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

The MS is paged with a PAGING REQUEST TYPE 1 message. The MS performs control early classmark sending to provide LCS positioning method capability.

After sending CIPHERING MODE COMPLETE message the MS receives RR APPLICATION INFORMATION messages containing RRLP Assistance Data messages.

The SS then sends an RR APPLICATION INFORMATION message containing an RRLP Measure Position Request including further assistance data to start the measurement.

Option 1: The MS then performs positioning measurements. After a delay of 8 seconds the SS sends an RR MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends an RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST (possibly by requesting additional assistance data first).

Option 2: The MS may request additional assistance data by immediately sending an RRLP Measure Position Response message containing a location error with IE LocErrorReason set ganssAssDataMissing or gpsAssDataMissing. If the MS requests additional assistance data that is available in the SS, then the SS provides the requested assistance data in zero, one or more RRLP Assistance Data delivery messages followed by a second RRLP Measure Position Request message which may include further assistance data. If the MS requests additional assistance data and the entire requested assistance data is not available in the SS, then the SS sends the second RRLP Measure Position Request message without assistance data. The MS then performs positioning measurements and the SS sends a RR

MANAGEMENT command. The MS shall terminate the current location measurement and perform the RR MANAGEMENT command. The MS sends a RR MANAGEMENT RESPONSE message to SS when the RR MANAGEMENT procedure is complete. The SS sends a new RRLP MEASURE POSITION REQUEST including assistance data and the MS either sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data finishing the measurement according to the newly received RRLP MEASUREMENT POSITION REQUEST or requests more assistance data and then sends RRLP MEASURE POSITION RESPONSE to SS with the measurement data.

The satellite signals should be made available after sending the second Measure Position request (in case of option 1) and third Measure Position request (in case of option 2).

Maximum duration of the test:

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|--|---------------------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE I | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in SABM. "mobile station classmark 2" includes settings for ES_IND. |
| 5 | MS -> SS | CLASSMARK CHANGE | "mobile station classmark 2" including settings for ES IND and CM3 supported. "mobile station classmark 3" includes settings for Positioning according to 3GPP TS 24.008, table 10.5.1.7. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESP | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 12 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 13 | SS -> MS | RR APPLICATION INFORMATION | RRLP Assistance Data |
| 14 | MS -> SS | RR APPLICATION INFORMATION | RRLP Assistance Data Ack |
| 15 | SS -> MS | RR APPLICATION INFORMATION | RRLP Measure Position Request |
| 16 | MS (Option 1) or MS ->SS (Option 2) | - or RR APPLICATION INFORMATION | If no message is received from the MS within 8 seconds, then the SS shall assume that the MS is performing the measurement (Option 1). The SS continues to step 17. If the MS sends RRLP Measure Position Response: locationError (Option 2) with ganssAssDataMissing or gpsAssDataMissing for Sub-Tests 3, 4 and 10 within 8 seconds, then the SS continues to step 16a. |
| 16a | SS -> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data. If the MS requested additional assistance data in step 16 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 16b | MS -> SS | RR APPLICATION INFORMATION | Option 2 only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 16a, the MS acknowledges the received assistance data. |
| 16c | SS-> MS | RR APPLICATION INFORMATION | Option 2 only: RRLP Measure Position Request. If the MS requested additional assistance data in step 16 that is available in the SS, this message may include further assistance data. |
| 16d | MS (Option 2) | | Option 2 only: MS is performing the measurement |
| 17 | SS -> MS | RR MANAGEMENT COMMAND | |
| 18 | MS -> SS | RR MANAGEMENT COMPLETE | MS terminates the measurement procedure and act on the RR management command |

| | | | |
|-----|----------|----------------------------|---|
| 19 | SS -> MS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION REQUEST (Option 1) or RRLP MEASURE POSITION REQUEST (Option 2) Note: The satellite signals should be made available to MS after sending this message |
| 20 | MS -> SS | RR APPLICATION INFORMATION | RRLP MEASURE POSITION RESPONSE ganssMeasureInfo and gps-measureInfo for Sub-Tests 3, 4 and 10 (Option 1 or 2a). or locationError with gpsAssDataMissing (Sub-Tests 3, 4 and 10) or ganssAssDataMissing and additionalAssistanceData including gpsAssistanceData (Sub-Tests 3, 4 and 10) and/or ganssAssistanceData (Option 2b) |
| 20a | SS -> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data. If the MS requested additional assistance data in step 20 that is available in the SS, then SS provides the requested data in zero, one or more RRLP Assistance Data delivery messages. |
| 20b | MS -> SS | RR APPLICATION INFORMATION | Option 2b only: RRLP Assistance Data Ack. If the SS sent additional assistance data in step 20a, the MS acknowledges the received assistance data. |
| 20c | SS-> MS | RR APPLICATION INFORMATION | Option 2b only: RRLP Measure Position Request. If the MS requested additional assistance data in step 20 that is available in the SS, this message may include further assistance data. |
| 20d | MS -> SS | RR APPLICATION INFORMATION | Option 2b only: RRLP Measure Position Response. If the MS requested additional assistance data in step 20, this message contains ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10). |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

RRLP Measure Position Response (Step 16 (Option 2)):

| Information element | Type | Value/remark |
|--------------------------|-----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionRsp |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 16a):

| Information element | Type | Value/remark |
|---------------------|-----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 section 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 16 (Option 2) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 section 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 16c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 1 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 section 6.1.4 as requested by the MS in step 16 (Option 2). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 16 (Option 2). |

RR Management Command (Classmark Enquiry) (Step 17):

| Information element | Value/remark |
|--------------------------------|-------------------------------|
| Encoded | (06 13) |
| Protocol Discriminator | RR Management Protocol (0110) |
| Skip Indicator | |
| Classmark Enquiry Message Type | 0001 0011 |

RRLP Measure Position Request (Step 19 (Option 1 or Option 2)):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | Enumerated | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| accuracy | Integer (0-127) | 127 |
| useMultipleSets | Enumerated | oneSet |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |

RRLP Measure Position Response (Step 20 (Option 1 or 2a) or Step 20d (Option 2b)):

| Information element | Type | Value/remark |
|---------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| gps-MeasureInfo | SEQUENCE | Any value of the parameters is acceptable. |
| locationError | SEQUENCE | Any error value is acceptable |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |
| ganssMeasureInfo | SEQUENCE | Any value is acceptable |

RRLP Measure Position Response (Step 20 (Option 2b)):

| Information element | Type | Value/remark |
|--------------------------|----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | msrPositionRsp (A valid response will contain ganssMeasureInfo and gps-MeasureInfo (Sub-Tests 3, 4 and 10); otherwise locationError will be returned) |
| locationError | SEQUENCE | |
| locErrorReason | ENUMERATED | Sub-Tests 1, 2 and 9: ganssAssDataMissing Sub-Tests 3, 4 and 10: gpsAssDataMissing |
| additionalAssistanceData | SEQUENCE | |
| gpsAssistanceData | OCTET STRING | Indicates missing assistance data elements. This field shall only be present for Sub-Tests 3, 4 and 10. |
| ganssAssistanceData | OCTET STRING | Indicates missing GANSS assistance data elements |
| extended-reference | SEQUENCE | The value returned by the MS shall equal the value received from the SS in the earlier Measure Position Request |

RRLP Assistance Data (Step 20a):

| Information element | Type | Value/remark |
|---------------------|----------------|---|
| ASN.1 encoded | | |
| referenceNumber | Integer,0 to 7 | 2 |
| component | CHOICE | assistanceData |
| gps-AssistData | SEQUENCE | If the MS requested further assistance data in Step 20 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the requested assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |
| moreAssDataToBeSent | ENUMERATED | 1, except in the case of the final Assistance Data message when the following Measure Position Request contains no additional Assistance Data (in which case: 0) |
| extended-reference | SEQUENCE | |
| ganss-AssistData | SEQUENCE | If the MS requested further assistance data in Step 20 (Option 2b) that is available in the SS, SS shall send zero, one or more RRLP Assistance Data messages containing the assistance data from TS 51.010-7 sub clause 6.1.4. Each message shall contain a maximum of 242 octets. |

RRLP Measure Position Request (Step 20c):

| Information element | Type | Value/remark |
|---------------------|-----------------|--|
| ASN.1 encoded | | |
| referenceNumber | Integer, 0 to 7 | 2 |
| component | CHOICE | msrPositionReq |
| methodType | CHOICE | msBased |
| positionMethod | ENUMERATED | gps |
| measureResponseTime | Integer 0 to 7 | 5 |
| useMultipleSets | ENUMERATED | oneSet |
| gps-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 20 (Option 2b). |
| extended-reference | SEQUENCE | |
| ganssPositionMethod | BIT STRING | Sub-Test 1: bit 5 set to value 1 Sub-Test 2: bit 1 set to value 1 Sub-Test 3: bits 0 and 3 set to value 1 Sub-Test 4: bits 0 and 5 set to value 1 Sub-Test 9: bit 6 set to value 1 Sub Test 10: bits 0 and 6 set to value 1 |
| ganss-AssistData | SEQUENCE | May contain further assistance data from TS 51.010-7 sub clause 6.1.4 as requested by the MS in step 20 (Option 2b). |

70.16 A-GNSS Minimum Performance tests

This sub clause specifies the measurement procedures for the conformance test of the minimum performance requirements for GSM user equipment (MS) that supports Assisted Global Navigation Satellite Systems (A-GNSS). It excludes performance requirements for MSs where the only A-GNSS supported is A-GPS L1C/A which are specified in sub clause 70.11

70.16.2 GNSS test conditions

70.16.2.1 GNSS signals

The GNSS signal is defined at the A-GNSS antenna connector of the MS. For MS with integral antenna only, a reference antenna with a gain of 0 dBi is assumed.

70.16.2.2 GNSS frequency

The GNSS signals shall be transmitted with a frequency accuracy of ± 0.025 PPM.

70.16.2.3 GNSS static propagation conditions

The propagation for the static performance measurement is an Additive White Gaussian Noise (AWGN) environment. No fading and multi-paths exist for this propagation model.

70.16.2.4 GNSS multi-path conditions

Doppler frequency difference between direct and reflected signal paths is applied to the carrier and code frequencies. The Carrier and Code Doppler frequencies of LOS and multi-path for GNSS signals are defined in table 70.16.2.1.

Table 70.16.2.1: Multi-path Conditions for GNSS Signals

| Initial relative Delay [GNSS chip] | Carrier Doppler frequency of tap [Hz] | Code Doppler frequency of tap [Hz] | Relative mean Power [dB] |
|---------------------------------------|--|---------------------------------------|-----------------------------|
| 0 | F_d | F_d / N | 0 |
| X | $F_d - 0.1$ | $(F_d - 0.1) / N$ | Y |

NOTE: Discrete Doppler frequency is used for each tap.

Where the X and Y depends on the GNSS signal type and is shown in Table 70.16.2.2, and N is the ratio between the transmitted carrier frequency of the signals and the transmitted chip rate as shown in Table 70.16.2.3 (where k in Table 70.16.2.3 is the GLONASS frequency channel number).

Table 70.16.2.2

| System | Signals | X [m] | Y [dB] |
|-----------------------|---------|-------|--------|
| Galileo | E1 | 125 | -4.5 |
| | E5a | 15 | -6 |
| | E5b | 15 | -6 |
| GPS/Modernized GPS | L1 C/A | 150 | -6 |
| | L1C | 125 | -4.5 |
| | L2C | 150 | -6 |
| | L5 | 15 | -6 |
| GLONASS | G1 | 275 | -12.5 |
| | G2 | 275 | -12.5 |
| BDS | B1I | 75 | -4.5 |

Table 70.16.2.3

| System | Signals | N |
|-----------------------|---------|--------------------------|
| Galileo | E1 | 1540 |
| | E5a | 115 |
| | E5b | 118 |
| GPS/Modernized GPS | L1 C/A | 1540 |
| | L1C | 1540 |
| | L2C | 1200 |
| | L5 | 115 |
| GLONASS | G1 | $3135.03 + k \cdot 1.10$ |
| | G2 | $2438.36 + k \cdot 0.86$ |
| BDS | B1I | 763 |

The initial carrier phase difference between taps shall be randomly selected between 0 and 2π radians. The initial value shall have uniform random distribution.

70.16.2.5 Mobile stations supporting multiple GNSS signals

For mobile stations supporting multiple GNSS signals, different minimum performance requirements may be associated with different signals. The satellite simulator shall generate all signals supported by the MS. Signals not supported by the MS do not need to be simulated. The relative power levels of each signal type for each GNSS are defined in Table 70.16.2.4. The individual test scenarios define the reference signal power level for each satellite. The power level of each simulated satellite signal type shall be set to the reference signal power level defined in each test scenario plus the relative power level defined in Table 70.16.2.4.

Table 70.16.2.4: Relative signal power levels for each signal type for each GNSS

| | Galileo | | GPS/Modernized GPS | | GLONASS | | QZSS | | SBAS | | BDS | | |
|--|--|-------|--------------------|---------|---------|-------|------|---------|------|----|------|-----|-------|
| | Signal power levels relative to reference power levels | E1 | 0 dB | L1 C/A | 0 dB | G1 | 0 dB | L1 C/A | 0 dB | L1 | 0 dB | B1I | D1 |
| | E6 | +2 dB | L1C | +1.5 dB | G2 | -6 dB | L1C | +1.5 dB | | | | D2 | +5 dB |
| | E5 | +2 dB | L2C | -1.5 dB | | | L2C | -1.5 dB | | | | | |
| | | | L5 | +3.6 dB | | | L5 | +3.6 dB | | | | | |

NOTE 1: For test cases which involve "Modernized GPS", the satellite simulator shall also generate the GPS L1 C/A signal if the MS supports "GPS" in addition to "Modernized GPS".

NOTE 2: The signal power levels in the Test Parameter Tables represent the total signal power of the satellite per channel not e.g. pilot and data channels separately.

NOTE 3: For test cases which involve "BDS", D1 represents MEO/IGSO satellites B1I signal type and D2 represents GEO satellites B1I signal type.

70.16.2.6 GNSS multi System Time Offsets

If more than one GNSS is used in a test, the accuracy of the GNSS-GNSS Time Offsets used at the system simulator shall be better than 3 ns.

70.16.3 GSM and other test conditions

70.16.3.1 GSM frequency band and frequency range

The tests in this sub clause are performed on one of the mid range ARFCNs of the GSM operating frequency band of the MS. The ARFCNs to be used for mid range are defined in Table 3.3.

If the MS supports multiple frequency bands then the Sensitivity tests in clause 70.16.5 shall be repeated in each supported frequency band.

70.16.3.2 Sensors

The minimum performances shall be met without the use of any data coming from sensors that can aid the positioning. A dedicated test message 'RESET MS POSITIONING STORED INFORMATION' has been defined in TS 44.014 for the purpose of disabling any such sensors.

70.16.4 A-GNSS test conditions

70.16.4.1 General

This sub clause defines the minimum performance requirements for both MS based and MS assisted A-GNSS terminals. If a terminal supports both modes then it shall be tested in both modes.

70.16.4.2 Measurement parameters

70.16.4.2.1 MS based A-GNSS measurement parameters

In case of MS-based A-GNSS, the measurement parameters are contained in the RRLP GANSS LOCATION INFORMATION IE. The measurement parameter is the horizontal position estimate reported by the MS and expressed in latitude/longitude.

70.16.4.2.2 MS assisted A-GNSS measurement parameters

In case of MS-assisted A-GNSS, the measurement parameters are contained in the RRLP GANSS MEASUREMENT INFORMATION IE, and in the RRLP GPS MEASUREMENT INFORMATION IE if GPS L1C/A is supported. The measurement parameters are the MS GANSS Code Phase measurements and the MS GPS Code Phase measurements (if supported). The MS GANSS Code Phase measurements and MS GPS Code Phase measurements are converted into a horizontal position estimate using the procedure detailed in clause 70.16.4.3.

70.16.4.2.3 2D position error

The 2D position error is defined by the horizontal difference in meters between the ellipsoid point reported or calculated from the MS Measurement Report and the actual simulated position of the MS in the test case considered.

70.16.4.2.4 Response time

Max Response Time is defined as the time starting from the moment that the MS has received the final RRLP MEASURE POSITION REQUEST sent before the MS sends the MEASURE POSITION RESPONSE containing the Location Information or the GPS and GANSS Measurement Information, and ending when the MS starts sending the MEASURE POSITION RESPONSE containing the Location Information or the GPS and GANSS Measurement Information on the Air interface. The response times specified for all test cases are Time-to-First-Fix (TTFF), i.e. the MS shall not re-use any information on GNSS time, location or other aiding data that was previously acquired or calculated and stored internally in the MS. A dedicated test message 'RESET MS POSITIONING STORED INFORMATION' has been defined in TS 44.014 for the purpose of deleting this information.

70.16.4.3 Converting MS-assisted measurement reports into position estimates

To convert the MS measurement reports in case of MS-assisted mode of A-GNSS into position errors, a transformation between the "measurement domain" (code-phases, etc.) into the "state" domain (position estimate) is necessary. Such a transformation procedure is outlined in the following clauses. The details can be found in [ICD-GPS 200], [IS-GPS-705], [IS-GPS-800], [SBAS], [IS-QZSS], [GLONASS -ICD], [Galileo-ICD], [P. Axelrad, R.G. Brown], [S.K. Gupta] and [BDS-ICD].

70.16.4.3.1 MS measurement reports

In case of MS-assisted A-GANSS, the measurement parameters are contained in the RRLP GANSS MEASUREMENT INFORMATION ELEMENT (sub clause A.3.2.10 in 3GPP TS 44.031). In case the MS provides also measurements on the GPS L1 C/A signal, the measurement parameters are contained in the RRLP GPS MEASUREMENT INFORMATION ELEMENT (sub clause A.3.2.5 in 3GPP TS 44.031). The measurement parameters required for calculating the MS position are:

1) Reference Time: The MS has two choices for the Reference Time:

- a) "Reference Frame";
- b) "GANSS TOD" and/or "GPS TOW" if GPS L1 C/A signal measurements are also provided.

NOTE: It is not expected that an MS will ever report both a GANSS TOD and a GPS TOW. However if two time stamps are provided and they derive from different user times, be aware that no compensation is made for this difference and this could affect the location accuracy.

2) Measurement Parameters for each GANSS and GANSS Signal: 1 to <maxSat>:

- a) "SV ID"; mapping according to Table A.10.14 in 3GPP TS 44.031;
- b) "Code Phase";
- c) "Integer Code Phase";
- d) "Code Phase RMS Error";

3) Additional Measurement Parameters in case of GPS L1 C/A signal measurements are also provided: 1 to <maxSat>:

- a) "Satellite ID (SV PRN)";
- b) "Whole GPS chips";

- c) "Fractional GPS Chips";
- d) "Pseudorange RMS Error".

Additional information required at the system simulator:

- 1) "Reference Location" (sub clause A.4.2.4 or A.4.2.6.1 in 3GPP TS 44.031):
Used for initial approximate receiver coordinates.
- 2) "GANSS Navigation Model" (sub clause A.4.2.6.2 in 3GPP TS 44.031):
Contains the ephemeris and clock correction parameters as specified in the relevant ICD of each supported GANSS; used for calculating the satellite positions and clock corrections.
- 3) "GANSS Ionospheric Model" (sub clause A.4.2.6.1 in 3GPP TS 44.031):
Contains the ionospheric parameters which allow the single frequency user to utilize the ionospheric model as specified in [Galileo-ICD] for computation of the ionospheric delay.
- 4) "GANSS Additional Ionospheric Model" (sub clause A.4.2.6.1 in 3GPP TS 44.031):
Contains the ionospheric parameters which allow the single frequency user to utilize the ionospheric model as specified in [QZSS-ICD] and [BDS-ICD] for computation of the ionospheric delay.
- 5) "GANSS Time Model" (sub clause A.4.2.6.2 in 3GPP TS 44.031):
Contains the GNSS-GNSS Time Offset for each supported GANSS. Note, that "GANSS Time Model" IE contains only the sub-ms part of the offset. Any potential integer seconds offset may be obtained from "UTC Model" (sub clause A.4.2.4 in 3GPP TS 44.031), "GANSS UTC Model" (sub clause A.4.2.6.2 in 3GPP TS 44.031), or "GANSS Additional UTC Model" (sub clause A.4.2.6.2 in 3GPP TS 44.031).
- 6) "Navigation Model" (sub clause A.4.2.4 in 3GPP TS 44.031):
Contains the GPS ephemeris and clock correction parameters as specified in [IS-GPS-200]; used for calculating the GPS satellite positions and clock corrections in case of GPS L1 C/A signal measurements are the only GPS measurements provided in addition to GANSS measurements.
- 7) "Ionospheric Model" (sub clause A.4.2.4 in 3GPP TS 44.031):
Contains the ionospheric parameters which allow the single frequency user to utilize the ionospheric model as specified in [IS-GPS 200] for computation of the ionospheric delay.

70.16.4.3.2 WLS position solution

The WLS position solution problem is concerned with the task of solving for four unknowns; x_u, y_u, z_u the receiver coordinates in a suitable frame of reference (usually ECEF) and b_u the receiver clock bias relative to the selected GNSS specific system time. It typically requires the following steps:

Step 1: Formation of pseudo-ranges

The observation of code phase reported by the MS for each satellite SV_i is related to the pseudo-range/c modulo the "GANSS Code Phase Ambiguity", or modulo 1 ms (the length of the C/A code period) in case of GPS L1 C/A signal measurements. For the formation of pseudo-ranges, the integer number of milliseconds to be added to each code-phase measurement has to be determined first. Since 1 ms corresponds to a travelled distance of 300 km, the number of integer ms can be found with the help of reference location and satellite ephemeris. The distance between the reference location and each satellite SV_i at the time of measurement is calculated, and the integer number of milliseconds to be added to the MS code phase measurements is obtained.

Step 2: Correction of pseudo-ranges for the GNSS-GNSS time offsets

In case the MS reports measurements for more than a single GNSS, the pseudo-ranges are corrected for the time offsets between the GNSSs relative to the selected reference time using the GNSS-GNSS time offsets available at the system simulator:

$$\rho_{GNSS_m,i} \equiv \rho_{GNSS_m,i} - c \cdot (t_{GNSS_k} - t_{GNSS_m}),$$

where $\rho_{GNSS_m,i}$ is the measured pseudo-range of satellite i of GNSS_m. The system time t_{GNSS_k} of GNSS_k is the reference time frame, and $(t_{GNSS_k} - t_{GNSS_m})$ is the available GNSS-GNSS time offset, and c is the speed of light.

Step 3: Formation of weighting matrix

The MS reported "Code Phase RMS Error" and/or "Pseudorange RMS Error" values are used to calculate the weighting matrix for the WLS algorithm described in [P. Axelrad, R.G. Brown]. According to 3GPP TS 44.031, the encoding for these fields is a 6 bit value that consists of a 3 bit mantissa, X_i and a 3 bit exponent, Y_i for each SV _{i} of GNSS _{j} :

$$w_{GNSS_j,i} = RMSError = 0.5 \times \left(1 + \frac{X_i}{8} \right) \times 2^{Y_i}$$

The weighting Matrix \mathbf{W} is defined as a diagonal matrix containing the estimated variances calculated from the "Code Phase RMS Error" and/or "Pseudorange RMS Error" values:

$$\mathbf{W} = \text{diag} \left\{ 1/w_{GNSS_1,1}^2, 1/w_{GNSS_1,2}^2, \dots, 1/w_{GNSS_1,n}^2, \dots, 1/w_{GNSS_m,1}^2, 1/w_{GNSS_m,2}^2, \dots, 1/w_{GNSS_m,l}^2 \right\}$$

Step 4: WLS position solution

The WLS position solution is described in e.g., [P. Axelrad, R.G. Brown] and usually requires the following steps:

- 1) Computation of satellite locations at time of transmission using the ephemeris parameters and user algorithms defined in the relevant ICD of the particular GNSS. The satellite locations are transformed into WGS-84 reference frame, if needed.
- 2) Computation of clock correction parameters using the parameters and algorithms as defined in the relevant ICD of the particular GNSS.
- 3) Computation of atmospheric delay corrections using the parameters and algorithms defined in the relevant ICD of the particular GNSS for the ionospheric delay, and using the Gupta model defined in [S.K. Gupta] p. 121 equation (2) for the tropospheric delay. For GNSSs which do not natively provide ionospheric correction models (e.g., GLONASS), the ionospheric delay is determined using the available ionospheric model adapted to the particular GNSS frequency.
- 4) The WLS position solution starts with an initial estimate of the user state (position and clock offset). The Reference Location is used as initial position estimate. The following steps are required:
 - a) Calculate geometric range (corrected for Earth rotation) between initial location estimate and each satellite included in the MS measurement report.
 - b) Predict pseudo-ranges for each measurement including clock and atmospheric biases as calculated in 1) to 3) above and defined in the relevant ICD of the particular GNSS and [P. Axelrad, R.G. Brown].
 - c) Calculate difference between predicted and measured pseudo-ranges Δp .
 - d) Calculate the "Geometry Matrix" \mathbf{G} as defined in [P. Axelrad, R.G. Brown]:

$$\mathbf{G} \equiv \begin{bmatrix} -\hat{\mathbf{1}}_{GNSS_1,1}^T & 1 \\ -\hat{\mathbf{1}}_{GNSS_1,2}^T & 1 \\ \vdots & \vdots \\ -\hat{\mathbf{1}}_{GNSS_1,n}^T & 1 \\ \vdots & \vdots \\ -\hat{\mathbf{1}}_{GNSS_m,1}^T & 1 \\ -\hat{\mathbf{1}}_{GNSS_m,2}^T & 1 \\ \vdots & \vdots \\ -\hat{\mathbf{1}}_{GNSS_m,l}^T & 1 \end{bmatrix} \text{ with } \hat{\mathbf{1}}_{GNSS_m,i} \equiv \frac{\mathbf{r}_{GNSS_m,i} - \hat{\mathbf{r}}_u}{\left| \mathbf{r}_{GNSS_m,i} - \hat{\mathbf{r}}_u \right|} \text{ where } \mathbf{r}_{GNSS_m,i} \text{ is the satellite position vector for SV}_i \text{ of GNSS}_m$$

(calculated in 1) above), and $\hat{\mathbf{r}}_u$ is the estimate of the user location.

- e) Calculate the WLS solution according to [P. Axelrad, R.G. Brown]:

$$\Delta \hat{\mathbf{x}} = \left(\mathbf{G}^T \mathbf{W} \mathbf{G} \right)^{-1} \mathbf{G}^T \mathbf{W} \Delta \rho$$

- f) Adding the $\Delta \hat{\mathbf{x}}$ to the initial state estimate gives an improved estimate of the state vector:

$$\hat{\mathbf{x}} \rightarrow \hat{\mathbf{x}} + \Delta \hat{\mathbf{x}} .$$

- 5) This new state vector $\hat{\mathbf{x}}$ can be used as new initial estimate and the procedure is repeated until the change in $\hat{\mathbf{x}}$ is sufficiently small.

Step 4: Transformation from Cartesian coordinate system to Geodetic coordinate system

The state vector $\hat{\mathbf{x}}$ calculated in Step 3 contains the MS position in ECEF Cartesian coordinates together with the MS receiver clock bias relative to the selected GNSS system time. Only the user position is of further interest. It is usually desirable to convert from ECEF coordinates x_u, y_u, z_u to geodetic latitude ϕ , longitude λ and altitude h on the WGS84 reference ellipsoid.

Step 5: Calculation of "2-D Position Errors"

The latitude ϕ / longitude λ obtained after Step 4 is used to calculate the 2-D position error.

70.16.5 Sensitivity

70.16.5.1 Sensitivity Coarse Time Assistance

70.16.5.1.1a Sub-tests

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 70.16.5.1.1.

Table 70.16.5.1.1: Sub-Test Case Number Definition

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

70.16.5.1.1 Definition

Sensitivity with coarse time assistance is the minimum level of GNSS satellite signals required for the MS to make an A-GNSS position estimate to a specific accuracy and within a specific response time when the network only provides coarse time assistance.

70.16.5.1.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.16.5.1.4 for the parameters specified in table 70.16.5.1.2.

Table 70.16.5.1.2: Test parameters for Sensitivity Coarse Time Assistance

| System | Parameters | Unit | Value |
|---|---|---------|-----------------------|
| | Number of generated satellites per system | - | See Table 70.16.5.1.3 |
| | Total number of generated satellites | - | 6 |
| | HDOP range | | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ± 2 |
| Galileo | Reference high signal power level | dBm | -142 |
| | Reference low signal power level | dBm | -147 |
| GPS ⁽¹⁾ | Reference high signal power level | dBm | -142 |
| | Reference low signal power level | dBm | -147 |
| GLONASS | Reference high signal power level | dBm | -142 |
| | Reference low signal power level | dBm | -147 |
| BDS | Reference high signal power level | dBm | -136 |
| | Reference low signal power level | dBm | -145 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.5.1.3: Power level and satellite allocation

| | | Satellite allocation for each constellation | | |
|---|-------------------|---|--------|--------|
| | | GNSS-1 ⁽¹⁾ | GNSS-2 | GNSS-3 |
| Single constellation | High signal level | 1 | - | - |
| | Low signal level | 5 | - | - |
| Dual constellation | High signal level | 1 | - | - |
| | Low signal level | 2 | 3 | - |
| Triple constellation | High signal level | 1 | - | - |
| | Low signal level | 1 | 2 | 2 |
| Note 1: For GPS capable receivers, GNSS-1, i.e. the system having the satellite with high signal level, shall be GPS. | | | | |

Table 70.16.5.1.4: Conformance requirement for Sensitivity Coarse Time Assistance

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, clause O.2.1.1.

70.16.5.1.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GNSS satellite signal conditions that represent weak signal conditions and with only Coarse Time Assistance provided by the SS.

70.16.5.1.4 Method of test

Initial conditions

Test environment: normal; see clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GNSS test parameters as specified in table 70.16.5.1.5 for GNSS scenario #1. For GNSS-1, select the first satellite SV ID defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7 for the one satellite with the higher level.
3. Switch on the MS.
4. Establish a signalling connection according to the generic procedure in clause 10.1a on a channel in the Mid ARFCN range.

Specific PICS statements

-

PIXIT statements

-

Procedure

1. Start GNSS scenario #1 as specified in clause 6.2.1.2 of TS 51.010-7 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in clause 6.2.1.2.5 of TS 51.010-7
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in clauses 6.2.2 and 6.2.6 of TS 51.010-7 for MS based testing; or clauses 6.2.4 and 6.2.6 of TS 51.010-7 for MS assisted testing with the value of GNSS TOW offset by a random value as specified in clause 6.2.6.2 of TS 51.010-7; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.16.5.1.7 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.16.5.1.7 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.5.1.7 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GNSS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in clause 70.16.4.5 and then compare the result against the simulated position of the MS, used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.5.1.7 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GNSS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. For GNSS-1, select the first satellite SV ID defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7 for the one satellite with the higher level. Use new random values for the MS location and altitude in step 1 and for the GNSS TOW offset in step 2.
6. Repeat steps 1 to 5 until the statistical requirements of clause 70.16.5.1.5 are met. Each time scenario #1 or #2 is used, the start time of the GNSS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again. Each time scenario #1 or #2 is used, for GNSS-1 select the next satellite SV ID from the one used previously, defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7, for the one satellite with the higher level.
7. Release the signalling connection.

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

| | | Satellite allocation for each constellation | | |
|---|-------------------|---|--------|--------|
| | | GNSS-1 ⁽¹⁾ | GNSS-2 | GNSS-3 |
| Single constellation | High signal level | 1 | - | - |
| | Low signal level | 5 | - | - |
| Dual constellation | High signal level | 1 | - | - |
| | Low signal level | 2 | 3 | - |
| Triple constellation | High signal level | 1 | - | - |
| | Low signal level | 1 | 2 | 2 |
| Note 1: For GPS capable receivers, GNSS-1, i.e. the system having the satellite with high signal level, shall be GPS. | | | | |

Table 70.16.5.1.7: Test requirements for Sensitivity Coarse Time Assistance

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 101.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in clause A5.5.4.

70.16.5.2 Sensitivity Fine Time Assistance

70.16.5.2.1a Sub-tests

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 70.16.5.2.1.

Table 70.16.5.2.1: Sub-Test Case Number Definition

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

70.16.5.2.1 Definition

Sensitivity with fine time assistance is the minimum level of GNSS satellite signals required for the MS to make an A-GNSS position estimate to a specific accuracy and within a specific response time when the network provides fine time assistance in addition to coarse time assistance.

70.16.5.2.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.16.5.2.4 for the parameters specified in table 70.16.5.2.2.

Table 70.16.5.2.2: Test parameters for Sensitivity Fine Time Assistance

| System | Parameters | Unit | Value |
|---|---|---------|-----------------------|
| | Number of generated satellites per system | - | See Table 70.16.5.2.3 |
| | Total number of generated satellites | - | 6 |
| | HDOP range | | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ±2 |
| | GNSS fine time assistance error range | µs | ±10 |
| Galileo | Reference signal power level | dBm | -147 |
| GPS ⁽¹⁾ | Reference signal power level | dBm | -147 |
| GLONASS | Reference signal power level | dBm | -147 |
| BDS | Reference signal power level | dBm | -147 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.5.2.3: Satellite allocation

| | Satellite allocation for each constellation | | |
|----------------------|---|--------|--------|
| | GNSS-1 | GNSS-2 | GNSS-3 |
| Single constellation | 6 | - | - |
| Dual constellation | 3 | 3 | - |
| Triple constellation | 2 | 2 | 2 |

Table 70.16.5.2.4: Conformance requirement for Sensitivity Fine Time Assistance

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, clause O.2.1.2.

70.16.5.2.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GNSS satellite signal conditions that represent weak signal conditions and with Fine Time Assistance provided by the SS.

70.16.5.2.4 Method of test

Initial conditions

Test environment: normal; see clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GNSS test parameters as specified in table 70.16.5.2.5 for GNSS scenario #1.
3. Switch on the MS.
4. Establish a signalling connection according to the generic procedure in clause 10.1a on a channel in the Mid ARFCN range.

Specific PICS statements

-

PIXIT statements

-

Procedure

1. Start GNSS scenario #1 as specified in clause 6.2.1.2 of TS 51.010-7 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in clause 6.2.1.2.5 of TS 51.010-7
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in clauses 6.2.2 and 6.2.6 of TS 51.010-7 for MS based testing; or clauses 6.2.4 and 6.2.6 of TS 51.010-7 for MS assisted testing with the values of GNSS TOW and BN offset by random values as specified in clause 6.2.6.2 of TS 51.010-7; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.16.5.2.7 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.16.5.2.7 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.5.2.7 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GNSS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in clause 70.16.4.3 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.5.2.7 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GNSS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Use new random values for the MS location and altitude in step 1 and for the GNSS TOW and BN offsets in step 2.
6. Repeat steps 1 to 5 until the statistical requirements of clause 70.16.5.2.5 are met. Each time scenario #1 or #2 is used, the start time of the GNSS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again.
7. Release the signalling connection.

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

Specific Message Contents

MEASURE POSITION REQUEST (3GPP TS 44.031 sub clause A.2) to the MS

| Information Element | Value/remark |
|--------------------------|--------------|
| Positioning Instructions | |
| Accuracy | 51.2m |
| Required Response Time | 20s |

70.16.5.2.5 Test Requirements

For the parameters specified in table 70.16.5.2.5 the MS shall meet the requirements and the success rate specified in table 70.16.5.2.7 with a confidence level of 95% according to annex A7.2.

Table 70.16.5.2.5: Test parameters for Sensitivity Fine Time Assistance

| System | Parameters | Unit | Value |
|---|---|---------|-----------------------|
| | Number of generated satellites per system | - | See Table 70.16.5.2.6 |
| | Total number of generated satellites | - | 6 |
| | HDOP range | | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ±1.8 |
| | GNSS fine time assistance error range | µs | ±9 |
| Galileo | Reference signal power level | dBm | -146 |
| GPS ⁽¹⁾ | Reference signal power level | dBm | -146 |
| GLONASS | Reference signal power level | dBm | -146 |
| BDS | Reference signal power level | dBm | -146 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.5.2.6: Satellite allocation

| | Satellite allocation for each constellation | | |
|----------------------|---|--------|--------|
| | GNSS-1 | GNSS-2 | GNSS-3 |
| Single constellation | 6 | - | - |
| Dual constellation | 3 | 3 | - |
| Triple constellation | 2 | 2 | 2 |

Table 70.16.5.2.7: Test requirements for Sensitivity Fine Time Assistance

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 101.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in clause A5.5.4.

70.16.6 Nominal Accuracy

70.16.6.1a Sub-tests

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 70.16.6.1.

Table 70.16.6.1: Sub-Test Case Number Definition

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

70.16.6.1 Definition

Nominal accuracy is the accuracy of the MS's A-GNSS position estimate under ideal GNSS signal conditions.

70.16.6.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.16.6.4 for the parameters specified in table 70.16.6.2.

Table 70.16.6.2: Test parameters for Nominal Accuracy

| System | Parameters | Unit | Value |
|---|---|---------|-----------------------|
| | Number of generated satellites per system | - | See Table 70.16.6.3 |
| | Total number of generated satellites | - | 6 or 7 ⁽²⁾ |
| | HDOP Range | - | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ±2 |
| GPS ⁽¹⁾ | Reference signal power level for all satellites | dBm | -128.5 |
| Galileo | Reference signal power level for all satellites | dBm | -127 |
| GLONASS | Reference signal power level for all satellites | dBm | -131 |
| QZSS | Reference signal power level for all satellites | dBm | -128.5 |
| SBAS | Reference signal power level for all satellites | dBm | -131 |
| BDS | Reference signal power level for all satellites | dBm | -133 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |
| NOTE 2: 7 satellites apply only for SBAS case. | | | |

If QZSS is supported, one of the GPS satellites will be replaced by a QZSS satellite with respective signal support.

If SBAS is supported, the SBAS satellite with the highest elevation will be added to the scenario.

Table 70.16.6.3: Satellite allocation

| | Satellite allocation for each constellation | | | |
|---|---|-----------------------|-----------------------|------|
| | GNSS 1 ⁽¹⁾ | GNSS 2 ⁽¹⁾ | GNSS 3 ⁽¹⁾ | SBAS |
| Single constellation | 6 | -- | -- | 1 |
| Dual constellation | 3 | 3 | -- | 1 |
| Triple constellation | 2 | 2 | 2 | 1 |
| NOTE1: GNSS refers to global systems i.e., GPS, Galileo, GLONASS and BDS. | | | | |

Table 70.16.6.4: Conformance requirement for Nominal Accuracy

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 15 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, clause O.2.2.

70.16.6.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GNSS satellite signal conditions that represent ideal conditions.

70.16.6.4 Method of test

Initial conditions

Test environment: normal; see clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GNSS test parameters as specified in table 70.16.6.5 for GNSS scenario #3.
3. Switch on the MS.
4. Establish a signalling connection according to the generic procedure in clause 10.1a on a channel in the Mid ARFCN range.

Specific PICS statements

-

PIXIT statements

-

Procedure

1. Start GNSS scenario #3 as specified in clause 6.2.1.2 of TS 51.010-7 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in clause 6.2.1.2.5 of TS 51.010-7
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in clauses 6.2.2 and 6.2.6 of TS 51.010-7 for MS based testing; or clauses 6.2.4 and 6.2.6 of TS 51.010-7 for MS assisted testing with the value of GNSS TOW offset by a random value as specified in clause 6.2.6.2 of TS 51.010-7; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.16.6.7 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.16.6.7 or reports a MS positioning error in the Measure Position Response message then record one Good Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.6.7 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GNSS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in clause 70.16.4.5 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.6.7 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GNSS scenario #4 instead of #3 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Use new random values for the MS location and altitude in step 1 and for the GNSS TOW offset in step 2.
6. Repeat steps 1 to 5 until the statistical requirements of clause 70.16.6.5 are met. Each time scenario #3 or #4 is used, the start time of the GNSS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again.
7. Release the signalling connection.

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

|--------|--------------|--------------------|-------------------|
| All | 95 % | 16.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in clause A5.5.4.

70.16.7 Dynamic Range

70.16.7.1a Sub-tests

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 70.16.7.1.

Table 70.16.7.1: Sub-Test Case Number Definition

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

70.16.7.1 Definition

Dynamic Range is the maximum difference in level of the GNSS signals from a number of satellites that allows the MS to make an A-GNSS position estimate with a specific accuracy and a specific response time.

70.16.7.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.16.7.4 for the parameters specified in table 70.16.7.2.

Table 70.16.7.2: Test parameters for Dynamic Range

| System | Parameters | Unit | Value |
|---|---|---------|---------------------|
| | Number of generated satellites per system | - | See Table 70.16.7.3 |
| | Total number of generated satellites | - | 6 |
| | HDOP Range | - | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ±2 |
| Galileo | Reference high signal power level | dBm | -127,5 |
| | Reference low signal power level | dBm | -147 |
| GPS ⁽¹⁾ | Reference high signal power level | dBm | -129 |
| | Reference low signal power level | dBm | -147 |
| GLONASS | Reference high signal power level | dBm | -131.5 |
| | Reference low signal power level | dBm | -147 |
| BDS | Reference high signal power level | dBm | -133.5 |
| | Reference low signal power level | dBm | -145 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.7.3: Power level and satellite allocation

| | | Satellite allocation for each constellation | | |
|--|-------------------|---|-----------------------|-----------------------|
| | | GNSS 1 ⁽¹⁾ | GNSS 2 ⁽¹⁾ | GNSS 3 ⁽¹⁾ |
| Single constellation | High signal level | 2 | -- | -- |
| | Low signal level | 4 | -- | -- |
| Dual constellation | High signal level | 1 | 1 | -- |
| | Low signal level | 2 | 2 | -- |
| Triple constellation | High signal level | 1 | 1 | 1 |
| | Low signal level | 1 | 1 | 1 |
| NOTE 1: GNSS refers to global systems i.e., GPS, Galileo, GLONASS and BDS. | | | | |

Table 70.16.7.4: Conformance requirement for Dynamic Range

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, clause O.2.3.

70.16.7.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GNSS satellite signal conditions that have a wide dynamic range. Strong satellites are likely to degrade the acquisition of weaker satellites due to their cross-correlation products.

70.16.7.4 Method of test

Initial conditions

Test environment: normal; see clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GNSS test parameters as specified in table 70.16.7.5 for GNSS scenario #1. Randomly select from the satellite SV IDs defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7 for the satellites with the higher levels.
3. Switch on the MS.
4. Establish a signalling connection according to the generic procedure in clause 10.1a on a channel in the Mid ARFCN range.

Specific PICS statements

-

PIXIT statements

-

Procedure

1. Start GNSS scenario #1 as specified in clause 6.2.1.2 of TS 51.010-7 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in clause 6.2.1.2.5 of TS 51.010-7
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in clauses 6.2.2 and 6.2.6 of TS 51.010-7 for MS based testing; or clauses 6.2.4 and 6.2.6 of TS 51.010-7 for MS assisted testing with the value of GNSS TOW offset by a random value as specified in clause 6.2.6.2 of TS 51.010-7; as required to obtain a fix.
3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.16.7.7 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.16.7.7 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.7.7 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GNSS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in clause 70.16.4.5 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.7.7 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GNSS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Randomly select from the satellite SV IDs defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7 for the satellites with the higher levels. Use new random values for the MS location and altitude in step 1 and for the GNSS TOW offset in step 2.

6. Repeat steps 1 to 5 until the statistical requirements of clause 70.16.7.5 are met. Each time scenario #1 or #2 is used, the start time of the GNSS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again. Each time scenario #1 or #2 is used, randomly select from the satellite SV IDs defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7, for the satellites with the higher levels.

7. Release the signalling connection.

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

| BDS | Reference high signal power level | dBm | -132.7 |
| | Reference low signal power level | dBm | -144 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.7.6: Power level and satellite allocation

| | | Satellite allocation for each constellation | | |
|---|-------------------|---|-----------------------|-----------------------|
| | | GNSS 1 ⁽¹⁾ | GNSS 2 ⁽¹⁾ | GNSS 3 ⁽¹⁾ |
| Single constellation | High signal level | 2 | -- | -- |
| | Low signal level | 4 | -- | -- |
| Dual constellation | High signal level | 1 | 1 | -- |
| | Low signal level | 2 | 2 | -- |
| Triple constellation | High signal level | 1 | 1 | 1 |
| | Low signal level | 1 | 1 | 1 |
| NOTE1: GNSS refers to global systems i.e., GPS, Galileo, GLONASS and BDS. | | | | |

Table 70.16.7.7: Test requirements for Dynamic Range

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 101.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in clause A5.5.4.

70.16.8 Multi-Path scenario

70.16.8.1a Sub-tests

This test case includes sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 70.16.8.1.

Table 70.16.8.1: Sub-Test Case Number Definition

| Sub-Test Case Number | Supported GNSS |
|----------------------|---|
| 1 | MS supporting A-GLONASS only |
| 2 | MS supporting A-Galileo only |
| 3 | MS supporting A-GPS and Modernized GPS only |
| 4 | MS supporting A-GPS and A-GLONASS only |
| 5 | Reserved |
| 6 | Reserved |
| 7 | Reserved |
| 8 | Reserved |
| 9 | MS supporting A-BDS only |
| 10 | MS supporting A-GPS and A-BDS only |

70.16.8.1 Definition

Multi-path performance measures the accuracy and response time of the MS's A-GNSS position estimate in a specific GNSS signal multi-path environment.

70.16.8.2 Conformance requirement

The first fix position estimates shall meet the accuracy and response time requirements in table 70.16.8.4 for the parameters specified in table 70.16.8.2.

Table 70.16.8.2: Test parameters for Multi-Path scenario

| System | Parameters | Unit | Value |
|---|---|---------|---------------------|
| | Number of generated satellites per system | - | See Table 70.16.8.3 |
| | Total number of generated satellites | - | 6 |
| | HDOP range | | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ±2 |
| Galileo | Reference signal power level | dBm | -127 |
| GPS ⁽¹⁾ | Reference signal power level | dBm | -128.5 |
| GLONASS | Reference signal power level | dBm | -131 |
| BDS | Reference signal power level | dBm | -133 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.8.3: Channel model allocation

| | | Channel model allocation for each constellation | | |
|----------------------|----------------------------|---|--------|--------|
| | | GNSS-1 | GNSS-2 | GNSS-3 |
| Single constellation | One-tap channel (see note) | 2 | -- | -- |
| | Two-tap channel (see note) | 4 | -- | -- |
| Dual constellation | One-tap channel (see note) | 1 | 1 | -- |
| | Two-tap channel (see note) | 2 | 2 | -- |
| Triple constellation | One-tap channel (see note) | 1 | 1 | 1 |
| | Two-tap channel (see note) | 1 | 1 | 1 |

NOTE: One-tap channel: no multi-path. Two-tap channel: multi-path defined in clause 70.16.2.4

Table 70.16.8.4: Conformance requirement for Multi-Path scenario

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 100 m | 20 s |

The reference for this requirement is 3GPP TS 45.005, clause O.2.4.

70.16.8.3 Test purpose

To verify the MS's first position estimate meets the Conformance requirement under GNSS satellite signal conditions that represent simple multi-path conditions.

70.16.8.4 Method of test

Initial conditions

Test environment: normal; see clause A1.2.2.

1. Connect SS and GSS to the MS antenna connector or antenna connectors.
2. Set the GNSS test parameters as specified in table 70.16.8.5 for GNSS scenario #1. Randomly select from the satellite SV IDs defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7 for the satellites with one-tap channels.
3. Switch on the MS.
4. Establish a signalling connection according to the generic procedure in clause 10.1a on a channel in the Mid ARFCN range.

Specific PICS statements:

-

PIXIT statements:

-

Procedure

1. Start GNSS scenario #1 as specified in clause 6.2.1.2 of TS 51.010-7 with the MS location randomly selected to be within 3 km of the Reference Location and the altitude of the MS randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid using the method described in clause 6.2.1.2.5 of TS 51.010-7. The initial carrier phase difference between taps of the multi-path model shall be randomly selected between 0 and 2π radians by selecting the next random number from a standard uniform random number generator, in the range 0 to 2π , representing radians with a resolution of 0.1, representing 0.1 radians.
2. Send a RESET MS POSITIONING STORED INFORMATION message followed by RRLP Assistance Data and RRLP Measure Position Request messages containing appropriate assistance data; as specified in clauses 6.2.2 and 6.2.6 of TS 51.010-7 for MS based testing; or clauses 6.2.4 and 6.2.6 of TS 51.010-7 for MS assisted testing with the value of GNSS TOW offset by a random value as specified in clause 6.2.6.2 of TS 51.010-7; as required to obtain a fix.

3. If the MS returns a valid result in the Measure Position Response message within the Max response time specified in table 70.16.8.8 then record the result and process it as specified in step 4. If the MS does not return a valid result within the Max response time specified in table 70.16.8.8 or reports a MS positioning error in the Measure Position Response message then record one Bad Result.
4. For MS based testing compare the reported Location Information in the Measure Position Response message against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.8.8 and record one Good Result or Bad Result as appropriate; or

For MS assisted testing convert the GNSS Measurement Information reported in the Measure Position Response message to a 2D position using the method described in clause 70.16.4.3 and then compare the result against the simulated position of the MS used in step 1, and calculate the 2D position error as specified in clause 70.16.4.3.2. Compare the 2D position error against the value in table 70.16.8.8 and record one Good Result or Bad Result as appropriate.

5. Repeat steps 1 to 4 using GNSS scenario #2 instead of #1 so that the reference location changes sufficiently such that the MS shall have to use the new assistance data. Randomly select from the satellite SV IDs defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7 for the satellites with the one-tap channels. Use new random values for the MS location and altitude, and the initial carrier phase difference between taps of the multi-path model in step 1 and for the GNSS TOW offset in step 2.
6. Repeat steps 1 to 5 until the statistical requirements of clause 70.16.8.5 are met. Each time scenario #1 or #2 is used, the start time of the GNSS scenario shall be advanced by 2 minutes from the time used previously for that scenario. Once a scenario reaches the end of its viable running time, restart it from its nominal start time again. Each time scenario #1 or #2 is used, randomly select from the satellite SV IDs defined in the relevant table of Satellites to be simulated in clause 6.2.1.2 in TS 51.010-7, for the satellites with the one-tap channels.
7. Release the signalling connection

Minimum / Maximum duration of the test

Minimum duration approximately 1 hour, maximum duration approximately 20 hours

Specific Message Contents

MEASURE POSITION REQUEST (3GPP TS 44.031 sub clause A.2) to the MS

| Information Element | Value/remark |
|--------------------------|--------------|
| Positioning Instructions | |
| Accuracy | 51.2m |
| Required Response Time | 20s |

70.16.8.5 Test Requirements

For the parameters specified in table 70.16.8.5 the MS shall meet the requirements and the success rate specified in table 70.16.8.8 with a confidence level of 95% according to annex A7.2.

Table 70.16.8.5: Test parameters for Multi-Path scenario

| System | Parameters | Unit | Value |
|---|---|---------|---------------------|
| | Number of generated satellites per system | - | See Table 70.16.8.6 |
| | Total number of generated satellites | - | 6 |
| | HDOP range | | 1.4 to 2.1 |
| | Propagation conditions | - | AWGN |
| | GNSS coarse time assistance error range | seconds | ±1.8 |
| Galileo | Reference signal power level | dBm | -127 |
| GPS ⁽¹⁾ | Reference signal power level | dBm | -128.5 |
| GLONASS | Reference signal power level | dBm | -131 |
| BDS | Reference signal power level | dBm | -133 |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on MS capabilities. | | | |

Table 70.16.8.6: Channel model allocation

| | | Channel model allocation for each constellation | | |
|--|---------------------------|---|--------|--------|
| | | GNSS-1 | GNSS-2 | GNSS-3 |
| Single constellation | One-tap channel(see note) | 2 | -- | -- |
| | Two-tap channel(see note) | 4 | -- | -- |
| Dual constellation | One-tap channel(see note) | 1 | 1 | -- |
| | Two-tap channel(see note) | 2 | 2 | -- |
| Triple constellation | One-tap channel(see note) | 1 | 1 | 1 |
| | Two-tap channel(see note) | 1 | 1 | 1 |
| NOTE: One-tap channel: no multi-path. Two-tap channel: multi-path defined in clause 70.16.2.4 with Relative mean Power (Y) defined in Table 70.16.8.7. | | | | |

Table 70.16.8.7: Relative mean Power (Y)for use in Table 70.16.2.1

| System | Signals | Y [dB] |
|--------------------|---------|--------|
| Galileo | E1 | -4.7 |
| | E5a | -6.2 |
| | E5b | -6.2 |
| GPS/Modernized GPS | L1 C/A | -6.2 |
| | L1C | -4.7 |
| | L2C | -6.2 |
| | L5 | -6.2 |
| GLONASS | G1 | -12.7 |
| | G2 | -12.7 |
| BDS | B1I | -4.7 |

Table 70.16.8.8: Test requirements for Multi-Path scenario

| System | Success rate | 2-D position error | Max response time |
|--------|--------------|--------------------|-------------------|
| All | 95 % | 101.3 m | 20.3 s |

NOTE: If the above Test Requirement differs from the Conformance requirement then the Test Parameter Relaxation applied for this test is non-zero. The Test Parameter Relaxation for this test is defined in clause A5.5.2 and the explanation of how the Conformance requirement has been relaxed by the Test Parameter Relaxation is given in clause A5.5.4.

