| 16 | SS | | The header of the next uplink SACCH is examined and the Timing Advance and Power Level indications are examined. The correct timing advance shall be indicated. A tolerance of ± 2 bit periods is allowed. The power level indication shall indicate the power level used in the handover command (see note). |
| 17 | MS -> SS | SETUP | Same N(SD) as in step 7. |
| 18 | SS -> MS | CHANNEL RELEASE | |
| NOTE: | In case the Handover procedure is completed within 1 SACCH multiframe, the powerlevel indication, of the power level used in the handover command, will be done in the second uplink SACCH sent on the target cell. As the indicated value shall be the power control level actually used by the mobile for the last burst of the previous SACCH period, the first uplink SACCH header will indicate the powerlevel used by the MS on the old cell, if the Handover procedure is completed within 1 SACCH multiframe. In this case the powerlevel examination shall be done in the second uplink SACCH header sent on the target cell. Reference: 05.08/45.008 clause 4.2. | | |

26.6.5.5 Pre-synchronized handovers

26.6.5.5.1 Handover / successful / active call / pre-synchronized / Timing Advance IE not included

If an MS does not implement the pre-synchronized handover procedure correctly then calls may fail.

26.6.5.5.1.1 Conformance requirements

- 1 The MS shall correctly apply the handover procedure from TCH/F without frequency hopping to TCH/F without frequency hopping in the pre-synchronized case when a call is active.
- 2 When the Timing Advance information element is not included in the HANDOVER COMMAND, the MS shall access the new cell with the default timing advance of 1 bit period.
- 3 The MS shall be ready to transmit the HANDOVER COMPLETE message within 650 ms of the end of the HANDOVER COMMAND message.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.4.

Conformance requirement 2: 3GPP TS 05.10, subclause 6.6.

Conformance requirement 3: 3GPP TS 04.13, subclause 5.2.6.1.

26.6.5.5.1.2 Test purpose

To verify that when the MS is ordered to make a pre-synchronized handover to another cell, it sends 4 access bursts on the main DCCH (and optionally on the SACCH) and then activates the channel correctly and correctly calculates the time to transmit.

26.6.5.5.1.3 Method of test

Initial Conditions

System Simulator:

2 cells, A and B, with same LAI, default parameters.

The BCCH of cell A is sent k bit periods before the BCCH of cell B. k is arbitrarily selected.

Mobile Station:

The MS is in the active state (U10) of a call (on cell A) using a full rate TCH in non-hopping mode.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

The active state (U10) of a mobile call (on cell B) using a full rate TCH in non-hopping mode.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND for a pre-synchronized handover without the Timing Advance IE on the main DCCH. The MS shall send 4 access bursts, in 4 successive slots of the new DCCH to cell B with a Timing Advance of zero (Note: Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH). Then the MS shall establish a signalling link using a Timing Advance of one and send a HANOVER COMPLETE message. The MS shall be ready to transmit the HANOVER COMPLETE message before 650 ms after the end of the HANOVER COMMAND message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Maximum Duration of Test

5 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | HANOVER COMMAND | See specific message contents below. |
| 2 | MS -> SS | HANOVER ACCESS | Handover Reference as included in the |

| 7 | SS -> MS | UA | |
| 8 | MS -> SS | HANOVER COMPLETE | This message shall be ready to be transmitted before 650 ms after the completion of step 1. |
| 9 | SS | - | The SS checks that the timing advance reported in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM is 1 bit period. |

Specific Message Contents

HANOVER COMMAND

| | |
|--|---------------------------------|
| As default message contents, except: Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
|--|---------------------------------|

26.6.5.5.2 Handover / successful / call being established / pre-synchronized / timing advance IE is included / reporting of observed time difference requested

If an MS does not implement the pre-synchronized handover procedure correctly then calls may fail.

If an MS does not report the observed time difference between cells correctly then pseudo synchronized handovers might not be possible for any MS.

26.6.5.5.2.1 Conformance requirements

- 1 The MS shall correctly apply the handover procedure from an SDCCH/4 to a TCH/F without frequency hopping in the pre-synchronized case while a call is being established.
- 2 If during call establishment a Layer 3 MM or CC message just sent by the MS is not Layer 2 acknowledged before the channel change caused by the HANOVER COMMAND message, the MS shall send the Layer 3 message to the new cell, using the same value in the N(SD) field, after the handover procedure.
- 3 When the Timing Advance information element is included in the HANOVER COMMAND, the MS shall access the new cell with the timing advance included in the Timing Advance IE.
- 4 The MS shall be ready to transmit the HANOVER COMPLETE message within 650 ms of the end of the HANOVER COMMAND message.
- 5 When requested to do so in the HANOVER COMMAND message, the MS shall return the Mobile Time Difference IE in the HANOVER COMPLETE message indicating the sum of the observed time difference between the cells and the timing advance used on the old cell.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.1.4.3.

Conformance requirement 3: 3GPP TS 05.10, subclause 6.6.

Conformance requirement 4: 3GPP TS 04.13, subclause 5.2.6.1.

Conformance requirement 5: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 10.5.2.39.

26.6.5.5.2.2 Test purpose

To test that when the MS is ordered to make a pre-synchronized handover to another cell, it sends 4 access bursts on the main DCCH (and optionally on the SACCH) and then activates the channel correctly and correctly calculates the time to transmit. To test that the MS correctly retransmits Layer 3 MM or CC messages that were not acknowledged by Layer 2 before the Handover, after completion of the Handover. To test that the MS correctly reports on the time difference between the cells.

26.6.5.5.2.3 Method of test

Initial Conditions

System Simulator:

2 cells, A and B, with same LAI, default parameters.

The BCCH of cell A is sent k bit periods before the BCCH of cell B.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

A Mobile Originating Call is initiated. The SS sends an IMMEDIATE ASSIGNMENT message allocating an SDCCH/4. The MS is commanded to use a timing advance of y bit periods on cell A. After the MS has sent the SETUP message (and before the last L2 frame carrying the SETUP message is acknowledged by the SS) the SS sends a HANDOVER COMMAND, ordering the MS to switch to cell B. The MS shall then send 4 access bursts, in 4 successive slots of the new DCCH to cell B (Note: Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH). Then the MS shall establish a signalling link using the correct timing advance and send a HANDOVER COMPLETE message. The MS shall be ready to transmit the HANDOVER COMPLETE message before 650 ms after the end of the HANDOVER COMMAND message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13.

The MS shall then again send the SETUP message to the SS, using the same value in the N(SD) field. Finally the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

20 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | ----- | ----- | A MO call is initiated. |
| 2 | MS -> SS | CHANNEL REQUEST | |

26.6.5.6.2 Test purpose

To test that when the MS is ordered to make a pseudo synchronized handover to another cell, it sends 4 access bursts on the main DCCH (and optionally the SACCH) and then activates the channel correctly and correctly calculates the time to transmit. To test that the MS correctly reports the time difference between the cells.

26.6.5.6.3 Method of test

Initial Conditions

System Simulator:

2 cells, A and B, with same LAI, default parameters.

The BCCH of cell A is sent k bit periods before the BCCH of cell B. k is arbitrarily selected.

The MS is being commanded to use a timing advance of y bit periods on cell A, where y is arbitrarily selected from the set {11, 12, ..., 62}.

Mobile Station:

The MS is in the active state (U10) of a call (on cell A) using a full rate TCH in non-hopping mode.

Specific PICS statements

-

PIXIT statements

-
-

Foreseen Final State of the MS

The active state (U10) of a mobile call (on cell B) using a full rate TCH in non-hopping mode.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND for a pseudo-synchronized handover with the Real Time Difference IE included. The Time Difference value is set to $(2k+10)$ modulo 256. The MS shall send 4 access bursts, , in 4 successive slots of the new DCCH to cell B with a Timing Advance of zero (Note: Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH). Then the MS shall establish a signalling link using a Timing Advance of $(y-10)$ bit periods and send a HANOVER COMPLETE message. The MS shall be ready to transmit the HANOVER COMPLETE message before 650 ms after the end of the HANOVER COMMAND message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Maximum Duration of Test

5 s.

| As default message contents, except: Synchronization Indication Time Difference | pseudo-synchronized; ROT=1; NCI=0. $(2k+10) \bmod 256$. |
|---|---|

26.6.5.7 Handover / successful / active call / non-synchronized / reporting of observed time difference requested

If an MS does not report the observed time difference between cells correctly then pseudo synchronized handovers might not be possible for any MS.

26.6.5.7.1 Conformance requirements

- 1 The MS shall correctly apply the handover procedure from a TCH/F without frequency hopping to a TCH/F without frequency hopping in the non-synchronized case while a call is active.
- 2 When requested to do so in the HANOVER COMMAND message, the MS shall return the Mobile Time Difference IE in the HANOVER COMPLETE message indicating the sum of the observed time difference between the cells and the timing advance used on the old cell.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 10.5.2.39.

26.6.5.7.2 Test purpose

To verify that when the MS is ordered to make a non-synchronized handover to another cell and is ordered to report on the time difference between the cells, that it does so correctly.

26.6.5.7.3 Method of test

Initial Conditions

System Simulator:

2 cells, A and B with default parameters except the LAI of cell B has MNC = 02 (PCS 1 900: MNC = 021) decimal, MCC = 315 decimal, and LAC = 5344 H.

The BCCH of cell A is sent k bit periods before the BCCH of cell B.

The MS is commanded to use a timing advance of y bit periods on cell A.

Mobile Station:

The MS is in the active state (U10) of a call (on cell A) using a full rate TCH in non-hopping mode.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

The active state (U10) of a mobile call (on cell B) using a full rate TCH in non-hopping mode.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND on the main DCCH. The HANOVER COMMAND includes a Synchronization Indication IE that instructs the MS to supply the observed time difference between the cells. The MS shall begin to send access bursts on the new DCCH (and optionally the SACCH) to cell B and the SS sends one PHYSICAL INFORMATION message. The MS shall activate the channel in sending and receiving mode and establish a signalling link using the correct timing advance. The MS shall transmit a HANOVER COMPLETE message containing the Mobile Time Difference IE with a correct value.

Maximum Duration of Test

5 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | SS -> MS | HANDOVER COMMAND | See specific message contents below. |
| 2 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. |
| 3 | SS -> MS | PHYSICAL INFORMATION | |
| 4 | MS -> SS | SABM | Sent without information field. |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANDOVER COMPLETE | Shall include the Mobile Time Difference IE with value $(2k+y) \bmod 2,097,152$ half bit periods. A tolerance of ± 2 half bit periods is allowed. |

Specific Message Contents

HANDOVER COMMAND

| | |
|--|-----------------------------------|
| as default message contents, except: Synchronization Indication | "not synchronized"; ROT=1; NCI=0. |
|--|-----------------------------------|

26.6.5.8 Handover / layer 3 failure

26.6.5.8.1 Conformance requirements

The MS shall return to the old channel in the case of an handover failure caused by the non reception of the PHYSICAL INFORMATION message. On the old channel the MS shall use the Power Level that it was previously using on that channel.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.4.

26.6.5.8.2 Test purpose

To verify the function of timer T3124 and the contents in the message HANDOVER FAILURE and in the layer 1 header on the SACCH.

26.6.5.8.3 Method of test

Initial Conditions

System Simulator:

2 cells with same LAI, default parameters.

Mobile Station:

The MS is in the active state (U10) of a call (on cell A). Used power level is the maximum supported by the MS.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

The active state (U10) of a mobile call (on cell A). Used power level is the maximum supported by the MS.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND with Power Command set to 8 on the main DCCH. The MS shall begin to send access bursts on the new DCCH (and optionally the SACCH) to cell B. The SS activates the SACCH, but does not send PHYSICAL INFORMATION (thus causing a time-out of T3124). The MS shall re-establish the old link on cell A and send a HANOVER FAILURE within 3 s from the transmission of HANOVER COMMAND, using the old Power Control Level.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---|
| 0 | SS | - | The SS records the Power Control Level in the layer 1 header of the last SACCH message sent by the MS before step 1. |
| 1 | SS -> MS | HANOVER COMMAND | Channel description: non-hopping, full rate Power Command: 8. Synchronization Indication: non synchronized. |
| 2 | MS -> SS | HANOVER ACCESS | Several messages are sent, all with correct Handover References. |
| 3 | MS -> SS | HANOVER FAILURE | Sent on old channel, RR cause value = "Abnormal release, unspecified", "Abnormal release, channel unacceptable", "Abnormal release, timer expired", "Abnormal release, no activity on the radio path" or "Protocol error unspecified". Shall be sent within 3 s from the transmission of HANOVER COMMAND. |
| 4 | SS | - | The SS checks that the Power Control Level reported in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM is the same as in step 0. |

Specific Message Contents

None.

26.6.5.9 Handover / layer 1 failure

26.6.5.9.1 Conformance requirements

The MS shall return to the old channel in the case of an handover failure caused by a layer 1 failure on the target cell. On the old channel the MS shall use the Power Level that it was previously using on that channel.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.4.

26.6.5.9.2 Test purpose

To verify the function of timer T3124 and the contents in the message HANOVER FAILURE and in the layer 1 header on the SACCH.

26.6.5.9.3 Method of test

Initial Conditions

System Simulator:

2 cells with same LAI, default parameters.

Mobile Station:

The MS is in the active state (U10) of a call (on cell A). Used power level is the maximum supported by the MS.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

The active state (U10) of a mobile call (on cell A). Used power level is the maximum supported by the MS.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND on the main DCCH. The MS shall begin to send access bursts at the commanded Power Control Level on the new DCCH (and optionally the SACCH) to cell B (the commanded Power Control Level must be different than that already used for Cell A). With the exception of normal BCCH signalling, the SS does not transmit anything on cell B (thus causing a time-out of T3124). The MS shall re-establish the old link on cell A and send a HANOVER FAILURE within 3 s from the transmission of HANOVER COMMAND, using the old Power Control Level.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---|
| 0 | SS | - | The SS records the Power Control Level in the layer 1 header of the last SACCH message sent by the MS before step 1. |
| 1 | SS -> MS | HANOVER COMMAND | Channel description: non-hopping, full rate. Synchronization Indication: non synchronized. Power Level: different than that recorded in step 0. |
| 2 | MS -> SS | HANOVER ACCESS | Several messages are sent, all with correct Handover References. |
| 3 | MS -> SS | HANOVER FAILURE | Sent on old channel, RR cause value = "Abnormal release, unspecified", "Abnormal release, channel unacceptable", "Abnormal release, timer expired", "Abnormal release, no activity on the radio path" or "Protocol error unspecified". Shall be sent within 3 s from the transmission of HANOVER COMMAND. |
| 4 | SS | - | The SS checks that the Power Control Level reported in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM is the same as in step 0. |

Specific Message Contents

None.

26.6.6 Test of frequency redefinition

The Frequency Redefinition procedure is used by the network to change the frequencies and hopping sequences of the allocated channels.

26.6.6.1 Frequency redefinition

26.6.6.1.1 Conformance requirements

An MS, after receiving a FREQUENCY REDEFINITION message, shall start using the new frequencies and hopping sequence in the correct time slot when the MS is allocated a dedicated channel.

The behaviour described in the test purpose is applied for each combination of the value $T(k)$ ($k = 1,2,3$) and for each supported dedicated channel type.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.5, 9.1.13 and 10.5.2.13.

26.6.6.1.2 Test purpose

To verify that the MS, after receiving a Frequency Redefinition message, starts using the new frequencies and hopping sequence at the time indicated in the message.

26.6.6.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs. The cell allocation is set to CA (1), depending on the band of operation of the Mobile Station before each execution of this test.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

Test parameters:

ca (1) is set according to the column *ca(1)* of table below.

An arbitrary subset **CA**(1) of the set in the column *CA Range* of the table below containing **ca**(1) elements is drawn. **CA**(1) is then coded using the *coding* scheme from the table below.

An element B of the set CA(1) is arbitrarily chosen.

An arbitrary value ca(2) in the range indicated in column ca(2) of the table below is chosen.

An arbitrary subset CA(2) of the set in the column CA Range of the table below with ca(2) elements and containing B is chosen.

An arbitrary value ca(3) in the range indicated in column ca(3) of the table below is chosen.

An arbitrary subset CA(3) of the set in the column CA Range of the table below with ca(3) elements and containing B is chosen.

For $j = 1, 2, 3$, values ma(j) in the range $j, \dots, ca(j)-1$ and values MAIO(j) in the range $0, \dots, ma(j)-1$ are arbitrarily chosen.

Subsets MA(j) of CA(j) not containing B and having ma(j) elements are arbitrarily chosen.

| Band | ca(1) | CA Range | ca(2) | ca(3) | Coding |
|-----------|-------|---------------|-------------|------------|-----------------|
| GSM 450 | 32 | 259, ..., 293 | 17, ..., 31 | 4, ..., 16 | Range 128 |
| GSM 480 | 32 | 306, ..., 340 | 17, ..., 31 | 4, ..., 16 | Range 128 |
| GSM 710 | 64 | 438, ..., 511 | 19, ..., 62 | 3, ..., 18 | Range 128 |
| GSM 750 | 64 | 438, ..., 511 | 19, ..., 62 | 3, ..., 18 | Range 128 |
| T-GSM 810 | 64 | 438, ..., 511 | 19, ..., 62 | 3, ..., 18 | Range 128 |
| GSM 850 | 64 | 128, ..., 251 | 19, ..., 62 | 3, ..., 18 | Variable bitmap |
| GSM 900 | 64 | 1, ..., 124 | 20, ..., 63 | 4, ..., 19 | Bitmap 0 |
| DCS 1 800 | 64 | 700, ..., 812 | 17, ..., 63 | 4, ..., 16 | Variable bitmap |
| PCS 1 900 | 64 | 700, ..., 810 | 17, ..., 63 | 4, ..., 16 | Variable bitmap |

Let $T(1) = 91$, $T(2) = 42\ 000$.

An arbitrary value T(3) in the range 92, ..., 29999 is chosen.

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns a dedicated channel (TCH/F, TCH/H or SDCCH, as defined by the execution counter R). Then the SS sends a FREQUENCY REDEFINITION message, which modifies the frequencies/hopping sequence to be used by the MS. The MS shall then, at the TDMA frame defined by the contents of the "Starting Time" information element, use the new frequencies/hopping sequence. (The value of T(2) ensures that the MS believes the Starting Time has passed and so the MS shall start transmitting immediately. Immediately being in the scope of this test no later than 73 Frames for SDCCH/8 or TCH/F and 90 Frames for TCH/H after the SS sends the last burst of the first L2 frame containing the beginning of the FREQUENCY REDEFINITION message. The range for T(3) ensures that the MS has to wait until the designated frame before starting transmission on the new frequencies.)

The verification is performed at the RF burst level. The MS transmits the standard test signal C1 (annex 5), and for the TCH case, the SS checks the received pattern with the expected pattern. For the SDCCH case the MS transmits fill frames, and the SS checks for each burst whether the burst is transmitted at the right frequency.

Maximum Duration of Test

$3 * (\text{number of supported channels} * T(3) + 7)$

Expected Sequence

This sequence is performed for every combination of execution counters $K = 1, 2, 3$ and $R = 1, 2, 3$:

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | The SS checks that the MS is transmitting on the correct frequencies without delay. See description 1 below. The SS checks that the MS is transmitting on the correct frequencies and that the transmissions started in the correct frame. See description 2 below. The SS checks that the MS is transmitting on the correct frequencies and that the transmissions started in the correct frame. |
| 2 | MS -> SS | CHANNEL REQUEST | |

26.6.7 Test of the channel mode modify procedure

The channel mode modify procedure allows the network to request the MS to change the channel mode for one channel. If the mobile station does not correctly respond to the CHANNEL MODE MODIFY message (with a positive acknowledgement if the new channel mode is supported, with a negative acknowledgement if the new channel mode is not supported), the network may try to repeat the procedure, release the connection, or continue to wait for the acknowledgement (the maximum time resulting from layer two re-transmissions and MS reaction time being around 5 s).

26.6.7.1 Test of the channel mode modify procedure / full rate

26.6.7.1.1 Conformance requirement

When the MS has received the CHANNEL MODE MODIFY message, the mobile station changes the mode for the indicated channel and then replies by a CHANNEL MODE MODIFY ACKNOWLEDGE message indicating the new channel mode.

If the mobile station does not support the indicated mode, it shall retain the old mode and return the associated channel mode information in the CHANNEL MODE MODIFY ACKNOWLEDGE message.

References

3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.6.1.2 and 3.4.6.1.3

26.6.7.1.2 Test purpose

To verify that the MS, in an RR connected state, acknowledges a CHANNEL MODE MODIFY message by sending a CHANNEL MODE MODIFY ACKNOWLEDGEMENT message specifying and switching to the correct mode.

- the new mode if that mode is supported.
- the old mode if the new mode is not supported.

This shall be verified for the channel modes

- signalling only.
- speech full rate version 1.
- data 9,6 Kb/s.
- data 4,8 Kb/s full rate.
- data 2,4 Kb/s full rate.

26.6.7.1.3 Method of test

Initial Conditions

System Simulator:

1 cells, default parameters.

Mobile Station:

The MS is "idle updated", with TMSI allocated.

Specific PICS statements

- GSM FR (TSPC_AddInfo_Full_rate_version_1)
- 9.6 k full rate data mode (TSPC_AddInfo_96Data)
- 4.8 k full rate data mode (TSPC_AddInfo_48DataF)
- 2.4 k full rate data mode (TSPC_AddInfo_24DataF)

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test procedure

A Mobile Terminated call is initiated, however following the Channel Request received from the Mobile Station, the SS sends an Immediate Assignment to the MS commanding it to go to a TCH/F. This sets the Channel Mode automatically to "Signalling Only".

The SS then sends a series of CHANNEL MODE MODIFY messages to the MS. Each time it is checked that the MS responds with a CHANNEL MODE MODIFY ACKNOWLEDGE message specifying:

- the channel mode that has been specified in the CHANNEL MODE MODIFY message, if the MS supports that mode (this mode then becomes the "channel mode in use");
- the channel mode that was in use when the CHANNEL MODE MODIFY message has been received, if the MS does not support the channel mode specified in the CHANNEL MODE MODIFY message.

Maximum Duration of Test

30 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------------------|---|
| 1 | SS->MS | PAGING REQUEST TYPE 1 | Sent on correct paging subchannel. |
| 2 | MS->SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | Assignment to a non hopping TCH/F. |
| 4 | MS->SS | PAGING RESPONSE | |
| 5 | SS->MS | CHANNEL MODE MODIFY | |
| 6 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 7 | SS->MS | CHANNEL MODE MODIFY | |
| 8 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 9 | SS->MS | CHANNEL MODE MODIFY | |
| 10 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 11 | SS->MS | CHANNEL MODE MODIFY | |
| 12 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 13 | SS->MS | CHANNEL MODE MODIFY | |
| 14 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 15 | SS->MS | CHANNEL RELEASE | |

Specific Message Contents

26.6.8 Test of ciphering mode setting

The Ciphering Mode Setting Procedure can be used by the network to trigger the start and stop of stream ciphering.

The SS shall start and synchronize ciphering and deciphering according to 3GPP TS 03.20 / 3GPP TS 33.102, 3GPP TS 33.220. The bit stream shall be generated by algorithm A5 (A5/1, A5/3 and A5/4 as defined by the test case) using the encryption key Kc (A5/1, A5/3) or Kc₁₂₈ (A5/4).

For test cases using algorithm A5/4 Test USIM as specified in Annex 4A is required.

26.6.8.1 Ciphering mode / start ciphering

26.6.8.1.1 Conformance requirements

1. When the MS receives the CIPHERING MODE COMMAND message with Ciphering Mode Setting information element set to "start ciphering", the MS starts ciphering and deciphering with the algorithm indicated by the "algorithm identifier" field:
 - the MS responds with a CIPHERING MODE COMPLETE message in ciphered mode;
 - the ciphering uses the cipher key determined during the authentication procedure.
2. The MS responds to the AUTHENTICATION REQUEST message with an AUTHENTICATION RESPONSE message and continues to use the ciphering key obtained from the previous authentication procedure.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.7.

26.6.8.1.2 Test purpose

To verify that the MS starts ciphering when it receives a CIPHERING MODE COMMAND message with Cipher Mode Setting = "Start Ciphering". To verify that it continues to use the old cipher key after it receives an AUTHENTICATION REQUEST whilst in ciphered mode.

26.6.8.1.3 Method of test

Initial Conditions

System Simulator:

1 cells, Radio_Link_Timeout set to 64.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- Support for A5/3 (TSPC_Feat_A53)

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is made to originate a call. It shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a CM SERVICE REQUEST. The SS sends an AUTHENTICATION REQUEST and the MS shall answer with AUTHENTICATION RESPONSE. Then the SS sends a CIPHERING MODE COMMAND, ordering the MS to start ciphering with an algorithm supported by the MS. After transmission of this command the SS starts deciphering. The MS shall respond with a CIPHERING MODE

COMPLETE message in ciphered mode using the cipher key determined during the authentication procedure, and continue to establish the call with a SETUP message. After reception of the CIPHERING MODE COMPLETE the SS starts enciphering.

The SS then sends another AUTHENTICATION REQUEST and the MS shall respond with an AUTHENTICATION RESPONSE. The MS shall continue to use the old cipher key.

Finally the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for execution counter, K=1 and optionally when the MS supports A5/3 for K=3.

| Step | Direction | Message | Comments | |
|------|-----------|-------------------------|---|---|
| 1 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Originating Call" NECI not set to 1 | |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | | |
| 3 | MS -> SS | CM SERVICE REQUEST | | |
| 4 | SS -> MS | AUTHENTICATION REQUEST | Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/K". The SS starts deciphering. Sent in ciphered mode using the cipher key determined in between steps 4&5. The SS start enciphering. | |
| 5 | MS -> SS | AUTHENTICATION RESPONSE | | |
| 6 | SS -> MS | CIPHERING MODE COMMAND | | |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | | |
| 8 | MS -> SS | SETUP | | |
| 9 | SS -> MS | AUTHENTICATION REQUEST | | |
| 10 | MS -> SS | AUTHENTICATION RESPONSE | | |
| | | | | New cipher key has been calculated. Sent in ciphered mode using the cipher key determined in between steps 4&5. |
| 11 | SS -> MS | CHANNEL RELEASE | | |

|-----|--|

26.6.8.2 Ciphering mode / no ciphering

26.6.8.2.1 Conformance requirements

When the MS receives a CIPHERING MODE COMMAND message with Ciphering Mode Setting information element set to "no ciphering" the MS shall respond in non ciphered mode with a CIPHERING MODE COMPLETE message.

When the CIPHERING MODE COMMAND with Ciphering Mode Setting information element set to "no ciphering" is received as a response to a CM SERVICE REQUEST, the MS shall continue the establishment of the CM service.

26.6.8.2.2 Test purpose

To verify that the MS does not start ciphering when it receives a CIPHERING MODE COMMAND message with Cipher Mode Setting = "No Ciphering".

26.6.8.2.3 Method of test

Initial Conditions

System Simulator:

1 cells, Radio_Link_Timeout set to 64.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is made to originate a call. It shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a CM SERVICE REQUEST. The SS sends an AUTHENTICATION REQUEST and the MS shall answer with an AUTHENTICATION RESPONSE. Then the SS sends a CIPHERING MODE COMMAND, ordering the MS not to start ciphering. The MS shall respond with a CIPHERING MODE COMPLETE message in non-ciphered mode and continue to establish the call with a SETUP message.

Finally the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Originating call; NECI not equal to 1. |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 3 | MS -> SS | CM SERVICE REQUEST | |
| 4 | SS -> MS | AUTHENTICATION REQUEST | Cipher Mode Setting = "No Ciphering". Sent in non-ciphered mode. |
| 5 | MS -> SS | AUTHENTICATION RESPONSE | |
| 6 | SS -> MS | CIPHERING MODE COMMAND | |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | |
| 8 | MS -> SS | SETUP | |
| 11 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

None.

26.6.8.3 Cipherng mode / old cipher key

26.6.8.3.1 Conformance requirements

When the MS receives the CIPHERING MODE COMMAND message with Cipherng Mode Setting information element set to "start cipherng", the MS starts cipherng and deciphering with the algorithm indicated by the "algorithm identifier" field. Also;

- the MS responds with a CIPHERING MODE COMPLETE message in the correct ciphered mode;
- the cipherng shall use the previously stored cipher key;
- in the case of a mobile originating speech call, the MS shall send a SETUP message after the completion of the cipherng procedure.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.7.

26.6.8.3.2 Test purpose

To verify that the MS uses the stored cipher key when it receives a CIPHERING MODE COMMAND without a preceding authentication procedure.

26.6.8.3.3 Method of test

Initial Conditions

System Simulator:

1 cells, Radio_Link_Timeout = 64.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and a known cipher key stored.

Specific PICS statements

- Support for A5/3 (TSPC_Feat_A53)

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is made to originate a call. It shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a CM SERVICE REQUEST. The SS sends a CIPHERING MODE COMMAND, ordering the MS to start cipherng with a supported algorithm. After transmission of this command the SS starts deciphering. The MS shall respond with a CIPHERING MODE COMPLETE message in the commanded ciphered mode using the stored cipher key and continue to establish the call with a SETUP message. After reception of the CIPHERING MODE COMPLETE the SS starts encipherng.

Finally the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Originating Call: NECI not equal to 1. |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 3 | MS -> SS | CM SERVICE REQUEST | Cipher Mode Setting = "Start Cipherring", algorithm A5/1 or A5/3, if supported, is arbitrarily selected. The SS starts deciphering. |
| 4 | SS -> MS | CIPHERING MODE COMMAND | |
| 5 | MS -> SS | CIPHERING MODE COMPLETE | |
| 6 | MS -> SS | SETUP | Sent in commanded ciphered mode with the stored cipher key. The SS starts enciphering. |
| 7 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

None.

26.6.8.4 Cipherring mode / change of mode, algorithm and key

Networks can be implemented that do not have the same cipherring algorithms on all base stations. In such networks changes of algorithms and cipherring mode may occur and calls will fail if MSs incorrectly handle commands or use an incorrect cipher key.

26.6.8.4.1 Conformance requirements

- 1 When the MS in the "not ciphered" mode, receives a CIPHERING MODE COMMAND message with the Cipherring Mode Setting information element set to "start cipherring", the MS shall load the cipher key stored in the SIM into the ME, use this key to start cipherring and deciphering with the algorithm indicated by the "algorithm identifier" field and, respond with a CIPHERING MODE COMPLETE message.
- 2 If the last timeslot of the message block containing a CIPHERING MODE COMMAND message occurs at time T, then the MS shall be ready to transmit the CIPHERING MODE COMPLETE message before T+500 ms.
- 3 When the MS receives an ASSIGNMENT COMMAND message containing a Cipher Mode Setting IE after receipt of a CIPHERING MODE COMMAND message, the MS shall perform the assignment, use the commanded mode and/or algorithm on the new channel, and not change the cipherring key.
- 4 When the MS receives a HANDOVER COMMAND message containing a Cipher Mode Setting IE after receipt of a CIPHERING MODE COMMAND message, the MS shall perform the handover, use the commanded mode and/or algorithm on the new channel, and not change the cipherring key.
- 5 When the MS in the "ciphered" mode receives a CIPHERING MODE COMMAND message with Cipher Mode Setting IE set to "no cipherring", the MS shall load the cipher key stored in the SIM into the ME, load the cipher key stored in the SIM into the ME, stop cipherring and deciphering and, respond with a CIPHERING MODE COMPLETE message.
- 6 When the MS receives an AUTHENTICATION REQUEST message, it shall process the challenge information and send back an AUTHENTICATION RESPONSE message to the network. The new cipherring key calculated from the challenge information shall overwrite the previous one and be stored on the SIM before the AUTHENTICATION RESPONSE message is transmitted. The cipherring key stored in the SIM shall be loaded in to the ME when any valid CIPHERING MODE COMMAND is received.
- 7 When the MS in the not ciphered mode receives a CIPHERING MODE COMMAND message with Cipher Mode Setting IE set to "no cipherring", the MS shall load the cipher key stored in the SIM into the ME, stop cipherring and deciphering and, respond with a CIPHERING MODE COMPLETE message.
- 8 If a handover fails then the operational parameters used when returning to the old channel are those applied before the HANDOVER COMMAND message was received.
- 9 If an assignment fails then the operational parameters used when returning to the old channel are those applied before the ASSIGNMENT COMMAND message was received.

26.6.8.4.2 Test purpose

- 1 To verify that when the MS is in the "not ciphered" mode and receives the CIPHERING MODE COMMAND message with Ciphering Mode Setting information element set to "start ciphering", the MS uses the cipher key stored in the SIM to start ciphering and deciphering with the algorithm indicated by the "algorithm identifier" field and that the MS responds with a CIPHERING MODE COMPLETE message.
- 2 To verify that the MS is ready to transmit the CIPHERING MODE COMPLETE message before 500 ms after the end of the CIPHERING MODE COMMAND message.
- 3 To verify that when the MS receives an ASSIGNMENT COMMAND message containing a Cipher Mode Setting IE after receipt of a CIPHERING MODE COMMAND message, the MS shall perform the assignment, use the commanded mode and/or algorithm on the new channel, and not change the ciphering key.
- 4 To verify that when the MS receives a HANDOVER COMMAND message containing a Cipher Mode Setting IE after receipt of a CIPHERING MODE COMMAND message, the MS shall perform the handover, use the commanded mode and/or algorithm on the new channel, and not change the ciphering key
- 5 To verify that when the MS is in the "ciphered" mode and receives the CIPHERING MODE COMMAND message with Cipher Mode Setting IE set to "no ciphering", the MS loads the cipher key stored in the SIM into the ME, stops ciphering and deciphering and, responds with a CIPHERING MODE COMPLETE message.
- 6 To verify that the MS responds to an AUTHENTICATION REQUEST message with an AUTHENTICATION RESPONSE message and continues to use the cipher key obtained from the previous authentication procedure.
- 7 To verify that when the MS is in the "not ciphered" mode and receives the CIPHERING MODE COMMAND message with Ciphering Mode Setting information element set to "no ciphering", the does not start ciphering or deciphering, but does respond with a CIPHERING MODE COMPLETE message.
- 8 To verify that when the MS receives a HANDOVER COMMAND message and the handover fails, the MS sends a HANDOVER FAILURE message on the old channel using the old ciphering mode and (if ciphered) the old algorithm and old key.
- 9 To verify that when the MS receives an ASSIGNMENT COMMAND message and the assignment fails, the MS sends an ASSIGNMENT FAILURE message on the old channel using the old ciphering mode and (if ciphered) the old algorithm and old key.

26.6.8.4.3 Method of test

Initial Conditions

System Simulator:

1 cell, with a legal combination of CCCH_CONF with SDCCH/4s or SDCCH/8s is chosen arbitrarily by the SS.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and a known cipher key, K, stored in the SIM.

Specific PICS statements

- Support for A5/3 (TSPC_Feat_A53)
- TSPC_Type_xxx (all appropriate power classes)

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged. The MS shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a PAGING RESPONSE message.

The SS sends a CIPHERING MODE COMMAND, ordering the MS to start ciphering with a supported algorithm. After transmission of this command the SS starts deciphering. The MS shall respond with a CIPHERING MODE COMPLETE message in the commanded ciphered mode using the cipher key K. After reception of the CIPHERING MODE COMPLETE the SS starts enciphering. The MS shall be ready to transmit the CIPHERING MODE COMPLETE message before 500 ms after the end of the CIPHERING MODE COMMAND message.

The term "ready to transmit" is defined in 3GPP TS 04.13.

The SS sends an AUTHENTICATION REQUEST message to the MS. Cipher key L is calculated. The MS shall send an AUTHENTICATION RESPONSE message to the SS.

The SS sends a HANDOVER COMMAND (for a finely synchronized intra-BTS handover) with the Cipher Mode Setting IE set to "no ciphering". The MS shall transmit the HANDOVER COMPLETE on the commanded channel in non ciphered mode.

The SS sends an ASSIGNMENT COMMAND message containing a Cipher Mode Setting IE set to "start ciphering". The MS shall start transmitting on the commanded channel using the commanded algorithm and cipher key K. The MS shall transmit the ASSIGNMENT COMPLETE message.

The SS sends a CIPHERING MODE COMMAND, ordering the MS to stop ciphering. After transmission of this command the SS stops deciphering. The MS shall respond with a CIPHERING MODE COMPLETE message in non ciphered mode. After reception of the CIPHERING MODE COMPLETE the SS stops enciphering.

The SS sends a HANDOVER COMMAND (for a finely synchronized intra-BTS handover) with the Cipher Mode Setting IE set to "start ciphering". The MS shall transmit the HANDOVER COMPLETE on the commanded channel in ciphered mode using cipher key L and command algorithm.

The SS sends a HANDOVER COMMAND (for a finely synchronized intra-BTS handover) with the Cipher Mode Setting IE set to "start ciphering" and the algorithm identifier indicating the algorithm currently in use. The MS shall transmit the HANDOVER COMPLETE on the commanded channel in ciphered mode using the same algorithm as before the handover.

The SS sends an ASSIGNMENT COMMAND message containing a Cipher Mode Setting IE set to "no ciphering". The MS shall start transmitting on the commanded channel in non-ciphered mode. The MS shall transmit the ASSIGNMENT COMPLETE message.

The SS sends a CIPHERING MODE COMMAND, containing a Cipher Mode Setting IE set to "no ciphering". The MS shall respond with a CIPHERING MODE COMPLETE message.

The SS sends an AUTHENTICATION REQUEST message to the MS. Cipher key M is calculated. The MS shall send an AUTHENTICATION RESPONSE message to the SS.

The SS sends a HANOVER COMMAND (for a finely synchronized intra-BTS handover) with the Cipher Mode Setting IE set to "start ciphering". The MS shall transmit the HANOVER COMPLETE on the commanded channel using the commanded algorithm and cipher key L.

The SS sends a HANOVER COMMAND (for a finely synchronized intra-BTS handover) with the Cipher Mode Setting IE set to "no ciphering". The SS does not activate the commanded channel. The MS's transmissions on the new channel need not be monitored. The MS shall transmit the HANOVER FAILURE message on the "old" channel using the "old" algorithm and cipher key L and commanded algorithm.

The SS sends an ASSIGNMENT COMMAND message containing a Cipher Mode Setting IE set to "start ciphering". The SS does not activate the commanded channel. The MS's transmissions on the new channel need not be monitored. The MS shall transmit the ASSIGNMENT FAILURE message on the "old" channel using the "old" algorithm and cipher key L.

If the MS only supports one ciphering algorithm then the SS sends a CHANNEL RELEASE message.

If the MS supports more than one ciphering algorithm then the following steps are performed:

The SS sends an ASSIGNMENT COMMAND message containing a Cipher Mode Setting IE set to "start ciphering" and the Algorithm Identifier indicating a different supported algorithm to the one in use. The MS shall start transmitting on the commanded channel using the commanded algorithm. The MS shall transmit the ASSIGNMENT COMPLETE message.

The SS sends a HANOVER COMMAND (for a finely synchronized intra-BTS handover) containing a Cipher Mode Setting IE set to "start ciphering" and the Algorithm Identifier indicating a different supported algorithm to the one in use. The MS shall transmit the HANOVER COMPLETE on the commanded channel using the commanded algorithm.

The SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

3 minutes.

Expected Sequence

For MSs that only support one ciphering algorithm, the SS shall use step 61A. For MSs that support more than one ciphering algorithm, the SS shall use step 61B and the subsequent steps.

NOTE: 3GPP TS 04.08 / 3GPP TS 44.018 appears to be unclear as to whether timer T3240 shall or shall not be started as a result of the AUTHENTICATION REQUEST messages sent in steps 8 and 44. To allow a variety of test equipment implementations, the IDENTITY REQUEST messages are included in order to avoid an unexpected expiry of timer T3240 prior to the end of the expected sequence.

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | To either SDCCH4 or SDCCH8 depending upon CCCH_CONF arbitrarily chosen. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | Cipher Mode Setting = "Start Ciphering", algorithm arbitrarily selected from those supported by the MS. The SS starts deciphering with the selected algorithm. |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | Sent in ciphered mode using key "K", the stored cipher key, and the commanded algorithm. This message shall be ready to be transmitted before 500 ms after the completion of step 5. |
| 7 | SS | | - The SS starts enciphering using key "K". |
| 8 | SS -> MS | AUTHENTICATION REQUEST | Contains a new Ciphering Key Sequence Number which is associated with the new cipher key, "L". |
| 9 | MS -> SS | AUTHENTICATION RESPONSE | |
| 10 | SS -> MS | HANOVER COMMAND | Includes Cipher Mode Setting IE set to "No Ciphering". |
| 11 | SS | - | The SS activates the new channel without ciphering. |
| 12 | MS -> SS | HANOVER ACCESS | These four HANOVER ACCESS messages are |
| 13 | MS -> SS | HANOVER ACCESS | sent on the new channel in non ciphered |

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 14 | MS -> SS | HANDOVER ACCESS | mode. |
| 15 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 16 | MS -> SS | HANDOVER COMPLETE | Sent in non ciphered mode on the new channel. |
| 17 | SS -> MS | ASSIGNMENT COMMAND | Includes Cipher Mode Setting IE set to "Start Ciphering", with algorithm arbitrarily selected from those supported by the MS. |
| 18 | SS | | The SS activates the new channel with enciphering and deciphering enabled and using cipher key "K". |
| 19 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the new channel in ciphered mode using key "K" and the commanded algorithm. |
| 20 | SS -> MS | CIPHERING MODE COMMAND | Cipher Mode Setting = "No Ciphering". The SS starts receiving in non ciphered mode. |
| 21 | MS -> SS | CIPHERING MODE COMPLETE | Sent in non ciphered mode. This message shall be ready to be transmitted before 500 ms after the completion of step 20. |
| 22 | SS | - | The SS starts transmitting in non ciphered mode. |
| 23 | SS -> MS | HANDOVER COMMAND | Includes Cipher Mode Setting IE set to "Start Ciphering", with algorithm "X" arbitrarily selected from those supported by the MS. |
| 24 | SS | | The SS activates the new channel with enciphering and deciphering enabled and using cipher key "L". |
| 25 | MS -> SS | HANDOVER ACCESS | These four HANDOVER ACCESS messages are sent on the new channel in the non ciphered mode. |
| 26 | MS -> SS | HANDOVER ACCESS | |
| 27 | MS -> SS | HANDOVER ACCESS | |
| 28 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 29 | MS -> SS | HANDOVER COMPLETE | Sent on the new channel in ciphered mode using key "L" and algorithm "X". |
| 30 | SS -> MS | IDENTITY REQUEST | |
| 31 | MS -> SS | IDENTITY RESPONSE | |
| 32 | SS -> MS | HANDOVER COMMAND | Includes Cipher Mode Setting IE set to "Start Ciphering", with algorithm identifier set to "X". |
| 33 | SS | | The SS activates the new channel with enciphering and deciphering enabled. |
| 34 | MS -> SS | HANDOVER ACCESS | These four HANDOVER ACCESS messages are sent on the new channel in the non ciphered mode. |
| 35 | MS -> SS | HANDOVER ACCESS | |
| 36 | MS -> SS | HANDOVER ACCESS | |
| 37 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 38 | MS -> SS | HANDOVER COMPLETE | Sent on the new channel in ciphered mode using algorithm "X". |
| 39 | SS -> MS | ASSIGNMENT COMMAND | Includes Cipher Mode Setting IE set to "No Ciphering". |
| 40 | SS | | The SS activates the new channel without ciphering. |
| 41 | MS -> SS | ASSIGNMENT COMPLETE | Sent in non-ciphered mode on the new channel. |
| 42 | SS -> MS | CIPHERING MODE COMMAND | Cipher Mode Setting = "No Ciphering". |
| 43 | MS -> SS | CIPHERING MODE COMPLETE | Sent in non ciphered mode. This message shall be ready to be transmitted before 500 ms after the completion of step 42. |
| 44 | SS -> MS | AUTHENTICATION REQUEST | Contains a new Ciphering Key Sequence Number which is associated with the new cipher key, "M". |
| 45 | MS -> SS | AUTHENTICATION RESPONSE | |
| 46 | SS -> MS | HANDOVER COMMAND | Includes Cipher Mode Setting IE set to "Start Ciphering", with algorithm "Y" arbitrarily selected from those supported by the MS. |
| 47 | SS | | The SS activates the new channel with enciphering and deciphering enabled and using cipher key "L". |
| 48 | MS -> SS | HANDOVER ACCESS | These four HANDOVER ACCESS messages are sent on the new channel in the non ciphered mode. |
| 49 | MS -> SS | HANDOVER ACCESS | |
| 50 | MS -> SS | HANDOVER ACCESS | |

| Step | Direction | Message | Comments |
|------|-----------|---------------------|--|
| 51 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 52 | MS -> SS | HANDOVER COMPLETE | Sent on the new channel in ciphered mode using key "L" |
| 53 | SS -> MS | HANDOVER COMMAND | Includes Cipher Mode Setting IE set to "No Ciphering". |
| 54 | SS, MS | | The SS does not activate the new channel The MS's transmissions on the new channel need not be monitored. |
| 55 | MS -> SS | HANDOVER FAILURE | sent on old channel using algorithm "Y" and key "L". |
| 56 | SS -> MS | IDENTITY REQUEST | |
| 57 | MS -> SS | IDENTITY RESPONSE | |
| 58 | SS -> MS | ASSIGNMENT COMMAND | Includes Cipher Mode Setting IE set to "No Ciphering". |
| 59 | SS, MS | | The SS does not activate the new channel The MS's transmissions on the new channel need not be monitored. |
| 60 | MS -> SS | ASSIGNMENT FAILURE | sent on old channel using algorithm "Y" and key "L". |
| 61A | SS -> MS | CHANNEL RELEASE | |
| 61B | SS -> MS | ASSIGNMENT COMMAND | Includes Cipher Mode Setting IE set to "Start Ciphering", with algorithm "Z" arbitrarily selected from those supported by the MS but different to algorithm "Y". |
| 62B | SS | | The SS activates the new channel with enciphering and deciphering enabled. |
| 63B | MS -> SS | ASSIGNMENT COMPLETE | Sent on the new channel in ciphered mode using key "L" and algorithm "Z". |
| 64B | SS -> MS | HANDOVER COMMAND | Includes Cipher Mode Setting IE set to "Start Ciphering" and the algorithm identifier set to "Y". |
| 65B | SS | | The SS activates the new channel with enciphering and deciphering enabled. |
| 66B | MS -> SS | HANDOVER ACCESS | These four HANDOVER ACCESS messages are |
| 67B | MS -> SS | HANDOVER ACCESS | sent on the new channel in the non ciphered |
| 68B | MS -> SS | HANDOVER ACCESS | mode. |
| 69B | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 70B | MS -> SS | HANDOVER COMPLETE | Sent on the new channel in ciphered mode using key "L" and algorithm "Y". |
| 71B | SS -> MS | CHANNEL RELEASE | |

CIPHER MODE COMMAND

| Information Element | value/remark |
|--------------------------------------|---------------------|
| As default message contents, except: | |
| Cipher Mode Setting | |
| - Algorithm Identifier | As specified above. |
| - Cipher Mode Set | As specified above. |

26.6.8.5 Ciphering mode / IMEISV request

If the MS does not supply the IMEISV when requested, the network will not know whether or not the MS is type approved, i.e. whether or not it has passed any tests.

If the MS supplies its IMEISV when not requested, this may cause calls to systematically fail.

26.6.8.5.1 Conformance requirements

1. When the MS receives the CIPHERING MODE COMMAND message with Cipher Response bit set to "IMEISV shall be included" and the Cipher Mode Setting is "no ciphering", the MS shall include the IMEISV in the Mobile Identity IE in the CIPHERING MODE COMPLETE message.

2. When the MS receives the CIPHERING MODE COMMAND message with Cipher Response bit set to "IMEISV shall not be included", the MS shall not include the Mobile Identity IE in the CIPHERING MODE COMPLETE message.
3. When the MS receives the CIPHERING MODE COMMAND message with Cipher Response bit set to "IMEISV shall be included" and the Cipher Mode Setting is "Ciphering required", the MS shall include the IMEISV in the Mobile Identity IE in the CIPHERING MODE COMPLETE message.
4. When the MS receives a IDENTITY REQUEST message with ciphering enabled and the Identity Type IE set to "IMEISV", the MS shall return its IMEISV in the Mobile Identity IE contained within the IDENTITY RESPONSE message.
5. To verify that the SVN portion of the IMEISV value returned by the MS is coded using binary coded decimal digits and does not use the reserved value "99".

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.7.2 and 9.1.10.1.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.10.1.

Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.10.1.

Conformance requirement 4: 3GPP TS 24.008 subclauses 4.4.3.1, 4.7.1.2 and 4.7.8

Conformance requirement 5: 3GPP TS 23.003 subclause 6.2.2 / 3GPP TS 24.008 table 10.5.1.4

26.6.8.5.2 Test purpose

To verify that the MS supplies its IMEISV in the CIPHERING MODE COMPLETE message when it receives a CIPHERING MODE COMMAND message with a Cipher Response bit set to "IMEISV shall be included" and ciphering is not active/required.

To verify that the MS does not supply any Mobile Identity IE in the CIPHERING MODE COMPLETE message when it receives a CIPHERING MODE COMMAND message with a Cipher Response bit set to "IMEISV shall not be included".

To verify that the MS supplies its IMEISV in the CIPHERING MODE COMPLETE message when it receives a CIPHERING MODE COMMAND message with a Cipher Response bit set to "IMEISV shall be included" and ciphering is active/required.

To verify that the MS supplies its IMEISV in the IDENTITY RESPONSE message when it receives a IDENTITY REQUEST message with the Identity Type IE set to "IMEISV". The IDENTITY REQUEST and IDENTITY RESPONSE messages should not be ciphered (refer to 3GPP TS 24.008 clause 4.7.1.2).

To verify that the MS codes the SVN portion of the IMEISV using binary coded decimal (BCD) digits and does not use the reserved value "99".

26.6.8.5.3 Method of test

Initial Conditions

System Simulator:

1 cell.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

- IMEISV of the MS.

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged. It shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a PAGING RESPONSE. Then the SS sends a CIPHERING MODE COMMAND indicating "No ciphering" and with the Cipher Response bit set to "IMEISV shall not be included". The MS shall respond with a CIPHERING MODE COMPLETE message that does not include the Mobile Identity IE.

Then the SS sends a CIPHERING MODE COMMAND indicating "No ciphering" and with the Cipher Response bit set to "IMEISV shall be included". The MS shall respond with a CIPHERING MODE COMPLETE message that carries the IMEISV in the Mobile Identity IE. The SS checks the IMEISV value and verifies that the SVN IE is coded using BCD and does not equal the reserved value "99".

The SS sends an IDENTITY REQUEST message with the Identity Type IE set to request the IMEISV value from the MS. The MS shall respond with an IDENTITY RESPONSE message that carries the IMEISV in the Mobile Identity IE. The SS then checks the IMEISV value and verifies that the SVN IE is coded using BCD and does not equal the reserved value "99".

The IDENTITY REQUEST and IDENTITY RESPONSE messages shall not be ciphered.

The SS sends a third CIPHERING MODE COMMAND indicating "ciphering required" and with the Cipher Response bit set to "IMEISV shall be included". The MS shall respond with a CIPHERING MODE COMPLETE message that carries the IMEISV in the Mobile Identity IE. The SS checks the IMEISV value and verifies that the SVN IE is coded using BCD and does not equal the reserved value "99"..

Finally the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

20 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | Cipher Mode Setting = "No Ciphering". Cipher Response = "IMEISV shall not be included". |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | Shall not include Mobile Identity IE. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | Cipher Mode Setting = "No Ciphering". Cipher Response = "IMEISV shall be included". |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall include one Mobile Identity IE carrying the MS's IMEISV. The SS checks the IMEISV value is coded in BCD digits and does not equal 99. |
| 9 | SS -> MS | IDENTITY REQUEST | Identity Type = "IMEISV" The IDENTITY REQUEST message shall not be ciphered. |
| 10 | MS -> SS | IDENTITY RESPONSE | Shall include Mobile Identity IE carrying the MS's IMEISV. The SS checks the IMEISV value is coded in BCD digits and does not equal 99. |
| 11 | SS -> MS | CIPHERING MODE COMMAND | The IDENTITY RESPONSE message shall not be ciphered. Cipher Mode Setting = "Start Ciphering". Cipher Response = "IMEISV shall be included". |
| 12 | MS -> SS | CIPHERING MODE COMPLETE | Shall include one Mobile Identity IE carrying the MS's IMEISV. The SS checks the IMEISV value is coded in BCD digits and does not equal 99. The SVN portion of the IMEISV shall not be ciphered. |
| 13 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

None.

26.6.8.6 Ciphering mode / Non support of algorithm A5/2

26.6.8.6.1 Conformance requirements

For the MS it is prohibited to implement algorithm A5/2.