80 Generic Access default conditions, message contents and macros

80.1 Default test conditions

The following default test conditions shall apply if not stated otherwise within an individual test description.

80.1.1 Unlicensed Radio Access

80.1.1.1 IEEE 802.11

First access point.

| | Setting |
|----------------|----------------|
| Channel | 7 |
| SSID | GAN_1 |
| SSID-Broadcast | On |
| Ciphering | Off |
| Mode | Infrastructure |

Second access point.

| | Setting |
|----------------|----------------|
| Channel | 3 |
| SSID | GAN_2 |
| SSID-Broadcast | On |
| Ciphering | Off |
| Mode | Infrastructure |

80.1.1.2 Bluetooth

| | Setting |
|---------|---------|
| Profile | PAN |

80.1.2 Protocol Settings

80.1.2.1 Dynamic Host Configuration Protocol - DHCP

| | Setting |
|----------------------------------|--------------------|
| Server IP-Address | 192.168.11.1 |
| Port | 67 |
| Client (Transport) IP Range Pool | 192.168.11.10 - 15 |
| Address Mask | 255.255.255.0 |
| Default Gateway | 192.168.11.1 |

80.1.2.2 Domain Name System – DNS

80.1.2.2.1 Public DNS Server

| | Setting |
|--|---------|
| | |

| | |
|-------------------|---------------|
| Server IP-Address | 192.168.11.16 |
| Port | 53 |

The following entries should be used:

| | FQDN | IP |
|-------------------|--|---------------|
| Provisioning SEGW | psgw.gan.mnc001.mcc001.3gppnetwork.org | 192.168.11.32 |
| Default SEGW | dsgw.default.gan | 192.168.11.33 |
| Serving SEGW | ssgw.serving.gan | 192.168.11.34 |

80.1.2.2.2 DNS associated with GANC

| | Setting |
|-------------------|--------------|
| Server IP-Address | 172.16.0.144 |
| Port | 53 |

The following entries should be used:

| | FQDN | IP |
|-------------------|-----------------------------------|--------------|
| Provisioning GANC | gan.mnc001.mcc001.3gppnetwork.org | 172.16.0.192 |
| Default GANC | gan.default.gan | 172.16.0.193 |
| Serving GANC | gan.serving.gan | 172.16.0.194 |

80.1.2.3 Secure Gateway (SEGW)

| | FQDN | IP |
|-------------------|--|---------------|
| Provisioning SEGW | psgw.gan.mnc001.mcc001.3gppnetwork.org | 192.168.11.32 |
| Default SEGW | dsgw.default.gan | 192.168.11.33 |
| Serving SEGW | ssgw.serving.gan | 192.168.11.34 |

80.1.2.4 Generic Access Network Controller (GANC)

| | FQDN | IP |
|-------------------|-----------------------------------|--------------|
| Provisioning GANC | gan.mnc001.mcc001.3gppnetwork.org | 172.16.0.192 |
| Default GANC | gan.default.gan | 172.16.0.193 |
| Serving GANC | gan.serving.gan | 172.16.0.194 |

The TCP port used for Discovery and Registration is port number 14001 (see 44.318: 12.2.1)

80.1.2.5 Secure Internet Protocol - IPsec

All cryptographic suites must be supported on SS side.

The certificates specified in annex A9 shall be used for authentication of the SS by the MS.

| | Setting |
|------------------------------|-------------------|
| Client (Local) IP Range Pool | 172.16.0.202 -217 |

80.2 Default message contents

80.3 Macros

80.3.1 Overview

The present document presents macros for Generic Access test cases. It is intended to be a working document forming part of the Generic Access Test Specifications.

80.3.1.1 Definition

A macro is a name or sentence, possibly followed by an argument list, that is equated to a text to which it is to be expanded, possibly with the substitution of actual arguments.

Macros may be used to simplify the writing and reading of the test cases or to avoid the repetition of common sentences, message contents or message sequences. The macros defined in this subclause can be used throughout the test cases.

The definition of the macros is done in alphabetical order.

80.3.1.2 Syntax

80.3.1.2.1 Message contents

Any macro referencing message contents shall use the following table:

| Macro reference (arguments) | | |
|-----------------------------|---------------------|---------------|
| (P)SI | Information Element | Value/Remarks |
| | | |

The table must contain:

Macro reference: word or sentence that gives the name to the macro. It may include a list of arguments with actual values for some IE's.

(P)SI: the System Information and Packet System Information messages whose content is referenced. Several (P)SIs can be referenced in this column. The defined IE value(s) refers to the (P)SI(s) in the same row.

Information Element: IE which value is specified.

Value/Remarks: value and any other comment specific to the IE's. In particular, the mapping between an argument value and its coding shall be specified in this column (see note).

NOTE: If possible, only the meaning of the value will be shown and not the value itself; this avoids updating when the core specifications are modified.

80.3.1.2.2 Message sequence

Any macro referencing message contents shall use the following table:

| Step | Direction | Message | Comments |
|------|-----------|---------------------|-------------------|
| | | { Macro reference } | Macro (arguments) |

| | | | | | | | | | |
|--|--|--|--|--|--|--|--|--|--|
| | | | | | | | | | |
|--|--|--|--|--|--|--|--|--|--|

The table must contain:

Macro reference: word or sentence that assigns the name to the macro. It may include a list of arguments with actual values for some parameters used within the macro.

Step: Number of the message. Letters may be used for general values: the same rules as in 3GPP TS 11.10 apply.

Direction: it must be either:

- "MS → SS": for an uplink message or a macro containing only uplink message(s);
- "SS → MS": for a downlink message or a macro containing only downlink message(s);
- "SS ↔ MS": for a macro containing both uplink and downlink message(s);
- "MS": for an action performed on the mobile side; or
- "SS": for an action performed on the system simulator side.

Message: Message name or macro reference.

Comments: any other comment specific to the message. In particular, value of certain bits/fields of the corresponding message.

The symbol ':' can be used to indicate that the previous and following message or sequence of messages (both previous and following must appear) is repeated an unknown number of times, probably referenced with a letter on the 'step' column.

80.3.2 Default message contents

80.3.3 Macro message sequences

80.3.3.1 Location Update Procedure

80.3.3.1.1 GAN A/Gb Mode Location Update Procedure

| Step | Direction | Message | Comments |
|------------------|-----------|---|---|
| | | { GAN A/Gb Mode Location Update Procedure } | |
| 1 | MS → SS | GA-CSR REQUEST | |
| 2 | SS → MS | GA-CSR REQUEST ACCEPT | |
| 3 | MS → SS | GA-CSR UPLINK DIRECT TRANSFER | Containing L3 (MM) Location Update Request |
| 4 | SS → MS | GA-CSR DOWNLINK DIRECT TRANSFER | Containing L3 (MM) Authentication Request |
| 5 | MS → SS | GA-CSR UPLINK DIRECT TRANSFER | Containing L3 (MM) Authentication Response |
| 6 | SS → MS | GA-CSR DOWNLINK DIRECT TRANSFER | Containing L3 (MM) Location Update Accept |
| A6 (Optional) | MS → SS | GA-CSR UPLINK DIRECT TRANSFER | Containing L3 (MM) TMSI Reallocation Complete This step is executed only when assigned mobile identity is of type TMSI |

| | | | |
|---|---------|-------------------------|---|
| 7 | SS → MS | GA-CSR RELEASE | NOTE: Only in case the MS performed GPRS suspension procedure prior to the CS session, then the GPRS RESUMPTION IE shall be present with ACK field set to 1. |
| 8 | MS → SS | GA-CSR RELEASE COMPLETE | |

80.3.3.1.2 GAN Iu Mode Location Update Procedure

| Step | Direction | Message | Comments |
|------------------|-----------|---|---|
| | | { GAN Iu Mode Location Update Procedure } | |
| 1 | MS → SS | GA-RRC REQUEST | |
| 2 | SS → MS | GA-RRC REQUEST ACCEPT | |
| 3 | MS → SS | GA-RRC UPLINK DIRECT TRANSFER | Containing L3 (MM) Location Update Request |
| 4 | SS → MS | GA-RRC DOWNLINK DIRECT TRANSFER | Containing L3 (MM) Authentication Request |
| 5 | MS → SS | GA-RRC UPLINK DIRECT TRANSFER | Containing L3 (MM) Authentication Response |
| 6 | SS → MS | GA-RRC DOWNLINK DIRECT TRANSFER | Containing L3 (MM) Location Update Accept |
| A6 (Optional) | MS → SS | GA-RRC UPLINK DIRECT TRANSFER | Containing L3 (MM) TMSI Reallocation Complete This step is executed only when assigned mobile identity is of type TMSI |
| 7 | SS → MS | GA-RRC RELEASE | |
| 8 | MS → SS | GA-RRC RELEASE COMPLETE | |

80.4 Test PDP contexts

PDP context 1: same as PDP context 1 in section 40.5.

81 GAN Discovery and Registration Procedures

81.1 Discovery Procedure

81.1.1 Discovery Procedure, Accepted

81.1.1.1 Discovery Procedure, MS holds the IP address of the provisioning SEGW and FQDN of provisioning GANC, provisioning GANC and default GANC belong to the same SEGW

81.1.1.1.1 Conformance requirement

The MS shall:

- If the MS holds an IP address of the Provisioning SEGW, the MS establishes the secure connection towards the Provisioning SEGW according to sub-clause 4.2
- Following successful establishment of secure connection to the Provisioning SEGW:
- If the MS holds a FQDN of the Provisioning GANC, the MS shall perform a DNS query "inside the secure connection" to retrieve the IP-address of the Provisioning GANC. The MS shall establish a TCP connection to the

Provisioning GANC using this IP address and a TCP port defined for Discovery (see sub-clause 12.2.1). The MS shall not store the IP address retrieved from DNS for subsequent procedures (apart from DNS resolver caching).

When the MS receives GA-RC DISCOVERY ACCEPT message, it shall:

- stop the timer TU3901.
- set the timer value for TU3903 to the default value,
- store the information about Default GANC in persistent storage:
 - The Default GANC information consists of the Default GANC, SEGW associated with the Default GANC and optionally a TCP port to be used with that Default GANC. If a specific TCP Port is not received in the message, the defined port for Registration is used (see sub-clause 12.2.1)
 - release the TCP connection towards the Provisioning GANC
 - the secure connection to the Provisioning SEGW can be reused as follows;
- If the MS is provisioned with an IP address of the Provisioning GANC-SEGW and it matches the received Default GANC-SEGW IP address IE, the MS shall reuse the existing secure connection.
- If the MS is provisioned with a FQDN of the Provisioning GANC-SEGW or derived a FQDN for the Provisioning GANC-SEGW and it matches the received Default GANC-SEGW FQDN IE, the MS shall reuse the existing secure connection.
 - otherwise the MS shall release the existing secure connection towards the SEGW of the Provisioning GANC as defined in sub-clause 4.5
 - initiate the registration procedure towards the Default GANC as defined in sub-clause 6.2.

Reference(s)

3GPP TS 44.318 sub-clause 5.3 and 5.5.1

81.1.1.1.2 Test purpose

To verify that the MS is able to initiate the Discovery Procedure with an IP address to the SEGW associated with the provisioning GANC and the FQDN to the GANC.

To verify that the MS keeps the secure connection when registering to the default GANC if the provisioning GANC and default GANC have the same SEGW.

81.1.1.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Provisioning GANC and default GANC belonging to the same SEGW
- Public DNS without knowledge of SEGW FQDN associated with Provisioning GANC

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS has the IP address for the SEGW associated with the provisioning GANC, but not the FQDN
- The MS has the FQDN for the provisioning GANC, but not the IP address
- The MS does not have any knowledge about the default GANC
- The MS does not have any knowledge about the serving GANC

Foreseen final state of the MS

The MS will stay in state GA-RC DEREGISTERED.

Test procedure

Make the MS join the AP so that the Discovery procedure is kicked off.

The SS is supposed to answer the Discovery Request message with a valid FQDN or IP address of Default GANC and IP address of the SEGW associated with Default GANC matching the IP address of SEGW associated with Provisioning GANC before timer TU3901 expires.

The MS shall attempt to register towards the Default GANC reusing the same security connection used during Discovery procedure.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | Set up Ipsec tunnel to SEGW |
| 3 | | → | | DNS Standard Query for GANC to the DNS server associated with the GANC |
| 4 | | ← | | Standard Query Response with IP address to GANC |
| 5 | MS | | | Establish TCP connection to provisioning GANC |
| 6 | | → | GA-RC DISCOVERY REQUEST | To provisioning GANC |
| 7 | | ← | GA-RC DISCOVERY ACCEPT | Default GANC and SEGW provided. Note: Default GANC belongs to the same SEGW as the Provisioning GANC The message is sent before expiry of TU3901. |
| 8 | MS | | | Establish TCP connection to default GANC using either IP address or FQDN |
| 9 | | → | GA-RC REGISTER REQUEST | To default GANC |

81.1.1.2 Discovery procedure, the MS holds the FQDN of the provisioning SEGW and IP address of the provisioning GANC, provisioning GANC and default GANC belong to different SEGWs

81.1.1.2.1 Conformance requirement

- If the MS holds a FQDN of the Provisioning SEGW, the MS performs a public DNS query to retrieve the IP-address of the Provisioning SEGW and establish the secure connection towards the Provisioning SEGW according to sub-clause 4.2. The MS shall not store the IP address retrieved from DNS for subsequent procedures (apart from DNS resolver caching).
- Following successful establishment of secure connection to the Provisioning SEGW
- If the MS holds an IP address of the Provisioning GANC, the MS shall establish a TCP connection to the Provisioning GANC using the well-known TCP port for Discovery as defined in sub-clause 12.2.1

When the MS receives GA-RC DISCOVERY ACCEPT message, it shall:

- stop the timer TU3901.
- set the timer value for TU3903 to the default value,
- store the information about Default GANC in persistent storage:
- The Default GANC information consists of the Default GANC, SEGW associated with the Default GANC and optionally a TCP port to be used with that Default GANC. If a specific TCP Port is not received in the message, the defined port for Registration is used (see sub-clause 12.2.1)
 - release the TCP connection towards the Provisioning GANC
 - the secure connection to the Provisioning SEGW can be reused as follows;
- If the MS is provisioned with an IP address of the Provisioning GANC-SEGW and it matches the received Default GANC-SEGW IP address IE, the MS shall reuse the existing secure connection.
- If the MS is provisioned with a FQDN of the Provisioning GANC-SEGW or derived a FQDN for the Provisioning GANC-SEGW and it matches the received Default GANC-SEGW FQDN IE, the MS shall reuse the existing secure connection.
 - otherwise the MS shall release the existing secure connection towards the SEGW of the Provisioning GANC as defined in sub-clause 4.5
 - initiate the registration procedure towards the Default GANC as defined in sub-clause 6.2.

Reference(s)

3GPP TS 44.318 sub-clause 5.3 and 5.5.1

81.1.1.2.2 Test purpose

To verify that the MS can initiate the Discovery Procedure with the FQDN to the SEGW associated with the provisioning GANC and IP address to the GANC.

To verify that the MS releases the secure connection when registering to the default GANC if the provisioning GANC and default GANC don't have the same SEGW.

81.1.1.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS that holds the IP address to the SEGW associated with the provisioning GANC, but without knowledge of the provisioning GANC's FQDN

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS has the FQDN for the SEGW associated with the provisioning GANC, but not the IP address
- The MS has the IP address to the provisioning GANC
- The MS does not have any knowledge about the default GANC
- The MS does not have any knowledge about the serving GANC

Foreseen final state of the MS

The MS will stay in state GA-RC DEREGISTRED.

Test procedure

Make the MS join the AP so that the Discovery procedure is kicked off.

The SS is supposed to answer the Discovery Request message before timer TU3901 expires.

The MS shall release the Security Association towards the SEGW associated with Provisioning GANC.

The MS shall establish a secure tunnel towards the SEGW provided in Discovery Accept message and establish TCP to the Default GANC.

The MS shall send Register Request message towards the Default GANC.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | → | | | DNS Standard Query for the SEGW to the public DNS server |
| 3 | ← | | | Standard Query Response with IP address to the SEGW |
| 4 | MS | | | MS sets up a secure connection to the SEGW and establishes TCP connection to the provisioning GANC |
| 5 | MS | | | MS establish a TCP connection using the stored IP address |
| 6 | → | | GA-RC DISCOVERY REQUEST | To provisioning GANC |
| 7 | ← | | GA-RC DISCOVERY ACCEPT | Default GANC and SEGW provided. The message is sent before expiry of TU3901. |
| 8 | | | | MS releases the secure connection to the SEGW |
| 9 | | | | MS sets up a secure connection to the new SEGW using either IP address or FQDN |
| 10 | | | | MS establish a TCP connection to the default GANC using either IP address or FQDN |
| 11 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.1.1.3 Discovery procedure, the MS is not provisioned with information about the provisioning GANC or its SEGW

81.1.1.3.1 Conformance requirement

- In case the MS is not provisioned with information about the Provisioning SEGW, derive a FQDN of the Provisioning SEGW from the IMSI (as described in [3]);

The MS performs a public DNS Query to retrieve the IP-address of the Provisioning SEGW and establish the secure connection towards the Provisioning SEGW according to sub-clause 4.2. The MS shall not store the IP address retrieved from DNS for subsequent procedures (apart from DNS resolver caching);

- Following successful establishment of secure connection to the Provisioning SEGW:

- In cases where the MS is not provisioned with information about the Provisioning GANC, the MS derives a FQDN of the Provisioning GANC from the IMSI (as described in [3]).

A DNS query is performed "inside the secure connection" to retrieve the IP-address of the Provisioning GANC. The MS shall not store the IP address retrieved from DNS for subsequent procedures (apart from DNS resolver caching). A TCP connection is then established inside the IPsec tunnel, to the Provisioning GANC using the TCP port defined for Discovery procedure (see sub-clause 12.2.1).

- In all cases the MS shall establish only a single TCP connection to the GANC over the IPsec tunnel.

Reference(s)

3GPP TS 44.318 sub-clause 5.3.

81.1.1.3.2 Test purpose

To verify that the MS can derive the FQDN from its IMSI and go to the correct DNS to ask for the IP address to the SEGW and provisioning GANC.

81.1.1.3.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the provisioning GANC's FQDN

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS does not have any knowledge about the provisioning GANC
- The MS does not have any knowledge about the default GANC
- The MS does not have any knowledge about the serving GANC

Foreseen final state of the MS

The MS will stay in state GA-RC DEREGISTRED.

Test procedure

Make the MS join the AP so that the Discovery procedure is kicked off.

The MS will derive SEGW associated with provisioning GANC and provisioning GANC from the IMSI.

The SS is supposed to answer the Discovery Request message before timer TU3901 expires.

Use a default GANC associated with the same SEGW as the provisioning GANC in order to simplify the test sequence.

The MS will attempt to register towards the default GANC reusing the same security association.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------|----------------------|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |

| | | | |
|----|----|-------------------------|---|
| 2 | MS | | Derive FQDN to SEGW from the IMSI |
| 3 | → | | DNS Standard Query for the SEGW to the public DNS server |
| 4 | ← | | Standard Query Response with IP address to the SEGW |
| 5 | MS | | MS sets up a secure connection to the SEGW |
| 6 | MS | | Derive FQDN to GANC from the IMSI |
| 7 | → | | DNS Standard Query for GANC to the DNS server associated with the GANC |
| 8 | ← | | Standard Query Response with address to GANC |
| 9 | MS | | Establish TCP connection to provisioning GANC over the secure connection |
| 10 | → | GA-RC DISCOVERY REQUEST | To provisioning GANC |
| 11 | ← | GA-RC DISCOVERY ACCEPT | Default GANC provided and SEGW matching the SEGW associated with provisioning GANC. The message is sent before expiry of TU3901. |
| 12 | MS | | Establish TCP connection to default GANC using either IP address or FQDN |
| 13 | → | GA-RC REGISTER REQUEST | To default GANC |

81.1.2 Discovery Procedure, Rejected

81.1.2.1 Discovery Procedure, Discovery Reject, Network Congestion

81.1.2.1.1 Conformance requirement

When the MS receives GA-RC DISCOVERY REJECT message it shall:

- stop the timer TU3901,
- set the timer value for TU3903 to the default value,
- If the value of the Reject Cause IE indicates 'Network Congestion', the MS shall
- Maintain the secure connection to the GANC-SEGW and the TCP connection to the GANC
- Create a random value between zero and the received value in TU3902 Timer IE and
- Add this value to the received value in TU3902 Timer IE, this becomes the new value for TU3902
- Start timer TU3902 according to the new calculated value

Reference(s)

3GPP TS 44.318 sub-clause 5.5.2

81.1.2.1.2 Test purpose

To verify that the MS wait the correct time after receiving Discovery Reject due to network congestion before it tries to go through the discovery procedure again.

81.1.2.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

- Public DNS without knowledge of the provisioning GANC's FQDN

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS has the IP address or the FQDN for the provisioning GANC
- The MS does not have any knowledge about the default GANC
- The MS does not have any knowledge about the serving GANC

Foreseen final state of the MS

The MS will stay in state GA-RC DEREGISTRED.

Test procedure

Make the MS join the AP so that the Discovery procedure is kicked off.

The SS is supposed to answer the Discovery Request message with Discovery rejected with cause 'Network congestion' before timer TU3901 expires. The TU3902 timer is set to 60 (1 minutes).

The MS will set TU3902 between 1 and 2 minutes and send a Discovery Request message towards the provisioning GANC after expiration of the timer.

Specific Test Parameters

-

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|--------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 3 | → | | GA-RC DISCOVERY REQUEST | To provisioning GANC |
| 4 | ← | | GA-RC DISCOVERY REJECTED | With cause set to Network congestion TU3902 Timer IEs set to 60 |
| 5 | MS | | | Wait for 1 – 2 minutes . The MS sets TU3902 randomly between 60 and 120, i.e. 1 to 2 minutes. |
| 6 | → | | GA-RC DISCOVERY REQUEST | New attempt on the same secure connection to the provisioning GANC |

81.1.2.2 Discovery Procedure, Discovery Reject, IMSI not allowed

81.1.2.2.1 Conformance requirement

When the MS receives GA-RC DISCOVERY REJECT message it shall:

- If the value of the Reject Cause IE indicates 'IMSI not allowed' or "Unspecified", then the MS shall:
- Release the TCP connection established to the Provisioning GANC, if still established.
- Release the secure connection towards the SEGW associated with the Provisioning GANC as defined in sub-clause 4.5.

- Not initiate a new Discovery procedure until the next power-on.

Reference(s)

3GPP TS 44.318 sub-clause 5.5.2.

81.1.2.2.2 Test purpose

To verify that the MS does not try to kick off the Discovery procedure again after receiving Discovery Reject due to IMSI not allowed.

81.1.2.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the provisioning GANC's FQDN
- DNS inside of the SEGW associated with the provisioning GANC with knowledge of the provisioning GANC's FQDN

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS has the IP address or the FQDN for the provisioning GANC
- The MS does not have any knowledge about the default GANC
- The MS does not have any knowledge about the serving GANC

Foreseen final state of the MS

The MS will start the discovery procedure and receive Discovery rejected with cause value 'IMSI not allowed'. The MS will not try to kick off the Discovery procedure until it is powered off and back on again. When the second attempt to register has started the signalling is interrupted and the MS will stay in state GA-RC DEREGISTRED.

Test procedure

Make the MS join the AP so that the Discovery procedure is kicked off.

The SS is supposed to answer the Discovery Request message with Discovery rejected with cause 'IMSI not allowed' before timer TU3901 expires. The TU3902 timer is set to 60 (1 minutes).

Specific Test Parameters

-

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 3 | → | | GA-RC DISCOVERY REQUEST | To provisioning GANC |

| | | | |
|---|----|--------------------------|--|
| 4 | ← | GA-RC DISCOVERY REJECTED | Cause: IMSI not allowed |
| 5 | | | MS releases the TCP connection and the secure connection |
| 6 | MS | | Wait for 2 minutes. Make sure that the MS does not try to access the GAN network. |
| 7 | MS | | Switch off the MS and then back on again. |
| 8 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 9 | → | GA-RC DISCOVERY REQUEST | New attempt |

81.1.2.3 Void

81.1.3 Discovery Procedure, Abnormal Cases

81.1.3.1 Discovery Procedure, TU3901/TU3903 Expires

81.1.3.1.1 Conformance requirement

If timer TU3901 has expired in the MS, the MS shall:

- release the TCP connection towards the Provisioning GANC,
- release the secure connection towards SEGW of the Provisioning GANC as defined in sub-clause 4.5,
- double the current value for timer TU3903 but not exceeding the maximum value defined for this timer as defined in sub-clause 12.1.1 and
- start timer TU3903

Reference(s)

3GPP TS 44.318 sub-clause 5.6.1.

81.1.3.1.2 Test purpose

To verify that the MS attempts to kick off the Discovery procedure again after the correct time has elapsed when the TU3901/TU3903 timer expires.

81.1.3.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the provisioning GANC's FQDN
- DNS inside of the SEGW associated with the provisioning GANC with knowledge of the provisioning GANC's FQDN

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS has the IP address or the FQDN for the provisioning GANC
- The MS does not have any knowledge about the default GANC
- The MS does not have any knowledge about the serving GANC
- Timer TU3901 set to the default value 30 seconds

- Timer TU3903 set to 1 minute

Foreseen final state of the MS

The MS will start the discovery procedure and when TU3901 expires it will set TU3903 to 2 minutes. When TU3903 expires it will kick off the Discovery procedure again. The same sequence is repeated and for each time TU3903 is doubled until it reaches its maximum value of 32 minutes.

Test procedure

Make the MS join the AP so that the Discovery procedure is kicked off.

The SS is not supposed to answer the Discovery Request message at any occasion.

Specific Test Parameters

-

Maximum duration of test

100 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 3 | → | | GA-RC DISCOVERY REQUEST | To provisioning GANC, MS starts TU3901 |
| 4 | MS | | | Wait for 30 s so TU3901 expires. TU3903 is set to 2 min. when TU3901 expires. |
| 5 | | | | MS releases the TCP connection and the secure connection |
| 6 | MS | | | Wait for 2 minutes so that TU3903 expires |
| 7 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 8 | → | | GA-RC DISCOVERY REQUEST | New attempt, MS starts TU3901 |
| 9 | MS | | | Wait for 30 s so TU3901 expires. TU3903 is set to 4 min. when TU3901 expires the 2 nd time. |
| 10 | | | | MS releases the TCP connection and the secure connection |
| 11 | MS | | | Wait for 4 minutes so that TU3903 expires. |
| 12 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 13 | → | | GA-RC DISCOVERY REQUEST | New attempt, MS starts TU3901 |
| 14 | MS | | | Wait for 30 s so TU3901 expires. TU3903 is set to 8 min. when TU3901 expires the 3 rd time. |
| 15 | | | | MS releases the TCP connection and the secure connection |
| 16 | MS | | | Wait for 8 minutes so that TU3903 expires. |
| 17 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |

| | | | |
|----|----|-------------------------|---|
| 18 | → | GA-RC DISCOVERY REQUEST | New attempt, MS starts TU3901 |
| 19 | MS | | Wait for 30 s so TU3901 expires. TU3903 is set to 16 min. when TU3901 expires the 4 th time. |
| 20 | | | MS releases the TCP connection and the secure connection |
| 21 | MS | | Wait for 16 minutes so that TU3903 expires. |
| 22 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 23 | → | GA-RC DISCOVERY REQUEST | New attempt, MS starts TU3901 |
| 24 | MS | | Wait for 30 s so TU3901 expires. TU3903 is set to 32 min. when TU3901 expires the 5 th time. |
| 25 | | | MS releases the TCP connection and the secure connection |
| 26 | MS | | Wait for 32 minutes so that TU3903 expires. |
| 27 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 28 | → | GA-RC DISCOVERY REQUEST | New attempt, MS starts TU3901 |
| 29 | MS | | Wait for 30 s so TU3901 expires. TU3903 is set to 32 min. again when TU3901 expires the 6 th time. |
| 30 | | | MS releases the TCP connection and the secure connection |
| 31 | MS | | Wait for 32 minutes so that TU3903 expires. |
| 32 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 33 | → | GA-RC DISCOVERY REQUEST | New attempt |

81.1.3.2 Void

81.1.3.3 Void

81.1.3.4 Void

81.1.3.5 Void

81.1.3.6 Void

81.1.3.7 SEGW certificate checking, the MS holds the “invalid” FQDN of the provisioning SEGW

81.1.3.7.1 Conformance requirement

As the MS and GANC-SEGW use EAP-SIM or EAP-AKA for mutual authentication, IKEv2 mandates that this is used in conjunction with a public key signature based authentication of the GANC-SEGW to the MS.

The MS requirements for certificate authentication and handling are listed in 3GPP TS 33.234 [10].

In addition to the requirements listed in 3GPP TS 33.234 [10], the MS shall take the following actions for received GANC-SEGW certificates:

- match the SubjectAltName in the end entity certificate with the IDr payload, and with GANC-SEGW identity obtained from derivation of the Provisioning GANC-SEGW FQDN, provisioning, discovery or register redirect.

- If the MS was provisioned with an IP address of the GANC-SEGW, (or received it in the GA-RC DISCOVERY ACCEPT or GA-RC REGISTER REDIRECT message), then the certificate shall contain an IPAddress SubjectAltName that matches that address.
- If the MS was provisioned with an FQDN of the GANC-SEGW, or received it in the GA-RC DISCOVERY ACCEPT or GA-RC REGISTER REDIRECT message, then the certificate shall contain a DNSname SubjectAltName that matches that FQDN.
- If the MS derived the FQDN of the Provisioning GANC-SEGW, then the certificate shall contain a DNSname SubjectAltName that matches that FQDN.

If the MS and GANC-SEGW are not able to set up the SA for any other reason than EAP-SIM or EAP-AKA authentication failure, and the current GANC-SEGW is the SEGW associated to the Provisioning GANC, the MS shall act as if a "Lower layer failure in the MS" has occurred and act as defined in sub-clause 5.6.2.

Reference(s)

3GPP TS 44.318 sub-clauses 4.2.5 and 4.2.6

81.1.3.7.2 Test purpose

To verify that the MS does correct SEGW certificate checking during secure tunnel establishment.

81.1.3.7.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS that holds the IP address to the SEGW associated with the provisioning GANC, but that DNS entry is not in provisioning SEGW certificate.

Mobile Station:

- MS in state GA-RC DEREGISTERED
- The MS has the "invalid" FQDN for the SEGW

The MS holds an "invalid" FQDN of the Provisioning SEGW. MS is made to perform a public DNS query to retrieve the IP-address of the Provisioning SEGW and to initialise establishment of the secure connection towards the Provisioning SEGW. Secure tunnel establishment will fail, because provisioning SEGW certificate does not contain DNS subjectAltName "invalid.provisioning.gan". The MS shall act as if "a Lower layer failure in the MS" has occurred and act as defined in sub-clause 5.6.2.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | → | | | DNS Standard Query for the SEGW to the public DNS server |
| 3 | ← | | | Standard Query Response with IP address to the SEGW |
| 4 | → | | IKE_SA_INIT | MS sends IKE_SA_INIT message to initialize secure connection setup to the SEGW |
| 5 | ← | | IKE_SA_INIT | SEGW replies with IKE_SA_INIT |
| 6 | → | | IKE_AUTH | MS informs trusted CA certificates in CERT_REQ payload. Authentication phase is started |

| | | | |
|-----------------|----|----------|--|
| 7 | ← | IKE_AUTH | SEGW replies with certificate that does not contain "invalid" FQDN in its SubjectAltName field |
| 8 (optional) | → | IKE_AUTH | MS may optionally send one more IKE_AUTH message |
| 9 | MS | | MS stops attempting to set up a security connection and starts TU3903 |
| 10 | MS | | Wait for 10 seconds |
| 11 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC using either IP address or FQDN |

81.2 Registration Procedure

81.2.1 Registration Procedure, Accepted

81.2.1.1 Registration Procedure, MS in GSM Coverage, Serving GANC for CGI Known

81.2.1.1.1 Conformance requirement

If the MS is in GERAN or UTRAN coverage, it shall check if it has stored Serving GANC information for the current GSM CGI in case of GERAN coverage, or UTRAN cell Identity, in case of UTRAN Coverage, or if the MS is not in GERAN/UTRAN coverage, it shall check if it has stored Serving GANC information for the current AP-ID

- if found, the MS shall initiate Registration procedure towards the stored Serving GANC

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- Start Keep alive mechanism as defined in sub-clause 6.5 using the received TU3906 Timer IE

Reference(s)

3GPP TS 44.318 sub-clause 6.2.1 and 6.2.3.1

81.2.1.1.2 Test purpose

To verify that the MS can store the address to a serving GANC associated with a certain GSM cell and access that GANC at the Registration procedure.

81.2.1.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored a serving GANC associated with the GSM cell (CGI)
- MS has not stored a serving GANC associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------------------|-----------|----|---|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | | → | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | | ← | GA-RC REGISTER ACCEPT | TU3906 set to 60 seconds GANC Control Channel Description IE shall indicate that GPRS services are not available and IMSI Attach/Detach procedure shall not apply. |
| 5 | MS | | | Wait for 1 minutes so that TU3906 expires |
| A5 (Optional) | | | {GAN A/Gb Mode Location Update Procedure} | This step is performed only if the MS initiates a Location Area Update while TU3906 is still running |
| 6 | | → | GA-RC KEEP ALIVE | |

81.2.1.2 Registration Procedure, MS in GSM Coverage, Serving GANC for CGI Not Known; MS not in GSM Coverage, Serving GANC for AP Known

81.2.1.2.1 Conformance requirement

If the MS is in GERAN or UTRAN coverage, it shall check if it has stored Serving GANC information for the current GSM CGI in case of GERAN coverage, or UTRAN cell Identity, in case of UTRAN Coverage, or if the MS is not in GERAN/UTRAN coverage, it shall check if it has stored Serving GANC information for the current AP-ID

- if found, the MS shall initiate the GAN Registration procedure towards the stored Serving GANC

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- Start Keep alive mechanism as defined in sub-clause 6.5 using the received TU3906 Timer IE

The GANC may at any time initiate the deregistration of a MS by sending the GA-RC DEREGISTER message to the MS. When the GA-RC layer in the network has submitted the GA-RC DEREGISTER message to the TCP layer, it may initiate release of its half of the bidirectional TCP connection

Reference(s)

3GPP TS 44.318 sub-clause 6.2.1, 6.2.3.1, and 6.4.3

81.2.1.2.2 Test purpose

To verify that the MS can register to the default GANC if it doesn't have any data stored about serving GANC in the current GSM cell.

To verify that the MS can store the address to a serving GANC associated with a certain AP and access that GANC at the Registration procedure.

81.2.1.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC
- DNS inside of the default SEGW associated with the default GANC

Mobile Station:

- MS has stored a serving GANC associated with the AP-ID
- MS has not stored a serving GANC associated with the GSM cell (CGI)
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

The SS requests the MS to deregister. The GSM cell is then removed. The MS should now attempt to register using the stored AP-ID.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the default SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |

| | | | |
|---------------|----|---|---|
| 3 | → | GA-RC REGISTER REQUEST | To default GANC, verify correct GSM CGI is used. |
| 4 | ← | GA-RC REGISTER ACCEPT. | GANC Control Channel Description IE shall indicate that GPRS services are not available and IMSI Attach/Detach procedure shall not apply. |
| A4 (Optional) | | {GAN A/Gb Mode Location Update Procedure} | This step is performed only if the MS initiates a Location Area Update |
| 5 | ← | GA-RC DEREGISTER | Reject Cause = Unspecified |
| 6 | SS | | Remove GSM Coverage |
| 7 | MS | | Remove the TCP connection and the secure connection to SEGW |
| 8 | MS | | MS is joining the AP |
| 9 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 10 | → | GA-RC REGISTER REQUEST | To serving GANC, verify correct AP-ID is used. |
| 11 | ← | GA-RC REGISTER ACCEPT | TU3906 set to 60 seconds |
| 12 | MS | | Wait for 1 minutes so that TU3906 expires |
| 13 | → | GA-RC KEEP ALIVE | |

81.2.1.3 Void

81.2.1.4 Registration Procedure, MS Holds The IP Address to The serving SEGW And The FQDN to The Serving GANC

81.2.1.4.1 Conformance requirement

To initiate the registration procedure the MS shall:

- If the MS has stored an IP address of the GANC-SEGW, and the MS does not already have an established secure connection to this GANC-SEGW, the MS establishes a secure connection towards the GANC-SEGW according to sub-clause 4.2,

Following successful establishment of secure tunnel:

- If the MS holds a FQDN of the GANC, the MS performs a DNS query "inside the secure tunnel" to retrieve the IP-address of the GANC. The MS establishes a TCP connection to the GANC at the stored TCP port to be used for Registration with this GANC. If no TCP port has been stored for this GANC, the default TCP port (see sub-clause 12.2.1) shall be used. The MS shall not store the retrieved IP address for subsequent procedures (apart from DNS resolver caching);
- The MS shall only establish a single TCP connection to the GANC over the IPsec tunnel.

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- Start Keep alive mechanism as defined in sub-clause 6.5 using the received TU3906 Timer IE

Reference(s)

3GPP TS 44.318 sub-clause 6.2.1 and 6.2.3.1

81.2.1.4.2 Test purpose

To verify that the MS can register to the GANC by using IP addresses to SEGW and GANC.

81.2.1.4.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored the IP address to the SEGW associated with the serving GANC associated with the AP-ID but not the FQDN
- MS has stored the FQDN to the serving GANC associated with the AP-ID but not the IP address
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------------------|-----------|----|---|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | Set up Ipsec tunnel to serving SEGW |
| 3 | → | | | DNS Standard Query for GANC to the DNS server associated with the GANC |
| 4 | ← | | | Standard Query Response with IP address to GANC |
| 5 | MS | | | Establish TCP connection to serving GANC |
| 6 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 7 | ← | | GA-RC REGISTER ACCEPT | TU3906 set to 60 seconds. GANC Control Channel Description IE shall indicate that GPRS services are not available and IMSI Attach/Detach procedure shall not apply. |
| 8 | MS | | | Wait for 1 minutes so that TU3906 expires |
| A8 (Optional) | | | {GAN A/Gb Mode Location Update Procedure} | This step is performed only if the MS initiates a Location Area Update while TU3906 is still running |
| 9 | → | | GA-RC KEEP ALIVE | |

81.2.1.5 Registration Procedure, MS Holds The FQDN to The serving SEGW And The IP Address to The Serving GANC

81.2.1.5.1 Conformance requirement

To initiate the GAN registration procedure the MS shall:

- If the MS has stored a FQDN of the GANC-SEGW, the MS performs a public DNS query to retrieve the IP-address of the GANC-SEGW, if the MS does not already have an established secure connection to this GANC-SEGW, the MS establishes the secure connection towards the GANC-SEGW according to sub-clause 4.2. The MS shall not store the IP address retrieved from DNS for subsequent procedures (apart from DNS resolver caching).

Following successful establishment of secure tunnel:

- If the MS holds an IP address of the GANC, the MS establishes a TCP connection to the GANC at the stored TCP port to be used for Registration with this GANC. If no TCP port has been stored for this GANC, the default TCP port (see sub-clause 12.2.1) shall be used.
- The MS shall only establish a single TCP connection to the GANC over the IPsec tunnel.

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- Start Keep alive mechanism as defined in sub-clause 6.5 using the received TU3906 Timer IE

Reference(s)

3GPP TS 44.318 sub-clause 6.2.1 and 6.2.3.1

81.2.1.5.2 Test purpose

To verify that the MS can register to the GANC by using FQDN to SEGW.

81.2.1.5.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN

Mobile Station:

- MS has stored the FQDN to the SEGW associated with the serving GANC associated with the AP-ID, but not the IP address
- MS has stored the IP address to the serving GANC associated with the AP-ID, but not the FQDN
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------------------|-----------|----|---|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | → | | | DNS Standard Query for the SEGW to the public DNS server |
| 3 | ← | | | Standard Query Response with IP address to the SEGW |
| 4 | MS | | | MS sets up a secure connection to the SEGW and establishes TCP connection to the serving GANC using the stored IP address |
| 5 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 6 | ← | | GA-RC REGISTER ACCEPT | TU3906 set to 60 seconds GANC Control Channel Description IE shall indicate that GPRS services are not available and IMSI Attach/Detach procedure shall not apply. |
| 7 | MS | | | Wait for 1 minutes so that TU3906 expires |
| A7 (Optional) | | | {GAN A/Gb Mode Location Update Procedure} | This step is performed only if the MS initiates a Location Area Update while TU3906 is still running |
| 8 | → | | GA-RC KEEP ALIVE | |

81.2.1.6 Registration Procedure, MS is capable of GAN A/Gb mode and GAN Iu mode, directed to operate in GAN A/Gb mode

81.2.1.6.1 Conformance requirement

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- stop the timer TU3904,
- reset the Redirection Counter,
- retrieve the GAN Mode Indicator IE (if included) and:
 - if no GAN Mode Indicator IE is included or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, and the MS supports GAN A/Gb mode, then the MS shall operate in GAN A/Gb mode while registered with the GANC.
 - if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN Iu mode, and the MS supports GAN Iu mode, then the MS shall operate in GAN Iu mode while registered with the GANC.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.1

81.2.1.6.2 Test purpose

To verify that the MS that is capable of both GAN A/Gb mode and GAN Iu mode operation can be directed to operate in GAN A/Gb mode as a result of the Registration procedure.

81.2.1.6.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, with different LAI than GAN cell
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored a serving GANC associated with the GSM cell (CGI)
- MS has not stored a serving GANC associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| 5 | | | {GAN A/GB Mode Location Update Procedure} | |

81.2.1.7 Registration Procedure, MS is capable of GAN A/Gb mode and GAN lu mode, directed to operate in GAN lu mode

81.2.1.7.1 Conformance requirement

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- stop the timer TU3904,
- reset the Redirection Counter,

- retrieve the GAN Mode Indicator IE (if included) and:
- if no GAN Mode Indicator IE is included or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, and the MS supports GAN A/Gb mode, then the MS shall operate in GAN A/Gb mode while registered with the GANC.
- if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN Iu mode, and the MS supports GAN Iu mode, then the MS shall operate in GAN Iu mode while registered with the GANC.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.1

81.2.1.7.2 Test purpose

To verify that the MS that is capable of both GAN A/Gb mode and GAN Iu mode operation can be directed to operate in GAN Iu mode as a result of the Registration procedure.

81.2.1.7.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, with different LAI than GAN cell
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored a serving GANC associated with the GSM cell (CGI)
- MS has not stored a serving GANC associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

| 5 | | {GAN Iu Mode Location Update Procedure} | |

81.2.1.8 Registration Procedure, MS is capable of GAN A/Gb mode and GAN Iu mode, no GAN Mode Indicator IE in GA-RC REGISTER ACCEPT

81.2.1.8.1 Conformance requirement

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- stop the timer TU3904,
- reset the Redirection Counter,
- retrieve the GAN Mode Indicator IE (if included) and:
 - if no GAN Mode Indicator IE is included or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, and the MS supports GAN A/Gb mode, then the MS shall operate in GAN A/Gb mode while registered with the GANC.
 - if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN Iu mode, and the MS supports GAN Iu mode, then the MS shall operate in GAN Iu mode while registered with the GANC.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.1

81.2.1.8.2 Test purpose

To verify that the MS that is capable of both GAN A/Gb mode and GAN Iu mode operation will use GAN A/Gb mode if no GAN Mode Indicator IE is included in the GA-RC REGISTER ACCEPT message.

81.2.1.8.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, with different LAI than GAN cell
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored a serving GANC associated with the GSM cell (CGI)
- MS has not stored a serving GANC associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC GAN Mode Support Indicator in GAN Classmark IE indicates that MS supports GAN A/Gb mode and GAN Iu mode |
| 4 | ← | | GA-RC REGISTER ACCEPT | TU3906 set to 60 seconds No GAN Mode Indicator IE included |
| 5 | | | {GAN A/GB Mode Location Update Procedure} | |

81.2.1.9 Registration Procedure, MS is capable of GAN Iu mode only, no GAN Mode Indicator IE in GA-RC REGISTER ACCEPT

81.2.1.9.1 Conformance requirement

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- stop the timer TU3904,
- reset the Redirection Counter,
- retrieve the GAN Mode Indicator IE (if included) and:
 - if no GAN Mode Indicator IE is included or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, and the MS supports GAN A/Gb mode, then the MS shall operate in GAN A/Gb mode while registered with the GANC.
 - if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN Iu mode, and the MS supports GAN Iu mode, then the MS shall operate in GAN Iu mode while registered with the GANC.

If no GAN Mode Indicator IE is included in the GA-RC REGISTER ACCEPT message or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, but the MS does not support GAN A/Gb mode, then the MS shall immediately initiate GAN deregistration per sub-clause 6.4.1 and then proceed according to the registration reject procedures defined for the case of 'Invalid GANC' in sub-clause 6.2.3.3.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.1 and 6.2.4.6

81.2.1.9.2 Test purpose

To verify that the MS that is capable of GAN Iu mode operation (only) initiates GAN deregistration if the GA-RC REGISTER ACCEPT message does not include the GAN Mode Indicator.

81.2.1.9.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, with different LAI than GAN cell
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored a serving GANC associated with the GSM cell (CGI)
- MS has not stored a serving GANC associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

| 5 | → | | GA-RC DEREGISTER | Register Reject Cause = Unspecified |

81.2.1.10 Registration Procedure, MS is capable of GAN Iu mode only, GAN Mode Indicator IE in GA-RC REGISTER ACCEPT indicates that MS shall use GAN A/Gb mode

81.2.1.10.1 Conformance requirement

When the MS receives GA-RC REGISTER ACCEPT message, it shall:

- stop the timer TU3904,
- reset the Redirection Counter,
- retrieve the GAN Mode Indicator IE (if included) and:
 - if no GAN Mode Indicator IE is included or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, and the MS supports GAN A/Gb mode, then the MS shall operate in GAN A/Gb mode while registered with the GANC.
 - if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN Iu mode, and the MS supports GAN Iu mode, then the MS shall operate in GAN Iu mode while registered with the GANC.

If no GAN Mode Indicator IE is included in the GA-RC REGISTER ACCEPT message or if the GAN Mode Indicator IE is included and indicates that the MS shall operate in GAN A/Gb mode, but the MS does not support GAN A/Gb mode, then the MS shall immediately initiate GAN deregistration per sub-clause 6.4.1 and then proceed according to the registration reject procedures defined for the case of 'Invalid GANC' in sub-clause 6.2.3.3.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.1 and 6.2.4.6

81.2.1.10.2 Test purpose

To verify that the MS that is capable of GAN Iu mode operation (only) initiates GAN deregistration if the GA-RC REGISTER ACCEPT message includes the GAN Mode Indicator with value 'The MS shall operate in GAN A/Gb mode'.

81.2.1.10.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, with different LAI than GAN cell
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored a serving GANC associated with the GSM cell (CGI)
- MS has not stored a serving GANC associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Accept before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

81.2.2 Registration Procedure, Redirected

81.2.2.1 Registration Procedure, Redirected, Not Possible to Reuse Secure Connection

81.2.2.1.1 Conformance requirement

When the MS receives GA-RC REGISTER REDIRECT message, it shall:

- stop the timer TU3904,
- Increment the Redirection counter,

- release the TCP connection towards the GANC,
- otherwise release the secure connection towards SEGW of the previous GANC as defined in sub-clause 4.5
- initiate the registration procedure towards the returned GANC as defined in sub-clause 6.2.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.2

81.2.2.1.2 Test purpose

To verify that the MS can register to another GANC when it receives Registration Redirect as a response on the Registration Request message.

81.2.2.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC
- DNS inside of the default SEGW associated with the default GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- The serving GANC does not belong to the same SEGW as the default GANC
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Redirect before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| | | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |

| | | | |
|---|----|-------------------------|---|
| 2 | → | GA-RC REGISTER REQUEST | To serving GANC |
| 3 | ← | GA-RC REGISTER REDIRECT | Redirect default GANC, with associated default SEGW IP or FQDN |
| 4 | MS | | Remove the TCP connection and the secure connection to SEGW |
| 5 | MS | | MS sets up secure connection to the new SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 6 | → | GA-RC REGISTER REQUEST | To default GANC |

81.2.2.2 Registration Procedure, Redirected, Current And Received GANC Belongs to The Same SEGW, IP Address Matches

81.2.2.2.1 Conformance requirement

When the MS receives GA-RC REGISTER REDIRECT message, it shall:

- stop the timer TU3904,
- Increment the Redirection counter,
- release the TCP connection towards the GANC,
- if the returned SEGW is the same as the one used for the connection towards the previous GANC,
- if the MS held a Serving GANC-SEGW IP address for the current Serving GANC (either in the Serving GANC store or received in a previous GA-RC REGISTER REDIRECT) and the received GA-RC REGISTER REDIRECT contains the Serving GANC-SEGW IP address IE, and these two IP addresses match, the MS shall reuse the secure connection, or
 - initiate the registration procedure towards the returned GANC as defined in sub-clause 6.2.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.2

81.2.2.2.2 Test purpose

To verify that the MS can register to another GANC when it receives Registration Redirect as a response on the Registration Request message.

To verify that the same Ipsec tunnel can be reused if the current GANC belongs to the same SEGW as the received GANC using FQDN as identifier.

81.2.2.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC and default GANC.

Mobile Station:

- MS has stored the IP address or FQDN to the serving GANC and its SEGW associated with the AP-ID
- The serving GANC belongs to the same SEGW as the default GANC
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Redirect before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| | | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 2 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 3 | ← | | GA-RC REGISTER REDIRECT | Redirect default GANC, IP address for the SEGW sent |
| 4 | MS | | | Remove the TCP connection |
| 5 | MS | | | Establish a TCP connection to the default GANC over the same secure connection |
| 6 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.2.2.3 Registration Procedure, Redirected, Current And Received GANC Belongs to The Same SEGW, FQDN Matches

81.2.2.3.1 Conformance requirement

When the MS receives GA-RC REGISTER REDIRECT message, it shall:

- stop the timer TU3904,
- Increment the Redirection counter,
- release the TCP connection towards the GANC,
- if the returned SEGW is the same as the one used for the connection towards the previous GANC,
- if the MS held a Serving GANC-SEGW FQDN identifier (either in the Serving GANC store or received in a previous GA-RC REGISTER REDIRECT) and the received GA-RC REGISTER REDIRECT contains the Serving GANC-SEGW FQDN IE, and these identifiers match, the MS shall reuse the secure connection
- initiate the registration procedure towards the returned GANC as defined in sub-clause 6.2

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.2

81.2.2.3.2 Test purpose

To verify that the MS can register to another GANC when it receives Registration. Redirect as a response on the Registration Request message.

To verify that the same Ipsec tunnel can be reused if the current GANC belongs to the same SEGW as the received GANC using FQDN as identifier.

81.2.2.3.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC and default GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and the IP address or FQDN of its SEGW associated with the AP-ID
- The serving GANC belongs to the same SEGW as the default GANC
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC REGISTERED.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Redirect before timer TU3904 expires.

Specific Test Parameters

-

Maximum duration of test

1 min.

|------|-----------|----|-------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| | | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using FQDN |
| 2 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 3 | ← | | GA-RC REGISTER REDIRECT | Redirect default GANC, FQDN for the SEGW sent |

| | | | |
|---|----|------------------------|--|
| 4 | MS | | Remove the TCP connection |
| 5 | MS | | Establish a TCP connection to the default GANC over the same secure connection |
| 6 | → | GA-RC REGISTER REQUEST | To default GANC |

81.2.3 Registration Procedure, Rejected

81.2.3.1 Registration Procedure, Registration rejected, Network congestion

81.2.3.1.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Network Congestion'
 - create a random value between zero and the received value in IE 'TU3907 Timer' and
 - add this value to the received value in IE 'TU3907 Timer', and use this as the new value for TU3907
 - start timer TU3907 according to the new calculated value and wait for it to expire.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3

81.2.3.1.2 Test purpose

To verify that the MS retries to register again after the correct time, according to the received timer TU3907, after receiving Register reject.

81.2.3.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN or IP address of the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due to network congestion before timer TU3904 expires. TU3907 Timer IE is set to 60 (1 minutes).

Specific Test Parameters

-

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | ← | | GA-RC REGISTER REJECT | Cause: network congested. TU3907 Timer IE is set to 60 seconds |
| 5 | MS | | | The MS sets TU3907 randomly between 60 and 120, i.e. 1 – 2 minutes. Wait until the TU3907 expires |
| 6 | → | | GA-RC REGISTER REQUEST | To serving GANC |

81.2.3.2 Registration Procedure, Registration rejected, AP not allowed

81.2.3.2.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'AP not allowed'
 - release the TCP connection established to the GANC, if still established,
 - release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5
 - store the AP-ID in the AP Black List and not initiate a new Register Request from this AP, until the AP-ID is removed from the AP Black List i.e. as a result of power-cycle.

The MS shall also:

- Update the stored Serving GANC table as follows if the received Reject cause was not 'Network Congestion' or 'Geo Location not known':
- If the MS is not in GERAN/UTRAN coverage it shall remove information related to the AP-ID, if exists in the table.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3

81.2.3.2.2 Test purpose

To verify that the MS does not try to register again, after receiving Register reject due to Location not allowed until the MS is joining another AP.

81.2.3.2.3 Method of test

Initial conditions

System Simulator:

- 2 GAN cells, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC
- DNS inside of the default SEGW associated with the default GANC

Mobile Station:

- MS has stored the FQDN or IP address to the serving GANC and its SEGW associated with the AP-ID
- MS has stored the FQDN or IP address to the default GANC and its SEGW
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due to AP not allowed before timer TU3904 expires.

The MS are not allowed to try to register again from the same AP. Therefore wait for 2 minutes and let the MS join the second AP, where the mobile will try to register again.

Specific Test Parameters

-

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the first AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | ← | | GA-RC REGISTER REJECT | Cause: AP not allowed |
| 5 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |

| | | | |
|---|----|------------------------|---|
| 6 | MS | | Wait for 2 minutes. Make sure that the MS doesn't try to register again. |
| 7 | MS | | MS is joining the second AP |
| 8 | MS | | MS sets up secure connection to the default SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 9 | → | GA-RC REGISTER REQUEST | To default GANC |

81.2.3.3 Registration Procedure, Registration rejected, Location not allowed

81.2.3.3.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Location not allowed'
 - release the TCP connection established to the GANC, if still established,
 - release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5
 - update the Location Black List according to the received information elements Location Black List indicator and Location Area Identification (i.e. the same as that included in the GA-RC REGISTER REQUEST message) and not initiate a new Register Request from the locations indicated by the updated Location Black List, until they are removed from the Location Black List i.e. as a result of power-cycle.

The MS shall also:

- Update the stored Serving GANC table as follows if the received Reject cause was not 'Network Congestion' or 'Geo Location not known':
- If the MS is in GERAN/UTRAN coverage it shall remove information related to the current GSM-CGI or UTRAN Cell Identity, if it exists in the table.
- If the MS is not in GERAN/UTRAN coverage it shall remove information related to the AP-ID, if exists in the table.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3

81.2.3.3.2 Test purpose

To verify that the MS does not try to register again, after receiving Register reject due to Location not allowed until it is powercycled.

81.2.3.3.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, default parameters
- Public DNS without knowledge of the serving GANC's FQDN

- DNS inside of the serving SEGW associated with the serving GANC
- DNS inside of the default SEGW associated with the default GANC

Mobile Station:

- MS has stored the FQDN or IP address to the serving GANC and its SEGW associated with the GSM cell (CGI)
- MS has stored the FQDN or IP address to the default GANC and its SEGW
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due to Location not allowed before timer TU3904 expires.

The MS are not allowed to try to register again from the same Location Area. Therefore wait for 5 minutes and then powercycle the MS so that the LAI disappears from the Location black list and the MS can register again from that Location area.

Specific Test Parameters

-

Maximum duration of test

6 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | ← | | GA-RC REGISTER REJECT | Cause: Location not allowed |
| 5 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 6 | MS | | | Wait for 5 minutes. Make sure that the MS doesn't try to register again. |
| 7 | MS | | | Powercycle the MS |
| 8 | MS | | | MS sets up secure connection to the default SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 9 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.2.3.4 Registration Procedure, Registration rejected, IMSI not allowed

81.2.3.4.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
- 'IMSI not allowed'
- release the TCP connection established to the GANC, if still established.
- release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5
- not initiate a new GAN Registration procedure until the next power-on.

The MS shall also:

- Update the stored Serving GANC table as follows if the received Reject cause was not 'Network Congestion' or 'Geo Location not known':
- If the MS is not in GERAN/UTRAN coverage it shall remove information related to the AP-ID, if exists in the table.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3

81.2.3.4.2 Test purpose

To verify that the MS does not try to register again after receiving Registration reject due to IMSI not allowed until the MS is power cycled.

81.2.3.4.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC
- DNS inside of the default SEGW associated with the default GANC

Mobile Station:

- MS has stored the FQDN or the IP address to the serving GANC and its SEGW associated with the AP-ID
- MS has stored the FQDN or the IP address to the default GANC and its SEGW
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due to IMSI not allowed before timer TU3904 expires.

Wait for 2 minutes to confirm that the MS does not try to register again.

Switch off the MS and switch it back on again. The MS is supposed to try to register with the default GANC.

Specific Test Parameters

-

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the first AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | ← | | GA-RC REGISTER REJECT | Cause: IMSI not allowed |
| 5 | MS | | | Release the TCP connection to the serving GANC and the secure connection to the serving SEGW |
| 6 | MS | | | Wait for 2 minutes. Make sure that the MS doesn't try to register again. |
| 7 | MS | | | Power cycle the MS |
| 8 | MS | | | MS sets up secure connection to the default SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 9 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.2.3.5 Void

81.2.3.6 Registration Procedure, Registration rejected, invalid GANC

81.2.3.6.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Invalid GANC' or 'Unspecified'
 - release the TCP connection established to the GANC, if still established.

- release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5
- act as defined in sub-clause 6.2.4.5

The MS shall also:

- Update the stored Serving GANC table as follows if the received Reject cause was not 'Network Congestion' or 'Geo Location not known':
- If the MS is not in GERAN/UTRAN coverage it shall remove information related to the AP-ID, if exists in the table.

The MS shall;

- If the GANC selection is ongoing:
- act on upper layer indications as follows;
- If no more PLMNs/GANCs are available for GANC selection or the GANC selection is finished unsuccessfully;
- stop all ongoing registration procedures;
- release the TCP connection towards the current GANC, if established,
- release the secure connection towards SEGW of the current GANC, if established, as defined in sub-clause 4.5
- initiate registration towards the Default GANC as defined in sub-clause 6.2.1;
- else if the GANC selection process indicates new PLMN/GANC selection:
- initiate registration procedure towards the GANC associated with the selected PLMN as defined in sub-clause 6.2.
 - else if the MS attempted the registration towards the Default GANC
- delete the stored information about the Default GANC,
- delete the contents of the stored Serving GANC table
- Increment Redirection Counter
- initiate Discovery Procedure as defined in sub-clause 5.3
 - else if the MS attempted the registration towards current GANC is a Serving GANC
- Update the stored Serving GANC table as defined in the end of sub-clause 6.2.3.3 (i.e. delete information about this Serving GANC in the table) and
- Increment Redirection Counter
- initiate Registration Procedure towards the Default GANC as defined in sub-clause 6.2.1

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3 and 6.2.4.5

81.2.3.6.2 Test purpose

To verify for serving and default GANC that the MS does not try to register again to the same GANC after receiving Registration reject due to invalid GANC.

81.2.3.6.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of any GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

- DNS inside of the default SEGW associated with the default GANC
- DNS inside of the provisioning SEGW associated with the provisioning GANC

Mobile Station:

- MS has stored the FQDN or IP address to the serving GANC associated with the AP-ID
- MS has stored the FQDN or IP address to the default GANC
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due invalid GANC before timer TU3904 expires.

Check that the MS kicks off the Registration procedure towards the Default GANC. Check the Register Reject Cause IE and Redirection Counter IE in the Discovery Request message.

The SS is supposed to answer the Registration Request message with Registration Rejected due invalid GANC before timer TU3904 expires.

Check that the MS kicks off the Discovery procedure towards the Provisioning GANC. Check the Register Reject Cause IE and Redirection Counter IE in the Discovery Request message.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the first AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | ← | | GA-RC REGISTER REJECT. | Cause: Invalid GANC |
| 5 | | | | Release the TCP connection to the serving GANC and the secure connection to the serving SEGW |
| 6 | | | | MS sets up secure connection to the default SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 7 | → | | GA-RC REGISTER REQUEST | To default GANC |
| 8 | ← | | GA-RC REGISTER REJECT. | Cause: Invalid GANC |

| | | | |
|----|---|-------------------------|---|
| 9 | | | Release the TCP connection to the default GANC and the secure connection to the default SEGW |
| 10 | | | MS sets up secure connection to the provisioning SEGW and establishes a TCP connection to the provisioning GANC using either IP address or FQDN |
| 11 | → | GA-RC DISCOVERY REQUEST | To provisioning GANC |

81.2.3.7 Registration Procedure, Registration rejected, Geo location not known

81.2.3.7.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Geo Location not known'
 - release the TCP connection established to the GANC, if still established.
 - release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5
 - not retry registration from this AP until the location is provided or until the next power-on.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3

81.2.3.7.2 Test purpose

To verify that the MS does not try to register again after receiving Registration Reject due to 'Geo location not known' until the MS is power cycled.

81.2.3.7.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the serving SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN or the IP address to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due to Geo location not known before timer TU3904 expires.

Wait for 2 minutes to confirm that the MS does not try to register again.

Switch off the MS and switch it back on again. The MS is supposed to try to register again.

Specific Test Parameters

-

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the first AP |
| 2 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | To serving GANC |
| 4 | ← | | GA-RC REGISTER REJECT | Cause: Geo location not known |
| 5 | | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 6 | MS | | | Wait for 2 minutes. Make sure that the MS doesn't try to register again. |
| 7 | MS | | | Power cycle the MS |
| 8 | MS | | | MS sets up secure connection to the serving SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 9 | → | | GA-RC REGISTER REQUEST | To serving GANC |

81.2.4 Registration Procedure, Abnormal Cases

81.2.4.1 Registration Procedure, TU3904/TU3905 expiry, Serving GANC

81.2.4.1.1 Conformance requirement

If timer TU3904 expires in the MS, the MS shall:

- release the TCP connection towards the GANC,
- release the secure connection towards SEGW of the GANC as defined in sub-clause 4.5,
- If GAN registration is unsuccessful after a number of attempts defined by the MS parameter "Up Register Max Retries" (defined in sub-clause 12.2.3), the MS shall act as defined in sub-clause 6.2.4.5.
- Otherwise, if GAN Registration can be re-attempted according to the MS parameter "Up Register Max Retries", start timer TU3905 and wait for it to expire.

If timer TU3905 has expired in the MS, the MS shall restart the Registration procedure as defined in sub-clause 6.2.1.

Reference(s)

3GPP TS 44.318 sub-clause 6.2.4.1 and 6.2.4.3

81.2.4.1.2 Test purpose

To verify that the MS retries to register correct number of times before it tries to register at another GANC when it does not get any reply on the Registration Request message.

81.2.4.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is not supposed to answer the Registration Request message at all.

The MS will wait for TU3904 and TU3905 to expire and retry to register again the number of times that is set in the MS parameter 'Up Register Max Retries'. After that it will try to register at the default GANC

Specific Test Parameters

'Up Register Max Retries' (3 times)

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the first AP |
| 2 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | 1 st time to serving GANC, MS starts TU3904 |
| 4 | MS | | | Wait for 30 seconds so that TU3904 expires. TU3905 is set |
| 5 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 6 | MS | | | Wait for 10 seconds so that TU3905 expires |

| | | | |
|----|----|------------------------|---|
| 7 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 8 | → | GA-RC REGISTER REQUEST | 2 nd time to serving GANC, MS starts TU3904. 1 st reattempt |
| 9 | MS | | Wait for 30 seconds so that TU3904 expires. TU3905 is set |
| 10 | MS | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 11 | MS | | Wait for 10 seconds so that TU3905 expires |
| 12 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 13 | → | GA-RC REGISTER REQUEST | 3 rd time to serving GANC, MS starts TU3904. 2 nd reattempt |
| 14 | MS | | Wait for 30 seconds so that TU3904 expires. |
| 15 | MS | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 16 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 17 | → | GA-RC REGISTER REQUEST | To default GANC |

81.2.4.2 Registration Procedure, Registration Rejected, Network Congestion, Persistent Fault

81.2.4.2.1 Conformance requirement

When the MS receives GA-RC REGISTER REJECT message it shall:

- stop the timer TU3904,
- if the MS is in the process of GANC selection;
- ignore the received Register Reject Cause Information Element; and;
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Register Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Network Congestion'
 - create a random value between zero and the received value in IE 'TU3907 Timer' and
 - add this value to the received value in IE 'TU3907 Timer', and use this as the new value for TU3907
 - start timer TU3907 according to the new calculated value and wait for it to expire.

If timer TU3907 expires in the MS, the MS shall:

- If GAN registration is unsuccessful after a number of attempts defined by the MS parameter "Up Register Max Retries" (defined in sub-clause 12.2.3), the MS shall act as if a "Lower layer failure in the MS" has occurred as defined in sub-clause 6.2.4.2
- else, if the TCP connection to the GANC is still established,
- send a GA-RC REGISTER REQUEST that includes information elements as described in sub-clause 6.2.1 and
- start timer TU3904
 - else, restart the GAN Registration procedure towards the GANC as defined in sub-clause 6.2.1

Reference(s)

3GPP TS 44.318 sub-clause 6.2.3.3 and 6.2.4.4

81.2.4.2.2 Test purpose

To verify that the MS retries to register to the same GANC the correct number of times when it gets rejected due to network congestion several times.

81.2.4.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC DEREGISTERED

Foreseen final state of the MS

The MS will stay in state to GA-RC DEREGISTERED as the registration fails.

Test procedure

Make the MS join the AP so that the Registration procedure is kicked off.

The SS is supposed to answer the Registration Request message with Registration Rejected due to network congestion before timer TU3904 expires. TU3907 Timer IE is set to 60 (1 minutes).

The MS will wait for TU3904 and TU3907 to expire and retry to register again the number of times that is set in the MS parameter 'Up Register Max Retries'.

At the first reject the SS releases the TCP connection and the Ipsec tunnel, so that the MS has to establish the connection again. The rest of the rejects can keep the connection as that is the most likely scenario.

Specific Test Parameters

Up Register Max Retries' is set to 3 times

Maximum duration of test

7 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is joining the AP |
| 2 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 3 | → | | GA-RC REGISTER REQUEST | 1 st time to serving GANC, MS starts TU3904 |
| 4 | ← | | GA-RC REGISTER REJECT | Cause: network congested. TU3907 Timer IE is set to 60 seconds |

| | | | |
|---------------|----|------------------------|---|
| 5 | MS | | The MS sets TU3907 randomly between 60 and 120, i.e. 1 – 2 minutes. Wait until TU3907 expires |

81.2.4.4 Void

81.2.4.5 Void

81.2.4.6 Void

81.2.4.7 Void

81.2.5 Registration Procedure, Register Update

81.2.5.1 Registration Procedure, Register Update, Rejected

81.2.5.1.1 Conformance requirement

If the network rejects the Registration Update, it shall send the GA-RC DEREGISTER message to the MS. This message shall contain the Register Reject Cause information element.

When the MS receives the GA-RC DEREGISTER message, it shall behave as defined in sub-clause 6.4.4 "Reception of GA-RC DEREGISTER by MS".

When the MS receives the GA-RC DEREGISTER message, it shall:

- 'AP not allowed'
- release the TCP connection established to the GANC, if still established,
- release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5,
- store the AP-ID in the AP Black List of and not initiate a new Register Request from this AP, until the AP-ID is removed from the AP black list i.e. as a result of power-cycle.

Reference(s)

3GPP TS 44.318 sub-clause 6.3.2.2, 6.3.3.1 and 6.4.4

81.2.5.1.2 Test purpose

To verify that the MS acts according to the Register Update Reject Cause contained in the GA-RC DEREGISTER from the network.

81.2.5.1.3 Method of test

Initial conditions

System Simulator:

- 2 GAN cells, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED

Test procedure

Make the MS join a second AP so that the Registration Update procedure is kicked off.

The SS is supposed to reply with GA-RC DEREGISTER.

The MS will then check the Register Reject Cause IE contained in GA-RC DEREGISTER message and act as specified in GANC 44.318 section 6.4.4.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is changing APs |
| 2 | → | | GA-RC REGISTER UPDATE UPLINK | To serving GANC |
| 3 | ← | | GA-RC DEREGISTER | To MS Cause: AP not allowed |
| 4 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 5 | MS | | | Wait for 5 minutes. Make sure that the MS doesn't try to register again. |

81.2.5.2 Registration Procedure, Register Update, Redirection

81.2.5.2.1 Conformance requirement

If the network decides to redirect the MS to another GANC, it shall send the GA-RC REGISTER REDIRECT message to the MS. This message shall contain valid information about another GANC, so that the MS is able to initiate the Registration procedure towards that GANC.

Reference(s)

3GPP TS 44.318 sub-clause 6.3.2.3

81.2.5.2.2 Test purpose

To verify that the MS can register to another GANC if it gets redirected as a result of the Registration Update procedure.

81.2.5.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- 1 GSM cell, initially switched off

Mobile Station:

- MS in state GA-RC REGISTERED under no GSM coverage

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED as the Registration procedure to the new GANC is interrupted.

Test procedure

GSM cell is activated, MS is changing location area by going into GSM coverage area and Registration Update procedure is kicked off.

The SS is supposed to reply with .GA-RC REGISTER REDIRECT

The MS will then send GA-RC REGISTER REQUEST to the suggested GANC.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------------|----------------------------|
| | MS | SS | | |
| 1 | SS | | | The GSM cell is activated. |
| 2 | → | | GA-RC REGISTER UPDATE UPLINK | To serving GANC |
| 3 | ← | | GA-RC REGISTER REDIRECT | Suggest a different GANC |
| 4 | → | | GA-RC REGISTER REQUEST | To the suggested GANC. |

81.2.6 Registration Procedure, Deregister

81.2.6.1 Registration Procedure, Deregister, Network Congestion, MS in State GA-CSR DEDICATED

81.2.6.1.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.

- else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
- 'Network Congestion'
- release all local GAN resources (e.g. MS is in active call over GAN)
- release the TCP connection towards the current GANC and
- release the secure connection towards the GANC-SEGW, as defined in sub-clause 4.5
- create a random value between zero and the received value in IE 'TU3907 Timer' and
- add this value to the received value in IE 'TU3907 Timer', and use this as the new value for TU3907
- start timer TU3907 according to the new calculated value

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.1.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and starts to try to register again after receiving GA-RC DEREGISTER with cause 'Network Congestion'.

81.2.6.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-CSR DEDICATED with an active call

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'Network Congestion'.

The MS is supposed to start the Registration procedure when TU3907 has expired.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------|---------|
| | MS | SS | | |
| | | | | |

| | | | |
|---|----|------------------------|---|
| 1 | ← | GA-RC DEREGISTER | From serving GANC, cause: network congested. TU3907 is set to 10 sec. |
| 2 | MS | | Release the active call |
| 3 | MS | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 4 | MS | | The SS checks that the following step is initiated by the MS within min 10 and 20 sec |
| 5 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 6 | → | GA-RC REGISTER REQUEST | To serving GANC |

81.2.6.2 Registration Procedure, Deregister, AP Not Allowed, MS in State GA-RC REGISTERED

81.2.6.2.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'AP not allowed'
 - release the TCP connection established to the GANC, if still established,
 - release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5,
 - store the AP-ID in the AP Black List of and not initiate a new Register Request from this AP, until the AP-ID is removed from the AP black list i.e. as a result of power-cycle.

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.2.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and does not start to try to register again after receiving GA-RC DEREGISTER with cause 'AP not allowed' until it is powercycled.

81.2.6.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'AP not allowed'.

The MS are not allowed to try to register again from the same AP. Therefore, wait for 5 minutes and then powercycle the MS so that the AP disappears from the AP black list and the MS can register again from that AP.

Specific Test Parameters

-

Maximum duration of test

6 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | ← | | GA-RC DEREGISTER | From serving GANC, cause: AP not allowed. |
| 2 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 3 | MS | | | Wait for 5 minutes |
| 4 | MS | | | Powercycle the MS |
| 5 | | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 6 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.2.6.3 Registration Procedure, Deregister, Location Not Allowed, MS in State GA-CSR IDLE

81.2.6.3.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
- 'Location not allowed'
- release the TCP connection established to the GANC, if still established,
- release the secure connection towards the SEGW associated with the GANC, as defined in sub-clause 4.5,
- update the Location Black List according to the received information elements Location Black List indicator and Location Area Identification and not initiate a new Register Request from that Location, until the Location is removed from the Location Black List i.e. as a result of power-cycle.

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.3.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and does not start to try to register again after receiving GA-RC DEREGISTER with cause 'Location not allowed' until it is powercycled.

81.2.6.3.3 Method of test

Initial conditions

System Simulator:

- 1 GSM cell, default parameters
- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the GSM cell (CGI)
- MS in state GA-CSR IDLE

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'Location not allowed'.

The MS are not allowed to try to register again from the same Location area. Therefore, wait for 5 minutes and then powercycle the MS so that the LAI disappears from the Location black list and the MS can register again from that Location area.

Specific Test Parameters

-

Maximum duration of test

6 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------|---|
| | MS | SS | | |
| 1 | ← | | GA-RC DEREGISTER | From serving GANC, cause: Location not allowed. |
| 2 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 3 | MS | | | Wait for 5 minutes |
| 4 | MS | | | Powercycle the MS |
| 5 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |

| | | | |
|---|---|------------------------|-----------------|
| 6 | → | GA-RC REGISTER REQUEST | To default GANC |
|---|---|------------------------|-----------------|

81.2.6.4 Registration Procedure, Deregister, IMSI Not Allowed

81.2.6.4.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'IMSI not allowed'
 - release the TCP connection established to the GANC, if still established.
 - release the secure connection towards the SEGW associated with the GANC as defined in sub-clause 4.5,
 - not initiate a new Registration procedure until the next power-on.

The MS shall also,

- Update the stored Serving GANC table as following if the received Reject cause was not 'Network Congestion' or 'Geo Location not known'
- If the MS is not in GERAN/UTRAN coverage
- Remove information related to the AP-ID, if exists in the table.

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.4.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and does not start to try to register again after receiving GA-RC DEREGISTER with cause 'IMSI not allowed' until it is powercycled.

81.2.6.4.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the default GANC's FQDN
- DNS inside of the SEGW associated with the default GANC

Mobile Station:

- MS has stored the FQDN to the default GANC and its SEGW associated with the AP-ID
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'IMSI not allowed'.

The MS are not allowed to try to register again. Therefore, wait for 5 minutes and then powercycle the MS so that the MS can register again.

Specific Test Parameters

-

Maximum duration of test

6 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-RC DEREGISTER | From serving GANC, cause: IMSI not allowed. |
| 2 | | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 3 | MS | | | Wait for 5 minutes |
| 4 | MS | | | Powercycle the MS |
| 5 | | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the default GANC using FQDN |
| 6 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.2.6.5 Registration Procedure, Deregister, Unspecified

81.2.6.5.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Unspecified'
 - release the TCP connection established to the GANC, if still established.
 - release the secure connection towards the SEGW associated with the GANC as defined in sub-clause 4.5,
 - act as if a "Lower layer failure in the MS" has occurred as defined in sub-clause 6.2.4.2

The MS shall also,

- Update the stored Serving GANC table as following if the received Reject cause was not 'Network Congestion' or 'Geo Location not known'
- If the MS is not in GERAN/UTRAN coverage
- Remove information related to the AP-ID, if exists in the table.

Lower layer failure in the MS can be for example related to DNS, IPsec or TCP. If any lower layer failure happens in the MS, the MS shall:

- release the TCP connection towards the current GANC, if established,
- release the secure connection towards SEGW of the current GANC, if established, as defined in sub-clause 4.5 and
-
-

If registration is still unsuccessful after a number of attempts defined by the MS parameter "Up Connect Attempt Count" (defined in sub-clause 12.2.3), the MS shall act as defined in sub-clause 6.2.4.5.

- Otherwise, start timer TU3905 and wait for it to expire.

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4 and 6.2.4.2

81.2.6.5.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and act as if it has discovered a lower layer fault when it receives the GA-RC DEREGISTER message with message code 'Unspecified' and the number of failed attempts doesn't exceed the Up Connection Attempt Count.

81.2.6.5.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the default GANC's FQDN
- DNS inside of the SEGW associated with the default GANC

Mobile Station:

- MS has stored the FQDN to the default GANC and its SEGW associated with the AP-ID
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'Unspecified'.

The MS will try to register again to the default GANC.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-RC DEREGISTER | From serving GANC, with reject cause: Unspecified. |

| | | | |
|---|----|------------------------|--|
| 2 | MS | | Release the TCP connection to the GANC and the secure connection to the SEGW and TU3905 is started |
| 3 | MS | | TU3905 expires |
| 4 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the default GANC using FQDN |
| 5 | → | GA-RC REGISTER REQUEST | To default GANC |

81.2.6.6 Registration Procedure, Deregister, Unspecified, Persistent Fault, Default GANC

81.2.6.6.1 Conformance requirement

3GPP TS 44.318, section 6.4.4:

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Unspecified'
 - release the TCP connection established to the GANC, if still established.
 - release the secure connection towards the SEGW associated with the GANC as defined in sub-clause 4.5,
 - act as if a "Lower layer failure in the MS" has occurred as defined in sub-clause 6.2.4.2

The MS shall also,

- Update the stored Serving GANC table as following if the received Reject cause was not 'Network Congestion' or 'Geo Location not known'
- If the MS is not in GERAN/UTRAN coverage
- Remove information related to the AP-ID, if exists in the table.

3GPP TS 44.318, section 6.2.4.2:

Lower layer failure in the MS can be for example related to DNS, IPsec or TCP. If any lower layer failure happens in the MS, the MS shall:

- release the TCP connection towards the current GANC, if established,
- release the secure connection towards SEGW of the current GANC, if established, as defined in sub-clause 4.5 and
- If registration is still unsuccessful after a number of attempts defined by the MS parameter "Up Connect Attempt Count" (defined in sub-clause 12.2.3), the MS shall act as defined in sub-clause 6.2.4.5.
- Otherwise, start timer TU3905 and wait for it to expire.

3GPP TS 44.318, section 6.2.4.5:

else if the MS attempted the registration towards the Default GANC

- delete the stored information about the Default GANC,
- delete the contents of the stored Serving GANC table
- Increment Redirection Counter
- initiate Discovery Procedure as defined in sub-clause 5.3

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4 and 6.2.4.2, 6.2.4.5

81.2.6.6.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and will act as after a Registration Failure when it receives the GA-RC DEREGISTER message with message code 'Unspecified' and the number of failed attempts exceeds the Up Connection Attempt Count..

81.2.6.6.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS has stored the FQDN to the default GANC and its SEGW
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'Unspecified'. The MS treat this as a lower layer fault and starts to try to set up the connection to the GANC again. The SS simulates a persistent lower layer fault and after three attempts the number of failed attempts has reached the 'Up Connect Attempt Count' parameter and the fault will be treated as a registration fault. The MS will perform a Discovery procedure towards the Provisioning GANC.

Specific Test Parameters

-

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-RC DEREGISTER | From serving GANC, with reject cause : Unspecified. |
| 2 | MS | | | Release the TCP connection to the serving GANC and the secure connection to the SEGW and TU3905 is started |
| 3 | MS | | | TU 3905 expires after 10 seconds |

| | | | |
|----|----|-------------------------|---|
| 4 | MS | | MS tries to set up a secure connection to the default SEGW but fails. MS removes the secure connection. Number of Up Connect Attempts is increased to 1 and TU3905 is started |
| 5 | MS | | TU 3905 expires after 10 seconds |
| 6 | MS | | MS sets up a secure connection to the default SEGW and tries to set up a TCP connection to the default GANC but fails with the TCP connection. MS removes the TCP connection and the secure connection. Number of Up Connect Attempts is increased to 2 and TU3905 is started |
| 7 | MS | | TU 3905 expires after 10 seconds |
| 8 | MS | | MS sets up a secure connection to the default SEGW and tries to set up a TCP connection to the default GANC but fails with the TCP connection. MS removes the TCP connection and the secure connection. Number of Up Connect Attempts is increased to 3. |
| 9 | MS | | MS sets up secure connection to the SEGW and establishes a TCP connection to the provisioning GANC |
| 10 | → | GA-RC DISCOVERY REQUEST | To provisioning GANC |

81.2.6.7 Registration Procedure, Deregister, Invalid GANC, Serving GANC

81.2.6.7.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Invalid GANC'
 - release the TCP connection established to the GANC, if still established.
 - release the secure connection towards the SEGW associated with the GANC as defined in sub-clause 4.5,
 - act as defined in sub-clause 6.2.4.5 "Registration Failure"

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.7.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and does not start to try to register again to the same GANC after receiving GA-RC DEREGISTER with cause 'Invalid GANC'.

81.2.6.7.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'Invalid GANC'.

The MS will try to register to default GANC.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | ← | | GA-RC DEREGISTER | From serving GANC, invalid GANC. |
| 2 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 3 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the default GANC using either IP address or FQDN |
| 4 | → | | GA-RC REGISTER REQUEST | To default GANC |

81.2.6.8 Registration Procedure, Deregister, Geo Location Not Known

81.2.6.8.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
- else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Geo Location not known'
- release the TCP connection established to the GANC, if still established.

- release the secure connection towards the SEGW associated with the GANC as defined in sub-clause 4.5,
- not retry registration from this AP until the location is provided or until the next power-on.

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.8.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and does not start to try to register again after receiving GA-RC DEREGISTER with cause 'Geo location not known' until it is powercycled.

81.2.6.8.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will change state to GA-RC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RC DEREGISTER with cause 'Geo location not known'.

The MS are not allowed to try to register again. Therefore, wait for 5 minutes and then powercycle the MS so that the MS can register again.

Specific Test Parameters

-

Maximum duration of test

6 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------|--|
| | MS | SS | | |
| 1 | | ← | GA-RC DEREGISTER | From serving GANC, cause: Geo location not known'. |
| 2 | | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 3 | MS | | | Wait for 5 minutes |
| 4 | MS | | | Powercycle the MS |

| | | | |
|---|---|------------------------|---|
| 5 | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 6 | → | GA-RC REGISTER REQUEST | To serving GANC |
| | | | |

81.2.6.9 Registration Procedure, Deregister, MS Initiated

81.2.6.9.1 Conformance requirement

When the MS is leaving or about to leave the GAN coverage and the MS has successfully registered with a GANC, it should:

- send the GA-RC DEREGISTER -message using the currently established TCP-connection,
- release the TCP connection towards the GANC,
- release the secure connection towards the SEGW, as defined in sub-clause 4.5 and
- release all resources related to GAN

Reference(s)

3GPP TS 44.318 sub-clause 6.4.1

81.2.6.9.2 Test purpose

To verify that the MS sends GA-RC DEREGISTER when it is about to leave the AP e.g. when it is powered off.

81.2.6.9.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID
- MS in state GA-RC REGISTERED

Foreseen final state of the MS

The MS will be switched off.

Test procedure

The MS sends the GA-RC DEREGISTER message as it is switched off.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------|--|
| | MS | SS | | |
| 1 | MS | | | Switch off the MS |
| 2 | → | | GA-RC DEREGISTER | To serving GANC |
| 3 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |

81.2.6.10 Registration Procedure, Deregister, Network Congestion, MS in State GA-RRC CONNECTED

81.2.6.10.1 Conformance requirement

When the MS receives the GA-RC DEREGISTER message, it shall:

- if the MS is in the process of PLMN selection;
- ignore the received Register Reject Cause Information Element, and
- proceed as defined in sub-clause 6.2.4.5.
 - else extract the Reject Cause information element and act as following depending on the value of the Reject Cause IE:
 - 'Network Congestion'
 - release all local GAN resources (e.g. MS is in active call over GAN)
 - release the TCP connection towards the current GANC and
 - release the secure connection towards the GANC-SEGW, as defined in sub-clause 4.5
 - create a random value between zero and the received value in IE 'TU3907 Timer' and
 - add this value to the received value in IE 'TU3907 Timer', and use this as the new value for TU3907
 - start timer TU3907 according to the new calculated value

Reference(s)

3GPP TS 44.318 sub-clause 6.4.4

81.2.6.10.2 Test purpose

To verify that the MS changes state to GA-RC DEREGISTERED and starts to try to register again after receiving GA-RC DEREGISTER with cause 'Network Congestion'.

81.2.6.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter
- Public DNS without knowledge of the serving GANC's FQDN
- DNS inside of the SEGW associated with the serving GANC

Mobile Station:

- MS has stored the FQDN to the serving GANC and its SEGW associated with the AP-ID

- MS in state GA-RRC CONNECTED (CS sublayer entity or PS sublayer entity or both CS and PS sublayer entities)

Foreseen final state of the MS

The MS will change state to GA-RRC DEREGISTERED.

Test procedure

The SS initiates the deregistration by sending GA-RRC DEREGISTER with cause 'Network Congestion'.

The MS is supposed to start the Registration procedure when TU3907 has expired.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|---|
| | MS | SS | | |
| 1 | ← | | GA-RRC DEREGISTER | From serving GANC, cause: network congested. TU3907 is set to 10 sec. |
| 2 | MS | | | Release the active call |
| 3 | MS | | | Release the TCP connection to the GANC and the secure connection to the SEGW |
| 4 | MS | | | The SS checks that the following step is initiated by the MS within min 10 and 20 sec |
| 5 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 6 | → | | GA-RRC REGISTER REQUEST | To serving GANC |

81.3 Lower Layer Faults

81.3.1 TCP Reset

81.3.1.1 TCP Reset, Successful Re-establishment, MS in State GA-CSR DEDICATED

81.3.1.1.1 Conformance requirement

When MS receives TCP RST after TCP connection failure, it shall attempt to re-establish TCP connection once. After successfully re-establishing TCP connection, the MS shall send GA-RRC SYNCHRONIZATION INFORMATION to the GANC to synchronize the state information. If unsuccessful, the MS shall release the related local GA-CSR or GA-PSR resources, and continue as per section 9.5.

Reference(s)

3GPP TS 44.318 sub-clause 6.6.1.

81.3.1.1.2 Test purpose

To verify that the MS can re-establish the TCP connection after receiving a TCP Reset.

81.3.1.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-CSR DEDICATED
- The MS has the IP address or the FQDN for the serving GANC

Foreseen final state of the MS

The MS will stay in GA-CSR DEDICATED.

Test procedure

The MS starts in GA-CSR DEDICATED.

The SS sends a TCP RST and the MS re-establish the TCP connection and send the GA-RC SYNCHRONISATION INFORMATION message.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-----------------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS starts in GA-CSR DEDICATED |
| 2 | | SS | | The SS sends TCP RST |
| 3 | MS | | | The MS re-establish the TCP connection |
| 4 | → | | GA-RC SYNCHRONIZATION INFORMATION | To serving GANC |

81.3.1.2 TCP Reset, Unsuccessful Re-establishment, MS in State GA-CSR IDLE

81.3.1.2.1 Conformance requirement

When MS receives TCP RST after TCP connection failure, it shall attempt to re-establish TCP connection once. After successfully re-establishing TCP connection, the MS shall send GA-RC SYNCHRONIZATION INFORMATION to the GANC to synchronize the state information. If unsuccessful, the MS shall release the related local GA-RC or GA-PSR resources, and continue as per section 9.5.

Reference(s)

3GPP TS 44.318 sub-clause 6.6.1.

81.3.1.2.2 Test purpose

To verify that the MS can re-establish the TCP connection after receiving a TCP Reset.

81.3.1.2.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-CSR IDLE
- The MS has the IP address or the FQDN for the serving GANC

Foreseen final state of the MS

The MS will change to GA-RC DEREGISTERED.

Test procedure

The MS starts in GA-CSR IDLE.

The SS sends a TCP RST and the MS tries to re-establish the TCP connection. When that fails it start timer TU3905 and tries to register again when the timer expires.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS starts in GA-CSR IDLE |
| 2 | | SS | | The SS sends TCP RST |
| 3 | MS | | | The MS tries to re-establish the TCP connection, the SS doesn't reply. MS starts timer TU3905 |
| 4 | MS | | | Wait for 10 seconds |
| 5 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 6 | → | | GA-RC REGISTER REQUEST | To serving GANC |

81.3.1.3 TCP Reset, Successful Re-establishment, MS in State GA-RRC-CONNECTED (CS domain)

81.3.1.3.1 Conformance requirement

When MS receives TCP RST after TCP connection failure, it shall attempt to re-establish TCP connection once. After successfully re-establishing TCP connection, the MS shall send GA-RC SYNCHRONIZATION INFORMATION to the GANC to synchronize the state information. If unsuccessful, the MS shall release the related local GA-RRC resources, and continue as per section 9.5.

Reference(s)

3GPP TS 44.318 sub-clause 6.6.1.

81.3.1.3.2 Test purpose

To verify that the MS can re-establish the TCP connection after receiving a TCP Reset.

81.3.1.3.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-RRC-CONNECTED (CS domain)
- The MS has the IP address or the FQDN for the serving GANC

Foreseen final state of the MS

The MS will stay in GA-RRC-CONNECTED (CS domain).

Test procedure

The MS starts in GA-RRC-CONNECTED (CS domain).

The SS sends a TCP RST and the MS re-establish the TCP connection and send the GA-RC SYNCHRONISATION INFORMATION message.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-----------------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS starts in GA-RRC-CONNECTED (CS domain) |
| 2 | | SS | | The SS sends TCP RST |
| 3 | MS | | | The MS re-establish the TCP connection |
| 4 | → | | GA-RC SYNCHRONIZATION INFORMATION | To serving GANC |

81.3.1.4 TCP Reset, Successful Re-establishment, MS in State GA-RRC-CONNECTED (PS domain)

81.3.1.4.1 Conformance requirement

When MS receives TCP RST after TCP connection failure, it shall attempt to re-establish TCP connection once. After successfully re-establishing TCP connection, the MS shall send GA-RC SYNCHRONIZATION INFORMATION to the GANC to synchronize the state information. If unsuccessful, the MS shall release the related local GA-RRC resources, and continue as per section 9.5.

Reference(s)

3GPP TS 44.318 sub-clause 6.6.1.

81.3.1.4.2 Test purpose

To verify that the MS can re-establish the TCP connection after receiving a TCP Reset.

81.3.1.4.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-RRC-CONNECTED (PS domain)
- The MS has the IP address or the FQDN for the serving GANC

Foreseen final state of the MS

The MS will stay in GA-RRC-CONNECTED (PS domain).

Test procedure

The MS starts in GA-RRC-CONNECTED (PS domain).

The SS sends a TCP RST and the MS re-establish the TCP connection and send the GA-RC SYNCHRONISATION INFORMATION message.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-----------------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS starts in GA-RRC-CONNECTED (PS domain) |
| 2 | SS | | | The SS sends TCP RST |
| 3 | MS | | | The MS re-establish the TCP connection |
| 4 | → | | GA-RC SYNCHRONIZATION INFORMATION | To serving GANC |

81.3.1.5 TCP Reset, Unsuccessful Re-establishment, MS in State GA-RRC-IDLE (CS and PS domains)

81.3.1.5.1 Conformance requirement

When MS receives TCP RST after TCP connection failure, it shall attempt to re-establish TCP connection once. After successfully re-establishing TCP connection, the MS shall send GA-RC SYNCHRONIZATION INFORMATION to the GANC to synchronize the state information. If unsuccessful, the MS shall release the related local GA-RC or GA-RRC resources, and continue as per section 9.5.

Reference(s)

3GPP TS 44.318 sub-clause 6.6.1.

81.3.1.5.2 Test purpose

To verify that the MS can re-establish the TCP connection after receiving a TCP Reset.

81.3.1.5.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-RRC-IDLE (CS and PS domains)
- The MS has the IP address or the FQDN for the serving GANC

Foreseen final state of the MS

The MS will change to GA-RC DEREGISTERED.

Test procedure

The MS starts in GA-RRC-IDLE (CS and PS domains).

The SS sends a TCP RST and the MS tries to re-establish the TCP connection. When that fails it start timer TU3905 and tries to register again when the timer expires.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS starts in GA-RRC-IDLE (CS and PS domains) |
| 2 | | SS | | The SS sends TCP RST |
| 3 | MS | | | The MS tries to re-establish the TCP connection, the SS doesn't reply. MS starts timer TU3905 |
| 4 | MS | | | Wait for 10 seconds |
| 5 | MS | | | MS sets up secure connection to the SEGW and establishes a TCP connection to the serving GANC using either IP address or FQDN |
| 6 | | → | GA-RC REGISTER REQUEST | To serving GANC |

81.3.2 Lower Layer Faults, MS is Registered

81.3.2.1 IPsec Tunnel Failure, MS in State GA-CSR IDLE

81.3.2.1.1 Conformance requirement

The handling of lower layer failures in the MS while in the GA-RC-DEREGISTERED state is described in sub-clauses 5.6.2 and 6.2.4.2.

The handling of lower layer failures in the MS while not in the GA-RC-DEREGISTERED state is described below:

For all lower layer failures in the MS (for example related to DNS, IPsec or TCP failures other than RST) except the TCP connection failure specified in section 6.6, the MS shall:

- release the TCP connection towards the current GANC, if established,
- stop timer TU3906,
- release the secure connection towards SEGW of the current GANC, if established, as defined in sub-clause 4.5,
- start timer TU3905, and
- enter GA-RC-DEREGISTERED state.

Reference(s)

3GPP TS 44.318 sub-clause 9.5.

81.3.2.1.2 Test purpose

To verify that the MS tries to register again after a lower layer fault when in state GA-CSR IDLE.

81.3.2.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-CSR IDLE
- The MS has the IP address or the FQDN for the serving GANC

Foreseen final state of the MS

The MS will change to GA-RC DEREGISTERED.

Test procedure

The MS starts in GA-CSR IDLE.

The SS removes the Ipsec tunnel. When that happens the MS starts timer TU3905 and tries to register again when the timer expires.

Specific Test Parameters

-

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------|---|
| | MS | SS | | |
| 1 | MS | | | MS starts in GA-CSR IDLE |

82 GAN CS Domain Procedures

82.1 GA-CSR connection establishment

82.1.1 GA-CSR connection establishment / successful case

82.1.1.1 GA-CSR connection establishment, Upper Layer Message Transmission and GA-CRS connection release by GANC

82.1.1.1.1 Conformance requirement

The GA-CSR connection is a logical connection between the MS and the GANC. It is established when the upper layers in the MS request GA-CSR to enter dedicated mode. The MS initiates GA-CSR connection establishment by sending the GA-CSR REQUEST message to the network. When a successful response is received from the network, GA-CSR replies to the upper layer that it has entered dedicated mode. The upper layers have then the possibility to request transmission of messages to the network. These messages are sent to the network using GA-CSR UPLINK DIRECT TRANSFER messages as defined in sub-clause 7.2.1.

The GA-CSR UPLINK DIRECT TRANSFER message is used for the transfer of upper layer messages from the MS to the GANC while the GA-CSR DOWNLINK DIRECT TRANSFER message is used for the transfer of upper layer messages from the GANC to the MS. The first GA-CSR UPLINK DIRECT TRANSFER message received by the GANC triggers the establishment of the signalling connection to the CN for that MS.

The GANC initiates this procedure to command the MS to release the GA-CSR and any traffic channel resources and instruct the MS to leave GA-CSR-DEDICATED state.

The GA-CSR RELEASE message will include an RR cause indication as follows:

- #0: normal release, e.g. at the end of a call.
- #1: unspecified abnormal release.
- #65: if e.g. a handover procedure is stopped because the call has been cleared.

When the MS receives the GA-CSR RELEASE message, it shall:

- transmit a GA-CSR RELEASE COMPLETE message to the GANC and release all GA-CSR and any traffic channel resources,
- Enter GA-CSR-IDLE state.

Reference(s)

3GPP TS 44.318 subclause 7.1 / 7.2 / 7.5.3 / 7.5.4

82.1.1.1.2 Test purpose

To verify that MS is able to initiate GA-CSR connection establishment between the MS and GANC and to verify that MS is able to communicate with the CN by encapsulating upper layer messages (CC/MM/SS/SMS messages) to GA-CSR UPLINK DIRECT TRANSFER container message and able to receive upper layer messages within GA-CSR DOWNLINK DIRECT TRANSFER container message.

To verify that MS is able to release the GA-CSR connection, able to move into GA-CSR-IDLE state and release all GA-CSR and any traffic channel resources, when the MS receives the GA-CSR RELEASE message from SS.

82.1.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-IDLE state in service of GAN cell

Foreseen Final State of the MS

MS in GA-CSR-IDLE state.

Test Procedure

The MS is made to initiate a GA-CSR connection establishment. The MS moves into GA-CSR-DEDICATED state when the MS receives the GA-CSR REQUEST ACCEPT message from the SS within timer TU3908 (5 sec.) from sending GA-CSR REQUEST message. SS verifies that MS sends GA-CSR UPLINK DIRECT TRANSFER message within 10s from GA-CSR REQUEST ACCEPT message. The SS answers by sending upper layer message within GA-CSR DOWNLINK DIRECT TRANSFER container message.

The SS sends GA-CSR RELEASE message. The MS enters GA-CSR-IDLE state and transmits a GA-CSR RELEASE COMPLETE to the SS and releases all GA-CSR and any traffic channel resources.

Specific test parameters

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------------------------------|---|
| | MS | SS | | |
| 1 | MS | | | MS is made to initiate GA-CSR connection |
| 2 | MS | | | MS checks for access permission based on Access Control Class bits |
| 3 | → | | GA-CSR REQUEST | |
| 4 | ← | | GA-CSR REQUEST ACCEPT | |
| 5 | MS | | | MS in GA-CSR-DEDICATED state |
| 6 | → | | GA-CSR UPLINK DIRECT TRANSFER | Within 10s from GA-CSR REQUEST ACCEPT message Containing (UL) CC/MM/SS/SMS message |
| 7 | ← | | GA-CSR DOWNLINK DIRECT TRANSFER | Containing (DL) CC/MM/SS/SMS message |
| 8 | ← | | GA-CSR RELEASE | IE 'RR cause' indicates #0 |
| 9 | → | | GA-CSR RELEASE COMPLETE | MS enters GA-CSR-IDLE state |

82.1.2 GA-CSR connection establishment / negative cases

82.1.2.1 GA-CSR REQUEST rejected

82.1.2.1.1 Conformance requirement

3GPP TS 44.318 subclause 7.1.2.2:

If the GANC rejects the GA-CSR connection establishment request, it shall send the GA-CSR REQUEST REJECT message to the MS.

3GPP TS 44.318 subclause 7.1.3.2:

When the MS receives the GA-CSR REQUEST REJECT message, it shall:

- if timer TU3908 is active:
- stop timer TU3908,
- remain in GA-CSR-IDLE state and
- indicate to upper layers that GA-CSR was not able to enter dedicated state

3GPP TS 44.318 subclause 7.3.2:

If the mobile identity in the GA-CSR PAGING REQUEST message matches any of the valid identities of the MS and the MS is in GA-CSR-IDLE state, the MS shall:

- if timer TU3908 is not active and access to the network is allowed;
- send a GA-CSR PAGING RESPONSE message to the GANC and
- enter GA-CSR-DEDICATED state.

3GPP TS 44.318 subclauses 7.1.2.2 / 7.1.3.2 / 7.3.2

82.1.2.1.2 Test purpose

To verify that MS will remain in GA-CSR-IDLE state when MS receives the GA-CSR REQUEST REJECT message.

82.1.2.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-IDLE state in service of GAN cell

Foreseen Final State of the MS

MS in GA-CSR- IDLE state.

Test Procedure

The MS is made to initiate a GA-CSR connection establishment. SS sends the GA-CSR REQUEST REJECT message to the MS. MS is not able to enter GA-CSR-DEDICATED state. The SS sends GA-CSR PAGING REQUEST to verify that MS in GA-CSR-IDLE state. MS answers by sending GA-CSR PAGING RESPONSE.

Specific test parameters

-

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|----------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is made to initiate GA-CSR connection |
| 2 | MS | | | MS checks for access permission based on Access Control Class bits |
| 3 | → | | GA-CSR REQUEST | TU3908 is started |

| | | | |
|---|----|-------------------------|---|
| 4 | ← | GA-CSR REQUEST REJECT | The SS sends GA-CSR REQUEST REJECT before the expiry of TU3908. |
| 5 | MS | | MS in GA-CSR-IDLE state |
| 6 | ← | GA-CSR PAGING REQUEST | Valid identity of the MS ('TMSI'/'IMSI') |
| 7 | → | GA-CSR PAGING RESPONSE | MS enters GA-CSR-DEDICATED state |
| 8 | ← | GA-CSR RELEASE | IE 'RR cause' indicates #0 |
| 9 | → | GA-CSR RELEASE COMPLETE | MS enters GA-CSR-IDLE state |

82.1.2.2 MS receives GA-CSR REQUEST ACCEPT message after TU3908 expiry

82.1.2.2.1 Conformance requirement

If the GANC accepts the GA-CSR connection establishment request, it shall send the GA-CSR REQUEST ACCEPT message to the MS.

When the MS receives the GA-CSR REQUEST ACCEPT message, it shall:

- if timer TU3908 is active:
- stop timer TU3908,
- move into GA-CSR-DEDICATED state,
- indicate to upper layers that GA-CSR has entered dedicated state and
- send the initial GA-CSR UPLINK DIRECT TRANSFER message to the network
 - if timer TU3908 is not active:
- ignore the GA-CSR REQUEST ACCEPT message and
- continue with any ongoing procedure as if the GA-CSR REQUEST ACCEPT message was not received
 - If timer TU3908 expires in the MS, the MS shall remain in GA-CSR-IDLE state and indicate to upper layers that GA-CSR was not able to enter dedicated state

If the mobile identity in the GA-CSR PAGING REQUEST message matches any of the valid identities of the MS and the MS is in GA-CSR-IDLE state, the MS shall:

- if timer TU3908 is not active and access to the network is allowed;
- send a GA-CSR PAGING RESPONSE message to the GANC and
- enter GA-CSR-DEDICATED state.
 - if timer TU3908 is active;
 - discard the received GA-CSR PAGING REQUEST message.

| | MS | SS | | |
| 1 | MS | | | MS in GA-CSR-IDLE state |
| 2 | ← | | GA-CSR DOWNLINK DIRECT TRANSFER | Containing (DL) CC/MM/SS/SMS message |
| 3 | → | | GA-CSR STATUS | RR Cause: 'Message type not compatible with protocol state' PDU in Error: '<received (DL) message>' |

82.3 Paging for CS domain

82.3.1 Paging for CS domain / successful case

82.3.1.1 Paging for CS domain

82.3.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 7.3.1:

The GANC initiates this procedure when it receives a PAGING REQUEST message over the A-interface or a Paging CS over the Gb-interface. The MS to be paged is identified by the identity received in the request from the CN. If the request includes the TMSI then the GANC should include the TMSI as the mobile identity else it should include the IMSI received in the request.

3GPP TS 44.318 subclause 7.3.2:

If the mobile identity in the GA-CSR PAGING REQUEST message matches any of the valid identities of the MS and the MS is in GA-CSR-IDLE state, the MS shall:

- if timer TU3908 is not active and access to the network is allowed;
- send a GA-CSR PAGING RESPONSE to the GANC and
- enter GA-CSR-DEDICATED state.

3GPP TS 44.318 subclause 7.3.4:

If the MS receives a GA-CSR PAGING REQUEST and the mobile identity included in the message does not match any of the valid identities assigned to the MS, the MS shall:

- ignore the GA-CSR PAGING REQUEST message
- continue with any ongoing procedure as if the GA-CSR PAGING REQUEST message was not received.

Reference(s)

3GPP TS 44.318 subclauses 7.3.1 / 7.3.2 / 7.3.4

82.3.1.1.2 Test purpose

To verify that MS ignores the GA-CSR PAGING REQUEST and continues with any ongoing procedure, if received GA-CSR PAGING REQUEST doesn't contain valid identity.

To verify that MS is able send a GA-CSR PAGING RESPONSE to the SS and enter GA-CSR-DEDICATED state when MS receives GA-CSR PAGING REQUEST with valid identities of the MS.

82.3.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-IDLE state in service of GAN cell

Foreseen Final State of the MS

MS in GA-CSR-IDLE state in service of GAN cell Test Procedure

The SS initiates paging procedure by sending GA-CSR PAGING REQUEST message with not matching identity to the MS. MS ignores the GA-CSR PAGING REQUEST and continues with any ongoing procedure as if the GA-CSR PAGING REQUEST was not received. After 10s the SS sends GA-CSR PAGING REQUEST to verify that MS in GA-CSR-IDLE state. MS answers by sending GA-CSR PAGING RESPONSE.

Specific test parameters

-

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-------------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-CSR PAGING REQUEST | With not matching identity |

82.3.2 Paging for CS domain / negative cases

82.3.2.1 Void

82.3.2.2 MS receives GA-CSR PAGING REQUEST when TU3908 is active

82.3.2.2.1 Conformance requirement

If the mobile identity in the GA-CSR PAGING REQUEST message matches any of the valid identities of the MS and the MS is in GA-CSR-IDLE state, the MS shall:

- if timer TU3908 is not active and access to the network is allowed;

- send a GA-CSR PAGING RESPONSE message to the GANC and
- enter GA-CSR-DEDICATED state.
 - if timer TU3908 is active;
- discard the received GA-CSR PAGING REQUEST message

Reference(s)

3GPP TS 44.318 subclause 7.3.2

82.3.2.2.2 Test purpose

To verify that MS discards the received GA-CSR PAGING REQUEST message if timer TU3908 is active.

82.3.2.2.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-IDLE state in service of GAN cell

Foreseen Final State of the MS

MS in GA-CSR- IDLE state.

Test Procedure

MS is made to initiate GA-CSR connection. MS sends GA-CSR REQUEST message and activates timer TU3908. The SS initiates paging procedure by sending GA-CSR PAGING REQUEST message to the MS when TU3908 is active in MS. MS discards the received GA-CSR PAGING REQUEST message. After TU3908 expiry the SS sends GA-CSR PAGING REQUEST to verify that MS in GA-CSR-IDLE state. MS may answer by sending GA-CSR PAGING RESPONSE or re-establish the GA-CSR connection by re-sending GA-CSR REQUEST message.