References

3GPP TS 43.020 subclause 4.9

26.6.8.6.2 Test purpose

To verify that the MS does not start ciphering when it receives a CIPHERING MODE COMMAND message with Cipher Mode Setting = "Start Ciphering" and algorithm identifier set to "A5/2".

26.6.8.6.3 Method of test

Initial Conditions

System Simulator:

1 cell. ATT=1.

Mobile Station:

Power off.

Specific PICS statements

-

PIXIT statements

-

Test Procedure

The MS is powered on. The MS sends CHANNEL REQUEST for doing location update procedure. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a LOCATION UPDATING REQUEST. SS checks that MS does not support A5/2 algorithm by CLASSMARK ENQUIRY Procedure. Then SS sends an AUTHENTICATION REQUEST and the MS shall answer with AUTHENTICATION RESPONSE. Then the SS sends a CIPHERING MODE COMMAND, ordering the MS to start ciphering with algorithm A5/2 which is prohibited for the MS. After transmission of this command the SS starts deciphering. The MS shall not respond with a CIPHERING MODE COMPLETE message in ciphered mode using the cipher key determined during the authentication procedure.

Maximum Duration of Test

3 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS -> SS | CHANNEL REQUEST | MS is switched on or powered on |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 3 | MS -> SS | LOCATION UPDATING REQUEST | |
| 4 | SS->MS | CLASSMARK ENQUIRY | CLASSMARK CHANGE message is requested A5/2 algorithm = "encryption algorithm A5/2 not available" in Mobile Station Classmark 2 IE |
| 5 | MS->SS | CLASSMARK CHANGE | |
| 6 | SS -> MS | AUTHENTICATION REQUEST | Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/2". The SS starts deciphering. SS checks that there is no valid L3 message received using algorithm A5/2 (e.g. CIPHERING MODE COMPLETE) within 10s. |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| | | | |

Specific Message Contents

26.6.8.7 Ciphering mode with cipher key K_{C128}

26.6.8.7.1 Conformance requirements

- When the MS receives the CIPHERING MODE COMMAND message with Ciphering Mode Setting information element set to "start ciphering", the MS starts ciphering and deciphering with the algorithm indicated by the "algorithm identifier" field:
 - the MS responds with a CIPHERING MODE COMPLETE message in ciphered mode;
 - the ciphering uses the cipher key determined during the authentication procedure.

2. The MS responds to the AUTHENTICATION REQUEST message with an AUTHENTICATION RESPONSE message and continues to use the ciphering key obtained from the previous authentication procedure.
3. The ASSIGNMENT COMMAND message may contain a cipher mode setting IE. In that case, this ciphering mode has to be applied on the new channel. If no such information is present, the ciphering mode is the same as on the previous channel. In either case the ciphering key shall not be changed as long as the key length remains unchanged.

References

3GPP TS 44.018 subclause 3.4.3, 3.4.7.

3GPP TS 24.008 subclause 4.3.2.

26.6.8.7.2 Test purpose

To verify that the MS calculates the correct Kc_{128} and starts ciphering using cipher algorithm A5/4 when it receives a CIPHERING MODE COMMAND message with Cipher Mode Setting = "Start Ciphering".

To verify that the correct Kc_{128} key is used after ASSIGNMENT COMMAND including cipher mode setting for A5/4 algorithm.

26.6.8.7.3 Method of test

Initial Conditions

System Simulator:

1 cell, default settings.

Mobile Station:

Test USIM is plugged into the MS. The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

CC state U10-call active.

Test Procedure

The MS is made to originate a call. It shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a CM SERVICE REQUEST. The SS sends an AUTHENTICATION REQUEST with AUTN Information Element present and the MS shall answer with AUTHENTICATION RESPONSE with correct RES. Then the SS sends a CIPHERING MODE COMMAND ordering the MS to start ciphering with algorithm A5/4. After transmission of this command the SS starts deciphering. The MS shall respond with a CIPHERING MODE COMPLETE message in ciphered mode using the 128 bit cipher key calculated during the authentication procedure and continue to establish the call with a SETUP message.

The SS sends CALL PROCEEDING and initiates a new authentication procedure by sending AUTHENTICATION REQUEST with AUTN Information Element present and different RAND value. The MS shall respond with AUTHENTICATION RESPONSE with correct RES.

The call setup is proceeded with ALERTING. SS sends ASSIGNMENT COMMAND including cipher mode setting indicating A5/4. The MS shall respond with an ASSIGNMENT COMPLETE message in ciphered mode using the 128

bit cipher key calculated during the first authentication procedure. The call establishment is finished on the ciphered channel with CONNECT and CONNECT ACKNOWLEDGEMENT.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Originating Call" NECI not set to 1 Cipher key K_{C128} has been calculated. "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/4". The SS starts deciphering. Sent in ciphered mode using the cipher key determined in step 5. The SS start enciphering. A new cipher key K_{C128} has been calculated. "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. Depending on the PIXIT, an alerting indication is given. Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/4" Sent in ciphered mode using the cipher key determined in step 5. |

26.6.8.8 Ciphering mode with cipher key Kc_{128} and algorithm changes

26.6.8.8.1 Conformance requirements

1. A ME supporting UMTS authentication challenge may support the following procedure: In order to avoid a synchronisation failure, if the same RAND is received twice, the mobile station shall store the received RAND together with the RES returned from the USIM in the volatile memory and compare it with any subsequently received RAND values, until the RAND value stored in the mobile station is deleted. If the stored RAND value is equal to the new received value in the AUTHENTICATION REQUEST message, then the mobile station shall not pass the RAND to the USIM, but shall immediately send the AUTHENTICATION RESPONSE message with the stored RES. If there is no valid stored RAND in the mobile station or the stored RAND is different from the new received value in the AUTHENTICATION REQUEST message, the mobile station shall pass the RAND to the USIM, shall override any previously stored RAND and RES with the new ones and start, or reset and restart timer T3218.
2. The ME with a USIM in use shall compute a new GSM Kc_{128} using the UMTS ciphering key and the UMTS integrity key from an established UMTS security context as specified in 3GPP TS 33.102 [5a]. The new GSM Kc_{128} shall be stored only in the ME.
3. The ASSIGNMENT COMMAND message may contain a cipher mode setting IE. In that case, this ciphering mode has to be applied on the new channel. If no such information is present, the ciphering mode is the same as on the previous channel. In either case the ciphering key shall not be changed as long as the key length remains unchanged. However, in case of a switch between ciphering algorithms requiring different key lengths, i.e. 64 or 128 bits, a change from the 64 bit key to the 128 bit key or vice versa must be performed
4. In a UMTS authentication challenge, the new UMTS ciphering key, the new GSM ciphering key and the new UMTS integrity key calculated from the challenge information shall overwrite the previous UMTS ciphering key, GSM ciphering key and UMTS integrity key. The new UMTS ciphering key, GSM ciphering key and UMTS integrity key are stored on the USIM together with the ciphering key sequence number. Furthermore, in A/Gb mode when after the authentication procedure an A5 ciphering algorithm that requires a 128-bit ciphering key is taken into use, then a new GSM Kc_{128} shall also be calculated as described in the subclause 4.3.2.3a.

26.6.8.8.2 Test purpose

To verify that the MS handles correctly key length changes when the SS orders the MS to change from A5/1 to A5/4 and vice versa.

26.6.8.8.3 Method of test

Initial Conditions

System Simulator:

1 cell, default settings.

Mobile Station:

Test USIM is plugged into the MS. The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged. The MS shall send at least one CHANNEL REQUEST message. The SS sends an IMMEDIATE ASSIGNMENT and the MS shall answer with a PAGING RESPONSE message. The SS sends an AUTHENTICATION REQUEST with AUTN Information Element present and the MS shall answer with AUTHENTICATION RESPONSE with correct RES. Then the SS sends a CIPHERING MODE COMMAND ordering the MS to start ciphering with algorithm A5/1. After transmission of this command the SS starts deciphering. The MS shall respond with a CIPHERING MODE COMPLETE message in ciphered mode using the 64 bit key K_c calculated during the authentication procedure.

The SS then sends another AUTHENTICATION REQUEST with AUTN Information Element present and the MS shall respond with AUTHENTICATION RESPONSE with correct RES. The MS shall continue to use the old cipher key. Then the SS sends an ASSIGNMENT COMMAND with CIPHER MODE SETTING information element indicating to use algorithm A5/4. The MS shall respond with a ASSIGNMENT COMPLETE message in ciphered mode using the 128 bit cipher key K_{c128} calculated during the previous authentication procedure.

After an identity procedure the SS then sends another AUTHENTICATION REQUEST with AUTN and the MS shall answer with an AUTHENTICATION RESPONSE with correct RES. Then the SS sends an ASSIGNMENT COMMAND with CIPHER MODE SETTING information element indicating to use algorithm A5/1. The MS completes the procedure by sending an ASSIGNMENT COMPLETE message in ciphered mode using the key calculated during the previous authentication.

After an identity procedure the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

3 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns a SDCCH8 |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | Cipher keys Kc and Kc ₁₂₈ have been calculated. "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/1". The SS starts deciphering. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Sent in ciphered mode using the cipher key Kc determined in step 6. The SS start enciphering. |
| 9 | SS -> MS | AUTHENTICATION REQUEST | |
| 10 | MS -> SS | AUTHENTICATION RESPONSE | New cipher keys Kc and Kc ₁₂₈ have been calculated Sent in ciphered mode using the cipher key Kc determined in step 6. "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. |
| 11 | SS -> MS | ASSIGNMENT COMMAND | SS assigns SDCCH4 Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/4" |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | Sent in ciphered mode using the cipher key Kc ₁₂₈ determined in step 6. |
| 13 | SS -> MS | IDENTITY REQUEST | |
| 14 | MS -> SS | IDENTITY RESPONSE | |
| 15 | SS -> MS | AUTHENTICATION REQUEST | |
| 16 | MS -> SS | AUTHENTICATION RESPONSE | New cipher keys Kc and Kc ₁₂₈ have been calculated Sent in ciphered mode using the cipher key Kc ₁₂₈ determined in step 6. "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. |
| 17 | SS -> MS | ASSIGNMENT COMMAND | SS assigns SDCCH8 Cipher Mode Setting = "Start Ciphering; cipher with algorithm A5/1" |
| 18 | MS -> SS | ASSIGNMENT COMPLETE | Sent in ciphered mode using cipher algorithm A5/1 and the cipher key Kc determined in step 6. |
| 19 | SS -> MS | IDENTITY REQUEST | |
| 20 | MS -> SS | IDENTITY RESPONSE | |
| 21 | SS -> MS | CHANNEL RELEASE | |

26.6.9 Test of additional assignment

The Additional Assignment procedure is used to change an MS's channel configuration from Lm + ACCH to Lm + Lm + ACCH. It is therefore only relevant to those mobiles which perform such an operation.

No tests are specified at the moment.

26.6.10 Test of partial release

The Partial Release procedure is used to change an MS's channel configuration from Lm + Lm + ACCH to Lm + ACCH. It is therefore only relevant to those mobiles which perform such an operation.

No tests are specified at the moment.

26.6.11 Test of classmark

References to Class Mark related PICS values are provided in the table 26.6.11a and 26.6.11b.

26.6.11.1 Classmark change

This procedure allows the MS to indicate to the network that a change in the classmark (e.g. due to addition of power amplification) has taken place.

26.6.11.1.1 Conformance requirements

If the RF power capability of the MS is changed during a call, this change shall be signalled to the network.

If the RF power capability of the MS is changed in idle mode, the up to date RF power capability shall be signalled to the network during RR connection establishment.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.10.

26.6.11.1.2 Test purpose

To verify that if the RF power capability or any other capability indicated in a Classmark IE of the MS is changed during a call, the change is communicated on the DCCH to the network.

To verify that if the RF power capability or any other capability indicated in a Classmark IE of the MS is changed in idle mode, the out of date capabilities are not communicated to the network during RR connection establishment.

26.6.11.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and with no additional power amplification applied.

Specific PICS statements

- TSPC_Type_xxx (all appropriate power classes)
- TSPC_AddInfo_Full_rate_version_1
- TSPC_AddInfo_Full_rate_version_2
- TSPC_AddInfo_Full_rate_version_3

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated and with no additional power amplification applied.

Test Procedure

With the MS in idle mode, the RF power capability shall be changed by the addition of power amplification, after which the MS is made to originate a call. The new RF power capability shall be included in the CM SERVICE REQUEST message. After the call has reached the Call Control state U10, the RF power capability of the MS is changed by removal of the additional power amplification. The MS shall send a CLASSMARK CHANGE message indicating the new RF power capability. The RF power capability is then changed by adding the power amplification. The MS shall again send a CLASSMARK CHANGE message indicating the new RF power capability. The call is then released by the SS.

With the MS in idle mode, the power amplification is removed. The SS then pages the MS, which in the PAGING RESPONSE message shall indicate the correct RF power capability.

Finally the SS transmits a CHANNEL RELEASE to end the test.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|--|
| 1 | ----- | ----- | Add power amplification. |
| 2 | ----- | ----- | The MS shall be made to originate a call. |
| 3 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Originating call" NECI not equal to one. |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | The "Mobile Station Classmark 2" IE shall indicate the new RF power capability. |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | SETUP | |
| 8 | SS -> MS | CALL PROCEEDING | |
| 9 | SS -> MS | ALERTING | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | The Channel Mode is a non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | CONNECT | |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | ----- | ----- | Remove the power amplification. |
| 15 | MS -> SS | CLASSMARK CHANGE | The "Mobile Station Classmark 2" IE shall indicate the new power capability. |
| 16 | ----- | ----- | Add power amplification. |
| 17 | MS -> SS | CLASSMARK CHANGE | The "Mobile Station Classmark 2" IE shall indicate the new power capability. |
| 18 | SS -> MS | CHANNEL RELEASE | |
| 19 | ----- | ----- | Remove the power amplification. |
| | ----- | ----- | The SS waits 12 s to allow the MS to perform cell reselection. |
| 20 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 21 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Answer to paging". |
| 22 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 23 | MS -> SS | PAGING RESPONSE | The "Mobile Station Classmark 2" IE shall indicate the new power capability. |
| 24 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

None.

26.6.11.2 Classmark interrogation

This procedure allows the network to request the MS to supply all its classmark information to the network.

Networks may systematically use this procedure (e.g. during location updating) and, if it is incorrectly implemented in the MS, the basic connection establishment procedure may systematically fail.

26.6.11.2.1 Conformance requirements

On receipt of a CLASSMARK ENQUIRY message, the MS sends a CLASSMARK CHANGE message to the network containing the Mobile Station Classmark 2 information element and depending upon the contents of this information element, possibly the Mobile Station Classmark 3 information element.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.11 and 9.1.11.1.

3GPP TS 04.13 subclause 5.2.9.

26.6.11.2.2 Test purpose

To verify that if the network requests the MS to supply all its classmark information then this information is communicated on the DCCH to the network.

26.6.11.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

"Idle, updated", with TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is switched off (or has its power removed).

The SS then sets the IMSI attach-detach flag in the SYSTEM INFORMATION messages so that the MS shall perform a location update when switched on.

The MS is switched on (or its power is re-applied). The MS then initiates a location update attempt. After the mobile has sent the LOCATION UPDATING REQUEST message, the SS transmits a CLASSMARK ENQUIRY message. The MS shall be ready to transmit the CLASSMARK CHANGE message before 300 ms after the end of the CLASSMARK ENQUIRY message. The contents of the Mobile Station Classmark 2 Information element and the contents of Mobile Station Classmark 3 information element is recorded and compared to the corresponding PICS/PIXIT statement as shown in table 26.6.11a and 26.6.11b.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Then the SS transmits a LOCATION UPDATING ACCEPT message that does not contain a Mobile Identity IE.

Maximum Duration of Test

2 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS | | The MS is switched off (or has its power removed). IMSI attach-detach flag changed. The MS is switched on (or its power is re-applied). This message shall be ready to be transmitted before 300 ms after the completion of step 7. SS compares the contents of the Mobile Station Classmark 2/3 Information elements to the corresponding PICS/PIXIT statements. |
| 2 | SS | | |
| 3 | MS | | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | LOCATION UPDATING REQUEST | |
| 7 | SS -> MS | CLASSMARK ENQUIRY | |
| 8 | MS -> SS | CLASSMARK CHANGE | |
| 9 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 10 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

Contents of LOCATION UPDATING ACCEPT message:

| | |

| Follow on proceed | Not present |

26.6.11.3 Classmark interrogation / UTRAN Classmark Change

This procedure allows the network to request the MS to supply all its classmark information to the network. In addition the network may request a MS supporting UTRAN to send the UTRAN classmark information.

Networks may systematically use this procedure (e.g. during location updating) and, if it is incorrectly implemented in the MS, the basic connection establishment procedure may systematically fail.

If the last timeslot of the message block containing a CLASSMARK ENQUIRY message occurs at time T, then the MS shall be ready to transmit the CLASSMARK CHANGE message before T + 300 ms.

26.6.11.3.1 Conformance requirements

On receipt of a CLASSMARK ENQUIRY message, the MS sends a CLASSMARK CHANGE message to the network containing the Mobile Station Classmark 2 information element and depending upon the contents of this information element, possibly the Mobile Station Classmark 3 information element.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.11 and 9.1.11.1.

3GPP TS 04.13 subclause 5.2.9.

26.6.11.3.2 Test purpose

To verify that if the network requests the MS to supply all its classmark information, including the UTRA Classmark information, then this information is communicated on the DCCH to the network.

26.6.11.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters. In SI3 is ATT flag is set to 1 and Early Classmark Sending Control flag is set to Low.

Mobile Station:

Powered off.

Specific PICS statements

-

PIXIT statements

Test Procedure

The MS is switched on (or its power is re-applied). The MS then initiates a location update attempt. After the mobile has sent the LOCATION UPDATING REQUEST message, the SS transmits a CLASSMARK ENQUIRY message. The MS shall be ready to transmit the CLASSMARK CHANGE message within 300 ms after the end of the CLASSMARK ENQUIRY message. The contents of the Mobile Station Classmark 2 Information element and the contents of Mobile Station Classmark 3 information element are compared to the corresponding PICS/PIXIT statements as shown in table 26.6.11a and 26.6.11b.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Then the SS transmits a LOCATION UPDATING ACCEPT message that does not contain a Mobile Identity IE.

Maximum Duration of Test

2 minutes.

Expected Sequence

26.6.11.4 Early UTRAN Classmark Sending

This procedure allows the network to request the MS to supply all its classmark information to the network. In addition the network may request a MS supporting UTRAN to send the UTRAN classmark information.

Networks may systematically use this procedure (e.g. during location updating) and, if it is incorrectly implemented in the MS, the basic connection establishment procedure may systematically fail.

26.6.11.4.1 Conformance requirements

Early classmark sending consists in the mobile station sending as early as possible after access a CLASSMARK CHANGE message to provide the network with additional classmark information. In addition a MS supporting UTRAN sends a UTRAN Classmark Change message; an MS supporting CDMA2000 sends a CDMA2000 Classmark Change. When a CLASSMARK CHANGE message and one or more additional UTRAN Classmark Change or CDMA2000 Classmark Change messages are to be sent, the CLASSMARK CHANGE message shall be sent first.

....

A mobile station which implements the support of one or more 3G Radio Access Technology shall also implement the « Controlled Early Classmark Sending » option; in this case neither UTRAN CLASSMARK CHANGE nor CDMA2000 CLASSMARK CHANGE message shall be sent by the mobile if prohibited by the 3G Early Classmark Sending Restriction parameter in the last reception in the accessed cell of the SYSTEM INFORMATION TYPE 3 message or the PACKET SYSTEM INFORMATION TYPE 2 message (see 3GPP TS 04.60). If the PACKET SYSTEM INFORMATION TYPE 2 messages have been received, but the 3G Early Classmark Sending Restriction flag is not included, the mobile station shall assume neither UTRAN nor cdma2000 classmark change message shall be sent with the Early Classmark Sending.

During a contention resolution procedure, if the last timeslot of the block containing a Layer 2 UA frame, occurs at time T, then the MS shall be ready to transmit the CLASSMARK CHANGE message, if applicable (see GSM 04.06 [3] and GSM 04.08 [4]), before T + 40 ms.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1.4.1 and 9.1.11.1.

3GPP TS 04.13 subclause 5.2.9.

26.6.11.4.2 Test purpose

To verify that if the network requests the MS to supply all its classmark information, including the UTRAN Classmark information, then this information is communicated on the DCCH to the network. The request of the classmark information is indicated in SYSTEM INFORMATION TYPE 3.

26.6.11.4.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

The SS shall transmit SI3 with ATT flag is set to 1 and both Early Classmark Sending Restriction and 3G Early Classmark Sending Restriction parameter set to High.

Mobile Station:

Powered off.

Specific PICS statements

-

PIXIT statements

- Contents of Mobile Station Classmark 2 information element
- Contents of Mobile Station Classmark 3 information element
- Contents of UTRAN Classmark Change information

Test Procedure

The MS is switched on (or its power is re-applied). The MS then initiates a location update attempt. After the mobile has sent the LOCATION UPDATING REQUEST message, the MS transmits the CLASSMARK CHANGE and UTRAN CLASSMARK CHANGE messages.

Then the SS transmits a LOCATION UPDATING ACCEPT message that does not contain a Mobile Identity IE.

Maximum Duration of Test

2 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------------|--|
| 1 | MS | | The MS is switched on. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | (SABM) |
| 5 | SS -> MS | LOCATION UPDATING REQUEST | (UA) |
| 6 | MS -> SS | CLASSMARK CHANGE | This message shall be transmitted within 69 ms after the completion of step 5. If MS support UMTS FDD: UMTS FDD Radio Access Capability = 1 If MS support UMTS TDD: UMTS TDD Radio Access Capability = 1 Contents as declared in PIXIT. |
| 7 | MS -> SS | UTRAN CLASSMARK CHANGE | Contents as declared in PIXIT. |
| 8 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

26.6.12 Test of channel release

The purpose of this procedure is to deactivate the dedicated channels in use. When the channels are released, the MS returns to the CCCH configuration, idle mode.

26.6.12.1 Channel release / SDCCH

26.6.12.1.1 Conformance requirements

After the acknowledgement of the Layer 2 disconnection by the network, the MS shall not produce any further RF-transmission.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.1

26.6.12.1.2 Test purpose

To verify that the MS is able to correctly release an SDCCH after having received a CHANNEL RELEASE message.

26.6.12.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged and allocated a dedicated channel and the Layer 2 signalling link is established. The SS then sends a CHANNEL RELEASE message, after which the MS shall initiate a Layer 2 disconnection process on the main signalling link. After the acknowledgement of the Layer 2 disconnection by the SS, the MS shall stop transmission of Layer 2 messages. This is verified for 3 s. The MS shall return to the idle state, which is verified through the paging procedure to which the MS shall respond.

Maximum Duration of Test

20 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establish. Cause = "Answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type = SDCCH/8 |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CHANNEL RELEASE | With a valid RR cause value. |
| 6 | MS -> SS | DISC | The MS may send the DISC message without performing a layer 2 acknowledgement of the CHANNEL RELEASE message. |
| 7 | SS -> MS | UA | |
| | ----- | ----- | The SS verifies for 3 s that the MS does not produce any Layer 2 messages. |
| | ----- | ----- | The SS waits 12 s to allow the MS to perform cell reselection. |
| 8 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 9 | MS -> SS | CHANNEL REQUEST | Establish. Cause = "Answer to paging". |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | PAGING RESPONSE | |
| 12 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

None.

26.6.12.2 Channel release / SDCCH - no L2 ACK

26.6.12.2.1 Conformance requirements

After the expiry of timer T3110 the MS shall not produce any further RF-transmission.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.1.

26.6.12.2.2 Test purpose

To verify that the MS is able to correctly release a SDCCH after having received a CHANNEL RELEASE message, even if the SS does not L2 acknowledge the L2 DISC frame.

26.6.12.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged and allocated a dedicated channel and the Layer 2 signalling link is established. The SS then sends a CHANNEL RELEASE message, after which the MS shall send at least 2 L2 DISC frames. The SS does not acknowledge any of the L2 DISC frames. After 2 s, the SS verifies for 3 s that the MS has stopped transmission of Layer 2 messages. The MS shall return to the idle state, which is verified through the paging procedure to which the MS shall respond.

Maximum Duration of Test

25 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type = SDCCH/8. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CHANNEL RELEASE | With a valid RR cause value. |
| 6 | MS -> SS | DISC | The MS may send the DISC message without performing a layer 2 acknowledgement of the CHANNEL RELEASE message. The MS shall send at least 2 L2 DISC frames, to which the SS does not respond. After a period of 2 s, the SS verifies for 3 s that the MS does not produce any further Layer 2 messages. The SS waits 12 s to allow the MS to perform cell reselection. |
| | ----- | ----- | |
| 7 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 8 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Answer to paging". |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | PAGING RESPONSE | |
| 11 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

None.

26.6.12.3 Channel release / TCH-F

26.6.12.3.1 Conformance requirements

After the acknowledgement of the Layer 2 disconnection by the network the MS shall not produce any further RF-transmission.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.1.

26.6.12.3.2 Test purpose

To verify that the MS is able to correctly release a full-rate TCH after having received a CHANNEL RELEASE message.

26.6.12.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged and allocated a dedicated channel and the Layer 2 signalling link is established. The SS then sends a CHANNEL RELEASE message, after which the MS shall initiate a Layer 2 disconnection process on the main signalling link. After the acknowledgement of the Layer 2 disconnection by the SS, the MS shall stop transmission of Layer 2 messages. This is verified for 3 s. The MS shall return to the idle state, which is verified through the paging procedure to which the MS shall respond.

Maximum Duration of Test

20 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Establ. Cause = "Answer to paging". Channel Type = "Bm + ACCHs" With a valid RR cause value. The MS may send the DISC message without performing a layer 2 acknowledgement of the CHANNEL RELEASE message. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |

26.6.12.4 Channel release / TCH-F - no L2 ACK

26.6.12.4.1 Conformance requirements

After the expiry of timer T3110 the MS shall not produce any further RF-transmission.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.1

26.6.12.4.2 Test purpose

To verify that the MS is able to correctly release a TCH/F after having received a CHANNEL RELEASE message, even if the SS does not L2 acknowledge the L2 DISC frame.

26.6.12.4.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is paged and allocated a dedicated channel and the Layer 2 signalling link is established. The SS then sends a CHANNEL RELEASE message (with cause "abnormal release, unspecified"), after which the MS shall send at least 2 L2 DISC frames. The SS does not acknowledge any of the L2 DISC frames. After 2 s, the SS verifies for 3 s that the MS has stopped transmission of Layer 2 messages. The MS shall return to the idle state, which is verified through the paging procedure to which the MS shall respond.

Maximum Duration of Test

25 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establish. Cause = "Answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type = "Bm + ACCHs". |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CHANNEL RELEASE | Cause value = "Abnormal release, unspecified". |
| 6 | MS -> SS | DISC | The MS may send the DISC message without performing a layer 2 acknowledgement of the CHANNEL RELEASE message. The MS shall send at least 2 L2 DISC frames, to which the SS does not respond. After a period of 2 s, the SS verifies for 3 s that the MS does not produce any further Layer 2 messages. The SS waits 12 s to allow the MS to perform cell reselection. |
| - | - | - | |
| 7 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 8 | MS -> SS | CHANNEL REQUEST | Establish. Cause = "Answer to paging". |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type = SDCCH/8. |
| 10 | MS -> SS | PAGING RESPONSE | |
| 11 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

26.6.13 Test of starting time

The Assignment, Handover and immediate assignment procedures can include a delayed change of frequency list, MAIO and HSN. This series of tests checks the behaviour of the Mobile Station when receiving channel allocation messages with a starting time and channel description for both before and after the starting time. Tests checking the phase 1 usage of the starting time (that is without a channel description for before the time) are included in the series related to immediate assignment, dedicated assignment and handover.

Throughout subclause 26.6.13 the defaults in the following subclauses

Table 26.6

| Band | Defaults sub-clause |
|-----------|---------------------|
| GSM 450 | 26.6.16 |
| GSM 480 | 26.6.17 |
| GSM 710 | 26.6.21 |
| GSM 750 | 26.6.19 |
| T-GSM 810 | 26.6.22 |
| GSM 850 | 26.6.20 |
| GSM 900 | 26.6.14 |
| DCS 1 800 | 26.6.15 |
| PCS 1 900 | 26.6.18 |

are used with the following exceptions:

Contents of IMMEDIATE ASSIGNMENT message, unless otherwise defined in the individual test cases:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | Chosen arbitrarily (see initial conditions). |
| - Timeslot Number | Chosen arbitrarily by the test house; |
| - Training Sequence Code | Chosen arbitrarily by the test house |
| - Hopping | Yes. |
| - Hopping parameters | Chosen arbitrarily. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | Chosen arbitrarily, at least one frequency. In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Two cells are defined:

| Band | Cell A | | Cell B | | CA Coding format – both cells |
|-----------|------------|---|------------|--|-------------------------------|
| | BCCH ARFCN | Cell allocation | BCCH ARFCN | Cell allocation | |
| GSM 450 | 263 | 259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291 | 274 | 260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291 | Range 128 |
| GSM 480 | 310 | 306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338 | 321 | 307, 309, 311, 313, 315, 317, 319, 321, 323, 326, 328, 330, 332, 334, 336, 338 | Range 128 |
| GSM 710 | 457 | 447, 454, 457, 463, 471, 479, 482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508 | 477 | 451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508 | Range 128 |
| GSM 750 | 457 | 447, 454, 457, 463, 471, 479, 482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508 | 477 | 451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508 | Range 128 |
| T-GSM 810 | 457 | 447, 454, 457, 463, 471, 479, 482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508 | 477 | 451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508 | Range 128 |
| GSM 850 | 147 | 137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241 | 167 | 141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241 | Range 128 |
| GSM 900 | 20 | 10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114 | 40 | 14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114 | Bitmap 0 |
| DCS 1 800 | 747 | 737, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844 | 764 | 739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844 | Range 256 |
| PCS 1 900 | 647 | 637, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744 | 664 | 639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744 | Range 256 |

For DCS 1 800, PCS 1 900 the BCCH ARFCNs shall be added to the default BA-List.

For all other bands the BCCH ARFCNs are already included in the default BA-List.

26.6.13.1 Dedicated assignment with starting time / successful case / time not elapsed

26.6.13.1.1 Conformance requirement

A Mobile Station receiving an ASSIGNMENT COMMAND message with a starting time and channel descriptions for both after and before the starting time, and ready to access before the indicated time has elapsed, shall perform the assignment on the channels as described for before the starting time and shall start using the new frequency parameters (frequencies and hopping sequence, or single frequency) in the correct time slot indicated by the starting time.

The Mobile Station shall accept the ASSIGNMENT COMMAND message for different message formatting, differing by the information elements used to describe frequency lists.

Reference(s)

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3.1 and 9.1.2.

26.6.13.1.2 Test purpose

To verify that the MS, after receiving an ASSIGNMENT COMMAND message with a starting time and channel descriptions both for before and after the starting time, and ready to access before the indicated time, performs correctly the assignment using the description for before the time, and eventually starts using the frequency parameters for after the time at the time indicated in the message.

26.6.13.1.3 Method of test

Initial condition(s)

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports only SDCCH (TSPC_AddInfo_SDCCHOnly)
- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns a hopping SDCCH. Then the SS sends an ASSIGNMENT COMMAND message allocating a channel (TCH/F, TCH/H or SDCCH, arbitrarily chosen among the channels supported), with a starting time and channel descriptions (hopping case) for both before and after the starting time, as detailed in the "specific message contents" clause. The indicated time is such that the Mobile Station is ready to access before that time. The Mobile Station then accesses the channel as described for before the starting time. The MS shall eventually, at the TDMA frame defined by the contents of the "Starting Time" information element of the ASSIGNMENT COMMAND message, use the new frequency parameters. The verification is performed at the RF burst level.

Test parameters:

T1 is set to $T0+1000 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the ASSIGNMENT COMMAND message is sent.

Maximum duration of test

45 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Hopping channel. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 6 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel (before time parameters) after establishment of the main signalling link. |
| 7 | ----- | Time T1 | The SS checks that the MS is transmitting now on the correct frequencies (after time parameters) and that the transmission started in the correct frame. |
| 8 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

ASSIGNMENT COMMAND

| Information element | Value/remark |
|----------------------------------|---|
| Channel Description, after time | |
| Channel Type and TDMA offset | Chosen arbitrarily among that supported by the Mobile Station. |
| Timeslot Number | Chosen arbitrarily. |
| Training Sequence Code | Chosen arbitrarily. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily. |
| Power Command | |
| Power level | Chosen arbitrarily. |
| Channel Mode | |
| Mode | Signalling Only. |
| Mobile Allocation, after time | Chosen arbitrarily, at least one frequency. In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |
| Starting Time | T1 |
| Channel Description, before time | |
| Channel Type and TDMA offset | Same as after time. |
| Timeslot Number | Same as after time. |
| Training Sequence Code | Same as after time. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily, different from "after time". |
| Mobile Allocation, before time | Chosen arbitrarily, at least one frequency and different from "Mobile Allocation, after time". In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |

26.6.13.2 Dedicated assignment with starting time / successful case / time elapsed

26.6.13.2.1 Conformance requirement

A Mobile Station receiving an ASSIGNMENT COMMAND message with a starting time and channel descriptions for both after and before the starting time, and ready to access after the indicated time has elapsed, shall perform the assignment on the channels as described for after the starting time.

The Mobile Station shall accept the ASSIGNMENT COMMAND message for different message formattings, differing by the information elements used to describe frequency lists.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3.1 and 9.1.2.

26.6.13.2.2 Test purpose

To verify that the MS, after receiving an ASSIGNMENT COMMAND message with a starting time and channel descriptions both for before and after the starting time, performs correctly the assignment using the frequency parameters for after the time if the indicated time has already elapsed when the Mobile Station is ready to transmit.

26.6.13.2.3 Method of test

Initial condition(s)

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports only SDCCH (TSPC_AddInfo_SDCCHOnly)
- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns a hopping SDCCH. Then the SS sends an ASSIGNMENT COMMAND message allocating a channel (TCH/F, TCH/H or SDCCH, arbitrarily chosen among the channels supported), with a starting time and channel descriptions (hopping case) for both before and after the starting time, as detailed in the "specific message contents" clause. The indicated time is such that the Mobile Station is ready to access only after that time. The Mobile Station then accesses the channel as described for after the starting time. The verification is performed at the RF burst level.

Test parameters:

T1 is set to $T0+5 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the ASSIGNMENT COMMAND message is sent.

Maximum duration of test

45 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Hopping channel. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 6 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel (after time parameters) after establishment of the main signalling link. |
| 7 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

ASSIGNMENT COMMAND

| Information element | Value/remark |
|----------------------------------|---|
| Channel Description, after time | |
| Channel Type and TDMA offset | Chosen arbitrarily among that supported by the Mobile Station. |
| Timeslot Number | Chosen arbitrarily. |
| Training Sequence Code | Chosen arbitrarily. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily. |
| Power Command | |
| Power level | Chosen arbitrarily. |
| Channel Mode | |
| Mode | Signalling Only. |
| Mobile Allocation, after time | Chosen arbitrarily, at least one frequency. In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |
| Starting Time | T1 |
| Channel Description, before time | |
| Channel Type and TDMA offset | Same as after time. |
| Timeslot Number | Same as after time. |
| Training Sequence Code | Same as after time. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily, different from "after time". |
| Mobile Allocation, before time | Chosen arbitrarily, at least one frequency and different from "Mobile Allocation, after time". In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |

26.6.13.3 Dedicated assignment with starting time and frequency redefinition / failure case / time not elapsed

26.6.13.3.1 Conformance requirement

An MS, after receiving a FREQUENCY REDEFINITION message, shall keep the provided information until the time is elapsed. The Mobile Station must accept an intervening dedicated assignment, and, in case of failure of this assignment resulting in a return to the old channel before the time indicated in the FREQUENCY REDEFINITION message, shall return on the old channel with the frequency parameters in use at the moment of the reception of the FREQUENCY REDEFINITION message, and shall eventually start using the new frequency parameters in the correct time slot indicated by the starting time of the FREQUENCY REDEFINITION message.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3 and 3.4.5.

26.6.13.3.2 Test purpose

To verify that the MS, after receiving a FREQUENCY REDEFINITION and then an ASSIGNMENT COMMAND message with a starting time and channel descriptions both for before and after the starting time, failing the assignment and returning on the old channel, and ready to access before the time indicated in the FREQUENCY REDEFINITION, resumes transmission on the channels used at the time of the reception of the FREQUENCY REDEFINITION message and eventually starts using the new frequency parameters at the time indicated in the FREQUENCY REDEFINITION message.

26.6.13.3.3 Method of test

Initial condition(s)

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports only SDCCH (TSPC_AddInfo_SDCCHOnly)
- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns allocating a hopping channel (TCH/F, TCH/H or SDCCH, arbitrarily chosen among the channels supported). Then the SS sends a FREQUENCY REDEFINITION message (starting time T1), which modifies the frequency parameters to be used by the MS. Then the SS sends an ASSIGNMENT COMMAND message, with a starting time (T2) and channel descriptions for both before and after the starting time. The channels and hopping sequences so allocated are distinct from those used and from those described by the FREQUENCY REDEFINITION message. The System Simulator does not activate the channels defined in the ASSIGNMENT COMMAND. The MS shall try to activate the new channel (this is not verified) and shall then reactivate the old channel and trigger the establishment of the main signalling link on the old channel. Then the MS shall send an ASSIGNMENT FAILURE message. Time T1 is chosen so it is reached only after the sending of the ASSIGNMENT FAILURE message. The MS shall eventually, at the TDMA frame defined by the contents of the "Starting Time" information element of the FREQUENCY REDEFINITION message, use the new frequency parameters. The verification is performed at the RF burst level.

Test parameters:

T1 is set to $T0+5000 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the FREQUENCY REDEFINITION message is sent.

T2 is set to $T0+4000 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the FREQUENCY REDEFINITION message is sent.

Maximum duration of test

180 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |

26.6.13.4 Dedicated assignment with starting time and frequency redefinition / failure case / time elapsed

26.6.13.4.1 Conformance requirement

An MS, after receiving a FREQUENCY REDEFINITION message, shall keep the provided information until the time is elapsed. The Mobile Station must accept an intervening dedicated assignment, and, in case of failure of this assignment resulting in a return to the old channel after the time indicated in the FREQUENCY REDEFINITION message, shall return on the old channel with the frequency parameters indicated in the FREQUENCY REDEFINITION message.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3 and 3.4.5.

26.6.13.4.2 Test purpose

To verify that the MS, after receiving a FREQUENCY REDEFINITION and then an ASSIGNMENT COMMAND message with a starting time and channel descriptions both for before and after the starting time, failing the assignment and returning on the old channel, and ready to access after the time indicated in the FREQUENCY REDEFINITION, resumes transmission using the new frequency parameters indicated in the FREQUENCY REDEFINITION message.

26.6.13.4.3 Method of test

Initial condition(s)

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns allocating a hopping channel (SDCCH). Then the SS sends a FREQUENCY REDEFINITION message (starting time T1), which modifies the frequency parameters to be used by the MS. Then the SS sends an ASSIGNMENT COMMAND message, with a starting time (T2) and channel descriptions for both before and after the starting time. Time T1 is chosen so it is reached after the sending of the ASSIGNMENT COMMAND message, but before the return on the old channel. The System Simulator does not activate the channels defined in the ASSIGNMENT COMMAND. The MS shall try to activate the new channel (this is not verified) and shall then reactivate the old channel with the new frequency parameters as indicated by the FREQUENCY REDEFINITION message, and trigger the establishment of the main signalling link on the old channel. Then the MS shall send an ASSIGNMENT FAILURE message. The verification is performed at the RF burst level.

Test parameters:

i.e. for SDCCH

T2 is set to $T0+5000 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the FREQUENCY REDEFINITION message is sent.

T1 is set to $T0+214 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the FREQUENCY REDEFINITION message is sent.

NOTE: T0 + 214 is calculated for a maximum execution time of:

| | | |
|--|-------------------|------------|
| FREQUENCY REDEFINITION | using 1 L2 frame | 51 frames |
| ASSIGNMENT COMMAND | using 2 L2 frames | 102 frames |
| + 120 ms maximum time for a channel change | | 25 frames |
| + some frames contention (here 36) | | |

Maximum duration of test

180 s.

26.6.13.5 Handover with starting time / successful case / time not elapsed

26.6.13.5.1 Conformance requirement

A Mobile Station receiving an HANDOVER COMMAND message with a starting time and channel descriptions for both after and before the starting time, and ready to access before the indicated time has elapsed, shall perform the handover on the channels as described for before the starting time and shall, if specified, use the parameters in the frequency list, MAIO and HSN, in the correct time slot indicated by the starting time.

The Mobile Station shall accept the HANDOVER COMMAND message for different message formatting, differing by the information elements used to describe frequency lists.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4.1 and 9.1.15.

26.6.13.5.2 Test purpose

To verify that the MS, after receiving a HANDOVER COMMAND message with a starting time and channel descriptions both for before and after the starting time, and ready to access before the indicated time, performs correctly the handover using the description for before the time, and then starts using the frequency parameters for after the time at the time indicated in the message.

26.6.13.5.3 Method of test

Initial condition(s)

System Simulator:

2 cells, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports only SDCCH (TSPC_AddInfo_SDCCHOnly)
- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated, and camped on cell B.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns a hopping SDCCH. After the SS has received measurements concerning cell B, the SS sends a HANOVER COMMAND message allocating a channel (TCH/F, TCH/H or SDCCH, arbitrarily chosen among the channels supported), with a starting time and channel descriptions (hopping case) for both before and after the starting time, as detailed in the "specific message contents" clause. The indicated time is such that the Mobile Station is ready to access before that time. The Mobile Station then accesses the channel as described for before the starting time. The MS shall eventually, at the TDMA frame defined by the contents of the "Starting Time" information element of the HANOVER COMMAND message, use the new frequency parameters. The verification is performed at the RF burst level.

Test parameters:

T1 is set to $T0+1000 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the HANOVER COMMAND message is sent.

Maximum duration of test

120 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Hopping channel. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | HANOVER COMMAND | See specific message contents. |
| 6 | MS -> SS | HANOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. |
| 7 | SS -> MS | PHYSICAL INFORMATION | |
| 8 | MS -> SS | HANOVER COMPLETE | Sent on the correct channel (before time parameters) after establishment of the main signalling link. |
| 9 | ----- | Time T1 | The SS checks that the MS is transmitting now on the correct frequencies (after time parameters) and that the transmissions started in the correct frame. |
| 10 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

HANDOVER COMMAND:

26.6.13.8 Handover with starting time and frequency redefinition / failure case / time elapsed

26.6.13.8.1 Conformance requirement

An MS, after receiving a FREQUENCY REDEFINITION message, shall keep the provided information until the time is elapsed. The Mobile Station must accept an intervening handover, and, in case of failure of this handover resulting in a return to the old channel after the time indicated in the FREQUENCY REDEFINITION message, shall return on the old channel with the frequency parameters indicated in the FREQUENCY REDEFINITION message.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4 and 3.4.5.

26.6.13.8.2 Test purpose:

To verify that the MS, after receiving a FREQUENCY REDEFINITION and then a HANDOVER COMMAND message with a starting time and channel descriptions both for before and after the starting time, failing the handover and returning on the old channel, and ready to access after the time indicated in the FREQUENCY REDEFINITION, resumes transmission using the new frequency parameters indicated in the FREQUENCY REDEFINITION message.

26.6.13.8.3 Method of test

Initial condition(s)

System Simulator:

2 cells, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated, and camped on cell A.

Specific PICS statements

-

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated, and camped on cell A.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns a hopping channel (SDCCH). Then the SS sends a FREQUENCY REDEFINITION message (starting time T1), which modifies the frequency parameters to be used by the MS. Then the SS sends a HANDOVER COMMAND message, with a starting time (T2) and channel descriptions for both before and after the starting time. Time T1 is chosen so it is reached after the sending of the HANDOVER COMMAND message, but before the return on the old channel. The System Simulator does not activate the channels defined in the HANDOVER COMMAND. The MS shall try to activate the new channel (this is not verified) and shall then reactivate the old channel with the new frequency parameters as indicated by the FREQUENCY REDEFINITION message, and trigger the establishment of the main signalling link on the old channel. Then the MS shall send a HANDOVER FAILURE message. The verification is performed at the RF burst level.

Test parameters:

i.e. for SDCCH

T2 is set to $T0 + 5000 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the FREQUENCY REDEFINITION message is sent.

T1 is set to $T0 + 265 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the FREQUENCY REDEFINITION message is sent.

NOTE: $T0 + 265$ is calculated for a maximum execution time of:

| | | |
|--|-------------------|------------|
| FREQUENCY REDEFINITION | using 1 L2 frame | 51 frames |
| HANDOVER COMMAND | using 3 L2 frames | 153 frames |
| + 120 ms maximum time for a channel change | | 25 frames |
| + some frames contention (here 36) | | |

Maximum duration of test

180 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |

| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily, different than those of the IMMEDIATE ASSIGNMENT message, HSN same as in IMMEDIATE ASSIGNMENT. |
| Mobile Allocation | Chosen arbitrarily, at least two frequencies, different than those of the IMMEDIATE ASSIGNMENT message |
| Starting Time | T1 |

HANDOVER COMMAND

| Information element | Value/remark |
|----------------------------------|---|
| Cell Description | As for cell B. |
| Channel Description, after time | |
| Channel Type and TDMA offset | Chosen arbitrarily among that supported by the Mobile Station. |
| Timeslot Number | Chosen arbitrarily. |
| Training Sequence Code | Chosen arbitrarily. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily. |
| Power Command | |
| Power level | Chosen arbitrarily. |
| Synchronization indication | Non synchronized. |
| Cell Channel Description | As for cell B. |
| Channel Mode | |
| Mode | Signalling Only. |
| Mobile Allocation, after time | Chosen arbitrarily, at least one frequency. In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |
| Starting Time | T2 |
| Channel Description, before time | |
| Channel Type and TDMA offset | Same as after time. |
| Timeslot Number | Same as after time. |
| Training Sequence Code | Same as after time. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily, different from "after time". |
| Mobile Allocation, before time | Chosen arbitrarily, at least one frequency and different from "Mobile Allocation, after time". In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |

26.6.13.9 Immediate assignment with starting time / successful case / time not elapsed

26.6.13.9.1 Conformance requirement

A Mobile Station receiving an IMMEDIATE ASSIGNMENT message with a starting time and channel descriptions for both after and before the starting time, and ready to access before the indicated time has elapsed, shall perform the assignment on the channels as described for before the starting time and shall start using the new frequencies and hopping sequence in the correct time slot when the MS is allocated a dedicated channel.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1.3.1 and 9.1.18.

26.6.13.9.2 Test purpose

To verify that the MS, after receiving an IMMEDIATE ASSIGNMENT message with a starting time and channel descriptions both for before and after the starting time, and ready to access before the indicated time, performs correctly the assignment using the description for before the time, and then starts using the frequency parameters for after the time at the time indicated in the message.

26.6.13.9.3 Method of test

Initial condition(s)

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports only SDCCH (TSPC_AddInfo_SDCCHOnly)
- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator sends an IMMEDIATE ASSIGNMENT message allocating a hopping channel (TCH/F, TCH/H or SDCCH, arbitrarily chosen among the channels supported), with a starting time and channel descriptions for both before and after the starting time. The indicated time is such that the Mobile Station is ready to access before that time. The Mobile Station then accesses the channel as described for before the starting time. The MS shall eventually, at the TDMA frame defined by the contents of the "Starting Time" information element of the IMMEDIATE ASSIGNMENT message, use the new frequency parameters. The verification is performed at the RF burst level.

Test parameters:

T1 is chosen arbitrarily to be between T0+60 and T0+100 (mod 42 432), where T0 is the frame number at which the first burst of the IMMEDIATE ASSIGNMENT COMMAND message is sent.

Maximum duration of test

45 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | See specific message contents. The SS checks that the MS is transmitting now on the correct frequencies (after time parameters) and that the transmissions started in the correct frame. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | ----- | Time T1 | |
| 6 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

IMMEDIATE ASSIGNMENT

| Information element | Value/remark |
|---------------------------------|---|
| Page Mode | Normal. |
| Channel Description | |
| Channel Type and TDMA offset | Chosen arbitrarily among that supported by the Mobile Station. |
| Timeslot Number | Chosen arbitrarily. |
| Training Sequence Code | Chosen arbitrarily. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily. |
| Timing Advance | As needed. |
| Mobile Allocation (after time) | Chosen arbitrarily, at least one frequency. In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |
| Starting Time | T1 |
| IA Rest Octet | |
| MAIO | Chosen arbitrarily, different from "after time". |
| Mobile Allocation (before time) | Chosen arbitrarily, at least one frequency and different from "Mobile Allocation, after time". In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |

26.6.13.10 Immediate assignment with starting time / successful case / time elapsed

26.6.13.10.1 Conformance requirement

A Mobile Station receiving an IMMEDIATE ASSIGNMENT message with a starting time and channel descriptions for both after and before the starting time, and ready to access after the indicated time has elapsed, shall perform the assignment on the channels as described for after the starting time.

Reference(s):

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1.3.1 and 9.1.18.

26.6.13.10.2 Test purpose

To verify that the MS, after receiving an IMMEDIATE ASSIGNMENT message with a starting time and channel descriptions both for before and after the starting time, performs correctly the assignment using the frequencies and hopping sequence for after the time if the indicated time has already elapsed when the Mobile Station is ready to transmit.

26.6.13.10.3 Method of test

Initial condition(s)

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements

- MS supports only SDCCH (TSPC_AddInfo_SDCCHOnly)
- MS supports GSM HR (TSPC_AddInfo_Halfrate)

PIXIT statements

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator sends an IMMEDIATE ASSIGNMENT message allocating a hopping channel (TCH/F, TCH/H or SDCCH, arbitrarily chosen among the channels supported), with a starting time and channel descriptions for both before and after the starting time. The indicated time is such that the Mobile Station is ready to access only after that time. The Mobile Station then accesses the channel as described for after the starting time. The verification is performed at the RF burst level.

Test parameters:

T1 is set to $T0+5 \pmod{42\,432}$, where T0 is the frame number at which the first burst of the IMMEDIATE ASSIGNMENT COMMAND message is sent.