Specific test parameters

-

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|-----------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS is made to initiate GA-CSR connection |
| 2 | → | | GA-CSR REQUEST | MS activates TU3908 |

82.4 Traffic Channel assignment

82.4.1 Traffic Channel assignment / successful cases

82.4.1.1 Traffic Channel assignment

82.4.1.1 Traffic Channel assignment and Release

82.4.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 7.4.2:

The MS shall act on the received GA-CSR ACTIVATE CHANNEL message when in GA-CSR-DEDICATED state as follows:

- Code and decode the CS payload samples according to the IE "Channel Mode";
- Use the value indicated by the IE "Sample Size" as the minimum sampling size for the coding and decoding of the CS payload samples, if the MS is not able to use the indicated value. If AMR is used with FEC by sending redundant frames, the sample size is defined as the size of the new speech sample in each RTP packet, not including any redundant speech sample.
- Configure the uplink CS payload stream to be transmitted to the UDP port identified by the IE "UDP Port";
- Configure the uplink CS payload stream to be transmitted to the IP address identified by the IE "IP address";
- If received, use the configuration included in the IE 'Multi-rate Configuration' for the CS payload stream;
- If received, use the configuration included in the IE "RTP Redundancy Configuration" for the CS payload stream. The redundancy policy is defined for each of the AMR modes to use. The level of redundancy can span from no redundancy to double redundancy. In the same active codec set, a lower codec mode shall not be

associated with a lower redundancy level than a higher codec mode. For example, the highest mode in the set is used with no redundancy, the next lower with single redundancy and rest of the modes with double redundancy;

- If received, use the Payload Type included in the IE 'Payload Type' for the PT field in the RTP header for the CS downlink and uplink payload streams;
- On successful activation of the channel, the MS shall:
 - Transmit a GA-CSR ACTIVATE CHANNEL ACK message and include the UDP port number in the IE 'UDP Port' for the downlink CS payload stream to be used by the GANC.
 - Include the selected RTP sample size, to be used uplink and downlink, in the IE Sample Size.
 - if the IE 'RTCP UDP Port' was received in the GA-CSR ACTIVATE CHANNEL message and the MS is capable of supporting RTCP, activate the uplink RTCP stream and include the IE 'RTCP UDP Port' for the downlink RTCP stream to be used by the GANC.

3GPP TS 44.318 subclause 7.4.4:

The RTP channel is available for use by upper layers. To enable uplink quality measurements in the GANC, the MS shall send at least one RTP frame each 480 ms. The AMR payload Table of Contents shall indicate NO_DATA if there is no speech or SID frames to send.

3GPP TS 44.318 subclause 7.5.1:

If the MS needs to release the GA-CSR connection and signalling connection to the core network, it shall send the GA-CSR CLEAR REQUEST message to the GANC. The MS shall include the 'RR Cause' IE.

Reference(s)

3GPP TS 44.318 subclauses 7.4.2 / 7.4.4/ 7.5.1

82.4.1.1.2 Test purpose

To verify that MS is able to establish a GAN traffic channel.

The MS initiates the release the GA-CSR connection by sending GA-CSR CLEAR REQUEST to the SS. The MS enters GA-CSR-IDLE state and releases all GA-CSR and any traffic channel resources.

82.4.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-DEDICATED state in service of GAN cell and a voice call is ongoing.

Foreseen Final State of the MS

MS in GA-CSR-IDLE state in service of GAN cell.

Test Procedure

A voice call is ongoing. The SS configures a traffic channel by transmitting GA-CSR ACTIVATE CHANNEL to the MS. MS responds by transmitting a GA-CSR ACTIVATE CHANNEL ACK with the IE 'UDP Port'. Then the SS configures itself for transmission of RTP packets to the MS to the indicated UDP port and transmits a GA-CSR ACTIVATE CHANNEL COMPLETE message to the MS. MS and SS sends at least one RTP frame each 480 ms. The SS releases the call by sending GA-CSR DL DIRECT TRANSFER message (Release) and receiving GA-CSR UL DIRECT TRANSFER (Release Complete) message. Therefore, the MS will send GA-CSR CLEAR REQUEST to release CSR connection.

Specific test parameters

-

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|--|--|
| | MS | SS | | |
| 1 | MS | | | MS in GA-CSR-DEDICATED state, voice call is ongoing. |
| 2 | ← | | GA-CSR ACTIVATE CHANNEL | IE 'Channel Mode', IE 'Sample Size', IE 'UDP Port', IE 'IP address', optional IE 'Multi-rate Configuration', optional IE 'RTP Redundancy Configuration', optional IE 'Payload Type'. |
| 3 | → | | GA-CSR ACTIVATE CHANNEL ACK | IE 'UDP Port', optional IE 'RTCP UDP Port' |
| 4 | ← | | GA-CSR ACTIVATE CHANNEL COMPLETE | |
| 5 | → | | | Verify that the MS sends at least one RTP frame |
| 6 | ← | | GA-CSR DL DIRECT TRANSFER (Release) | |
| 7 | → | | GA-CSR UL DIRECT TRANSFER (Release Complete) | Eventual CC L3 messages are ignored. |
| 8 | → | | GA-CSR CLEAR REQUEST | |

82.4.2 Traffic Channel assignment / negative cases

82.4.2.1 MS fails to establish the traffic channel

82.4.2.1.1 Conformance requirement

If the MS fails to establish the channel indicated in the GA-CSR ACTIVATE CHANNEL the MS shall:

- transmit a GA-CSR ACTIVATE CHANNEL FAILURE message
- act as if the GA-CSR ACTIVATE CHANNEL message was not received.

Reference(s)

3GPP TS 44.318 subclause 7.4.5

82.4.2.1.2 Test purpose

To verify that if MS fails to establish the traffic channel, it transmits a GA-CSR ACTIVATE CHANNEL FAILURE and act as if the GA-CSR ACTIVATE CHANNEL was not received.

82.4.2.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-DEDICATED state in service of GAN cell and a voice call is ongoing.

Foreseen Final State of the MS

MS in GA-CSR- IDLE state in service of GAN cell.

Test Procedure

A voice call is ongoing. The SS configures a traffic channel by transmitting corrupted GA-CSR ACTIVATE CHANNEL to the MS. In the corrupted GA-CSR ACTIVATE CHANNEL message "Sample Size" octet 3 is set to "1" (1ms), which is a undefined value.

MS fails to establish the traffic channel and transmits a GA-CSR ACTIVATE CHANNEL FAILURE and acts as if the GA-CSR ACTIVATE CHANNEL was not received.

Specific test parameters

-

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------------------------------|--|
| | MS | SS | | |
| 1 | MS | | | MS in GA-CSR-DEDICATED state, voice call is ongoing |
| 2 | ← | | GA-CSR ACTIVATE CHANNEL | This message has non-supportive configuration, with a "Sample Size" octet 3 set to "1" |
| 3 | MS | | | MS fails to establish the traffic channel |
| 4 | → | | GA-CSR ACTIVATE CHANNEL FAILURE | IE 'FAILURE message identity' |
| 5 | ← | | GA-CSR RELEASE | IE 'RR cause' indicates #0 |
| 6 | → | | GA-CSR RELEASE COMPLETE | MS enters GA-CSR-IDLE state |

82.6.1.1 Classmark Indication, Initiation of Classmark Interrogation by MS

82.6.1.1.1 Conformance requirement

On receipt of the GA-CSR CLASSMARK ENQUIRY message or in case of "early classmark sending" procedure based on the system information indication received in GA-RC REGISTER ACCEPT message, the mobile station sends a GA-CSR CLASSMARK CHANGE message to the GANC.

The MS shall include the IE "Mobile Classmark 2" in the GA-CSR CLASSMARK CHANGE. It may also contain a IE "Mobile Classmark 3" depending on the MS capabilities.

In addition a MS supporting UTRAN sends a GA-CSR UTRAN CLASSMARK CHANGE message.

The Classmark Enquiry Mask information element in the GA-CSR CLASSMARK ENQUIRY message indicates the type of request. If the Classmark Enquiry Mask information element is not included in the GA-CSR CLASSMARK ENQUIRY message, this indicates a request for GA-CSR CLASSMARK CHANGE message.

Reference(s)

3GPP TS 44.318 sub-clause 7.6.2

82.6.1.1.2 Test purpose

To verify that the MS replies the GA-CSR CLASSMARK ENQUIRY correctly.

82.6.1.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-CSR-DEDICATED

Foreseen final state of the MS

MS in GA-CSR- IDLE state.

Test procedure

The SS sends the GA-CSR CLASSMARK ENQUIRY message. The MS replies with the GA-CSR CLASMARK CHANGE message.

Specific Test Parameters

-

Maximum duration of test

1 min.

Reference(s)Expected sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|--------------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-CSR CLASSMARK ENQUIRY | The Classmark Enquiry Mask information element is not included |
| 2 | → | | GA-CSR CLASSMARK CHANGE | |
| 3 | ← | | GA-CSR RELEASE | IE 'RR cause' indicates #0 |
| 4 | → | | GA-CSR RELEASE COMPLETE | MS enters GA-CSR-IDLE state |

82.7 Handover to GAN

82.7.1 Handover to GAN / successful cases

82.7.1.1 Handover from GERAN to GAN

82.7.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 7.7.1:

The procedure is initiated when the source radio access technology (e.g. GERAN) orders the MS to make handover to GAN.

The procedure is applicable in GA-RC REGISTERED state provided the conditions described in Annex C: "(Source-RAT) Measurement Report for Handover and Cell Change Order to GAN" are met.

The handover order in the source radio access technology mode is sent via the (RR) HANDOVER COMMAND message. If the ARFCN and BSIC parameters included in the Cell Description IE in the (RR) HANDOVER COMMAND message (specified in [12]) match those of the GAN cell, the MS shall:

- send a GA-CSR HANDOVER ACCESS message to the network including the complete (RR) HANDOVER COMMAND message in the Handover To GAN Command IE and enter GA-CSR-DEDICATED state;

NOTE: sending the complete (RR) HANDOVER COMMAND message in the Handover To GAN Command IE instead of the Handover Reference IE allows for more than 256 concurrent handover requests

- if non-signalling mode is indicated in Channel Mode IE, the MS shall:
- start timer TU3920;

3GPP TS 44.318 subclause 7.7.3:

- If the traffic channel assignment was successfully completed within timer TU3920, the MS shall:
- stop timer TU3920;
- send a GA-CSR HANDOVER COMPLETE message to the network;
- switch to GAN mode i.e. attach the GA-RR entity to the RR-SAP;

In addition the MS shall send upper layer messages for which LAPDm has not yet received acknowledgement from the network to the network using the GA-RR entity.

Reference(s)

3GPP TS 44.318 subclause 7.7.1 / 7.7.3

82.7.1.1.2 Test purpose

To verify that MS completes the handover procedure from GERAN to GAN successfully.

82.7.1.1.3 Method of test

Initial Conditions

System Simulator:

- 2 cells: GERAN cell & GAN cell
- 1 GERAN cell, default parameters
- 1 GAN cell, default parameters

Mobile Station:

- MS in GERAN mode in service of GERAN cell, voice call activated and in GA-RC-REGISTERED state

Foreseen Final State of the MS

MS in GA-CSR-IDLE state. Test Procedure

The MS is in GERAN mode in service of GERAN cell, voice call activated. MS sends MEASUREMENT REPORT with GAN-ARFCN within cell info list to GERAN cell and MS has not detected GSM neighbour cell matching the {GAN-ARFCN, GAN-BSIC} couple. SS sends (RR) HANDOVER COMMAND with ARFCN and BSIC in 'Cell Description' IE matched of the GAN cell. MS sends a GA-CSR HANDOVER ACCESS message to the GAN network with the complete (RR) HANDOVER COMMAND message in the 'Handover To GAN Command' IE and enters GA-CSR-DEDICATED state. MS establishes GAN traffic channel with SS and MS sends GA-CSR HANDOVER COMPLETE message to the SS.

Specific test parameters

Maximum Duration of Test

1 min.

82.7.1.3 Handover from UTRAN to GAN

82.7.1.3.1 Conformance requirement

The procedure is initiated when the source radio access technology (e.g. GERAN) orders the MS to make handover to GAN.

The procedure is applicable in GA-RC-REGISTERED state provided the conditions described in Annex C: "(Source-RAT) Measurement Report for Handover and Cell Change Order to GAN" are met.

The handover order in the source radio access technology mode is sent via the (RR) HANDOVER COMMAND message. If the ARFCN and BSIC parameters included in the Cell Description IE in the (RR) HANDOVER COMMAND message (specified in [12]) match those of the GAN cell, the MS shall:

- send a GA-CSR HANDOVER ACCESS message to the network including the complete (RR) HANDOVER COMMAND message in the *Handover To GAN Command* IE and enter GA-CSR-DEDICATED state;

NOTE: sending the complete (RR) HANDOVER COMMAND message in the *Handover To GAN Command* IE instead of the *Handover Reference* IE allows for more than 256 concurrent handover requests

- if non-signalling mode is indicated in *Channel Mode* IE, the MS shall:
- start timer TU3920;
- otherwise, the MS shall:
- immediately send a GA-CSR HANDOVER COMPLETE message to the network;
- switch to GAN mode i.e. attach the GA-RR entity to the RR-SAP;

If the traffic channel assignment was successfully completed within timer TU3920, the MS shall:

- stop timer TU3920;
- send a GA-CSR HANDOVER COMPLETE message to the network;
- switch to GAN mode i.e. attach the GA-RR entity to the RR-SAP;

In addition the MS shall send upper layer messages for which LAPDm has not yet received acknowledgement from the network to the network using the GA-RR entity.

Reference(s)

3GPP TS 44.318 subclause 7.7.1 / 7.7.3

82.7.1.3.2 Test purpose

To verify that MS completes the handover procedure from UTRAN to GAN successfully.

82.7.1.3.3 Method of test

Initial Conditions

System Simulator:

- 2 cells - Cell 1 is UTRAN (3GPP TS 34.108, subclause 6.1 shall be referenced for default parameters), Cell 2 is GAN (GAN default parameters)

Mobile Station:

- MS in UTRAN mode in service of UTRAN cell, voice call activated and in GA-RC-REGISTERED state

Foreseen Final State of the MS

MS in GA-CSR-IDLE state.

Test Procedure

The MS is in UTRAN mode in service of UTRAN cell, voice call activated. After measurement reporting procedure in UTRAN cell with successful reporting of the GAN cell, SS sends (RR) HANDOVER COMMAND with ARFCN and BSIC in 'Cell Description' IE of the GAN cell. MS sends a GA-CSR HANDOVER ACCESS message to the GAN network with the complete (RR) HANDOVER COMMAND message in the 'Handover To GAN Command' IE and enters GA-CSR-DEDICATED state. MS establishes GAN traffic channel with SS and MS sends GA-CSR HANDOVER COMPLETE message to the SS.

Specific test parameters

82.7.2 Handover to GAN / negative cases

82.7.2.1 Void

82.7.2.2 TU3920 expires during handover procedure

82.7.2.2.1 Conformance requirement

If the traffic channel assignment procedure fails or the timer TU3920 expires before traffic channel assignment is completed, the MS shall:

- terminate the procedure including release of the associated GA-CSR resources;
- resume the connection in the source radio access technology used before the handover;
- indicate the failure to the source radio access technology.

Reference(s)

3GPP TS 44.318 subclause 7.7.5

82.7.2.2.2 Test purpose

To verify that MS is able to terminate the handover procedure and resume the connection in the source radio access technology used before the handover, if timer TU3920 expires during handover procedure.

82.7.2.2.3 Method of test

Initial Conditions

System Simulator:

- 2 cells: GERAN cell & GAN cell
- 1 GERAN cell, default parameters
- 1 GAN cell, default parameters

Mobile Station:

- MS in GERAN mode in service of GERAN cell, voice call activated and in GA-RC-REGISTERED state

Foreseen Final State of the MS

MS in GERAN mode in service of GERAN cell, voice call activated

Test Procedure

The MS is in GERAN mode in service of GERAN cell, voice call activated. MS sends MEASUREMENT REPORT with GAN-ARFCN within cell info list to GERAN cell and MS has not detected GSM neighbour cell matching the {GAN-ARFCN, GAN-BSIC} couple. SS sends RR HANDOVER COMMAND with ARFCN and BSIC in 'Cell Description' IE matched of the GAN cell. MS sends a GA-CSR HANDOVER ACCESS message to the GAN network with the complete (RR) HANDOVER COMMAND message in the 'Handover To GAN Command' IE and enters GA-CSR-DEDICATED state. TU3920 expires during handover procedure. MS terminates the handover procedure and resumes the connection in the source radio access technology used before the handover. MS returns HANDOVER FAILURE message to GERAN cell.

82.8 Handover from GAN

82.8.1 Handover from GAN / successful cases

82.8.1.1 Handover from GAN to GERAN

82.8.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 7.8.1:

The purpose of this procedure is to transfer, upon request from the MS (and under the control of the GAN), a connection between MS and GAN to another radio access technology (e.g. GERAN).

The procedure is applicable in GA-CSR-DEDICATED state.

The procedure may be initiated by the MS based on:

- local measurements of GAN coverage signal quality;
- reception of a GA-CSR UPLINK QUALITY INDICATION message indicating poor uplink quality in the *UL Quality Indication* IE; If the UL Quality Indication IE indicates "Network problem" a handover out to GERAN or UTRAN should be attempted. In case the UL Quality Indication information element shows "Radio problem" or "Undetermined problem" a search for a new access point should be done before the handover out is initiated;
- reception of RTCP packets indicating poor uplink quality;
- excessive loss or delay in the received RTP packets.

When the MS decides to trigger the handover from GAN, it shall:

- send a GA-CSR HANDOVER INFORMATION message to the network including a list of candidate/ target cell identifiers ranked in order of preference which is the most recent list available from the other radio access technology (e.g. GSM RR) and including the received signal strength for each identified GERAN or UTRAN cell. The MS may include GERAN cells, UTRAN cells or both.

3GPP TS 44.318 subclause 7.8.3:

The MS shall:

- suspend all NAS layer signalling transmissions;
- start the connection establishment to the target radio access technology (e.g. GERAN) by using the contents of the Handover From GAN Command IE. This message carries information about the candidate/ target cell identifier and radio parameters relevant for the target radio access technology;

A MS that is simultaneously operating in GPRS and CS modes over GAN shall follow the procedure as outlined in 3GPP TS 43.055 when it switches to target cell.

NOTE: The requirements concerning the establishment of the radio connection towards the target radio access technology (e.g. GERAN) and the signalling procedure are outside of the scope of this specification.

3GPP TS 44.318 subclause 7.8.4:

Upon successfully completing the handover, the GANC should:

- release all radio resources associated with the GAN connection.

Upon successfully completing the handover, the MS shall:

- switch to target radio access technology (e.g. GERAN) mode i.e. detach the GA-RR entity from the RR-SAP;
- enter GA- RC -REGISTERED state.

NOTE: The release of the GAN radio resources is initiated from the target RAT. The MS may deregister from the GANC (as defined in sub-clause 6.4) after successfully completing the handover. If the MS chooses to deregister from the GANC, it may do so either immediately after successfully completing the handover or after sending the GA-CSR RELEASE COMPLETE message to the GANC in response to the GA-CSR RELEASE message from the GANC.

82.8.1.2 Handover from GAN to UTRAN

82.8.1.2.1 Conformance requirement

3GPP TS 44.318 subclause 7.8.1:

The purpose of this procedure is to transfer, upon request from the MS (and under the control of the GAN), a connection between MS and GAN to another radio access technology (e.g. GERAN).

The procedure is applicable in GA-CSR-DEDICATED state.

The procedure may be initiated by the MS based on:

- local measurements of GAN coverage signal quality;
- reception of a GA-CSR UPLINK QUALITY INDICATION message indicating poor uplink quality in the *UL Quality Indication* IE; If the UL Quality Indication IE indicates "Network problem" a handover out to GERAN or UTRAN should be attempted. In case the UL Quality Indication information element shows "Radio problem" or "Undetermined problem" a search for a new access point should be done before the handover out is initiated;
- reception of RTCP packets indicating poor uplink quality;
- excessive loss or delay in the received RTP packets.

When the MS decides to trigger the handover from GAN, it shall:

- send a GA-CSR HANDOVER INFORMATION message to the network including a list of candidate/ target cell identifiers ranked in order of preference which is the most recent list available from the other radio access technology (e.g. GSM RR) and including the received signal strength for each identified GERAN or UTRAN cell. The MS may include GERAN cells, UTRAN cells or both.

3GPP TS 44.318 subclause 7.8.3:

The MS shall:

- suspend all NAS layer signalling transmissions;
- start the connection establishment to the target radio access technology (e.g. GERAN) by using the contents of the *Handover From GAN Command* IE. This message carries information about the candidate/ target cell identifier and radio parameters relevant for the target radio access technology;

A MS that is simultaneously operating in GPRS and CS modes over GAN shall follow the procedure as outlined in 3GPP TS 43.055 when it switches to target cell.

NOTE: The requirements concerning the establishment of the radio connection towards the target radio access technology (e.g. GERAN) and the signalling procedure are outside of the scope of this specification.

3GPP TS 44.318 subclause 7.8.4:

Upon successfully completing the handover, the GANC should:

- release all radio resources associated with the GAN connection.

Upon successfully completing the handover, the MS shall:

- switch to target radio access technology (e.g. GERAN) mode i.e. detach the GA-RR entity from the RR-SAP;
- enter GA- RC -REGISTERED state.

NOTE: The release of the GAN radio resources is initiated from the target RAT. The MS may deregister from the GANC (as defined in sub-clause 6.4) after successfully completing the handover. If the MS chooses to deregister from the GANC, it may do so either immediately after successfully completing the handover or after sending the GA-CSR RELEASE COMPLETE message to the GANC in response to the GA-CSR RELEASE message from the GANC.

| 10 (conditional) | | ← | GA-CSR RELEASE | IE 'RR cause' Sent if GANC does not receive GA-RC DEREGISTER from MS (step 9) |
| 11 (conditional) | | → | GA-CSR RELEASE COMPLETE | MS in UTRAN mode in service of UTRAN cell, voice call activated, MS in GA-CSR-REGISTERED state Sent if MS does not send GA-RC DEREGISTER to GANC (step 9) |

82.8.2 Handover from GAN / negative cases

82.8.2.1 Connection establishment fails on GERAN cell

82.8.2.1.1 Conformance requirement

If the MS does not succeed in establishing a connection to the target radio access technology, the MS shall:

- revert back to the GAN configuration;

- return a GA-CSR HANDOVER FAILURE message and resume normal operation as if the GA-CSR HANDOVER COMMAND message has not been received. The cause shall be set as specified in 3GPP TS 44.018.

Reference(s)

3GPP TS 44.318 subclause 7.8.5

82.8.2.1.2 Test purpose

To verify that if MS fails to complete requested handover to GERAN, MS reverts back to the GAN configuration.

82.8.2.1.3 Method of test

Initial Conditions

System Simulator:

- 2 cells: GERAN cell & GAN cell
- 1 GERAN cell, default parameters
- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-DEDICATED state in service of GAN cell, voice call activated

Foreseen Final State of the MS

MS in GA-CSR-IDLE state

Test Procedure

The MS is in GA-CSR-DEDICATED state in service of GAN cell, voice call activated. SS sends GA-CSR UPLINK QUALITY INDICATION to the MS indicating poor uplink quality. MS sends a GA-CSR HANDOVER INFORMATION with candidate lists. SS sends GA-CSR HANDOVER COMMAND message to the MS. MS starts the connection establishment to the GERAN cell. MS does not succeed in establishing a connection to the target GERAN cell. MS reverts back to the GAN configuration, sends a GA-CSR HANDOVER FAILURE message and resumes normal operation.

Specific test parameters

-

Maximum Duration of Test

2 min.

Expected Sequence

| Step | Direction | | Message | Comment |

|---|---|-------------------------|-----------------------------|

82.8.2.2 Handover command with non-supported configuration

82.8.2.2.1 Conformance requirement

If the GA-CSR HANDOVER COMMAND message instructs the MS:

- to perform a non-supported scenario, or
- to use a non-supported configuration,

the MS shall return a GA-CSR HANDOVER FAILURE message with cause as defined in 3GPP TS 44.018 and resume normal operation as if the GA-CSR HANDOVER COMMAND message has not been received.

Reference(s)

3GPP TS 44.318 subclause 7.8.7

82.8.2.2.2 Test purpose

To verify that if the GA-CSR HANDOVER COMMAND message instructs the MS to use a non-supported configuration, MS resumes normal operation as if the GA-CSR HANDOVER COMMAND message has not been received.

82.8.2.2.3 Method of test

Initial Conditions

System Simulator:

- 2 cells: GERAN cell & GAN cell
- 1 GERAN cell, default parameters
- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-DEDICATED state in service of GAN cell, voice call activated

Foreseen Final State of the MS

MS in GA-CSR-IDLE state.

Test Procedure

The MS is in GA-CSR-DEDICATED state in service of GAN cell, voice call activated. SS sends GA-CSR UPLINK QUALITY INDICATION to the MS indicating poor uplink quality. MS sends a GA-CSR HANDOVER INFORMATION with candidate lists. SS sends GA-CSR HANDOVER COMMAND message to the MS. The GA-CSR HANDOVER COMMAND message instructs the MS to use a not supported frequency. MS sends a GA-CSR HANDOVER FAILURE message and resumes normal operation as if the GA-CSR HANDOVER COMMAND message has not been received.

Specific test parameters

-

Maximum Duration of Test

2 min.

| 5 | → | | GA-CSR HANDOVER FAILURE With IE 'RR Cause' " <i>frequency not implemented</i> ", MS resumes normal operation on GAN cell |
| 6 | ← | | GA-CSR RELEASE IE 'RR cause' indicates #0 |
| 7 | → | | GA-CSR RELEASE COMPLETE MS enters GA-CSR-IDLE state |

82.9 Ciphering Configuration Procedure

82.9.1 Ciphering Configuration Procedure, Normal cases

82.9.1.1 Ciphering Configuration Procedure

82.9.1.1.1 Conformance requirement

The network initiates the ciphering mode setting procedure by sending a GA-CSR CIPHERING MODE COMMAND message to the mobile station, indicating whether ciphering shall be used or not, and if yes which algorithm to use.

Additionally, the network may, by the use of the cipher response information element, request the mobile station to include its IMEISV in the GA-CSR CIPHERING MODE COMPLETE message.

Whenever the mobile station receives a valid GA-CSR CIPHERING MODE COMMAND message, it shall, if a SIM is present and considered valid and the ciphering key sequence number stored on the SIM indicates that a ciphering key is available, save information about the ciphering key to use if the MS is later performing Handover from GAN. A valid GA-CSR CIPHERING MODE COMMAND message is defined to be one of the following:

- one that indicates "start ciphering" and is received by the mobile station in the "not ciphered" mode;
- one that indicates "no ciphering" and is received by the MS in the "not ciphered" mode; or
- one that indicates "no ciphering" and is received by the mobile station in the "ciphered" mode.

Other GA-CSR CIPHERING MODE COMMAND messages shall be regarded as erroneous, and a GA-CSR STATUS message with cause "Protocol error unspecified" shall be returned, and no further action taken.

The MS shall also calculate a MAC (Message Authentication Code). The MAC shall be calculated over the following data:

RAND | IMSI

using "HMAC-SHA1-96" algorithm, as specified in [24] with Kc as authentication key.

In the formulas above, the "|" character denotes concatenation. RAND is the 16-octet random number received from the GANC in the GA-CSR CIPHERING MODE COMMAND message. IMSI is the MS IMSI, in the same format as defined for the Mobile Identity IE as defined in [8 / 3GPP TS 44.318 v.6.0.0] i.e. as a variable-length sequence of digits in BCD format (e.g. the IMSI "123456789098765" is encoded as the following octets (in hexadecimal): "21 43 65 87 09 89 67 F5"). Network byte order is used.

The Kc key is the Kc that has been derived during the last authentication. The length of the MAC is 12 octets.

When the appropriate action on the GA-CSR CIPHERING MODE COMMAND message has been taken, the mobile station sends back a GA-CSR CIPHERING MODE COMPLETE message. If the "cipher response" field of the cipher response information element in the GA-CSR CIPHERING MODE COMMAND message specified "IMEISV must be included" the mobile station shall include its IMEISV in the GA-CSR CIPHERING MODE COMPLETE message.

Reference(s)

3GPP TS 44.318 sub-clause 7.9.1 and 7.9.2

82.9.1.1.2 Test purpose

To verify that the MS can reply a GA-CSR CIPHERING MODE COMMAND message and return the correct Message Authentication Code (MAC).

82.9.1.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

Mobile Station:

- MS in state GA-CSR-DEDICATED
- MS in not ciphered mode

Foreseen final state of the MS

MS in GA-CSR IDLE state. Test procedure

The SS sends the GA-CSR CIPHERING MODE message. The Cipher Response IE should indicate that IMEISV should not be included. The MS replies with the GA-CSR CIPHERING MODE COMPLETE message. SS checks that the IMEISV is not included and that the MAC is correct. The SS sends another GA-CSR CIPHERING MODE COMMAND message with SC in Cipher Mode Setting IE set to "No ciphering". The MS replies with the GA-CSR CIPHERING MODE COMPLETE message. The SS sends new GA-CSR CIPHERING MODE message. The Cipher Response IE should indicate that IMEISV should be included. The MS replies with the GA-CSR CIPHERING MODE COMPLETE message. SS checks that the IMEISV is included and that the MAC is correct.

82.10 Channel mode modify procedure

82.10.1 Channel mode modify procedure / successful cases

82.10.1.1 Channel mode modify / successful case

82.10.1.1.1 Conformance requirement

In dedicated mode, the GANC can request a modification of the channel mode, multi-rate configuration, RTP redundancy configuration, sample size, GANC IP address, GANC RTP UDP port and GANC RTCP UDP port used for an active traffic channel.

The channel mode modify procedure allows the network to request the mobile station to modify configuration used for an active channel. The channel mode covers the coding, decoding and transcoding mode as well as the redundancy policy used on the active channel.

This procedure is always initiated by the network.

The network initiates the procedure by sending a GA-CSR CHANNEL MODE MODIFY message to the mobile station.

When the MS has received the GA-CSR CHANNEL MODE MODIFY message, the mobile station modifies the configuration, sets the mode and/or the RTP redundancy configuration for the active channel and then replies by a GA-CSR CHANNEL MODE MODIFY ACKNOWLEDGE message indicating the ordered channel mode.

Reference(s)

3GPP TS 44.318 subclauses 7.10 / 7.10.1.1 / 7.10.1.2

82.10.1.1.2 Test purpose

To verify that MS is able to change active channel mode if requested when it is different from the one used by the mobile station or whether it is already in use.

82.10.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-CSR-DEDICATED state in service of GAN cell, voice call activated

Foreseen Final State of the MS

MS in GA-CSR-IDLE state

Test Procedure

The MS is in GA-CSR-DEDICATED state in service of GAN cell, voice call activated. SS sends GA-CSR CHANNEL MODE MODIFY message to change active channel mode. The mode is different from the one used by the mobile station. MS sets the mode for the active channel and then replies by a GA-CSR CHANNEL MODE MODIFY ACKNOWLEDGE message indicating the ordered channel mode.

83.1 GA-PSR Transport Channel Activation & Deactivation Procedures

83.1.1 GA-PSR Transport Channel Activation & Deactivation Procedures, Normal Cases

83.1.1.1 MS Initiated GA-PSR TC Activation

83.1.1.1.1 Conformance requirements

Upon receiving the uplink user data transfer request from the LLC for LLC SAPI 3, 5, 9 or 11 and while the MS GA-PSR is in the GA-PSR-STANDBY state, the MS shall,

- send a GA-PSR-ACTIVATE-UTC-REQ message,
- start timer TU4002,
- set the uplink packet sequence number to 0,
- set the expected downlink packet sequence number to 0 and

Upon receiving the GA-PSR-ACTIVATE-UTC-ACK message while the MS initiated GA-PSR TC activation is in progress, the MS shall stop timer TU4002, create and store the corresponding GA-PSR TC information and the MS GA-PSR shall transition into GA-PSR-ACTIVE state. The MS GA-PSR shall start TU4001 timer and forward any outstanding uplink user data packets. The TU4001 timer is restarted whenever any user data packet is sent to or received from the GANC.

References

3GPP TS 44.318, subclauses 8.2.1 & 8.2.3

83.1.1.1.2 Test purpose

To verify that on receiving uplink data request from LLC in GA-PSR-STANDBY state, MS shall initiate GA-PSR TC Activation procedure.

To verify that on receipt of acknowledgment from GANC for the activation request MS shall move into GA-PSR-ACTIVE state.

83.1.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell.

Test Procedure

MS is made to initiate the GA-PSR TC and send to SS the GA-PSR-ACTIVATE-UTC-REQ.

The SS responds to MS with GA-PSR-ACTIVATE-UTC-ACK and the MS transmits GA-PSR-UNITDATA with the data to SS.

Maximum Duration of Test

1 min.

83.1.2.2 GANC Rejects GA-PSR TC Activation

83.1.2.2.1 Conformance requirements

Upon receiving the uplink user data transfer request from the LLC for LLC SAPI 3, 5, 9 or 11 and while the MS GA-PSR is in the GA-PSR-STANDBY state, the MS shall,

- send a GA-PSR-ACTIVATE-UTC-REQ message,
- start timer TU4002,
- set the uplink packet sequence number to 0,
- set the expected downlink packet sequence number to 0 and

If the GANC decides to reject GA-PSR TC activation, it shall send a GA-PSR-ACTIVATE-UTC-ACK message to the MS with the failure cause code and shall not include GANC IP address and UDP port number. The following rejection cause values are supported:

- "No available resources" indicates that the GANC failed to allocate required resources.
- "GANC failure" indicates internal GANC failure
- "Not authorized for data service" indicates that the MS is not authorized to use data services via GAN

Upon receiving the GA-PSR-ACTIVATE-UTC-ACK message indicating failure, the MS shall declare the procedure as failed to the upper layers.

References

3GPP TS 44.318, subclauses 8.2.1; 8.2.4.1; 8.2.4.4

83.1.2.2.2 Test purpose

To verify that by receiving the GA-PSR-ACTIVATE-UTC-ACK message with the failure cause code, described below, the MS would declare the procedure as failed to the upper layers.

83.1.2.2.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

The MS initiates the GA-PSR-ACTIVE state transmitting GA-PSR-ACTIVATE-UTC-REQ to the SS. The SS responds with GA-PSR-ACTIVATE-UTC-ACK with failure code "No available resources". The MS remains in the GA-PSR-STANDBY state. To confirm that the MS is in the GA-PSR-STANDBY state, the SS sends GA-PSR-ACTIVATE-UTC-REQ and waits for the GA-PSR-ACTIVATE-UTC-ACK from the MS. Upon receiving the GA-PSR-ACTIVATE-UTC-ACK, the SS concludes that the MS was in GA-PSR-STANDBY state in step 4.

Maximum Duration of Test

1 min.

Expected Sequence

83.1.3 Network Initiated GA-PSR Transport Channel Activation, Normal Case

83.1.3.1 Processing of the GA-PSR TC Activation Request by the MS

83.1.3.1.1 Conformance requirements

Upon receiving the downlink user data transfer request associated with LLC SAPI 3, 5, 9 or 11 and if there is no GA-PSR TC associated with the specific MS, the GANC allocates the IP address and the UDP port number to be used by

the MS for GPRS user data transport and sends a GA-PSR-ACTIVATE-UTC-REQ message to the MS. The GANC also:

- sets downlink packet sequence number to 0 and
- sets the expected uplink packet sequence number to 0

Upon receiving the GA-PSR-ACTIVATE-UTC-REQ message from the GANC, the MS shall verify the following:

- the GA-PSR is in GA-PSR-STANDBY state
- the GA-PSR TC does not exist
- the GPRS service is not suspended

Assuming successful verification, the MS shall allocate UDP port number for the MS GPRS user data transport and store the associated information. In parallel, the MS GA-PSR shall transition to GA-PSR-ACTIVE state and start TU4001 timer. Subsequently, the MS shall send the GA-PSR-ACTIVATE-UTC-ACK message to the GANC with the cause indicating successful activation. The message includes the MS UDP port to be used for the downlink GPRS user data transport.

After the MS has sent the GA-PSR-ACTIVATE-UTC-ACK message, it shall:

- set the uplink packet sequence number to 0 and
- set the expected downlink packet sequence number to 0

When the TU4001 timer expires and if there are no outstanding uplink GPRS user data messages to be transferred, the MS GA-PSR shall send the GA-PSR-DEACTIVATE-UTC-REQ message to the GANC to request the deactivation of the transport channel. In parallel, the MS shall start TU4002 timer to wait for the confirmation.

References

3GPP TS 44.318, subclauses 8.3.1; 8.3.2 & 8.4.1

83.1.3.1.2 Test purpose

To verify that on receiving the GA-PSR-ACTIVATE-UTC-REQ message from the GANC, MS will:

- 1) Allocate UDP port number for the MS GPRS user data transport and store the associated information.
- 2) Transition to GA-PSR-ACTIVE state and start TU4001 timer.
- 3) Send the GA-PSR-ACTIVATE-UTC-ACK message to the GANC with the cause indicating successful activation.
- 4) Includes the MS UDP port to be used for the downlink GPRS user data transport in the GA-PSR-ACTIVATE-UTC-ACK message.
- 5) Set uplink packet sequence number to 0 and
- 6) Set the expected downlink packet sequence number to 0

83.1.3.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

The SS initiates the GA-PSR-ACTIVE state transmitting GA-PSR-ACTIVATE-UTC-REQ to the MS. MS responds with GA-PSR-ACTIVATE-UTC-ACK and starts TU4001. SS does not transmit any data for the time exceeding TU4001. The MS transmits GA-PSR-DEACTIVATE-UTC-REQ, confirming that the MS was in GA-PSR-ACTIVE state and TU4001 has been started in step 2.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-PSR-ACTIVATE-UTC-REQ | |
| 2 | → | | GA-PSR-ACTIVATE-UTC-ACK | SS verifying the IE UDP Port for GPRS user data transport (port number for DL) |
| 3 | | SS | | Waiting for time exceeding TU4001 |
| 4 | → | | GA-PSR-DEACTIVATE-UTC-REQ | SS confirms that the MS was in GA-PSR-ACTIVE state in step 3. |
| 5 | ← | | GA-PSR-DEACTIVATE-UTC-ACK | |

83.1.4 Network Initiated GA-PSR Transport Channel Activation, Abnormal Cases

83.1.4.1 Void

83.1.4.2 MS Rejects GA-PSR TC Activation when the GPRS Service is suspended

83.1.4.2.1 Conformance requirements

If the MS determines that the GPRS service is suspended when the GA-PSR-ACTIVATE-UTC-REQ is received, it shall send a GA-PSR-ACTIVATE-UTC-ACK message to the GANC with the failure cause code set to "GPRS Suspended".

Upon receiving the GA-PSR-ACTIVATE-UTC-ACK message indicating that the GPRS service is suspended, the GANC aborts the activation procedure.

References

3GPP TS 44.318, subclause 8.3.4.2

83.1.4.2.2 Test purpose

To verify that on receiving a GA-PSR-ACTIVATE-UTC-REQ by the MS when the GPRS service for the MS is suspended, the MS sends a GA-PSR-ACTIVATE-UTC-ACK message to the GANC with the failure cause code set to "GPRS Suspended".

83.1.4.2.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

The SS initiates the GA-PSR-ACTIVE state transmitting GA-PSR-ACTIVATE-UTC-REQ to the MS. The SS responds with GA-PSR-ACTIVATE-UTC-ACK and MS enters the GA-PSR-ACTIVE state. The MS starts to transmit data using GA-PSR-UNITDATA. The MS is made to initiate a voice call, which will make MS initiate the GPRS suspend procedure. The SS initiates the GA-PSR-ACTIVE procedure, sending the GA-PSR-ACTIVATE-UTC-REQ.

The MS responds with GA-PSR-ACTIVATE-UTC-ACK, with failure cause code set to "GPRS Suspended"

The SS checks that GA-PSR-ACTIVATE-UTC-ACK, contains failure cause code "GPRS Suspended"

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | MS | SS | | |
| 1 | | | | Trigger MS to initiate data transfer |
| 2 | → | | GA-PSR-ACTIVATE-UTC-REQ | MS initiated GA-PSR-ACTIVE state |
| 3 | ← | | GA-PSR-ACTIVATE-UTC-ACK | MS is waiting for this message |
| 4 | → | | GA-PSR-UNITDATA | MS is transmitting the uplink user data packets |
| 5 | | | | MS is made to initiate a voice call |
| 6 | → | | GA-CSR GPRS SUSPENSION REQUEST Or GA-CSR REQUEST | Repeat step 6 until both messages GA-CSR GPRS SUSPENSION REQUEST and GA-CSR REQUEST are received |
| 7 | ← | | GA-CSR REQUEST ACCEPT | MS in GA-CSR-DEDICATED state |
| 8 | → | | GA-CSR UPLINK DIRECT TRANSFER | |
| 9 | ← | | GA-PSR-ACTIVATE-UTC-REQ | |
| 10 | → | | GA-PSR-ACTIVATE-UTC-ACK | Failure cause code set to "GPRS Suspended" |
| 11 | ← | | GA-CSR RELEASE | IE 'RR cause', including GPRS resumption indication as per standard GSM/GPRS to indicate that resume of GPRS service is not necessary. |
| 12 | → | | GA-CSR RELEASE COMPLETE | MS enters GA-CSR-IDLE state and GA- PSR-STANDBY |

83.1.4.3 MS Receives GA-PSR TC Activation Request while GA-PSR TC active

83.1.4.3.1 Conformance requirements

If the MS receives a GA-PSR TC activation message from the GANC while the GA-PSR TC is active, it shall send the GA-PSR-ACTIVATE-UTC-ACK message to the GANC. The message shall include MS UDP port allocated to the existing GA-PSR TC. In parallel, if the GANC provided new IP Address and UDP port number, the MS shall update the GA-PSR TC attributes accordingly.

After sending the GA-PSR-ACTIVATE-UTC-ACK message, the MS shall:

- set uplink packet sequence number to 0 and
- set the expected downlink packet sequence number to 0

References

3GPP TS 44.318, subclauses 8.2.1; 8.2.3 & 8.3.4.3

83.1.4.3.2 Test purpose

To verify that if the MS receives a GA-PSR TC activation message from the GANC while the GA-PSR TC is active, the MS sends the GA-PSR-ACTIVATE-UTC-ACK message to the GANC.

83.1.4.3.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

MS is made to initiate GA-PSR-ACTIVE state establishment and SS responds with GA-PSR-ACTIVATE-UTC-ACK. MS enters the GA-PSR-ACTIVE state and sends GA-PSR-UNITDATA. While the MS is transmitting data the SS sends GA-PSR-ACTIVATE-UTC-REQ with a different IP address and port number.

The MS responds with GA-PSR-ACTIVATE-UTC-ACK, containing the MS UDP port allocated to the existing GA-PSR TC. MS is triggered to initiate another data transfer. The MS transmits GA-PSR-UNITDATA, using new IP address and port number.

SS checks that the MS transmits the GA-PSR-UNITDATA, using new IP address and port number, and that the MS sets uplink packet sequence number to 0.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|-------------------------|---|
| | MS | SS | | |
| 1 | | | | Trigger MS to initiate data transfer |
| 2 | → | | GA-PSR-ACTIVATE-UTC-REQ | |
| 3 | ← | | GA-PSR-ACTIVATE-UTC-ACK | |
| 4 | → | | GA-PSR-UNITDATA | MS is transmitting the uplink user data packets |

| | | | |
|----|---|---------------------------|---|
| 5 | ← | GA-PSR-ACTIVATE-UTC-REQ | SS provides different IP address and port number |
| 6 | → | GA-PSR-ACTIVATE-UTC-ACK | Message includes the MS UDP port allocated to the existing GA-PSR TC |
| 7 | | | Trigger MS to initiate an other data transfer |
| 8 | → | GA-PSR-UNITDATA | MS using new IP address and port number, SS verifies that sequence number =0. |
| 9 | ← | GA-PSR-DEACTIVATE-UTC-REQ | |
| 10 | → | GA-PSR-DEACTIVATE-UTC-ACK | |

83.1.5 MS Initiated Deactivation of GA-PSR Transport Channel, Normal Case

83.1.5.1 GA-PSR TC Deactivation Initiation by the MS

83.1.5.1.1 Conformance requirements

When the TU4001 timer expires and if there are no outstanding uplink GPRS user data messages to be transferred, the MS GA-PSR shall send GA-PSR-DEACTIVATE-UTC-REQ message to the GANC to request the deactivation of the transport channel. In parallel, the MS shall start TU4002 timer to wait for the confirmation.

Upon receipt of a GA-PSR-DEACTIVATE-UTC-REQ message from the MS, the GANC releases the GA-PSR TC and sends the GA-PSR-DEACTIVATE-UTC-ACK message to the MS indicating successful deactivation; i.e. the cause IE is set to "success".

Upon receipt of a GA-PSR-DEACTIVATE-UTC-ACK message from the GANC, the MS GA-PSR shall stop TU4002 timer, and release the GA-PSR TC. In parallel, the MS GA-PSR shall transition to GA-PSR-STANDBY state.

Packets received out-of-sequence should be dropped.

References

3GPP TS 44.318, subclauses 8.4.1; 8.4.2; 8.4.3 and 8.7.5.3

83.1.5.1.2 Test purpose

To verify that, when the TU4001 timer expires and if there are no outstanding uplink GPRS user data messages to be transferred, the MS GA-PSR sends GA-PSR-DEACTIVATE-UTC-REQ message to the GANC to request the deactivation of the transport channel and in parallel, the MS starts TU4002 timer to wait for the confirmation.

To verify that upon receiving a GA-PSR-DEACTIVATE-UTC-ACK message from the GANC, the MS GA-PSR stops TU4002 timer, and releases the GA-PSR TC and that the MS GA-PSR transitions to GA-PSR-STANDBY state.

83.1.5.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

MS is made to initiate GA-PSR-ACTIVE state and SS responds with GA-PSR-ACTIVATE-UTC-ACK. MS enters the GA-PSR-ACTIVE state and sends GA-PSR-UNITDATA. Once all expected data has been transmitted and the sequential TU has expired, the MS sends GA-PSR-DEACTIVATE-UTC-REQ, and starts TU4002, requesting SS to deactivate GA-PSR state. In response, the SS sends GA-PSR-DEACTIVATE-UTC-ACK. Upon receiving the GA-PSR-DEACTIVATE-UTC-ACK the MS stops the TU4002 and enters the GA-PSR-STANDBY state.

To verify that the MS deactivated timer TU4002, SS sends a GA-PSR-ACTIVATE-UTC-REQ again. If the MS deactivated TU4002, the MS will respond with a GA-PSR-ACTIVATE-UTC-ACK.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | | | | Trigger MS to initiate data transfer |
| 2 | → | | GA-PSR-ACTIVATE-UTC-REQ | MS initiated GA-PSR-ACTIVE state |
| 3 | ← | | GA-PSR-ACTIVATE-UTC-ACK | MS is waiting for this message |

83.1.6 MS Initiated Deactivation of GA-PSR Transport Channel, Abnormal Cases

83.1.6.1 Uplink User Data Transfer is initiated while GA-PSR TC Deactivation is in Progress

83.1.6.1.1 Conformance requirements

If the MS LLC initiates the uplink user data transfer after the MS GA-PSR has sent the deactivation request to the GANC, the MS GA-PSR shall complete the deactivation procedure first and then initiate a new GA-PSR TC activation procedure to enable data transfer.

References

3GPP TS 44.318, subclause 8.4.4.3

83.1.6.1.2 Test purpose

To verify that if the MS LLC initiates the uplink user data transfer after the MS GA-PSR has sent the deactivation request to the GANC, the MS GA-PSR completes the deactivation procedure first and then initiate a new GA-PSR TC activation procedure to enable data transfer.

83.1.6.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

MS is made to initiate GA-PSR-ACTIVE state establishment by triggering a user data transfer of 1 octet. The SS responds with GA-PSR-ACTIVATE-UTC-ACK. After the MS completes the user data transfer it initiates deactivation by sending the GA-PSR-DEACTIVATE-UTC-REQ. Then MS is triggered to initiate the uplink user data transfer. The MS shall not start data transmission but instead initiates second activation by sending GA-PSR-ACTIVATE-UTC-REQ after the deactivation procedure is completed. The SS responds with GA-PSR-ACTIVATE-UTC-ACK and MS begins to transmit the data, sending GA-PSR-UNITDATA.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | → | | GA-PSR-ACTIVATE-UTC-REQ | MS initiated GA-PSR-ACTIVE state by triggering user data transfer of 1 octet. |
| 2 | ← | | GA-PSR-ACTIVATE-UTC-ACK | |

83.1.6.2 Downlink User Data Transfer is received while the GA-PSR TC Deactivation is in Progress

83.1.6.2.1 Conformance requirements

If the MS receives any downlink user data packets while waiting for the GA-PSR-DEACTIVATE-UTC-ACK message response, it shall abort the deactivation procedure (i.e. stop timer TU4002) and restart TU4001 timer.

References

3GPP TS 44.318, subclause 8.4.4.4

83.1.6.2.2 Test purpose

To verify that if the MS receives any downlink user data packets while waiting for the GA-PSR-DEACTIVATE-UTC-ACK response, it aborts the deactivation procedure (i.e. stop timer TU4002) and restarts TU4001 timer.

83.1.6.2.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

The MS is made to initiate GA-PSR-ACTIVE state establishment by triggering a user data transfer of 1 octet. The SS responds with GA-PSR-ACTIVATE-UTC-ACK. After the MS completes the user data transfer it initiates deactivation by sending GA-PSR-DEACTIVATE-UTC-REQ. The SS sends GA-PSR-UNITDATA, preventing deactivation of the GA-PSR TC by the MS. To check that the MS is in GA-PSR-ACTIVE state, a data transmission is triggered in the MS. SS initiates deactivation procedure and sends GA-PSR-DEACTIVATE-UTC-REQ. The MS responds with GA-PSR-DEACTIVATE-UTC-ACK.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|---|
| | MS | SS | | |
| 1 | → | | GA-PSR-ACTIVATE-UTC-REQ | MS initiated GA-PSR-ACTIVE state by triggering user data transfer of 1 octet. |
| 2 | ← | | GA-PSR-ACTIVATE-UTC-ACK | |

83.1.6.3 Unexpected GA-PSR-DEACTIVATE-UTC-ACK response

83.1.6.3.1 Conformance requirements

If the MS receives an unexpected GA-PSR-DEACTIVATE-UTC-ACK message response while the GA-PSR is in GA-PSR-ACTIVE state, the MS GA-PSR shall stop TU4001 timer, and release the GA-PSR TC. In parallel, the MS GA-PSR shall transition to GA-PSR-STANDBY state.

If the MS receives an unexpected GA-PSR-DEACTIVATE-UTC-ACK message response while the GA-PSR is in GA-PSR-STANDBY state, the message is silently discarded.

References

3GPP TS 44.318, subclauses 8.4.4.5

83.1.6.3.2 Test purpose

To verify that if the MS receives an unexpected GA-PSR-DEACTIVATE-UTC-ACK response while the GA-PSR is in GA-PSR-ACTIVE state, the MS GA-PSR stops TU4001 timer, releases the GA-PSR TC and, the MS GA-PSR transitions to GA-PSR-STANDBY state.

83.1.6.3.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell.

Test Procedure

MS is made to initiate GA-PSR-ACTIVE state establishment and SS responds with GA-PSR-ACTIVATE-UTC-ACK. While the MS transmits data, the SS sends GA-PSR-DEACTIVATE-UTC-ACK. The MS enters the GA-PSR-STANDBY state. To confirm that the MS is in the GA-PSR-STANDBY state, the SS sends the GA-PSR-UNITDATA message and expects to receive the GA-PSR-ACTIVATE-UTC-REQ.

Check for 10 sec that MS does not send any more messages.

To verify that the MS is in GA-PSR-STANDBY state a new connection is initiated with GA-PSR-ACTIVATE-UTC-REQ. If the MS responses with GA-PSR-ACTIVATE-UTC-ACK, the MS was in GA-PSR-STANDBY state.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |

83.1.6.4 Unexpected GA-PSR-ACTIVATE-UTC-REQ

83.1.6.4.1 Conformance requirements

If the MS receives any downlink user data packets while waiting for the GA-PSR-DEACTIVATE-UTC-ACK message response, it shall abort the deactivation procedure (i.e. stop timer TU4002) and restart TU4001 timer.

If the MS receives an unexpected GA-PSR-ACTIVATE-UTC-REQ message while waiting for GA-PSR-DEACTIVATE-UTC-ACK message response, the MS ignores the request and continues waiting for deactivation response.

References

3GPP TS 44.318, subclauses 8.4.4.4 and 8.4.4.6

83.1.6.4.2 Test purpose

To verify that if the MS receives an unexpected GA-PSR-ACTIVATE-UTC-REQ while waiting for GA-PSR-DEACTIVATE-UTC-ACK response, the MS ignores the request and continues waiting for deactivation response.

83.1.6.4.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell.