Maximum duration of test

45 s

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | PAGING RESPONSE | The SS checks that the MS is transmitting now on the correct frequencies (after time parameters). |
| 5 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

IMMEDIATE ASSIGNMENT:

| Information element | Value/remark |
|---------------------------------|---|
| Page Mode | Normal. |
| Channel Description | |
| Channel Type and TDMA offset | Chosen arbitrarily among that supported by the Mobile Station. |
| Timeslot Number | Chosen arbitrarily. |
| Training Sequence Code | Chosen arbitrarily. |
| Hopping | Yes. |
| Hopping parameters | Chosen arbitrarily. |
| Timing Advance | As needed. |

| Starting Time | T1 |
| IA Rest Octet | |
| MAIO | Chosen arbitrarily, different from "after time". |
| Mobile Allocation (before time) | Chosen arbitrarily, at least one frequency and different from "Mobile Allocation, after time". In case of an MA with just one frequency, the frequency should be different from the BCCH carrier. |

26.6.14 Default contents of GSM 900 layer 3 messages for RR tests

This subclause contains the default values of GSM 900 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the GSM 900 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | bit map 0. |
| - Cell Allocation ARFCN | Channel Numbers 20, 30, 50 and 70. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKES_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | bit map 0. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 10, 20, 40, 80, 90, 100, 110 and 120. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 20 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Bit map 0. Channel Number 10. |
|--|----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 10 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |

| - TMSI value | |
| Mobile Identity 2 | TMSI not allocated to MS. |
| - TMSI value | |
| Mobile Identity | Not present. |
| P2 rest octets | Not used (all bits set to spare). |

Contents of PAGING REQUEST TYPE 3 message:

| | |
|------------------------|-----------------------------------|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100100 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|-------------------------------|--|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|------------------------|-----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.15 Default contents of DCS 1 800 layer 3 messages for RR tests

This subclause contains the default values of DCS 1 800 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the DCS 1 800 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

SYSTEM INFORMATION 5 bis is not sent as a default message. For those tests which require SYSTEM INFORMATION 5 bis see the specific message contents for that test.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 512. |
| - Cell Allocation ARFCN | Channel Numbers, 590, 650, 750 and 850. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set, 0 |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | MS shall not apply. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal. |
| - Mobile Network Code | 01 decimal. |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 512. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers, 520, 590, 600, 700, 747, 764, 780, 810, 870. |
| - EXT-IND | This IE carries the complete BA. EXT-IND is 0. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not Allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|---|
| Downlink input level | 63 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class |
| Propagation profile | static. |
| BCCH/CCCH carrier number | ARFN 590. |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Range 512. Channel Number 520. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

| | |
|--|-------|
| Cell Identity - Cell Identity Value | 0002H |
|--|-------|

Default settings for cell B:

| | |
|--------------------------|---|
| Downlink input level | 53 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 520 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Power Command | |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description | Depending on test. |
| - Channel Type and TDMA offset | Same as in the CHANNEL MODE MODIFY message. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Band number 0. |
| - Frequency Band | Channel number 650. |
| - ARFCN | |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message:

| | |
|---------------------|--------------|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|------------------------|-----------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|----------------------------|--------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | |
| - RF Power Capability | See PIXIT. |
| - Frequency Capability | Set to 0. |
| Mobile Station Classmark 3 | For presence and contents see PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message:

| | |
|----------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 0X100100 |
| Other information elements | Not checked. |

Contents of CONNECT message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 |
| Message Type | 00000111 |
| All other information elements | Not present. |

Contents of CONNECT ACKNOWLEDGE message (MS to SS):

| | |
|------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|--------------------|--|
| Handover Reference | Equal to the value included in the Handover Command message. |
|--------------------|--|

Contents of HANDOVER COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | 1 |
| - Network Colour Code | Corresponding to target cell |
| - Base station Colour Code | Set to the BCCH carrier number of cell B. (one of 520, 590, 600, 700, 780, 810 or 870). |
| - BCCH Carrier Number | |
| Channel Description | Bm + ACCHs. |
| - Channel Type and TDMA offset | Chosen arbitrarily by the test house. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Chosen arbitrarily by the test house from those supported on the target cell. |
| - ARFCN | |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - ATC | 0 (Sending of Handover Access is mandatory) |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of HANDOVER COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101100 |
| RR cause | Normal event. |
| Time difference | Not present. |

Contents of HANDOVER FAILURE message:

| | |
|------------------------|------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101000 |
| RR cause | Dependent on the test. |

IDENTITY REQUEST

| Information element | Value/remark |
|---------------------|--------------|
| Identity type | IMEI |
| Spare half octet | 0000 |

IDENTITY RESPONSE

| Information element | Value/remark |
|---------------------|--------------|
| Mobile identity | not checked |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 650; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 590. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 650; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 590. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.16 Default contents of GSM 450 layer 3 messages for RR tests

This subclause contains the default values of GSM 450 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the GSM 450 MS under test. These values are used in order to be consistent with the phase 2 version of subclause 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 128. |
| - Cell Allocation ARFCN | Channel Numbers 263, 267, 275 and 279. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKES_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 262, 263, 274, 282, 284, 287, 290 and 293. |
| - EXT-IND | This IE carries the complete BA. |

| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 263 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 261. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 261 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |

| Message Type | 00101000 |
| RR cause | Dependent on the test. |

IDENTITY REQUEST

| Information element | Value/remark |
|---------------------|--------------|
| Identity type | IMEI |
| Spare half octet | 0000 |

IDENTITY RESPONSE

| Information element | Value/remark |
|---------------------|--------------|
| Mobile identity | not checked |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 263. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 263. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.17 Default contents of GSM 480 layer 3 messages for RR tests

This subclause contains the default values of GSM 480 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the GSM 480 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channel Numbers 310, 315, 322 and 326. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 308, 310, 321, 329, 331, 334, 337 and 340. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 310 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 308. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 308 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 315. |
| Power Command | |
| - ATC | 0 (Sending of Handover Access is mandatory) |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMPLETE message:

| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|-------------------------------|--|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|------------------------|-----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.18 Default contents of PCS 1 900 layer 3 messages for RR tests

This subclause contains the default values of PCS 1 900 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the PCS 1 900 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

SYSTEM INFORMATION 5 bis is not sent as a default message. For those tests which require SYSTEM INFORMATION 5 bis see the specific message contents for that test.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 512. |
| - Cell Allocation ARFCN | Channel Numbers, 590, 650, 750 and 780. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set, 0 |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | MS shall not apply. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal. |
| - Mobile Network Code | 011 decimal. |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 512. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers, 520, 590, 600, 647, 664, 700, 720, 760, 780. |
| - EXT-IND | This IE carries the complete BA. EXT-IND is 0. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not Allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | ARFN 590. |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Range 512. Channel Number 520. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

| | |
|--|-------|
| Cell Identity - Cell Identity Value | 0002H |
|--|-------|

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 520 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Power Command | |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description | Depending on test. |
| - Channel Type and TDMA offset | Same as in the CHANNEL MODE MODIFY message. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Band number 0. |
| - Frequency Band | Channel number 650. |
| - ARFCN | |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |

| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 650; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 590. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.19 Default contents of GSM 750 layer 3 messages for RR tests

This subclause contains the default values of GSM 750 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the GSM 750 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channel Numbers 457, 467, 470 and 475. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKES_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 128. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 447, 457, 477, 480, 499, 504, 507 and 510. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | Minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 457 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 447. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 447 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Power Command | |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description | Depending on test. |
| - Channel Type and TDMA offset | Same as in the CHANNEL MODE MODIFY message. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Band number 0. |
| - Frequency Band | Channel number 467. |
| - ARFCN | |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message

| | |
|---------------------|--------------|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|------------------------|-----------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|----------------------------|--------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | See PIXIT. |
| Mobile Station Classmark 3 | For presence and contents see PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message

| | |
|----------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 0X100100 |

Contents of CONNECT message (SS to MS)

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 |
| Message Type | 00000111 |
| All other information elements | Not present. |

Contents of CONNECT ACKNOWLEDGE message (MS to SS)

| | |
|------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|--------------------|--|
| Handover Reference | Equal to the value included in the Handover Command message. |
|--------------------|--|

Contents of HANDOVER COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | 1 |
| - Network Colour Code | Corresponding to target cell |
| - Base station Colour Code | Set to the BCCH carrier number of cell B. (one of 447, 457, 480, 499, 504, 507 or 510). |
| - BCCH Carrier Number | |
| Channel Description | Bm + ACCHs. |
| - Channel Type and TDMA offset | Chosen arbitrarily by the test house. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Chosen arbitrarily by the test house from those supported on the target cell. |
| - ARFCN | |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - ATC | 0 (Sending of Handover Access is mandatory) |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of HANDOVER COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101100 |
| RR cause | Normal event. |
| Time difference | Not present. |

Contents of HANDOVER FAILURE message:

| | |
|------------------------|------------------------|
| Protocol Discriminator | RR Management. |

| Mobile Identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile Identity | Not present. |
| P2 rest octets | Not used (all bits set to spare). |

Contents of PAGING REQUEST TYPE 3 message:

| | |
|------------------------|-----------------------------------|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100100 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|-------------------------------|--|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|------------------------|-----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.20 Default contents of GSM 850 layer 3 messages for RR tests

This subclause contains the default values of GSM 850 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the GSM 850 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | 128 range. |
| - Format identifier | Channel Numbers 147, 157, 177 and 197. |
| - Cell Allocation ARFCN | |
| Cell Identity | 0001H |
| - Cell Identity Value | |
| Cell Options | Power Control Indicator is not set. |
| - Power Control Indicator | MS shall not use DTX. |
| - DTX Indicator | 8 SACCH blocks. |
| - Radio_Link_Timeout | |
| Cell Selection Parameters | 12 dB. |
| - Cell_Reselect_Hysteresis | Minimum level. |
| - MX_TXPWR_MAX_CCH | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - ACS | New establishment causes not supported. |
| - NECI | Minimum level. |
| - RXLEV_ACCESS_MIN | |
| Control Channel Description | No Attach/Detach. |
| - Attach-Detach allowed | 0 blocks reserved for access grant. |
| - BS_AG_BLK_RES | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - CCCH_CONF | 5 multiframe periods for transmission of paging messages. |
| - BS_PA_MFRMS | Infinite. |
| - T3212 Time-out value | |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 137, 147, 167, 207, 217, 227, 237 and 247. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |
| SI 6 rest octets | 2B2B2B2B2B2B2B |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 147 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 137. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 137 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 157. |
| Power Command | |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 157. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description | Depending on test. |
| - Channel Type and TDMA offset | Same as in the CHANNEL MODE MODIFY message. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Band number 0. |
| - Frequency Band | Channel number 157. |
| - ARFCN | |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message

| | |
|---------------------|--------------|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|------------------------|-----------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|----------------------------|--------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | See PIXIT. |
| Mobile Station Classmark 3 | For presence and contents see PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message

| | |
|----------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 0X100100 |
| Other information elements | Not checked. |

Contents of CONNECT message (SS to MS)

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 |
| Message Type | 00000111 |
| All other information elements | Not present. |

Contents of CONNECT ACKNOWLEDGE message (MS to SS)

| | |
|------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|--------------------|--|
| Handover Reference | Equal to the value included in the Handover Command message. |
|--------------------|--|

Contents of HANDOVER COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | 1 |
| - Network Colour Code | Corresponding to target cell |
| - Base station Colour Code | Set to the BCCH carrier number of cell B. (one of 137, 147, 207, 217, 227, 237 or 247). |
| - BCCH Carrier Number | |
| Channel Description | Bm + ACCHs. |
| - Channel Type and TDMA offset | Chosen arbitrarily by the test house. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Chosen arbitrarily by the test house from those supported on the target cell. |
| - ARFCN | |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - ATC | 0 (Sending of Handover Access is mandatory) |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of HANDOVER COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101100 |
| RR cause | Normal event. |
| Time difference | Not present. |

Contents of HANDOVER FAILURE message:

|------------------------|------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101000 |
| RR cause | Dependent on the test. |

IDENTITY REQUEST

| Information element | Value/remark |
|---------------------|--------------|
| Identity type | IMEI |
| Spare half octet | 0000 |

IDENTITY RESPONSE

| Information element | Value/remark |
|---------------------|--------------|
| Mobile identity | not checked |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 157; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 147. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |

| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.21 Default contents of GSM 710 layer 3 messages for RR tests

This subclause contains the default values of GSM 710 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the GSM 710 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channel Numbers 457, 467, 470 and 475. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKRES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 128. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 447, 457, 477, 480, 499, 504, 507 and 510. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |

| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | Minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 457 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 447. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 447 |

Contents of ALERTING message (SS to MS):

| | |

Contents of CONNECT ACKNOWLEDGE message (MS to SS)

| | |
|------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|--------------------|--|
| Handover Reference | Equal to the value included in the Handover Command message. |
|--------------------|--|

Contents of HANDOVER COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | 1 |
| - Network Colour Code | Corresponding to target cell |
| - Base station Colour Code | Set to the BCCH carrier number of cell B. (one of 447, 457, 480, 499, 504, 507 or 510). |
| - BCCH Carrier Number | |
| Channel Description | Bm + ACCHs. |
| - Channel Type and TDMA offset | Chosen arbitrarily by the test house. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Chosen arbitrarily by the test house from those supported on the target cell. |
| - ARFCN | |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - ATC | 0 (Sending of Handover Access is mandatory) |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of HANDOVER COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101100 |
| RR cause | Normal event. |
| Time difference | Not present. |

Contents of HANDOVER FAILURE message:

| | |
|------------------------|------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101000 |
| RR cause | Dependent on the test. |

IDENTITY REQUEST

| Information element | Value/remark |
|---------------------|--------------|
| Identity type | IMEI |
| Spare half octet | 0000 |

IDENTITY RESPONSE

| Information element | Value/remark |
|---------------------|--------------|
| Mobile identity | not checked |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 467; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 457. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 467; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 457. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.6.22 Default contents of T-GSM 810 layer 3 messages for RR tests

This subclause contains the default values of T-GSM 810 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the T-GSM 810 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channel Numbers 457, 467, 470 and 475. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKRES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 128. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers 447, 457, 477, 480, 499, 504, 507 and 510. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | Minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 457 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 447. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests which command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 447 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Power Command | |
| - EPC mode (for R5 and after MS only) | 0 (Channel not in EPC mode) |
| - FPC (for R99 and R4 MS only) | 0 (FPC not in use) |
| - FPC_EPC mode (for R5 and after MS only) | 0 (FPC or EPC not in use) |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |

26.6.23 Test of Repeated SACCH

26.6.23.1 Repeated SACCH / Downlink Repeated SACCH

26.6.23.1.1 Conformance requirement

If a downlink SACCH block is incorrectly decoded (prior to combining with any previously received SACCH block), and the next uplink SACCH block is not a repetition as per the Repeated SACCH procedure (see sub-clause 11.3), then

the MS shall set the SACCH Repetition Request in the next uplink SACCH block to "Repeated SACCH required" (see 3GPP TS 44.004).

If a downlink SACCH block is correctly decoded (prior to combining with any previously received SACCH block), and the next uplink SACCH block is not a repetition as per the Repeated SACCH procedure (see sub-clause 11.3), the MS shall set the SACCH Repetition Request in the next uplink SACCH block to "Repeated SACCH not required".

References

3GPP TS 44.006 clause 11.2.

26.6.23.1.2 Test purpose

To verify that when the downlink SACCH block is wrongly decoded, the MS sends an uplink SACCH block containing SACCH Repetition Request set to "Repeated SACCH required" and when the downlink SACCH block is decoded correctly, the MS sends an uplink SACCH block containing SACCH Repetition Request set to "Repeated SACCH not required"

26.6.23.1.3 Method of test

Specific PICS statements:

-

PIXIT statements:

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

U0, null.

26.6.23.1.4 Test procedure

- a) A MS terminated call is set up according to the generic call set up procedure.
- b) For 10 secs, the SS sends error free SACCH messages.
- c) SS Sends one SACCH messages with unrecoverable errors.
- d) For 10 secs the SS shall continuously send error free SACCH messages.

26.6.23.1.5 Test requirement

- 1) In step b, check that all the uplink SACCH messages have SACCH Repetition Request set to "Repeated SACCH not required"
- 2) After step c, check that the MS sends a SACCH message having SACCH Repetition Request set to "Repeated SACCH required".
- 3) In step d, check that all the uplink SACCH messages have SACCH Repetition Request set to "Repeated SACCH not required"

Specific Message Contents

None.

26.6.23.2 Repeated SACCH / Uplink Repeated SACCH

26.6.23.2.1 Conformance requirement

At the MS side, if an uplink SACCH block contains a SAPI 0 frame and is not already a repetition, and if the last correctly received SACCH Repetition Order was set to "Repeated SACCH required", then the MS shall repeat this SACCH block at the next SACCH block period.

References

3GPP TS 44.006 clause 11.3.

26.6.23.2.2 Test purpose

To verify that the MS repeats an uplink SACCH block when the downlink SACCH blocks contains SACCH Repetition Order set to "Repeated SACCH required".

26.6.23.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

U0, null.

26.6.23.2.4 Test procedure

- a) A MS terminated call is set up according to the generic call set up on cell A.
- b) For the duration of test case, power levels of serving cell is changed in a steps from -50dBm to -65dBm to -80dBm and back to -50dBm , by doing one change at every 480 ms. This is made to make sure that every report is different from the previous one.
- c) For 10 sec, the SS sends SACCH messages, setting SACCH Repetition Order to "Repeated SACCH Not Required".
- d) SS Sends one SACCH messages setting SACCH Repetition Order to "Repeated SACCH Required".
- e) For 10 more secs, the SS shall continuously send SACCH messages with SACCH Repetition Order set to "Repeated SACCH Not Required".

26.6.23.2.5 Test requirement

- 1) In step c, check that MS is not retransmitting the SACCH messages on uplink.
- 2) After step d, Check that the MS repeats the last message.
- 3) In step e, check that MS is not retransmitting the SACCH messages on uplink.

Specific Message Contents

None.

26.6.23.3 Repeated SACCH / Uplink Repeated SACCH with SAPI 3 frames

26.6.23.3.1 Conformance requirements

At the MS side, if an uplink SACCH block contains a SAPI 0 frame and is not already a repetition, and if the last correctly received SACCH Repetition Order was set to "Repeated SACCH required", then the MS shall repeat this SACCH block at the next SACCH block period. If a SAPI 3 frame was also scheduled to be sent at this next SACCH period, the MS shall delay the sending of the SAPI 3 frame by one SACCH period in order to make room for the repetition.

Reference

3GPP TS 44.006 clause 11.3.

26.6.23.3.2 Test purpose

To verify that the MS delays sending of a SAPI 3 frame by one SACCH period if a repeated SAPI 0 SACCH frame is to be repeated according to the SACCH Repetition Parameter in the downlink SACCH block.

26.6.23.3.3 Method of test

Initial Conditions

System simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in "Idle, updated" state.

Specific PICS Statements

-

PIXIT Statements

- Description of the basic procedures to display a mobile originated short message.
- Maximum length (characters) of a mobile originated short message.

Foreseen Final State of MS

U0, null.

Test Procedure

A data or speech call is established on a TCH with the SS and the state U10 of call control is entered. SACCH Repetition Order is set to "Repeated SACCH required" in all the downlink SACCH blocks. The MS is setup to send an

SM. During an SMS transfer it is checked that every SAPI0 SACCH block is repeated once and no SAPI3 SACCH block is repeated.

For the duration of test case, power levels of serving cell is changed in a steps from –50dBm to –65dBm to –80dBm and back to –50dBm, by doing one change at every 480 ms. This is made to make sure that every report is different from the previous one.

Expected sequence

| Step | Direction | Message | Comments/actions/next state |
|------|-----------|--------------------|--|
| 1 | MS< -> SS | | MS is brought to U10 state. All the downlink SACCH message has SACCH Repetition Order set to "Repeated SACCH required". |
| 2 | MS | | The MS is set up to send an SM. |
| 3 | MS -> SS | CM SERVICE REQUEST | Sent in a layer 2 frames on the FACCH. CM service type set to "short message transfer" |
| 4 | SS -> MS | CM SERVICE ACCEPT | |
| 5 | MS -> SS | SABM (SAPI=3) | Receive SAPI=3 uplink SACCH block |
| 6 | SS -> MS | UA (SAPI=3) | |
| 7 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 8 | SS -> MS | CP-ACK | |
| 9 | SS -> MS | CP-DATA | |
| 10 | MS -> SS | CP-ACK | MO SMS procedure is completed. |
| 11 | | | During steps 7-10, check that the MS is retransmitting every SAPI0 SACCH message once, before sending the new one and no SAPI3 SACCH messages are retransmitted. |
| 12 | | | CS call is released and the MS is brought in idle state. |

Specific Message Contents

None.

26.7 Elementary procedures of mobility management

The tests are based on 3GPP TS 04.08 / 3GPP TS 24.008 and 3GPP TS 03.03.

In this subclause, when the expected sequence require that "a mobile originated CM connection is attempted", it shall be for a service other than emergency call.

In this subclause, a initial CM message is either a SETUP message, a REGISTER message or a CP-DATA message (in that case the acknowledged mode of operation on SAPI 3 will have be established and this message will be sent on SAPI 3).

26.7.0 Default contents of messages

Default contents SYSTEM INFORMATION messages and default settings

For cell A and B

For GSM use 26.6.14. For DCS use 26.6.15, for PCS 1 900 use 26.6.18, for GSM 450 use 26.6.16, for GSM 480 use 26.6.17, for GSM 750 use 26.6.19, for GSM 850 use 26.6.20, for GSM 710 use 26.6.21 and for T-GSM 810 use 26.6.22.

Cell C

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell C are identical to those of cell A with the following exceptions:

| | |
|---|---|
| Cell Channel Description - Format Identifier | Range 128 for GSM 450, GSM 480, GSM 710, GSM 750, T-GSM 810 and GSM 850. Bit map 0 for GSM. |
| - Cell Allocation ARFCN | Range 512 for DCS and PCS 1 900. Channel number 267 for GSM 450, Channel number 315 for GSM 480, Channel Number 30 for GSM, Channel Number 700 for DCS, PCS 1 900, Channel Number 467 for GSM 710, GSM 750 and T-GSM 810 and Channel Number 157 for GSM 850. |
| Cell Identity - Cell Identity Value | 0003H |

Default settings for cell C:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf |
| Uplink output power | minimum supported by the MS's power class for GSM and DCS, Power Control Level = 10 for PCS 1 900 |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 267 for GSM 450, 315 for GSM 480, 30 for GSM, 700 for DCS and PCS 1 900, 467 for GSM 710, GSM 750 and T-GSM 810 and 157 for GSM 850. |

ABORT

| Information element | Value/remark |
|---------------------|---|
| Reject cause | Depending on the test one of either: #6 - Illegal ME #17 - Network Failure. |

AUTHENTICATION REQUEST

TMSI REALLOCATION COMMAND

| Information element | Value/remark |
|------------------------------|---------------------------|
| Location area identification | As in subclause 26.1.1 |
| Mobile identity | TMSI of the MS under test |

TMSI REALLOCATION COMPLETE

| Information element | Value/remark |
|-----------------------|--------------|
| None but message head | omitted |

26.7.1 TMSI reallocation

The intention of the TMSI Reallocation procedure is to assign a new temporary identity for the MS. If the message is not understood by the MS, the network could not establish a link to the MS. As this is a common MM procedure, it can be initiated at any time.

26.7.1.1 Conformance requirement

- 1) A Mobile Station shall acknowledge a new TMSI when explicitly allocated during a location updating procedure or an incoming call.
- 2) The TMSI shall be updated on the SIM when the Mobile Station is correctly deactivated in accordance with the manufacturer's instructions.
- 3) A Mobile Station shall answer paging with this TMSI and includes it in the Paging Response message.

Reference(s):

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.1, 3GPP TS 03.03 clause 2, 3GPP TS 02.17 subclause 6.1.

26.7.1.2 Test purpose

To verify that the MS is able to receive and acknowledge a new TMSI by means of an explicit TMSI reallocation procedure.

To verify that the MS has stored the TMSI in a non-volatile memory.

The implicit reallocation procedure is tested in subclause 26.7.4.1.

26.7.1.3 Method of test

Initial conditions

System Simulator:

Two cells A and B, belonging to different location areas a and b, default parameters.

Mobile Station:

The MS has valid TMSI (= TMSI1), CKSN, Kc. It is "idle updated" on cell B.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI (= TMSI1), CKSN, Kc. It is "idle updated" on cell A.

Test Procedure

The MS is paged in cell B and the ciphering mode is established. An explicit TMSI reallocation procedure is performed. The channel is released. The MS is switched off and then its power supply is interrupted for 10 s. The power supply is resumed and then the MS is switched on and allowed sufficient time to guarantee that the MS is in service (listening to its paging subchannel). The system simulator then checks, by paging, whether the MS has stored the received TMSI.

The MS is made to select cell A. A normal location updating procedure is performed in cell A. An explicit TMSI reallocation procedure is performed and then the location updating procedure is accepted by the SS. The system simulator checks, by paging, whether the MS has stored the allocated TMSI.

Maximum duration of test

2 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | The following messages are sent and shall be received on cell B. "Mobile identity" = TMSI1. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | The SS starts deciphering. |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | The SS starts enciphering. |
| 7 | SS -> MS | TMSI REALLOCATION COMMAND | "Mobile identity" = new TMSI (TMSI2) different from TMSI 1. |
| 8 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 9 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 10 | MS | | If possible (see PICS), the MS is switched off. |
| 10a | MS | | The power supply is interrupted for 10 s. |
| 11 | MS | | The MS is switched on. |
| 12 | SS | | The SS waits an amount of time which is enough to guarantee that the MS is in service (listening to its paging subchannel). |
| 13 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" = TMSI2. |
| 14 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 15 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 16 | MS -> SS | PAGING RESPONSE | "Mobile identity" = TMSI2. |
| 17 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The following messages are sent and shall be received on cell A |
| 18 | SS | | The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 19 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 20 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 21 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, "ciphering key sequence number" = CKSN, LAI = b, "mobile identity" = TMSI2. |
| 22 | SS -> MS | TMSI REALLOCATION COMMAND | TMSI = TMSI1. |
| 23 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 24 | SS -> MS | LOCATION UPDATING ACCEPT | This message does not contain the optional Mobile Identity field. |
| 25 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits an amount of time which is enough to guarantee that the MS is "idle updated" on cell A. |
| 26 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" IE contains the new TMSI (= TMSI1). |
| 27 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Answer to paging. |
| 28 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 29 | MS -> SS | PAGING RESPONSE | "Mobile identity" IE contains the new TMSI (= TMSI1). |
| 30 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.2 Authentication

The purpose of this procedure is to verify the user identity. A correct response is essential to guarantee the establishment of the connection. If not, the connection will drop.

For GSM Authentication Challenge (i.e. Authentication with a SIM as defined in Annex A4 or GSM AKA using a USIM as defined TS 33.102) the SS shall be able to handle vectors of Kc, RAND, and SRES in a similar way as the MSC/BSS entities. The SS shall incorporate a test algorithm for generating SRES and Kc from RAND and Ki (and CK, IK for GSM AKA). Additionally, the SS shall use a proper RAND value to be able to distinguish the SRES, Kc values generated by the USIM or SIM applications.

For UMTS Authentication Challenge (i.e. UMTS AKA using an USIM as defined in TS 33.102), the SS shall be able to handle vectors of AUTN, RAND, CK, IK, AUTS and XRES in the way as the MSC/BSS entities.

The Test USIM is defined in Annex 4Aa.

26.7.2.1 Authentication accepted

26.7.2.1.1 Conformance requirement

- 1) A Mobile Station shall correctly respond to an Authentication Request message by sending an Authentication Response message with the SRES information field set to the same value as the one produced by the authentication algorithm in the network.
- 2) A Mobile Station shall indicate in a Paging Response message the ciphering key sequence number which was allocated to it through the authentication procedure.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.2, 3GPP TS 03.03 clause 2.

26.7.2.1.2 Test purpose

- 1) To check that a Mobile Station correctly responds to an Authentication Request message by sending an Authentication Response message with the SRES information field set to the same value as the one produced by the authentication algorithm in the network.
- 2) To check that a Mobile Station indicates in a Paging Response message the ciphering key sequence number which was allocated to it through the authentication procedure.

26.7.2.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has valid TMSI, CKSN (CKSN1), Kc. It is "idle updated" on the cell.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN and Kc. It is "idle updated" on the cell.

Test Procedure

The MS is paged. After the MS has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure and checks the value SRES sent by the MS in the AUTHENTICATION RESPONSE message. The channel is released. The MS is paged and the SS checks the value of the ciphering key sequence number sent by the MS in the PAGING RESPONSE message.

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | CKSN = CKSN1 |
| 5 | SS -> MS | AUTHENTICATION REQUEST | The SS initiates authentication with CKSN2 different from CKSN1. |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | "Auth. parameter SRES" IE shall be bit exact with the value as produced by the authentication algorithm. |
| 7 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits an amount of time which is enough to guarantee that the MS is in service. |
| 8 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 9 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | PAGING RESPONSE | "Ciphering key sequence number" shall be the same as the value that was sent in the last AUTHENTICATION REQUEST message (= CKSN2). |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.2.2 Authentication rejected

26.7.2.2.1 Conformance requirement

1) After reception of an Authentication Reject message the Mobile Station shall:

- 1.1 not perform normal location updating.
- 1.2 not perform periodic location updating.
- 1.3 not respond to paging with TMSI.
- 1.4 reject any request from CM entity for MM connection except for emergency call.
- 1.5 not perform IMSI detach if deactivated.

2) After reception of an Authentication Reject message the Mobile Station, if it supports speech, shall accept a request for an emergency call by sending a CHANNEL REQUEST message with the establishment cause set to "emergency call" and include an IMEI as mobile identity in the CM SERVICE REQUEST message.

- 3) After reception of an Authentication Reject message the Mobile Station shall delete the stored LAI, CKSN and TMSI.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.2.5.

26.7.2.2.2 Test purpose

- 1) To check that ,after reception of an Authentication Reject message, the Mobile Station:
 - 1.1 does not perform normal location updating.
 - 1.2 does not perform periodic location updating.
 - 1.3 does not respond to paging with TMSI.
 - 1.4 rejects any request from CM entity for MM connection except for emergency call.
 - 1.5 does not perform IMSI detach if deactivated.
- 2) To check that, after reception of an Authentication Reject message the Mobile Station, if it supports speech, accepts a request for an emergency call by sending a CHANNEL REQUEST message with the establishment cause set to "emergency call" and includes an IMEI as mobile identity in the CM SERVICE REQUEST message.
- 3) To check that, after reception of an Authentication Reject message and after having been deactivated and reactivated, the MS performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN.

26.7.2.2.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B, belonging to different location areas a and b.

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has valid TMSI, CKSN (CKSN2) and Kc. It is "idle updated" on cell B.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN (CKSN1) and Kc. It is "idle updated" on cell A.

Test procedure

The SS rejects an authentication. The channel is released. The SS checks that the MS has entered the state MM IDLE substate NO IMSI, i.e. does not perform normal location updating, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if SIM detachment is performed, switch off is performed, or the power is removed, depending on the MS (see PICS/PIXIT).

Maximum duration of test

10 minutes.

Expected sequence

| Step | Direction | Message | Comments | |
|--|-----------|----------------------------|---|---|
| The following messages are sent and shall be received on cell B | | | | |
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Establishment Cause: Answer to paging. "Ciphering key sequence number" shall be the same as the value that was sent in the last AUTHENTICATION REQUEST message (= CKSN2). | |
| 2 | MS -> SS | CHANNEL REQUEST | | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | | |
| 4 | MS -> SS | PAGING RESPONSE | | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | After the sending of this message, the SS waits for the disconnection of the main signalling link. The MS is paged in cell B. "Mobile identity" IE contains TMSI. The MS shall ignore this message. This is verified during 3 s. The SS waits for at least for 15 s. A MO CM connection is attempted. The MS shall not initiate an RR connection establishment on cell A or cell B. This is checked during 3 s. If the MS supports speech (see PICS), an emergency call is attempted. "Establishment cause": Emergency call. "CM service type": Emergency call establishment. "Mobile identity": type of identity is set to IMEI. "Cause" = unassigned number. After the sending of this message, the SS waits for the disconnection of the main signalling link. | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | | |
| 7 | SS -> MS | AUTHENTICATION REJECT | | |
| 8 | SS -> MS | CHANNEL RELEASE | | |
| 9 | SS -> MS | PAGING REQUEST TYPE 1 | | |
| 10 | MS | | | |
| 11 | SS | | | |
| 12 | MS | | | |
| 13 | MS | | | |
| 14 | MS | | | |
| 15 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Emergency call. "CM service type": Emergency call establishment. "Mobile identity": type of identity is set to IMEI. "Cause" = unassigned number. After the sending of this message, the SS waits for the disconnection of the main signalling link. | |
| 16 | SS -> MS | IMMEDIATE ASSIGNMENT | | |
| 17 | MS -> SS | CM SERVICE REQUEST | | |
| 18 | SS -> MS | CM SERVICE ACCEPT | | |
| 19 | MS -> SS | EMERGENCY SETUP | | |
| 20 | SS -> MS | RELEASE COMPLETE | | |
| 21 | SS -> MS | CHANNEL RELEASE | | |
| The following messages are sent and shall be received on cell A. | | | | |
| 22 | SS | | | The RF levels are changed to make the MS reselect the cell A. The MS performs cell reselection according to procedure as specified in 3GPP TS 05.08 (this however is not checked until step 29). The MS shall not initiate an RR connection establishment on cell A or on cell B. The SS waits at least 7 minutes for a possible periodic updating. The MS shall not initiate an RR connection establishment on cell A or on cell B. If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. Depending on what has been performed in step 26 the MS is brought back to operation. "Establishment cause": Location updating. "location updating type" = normal, "CKSN" = no key available, "Mobile Identity" = IMSI, "LAI" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE). "CKSN" = CKSN1. "Mobile Identity" = TMSI. After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 23 | MS | | | |
| 24 | SS | | | |
| 25 | MS | | | |
| 26 | MS | | | |
| 27 | MS | | | |
| 28 | MS | | | |
| 29 | MS -> SS | CHANNEL REQUEST | | |
| 30 | SS -> MS | IMMEDIATE ASSIGNMENT | | |
| 31 | MS -> SS | LOCATION UPDATING REQUEST | | |
| 32 | SS -> MS | AUTHENTICATION REQUEST | | |
| 33 | MS -> SS | AUTHENTICATION RESPONSE | | |
| 34 | SS -> MS | LOCATION UPDATING ACCEPT | | |
| 35 | MS -> SS | TMSI REALLOCATION COMPLETE | | |
| 36 | SS -> MS | CHANNEL RELEASE | | |

Specific message contents

None.

26.7.2.3 Authentication accepted with USIM

26.7.2.3.1 Conformance requirement

The mobile station shall be ready to respond upon an AUTHENTICATION REQUEST message at any time whilst a RR connection exists. With exception of the cases described in subclause 4.3.2.5.1, it shall process the challenge information and send back an AUTHENTICATION RESPONSE message to the network.

This IE (AUTN) shall be present if and only if the authentication challenge is a UMTS authentication challenge. The presence or absence of this IE defines- in the case of its absence- a GSM authentication challenge or- in the case of its presence- a UMTS authentication challenge.

For UMTS subscribers, authentication and key agreement will be performed as follows:

- UMTS AKA shall be applied when the user is attached to a GSM BSS, in case the user has R99+ ME capable of UMTS AKA and also the VLR/SGSN is R99+. In this case, the GSM cipher key Kc is derived from the UMTS cipher/integrity keys CK and IK, by the VLR/SGSN on the network side and by the USIM on the user side.

Reference(s)

3GPP TS 24.008 subclause 4.3.2.2, 4.3.2.4, 9.2.2.1, 3GPP TS 33.102 subclause 6.8.1.1

26.7.2.3.2 Test purpose

To check that a Mobile Station with an USIM inserted:

- 1) correctly responds to an Authentication Request message including an UMTS authentication challenge by sending an Authentication Response message with the RES information field set to the same value as the one produced by the UMTS authentication algorithm in the network (cf TS 31.900 subclause 6.1 – case B or 6.2.2 case B')
- 2) correctly responds to an Authentication Request message not including an UMTS authentication challenge (i.e. IE AUTN not included) by sending an Authentication Response message with the SRES information field set to the same value as the one produced by the GSM authentication algorithm in the network.

26.7.2.3.3 Method of test

Initial conditions

System Simulator:

1 cell, Rel-99 MSC .

Mobile Station:

Test USIM is plugged into the MS.
The MS has valid TMSI. It is "idle updated" on the cell.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN and Kc. It is "idle updated" on the cell.

Test Procedure 1 - UMTS Authentication Challenge

The MS is paged. After the MS has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure (AUTHENTICATION REQUEST with IE AUTN included – i.e. UMTS authentication challenge) and checks the value RES sent by the MS in the AUTHENTICATION RESPONSE message.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | The SS initiates authentication with IE AUTN included for UMTS authentication challenge |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. |
| 7 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

AUTHENTICATION REQUEST in step 5:

Same as default content except : AUTHENTICATION REQUEST

| Information element | Value/remark |
|---------------------|-------------------------------------|
| IE AUTN | Calculated as defined for Test USIM |

Test Procedure 2 - GSM Authentication Challenge

The MS is paged. After the MS has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure (AUTHENTICATION REQUEST without IE AUTN included – i.e. GSM authentication challenge) and checks the value SRES sent by the MS in the AUTHENTICATION RESPONSE message.

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | The SS initiates authentication with IE AUTN not included |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (SRES in this case) |
| 7 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

None.

26.7.2.4 Authentication not accepted by MS with USIM (MAC Failure)

26.7.2.4.1 Conformance requirement

In a UMTS authentication challenge, the authentication procedure is extended to allow the MS to check the authenticity of the core network. Thus allowing, for instance, detection of false base station.

Following a UMTS authentication challenge, the MS may reject the core network, on the grounds of an incorrect AUTN parameter (see 3GPP TS 33.102 [5a]). This parameter contains two possible causes for authentication failure:

a) MAC code failure:

If the MS considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid, it shall send an AUTHENTICATION FAILURE message to the network, with the reject cause 'MAC failure'. The MS shall then follow the procedure described in subclause 4.3.2.6 (c).

[...]

If the MS returns an AUTHENTICATION_FAILURE message to the network, the MS shall delete any previously stored RAND and RES and shall stop timer T3218, if running.

[...]

(c) Authentication failure (reject cause "MAC failure" or "GSM authentication unacceptable"):

The MS shall send an AUTHENTICATION FAILURE message, with reject cause "MAC failure" or "GSM authentication unacceptable" according to subclause 4.3.2.5.1, to the network and start timer T3214. Furthermore, the MS shall stop any of the retransmission timers that are running (e.g. T3210, T3220 or T3230). Upon the first receipt of an AUTHENTICATION FAILURE message from the MS with reject cause "MAC failure" or "GSM authentication unacceptable", the network may initiate the identification procedure described in subclause 4.3.3. This is to allow the network to obtain the IMSI from the MS. The network may then check that the TMSI originally used in the authentication challenge corresponded to the correct IMSI. Upon receipt of the IDENTITY REQUEST message from the network, the MS shall send the IDENTITY RESPONSE message.

NOTE: Upon receipt of an AUTHENTICATION FAILURE message from the MS with reject cause "MAC failure" or "GSM authentication unacceptable", the network may also terminate the authentication procedure (see subclause 4.3.2.5).

If the TMSI/IMSI mapping in the network was incorrect, the network should respond by sending a new AUTHENTICATION REQUEST message to the MS. Upon receiving the new AUTHENTICATION REQUEST message from the network, the MS shall stop the timer T3214, if running, and then process the challenge information as normal.

If the network is validated successfully (an AUTHENTICATION REQUEST that contains a valid SQN and MAC is received), the MS shall send the AUTHENTICATION RESPONSE message to the network and shall start any retransmission timers (e.g. T3210, T3220 or T3230), if they were running and stopped when the MS received the first failed AUTHENTICATION REQUEST message.

Reference(s)

3GPP TS 24.008 subclause 4.3.2.5.1, 4.3.2.6(c)

26.7.2.4.2 Test purpose

To check that a Mobile Station with an USIM inserted:

- 1) correctly responds to an AUTHENTICATION REQUEST message, with a MAC code failure in the AUTN parameter, by sending an AUTHENTICATION FAILURE message with the reject cause 'MAC failure'.

- 2) identifies itself upon reception of an IDENTITY REQUEST message, by sending an IDENTITY RESPONSE message including the IMSI to the network.

26.7.2.4.3 Method of test

Initial conditions

System Simulator:

1 cell, Rel-99 MSC .

Mobile Station:

Test USIM is plugged into the MS.
The MS has valid TMSI. It is "idle updated" on the cell.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN and Kc. It is "idle updated" on the cell.

Test Procedure

The MS is paged. After the MS has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure (AUTHENTICATION REQUEST with IE AUTN included – i.e. UMTS authentication challenge with a MAC value different from the one expected). The MS then reject the Authentication by sending AUTHENTICATION FAILURE (MAC Failure). Upon receipt of the AUTHENTICATION FAILURE message the SS initiates identification procedure. The MS responds to the SS by sending IDENTITY RESPONSE message. The SS sends AUTHENTICATION REQUEST message with correct AUTN parameter and the procedure is completed by the MS.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | With AUTN parameter (see specific message content) |
| 6 | MS -> SS | AUTHENTICATION FAILURE | With reject cause "MAC failure" |
| 7 | SS -> MS | IDENTITY REQUEST | With identity type IMSI |
| 8 | MS -> SS | IDENTITY RESPONSE | With IMSI in Mobile Identity IE |
| 9 | SS -> MS | AUTHENTICATION REQUEST | With the AUTN parameter and RAND different from step 5 (see specific message content) |
| 10 | MS -> SS | AUTHENTICATION RESPONSE | "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. |
| 11 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

AUTHENTICATION REQUEST in step 5:

Same as default content except:

| Information element | Value/remark |
|---------------------|--|
| IE AUTN | AUTN parameter having a MAC value different from what is calculated according to Test USIM definition. |

AUTHENTICATION REQUEST in step 9:

Same as default content except:

| Information element | Value/remark |
|---------------------|-------------------------------------|
| IE AUTN | Calculated as defined for Test USIM |

26.7.2.5 Authentication not accepted by MS with USIM (Synch Failure)

26.7.2.5.1 Conformance requirement

In a UMTS authentication challenge, the authentication procedure is extended to allow the MS to check the authenticity of the core network. Thus allowing, for instance, detection of false base station.

Following a UMTS authentication challenge, the MS may reject the core network, on the grounds of an incorrect AUTN parameter (see 3GPP TS 33.102 [5a]). This parameter contains two possible causes for authentication failure:

[...]

b) SQN failure:

If the MS considers the SQN (supplied by the core network in the AUTN parameter) to be out of range, it shall send a AUTHENTICATION FAILURE message to the network, with the reject cause 'Synch failure' and a re-synchronization token AUTS provided by the USIM (see 3GPP TS 33.102 [5a]). The MS shall then follow the procedure described in subclause 4.3.2.6 (d).

[...]

If the MS returns an AUTHENTICATION_FAILURE message to the network, the MS shall delete any previously stored RAND and RES and shall stop timer T3218, if running.

[...]

(d) Authentication failure (reject cause "synch failure"):

The MS shall send an AUTHENTICATION FAILURE message, with reject cause "synch failure", to the network and start the timer T3216. Furthermore, the MS shall stop any of the retransmission timers that are running (e.g. T3210, T3220 or T3230). Upon the first receipt of an AUTHENTICATION FAILURE message from the MS with the reject cause "synch failure", the network shall use the returned AUTS parameter from the authentication failure parameter IE in the AUTHENTICATION FAILURE message, to re-synchronise. The re-synchronisation procedure requires the VLR/MSC to delete all unused authentication vectors for that IMSI and obtain new vectors from the HLR. When re-synchronisation is complete, the network shall initiate the authentication procedure. Upon receipt of the AUTHENTICATION REQUEST message, the MS shall stop the timer T3216, if running.

NOTE: Upon receipt of two consecutive AUTHENTICATION FAILURE messages from the MS with reject cause "synch failure", the network may terminate the authentication procedure by sending an AUTHENTICATION REJECT message.

If the network is validated successfully (a new AUTHENTICATION REQUEST is received which contains a valid SQN and MAC) while T3216 is running, the MS shall send the AUTHENTICATION RESPONSE

message to the network and shall start any retransmission timers (e.g. T3210, T3220 or T3230), if they were running and stopped when the MS received the first failed AUTHENTICATION REQUEST message.

Reference(s)

3GPP TS 24.008 subclause 4.3.2.5.1, 4.3.2.6(d)

26.7.2.5.2 Test purpose

To check that a Mobile Station with an USIM inserted:

- 1) correctly responds to an AUTHENTICATION REQUEST message, with an SQN failure in the AUTN parameter, by sending an AUTHENTICATION FAILURE message with the reject cause 'Synch failure'.
- 2) sends the AUTHENTICATION RESPONSE message to the network if a second AUTHENTICATION REQUEST is received which contains a valid SQN (with T3216 expiry).

26.7.2.5.3 Method of test

Initial conditions

System Simulator:

1 cell, Rel-99 MSC .

Mobile Station:

Test USIM is plugged into the MS.
The MS has valid TMSI. It is "idle updated" on the cell.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN and Kc. It is "idle updated" on the cell.

Test Procedure

The MS is paged. After the MS has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure by sending a AUTHENTICATION REQUEST with IE AUTN included – i.e. UMTS authentication challenge - having an invalid SQN code (i.e. uses the predefined $AMF_{RESYNCH}$ value to trigger the SQN re-synchronisation procedure, see TS 34.108 clause 8.1.2.2). The MS then reject the Authentication by sending AUTHENTICATION FAILURE (Synch Failure). Upon receipt of the AUTHENTICATION FAILURE message the SS sends a second AUTHENTICATION REQUEST message with a valid SQN code and the procedure is completed by the MS.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment Cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | IE AUTN included (see specific message content) |
| 6 | MS -> SS | AUTHENTICATION FAILURE | Including the AUTS parameter and with the reject cause set to 'Synch failure' |
| 7 | SS -> MS | AUTHENTICATION REQUEST | IE AUTN included (see specific message content) |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | "Auth. Response Parameter" IE shall be bit exact with the value as produced by the authentication algorithm (RES in this case) "Auth. Response Parameter (extension)" IE might be included if the RES value is more than 4 octets long. |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

AUTHENTICATION REQUEST in step 5:

Same as default content except:

| Information element | Value/remark |
|---------------------|--|
| IE AUTN | with the AMF information field set to AMF _{RESYNCH} value to trigger SQN re-synchronisation procedure in Test USIM. |

AUTHENTICATION REQUEST in step 7:

Same as default content except:

| Information element | Value/remark |
|---------------------|-------------------------------------|
| IE AUTN | Calculated as defined for Test USIM |

26.7.3 Identification

The purpose of this procedure is to check that the MS gives its identity as requested by the network. If this procedure does not work, it will not be possible for the network to rely on the identity claimed by the MS.

26.7.3.1 General Identification

26.7.3.1.1 Conformance requirement

- 1) When requested by the network the Mobile Station shall send its IMSI.
- 2) When requested by the network the Mobile Station shall send the TMSI which it was previously allocated.
- 3) When requested by the network the Mobile Station shall send its IMEI as stored in the Mobile Equipment.
- 4) When requested by the network the Mobile Station shall send its IMEISV as stored in the Mobile Equipment.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.3.

26.7.3.1.2 Test purpose

- 1) To verify that the MS sends identity information as requested by the system in the following cases: IMSI and TMSI are requested in non-ciphered mode, IMEI is requested in ciphered mode.
- 2) To verify that the MS sends its IMEI, when requested to do so, in non-ciphered mode.
- 3) To verify that the MS sends its IMEISV, when requested to do so, in non-ciphered mode.

26.7.3.1.3 Method of test

26.7.3.1.3.1 Identification / test 1

Initial conditions

System Simulator:

1 cell, default values.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on the cell.

Specific PICS statements:

-

PIXIT statements:

- IMEI of the MS

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated" on the cell.

Test Procedure

The SS requests identity information from the MS:

- IMSI in non ciphering mode,
- allocated TMSI in non ciphering mode,
- IMEI in ciphering mode.

Maximum duration of test

30 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Establishment Cause: Answer to paging. "Identity type" IE is IMSI. "Mobile identity" IE specifies the IMSI of the MS. "Identity type" IE is TMSI. "Mobile identity" IE specifies the allocated TMSI of the MS. "Identity type" IE is IMEI. "Mobile identity" IE specifies the IMEI stored in the Mobile Equipment. After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | IDENTITY REQUEST | |
| 6 | MS -> SS | IDENTITY RESPONSE | |
| 7 | SS -> MS | IDENTITY REQUEST | |
| 8 | MS -> SS | IDENTITY RESPONSE | |
| 9 | SS -> MS | CIPHERING MODE COMMAND | |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | |
| 11 | SS -> MS | IDENTITY REQUEST | |
| 12 | MS -> SS | IDENTITY RESPONSE | |
| 13 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

None.

26.7.3.1.3.2 Identification / test 2

Initial conditions

System Simulator:

1 cell, default values.

Mobile Station:

The MS has a valid TMSI. It is in "idle updated".

Specific PICS statements:

-

PIXIT statements:

- IMEI of the MS
- IMEISV of the MS

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test Procedure

The SS requests identity information from the MS:

- IMEI in non ciphering mode;
- IMEISV in non ciphering mode.

Maximum duration of test

30 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Establishment Cause: Answer to paging. "Identity type" IE is IMEI. "Mobile identity" IE specifies the IMEI of the MS. "Identity type" IE is IMEIS. "Mobile identity" IE specifies the IMEISV of the MS. After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | IDENTITY REQUEST | |
| 6 | MS -> SS | IDENTITY RESPONSE | |
| 7 | SS -> MS | IDENTITY REQUEST | |
| 8 | MS -> SS | IDENTITY RESPONSE | |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

None.

26.7.3.2 Handling of IMSI shorter than the maximum length

26.7.3.2.1 Conformance requirement

The MS shall be capable of handling an IMSI that is not of the maximum length.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 10.5.1.4.

26.7.3.2.2 Test purpose

To check that the MS behaves correctly when activated with an IMSI of length less than the maximum length.

In this condition, the MS shall:

- perform location updating;
- answer to paging with IMSI;
- give the correct IMSI when asked by an IDENTITY REQUEST;
- attempt CM connection establishment when requested to;
- attempt call re-establishment when needed;
- attempt IMSI detach when needed;
- erase its TMSI when the IMSI is sent by the network in a LOCATION UPDATING ACCEPT or a TMSI REALLOCATION COMMAND message.

26.7.3.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default values.

IMSI attach/detach bit set to "1".

Mobile Station:

The MS has no valid TMSI.

It is "idle updated".

The IMSI has the value 001011234.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of MS

The MS has no valid TMSI. It is in "idle, updated".

Test Procedure

The MS is paged with its IMSI. The MS shall answer to paging and include the correct IMSI in the PAGING RESPONSE message. During call establishment, the SS asks for the IMSI of the MS. The MS shall answer by an IDENTITY RESPONSE message including the correct IMSI. During the active phase of the call, the SS stops sending valid SACCH frames. The MS performs call re-establishment. The MS shall include the correct IMSI in the CM RE-ESTABLISHMENT message. a TMSI REALLOCATION COMMAND including a TMSI is sent to the MS. The MS acknowledges this message. The call is release.

The MS is paged with its TMSI. The MS shall answer to paging and includes its TMSI in the PAGING RESPONSE message. During call establishment, the SS sends a TMSI REALLOCATION COMMAND including the IMSI to the MS. The MS shall acknowledge this message. The MS shall erase its TMSI. The call is released.

The MS is switched off or has its power source removed. The MS performs IMSI detach. The MS shall include the correct IMSI in the IMSI DETACH INDICATION message.

The MS is switched on or powered on. The MS performs IMSI attach. The MS shall include the correct IMSI in the LOCATION UPDATING REQUEST message. A TMSI is allocated to the MS.

The LAC of the cell is changed. The MS performs location updating. The SS includes the IMSI in the LOCATION UPDATING ACCEPT message.

A mobile originated CM connection is attempted. The MS shall include the correct IMSI in the CM SERVICE REQUEST message.

Maximum duration of test

5 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | "mobile identity 1" contains IMSI of MS. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause: Answer to paging. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | "mobile identity" contains the IMSI of the MS. |
| 5 | SS -> MS | IDENTITY REQUEST | "identity type" IE is IMSI. |
| 6 | MS -> SS | IDENTITY RESPONSE | "mobile identity" IE contains the IMSI of the MS. |
| 7 | | | The call is established using the sequence of the generic terminating call set-up procedure. |
| 8 | SS | | The SS stops sending valid SACCH frames. |
| 9 | MS -> SS | CHANNEL REQUEST | |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | CM REESTABLISHMENT REQUEST | "mobile identity" IE contains IMSI of the MS. |
| 12 | SS -> MS | TMSI REALLOCATION COMMAND | "mobile identity" contains a TMSI. |
| 13 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 14 | SS -> MS | CHANNEL RELEASE | After sending this message, the SS waits for the disconnection of the main signalling link. |
| 15 | SS -> MS | PAGING REQUEST TYPE 1 | "mobile identity 1" contains TMSI of MS. |
| 16 | MS -> SS | CHANNEL REQUEST | Establishment cause: Answer to paging. |
| 17 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 18 | MS -> SS | PAGING RESPONSE | "mobile identity" contains the TMSI of the MS. |
| 19 | SS -> MS | AUTHENTICATION REQUEST | |
| 20 | MS -> SS | AUTHENTICATION RESPONSE | |
| 21 | SS -> MS | TMSI REALLOCATION COMMAND | "mobile identity" contains a IMSI of MS. |
| 22 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | |
| 24 | MS | | If possible (see PICS) the MS is switched off, otherwise the MS has its power source removed. |
| 25 | MS -> SS | CHANNEL REQUEST | If the MS was switched off it performs IMSI detach. |
| 26 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 27 | MS -> SS | IMSI DETACH INDICATION | "mobile identity" contains IMSI of MS. |
| 28 | SS -> MS | CHANNEL RELEASE | |
| 29 | MS | | The MS is switched on or has power restored. |
| 30 | MS -> SS | CHANNEL REQUEST | |
| 31 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 32 | MS -> SS | LOCATION UPDATING REQUEST | "mobile identity" contains IMSI of MS. |
| 33 | SS -> MS | LOCATION UPDATING ACCEPT | "mobile identity" contains a TMSI. |
| 34 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 35 | SS -> MS | CHANNEL RELEASE | |
| 36 | SS | | The SS changes the LAC of the cell. |
| 37 | MS -> SS | CHANNEL REQUEST | Shall be sent within 35s of the LAC being changed. |
| 38 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 39 | MS -> SS | LOCATION UPDATING REQUEST | "mobile identity" contains TMSI of the MS. |
| 40 | SS -> MS | LOCATION UPDATING ACCEPT | "mobile identity" contains IMSI of the MS. |
| 41 | SS -> MS | CHANNEL RELEASE | |
| 42 | MS | | a mobile originated CM connection is attempted. |
| 43 | MS -> SS | CHANNEL REQUEST | |
| 44 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 45 | MS -> SS | CM SERVICE REQUEST | "mobile identity" contains IMSI of the MS. |
| 46 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

None.

26.7.4 Location updating

This procedure is used to register the MS in the network. If it is not performed correctly, no call can be established.

26.7.4.1 Location updating / accepted

26.7.4.1.1 Conformance requirement

1.

1.1 If the network accepts a location updating from the Mobile Station and reallocates a TMSI in the Location Updating Accept message the Mobile Station shall acknowledge the reception of the new TMSI.

1.2 The Mobile Station shall answer to paging with this TMSI and include it in a Paging Response message.

2 If the network accepts a location updating from the Mobile Station and the Location Updating Accept message contains neither TMSI nor IMSI, the Mobile Station shall answer to paging when addressed with the last allocated TMSI and include it in the Paging Response message.

3.

3.1 If the network accepts a location updating from the Mobile Station by use of a Location Updating Accept message containing the IMSI of the Mobile Station, the Mobile Station shall not answer paging with the last allocated TMSI.

3.2 The Mobile Station shall still answer paging with IMSI.

4. A mobile station that supports:

only the GSM 450 band (cf. 3GPP TS 05.05); or

only the GSM 480 band (cf. 3GPP TS 05.05); or

only the GSM 710 band (cf. 3GPP TS 05.05); or

only the GSM 750 band (cf. 3GPP TS 05.05); or

only the T-GSM 810 band (cf. 3GPP TS 05.05); or

only the GSM 850 band (cf. 3GPP TS 05.05); or

only the primary GSM band P-GSM 900 (cf. 3GPP TS 05.05); or

only the DCS 1800 band (cf. 3GPP TS 05.05).

may ignore SYSTEM INFORMATION TYPE 2ter messages ; if it does so it shall assume that the SYSTEM INFORMATION TYPE 2 carries the complete BA, for selection of the cell , where it performs the location updating procedure.

This SYSTEM INFORMATION TYPE 2ter message may be sent by the network with either a L2 pseudo length of 18 or some other value.

See 3GPP TS 04.08 / 3GPP TS 44.018, subclauses 9.1.34 and 3.2.2.1.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.6.

26.7.4.1.2 Test purpose

1) To test the behaviour of the MS if the network accepts the location updating of the MS.

For the network response three different cases are identified:

1.1) TMSI is allocated;

- 1.2) Location updating accept contains neither TMSI nor IMSI;
- 1.3) Location updating accept contains IMSI.

2) To verify that the MS, that supports only the GSM 450 band or only the GSM 480 band or only the GSM 710 or only the GSM 750 or only the T-GSM 810 band or only the GSM 850 band or only the primary GSM900 band or only the DCS1800 band is not disturbed by SYSTEM INFORMATION 2ter messages, with different values of L2pseudolength.

26.7.4.1.3 Method of test

26.7.4.1.3.1 Location Updating/accepted/test1

Initial conditions:

System Simulator:

Two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN.

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has a valid TMSI (=TMSI1) and CKSN (=CKSN1). It is "idle updated" on cell A.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has no valid TMSI. It has valid CKSN and Kc. It is "idle, updated" on cell B.

Test Procedure

The MS is made to select cell B. A normal location updating with TMSI reallocation is performed in cell B. The channel is released. The SS checks, by paging, that the MS has stored the newly allocated TMSI. The channel is released. The MS is made to select cell A. A normal location updating is performed in cell A. The LOCATION UPDATING ACCEPT message contains neither IMSI nor TMSI. The SS checks, by paging, that the MS has kept the old TMSI. The channel is released. The MS is made to select cell B. A normal location updating is performed in cell B. The LOCATION UPDATING ACCEPT message contains an IMSI. The SS checks, by paging, that the MS has deleted its TMSI and responds to paging with IMSI.

Maximum duration of test

4 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | SS | | The RF level of cell A is lowered until the MS selects cell B. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = a, "mobile station classmark 1" as given by the PICS and "mobile identity" = TMSI1. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" = new TMSI (=TMSI2), LAI = b. |
| 6 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 7 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits an amount of time which is enough to guarantee that the MS is in service. |
| 8 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" IE contains the new TMSI (= TMSI2). |
| 9 | MS -> SS | CHANNEL REQUEST | |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | PAGING RESPONSE | "Mobile identity" IE contains the new TMSI (= TMSI2). |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 13 | SS | | The RF level of cell B is lowered until the MS selects cell A. |
| 14 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating |
| 15 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 16 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = b, "mobile station classmark 1" as given by the PICS and "mobile identity" = TMSI2. |
| 17 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" IE not included. |
| 18 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits an amount of time which is enough to guarantee that the MS is in service. |
| 19 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" IE contains the TMSI (= TMSI2). |
| 20 | MS -> SS | CHANNEL REQUEST | |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 22 | MS -> SS | PAGING RESPONSE | "Mobile identity" IE contains the TMSI (=TMSI2). |
| 23 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 24 | SS | | The RF level of cell A is lowered until the MS selects cell B. |
| 25 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 26 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 27 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = a, "mobile station classmark 1" as given by the PICS and "mobile identity" = TMSI2. |
| 28 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" IE contains IMSI. |
| 29 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits an amount of time which is enough to guarantee that the MS is in service. |
| 30 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" IE contains the old TMSI (= TMSI2). |
| 31 | MS | | The MS shall ignore this message. This is checked during 5 s. |
| 32 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" IE contains the IMSI. |
| 33 | MS -> SS | CHANNEL REQUEST | |
| 34 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 35 | MS -> SS | PAGING RESPONSE | "Mobile identity" IE contains the IMSI. |
| 36 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.4.1.3.2 Location Updating/accepted/test2

Initial conditions:

System Simulator:

Two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN.

System information2ter is broadcasted on the two cells (Cell A with L2pseudolength=18, Cell B with L2pseudolength=0) .

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has a valid TMSI (=TMSI1) and CKSN (=CKSN1). It is "idle updated" on cell A.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has no valid TMSI. It has valid CKSN and Kc. It is "idle, updated" on cell B.

Test Procedure

The MS is made to select cell B. A normal location updating with TMSI reallocation is performed in cell B. The channel is released. The SS checks, by paging, that the MS has stored the newly allocated TMSI. The channel is released. The MS is made to select cell A. A normal location updating is performed in cell A. The LOCATION UPDATING ACCEPT message contains neither IMSI nor TMSI. The SS checks, by paging, that the MS has kept the old TMSI. The channel is released. The MS is made to select cell B. A normal location updating is performed in cell B. The LOCATION UPDATING ACCEPT message contains an IMSI. The SS checks, by paging, that the MS has deleted its TMSI and responds to paging with IMSI.

Maximum duration of test

4 minutes.

Expected sequence

| Step | Direction | Message | Comments |

26.7.4.2 Location updating / rejected

26.7.4.2.1 Location updating / rejected / IMSI invalid

26.7.4.2.1.1 Conformance requirement

- 1) If the network rejects a location updating from the Mobile Station with the cause "IMSI unknown in HLR", "Illegal MS" or "Illegal ME" the Mobile Station shall:

- 1.1 not perform normal location updating;
- 1.2 not perform periodic location updating;
- 1.3 not respond to paging with IMSI;
- 1.4 not respond to paging with TMSI;
- 1.5 reject any request from CM entity for MM connection other than for emergency call;
- 1.6 not perform IMSI detach if it is switched off or has its power source removed.

- 2) If the network rejects a location updating from the Mobile Station with the cause "IMSI unknown in HLR", "Illegal MS" or "Illegal ME" the Mobile Station, if it supports speech, shall accept a request for an emergency call by sending a Channel Request message with the establishment cause set to "emergency call" and include an IMEI as mobile identity in the CM SERVICE REQUEST message.
- 3) If the network rejects a location updating from the Mobile Station with the cause "IMSI unknown in HLR", "Illegal MS" or "Illegal ME" the Mobile Station shall delete the stored LAI, CKSN and TMSI.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.7.

26.7.4.2.1.2 Test purpose

To test the behaviour of the MS if the network rejects the location updating of the MS with the cause "IMSI unknown in HLR", "illegal MS" or "Illegal ME".

26.7.4.2.1.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B, belonging to different location areas of the same PLMN.

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell A.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell A.

Test Procedure

The SS rejects a normal location updating with the cause value "IMSI unknown in HLR". The channel is released. The SS checks that the MS has entered the state MM IDLE and the substate NO IMSI, i.e. does not perform normal location updating when a new cell of the same or another PLMN is entered, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if it is switched off or has its power source removed.

The test is repeated with cause value "Illegal MS" and with cause value "Illegal ME".

Maximum duration of test

35 minutes.

Expected sequence

The sequence is executed for execution counter $k = 1, 2, 3$.

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The following messages are sent and shall be received on cell B. The RF level of cell A is lowered until the MS selects cell B. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. "Reject cause" IE is "IMSI unknown in HLR" for $k = 1$, "Illegal MS" for $k = 2$, "Illegal ME" for $k = 3$. After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | |
| 6 | SS -> MS | CHANNEL RELEASE | |
| 7 | SS | | The following messages are sent and shall be received on cell A. The RF levels are then changed again to make the MS reselect the cell A. |
| 8 | MS | | The MS performs cell reselection according to procedure as specified in 3GPP TS 05.08 (this however is not checked until step 18). The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 9 | SS | | The SS waits at least 7 minutes for a possible periodic updating. |
| 10 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 11 | SS -> MS | PAGING REQUEST TYPE 1 | The MS is paged in cell A. "Mobile identity" IE contains IMSI. The MS shall ignore this message. This is verified during 3 s. |
| 12 | MS | | |
| 13 | SS -> MS | PAGING REQUEST TYPE 1 | The MS is paged in cell A. "Mobile identity" IE contains TMSI. The MS shall ignore this message. This is verified during 3 s. |
| 14 | MS | | |
| 15 | MS | | A MO CM connection is attempted. |
| 16 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |
| 17 | MS | | If the MS supports speech (see PICS), it is made to perform an emergency call. |
| 18 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Emergency call. This message is sent in cell A. "CM service type": Emergency call establishment. "Mobile identity": type of identity is set to IMEI. "Cause" = unassigned number. After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 19 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 20 | MS -> SS | CM SERVICE REQUEST | |
| 21 | SS -> MS | CM SERVICE ACCEPT | |
| 22 | MS -> SS | EMERGENCY SETUP | |
| 23 | SS -> MS | RELEASE COMPLETE | |
| 24 | SS -> MS | CHANNEL RELEASE | |
| 25 | MS | | |
| 26 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 27 | MS | | Depending on what has been performed in step 25 the MS is brought back to operation. |
| 28 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 29 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 30 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = no key available, "mobile station classmark 1" as given by the PICS, "Mobile Identity" = IMSI, "LAI" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE). |
| 31 | SS -> MS | AUTHENTICATION REQUEST | "CKSN" = CKSN1. |
| 32 | MS -> SS | AUTHENTICATION RESPONSE | |
| 33 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile Identity" = TMSI. |
| 32 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 33 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.4.2.2 Location updating / rejected / PLMN not allowed

26.7.4.2.2.1 Conformance requirement

- 1) If the network reject a location updating from the Mobile Station with the cause "PLMN not allowed" the Mobile Station shall:
 - 1.1 not perform periodic updating;
 - 1.2 not perform IMSI detach when switched off;
 - 1.3 not perform IMSI attach when switched on in the same location area;
 - 1.4 not perform normal location updating when in the same PLMN and when that PLMN is not selected manually;
 - 1.5 reject any request from CM entity for MM connection other than for emergency call.
- 2) If the network rejects a location updating from the Mobile Station with the cause "PLMN not allowed" the Mobile Station shall:
 - 2.1 perform normal location updating when a new PLMN is entered;
 - 2.2 accept a request for an emergency call, if it supports speech, by sending a Channel Request message with the establishment cause set to "emergency call".
- 3) If the network rejects a location updating from the Mobile Station with the cause "PLMN not allowed" and if after that the PLMN from which this rejection was received, is manually selected, the Mobile Station shall perform a normal location updating procedure.4) For emergency call establishment and re-establishment the mobile station shall select the mobile identity type with the following priority:
 - 4.1 TMSI: The TMSI shall be used if it is available and if the location update status is UPDATED, and the stored LAI is equal to the one received on the BCCH from the current serving cell.
 - 4.2 IMSI: The IMSI shall be used in cases where no TMSI is available or TMSI is available but either the update status is different from UPDATED, or the stored LAI is different from the one received on the BCCH from the current serving cell.
 - 4.3 IMEI: The IMEI shall be used in cases where no SIM/USIM is available or the SIM/USIM is considered as not valid by the mobile station or no IMSI or TMSI is available.

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.4.4.7, 10.5.1.4.

26.7.4.2.2.2 Test purpose

To test the behaviour of the MS if the network rejects the location updating of the MS with the cause "PLMN not allowed".

26.7.4.2.2.3 Method of test

26.7.4.2.2.3.1 Location updating / rejected / PLMN not allowed / test 1

Initial conditions

System Simulator:

One cell: C, belonging to PLMN1.

Two cells: A and B, belonging to different location areas a and b and belonging to PLMN2. PLMN2 is different from HPLMN and from PLMN1.

IMSI attach/detach is allowed in cells A and B but not in cell C.

The T3212 time-out value is 1/10 hour in cells A and B.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on cell C.

The MS is in manual mode for PLMN selection.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)
- automatically enter automatic selection of PLMN mode (TSPC_AddInfo_AutoAutoMode)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated" on cell C. The MS is in automatic mode for PLMN selection.

Test Procedure

The SS rejects a normal location updating with the cause value "PLMN not allowed". The channel is released. The SS checks that the MS does not perform periodic updating, does not perform IMSI detach, does not perform IMSI attach if activated in the same location area, rejects any request for CM connection establishment other than emergency call, accepts a request for an emergency call and performs normal location updating only when a new PLMN is entered.

Maximum duration of test

12 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS | | The following messages are sent and shall be received on cell B. |
| 2 | SS | | The MS is switched off (or power is removed). |
| 3 | MS | | The SS activates cells A and B and deactivates cell C. Cell B has a level higher by at least 5 dB than cell A. The MS is switched on. (or power is reapplied) If necessary the MS is put in manual selection mode. The MS shall offer the new PLMN as available to the user. The PLMN is manually selected. |
| 4 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | LOCATION UPDATING REQUEST | |
| 7 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" = PLMN not allowed. |
| 8 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 9 | SS | | The SS waits for a possible periodic updating for 7 minutes. |
| 10 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 11 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. |
| 12 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |
| 13 | MS | | Depending on what has been performed in step 11 the MS is brought back to operation. The MS is not made to select PLMN 2. |
| 14 | MS | | The MS shall not initiate an RR connection establishment. This is checked during 3 s. |
| 15 | SS | | The following message are sent and shall be received on cell A. |
| 16 | MS | | The RF level of cell B is lowered to make the MS reselect cell A. No access to the network shall be registered by the SS within one minute. |
| 17 | MS | | If the MS supports speech (see PICS) it is made to perform an emergency. |
| 18 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Emergency call. |
| 19 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 20 | MS -> SS | CM SERVICE REQUEST | "CM service type" = Emergency call establishment. "Mobile identity" = IMSI. |
| 21 | SS -> MS | CM SERVICE ACCEPT | |
| 22 | MS -> SS | EMERGENCY SETUP | |
| 23 | SS -> MS | RELEASE COMPLETE | Cause IE: "unassigned number". |
| 24 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 25 | MS | | A MO CM connection is attempted. |
| 26 | MS | | The MS shall not initiate an RR connection establishment. This is checked during 3 s. |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 27 | MS | | The following messages are sent and shall be received on cell C. |
| 28 | SS | | The MS is switched off. |
| 29 | MS | | The SS activates cell C and deactivates cells A and B. |
| 30 | MS -> SS | CHANNEL REQUEST | The MS is switched on. If necessary the MS is placed into the automatic mode. |
| 31 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 32 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = no key available, "LAI" = deleted LAI (the MCC and MNC hold the values of PLMN1, the LAC is coded FFFE) "mobile identity" = IMSI. |
| 33 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" = TMSI. |
| 34 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 35 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.4.2.2.3.2 Location updating / rejected / PLMN not allowed / test 2

Initial conditions

System Simulator:

One cell C, belonging to PLMN1.

Two cells A and B, belonging to different location areas a and b and belonging to PLMN2. PLMN2 is different from HPLMN.

IMSI attach/detach is allowed in cells A and B but not in cell C.

The T3212 time-out value is 1/10 hour in cells A and B.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on cell C.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- automatically enter automatic selection of PLMN mode (TSPC_AddInfo_AutoAutoMode)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle, updated" on cell C.

The MS is in automatic mode for PLMN selection.

Test Procedure

The SS rejects a normal location updating with the cause value "PLMN not allowed". The channel is released. Then the PLMN from which this rejection was received is manually selected and the SS checks that a normal location updating is performed.

Maximum duration of test

5 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | The following messages are sent and shall be received on cell B. |
| 2 | SS | | The MS is switched off (or power is removed). |
| 3 | MS | | The SS activates cells A and B and deactivates cell C. |
| 3a | MS | | Cell B has a level higher by at least 5 dB than cell A. |
| | | | The MS is switched on (or power is reapplied). |
| | | | If the MS is in manual mode, it shall offer the new PLMN as available to the user. In this case the PLMN is manually selected. |
| 4 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | LOCATION UPDATING REQUEST | |
| 7 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" = PLMN not allowed. |
| 8 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 9 | MS | | The MS is made to search for PLMNs and the PLMN indicated by the SS is manually selected. |
| 10 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 12 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = no key available, "LAI" = deleted LAI (the MCC and MNC hold the values of PLMN1, the LAC is coded FFFE) "mobile identity" = IMSI. |
| 13 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The following messages are sent and shall be received on cell C. |
| 14 | MS | | The MS is switched off. |
| 15 | SS | | The SS activates cell C and deactivates cells A and B. |
| 16 | MS | | The MS is switched on. If necessary, the MS is put into the automatic mode. |
| 17 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 19 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = no key available, "LAI" = deleted LAI (the MCC and MNC hold the values of PLMN1, the LAC is coded FFFE) "mobile identity" = IMSI. |
| 20 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" = TMSI. |
| 21 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 22 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.4.2.3 Location updating / rejected / location area not allowed

26.7.4.2.3.1 Conformance requirement

- 1) If the network rejects a location updating from the Mobile Station with the cause "Location Area not allowed" the Mobile Station shall:
 - 1.1 not perform periodic updating;
 - 1.2 not respond to paging with TMSI;
 - 1.3 reject any request from CM entity for MM connection other than for emergency call;
 - 1.4 not perform IMSI detach.
- 2) If the network rejects a location updating from the Mobile Station with the cause "Location Area not allowed" the Mobile Station shall:
 - 2.1 perform normal location updating when a new location area is entered;
 - 2.2 accept a request for an emergency call, if it supports speech, by sending a Channel Request message with the establishment cause set to "emergency call";
 - 2.3 delete the list of forbidden LAs after switch off (power off).

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.7.

26.7.4.2.3.2 Test purpose

To test the behaviour of the MS if the network rejects the location updating of the MS with the cause "Location Area not allowed".

To test that the MS deletes the list of forbidden LAs after switch off (power off).

26.7.4.2.3.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B, belonging to different location areas a and b.

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on cell A.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

PIXIT statements:

- Method to clear the list of forbidden location areas periodically

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated" on cell A.

Test Procedure

The SS rejects a normal location updating with the cause value "Location Area not allowed". The channel is released. The SS checks that the MS does not perform periodic updating, does not respond to paging with TMSI, rejects any requests from CM entities for MM-connections except emergency calls, does not perform IMSI detach, performs normal location updating when a new location area is entered and deletes the list of forbidden LAs when switched off.

Different types of MS may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.

Maximum duration of test

12 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | SS | | The following messages are sent and shall be received on cell B. |
| 2 | MS -> SS | CHANNEL REQUEST | The RF level of cell A is lowered so that cell B is selected, while keeping the C1 and C2 of cell A greater than 10. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" = "Location Area not allowed". |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits for a possible location updating for 7 minutes. |
| 7 | SS | | |
| 8 | MS | | The MS shall not initiate an RR-connection establishment either on cell A or cell B. |
| 9 | SS -> MS | PAGING REQUEST TYPE 1 | The MS is paged in cell B. "Mobile identity" = TMSI. |
| 10 | MS | | The MS shall ignore this message. This is checked during 3 s. |
| 11 | MS | | A MO CM connection is attempted. |
| 12 | MS | | The MS shall not initiate an RR connection establishment on cell A or cell B. This is checked during 3 s. |
| 13 | MS | | If the MS supports speech (see PICS), it is made to perform an emergency call. |
| 14 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Emergency call. |
| 15 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 16 | MS -> SS | CM SERVICE REQUEST | "CM service type": Emergency call establishment. |
| 17 | SS -> MS | CM SERVICE ACCEPT | |
| 18 | MS -> SS | EMERGENCY SETUP | |
| 19 | SS -> MS | RELEASE COMPLETE | Cause: "unassigned number". |
| 20 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 21 | MS | | If possible (see PICS) switch off is performed. Otherwise the power is removed. |
| 22 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B (check for IMSI detach) This is checked during 3 s. |
| 23 | MS | | Depending on what has been performed in step 21 the MS is brought back to operation. |
| 24 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 25 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 26 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = no key available, "LAI" = deleted LAI, "mobile identity" = IMSI (This checks the deletion of the forbidden lists) |
| 27 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" = "Location Area not allowed". |
| 28 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. The following messages are sent and shall be received on cell A. |
| 29 | SS | | The RF level of cell B is lowered until the MS selects cell A. |
| 30 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 31 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 32 | MS -> SS | LOCATION UPDATING REQUEST | |
| 33 | SS -> MS | AUTHENTICATION REQUEST | |
| 34 | MS -> SS | AUTHENTICATION RESPONSE | |
| 35 | SS -> MS | LOCATION UPDATING ACCEPT | Mobile identity = TMSI. |
| 36 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 37 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.4.2.4 Location updating / rejected / roaming not allowed in this location area

26.7.4.2.4.1 Conformance requirement

- 1) If the network rejects a location updating from the Mobile Station with the cause "Roaming not allowed in this area" the Mobile Station shall:
 - 1.1 not perform periodic updating;
 - 1.2 not respond to paging with TMSI;
 - 1.3 reject any request from CM entity for MM connection other than for emergency call;
 - 1.4 not perform IMSI detach.
- 2) If the network rejects a location updating from the Mobile Station with the cause "Roaming not allowed in this area" the Mobile Station shall:
 - 2.1 perform normal location updating when a new location area is entered;
 - 2.2 accept a request for an emergency call, if it supports speech, by sending a Channel Request message with the establishment cause set to "emergency call";
 - 2.3 periodically search for its HPLMN.
- 3) The mobile station shall reset the list of "Forbidden location areas for roaming" when it is switched off or has its power source removed or when the SIM is removed.
- 4) The MS shall be capable of storing at least 6 entries in the list of "Forbidden location areas for roaming".

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.7.

26.7.4.2.4.2 Test purposes

Test purpose 1

To test that on receipt of a rejection using the Roaming cause code, the MS ceases trying to update on that cell, that this situation continues for at least one periodic location interval period, and that the corresponding list is re-set by switching off the MS or removing its power source.

Test purpose 2

To test that if no cell is available, the MS does not answer to paging with TMSI, rejects a request from CM entity other than for emergency calls.

Test purpose 3

To test that at least 6 entries can be held in the list of "forbidden location areas for roaming" (the requirement in 3GPP TS 04.08 / 3GPP TS 24.008 is to store at least 10 entries. This is not fully tested by the third procedure).

Test purpose 4

To test that if a cell of the Home PLMN is available then the MS returns to it in preference to any other available cell.

Test purpose 5

To test that if the SIM is removed the list of "forbidden location areas for roaming" is cleared.

26.7.4.2.4.3 Method of test

Initial conditions

The initial conditions shall be met before each of the different procedures.

System Simulator:

For procedures 1, 2, 3 and 5: Two cells A and B, belonging to different location areas of the same PLMN with LAI a and b. The MCC of that PLMN is the same as that of the HPLMN. The MNC of that PLMN is different from that of the HPLMN.

For procedure 4: three cells A, B, C of the same PLMN which is not the HPLMN with 3 different location area codes. Cells should differ in signal strength by 10 dB with cell A being the strongest and cell C the weakest. There should be a 20 dB range between A and C. A should be set to a level of - 40 dBm.

IMSI attach/detach is allowed in every cell.

The T3212 time-out value is 1/10 hour in every cell.

Mobile Station:

Procedures 1, 2, 3 and 5: The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell B.

Procedure 4: The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell A.

The list of "forbidden location areas for roaming" shall be empty (this may be achieved by either removing the SIM or switching the MS OFF then ON or removing the MS power source depending on PICS).

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- automatically enter automatic selection of PLMN mode (TSPC_AddInfo_AutoAutoMode)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

PIXIT statements:

- Method to clear the list of location areas for roaming periodically

Foreseen final state of the MS

Procedures 1 and 5: The MS has no valid TMSI and no CKSN. It is "idle updated" on cell A.

Procedure 2 and 3: The MS has no valid TMSI and no CKSN. It is in the "limited service" state on cell A.

Procedure 4: The MS has no valid TMSI and no CKSN. It is "idle updated" on cell C.

Test Procedures

Procedure 1:

The SS rejects a normal location updating with the cause value "Roaming not allowed in this area". The channel is released. The SS checks that the MS does not perform periodic location updating procedure. The MS is turned off and then on. The SS checks that the MS performs location updating on the cell on which its location update request had been rejected (this checks that the LA is not the forbidden list after switch on). This procedure is performed another time but the deletion of the list is checked while removing the SIM (instead of turning off the MS).

Procedure 2:

The SS rejects a normal location updating with the cause value "Roaming not allowed in this area". The channel is released. The SS checks that the MS does not answer to a paging message with TMSI, rejects a request from CM entity but supports an emergency call.

Procedure 3:

The SS rejects a normal location updating with the cause value "Roaming not allowed in this area". This is done for 6 different location areas. Then the SS checks that the MS does not attempt to begin a location updating procedure on the non-allowed location areas.

Procedure 4:

The SS accepts a periodic location updating on a cell not belonging to the HPLMN. Then when the MS attempts to perform a periodic location updating to this cell, the SS rejects this location updating with the cause value "Roaming not allowed in this area". Two cells are then available, one belonging to the HPLMN but with the weakest level. It is checked that the MS returns to its HPLMN.

Procedure 5: If SIM removal is possible while MS is powered:

The SS rejects a normal location updating with the cause value "Roaming not allowed in this area". The channel is released. The SS checks that the MS does not perform periodic location updating procedure. The SIM is removed and inserted in the MS. The SS checks that the MS performs location updating on the cell on which its location update request had been rejected (this checks that the LA is not the forbidden list after switch on).

Different types of MS may use different methods to periodically clear the list of forbidden areas (e.g. every day at 12am) for roaming. If the list is cleared while the test is being run, it may be necessary to re-run the test.

Maximum duration of test

Procedures 1 and 5: 12 minutes each.

Procedure 2: 6 minutes.

Procedure 3: 17 minutes.

Procedure 4: 16 minutes.

Expected sequence

The following procedure is used during the test:

Change_LAI (x):

- The purpose of this procedure is to change the value of Location Area Identifier of cell x.
- The Location Area Identifier of cell x shall be changed. The code shall be chosen arbitrarily but shall be different from any previously used in this procedure. The code shall have the same MCC as the Home PLMN and shall not have the same MNC as the Home PLMN.

Procedure 1

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The following messages are sent and shall be received on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | The RF level of cell B is lowered until cell B is no more suitable and the MS selects cell A. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | The SS waits at least 7 minutes for a possible location updating. |
| 8 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 9 | MS | | If possible (see PICS) the MS is switched off. Otherwise if possible the power is removed. |
| 10 | MS | | Depending on what has been performed in step 9 the MS is brought back to operation and placed in a automatic mode. |
| 11 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | LOCATION UPDATING REQUEST | Location Updating Type = normal. |
| 14 | SS -> MS | LOCATION UPDATING ACCEPT | IE Mobile Identity not present. |
| 15 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Procedure 2

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The following messages are sent and shall be received on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | The RF level of cell B is lowered until the MS selects cell A. The level of cell B shall be such that cell B is suitable for cell selection. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating This message is sent on cell A. |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | MS -> SS | CHANNEL REQUEST | The following messages are sent and shall be received on cell B. |
| 8 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 9 | MS -> SS | LOCATION UPDATING REQUEST | |
| 10 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 11 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 12 | SS | | The SS waits for a possible location updating procedure on both cells A and B for 2 minutes. |
| 13 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B within 2 minutes after the end of step 11. |
| 14 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" = TMSI. This message is sent on cell A and on cell B. |
| 15 | MS | | The MS shall not initiate an RR connection on cell A or on cell B. This is checked during 3 s. |
| 16 | MS | | A MO CM connection is attempted. |
| 17 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |
| 18 | MS | | The following messages are sent and shall be received on cell A Steps 20 to 27 are performed if the MS supports speech. |
| 19 | MS -> SS | CHANNEL REQUEST | An emergency call is attempted. |
| 20 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": |
| 21 | MS -> SS | CM SERVICE REQUEST | "CM service type": Emergency call establishment. |
| 22 | SS -> MS | CM SERVICE ACCEPT | |
| 23 | MS -> SS | EMERGENCY SETUP | |
| 24 | SS -> MS | RELEASE COMPLETE | "Cause" = unassigned number. |
| 25 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Procedure 3

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The following messages are sent and shall be received on cell A |
| 2 | MS -> SS | CHANNEL REQUEST | The RF level of cell B is lowered until the MS selects cell A. The level of cell B shall be such that cell B is suitable for cell selection. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 9 | MS -> SS | CHANNEL REQUEST | The following messages are sent and shall be received on cell B. |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 11 | MS -> SS | LOCATION UPDATING REQUEST | |
| 12 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 13 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 14 | SS | | Change_LAI (A) within 5 s after step 12. |
| 17 | MS -> SS | CHANNEL REQUEST | The following messages are sent and shall be received on cell A. |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 19 | MS -> SS | LOCATION UPDATING REQUEST | |
| 20 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 21 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 22 | SS | | Change_LAI (B) within 5 s after step 20. |
| 25 | MS -> SS | CHANNEL REQUEST | The following messages are sent and shall be received on cell B. |
| 26 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 27 | MS -> SS | LOCATION UPDATING REQUEST | |
| 28 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 29 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 30 | SS | | Change_LAI (A) within 5 s after step 28. |
| 33 | MS -> SS | CHANNEL REQUEST | The following messages are sent and shall be received on cell A. |
| 34 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 35 | MS -> SS | LOCATION UPDATING REQUEST | |
| 36 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 37 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 38 | SS | | Change_LAI (B) within 5 s after step 36. |

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 41 | MS -> SS | CHANNEL REQUEST | <p>The following messages are sent and shall be received on cell B.</p> <p>"Establishment cause": Location updating.</p> <p>"Reject cause" IE is "Roaming not allowed in this location area".</p> <p>After the sending of this message, the SS waits for the disconnection of the main signalling link.</p> <p>The SS waits for a possible location updating procedure on both cells A and B for 7 minutes.</p> <p>The MS shall not initiate an RR connection establishment on cell A or on cell B within 7 minutes after the end of step 45.</p> |
| 42 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 43 | MS -> SS | LOCATION UPDATING REQUEST | |
| 44 | SS -> MS | LOCATION UPDATING REJECT | |
| 45 | SS -> MS | CHANNEL RELEASE | |
| 46 | SS | | |
| 47 | MS | | |

Procedure 4

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | <p>The following messages are sent and shall be received on cell A.</p> <p>The SS waits for a periodic location updating procedure on cell A for 7 minutes after the initial conditions have been established.</p> <p>"Establishment cause": Location updating.</p> <p>Location Updating Type = periodic.</p> <p>IE Mobile Identity not present.</p> <p>After the sending of this message, the SS waits for the disconnection of the main signalling link.</p> <p>The location area identity of cell C shall be changed to that of a location area in the Home PLMN.</p> <p>The SS waits for a periodic location updating procedure on cell A for 7 minutes.</p> <p>"Establishment cause": Location updating This message is sent on cell A within 7 minutes after the end of step 6.</p> <p>"Location updating type" = periodic.</p> <p>"Reject cause" IE is "Roaming not allowed in this location area".</p> <p>After the sending of this message, the SS waits for the disconnection of the main signalling link.</p> <p>The following messages are sent and shall be received on cell C.</p> <p>"Establishment cause": Location updating.</p> <p>IE Mobile Identity not present.</p> <p>After the sending of this message, the SS waits for the disconnection of the main signalling link.</p> |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | |
| 7 | SS | | |
| 8 | SS | | |
| 9 | MS -> SS | CHANNEL REQUEST | |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | LOCATION UPDATING REQUEST | |
| 12 | SS -> MS | LOCATION UPDATING REJECT | |
| 13 | SS -> MS | CHANNEL RELEASE | |
| 16 | MS -> SS | CHANNEL REQUEST | |
| 17 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 18 | MS -> SS | LOCATION UPDATING REQUEST | |
| 19 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 20 | SS -> MS | CHANNEL RELEASE | |

Procedure 5

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The following messages are sent and shall be received on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | The RF level of cell B is lowered until cell B is no longer suitable and the MS selects cell A. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | "Reject cause" IE is "Roaming not allowed in this location area". |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | The SS waits at least 7 minutes for a possible location updating. |
| 8 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 9 | MS | | The SIM is removed. |
| 10 | MS | | The SIM is inserted into the ME. |
| 11 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | LOCATION UPDATING REQUEST | Location Updating Type = normal. |
| 14 | SS -> MS | LOCATION UPDATING ACCEPT | IE Mobile Identity not present. |
| 15 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

None.

26.7.4.3 Location updating / abnormal cases

26.7.4.3.1 Location updating / abnormal cases / random access fails

26.7.4.3.1.1 Conformance requirement

If during the RR connection establishment phase of a normal location updating procedure, channel requests are not answered by the network, the Mobile Station shall:

1. send (Max-Retrans+1) Channel Request messages;
2. not try to establish a connection during a period of T3213;
3. then perform a normal location updating procedure as it is still necessary;
4. not repeat the complete procedure if the original cause of the location updating procedure has disappeared.

Reference(s):

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.9 and 3GPP TS 05.08 subclause 6.6.2.

26.7.4.3.1.2 Test purpose

To verify that when during the RR connection establishment phase of a location updating procedure, channel requests are not answered by the network, after expiry of T3213 (= 4s in Phase 2) and when the cell reselection procedure is finished the complete procedure is repeated if still necessary.

26.7.4.3.1.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B of the same PLMN, belonging to different location areas with LAI a and b.

The RF power level of cell B is higher than the one of cell A.

IMSI attach/detach is not allowed in both cells.

The T3212 time-out value is set to infinite in both cells.

Mobile Station:

The MS has a valid TMSI, CKSN and Kc. It is "Idle updated" on cell B.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS is "Idle updated" on cell A.

Test Procedure

The SS causes a random access failure in the MS during a normal location updating procedure. After the expiry of T3213 and when the cell reselection procedure is finished the MS will try to restart the normal location updating procedure.

The test is repeated but the original cause of the location updating procedure has disappeared. The SS then checks that the MS will not restart the location updating procedure.

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS | | The following messages are sent and shall be received on cell A. The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2.. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. This message is sent by the MS (Max_Retrans + 1) times. |
| 3 | SS | | The SS waits for 4 seconds. |
| 4 | MS | | The MS shall not send any layer 3 message during this time. |
| 5 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. The time difference between this message and the last CHANNEL REQUEST sent in step 2 shall be in the range 4 s - 9 s. |
| 6 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 7 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = initial value, LAI = b, mobile station classmark 1 and mobile identity = TMSI. |
| 8 | SS -> MS | LOCATION UPDATING ACCEPT | Optional IE Mobile Identity not included |
| 9 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 10 | SS | | The RF level of cell B is set to the same value as for cell A. |
| 11 | SS | | The RF level of cell A is lowered until the MS selects cell B. The RF level of cell A is kept sufficiently high to ensure that cell A is still suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 12 | MS -> SS | CHANNEL REQUEST | The following messages are sent and shall be received on cell B. Establishment cause: Location updating. This message is sent by the MS (Max_Retrans + 1) times. |
| 13 | SS | | Immediately after the end of step 12 the RF level of cell A is set to the same value as for cell B. |
| 14 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 15 s. |

Specific message contents:

None.

26.7.4.3.2 Location updating / abnormal cases / attempt counter less or equal to 4, LAI different

26.7.4.3.2.1 Conformance requirement

- 1) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a normal location updating procedure, if the attempt counter is smaller than 4 and after expiry of T3211, the Mobile Station shall resend its Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "normal location updating".
- 2) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a normal location updating procedure the Mobile Station shall:
 - 2.1 not answer to paging with the previously allocated TMSI;
 - 2.2 not perform the IMSI detach procedure, when switched off.

- 3) When a failure such as case e) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a normal location updating procedure and when an emergency call establishment is requested by the user the Mobile Station, if it supports speech, shall send a CM Service Request message with CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key available" and Mobile Identity IE set to its IMSI and after acceptance by the network it shall send an Emergency Setup message.
- 4) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a normal location updating procedure the Mobile Station shall use a request from CM entity other than emergency call as a trigger for a normal location updating procedure and shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".
- 5) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a normal location updating procedure the Mobile Station shall answer to paging with IMSI and shall send a Paging Response message with CKSN IE set to "no key available" and Mobile Identity IE set to its IMSI.
- 6) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a normal location updating procedure the Mobile Station shall perform a normal location updating procedure as soon as it enters a new cell.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.4.4.2 and 4.4.4.9 and in 3GPP TS 05.08 subclause 6.6.2.

26.7.4.3.2.2 Test purpose

To verify that the MS performs normal location updating procedures when its attempt counter is smaller than 4.

To check that the MS does not perform the IMSI detach procedure when "idle not updated".

To verify that when "idle not updated" the MS can perform an emergency call.

To verify that when "idle not updated" the MS uses requests from CM layer other than emergency call as triggering of a normal location updating procedure.

To verify that the MS performs a normal location updating procedure if it enters a new cell while being "idle not updated".

26.7.4.3.2.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B of the same PLMN, belonging to different location areas with LAI a and b.

ATT flag shall be set to IMSI attach/detach allowed.

Mobile Station:

The MS is "idle updated" on cell A. A valid CKSN value is stored in the SIM and is noted "initial CKSN". A TMSI is allocated.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "Idle updated" on cell A with a valid CKSN and a TMSI.

Test Procedure

The MS is made to perform a normal location updating procedure. Four types of failure cases are triggered:

- sending of a Location Updating Reject with cause #17;
- RR-connection failure (case d);
- sending of a CHANNEL RELEASE message before the normal end of the procedure (case f);
- T3210 time-out (case e).

As there is no stored LAI or the stored LAI is different from the broadcast LAI, and the attempt counter in the MS shall be lower than 4, the MS enters the state MM IDLE and substate ATTEMPTING TO UPDATE and waits for T3211 seconds before trying again a location updating procedure.

Then the behaviour of the MS in the MM IDLE ATTEMPTING TO UPDATE SERVICE state is checked, that is:

- not answer to paging with TMSI;
- not perform an IMSI detach procedure;
- support request for emergency call;
- use requests from CM layer other than emergency call as triggering of a normal location updating procedure;
- perform normal location updating procedure when a new cell is entered.

Maximum duration of test

9 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|--|-----------|----------------------------|--|
| The following messages are sent and shall be received on cell B. | | | |
| 1 | MS | | The RF level of cell A is lowered until the MS selects cell B. The RF level of cell A is set sufficiently low to ensure that cell A is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = initial value, LAI = a, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 5 | SS -> MS | LOCATION UPDATING REJECT | IE Reject cause is set to a value #17. |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 8 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 11 | SS | | The SS deactivates the SACCH on the dedicated channel. The SS waits until there are no more SACCH frames in the uplink direction. This release connection is done within 8 SACCH frames. |
| 12 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B within T3211 + RadioLinkTimeout after the SS deactivates the SACCH. |
| 13 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 14 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 15 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 16 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 17 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 18 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 19 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 20 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 21 | SS -> MS | AUTHENTICATION REQUEST | CKSN = initial CKSN. |
| 22 | MS -> SS | AUTHENTICATION RESPONSE | |
| 23 | SS -> MS | LOCATION UPDATING ACCEPT | IE mobile Identity = new TMSI. |
| 24 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 25 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle updated" in cell B. |

| Step | Direction | Message | Comments |
|--|-----------|----------------------------|---|
| The following messages are sent and shall be received on cell A. | | | |
| 26 | MS | | The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 27 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 28 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 29 | MS -> SS | LOCATION UPDATING REQUEST | |
| 30 | SS | | location updating type = normal, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 31 | SS -> MS | PAGING REQUEST TYPE 1 | performs step 5 with reject cause #100 and step 6. Mobile identity = old TMSI of the MS. This message is sent continuously to the MS during 8 seconds. |
| 32 | SS | | The SS checks that there is no answer from the MS during 12 s. |
| 33 | SS | | If during steps 31 and 32 the MS attempts to perform a location updating procedure the SS will perform step 30 and then continue the procedure. |
| 34 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) mobile switch off is performed. Otherwise the power is removed. |
| 35 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 30 s. |
| 36 | MS | | Depending on what has been performed in step 34 the MS is brought back to operation. |
| 37 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 38 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 39 | MS -> SS | LOCATION UPDATING REQUEST | |
| 40 | SS -> MS | AUTHENTICATION REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 41 | MS -> SS | AUTHENTICATION RESPONSE | CKSN = initial CKSN. |
| 42 | SS -> MS | LOCATION UPDATING ACCEPT | IE mobile Identity = new TMSI. |
| 43 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 44 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle updated" in cell A. |
| 45 | MS | | The RF level of cell A is lowered until the MS selects cell B. The RF level of cell A is set sufficiently low to ensure that cell A is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 46 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 47 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 48 | MS -> SS | LOCATION UPDATING REQUEST | |
| 49 | SS -> MS | AUTHENTICATION REQUEST | location updating type = normal, CKSN = initial value, LAI = a, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 50 | MS->SS | AUTHENTICATION RESPONSE | |
| 51 | SS | | steps 49 and 50 are performed N times. N shall be chosen in such a way that T3210 expires. Depending on when T3210 expires in the MS, it is possible that on the Nth occurrence of step 50 the MS may send a L2 DISC rather than the AUTHENTICATION RESPONSE message. |
| 52 | MS | | The SS checks that there is no more activity from the MS on the channel after the DISC/UA exchange has been completed. |
| 53 | MS -> SS | CHANNEL REQUEST | If the MS supports speech it is made to perform an emergency call. |
| 54 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 55 | MS -> SS | CM SERVICE REQUEST | Establishment cause: Emergency call. |
| 56 | SS -> MS | CM SERVICE ACCEPT | CM service type = Emergency call establishment; CKSN = no key available; Mobile Identity = IMSI. |
| 57 | MS -> SS | EMERGENCY SETUP | |
| 58 | SS -> MS | RELEASE COMPLETE | |
| | | | Cause = unassigned number. |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 59 | SS -> MS | CHANNEL RELEASE | Establishment cause: Location updating The SS will wait at most 15 s for this message. |
| 60 | MS -> SS | CHANNEL REQUEST | |
| 61 | SS -> MS | IMMEDIATE ASSIGNMENT | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. CKSN = initial CKSN. |
| 62 | MS -> SS | LOCATION UPDATING REQUEST | |
| 63 | SS -> MS | AUTHENTICATION REQUEST | IE mobile Identity = new TMSI. |
| 64 | MS -> SS | AUTHENTICATION RESPONSE | |
| 65 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 66 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 67 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle updated" in cell B. |
| 68 | MS | | The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 69 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 70 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 71 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 11. |
| 72 | SS | | |
| 73 | MS | | A MO CM connection is attempted before T3211 expiry. |
| 74 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 75 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 76 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. IE mobile Identity = new TMSI. |
| 77 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 78 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 79 | SS -> MS | CHANNEL RELEASE | Steps 80 to 83 are optional as the MS may have memorized the request for CM connection attempt Wait 10 s to decide whether to go directly to step 84. |
| 80 | MS -> SS | CHANNEL REQUEST | Establishment cause: Not checked. |
| 81 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 82 | MS -> SS | CM SERVICE REQUEST | CKSN = no key available, Mobile identity = TMSI. After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle updated" in cell A. |
| 83 | SS -> MS | CHANNEL RELEASE | |
| 84 | MS | | The RF level of cell A is lowered until the MS selects cell B. The RF level of cell A is set sufficiently low to ensure that cell A is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 85 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 86 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 87 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available LAI = a, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 16. |
| 88 | SS | | |
| 89 | MS | | The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 90 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. The time interval between Cell B being set sufficiently low to ensure that Cell B is not suitable and this message shall be less than 20s. |
| 91 | SS -> MS | IMMEDIATE ASSIGNMENT | |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 92 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available , LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), mobile station classmark 1 as given by the PICS and mobile identity = IMSI. CKSN = initial CKSN. |
| 93 | SS -> MS | AUTHENTICATION REQUEST | |
| 94 | MS -> SS | AUTHENTICATION RESPONSE | Mobile identity = TMSI. |
| 95 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 96 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 97 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "Idle, updated" in cell A. |

Specific message contents

None.

26.7.4.3.3 Location updating / abnormal cases / attempt counter equal to 4

26.7.4.3.3.1 Conformance requirement

- 1) When four failures such as cases d) to g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during a normal location updating procedure the Mobile Station shall:
 - 1.1 perform location updating after T3212 expiry by sending a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "normal updating".
 - 1.2 if the T3212 initiated location updating was unsuccessful, then after T3211 expiry the Mobile Station shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".
 - 1.3 MS may optionally enter the MM IDLE sub-state PLMN SEARCH and perform Normal Location Update Procedure.
- 2) When four failures such as cases d), f), g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during a normal location updating procedure the Mobile Station, if it supports speech, shall be able to perform an emergency call i.e. the Mobile Station is able to send a CM Service Request message with the CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key is available" and Mobile Identity IE set to its IMSI and then send an Emergency Setup message.
- 3) When four failures such as cases d), f), g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during a normal location updating procedure:
 - 3.1 the Mobile Station shall use a request from CM entity for MM connection for a service other than emergency call as a trigger for a normal location updating procedure and shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".
 - 3.2 after a location updating triggered by a request from the CM layer which was .unsuccessful, after T3211 expiry the Mobile Station shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".
- 4) When four failures such as cases d), f), g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during a normal location updating procedure:
 - 4.1 the Mobile Station shall perform a normal location updating procedure if it enters a new cell.
 - 4.2 if this location updating is unsuccessful, after T3211 expiry the Mobile Station shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.9, 4.2.1.2 and 3GPP TS 05.08 subclause 6.6.2.

26.7.4.3.3.2 Test purpose

To verify that the MS performs normal location updating procedures after T3212 expiry, when its attempt counter has reached value 4 and that the MS reset its attempt counter after a timer T3212 expiry.

To verify that the MS still follows the MM IDLE ATTEMPTING TO UPDATE state requirements or optionally follows the MM IDLE sub-state PLMN SEARCH state requirements after its attempt counter has reached value 4.

A Rel-10 or later MS may optionally enter the MM IDLE sub-state PLMN SEARCH (according to subclause 4.2.1.2) in order to perform a PLMN selection. To verify that the attempt counter is reset in the cases where it has to be done.

26.7.4.3.3.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B, belonging to different location areas a and b.

IMSI attach/detach is allowed in both cells.

T3212 is set to 6 minutes.

Mobile Station:

The MS is "Idle updated" on cell B with a valid CKSN and a TMSI.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)
- at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "Idle updated" on cell A with a valid CKSN and a TMSI.

Test Procedure

The MS is made to perform a normal location updating. The SS triggers a failure in this procedure. After T3211 expiry the MS will try again the location updating procedure. The SS triggers again a failure. This is done again 2 times. At this point the attempt counter shall be equal to 4. It is then checked that T3212 has been started and that at its expiry the MS will try a normal location updating procedure. or Optionally MS can perform location update procedure before the T3212 expiry It is verified that the MS has reset its attempt counter after timer T3212 expiry.

Then it is checked that, when the attempt counter has reached the value of 4, the MS is in the MM IDLE state and ATTEMPTING TO UPDATE substate, that is:

- not perform an IMSI detach procedure;
- support request for emergency call; this verification is done only for MS supporting Speech for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

- use requests from CM layer other than emergency call (for MS supporting at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc)) as triggering of a normal location updating procedure;
- perform normal location updating procedure when a new cell is entered.

Maximum duration of test

20 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | MS | | The following messages are sent and shall be received on cell A. The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. location updating type = normal, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING REJECT | |
| 6 | SS -> MS | CHANNEL RELEASE | IE Reject cause is set to #17. The SS waits for the disconnection of the main signalling link. |
| 7 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B within T3211. |
| 8 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | |
| 11 | SS | | The SS deactivates the SACCH on the dedicated channel and waits until there are no more SACCH frames in the uplink. This is done within 8 SACCH frames. |
| 12 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B with T3211 + RadioLinkTimeout after the SS deactivates the SACCH. |
| 13 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 14 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 15 | MS -> SS | LOCATION UPDATING REQUEST | |
| 16 | SS -> MS | AUTHENTICATION REQUEST | these steps (16 and 17) are performed N times. N shall be chosen in such a way that T3210 expires. Depending on when T3210 expires in the MS, it is possible that on the Nth occurrence of step 50 the MS may send a L2 DISC rather than the AUTHENTICATION RESPONSE message. |
| 17 | MS -> SS | AUTHENTICATION RESPONSE | |
| 18 | MS | | The MS shall cease transmission (after the DISC/UA exchange has been completed) and then shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the expiry of T3210. |
| 19 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 20 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 21 | MS -> SS | LOCATION UPDATING REQUEST | |
| 22 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 23 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3212 (tolerance -15s; 45s) at least after the channel release. Or optionally the MS may perform a RR connection establishment before T3212 expiry if MS enters MM IDLE sub-state PLMN SEARCH. |
| 24 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 25 | SS -> MS | IMMEDIATE ASSIGNMENT | |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 26 | MS -> SS | LOCATION UPDATING REQUEST | location updating type: "normal location update" CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 27 | SS -> MS | LOCATION UPDATING REJECT | IE Reject cause = #17 "network failure". |
| 28 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 29 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 30 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 31 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 32 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 33 | SS -> MS | AUTHENTICATION REQUEST | CKSN = initial CKSN. |
| 34 | MS -> SS | AUTHENTICATION RESPONSE | |
| 35 | SS -> MS | LOCATION UPDATING ACCEPT | IE mobile Identity = new TMSI. |
| 36 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 37 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle, updated" in cell A. |
| 38 | MS | | The RF level of cell A is lowered until the MS selects cell B. The RF level of cell A is set sufficiently low to ensure that cell A is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 39 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 40 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 41 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = initial value, LAI = a, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 42 | SS -> MS | LOCATION UPDATING REJECT | IE Reject cause is set to #42. |
| 43 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 44 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 45 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 46 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 47 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 48 | SS | | The SS deactivates the SACCH on the dedicated channel and waits until there is no more SACCH frames in the uplink. This is done within 8 SACCH frames. |
| 48a | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B within T3211 + RadioLinkTimeOut after the SS deactivates the SACCH. |
| 49 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 50 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 51 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 52 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 53 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 54 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 55 | SS -> MS | IMMEDIATE ASSIGNMENT | |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 56 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 57 | SS | | performs step 42 with cause #38 and step 43. |
| 58 | MS | | If the MS supports speech, it is made to perform an emergency call. |
| 59 | MS -> SS | CHANNEL REQUEST | Establishment cause: Emergency call. |
| 60 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 61 | MS -> SS | CM SERVICE REQUEST | CM service type = Emergency call establishment; CKSN = no key available; Mobile Identity = IMSI. |
| 62 | SS -> MS | CM SERVICE ACCEPT | |
| 63 | MS -> SS | EMERGENCY SETUP | |
| 64 | SS -> MS | RELEASE COMPLETE | Cause = unassigned number. |
| 65 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 66 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. |
| 67 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |
| 68 | MS | | Depending on what has been performed in step 66 the MS is brought back to operation. |
| 69 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 70 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 71 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 72 | SS -> MS | AUTHENTICATION REQUEST | CKSN = initial CKSN. |
| 73 | MS -> SS | AUTHENTICATION RESPONSE | |
| 74 | SS -> MS | LOCATION UPDATING ACCEPT | IE mobile Identity = new TMSI. |
| 75 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 76 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle, updated" in cell B. |
| 77 | MS | | The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 78 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 79 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 80 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 81 | SS -> MS | LOCATION UPDATING REJECT | IE Reject cause is set to #38. |
| 82 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 83 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 84 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 85 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 86 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 87 | SS | | The SS deactivates the SACCH on the dedicated channel and waits until there is no more SACCH frames in the uplink. This is done within 8 SACCH frames. |
| 88 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B within T3211 +RadioLinkTimeout seconds after the SS deactivates the SACCH. |
| 89 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 90 | SS -> MS | IMMEDIATE ASSIGNMENT | |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 91 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 92 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 93 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 94 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 95 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 96 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 97 | SS | | performs step 48. |
| 98 | MS | | For an MS that supports at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a MO CM connection is attempted. An MS that does not support at least one MO circuit switched basic service performs steps 66-68. |
| 99 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 100 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 101 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 102 | SS | | performs step 52. |
| 103 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 104 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 105 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 106 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 107 | SS -> MS | AUTHENTICATION REQUEST | CKSN = initial CKSN. |
| 108 | MS -> SS | AUTHENTICATION RESPONSE | |
| 109 | SS -> MS | LOCATION UPDATING ACCEPT | IE mobile Identity = new TMSI. |
| 110 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 111 | SS -> MS | CHANNEL RELEASE | MS is now "idle, updated" in cell A The MS may or may not have memorized the request for CM connection. The steps 112 to 116 are therefore optional for the MS. The SS waits 10 s whether to decide to go directly to step 117. |
| 112 | MS -> SS | CHANNEL REQUEST | |
| 113 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 114 | MS -> SS | CM SERVICE REQUEST | CKSN = initial value, Mobile identity = TMSI. |
| 115 | SS -> MS | CM SERVICE REJECT | cause #17 (network failure). |
| 116 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 117 | MS | | The RF level of cell A is lowered until the MS selects cell B. The RF level of cell A is set sufficiently low to ensure that cell A is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 118 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 119 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 120 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = initial value, LAI = a, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 121 | SS -> MS | LOCATION UPDATING REJECT | IE Reject cause is set to #38. |
| 122 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 123 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 124 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 125 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 126 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 127 | SS | | The SS stops any RF transmission on the dedicated channel and waits until there is no more SACCH in the uplink. |
| 128 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B within T3211 + RadioLinkTimeout seconds after the SS stops RF transmission. |
| 129 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 130 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 131 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 132 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 133 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B during T3211 seconds at least after the channel release. |
| 134 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 135 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 136 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 137 | SS | | performs steps 42 and 43. |
| 138 | MS | | The RF level of cell B is lowered until the MS selects cell A. The RF level of cell B is set sufficiently low to ensure that cell B is not suitable as defined in 3GPP TS 05.08 subclause 6.6.2. |
| 139 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 140 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 141 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 142 | SS | | performs the step 48. |
| 143 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B until T3211 + RadioLinkTimeout after the SS deactivates the SACCH. |
| 144 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 145 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 146 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI. |
| 147 | SS -> MS | AUTHENTICATION REQUEST | CKSN = initial CKSN. |
| 148 | MS -> SS | AUTHENTICATION RESPONSE | |
| 149 | SS -> MS | LOCATION UPDATING ACCEPT | IE mobile Identity = new TMSI. |
| 150 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 151 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. MS is now "idle, updated" in cell A. |

Specific message contents

None.