Test Procedure

MS is made to initiate GA-PSR-ACTIVE state establishment and SS responds with GA-PSR-ACTIVATE-UTC-ACK. MS transmits data and sequentially initiates the deactivation procedure sending GA-PSR-DEACTIVATE-UTC-REQ. The MS receives an unexpected GA-PSR-ACTIVATE-UTC-REQ while waiting for GA-PSR-DEACTIVATE-UTC-ACK response. MS ignores this message and continues to wait for the GA-PSR-DEACTIVATE-UTC-ACK response. SS waits for one second to make sure MS receives GA-PSR-ACTIVATE-UTC-REQ before GA-PSR-UNIT-DATA. SS sends the GA-PSR-UNITDATA, and MS responds by aborting the deactivation procedure. To finish the test SS sends GA-PSR-DEACTIVATE-UTC-REQ and MS responds with GA-PSR-DEACTIVATE-UTC-ACK.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | | | | Trigger MS to initiate data transfer |
| 2 | → | | GA-PSR-ACTIVATE-UTC-REQ | MS initiated GA-PSR-ACTIVE state |

83.1.7 GANC Initiated Deactivation of GA-PSR Transport Channel, Normal Case

83.1.7.1 GA-PSR TC Deactivation Initiation by the GANC

83.1.5.7.1 Conformance requirements

When the GANC decides to deactivate GA-PSR TC channel, it shall send GA-PSR-DEACTIVATE-UTC-REQ message to the MS to request the deactivation.

If the MS receives an unexpected GA-PSR-DEACTIVATE-UTC-ACK message response while the GA-PSR is in GA-PSR-ACTIVE state, the MS GA-PSR shall stop TU4001 timer, and release the GA-PSR TC. In parallel, the MS GA-PSR shall transition to GA-PSR-STANDBY state.

References

3GPP TS 44.318, subclauses 8.5.1 & 8.4.4.5

83.1.7.1.2 Test purpose

To verify that upon receiving a GA-PSR-DEACTIVATE-UTC-REQ message from the GANC, the MS releases the GA-PSR TC, sends the GA-PSR-DEACTIVATE-UTC-ACK message to the GANC indicating successful deactivation and MS GA-PSR enters the GA-PSR-STANDBY state.

83.1.7.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

The SS initiates active state. The MS responds with GA-PSR-ACTIVATE-UTC-ACK. The SS initiates deactivation of the TC and sends GA-PSR-DEACTIVATE-UTC-ACK. The MS responds with GA-PSR-DEACTIVATE-UTC-ACK and enters the GA-PSR-STANDBY state. To confirm that the MS is in the GA-PSR-STANDBY state, the MS is triggered to send user data. Therefore, GA-PSR-ACTIVATE-UTC-REQ is expected to be sent from the MS. The SS sends GA-PSR-ACTIVATE-UTC-ACK message and waits for GA-PSR-UNITDATA.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | ← | | GA-PSR-ACTIVATE-UTC-REQ | SS initiated GA-PSR-ACTIVE state |

83.1.8 Void

83.2 GA-PSR GPRS User Data Transport

83.2.1 GA-PSR GPRS User Data Transport , Normal Cases

83.2.1.1 MS Initiates Uplink GPRS User Data Transfer

83.2.1.1.1 Conformance requirements

The GPRS user data packets are tunnelled using UDP transport as specified for GA-PSR Transport Channel. Each packet is assigned a sequence number in the range of 0 to 65535 sequentially. The sequence number is set to 0 after reaching the maximum – 65535.

Assuming that the GA-PSR TC has been already activated as specified in sub-clauses 8.2 or 8.3, the MS GA-PSR is able to immediately forward any uplink GPRS user data packets to the GANC. Upon the request from the LLC to transfer an uplink LLC PDU with GPRS user data identified with LLC SAPI 3, 5, 9 or 11, the MS GA-PSR shall restart TU4001 timer and encapsulate the complete LLC PDU within a GA-PSR UNITDATA message.

Subsequently, the MS shall send the GA-PSR UNITDATA message to the GANC using the existing GA-PSR TC; i.e. using the corresponding GANC IP address and UDP port number.

The MS shall increment the uplink packet sequence number for each GA-PSR-UNITDATA message sent to the GANC.

References

3GPP TS 44.318, subclauses 8.7 & 8.7.1.

83.2.1.1.2 Test purpose

To verify that MS:

- 1) Uses corresponding GANC IP address and UDP port number,
- 2) Transmits at least 65537 packets, and that each packet is assigned a sequence number in the range of 0 to 65535 sequentially.
- 3) Assigns sequence number to 0 after reaching the maximum – 65535

83.2.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell.

Test Procedure

The MS activates the GA-PSR TC with the corresponding GANC IP address and UDP port number and immediately forwards uplink GPRS user data, which consist of 65537 of packets, being requested from the MS LLC, to the GANC. The MS tunnels the GPRS data packets using UDP transport, assigning number to the packets in range from 0 to 65535 sequentially. The MS increments the uplink packet sequence number for each GA-PSR-UNITDATA message, being sent to the GANC, and assigns the number 0 after reaching the 65535.

SS verifies that MS:

- 1) Uses corresponding GANC IP address and UDP port number,
- 2) Transmits at least 65537 packets, and that each packet is assigned a sequence number in the range of 0 to 65535 sequentially.
- 3) Assigns sequence number to 0 after reaching the maximum – 65535

Maximum Duration of Test

30 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|--|
| | MS | SS | | |
| 1 | → | | GA-PSR-ACTIVATE-UTC-REQ | SS initiated GA-PSR-ACTIVE state |
| 2 | ← | | GA-PSR-ACTIVATE-UTC-ACK | SS sends IP address and UDP port number |
| 3 | → | | GA-PSR-UNITDATA | MS sends at least 65537 packets, SS verified that the sequence number is set to 0 after reaching the maximum – 65535 |
| 4 | → | | GA-PSR-DEACTIVATE-UTC-REQ | Sent after TU4001 expires |
| 5 | ← | | GS-PSR DEACTIVATE-UTC-ACK | |

83.2.2 GA-PSR GPRS User Data Transport , Abnormal Cases

83.2.2.1 Void

83.2.2.2 Void

83.2.2.3 MS Receives a Downlink Message to Initiate Uplink GPRS User Data Transfer while the GA-PSR TC activation Procedure is in progress

83.2.2.3.1 Conformance requirements

Upon receiving a downlink message while the GA-PSR TC activation procedure is in progress (TU4002 timer is still running), the MS GA-PSR shall process the request as if the transport channel was active. The MS shall not initiate uplink GPRS user data transfer until the GA-PSR TC activation procedure is successfully completed (as specified in the subclause 8.2). The MS shall use the IP address and UDP port number received in the GA-PSR ACTIVATE UTC ACK message for sending uplink GPRS user data packets to the GANC on that transport channel.

References

3GPP TS 44.318, subclause 8.7.5.4

83.2.2.3.2 Test purpose

To verify that MS GA-PSR shall only use IP address and UDP port number received in the GA-PSR ACTIVATE UTC ACK message to send uplink GPRS user data packets to the SS

83.2.2.3.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated

Foreseen Final State of the MS

MS in GA-PSR-ACTIVE state in service of GAN cell.

Test Procedure

The MS receives a downlink message GA-PSR UNITDATA while Transport Channel activation is in progress. The MS activates the GA-PSR TC with the GANC IP address and UDP port number given in the GA-PSR ACTIVATE UTC ACK message and sends uplink GPRS user data.

SS verifies that MS:

- 1) GA-PSR shall only use IP address and UDP port number received in the GA-PSR ACTIVATE UTC ACK message to send uplink GPRS user data packets to the SS

Maximum Duration of Test

5 min.

Expected Sequence

| Step | Direction | | Message | Comments |
|------|-----------|----|-------------------------|---|

83.4 GPRS Suspend Procedure

83.4.1 GPRS Suspension Initiation by the MS, normal Case

83.4.1.1 GPRS Suspension Initiation by the MS

83.4.1.1.1 Conformance requirements

While transitioning to dedicated mode and if unable to support simultaneous CS and PS services, the MS shall request the suspension of the downlink GPRS data transfer by sending a GA-CSR GPRS SUSPENSION REQUEST message to the GANC

Upon receiving a GA-CSR GPRS SUSPENSION REQUEST message from the MS, the GANC completes the GPRS suspend procedure via the Gb interface as defined in [3GPP 48.018].

References

3GPP TS 44.318, subclauses 8.10.1 & 8.10.2

83.4.1.1.2 Test purpose

To verify that the MS requests the suspension of the downlink GPRS data transfer by sending a GA-CSR GPRS SUSPENSION REQUEST message to the GANC, while the MS is transitioning to dedicated mode and if the MS unable to support simultaneous CS and PS services.

83.4.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Foreseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

The SS initiates GA-PSR TC, sending the GA-PSR-ACTIVATE-UTC-REQ. The MS responds with GA-PSR-ACTIVATE-UTC-ACK. The SS sends data, sending GA-PSR-UNITDATA. The SS sends GA-CSR PAGING REQUEST, requesting transitioning of the MS to dedicated mode. MS sends GA-CSR GPRS SUSPENSION REQUEST. The SS verifies that the MS requests GPRS suspension.

Maximum Duration of Test

1 min.

83.5 Downlink Flow Control

83.5.1 Initiation of the Downlink Flow Control and Processing of the TU4003 Timer Expiry by the MS, Normal Case

83.5.1.1 Initiation of the Downlink Flow Control and Processing of the TU4003 Timer Expiry by the MS

83.5.1.1.1 Conformance requirements

Upon detecting the downlink flow control condition, the MS shall initiate a downlink flow control procedure by sending a GA-PSR-DFC-REQ message to the GANC via the existing GA-PSR TC. The message includes new estimated data rate that can be supported. At the same time the MS shall start timer TU4003 to continue monitoring the flow control condition. The timer TU4003 is specified in sub-clause 12.

When the TU4003 timer expires, the MS shall re-evaluate the flow control condition and perform the following based on the outcome of the evaluation:

- If the flow control condition still exists (e.g. downlink buffer utilization is still above the low watermark level), the MS shall calculate a new data rate that can be supported and forward the corresponding GA-PSR-DFC-REQ to the GANC via the existing GA-PSR TC. Simultaneously, the MS shall start timer TU4003 to continue monitoring the downlink data transfer.
- If the flow condition has been resolved (e.g. buffer utilization is below the low mark level), the MS shall not restart the TU4003 timer and shall stop sending flow control requests to the GANC.

References

3GPP TS 44.318, subclauses 8.11.1 & 8.11.3

83.5.1.1.2 Test purpose

To verify that:

- 1) If the flow control condition exists the MS calculates a new data rate that can be supported and forwards the corresponding GA-PSR-DFC-REQ to the GANC via the existing GA-PSR TC.
- 2) If the timer expires, the MS checks the downlink flow control condition, and if it continues to exist, the MS restarts the timer TU4003, and optionally sends another GA-PSR-DFC-REQ message to the GANC.
- 3) If the flow condition has been resolved (e.g. buffer utilization is below the low mark level), the MS not restarts the TU4003 timer and stops sending flow control requests to the GANC.

83.5.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Forseen Final State of the MS

MS in GA-PSR-STANDBY state in service of GAN cell

Test Procedure

SS initiates the activation procedure and starts to transmit data. The MS detects flow control condition, sends the GA-PSR-DFC-REQ message and starts the TU4003 timer. SS reduces the data rate and continues to send the data. The SS verifies that the MS does not send GA-PSR-DFC-REQ message.

Maximum Duration of Test

1 min.

Expected Sequence

| Step | Direction | | Message | Comment |
|------|-----------|----|---------------------------|---|
| | MS | SS | | |

83.6 Uplink Flow Control

83.6.1 Processing of the Uplink Flow Control Request by the MS, Normal Case

83.6.1.1 Processing of the Uplink Flow Control Request by the MS

83.6.1.1.1 Conformance requirements

Upon detecting the uplink flow control condition, the GANC initiates an uplink flow control procedure by sending a GA-PSR-UFC-REQUEST message to the MS via the existing GA-PSR TC. The request is PFC based if the packet flow management procedures are supported.

Upon receiving the GA-PSR-UFC-REQUEST message from the GANC, the MS adjusts the uplink data rate accordingly.

References

3GPP TS 44.318, subclauses 8.12.1 & 8.12.2

83.6.1.1.2 Test purpose

To verify that the MS adjusts the uplink data rate accordingly with GA-PSR-UFC-REQUEST message received from the GANC.

83.6.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS GA-PSR is in the GA-PSR-STANDBY state. PDP context 1 is activated.

Forseen Final State of the MS

MS in Idle state

Test Procedure

The MS activates GA-PSR TC and starts to send lowest data rate to the SS. SS requests UL Flow Control sending the GA-PSR-UFC-REQ. The MS sends the data with rate adjusted according to GA-PSR-UFC-REQ.

The SS verifies whether the MS sends the data with adjusted data rate.

Maximum Duration of Test

1 min.

Expected Sequence

84 GAN Iu Mode Procedures

84.1 Macros for GAN Iu mode

84.2 GA-RRC connection establishment

84.2.1 GA-RRC connection establishment / successful case

84.2.1.1 GA-RRC connection establishment, Upper Layer Message Transmission and GA-RRC connection release by GANC (CS domain)

84.2.1.1.1 Conformance requirement

The GAN Iu mode GA-RRC CS and PS connections are logical connections between the MS and the GANC. As described in 3GPP TS 43.318, the GA-RRC sub-layer in the MS contains two entities, the CS domain GA-RRC sublayer entity and the PS domain GA-RRC sublayer entity. These entities operate independently and in parallel; e.g., two GA-RRC connections are established in the case of simultaneous CS and PS services, one GA-RRC connection for each domain. Each GA-RRC sub-layer entity in the MS can be in one of two states, GA-RRC-IDLE or GA-RRC-CONNECTED.

A GA-RRC connection is established when the upper layers in the MS request the establishment of a signalling connection for either CS or PS domain and the GA-RRC sub-layer entity in the MS is in the GA-RRC-IDLE state for that domain; i.e., no GA-RRC connection exists. When a successful response is received from the network, GA-RRC replies to the upper layer that the GA-RRC sub-layer entity in the MS has entered the RRC connected mode (i.e., the GA-RRC-CONNECTED state). The upper layers then have the possibility to request transmission of NAS messages to the network.

The GA-RRC INITIAL DIRECT TRANSFER message is used to transfer the "initial" upper layer message for the domain (i.e., the first NAS message after GA-RRC connection establishment for the domain) from the MS to the GANC. Receipt of the GA-RRC INITIAL DIRECT TRANSFER message by the GANC triggers the establishment of the signalling connection to the indicated CN domain for the MS. The GA-RRC UPLINK DIRECT TRANSFER message is used to transfer all subsequent upper layer messages for the signalling connection from the MS to the GANC.

The GA-RRC DOWNLINK DIRECT TRANSFER message is used to transfer upper layer messages from the GANC to the MS.

The GANC initiates the GA-RRC connection release procedure to command the MS to release the GA-RRC connection and any user plane resources for a particular domain and instruct the GA-RRC sub-layer entity of the MS to leave the GA-RRC-CONNECTED state and return to the GA-RRC-IDLE state for the domain. The GANC normally initiates this procedure when it receives the Iu Release Command from the CN; however, the GANC may also initiate this procedure under certain failure conditions.

The GA-RRC RELEASE message includes the IE "GA-RRC Cause". The GA-RRC Cause value should be one of the following:

- #83: normal release; e.g., at the end of a call
- #115: unspecified failure

Other values, if received, should be treated as "unspecified failure".

When the GA-RRC sublayer entity in the MS receives the GA-RRC RELEASE message, it shall:

- send a GA-RRC RELEASE COMPLETE message to the GANC,
- release the GA-RRC connection and any user plane resources for the indicated domain,
- stop timer TU5002 for the domain (if running),
- stop timer TU5909 for the domain (if running), and
- enter the GA-RRC-IDLE state for the domain.

Reference(s)

3GPP TS 44.318 subclause 8a.1 / 8a.2 / 8a.5.3 / 8a.5.4

84.2.1.1.2 Test purpose

To verify all of the following for the CS domain.

To verify that MS is able to initiate GA-RRC connection establishment between the MS and GANC and to verify that MS is able to communicate with the CN by encapsulating NAS messages in the GA-RRC INITIAL DIRECT TRANSFER message (first NAS message after GA-RRC connection establishment) and GA-RRC UPLINK DIRECT TRANSFER message and able to receive upper layer messages within GA-RRC DOWNLINK DIRECT TRANSFER message.

To verify that MS is able to release the GA-RRC connection, able to move into GA-RRC-IDLE state and release all GA-RRC and any traffic channel resources, when the MS receives the GA-RRC RELEASE message from SS.

84.2.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-RRC-IDLE state for CS domain in service of GAN cell

Foreseen Final State of the MS

MS in GA-RRC-IDLE state for CS domain.

Test Procedure

The MS is made to initiate a GA-RRC connection establishment for CS domain. The MS moves into GA-RRC-CONNECTED state when the MS receives the GA-RRC REQUEST ACCEPT message from the SS within timer TU5908 (5 sec.) from sending GA-RRC REQUEST message. SS verifies that MS sends GA-RRC INITIAL DIRECT TRANSFER message within 10s from GA-RRC REQUEST ACCEPT message. The SS answers by sending upper layer message within GA-RRC DOWNLINK DIRECT TRANSFER container message.

The SS sends GA-RRC RELEASE message. The MS enters GA-RRC-IDLE state and transmits a GA-RRC RELEASE COMPLETE to the SS and releases all GA-RRC and any traffic channel resources.

84.2.1.2 GA-RRC connection establishment, Upper Layer Message Transmission and GA-RRC connection release by GANC (PS domain)

84.2.1.2.1 Conformance requirement

The GAN Iu mode GA-RRC CS and PS connections are logical connections between the MS and the GANC. As described in 3GPP TS 43.318, the GA-RRC sub-layer in the MS contains two entities, the CS domain GA-RRC sublayer entity and the PS domain GA-RRC sublayer entity. These entities operate independently and in parallel; e.g., two GA-RRC connections are established in the case of simultaneous CS and PS services, one GA-RRC connection for each domain. Each GA-RRC sub-layer entity in the MS can be in one of two states, GA-RRC-IDLE or GA-RRC-CONNECTED.

A GA-RRC connection is established when the upper layers in the MS request the establishment of a signalling connection for either CS or PS domain and the GA-RRC sub-layer entity in the MS is in the GA-RRC-IDLE state for that domain; i.e., no GA-RRC connection exists. When a successful response is received from the network, GA-RRC replies to the upper layer that the GA-RRC sub-layer entity in the MS has entered the RRC connected mode (i.e., the GA-RRC-CONNECTED state). The upper layers then have the possibility to request transmission of NAS messages to the network.

The GA-RRC INITIAL DIRECT TRANSFER message is used to transfer the "initial" upper layer message for the domain (i.e., the first NAS message after GA-RRC connection establishment for the domain) from the MS to the GANC. Receipt of the GA-RRC INITIAL DIRECT TRANSFER message by the GANC triggers the establishment of the signalling connection to the indicated CN domain for the MS. The GA-RRC UPLINK DIRECT TRANSFER message is used to transfer all subsequent upper layer messages for the signalling connection from the MS to the GANC.

The GA-RRC DOWNLINK DIRECT TRANSFER message is used to transfer upper layer messages from the GANC to the MS.

The GANC initiates the GA-RRC connection release procedure to command the MS to release the GA-RRC connection and any user plane resources for a particular domain and instruct the GA-RRC sub-layer entity of the MS to leave the GA-RRC-CONNECTED state and return to the GA-RRC-IDLE state for the domain. The GANC normally initiates this procedure when it receives the Iu Release Command from the CN; however, the GANC may also initiate this procedure under certain failure conditions.

The GA-RRC RELEASE message includes the IE "GA-RRC Cause". The GA-RRC Cause value should be one of the following:

#83: normal release; e.g., at the end of a call

#115: unspecified failure

Other values, if received, should be treated as "unspecified failure".

When the GA-RRC sublayer entity in the MS receives the GA-RRC RELEASE message, it shall:

- send a GA-RRC RELEASE COMPLETE message to the GANC,
- release the GA-RRC connection and any user plane resources for the indicated domain,
- stop timer TU5002 for the domain (if running),
- stop timer TU5909 for the domain (if running), and
- enter the GA-RRC-IDLE state for the domain.

Reference(s)

3GPP TS 44.318 subclause 8a.1 / 8a.2 / 8a.5.3 / 8a.5.4

84.2.1.2.2 Test purpose

To verify all of the following for the PS domain.

To verify that MS is able to initiate GA-RRC connection establishment between the MS and GANC and to verify that MS is able to communicate with the CN by encapsulating NAS messages in the GA-RRC INITIAL DIRECT TRANSFER message (first NAS message after GA-RRC connection establishment) and GA-RRC UPLINK DIRECT TRANSFER message and able to receive upper layer messages within GA-RRC DOWNLINK DIRECT TRANSFER message.

To verify that MS is able to release the GA-RRC connection, able to move into GA-RRC-IDLE state and release all GA-RRC and any traffic channel resources, when the MS receives the GA-RRC RELEASE message from SS.

84.2.1.2.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-RRC-IDLE state for PS domain in service of GAN cell

Foreseen Final State of the MS

MS in GA-RRC-IDLE state for PS domain.

Test Procedure

The MS is made to initiate a GA-RRC connection establishment for PS domain. The MS moves into GA-RRC-CONNECTED state when the MS receives the GA-RRC REQUEST ACCEPT message from the SS within timer TU5908 (5 sec.) from sending GA-RRC REQUEST message. SS verifies that MS sends GA-RRC INITIAL DIRECT TRANSFER message within 10s from GA-RRC REQUEST ACCEPT message. The SS answers by sending upper layer message within GA-RRC DOWNLINK DIRECT TRANSFER container message.

The SS sends GA-RRC RELEASE message. The MS enters GA-RRC-IDLE state and transmits a GA-RRC RELEASE COMPLETE to the SS and releases all GA-RRC and any traffic channel resources.

| 1 | MS | | | MS is made to initiate GA-RRC connection |
| 2 | MS | | | MS checks for access permission based on Access Control Class bits |
| 3 | → | | GA-RRC REQUEST | IE 'CN Domain Identity' indicates PS domain |
| 4 | ← | | GA-RRC REQUEST ACCEPT | IE 'CN Domain Identity' indicates PS domain |
| 5 | MS | | | MS in GA-RRC-CONNECTED state for PS domain |
| 6 | → | | GA-RRC INITIAL DIRECT TRANSFER | Within 10s from GA-RRC REQUEST ACCEPT message Containing NAS message IE 'CN Domain Identity' indicates PS domain |
| 7 | ← | | GA-RRC DOWNLINK DIRECT TRANSFER | Containing NAS message IE 'CN Domain Identity' indicates PS domain |
| 8 | ← | | GA-RRC RELEASE | IE 'GA-RRC Cause' indicates #83 IE 'CN Domain Identity' indicates PS domain |
| 9 | → | | GA-RRC RELEASE COMPLETE | MS enters GA-RRC-IDLE state IE 'CN Domain Identity' indicates PS domain |

84.2.2 GA-RRC connection establishment / negative cases

84.2.2.1 GA-RRC REQUEST rejected (CS domain)

84.2.2.1.1 Conformance requirement

3GPP TS 44.318 subclause 8a.1.2.2:

If the GANC rejects the GA-RRC connection establishment request, it shall send the GA-RRC REQUEST REJECT message to the MS including the IE "CN Domain Identity".

3GPP TS 44.318 subclause 8a.1.3.2:

When the MS receives the GA-RRC REQUEST REJECT message, it shall:

- if timer TU5908 is active for the domain indicated by the IE "CN Domain Identity":
- stop timer TU5908 for that domain,
- remain in the GA-RRC-IDLE state for that domain, and
- indicate to upper layers that GA-RRC was not able to enter the connected state for that domain;
 - if timer TU5908 is not active for the domain indicated by the IE "CN Domain Identity":
- ignore the GA-RRC REQUEST REJECT message, and
- continue with the procedure as if the GA-RRC REQUEST REJECT message was not received.

3GPP TS 44.318 subclause 8a.3.2:

If the mobile identity in the GA-RRC PAGING REQUEST message matches any of the valid identities of the MS and the GA-RRC sub-layer entity in the MS is in the GA-RRC-IDLE state for the indicated domain, the MS shall:

- if timer TU5908 is not active for the domain and access to the network is allowed:
- indicate reception of paging to upper layers, and
- forward the IE "CN Domain Identity", the IE "Mobile Identity" and the IE "Paging Cause" (if received) to the upper layers;
- Note: The upper layers will request the establishment of a signalling connection and the transmission of the paging response in the initial NAS message. This results in the implicit establishment of the GA-RRC connection (i.e., the GA-RRC sub-layer entity in the MS enters the GA-RRC CONNECTED state) and the transmission of the paging response from the MS to the GANC in the GA-RRC INITIAL DIRECT TRANSFER message, as shown in Figure 8a.3.1.
- if timer TU5908 is active for the domain:
- ignore the GA-RRC PAGING REQUEST message, and
- continue with the ongoing procedure as if the GA-RRC PAGING REQUEST was not received.

84.4 Paging

84.4.1 Paging for CS domain / successful cases

84.4.1.1 Paging for CS domain

84.4.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 8a.3.1:

The GANC sends the GA-RRC PAGING REQUEST message to the MS when the GANC receives a PAGING message over the Iu interface from a CN domain. The IMSI of the MS to be paged is identified by the IE "Permanent NAS UE Identity" received in the request from the CN. If the request also includes the (P-)TMSI then the GANC shall include the (P-)TMSI in the IE "Mobile Identity"; else the GANC shall include the IMSI in the IE "Mobile Identity". The GANC also includes the IE "CN Domain Identity" and the IE "GA-RRC Paging Cause", if a cause is received from the CN.

3GPP TS 44.318 subclause 8a.3.2:

If the mobile identity in the GA-RRC PAGING REQUEST message matches any of the valid identities of the MS and the GA-RRC sub-layer entity in the MS is in the GA-RRC-IDLE state for the indicated domain, the MS shall:

- if timer TU5908 is not active for the domain and access to the network is allowed:
- indicate reception of paging to upper layers, and
- forward the IE "CN Domain Identity", the IE "Mobile Identity" and the IE "Paging Cause" (if received) to the upper layers;
- Note: The upper layers will request the establishment of a signalling connection and the transmission of the paging response in the initial NAS message. This results in the implicit establishment of the GA-RRC connection (i.e., the GA-RRC sub-layer entity in the MS enters the GA-RRC CONNECTED state) and the transmission of the paging response from the MS to the GANC in the GA-RRC INITIAL DIRECT TRANSFER message, as shown in Figure 8a.3.1.
- if timer TU5908 is active for the domain:
- ignore the GA-RRC PAGING REQUEST message, and
- continue with the ongoing procedure as if the GA-RRC PAGING REQUEST was not received.

3GPP TS 44.318 subclause 8a.3.3:

If the MS receives a GA-RRC PAGING REQUEST and the mobile identity included in the message does not match any of the valid identities assigned to the MS, the MS shall:

- ignore the GA-RRC PAGING REQUEST message, and
- continue with any ongoing procedure as if the GA-RRC PAGING REQUEST message was not received.

- for each CTC specified in the IE "CTC Activation List":
 - store the RAB ID;
 - if the IE "RAB Configuration" indicates that the CTC is for AMR or AMR-WB speech, use the format specified in Annex A.1 and Annex D to code and decode the RTP packets;
 - if the IE "RAB Configuration" indicates that the CTC is for circuit switched data, use the format specified in Annex A.2 to code and decode the RTP packets;
 - use the value indicated by the IE "Sample Size" as the minimum sample size for the coding and decoding of the RTP packets, if the MS is not able to use the indicated value. If the circuit transport channel is for AMR or AMR-WB speech with RTP redundancy, the sample size is defined as the size of the new speech sample in each RTP packet, not including any redundant speech samples;
 - configure the uplink RTP packets to be transmitted to the UDP port and IP address identified by the IE "RTP UDP Port" and the IE "GANC IP address", respectively;
 - use the Payload Type included in the IE "Payload Type" for the PT field in the RTP header for the RTP packets;
 - if received, use the configuration included in the IE "Multi-rate Configuration 2" for the circuit transport channel that is for AMR or AMR-WB speech;
 - if received, use the configuration included in the IE "RTP Redundancy Configuration" for the circuit transport channel that is for AMR or AMR-WB speech. The redundancy policy is defined for each of the AMR modes specified in the IE "Multi-rate Configuration 2". The level of redundancy can span from no redundancy to double redundancy. In the same active codec set, a lower codec mode shall not be associated with a lower redundancy level than a higher codec mode. For example, the highest mode in the set is used with no redundancy, the next lower with single redundancy and rest of the modes with double redundancy.
 - if received, pass the contents of the NAS Synchronisation Indicator to upper layers.

On completing the above procedure, the MS shall:

- start timer TU5911 for the CS domain;

- transmit a GA-RRC ACTIVATE CHANNEL ACK message including the IE "CN Domain Identity" and the IE "CTC Activation Ack List". For each CTC specified in the IE "CTC Activation Ack List":
 - include the IE "RAB ID" for the CTC with the same value as received in the GA-RRC ACTIVATE CHANNEL message in the IE "RAB ID";
 - include the IE "GA-RRC Cause" indicating either success (i.e., value '0') or a failure cause value;
 - for each CTC that is successfully configured (i.e., GA-RRC Cause value is '0'):
 - include the allocated UDP port number in the IE "RTP UDP Port" for the downlink RTP packets to be sent from the GANC to the MS;
 - include the selected RTP sample size, to be used for uplink and downlink RTP packets, in the IE "Sample Size";
 - include the Payload Type in the IE "Payload Type";
 - if the IE "RTCP UDP Port" was received in the GA-RRC ACTIVATE CHANNEL message and the MS is capable of supporting RTCP, activate the uplink RTCP stream and include the IE "RTCP UDP Port" for the downlink RTCP packets to be sent from the GANC to the MS.

3GPP TS 44.318 subclause 8a.4.1.4:

On reception of the GA-RRC ACTIVATE CHANNEL COMPLETE message indicating the CS domain, the MS shall stop timer TU5911 for the CS domain and consider the successfully activated CTC(s) to be available for use by upper layers. To enable uplink quality measurements in the GANC, the MS shall send at least one RTP frame each 480 ms for each active CTC. During periods of discontinuous transmission (DTX), each RTP frame transmitted by the MS shall bear a format in the AMR/AMR-WB payload Table of Contents that either (a) omits all NO_DATA indications and contains only the next AMR speech or SID frame that is available, or (b) includes a single NO_DATA frame should no AMR speech or SID frame become available for 480 ms. The RTP timestamp shall indicate the time of that speech or SID or NO_DATA frame. See Section A.1.2 of Annex A for examples.

3GPP TS 44.318 subclause 8a.5.1:

If the MS needs to release the GA-RRC connection and signalling connection to a particular CN domain, it shall send the GA-RRC RELEASE REQUEST message to the GANC and start timer TU5909 for the domain. The MS shall include the IE "CN Domain Identity" and the IE "GA-RRC Cause". The GA-RRC Cause value shall be one of the following:

- #40: UE generated signalling connection release
- #115: unspecified failure

Reference(s)

3GPP TS 44.318 subclauses 8a.4.1.2 / 8a.4.1.4/ 8a.5.1

84.5.1.1.2 Test purpose

To verify that MS is able to establish a CS domain traffic channel.

The MS initiates the release the GA-RRC connection (CS domain) by sending GA-RRC CLEAR REQUEST to the SS. The MS enters GA-RRC-IDLE state and releases all GA-RRC and any traffic channel resources (CS domain).

84.5.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-RRC-CONNECTED state (CS domain) in service of GAN cell and a voice call is ongoing.

Foreseen Final State of the MS

MS in GA-RRC-IDLE state (CS domain) in service of GAN cell.

Test Procedure

A voice call is ongoing. The SS configures a CS traffic channel by transmitting GA-RRC ACTIVATE CHANNEL (CS domain) to the MS. MS responds by transmitting a GA-RRC ACTIVATE CHANNEL ACK including the IE 'UDP Port'. Then the SS configures itself for transmission of RTP packets to the MS to the indicated UDP port and transmits a GA-RRC ACTIVATE CHANNEL COMPLETE message to the MS. MS and SS sends at least one RTP frame each 480 ms. The SS releases the call by sending GA-RRC DL DIRECT TRANSFER message (Release) and receiving GA-RRC UL DIRECT TRANSFER (Release Complete) message. Therefore, the MS will send GA-RRC RELEASE REQUEST to release the CS domain connection.

Specific test parameters

3GPP TS 44.318 subclause 8a.4.1.2:

The MS shall act on the received GA-RRC ACTIVATE CHANNEL message indicating the CS domain as follows:

- for each CTC specified in the IE "CTC Activation List":
 - store the RAB ID;

- if the IE "RAB Configuration" indicates that the CTC is for AMR or AMR-WB speech, use the format specified in Annex A.1 and Annex D to code and decode the RTP packets;
- if the IE "RAB Configuration" indicates that the CTC is for circuit switched data, use the format specified in Annex A.2 to code and decode the RTP packets;
- use the value indicated by the IE "Sample Size" as the minimum sample size for the coding and decoding of the RTP packets, if the MS is not able to use the indicated value. If the circuit transport channel is for AMR or AMR-WB speech with RTP redundancy, the sample size is defined as the size of the new speech sample in each RTP packet, not including any redundant speech samples;
- configure the uplink RTP packets to be transmitted to the UDP port and IP address identified by the IE "RTP UDP Port" and the IE "GANC IP address", respectively;
- use the Payload Type included in the IE "Payload Type" for the PT field in the RTP header for the RTP packets;
- if received, use the configuration included in the IE "Multi-rate Configuration 2" for the circuit transport channel that is for AMR or AMR-WB speech;
- if received, use the configuration included in the IE "RTP Redundancy Configuration" for the circuit transport channel that is for AMR or AMR-WB speech. The redundancy policy is defined for each of the AMR modes specified in the IE "Multi-rate Configuration 2". The level of redundancy can span from no redundancy to double redundancy. In the same active codec set, a lower codec mode shall not be associated with a lower redundancy level than a higher codec mode. For example, the highest mode in the set is used with no redundancy, the next lower with single redundancy and rest of the modes with double redundancy.
- if received, pass the contents of the NAS Synchronisation Indicator to upper layers.

On completing the above procedure, the MS shall:

- start timer TU5911 for the CS domain;
- transmit a GA-RRC ACTIVATE CHANNEL ACK message including the IE "CN Domain Identity" and the IE "CTC Activation Ack List". For each CTC specified in the IE "CTC Activation Ack List":
 - include the IE "RAB ID" for the CTC with the same value as received in the GA-RRC ACTIVATE CHANNEL message in the IE "RAB ID";
 - include the IE "GA-RRC Cause" indicating either success (i.e., value '0') or a failure cause value;
 - for each CTC that is successfully configured (i.e., GA-RRC Cause value is '0'):
 - include the allocated UDP port number in the IE "RTP UDP Port" for the downlink RTP packets to be sent from the GANC to the MS;
 - include the selected RTP sample size, to be used for uplink and downlink RTP packets, in the IE "Sample Size";
 - include the Payload Type in the IE "Payload Type";
 - if the IE "RTCP UDP Port" was received in the GA-RRC ACTIVATE CHANNEL message and the MS is capable of supporting RTCP, activate the uplink RTCP stream and include the IE "RTCP UDP Port" for the downlink RTCP packets to be sent from the GANC to the MS.

Reference(s)

3GPP TS 44.318 subclauses 8a.4.1.2

84.5.2.1.2 Test purpose

To verify that if MS fails to establish the traffic channel, it transmits a GA-RRC ACTIVATE CHANNEL ACK message including the reason for the failure.

84.5.2.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-RRC-CONNECTED state (CS domain) in service of GAN cell and a voice call is ongoing.

Foreseen Final State of the MS

MS in GA-RRC-IDLE state (CS domain) in service of GAN cell.

Test Procedure

A CS domain voice call is ongoing. The SS configures a traffic channel by transmitting corrupted GA-RRC ACTIVATE CHANNEL to the MS. In the corrupted GA-RRC ACTIVATE CHANNEL message "Sample Size" octet 3 is set to "1" (1ms), which is an undefined value.

MS fails to establish the traffic channel and transmits a GA-RRC ACTIVATE CHANNEL ACK message including the reason for the failure.

Specific test parameters

| 3 | MS | | | MS fails to establish the traffic channel |
| 4 | → | | GA-RRC ACTIVATE CHANNEL ACK | For the (single) CTC specified in the IE 'CTC Activation Ack List': IE 'RAB ID', IE 'GA-RRC Cause' indicates a value other than #0 (e.g., 'Invalid RAB Parameters Value' #19). |
| 5 | ← | | GA-RRC RELEASE | IE 'GA-RRC Cause' = #83 IE 'CN Domain Identity' indicates CS domain |
| 6 | → | | GA-RRC RELEASE COMPLETE | IE 'CN Domain Identity' indicates CS domain MS enters GA-RRC-IDLE state for CS domain |

84.5.3 PS Traffic Channel assignment / successful cases

84.5.3.1 PS Traffic Channel assignment and Release

84.5.3.1.1 Conformance requirement

3GPP TS 44.318 subclause 8a.4.2.2:

The MS shall act on the received GA-RRC ACTIVATE CHANNEL message indicating the PS domain as follows:

- for each PTC specified in the IE "PTC Activation List":

- store the RAB ID;
- allocate local PTC resources based on the values in the IE "RAB Configuration";
- use the TEID value included in the IE "GANC TEID" for the TEID field in the GA-RRC PDU messages to be sent to the GANC;
- use the TEID value included in the IE "MS TEID" to verify the TEID field in the GA-RRC PDU messages to be received from the GANC;
- configure the uplink GA-RRC PDU messages to be transmitted to the UDP port and IP address identified by the IE "GANC UDP Port" and the IE "GANC IP address", respectively.

On completing the above procedure, the MS shall:

- start timer TU5911 for the PS domain;
- transmit a GA-RRC ACTIVATE CHANNEL ACK message including the IE "CN Domain Identity" and the IE "PTC Activation Ack List". For each PTC specified in the IE "PTC Activation Ack List":
 - include the IE "RAB ID" for the PTC with the same value as received in the GA-RRC ACTIVATE CHANNEL message in the IE "RAB ID";
 - include the IE "GA-RRC Cause" indicating either success (i.e., value '0') or a failure cause value;
 - for each PTC that is successfully configured (i.e., GA-RRC Cause value is '0'):
 - include the allocated UDP port number in the IE "MS UDP Port" for the downlink GA-RRC PDU messages to be sent from the GANC to the MS.

3GPP TS 44.318 subclause 8a.4.2.4:

On reception of the GA-RRC ACTIVATE CHANNEL COMPLETE message indicating the PS domain, the MS shall stop timer TU5911 for the PS domain, and start timer TU4001 for each of the successfully activated PTC(s) which are now available for use by upper layers.

3GPP TS 44.318 subclause 8a.5.1:

If the MS needs to release the GA-RRC connection and signalling connection to a particular CN domain, it shall send the GA-RRC RELEASE REQUEST message to the GANC and start timer TU5909 for the domain. The MS shall include the IE "CN Domain Identity" and the IE "GA-RRC Cause". The GA-RRC Cause value shall be one of the following:

- #40: UE generated signalling connection release
- #115: unspecified failure

Reference(s)

84.6 Release of GA-RRC

FFS

84.7 Void

84.8 Void

84.9 Security Mode Control Procedure

84.9.1 Security Mode Control Procedure / successful cases

84.9.1.1 Security Mode Control Procedure (CS domain)

84.9.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 8a.6.1:

The GANC initiates the security mode control procedure by sending a GA-RRC SECURITY MODE COMMAND message to the MS. This message includes the IE "Selected Integrity Protection Algorithm", the IE "Selected Encryption Algorithm" (optional), and the IE "Random Number". The GANC selects the algorithms based on the permitted algorithms received from the CN and the MS security capabilities indicated in the IE "3G Security Capability" received from the MS in the GA-RC REGISTER REQUEST message.

3GPP TS 44.318 subclause 8a.6.2:

Whenever the MS receives a valid GA-RRC SECURITY MODE COMMAND message, it shall, if a (U)SIM is present and considered valid and the key set identifier (KSI) stored on the (U)SIM indicates that an integrity key and cipher key are available for the domain indicated in the IE "CN Domain Identity", store the selected integrity protection algorithm and (if received) the selected encryption algorithm for possible future use after a handover from GAN Iu mode to UTRAN during the same upper layer transaction. If handover from GAN Iu mode to UTRAN occurs, encryption is enabled if the IE "Selected Encryption Algorithm" is present in the message and disabled otherwise.

The MS shall also calculate a MAC (Message Authentication Code). The MAC shall be calculated over the following data:

RAND | IMSI

using "HMAC-SHA1-96" algorithm, as specified in [24] with the integrity key (IK) for the domain indicated in the IE "CN Domain Identity" used as the authentication key.

In the formulas above, the "|" character denotes concatenation. RAND is the 16-octet random number received from the GANC in the GA-RRC SECURITY MODE COMMAND message. IMSI is the MS IMSI, in the same format as defined for the Mobile Identity IE as defined in [8]; i.e. as a variable-length sequence of digits in BCD format (e.g. the IMSI "123456789098765" is encoded as the following octets (in hexadecimal): "21 43 65 87 09 89 67 F5"). Network byte order is used.

The IK key is the IK that has been derived during the last authentication for the domain indicated in the IE "CN Domain Identity". The length of the MAC is 12 octets.

When the appropriate action on the GA-RRC SECURITY MODE COMMAND message has been taken, the MS sends a GA-RRC SECURITY MODE COMPLETE message to the GANC. The MS includes the calculated MAC value in the IE "Ciphering Command MAC".

Reference(s)

3GPP TS 44.318 sub-clause 8a.6.1 and 8a.6.2.

84.9.1.1.2 Test purpose

To verify that the MS can reply to a GA-RRC SECURITY MODE COMMAND message and return the correct Message Authentication Code (MAC).

84.9.1.1.3 Method of test

Initial conditions

System Simulator:

- 1 GAN cell, default parameter

84.10 Channel modify procedure

84.10.1 CS channel modify procedure / successful cases

84.10.1.1 CS channel modify / successful case

84.10.1.1.1 Conformance requirement

3GPP TS 44.318 subclause 8a.7.1.1:

The GANC initiates the circuit transport channel (CTC) modification procedure when it determines that one or more active CTCs require modification; e.g., based on information received from the MSC in the RAB Assignment Request message or based on local GANC logic.

The following CTC parameters may be modified:

- RAB Configuration
- Sample Size
- GANC RTP UDP Port
- GANC IP Address
- Multi-rate Configuration 2
- RTP Redundancy Configuration
- GANC RTCP UDP Port
- NAS Synchronisation Indicator

The GANC only includes the IEs which specify modifications to the existing CTC parameters.

One or more CTCs may be modified using a single instance of the channel modification procedure; however, it is not possible to modify both circuit and packet transport channels using a single instance of the channel modification procedure.

The GANC begins the modification of the CTC(s) by transmitting the GA-RRC MODIFY CHANNEL message to the MS. The message contains the IE "CN Domain Identity" (indicating CS domain) and IE "CTC Modification List" which includes the parameters necessary to describe the modifications to each circuit transport channel.

3GPP TS 44.318 subclause 8a.7.1.2:

On receipt of the GA-RRC MODIFY CHANNEL message indicating the CS domain, the MS shall process the specified CTC modifications.

On completion of the modification of the CTC(s), the MS shall:

- transmit a GA-RRC MODIFY CHANNEL ACK message including the IE "CN Domain Identity" and the IE "CTC Modification Ack List". For each CTC specified in the IE "CTC Modification Ack List":
 - include the IE "RAB ID" for the CTC with the same value as received in the GA-RRC MODIFY CHANNEL message in the IE "RAB ID";
 - include the IE "GA-RRC Cause" indicating either success (i.e., value '0') or a failure cause value;
 - for each CTC that is successfully modified (i.e., GA-RRC Cause value is '0'):
 - include the modified parameter values currently used by the MS.

When the MS has sent the GA-RRC MODIFY CHANNEL ACK message, it shall start transmitting RTP packets based on the successful parameter modifications. The MS shall be able to receive RTP packets with the old parameters until the MS determines that the first RTP packet using the new parameters has been received.

Reference(s)

3GPP TS 44.318 subclauses 8a.7.1.1, 8a.7.1.2

84.10.1.1.2 Test purpose

To verify that MS is able to change active CTC parameters if requested.

84.10.1.1.3 Method of test

Initial Conditions

System Simulator:

- 1 GAN cell, default parameters

Mobile Station:

- MS in GA-RRC-CONNECTED state (CS domain) in service of GAN cell, voice call activated

Foreseen Final State of the MS

MS in GA-RRC-IDLE state (CS domain)

Test Procedure

The MS is in GA-RRC-CONNECTED state (CS domain) in service of GAN cell, voice call activated. SS sends GA-RRC MODIFY CHANNEL message to change the active sample size for the CTC. The MS sets the sample size for the active CTC and then replies by a GA-RRC MODIFY CHANNEL ACK message indicating the modified parameter.

84.10.3 PS channel modify procedure / successful cases

84.10.3.1 PS channel modify / successful case

84.10.3.1.1 Conformance requirement

3GPP TS 44.318 subclause 8a.7.2.1:

The GANC initiates the packet transport channel (PTC) modification procedure when it determines that one or more active PTCs require modification; e.g., based on information received from the SGSN in the RAB Assignment Request message or based on local GANC logic.

The following PTC parameters may be modified:

- RAB Configuration
- GANC UDP Port
- GANC IP Address

The GANC only includes the IEs which specify modifications to the existing PTC parameters.

One or more PTCs may be modified using a single instance of the channel modification procedure; however, it is not possible to modify both circuit and packet transport channels using a single instance of the channel modification procedure.

The GANC begins the modification of the PTC(s) by transmitting the GA-RRC MODIFY CHANNEL message to the MS. The message contains the IE "CN Domain Identity" (indicating PS domain) and IE "PTC Modification List" which includes the parameters necessary to describe the modifications to each packet transport channel.

3GPP TS 44.318 subclause 8a.7.2.2:

On receipt of the GA-RRC MODIFY CHANNEL message indicating the PS domain, the MS shall process the specified PTC modifications.

On completion of the modification of the PTC(s), the MS shall:

- transmit a GA-RRC MODIFY CHANNEL ACK message including the IE "CN Domain Identity" and the IE "PTC Modification Ack List". For each PTC specified in the IE "PTC Modification Ack List":
 - include the IE "RAB ID" for the PTC with the same value as received in the GA-RRC MODIFY CHANNEL message in the IE "RAB ID";
 - include the IE "GA-RRC Cause" indicating either success (i.e., value '0') or a failure cause value;
 - for each PTC that is successfully modified (i.e., GA-RRC Cause value is '0'):
 - include the modified parameter values currently used by the MS.

When the MS has sent the GA-RRC MODIFY CHANNEL ACK message, it shall start transmitting GA-RRC PDU messages based on the successful parameter modifications. The MS shall be able to receive GA-RRC PDU messages with the old parameters until the MS determines that the first GA-RRC PDU message using the new parameters has been received.

84.11.3 PS deactivate channel procedure / successful cases

84.11.3.1 PS deactivate channel request from GANC

84.11.1.3.1 Conformance requirement

3GPP TS 44.318 subclause 8a.8.3:

The GANC normally initiates this procedure when it receives the RAB Assignment message from the CN indicating RAB release; however, the GANC may also initiate this procedure under certain failure conditions.

One or more circuit or packet transport channels may be deactivated using a single instance of the channel deactivation procedure; however, it is not possible to deactivate both circuit and packet transport channels using a single instance of the channel deactivation procedure.

The GA-RRC DEACTIVATE CHANNEL message includes the IE "GA-RRC Cause" with value as follows:

#0: normal event, e.g. deactivate due to RAB release request from CN

#115: unspecified failure

#10: relocation cancelled (e.g., the handover procedure is stopped because the call has been cleared)

3GPP TS 44.318 subclause 8a.8.4:

When the MS receives the GA-RRC DEACTIVATE CHANNEL message, it shall:

- deactivate the CTC(s) or PTC(s) identified in the IE "RAB ID List";
- send a GA-RRC DEACTIVATE CHANNEL COMPLETE message to the GANC.

3GPP TS 44.318 subclause 8a.8.5:

If timer TU5002 expires in the MS, the MS shall release the associated transport channel(s).

Reference(s)

84.11.3.2 PS deactivate channel request from MS

84.11.3.2.1 Conformance requirement

3GPP TS 44.318 subclause 8a.8.1:

If the MS needs to deactivate one or more transport channels for a particular domain, it shall send the GA-RRC DEACTIVATE CHANNEL REQUEST message to the GANC and start timer TU5002 for the domain. The MS shall include the IE "CN Domain Identity" and the IE "GA-RRC Cause". The GA-RRC Cause value shall be one of the following:

#0: normal release (e.g., due to inactivity timer timeout)

#115: unspecified failure

3GPP TS 44.318 subclause 8a.8.2:

When the GANC receives the GA-RRC DEACTIVATE CHANNEL REQUEST message, it shall request the selected CN domain to release the identified RABs associated with the MS. The GANC selects the CN domain based on the value of the received IE "CN Domain Identity". Note that the GANC may also request the selected CN domain to release the Iu connection for the MS in this case, based on local policy settings.

3GPP TS 44.318 subclause 8a.8.3:

The GANC normally initiates this procedure when it receives the RAB Assignment message from the CN indicating RAB release; however, the GANC may also initiate this procedure under certain failure conditions.

One or more circuit or packet transport channels may be deactivated using a single instance of the channel deactivation procedure; however, it is not possible to deactivate both circuit and packet transport channels using a single instance of the channel deactivation procedure.

The GA-RRC DEACTIVATE CHANNEL message includes the IE "GA-RRC Cause" with value as follows:

#0: normal event, e.g. deactivate due to RAB release request from CN

#115: unspecified failure

#10: relocation cancelled (e.g., the handover procedure is stopped because the call has been cleared)

3GPP TS 44.318 subclause 8a.8.4:

When the MS receives the GA-RRC DEACTIVATE CHANNEL message, it shall:

- deactivate the CTC(s) or PTC(s) identified in the IE "RAB ID List";
- send a GA-RRC DEACTIVATE CHANNEL COMPLETE message to the GANC.

3GPP TS 44.318 subclause 8a.8.5:

If timer TU5002 expires in the MS, the MS shall release the associated transport channel(s).

90 Text Telephony (TTY) Services

This subclause contains test cases for Text Telephony (TTY) services.

90.1 Transmission of CTM Bearer Code

90.1.1 Mobile Originated TTY Call

90.1.1.1 Conformance requirement

- 1) When establishing a mobile originated call with TTY mode enabled in the MS, bit 6 of Octet 3a in the Bearer Capability Information Element shall be '1'.
- 2) When establishing a mobile originated call with TTY mode disabled in the TTY-compatible MS, bit 6 of Octet 3a in the Bearer Capability Information Element shall be '0'.

Reference(s):

For conformance requirement 1 and 2:

3GPP TS 04.08 / TS 24.008, subclause 10.5.4.5

90.1.1.2 Test purpose

- 1) To verify that a TTY compatible MS, with TTY mode enabled, correctly sets bit 6 of Octet 3a in the Bearer Capability Information Element to 1 when made to originate a call.
- 2) To verify that a TTY compatible MS, with TTY mode disabled, correctly sets bit 6 of Octet 3a in the Bearer Capability Information Element to 0 when made to originate a call.

90.1.1.3 Method of test

90.1.1.3.1 void

90.1.1.3.2 Initial conditions

System Simulator:

- 1 cell, default parameters.

Mobile Station:

- The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

90.1.1.3.3 Final foreseen state of the MS

U0, null.

90.1.1.3.4 Test Procedure

- a) The MS is set to TTY mode using the normal MMI. A mobile originated call is established following the generic call set-up procedure for mobile originating speech calls.
- b) After receipt of the SETUP message from the MS, the SS shall disconnect the call.
- c) TTY mode is disabled in the MS using the normal MMI. A mobile originated call is established following the generic call set-up procedure for mobile originating speech calls.
- d) After receipt of the SETUP message from the MS, the SS shall disconnect the call.

90.1.1.4 Test requirement

- 1) In step a), the MS shall send a SETUP message where bit 6 of Octet 3a of the Bearer Capability Information Element is set to 1.
- 2) In step c), the MS shall send a SETUP message where bit 6 of Octet 3a of the Bearer Capability Information Element is set to 0.

90.1.2 Mobile Terminated TTY Call

90.1.2.1 Conformance requirement

- 1) When establishing a mobile terminated call with TTY mode enabled in the MS, bit 6 of Octet 3a in the Bearer Capability Information Element shall be '1'.
- 2) When establishing a mobile terminated call with TTY mode disabled in the TTY-compatible MS, bit 6 of Octet 3a in the Bearer Capability Information Element shall be '0'.

Reference(s):

For conformance requirement 1 and 2:

3GPP TS 04.08 / TS 24.008, subclause 10.5.4.5

90.1.2.2 Test purpose

- 3) verify that a TTY compatible MS, with TTY mode enabled, correctly sets bit 6 of Octet 3a in the Bearer Capability Information Element to 1 when receiving a mobile terminated call.
- 4) To verify that a TTY compatible MS, with TTY mode disabled, correctly sets bit 6 of Octet 3a in the Bearer Capability Information Element to 0 when receiving a mobile terminated call.

90.1.2.3 Method of test

90.1.2.3.1 void

90.1.2.3.2 Initial conditions

System Simulator:

- 1 cell, default parameters.

Mobile Station:

- The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

90.1.2.3.3 Final foreseen state of the MS

U0, null.

90.1.2.3.4 Test Procedure

- a) The MS is set to TTY mode using the normal MMI. A mobile terminated call is established following the generic call set-up procedure for mobile terminating speech calls.
- b) After receipt of the CALL CONFIRMED message from the MS, the SS shall disconnect the call.
- c) TTY mode is disabled in the MS using the normal MMI. A mobile terminated call is established following the generic call set-up procedure for mobile terminating speech calls.
- d) After receipt of the CALL CONFIRMED message from the MS, the SS shall disconnect the call.

90.1.2.4 Test requirement

- 1) In step a), the MS shall send a CALL CONFIRMED message where bit 6 of Octet 3a of the Bearer Capability Information Element is set to 1.
- 2) In step c), the MS shall send a CALL CONFIRMED message where bit 6 of Octet 3a of the Bearer Capability Information Element is set to 0.

Annex 1 (normative): Reference test methods

A1.1 General Conditions (GC)

A1.1.1 Outdoor test site and general arrangements for measurements involving the use of radiated fields (GC4)

The outdoor test site shall be on a reasonably level surface or ground. At one point on the site a ground plane of at least 5 m diameter shall be provided. In the middle of this ground plane a non-conducting support capable of rotation through 360 degrees in the horizontal plane shall be used to support the test sample at 1,5 m above the ground plane.

The test site shall be large enough to allow the erection of a measuring or transmitting antenna at a distance of half a wavelength or at least 3 m whichever is the greater. Sufficient precautions shall be taken to ensure that reflections from extraneous objects adjacent to the site and ground reflections do not degrade the measurement results.

The test antenna is used to detect the radiation from both the test sample and the substitution antenna, when the site is used for radiation measurements. Where necessary the substitution antenna is used as a transmitting antenna, when the site is used for the measurement of receiver characteristics. This antenna is mounted on a support such as to allow the antenna to be used in either the horizontal or vertical polarization and for the height of its centre above ground to be varied over the range 1 m to 4 m. Preferably test antennas with pronounced directivity should be used. The size of the test antenna along the measurement axis shall not exceed 20 % of the measuring distance.

For radiation measurements the test antenna is connected to a test receiver capable of being tuned to any frequency under investigation and of measuring accurately the relative levels of signals at its input. When necessary (for receiver measurements) the test receiver is replaced by a signal source.

The substitution antenna shall be a half wave dipole, resonant at the frequency under consideration, or a shortened dipole, or (in the range 1 GHz to 4 GHz) a horn radiator. Antennas other than a half wave dipole shall have been calibrated to the half wave dipole. The centre of this antenna shall coincide with the reference point of the test sample it has replaced. This reference point shall be the volume centre of the sample when its antenna is mounted inside the cabinet, or the point where an external antenna is connected to the cabinet. The distance between the lower extremity of the dipole and the ground shall be at least 30 cm.

The substitution antenna shall be connected to a calibrated signal generator when the site is used for radiation measurements and to a calibrated measuring receiver when the site is used for measurements of receiver characteristics. The signal generator and the receiver shall be operating at the frequencies under investigation and shall be connected to the antenna through suitable matching and balancing network.

A1.1.2 Anechoic shielded chamber (GC5)

As an alternative to the above mentioned outdoor test site an indoor test site, being a well shielded anechoic chamber simulating free space environment may be used. If such a chamber is used, this shall be recorded in the test report.

NOTE: The anechoic shielded chamber is the preferred test site for testing to the present document.

The measurement site may be an electrically shielded anechoic chamber being 10 m long, 5 m broad and 5 m high. Walls and ceiling should be coated with RF absorbers of 1 m height. The ground should be covered with absorbing material 1 m thick able to carry test equipment and operators. A measuring distance of 3 m to 5 m in the long middle axis of the chamber can be used for measurements up to at least 10 GHz.

The test antenna, test receiver, substitution antenna and calibrated signal generator are used in a way similar to that of the outdoor test site method with the exception that, because the floor absorbers reject floor reflections, the antenna height need not be changed and shall be at the same height as the test sample. In the range between 30 MHz and 100 MHz some additional calibration may be necessary.

A1.1.3 Temporary antenna connector (GC7)

If the MS to be tested does not normally have a permanent external 50 Ω connector then for test purposes only it may be modified to fit a temporary 50 Ω antenna connector.

The permanent integral antenna shall be used for measurement of:

- Transmitter effective radiated power (subclause 13.3).
- Radiated spurious emissions (clause 12).

For tests in the relevant MS Receive band:

- The temporary antenna coupling factor is determined using the procedure defined in annex 1, subclause 1.1.5. When using the temporary antenna connector, the temporary antenna coupling factor needs to be taken into consideration when determining a stimulus or measured level in the receive band.

For tests in the relevant MS Transmit band:

- The temporary antenna coupling factor is determined using the procedure defined in subclause 13.3.4.2. When using the temporary antenna connector, the temporary antenna coupling factor needs to be taken into consideration when determining a stimulus or measured level in the transmit band.

For frequencies outside the above mentioned relevant bands the temporary antenna coupling factor is assumed to be 0 dB.

NOTE 1: The uncertainty in the determined value of the temporary antenna coupling factor is directly related to the uncertainty of the field strength value measured in subclause 13.3.4.2 step n) and annex 1, subclause 1.1.5.2 (approximately ± 3 dB). By mutual agreement, between the MS manufacturer and the testing authority, a value of 0 dB for the temporary antenna coupling factor could be used.

NOTE 2: The accommodation of the uncertainty in the temporary antenna coupling factor in the relevant MS receive band for the tests in clause 14 is for further study.

NOTE 3: The uncertainty in the temporary antenna coupling factor in the relevant MS transmit band can be accommodated with appropriate adjustment of the measured levels by the uncertainty.

Testing must be performed in the following order to ensure that all the free field measurements are performed before the MS is modified.

- Subclause 12.1.2.
- Annex 1, subclauses 1.1.5.1 and 1.1.5.2.
- Subclause 13.3.4.2 (during this step the MS is modified).
- Annex 1, subclause 1.1.5.3.
- All remaining tests of clauses 12, 13, 14, 15, 16, 17, 18, 19, 20, 21 and 22.

A1.1.4 Temporary antenna connector characteristics

The method of connection of the temporary connector shall allow secure and repeatable connections to be made to the device under test.

The antenna connector shall present a nominal 50 Ω impedance over the GSM receive and transmit frequency ranges. The maximum loss within the frequency range 100 kHz to 12,75 GHz shall be less than 1 dB.

The connection circuitry shall be maximally broadband and shall contain no non-linear or active devices.

The characteristics of the connector shall not be significantly affected by temperatures in the range -25° to $+60^{\circ}$ Celsius.

A1.1.5 Calibration of the temporary antenna connector

For equipments fitted with an integral antenna and not provided with a permanent means for connection to an external antenna a calibration procedure is required to allow subsequent measurements to be performed on the temporary antenna connector.

Once calibrated this temporary antenna connector enables all receiver test procedures to be identical for equipments with an integral antenna and for equipments with an antenna connector.

The calibration procedure shall be carried out at three frequencies, namely an ARFCN in the low mid and high ARFCN ranges. The procedure consists of three distinct stages as follows:

- 1) Establish the MS antenna radiation pattern for the three selected frequencies.
- 2) Calibrate the test range (or anechoic shielded chamber) for the conditions needed in 1).
- 3) Determine the temporary antenna connector coupling factor.

A1.1.5.1 Antenna radiation pattern

- a) The MS shall be in the anechoic shielded chamber, or on an outdoor test site, on an isolated support in a vertical position at an orientation specified by the manufacturer. This position is the 0° position.

A test antenna, connected to the SS shall be in the anechoic shielded chamber, or on the outdoor test site, at a distance of at least 3 m from the MS.

- b) A call shall be originated by the SS to the MS on a frequency in the low ARFCN range. The MS shall be made to answer the call. The SS shall command the MS to maximum transmit power.
- c) The SS shall, using estimated parameters for the outdoor test site or anechoic shielded chamber, set its output level "E" [see figure A1-1 to give an MS receiver input level of approximately 32 dB μ V_{emf}. This corresponds to a field strength of 55,5 dB μ V/m at the MS position. The signal shall be the Standard Test Signal C1.

NOTE 1: The absolute value of the received signal level is not critical. The value suggested however will ensure that the MS receiver is operating essentially error free, yet is low enough to avoid any non linear effects in the receiver.

- d) The SS shall use the RXLEV message from the MS to determine a measure of the received field strength. The procedure detailed in the flow chart of figure A1-1 shall now be followed.

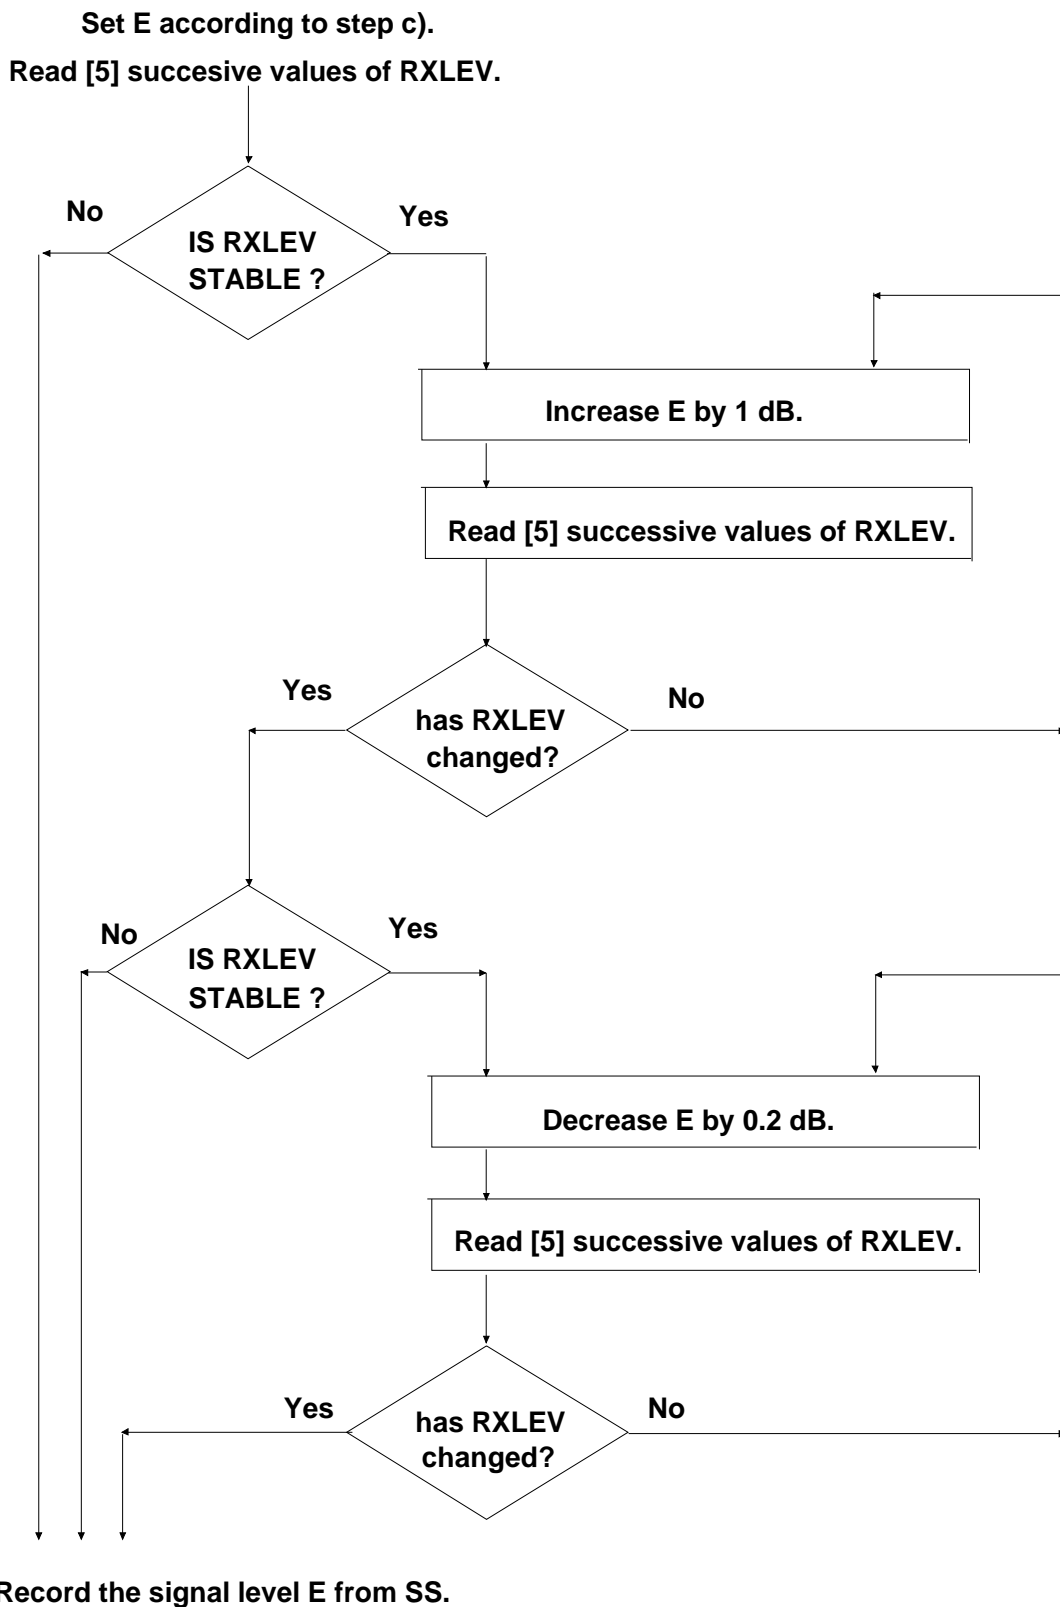

Figure A1-1

The signal level from the SS that just results in the transition from $RXLEV_a$ to $RXLEV_b$ shall be recorded as E_i .

NOTE 2: The actual values of $RXLEV_a$ and $RXLEV_b$ will need to be recorded, because this transition will be used as the reference point for all further stages of the calibration procedure.

e) Step d) shall be repeated after the MS has been rotated by $n \times 45^\circ$ in the horizontal plane. Ensuring that the same RXLEV transition is used, the signal levels from the SS shall be recorded as E_{in} .

- f) Calculate the effective mean signal level from the RMS value of the eight signal levels obtained in d) and e) above by using the following formula:

$$E_1 = \left[\frac{8}{\sum_{n=0}^{n=7} \frac{1}{E_{in}}} \right]^{\frac{1}{2}}$$

- g) Repeat steps b) to f), except in step b) use an ARFCN in the mid ARFCN range to obtain a mean signal level E_2 . Ensure the same RXLEV transition is used.
- h) Repeat steps b) to f), except in step b) use an ARFCN in the high ARFCN range to obtain a mean signal level E_3 .

Ensure the same RXLEV transition is used.

A1.1.5.2 Test range calibration

The objective of this step is to determine the actual field strength at the MS corresponding to the three signal levels E_1 , E_2 and E_3 established in annex 1, subclause 1.1.5.1. The following procedure shall be used:

- a) Replace the MS by a calibrated reception antenna connected to a measuring receiver.
- b) For each frequency used in annex 1, subclause 1.1.5.1 measure the field strength E_{fr} corresponding to the respective signal levels E_r determined in steps f), g) and h) of annex 1, subclause 1.1.5.1 record these values as E_{f1} , E_{f2} , E_{f3} .

A1.1.5.3 Temporary antenna connector coupling factor

The coupling factor of the temporary antenna connector is the relationship expressed in dB, between the output signal of the SS and the effective receiver input signal for the MS.

The test sample MS is modified to fit a temporary antenna connector in accordance with annex 1, subclause 1.1.3. Or alternatively a second MS shall be provided, fitted with such a temporary antenna connector.

NOTE: If only one MS is supplied for testing, the tests of radiated spurious emissions (transmit and receive) and receiver sensitivity shall be performed before the MS is modified to accept a temporary antenna connector.

The calibration procedure shall be as follows:

- a) The MS temporary connector is connected to the output of the SS.
- b) A call shall be originated by the SS to the MS using a frequency in the low ARFCN range. The MS shall be made to answer the call. The SS shall command the MS to maximum transmit power, non hopping encrypted mode.
- c) The SS shall, using the procedures of annex 1, subclause 1.1.5.1, adjust its output signal level to determine the RXLEV_a to RXLEV_b transition. This signal level shall be recorded as E_{c1} .
- d) Repeat steps b) and c) for frequencies in the mid ARFCN range and the high ARFCN range. Record the RXLEV transitions as E_{c2} and E_{c3} respectively.
- e) The temporary antenna connector coupling factor F is then calculated from:

$$F_n = 20 \log_{10} \left[\frac{E_{cn}}{E_{fn} * K_n} \right]$$

where K_n = conversion factor of an isotropic antenna expressed as μV at the frequency $\mu V/m$ corresponding to the ARFCN used.

- f) The mean antenna coupling factor F_m to be used for measurements requiring hopping shall be calculated from the RMS value of all parameters in e) as follows:

$$E_{cm} = \left[\frac{3}{1/E_{c1} + 1/E_{c2} + 1/E_{c3}} \right]^{1/2}$$

$$E_{fm} = \left[\frac{3}{1/E_{f1} + 1/E_{f2} + 1/E_{f3}} \right]^{1/2}$$

$$k_m = \left[\frac{k_1 + k_2 + k_3}{3} \right]^{1/2}$$

$$F_m = 20 \log_{10} \left[\frac{E_{cm}}{E_{fm} + k_m} \right]$$

g) In all tests in which a MS with integral antenna is the unit under test, the signal level at the temporary antenna connector is determined from:

$$- E_{in} = E_{req} + F;$$

where:

- E_{in} = signal level at coupling device (dB μ Vemf);
- E_{req} = signal level required by the test (dB μ Vemf);
- F = coupling factor at the respective ARFCN (dB).

This is indicated in the test procedures as E_{req} , dB μ Vemf(), where the empty parenthesis is to be read as E_{in} .

For frequencies not in the receive band or the transmit band, 0dBi antenna gain shall be assumed.]

A1.1.6 Connection of devices with multiple antennae

Devices with multiple antennae must be connected in well defined manner in order for test requirements to be considered valid. This applies equally to those tests which are specifically testing these requirements associated with a device with multiple antennae, as those which are not.

A1.1.6.1 DARP phase 2 MS

For those tests which are specifically designed for DARP phase 2 MS, the SS must present signals to, and connect to the MS in a manner specified in TS 45.005 Annex N.2. Additionally, the SS must be able to accommodate the MS transmission being on either one or both of these antennae, or indeed an alternative antenna.

A1.1.6.2 VAMOS III MS

For those tests which are specifically designed for VAMOS III MS, the SS must present signals to, and connect to the MS in a manner specified in TS 45.005 Annex Q.7. Additionally, the SS must be able to accommodate the MS transmission being on either one or both of these antennae, or indeed an alternative antenna.

A1.2 Normal and extreme Test Conditions (TC)

A1.2.1 Power sources and ambient temperatures (TC2)

During type approval tests the power source of the equipment shall be replaced by a test power source, capable of producing normal and extreme test voltages as specified in subclauses 1.2.2 and 1.2.3. The internal impedance of the test power source shall be low enough for its effect on the test results to be negligible. For the purpose of tests, the voltage of the power source shall be measured at the input terminals of the equipment. If the equipment is provided with a permanently connected power cable, the test voltage shall be that measured at the point of connection of the power cable to the equipment. In equipment with incorporated batteries the test power source shall be applied as close to the battery terminals as practicable.

During tests the power source voltages shall be maintained within a tolerance of $\pm 3\%$ relative to the voltage at the beginning of each test.

A1.2.2 Normal test conditions (TC2.1)

The normal temperature and humidity conditions for tests shall be any convenient combination of temperature and humidity within the following ranges:

- Temperature: $+15^{\circ}\text{C}$ to $+35^{\circ}\text{C}$ (degrees Celsius).
- Relative humidity: up to 75 %.

NOTE: When it is impracticable to carry out the tests under the conditions stated above, the actual temperature and relative humidity during the tests shall be recorded in the test report.

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of these specifications, the nominal voltage shall be the declared voltage or any of the declared voltages for which the equipment was designed. The frequency of the test power source corresponding to the mains shall be within 1 Hz of the nominal mains frequency.

When the radio equipment is intended for operation from the usual types of regulated lead-acid battery power source of vehicles, the normal test voltage shall be 1,1 times the nominal voltage of the battery (6 volts, 12 volts etc.).

For operation from other power sources or types of battery (primary or secondary) the normal test voltage shall be that declared by the equipment manufacturer.

A1.2.3 Extreme test conditions (TC2.2)

For tests under extreme test conditions the 4 combinations of extreme voltages and extreme temperatures in table A1.1 shall be applied.

Table A1.1

| | 1 | 2 | 3 | 4 |
|-------------|------|------|------|-----|
| Temperature | High | High | Low | Low |
| Voltage | High | Low | High | Low |

For tests at extreme ambient temperatures measurements shall be made at the temperatures given in table A1.2 (see 3GPP TS 45.005, D.2.1 for further details), following the testing procedures given in IEC publications 68-2-1 and 68-2-2 for the low and high temperature tests.

For tests at the high temperature, after thermal balance has been achieved, the MS is switched on in the transmit condition (non DTX) for a period of one minute followed by 4 minutes in the idle mode (non DRX) after which the MS shall meet the specified requirements.

For tests at the low temperature, after thermal balance has been achieved, the MS is switched to the idle mode (non DRX) for a period of one minute after which the MS shall meet the specified requirements.

Table A1.2

| | Temperature (degrees Celsius) | |
|--|-------------------------------|------|
| | Low | High |
| For small MS units | -10 | +55 |
| For other units | -20 | +55 |
| Note 1: Mobile phones, Tabs, Data cards, Embedded modules etc. are considered belonging to the small MS category | | |

For tests at extreme voltages measurements shall be made at the lower and higher extreme voltages as declared by the MS manufacturer. For MS that can be operated from one or more of the power sources listed below, the lower extreme voltage shall not be higher, and the higher extreme voltage shall not be lower than that specified in table A1.3.

Table A1.3

| | Voltage (relative to nominal) | | |
|-----------------------------|-------------------------------|----------------|--------------|
| | Lower extreme | Higher extreme | Normal cond. |
| Power source: | | | |
| AC mains | 0,9 | 1,1 | 1,0 |
| Regulated lead acid battery | 0,9 | 1,3 | 1,1 |
| Non regulated batteries: | | | |
| Leclanché | 0,85 | 1,0 | 1,0 |
| lithium | 0,95 | 1,10 | 1,10 |
| mercury/ nickel cadmium | 0,9 | 1,0 | 1,0 |

A1.2.4 Vibration requirements (TC4)

When the MS is to be tested under vibration, then random vibration is used, where the acceleration spectral densities (ASD) and the frequency ranges of 3GPP TS 05.05 [subclause D.2.3] apply. These are given in table A1.4.

Table A1.4

| frequency in Hz | ASD in m^2/s^3 |
|-----------------|--|
| 5- 20 | 0,96 |
| 20 - 500 | 0,96 at 20 Hz, thereafter -3 dB / octave |

The test shall be performed as described in IEC publication 68-2-36.

Annex 2:
Void

Annex 3: Protocol implementation information

General

The list of PICS and PIXIT gives all the information needed to perform the tests described in 3GPP TS 11.10.

A3.1 Protocol Implementation Conformance Statement (PICS)

For the points listed the manufacturer has the choice between different solutions in implementation. The manufacturer has to describe his choice if there is any consequence for the tests.

A3.1.1 LAPDm protocol (3GPP TS 04.05 and 04.06)

A3.1.1.1 Simplified protocol - 3GPP TS 04.06 clause 6

Statement about the choice made by the manufacturer.

A3.1.1.2 Management of SAPI = 3 - 3GPP TS 04.11 subclause 2.3

Statement about the handling of SAPI = 3 on the data link layer chosen by the manufacturer.

A3.1.2 Mobility management

A3.1.2.1 IMSI detach initiation by the MS - 3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.4.1

During a location updating, if an IMSI detach has to be performed (SIM or power off), the IMSI detach can be delayed until the location updating is finished, or can be omitted.

A3.1.2.2 IMSI detach completion by the MS - 3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.4.3

The MS should delay the local release of the channel to allow a normal release from the network after a detach by power off command, if possible.

If not possible the RR sub-layer on the MS side should be aborted without waiting for something from the network.

A3.1.2.3 MM specific procedures - 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.4 and 4.5.1.1

During the lifetime of an MM specific procedure, if an MM connection establishment is required by a CM-entity, this request will either be rejected or delayed until the running MM specific procedure is terminated and, provided that the network has not sent a "follow-on proceed" indication, the RR connection is released.

If the LOCATION UPDATING REQUEST message has not been sent, the mobile station may include a "follow-on request" indicator in the message. The mobile station shall then delay the request until the MM specific procedure is completed, when it may be given the opportunity by the network to use the RR connection.

A3.1.2.4 Receiving an MM STATUS message - 3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.6

If the MM-entity of the Mobile Station receives a MM-STATUS message no state transition and no specific action shall be taken as seen from the radio interface, i.e. local actions are possible.

A3.1.3 Call control

A3.1.3.1 Status enquiry procedures - 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.5.3.1

The MS may send a STATUS ENQUIRY and take the appropriate actions based on the answer (STATUS) of the network.

A3.1.3.2 Receiving a STATUS message by a CC entity - 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.5.3.2

The determination of which CC states are incompatible between the MS and the network is left as an implementation decision except in some particular cases.

A3.1.3.3 Called side compatibility checking - 3GPP TS 04.08 / 3GPP TS 24.008 clause B.3

Compatibility checking can be performed in various ways from the viewpoint of execution order and information to be checked, e.g. first DDI number, sub-address and then compatibility or vice versa.

A3.1.3.4 Disconnect on incoming call

The mobile equipment may or may not offer the possibility to disconnect an incoming call:

- a) after having confirmed an incoming call, but before alerting;
- b) after alerting, but before connecting.

3GPP TS 02.30 (subclause 5.2.3) allows the combination of SEND and END function in one key.

A3.1.4 Layer 1

A3.1.4.1 Optional storage of BCCH carrier information - 3GPP TS 05.08 subclause 6.3

The MS may include optional storage of BCCH carrier information. For instance, the MS may store the BCCH carriers in use by the PLMN accessed when it was last active in the GSM network, or it may store BCCH carriers for more than one PLMN.

A3.1.5 Autocalling - (ref.: 3GPP TS 02.07, annex 1)

Cause number 27 implemented in:

- category 2 (preferred);
- category 3.

A3.1.6 Transient states

The following call control states may be transient in the mobile station:

State U6

State U6 may be transient if the mobile station is not configured to support explicit refusal of an incoming call by the (human or non-human) user (e.g. via a terminal interface) before call confirmation.

If U6 is transient, there is an internal transition:

```

                CALL CONFIRMED
U6 -----> U9
  
```

or an internal transition:

RELEASE COMPLETE

U6 ----- > U0.

State U7:

State U7 is transient if the implementation allows for automatic connect after an implementation specific time T.

If U7 is transient, there is an internal transition:

after T, CONNECT

U7 ----- > U8.

State U9:

State U9 is not transient if:

- the implementation does not support immediate connect;
- an appropriate TCH is not yet assigned;
- the signalling element has not been present in the SETUP.

If the implementation supports immediate connect, there is an internal transition:

CONNECT

U9 ----- > U8.

If the appropriate TCH is available or the signalling element was present in SETUP, there is an internal transition:

ALERTING

U9 ----- > U7.

State U12:

U12 is a stable state, if an appropriate speech traffic channel is connected and progress indicator #8 was present in the DISCONNECT message. Otherwise U12 is transient, and there is an internal transition:

A3.2 Protocol Implementation Extra Information for Testing (PIXIT)

A3.2.0 Introduction

Some of the features listed below are mandatory, others are not ; but in any case for each feature implemented the manufacturer must provide information to enable regulatory testing to be conducted.

A3.2.1 Basic characteristics

A3.2.1.1 Type of antenna

- Integrated without a connector.
- Position for normal use (if integrated without a connector).
- With a connector allowing the connection of an external antenna.
- If with a connector, declare in band impedance.

A3.2.1.2 Power supply

- Type of battery (if any).
- Type of power supply.
- Nominal voltage(s).
- End-point voltage(s) of battery(s) (if any).
- Details of MS shut-down voltage.

A3.2.1.3 Power class of the MS

- Different class declared.
- Class mark change: description of the means to change the RF power capabilities.

A3.2.1.4 Channel modes supported

- Speech full rate.
- Speech half rate.
- Data 14.5 kbit/s T/NT.
- Data 12 kbit/s full rate T/NT.
- Data 6 kbit/s full rate T/NT.
- Data 6 kbit/s half rate T/NT.
- Data 3,6 kbit/s full rate T.
- Data 3,6 kbit/s half rate T.

A3.2.1.5 Teleservices supported

- 11) Telephony.
- 12) Emergency calls.
- 21) Short message MT/PP.
- 22) Short message MO/PP.
- 23) Short message transmission cell broadcast.
- 61) Alternate speech and facsimile group 3 T/NT.
- 62) Automatic facsimile group 3 T/NT.

A3.2.1.6 Supplementary services supported

- Call forwarding.
- Call restriction.
- Handling of undefined GSM Supplementary Services.

A3.2.1.7 Bearer services supported

- | | | |
|-----|-------------------------------------|---------------------------------|
| 20) | Asynchronous General Bearer Service | see 3GPP TS 02.02 subclause 3.1 |
| 21) | Data circuit Duplex asynchronous | 300 bit/s T/NT |
| 22) | Data circuit Duplex asynchronous | 1 200 bit/s T/NT |

| | | | |
|-----|---|---------------------------------|------|
| 23) | Data circuit Duplex asynchronous | 1 200/75 bit/s | T/NT |
| 24) | Data circuit Duplex asynchronous | 2 400 bit/s | T/NT |
| 25) | Data circuit Duplex asynchronous | 4 800 bit/s | T/NT |
| 26) | Data circuit Duplex asynchronous | 9 600 bit/s | T/NT |
| 30) | Synchronous General Bearer Service | see 3GPP TS 02.02 subclause 3.1 | |
| 31) | Data circuit Duplex synchronous | 1 200 bit/s | T |
| 32) | Data circuit Duplex synchronous | 2 400 bit/s | T/NT |
| 33) | Data circuit Duplex synchronous | 4 800 bit/s | T/NT |
| 34) | Data circuit Duplex synchronous | 9 600 bit/s | T/NT |
| 40) | General PAD Access Bearer Service | see 3GPP TS 02.02 subclause 3.1 | |
| 41) | PAD Access circuit asynchronous | 300 bit/s | T/NT |
| 42) | PAD Access circuit asynchronous | 1 200 bit/s | T/NT |
| 43) | PAD Access circuit asynchronous | 1 200/75 bit/s | T/NT |
| 44) | PAD Access circuit asynchronous | 2 400 bit/s | T/NT |
| 45) | PAD Access circuit asynchronous | 4 800 bit/s | T/NT |
| 46) | PAD Access circuit asynchronous | 9 600 bit/s | T/NT |
| 50) | General Packet Access Bearer Service | see 3GPP TS 02.02 subclause 3.1 | |
| 51) | Data Packet Duplex synchronous | 2 400 bit/s | NT |
| 52) | Data Packet Duplex synchronous | 4 800 bit/s | NT |
| 53) | Data Packet Duplex synchronous | 9 600 bit/s | NT |
| 61) | Alternate Speech/Data (here Data offers the same service as bearer services 21-34 with "3,1kHz" information transfer capability) | | |
| 81) | Speech followed by Data (here Data offers the same service as bearer services 21-34 with "3,1kHz" information transfer capability). | | |

A3.2.1.8 SIM removal

- Removal of the SIM is possible without disconnection of the power supply (Y/N).

A3.2.1.9 Classmark

The coding of Mobile station classmark 1, 2, and 3 and the fact whether and under which conditions the classmark 3 information element is included in a CLASSMARK CHANGE message, has to be declared by the manufacturer. The declaration has to fulfil the following requirements:

- Mobile station classmark 1: Bits 4, 5 and 8 of the first (and only) octet of the value part of the information element shall be coded as "0". The "Revision level" and "RF power capability" field shall specify the value that is correct for the MS.
- Mobile station classmark 2: Bits 4, 5 and 8 of the first octet, bits 2, 3 and 8 of the second octet, bits 3 to 7 of the third octet of the value part of the information element shall be coded as "0". The "Revision level" field, "RF power capability" field, "PS capability" field, "SS Screening indicator" field, "SM capability" field, "Frequency capability" field, "Classmark 3" field, "A5/2 algorithm supported" field, and "A5/3 algorithm supported" field shall specify the value that is correct for the MS.
- Mobile station classmark 3: Bits 5 to 8 of the first octet of the value part of the information element shall be coded as "0". If the value part contains more octets, they shall be coded as "0000 0000". The "A5/4 algorithm supported" field, "A5/5 algorithm supported" field "A5/6 algorithm supported" field, and "A5/7 algorithm supported" field shall specify the value that is correct for the MS (that is, they shall be set to "0").

NOTE: The requirements to the classmark may be subject to changes. That is why test cases are expected to verify the manufacturer's declaration, whereas the correctness of the manufacturer's declaration is to be verified "off line".

A3.2.1.10 Type of SIM/ME interface (ref. 3GPP TS 11.11 and 3GPP TS 11.12)

- 5V SIM/ME interface (5V only ME).
- 3V SIM/ME interface (3V only ME).
- 5V/3V SIM/ME interface (3V technology ME).

A3.2.1.11 Multislot class

- Multislot class as defined in clause B.1 of 3GPP TS 05.02.

A3.2.2 Man machine interface

A3.2.2.1 Mobile station features

- Description of manual entry and display of a called number.
- Description of the basic way to send a call manually.
- Description of the basic way to take a call manually.
- Description of the basic way to end a call manually.
- Description of the basic way to send an emergency call manually.
- Description of the basic way to send DTMF manually.
- Description of the manual PLMN selector.
- Description of the automatic PLMN selector.
- Description of the indication of the country.
- Description of the indication of the available PLMN.
- Description of the indication of the automatic registration to a PLMN.
- Description of the service indicator.
- Description of the management of the SIM by the user:
 - keying PIN and changing PIN;
 - indication of acceptance or rejection of keyed PIN;
 - indication of blocked SIM;
 - indication of successful unblocking of the SIM;
 - storing an abbreviated number;
 - displaying an abbreviated number.
- Description of the selection of the hands free.
- Description of the volume control.
- Description of local barring of outgoing calls.
- Description of prevention of unauthorized calls.
- Description of the auto calling management:
 - selection of the auto calling;

- indication that the call failed and a re-try is attempted;
- indication that the call finally failed;
- number of B-party numbers that can be stored in the list of blacklisted numbers.
- Description of the way in which the MS generates an MS originated NOTIFY, if possible. This feature may or may not be supported by the MS.
- Description of the way the MS indicates the identity of the current LSA to the human user (only applicable if the SoLSA MS has an interface to the human user).
- Description of the way the MS indicates the change of the current LSA to the human user (only applicable if the SoLSA MS has an interface to the human user).

NOTE: All the above description could be extracted from the user's manual.

A3.2.2.2 Short message service

- Description of the basic procedures to send a mobile originated short message.
- Description of the basic procedures to display a mobile terminated short message.
- Description of the basic procedures to display a cell broadcasted short message.
- Whether SMS messages are stored in the SIM and/or the ME.
- Maximum length (characters) of a mobile originated short message.

A3.2.2.3 Supplementary services

A3.2.2.3.1 Call forwarding

- Description of the user's commands and of the display of the answers from the network for:
 - registration;
 - erasure;
 - activation;
 - deactivation;
 - interrogation;
 - specific data request.
- Description of the display of:
 - notification of an incoming call to the "served" mobile or the "forwarded to" mobile;
 - notification during out-going call;
 - information to the calling mobile.

A3.2.2.3.2 Call restriction

- Description of the user's commands and the display of the answers from the network for:
 - registration;
 - change of the password;
 - activation;
 - deactivation;

- interrogation.
- Description of the display of the indication of call barring.

A3.2.2.3.3 Handling of (undefined) GSM supplementary services

- Description of the user's commands and the display of the answer from the network.
- Identification of the short strings defining MS manufacturer defined procedure in idle mode (1 or 2 characters defined in the 3GPP TS 03.38 default alphabet followed by "SEND").

A3.2.3 Electrical Man Machine Interface (EMMI)

A3.2.3.1 Methods supported for activation/deactivation of EMMI

- All possibilities specified in 3GPP TS 11.10, subclause 36.2.2.
- All possibilities specified in 3GPP TS 11.10, subclause 36.2.2, except activation by inserting a test SIM (when the ME is already switched on).
- Activation/deactivation only via layer 3 messages on the radio interface according to 3GPP TS 11.10, subclause 36.2.2.

A3.2.3.2 Transmission rate supported by the ME on the EMMI

A3.2.3.3 Layer 3 messages supported on the EMMI

- Layer 3 messages as specified in 3GPP TS 11.10, subclause 36.3.5.3.2, except: (followed by the list of messages not supported).
- others than defined in 3GPP TS 11.10 subclause 36.3.5.3.1 table 9.

A3.2.3.4 Keystroke sequence messages

Non standard keystroke sequences to be used on the EMMI (in line with 3GPP TS 11.10, subclause 36.3.5.3.2):

- related to tests of the mobile station features (3GPP TS 11.10, clause 33);
- related to testing of the ME/SIM interface (3GPP TS 11.10, clause 27);
- related to tests of autocalling restrictions (3GPP TS 11.10, clause 28);
- related to tests of supplementary services (3GPP TS 11.10, clause 31);
- related to tests of data services (3GPP TS 11.10, clause 29);
- related to tests of short message service (3GPP TS 11.10, clause 34);
- related to other tests.

A3.2.3.5 Internal malfunction detected messages

List of the error indicators provided.

A3.2.4 Digital Audio Interface (DAI)

Description of the speech data routing:

- via the control lines; or
- via the test interface message.

A3.2.5 Characteristics related to bearer services or teleservices

A3.2.5.1 Access interface

Description of the access interface to connect the DTE (e.g. V series (V.24, V.28), X series, two wire analogue interface for use with fax group 3, I.420 (S-reference point).

In case of a proprietary interface to a DTE (non standard), description of this interface (hardware and software).

In case of a non standard connector provide a mechanical adapter.

A3.2.5.2 Configuration of the MT

Description of the configuration information to be selected in the MT to connect a terminal equipment to the mobile termination.

Description of the (different) configuration(s) of the MT for each bearer service and each teleservice supported, with the range or value for the parameters and the configuration procedure.

For the purpose of test of MOC, the manufacturer shall describe precisely how it is possible to put the MT in the different configurations to generate the capability information of the Mobile according to subclause 3.2.5.3, and described as supported by the MS.

For the purpose of test of MTC, the manufacturer shall describe how to verify the correct selection by the MT of the required function with regard to the capability information as described below, especially using the messages at the Um interface if there is no R or S interface available (case MTO). The description shall be made for every combination of the parameter value valid for the MT.

A3.2.5.3 Capability information

Description of the capability information, related to supported bearer services:

- bearer capabilities;
- higher layer capabilities;
- lower layer capabilities.

The manufacturer shall describe for every capability the associated terminal functions and their characteristics.

A3.2.5.4 Subaddress or DDI number

Subaddress or a DDI number of the MT.

Procedure to allocate or change DDI number or subaddress, if possible.

A3.2.5.5 User to user signalling

Description of the function and the user's access to it.

A3.2.5.6 Data call set-up and data call clearing

For each implemented transparent and non-transparent data service:

- Description of the data call establishment mechanism:
 - Terminal initiated (CT108) (if possible);
 - MT (MMI/EMMI) initiated;
- Description of DCE provided information (MT to TE), if any;
- Declaration of optimal function and procedure, services supported by the MT.
- Description of the data call clearing mechanism:

- Terminal initiated (CT109) (if possible);
- MT (MMI/EMMI) initiated;
- Description of DCE provided information (MT to TE) related to a mobile or network initiated call clearing, if any.

A3.2.5.7 Characteristics of non-transparent data services

Description of Radio Link Protocol (RLP) features supported.

Description of supported RLP parameters and how to modify these values (if possible):

- <iws> IWF to MS window size
- <mws> MS to IWF window size
- <T1> acknowledgement timer T1
- <N2> retransmission attempts N2

Ability to configure the MS to use non-default RLP parameters.

Description of flow control mechanism:

- INBAND (XON/XOFF);
- OUTBAND COPnoFICt (CT105 and CT106).

A3.2.5.8 Possible ways of setting-up a call from either an external interface or internally

Describe in detail all possible ways a call can be initiated from the MS or a connected terminal.

A3.2.5.9 Application layer causing automatic call termination

State whether the call termination facility can be disabled and if so, describe in detail how.

A3.2.5.10 Call re-establishment for MS not supporting speech

Applicability of call re-establishment.

A3.2.6 International mobile station equipment identity

IMEI of the MS.

A3.2.7 Receiver intermediate frequencies

F_0 - Local Oscillator frequency applied to first receiver mixer.

$IF_1 \dots IF_n$ - intermediate frequencies.

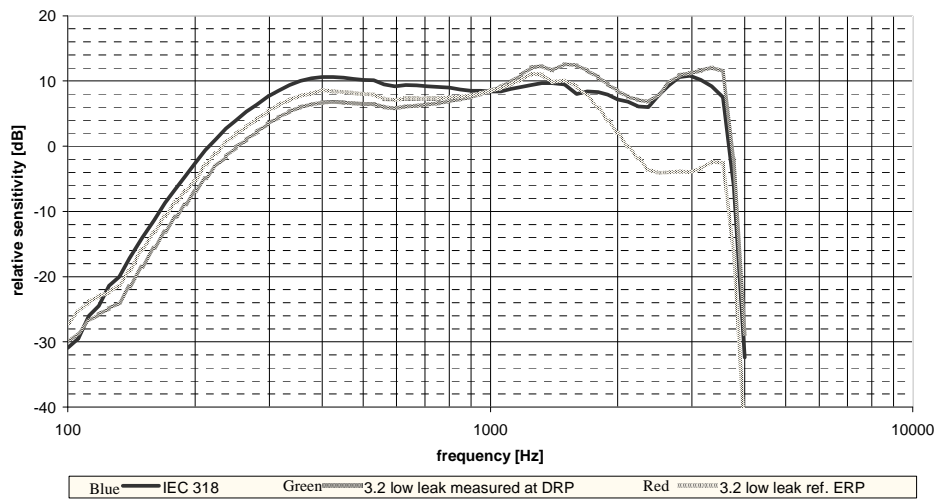

A3.2.8 Artificial ear

The manufacturer shall declare which type of artificial ear (type 1 or type 3.2 or type 3.4) is used for teleservices speech testing.

The following illustrate the results of both artificial ears when specified for acoustic receiving measurement.

Type 3.2 results are currently referred to ERP (as specified), but measured at DRP. When introducing DRP to ERP correction, a special frequency response is used which is obtained with the artificial ear in a free sound field. The overall result actually differs substantially from the transfer function under the IEC 318 test conditions. Referring the results to DRP instead avoids misleading interpretations.

Receiving frequency response, sample mobile 1

This slide as well as the following two shows results of three measurement and evaluation methods per each mobile sample. The blue curve is as measured sealed to IEC 318 closed coupler. The green curve is as measured with type 3.2 low leak coupler at DRP. The red curve shows the same measurement data corrected to ERP using the correction function provided by the manufacturer.

Receiving frequency response, sample mobile 2

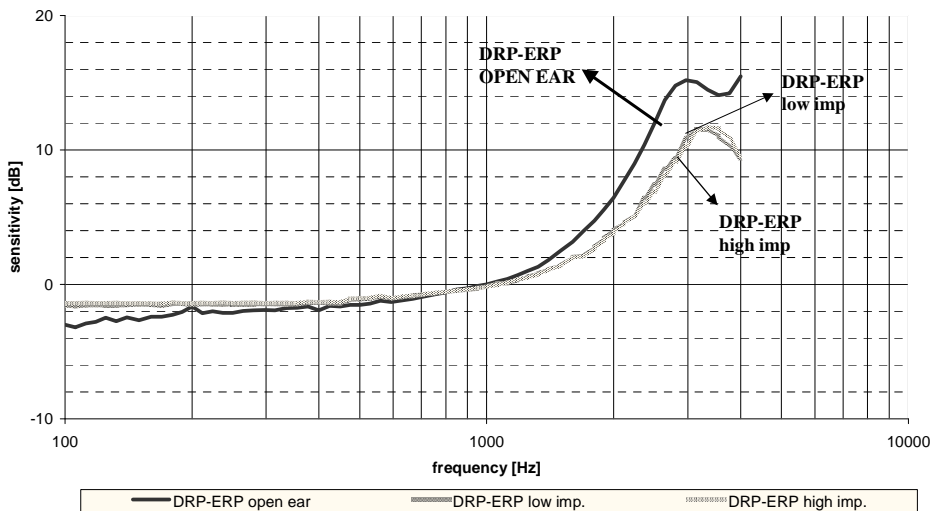

Receiving frequency response, sample mobile 3

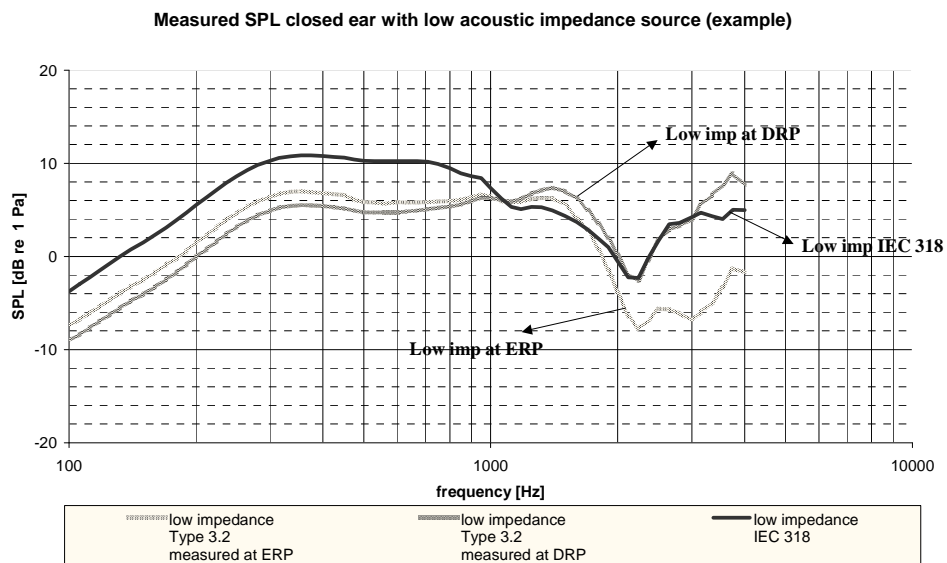

Below 1 KHz both type 3.2 curves are similar. The level decreases from IEC 318 to the type 3.2 results is due to the leak. At high frequencies the measured type 3.2 curve without DRP to ERP correction (green) clearly illustrates better compatibility towards IEC 318 results than the curve referred to ERP (red).

DRP to ERP transfer function of type 3.2 artificial ear

The three curves show the DRP to ERP transfer function for different source conditions. The blue line is obtained mounted in a baffle. The other two functions are measured with a probe microphone at ERP on two mobiles with different acoustic source impedance.

Contrary to the first three slides, the type 3.2 low leak response at ERP here is not calculated, but measured with a probe microphone. The relationship between the three curves is the same as in each of the first three slides.

The difference between the results of type 3.2 low leak artificial ear referred to DRP and ERP respectively is due to the acoustic input impedance of the artificial ear. The high acoustic impedance at DRP is transferred to a relatively low impedance at ERP for high frequencies according to the quarter wavelength distance between both points. This means that acoustic energy at ERP is more in terms of sound velocity, which is not measured with the used pressure microphone. The human ear is known to have its highest sensitivity around 5 KHz. Type 3.2 low leak measurement referred to ERP has particularly low sensitivity at this frequency. In order to account for compatibility between IEC 318 results and type 3.2 low leak results as well as for the sensitivity of the human ear, it is up to the choice of the terminal manufacturer, whether acoustic test results from the type 3.2 low leak artificial ear should be referred to ERP or to DRP.

Annex 4: Test SIM Parameters

A4.1 Introduction

This clause defines the GSM related default parameters for programming the elementary files of the test SIM or test USIM. The requirements of this annex do not apply to the SIM/ME tests of clause 27.

A4.1.1 Definitions

"Test SIM card":

A SIM card supporting the test algorithm for authentication, programmed with the parameters defined in this subclause. The electrical, mechanical and environmental requirements of the test SIM card are specified in 3GPP TS 11.11 / 3GPP TS 51.011.

"Test SIM":

Either a test SIM card or the SIM simulator programmed with the parameters defined in this subclause.

A4.1.2 Definition of the test algorithm for authentication

The following procedure employs bit wise modulo 2 addition ("XOR").

The following convention applies:

In all data transfer the most significant byte is the first byte to be sent; data is represented so that the left most bit is the most significant bit of the most significant byte.

Step 1:

XOR to the challenge RAND, a predefined number Ki, having the same bit length (128 bits) as RAND. The result RES1 of this is

$$\text{RES1} = \text{RAND XOR Ki}$$

Step 2:

The most significant 32 bits of RES1 form SRES. The next 64 bits of RES1 form Kc. The remaining 32 bits are not used.

A4.2 Default Parameters for the test SIM

Ki:

The authentication key "Ki" will be chosen by the test house and will be non zero. The "Ki" value used by the SS will align with this value.

PIN Disabling

The PIN enabled / disabled flag will be set to "PIN Disabled". This ensures that when the Test SIM is inserted into a MS the user will not be prompted for PIN entry. This requires a specific card capability defined by the SIM service table (see subclause 2.9).

A4.3 Default settings for the Elementary Files (EFs)

The format and coding of elementary files of the SIM are defined in 3GPP TS 11.11 / 3GPP TS 51.011. The following subclauses define the default parameters to be programmed into each elementary file. Some files may be updated by the MS based on information received from the SS. These are identified in the following subclauses.

A4.3.1 EF_{ICCID} (ICC Identification)

The programming of this EF is a test house option.

A4.3.2 EF_{LP} (Language preference)

The programming of this EF is a test house option.

A4.3.3 EF_{IMSI} (IMSI)

The IMSI value will be chosen by the test house. The IMSI used by the SS will align this value.

File size: 9 bytes
 Default values: Byte 1 (DEC): 8
 Bytes 2-9 (DEC): 09 10 10 ** ** **

| |
|----|
| ** |
|----|

| |
|----|
| ** |
|----|

 for GSM 400, GSM 900 and DCS 1 800
 Bytes 2-9 (DEC): 09 10 10 *1 ** **

| |
|----|
| ** |
|----|

| |
|----|
| ** |
|----|

 for GSM 700, GSM 850 and GSM 1 900

"*" indicates any number between 0 and 9 subject to the restriction that IMSI mod 1000 (i.e. the three boxed "*" digits number 13, 15 and 16) lies in one of the following ranges:

- 063-125, 189-251, 315-377, 441-503, 567-629, 693-755, 819-881 or 945-999.

NOTE: This ensures that the MS can listen to the second CCCH when more than one basic physical channel is configured for the CCCH. This is necessary for the test of "paging re-organization".

A4.3.4 EF_{Kc} (Cipherring key Kc)

File size: 9 Bytes
 Default values (HEX): Bytes 1-8: Align with Kc used by SS
 Byte 9: 07

Byte 9 is set to 07 to indicate that there is no key available at the start of a test.

The bytes within this elementary file may be updated by the MS as a result of a successful authentication attempt.

A4.3.5 EF_{PLMNsel} (PLMN selector)

GSM 400, GSM 900 and DCS 1 800 begin

File size: 102 bytes
 Default values (HEX): Bytes 1-3: 32 F4 10 (MCC, MNC) - Translates to 234, 01
 Bytes 4-6: 32 F4 20 (MCC, MNC)
 Bytes 7-9: 32 F4 30 (MCC, MNC)

 Bytes 94-96: 32 F4 23 (MCC, MNC)
 Bytes 97-99: 32 F4 33 (MCC, MNC)
 Bytes 100-102: 32 F4 43 (MCC, MNC)

GSM 400, GSM 900 and DCS 1 800 end

GSM 700, GSM 850 and PCS 1900 begin

File size: 102 bytes
 Default values (HEX): Bytes 1-3: 32 24 10 (MCC, MNC) - Translates to 234, 012
 Bytes 4-6: 32 34 20 (MCC, MNC)
 Bytes 7-9: 32 44 30 (MCC, MNC)

 Bytes 94-96: 32 34 23 (MCC, MNC)

Bytes 97-99: 32 44 33 (MCC, MNC)
 Bytes 100-102: 32 54 43 (MCC, MNC)

GSM 700, GSM 850 and PCS 1900 end

34 PLMNs are shown coded above since this is the largest number required for a test - see subclause 27.9.4.1. It is necessary to take this into account since the SIM cards must be dimensioned to cope with this number of records.

A4.3.6 EF_{HPLMN} (HPLMN search period)

File size: 1 byte

Default value (HEX): 00 (no HPLMN search attempts)

A4.3.7 EF_{ACMmax} (ACM maximum value)

File size: 3 bytes

Default: Byte 1: 00
 Byte 2: 00
 Byte 3: 00

The above translates to: "Not valid".