26.7.4.3.4 Location updating / abnormal cases / attempt counter less or equal to 4, stored LAI equal to broadcast LAI

26.7.4.3.4.1 Conformance requirement

- 1) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a periodic location updating procedure (the broadcast LAI is equal to the stored LAI):

- 1.1 the Mobile Station shall be able to establish an MM connection i.e. send a Channel Request and then a CM Service Request message, CKSN and LAI set to those which have been allocated to the Mobile Station, Mobile Identity IE set to the TMSI which has been allocated to the Mobile Station;

- 1.2 then the Mobile Station shall not attempt a location updating procedure.

- 2) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during an IMSI attach procedure (the broadcast LAI is equal to the stored LAI):

- 2.1 the Mobile Station shall be able to establish an MM connection i.e. send a Channel Request and then a CM Service Request message, CKSN and LAI set to those which have been allocated to the Mobile Station, Mobile Identity IE set to the TMSI which has been allocated to the Mobile Station;

- 2.2 then the Mobile Station shall not attempt a location updating procedure.

- 3) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during a periodic location updating procedure and the attempt counter is smaller than 4 the Mobile Station shall send, after T3211 expiry, a Location Updating Request message with the Mobile Identity IE set to the TMSI which has been allocated to the Mobile Station, CKSN IE and LAI set to those which have been allocated to the Mobile Station and the Location Updating type set to "periodic updating".

When the Mobile Station's attempt counter reaches the value 4 (four failures such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during a periodic location updating procedure) after T3212 expiry it shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "normal" or MS may optionally enter the MM IDLE sub-state PLMN SEARCH (according to subclause 4.2.1.2) and perform Normal Location Update Procedure.

- 4) When the Mobile Station's attempt counter reaches the value 4 (four failures such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during a periodic location updating procedure) it shall use a request for a CM connection other than emergency call as a trigger for a location updating procedure.

- 5) When a failure such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 has occurred during an IMSI attach procedure and the attempt counter is smaller than 4 the Mobile Station shall send, after T3211 expiry, a Location Updating Request message with the Mobile Identity IE set to the TMSI which has been allocated to the Mobile Station, CKSN IE and LAI set to those which have been allocated to the Mobile Station and the Location Updating type set to "IMSI attach".

When the Mobile Station's attempt counter reaches the value 4 (four failures such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during an IMSI attach procedure) after T3212 expiry it shall send a Location Updating Request message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "normal".

- 6) When the Mobile Station's attempt counter reaches the value 4 (four failures such as cases d), f) and g) of subclause 4.4.4.9 of 3GPP TS 04.08 / 3GPP TS 24.008 have occurred during an IMSI attach procedure) it shall use a request for a CM connection other than emergency call as a trigger for a location updating procedure.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.9., 4.2.1.2.

26.7.4.3.4.2 Test purpose

To verify that in the case when the attempt counter is smaller than 4 and the broadcast LAI is equal to the stored LAI, the MS is in the MM IDLE state and NORMAL SERVICE substate. To verify that timer T3211 is stopped after a MM connection establishment.

To verify that the MS uses the T3211 timer, and that it enters the MM IDLE state and NORMAL SERVICE substate when its attempt counter reaches value 4 even in the case where the stored LAI is equal to the broadcast LAI.

26.7.4.3.4.3 Method of test

Initial conditions

System Simulator:

One cell: B, belonging to location area b.

IMSI attach/detach is allowed.

T3212 is set to 6 minutes.

Mobile Station:

The MS is "Idle updated" on cell B with a valid CKSN and a TMSI.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on cell B with a valid CKSN and a TMSI.

Test Procedure

A failure during the periodic location updating is triggered: as the broadcast LAI is equal to the stored LAI, the MS is still in the MM IDLE state and NORMAL SERVICE substate and timer T3211 is started. For MS supporting at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a CM connection other than for emergency call is attempted and it is checked that this is possible and that T3211 is stopped. Same test is performed with a failure during an IMSI attach procedure.

Then failures are triggered during the periodic location updating to let the attempt counter to reach the value of 4. The MS shall enter the MM IDLE LIMITED SERVICE state and delete any TMSI, stored LAI, ciphering key sequence number and ciphering key. When the attempt counter reaches the value of 4, timer T3212 shall be started. At timer T3212 expiry a location updating procedure is started or MS can optionally perform location update procedure before the T3212 expiry. For MS supporting at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a request for CM connection other than emergency call shall trigger a location updating procedure.

Same tests are performed when the failures are triggered during an IMSI attach procedure.

Maximum duration of test

40 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | SS | | The SS shall wait at most T3212 + 45 s. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 5 | SS | | performs step 5, of 26.7.4.3.2 with cause #17 and step 6 of 26.7.4.3.2. |
| 6 | MS | | For an MS that supports at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a MO CM connection is attempted. An MS that does not support at least one MO circuit switched basic service skips the steps 7 to 13. |
| 7 | MS -> SS | CHANNEL REQUEST | |
| 8 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 9 | MS -> SS | CM SERVICE REQUEST | CKSN = initial CKSN, Mobile Identity = TMSI. |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | An initial CM message | |
| 12 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 13 | SS | | The MS shall not initiate an RR connection establishment. This is checked during 2*T3211. |
| 14 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. |
| 15 | MS -> SS | CHANNEL REQUEST | Steps 15 to 18 are optional. |
| 16 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 17 | MS -> SS | IMSI DETACH INDICATION | |
| 18 | SS -> MS | CHANNEL RELEASE | |
| 19 | MS | | Depending on what has been performed in step 14 the MS is brought back to operation. |
| 20 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 22 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = IMSI attach, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 23 | SS | | performs step 11 of 26.7.4.3.2. |
| 24 | MS | | For an MS that supports at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a MO CM connection is attempted. An MS that does not support at least one MO circuit switched basic service skips the steps 25 to 32. |
| 25 | MS -> SS | CHANNEL REQUEST | |
| 26 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 27 | MS -> SS | CM SERVICE REQUEST | CKSN = initial CKSN, Mobile Identity = TMSI. |
| 28 | SS -> MS | CIPHERING MODE COMMAND | |
| 29 | MS -> SS | CIPHERING MODE COMPLETE | |
| 30 | MS -> SS | An initial CM message | |
| 31 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. |
| 32 | SS | | The MS shall not initiate an RR connection establishment. This is checked during 2*T3211 MS is "idle, updated" in cell B. |
| 32/1 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. |
| 32/2 | MS -> SS | CHANNEL REQUEST | Steps 32/2 to 32/5 are optional. |
| 32/3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 32/4 | MS -> SS | IMSI DETACH INDICATION | |
| 32/5 | SS -> MS | CHANNEL RELEASE | |
| 32/6 | MS | | Depending on what has been performed in step 32/1, the MS is brought back to operation. |
| 32/7 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |

| Step | Direction | Message | Comments |
|-------|-----------|----------------------------|---|
| 32/8 | SS -> MS | IMMEDIATE ASSIGNMENT | location updating type = IMSI attach, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. without mobile identity |
| 32/9 | MS -> SS | LOCATION UPDATING REQUEST | |
| 32/10 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 32/11 | SS -> MS | CHANNEL RELEASE | |
| 33 | SS | | The SS shall wait at most T3212 + 15 s. |
| 34 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 35 | SS -> MS | IMMEDIATE ASSIGNMENT | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 16 of 26.7.4.3.2. The MS shall not initiate an RR connection establishment during T3211 at least after the channel release. Establishment cause: Location updating. |
| 36 | MS -> SS | LOCATION UPDATING REQUEST | |
| 37 | SS | | |
| 38 | MS | | |
| 39 | MS -> SS | CHANNEL REQUEST | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 5 of 26.7.4.3.2 with cause #17 and step 6 of 26.7.4.3.2. The MS shall not initiate an RR connection establishment during T3211 at least after the channel release. Establishment cause: Location updating. |
| 40 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 41 | MS -> SS | LOCATION UPDATING REQUEST | |
| 42 | SS | | |
| 43 | MS | | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 11 of 26.7.4.3.2. The MS shall not initiate an RR connection establishment within T3211 + RadioLinkTimeout after the SS deactivates the SACCH. |
| 44 | MS -> SS | CHANNEL REQUEST | |
| 45 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 46 | MS -> SS | LOCATION UPDATING REQUEST | |
| 47 | SS | | Establishment cause: Location updating. |
| 48 | MS | | |
| 49 | MS -> SS | CHANNEL REQUEST | |
| 50 | SS -> MS | IMMEDIATE ASSIGNMENT | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 51 | MS -> SS | LOCATION UPDATING REQUEST | |
| 52 | SS | | performs step 16 of 26.7.4.3.2. The MS shall not initiate an RR connection establishment during T3212 - 15 s at least after the channel release. Or optionally MS may perform RR connection establishment before T3212 expiry if MS enters MM IDLE sub-state PLMN SEARCH. Establishment cause: Location updating. |
| 53 | MS | | |
| 54 | MS -> SS | CHANNEL REQUEST | |
| 55 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 56 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = periodic or normal (see Note 1), CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 57 | SS -> MS | AUTHENTICATION REQUEST | |
| 58 | MS -> SS | AUTHENTICATION RESPONSE | |
| 59a | SS -> MS | LOCATION UPDATING ACCEPT | |
| 59b | MS -> SS | TMSI REALLOCATION COMPLETE | IE mobile Identity = TMSI. |
| 60 | SS -> MS | CHANNEL RELEASE | The SS waits for the disconnection of the main signalling link. The MS shall no initiate an RR connection establishment earlier than T3212 - 15 s after the transmission of the CHANNEL RELEASE in step 60. Establishment cause: Location updating. |
| 61 | MS | | |
| 62 | MS -> SS | CHANNEL REQUEST | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 63 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 64 | MS -> SS | LOCATION UPDATING REQUEST | |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 65 | SS | | performs step 5 of 26.7.4.3.2 with cause #17 and step 6 of 26.7.4.3.2. |
| 66 | MS | | The MS shall not initiate an RR connection establishment during T3211 at least after the channel release. |
| 67 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 68 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 69 | MS -> SS | LOCATION UPDATING REQUEST | |
| 70 | SS | | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 11 of 26.7.4.3.2. |
| 71 | MS | | The MS shall not initiate an RR connection establishment within T3211 + RadioLinkTimeout after the SS deactivates the SACCH. |
| 72 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 73 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 74 | MS -> SS | LOCATION UPDATING REQUEST | |
| 75 | SS | | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 16 of 26.7.4.3.2. |
| 76 | MS | | The MS shall not initiate an RR connection establishment during T3211 at least after the channel release. |
| 77 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 78 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 79 | MS -> SS | LOCATION UPDATING REQUEST | |
| 80 | SS | | location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. performs step 5 of 26.7.4.3.2 with cause #17 and step 6 of 26.7.4.3.2. |
| 81 | MS | | For an MS that supports at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a MO CM connection is attempted and the step 81/1-81/6 are skipped. |
| 81/1 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. Steps 81/2 to 81/5 are optional. |
| 81/2 | MS -> SS | CHANNEL REQUEST | Depending on what has been performed in step 81/1 the MS is brought back to operation. |
| 81/3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 81/4 | MS -> SS | IMSI DETACH INDICATION | |
| 81/5 | SS -> MS | CHANNEL RELEASE | |
| 81/6 | MS | | |
| 82 | MS -> SS | CHANNEL REQUEST | |
| 83 | SS -> MS | IMMEDIATE ASSIGNMENT | Establishment cause: Location updating. |
| 84 | MS -> SS | LOCATION UPDATING REQUEST | |
| 85 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 86 | MS -> SS | TMSI REALLOCATION COMPLETE | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 87 | SS -> MS | CHANNEL RELEASE | IE mobile identity = TMSI. |
| 88 | MS -> SS | CHANNEL REQUEST | Steps 88 to 92 are optional Wait 10 s to decide whether to go directly to step 93. |
| 89 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 90 | MS -> SS | CM SERVICE REQUEST | |
| 91 | SS -> MS | CM SERVICE REJECT | |
| 92 | SS -> MS | CHANNEL RELEASE | |
| 93 | MS | | CKSN = no key available, Mobile identity = TMSI cause #17 (network failure). |
| 93 | MS | | If possible (see PICS) SIM detachment is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. |
| 94 | MS -> SS | CHANNEL REQUEST | Steps 94 to 97 are optional. |
| 95 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 96 | MS -> SS | IMSI DETACH INDICATION | |

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 97 | SS -> MS | CHANNEL RELEASE | |
| 98 | MS | | Depending on what has been performed in step 97 the MS is brought back to operation. |
| 99 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |
| 100 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 101 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = IMSI attach, CKSN = no key available, LAI = b, mobile station classmark 1 as given by the PICS and mobile identity = TMSI. |
| 102 | SS | | performs step 11 of 26.7.4.3.2. |
| 103 | MS | | The MS shall not initiate an RR connection establishment within T3211 + RadioLinkTimeout after the SS deactivates the SACCH. |
| 104 | MS -> SS | CHANNEL REQUEST | Establishment cause: Location updating. |

| 153 | MS -> SS | CHANNEL REQUEST | location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE) mobile station classmark 1 as given by the PICS and mobile identity = IMSI. |
| 154 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 155 | MS -> SS | LOCATION UPDATING REQUEST | |
| 156 | SS -> MS | AUTHENTICATION REQUEST | IE mobile Identity = TMSI. |
| 157 | MS -> SS | AUTHENTICATION RESPONSE | |
| 158 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 159 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 160 | SS -> MS | CHANNEL RELEASE | |
| 161 | MS | | Steps 161 to 166 are optional. An MO CM connection is attempted. CKSN = initial value, Mobile identity = TMSI. cause #17 (network failure). |
| 162 | MS -> SS | CHANNEL REQUEST | |
| 163 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 164 | MS -> SS | CM SERVICE REQUEST | |
| 165 | SS -> MS | CM SERVICE REJECT | |
| 166 | SS -> MS | CHANNEL RELEASE | |

NOTE 1: the MS can include both types of Location updating. As T3212 expires it can be a periodic location updating procedure and as there is no stored LAI it can be a normal one.

NOTE 2: same problem as in note 1. Three types of location updating procedures should be allowed.

Specific message contents

None.

26.7.4.3.5 Location updating / abnormal cases / Network reject with Extended Wait Timer

26.7.4.3.5.1 Conformance requirement

An MS configured for NAS signalling low priority indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured to NAS signalling low priority" except for the following cases in which the MS shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the MS is performing an attach for emergency bearer services;
- the MS has a PDN connection for emergency bearer services established and is performing mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the MS is accessing the network with access class 11 – 15; or
- the MS is responding to paging.

The network may at any time include an implicit reject indication for the PS domain or the CS domain within an IMMEDIATE ASSIGNMENT message using the *IA Rest Octets* IE (see sub-clause 10.5.2.16) or within an IMMEDIATE ASSIGNMENT REJECT or an IMMEDIATE ASSIGNMENT EXTENDED message using the *Feature Indicator* IE (see sub-clause 10.5.2.76) or within a PAGING REQUEST TYPE 1 message using the *P1 Rest Octets* IE (see sub-clause 10.5.2.23) or within a PAGING REQUEST TYPE 2 message using the *P2 Rest Octets* IE (see sub-clause 10.5.2.24) or within a PAGING REQUEST TYPE 3 message using the *P3 Rest Octets* IE (see sub-clause 10.5.2.25).

The RR entity of a mobile station configured for "low access priority" (see 3GPP TS 23.060), when attempting to establish a CS connection other than in case of an emergency call or when the mobile station is a member of an authorized special access class or sending a paging response shall, while ignoring MS identities included within PAGING REQUEST messages, start listening to the downlink CCCH until successfully decoding one of the RR messages listed in sub-clause 3.3.1.1.1a. If the RR message indicates an implicit reject for the CS domain (see sub-clause 3.3.1.1.1a) the mobile station shall abort the immediate assignment procedure and initiate the Implicit Reject procedure (see sub-clause 3.3.1.1.3.2a).

If the mobile station initiates this procedure due to implicit reject indication received for the CS domain (respectively PS domain) it starts timer T3234 (respectively timer T3236) and returns to idle mode. The mobile station is not allowed to make a mobile originated access attempt for the CS domain (respectively PS domain) in the same cell until T3234 (respectively T3236) expires or is stopped. If the mobile station receives a PAGING REQUEST message while T3234/T3236 is running it shall stop T3234/T3236 and respond to the PAGING REQUEST message.

Reference(s):

TS 24.008 clause 1.8. 3GPP TS 44.018 subclauses 3.3.1.1.1a, 3.3.1.1.2 and 3.3.1.1.3.2a.

26.7.4.3.5.2 Test purpose

- 1) To verify that the LAP indicator can be set in the MS.
- 2) To verify that the Delay Tolerant indicator is sent by the MS.
- 3) To verify that the MS uses the back-off timer if the network reject a request with the implicit reject procedure.

26.7.4.3.5.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B of the same PLMN, belonging to different location areas with LAI a and b.

Mobile Station:

The MS has a valid TMSI. It is "Idle updated" on cell A.

The MS is configured for "low access priority"

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS is "Idle updated" on cell A.

Test Procedure

The SS enables cell B and disables cell A triggering the MS to start the location updating procedure. The MS sends a CHANNEL REQUEST message and the SS responds with the IMMEDIATE ASSIGNMENT message with the Implicit Reject CS bit is set to "1".

The MS abort the location updating procedure and starts timer T3234 with a random value drawn from the following set: {10.0, 10.1, 10.2, ...200.0}. SS checks that MS does not send further CHANNEL REQUESTs until minimum value of T3234 and re-attempts location updating procedure after maximum value of T3234. When the timer expires the MS the MS sends the CHANNEL REQUEST message to indicate location updating. The SS sends an IMMEDIATE ASSIGNMENT message with the implicit reject flag set to "0". The MS sends the LOCATION UPDATING REQUEST message with the IE "Device properties" set to "MS is configured for NAS signalling low priority".

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | SS | | Make cell B available and cell A non available. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | The Implicit Reject CS bit is set to "1". |
| 4 | MS | | Timer T3234 (random value drawn from the following set: {10.0, 10.1, 10.2, ...200.0} seconds) is active. |
| | MS | | MS discards all further CHANNEL REQUESTS |
| 5 | MS -> SS | CHANNEL REQUEST | Not received within 10 seconds after step 2. May be sent within 10 and 200 seconds. Shall be sent after 200 seconds. |
| 6 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating The Implicit Reject CS bit is set to "0". |

| | | | |
|----|----------|----------------------------|---|
| 7 | MS -> SS | LOCATION UPDATING REQUEST | The SS verifies that the IE "Device properties" is set to "MS is configured for NAS signalling low priority" Mobile Identity: TMSI |
| 8 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 9 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 10 | MS -> SS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link |

Specific message contents:

None.

26.7.4.4 Location updating / release / expiry of T3240

26.7.4.4.1 Conformance requirement

The mobile station receiving a LOCATION UPDATING REJECT message shall start T3240: it shall abort the RR connection at the expiry of timer T3240.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.4.4.8 and 11.2.

26.7.4.4.2 Test purpose

To verify that the MS aborts the RR-connection at the expiry of timer T3240.

26.7.4.4.3 Method of test

Initial conditions

System Simulator:

Two cells: A and B, belonging to different location areas a and b.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on cell A.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on cell B.

Test Procedure

A normal location updating procedure is performed. The RR-connection is not released by the SS within the timer T3240. It is checked that the MS aborts the RR-connection.

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The RF level of cell A is lowered until the MS selects cell B. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS | | The SS waits T3240 expiry. |
| 7 | MS | | The MS shall abort the RR connection (disconnection of layer 2). |

Specific message contents

None.

26.7.4.5 Location updating / periodic

26.7.4.5.1 Location updating / periodic spread

26.7.4.5.1.1 Conformance requirement

- 1) The Mobile Stations shall perform spreading of the time before performing a periodic location updating when the location updating timer value is reduced.
- 2) The Mobile Station shall reset timer T3212 when the Mobile Station is deactivated, and shall start with a value between zero and the broadcasted value when reactivated in the same cell, IMSI attach being forbidden.
- 3) When activated the Mobile Station shall start timer T3212 with a value randomly drawn in the allowed range.

NOTE: This conformance requirement is not covered by a test purpose. It is intended to be covered by a manufacturer declaration.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.2.

26.7.4.5.1.2 Test purpose

- 1) To check that when the location updating timer is reduced, the timer running in the MS is started with a value depending on the current timer value and the new broadcasted T3212 value.
- 2) To verify that when the MS is reactivated in the same cell (as the one in which it was deactivated), IMSI attach being forbidden, the MS starts the timer T3212 with a value between zero and the broadcasted value.

NOTE: It is not tested that the value is random.

26.7.4.5.1.3 Method of test

Initial conditions

System Simulator:

One cell, T3212 is set to 30 minutes.

IMSI attach is allowed in the cell.

Mobile Station:

The MS is deactivated. The stored MCC, MNC and LAC correspond to the broadcasted values. The stored update status is "updated".

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

The MS is activated. It performs IMSI attach. 3 minutes after the end of the IMSI attach procedure, the value of T3212 is set to 6 minutes. The MS shall perform periodic location updating 6 minutes after the end of the IMSI attach procedure.

Then, the IMSI attach/detach is forbidden. T3212 is still set to 6 minutes.

The MS is deactivated. The MS is reactivated. It is checked that the MS performs a periodic location updating during the 6 minutes following activation.

Maximum duration of test

20 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS | | The MS is activated. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": IMSI attach. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | 3 minutes after step 6 the value of T3212 is set to 6 minutes. |
| 8 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall be sent by the MS between 5minutes 45s and 6minutes 15s after step 6. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": periodic updating. |
| 11 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 13 | SS | | IMSI attach/detach is not allowed. |
| 14 | MS | | The MS is deactivated. |
| 15 | MS | | The MS is activated. |
| 16 | SS | | The SS waits until the periodic location updating. |
| 17 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall arrive during the 7 minutes following the MS activation. |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 19 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic. |
| 20 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 21 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.2 Location updating / periodic normal / test 1

26.7.4.5.2.1 Conformance requirement

- 1 The Mobile Station shall stop and reset the timer T3212 of the periodic location updating procedure when the first MM message is received or ciphering mode setting is completed in the case of MM connection establishment.
- 2 The Mobile Station shall stop and reset the timer T3212 of the periodic location updating procedure when the Mobile Station has responded to paging and thereafter has received the first correct L3 message that is not an RR message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.2.

26.7.4.5.2.2 Test purpose

To verify that the MS stops and resets the timer T3212 of the periodic location updating procedure when:

- the first MM-message is received in the case of MM-connection establishment, ciphering mode being not set;
- the MS has responded to paging and the first correct L3 message that is not an RR message is received.

NOTE: T3212 is stopped when the MM-idle state is left and restarted when the MM sublayer returns to that state, substate NORMAL SERVICE or ATTEMPTING TO UPDATE. As a consequence, the exact time when T3212 is reset between those two events cannot be tested.

26.7.4.5.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

IMSI attach/detach is allowed.

The T3212 time-out value is 2/10 hour.

Mobile Station:

The MS has a valid TMSI. It is "idle updated".

Specific PICS statements:

- at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

For MS supporting at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) an MS originated MM connection is established and cleared. The channel is released. It is checked that the MS performs a periodic location updating 12 minutes after the release of the channel.

The MS is paged, it sends a CHANNEL REQUEST message and the SS responds with an IMMEDIATE ASSIGNMENT message, a call is established and then cleared. It is checked that the MS performs a periodic location updating 12 minutes after the release of the link.

Maximum duration of test

30 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | MS | | For an MS that supports at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc) a MO CM connection is attempted. An MS that does not support at least one MO circuit switched basic service skips the steps 2 to 13. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE REJECT | cause #17 (network failure). |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | The SS waits until the periodic location updating. |
| 8 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall arrive between 11 minutes 45 s and 12 minutes 15 s after the last release of the RR connection by the SS. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic. |
| 11 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 13 | SS | | The SS waits 1 minute. |
| 14 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" = IMSI. |
| 15 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Answer to paging. |
| 16 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 17 | MS -> SS | PAGING RESPONSE | |
| 18 | SS -> MS | AUTHENTICATION REQUEST | |
| 19 | MS -> SS | AUTHENTICATION RESPONSE | |
| 20 | SS - MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 21 | SS | | The SS waits until the periodic location updating. |
| 22 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall arrive between 11 minutes 45 s and 12 minutes 15 s after the last release of the RR connection by the SS. |
| 23 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 24 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic. |
| 25 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 26 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.3 Location updating / periodic normal / test 2

26.7.4.5.3.1 Conformance requirement

When a LOCATION UPDATING ACCEPT or a LOCATION UPDATING REJECT message is received, the timer T3212 is stopped and reset and the Mobile Station shall perform a periodic location updating after T3212 expiry.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.2.

26.7.4.5.3.2 Test purpose

To verify that the MS stops and resets the timer T3212 of the periodic location updating procedure when a LOCATION UPDATING ACCEPT message is received.

NOTE: T3212 is stopped when the MM-idle state is left and restarted when the MM sublayer returns to that state, substate NORMAL SERVICE or ATTEMPTING TO UPDATE. As a consequence, the exact time when T3212 is reset between those two events cannot be tested.

26.7.4.5.3.3 Method of test

Initial conditions

System Simulator:

2 cells, IMSI attach/detach is allowed in both cells.

T3212 is set to 6 minutes.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on cell A.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated" on cell B.

Test procedure

A normal location updating is performed. The channel is released. One minute later, the MS is deactivated, then reactivated in the same cell. It is checked that the MS performs an IMSI attach and a periodic location updating 6 minutes after the IMSI attach.

Maximum duration of test

20 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | SS | | The following messages are sent and shall be received on cell B. |
| 2 | MS -> SS | CHANNEL REQUEST | The RF level of cell A is lowered until the MS selects cell B. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | "establishment cause": Location updating. |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | The SS waits until the periodic location updating. |
| 8 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall arrive between 5 minutes 45s and 6 minutes 15 s after the last release of the RR connection by the SS. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic. |
| 11 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 13 | MS | | If possible (see PICS) SIM removal is performed. Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. steps 14 to 17 may be performed or not depending on the action made in step 13. |
| 14 | MS -> SS | CHANNEL REQUEST | |
| 15 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 16 | MS -> SS | IMSI DETACH INDICATION | |
| 17 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 18 | MS | | Depending on what has been performed in step 13 the MS is brought back to operation. |
| 19 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 20 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 21 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = IMSI attach. |
| 22 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 23 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 24 | SS | | The SS waits until the periodic location updating. |
| 25 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall arrive between 5 minutes 45 s and 6 minutes 15s after the last release of the RR connection by the SS. |
| 26 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 27 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic. |
| 28 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 29 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.4 Location updating / periodic HPLMN search

26.7.4.5.4.1 Location updating / periodic HPLMN search / MS waits time T

26.7.4.5.4.1.1 Conformance requirement

When in automatic mode and roaming in the home country, the MS shall make an attempt to access the HPLMN, if the MS is on the VPLMN at time T after since the last attempt.

NOTE: This test is not intended to test every value in the range 6 minutes to 8 hours or the default of 30 minutes, but is intended to check that the mobile is capable of using the value stored on the SIM.

References

3GPP TS 02.11 subclause 3.2.2.5.2.

3GPP TS 03.22 subclause 4.4.3.3.

26.7.4.5.4.1.2 Test purpose

To verify that when a cell of the HPLMN becomes available, following the successful location request on the VPLMN of the home country and after the first search the mobile has failed to find its HPLMN, that the MS shall perform a location update request on the HPLMN after time T. Where T is the HPLMN Search Period stored in the SIM.

26.7.4.5.4.1.3 Method of test

Initial conditions

System Simulator:

Two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted".

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on Cell A.

Test Procedure

Only Cell B shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. Cell A shall be made available after 8 minutes, thus ensuring the MS fails to find the HPLMN during its first attempt. It is verified that the MS performs a location update request on Cell A, within 6 minutes after broadcasting of Cell A.

Maximum duration of test

17 minutes.

Expected sequence

| Step | Direction | Message | Contents |
|------|-----------|---------------------------|--|
| 1 | MS | | The following messages shall be sent and received on Cell B. The MS is switched on by either using the Power Switch or by applying power. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. The SS waits a period of 8 minutes, this allowing the MS to make its first periodic search. |
| 7 | | | Cell A is made available. |
| 8 | SS | | Within 8 minutes after step 7 the following messages shall be sent and received on Cell A. |
| 9 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": normal. |
| 12 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 13 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.4.2 Location updating / periodic HPLMN search / MS in manual mode

26.7.4.5.4.2.1 Conformance requirement

The periodic attempts shall only be performed if in automatic mode when the MS is roaming in its home country.

References

3GPP TS 02.11 subclause 3.2.2.5.2.

3GPP TS 03.22 subclause 4.4.3.3.

26.7.4.5.4.2.2 Test purpose

To verify that no HPLMN Search is performed when the MS is not in automatic mode.

26.7.4.5.4.2.3 Method of test

Initial conditions

System Simulator:

Two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted".

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on Cell B.

Test Procedure

Only Cell B shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. The MS is forced into manual selection mode. Cell A is made available. It is verified that the MS does not attempt to perform a location update on Cell A.

Maximum duration of test

7 minutes.

Expected sequence

| Step | Direction | Message | Contents |
|-------------------|-----------|---------------------------|--|
| 1 | MS | | The following messages shall be sent and received on Cell B. The MS is switched on by either using the Power Switch or by applying power. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |
| 8 | MS | | The MS is forced into manual selection mode. If the MS triggers a new Location Update Procedure on cell B (within 30s), steps 9 to 15 apply, otherwise steps 14 and 15 only |
| 9(option al) | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating, received on Cell B. |
| 10 (conditi onal) | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 (conditio nal) | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 12 (conditio nal) | SS -> MS | LOCATION UPDATING ACCEPT | |
| 13 (conditio nal) | SS -> MS | CHANNEL RELEASE | |
| 14 | SS | | Cell A is made available. |
| 15 | SS | | The SS waits a period of 7 minutes. During this time no messages shall be received on Cell A. |

Specific message contents

None.

26.7.4.5.4.3 Location updating / periodic HPLMN search / MS waits at least two minutes and at most T minutes

26.7.4.5.4.3.1 Conformance requirement

After switch on, the MS waits at least 2 minutes and at most T minutes before the first HPLMN Search is attempted.

References

3GPP TS 02.11 subclause 3.2.2.5.2.

3GPP TS 03.22 subclause 4.4.3.3.

26.7.4.5.4.3.2 Test purpose

To verify that the MS waits at least 2 minutes and at most T minutes before attempting its first HPLMN Search.

26.7.4.5.4.3.3 Method of test

Initial Conditions

System Simulator:

Two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted".

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on Cell A.

Test Procedure

Only Cell B shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. Cell A is made available. It is verified that the MS attempts to perform a location update on Cell A, after at least 2 minutes and at most T minutes have passed following power on.

Maximum duration of test

8 minutes.

Expected sequence

| Step | Direction | Message | Contents |
|------|-----------|---------------------------|---|
| | | | The following messages shall be sent and received on Cell B. |
| 1 | MS | | The MS is switched on by either using the Power Switch or by applying power. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |
| 8 | SS | | Cell A is made available. |
| 9 | SS | | The SS waits a period of 2 minutes after MS is switched on. During this time no messages shall be received on Cell A. The following messages shall be sent and received on cell A. Within T minutes after step 5 the following messages shall be sent and received on cell A. |
| 10 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall be sent between 2 and 7 minutes after step 1 |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 12 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": normal. |
| 13 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 14 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.4.4 Location updating/periodic search of the higher priority PLMN, when a MS is receiving foreign country's VPLMN/MS is in automatic mode.

26.7.4.5.4.4.1 Conformance requirement

A MS in Automatic Mode shall make periodic attempts to look for a higher priority PLMN of the same country as the currently received PLMN.

References.

3GPP TS 22.011, subclause 3.2.2.5

26.7.4.5.4.4.2 Test purpose

To verify that the MS selects the highest priority network if the HPLMN/higher priority PLMN Search is performed, when a MS is receiving foreign country's VPLMN and MS is in automatic mode.

26.7.4.5.4.4.3 Method of test

Initial conditions

System Simulator:

Three cells A, B and C, belonging to different location areas with location identification a, b and c. Cell A shall be a cell of the HPLMN, Cell B shall be a cell of the VPLMN with a different Mobile Country Codes that of Cell A and Cell C shall be a cell of a higher priority VPLMN but of the same Mobile Country Code as Cell B. Initially Cell A and Cell C shall not be broadcasting. IMSI attach/detach is not allowed on any cell. The downlink input level setting for cells B and C shall be the same as cell A.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted".

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on Cell C.

Test Procedure

Only Cell B shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. The MS is in automatic selection mode. Cell A and Cell C are made available. It is verified that the MS does not attempt to perform a location update on Cell A. It is verified that the MS does perform a location update on Cell C.

Maximum duration of test

7 minutes.

Expected sequence

| Step | Direction | Message | Contents |
|------|-----------|---------------------------|---|
| | | | The following messages shall be sent and received on Cell B. |
| 1 | MS | | The MS is switched on by either using the Power Switch or by applying power. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | Cell A is made available. |
| 8 | SS | | Cell C is made available. |
| 9 | SS | | The SS waits a period of 7 minutes. During this time no messages shall be received on Cell A but the following messages are received on Cell C. |
| 10 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 12 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 13 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 14 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.4.5 Location updating/periodic PLMN search in foreign country's border areas/MS is in automatic mode.

26.7.4.5.4.5.1 Conformance requirement

A MS in Automatic Mode shall make periodic attempts to look for a higher priority PLMN of the same country as the currently received PLMN. The MS shall not select a lower priority PLMN of the same country as the currently received PLMN.

References

1. 3GPP TS 22.011, subclause 3.2.2.5

26.7.4.5.4.5.2 Test purpose

To verify that the MS remains on the highest priority network when the HPLMN/higher priority PLMN Search is performed, if the MS is receiving a foreign country's VPLMN and is in automatic mode.

26.7.4.5.4.5.3 Method of test

Initial conditions

System Simulator:

Three cells A, B and C, belonging to different location areas with location identification a, b and c. Cell A shall be a cell of the HPLMN, Cell B shall be a cell of the VPLMN with a different Mobile Country Codes that of Cell A and Cell C shall be a cell of a lower priority VPLMN but of the same Mobile Country Code as Cell B. Initially Cell A and Cell C shall not be broadcasting. IMSI attach/detach is not allowed on any cell. The downlink input level setting for cells B and C shall be the same as cell A.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted". The PLMN Selector on the SIM shall contain entries for both PLMNs of Cell B and Cell C, where PLMN B is of a higher priority than PLMN C.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on Cell B.

Test Procedure

Only Cell B shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. The MS is in automatic selection mode. Cell A and Cell C are made available. It is verified that the MS does not attempt to perform a location update on Cell A or Cell C.

Maximum duration of test

7 minutes.

Expected sequence

| Step | Direction | Message | Contents |
|------|-----------|---------------------------|--|
| | | | The following messages shall be sent and received on Cell B. |
| 1 | MS | | The MS is switched on by either using the Power Switch or by applying power. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | Cell A is made available. |
| 8 | SS | | Cell C is made available. |
| 9 | SS | | The SS waits a period of 7 minutes. During this time no messages shall be received on Cell A or C. |

Specific message contents

None.

26.7.4.5.4.6 Location updating/periodic search for higher priority PLMN when the list of equivalent PLMNs includes the HPLMN, when a MS is registered in a foreign country's VPLMN/MS is in automatic mode.

26.7.4.5.4.6.1 Conformance requirement

A UE in Automatic Mode shall make periodic attempts to look for a higher priority PLMN of the same country as the currently registered PLMN. For the ranking of PLMNs the UE shall use the order used in subclause 3.2.2.2. In the case that the MS has stored a list of equivalent PLMNs, the UE shall only select a PLMN if it has a higher priority than all the PLMNs, in the list of equivalent PLMNs, which are of the same country as the currently registered PLMN

The Mobile Equipment stores a list of "equivalent PLMNs". This list is replaced or deleted at the end of each location update procedure, routing area update procedure and GPRS attach procedure. The stored list consists of a list of equivalent PLMNs as downloaded by the network plus the PLMN code of the network that downloaded the list. All PLMNs in the stored list are regarded as equivalent to each other for PLMN selection, cell selection/re-selection and handover.

References.

1. 3GPP TS 22.011, subclause 3.2.2.5
2. 3GPP TS 23.122, subclause 4.4.3

26.7.4.5.4.6.2 Test purpose

To verify that, in automatic mode, when registered on a VPLMN of a country different to its HPLMN, the MS only selects the highest priority network available from upon those of the same country as the serving PLMN. It also verifies that the MS does not take into account PLMNs, including the HPLMN, which are included in the Equivalent PLMN list.

26.7.4.5.4.6.3 Method of test

Initial conditions

System Simulator:

Three cells A, B and C, belonging to different location areas with location identification a, b and c. Cell A shall be a cell of the HPLMN, Cell B shall be a cell of the VPLMN with a different Mobile Country Codes that of Cell A and Cell C shall be a cell of a higher priority VPLMN but of the same Mobile Country Code as Cell B. Initially Cell A and Cell C shall not be broadcasting. The downlink input level setting for cells B and C shall be the same as cell A. The BA list of Cell B does not include Cell A or Cell C.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted".

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on Cell C.

Test Procedure

Only Cell B shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. During the location update procedure Cell B sends an equivalent PLMN list which includes the HPLMN (Cell A). The MS is in automatic selection mode. The MS receives and store the equivalent PLMN list. The Cell A and Cell C are made available. Cell C is of a higher priority VPLMN but of the same Mobile Country Code as Cell B. It is verified that the MS does not attempt to perform a location update on Cell A. It is verified that the MS does perform a location update on Cell C.

Maximum duration of test

8 minutes.

Expected sequence

| Step | Direction | Message | Contents |
|------|-----------|---------------------------|---|
| | | | The following messages shall be sent and received on Cell B. |
| 1 | MS | | The MS is switched on by either using the Power Switch or by applying power. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | The MS receives and store an equivalent PLMN list. |
| 6 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | Cell A is made available. |
| 8 | SS | | Cell C is made available. |
| 9 | SS | | The SS waits a period of 7 minutes. During this time no messages shall be received on Cell A but the following messages are received on Cell C. |
| 10 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 12 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 13 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 14 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.4a Location updating / periodic per-device timer

26.7.4.5.4a.1 Conformance requirement

1. In the case that the mobile has a stored "Equivalent PLMNs" list the mobile shall only select a PLMN if it is of a higher priority than those of the same country as the current serving PLMN which are stored in the "Equivalent PLMNs" list.
2. In steps i), ii) and iii) of the Automatic Network Selection Mode Procedure, the MS shall limit its attempts to access higher priority PLMNs to PLMNs of the same country as the current serving VPLMN;
3. If the MS is in idle mode in a VPLMN, the MS shall periodically attempt to obtain service on its HPLMN or higher priority PLMN listed in "user controlled PLMN selector" or "operator controlled PLMN selector". The MS shall make an attempt if the MS is on the VPLMN at time T after the last attempt.
4. If the MS is configured with the MinimumPeriodicSearchTimer, the MS shall not use a value for T that is less than the MinimumPeriodicSearchTimer. If the value stored in the SIM, or the default value for T (when no value is stored in the SIM), is less than the MinimumPeriodicSearchTimer, then T shall be set to the MinimumPeriodicSearchTimer

References

3GPP TS 23.122 subclause 4.4.3.3.

26.7.4.5.4a.2 Test purpose

To verify that if a MS is camped on a VPLMN it will perform a search for higher priority networks (e.g. HPLMN) with a periodicity of T, where T is the largest value of the Search Period stored in the SIM and the Minimum Periodic search timer, if present

This test will confirm that, if a cell from a new PLMN becomes available, within a time T the MS will perform a location updating on it only if the following requirements are met:

- The PLMN of this new cell is from the same country as the VPLMN, and
- This PLMN is the HPLMN stored in the SIM, or has a higher priority than the serving VPLMN or any PLMN from the country of the VPLMN that is stored in the equivalent PLMN list.

26.7.4.5.4a.3 Method of test

Initial conditions

System Simulator:

four cells A, B, C and D, belonging to different location areas with location identification a, b, c and d. Their country codes and mobile network codes are defined as follows:

| Cell | Cell No. | MCC | MNC |
|------|----------|-----|-----|
| A | 1 | 001 | 01 |
| B | 2 | 022 | 02 |
| C | 7 | 001 | 10 |
| D | 4 | 001 | 11 |
| E | 3 | 001 | 30 |

initially Cells A, B and C shall not be broadcasting.

Cell E is not activated.

Mobile Station:

The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes. The location area information on the SIM is "deleted".

The MS is configured with the Minimum Periodic search timer that shall be set to 9 minutes.

The following SIM fields are configured:

| SIM field | Priority | PLMN |
|-------------------------|-----------------|------|
| EF _{HPLMNwAcT} | 1 st | A |
| EF _{PLMNwAcT} | 1 st | B |
| | 2 nd | E |
| EF _{OPLMNwAcT} | 1 st | C |
| | 2 nd | D |

In the table, PLMN X is the PLMN code from cell X (see above).

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated" on cell A.

Test procedure

Only Cell D shall be broadcasting. The MS shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell D. The SS shall include the PLMN E in the list of equivalent PLMNs that is sent in the Location Update Accept message. Cells B and C shall be made available after 10 minutes from switched on, thus ensuring the MS fails to find any higher priority PLMN during its first attempt. It is verified that the MS does not perform a location update request on Cell B or C (waiting for at least 10 minutes after broadcasting of Cells B and C). Then Cell A is also made available, and it is verified that the MS performs a location update request on Cell A within 10 minutes after broadcasting of Cell A.

Maximum duration of test

30 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | SS | | The following messages shall be sent and received on Cell D. |
| 2 | MS | | Only cell D is made available |
| 3 | MS -> SS | CHANNEL REQUEST | The MS is switched on by either using the Power Switch or by applying power. |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 5 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": Normal. |
| 6 | SS -> MS | LOCATION UPDATING ACCEPT | "Equivalent PLMNs": PLMN E |
| 7 | SS -> MS | CHANNEL RELEASE | The SS releases the signalling connection. |
| 8 | SS | | The SS waits a period of 10 minutes after the MS is switched on, allowing the MS to make its first periodic search. |
| 9 | SS | | Cells B and C are made available |
| 10 | SS | | The SS shall wait for 10 minutes during which no messages should be received. |
| 11 | SS | | Cell A is made available |
| 12 | MS -> SS | CHANNEL REQUEST | Within 10 minutes after step 7, the following messages shall be sent and received on Cell A. The lower boundary of time T shall not be checked in this test step. |
| 13 | SS -> MS | IMMEDIATE ASSIGNMENT | "Establishment cause": Location updating. |
| 14 | MS -> SS | LOCATION UPDATING REQUEST | "Location Update Type": normal. |
| 15 | SS -> MS | LOCATION UPDATING ACCEPT | Mobile Identity : TMSI |
| 16 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 17 | SS -> MS | CHANNEL RELEASE | After sending this message the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.5.5 Location Updating / Multi-Band PLMN selection between different ITU regions /

The PLMN numbers indicated below are used in test cases to associate a cell with an MCC and MNC for that cell. The MCC used are in the range 310-316 to be considered for National Roaming (cf TS 23.122, s. 4.4.3.3 / Annex B)

Table 26.7.4.5.5-1: MNC-MCC used in System Information type 3 messages broadcast on the BCCH

| PLMN | MCC1 | MCC2 | MCC3 | MNC1 | MNC2 | MNC3 | Band |
|-----------|------|------|------|------|------|------|---------------|
| 1 (HPLMN) | 3 | 1 | 1 | 0 | 1 | 1 | 1900 (NOTE 1) |
| 2 | 3 | 1 | 2 | 1 | 1 | 1 | 1900 (NOTE 1) |
| 3 | 3 | 1 | 3 | 2 | 1 | 1 | 850 (NOTE 2) |
| 4 | 3 | 1 | 4 | 3 | 1 | F | 1800 (NOTE 2) |
| 5 | 3 | 1 | 5 | 4 | 1 | F | 900(NOTE 2) |
| 6 | 3 | 1 | 6 | 5 | 1 | 1 | 1900 (NOTE 1) |
| 7 | 3 | 1 | 0 | 6 | 1 | 1 | 850 (NOTE 2) |

NOTE 1: the main band used is by default the 1900 band. If the MS does NOT support the 1900 band, 850 band is used instead

NOTE 2: the band used is set according to the MS supported bands:

- the 1900 band is used instead of 850 band if not supported,
- the 900 band is used instead of 1800 band if not supported,
- the 1800 band is used instead of 900 band is not supported.

The SIM used for testing is the standard SIM defined in Annex 4, except for the Following Parameters:

Table 26.7.4.5.5-2: SIM settings

| SIM field | Priority | PLMN |
|--------------------------------|-----------------|-----------------|
| EF _{LOCI} | | PLMN 2 (NOTE 3) |
| EF _{HHPLMN} | | 1 (6 min) |
| EF _{PLMNsel} (NOTE 4) | 1 st | PLMN 5 |
| | 2 nd | PLMN 4 |
| | 3 rd | PLMN 3 |
| | 4 th | PLMN 2 |

NOTE 3: Unless otherwise stated in the method of test, in all of the tests of this clause, SIM is idle updated in the PLMN 2 at the beginning of each test to achieve EF_{LOCI} as PLMN 2.

NOTE 4: In case additional fields EF_{PLMNwAcT}, EF_{OPLMNwAcT} are present on the SIM they shall have same settings as EF_{PLMNsel}.

LAC is valid and different from 0000 or FFFE (LAI is not deleted) or 0001.

26.7.4.5.5.1 Higher Priority PLMN / Automatic PLMN Selection Mode / Normal Service

Conformance requirement

At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

If the MS is in a VPLMN, the MS shall periodically attempt to obtain service on its HPLMN (if the EHPLMN list is not present or is empty) or one of its EHPLMNs (if the EHPLMN list is present) or a higher priority PLMN/access technology combinations listed in "user controlled PLMN selector" or "operator controlled PLMN selector" by scanning in accordance with the requirements that are applicable to i), ii) and iii) as defined in the Automatic Network Selection Mode in subclause 4.4.3.1.1. In the case that the mobile has a stored "Equivalent PLMNs" list the mobile shall only select a PLMN if it is of a higher priority than those of the same country as the current serving PLMN which are stored in the "Equivalent PLMNs" list. For this purpose, a value T minutes may be stored in the SIM, T is either in the range 6 minutes to 8 hours in 6 minute steps or it indicates that no periodic attempts shall be made. If no value is stored in the SIM, a default value of 60 minutes is used.

The attempts to access the HPLMN or an EHPLMN or higher priority PLMN shall be as specified below:

- a) The periodic attempts shall only be performed in automatic mode when the MS is roaming;
- b) After switch on a period of at least 2 minutes and at most T minutes shall elapse before the first attempt is made;

References

TS 23.122, clause 4.4.3.1, 4.5.2 and section 4.4.3.3.1

Test purpose

To verify that in Automatic Network Selection Mode Procedure, after Power On:

- 1 the MS selects the Last Registered PLMN if available,
- 2 the MS selects the Highest Priority PLMN available (regardless of the ITU region) according to the SIM "PLMN Selector" Data
- 3 the MS reselects the Highest Priority PLMN available (regardless of the ITU region) according to the SIM "PLMN Selector" Data

Initial conditions

The MS is in automatic PLMN selection mode.

| Cell | RF signal level [dBm] |
|-----------------|-----------------------|
| Cell 2 / PLMN 2 | -60 |
| Cell 3 / PLMN 3 | -50 |
| Cell 4 / PLMN 4 | -50 |
| Cell 5 / PLMN 5 | -50 |

NOTE: the Band used are defined in section 26.7.4.5.5.

The SIM parameters and the MNC-MCC used are also defined in section 26.7.4.5.5.

Specific PICS statements:

- Support of GSM 900 Band (TSPC_Type_GSM_E_Band, TSPC_Type_GSM_P_Band)
- Support of GSM 1800 Band (TSPC_Type_DCS_Band)
- Support of GSM 850 Band (TSPC_Type_GSM_850_Band)
- Support of PCS 1900 Band (TSPC_Type_PCS_Band)

PIXIT statements:

Test procedure

- a) The SS activates Cell 2, Cell 3 and Cell 4 and monitors the cells for random access requests from the MS.
- b) The MS is switched on.
- c) The SS waits for the MS registration.
- d) The SS waits for the PLMN reselection triggered by the MS
- e) Cell 4 is deactivated and Cell 5 activated.
- f) The SS waits for the MS registration.

Test Requirements

1. In step c), the MS must select and register on Cell 2 / PLMN 2.
2. In step d), the MS must reselect and register on Cell 4 / PLMN 4 within 2 to 6 min ($\pm 10\%$) of step b).
3. In step f), the MS must select and register on Cell 5 / PLMN 5.

26.7.4.5.5.2 Higher Priority PLMN / Automatic PLMN Selection Mode / Limited Service

Conformance requirement

If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode.

The behaviour of the MS in the roaming not allowed state is dependent on the LR reject cause as shown in table 2 in clause 5. Additionally:

- in automatic mode, "PLMN not allowed" and "roaming not allowed in this location area" cause the Automatic Network Selection procedure of clause 4.4.3.1.1 to be started;

At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

References

TS 23.122, clause 3.1, 4.3.3, 4.4.3.1 and section 3.5.

Test purpose

To verify that in Automatic Network Selection Mode Procedure, after Power On:

1. the MS selects the Last Registered PLMN if available
2. the MS attempts to obtain service on its HPLMN or a Higher priority PLMN when a its registration on a VPLMN is rejected with "PLMN not allowed" .

Initial conditions

The MS is in automatic PLMN selection mode.

| Cell | RF signal level [dBm] |
|-----------------|-----------------------|
| Cell 2 / PLMN 2 | -60 |
| Cell 3 / PLMN 3 | -50 |
| Cell 4 / PLMN 4 | -50 |

NOTE: the Band used are defined in section 26.7.4.5.5.

The SIM parameters and the MNC-MCC used are also defined in section 26.7.4.5.5.

Specific PICS statements:

- Support of GSM 900 Band (TSPC_Type_GSM_E_Band, TSPC_Type_GSM_P_Band)
- Support of GSM 1800 Band (TSPC_Type_DCS_Band)
- Support of GSM 850 Band (TSPC_Type_GSM_850_Band)
- Support of PCS 1900 Band (TSPC_Type_PCS_Band)

PIXIT statements:

Test procedure

- a) The SS activates Cell 2, Cell 3 and Cell 4 and monitors the cells for random access requests from the MS.
- b) The MS is switched on.
- c) The SS waits for the MS registration.
- d) The SS reject the MS registration on Cell 2 / PLMN 2 with the cause #11 "PLMN Not allowed"
- e) The SS waits for the MS registration.

Test Requirements

1. In step c), the MS must select and try to register on Cell 2 / PLMN 2.
2. In step e), the MS must reselect and register on Cell 4 / PLMN 4. Verified for 2 mins.

26.7.4.5.5.3 Higher Priority PLMN / Automatic PLMN Selection Mode / Recovery from Lack of Service

Conformance requirement

At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

References

TS 23.122, clause 4.4.3.1.

Test purpose

To verify that in Automatic Network Selection Mode Procedure, after Power On:

1. the MS selects the Last Registered PLMN if available,

2. the MS selects the Highest Priority PLMN available (regardless of the ITU region) according to the SIM "PLMN Selector" Data
3. the MS reselects the Highest Priority PLMN available (regardless of the ITU region) according to the SIM "PLMN Selector" Data

Initial conditions

The MS is in automatic PLMN selection mode.

| Cell | RF signal level [dBm] |
|-----------------|-----------------------|
| Cell 2 / PLMN 2 | -60 |
| Cell 3 / PLMN 3 | -50 |
| Cell 4 / PLMN 4 | -50 |

NOTE 1: the Band used are defined in section 26.7.4.5.5.

The SIM parameters and the MNC-MCC used are also defined in section 26.7.4.5.5.

Specific PICS statements:

- Support of GSM 900 Band (TSPC_Type_GSM_E_Band, TSPC_Type_GSM_P_Band)
- Support of GSM 1800 Band (TSPC_Type_DCS_Band)
- Support of GSM 850 Band (TSPC_Type_GSM_850_Band)
- Support of PCS 1900 Band (TSPC_Type_PCS_Band)

PIXIT statements:

Test procedure

- a) The SS activates Cell 2 and monitors the cells for random access requests from the MS.
- b) The MS is switched on.
- c) The SS waits for the MS registration.
- d) The SS waits 3 min and deactivates Cell 2.
- e) The SS waits 2 more minutes and activates Cell 3 and Cell 4.
- f) The SS waits for the MS registration.

Test Requirements

1. In step c), the MS must select and register on Cell 2 / PLMN 2.
2. In step f), the MS must select and register on Cell 4 / PLMN 4 (Note).

NOTE 2: If the MS registers first on Cell 3 / PLMN 3, it must reselect and register on Cell 4 / PLMN 4 within 6 min (+10%) of the registration on PLMN 3.

26.7.4.5.5.4 User Selection / Manual PLMN Selection Mode

Conformance Requirements

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

NOTE 1: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

The MS selects and attempts registration on PLMNs, if available and allowable, in all of its bands of operation in accordance with the following order:

- i) HPLMN;
- ii) PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order) excluding the previously selected PLMN;
- iii) PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order) excluding the previously selected PLMN;
- iv) other PLMN/access technology combinations with the received high quality signal in random order excluding the previously selected PLMN;
- v) other PLMN/access technology combinations, excluding the previously selected PLMN in order of decreasing signal quality or, alternatively, the previously selected PLMN may be chosen ignoring its signal quality;
- vi) The previously selected PLMN.

The previously selected PLMN is the PLMN which the MS has selected prior to the start of the user reselection procedure.

NOTE 2: If the previously selected PLMN is chosen, and registration has not been attempted on any other PLMNs, then the MS is already registered on the PLMN, and so registration is not necessary.

References

TS 23.122, clause 4.4.3.1.2, 4.4.3.2.1

Test purpose

To verify that in Manual Network Selection Mode Procedure:

- the MS registers in the PLMN selected by the user, regardless of the ITU region.

Initial conditions

The MS is in automatic PLMN selection mode.

| Cell | RF signal level [dBm] |
|-----------------|-----------------------|
| Cell 2 / PLMN 2 | -60 |
| Cell 3 / PLMN 3 | -50 |
| Cell 4 / PLMN 4 | -50 |
| Cell 5 / PLMN 5 | -50 |

NOTE 3: the Band used are defined in section 26.7.4.5.5.

The SIM parameters and the MNC-MCC used are also defined in section 26.7.4.5.5, except for the Last Registered PLMN being set to PLMN 1 (EF_{LOC1} set to HPLMN) SIM is idle updated in PLMN 1.

Specific PICS statements:

- Support of GSM 900 Band (TSPC_Type_GSM_E_Band, TSPC_Type_GSM_P_Band)
- Support of GSM 1800 Band (TSPC_Type_DCS_Band)
- Support of GSM 850 Band (TSPC_Type_GSM_850_Band)
- Support of PCS 1900 Band (TSPC_Type_PCS_Band)
- Support of automatically enter automatic selection of PLMN mode.(TSPC_AddInfo_AutoAutoMode)

PIXIT statements:

-

Test procedure

- a1) If the MS does not support TSPC_AddInfo_AutoAutoMode: The MS is switched On and set in Manual PLMN selection Mode and powered Off (Note 4).
- a2) If the MS does support TSPC_AddInfo_AutoAutoMode: The MS is switched On and set in Manual PLMN selection Mode (Note 4).
- b) The SS activates Cell 2, Cell 3, Cell 4 and Cell 5.
- c) If the MS does not support TSPC_AddInfo_AutoAutoMode: The MS is switched On.
- d) PLMN 4 is selected for Manual Reselection
- e) The MS is set to Automatic PLMN selection mode
- f) The SS waits for the MS registration.

NOTE 4: Depending on MS implementation it might be needed to activate a Cell/PLMN in order to put the MS in Manual selection mode. The Test Simulator MUST handle this case with Cell 1/ PLMN 1 if needed.

Test Requirements

1. In step c), the MS must remain in Limited Service and do not register on any of the available PLMN,

2. In step d), the MS must register on Cell 4 / PLMN 4,
3. In step f), the MS must select and register on Cell 5 / PLMN 5.

26.7.4.5.6 Location updating / periodic per-device timer

26.7.4.5.6.1 Conformance requirement

Periodic updating may be used to notify periodically the availability of the mobile station to the network. Periodic updating is performed by using the location updating procedure. The location updating type information element in the LOCATION UPDATING REQUEST message shall indicate periodic updating.

The procedure is controlled by the timer T3212 in the mobile station. The MS indicates in the MS network feature support IE whether it supports the extended value for timer T3212. If the MS receives the Per MS T3212 IE in the Location Updating Accept message, the MS shall use this IE to determine the value of T3212 instead of the value of T3212 that is broadcast.

References

3GPP TS 24.008 subclause 4.4.2.

26.7.4.5.6.2 Test purpose

To verify that the MS uses the per-device timer value for Periodic Location Area Update broadcast by the network.

26.7.4.5.6.3 Method of test

Initial conditions

System Simulator:

One cell, T3212 is set to 30 minutes.

IMSI attach is allowed in the cell.

Mobile Station:

The MS is deactivated. The stored MCC, MNC and LAC correspond to the broadcasted values. The stored update status is "updated".

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

The MS is activated. It performs IMSI attach. The MS signals that it supports the extended periodic timer. The SS provides the per device timer, T3212, with a value of 6 minutes. The MS shall perform periodic location updating 6 minutes after the end of the IMSI attach procedure.

Maximum duration of test

20 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The MS is activated. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": IMSI attach. "MS network feature support": 1 (MS supports the extended periodic timer in this domain) |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | "Per MS T3212" : 6 minutes Mobile Identity : TMSI |
| 6 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 7 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 8 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall be sent by the MS between 5minutes 45s and 6minutes 15s after step 6. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": periodic updating. |
| 11 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.4.6 Location updating / interworking of attach and periodic

26.7.4.6.1 Conformance requirement

- 1) If the Mobile Station is in service state NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH or PLMN SEARCH-NORMAL SERVICE when the timer expires the location updating procedure is delayed until this service state is left.
- 2) The T3212 time-out value shall not be changed in the NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH and PLMN SEARCH-NORMAL SERVICE states.
- 3) If the selected cell is in the location area where the mobile station is registered and IMSI ATTACH is not required and timer T3212 has not expired, then the state is NORMAL SERVICE.

References

1. 3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.2.
2. 3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.2.
3. 3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.2.1.1.

26.7.4.6.2 Test purpose

- 1) To check that if the PLU timer expires while the MS is out of coverage, the MS informs the network of its return to coverage.
- 2) To check that the PLU timer is not disturbed by cells of forbidden PLMNs.
- 3) To check that if the PLU timer does not expire while out of coverage and if the mobile returns to the LA where it is updated, the mobile does not inform the network of its return to coverage.

26.7.4.6.3 Method of test

Initial conditions

System Simulator:

Two cells, a and b, of different PLMNs.

T3212 is set to 12 minutes on cell a.

T3212 is set to 6 minutes on cell b.

IMSI attach is allowed in both cells.

Mobile Station:

The MS is deactivated. The PLMN of cell b is entered in the SIM's forbidden PLMN list.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated". The PLMN of cell b is entered in the SIM's forbidden PLMN list.

Test procedure

The MS is activated and placed in automatic network selection mode. It performs IMSI attach. 1 minute after the end of the IMSI attach procedure, cell a is switched off. The MS shall not location update on cell b. 8 minutes after the end of the IMSI attach procedure, cell a is switched on. The MS shall not location update on cell a before 11,75 minutes after the end of the IMSI attach procedure. The MS shall perform a periodic location update on cell a between 11,75 minutes and 12,25 minutes after the end of the IMSI attach procedure.

3 minutes after the end of the periodic location updating procedure, cell a is switched off. The MS shall not location update on cell b. 14 minutes after the end of the periodic location updating procedure, cell a is switched on and cell b is switched off. The MS shall perform a location update on cell a before 17 minutes after the end of the periodic location updating procedure.

Maximum duration of test

35 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | MS | | The MS is activated in automatic network selection mode. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": IMSI attach. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | SS | | 1 minute after step 6, cell a is switched off. |
| 8 | SS | | 8 minutes after step 6, cell a is switched on. |
| 9 | MS -> SS | CHANNEL REQUEST | This message shall be sent by the MS between 11 minutes 45s and 12 minutes 15s after step 6. |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": periodic updating. |
| 12 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 13 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 14 | SS | | 3 minutes after step 13, cell a is switched off. |
| 15 | SS | | 14 minutes after step 13, cell a is switched on and cell b is switched off. |
| 16 | MS -> SS | CHANNEL REQUEST | This message shall be sent by the MS before 17 minutes after step 13. |
| 17 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 18 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic. |
| 19 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 22 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5 MM connection

26.7.5.1 Introduction

[tbd]

26.7.5.2 MM connection / establishment with cipher and repeated FACCH

26.7.5.2.1 Conformance requirement

The Mobile Station shall be able to correctly set up an MM connection in a Mobile Originating CM connection attempt and send a CM Service Request message with CKSN information element as stored in the SIM and Mobile Identity information element set to the TMSI.

The Mobile Station shall be able to interpret cipher mode setting as acceptance of its CM service request i.e. send a CM message.

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.5.1.1;

The MS shall, when receiving a downlink FACCH block, always attempt to decode it without combining with any previously received FACCH block.

If the current FACCH block is successfully decoded and an identical FACCH block was previously received (successfully decoded and spaced in time from the current FACCH block as specified in sub-clause 10.2), the MS shall not send the LAPDm frame of the current FACCH block to the LAPDm entity.

3GPP TS 44.006 subclause 10.4;

26.7.5.2.2 Test purpose

To verify that the MS can correctly set up an MM connection in an origination and interpret cipher mode setting as acceptance of its CM service request.

To verify that the MS behaves correctly when Repeated FACCH is used by the SS for LAPDm command frames, and additionally where the MS supported repeated FACCH for LAPDm response frames.

26.7.5.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a valid TMSI. It is "idle updated".

Specific PICS statements:

- at least one half rate service (TSPC_AddInfo_HalfRate)
- Support of Repeated FACCH (TSPC_Repeated_FACCH)

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN. It is "idle updated".

Test Procedure

A mobile originating CM connection is initiated. After the MS has sent the CM SERVICE REQUEST message to the SS, an authentication procedure and a ciphering mode setting procedure are performed. Then, the MS sends a CM message and the SS clears the call and releases the channel.

For $k=2$ and $k=3$, the SS shall activate Repeated FACCH for LAPDm command frames on FACCH.

If the MS supports Repeated FACCH, the SS shall additionally activate Repeated FACCH for LAPDm response frames on FACCH. It is checked by the SS that the MS does not respond to identical FACCH blocks which are repeated.

If the MS does not support Repeated FACCH, the MS may respond to the identical FACCH blocks which are repeated, with a REJ frame.

This test is repeated for:

$k=1$;

$k=2$;

$k=3$ where the MS supports at least one half rate service.

Maximum duration of test

3 minute.

Expected sequence

| Step | Direction | Message | Comments |
|---|-----------|-------------------------|--|
| If the MS supports Repeated FACCH (TSPC_Repeated_FACCH), the SS shall check that the MS does not respond to identical FACCH blocks which are repeated. If the MS does not support Repeated FACCH (TSPC_Repeated_FACCH), the MS may respond to the identical FACCH blocks which are repeated, with a REJ frame. | | | |
| 1 | MS | | A MO CM connection is attempted. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | The SS starts deciphering. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | The SS starts enciphering. |
| A9 | MS -> SS | SETUP | |
| A10 | SS -> MS | RELEASE COMPLETE | "Cause" IE: "unassigned number". |
| B9 | MS -> SS | REGISTER | |
| B10 | SS -> MS | RELEASE COMPLETE | |
| C9 | MS -> SS | CP-DATA | |
| C10 | SS -> MS | CP-ACK | |
| C11 | SS -> MS | CP-DATA | |
| C12 | MS -> SS | CP-ACK | |
| C13 | SS -> MS | RELEASE COMPLETE | |
| 14 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

IMMEDIATE ASSIGNMENT

| Information Element | value/remarks |
|---------------------|--|
| Channel description | k=1: SDCCH k=2: TCH/F k=3: TCH/H |

26.7.5.3 MM connection / establishment without cipher

26.7.5.3.1 Conformance requirement

Upon reception of the CM SERVICE ACCEPT message, the MS shall send a CM message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.1.1.

26.7.5.3.2 Test purpose

To verify that the MS can correctly set up an MM connection in an originating CM connection establishment when ciphering mode setting is not required.

26.7.5.3.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a valid TMSI. It is "idle updated".

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test Procedure

A mobile originating CM connection is attempted. The MM-connection is established without invoking the ciphering mode setting procedure.

Then, the MS sends a CM message and the SS releases the channel.

Maximum duration of test

one minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS | | A MO CM connection is attempted. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| A6 | MS -> SS | SETUP | |
| B6 | MS -> SS | REGISTER | |
| C6 | MS -> SS | CP-DATA | |
| C7 | SS -> MS | CP-ACK | |
| C8 | SS -> MS | CP-DATA | |
| C9 | MS -> SS | CP-ACK | |
| 10 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.4 MM connection / establishment rejected

26.7.5.4.1 Conformance requirement

Upon reception of a CM SERVICE REJECT message, the MS shall not send any layer 3 message, start timer T3240 and enter the "wait for network command" state.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.5.1.1.

26.7.5.4.2 Test purpose

To verify that the MS does not send a layer 3 message when the service request is rejected by the SS.

26.7.5.4.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a valid TMSI. It is "idle updated".

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI; It is "idle updated".

Test Procedure

A mobile originating CM connection is attempted. After the MS has sent the CM SERVICE REQUEST message to the SS, the SS responds with a CM SERVICE REJECT message with reject cause "requested service option not subscribed". It is checked that the MS does not send a layer 3 message.

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS | | A MO CM connection is attempted |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE REJECT | "Reject cause" IE: "requested service option not subscribed". |
| 6 | SS | | The MS shall not send a layer 3 message. This is checked during 5 s. |
| 7 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.5 MM connection / establishment rejected cause 4

26.7.5.5.1 Conformance requirement

- 1) The Mobile Station shall be able to correctly set up an MM connection in a Mobile Originating CM connection attempt and send a CM Service Request message with CKSN information element as stored in the SIM and Mobile Identity information element set to the TMSI.

- 2) The Mobile Station, when receiving a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR" shall wait for the network to release the RR connection.
- 3) The Mobile Station shall then be able to perform a location updating procedure.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.5.1.1.

26.7.5.5.2 Test purpose

To verify that the MS can correctly accept a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR".

26.7.5.5.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a valid TMSI. It is "idle updated".

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has valid TMSI, CKSN. It is "idle updated".

Test Procedure

A mobile originating CM connection is attempted. After the MS has sent the CM SERVICE REQUEST message to the SS, the SS responds with a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR". On receipt of this message, the MS shall delete any TMSI, LAI, cipher key and cipher key sequence number. The channel is released. It is checked that the MS performs a normal location updating procedure.

Maximum duration of test

One minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | A MO CM connection is attempted. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE REJECT | "Reject cause" = "IMSI unknown in VLR". |
| 6 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 7 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 8 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 9 | MS -> SS | LOCATION UPDATING REQUEST | "Ciphering key sequence number" = "No key is available". "Mobile identity" = IMSI. "Location area identification" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE). |
| 10 | SS -> MS | AUTHENTICATION REQUEST | |
| 11 | MS -> SS | AUTHENTICATION RESPONSE | |
| 12 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" = new TMSI. |
| 13 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 14 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.6 MM connection / expiry T3230

26.7.5.6.1 Conformance requirement

At T3230 expiry (i.e. no response is given but an RR connection is available) the MM connection establishment shall be aborted.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.1.2 and 11.2.

26.7.5.6.2 Test purpose

To verify that at T3230 expiry, the MS aborts the MM-connection establishment.

26.7.5.6.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a valid TMSI. It is "idle updated".

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test Procedure

A mobile originating CM connection is attempted. After the MS has sent the CM SERVICE REQUEST message to the SS, the SS waits for expiry of timer T3230. It is checked that the MS does not send a layer 3 message but waits for the release of the RR-connection.

Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS | | A MO CM connection is attempted. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS | | The SS waits for expiry of timer T3230. |
| 6 | SS -> MS | CM SERVICE ACCEPT | |
| 7 | MS -> SS | MM STATUS | "Reject cause" IE is "message not compatible with the call state or not implemented". |
| 8 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.7 MM connection / abortion by the network

26.7.5.7.1 MM connection / abortion by the network / cause #6

26.7.5.7.1.1 Conformance requirement

- 1) Upon reception of an ABORT message, the MS shall release any ongoing MM connection and enter the "wait for network command" state.
- 2) If the cause in the ABORT message was cause #6, the Mobile Station shall:
 - 2.1 not perform normal location updating;
 - 2.2 not perform periodic location updating;
 - 2.3 not respond to paging with TMSI;
 - 2.4 reject any request for Mobile Originating call establishment except Emergency call;
 - 2.5 not perform IMSI detach if deactivated.
- 3) After reception of an ABORT message with cause #6, the Mobile Station, if it supports speech, shall accept a request for an emergency call by sending a Channel Request message with the establishment cause set to "emergency call".
- 4) After reception of an ABORT message with cause #6, the Mobile Station shall delete the stored LAI, CKSN and TMSI.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.5.

26.7.5.7.1.2 Test purpose

To check that upon reception of an ABORT message with cause #6 during call establishment:

- the MS does not send any layer 3 message;
- after reception of an ABORT message and after having been deactivated and reactivated, the MS performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN;
- the MS does not perform location updating, does not answer to paging with TMSI, rejects any request for mobile originating call except emergency call, does not perform IMSI detach;
- the MS accepts a request for emergency call.

26.7.5.7.1.3 Method of test

Initial Conditions

System Simulator:

2 cells, default parameters.

Mobile Station:

The MS has a valid TMSI, CKSN and Kc. It is "idle updated" on cell B.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- SIM removable without power down (TSPC_AddInfo_SIMRmv)
- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated" on cell A.

Test procedure

A mobile originating CM connection is attempted. Upon reception of the AUTHENTICATION RESPONSE message, the SS sends an ABORT message with cause #6. The SS waits for 5 s. The MS shall not send any layer 3 message. The SS releases the RR connection.

The SS checks that the MS has entered the state MM IDLE substate NO IMSI, i.e. does not perform normal location updating, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if deactivated.

Maximum Duration Of Test

10 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|--|-----------|----------------------------|---|
| The following messages are sent and shall be received on cell B | | | |
| 1 | MS | | A mobile originating CM connection is attempted. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | ABORT | "reject cause" = #6. |
| 8 | SS | | The SS waits for 5 s. |
| 9 | MS | | The MS shall not send any layer 3 message during that time. |
| 10 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| The following messages are sent and shall be received on cell A. | | | |
| 11 | SS | | The RF levels are changed to make the MS reselect cell A. |
| 12 | MS | | The MS performs cell reselection according to procedure as specified in 3GPP TS 05.08 (this however is not checked until step 22). The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 13 | SS | | The SS waits at least 7 minutes for a possible periodic updating. |
| 14 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. |
| 15 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile identity" IE contains TMSI. |
| 16 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is verified during 3 s. |
| 17 | MS | | A MO CM connection is attempted. |
| 18 | MS | | The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |
| 19 | MS | | If the MS supports speech (see PICS), an emergency call is attempted. |
| 20 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Emergency call. |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 22 | MS -> SS | CM SERVICE REQUEST | "CM service type": Emergency call establishment. |
| 23 | SS -> MS | CM SERVICE ACCEPT | |
| 24 | MS -> SS | EMERGENCY SETUP | |
| 25 | SS -> MS | RELEASE COMPLETE | "Cause" = unassigned number. |
| 26 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 27 | MS | | If possible (see PICS) SIM detachment is performed. |
| 28 | MS | | Otherwise if possible (see PICS) switch off is performed. Otherwise the power is removed. The MS shall not initiate an RR connection establishment on cell A or on cell B. This is checked during 3 s. |
| 29 | MS | | Depending on what has been performed in step 29 the MS is brought back to operation. |
| 30 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 31 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 32 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = no key available, "Mobile Identity" = IMSI, "LAI" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE). |
| 33 | SS -> MS | AUTHENTICATION REQUEST | "CKSN" = CKSN1. |
| 34 | MS -> SS | AUTHENTICATION RESPONSE | |
| 35 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile Identity" = TMSI. |
| 36 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 37 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.7.2 MM connection / abortion by the network / cause not equal to #6

26.7.5.7.2.1 Conformance requirement

Upon reception of an ABORT message, the MS shall release any ongoing MM connection and enter the "wait for network command" state.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.5.

26.7.5.7.2.2 Test purpose

1. When multiple MM connections are established, the MS releases all MM connections upon reception of an ABORT message, in the case when the two MM connections are established for a mobile terminating call and a non call related supplementary service operation.
2. The TMSI isn't deleted from MS after reception of ABORT message with cause another than #6.

26.7.5.7.2.3 Method of test

Initial Conditions

System Simulator:

- 1 cell, default parameters.
- T3212 is set to 6 minutes.

Mobile Station:

The MS is in state U10 of a mobile terminating call.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

A non call related supplementary service operation is attempted at the MS. Upon reception of the REGISTER message, the SS sends an ABORT message with cause # 17. The SS waits for 5 s. The MS shall not send any layer 3 message. The SS releases the RR connection. The MS shall perform periodic location updating 6 minutes after the CHANNEL RELEASE message. TMSI shall be used as an MS Identity in LOCATION UPDATING REQUEST

Maximum Duration Of Test

15 minutes.

Expected Sequence

This procedure is performed if the MS supports non call related supplementary service operation.

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS | | A non call related supplementary service operation is attempted at the MS. |
| 2 | MS -> SS | CM SERVICE REQUEST | |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | ABORT | "reject cause" = #17. |
| 6 | SS | | The SS waits for 5 seconds. The MS shall not send any layer 3 message during that time. |
| 7 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 8 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating This message shall be sent by the MS between 5minutes 45s and 6minutes 15s after step 7. |
| 9 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 10 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": periodic updating. Mobile identity IE specifies the TMSI of the MS. |
| 11 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 12 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.8 MM connection / follow-on request pending

26.7.5.8.1 MM connection / follow-on request pending / test 1

26.7.5.8.1.1 Conformance requirement

The MS shall not attempt to establish a new MM connection after location updating on the same RR connection if not allowed by the network.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.6.

26.7.5.8.1.2 Test purpose

To check that when the network does not include the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a MS that has a CM application request pending does not attempt to establish a new MM connection on that RR connection.

26.7.5.8.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".

Mobile Station:

The MS has a valid TMSI and is deactivated.

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

The MS is activated and a CM connection is attempted during the location updating procedure. The SS does not include the follow on proceed information element in the LOCATION UPDATING ACCEPT message. The SS waits for at least 8 seconds. The MS shall not send any layer 3 message for 8 seconds.

Maximum Duration of Test

60 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | MS | | The MS is activated. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | location updating type = IMSI attach. Then the SS waits for 15 s. During this delay a CM connection is attempted. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | follow on proceed IE not included. |
| 6 | SS | | The SS wait for at least 8 seconds. |
| 7 | MS | | The MS shall not send any layer 3 message for 8 seconds after reception of the LOCATION UPDATING ACCEPT message. |
| 8 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.8.2 MM connection / follow-on request pending / test 2

26.7.5.8.2.1 Conformance requirement

A MS supporting the follow-on request procedure and having a CM connection request pending shall correctly establish an MM connection following a location update when allowed by the network.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.6.

26.7.5.8.2.2 Test purpose

To check that when the network includes the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a MS that supports the follow on request procedure and that has a CM application request pending establishes successfully a new MM connection on that RR connection.

26.7.5.8.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".

Mobile Station:

The MS has a valid TMSI and is deactivated.

Specific PICS statements:

- follow-on request procedure (TSPC_AddInfo_followOnReq)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

The MS is activated and a CM connection is attempted during the location updating procedure. The SS includes the follow on proceed information element in the LOCATION UPDATING ACCEPT message. The SS waits for at least 8 seconds.

If the MS supports the follow on request procedure:

The MS shall send a CM SERVICE REQUEST. Upon reception of that message, the SS sends a CM SERVICE ACCEPT message. The MS shall send an initial CM message. Upon reception of that message, the SS releases the RR connection.

If the MS does not support the follow on request procedure:

The MS shall not send any layer 3 message for 8 seconds.

Maximum Duration of Test

60 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|---|
| 1 | MS | | The MS is activated. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | Location updating type = IMSI attach. Then the SS waits for 15 s. During this delay a CM connection is attempted. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | follow on proceed IE included. |
| | | | If the MS supports the follow on request procedure (see PICS) steps A6 to A8 are performed, otherwise steps B6 to B7 are performed. |
| A6 | MS -> SS | CM SERVICE REQUEST | |
| A7 | SS ->MS | CM SERVICE ACCEPT | |
| A8 | MS -> SS | An initial CM message | |
| B6 | SS | | The SS wait for at least 8 seconds. |
| B7 | MS | | The MS shall not send any layer 3 message for 8 seconds after reception of the LOCATION UPDATING ACCEPT message. |
| 9 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.5.8.3 MM connection / follow-on request pending / test 3

26.7.5.8.3.1 Conformance requirement

- 1) The MS shall not set the follow on request bit in a LOCATION UPDATING REQUEST message if no MM connection request is pending.
- 2) When the network includes the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a MS that has no CM application request pending shall not attempt to establish a new MM connection on that RR connection.
- 3) The MS shall correctly handle a CM connection established by the network on the RR connection that was used for the location updating procedure.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.6.

26.7.5.8.3.2 Test purpose

- 1) To check that a MS that has no CM application request pending sets the Follow-On-Request bit to No follow-on request pending in a LOCATION UPDATING REQUEST message.
- 2) To check that when the network includes the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a MS that has no CM application request pending does not attempt to establish a new MM connection on that RR connection.
- 3) To check that the MS accepts establishment by the network of a new MM connection on the existing RR connection.

26.7.5.8.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".

Mobile Station:

The MS has a valid TMSI and is deactivated.

Specific PICS statements:

- at least one MO circuit switched basic service (TSPC_AddInfo_MOsvc)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI. It is "idle updated".

Test procedure

The MS is activated. The MS performs location updating. The MS shall set the FOR bit to No follow-on request pending in the LOCATION UPDATING REQUEST message. The SS includes the follow on proceed information element in the LOCATION UPDATING ACCEPT message. The SS waits for 5 s. The MS shall not send any layer 3 message for 5 s. The SS sends a SETUP message to the MS requesting a basic service supported by the MS. The MS shall send either a CALL CONFIRMED message if it supports a service on TCH or a RELEASE COMPLETE with cause #88.

Maximum Duration of Test

20 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------------|--|
| 1 | MS | | The MS is activated. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = IMSI attach. The FOR bit is set to No follow-on request pending. |
| 5 | SS -> MS | LOCATION UPDATING ACCEPT | follow on proceed IE is included. |
| 6 | SS | | The SS wait for 5 s. |
| 7 | MS | | The MS shall not send any layer 3 message for 5 s after reception of the LOCATION UPDATING ACCEPT message. |
| 8 | SS -> MS | SETUP | |
| A9 | MS -> SS | CALL CONFIRMED | If the MS supports a basic service on TCH. |
| B9 | MS -> SS | RELEASE COMPLETE | If the MS does not support any basic service on TCH. cause #88. |
| 10 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents

None.

26.7.6 Network Identity and Time zone (NITZ)

26.7.6.1 NITZ and CS location update procedures

26.7.6.1.1 NITZ / CS location update / Time zone, Time and DST Handling

26.7.6.1.1.1 Conformance requirement

The feature Network Identities and Time zone shall make it possible for a serving PLMN to transfer its current identity, universal time, DST and LTZ to MSs, and for the MS to store and use this information. Each one of these elements is optional. The feature significantly enhances roaming as it enables the accurate indication of network identities that are either newer than the ME or have changed their name since the ME was manufactured or sold. Additionally time and time zone information can be utilised by MEs as desired.

The serving PLMN shall make Local Time Zone (LTZ) available to the MS as an offset from Universal Time in units of 15 minutes.

When the LTZ is compensated for DST (summertime), the serving PLMN shall provide a DST parameter to indicate this. The adjustment for DST can be +1h or +2h.

The Time Zone code enables the receiver to calculate the equivalent time in GMT from the other semi-octets in the Service-Centre-Time-Stamp, or indicate the time zone (GMT, GMT+1H etc.), or perform other similar calculations as required by the implementation. The value contained in the Time Zone field must take into account daylight saving time, such that when the sending entity changes from regular (winter) time to daylight saving (summer) time, there is a change to the value in the Time Zone field.

The mobile station should assume that this time zone applies to the Location Area of the cell to which the Channel Request message was sent.

If the local time zone has been adjusted for Daylight Saving Time, the network shall indicate this by including the IE Network Daylight Saving Time.

The network may be able to select particular instants where it can send the MM INFORMATION message without adding delay to, or interrupting, any CM layer transaction, e.g. immediately after the AUTHENTICATION REQUEST message.

Reference(s):

3GPP TS 02.42 / 3GPP TS 22.042 subclause 4

3GPP TS 03.40 / 3GPP TS 23.040 subclause 9.2.3.11

3GPP TS 04.08 / 3GPP TS 24.008 subclause 9.4.19.4, 4.3.6

26.7.6.1.1.2 Test purpose

To verify that a MS supporting any of the NITZ Time related feature (Local Time Zone, Universal Time and DST IE and thus MM Information) is able to handle them properly.

26.7.6.1.1.3 Method of test

Initial conditions

System Simulator:

One cell (cell A)

IMSI attach/detach allowed in the cell

Mobile Station:

The MS has a valid IMSI. MS is powered off.

Specific PICS statements:

- On/Off switch (TSPC_Feat_OnOff)
- Use of NITZ DST (TSPC_NITZ_DST)
- Use of NITZ Universal Time for PLMN (TSPC_NITZ_Universal_Time)
- Use of NITZ Local Time Zone for PLMN (TSPC_NITZ_Time_Zone)

PIXIT statements:

-

Test procedure

During the Location Update procedure on Cell A, SS sends its local time and date (UK, Winter Time) using the MM INFORMATION Message to the MS. The operator verifies then the supported parameters and/or the time and date stored in the MS.

The MS is powered off and then powered on. During the location update the SS sets local time and date (UK, Summer Time). The operator verifies then the supported parameters and/or the time and date stored in the MS.

This is then repeated for the follow scenarios: US East coast summer time (GMT-5+1), US West coast summer time (GMT-8+1), US Mountain time (no summer adjustment) (GMT-7).

Maximum duration of test

10 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | MS | | The MS is powered up or switched on (see PICS) and initiates a location update. |
| 2 | MS -> SS | LOCATION UPDATE REQUEST | |
| 3 | SS -> MS | AUTHENTICATION REQUEST | |
| 4 | MS -> SS | AUTHENTICATION RESPONSE | |
| 5 | SS ->MS | MM INFORMATION | Universal Time IE is included : "< Current Year >/ 05/15 06:25:00" for UT "0 hour" for Timezone Local Time Zone IE included: "0 hour" for Timezone No DST IE included See specific message content |
| 6 | SS -> MS | LOCATION UPDATE ACCEPT | Operator Action : The use of the supported Fields is checked: |
| 7 | MS | | Universal Time: Year: < Current Year > Month: May Day: 15 th Hour: 6 Hours Minute: 25 Minutes Timezone: GMT+0 Local Time Zone: Timezone: GMT+0 DST: Daylight Saving Time not in use (i.e. winter time) cf note |
| 8 | MS | | The MS is switched off or power is removed (see PICS). |

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 9 | MS -> SS | IMSI DETACH | Message not sent if power is removed. Detach type = IMSI detach |
| 10 | MS | | The MS is powered up or switched on (see PICS) and initiates a location update. |
| 11 | MS -> SS | LOCATION UPDATE REQUEST | |
| 12 | SS -> MS | AUTHENTICATION REQUEST | |
| 13 | MS -> SS | AUTHENTICATION RESPONSE | |
| 14 | SS ->MS | MM INFORMATION | Universal Time IE is included : "< Current Year >/ 05/15 06:25:00" for UT "1 hour" for Timezone (including DST) DST = +1 hour See specific message content |
| 15 | SS -> MS | LOCATION UPDATE ACCEPT | |
| 16 | MS | | Operator Action : The use of the supported Fields is checked: Universal Time: Year: < Current Year > Month: May Day: 15 th Hour: 7 Hours Minute: 25 Minutes Timezone: GMT+0 Local Time Zone: Not sent DST: Daylight Saving Time in use (i.e. summer time) cf note |
| 17 | MS | | The MS is switched off or power is removed (see PICS). |
| 18 | MS -> SS | IMSI DETACH | Message not sent if power is removed. Detach type = IMSI detach |
| 19 | MS | | The MS is powered up or switched on (see PICS) and initiates a location update. |
| 20 | MS -> SS | LOCATION UPDATE REQUEST | |
| 21 | SS -> MS | AUTHENTICATION REQUEST | |
| 22 | MS -> SS | AUTHENTICATION RESPONSE | |
| 23 | SS ->MS | MM INFORMATION | UniversalTime IE is included : "< Current Year >/ 05/15 06:25:00" for UT "-4 hours" for Timezone (including DST) DST = +1 hour See specific message content |
| 24 | SS -> MS | LOCATION UPDATE ACCEPT | |
| 25 | MS | | Operator Action : The use of the supported Fields is checked: Universal Time: Year: < Current Year > Month: May Day: 15 th Hour: 2 Hours Minute: 25 Minutes Timezone: GMT-5 Local Time Zone: Not sent DST: Daylight Saving Time in use (i.e. summer time) cf note |
| 26 | MS | | The MS is switched off or power is removed (see PICS). |
| 27 | MS -> SS | IMSI DETACH | Message not sent if power is removed. Detach type = IMSI detach |

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 28 | MS | | The MS is powered up or switched on (see PICS) and initiates a location update. |
| 29 | MS -> SS | LOCATION UPDATE REQUEST | Universal Time IE is included : "< Current Year >/ 05/15 06:25:00" for UT "-7 hours" for Timezone (including DST) DST = +1 hour See specific message content Operator Action : The use of the supported Fields is checked: Year: < Current Year > Month: May Day: 14 th Hour: 23 Hours Minute: 25 Minutes Timezone: GMT-8 Local Time Zone: Not sent DST: Daylight Saving Time in use (i.e. summer time) cf note |
| 30 | SS -> MS | AUTHENTICATION REQUEST | |
| 31 | MS -> SS | AUTHENTICATION RESPONSE | |
| 32 | SS ->MS | MM INFORMATION | |
| 33 | SS -> MS | LOCATION UPDATE ACCEPT | |
| 34 | MS | | |
| 35 | MS | | The MS is switched off or power is removed (see PICS). |
| 36 | MS -> SS | IMSI DETACH | Message not sent if power is removed. Detach type = IMSI detach |
| 37 | MS | | The MS is powered up or switched on (see PICS) and initiates a location update. |
| 38 | MS -> SS | LOCATION UPDATE REQUEST | Universal Time IE is included : "< Current Year >/ 05/15 06:25:00" for UT "-7 hour" for Timezone No DST IE included See specific message content Operator Action : The use of the supported Fields is checked: Universal Time: Year: < Current Year > Month: MayDay: 14 th Hour: 23 Hours Minute: 25 Minutes Timezone: GMT-7 Local Time Zone: No sent DST: Daylight Saving Time not in use (i.e. winter time) cf note |
| 39 | SS -> MS | AUTHENTICATION REQUEST | |
| 40 | MS -> SS | AUTHENTICATION RESPONSE | |
| 41 | SS ->MS | MM INFORMATION | |
| 42 | SS -> MS | LOCATION UPDATE ACCEPT | |
| 43 | MS | | |
| 44 | MS | | The MS is switched off or power is removed (see PICS). |
| 45 | MS -> SS | IMSI DETACH | Message not sent if power is removed. Detach type = IMSI detach |

Note: In steps 7, 16, 25, 34 and 43 the "minute" is not so relevant and can be higher than "25" depending on operator's action time.

Current Year is derived by the SS.

The check of Timezone and DST is done implicitly by checking the time only in case MS does not support the display of these two fields.

Specific message contents

MM Information on step 5:

| Information element | Value/remark |

26.8 Tests related to circuit switched call control

26.8.1 Circuit switched Call Control (CC) state machine verification

26.8.1.1 General on CC state machine verification

The principle of checking the call control functions consists in the validation of each call control identified state.

State U0 as an initial state is not verified in the tests of 26.8.1.2 (establishment of an outgoing call).

State U0.1 is never verified.

The steps to be followed within each performed test are:

- bring the MS into the required state;
- trigger the tested event;
- check the MS response and new state.

In subclauses 26.8.1.2 and 26.8.1.3 different tables are defined to bring the MS into the required initial state. The exact table to be chosen is specified individually in subclause "Initial conditions" of "Method of test" for each test case.

For each test, unless otherwise specified, a circuit switched basic service among those supported by the MS but excluding the emergency call teleservice shall be chosen arbitrarily, and the test shall be performed according to that basic service. If the only circuit switched basic service supported by the mobile is emergency call, then the incoming call tests shall not be performed and the other call control tests shall be performed with the EMERGENCY SETUP message replacing the SETUP message.

The initial states are to be checked through STATUS ENQUIRY messages sent by the SS, when feasible. This is not explicitly stated in the tables of expected sequences of signalling messages. The checking of final states are explicitly included into the expected sequences of signalling messages.

The following postamble may be used by the SS to bring MS back to idle mode in those test cases, in which it is not already included into expected sequence of signalling messages:

Table 26.8.1.1/1: A postamble to bring the MS back to idle mode.

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---|
| n | SS -> MS | CHANNEL RELEASE | |
| n+1 | MS | | the MS shall release the main signalling link (DISC/UA) |

The postamble has not been included into the all of the tests in order to leave an option to concatenate the procedures in the future by using a final state of a test case as an initial state to another one.

For the special case of U0, the state is checked by sending STATUS ENQUIRY message with all possible values of transaction identifier (seven values) as U0 is the only state in which for every TI the MS will answer with release complete with cause #81. If U0 is to be verified when no RR connection exists, first a mobile terminating radio connection must be established.

The MS responses are either call management messages received by the SS or lower layers functions activated within the MS or MMI actions (e.g. the buzzing of an alerting tone).

A time-out within the MS is triggered by the SS when it does not answer back an MS expected response.

The test sequences may be split in 3 main groups:

- establishment and release of an outgoing call;
- establishment and release of an incoming call;
- in-call functions.

Remark on verification of transient states:

Some call control states of the mobile station may be transient, depending on implementation, configuration of the MS and previous messages (see annex 3, subclause 3.1.6).

If a test starts in a transient state, then the test is executed without verification of the starting state.

26.8.1.2 Establishment of an outgoing call

Initial conditions

As a minimum requirement the MS is updated and has been given a TMSI, a ciphering key and cipher key sequence number, and the layer 2, RR and MM functionalities have been verified.

There are as many CM initial conditions as states to be checked.

The tables below describe message exchanges which bring the MS in the requested initial states.

A state may be taken as initial only when all the states which lead to this initial state have been validated. The order followed in the test procedure will be U0, U0.1, U1, U3, U4, U10, U12, U19, U11 as seen in the table underneath.

The MS is brought again in the initial state starting with U0 at each new test performed.

Table 26.8.1.2/1: Establishment of an outgoing call, procedure 1 (late assignment)

| Step | Direction | Message | Comments/actions/next state |
|--|-----------|-------------------------|-----------------------------|
| 1 | MS -> SS | CHANNEL REQUEST | initiate outgoing call |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH, U0 |
| 3 | MS -> SS | CM SERVICE REQUEST | U0.1 |
| 4 | SS -> MS | CIPHERING MODE COMMAND | |
| 5 | MS -> SS | CIPHERING MODE COMPLETE | |
| 6 | MS -> SS | SETUP | U1 |
| 7 | SS -> MS | CALL PROCEEDING | U3 |
| 8 | SS -> MS | ALERTING | U4 |
| 9 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | |
| 11 | SS -> MS | CONNECT | |
| 12 | MS -> SS | CONNECT ACKNOWLEDGE | U10 |
| A13 | SS -> MS | DISCONNECT | U12 (note 1) |
| B13 | SS -> MS | DISCONNECT | U12 (note 2) |
| B14 | MS -> SS | RELEASE | U19 |
| C13 | | | MMI action, terminate call |
| C14 | MS -> SS | DISCONNECT | U11 |
| NOTE 1: The Progress Indicator IE with progress description #8 "in band information or appropriate pattern now available" is included. | | | |
| NOTE 2: The Progress Indication IE is not included. | | | |

Table 26.8.1.2/2: Establishment of an outgoing call, procedure 2

| Step | Direction | Message | Comments/actions/next state |
|--|-----------|------------------------------------|-----------------------------|
| 1 | MS -> SS | CHANNEL REQUEST | initiate outgoing call |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH, U0 |
| 3 | MS -> SS | CM SERVICE REQUEST | U0.1 |
| 4 | SS -> MS | CHANNEL MODE MODIFY | (note 1) |
| 5 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 6 | SS -> MS | CIPHERING MODE COMMAND | |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | |
| 8 | MS -> SS | SETUP | U1 |
| 9 | SS -> MS | CALL PROCEEDING | U3 |
| 10 | SS -> SS | ALERTING | U4 |
| 11 | SS -> MS | CONNECT | |
| 12 | MS -> SS | CONNECT ACKNOWLEDGE | U10 |
| A13 | SS -> MS | DISCONNECT | U12 (note 2) |

26.8.1.2.1 Outgoing call / U0 null state

26.8.1.2.1.1 Outgoing call / U0 null state / MM connection requested

26.8.1.2.1.1.1 Definition

The call control entity of the Mobile Station requests the MM-sublayer to establish a mobile originating MM-connection. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.1.1.2 Conformance requirement

- 1) Upon initiation of an outgoing basic call by user the MS shall initiate establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1.1, 4.5.1.1 and 3.3.1.1.

26.8.1.2.1.1.3 Test purpose

To verify that upon initiation of an outgoing basic call by user the MS initiates establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment".

26.8.1.2.1.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

U0, null.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked.

Maximum duration of test

30 s.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS -> SS | CHANNEL REQUEST | initiate outgoing call |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH |
| 3 | MS -> SS | CM SERVICE REQUEST | verify the type of call which is asked for "basic" or "emergency by the MS |
| 4 | SS -> MS | CHANNEL RELEASE | |
| 5 | MS | | the MS shall release the main signalling link (DISC/UA) |

Specific message contents:

None.

26.8.1.2.2 Outgoing call / U0.1 MM connection pending

26.8.1.2.2.1 Outgoing call / U0.1 MM connection pending / CM service rejected

26.8.1.2.2.1.1 Definition

A request for MM connection is rejected by the SS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.2.1.2 Conformance requirement

Upon receiving indication of an MM-connection establishment being rejected, CC entity should inform upper layer of this rejection.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 4.5.1.1, 3GPP TS 04.07 / 3GPP TS 24.007, subclause 6.2.2.

26.8.1.2.2.1.3 Test purpose

To verify that a CC entity of the MS in CC-state U0.1, "MM-connection pending", upon the MS receiving a CM SERVICE REJECT message, returns to CC state U0, "Null".

26.8.1.2.2.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U0.1 by using table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to

initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked. The SS rejects it by CM SERVICE REJECT. Then the SS will check the state of the MS by using STATUS ENQUIRY with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------|---|
| 1 | SS -> MS | CM SERVICE REJECT | |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | RELEASE COMPLETE | |
| 4 | SS | | cause shall be 81# (invalid TI value) repeat steps 2-3 to cover all the transaction identifiers from 000 ...110 |
| 5 | SS -> MS | CHANNEL RELEASE | |
| 6 | MS | | the MS shall release the main signalling link (DISC/UA) |

Specific message contents:

None.

26.8.1.2.2.2 Outgoing call / U0.1 MM connection pending / CM service accepted

26.8.1.2.2.2.1 Definition

A CM request is accepted for the MM-connection by the SS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.2.2.2 Conformance requirement

A CC entity of the MS in CC-state U0.1, "MM-connection pending", upon the MS receiving a CM SERVICE ACCEPT message, shall send a SETUP message specifying the Called party BCD number that was entered into the MS and then enter CC state U1, "Call initiated".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.1.1 and 5.2.1.1.

26.8.1.2.2.2.3 Test purpose

To verify that a CC entity of the MS in CC-state U0.1, "MM-connection pending", upon the MS receiving a CM SERVICE ACCEPT message, sends a SETUP message specifying the Called party BCD number that was entered into the MS and then enters CC state U1, "Call initiated".

26.8.1.2.2.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U0.1 by using table 26.8.1.2/1.

Foreseen final state of the MS

U1, call initiated.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. When the MS is requesting a MM-connection, the SS will indicate acceptance by sending a CM SERVICE ACCEPT message. The MS shall respond with SETUP. Then the SS will check the state of the call control entity by STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------|--|
| 1 | SS -> MS | CM SERVICE ACCEPT | |
| 2 | MS -> SS | SETUP | with called party BCD number. |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause shall be 30# (response to enq.) and state U1 call initiated. |

Specific message contents:

None.

26.8.1.2.2.3 Outgoing call / U0.1 MM connection pending / lower layer failure

26.8.1.2.2.3.1 Definition

The call control entity of the MS being in the state, U0.1, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.2.3.2 Conformance requirement

- 1) Upon a lower layer failure the MS releases the MM connection in progress and returns to idle mode. In that state no call exists and the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.1.2, 5.2.1.1, 5.5.3.2 and 8.3.

26.8.1.2.2.3.3 Test purpose

To verify that after the MS with a CC entity in state U0.1, "MM-connection pending", has detected a lower layer failure and has returned to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

26.8.1.2.2.3.4 Method of test

Specific PICS statements

- Support of UTRAN Radio Access Technology (TSPC_Type_UTRAN)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U0.1 by using table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. When the MS has sent a CM SERVICE REQUEST message, the SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | SS | | SS generates lower layer failure. |
| 2 | SS | | If PICS statement "Support of UTRAN Radio Access Technology" is 'NO', then the SS waits 20 s for the MS to return to listening to paging. If PICS statement "Support of UTRAN Radio Access Technology" is 'YES', then the SS waits 50 s for the MS to return to listening to paging. |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause shall be 81# (invalid TI value). |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000 ...110. |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.3 Outgoing call / U1 call initiated

26.8.1.2.3.1 Outgoing call / U1 call initiated / receiving CALL PROCEEDING

26.8.1.2.3.1.1 Definition

The call control entity of the MS being in the state, U1, a CALL PROCEEDING message is sent by the SS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.1.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a CALL PROCEEDING message, shall enter CC state U3, "Mobile originating call proceeding".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.1, 5.2.1.2 and 5.2.1.3.

26.8.1.2.3.1.3 Test purpose

To verify that a CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a CALL PROCEEDING message, enters CC state U3, "Mobile originating call proceeding".

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/2.

Foreseen final state of the MS

U3, Mobile originating call proceeding.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to

initiate a call. The CC entity of the MS is brought to the state U1. The SS sends a CALL PROCEEDING message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U3.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|-------------------------------|
| 1 | SS -> MS | CALL PROCEEDING | tone generation not mandatory |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | cause 30#, state U3 |

Specific message contents:

None.

26.8.1.2.3.2 Outgoing call / U1 call initiated / rejecting with RELEASE COMPLETE

26.8.1.2.3.2.1 Definition

The call control entity of the MS being in the state, U1, the call is rejected by a RELEASE COMPLETE message sent by the SS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.2.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".
- 2) On returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".
- 3) On releasing the MM-connection, the MS shall wait for MM layer release initiated by the network.

26.8.1.2.3.3 Outgoing call / U1 call initiated / T303 expiry

26.8.1.2.3.3.1 Definition

The call control entity of the MS being in the state, U1, if no response is then received from the SS, timer T303 expires at the MS side. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.3.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U1, "Call initiated", upon expiry of T303 shall send a DISCONNECT message to its peer entity and enter state U11, "Disconnect request".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.1 and 5.4.

26.8.1.2.3.3.3 Test purpose

- 1) To verify that a CC entity of the MS in CC-state U1, "Call initiated", upon expiry of T303 (accuracy $\pm 20\%$ between reception of CM SERVICE REQUEST and DISCONNECT by SS) sends a DISCONNECT message to its peer entity and enters state U11, "Disconnect request".

26.8.1.2.3.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/2.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

1 minute.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U1. When T303 expires at the MS, the MS shall send DISCONNECT. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|--|
| 1 | SS | | SS waits for T303 expiry. |
| 2 | MS -> SS | DISCONNECT | Shall be transmitted between 24 s and 36 s after the CM SERVICE REQUEST. |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, status U11 |

Specific message contents:

None.

26.8.1.2.3.4 Outgoing call / U1 call initiated / lower layer failure

26.8.1.2.3.4.1 Definition

The call control entity of the MS being in the state, U1, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.4.2 Conformance requirement

Upon a lower layer failure MM informs the relevant CM entities that the MM connection has been interrupted. As call re-establishment is not allowed, the CC entity must perform a local release. The MS returns to idle mode. In that state no call exists, and the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.2.3, 5.2.1.1 and 5.5.3.2.