A4.3.8 EF_{SST} (SIM service table)

Services will be allocated and activated as follows:

| Service | Allocated | Activated |
|---|-----------|-----------|
| No. 1: CHV1 disable function | Yes | Yes |
| No. 2: Abbreviated Dialling numbers (ADN) | Yes | Yes |
| No. 3: Fixed dialling numbers (FDN) | Yes | Optional |
| No. 4: Short Message Storage (SMS) | Yes | Yes |
| No. 5: Advice of Charge (AoC) | Yes | Yes |
| No. 6: Capability Configuration Parameters (CCP) | Yes | Yes |
| No. 7: PLMN Selector | Yes | Yes |
| No. 8: Reserved for future use | No | No |
| No. 9: MSISDN | Optional | Optional |
| No. 10: Extension 1 | Yes | Optional |
| No. 11: Extension 2 | Yes | Optional |
| No. 12: SMS Parameters | Yes | Yes |
| No. 13: Last Dialed Number (LND) | Yes | Yes |
| No. 14: Cell Broadcast Message Identifier | Yes | Yes |
| No. 15: Group identifier Level 1 | Yes | Optional |
| No. 16: Group identifier Level 2 | Yes | Optional |
| No. 17: Service Provider Name | Optional | Optional |
| No. 18: Service Dialling Numbers (SDN) | Optional | Optional |
| No. 19: Extension3 | Optional | Optional |
| No. 20: RFU | Optional | Optional |
| No. 21: VGCS Group Identifier List (EF _{VGCS} , EF _{VGCS}) | Yes | Yes |
| No. 22: VBS Group Identifier List (EF _{VBS} , EF _{VBS}) | Yes | Yes |
| No. 23: eMLPP service | Yes | Yes |
| No. 24: Automatic answer for eMLPP | Yes | Yes |
| No. 25: Data download via SMS-CB | Optional | Optional |
| No. 26: Data download via SMS-PP | Optional | Optional |
| No. 27: Menu selection | Optional | Optional |
| No. 28: Call control | Optional | Optional |
| No. 29: Proactive SIM | Optional | Optional |
| No. 30: Cell Broadcast Message Identifier Ranges | Optional | Optional |
| No. 31: Barred Dialling Numbers (BDN) | Optional | Optional |
| No. 32: Extension4 | Optional | Optional |
| No. 33: De-personalization Control Keys | Optional | Optional |
| No. 34: Co-operative Network List | Optional | Optional |
| No. 35: Short Message Status Reports | Optional | Optional |
| No. 36: Network's indication of alerting in the MS | Optional | Optional |

| Service | Allocated | Activated |
|---|-----------|-----------|
| No. 37: Mobile Originated Short Message control by SIM | Optional | Optional |
| No. 38: GPRS | Optional | NOTE 1 |
| No. 39: Image (IMG) | Optional | Optional |
| No. 40: SoLSA (Support of Local Service Area) | Optional | Optional |
| No. 41: USSD string data object supported in Call Control | Optional | Optional |
| No. 42: RUN AT COMMAND command | Optional | Optional |
| No. 43: User controlled PLMN Selector with Access Technology | Optional | Optional |
| No. 44: Operator controlled PLMN Selector with Access Technology | Optional | NOTE 2 |
| No. 45: HPLMN Selector with Access Technology | Optional | NOTE 2 |
| No. 46: CPBCCCH Information | Optional | Optional |
| No. 47: Investigation Scan | Optional | Optional |
| No. 48: Extended Capability Configuration Parameters | Optional | Optional |
| No. 49: MExE | Optional | Optional |
| No. 50: Reserved and shall be ignored | No | No |
| No. 51: PLMN Network Name | Optional | Optional |
| No. 52: Operator PLMN List | Optional | Optional |
| No. 53: Mailbox Dialling Numbers | Optional | Optional |
| No. 54: Message Waiting Indication Status | Optional | Optional |
| No. 55: Call Forwarding Indication Status | Optional | Optional |
| No. 56: Service Provider Display Information | Optional | Optional |
| No. 57: Multimedia Messaging Service (MMS) | Optional | Optional |
| No. 58: Extension 8 | Optional | Optional |
| No. 59: MMS User Connectivity Parameters | Optional | Optional |
| NOTE 1: For GPRS tests the GPRS service shall be activated. | | |
| NOTE 2: If allocated EF _{PLMNwACT} , EF _{OPLMNwACT} are present on the SIM they shall have same settings as EF _{PLMNsel} . | | |

A4.3.9 EF_{ACM} (Accumulated call meter)

| | |
|------------|--|
| File size: | 3 bytes |
| Default: | Byte 1: 00 Byte 2: 00 Byte 3: 00 |

The above translates to: "Not yet implemented".

A4.3.10 EF_{PUCT} (Price per unit and currency table)

| | |
|------------|------------------------------|
| File size: | 5 bytes |
| Default: | Byte 1-3: FF Byte 4-5: 00 |

A4.3.11 EF_{CBMI} (Cell broadcast Message Identifier Selection)

The programming of this EF is a test house option.

The file size is 2n bytes, where n is the number of Cell broadcast message identifier records - each record defining a type of Cell Broadcast message which may be accessed by the MS. Care should be taken when dimensioning the SIM to take into account the number of Cell Broadcast message identifier records required.

A4.3.12 EF_{BCCH} (Broadcast control channels)

| | |
|-----------------------|---|
| File size: | 16 Bytes |
| Default values (BIN): | Bytes 1-2: 11111111 11111111 Bytes 3-4: 11111111 11111111 Bytes 5-6: 11111111 11111111 Bytes 7-8: 11111111 11111111 Bytes 9-10: 11111111 11111111 Bytes 11-12: 11111111 11111111 |

Bytes 13-14: 11111111 11111111
 Bytes 15-16: 11111111 11111111

This field may be updated dependent on the MS implementation.

A4.3.13 EF_{ACC} (Access control class)

File size: 2 Bytes
 Default values (BIN): Byte 1: 00000000
 Byte 2: *****

The test house may set any single bit of byte 2 to "1". All remaining bits of byte 2 will be set to "0". This determines the access control class of the SIM.

A4.3.14 EF_{FPLMN} (Forbidden PLMNs)

Length: 12 Bytes
 Format (HEX): Bytes 1-3: FF FF FF
 Bytes 4-6: FF FF FF
 Bytes 7-9: FF FF FF
 Bytes 10-12: FF FF FF

This coding corresponds to an empty "forbidden PLMN list". The bytes within this file may be updated if a LOCATION UPDATE REJECT message is received by the MS with cause, "PLMN not allowed".

A4.3.15 EF_{LOCI} (Location information)

GSM 400, GSM 900 and DCS 1 800 begin

File size: 11 Bytes
 Default values: Bytes 1-4 (HEX): FF FF FF FF (TMSI)
 Bytes 5-9 (HEX): 42 F6 18 FF FE (LAI)
 Byte 10 (HEX): FF (Periodic LU Time = "the timer is not running")
 Byte 11 (BIN): 00000001 (Location Update Status = "not updated")

Bytes 5-9: LAI-MCC = 246 (bytes 5-6) and LAI-MNC = 81 (byte 7) are frequently used in clause 27. The LAC (bytes 8-9) is set to "FF FE" since this, in conjunction with byte 11 setting of "01", is used to ensure that the MS performs a location update at the beginning of a test.

Bytes in this file (e.g. TMSI in bytes 1-4) may be updated as a result of a location update attempt by the MS.

GSM 400, GSM 900 and DCS 1 800 end

GSM 700, GSM 850 and PCS 1900 begin

File size: 11 Bytes
 Default values: Bytes 1-4 (HEX): FF FF FF FF (TMSI)
 Bytes 5-9 (HEX): 42 36 18 FF FE (LAI)
 Byte 10 (HEX): FF (Periodic LU Time = "the timer is not running")
 Byte 11 (BIN): 00000001 (Location Update Status = "not updated")

Bytes 5-9: LAI-MCC = 246 (bytes 5-6) and LAI-MNC = 813 (bytes 6-7) are frequently used in clause 27. The LAC (bytes 8-9) is set to "FF FE" since this, in conjunction with byte 11 setting of "01", is used to ensure that the MS performs a location update at the beginning of a test.

Bytes in this file (e.g. TMSI in bytes 1-4) may be updated as a result of a location update attempt by the MS.

GSM 700, GSM 850 and PCS 1900 end

A4.3.16 EF_{AD} (Administrative data)

File size: 3 bytes
 Default values Byte 1: 10000000 - (type approval operations)
 Byte 2: 11111111
 Byte 3: 11111111

A4.3.17 EF_{Phase} (Phase identification)

File size: 1 byte
 Default value (HEX): 02 Phase 2

A4.3.18 EF_{ADN} (Abbreviated dialling numbers)

The programming of this EF is a test house option. It should be noted that sufficient space should be provided on the SIM card for 101 records - see subclause 27.15.4.1.

A4.3.19 EF_{F DN} (Fixed dialling numbers)

Optional.

A4.3.20 EF_{SMS} (Short messages)

Default: Records 1-5 Byte 1: 00
 Byte 2: FF
 Bytes 3-14: FF FF FF FF FF FF FF FF FF FF FF FF
 Bytes 15-26: FF FF FF FF FF FF FF FF FF FF FF FF
 Byte 27: FF
 Byte 28: FF
 Bytes 29-35: FF FF FF FF FF FF FF
 Byte 36: FF
 Bytes 37-176: All Bytes set to FF

A4.3.21 EF_{CCP} (Capability configuration parameters)

File size: 14 bytes
 Default values Byte 1: 04
 Byte 2: 01
 Byte 3: A0
 Bytes 4-14: FF

The above translates to: "Full rate, GSM Standardized coding, circuit mode and speech".

A4.3.22 EF_{MSISDN} (MSISDN)

Optional.

A4.3.23 EF_{SMSP} (Short message service parameters)

The programming of this EF is a test house option.

Each record size is 28+Y bytes, where Y is the number of bytes in the Alpha Identifier. Care should be taken when dimensioning the SIM to take into account the number of Short message service parameter records required.

A4.3.24 EF_{SMSS} (SMS status)

File size: 2 bytes
 Byte 1: 00
 Byte 2 (BIN): 11111111

The above translates to:

- (a) Last Mobile Originated Short Message had a TP Message Reference parameter of "00".
- (b) SMS Memory Capacity Exceeded, Notification Flag unset: memory capacity available.

A4.3.25 EF_{EXT1} (Extension 1)

Optional.

A4.3.26 EF_{EXT2} (Extension 2)

Optional.

A4.3.27 EF_{VGCS} (Voice Group Call Service)

This EF contains a list of the default VGCS group identifiers.

File size: Bytes 200

Default values:

| Bytes | Group ID | Value | BCD encoding in the SIM card |
|---------|----------|---------|------------------------------|
| 1-4 | 1 | 12 | 21 FF FF FF |
| 5-8 | 2 | 123 | 21 F3 FF FF |
| 9-12 | 3 | 1234 | 21 43 FF FF |
| 13-16 | 4 | 12348 | 21 43 F8 FF |
| 17-20 | 5 | 123491 | 21 43 19 FF |
| 21-24 | 6 | 1235029 | 21 53 20 F9 |
| 25-28 | 7 | 12351 | 21 53 F1 FF |
| 29-32 | 8 | 12352 | 21 53 F2 FF |
| 33-36 | 9 | 12353 | 21 53 F3 FF |
| 37-40 | 10 | 12354 | 21 53 F4 FF |
| 41-44 | 11 | 12355 | 21 53 F5 FF |
| 45-48 | 12 | 12356 | 21 53 F6 FF |
| 49-52 | 13 | 12357 | 21 53 F7 FF |
| 53-56 | 14 | 12358 | 21 53 F8 FF |
| 57-60 | 15 | 12359 | 21 53 F9 FF |
| 61-64 | 16 | 20000 | 02 00 F0 FF |
| 65-68 | 17 | 20001 | 02 00 F1 FF |
| 69-72 | 18 | 20002 | 02 00 F2 FF |
| 73-76 | 19 | 20003 | 02 00 F3 FF |
| 77-80 | 20 | 20004 | 02 00 F4 FF |
| 81-84 | 21 | 20005 | 02 00 F5 FF |
| 85-88 | 22 | 20006 | 02 00 F6 FF |
| 89-92 | 23 | 20007 | 02 00 F7 FF |
| 93-96 | 24 | 20008 | 02 00 F8 FF |
| 97-100 | 25 | 20009 | 02 00 F9 FF |
| 101-104 | 26 | 20010 | 02 10 F0 FF |
| 105-108 | 27 | 66660 | 66 66 F0 FF |
| 109-112 | 28 | 66661 | 66 66 F1 FF |
| 113-116 | 29 | 66662 | 66 66 F2 FF |
| 117-120 | 30 | 666638 | 66 66 83 FF |
| 121-124 | 31 | 66664 | 66 66 F4 FF |
| 125-128 | 32 | 66665 | 66 66 F5 FF |
| 129-132 | 33 | 66666 | 66 66 F6 FF |
| 133-136 | 34 | 66667 | 66 66 F7 FF |
| 137-140 | 35 | 66668 | 66 66 F8 FF |
| 141-144 | 36 | 66669 | 66 66 F9 FF |
| 145-148 | 37 | 66670 | 66 76 F0 FF |
| 149-152 | 38 | 80120 | 08 21 F0 FF |
| 153-156 | 39 | 80121 | 08 21 F1 FF |
| 157-160 | 40 | 80122 | 08 21 F2 FF |
| 161-164 | 41 | 80123 | 08 21 F3 FF |

| Bytes | Group ID | Value | BCD encoding in the SIM card |
|---------|----------|---------|------------------------------|
| 165-168 | 42 | 80124 | 08 21 F4 FF |
| 169-172 | 43 | 80125 | 08 21 F5 FF |
| 173-176 | 44 | 80126 | 08 21 F6 FF |
| 177-180 | 45 | 80127 | 08 21 F7 FF |
| 181-184 | 46 | 80128 | 08 21 F8 FF |
| 185-188 | 47 | 80129 | 08 21 F9 FF |
| 189-192 | 48 | 80130 | 08 31 F0 FF |
| 193-196 | 49 | 99999 | 99 99 F9 FF |
| 197-200 | 50 | 1111119 | 11 11 11 F9 |

A4.3.28 EF_{VGCS} (Voice Group Call Service Status)

This EF contains the default activation of the VGCS group identifiers. The following list of group ID are activated: 1, 4, 20, 30, and 50.

File size: Bytes 7
 Default values (HEX): Bytes 1-7: '09 00 08 20 00 00 FE'

A4.3.29 EF_{VBS} (Voice Broadcast Service)

This EF contains a list of the default VBS group identifiers.

File size: Bytes 200

Default values:

| Bytes | Group ID | Value | BCD encoding in the SIM card |
|---------|----------|---------|------------------------------|
| 1-4 | 1 | 12 | 21 FF FF FF |
| 5-8 | 2 | 123 | 21 F3 FF FF |
| 9-12 | 3 | 1234 | 21 43 FF FF |
| 13-16 | 4 | 12348 | 21 43 F8 FF |
| 17-20 | 5 | 123491 | 21 43 19 FF |
| 21-24 | 6 | 1235029 | 21 53 20 F9 |
| 25-28 | 7 | 12351 | 21 53 F1 FF |
| 29-32 | 8 | 12352 | 21 53 F2 FF |
| 33-36 | 9 | 12353 | 21 53 F3 FF |
| 37-40 | 10 | 12354 | 21 53 F4 FF |
| 41-44 | 11 | 12355 | 21 53 F5 FF |
| 45-48 | 12 | 12356 | 21 53 F6 FF |
| 49-52 | 13 | 12357 | 21 53 F7 FF |
| 53-56 | 14 | 12358 | 21 53 F8 FF |
| 57-60 | 15 | 12359 | 21 53 F9 FF |
| 61-64 | 16 | 20000 | 02 00 F0 FF |
| 65-68 | 17 | 20001 | 02 00 F1 FF |
| 69-72 | 18 | 20002 | 02 00 F2 FF |
| 73-76 | 19 | 20003 | 02 00 F3 FF |
| 77-80 | 20 | 20004 | 02 00 F4 FF |
| 81-84 | 21 | 20005 | 02 00 F5 FF |
| 85-88 | 22 | 20006 | 02 00 F6 FF |
| 89-92 | 23 | 20007 | 02 00 F7 FF |
| 93-96 | 24 | 20008 | 02 00 F8 FF |
| 97-100 | 25 | 20009 | 02 00 F9 FF |
| 101-104 | 26 | 20010 | 02 10 F0 FF |
| 105-108 | 27 | 66660 | 66 66 F0 FF |
| 109-112 | 28 | 66661 | 66 66 F1 FF |
| 113-116 | 29 | 66662 | 66 66 F2 FF |
| 117-120 | 30 | 666638 | 66 66 83 FF |
| 121-124 | 31 | 66664 | 66 66 F4 FF |
| 125-128 | 32 | 66665 | 66 66 F5 FF |
| 129-132 | 33 | 66666 | 66 66 F6 FF |
| 133-136 | 34 | 66667 | 66 66 F7 FF |
| 137-140 | 35 | 66668 | 66 66 F8 FF |

| Bytes | Group ID | Value | BCD encoding in the SIM card |
|---------|----------|---------|------------------------------|
| 141-144 | 36 | 66669 | 66 66 F9 FF |
| 145-148 | 37 | 66670 | 66 76 F0 FF |
| 149-152 | 38 | 80120 | 08 21 F0 FF |
| 153-156 | 39 | 80121 | 08 21 F1 FF |
| 157-160 | 40 | 80122 | 08 21 F2 FF |
| 161-164 | 41 | 80123 | 08 21 F3 FF |
| 165-168 | 42 | 80124 | 08 21 F4 FF |
| 169-172 | 43 | 80125 | 08 21 F5 FF |
| 173-176 | 44 | 80126 | 08 21 F6 FF |
| 177-180 | 45 | 80127 | 08 21 F7 FF |
| 181-184 | 46 | 80128 | 08 21 F8 FF |
| 185-188 | 47 | 80129 | 08 21 F9 FF |
| 189-192 | 48 | 80130 | 08 31 F0 FF |
| 193-196 | 49 | 99999 | 99 99 F9 FF |
| 197-200 | 50 | 1111119 | 11 11 11 F9 |

A4.3.30 EF_{VBS} (Voice Broadcast Service Status)

This EF contains the default activation of the VBS group identifiers. The following list of group ID are activated: 1, 4, 20, 30, and 50.

File size: Bytes 7
 Default values (HEX): Bytes 1-7: '09 00 08 20 00 00 FE'

A4.3.31 EF_{eMLPP} (enhanced Multi Level Pre-emption and Priority)

This EF contains default information about priority levels and fast call set-up conditions for the enhanced Multi Level Pre-emption and Priority service.

Length: 2 Bytes
 Format (HEX): Byte 1 (Priority levels): '74'
 Byte 2 (Fast call set-up conditions): '04'

The coding corresponds to available priority levels 2, 3, 4 and 0. For fast call setup, the coding corresponds to available priority level 0.

A4.3.32 EF_{AAeM} (Automatic Answer for eMLPP Service)

This EF contains the default priority levels (of the Multi Level Pre-emption and Priority service) for which the mobile station shall answer automatically to incoming calls.

Length: 1 Byte
 Format (HEX): Byte 1: '0F'

The coding corresponds to the default capability of the MS to answer automatically to incoming calls that have a priority level higher than 2.

A4.3.33 EF_{KcGPRS} (GPRS Ciphering key KcGPRS)

Mandatory if GPRS shall be tested else optional.

File size: 9 bytes
 Default values (HEX): Bytes 1-8: Align with KcGPRS used by SS
 Byte 9: 07

Byte 9 is set to 07 to indicate that there is no key available at the start of a test unless other conditions follow from the definition of the initial conditions of the mobile.

The bytes within this elementary file may be updated by the MS as a result of a successful authentication attempt.

A4.3.34 EF_{LOCIGPRS} (GPRS location information)

Mandatory if GPRS shall be tested else optional.

File size: 14 bytes
Default values: Bytes 1-4 (HEX): FF FF FF FF (P-TMSI)
Bytes 5-7 (HEX): FF FF FF (P-TMSI signature value)
Bytes 8-13 (HEX): FF FF FF FF FF FF (RAI)
Byte 14 (BIN): 00000001 (Routing Area Update Status = "not updated")

Bytes in this file (e.g. P-TMSI in bytes 1-4) may be updated as a result of a routing area update attempt by the MS.

Annex 4A: Test USIM Parameters

Test USIM application is defined in 3GPP TS 34.108 clause 8 “Test USIM Parameters” and can be used instead of test SIM.

Test USIM (UICC hardware) shall allow MS to perform GSM test algorithm for authentication (GSM AKA) or UMTS Authentication Challenge (UMTS AKA) as defined in TS 33.102.

The SS shall support both algorithm and the algorithm applied is configured by pixit settings.

For UMTS Authentication Challenge (i.e. UMTS AKA using an USIM as defined in TS 33.102), the SS shall be able to handle vectors of AUTN, RAND, CK, IK, AUTS and XRES in the way as the MSC/BSS entities. The SS and Test USIM shall incorporate a test algorithm for generating RES and CK, IK from RAND, AUTN and IK which operates as described in TS 34.108 clause 8.1.2.

For test cases indicating Test USIM to be used test SIM can not be used.

Annex 5: Test equipment

A5.1 Introduction

A5.1.1 General

The test equipment is either an equipment or assembly of equipments which enables the tests described in the present document to be conducted.

This annex describes requirements for the test equipment which cannot be derived from and which are assumed in, the conformance test descriptions described in the present document.

Specifically stimulus setting and measurement uncertainties are defined.

A5.1.2 Test equipment terms

The term "System Simulator" (SS) is used to describe the complete suite of test equipment required to perform the tests in the present document when interacting with the following MS interfaces:

- Antenna (Connector or radiated);
- Acoustic;
- Data Port(s);
- Power supply;
- DAI.

NOTE: To perform a sub-set of tests, the SS may be simplified accordingly.

The term "SIM simulator" is used to describe the test equipment required to interact with the SIM/ME interface.

A "test SIM" has the physical characteristics of a standard SIM card, (see 3GPP TS 11.11) with specific parameters defined in annex 3.

A5.1.3 Confidence level

All uncertainty values stated in this annex are quoted for a Confidence Level of 95 %.

A5.2 Standard test signals

The Cx signals represent the wanted signals and the Ix signals represent the unwanted signals.

| | |
|-----------|--|
| Signal C0 | Unmodulated continuous carrier. |
| Signal C1 | A standard signal with GMSK AQPSK, 8-PSK, 16-QAM or 32-QAM modulation as appropriate. The channel coder will depend on the test and the cipher mode shall be selectable by the test method. When using this signal in the non hopping mode, the unused seven time slots shall also contain dummy bursts, with power levels variable with respect to the used timeslot, see also DYNAMIC LEVEL SETTING in subclause A5.3.4.7. |
| Signal I0 | Unmodulated continuous carrier. |
| Signal I1 | A GMSK modulated carrier following the structure of the GSM signals, but with all modulating bits (including the midamble period) derived directly from a random or pseudo random data stream. |
| Signal I2 | A standard GMSK modulated signal with valid midamble, different from C1. The data bits (including bits 58 and 59) shall be derived from a random or pseudo random data stream. |
| Signal I3 | An Additive White Gaussian Noise (AWGN) signal having a minimum bandwidth of 1,5 times the symbol rate i.e. minimum 402,6kHz for a GSM channel. The AWGN power shall be measured over a noise bandwidth of 270,833 kHz. In the complex baseband, the AWGN signals shall be independent in the real and in the imaginary part, zero-mean and with equal power. |
| Signal I4 | A GMSK modulated signal with valid training sequence code (TSC) randomly selected on a burst-by-burst basis from {TSC1,...,TSC7}. The interferer shall be a single slot wide, and shall apply power ramping according to the requirements in 3GPP TS 45.005. The interferer shall be delayed with respect to the wanted signal by an integer number of symbols in the range -1 to +4. Unless specified in a given test case, The delay shall be randomly chosen and shall remain fixed for the duration of the test. |
| Signal I5 | A GMSK modulated signal following the structure of the GSM signals, but with all modulating bits (including the midamble period) derived directly from a random or pseudo random data stream. The interferer shall be a single slot wide, and shall apply power ramping according to the requirements in 3GPP TS 45.005. The interferer shall be delayed with respect to the wanted signal by 74 symbols. |

NOTE: For multi-slot configuration the same number of active slots for test signal I4 and I5 shall be used.

A5.3 SS functional requirements

A5.3.1 Level setting range

It is assumed that the SS is capable of setting stimulus levels, at the MS interface, to those required in the test specification extended by the measurement uncertainty defined in this annex.

NOTE: This ensures that the SS is able adequately to stimulate the MS performance at and just beyond the limit requirement under all conditions.

A5.3.2 Level Measurement / operation range

It is assumed that the SS is capable of performing measurements, within the uncertainty defined in this annex, over a level range, at the MS interface, as required in the test specification extended by the SS measurement uncertainty defined in this annex and extended by a further 3dB on the MS conformity requirement.

NOTE: This ensures that the SS is able adequately to measure the MS performance at and just beyond the limit requirement under all conditions.

A5.3.3 MS power supply interface

Test DC power supply for MS:

Voltage setting uncertainty < 1 %.

Ripple < 10 mV RMS, 50 mV peak to peak.

Test AC power supply for MS:

Voltage setting uncertainty: < 1 %.

A5.3.4 MS antenna interface

The SS is assumed to offer a nominal 50 ohm impedance to the MS.

| | | | | |
|------|----------------------|---------|----------|-------------|
| | GSM/DCS/PCS bands | < 4 GHz | < 10 GHz | < 12,75 GHz |
| VSWR | ≤ 1,3 | ≤ 2,0 | ≤ 3,0 | ≤ 3,5 |

A5.3.4.1 Uplink receiver error

The SS receiver should be capable of performing the tests as specified in 3GPP TS 11.10 without the addition of bit errors in excess of 1 in 10E7 due to the receiver performance when operated with a MS which meets the transmitter requirements of 3GPP TS 05.05. This requirement shall apply for GMSK and 8PSK modulation.

NOTE: This requirement is based on a minimum BER measurement of 1 in 10E5.

A5.3.4.2 Power and Power versus time measurements

Measurement uncertainty of transmitter output power for GMSK and 8PSK signals: ±1 dB.

In the case of 8PSK, provision is made for power measurement by averaging over multiple bursts or by using an estimation method, see 3GPP TS 05.05, clause 4. The estimation method may be based on measurements of one or more bursts, or part of a burst.

If 8PSK power is measured by averaging over multiple bursts, allowance must be made for variations in burst power as a function of the data. This allowance must be included within the ±1 dB measurement limit. The allowance is related to the number of bursts taken in the average and shall be defined as follows:

$$\text{Allowance for burst power variation} = 2\sigma/\text{SQRT}(N)$$

Where: σ = the standard deviation of burst power variation for random data (0,2 dB).

(two standard deviations yield a 95 % confidence interval).

N = number of averages.

EXAMPLE: An average is calculated from 4 bursts. The allowance for burst power variation is 0,2 dB. The accuracy for the power meter should then be better than ±0,8 dB.

If 8PSK power is measured using an estimation method, it shall be demonstrated, using the method described below, that the accuracy of the estimation technique is also ±1 dB.

A test signal is established consisting of properly formatted bursts with midambles and random data in the payload. The long-term average power of this signal is determined by measuring the power over 200 bursts and taking the average (P_{avg}). The measurement uncertainty of the equipment used to determine the long-term average shall be noted (ΔP).

The same test signal is then measured using the estimation technique. The difference between the estimated value of long-term average power and the measured long-term average power is noted (P_{est}). The following inequality shall hold:

$$|\Delta P| + |(P_{\text{avg}} - P_{\text{est}})| \leq 1 \text{ dB}$$

For GMSK, measurement uncertainty of power level (relative to peak transmitter carrier power):

| Power level | Measurement uncertainty |
|------------------|-------------------------|
| +6 dB to -7 dB | $\pm 0,25$ dB |
| -7 dB to -20 dB | $\pm 1,0$ dB |
| -20 dB to -32 dB | $\pm 2,0$ dB |
| -32 dB to -45 dB | $\pm 5,0$ dB |
| -45 dB to -71 dB | $\pm 1,0$ dB |
| < -71 dB | $\pm 2,0$ dB |

For 8PSK, measurement uncertainty of power level (relative to output power):

| Power level | Measurement uncertainty |
|------------------|-------------------------|
| +6 dB to -7 dB | $\pm 0,25$ dB |
| -7 dB to -16 dB | $\pm 1,0$ dB |
| -16 dB to -32 dB | $\pm 2,0$ dB |
| -32 dB to -45 dB | $\pm 5,0$ dB |
| -45 dB to -71 dB | $\pm 1,0$ dB |
| < -71 dB | $\pm 2,0$ dB |

NOTE: Due to the method of measurement (downconversion to I/Q baseband / filtering / A/D conversion / postprocessing) several uncertainties occur. The sources are:

- a) absolute level uncertainty;
- b) filter ripple,
I/Q gain imbalance,
I/Q imperfect quadrature;
- c) A/D conversion (resolution),
I/Q offset.

Items under b) and c) affect the individual samples and can be observed as a "ripple" in the horizontal part of the power time mask.

Items under b) are uncertainties which are proportional to the signal measured.

Items under c) are constant amounts of uncertainty, independent of the signal measured.

The item a) moves the entire power time template up or down.

The uncertainties b) and c) are added to the measured signal as an uncorrelated interferer.

The above mentioned absolute measurement uncertainty refers to a). The table covers uncertainties b) and c).

Uncertainty of time measurement

The relative timing uncertainty of the transition point:

- symbol 13 to 14 in the midamble (normal burst);
- end of the sync sequence (access burst);

is $\pm 1/8$ symbol.

Timing uncertainty of the measurement samples in the vertical part of the power time mask are displayed as marked fields in the figure A5.3-1.

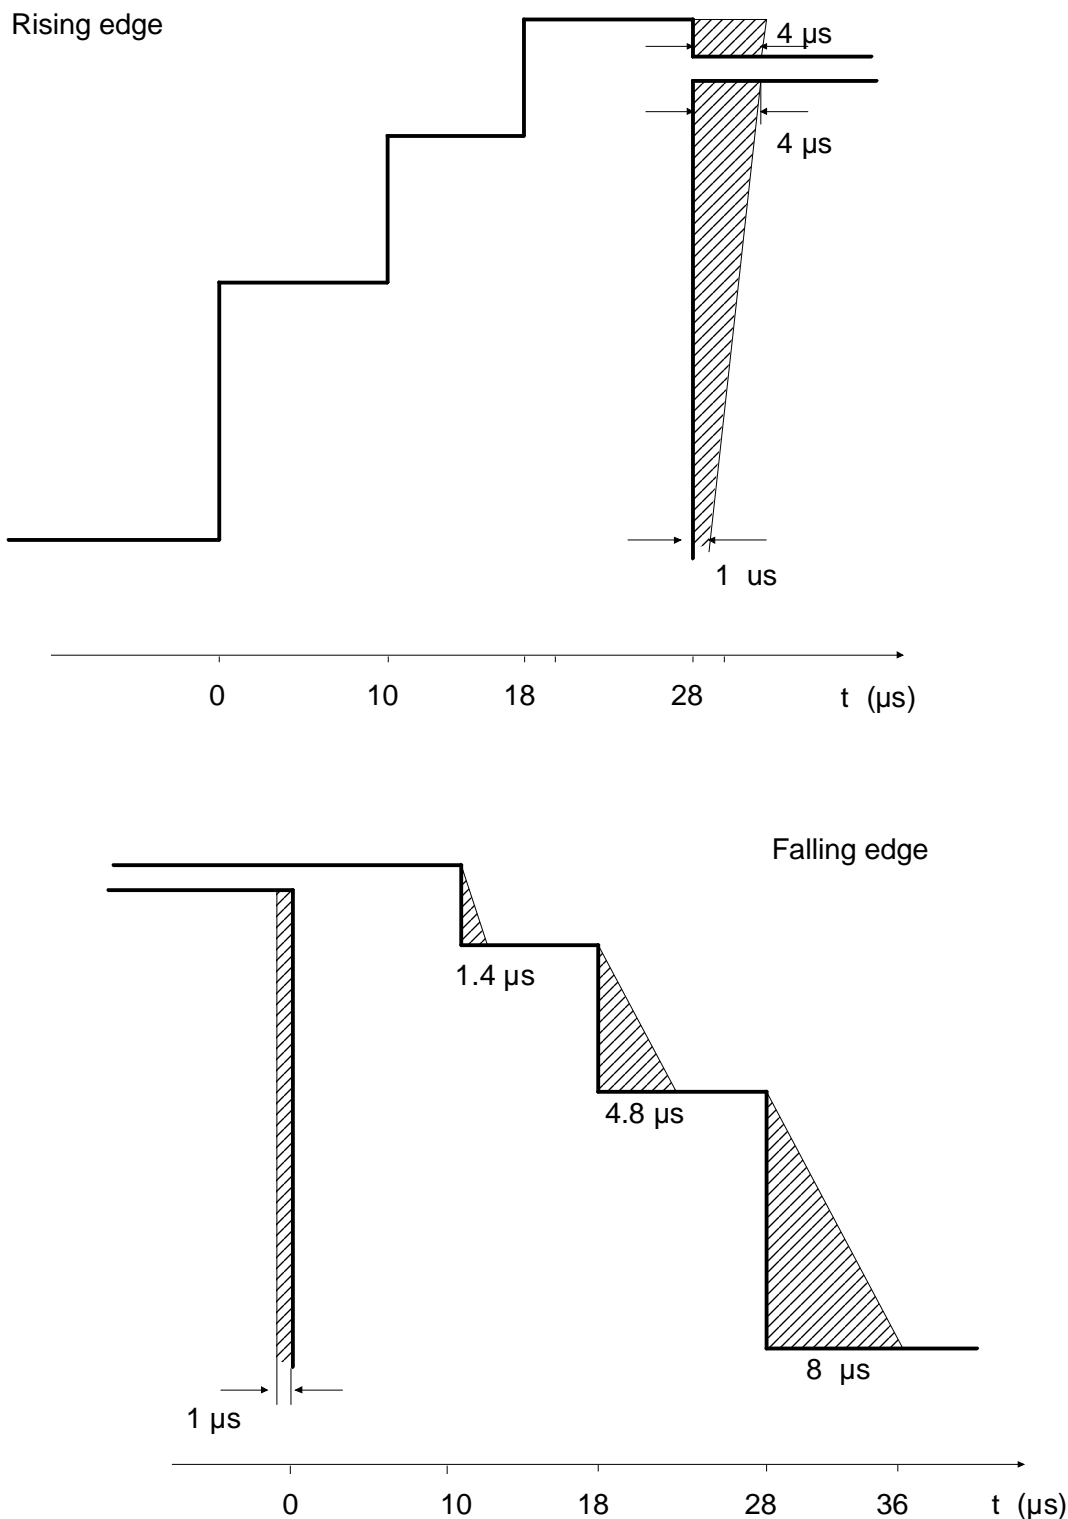

Figure A5.3-1: Time Measurement Uncertainty for the Power Time Mask

NOTE: With a real method of measurement one has to reckon on systematic measurement uncertainties in the vertical part of the power time template (figures 13-2 & 13-3). The reason for this is that the measurement is conducted through a filter which has to fulfil different requirements simultaneously, requirements in the frequency domain and in the time domain as well. The time behaviour of the filter causes the above mentioned measurement uncertainty. It occurs clearly when measuring the falling edge of the power burst. The measurement uncertainty, which in principle delays the actual performance, depends on the filter characteristics and on the signal shape. At favourable signal shapes the uncertainty is negligible, however, at unfavourable signal shapes it consumes the marked area in figure A5.3-1 (falling edge).

The underlying filter is:

- type inverse Chebycheff.
- passband $\leq \pm 200$ kHz.
- stopband (40 dB stop att.) $\geq \pm 541,67$ kHz.

To avoid aliasing with this filter the RF output spectrum must meet the requirements of subclause 13.4.

If the lowest limit line in the power time template is replaced by a -54 dBm line, measuring lower carrier powers, the area of measurement uncertainty is reduced equivalently.

The marked area in figure A5.3-1 describes the systematic measurement uncertainty of the test equipment and does not widen the design requirements.

Uncertainties associated with 13.3.5 requirement b) (power control levels, adjacent steps):

| | |
|--------------------------|-------------------------------------|
| Repeatability | $\pm 0,3$ dB |
| Linearity | $\pm 0,03$ dB/dB |
| Combined uncertainty is: | $\pm (0,3 + 0,03 \text{ dB/dB})$ dB |

E.g. where the indicated value of the step size is 2,0 dB, the uncertainty is:

$$\pm (0,3 + 0,06) \text{ dB} = \pm 0,36 \text{ dB.}$$

A5.3.4.3 Wideband selective power measurement

Power is to be measured selectively for spurious emissions without frequency hopping (ref.: clause 12).

| | | |
|-----------------------|--------------------|--------------|
| Uncertainty conducted | 100 kHz to 1GHz | $\pm 1,5$ dB |
| | 1 GHz to 12,75 GHz | $\pm 3,0$ dB |
| Uncertainty radiated | 30 MHz to 4 GHz | ± 6 dB |

NOTE: The uncertainties include the effect of a worst case reflection from the MS of 0,7 for out of band signals.

It is acceptable to use a band stop filter in spurious emission measurements of the transceiver in order to fulfil the above requirements.

A5.3.4.4 Inband selective power measurements

Power is to be measured selectively for output RF spectrum.

The measurement is performed on a single frequency while the MS is frequency hopping (ref.: subclause 13.3).

| | |
|-------------|----------------|
| Uncertainty | $< \pm 1,6$ dB |
|-------------|----------------|

NOTE: The video signal of the spectrum analyser is "gated" such that the spectrum generated by at least 40 of the bits 87 to 132 of the burst is the only spectrum measured. This gating may be analogue or numerical, dependent upon the design of the spectrum analyser.

A5.3.4.5 Modulation accuracy and frequency error measurements

GMSK modulation

Ref.: Subclauses 13.1 and 13.2 for definitions and methods of measurement.

Phase measurement uncertainty:

± 1 degree RMS;

± 4 degrees for individual phase measurement samples.

The phase measurement uncertainties above apply during the useful bits.

Frequency measurement uncertainty: ± 5 Hz.

8PSK modulation

Ref.: Subclause 13.17.1 for definitions and methods of measurement.

EVM measurement uncertainty:

$+(0,75 - 0,025\text{RMS_EVM}), -(0,75 + 0,025\text{RMS_EVM})$ % RMS;

4% for individual EVM measurement samples.

NOTE 1: The value of the RMS EVM specification is a function of the value of RMS_EVM being measured. The asymmetric specification results from the RMS EVM minimisation method used for parameter estimation (see 3GPP TS 05.05, annex G). This method of measurement for RMS EVM always produces a result that is lower than the actual value of RMS EVM.

NOTE 2: The value for individual EVM samples assumes a Rayleigh distribution of measurement errors. It represents the maximum 95th percentile value test equipment should return when measuring a signal without error.

NOTE 3: If the test equipment demodulates the transmitted signal to derive the reference signal for the EVM measurement, the symbol error rate of the demodulation process must be less than 4.4×10^{-4} for 95% confidence that no detection errors occur in a burst.

Origin Offset uncertainty (for a single burst) $< \pm 1,5$ dB for origin offset ≥ -35 dBc.

Frequency measurement uncertainty $< \pm 20$ Hz.

A5.3.4.6 RF delay measurements relative to nominal times

Range -140 to +140 symbol periods.

Resolution 1/4 symbol period.

Uncertainty $\pm 1/8$ symbol period.

A5.3.4.7 The wanted signal or traffic channel of serving cell

The Wanted signal is used in most of the specified RF measurements. The traffic channel of the serving cell is used in most of the signalling tests.

FREQUENCY:

GMSK

Uncertainty: $< \pm 5 \times 10^{-9}$.

8PSK

Uncertainty: $< \pm 20 \times 10^{-9}$.

MODULATION (see 3GPP TS 05.04):

GMSK

Phase uncertainty: < ± 1 degree RMS; and
< ± 4 degrees peak(as defined in 3GPP TS 05.05).

8PSK

EVM uncertainty < 4 % RMS.
Origin offset suppression < -35 dBc.

LEVEL:

Uncertainty: < ± 1 dB in subclause 13, 14 except;
< ± 3 dB for test 14.2 radiated;
< $\pm 1,2$ dB for test 14.6;
< $\pm 2,5$ dB for all other tests.

Settling time: < 10 us.

DYNAMIC LEVEL SETTING:

The SS shall be able to switch from any power level to any other power level within the range of 30 dB on a timeslot per timeslot basis. This dynamic switching requirement only applicable for a single channel for a limited number of tests.

SPURIOUS:

in channel:

Covered by phase error.

out channel:

Noise Power, 1 Hz bandwidth:

< -100 dBc for > 100 kHz carrier offset;
< -110 dBc for > 300 kHz carrier offset;
< -121 dBc for > 1 500 kHz carrier offset.

Non harmonics:

< -55 dBc for > 100 kHz carrier offset;
< -68 dBc for > 1 500 kHz carrier offset.

FREQUENCY HOPPING:

The signal shall be capable of hopping according to the criteria of 3GPP TS 05.02. The timing of the frequency change shall be such that frequency transitions do not occur during the active timeslot of the MS.

A5.3.4.8 The first interfering signal or traffic channel of the first adjacent cell

The First interfering signal is used in measurements of co-channel rejection, adjacent channel rejection and intermodulation rejection. The Traffic channel of the first adjacent cell is used in handover tests.

FREQUENCY:

Uncertainty:

$< \pm 5 \cdot 10^{-9}$

PHASE:

Uncertainty:

$< \pm 1$ degree RMS; and

$< \pm 4$ degrees peak (as defined in 3GPP TS 05.05).

LEVEL:

Uncertainty:

$< \pm 1$ dB relative to the wanted signal for test 13.2 and 14.5;

$< \pm 0,3$ dB relative to the wanted signal for test 14.4, 14.10, 14.11, 14.12 and 14.16.4;

$< \pm 1$ dB for test 14.6;

$< \pm 2,5$ dB for all other tests.

MODULATION:

GMSK (as specified in 3GPP TS 05.04)

The total relative single sideband power (noise + harmonics) in the frequency range 1,5 MHz to 1,7 MHz offset from the nominal carrier frequency shall be less than -72 dBc.

SPURIOUS:

In channel:

Covered by phase error.

Out channel:

Noise Power, 1 Hz bandwidth:

< -100 dBc for > 100 kHz carrier offset;

< -110 dBc for > 300 kHz carrier offset;

< -127 dBc for $> 1\ 500$ kHz carrier offset.

non harmonics:

< -55 dBc for > 100 kHz carrier offset;

< -68 dBc for $> 1\ 500$ kHz carrier offset.

FREQUENCY HOPPING:

The signal shall be capable of hopping according to the criteria of 3GPP TS 05.02. The timing of the frequency change shall be such that frequency transitions do not occur during the active timeslot of the MS.

A5.3.4.9 The second interfering signal

The second interfering signal is used in the measurements of intermodulation rejection and blocking.

FREQUENCY:

Uncertainty:

< $\pm 5 \cdot 10^{-9}$.**LEVEL:**

Uncertainty:

< ± 1 dB for test 14.6;< $\pm 1,5$ dB relative to the wanted signal for all other tests.**MODULATION:**

Unmodulated.

SPURIOUS:

In channel:

No requirements.

Out channel:

Noise Power, 1 Hz bandwidth:

< -135 dBc for > 500kHz carrier offset;

< -140 dBc for > 700kHz carrier offset;

< -150 dBc for > 1 500kHz carrier offset.

Non harmonics:

< -79 dBc for > 500 kHz carrier offset;

< -84 dBc for > 700 kHz carrier offset;

< -94 dBc for > 1 500 kHz carrier offset.

Harmonically related spuri:

< -40 dBc.

A5.3.4.10 BCCH carriers of serving and adjacent cells

The BCCH of the serving cell is used for synchronizing the MS and to send network information to the MS under test. The BCCH signals of the adjacent cells are used in the handover tests. The MS measures the RF-levels of the BCCHs of adjacent cells.

FREQUENCY:

Uncertainty:

< $\pm 5 \cdot 10^{-9}$.

PHASE:

Uncertainty:

< ±1 degree RMS; and

< ±4 degrees peak(as defined in 3GPP TS 05.05).

LEVEL:

Uncertainty:

< 1 dB for test 13.2 and 20;

< 2,5 dB for all other tests;

< 0,6 dB relative to each other and to TCH for test 21 over the range 65 dBmicroVoltemf to 3 dBmicroVoltemf;

< 1,2 dB relative to each other and to TCH for test 26.3.

MODULATION:

GMSK (as specified in 3GPP TS 05.04).

SPURIOUS:

In channel:

Covered by phase error.

Out channel:

Noise Power, 1Hz bandwidth:

< -100 dBc for > 100 kHz carrier offset;

< -125 dBc for > 1 500 kHz carrier offset.

Non harmonics:

< -55 dBc for > 100 kHz carrier offset;

< -72 dBc for > 1 500 kHz carrier offset.

A5.3.4.11 The wide frequency range signal

The wide frequency range signal is used in the measurements of spurious response.

FREQUENCY

Uncertainty:

< ± 5*10E-9.

LEVEL

Uncertainty:

< ±1,5 dB relative to the wanted signal for test 14.7;

< ±1 dB error of substituted "wanted signal".

MODULATION:

Unmodulated.

SPURIOUS in the MS receiving range:

Non harmonics:

< -94 dBc.

Harmonically related spuri:

< -40 dBc.

Noise:

< -4 dBuVemf equivalent at the MS receiver input when measured in a 200 kHz bandwidth.

A5.3.4.12 The multipath fading function

The multipath fading function simulates the fading effects of a broadband radio channel in mobile radio communication.

The propagation conditions are specified in 3GPP TS 05.05, annex 3.

The multipath fading function shall be performed only within a 5 MHz bandwidth during one test case.

A5.3.5 MS audio interface and DAI

A5.3.5.1 General uncertainties

Unless otherwise specified, the following uncertainties apply to the audio interface:

Signal level measurement uncertainty: $\pm 0,2$ dB;

Sound pressure measurement uncertainty: $\pm 0,6$ dB;

Frequency Measurement uncertainty: $\pm 0,1$ %.

Stimulus frequency setting uncertainty:

Frequency settings are taken from ISO 3, R10 series or R40 series or from table 2 of Rec. ITU-T Recommendation P.79. A departure from the nominal frequencies of ± 5 % below 240 Hz and ± 2 % at 240 Hz and above is accepted.

In the case of 4 kHz the departure is restricted to -2 %.

A5.3.5.2 Analogue single test tone

Total distortion:

< 0,5 %.

A5.3.5.3 Delay measurement between Um and DAI

The delay measurement between the Um interface of the MS and its DAI in both directions is described in subclause 32.5.

Uncertainty:

< $\pm 0,1$ ms.

A5.4 SIM simulator functional requirements

A5.4.1 General

The SIM simulator shall implement the functions of a SIM as described in 3GPP TS 02.17 and 3GPP TS 11.11.

The Test Algorithm for authentication incorporated in the SIM Simulator shall operate as described in annex 3.

A5.4.2 Contacts C1, C2, C6, C7

A5.4.2.1 Default measurement / setting uncertainties

Unless stated otherwise below, the following uncertainties apply:

Voltage measurement uncertainty: $< \pm 50$ mV;

Voltage setting uncertainty: $< \pm 20$ mV;

Time measurement uncertainty: $< \pm 100$ ns.

A5.4.2.2 Contact C1

Continuous Spikes:

Voltage measurement uncertainty:

$< \pm 100$ mV.

Current Load Amplitude:

0 mA - 20 mA

Adjustable Step Size:

1 mA.

Uncertainty

$< \pm 1$ mA.

Additional Current Offset:

0 mA - 5 mA.

Adjustable Step Size:

1 mA.

Uncertainty:

$< \pm 1$ mA.

Pulse Width:

100 ns - 500 ns.

Adjustable Step Size:

50 ns.

Uncertainty:

$< \pm 25$ ns.

Rise and Fall Time:

≤ 50 ns.

Pause Width:

100 ns - 500 ns.

Adjustable Step Size:

50 ns.

Uncertainty:

< ± 25 ns.

Random Spikes:

Voltage measurement uncertainty:

< ± 100 mV.

Current Load Amplitude:

50 mA - 200 mA.

Adjustable Step Size:

1 mA.

Uncertainty:

< ± 1 mA.

Additional Current Offset:

0 mA - 5 mA.

Adjustable Step Size:

1 mA.

Uncertainty:

< $\pm 0,1$ mA.

Pulse Width:

100 ns - 500 ns.

Adjustable Step Size:

50 ns.

Uncertainty:

< ± 25 ns.

Rise and Fall Time:

≤ 50 ns.

Pause Width:

0,1 ms - 500 ms, randomly varied.

Adjustable Step Size:

0,1 ms.

Uncertainty:

< $\pm 0,1$ ms.

A5.4.2.3 Contact C7

The Elementary Time Unit (etu) used in the subclauses below refer to the nominal bit duration on the I/O line, as defined in ISO 7816-3.

Rise & fall Time setting uncertainty: $< \pm 100$ ns.

Jitter measurement uncertainty: $< \pm 5 \cdot 10^{-3}$ etu.

Jitter setting uncertainty: $< \pm 5 \cdot 10^{-3}$ etu.

A5.4.3 Contact C3

Frequency measurement uncertainty: $< \pm 0,5$ %.

Voltage Measurement uncertainty: $< \pm 50$ mV.

Rise & fall time measurement uncertainty: $< \pm 5$ ns.

Duty cycle measurement uncertainty: $< \pm 2,5$ %.

A5.4.4 Definition of timing

It shall be possible to define all timings relative to the clock. The SIM simulator shall be able to calculate and to use the absolute values automatically, even if the ME changes the frequency during the communication.

A5.5 A-GPS and A-GNSS Minimum Performance Test System requirements

A5.5.1 Test System Uncertainty for A-GPS and A-GNSS Minimum Performance tests

The maximum acceptable uncertainty of the Test System is specified below for each test, where appropriate.

The Test System shall enable the stimulus signals in the test case to be adjusted to within the specified range, and the equipment under test to be measured with an uncertainty not exceeding the specified values. All ranges and uncertainties are absolute values, and are valid for a confidence level of 95 %, unless otherwise stated.

A confidence level of 95 % is the measurement uncertainty tolerance interval for a specific measurement that contains 95 % of the performance of a population of test equipment.

It should be noted that the uncertainties in this clause apply to the Test System operating into a nominal 50 ohm load and do not include system effects due to mismatch between the DUT and the Test System.

Table A5.5.1: Maximum Test System Uncertainty for A-GPS Minimum Performance tests

| Clause | Maximum Test System Uncertainty | Derivation of Test System Uncertainty | |
|--|---------------------------------|---------------------------------------|---|
| 70.11.5.1 Sensitivity Coarse Time Assistance | Coarse Time Assistance | ±200 ms | |
| | Absolute GPS signal level | ±1 dB | |
| | Position error | ±0.05 m | Position error consists of ±0.05 m system uncertainty. The effect of position reporting resolution of approximately ±1.2 m (see note) is not included in the allowable test system uncertainty but is included in the Test Parameter Relaxations since this resolution limitation limits the reporting capability of the MS. For simplicity the combined Test Parameter Relaxation is given as ±1.3 m |
| | Response time | ± 300 ms | |
| 70.11.5.2 Sensitivity Fine Time Assistance | Coarse Time Assistance | ±200 ms | |
| | Fine Time Assistance | ±1 us | |
| | Absolute GPS signal level | ±1 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |
| 70.11.6 Nominal Accuracy | Coarse Time Assistance | ±200 ms | |
| | Absolute GPS signal level | ±1 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |
| 70.11.7 Dynamic Range | Coarse Time Assistance | ±200 ms | |
| | Absolute GPS signal level | ±1 dB | |
| | Relative GPS signal level | ±0.2 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |
| 70.11.8 Multi-Path scenario | Coarse Time Assistance | ±200 ms | |
| | Absolute GPS signal level | ±1 dB | |
| | Relative GPS signal level | ±0.2 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |

NOTE: For MS based mode the effect of position reporting resolution is given by:

$$\sqrt{\left(\frac{90 \times 2 \times \pi \times R}{2E23 \times 360}\right)^2 + \left(\frac{360 \times 2 \times \pi \times R \times \cos \phi}{2E24 \times 360}\right)^2}$$

meters, where R is the radius of the earth and ϕ is the latitude of the location. For the two GPS scenarios defined in TS 51.010-7 subclause 5.2 this equates to approximately 2.32 m and 2.24 m. For simplicity this is given as ±1.2 m.

For MS assisted mode it is assumed that the output from the WLS position solution calculation in clause 70.11.4.3 is coded using the same position coding method as for MS based mode before being used to calculate position error. Therefore the effect of reporting resolution will be the same as for MS based mode.