26.8.1.2.3.4.3 Test purpose

To verify that after the MS with a CC entity in state U1 "Call initiated", has detected a lower layer failure and has returned to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

26.8.1.2.3.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/4.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The MS is brought to the state U1. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | SS | | SS generates lower layer failure. |
| 2 | SS | | SS waits 20 s for the MS to return to listening to paging. |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value). |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110. |
| 10 | SS -> MS | CHANNEL RELEASE | |
| 11 | MS | | the MS shall release the main signalling link (DISC/UA). |

Specific message contents:

None.

26.8.1.2.3.5 Outgoing call / U1 call initiated / receiving ALERTING

26.8.1.2.3.5.1 Definition

The call control entity of the MS being in the state, U1, an ALERTING message is sent to the MS as a indication that a call is being alerted at a called end. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.5.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U1, "Call initiated", upon receipt of an ALERTING message, shall enter CC state U4, "Call delivered".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1.

26.8.1.2.3.5.3 Test purpose

To verify that a CC entity of the MS in CC-state U1, "Call initiated", upon receipt of an ALERTING message, enters CC state U4, "Call delivered".

26.8.1.2.3.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/4.

Foreseen final state of the MS

U4, call delivered.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U1. The SS sends an ALERTING message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---------------------|
| 1 | SS -> MS | ALERTING | |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | cause 30#, state U4 |

Specific message contents:

None.

26.8.1.2.3.6 Outgoing call / U1 call initiated / entering state U10

26.8.1.2.3.6.1 Definition

The call control entity of the MS being in the state, U1, a CONNECT message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.6.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a CONNECT message, shall send a CONNECT ACKNOWLEDGE message to its peer entity and enter CC state U10, "Active".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.1 and 5.2.1.6.

26.8.1.2.3.6.3 Test purpose

To verify that a CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a CONNECT message, sends a CONNECT ACKNOWLEDGE message to its peer entity and enters CC state U10, "Active".

26.8.1.2.3.6.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/4.

Foreseen final state of the MS

U10, call active.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U1. The SS sends a CONNECT message to the MS. The MS shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|----------------------|
| 1 | SS -> MS | CONNECT | |
| 2 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

None.

26.8.1.2.3.7 Outgoing call / U1 call initiated / unknown message received

26.8.1.2.3.7.1 Definition

The call control entity of the MS being in the state, U1, an unknown message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.3.7.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a message with message type not defined for the protocol discriminator from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.4.

26.8.1.2.3.7.3 Test purpose

To verify that a CC entity of the MS in CC-state U1, "Call initiated", upon receipt of a message with message type not defined for the protocol discriminator unknown message from its peer entity returns a STATUS message.

26.8.1.2.3.7.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/1.

Foreseen final state of the MS

U1, call initiated.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U1. The SS sends a message with message type not defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U1 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U1 |

Specific message contents:

None.

26.8.1.2.4 Outgoing call / U3 MS originating call proceeding

26.8.1.2.4.1 Outgoing call / U3 MS originating call proceeding / ALERTING received

26.8.1.2.4.1.1 Definition

The call control entity of the MS being in the state, U3, an ALERTING message is sent to the MS as a indication that a call is being alerted at a called end. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.1.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a ALERTING message shall enter CC-state U4, "Call Delivered".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.5.

26.8.1.2.4.1.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a ALERTING message enters CC-state U4, "Call Delivered".

26.8.1.2.4.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U4, call delivered.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends an ALERTING message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---------------------|
| 1 | SS -> MS | ALERTING | |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | cause 30#, state U4 |

Specific message contents:

None.

26.8.1.2.4.2 Outgoing call / U3 MS originating call proceeding / CONNECT received

26.8.1.2.4.2.1 Definition

The call control entity of the MS being in the state, U3, a CONNECT message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a CONNECT message shall return a "CONNECT ACKNOWLEDGE" message to its peer entity and enter the CC state U10, "Active".

- 2) The MS shall then stop any locally generated indication.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.

26.8.1.2.4.2.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a CONNECT message returns a "CONNECT ACKNOWLEDGE" message to its peer entity and enters the CC state U10, "Active".
- 2) To verify that the MS stops locally generated indication, if any.

26.8.1.2.4.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U10, active.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a CONNECT message to the MS. The MS shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|---|
| 1 | SS -> MS | CONNECT | the MS shall stop tone generation, if any |
| 2 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 3 | SS -> MS | STATUS ENQUIRY | cause 30#, state U10 |
| 4 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.2.4.3 Outgoing call / U3 MS originating call proceeding / PROGRESS received without in band information

26.8.1.2.4.3.1 Definition

The call control entity of the MS being in the state, U3, a PROGRESS message is received by the MS. The PROGRESS message does not contain indication of in-band information availability. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.3.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message with valid Progress Indicator values shall stay in CC-state U3.
- 2) After receipt of the PROGRESS message timer T310 shall be stopped.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 11.3.

26.8.1.2.4.3.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message with valid Progress Indicator values stays in CC-state U3.
- 2) To verify that after receipt of the PROGRESS message timer T310 is stopped.

26.8.1.2.4.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U3, mobile originating call proceeding.

Maximum duration of test

1 min.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a PROGRESS message not containing indication of in-band information availability to the MS. The SS checks that the MS has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the MS. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | PROGRESS | (note) |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | cause 30#, state U3 |
| 4 | SS | | SS waits at least 45 s and checks no DISCONNECT is sent by the MS |
| 5 | SS -> MS | STATUS ENQUIRY | |
| 6 | MS -> SS | STATUS | cause 30#, state U3 |

NOTE: Tested with a valid Progress Indicator value among:

- #4 call has returned to PLMN/ISDN;
- #32 call is end-to-end PLMN/ISDN; or
- any value in the set #(21-127).

Specific message contents:

None.

26.8.1.2.4.4 Outgoing call / U3 MS originating call proceeding / PROGRESS with in band information

26.8.1.2.4.4.1 Definition

The call control entity of the MS being in the state, U3, a PROGRESS message indicating availability of in band information is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.4.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message indicating in-band announcement shall through-connect the traffic channel for speech, if TCH is in a speech mode. If TCH is not in speech mode, the MS shall not through-connect the TCH.
- 2) After receipt of the PROGRESS message, T310 shall be stopped.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3,

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.1.3, 5.2.1.4, 5.2.1.9, 5.5.1 and 11.3.

26.8.1.2.4.4.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message indicating in-band announcement through-connects the traffic channel for speech, if TCH is in speech mode. If TCH is not in a speech mode, the MS does not through-connect the TCH.
- 2) To verify that after receipt of the PROGRESS message, T310 is stopped.

26.8.1.2.4.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U3, mobile originating call proceeding.

Maximum duration of test

1 minute.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a PROGRESS message containing indication of in-band information availability to the MS. The SS checks that if channel mode is speech, the TCH shall be through connected. If channel mode is not speech, the TCH shall not be through connected. Also the SS checks that the MS has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the MS. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | PROGRESS | the MS shall stop all the CC timers (note), if channel mode is speech, the TCH shall be through connected. If channel mode is not speech, the TCH shall not be through connected. |
| 2 | SS -> MS | STATUS ENQUIRY | cause 30#, state U3 SS waits at least 45 s and checks no DISCONNECT is sent by the MS. |
| 3 | MS -> SS | STATUS | |
| 4 | SS | | |
| 5 | SS -> MS | STATUS ENQUIRY | |
| 6 | MS -> SS | STATUS | cause 30#, state U3 If the channel mode is speech the SS will check that the user connection for speech is attached (both downlink and uplink). |
| 7 | SS | | |

Specific message contents:

NOTE: Tested with a valid Progress Indicator value among:

#1 call is not end to end PLMN/ISDN;

#2 destination address is non PLMN/ISDN;
#3 originating address is non PLMN/ISDN;
#8 in band information or appropriate pattern now available; or
any value in the set #(6-20).

26.8.1.2.4.5 Outgoing call / U3 MS originating call proceeding / DISCONNECT with in band tones

26.8.1.2.4.5.1 Definition

The call control entity of the MS being in the state, U3, a DISCONNECT message indicating availability of in band information is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.5.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If TCH is not in speech mode, the MS shall send a RELEASE message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1.4 and 5.4.4.

26.8.1.2.4.5.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8 through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If TCH is not in speech mode, the MS sends a RELEASE message.

26.8.1.2.4.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U12, disconnect indication if TCH is speech mode.

U19, release request if TCH is not speech mode.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a DISCONNECT message containing indication of in-band information availability to the MS. The SS checks that if channel mode is speech, the TCH shall be through connected and the MS enters state U12, disconnect indication. If channel mode is not speech, the TCH shall not be through connected and the MS shall enter state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | DISCONNECT | (note) |
| B2 | SS | | TCH in speech mode: the SS will check that the audio path for in band tones is attached. |
| B3 | SS -> MS | STATUS ENQUIRY | |
| B4 | MS -> SS | STATUS | cause 30#, state U12 |
| C2 | MS -> SS | RELEASE | TCH is not in speech mode: |
| C3 | SS -> MS | STATUS ENQUIRY | |
| C4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

NOTE: the Progress Indicator value:

#8 in band information or appropriate pattern now available.

26.8.1.2.4.6 Outgoing call / U3 MS originating call proceeding / DISCONNECT without in band tones

26.8.1.2.4.6.1 Definition

The call control entity of the MS being in the state, U3, a DISCONNECT message is received by the MS. The DISCONNECT message does not contain indication of in-band information availability. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.6.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT without progress indicator shall return a RELEASE message and enter the CC-state U19, "Release Request"

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

26.8.1.2.4.6.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT without progress indicator returns a RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.2.4.6.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a DISCONNECT message not containing indication of in-band information availability to the MS. The MS shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the MS has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

None.

26.8.1.2.4.7 Outgoing call / U3 MS originating call proceeding / RELEASE received

26.8.1.2.4.7.1 Definition

The call control entity of the MS being in the state, U3, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.7.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) The MS on returning to the idle mode shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".
- 3) On releasing the MM-connection, the MS shall wait for MM layer release initiated by the network.

References

- Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.2 and 5.4.4.
- Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3 and 5.5.3.2.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.4.4.3 and 4.5.3, 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.13.1

26.8.1.2.4.7.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".
- 3) To verify that in releasing the MM-connection, the MS shall wait for MM layer release initiated by SS.

26.8.1.2.4.7.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/2.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 minute 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a RELEASE message to the MS. The MS shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|---|
| 1 | SS -> MS | RELEASE | with cause "Normal, unspecified" |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | cause 81# (invalid TI value) repeat steps 3-4 to cover all the transaction identifiers from 000...110 |
| 4 | MS -> SS | RELEASE COMPLETE | |
| 5 | SS | | |
| 6 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.4.8 Outgoing call / U3 MS originating call proceeding / termination requested by the user

26.8.1.2.4.8.1 Definition

The call control entity of the MS being in the state, U3, the user requests to terminate the call. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.8.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.3.

26.8.1.2.4.8.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

26.8.1.2.4.8.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator: 1 cell, default parameters.

Mobile Station: The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/3.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The user requests termination of the call. The MS shall send a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------------|
| 1 | | | MMI action, terminate call |
| 2 | MS -> SS | DISCONNECT | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U11 |

Specific message contents:

None.

26.8.1.2.4.9 Outgoing call / U3 MS originating call proceeding / traffic channel allocation

26.8.1.2.4.9.1 Definition

The call control entity of the MS being in the state, U3, a traffic channel assignment procedure is performed. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.9.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3,

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.9.

26.8.1.2.4.9.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding", when allocated a traffic channel by the network performing the assignment procedure, performs a layer 2 establishment on the FACCH without changing the state of the call in progress.

26.8.1.2.4.9.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/3.

Foreseen final state of the MS

U3, mobile originating call proceeding.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends an ASSIGNMENT COMMAND for traffic channel to the MS. The MS shall establish layer 2 link on the newly allocated channel and respond with an ASSIGNMENT COMPLETE message. The SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|--|
| 1 | SS -> MS | ASSIGNMENT COMMAND | (TCH) the MS shall perform L2 establishment on the FACCH |
| 2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U3 |

Specific message contents:

None.

26.8.1.2.4.10 Outgoing call / U3 MS originating call proceeding / timer T310 time-out

26.8.1.2.4.10.1 Definition

The call control entity of the MS being in the state, U3, if no response is then received from the SS, timer T310 expires at the MS side. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.10.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding" shall, upon expiry of timer T310, and not before, initiate call release by sending DISCONNECT and enter the CC-state U11, "Disconnect Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1.3./Abnormal case, 5.4.3 and 11.3.

26.8.1.2.4.10.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding" will, upon expiry of timer T310 (accuracy minus 2 %, plus 50 %), initiate call release by sending DISCONNECT and enter the CC-state U11, "Disconnect Request".

26.8.1.2.4.10.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/3.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

1 minute.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The T310 expires at the MS and the MS shall send DISCONNECT. The SS checks timer T310 accuracy and that the CC entity has entered the state U11, disconnect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|--|
| 1 | SS | | the SS waits for T310 time-out |
| 2 | MS -> SS | DISCONNECT | check the timer T310 accuracy (minus 2 % to plus 50 %) |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U11 |

Specific message contents:

None.

26.8.1.2.4.11 Outgoing call / U3 MS originating call proceeding / lower layer failure

26.8.1.2.4.11.1 Definition

The call control entity of the MS being in the state, U3, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.11.2 Conformance requirement

- 1) If a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding" has detected a lower layer failure and has returned to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.5.2.3, 4.5.3 and 5.5.3.2.

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.2.1.

26.8.1.2.4.11.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding" having detected a lower layer failure and having returned to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

26.8.1.2.4.11.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/4.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 minute 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The MS is brought to the state U3. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | SS waits 20 s for the MS to return to listening to paging |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 18-19 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.4.12 Outgoing call / U3 MS originating call proceeding / unknown message received

26.8.1.2.4.12.1 Definition

The call control entity of the MS being in the state, U3, an unknown message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.4.12.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding" having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.5.

26.8.1.2.4.12.3 Test purpose

To verify that a CC-entity of the MS in CC-state U3, "Mobile Originating Call Proceeding" having received an unknown message from its peer entity returns a STATUS message.

26.8.1.2.4.12.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/1.

Foreseen final state of the MS

U3, mobile originating call proceeding.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U3. The SS sends a message with message type not defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U3 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U3 |

Specific message contents:

None.

26.8.1.2.4.13 Outgoing call / U3 MS originating call proceeding / Internal alerting indication

26.8.1.2.4.13.1 Definition

The call control entity of the MS being in the state, U3, an ALERTING message is sent to the MS when the user connection is not attached to the radio path. This test is applicable for any equipment supporting mobile originated circuit switched basic service for telephony.

26.8.1.2.4.13.2 Conformance requirement

- 1) When the call control entity of the MS in the "mobile originating call proceeding" state receives an ALERTING message then it shall enter "call delivered" state and, for speech calls, if the user connection is not attached to the radio path, the MS shall internally generate an alerting indication.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.5.

26.8.1.2.4.13.3 Test purpose

When the call control entity of the MS in the "mobile originating call proceeding" state receives an ALERTING message then it enters "call delivered" state and, for speech calls, if the user connection is not attached to the radio path, the MS generates internally an alerting indication.

26.8.1.2.4.13.4 Method of test

Specific PICS statements

-

PIXIT statements

- way to give internally generated alerting indication for outgoing calls

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U3 by using table 26.8.1.2/1.

Foreseen final state of the MS

U4, call delivered.

Maximum duration of test

30 s.

Test procedure

The SS sends an ALERTING message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered. Also it is checked that the MS generates internally alerting indication to the user in the way described in the PIXIT statements.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | ALERTING | the MS shall generate an alerting indication to the user in the way described in the PIXIT statements |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | cause 30#, state U4 |

Specific message contents:

None.

26.8.1.2.5 Outgoing call / U4 call delivered

26.8.1.2.5.1 Outgoing call / U4 call delivered / CONNECT received

26.8.1.2.5.1.1 Definition

The call control entity of the MS being in the state, U4, a CONNECT message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.1.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of the CONNECT message shall return a CONNECT ACKNOWLEDGE to its peer entity and enter the CC-state U10, "Active".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.

26.8.1.2.5.1.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of the CONNECT message returns a CONNECT ACKNOWLEDGE to its peer entity and enters the CC-state U10, "Active".

26.8.1.2.5.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/3.

Foreseen final state of the MS

U10, active.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a CONNECT message to the MS. The MS shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|----------------------------------|
| 1 | SS -> MS | CONNECT | |
| 2 | MS -> SS | CONNECT ACKNOWLEDGE | MS stops alerting, if applicable |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

None.

26.8.1.2.5.2 Outgoing call / U4 call delivered / termination requested by the user

26.8.1.2.5.2.1 Definition

The call control entity of the MS being in the state, U4, the user requests to terminate the call. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2.

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.3.

26.8.1.2.5.2.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

26.8.1.2.5.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/3.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The user requests termination of the call. The MS shall send a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------------|
| 1 | | | MMI action, terminate call |
| 2 | MS -> SS | DISCONNECT | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U11 |

Specific message contents:

None.

26.8.1.2.5.3 Outgoing call / U4 call delivered / DISCONNECT with in band tones

26.8.1.2.5.3.1 Definition

The call control entity of the MS being in the state, U4, a DISCONNECT message indicating availability of in band information is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.3.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered" shall, upon receipt of a DISCONNECT with a progress indicator indicating in-band information, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If TCH is not in speech mode, the MS shall send a RELEASE message.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3,

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4.1, 5.5.1 and 5.2.1.9.

26.8.1.2.5.3.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT with a progress indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If TCH is not in speech mode, the MS shall send a RELEASE message.

26.8.1.2.5.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/2.

Foreseen final state of the MS

U12, disconnect indication.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a DISCONNECT message containing indication of in-band information availability to the MS. The SS checks that if channel mode is MO telephony, the TCH shall be through connected and the MS enters state U12, disconnect indication. If channel mode is not speech, the TCH shall not be through connected and the MS shall enter state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | DISCONNECT | (note) |
| A2 | SS | | TCH in speech mode: the SS will check that the audio path for in band tones is attached. |
| A3 | SS -> MS | STATUS ENQUIRY | |
| A4 | MS -> SS | STATUS | cause 30#, state U12 |
| B2 | MS -> SS | RELEASE | TCH is not in speech mode: |
| B3 | SS -> MS | STATUS ENQUIRY | |
| B4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

NOTE: the Progress Indicator, Progress Description:

#8 in band information or appropriate pattern now available.

26.8.1.2.5.4 Outgoing call / U4 call delivered / DISCONNECT without in band tones

26.8.1.2.5.4.1 Definition

The call control entity of the MS being in the state, U4, a DISCONNECT message is received by the MS. The DISCONNECT message does not contain indication of in-band information availability. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.4.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

26.8.1.2.5.4.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.2.5.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/2.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a DISCONNECT message not containing indication of in-band information availability to the MS. The MS shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the MS has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

None.

26.8.1.2.5.5 Outgoing call / U4 call delivered / RELEASE received

26.8.1.2.5.5.1 Definition

The call control entity of the MS being in the state, U4, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.5.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of the RELEASE message shall respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".
- 2) The MS on returning to idle mode shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.2 and 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3 and 5.5.3.2.

26.8.1.2.5.5.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of the RELEASE message will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

26.8.1.2.5.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/2.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a RELEASE message to the MS. The MS shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|---|
| 1 | SS -> MS | RELEASE | with cause "Normal, unspecified" |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | cause 81# (invalid TI value) repeat steps 3-4 to cover all the transaction identifiers from 000...110 |
| 4 | MS -> SS | RELEASE COMPLETE | |
| 5 | SS | | |
| 6 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.5.6 Outgoing call / U4 call delivered / lower layer failure

26.8.1.2.5.6.1 Definition

The call control entity of the MS being in the state, U4, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.6.2 Conformance requirement

- 1) When CC-entity of the MS in CC-state U4, "Call Delivered" has detected a lower layer failure and has returned to idle mode, the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.2.3, 4.5.3 and 5.5.3.2,

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.2.1.

26.8.1.2.5.6.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered" having detected a lower layer failure and has returned to idle mode, the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

26.8.1.2.5.6.4 Method of test

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/2.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 minute 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The MS is brought to the state U4. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | SS waits 20 s for the MS to return to listening to paging |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.5.7 Outgoing call / U4 call delivered / traffic channel allocation

26.8.1.2.5.7.1 Definition

The call control entity of the MS being in the state, U4, a traffic channel assignment procedure is performed. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.7.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

References

- 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.9.

26.8.1.2.5.7.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

26.8.1.2.5.7.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/1.

Foreseen final state of the MS

U4, call delivered.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends an ASSIGNMENT COMMAND for traffic channel to the MS. The MS shall establish layer 2 link on the newly allocated channel and respond with an ASSIGNMENT COMPLETE message. The SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|---|
| 1 | SS -> MS | ASSIGNMENT COMMAND | TCH, the MS shall perform L2 establishment on the FACCH |
| 2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U4 |

Specific message contents:

None.

26.8.1.2.5.8 Outgoing call / U4 call delivered / unknown message received

26.8.1.2.5.8.1 Definition

The call control entity of the MS being in the state, U4, an unknown message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.5.8.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U4, "Call Delivered", having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.4.

26.8.1.2.5.8.3 Test purpose

To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", having received an unknown message from its peer entity returns a STATUS message.

26.8.1.2.5.8.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U4 by using table 26.8.1.2/4.

Foreseen final state of the MS

U4, call delivered.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a message with message type not

defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U4 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U4 |

Specific message contents:

None.

26.8.1.2.6 U10 call active

26.8.1.2.6.1 U10 call active / termination requested by the user

26.8.1.2.6.1.1 Definition

The call control entity of the MS being in the state, U10, the user requests to terminate the call. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.1.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U10, "Call Active", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.3.

26.8.1.2.6.1.3 Test purpose

To verify that the a CC-entity of the MS in CC-state U10, "Call Active", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

26.8.1.2.6.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/1.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U10. The user requests termination of the call. The MS shall send a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------------|
| 1 | | | MMI action, terminate call |
| 2 | MS -> SS | DISCONNECT | U11 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U11 |

Specific message contents:

None.

26.8.1.2.6.2 U10 call active / RELEASE received

26.8.1.2.6.2.1 Definition

The call control entity of the MS being in the state, U10, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U10, "Call Active", upon receipt of the RELEASE shall respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null"
- 2) When the MS returns to the idle mode it shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null"

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.2 and 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3 and 5.5.3.2.

26.8.1.2.6.2.3 Test purpose

- 1) To verify that the a CC-entity of the MS in CC-state U10, "Call Active", upon receive of the RELEASE will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

26.8.1.2.6.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U0 by using table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U0. The SS sends a RELEASE message to the MS. The MS shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE | with cause "Normal, unspecified" |
| 2 | MS -> SS | RELEASE COMPLETE | the MS starts T3240 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 5 | SS | | repeat steps 3-4 to cover all the transaction identifiers from 000...110 |

None.

26.8.1.2.6.3 U0 call active / DISCONNECT with in band tones

26.8.1.2.6.3.1 Definition

The call control entity of the MS being in the state, U0, a DISCONNECT message indicating availability of in band information is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.3.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U10, "Call Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If TCH is not in speech mode, the MS shall send a RELEASE message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4.1 and 5.5.1.

26.8.1.2.6.3.3 Test purpose

To verify that a CC-entity of the MS in CC-state U10, "Call Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If TCH is not in speech mode, the MS sends a RELEASE message.

26.8.1.2.6.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/2.

Foreseen final state of the MS

U12, disconnect indication.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U10. The SS sends a DISCONNECT message containing indication of in-band information availability to the MS. The SS checks that if channel mode is speech, the TCH shall be through connected and the MS enters state U12, disconnect indication. If channel mode is not speech, the TCH shall not be through connected and the MS enters state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | DISCONNECT | (note) |
| A2 | SS | | TCH in speech mode: the SS will check that the audio path for in band tones is attached. |
| A3 | SS -> MS | STATUS ENQUIRY | |
| A4 | MS -> SS | STATUS | cause 30#, state U12 |
| B2 | MS -> SS | RELEASE | TCH is not in speech mode: |
| B3 | SS -> MS | STATUS ENQUIRY | |
| B4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

NOTE: the Progress Indicator, Progress Description:

#8 in band information or appropriate pattern now available.

26.8.1.2.6.4 U10 call active / DISCONNECT without in band tones

26.8.1.2.6.4.1 Definition

The call control entity of the MS being in the state, U10, a DISCONNECT message is received by the MS. The DISCONNECT message does not contain indication of in-band information availability. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.4.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U10, "Call Active", upon receipt of a DISCONNECT message without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

26.8.1.2.6.4.3 Test purpose

To verify that the a CC-entity of the MS in CC-state U10, "Call Active", upon receipt of a DISCONNECT message without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.2.6.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/2.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U10. The SS sends a DISCONNECT message not containing indication of in-band information availability to the MS. The MS shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the MS has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

None.

26.8.1.2.6.5 U10 call active / RELEASE COMPLETE received

26.8.1.2.6.5.1 Definition

The call control entity of the MS being in the state, U10, the call is cleared by a RELEASE COMPLETE message sent by the SS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.5.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U10, "active", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".
- 2) On returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.4.2 and 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.4.4.3.

26.8.1.2.6.5.3 Test purpose

- 1) To verify that a CC entity of the MS in CC-state U10, "Call active" upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".
- 2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

26.8.1.2.6.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/2.

Foreseen final state of the MS

U0, null.

Maximum duration of test

30 s.

Test procedure

The SS sends a RELEASE COMPLETE message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE COMPLETE | note 1 |
| 2 | SS -> MS | STATUS ENQUIRY | note 2 |
| 3 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value), |
| 4 | SS | | repeat steps 2-3 to cover all the transaction identifiers from 000...110 |
| 5 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

NOTE 1: With the cause value chosen arbitrarily.

NOTE 2: TI flag has the value indicating the MS as a originator of the call.

26.8.1.2.6.6 U10 call active / SETUP received

26.8.1.2.6.6.1 Definition

If the MS does not react correctly when receiving a SETUP message on a new Transaction Identifier during an active call, the active call may be lost.

This test is applicable for all MS supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.6.2 Conformance requirement

- 1) A Mobile Station that has a call established when receiving a SETUP message shall respond either with a CALL CONFIRMED message or a RELEASE COMPLETE message, both with cause #17 "user busy".
- 2) The call control state of the existing transaction shall not be affected by the incoming SETUP message.

Reference(s):

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.2.3.1.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.1.1.

26.8.1.2.6.6.3 Test purpose

- 1) To verify that a Mobile Station that has a call established and receives a SETUP message answers either with a CALL CONFIRMED message with cause "user busy" if it supports call waiting, or with a RELEASE COMPLETE message with cause "user busy" otherwise.
- 2) To verify that after having sent this message, the MS is still in state U10 for the established call.

26.8.1.2.6.6.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is idle updated with valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/14.

Specific PICS statements

- support of call waiting (TSPC_Serv_SS_CW)

PIXIT statements

-

Foreseen final state of the MS

U10, call active.

Maximum duration of test

30 s.

Test Procedure

The MS has a mobile originated call in the U10 state.

The SS sends a SETUP message to the MS (with signal IE indicating "call waiting tone on").

If the MS does not support call waiting it shall answer by a RELEASE COMPLETE message.

If the MS supports call waiting it shall answer by a CALL CONFIRMED message followed by an ALERTING. The second transaction is then released by the SS with a RELEASE COMPLETE message.

In both cases the SS checks by using the status enquiry procedure that the CC entity of the MS is still in state U10, active call for the original call.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | SETUP | this message establishes a second transaction The TI value shall be the same as the one that is in use for the MO call. The TI flag shall have the value specified for an MT call. |
| A2 | MS -> SS | RELEASE COMPLETE | if the MS does not support call waiting with cause user busy" with the TI of the second transaction |
| B2 | MS -> SS | CALL CONFIRMED | if the MS supports call waiting with cause user busy" with the TI of the second transaction |
| B3 | MS -> SS | ALERTING | with the TI of the second transaction |
| B4 | SS -> MS | RELEASE COMPLETE | with the TI of the second transaction |
| 5 | SS -> MS | STATUS ENQUIRY | with the TI of the original transaction |
| 6 | MS -> SS | STATUS | cause 30#, state U10 with the TI of the original transaction |

NOTE: The Transaction Identifier of the second transaction shall be different from the one of the already established transaction.

Specific message contents

SETUP message contains a Signal IE with value "call waiting tone on" (H'07).

26.8.1.2.6.7 U10 call active / RELEASE received with Normal call clearing

26.8.1.2.6.7.1 Definition

The call control entity of the MS being in the state, U10, a RELEASE message is received by the MS with cause value 16 "normal call clearing". This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.6.7.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U10, "Call Active", upon receipt of the RELEASE shall respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 sub clauses 4.5.3, 5.4.2 and 5.4.3.

26.8.1.2.6.7.3 Test purpose

- 1) To verify that the a CC-entity of the MS in CC-state U10, "Call Active", upon receipt of the RELEASE will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".

26.8.1.2.6.7.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U10 by using table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U10. The SS sends a RELEASE message to the MS. The MS shall respond with a RELEASE COMPLETE message.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE | with cause "Normal call clearing" |
| 2 | MS -> SS | RELEASE COMPLETE | the MS starts T3240 |
| 3 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA) |

Specific message contents:

None

26.8.1.2.7 U11 disconnect request

26.8.1.2.7.1 U11 disconnect request / clear collision

26.8.1.2.7.1.1 Definition

The call control entity of the MS being in the state, U11, a DISCONNECT message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.7.1.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U11, "Disconnect Request", upon receipt of a DISCONNECT message, shall return to its peer entity the RELEASE message and enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.5.

26.8.1.2.7.1.3 Test purpose

To verify that the a CC-entity of the MS in CC-state U11, "Disconnect Request", upon receipt of a DISCONNECT message, returns to its peer entity the RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.2.7.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U11 by using table 26.8.1.2/3.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U11. The SS sends a DISCONNECT message to the MS. The MS shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the MS has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

None.

26.8.1.2.7.2 U11 disconnect request / RELEASE received

26.8.1.2.7.2.1 Definition

The call control entity of the MS being in the state, U11, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.7.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U11, "Disconnect Request", upon receipt of the RELEASE message shall return RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the MS shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.3.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3, 5.5.3.2 and 8.3.

26.8.1.2.7.2.3 Test purpose

- 1) To verify that the a CC-entity of the MS in CC-state U11, "Disconnect Request", upon receipt of the RELEASE message shall return RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

26.8.1.2.7.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U11 by using table 26.8.1.2/3.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U11. The SS sends a RELEASE message to the MS. The MS shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|---|
| 1 | SS -> MS | RELEASE | |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | |
| 5 | SS | | cause 81# (invalid TI value) repeat steps 3-4 to cover all the transaction identifiers from 000...110 |
| 6 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.7.3 U11 disconnect request / timer T305 time-out

26.8.1.2.7.3.1 Definition

The call control entity of the MS being in the state, U11, if no response is then received from the SS, timer T305 expires at the MS side. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.7.3.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U11, "Disconnect Request" shall on expiry of T305, proceed with the connection release procedure by sending the RELEASE message to its peer entity and shall enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.3 and 11.3.

26.8.1.2.7.3.3 Test purpose

To verify that the CC-entity of the MS in CC-state U11, "Disconnect Request" shall on expiry of T305 (accuracy $\pm 10\%$), proceed with the connection release procedure by sending the RELEASE message to its peer entity and enters the CC-state U19, "Release Request".

26.8.1.2.7.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U11 by using table 26.8.1.2/3.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

1 minute.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U11. Then T305 expires at the MS and the MS shall send a RELEASE message. The SS checks timer T305 accuracy and that the CC entity has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS | | SS waits until T305 expires at the MS |
| 2 | MS -> SS | RELEASE | SS checks the time between DISCONNECT and RELEASE (note), (T305 ± 10 %) |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

NOTE: With the same cause value as originally contained in the DISCONNECT message. An additional cause information element (#102 recovery on timer expiry) may be included.

26.8.1.2.7.4 U11 disconnect request / lower layer failure

26.8.1.2.7.4.1 Definition

The call control entity of the MS being in the state, U11, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.7.4.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U11, "Disconnect Request" having detected a lower layer failure shall return to the idle mode. The CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.2.3, 4.5.3, 5.5.3.2 and 8.3.

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.13.2.1.

26.8.1.2.7.4.3 Test purpose

To verify that the a CC-entity of the MS in CC-state U11, "Disconnect Request" having detected a lower layer failure returns to the idle mode. The CC entities relating to the seven mobile originating transaction identifiers are thus in state U0, "Null".

26.8.1.2.7.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U11 by using table 26.8.1.2/4.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 minute 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The MS is brought to the state U11. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | SS waits 20 s for the MS to return to listening to paging |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.7.5 U11 disconnect request / unknown message received

26.8.1.2.7.5.1 Definition

The call control entity of the MS being in the state, U11, an unknown message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.7.5.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U11, "disconnect request", having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.4.

26.8.1.2.7.5.3 Test purpose

To verify that a CC-entity of the MS in CC-state U11, "disconnect request", having received an unknown message from its peer entity returns a STATUS message.

26.8.1.2.7.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U11 by using table 26.8.1.2/4.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U11. The SS sends a message with message type not defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U11 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U11 |

Specific message contents:

None.

26.8.1.2.8 U12 disconnect indication

26.8.1.2.8.1 U12 disconnect indication / call releasing requested by the user

26.8.1.2.8.1.1 Definition

The call control entity of the MS being in the state, U12, the user requests to terminate the call. This test is applicable only for mobile stations supporting bearer capability for speech.

26.8.1.2.8.1.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U12, "Disconnect Indication" being in network initiated call release phase, shall, upon receiving a call release request from the user send a RELEASE to its peer entity and enter CC-state U19, "Release Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

26.8.1.2.8.1.3 Test purpose

To verify that a CC-entity of the MS in CC-state U12, "Disconnect Indication" being in network initiated call release phase, shall, upon receiving a call release request from the user sends a RELEASE to its peer entity and enters CC-state U19, "Release Request"

26.8.1.2.8.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U12 by using Option A of table 26.8.1.2/1.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U12. The user requests termination of the call. The MS shall send a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|-----------------------|
| 1 | | | MMI action, "on hook" |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.2.8.2 U12 disconnect indication / RELEASE received

26.8.1.2.8.2.1 Definition

The call control entity of the MS being in the state, U12, a RELEASE message is received by the MS. This test is applicable only for mobile stations supporting bearer capability for speech.

26.8.1.2.8.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U12, "Disconnect Indication", upon receipt of a RELEASE message shall return to its peer entity the RELEASE COMPLETE message and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the MS shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.2.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3, 5.5.3.2 and 8.3.

26.8.1.2.8.2.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U12, "Disconnect Indication", upon receipt of a RELEASE message returns to its peer entity the RELEASE COMPLETE message and enters the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

26.8.1.2.8.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U12 by using Option A of table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U12. The SS sends a RELEASE message to the MS. The MS shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE | |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | |
| 5 | SS | | cause 81# (invalid TI value) repeat steps 3-4 to cover all the transaction identifiers from 000...110 |
| 6 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.8.3 U12 disconnect indication / lower layer failure

26.8.1.2.8.3.1 Definition

The call control entity of the MS being in the state, U12, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable only for mobile stations supporting bearer capability for speech.

26.8.1.2.8.3.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U12, "Disconnect Indication" having detected a lower layer failure shall return to idle mode. The CC-entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3.2, 4.5.3, 5.5.3.2, 3.4.13.2.1 and 8.3.

26.8.1.2.8.3.3 Test purpose

To verify that a CC-entity of the MS in CC-state U12, "Disconnect Indication" having detected a lower layer failure returns to idle mode. The CC-entities relating to the seven mobile originating transaction identifiers are thus in state U0, "Null".

26.8.1.2.8.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

26.8.1.2.9 Outgoing call / U19 release request

26.8.1.2.9.1 Outgoing call / U19 release request / timer T308 time-out

26.8.1.2.9.1.1 Definition

The call control entity of the MS being in the state, U19, if no response is then received from the SS, timer T308 expires at the MS side. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.9.1.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U19, "Release Request" will, upon the first expiry of timer T308 send the RELEASE message to its peer entity and remain in the CC-state U19.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4.3.1 and 11.3.

26.8.1.2.9.1.3 Test purpose

To verify that a CC-entity of the MS in CC-state U19, "Release Request" will, upon the first expiry of timer T308 (accuracy $\pm 10\%$) send the RELEASE message to its peer entity and remain in the CC-state U19.

26.8.1.2.9.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U19 by using table 26.8.1.2/4.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

1 min.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U19. When T308 expires at the MS, the MS shall send a RELEASE message. The SS checks timer T308 accuracy and that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS | | SS waits until T308 at the MS |
| 2 | MS -> SS | RELEASE | SS checks the time between the two RELEASE messages (T308 ± 10 %) |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

None.

26.8.1.2.9.2 Outgoing call / U19 release request / 2nd timer T308 time-out

26.8.1.2.9.2.1 Definition

The call control entity of the MS being in the state, U19, if no response is then received after timer T308 has expired two times in success at the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.9.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U19, "Release Request", upon the 2nd expiry of the timer T308, shall enter the CC-state U0, "Null".
- 2) Subsequently the MS shall proceed with releasing the MM-connection and enter the idle mode with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4.3.1 and 11.3.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3 and 5.5.3.2.

26.8.1.2.9.2.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U19, "Release Request", upon the 2nd expiry of the timer T308, enters the CC-state U0, "Null".
- 2) To verify that subsequently the MS proceeds with releasing the MM-connection and enters the idle mode with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

26.8.1.2.9.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U19 by using table 26.8.1.2/4.

Foreseen final state of the MS

U0, null.

Maximum duration of test

2 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U19. The SS allows T308 expiry at the MS, and the MS shall repeat sending the RELEASE message and start timer T308 again. The SS allows again T308 expiry at the MS. The MS shall abort the RR-connection (DISC/UA). The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | SS | | SS waits until T308 expiry at the MS |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |
| 5 | SS | | SS waits until the second T308 expiry at the MS |
| 6 | SS | | SS waits T3240 expiry at the MS |
| 7 | MS | | the main signalling link shall be released by the MS (L2: DISC/UA). |
| 8 | SS | | SS waits 10 s for the MS to return to listening to paging |
| 9 | SS -> MS | PAGING REQUEST | |
| 10 | MS -> SS | CHANNEL REQUEST | |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 12 | MS -> SS | PAGING RESPONSE | |
| 13 | SS -> MS | STATUS ENQUIRY | |
| 14 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 15 | SS | | repeat steps 13-14 to cover all the transaction identifiers from 000...110 |
| 16 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.9.3 Outgoing call / U19 release request / RELEASE received

26.8.1.2.9.3.1 Definition

The call control entity of the MS being in the state, U19, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.9.3.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U19, "Release Request", upon receipt of a RELEASE, shall release the MM-connection and enter the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.5, 11.3 and 5.5.3.2.

26.8.1.2.9.3.3 Test purpose

To verify that a CC-entity of the MS in CC-state U19, "Release Request", upon receipt of a RELEASE, shall release the MM-connection and enters the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U19. The SS sends a RELEASE message to the MS. The MS shall release the MM-connection. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE | (note) |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 4 | SS | | repeat steps 2-3 to cover all the transaction identifiers from 000...110 |
| 5 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

NOTE: With the same cause number as originally contained in DISC and optional cause #102 recovery on timer expiry.

26.8.1.2.9.4 Outgoing call / U19 release request / RELEASE COMPLETE received

26.8.1.2.9.4.1 Definition

The call control entity of the MS being in the state, U19, a RELEASE COMPLETE message is received by the MS. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.9.4.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U19, "Release Request", upon receipt of a RELEASE COMPLETE, shall release the MM-connection and enter the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4.3, 4.5.3 and 8.3.

26.8.1.2.9.4.3 Test purpose

To verify that a CC-entity of the MS in CC-state U19, "Release Request", upon receipt of a RELEASE COMPLETE, shall release the MM-connection and enters the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

26.8.1.2.9.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U19 by using table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U19. The SS sends a RELEASE COMPLETE message to the MS. The MS shall release the MM-connection. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|---|
| 1 | SS -> MS | RELEASE COMPLETE | |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | RELEASE COMPLETE | |
| 4 | SS | | cause 81# (invalid TI value) repeat steps 2-3 to cover all the transaction identifiers from 000...110 |
| 5 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.2.9.5 Outgoing call / U19 release request / lower layer failure

26.8.1.2.9.5.1 Definition

The call control entity of the MS being in the state, U19, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.1.2.9.5.2 Conformance requirement

A CC-entity of the MS in CC-state U19, "Release Request", having detected a lower layer failure, shall return to the idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.2.3, 4.5.3, 5.5.3.2 and 8.3.

26.8.1.2.9.5.3 Test purpose

To verify that a CC-entity of the MS in CC-state U19, "Release Request", having detected a lower layer failure, returns to the idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

26.8.1.2.9.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U19 by using table 26.8.1.2/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The MS is brought to the state U19. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | SS waits 20 s for the MS to return to listening to paging |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.3 Establishment of an incoming call / Initial conditions

The tables below describe message exchanges which bring the MS in the requested initial states in case of an incoming call.

A state may be taken as initial only when all the states which lead to this initial states have been validated. The order will be U0, U6, U9, U7, U8, U10, U26 etc. as in the following tables.

Table 26.8.1.3/1: Establishment of an incoming call, procedure 1

| Step | Direction | Message | Comments |
|--|-----------|-------------------------|---------------------|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS -> MS | SETUP | U6, (note 1) |
| 10 | MS -> SS | CALL CONFIRMED | U9 |
| A11 | MS -> SS | CONNECT | U8, p = Y, (note 2) |
| B11 | MS -> SS | ALERTING | U7, p = N, (note 2) |
| B12 | MS | | (note 3) |
| B13 | MS -> SS | CONNECT | U8 |
| 14 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | CONNECT ACKNOWLEDGE | U10 |
| NOTE 1: With signal information included in the SETUP message. | | | |
| NOTE 2: The MS is supporting immediate connect (p = Y/N). See PICS/PIXIT statement. | | | |
| NOTE 3: If necessary (see PICS/PIXIT statement), the MS is made to accept the call in the way described in a PICS/PIXIT statement. | | | |

Table 26.8.1.3/2: Establishment of an incoming call, procedure 2

| Step | Direction | Message | Comments |
|--|-----------|-------------------------|---------------------|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | |
| 7 | SS -> MS | SETUP | U6, (note 1) |
| 8 | MS -> SS | CALL CONFIRMED | U9 |
| A9 | MS -> SS | CONNECT | U8, p = Y, (note 2) |
| A10 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| A11 | MS -> SS | ASSIGNMENT COMPLETE | |
| B9 | MS -> SS | ALERTING | U7, p = N, (note 2) |
| B10 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| B11 | MS -> SS | ASSIGNMENT COMPLETE | |
| B12 | MS | | (note 3) |
| B13 | MS -> SS | CONNECT | U8 |
| 14 | SS -> MS | AUTHENTICATION REQUEST | |
| 15 | MS -> SS | AUTHENTICATION RESPONSE | |
| 16 | SS -> MS | CONNECT ACKNOWLEDGE | U10 |
| NOTE 1: With signal information included in the SETUP message. | | | |
| NOTE 2: The MS is supporting immediate connect (p = Y/N). See PICS/PIXIT statement. | | | |
| NOTE 3: If necessary (see PICS/PIXIT statement), the MS is made to accept the call in the way described in a PICS/PIXIT statement. | | | |

Table 26.8.1.3/3: Establishment of an incoming call, procedure 3

| Step | Direction | Message | Comments |
|--|-----------|------------------------------------|---------------------|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, TCH |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS -> MS | CHANNEL MODE MODIFY | (note 1) |
| 10 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 11 | SS -> MS | SETUP | U6, (note 2) |
| 12 | MS -> SS | CALL CONFIRMED | U9 |
| A13 | MS -> SS | CONNECT | U8, p = Y, (note 3) |
| B13 | MS -> SS | ALERTING | U7, p = N, (note 3) |
| B14 | MS | | (note 4) |
| B15 | MS -> SS | CONNECT | U8 |
| 16 | SS -> MS | CONNECT ACKNOWLEDGE | U10 |
| NOTE 1: Assigned channel is appropriate for the chosen mobile originated circuit switched basic service. | | | |
| NOTE 2: With signal information included in the SETUP message. | | | |
| NOTE 3: The MS is supporting immediate connect (p = Y/N). See PICS/PIXIT statement. | | | |
| NOTE 4: If necessary (see PICS/PIXIT statement), the MS is made to accept the call in the way described in a PICS/PIXIT statement. | | | |

Table 26.8.1.3/4: Establishment of an incoming call, procedure 4

| Step | Direction | Message | Comments |
|--|-----------|-------------------------|---------------------|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | |
| 7 | SS -> MS | SETUP | U6, (note 1) |
| 8 | MS -> SS | CALL CONFIRMED | U9 |
| 9 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | |
| A11 | MS -> SS | CONNECT | U8, p = Y, (note 2) |
| B11 | MS -> SS | ALERTING | U7, p = N, (note 2) |
| B12 | MS | | (note 3) |
| B13 | MS -> SS | CONNECT | U8 |
| 14 | SS -> MS | AUTHENTICATION REQUEST | |
| 15 | MS -> SS | AUTHENTICATION RESPONSE | |
| 16 | SS -> MS | CONNECT ACKNOWLEDGE | U10 |
| NOTE 1: The signal information element is not included in the SETUP message. | | | |
| NOTE 2: The MS is supporting immediate connect (p = Y/N). See PICS/PIXIT statement. | | | |
| NOTE 3: If necessary (see PICS/PIXIT statement), the MS is made to accept the call in the way described in a PICS/PIXIT statement. | | | |

26.8.1.3.1 Incoming call / U0 null state

26.8.1.3.1.1 Incoming call / U0 null state / SETUP received with a non supported bearer capability

26.8.1.3.1.1.1 Definition

The call control entity of the MS being in the state, U0, a SETUP message is received with only one bearer capability and this bearer capability is not supported by the MS. This test is applicable for all equipment.

26.8.1.3.1.1.2 Conformance requirement

- 1) A CC entity of the MS, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, shall return a RELEASE COMPLETE with correct cause value to its peer entity and return to the idle mode. The CC-entities relating to the seven mobile terminating transaction identifiers shall be in the state U0,"Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.2 and annex B.

26.8.1.3.1.1.3 Test purpose

To verify that a CC entity of the MS, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, returns a RELEASE COMPLETE with correct cause value to its peer entity, and returns to the idle mode. To verify that the CC-entities relating to the seven mobile terminating transaction identifiers are then in the state U0,"Null".

26.8.1.3.1.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

U0, null.

Maximum duration of test

30 s.

Test procedure

A mobile terminated call is initiated. The MS receives a SETUP message that contains a bearer capability not supported by the MS. The MS returns a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity is still in the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST | SS sends paging |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | (SDCCH) |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS -> MS | SETUP | (note 1) |
| 10 | MS -> SS | RELEASE COMPLETE | (note 2) |
| 11 | SS -> MS | STATUS ENQUIRY | Cause #81 (invalid TI value). Repeat steps 11-12 to cover all the transaction identifiers from 000... 110. |
| 12 | MS -> SS | RELEASE COMPLETE | |
| 13 | SS | | |

Specific message contents:

NOTE 1: With one bearer capability and that bearer capability is not supported by the MS.

NOTE 2: With cause #88 incompatible destination.

26.8.1.3.2 Incoming call / U6 call present

26.8.1.3.2.1 Incoming call / U6 call present / automatic call rejection

26.8.1.3.2.1.1 Definition

Although the state U6 is transient, the ability to refuse a call (automatically) in this state is tested, if it is implemented at the MS. The test is applicable for those equipments described above supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.2.1.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U6, "Call Present", upon receipt of a rejection indication of the incoming call from the user, send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers shall be in state U0, "Null".

References

- 3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,
3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.2.3.1, 5.5.3.2 and 8.3.

26.8.1.3.2.1.3 Test purpose

To verify that a CC entity of the MS in CC-state U6, "Call Present", shall upon receipt of a rejection indication of the incoming call from the user, shall send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers are then in state U0, "Null".

26.8.1.3.2.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U6 by using table 26.8.1.3/2.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice. Then a mobile terminated call is initiated. The call control entire of the MS is brought to the state U6 (Note: The state U6 is not checked, since it is not stable). The MS is made to refuse the call (the refusal may require some preliminary preparations in order to achieve refusal at this point). The MS shall send a RELEASE COMPLETE message and enter a call control state U0. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | | | |
| 2 | MS -> SS | RELEASE COMPLETE | the MS is made to refuse the call (note) |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 5 | SS | | repeat steps 3-4 to cover all the transaction identifiers from 000...110 |
| 6 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

NOTE: With cause value #21 call rejected.

26.8.1.3.3 Incoming call / U9 mobile terminating call confirmed

26.8.1.3.3.1 Incoming call / U9 mobile terminating call confirmed / alerting or immediate connecting

26.8.1.3.3.1.1 Definition

The call control entity of the MS having entered the state, U9, with signal information received in the preceding SETUP message, the subsequent behaviour of the MS is tested. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.3.1.2 Conformance requirement

- 1) A CC entity in CC-state U9, "MS Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) shall either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.3.2

26.8.1.3.3.1.3 Test purpose

To verify that a CC entity in CC-state U9, "MS Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) will either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

26.8.1.3.3.1.4 Method of test

Specific PICS statements

- Support of immediate connect (TSPC_AddInfo_ImmConn)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U9 by using table 26.8.1.3/2.

Foreseen final state of the MS

- U8, connect request, if the MS supports immediate connect for the selected basic service;
- otherwise U7, call received.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U9 by using a SETUP message containing signalling information element. (The state U9 is not a stable state in this case, and consequently it is not checked as an initial state.) If the MS supports immediate connect for the selected basic service ($p = Y$), it sends a CONNECT message and enters the state U8, connect request. Otherwise ($p = N$) the MS sends an ALERTING message and enters the state U7, call receiving. The SS checks by using the status enquiry procedure that the CC entity has entered its state as described.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|--------------------------------|
| A1 | MS -> SS | CONNECT | $p = Y$ cause 30#, state U8 |
| A2 | SS -> MS | STATUS ENQUIRY | |
| A3 | MS -> SS | STATUS | |
| B1 | MS -> SS | ALERTING | $p = N$ cause 30#, state U7 |
| B2 | SS -> MS | STATUS ENQUIRY | |
| B3 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.3.2 Incoming call / U9 mobile terminating call confirmed / TCH assignment

26.8.1.3.3.2.1 Definition

The call control entity of the MS being in the state, U9, an assignment procedure is performed for traffic channel. This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.

26.8.1.3.3.2.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH, send a ALERTING message and enter state U7.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 3.4.3, 5.2.2.7 and 5.2.2.3.2.

26.8.1.3.3.2.3 Test purpose

To verify that a CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed", when allocated a traffic channel by the network performing the assignment procedure, performs a layer 2 establishment on the FACCH, sends a ALERTING message and enters state U7.

26.8.1.3.3.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U9 by using table 26.8.1.3/4.

Foreseen final state of the MS

U9, mobile terminating call confirmed.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U9 (by using a SETUP message not containing the signal information element). The SS sends an ASSIGNMENT COMMAND for traffic channel to the MS. The MS shall establish layer 2 link on the newly allocated channel and respond with an ASSIGNMENT COMPLETE message. The MS sends an ALERTING message and enters state U7, call received. The SS verifies by using the status enquiry procedure that the MS has entered the correct state.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|---|
| 1 | SS -> MS | ASSIGNMENT COMMAND | TCH, an appropriate non-signalling mode the MS shall establish L2 link |
| 2 | MS | | |
| 3 | MS -> SS | ASSIGNMENT COMPLETE | |
| 4 | MS -> SS | ALERTING | |
| 5 | SS -> MS | STATUS ENQUIRY | |
| 6 | MS -> SS | STATUS | cause 30#, state U7 |

Specific message contents:

None.

26.8.1.3.3.3 Void

26.8.1.3.3.4 Incoming call / U9 mobile terminating call confirmed / DISCONNECT received

26.8.1.3.3.4.1 Definition

The call control entity of the MS being in the state, U9, a DISCONNECT message is received by the MS. This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.

26.8.1.3.3.4.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed", upon receipt of a DISCONNECT shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

26.8.1.3.3.4.3 Test purpose

To verify that a CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed", upon receipt of a DISCONNECT returns a RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.3.3.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U9 by using table 26.8.1.3/4.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U9. The SS sends a DISCONNECT message to the MS. The MS responds by sending a RELEASE message and enters state U19, release request. The SS verifies by using the status enquiry procedure that the MS has entered the correct state.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

None.

26.8.1.3.3.5 Incoming call / U9 mobile terminating call confirmed / RELEASE received

26.8.1.3.3.5.1 Definition

The call control entity of the MS being in the state, U9, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.