Table A5.5.2: Maximum Test System Uncertainty for A-GNSS Minimum Performance tests

| Clause | Maximum Test System Uncertainty | | Derivation of Test System Uncertainty |
|---|---------------------------------|----------|---|
| 70.16.5.1 Sensitivity Coarse Time Assistance | Coarse Time Assistance | ±200 ms | |
| | Absolute GNSS signal level | ±1 dB | |
| | Position error | ±0.05 m | Position error consists of ±0.05 m system uncertainty. The effect of position reporting resolution of approximately ±1.2 m (see note) is not included in the allowable test system uncertainty but is included in the Test Parameter Relaxations since this resolution limitation limits the reporting capability of the MS. For simplicity the combined Test Parameter Relaxation is given as ±1.3 m |
| | Response time | ± 300 ms | |
| 70.16.5.2 Sensitivity Fine Time Assistance | Coarse Time Assistance | ±200 ms | |
| | Fine Time Assistance | ±1 us | |
| | Absolute GNSS signal level | ±1 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |
| 70.16.6 Nominal Accuracy | Coarse Time Assistance | ±200 ms | |
| | Absolute GNSS signal level | ±1 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |
| 70.16.7 Dynamic Range | Coarse Time Assistance | ±200 ms | |
| | Absolute GNSS signal level | ±1 dB | |
| | Relative GNSS signal level | ±0.2 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |
| 70.16.8 Multi-Path scenario | Coarse Time Assistance | ±200 ms | |
| | Absolute GNSS signal level | ±1 dB | |
| | Relative GNSS signal level | ±0.2 dB | |
| | Position error | ±0.05 m | Position error as above |
| | Response time | ± 300 ms | |

NOTE: For MS based mode the effect of position reporting resolution is given by:

$$\sqrt{\left(\frac{90 \times 2 \times \pi \times R}{2E23 \times 360}\right)^2 + \left(\frac{360 \times 2 \times \pi \times R \times \cos \phi}{2E24 \times 360}\right)^2}$$

meters, where R is the radius of the earth and ϕ is the latitude of the location. For the GNSS scenarios defined in TS 51.010-7 subclause 6.2 this equates to approximately [TBD] m. For simplicity this is given as ±1.2 m.

For MS assisted mode it is assumed that the output from the WLS position solution calculation in clause 70.16.4.3 is coded using the same position coding method as for MS based mode before being used to calculate position error. Therefore the effect of reporting resolution will be the same as for MS based mode.

A5.5.2 Test Parameter Relaxations (This clause is informative)

The Test Parameter Relaxations defined in this clause have been used to relax the Conformance requirement to derive the Test Requirements.

The Test Parameter Relaxations are derived from Test System uncertainties, regulatory requirements and criticality to system performance. As a result, the Test Parameter Relaxations may sometimes be set to zero.

The Test Parameter Relaxations should not be modified for any reason e.g. to take account of commonly known test system errors (such as mismatch, cable loss, etc.).

Table A5.5.2.1: Test Parameter Relaxations for A-GPS Minimum Performance tests

| Clause | Test Parameter Relaxation | |
|--|---------------------------|--------|
| 70.11.5.1 Sensitivity Coarse Time Assistance | Coarse Time Assistance | 200 ms |
| | Absolute GPS signal level | 1 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.11.5.2 Sensitivity Fine Time Assistance | Coarse Time Assistance | 200 ms |
| | Fine Time Assistance | 1 us |
| | Absolute GPS signal level | 1 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.11.6 Nominal Accuracy | Coarse Time Assistance | 200 ms |
| | Absolute GPS signal level | 0 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.11.7 Dynamic Range | Coarse Time Assistance | 200 ms |
| | Absolute GPS signal level | 0 dB |
| | Relative GPS signal level | 0.2 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.11.8 Multi-Path scenario | Coarse Time Assistance | 200 ms |
| | Absolute GPS signal level | 0 dB |
| | Relative GPS signal level | 0.2 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |

Table A5.5.2.2: Test Parameter Relaxations for A-GNSS Minimum Performance tests

| Clause | Test Parameter Relaxation | |
|--|----------------------------|--------|
| 70.16.5.1 Sensitivity Coarse Time Assistance | Coarse Time Assistance | 200 ms |
| | Absolute GNSS signal level | 1 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.16.5.2 Sensitivity Fine Time Assistance | Coarse Time Assistance | 200 ms |
| | Fine Time Assistance | 1 us |
| | Absolute GNSS signal level | 1 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.16.6 Nominal Accuracy | Coarse Time Assistance | 200 ms |
| | Absolute GNSS signal level | 0 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.16.7 Dynamic Range | Coarse Time Assistance | 200 ms |
| | Absolute GNSS signal level | 0 dB |
| | Relative GNSS signal level | 0.2 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |
| 70.16.8 Multi-Path scenario | Coarse Time Assistance | 200 ms |
| | Absolute GNSS signal level | 0 dB |
| | Relative GNSS signal level | 0.2 dB |
| | Position error | 1.3 m |
| | Response time | 300 ms |

A5.5.3 Interpretation of measurement results

The measurement results returned by the Test System are compared - without any modification - against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in TR 102 273-1-2, clause 6.5.

The actual measurement uncertainty of the Test System for the measurement of each parameter shall be included in the test report.

The recorded value for the Test System uncertainty shall be, for each measurement, equal to or lower than the appropriate figure in clause A5.5.1.

If the Test System for a test is known to have a measurement uncertainty greater than that specified in clause A5.5.1, it is still permitted to use this apparatus provided that an adjustment is made value as follows:

Any additional uncertainty in the Test System over and above that specified in clause A5.5.1 shall be used to tighten the Test Requirement - making the test harder to pass. (This may require modification of stimulus signals). This procedure will ensure that a Test System not compliant with clause A5.5.1 does not increase the chance of passing a device under test where that device would otherwise have failed the test if a Test System compliant with clause A5.5.1 had been used.

A5.5.4 Derivation of Test Requirements (This clause is informative)

The Test Requirements have been calculated by relaxing the Conformance requirement of the core specification using the Test Parameter Relaxations defined in clause A5.5.2. When the Test Parameter Relaxation is zero, the Test Requirement will be the same as the Conformance requirement. When the Test Parameter Relaxation is non-zero, the Test Requirements will differ from the Conformance requirement, and the formula used for this relaxation is given in table A5.5.4.1 and A5.5.4.2.

Table A5.5.4.1: Derivation of Test Requirements for A-GPS Minimum Performance tests

| Test | Conformance requirement in 3GPP TS 45.005 | | Test Parameter Relaxation (TPR) | Test Requirement |
|--|---|------------------|---------------------------------|---|
| 70.11.5.1 Sensitivity Coarse Time Assistance | Coarse Time Assistance | ± 2 s | 200 ms | Formulas: UL-TPR, LL+TPR: ± 1.8 s |

Annex 6 (informative): E-OTD Accuracy Measurement Test Environment

A6.1 Recommended Timing Accuracy Test Environment (Unassisted)

3GPP TS 05.05, annex I calls for a best-case MS measurement observed timing difference (OTD) accuracy of 100 nanoseconds. This level of measurement accuracy implies that:

1. The time delay and phase shift of all components in the test environment must be taken into account.
2. The laboratory equipment utilized to measure the burst alignment of the two base station simulators must support a time resolution of at least 10 nanoseconds.
3. All base station simulators, active RF channel simulators, and time measurement equipment must be phase-locked to a common reference clock.
4. All base station simulators used for this test must be frame synchronized.

Figure A6-1 represents a recommended configuration for the unassisted measurement of E-OTD accuracy. If this test environment is utilized, the effects of differing cable lengths, channel simulator processing delays, etc., must be compensated for in order to establish the RTD between bursts from the base station simulators.

The "unassisted" test environment should require a relatively short time ($< 3\ 000$ s) for the test environment to obtain N measurements for the purpose of calculating the RMS_{90} timing error of the MS. In many cases, the predominant component leading to uncertainty in RTD between the two base station simulators during the measurement period will be phase jitter, which should follow a Gaussian distribution. The standard deviation of this distribution must be kept within a range that allows the test laboratory to confirm that this uncertainty component does not significantly affect the results of the OTD measurements made and reported by the MS. Test labs and base station simulator manufacturers are expected to quantify and document the test environment's RTD. Test labs and base station simulator manufacturers are also expected to have some means of verifying the standard deviation of the test environment's RTD (including phase jitter introduced by the RF channel simulators), declaring that this uncertainty will be negligible relative to the 100 nanosecond RMS_{90} best-case requirements of 3GPP TS 05.05 (V8.7.1), Release 99, annex I.

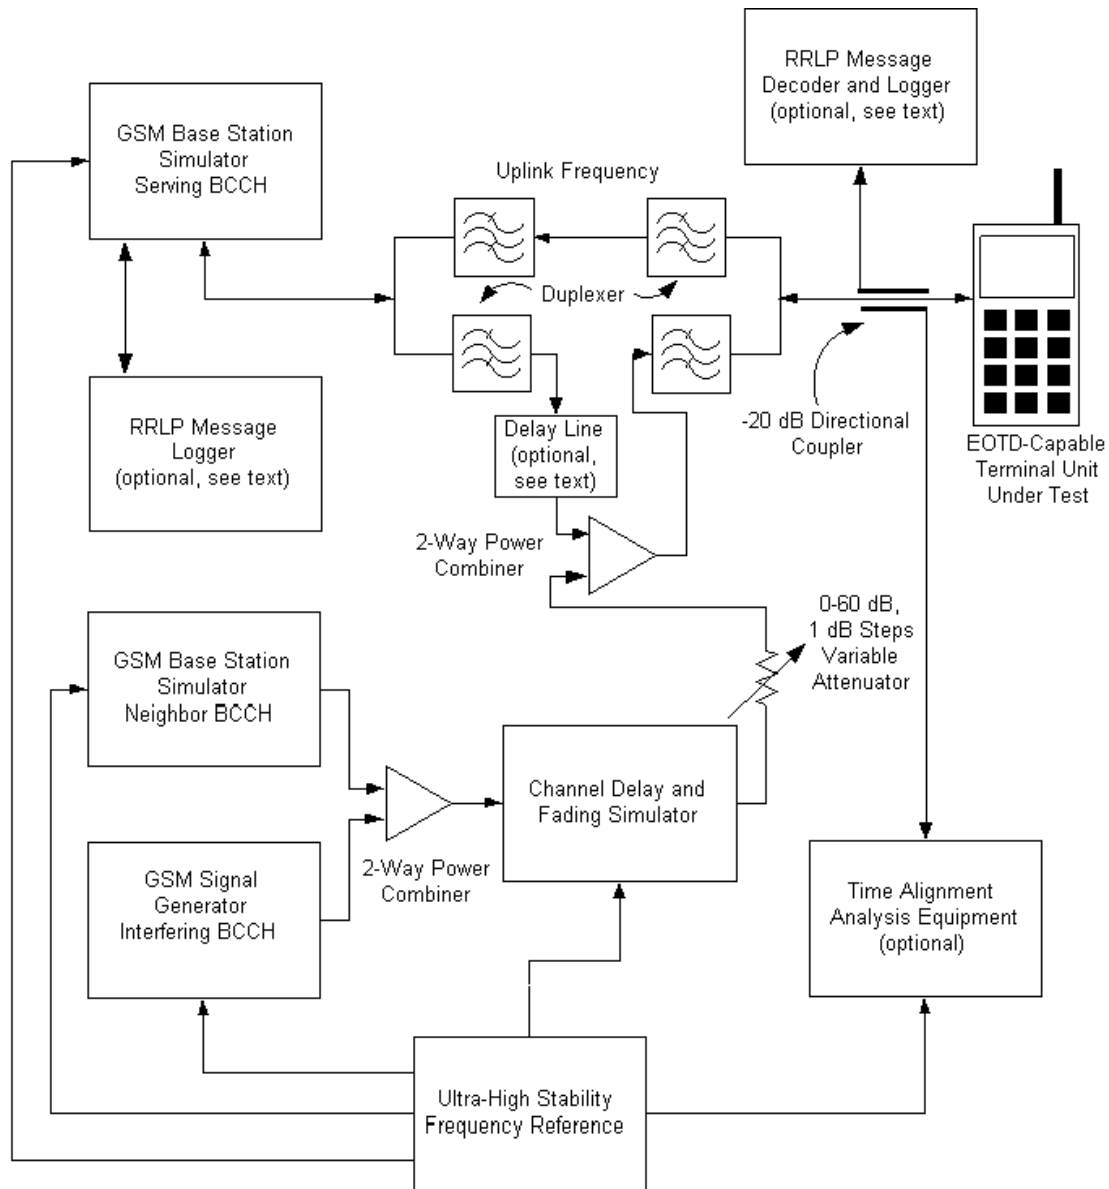

Figure A6-1: "Unassisted" E-OTD Test Environment

A6.2 Recommended Timing Accuracy Test Environment (Assisted)

In some laboratory environments, test equipment may not be available to measure and/or maintain the base station simulator burst time alignment to the accuracy required by the "unassisted" test environment described earlier. In such cases, a test configuration of the type shown in figure A6-2 may be employed for E-OTD performance validation. In this configuration, an LMU of known accuracy is used to measure the real timing difference (RTD) between the serving and neighbour base station simulators.

The "assisted" test environment should require a relatively short time (< 3 000 s) for the test environment to obtain N measurements for the purpose of calculating the RMS_{90} timing error of the MS. In many cases, the predominant component leading to uncertainty in RTD between the two base station simulators during the measurement period will be phase jitter, which should follow a Gaussian distribution. The timing offset or RTD between the two base station simulators is reported by the LMU. Even if an RTD measurement from the LMU is made in synchronism with an OTD measurement from the MS, some means of verification must be available to assure that the standard deviation of the RTD is kept within a range that allows the laboratory to confirm that this uncertainty does not significantly affect the results of the OTD reported by the MS. Test labs and LMU manufacturers are expected to have some means of verifying the standard deviation of the RTD reported for the test environment (including phase jitter introduced by the RF channel simulator), and declaring that this uncertainty component will be negligible relative to the 100 nanosecond RMS_{90} best-case requirements of 3GPP TS 05.05 (V8.7.1), Release 99, annex I.

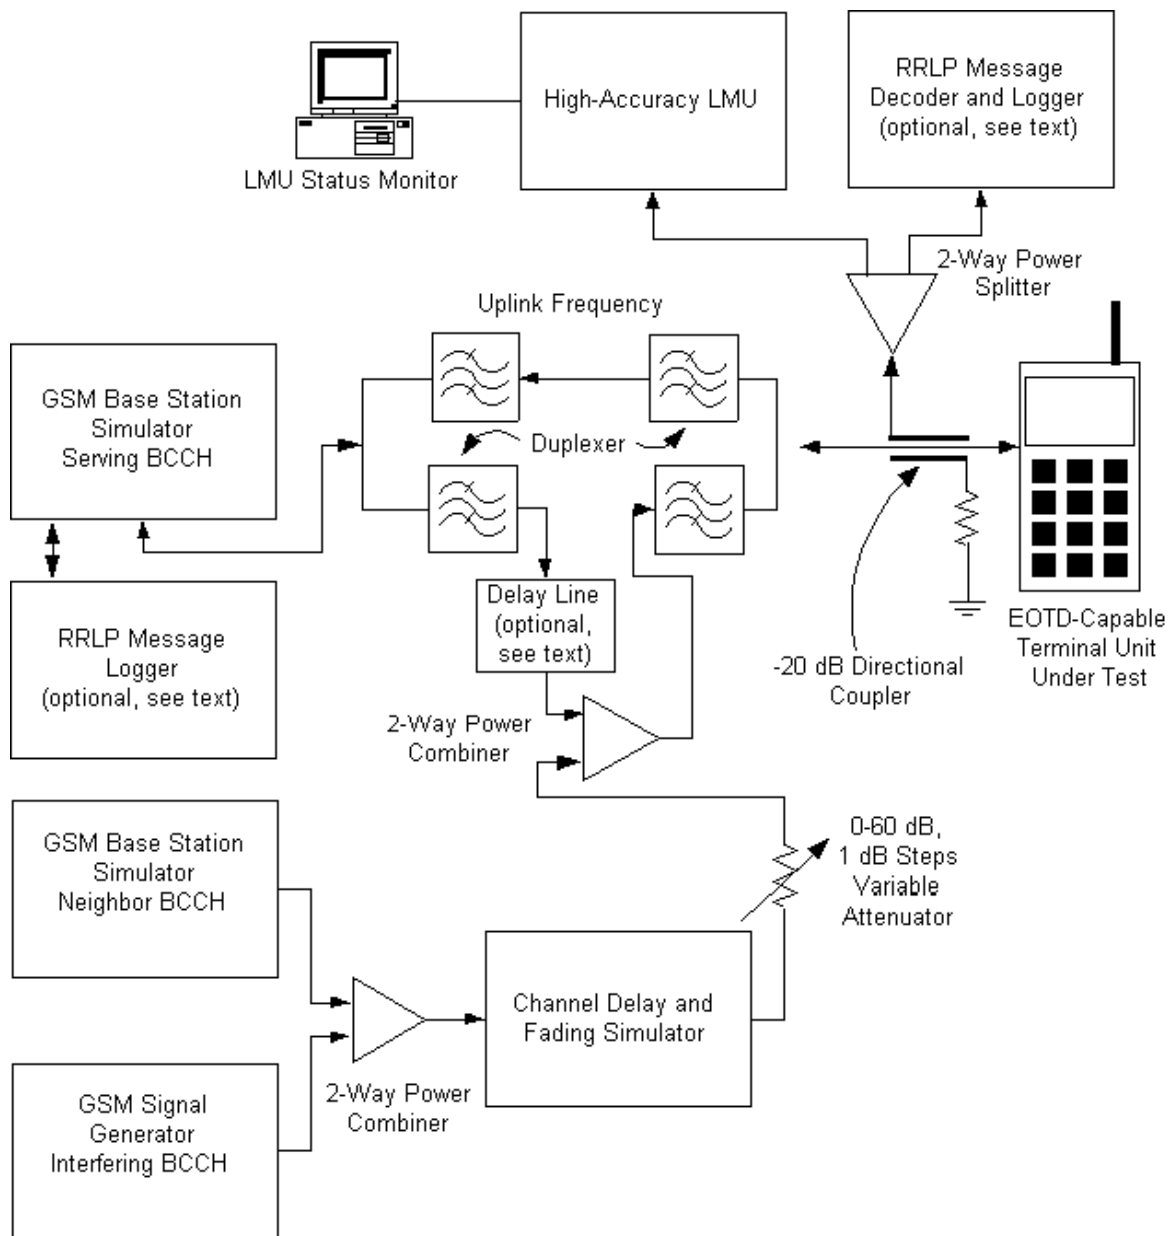

Figure A6-2: "Assisted" E-OTD Test Environment

Delay Line

Almost all active RF channel fading simulators introduce some intrinsic propagation delay, even when set to an RF channel delay of zero. In some cases, this delay may be too great to compensate for using a passive delay as shown in figure A6-1 and figure A6-2. In such cases, the intrinsic delay of the channel simulator shall be included in the

calculation of RTD for the test environment. Any phase jitter contribution from the RF channel fading simulator must be taken into account when evaluating the standard deviation of the test environment's RTD.

Simulated Geometric Time Difference

Once the RTD of the test environment is known, any additional time delay added to the fading simulator RF path will simulate the effect of distance between the MS and its neighbour cell. 3GPP TS 05.05 (V8.7.1), Release 99, annex I does not specify a value for geometric time delay, in part because the MS could be equidistant from the three base stations required for E-OTD calculation in a real network. Also, in an actual network, the geometric delay an MS must contend with can vary from 0 μ sec to over 50 μ sec, however, the 3GPP TS 05.05, annex I specification is only concerned with measurement error. Consequently, the test procedures described in this subclause require that no additional time delay will be added to simulate a geometric time difference.

Neighbour Lists

The serving base station simulator must be configured to include the neighbour base station simulator in its BA list. During interference tests, the interfering signal generator shall not be included in the serving base station simulator's BA list.

Interfering BCCH Signal Generator

The interfering BCCH signal generator shall provide a continuous GMSK signal, modulated with a pseudo-random bit sequence. This signal generator shall not be frame-synchronized with the serving or neighbour base station simulators.

RRLP Measure Position Request

The RRLP Measure Position Request sent from the serving base station simulator shall include the field values listed in table A6-1.

Table A6-1: RRLP Measure Position Request Field Values, Positioning Instructions Data Element

| Field Name | Value | Comments |
|--------------------------------|-------|-----------------------------|
| Method Type | 0 | Value="MS assisted" |
| Positioning Methods | 0 | Value="E-OTD" |
| Response Time | 1 | Value=2 seconds |
| Accuracy | NA | This field is optional |
| Multiple Sets | 0 | Value=Multiple sets allowed |
| Environmental Characterisation | NA | This field is optional |

The following Measure Position Request components will be used when relevant to the test:

- E-OTD Reference BTS of Assistance Data;
- E-OTD Measurement Assistance Data for System Information List Element;

These two assistance data elements are necessary in the Measure Position Request to facilitate the execution of certain physical-layer E-OTD tests. For example, 3GPP TS 05.05, Annex I requires that in some instances, an E-OTD capable MS must support a specified timing measurement accuracy when the neighbour BCCH is below the device's reference sensitivity. Without assistance data, it may be impossible to execute the necessary physical layer validation tests because the MS upper protocol layers would be incapable of decoding the BSIC of the neighbour BCCH.

MS Mode During Measurement

The MS under test shall make the requested measurements while in the dedicated mode on a TCH.

Automation of E-OTD Measurements

If at all possible, the laboratory environment used to verify E-OTD accuracy should be capable of supporting automated measurements. A minimum of 250 trials shall be utilized.

Terminal Unit RRLP Message Monitoring

The test lab shall have some means of logging the Measure Position Response message transmitted by the MS. This can be accomplished utilizing a suitable U_m interface analyzer monitoring the MS RRLP messages on the uplink, or through a base station simulator capable of reading and logging RRLP messaging. The device used to capture the received

RRLP messages should be capable of logging the MS observed time difference measurement to a flat ASCII file, with each of the reported OTD values in decimal.

E-OTD Measurement With 8PSK Modulated Bursts

3GPP TS 05.05 (V8.7.1) Release 99, annex I requires that an E-OTD-capable MS must support E-OTD measurements when the serving and the neighbour base stations are transmitting 8PSK modulated bursts. This test plan verifies that the timing error of an E-OTD-capable MS is maintained regardless of whether the serving and neighbour base station simulators are transmitting either GMSK or 8PSK in time slots 1 through 7.

Accuracy Calculation

In order to minimize the effects of "outlying" data points, the timing difference measurement accuracy of an E-OTD MS shall be calculated as an RMS value of 90% of the measurement trials with the least error. For example, if N=250 measurement trials, the trial error results x_1 through x_{250} shall be sorted in ascending order of error. A subset M that includes 90 % of the trials in set N (M=225 trials in this example) shall be established. In this example, the subset M will include the 225 trial results with the least error from set N. The RMS error is then calculated from the data points in subset M according to Equation A6-1 below:

(Equation A6-1) RMS_{90} Calculation

$$\mathbf{Error}_{\mathbf{RMS}} = \sqrt{\left(\left(\frac{\sum_{i=1}^M x_i^2}{M} \right) + M \right)}$$

Annex 7 (informative): General rules for statistical testing

A7.1 Statistical testing of receiver performance

Testing the receiver performance can be done either in the classical way with a fixed minimum number of samples or using statistical methods that lead to an early pass/fail decision with test time significantly reduced for MS with an error rate not on the limit.

Statistical testing of the receiver performance is based on the evaluation of error rates, such as bit error rates, block error rates or also the rate of missing bad frame indications.

A7.1.1 Basics

A7.1.1.1 Definition of (error) events

1) Bit Error Ratio (BER)

The Bit Error Ratio is defined as the ratio of the bits wrongly received to all data bits sent.

2) Block Error Ratio (BLER)

A Block Error Ratio is defined as the ratio of the number of erroneous blocks received to the total number of blocks sent. An erroneous block is defined as a Transport Block, the cyclic redundancy check (CRC) of which is wrong.

3) Rate of missing Bad Frame Indications (BFI)

The rate of missing Bad Frame Indications is the ratio of frames not marked incorrect to all frames sent, although all frames sent are incorrectly. This mechanism is used to test Bad Frame Indication of the MS.

A7.1.1.2 Test Method

Each test is performed in the following manner:

- a) Set up the required test conditions.
- b) Continuously record the number of samples tested and the number of (error) events (bit error, block error or missing BFI).
- c) While recording samples and errors continuously check, if it is about time to make a decision. The possible outcomes of a decision are: Early pass, early fail, continue with measuring the error rates, pass or fail.

A7.1.1.3 Test Criteria

The test shall fulfil the following requirements:

- a) good pass fail decision with high confidence level
 - 1) to keep reasonably low the probability (risk) of passing a bad unit for each individual test;
 - 2) to have high probability of passing a good unit for each individual test;
- b) good balance between test time and statistical significance
 - 3) to perform measurements with a high degree of statistical significance;
 - 4) to keep the test time as low as possible.

A7.1.1.4 Calculation assumptions

A7.1.1.4.1 Statistical independence

- (a) It is assumed, that error events are rare (error rate close to zero) and independent statistical events.

The assumption of rare events is justified by the error rates that need to be met by the DUT. Statistical independence is given as data bits of completely transmitted bursts are evaluated without further memory of the receiver active. Samples and errors are summed up after every time slot interval. So the assumption of independent error events is justified.

- (b) In error rate tests with fading there is the memory of the multipath fading channel which interferes the statistical independence. A minimum test time is introduced to average fluctuations of the multipath fading channel. So the assumption of independent error events is justified approximately.

A7.1.1.4.2 Applied formulas

The formulas, applied to describe the error rate test, are based on the following experiments:

- (1) After having observed a certain number of (error) events (**ne**) the number of samples are counted to calculate the error rate. Provisions are made such that the complementary experiment is valid as well:
- (2) After a certain number of samples (**ns**) the number of errors, occurred, are counted to calculate the error rate.

Experiment (1) stipulates to use the following Chi Square Distribution with degree of freedom **ne**:

$$2 \times X^2(2 \times \nu, 2 \times \mathbf{ne})$$

Where X^2 is the Chi-square distribution.

Experiment (2) stipulates to use the Poisson Distribution:

$$P_{\nu}(\mathbf{ne})$$

Where $P_{\nu}(\mathbf{ne})$ is the Poisson distribution for **ne** with mean ν .

with ν as the mean of the distribution.

To determine the early stop conditions, the following inverse cumulative operation is applied:

$$\frac{1}{2} C^{-1}(D, 2 \times \mathbf{ne}). \text{ This is applicable for experiment (1) and (2).}$$

D Wrong decision risk per test step.

NOTE: Where C^{-1} is the inverse cumulative distribution function for the X^2 distribution (the D-quantile function)
Other inverse cumulative operations are available, however only this is suited for experiment (1) and (2).

A7.1.2 Definition of good pass fail decision

A correct pass/fail decision requires the knowledge of the exact (true) error ratio of the DUT. However the true error ratio of the DUT is generally unknown. Measuring the true error ratio of the DUT requires to evaluate an infinite number of samples, which of course is not possible. This means that any error rate measurement within limited time is affected by an uncertainty, leading to two kinds of wrong decisions possible. If the measured error rate is higher than the true error rate a good DUT could possibly be failed and vice versa if the measured error rate is lower a bad DUT could possibly be passed.

Error rate tests within limited time hence require the acceptance of a wrong decision risk. The measure of a good pass fail decision is given by the probability (risk) F of the wrong decision at the end of the test. The probability of a correct decision is $1-F$.

Wrong decision risk F for one single error ratio test:

The probability (risk) to fail a good DUT shall be F_{fail} according to the following definition: A DUT is failed, accepting a probability F_{fail} that the DUT is still better than the test requirement

The probability (risk) to pass a bad DUT shall be F_{pass} according to the following definition: A DUT is passed, accepting a probability F_{pass} that the DUT is still worse than M times the specified error ratio. ($M > 1$ is the bad DUT factor).

The wrong decision risk F explained above applies to one single error ratio test. In most test cases where only one or few error ratio tests are done the wrong decision risk acceptable for an erroneous pass is identical to the acceptable risk for an erroneous fail:

$$F_{\text{pass}} = F_{\text{fail}} = F \quad \text{and e.g.} \quad F = 0.2\%$$

If a test is repeated under different conditions for several times, the total wrong decision risk for the DUT increases. The increasing risk for a bad fail decision is not acceptable for test cases that are composed of many single error rate tests like e.g. the blocking test, which implies approximately 3000 error rate tests (depends on design of MS). A DUT on the limit will fail approximately 6 to 7 times due to statistical reasons (wrong decision probability at the end of the test $F = 0.2\%$). 30 fails (6 in inband range and 24 outside) are allowed in the blocking test but these fails are reserved for spurious responses. This problem shall be solved by the following rules:

- All passes (based on $F_{\text{pass}} = 0.2\%$) are accepted, including the wrong decisions due to statistical reasons.
- An early fail limit based on $F_{\text{fail}} = 0.02\%$ instead of 0.2% is established, that ensures that wrong decisions due to statistical reasons are reduced to less than one.

These asymmetric test conditions ensure that a DUT on the test limit consumes hardly more test time for a blocking test than in the symmetric case and on the other hand discriminates sufficiently between statistical fails and spurious response cases.

Wrong decision probability D per test step:

As one single error ratio test is composed of several test steps the wrong decision probability per test step needs to be sufficiently small to keep the wrong decision risk F (the wrong decision risk at the end of the test) within the requirements. The wrong decision probability D per test step is a numerically evaluated fraction of F . Considerations regarding symmetry between probability of wrong pass and wrong fail decision are identical to those given for F .

For most test cases where only one or few error rate tests are done the wrong decision probability D per test step for a pass decision is identical to the wrong decision probability for a fail decision.

$$D_{\text{pass}} = D_{\text{fail}} = D \quad \text{and e.g.} \quad D = 0.0085\%$$

For test cases where $F_{\text{pass}} \neq F_{\text{fail}}$ (e.g. blocking) this applies also to D : $D_{\text{pass}} \neq D_{\text{fail}}$.

A7.1.3 Implementation

A7.1.3.1 Proceeding

- a) Set up the required test conditions.
- b) Continuously record the number of samples tested and the number of (error) events (bit error, block error or missing BFI). Calculate the preliminary error rates ber_0 and ber_1 from the number of samples and the number of (error) events. Regarding ber_0 and ber_1 refer to "A7.1.3.1 Limit lines".
- c) Continuously check while recording samples and errors, if it is about time to make a decision. The possible outcomes of a decision are: Early pass, early fail, continue with measuring the error rates, pass or fail.
 - 1st decision after minimum test time due to fading (refer to Table A7.1.4.2 : Minimum test time due to fading) has elapsed. In case the test runs without fading conditions this time is zero and in case this time exceeds the target test time (refer to A7.1.3.1 Limit lines), the test is already finished requiring a pass/fail decision .
 - 2nd and possibly further (early) decisions after a certain cyclic interval or the occurrence of the next error event. As long as no early decision can be made the test is continued.
 - If the target test time has elapsed the test is definitively finished and a pass/fail decision can be made. In case the minimum test time due to fading exceeds the target test time this point is reached already in the 1st step.

A7.1.3.2 Limit lines

Early decisions require that the actual error rate is checked both against a limit line for early pass and a limit line for early fail.

Limit line for early pass decision (for $ne \geq 1$):

The condition for an early pass decision is: $ber_1 < berlim_{pass}$

$$berlim_{pass}(D_{pass}, ne) = \frac{2 \times ne \times M}{C^{-1}(1 - D_{pass}, 2 \times ne)}$$

ber_1 is the normalised bit error rate with counting errors started from one which means that an artificial error is introduced at the beginning to avoid that the early pass condition is met when the test starts. After the first real error event has occurred the artificial error has to be removed to calculate the error rate correctly.

Limit line for early fail decision (for $ne \geq 7$):

The condition for an early fail decision is: $ber_0 > berlim_{fail}$

$$berlim_{fail}(D_{fail}, ne) = \frac{2 \times ne}{C^{-1}(D_{fail}, 2 \times ne)}$$

ber_0 is the normalised bit error rate with counting errors started from zero, meaning that no artificial erroneous sample is introduced at the beginning of the test..

Due to the nature of the test, namely discrete error events, the early fail condition shall not be valid, when fractional errors < 1 are used to calculate the early fail limit: Any early fail decision is postponed until number of errors $ne \geq 7$. In the blocking test any early fail decision is postponed until number of errors $ne \geq 8$.

Parameters for limit lines:

| | | | |
|----|-----|---------|--|
| 1. | D | | wrong decision probability per test step. |
| 2. | M | = 1.5 | bad DUT factor |
| 3. | ne | | number of (error) events. This parameter is the x-ordinate in figure A7.1.3.1 Limit lines. |
| 4. | ns | | number of samples. This parameter is not needed for limit lines, but enumerated here because it is aligned to ne closely. The bit error rate is calculated from ne and ns. |
| | | | Parameters D and M define the limit lines for early pass and early fail. With the two curves known the intersection point of the two limit lines can be calculated. The x-ordinate of this intersection point is the target number of errors (TNE) and y-ordinate is the (normalised) test limit (TL). This intersection point is reached when the target test time has elapsed. In this case a decision against the test limit (column "derived test limit") can be made. |
| 5. | TL | = 1.234 | For tests with $F = 0.2$ the parameters given above lead to this (normalised) test limit. The BER limit given in the core specs (column "Orig. BER requirement" in the tables defining the test limits) is multiplied with the test limit factor TL to gain the limit for the pass/fail decision (column "derived test limit"). |
| | TL | = 1.251 | Normalized test limit for tests with $F = 0.02$ (e.g. blocking test). |
| 6. | TNE | | The parameters given above lead to a target number of errors. For tests with $F = 0.2$ the target number of errors is 345. For tests with $F = 0.02$ (e.g. blocking test) the target number of errors results in 403. |

Figure A7.1.3.1 Limit lines

A typical error rate test, calculated from the number of samples and errors using experimental method (1) or (2) (see A7.1.1.4 Calculation assumptions) runs along the yellow trajectory. With an errorless sample the trajectory goes down vertically. With an erroneous sample it jumps up right. Making a pass/fail decision means to check if the error rate

("BER trajectory") intersects the limit lines for early pass or early fail. The term 'test limit' used in the figure above denotes the term 'derived test limit' used in this document.

A7.1.4 Good balance between test time and statistical significance

Three independent test parameters are introduced into the test and shown in Table A7.1.4.1. These are the obvious basis of test time and statistical significance. From the first two of them four dependent test parameters are derived. The third independent test parameter is justified separately.

Table A7.1.4.1 Independent and dependent test parameters

| Independent test parameters | | | Dependent test parameters | | |
|---|----------------------------|------------------|---|---------------------------------|-------------------------------------|
| Test Parameter | Value | Reference | Test parameter | Value | Reference |
| Bad DUT factor M | 1.5 | Section A7.1.3.1 | Early pass/fail condition | Curves | Section A7.1.3.1 Figure A7.1.3.1 |
| Final probability of wrong pass/fail decision F | 0.2% 0.02% for blocking | Section A7.1.2 | Target number of error events | 345 403 for blocking | Section A7.1.3.1 |
| | | | Probability of wrong pass/fail decision per test step D | 0.0085% 0.0008% for blocking | Section A7.1.2 |
| | | | Test limit factor TL | 1.234 1.251 for blocking | Section A7.1.3.1 |
| Minimum test time | | Table A7.1.4.2 | | | |

The minimum test time is derived from the following justification:

- 1) For no propagation conditions and static propagation condition

No early fail calculated from fractional number of errors <1

- 2) For multipath fading condition

No stop of the test until 990 wavelengths are crossed for fading profiles greater than 5km/h, and 250 wavelengths are crossed for fading profiles less than or equal to 5km/h. The minimum test time due to multipath fading conditions depends on the frequency of the DL signal, the vehicle speed and the data rate (full rate or half rate). Refer to table A7.1.6.2 : Minimum test time due to fading

Table A7.1.4.2: Minimum test time due to fading

| Frequency | 0,4 | 0,7 | 0,85 | 0,9 | 1,8 | 1,9 | GHz |
|---------------------------|---------|---------|---------|---------|---------|---------|----------|
| Full Rate 3 km/h | | | | | | | |

| | 0:02:51 | 0:01:38 | 0:01:21 | 0:01:16 | 0:00:38 | 0:00:36 | hh:mm:ss |

A7.1.5 Minimum and maximum expected duration of tests

Since there are a number of dependant and independent factors which determine the expected duration of a test using these statistical methods, it is recommended that in individual test cases an expected minimum and an expected maximum duration of test is specified for each configuration (e.g. times may significantly change for differing bands). Where the expected minimum and maximum duration are constrained by the same factor, and are thus the same, for clarity both values should be stated.

Where minimum and/or maximum test durations are specified, they should only be used in an informative manner (e.g. by a test case implementer to determine whether a given implementation is correct). These specified durations should not be used as a failure determination unless this is explicitly stated in an individual clause.

A7.2 Statistical testing of 2 D position error and TTFF for A-GPS and A-GNSS Minimum Performance test cases

A7.2.1 Test Method

Each test is performed in the following manner:

- a) Setup the required test conditions.

- b) Measure the 2D position and Time to First Fix repeated times. Start each repetition after having applied the message 'RESET MS POSITIONING STORED INFORMATION'. This ensures that each result is independent from the previous one. The results, measured, are simplified to:

good result, if the 2D position and TTFB are \leq limit.

bad result, if the 2D position or TTFB or both are $>$ limit

- c) Record the number of results (ns) and the number of bad results (ne)
- d) Stop the test at a pass or an fail event.
- e) Once the test is stopped, decide according to the pass fail decision rules (A7.2.4.2)

A7.2.2 Error Ratio (ER)

The Error Ratio (ER) is defined as the ratio of bad results (ne) to all results (ns).
(1-ER is the success ratio)

A7.2.3 Test Design

A statistical test is characterised by:

Test-time, Selectivity and Confidence level

A7.2.3.1 Confidence level

The outcome of a statistical test is a decision. This decision may be correct or in-correct. The Confidence Level CL describes the probability that the decision is a correct one. The complement is the wrong decision probability (risk) $D = 1-CL$

A7.2.3.2 Introduction: Supplier Risk versus Customer Risk

There are two targets of decision:

- a) A measurement on the pass-limit shows, that the DUT has the specified quality or is better with probability CL (CL e.g.95%) This shall lead to a "pass decision"

The pass-limit is on the good side of the specified DUT-quality. A more stringent CL (CL e.g.99%) shifts the pass-limit further into the good direction. Given that the quality of the DUTs is distributed, a greater CL passes less and better DUTs.

A measurement on the bad side of the pass-limit is simply "not pass" (undecided)

- aa) Complementary:

A measurement on the fail-limit shows, that the DUT is worse than the specified quality with probability CL.

The fail-limit is on the bad side of the specified DUT-quality. A more stringent CL shifts the fail-limit further into the bad direction. Given that the quality of the DUTs is distributed, a greater CL fails less and worse DUTs.

A measurement on the good side of the fail-limit is simply "not fail".

- b) A DUT, known to have the specified quality, shall be measured and decided pass with probability CL. This leads to the pass limit.

For CL e.g. 95%, the pass limit is on the bad side of the specified DUT-quality. CL e.g.99% shifts the pass-limit further into the bad direction. Given that the DUT-quality is distributed, a greater CL passes more and worse DUTs.

- bb) A DUT, known to be an ($\epsilon \rightarrow 0$) beyond the specified quality, shall be measured and decided fail with probability CL.

For CL e.g.95%, the fail limit is on the good side of the specified DUT-quality.

NOTE: the different sense for CL in (a), (aa) versus (b), (bb).

NOTE: for constant CL in all 4 bullets (a) is equivalent to (bb) and (aa) is equivalent to (b).

A7.2.3.3 Supplier Risk versus Customer Risk

The table below summarizes the different targets of decision.

Table A7.2.3.3 Equivalent statements

| | Equivalent statements, using different cause-to-effect-directions, and assuming CL = constant >0.5 | |
|----------------------------|---|--|
| cause-to-effect-directions | Known measurement result → estimation of the DUT's quality | Known DUT's quality → estimation of the measurement's outcome |
| Supplier Risk | A measurement on the pass-limit shows, that the DUT has the specified quality or is better (a) | A DUT, known to have an ($\epsilon \rightarrow 0$) beyond the specified DUT-quality, shall be measured and decided fail (bb) |
| Customer Risk | A measurement on the fail-limit shall shows, that the DUT is worse than the specified quality (aa) | A DUT, known to have the specified quality, shall be measured and decided pass (b) |

NOTE: The bold text shows the obvious interpretation of Supplier Risk and Customer Risk. The same statements can be based on other DUT-quality-definitions.

A7.2.3.4 Introduction: Standard test versus early decision concept

In standard statistical tests, a certain number of results (ns) is predefined in advance of the test. After ns results the number of bad results (ne) is counted and the error ratio (ER) is calculated as ne/ns .

Applying statistical theory, a decision limit can be designed, against which the calculated ER is compared to derive the decision. Such a limit is one decision point and is characterised by:

- D: the wrong decision probability (a predefined parameter)
- ns: the number of results (a fixed predefined parameter)
- ne: the number of bad results (the limit based on just ns)

In the formula for the limit, D and ns are parameters and ne is the variable. In the standard test ns and D are constant. The property of such a test is: It discriminate between two states only, depending on the test design:

- pass (with CL) / undecided (undecided in the sense: finally undecided)
- fail (with CL) / undecided (undecided in the sense: finally undecided)
- pass(with CL) / fail (with CL) (however against two limits).

In contrast to the standard statistical tests, the early decision concept predefines a set of (ne,ns) co-ordinates, representing the limit-curve for decision. After each result a preliminary ER is calculated and compared against the limit-curve. After each result one may make the decision or not (undecided for later decision) The parameters and variables in the limit-curve for the early decision concept have a similar but not equal meaning:

- D: the wrong decision probability (a predefined parameter)
- ns: the number of results (a variable parameter)
- ne: the number of bad results (the limit. It varies together with ns)

To avoid a "final undecided" in the standard test, a second limit must be introduced and the single decision co-ordinate (ne,ns) needs a high ne, leading to a fixed (high) test time. In the early decision concept, having the same selectivity and

the same confidence level an “undecided” does not need to be avoided, as it can be decided later. A perfect DUT will hit the decision coordinate (ne,ns) with ne=0. This test time is short.

A7.2.3.5 Standard test versus early decision concept

For Supplier Risk:

The wrong decision probability D in the standard test is the probability, to decide a DUT in-correctly in the single decision point. In the early decision concept there is a probability of in-correct decisions d at each point of the limit-curve. The sum of all those wrong decision probabilities accumulate to D. Hence $d < D$

For Customer Risk:

The correct decision probability CL in the standard test is the probability, to decide a DUT correctly in the single decision point. In the early decision concept there is a probability of correct decisions cl at each point of the limit-curve. The sum of all those correct decision probabilities accumulate to CL. Hence $cl < CL$ or $d > D$

A7.2.3.6 Selectivity

There is no statistical test which can discriminate between a limit-DUT-quality and a DUT-quality which is an $(\epsilon \rightarrow 0)$ apart from the limit in finite time and confidence level $CL > 1/2$. Either the test discriminates against one limit with the results pass (with CL)/undecided or fail (with CL)/undecided, or the test ends in a result pass (with CL)/fail (with CL) but this requires a second limit.

For $CL > 0.5$, a (measurement-result = specified-DUT-quality), generates undecided in test “supplier risk against pass limit” (a in clause A7.2.3.2) and also in the equivalent test against the fail limit (aa in clause A7.2.3.2)

For $CL > 0.5$, a DUT, known to be on the limit, will be decided pass for the test “customer risk against pass limit” (b in clause A7.2.3.2) and also in the equivalent test against fail limit (bb in clause A7.2.3.2).

This overlap or undecided area is not a fault or a contradiction, however it can be avoided by introducing a Bad or a Good DUT quality according to:

- Bad DUT quality: specified DUT-quality * M ($M > 1$)
- Good DUT quality: specified DUT-quality * m ($m < 1$)

Using e.g $M > 1$ and $CL = 95\%$ the test for different DUT qualities yield different pass probabilities:

Figure A7.2.3.6: Pass probability versus DUT quality

A7.2.3.7 Design of the test

The test is defined according to the following design principles:

1. The early decision concept is applied.
2. A second limit is introduced: Bad DUT factor $M > 1$
3. To decide the test pass:
 - Supplier risk is applied based on the Bad DUT quality
- To decide the test fail
 - Customer Risk is applied based on the specified DUT quality

The test is defined using the following parameters:

1. Specified DUT quality: $ER = 0.05$
2. Bad DUT quality: $M = 1.5$ (selectivity)
3. Confidence level $CL = 95\%$ (for specified DUT and Bad DUT-quality)

This has the following consequences:

- a) A measurement on the fail limit is connected with 2 equivalent statements:

| | |
|---|--|
| A measurement on the fail-limit shows, that the DUT is worse than the specified DUT-quality | A DUT, known to have the specified quality, shall be measured and decided pass |
|---|--|

A measurement on the pass limit is connected with the complementary statements:

| | |
|---|--|
| A measurement on the pass limit shows, that the DUT is better than the Bad DUT-quality. | A DUT, known to have the Bad DUT quality, shall be measured and decided fail |
|---|--|

The left column is used to decide the measurement.

The right column is used to verify the design of the test by simulation.

The simulation is based on the two fulcrums A and B only in Figure A7.2.3.6. There is freedom to shape the remainder of the function.

- b) Test time
 1. The minimum and maximum test time is fixed.
 2. The average test time is a function of the DUT's quality.
 3. The individual test time is not predictable (except ideal DUT).
- c) The number of decision co-ordinates (n_e, n_s) in the early decision concept is responsible for the selectivity of the test and the maximum test time. Having fixed the number of decision co-ordinates there is still freedom to select the individual decision co-ordinates in many combinations, all leading to the same confidence level.

A7.2.4 Pass fail decision

A7.2.4.1 Numerical definition of the pass fail limits

| ne | nsp | nsf | ne | nsp | nsf | ne | nsp | nsf | ne | nsp | nsf |
|----|-----|-----|----|------|------|-----|------|------|-----|------|------|
| 0 | 77 | NA | 43 | 855 | 576 | 86 | 1525 | 1297 | 129 | 2173 | 2050 |

NOTE: The first column is the number of bad results (ne)
The second column is the number of results for the pass limit (ns_p)
The third column is the number of results for the fail limit (ns_f)

A7.2.4.2 Pass fail decision rules

Having observed 0 bad results, pass the test at ≥ 77 results, otherwise continue

Having observed 1 bad result, pass the test at ≥ 106 results, otherwise continue

Having observed 2 bad results, pass the test at ≥ 131 results, otherwise continue

etc. until

Having observed 6 bad results, pass the test at ≥ 218 results, fail the test at ≤ 42 results, otherwise continue

Having observed 7 bad results, pass the test at ≥ 238 results, fail the test at ≤ 52 results, otherwise continue

etc. until

Having observed 168 bad results, pass the test at ≥ 2751 results, fail the test at ≤ 2747 results, otherwise continue

Having observed 169 bad results, pass the test at ≥ 2765 results, otherwise fail

NOTE: an ideal DUT passes after 77 results. The maximum test time is 2765 results.

A7.2.4.3 Background information to the pass fail limits

There is freedom to design the decision co-ordinates (ne,ns).

The binomial distribution and its inverse is used to design the pass and fail limits. Note that this method is not unique and that other methods exist.

$$\text{fail}(ne, d_f) := \frac{ne}{(ne + \text{qnbinom}(d_f, ne, ER))}$$

$$\text{pass}(ne, cl_p, M) := \frac{ne}{(ne + \text{qnbinom}(cl_p, ne, ER \cdot M))}$$

Where

fail(..) is the error ratio for the fail limit

pass(..) is the error ratio for the pass limit

ER is the specified error ratio 0.05

ne is the number of bad results. This is the variable in both equations

M is the Bad DUT factor $M=1.5$

d_f is the wrong decision probability of a single (ne,ns) co-ordinate for the fail limit.
It is found by simulation to be $d_f = 0.004$

cl_p is the confidence level of a single (ne,ns) co-ordinate for the pass limit.
It is found by simulation to be $cl_p = 0.9975$

qnbinom(..): The inverse cumulative function of the negative binomial distribution

The simulation works as follows:

A large population of limit DUTs with true $ER = 0.05$ is decided against the pass and fail limits.

cl_p and d_f are tuned such that CL (95%) of the population passes and D (5%) of the population fails.

A population of Bad DUTs with true $ER = M \cdot 0.05$ is decided against the same pass and fail limits.

cl_p and d_f are tuned such that CL (95%) of the population fails and D (5%) of the population passes.

This procedure and the relationship to the measurement is justified in clause A7.2.3.7. The number of DUTs decrease during the simulation, as the decided DUTs leave the population. That number decreases with an approximately exponential characteristics. After 169 bad results all DUTs of the population are decided.

NOTE: The exponential decrease of the population is an optimal design goal for the decision co-ordinates (ne,ns), which can be achieved with other formulas or methods as well.

Annex 8: Void

Annex 9 (normative): GAN certificate

A9.1 Files relating to GAN certificate for testing

All files associated with the certificates to be used for authentication in IPSec are contained in archive GAN_certificate_V1.zip.

Files to be used both by MS and SS are contained in this archive.

The archive file set consists of the following:

| | | |
|---|----------------|--|
| - | Ca.key | |
| - | Ca.crt | |
| - | Segw.key | |
| - | Segw.csr | |
| - | Segw.crt | |
| - | _Command.txt | The commands performed to generate the above files |
| - | _Openssl.txt | Input file containing information required to generate above certificates (renamed from openssl.cnf) |
| - | _Execution.txt | Activity log generated whilst above files are generated (also contains details of information prompted for during command execution) |

A9.1.1 Overview and usage of certificate files

In a regular network (non-test) environment, a public certification authority (CA) would be used to generate a SEGW certificate (ca.crt) using the CA's private key and the network operator's information. For testing we are using our own test CA and have made available the test CA self-signed root certificate (self signing ca.crt).

Of the above files, the MS will need to store the test CA root certificate (ca.crt).

The SS will use the private key (segw.key) and certificate (segw.crt) for mutual authentication relating to the provisioning SEGW.

The SS vendor will use the test CA private key (ca.key) and test CA root certificate (ca.crt) to generate further certificates relating to the default and serving SEGWs.

A9.1.2 Privacy of private keys and usage of certificate

Since the private key relating to the root certificate is published here, there is no privacy, and thus no relationship of trust associated with this root certificate (ca.crt). It is of the utmost importance that the MS will only utilise this certificate for test purposes. For further details refer to TS 44.014.

Annex 10 (informative): Repeated SACCH Layer 1 Test Method:

A10.1 Details on Repeated SACCH Testing

Table A10.1.1 shows the PCL values exchanged in the L1 headers between a MS and SS during a typical session with zero block errors on time slot 0. On the DL the SS updates the commanded PCL every second SACCH interval as each SACCH block is repeated. The SS must complete the following actions during the period between the last burst of the UL SACCH and the first burst of the DL SACCH (26 frames):

- Decode the reported PCL in the UL SACCH L1 header.
- Determine the new PCL based on the reported PCL in the UL L1 header and the PCL commanded in the previous SACCH interval on the DL. The procedure used is specified in section 14.2.26 or 14.4.32.
- Format the data for the first burst in the DL SACCH L1 header.

Using the information in Table A10.1.1 as an example, the SS must complete the above steps between the end of FN 42106 and the start of FN 42132. The “Next Commanded PCL by SS” to use in FN 42132 is determined according to table 14.2.26-1 or 14.4.32-1, referring to the following parameters:

- The “Last Commanded PCL” is that used in the DL SACCH block that started at FN 42028,
- The “Corresponding Reported MS PCL” is that reported for the UL SACCH block that started at FN 42028.

The entries in table 14.2.26-1 or 14.4.32-1 are derived such that the “Next commanded PCL by SS” is chosen so that it is not equal to either the “Last commanded PCL by SS” or the “Corresponding Reported MS PCL”. This ensures that the SS can detect all block error events. Only three PCL values are needed to ensure that all block error events are captured. The choice of PCL values 7, 8 and 9 are specified to ensure that all PCL values are within 2 steps of each other. This is to avoid rate limiting between changes in PCL values [see TS 45.008 subclause 4.7.1]. Note that PCL values 7, 8, and 9 were chosen to ensure all MSs, even those that do not support PCL values of 0, would work with these test cases.

Table A10.1.2 illustrates the specific case where an error only occurs in the first SACCH block of a repeated SACCH interval. Although this affects the SACCH block sequence that the SS receives from the MS, it does not alter its decisions as no block error occurs. In the case where only the second SACCH block of a repeated SACCH interval is in error, this is not detectable by the SS, however this is not a block error condition as the first SACCH block of the repeated SACCH interval was received without error.

Table A10.1.3 illustrates the specific case where an error occurs in the both the first and second SACCH blocks of a repeated SACCH interval. In this event, the SS detects the block error and the PCL sequence used by the SS is altered from the normal case in response to the sequence received from the MS.

Table A10.1.4 illustrates the specific case where multiple (in this case 4) sequential errors occur. In this event the SS detects two block errors and the PCL sequence used by the SS is altered from the normal case in response to the sequence received from the MS.

Table A10.1.1: Repeated SACCH Typical PCL Sequence (No Errors)

| FN OF FIRST BURST OF SACCH | FN OF LAST BURST OF SACCH | SS DL COMMANDED PCL IN L1 HEADER | MS UL REPORTED PCL IN L1 HEADER | COMMENTS |
|----------------------------|---------------------------|----------------------------------|---------------------------------|--|
| ... | ... | ... | ... | |
| 41508 | 41586 | 8 | 7 | |
| 41612 | 41690 | 8 | 7 | |
| 41716 | 41794 | 9 | 8 | |