26.8.1.3.3.5.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

- 2) On returning to the idle mode the MS shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3, 5.5.3.2 and 8.3.

26.8.1.3.3.5.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

26.8.1.3.3.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U9 by using table 26.8.1.3/4.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U9. The SS sends a RELEASE message to the MS. The MS responds by sending a RELEASE COMPLETE message and enters state U0, null. The SS verifies by using the status enquiry procedure that the MS has entered the correct state with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|----------------------------------|
| 1 | SS -> MS | RELEASE | with cause "Normal, unspecified" |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | |
| 5 | SS | | |
| 6 | SS -> MS | CHANNEL RELEASE | |

cause 81# (invalid TI value)
repeat steps 3-4 to cover all the transaction identifiers from 000...110
the main signalling link shall be released by the MS (L2: DISC/UA).

Specific message contents:

None.

26.8.1.3.3.6 Incoming call / U9 mobile terminating call confirmed / lower layer failure

26.8.1.3.3.6.1 Definition

The call control entity of the MS being in the state, U9, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.

26.8.1.3.3.6.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U9, "MS Terminating Call Confirmed", having detected a lower layer failure shall return to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.2.3, 4.5.3, 5.5.3.2 and 8.3.

26.8.1.3.3.6.3 Test purpose

To verify that a CC entity of the MS in CC-state U9, "MS Terminating Call Confirmed", having detected a lower layer failure returns to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

26.8.1.3.3.6.4 Method of test

Specific PICS statements

- Support of UTRAN Radio Access Technology (TSPC_Type_UTRAN)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U9 by using table 26.8.1.3/4.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The MS is brought to the state U9. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | If PICS statement "Support of UTRAN Radio Access Technology" is 'NO', then the SS waits 20 s for the MS to return to listening to paging. If PICS statement "Support of UTRAN Radio Access Technology" is 'YES', then the SS waits 50 s for the MS to return to listening to paging. |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.3.3.7 Incoming call / U9 mobile terminating call confirmed / unknown message received

26.8.1.3.3.7.1 Definition

The call control entity of the MS being in the state, U9, an unknown message is received by the MS. This test is applicable for any equipment supporting at least MT circuit switched basic service, for which immediate connect is not used.

26.8.1.3.3.7.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed" having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.4.

26.8.1.3.3.7.3 Test purpose

To verify that a CC-entity of the MS in CC-state U9, "MS Terminating Call Confirmed" having received an unknown message from its peer entity returns a STATUS message.

26.8.1.3.3.7.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U9 by using table 26.8.1.3/4.

Foreseen final state of the MS

U9, mobile terminating call proceeding.

Maximum duration of test

30 s.

Test procedure

A MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U9. The SS sends a message with message type not defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U9 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U9 |

Specific message contents:

None.

26.8.1.3.4 Incoming call / U7 call received

26.8.1.3.4.1 Incoming call / U7 call received / call accepted

26.8.1.3.4.1.1 Definition

The call control entity of the MS being in the state, U7, a user accepts the incoming call. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.1.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", upon a user accepting the incoming call, shall send a CONNECT message to its peer entity and enter the CC-state U8, "Connect Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.5.

26.8.1.3.4.1.3 Test purpose

To verify that a CC entity of a MS in CC-state U7, "Call Received", upon a user accepting the incoming call, shall send a CONNECT message to its peer entity and enter the CC-state U8, "Connect Request"

26.8.1.3.4.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/3.

Foreseen final state of the MS

U8, connect request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U7. The user accepts the incoming call. The MS sends a CONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered state U8, connect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | | | the MS is made to accept the call by the user |
| 2 | MS -> SS | CONNECT | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.4.2 Incoming call / U7 call received / termination requested by the user

26.8.1.3.4.2.1 Definition

The call control entity of the MS being in the state, U7, a user requests to terminate incoming call. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.2.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.3.

26.8.1.3.4.2.3 Test purpose

To verify that a CC entity of a MS in CC-state U7, "Call Received", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

26.8.1.3.4.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/3.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U7. The user initiates clearing the incoming call. The MS sends a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered state U11, disconnect request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | | | the MS is made to terminate/reject the call cause 30#, state U11 |
| 2 | MS -> SS | DISCONNECT | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.4.3 Incoming call / U7 call received / DISCONNECT received

26.8.1.3.4.3.1 Definition

The call control entity of the MS being in the state, U7, a DISCONNECT message is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.3.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", upon receipt of a DISCONNECT with a progress indicator indicating in-band information from network, if a TCH was not assigned, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

26.8.1.3.4.3.3 Test purpose

To verify that a CC entity of a MS in CC-state U7, "Call Received", upon receipt of a DISCONNECT with a progress indicator indicating in-band information from network, if a TCH was not assigned, returns a RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.3.4.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/1.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U7. The SS sends a DISCONNECT message. The MS responds with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | (note) |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

NOTE: With a progress indicator indicating in-band information; Progress Indicator, Progress Description #8.

26.8.1.3.4.4 Incoming call / U7 call received / RELEASE received

26.8.1.3.4.4.1 Definition

The call control entity of the MS being in the state, U7, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.4.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the MS shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3 and 5.5.3.2.

26.8.1.3.4.4.3 Test purpose

- 1) To verify that a CC entity of a MS in CC-state U7, "Call Received", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

26.8.1.3.4.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U7. The SS sends a RELEASE message. The MS responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|----------------------------------|
| 1 | SS -> MS | RELEASE | with cause "Normal, unspecified" |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | |
| 5 | SS | | |
| 6 | SS -> MS | CHANNEL RELEASE | |

cause 81# (invalid TI value)
repeat steps 3-4 to cover all the transaction identifiers from 000...110
the main signalling link shall be released by the MS (L2: DISC/UA).

26.8.1.3.4.5 Incoming call / U7 call received / lower layer failure

26.8.1.3.4.5.1 Definition

The call control entity of the MS being in the state, U7, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.5.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", having detected a lower layer failure shall return to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.2.3, 4.5.3, 5.5.3.2 and 8.3.

26.8.1.3.4.5.3 Test purpose

To verify that a CC entity of a MS in CC-state U7, "Call Received", having detected a lower layer failure returns to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

26.8.1.3.4.5.4 Method of test

Specific PICS statements

- Support of UTRAN Radio Access Technology

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/2.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The MS is brought to the state U7. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | If PICS statement "Support of UTRAN Radio Access Technology" is 'NO', then the SS waits 20 s for the MS to return to listening to paging. If PICS statement "Support of UTRAN Radio Access Technology" is 'YES', then the SS waits 50 s for the MS to return to listening to paging. |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.3.4.6 Incoming call / U7 call received / unknown message received

26.8.1.3.4.6.1 Definition

The call control entity of the MS being in the state, U7, an unknown message is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.6.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.4.

26.8.1.3.4.6.3 Test purpose

To verify that a CC entity of a MS in CC-state U7, "Call Received", having received an unknown message from its peer entity returns a STATUS message.

26.8.1.3.4.6.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/3.

Foreseen final state of the MS

U7, call received.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U7. The SS sends a message with message type not defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U7 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U7 |

Specific message contents:

None.

26.8.1.3.4.7 Incoming call / U7 call received / TCH assignment

26.8.1.3.4.7.1 Definition

The call control entity of the MS being in the state, U7, an assignment procedure is performed for traffic channel. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.

26.8.1.3.4.7.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U7, "Call Received", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.7.

26.8.1.3.4.7.3 Test purpose

To verify that a CC entity of a MS in CC-state U7, "Call Received", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

26.8.1.3.4.7.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/1.

Foreseen final state of the MS

U7, call received.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U7. The SS sends an ASSIGNMENT COMMAND for traffic channel to the MS. The MS shall establish layer 2 link on the newly allocated channel and respond with an ASSIGNMENT COMPLETE message. The SS verifies by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|--------------------------------|
| 1 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 2 | MS | | the MS shall establish L2 link |
| 3 | MS -> SS | ASSIGNMENT COMPLETE | |
| 4 | SS -> MS | STATUS ENQUIRY | |
| 5 | MS -> SS | STATUS | cause 30#, state U7 |

Specific message contents:

None.

26.8.1.3.4.8 Incoming call / U7 call received / RELEASE COMPLETE received

26.8.1.3.4.8.1 Definition

The call control entity of the MS being in the state, U7, the call is cleared by a RELEASE COMPLETE message sent by the SS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service, for which immediate connect is not used.

26.8.1.3.4.8.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U7, "call received", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".
- 2) On returning to idle mode, the CC entities relating to the seven mobile terminating transaction identifiers shall be in state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.4.2 and 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.4.4.3.

26.8.1.3.4.8.3 Test purpose

- 1) To verify that a CC entity of the MS in CC-state U7, "Call received", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".
- 2) To verify that in returning to idle mode, the CC entities relating to the seven mobile terminating transaction identifiers are in state U0, "Null".

26.8.1.3.4.8.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U7 by using table 26.8.1.3/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS and for which the MS does not use immediate connection; if the MS supports MT telephony without immediate connection, the selected service is telephony. If necessary, the MS is configured for that basic service. The a mobile terminated call is initiated. the CC entity of the MS is brought to U7. The SS sends a RELEASE COMPLETE message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE COMPLETE | note 1 |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value), note 2 |
| 4 | SS | | repeat steps 2-3 to cover all the transaction identifiers from 000...110 |
| 5 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

NOTE 1: With the cause value chosen arbitrarily.

NOTE 2: TI flag has the value indicating the SS as a originator of the call.

26.8.1.3.5 Incoming call / U8 connect request

26.8.1.3.5.1 Incoming call / U8 connect request / CONNECT acknowledged

26.8.1.3.5.1.1 Definition

The call control entity of the MS being in the state, U8, a CONNECT ACKNOWLEDGE message is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.1.2 Conformance requirement

A CC entity of a MS in CC-state U8, "Connect Request", upon receipt of CONNECT ACKNOWLEDGE shall enter the CC-state U10, "Call Active".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.6.

26.8.1.3.5.1.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", upon receipt of CONNECT ACKNOWLEDGE shall enter the CC-state U10, "Call Active".

26.8.1.3.5.1.4 Method of test

Specific PICS statements

- Support of immediate connect (TSPC_AddInfo_ImmConn)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/2.

Foreseen final state of the MS

U10, active.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8 (if the MS uses immediate connection for the selected basic service then $p = Y$, otherwise $p = N$). The SS sends a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity of the MS has entered state U10, active.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|----------------------|
| A1 | SS -> MS | ASSIGNMENT COMMAND | $p = Y$ |
| A2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | SS -> MS | CONNECT ACKNOWLEDGE | cause 30#, state U10 |
| 4 | SS -> MS | STATUS ENQUIRY | |
| 5 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.5.2 Incoming call / U8 connect request / timer T313 time-out

26.8.1.3.5.2.1 Definition

The call control entity of the MS being in the state, U8, if no response is then received from the SS, timer T313 expires at the MS side. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.2.2 Conformance requirement

A CC entity of a MS in CC-state U8, "Connect Request", having waited for a reasonable length of time (e.g. expiry of timer T313) without receiving the appropriate protocol message to complete the incoming call, shall initiate the clearing of that incoming call by sending the CC message DISCONNECT and enter the CC-state U11, "Disconnect Request".

If an MS disconnects too early then, in the case of very late assignment of a traffic channel, systematic waste of radio resources may occur.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.2.6 and 5.4.3.

26.8.1.3.5.2.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", having waited for a reasonable length of time (e.g. expiry of timer T313) without receiving the appropriate protocol message to complete the incoming call, shall initiate the clearing of that incoming call by sending the CC message DISCONNECT and enter the CC-state U11, "Disconnect Request"

26.8.1.3.5.2.4 Method of test

Specific PICS statements

- Support of immediate connect (TSPC_AddInfo_ImmConn)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/2.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

45 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8 (if the MS uses immediate connection for the selected basic service then p = Y, otherwise p = N). The T313 expires at the MS and the MS sends a DISCONNECT message and enters state U11, disconnect request. The SS checks by using the status enquiry procedure that the MS has entered the correct state.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|--|
| A1 | SS -> MS | ASSIGNMENT COMMAND | p = Y |
| A2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | MS -> SS | DISCONNECT | Shall not be sent before 15 s after entry into state U8. But, shall be sent before 1,1 * T313 after entry into state U8. |
| 4 | SS -> MS | STATUS ENQUIRY | cause 30#, state U11 |
| 5 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.5.3 Incoming call / U8 connect request / termination requested by the user

26.8.1.3.5.3.1 Definition

The call control entity of the MS being in the state, U8, the user requests for releasing of the call. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.3.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U8, "Connect Request", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

3GPP TS 04.07 / 3GPP TS 24.007 subclause 6.2.2,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.3

26.8.1.3.5.3.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

26.8.1.3.5.3.4 Method of test

Specific PICS statements

- MT circuit switched basic services for which immediate connect is not used.

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/2.

Foreseen final state of the MS

U11, disconnect request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8 (if the MS uses immediate connection for the selected basic service then p = Y, otherwise p = N). Then the user requests termination of the call. The MS sends a DISCONNECT message and enters state U11, disconnect request. The SS verifies by using the status enquiry procedure that the MS has entered the correct state.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|---|
| A1 | SS -> MS | ASSIGNMENT COMMAND | p = Y |
| A2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | | | the user requests to clear the call cause 30#, state U11 |
| 4 | MS -> SS | DISCONNECT | |
| 5 | SS -> MS | STATUS ENQUIRY | |
| 6 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.5.4 Incoming call / U8 connect request / DISCONNECT received with in-band information

26.8.1.3.5.4.1 Definition

The call control entity of the MS being in the state, U8, a DISCONNECT message indicating availability of in band information is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.4.2 Conformance requirement

A CC entity of a MS in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 shall enter CC-state U12, if the traffic channel is in speech mode. If the TCH is not in speech mode, the MS shall send a RELEASE message and enter CC-state U19.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4 and 5.5.1.

26.8.1.3.5.4.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 enters CC-state U12, if the traffic channel is in speech mode, and that the MS sends a RELEASE message and enters CC-state U19 if the TCH is not in speech mode.

26.8.1.3.5.4.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN. The MS is brought into the state U8 by using table 26.8.1.3/3.

Foreseen final state of the MS

U12, disconnect indication or U19 depending on the bearer capabilities.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8. The SS sends a DISCONNECT message containing indication of in-band information availability to the MS. If channel mode is speech, the MS enters state U12, disconnect indication. If channel mode is not speech, the MS sends a RELEASE message and enters state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|----------------|----------------------------------|-------------------------------------|--|
| 1 | SS -> MS | DISCONNECT | (note) |
| A2 A3 | SS -> MS MS -> SS | STATUS ENQUIRY STATUS | TCH in speech mode: cause 30#, state U12 |
| B2 B3 B4 | MS -> SS SS -> MS MS -> SS | RELEASE STATUS ENQUIRY STATUS | TCH is not in speech mode: cause 30#, state U19 |

Specific message contents:

NOTE: With a progress indicator indicating in-band information; Progress Indicator, Progress description #8.

26.8.1.3.5.5 Incoming call / U8 connect request / DISCONNECT received without in-band information

26.8.1.3.5.5.1 Definition

The call control entity of the MS being in the state, U8, a DISCONNECT message is received by the MS. The DISCONNECT message does not contain indication of in-band information availability. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.5.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4 and 5.4.4.2.

26.8.1.3.5.5.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

26.8.1.3.5.5.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/3.

Foreseen final state of the MS

U19, release request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8. The SS sends a DISCONNECT message not containing indication of in-band information availability to the MS. The MS shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the MS has entered the state U19, release request.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | DISCONNECT | (note) |
| 2 | MS -> SS | RELEASE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U19 |

Specific message contents:

NOTE: Without a progress indicator indicating in-band information.

26.8.1.3.5.6 Incoming call / U8 connect request / RELEASE received

26.8.1.3.5.6.1 Definition

The call control entity of the MS being in the state, U8, a RELEASE message is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.6.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U8, "Connect Request", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the MS shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.3 and 5.5.3.2.

26.8.1.3.5.6.3 Test purpose

- 1) To verify that a CC entity of a MS in CC-state U8, "Connect Request", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

26.8.1.3.5.6.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/3.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8. The SS sends a RELEASE message. The MS responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | SS -> MS | RELEASE | with cause "Normal, unspecified" |
| 2 | MS -> SS | RELEASE COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 5 | SS | | repeat steps 3-4 to cover all the transaction identifiers from 000...110 |
| 6 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.3.5.7 Incoming call / U8 connect request / lower layer failure

26.8.1.3.5.7.1 Definition

The call control entity of the MS being in the state, U8, a lower layer failure is accomplished at the MS and consequently, communication at layer 3 level with the peer entity is terminated. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.7.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U8, "Connect Request", having detected a lower layer failure shall return to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.5.2.3, 4.5.3 and 5.5.3.2.

26.8.1.3.5.7.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", having detected a lower layer failure returns to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

26.8.1.3.5.7.4 Method of test

Specific PICS statements

- Support of UTRAN Radio Access Technology (TSPC_Type_UTRAN)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/1.

Foreseen final state of the MS

U0, null.

Maximum duration of test

1 min 30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The MS is brought to the state U8. The SS generates a lower layer failure at the MS. The SS waits long enough to enable the MS to return to idle state listening to paging, and then pages MS to create RR-connection. Finally, the SS will check the state of the MS by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | SS | | SS generates lower layer failure |
| 2 | SS | | If PICS statement "Support of UTRAN Radio Access Technology" is 'NO', then the SS waits 20 s for the MS to return to listening to paging. If PICS statement "Support of UTRAN Radio Access Technology" is 'YES', then the SS waits 50 s for the MS to return to listening to paging. |
| 3 | SS -> MS | PAGING REQUEST | |
| 4 | MS -> SS | CHANNEL REQUEST | |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | RELEASE COMPLETE | cause 81# (invalid TI value) |
| 9 | SS | | repeat steps 7-8 to cover all the transaction identifiers from 000...110 |
| 10 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

None.

26.8.1.3.5.8 Incoming call / U8 connect request / TCH assignment

26.8.1.3.5.8.1 Definition

The call control entity of the MS being in the state, U8, an assignment procedure is performed for traffic channel. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.8.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U8, "Connect Request", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.7.

26.8.1.3.5.8.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", when allocated a traffic channel by the network performing the assignment procedure, shall perform a layer 2 establishment on the FACCH without changing the state of the call in progress.

26.8.1.3.5.8.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/1.

Foreseen final state of the MS

U8, connect request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8. The SS sends an ASSIGNMENT COMMAND for traffic channel to the MS. The MS shall establish layer 2 link on the newly allocated channel and respond with an ASSIGNMENT COMPLETE message. The SS verifies by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|---------------------|
| 1 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | cause 30#, state U8 |
| 4 | MS -> SS | STATUS | |

Specific message contents:

None.

26.8.1.3.5.9 Incoming call / U8 connect request / unknown message received

26.8.1.3.5.9.1 Definition

The call control entity of the MS being in the state, U8, an unknown message is received by the MS. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.3.5.9.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U8, "Connect Request", having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclause 8.4.

26.8.1.3.5.9.3 Test purpose

To verify that a CC entity of a MS in CC-state U8, "Connect Request", having received an unknown message from its peer entity returns a STATUS message.

26.8.1.3.5.9.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U8 by using table 26.8.1.3/1.

Foreseen final state of the MS

U8, connect request.

Maximum duration of test

30 s.

Test procedure

An MT circuit switched basic service is selected that is supported by the MS; if the MS supports MT telephony, the selected basic service is telephony. If necessary the MS is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the MS is brought to the state U8. The SS sends a message with message type not defined for the protocol discriminator to the MS. The MS shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---------------------------------|
| 1 | SS -> MS | unknown message | message type not defined for PD |
| 2 | MS -> SS | STATUS | cause 97#, state U8 |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U8 |

Specific message contents:

None.

26.8.1.4 In call functions

26.8.1.4.1 In-call functions / DTMF information transfer

26.8.1.4.1.1 In-call functions / DTMF information transfer / basic procedures

26.8.1.4.1.1.1 Definition

Dual Tone Multi Frequency (DTMF) is an inband one out of four plus one out of four signalling system primarily used from terminal instruments in telecommunication networks.

The support of DTMF is only permitted when a bearer capability for speech is in use or during the speech phase of alternate speech/data and alternate speech/facsimile teleservices.

26.8.1.4.1.1.2 Conformance requirement

- 1) An MS supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, shall send a START DTMF message on the correct DCCH.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.3.

- 2) An MS supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from among the ones supported), shall send a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element.

2.1 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.3.

26.8.1.4.1.1.3 Test purpose

- 1) To verify that an MS supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, sends a START DTMF message on the correct DCCH.
- 2) To verify that an MS supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from among the ones supported), sends a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element.

26.8.1.4.1.1.4 Method of test

Specific PICS statements

-

PIXIT statements

- supported character set (e.g. 0-9, #, *, A, B, C, D);
- if and how DTMF tone is indicated to the user.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC-state "active".

Foreseen final state of the MS

CC-state "active".

Maximum duration of test

1 min.

Test procedure

The MS being in the call active state, a user causes a DTMF tone to be generated e.g. by depression of a key in the MS. A DTMF digit corresponding to the digit indicated by the user is sent in a START DTMF message by the MS. The SS will return a START DTMF ACKNOWLEDGE message to the MS. This acknowledgement may be used in the MS to generate an indication as a feedback for a successful transmission. Then the user indicates that the DTMF sending should cease e.g. by releasing the key. The MS will send a STOP DTMF message to the network which is acknowledged with STOP DTMF ACKNOWLEDGE by the SS.

The sequence described above is repeated for each of the applicable characters 0-9, #, *, A, B, C, and D.

Then a case of rejecting a DTMF tone is tested and the state of the MS is verified.

Expected sequence

| Step | Direction | Message | Comments |
|------|----------------|------------------------|---|
| 1 | MS -> SS SS | START DTMF | the user causes DTMF tone to be generated the SS will verify that the transmitted information corresponds to the digit pressed |
| 2 | SS -> MS | START DTMF ACKNOWLEDGE | possible indication of a DTMF tone depending the PIXIT statements |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U10 |
| 5 | MS -> SS | STOP DTMF | |
| 6 | SS -> MS | STOP DTMF ACKNOWLEDGE | the DTMF tone indication shall be stopped |
| 7 | | | the steps 1-6 shall be repeated for each of the applicable characters 0-9, #, *, A, B, C, D. |
| 8 | SS -> MS | STATUS ENQUIRY | |
| 9 | MS -> SS | STATUS | cause 30#, state U10 |
| 10 | MS -> SS | START DTMF | |
| 11 | SS -> MS | START DTMF REJECT | |
| 12 | SS -> MS | STATUS ENQUIRY | |
| 13 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

None.

26.8.1.4.2 In-call functions / user notification

User notification procedure allows the network to notify a MS of any call-related event during the "active" state of a call. It also may allow a MS to notify the remote user of any appropriate call-related event during the "active" state of a call by sending a NOTIFY message containing a notification indicator to the network. No state change occurs at any of the interface sides during this procedure.

26.8.1.4.2.1 In-call functions / User notification / MS terminated

26.8.1.4.2.1.1 Definition

This is a case for testing user notification procedure terminated by the mobile station. The test is applicable for those equipments supporting at least one circuit switched basic service.

26.8.1.4.2.1.2 Conformance requirement

- 1) A CC entity of a MS in CC-state U10, "active", upon receiving of a NOTIFY message shall remain in the active state.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.1.

26.8.1.4.2.1.3 Test purpose

To verify that a CC entity of a MS in CC-state U10, "active", upon receiving of a NOTIFY message remains in the active state.

26.8.1.4.2.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC-state "active".

Foreseen final state of the MS

CC-state "active".

Maximum duration of test

10 s.

Test procedure

The MS being in the call active state, the SS will send a NOTIFY message to the MS. The state of the MS is checked after that.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|----------------------|
| 1 | SS -> MS | NOTIFY | |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

None.

26.8.1.4.3 In-call functions / channel changes

The two following test cases are for testing some elementary radio resource level procedures during an active state of a call to ensure call maintenance also during physical channel changes.

26.8.1.4.3.1 In-call functions / channel changes / a successful channel change in active state/ Handover and Assignment Command

26.8.1.4.3.1.1 Definition

This is a case to test a change of a physical channel during active state of a call. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.4.3.1.2 Conformance requirement

- 1) The MS being in the call active state after having successful completed a channel assignment or a handover command, shall remain in the call active state.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.2,
3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.6.1

26.8.1.4.3.1.3 Test purpose

To verify that the MS being in the call active state after having successful completed a channel assignment or having completed a handover command remains in the call active state.

26.8.1.4.3.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC-state "active".

Foreseen final state of the MS

CC-state "active".

Maximum duration of test

10 s.

Test procedure

The SS initiates a call to the Mobile Station, using an arbitrarily chosen MT circuit switched basic service (see clause 10 for generic call set up procedures).

The MS being in the call active state, the SS initiated channel assignment procedure causing an intracell change of channel by sending ASSIGNMENT COMMAND message to the MS. The MS performs channel assignment procedure and after the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message. The state of the MS is then checked.

The SS then initiates a Finely Synchronized handover intra cell procedure. On the successful completion of this procedure the state of the MS is checked.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------------------|--|
| 0 | | | Generic call set up procedure defined in subclauses 10.1 and 10.3, depending on choice of Bearer Capability. |
| 1 | SS -> MS | ASSIGNMENT COMMAND | |
| 2 | MS -> SS | ASSIGNMENT COMPLETE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U10 |
| 5 | SS -> MS | HANDOVER COMMAND | See Specific message contents. |
| 6 | MS -> SS | HANDOVER ACCESS | |
| 7 | MS -> SS | HANDOVER ACCESS | |
| 8 | MS -> SS | HANDOVER ACCESS | |
| 9 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 10 | MS -> SS | HANDOVER COMPLETE | |
| 11 | SS -> MS | STATUS ENQUIRY | |
| 12 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

ASSIGNMENT COMMAND

| Information Element | value/remark |
|---|--|
| Channel Description As used in Assignment Command when setting up the call, except: - Timeslot Number | Arbitrary value, but different to originally used. |

HANDOVER COMMAND

| Information Element | value/remark |

26.8.1.4.3.2 In-call functions / channel changes / an unsuccessful channel change in active mode/
Handover and Assignment Command

26.8.1.4.3.2.1 Definition

This is a case to test an unsuccessful change of a physical channel during active state of a call. This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

26.8.1.4.3.2.2 Conformance requirement

- 1) The MS, when returning to the old channel after handover or Assignment failure and having established the link, shall remain in the call active state.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.

26.8.1.4.3.2.3 Test purpose

To verify that the MS, when returning to the old channel after handover or Assignment failure and correctly establishing the link, will remain in the call active state.

26.8.1.4.3.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC-state "active".

Foreseen final state of the MS

CC-state "active".

Maximum duration of test

30 s.

Test procedure

The SS initiates a call to the Mobile Station, using an arbitrarily chosen circuit switched basic service (see clause 10 for generic call set up procedures).

The MS being in the call active state, the SS initiates non synchronized handover procedure to cell B. The MS begins to send access bursts on the new DCCH (and optionally the SACCH). The SS activates the SACCH, but does not send a PHYSICAL INFORMATION MESSAGE, thus causing timer T3124 to time-out. Then the MS shall return back to the old channel and re-establish the signalling link on cell A and send a HANDOVER FAILURE message. The state of the MS is then checked.

The SS sends an Assignment command message allocating a hopping TCH/F, but does not activate the assigned channel. The MS shall attempt try to activate the new channel (this is not verified) and shall then reactivate the "old" channel and trigger the establishment of the main signalling link on the old channel. The MS shall send an ASSIGNMENT FAILURE message. The state of the MS is then checked.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|--------------------|--|
| 0 | | | Generic call set up procedure defined in subclauses 10.1 and 10.3, depending on choice of Bearer Capability. |
| 1 | SS -> MS | HANDOVER COMMAND | |
| 2 | MS -> SS | HANDOVER ACCESS | Several messages are sent, all with the handover reference sent in the HANDOVER COMMAND message. |
| 3 | MS -> SS | HANDOVER FAILURE | |
| 4 | SS -> MS | STATUS ENQUIRY | |
| 5 | MS -> SS | STATUS | cause 30#, state U10 |
| 6 | SS -> MS | ASSIGNMENT COMMAND | Channel type = TCH/F, hopping. The MS attempts and fails to establish a signalling link on the new channel. |
| 7 | | | The MS re-establishes the signalling link on the "old" channel. |
| 8 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified" |
| 9 | SS -> MS | STATUS ENQUIRY | |
| 10 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

ASSIGNMENT FAILURE

| Information Element | value/remark |
|---------------------|------------------------------|
| RR cause | "protocol error unspecified" |

HANDOVER FAILURE

| Information Element | value/remark |
|---------------------|-----------------------------------|
| RR cause | Not checked, as tested elsewhere. |

STATUS

| Information Element | value/remark |
|---------------------|------------------|
| cause | #30, statue U10. |

26.8.1.4.4 In-call functions / MS terminated in-call modification

26.8.1.4.4.1 In-call functions / MS terminated in-call modification / modify when new mode is not supported

26.8.1.4.4.1.1 Definition

This is to test a special case of a in-call modification procedure, in which the new mode is not supported (and consequently not one of those negotiated and agreed during the establishment phase of the call). This test is applicable for any equipment supporting at least one circuit switched basic service.

26.8.1.4.4.1.2 Conformance requirement

- 1) In the case that the MS supports the network originated in-call modification procedure, the MS after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the MS shall reject it by sending a MODIFY REJECT message or a STATUS message.
- 2) In the case that the MS does not support the network originated in-call modification procedure, the MS shall, when receiving a MODIFY message, treat the message as unknown and respond with a STATUS message.

References

- 1) 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.3.4.3.4.2 and 5.3.4.4.
- 2) 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.

26.8.1.4.4.1.3 Test purpose

- 1) To verify that an MS supporting the network originated in-call modification procedure, after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the MS, rejects it by sending a MODIFY REJECT.
- 2) To verify that an MS not supporting the network originated in-call modification procedure, after having received a MODIFY message, responds with a STATUS message.

26.8.1.4.4.1.4 Method of test

Specific PICS statements

- the MS supports the network originated in-call modification procedure (p = Yes/No)
(TSPC_AddInfo_InCallMod)

PIXIT statements

-

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC-state "active".

Foreseen final state of the MS

CC-state "active".

Maximum duration of test

10 s.

Test procedure

The MS being in the call active state, the SS initiates in-call modification procedure by sending a MODIFY message with new mode different from actual mode and one of those not supported by the MS. The MS either returns a MODIFY REJECT message with the old bearer capability or a STATUS message with reject cause #97, depending on the PICS statement. The state of the MS is then checked.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | SS -> MS | MODIFY | with new mode different from actual one |
| 2a | MS -> SS | MODIFY REJECT | with the old call mode included OR, p = Yes |
| 2b | MS -> SS | STATUS | cause #97, state U10, p = No |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

None.

26.8.1.4.5 In-call functions / MS originated in-call modification

26.8.1.4.5.1 In-call functions / MS originated in-call modification / a successful case of modifying

26.8.1.4.5.1.1 Definition

This test is to test a successful case of in-call modification, which is triggered by the calling tone identification (CNG) received by the MS. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech/Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech/Group 3 fax).

26.8.1.4.5.1.2 Conformance requirement

- 1) The procedure shall be initiated by the MS in the "active" state of the call. It shall send a MODIFY message including the new mode to be changed to; and enter the "mobile originating modify" state. The new mode given in the MODIFY message shall be one of those already negotiated and agreed during the establishment phase of the call. The MS shall stop sending Bm-channel information according to the old mode and enter the state U26 "Mobile Originating Modify".
- 2) Upon receipt of the MODIFY COMPLETE message the MS shall start sending channel information according to the new call mode and enter the "active" state.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.1.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.2.

26.8.1.4.5.1.3 Test purpose

- 1) To verify that the procedure is initiated by the MS in the "active" state of the call. It sends a MODIFY message including the new mode to be changed to; and enters the "mobile originating modify" state. The new mode given in the MODIFY message is one of those already negotiated and agreed during the establishment phase of the call. The MODIFY originating side stops sending Bm-channel information.
- 2) To verify that upon receipt of the MODIFY COMPLETE message the MS starts sending channel information according to the new call mode and enters the "active" state.

26.8.1.4.5.1.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call

- a way to activate in-call modificationInitial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

CC-state "active".

Maximum duration of test

10 s.

Test procedure

The MS initiates a call for one of the supported dual mode services. The MS being in the call active state, in-call modification procedure is initiated for the selected service from the MS side. The MS shall send a MODIFY message with the new mode to the SS and the state of the MS is checked. The channel mode is modified with the CHANNEL MODE MODIFY message including the appropriate channel mode for the new service. The SS then returns a MODIFY COMPLETE message. The state of the MS is then checked.

NOTE: ICM can be initiated by manual intervention at the MS.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------------------|--|
| 1 | MS | | The MS is made to initiate a dual mode call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | |
| 7 | MS -> SS | SETUP | as specified in specific message contents |
| 8 | SS -> MS | AUTHENTICATION REQUEST | |
| 9 | MS -> SS | AUTHENTICATION RESPONSE | |
| 10 | SS -> MS | CALL PROCEEDING | as specified in specific message contents |
| 11 | SS -> MS | ASSIGNMENT COMMAND | channel mode: see subclause 10.4 |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | |
| 13 | SS -> MS | ALERTING | |
| 14 | SS -> MS | CONNECT | |
| 15 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 16 | MS -> SS | MODIFY | as specified in specific message contents |
| 17 | SS -> MS | STATUS ENQUIRY | |
| 18 | MS -> SS | STATUS | cause 30#, state U26 |
| 19 | SS -> MS | CHANNEL MODE MODIFY | as specified in specific message contents |
| 20 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 21 | SS -> MS | MODIFY COMPLETE | contains the new mode as bearer capability |
| 22 | SS | | allow at least 2 s for the MS to adapt for the new mode |
| 23 | SS -> MS | STATUS ENQUIRY | |
| 24 | MS -> SS | STATUS | cause 30#, state U10 |
| 25 | SS | | verify that the MS starts sending Bm channel information according to the new mode |

Specific message contents:

As specified in subclause 26.8.1.4.5.10.

26.8.1.4.5.2 In-call functions / MS originated in-call modification / modify rejected

26.8.1.4.5.2.1 Definition

This is to test a special case of a in-call modification procedure, in which the in-call modification is rejected. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech/Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech/Group 3 fax).

26.8.1.4.5.2.2 Conformance requirement

- 1) Upon receipt of the MODIFY REJECT message with the old bearer capability the MS shall: resume sending Bm-channel information according to the present call mode; resume interpreting received Bm-channel information according to the present call mode; and enter the "active" state.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.4.1.

26.8.1.4.5.2.3 Test purpose

To verify that upon receipt of the MODIFY REJECT message with the old bearer capability the MS resumes sending Bm-channel information according to the present call mode; resumes interpreting received Bm-channel information according to the present call mode; and enters the "active" state.

26.8.1.4.5.2.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call
- a way to activate in-call modification

Initial conditions

System Simulator:

26.8.1.4.5.5 In-call functions / MS originated in-call modification / time-out of timer T323

26.8.1.4.5.5.1 Definition

This is to test a special case of a in-call modification procedure, in which timer T323 expires in state U26, mobile originating modify. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech/Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech/Group 3 fax).

26.8.1.4.5.5.2 Conformance requirement

- 1) Upon expiration of T323 the MS shall initiate the procedures for call clearing with cause #102 "recovery on timer expiry".

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.4.3.

26.8.1.4.5.5.3 Test purpose

To verify that upon expiration of T323 (accuracy $\pm 10\%$) the MS shall initiate the procedures for call clearing with cause #102 "recovery on timer expiry".

26.8.1.4.5.5.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call
- a way to activate in-call modification

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

CC-state U11 "disconnect request".

Maximum duration of test

1 minute.

Test procedure

The MS initiates a call for one of the supported dual mode services. The MS being in the call active state, in-call modification procedure is initiated for the selected service from the MS side. The MS shall send a MODIFY message with new mode to the SS. The SS does not respond until timer T323 expires at the MS. The MS is expected to respond with a DISCONNECT message. The SS checks timer T323 accuracy between emission of MODIFY and reception of DISCONNECT messages, the state of the MS and a cause value from the DISCONNECT message.

Expected sequence

| Step | Direction | Message | Comments | |
|------|-----------|-------------------------|---|--|
| 1 | MS -> SS | CHANNEL REQUEST | MMI action to initiate a dual mode call SDCCH | |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | | |
| 3 | MS -> SS | CM SERVICE REQUEST | as specified in specific message contents | |
| 4 | SS -> MS | CIPHERING MODE COMMAND | | |
| 5 | MS -> SS | CIPHERING MODE COMPLETE | | |
| 6 | MS -> SS | SETUP | | |
| 7 | SS -> MS | AUTHENTICATION REQUEST | | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | | |
| 9 | SS -> MS | CALL PROCEEDING | | |
| 10 | SS -> MS | ASSIGNMENT COMMAND | | agreeing bearer capabilities for dual mode call TCH |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | | |
| 12 | SS -> MS | ALERTING | | |
| 13 | SS -> MS | CONNECT | MMI action to change the mode | |
| 14 | MS -> SS | CONNECT ACKNOWLEDGE | | |
| 15 | MS -> SS | MODIFY | | |
| 16 | SS | | the SS waits for the timer T323 expiry | |
| 17 | MS -> SS | DISCONNECT | cause value #102, the SS checks timer T323 accuracy ($\pm 10\%$) between MODIFY and DISCONNECT messages | |
| 18 | SS -> MS | STATUS ENQUIRY | cause 30#, state U11 | |
| 19 | MS -> SS | STATUS | | |

Specific message contents:

As specified in subclause 26.8.1.4.5.10.

26.8.1.4.5.6 In-call functions / MS originated in-call modification / a successful channel change in state mobile originating modify

26.8.1.4.5.6.1 Definition

This is to test a special case of a in-call modification procedure, in which a change of a physical channel occurs in state U26, mobile originating modify. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech/Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech/Group 3 fax).

26.8.1.4.5.6.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U26, "Mobile Originating Modify", after successful completion of a channel assignment procedure or channel mode modify procedure shall remain in the call state U26.
- 2) Upon receipt of the MODIFY COMPLETE message the MS shall start sending channel information according to the new call mode and enter the "active" state.

References

- 1) 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.2,
3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.6.1.
- 2) 3GPP TS 04.08, subclause 5.3.4.3.2.

26.8.1.4.5.6.3 Test purpose

- 1) To verify that a CC-entity of the MS in CC-state U26, "Mobile Originating Modify", after successful completion of a channel assignment procedure remains in the call state U26.
- 2) To verify that upon receipt of the MODIFY COMPLETE message the MS starts sending channel information according to the new call mode and enters the "active" state.

26.8.1.4.5.6.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call
- a way to activate in-call modification

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

CC-state U10, active.

Maximum duration of test

10 s.

Test procedure

The MS initiates a call for one of the supported dual mode services. The MS being in the call active state, in-call modification procedure is initiated for the selected service from the MS side. The MS shall send a MODIFY message with a new mode to the SS. The SS does not respond immediately, but performs channel assignment procedure including the appropriate channel mode for the new service. The state of the MS is then checked. The SS then returns a MODIFY COMPLETE message. The state of the MS is checked finally.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS -> SS | CHANNEL REQUEST | MMI action to initiate a dual mode call |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH |
| 3 | MS -> SS | CM SERVICE REQUEST | |
| 4 | SS -> MS | CIPHERING MODE COMMAND | |
| 5 | MS -> SS | CIPHERING MODE COMPLETE | |
| 6 | MS -> SS | SETUP | as specified in specific message contents |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | CALL PROCEEDING | agreeing bearer capabilities for dual mode call |
| 10 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> MS | ALERTING | |
| 13 | SS -> MS | CONNECT | |
| 14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 15 | MS -> SS | MODIFY | MMI action to change the mode |
| 16 | SS -> MS | ASSIGNMENT COMMAND | channel mode implied by the MODIFY message |
| 17 | MS -> SS | ASSIGNMENT COMPLETE | |
| 18 | SS -> MS | STATUS ENQUIRY | |
| 19 | MS -> SS | STATUS | cause 30#, state U26 |
| 20 | SS -> MS | MODIFY COMPLETE | |
| 21 | SS -> MS | STATUS ENQUIRY | |
| 22 | MS -> SS | STATUS | cause 30#, state U10 |

Specific message contents:

As specified in subclause 26.8.1.4.5.10.

26.8.1.4.5.7 In-call functions / MS originated in-call modification / an unsuccessful channel change in state mobile originating modify

26.8.1.4.5.7.1 Definition

This is to test a special case of a in-call modification procedure, in which an unsuccessful change of a physical channel occurs in state U26, mobile originating modify. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech/Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech/Group 3 fax).

26.8.1.4.5.7.2 Conformance requirement

- 1) A CC-entity of the MS in CC-state U26, "Mobile Originating Modify", when returning to the old channel after handover failure and having established the link, shall remain in the call state U26.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.4.3.2.

26.8.1.4.5.7.3 Test purpose

To verify that a CC-entity of the MS in CC-state U26, "Mobile Originating Modify", when returning to the old channel after handover failure and having established the link, remains in the call state U26.

26.8.1.4.5.7.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call
- a way to activate in-call modification

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

CC-state U26, mobile originating modify.

Maximum duration of test

10 s.

Test procedure

The MS initiates a call for one of the supported dual mode services. The MS being in the call active state, in-call modification procedure is initiated for the selected service from the MS side. The MS shall send a MODIFY message with a new mode to the SS. The SS initiates handover procedure. When the MS tries to establish the main signalling link, it is prohibited by the SS. Then the MS shall return back to the old channel and re-establish correctly the link. The state of the MS is then checked.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS -> SS | CHANNEL REQUEST | MMI action to initiate a dual mode call |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH |
| 3 | MS -> SS | CM SERVICE REQUEST | |
| 4 | SS -> MS | CIPHERING MODE COMMAND | |
| 5 | MS -> SS | CIPHERING MODE COMPLETE | |
| 6 | MS -> SS | SETUP | as specified in specific message contents |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |

26.8.1.4.5.8 In-call functions / MS originated in-call modification / unknown message received

26.8.1.4.5.8.1 Definition

This is to test a special case of a in-call modification procedure, in which an unknown message is received in state U26, mobile originating modify. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech/Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech/Group 3 fax).

26.8.1.4.5.8.2 Conformance requirement

A CC entity of a MS in CC-state U26, "Mobile Originating Modify", having received an unknown message from its peer entity shall return a STATUS message.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclause 8.4.

26.8.1.4.5.8.3 Test purpose

To verify that a CC entity of a MS in CC-state U26, "Mobile Originating Modify", having received an unknown message from its peer entity returns a STATUS message.

26.8.1.4.5.8.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call
- a way to activate in-call modification

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

CC-state U26, mobile originating modify.

Maximum duration of test

10 s.

Test procedure

The MS initiates a call for one of the supported dual mode services. The MS being in the call active state, in-call modification procedure is initiated for the selected service from the MS side. The MS shall send a MODIFY message with a new mode to the SS. The SS sends a message with message type not defined for the protocol discriminator. The state of the MS is then checked.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS -> SS | CHANNEL REQUEST | MMI action to initiate a dual mode call SDCCH |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 3 | MS -> SS | CM SERVICE REQUEST | as specified in specific message contents |

| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | SS -> SS | ALERTING | message type not defined for PD cause 97#, state U26 |
| 13 | SS -> MS | CONNECT | |
| 14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 15 | MS -> SS | MODIFY | |
| 16 | SS -> MS | unknown message | |
| 17 | MS -> SS | STATUS | |

Specific message contents:

As specified in subclause 26.8.1.4.5.10.

26.8.1.4.5.9 In-call functions / MS originated in-call modification / a release complete received

26.8.1.4.5.9.1 Definition

The call control entity of the MS being in the state, U26, the call is cleared by a RELEASE COMPLETE message sent by the SS. This test is applicable for any equipment supporting any dual mode bearer capability service (BS61 - Alternate Speech / Data, BS81 - Speech followed by Data, Teleservice 61 - Alternate Speech / Group 3 fax).

26.8.1.4.5.9.2 Conformance requirement

- 1) A CC entity of the MS in CC-state U26, "mobile originating modify", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".
- 2) On returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

Reference(s)

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.2 and 5.4.4.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.3.

26.8.1.4.5.9.3 Test purpose

- 1) To verify that a CC entity of the MS in CC-state U26, "mobile originating modify", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".
- 2) To verify that on returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

26.8.1.4.5.9.4 Method of test

Specific PICS statements

-

PIXIT statements

- a way to activate a dual mode call
- a way to activate in-call modification

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Maximum duration of test

30 s.

Test Procedure

The MS initiates a call for one of the supported dual mode services. The MS being in the call active state, in-call modification procedure is initiated for the selected service from the MS side. The MS shall send a MODIFY message with the new mode to the SS and the state of the MS is checked. The SS sends a RELEASE COMPLETE message to the MS. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

NOTE: ICM can be initiated by manual intervention at the MS.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | MS | | The MS is made to initiate a dual mode call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CIPHERING MODE COMMAND | |
| 6 | MS -> SS | CIPHERING MODE COMPLETE | |
| 7 | MS -> SS | SETUP | as specified in specific message contents |
| 8 | SS -> MS | AUTHENTICATION REQUEST | |
| 9 | MS -> SS | AUTHENTICATION RESPONSE | |
| 10 | SS -> MS | CALL PROCEEDING | as specified in specific message contents |
| 11 | SS -> MS | ASSIGNMENT COMMAND | channel mode: see subclause 10.4 |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | |
| 13 | SS -> MS | ALERTING | |
| 14 | SS -> MS | CONNECT | |
| 15 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 16 | MS -> SS | MODIFY | as specified in specific message contents |
| 17 | SS -> MS | STATUS ENQUIRY | |
| 18 | MS -> SS | STATUS | cause #30, state U26 |
| 19 | SS -> MS | RELEASE COMPLETE | |
| 20 | SS -> MS | STATUS ENQUIRY | |
| 21 | MS -> SS | RELEASE COMPLETE | cause #81 (invalid TI value) |
| 22 | SS | | repeat steps 20 - 21 to cover all the transaction identifiers from 000 ... 110 |
| 23 | SS -> MS | CHANNEL RELEASE | the main signalling link shall be released by the MS (L2: DISC/UA) |

Specific message contents:

As specified in subclause 26.8.1.4.5.10.

26.8.1.4.5.10 In-call functions/MS originated in-call modification/contents of some of the messages

The following messages are used for testing in-call modification procedures, test cases 26.8.1.4.5.*, as default messages for those ones defined below. If any other values are defined in the expected sequence of the actual test cases, those values take precedence over the ones defined hereafter.

SETUP (MS to SS)

| Information element | Value/remark |
|--|--|
| BC Repeat indicator | Sequential, if BS81 is being tested, otherwise circular for successive selection |
| Repeat indication | |
| Bearer capability 1 | Appropriate for the teleservice/Bearer Service selected as an initial call mode |
| Bearer capability 2 | Appropriate for the teleservice/Bearer Service to be selected as a new call mode |
| Facility | Omitted |
| Calling party subaddress | Omitted |
| Called party BCD number | As entered |
| Called party subaddress | Omitted |
| LLC repeat indicator | The same repeat indication as the one for BC. Present if and only if LLC I and LLC II are present |
| Low layer compatibility I | See note |
| Low layer compatibility II | See note |
| HLC repeat indicator | The same repeat indication as the one for BC. Present if and only if HLC i and HLC ii are present. |
| High layer compatibility i | See note |
| High layer compatibility ii | See note |
| User-user | Omitted |
| SS version | Omitted |
| CLIR suppression | Omitted |
| CC Capabilities | present, but contents not checked |
| NOTE: HLC/LLC may or may not be present. The contents of HLC/LLC are not verified. If LLC I is present then LLC II shall be present. If HLC i is present then HLC ii shall be present. | |

CALL PROCEEDING

If the MS offers a choice in a SETUP message with respect to its bearer capabilities (this choice is restricted to the connection element), the bearer capabilities 1 and 2 and BC repeat indicator must all be present in this message. Otherwise, all three IEs are omitted.

| Information element | Value/remark |
|---------------------|----------------------------------|
| Repeat Indicator | See above |
| Repeat indication | As received in the SETUP message |
| Bearer Capability 1 | Same as in subclause 10.4 |
| Bearer Capability 2 | Same as in subclause 10.4 |
| Facility | Omitted |
| Progress indicator | Omitted |

MODIFY

| Information element | Value/remark |
|---|---|
| Bearer capability | If the bearer capability IEs were present in the CALL PROCEEDING message, then as it was specified in the bearer capability 2 of the CALL PROCEEDING message. Otherwise as in the bearer capability 2 of the SETUP message. |
| Reverse Call Setup Direction | Presence and value not checked |
| Low layer compatibility | See note |
| High layer compatibility | See note |
| NOTE: HLC (LLC) shall be included if the HLC (LLC) was included in the SETUP message. The contents of LLC/HLC are not verified. | |

MODIFY COMPLETE

| Information element | Value/remark |
|------------------------------|---|
| Bearer capability | If the bearer capability IEs were present in the CALL PROCEEDING message, then as it was specified in the bearer capability 2 of the CALL PROCEEDING message. Otherwise as in the bearer capability 2 of the SETUP message. |
| Reverse Call Setup Direction | Same as in MODIFY |
| Low layer compatibility | See note |
| High layer compatibility | See note |
| NOTE: | HLC (LLC) shall be included if the HLC (LLC) was included in the SETUP message. The contents of LLC/HLC are not verified. |

MODIFY REJECT

| Information element | Value/remark |
|--------------------------|---|
| Bearer capability | If the bearer capability IEs were present in the CALL PROCEEDING message, then as it was specified in the bearer capability 1 of the CALL PROCEEDING message. Otherwise as in the bearer capability 1 of the SETUP message. |
| Cause | #58 "bearer capability not presently available". |
| Low layer compatibility | See note |
| High layer compatibility | See note |
| NOTE: | HLC (LLC) shall be included if the HLC (LLC) was included in the SETUP message. The contents of LLC/HLC are not verified. |

CHANNEL MODE MODIFY

| Information element | Value/remark |
|---------------------|--|
| Channel description | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Channel Mode | appropriate for the BC in the MODIFY |

CHANNEL MODE MODIFY ACKNOWLEDGE

| Information element | Value/remark |
|---------------------|--|
| Channel description | as sent by the SS in the corresponding CHANNEL MODE MODIFY message |
| Channel mode | as sent by the SS in the corresponding CHANNEL MODE MODIFY message |

26.8.2 Call Re-establishment

26.8.2.1 Call Re-establishment/call present, re-establishment allowed

26.8.2.1.1 Definition

This is to test a successful case of a call re-establishment procedure. This test is applicable for any equipment supporting at least one bearer capability. If the MS does not perform call re-establishment procedure correctly, the network will waste resources.

26.8.2.1.2 Conformance requirement

- 1) If the call is in the "active" state or "mobile originating modify" state, the indication from MM that re-establishment is possible shall cause call control to request re-establishment from the MM-connection, suspend any further message to be sent and await the completion of the re-establishment procedure.

- 2) When the call control entity is notified that the MM-connection is re-established, it shall then resume the transmission of possibly suspended messages and resume user data exchange when an appropriate channel is available.

References

- 1) 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.1.6 and 5.5.4.2.
- 2) 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.1.6 and 5.5.4.3.

26.8.2.1.3 Test purpose

The purpose of this test is to verify that the MS can correctly perform a call re-establishment procedure.

26.8.2.1.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

The SS simulates cells A and B. The LAC of cell A is different from the LAC of cell B. The PLMN identities of cell A and B are equal.

The call re-establishment parameter concerning cell A is set to an arbitrary value.

Cell B is not barred, the RACH control parameters information element sent in SYSTEM INFORMATION TYPE 1 to 4 messages of cell A and B specifies "call reestablishment allowed in the cell", the NCC of cell B is indicated as permitted in the PLMN permitted information element of SYSTEM INFORMATION TYPE 2 and 6 messages of cell A. Cell B is indicated as a neighbour cell of cell A in SYSTEM INFORMATION TYPE 2 and 5 messages of cell A. Cell reselect hysteresis parameter of cell A is set to zero.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN on cell A.

Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Maximum duration of test

1 minute.

Test procedure

The MS is brought to active state by using procedure 26.9.2, "structured procedures, MS originated call, early assignment". The RF level of cell A is lowered so that cell B is to be selected (when the MS performs re-establishment after radio link failure), while keeping the C1 and C2 of cell A greater than zero. SS waits for at least 5 s. Then the SS stops transmission on the TCH/SACCH. The MS shall re-establish the call on cell B using a CM RE-ESTABLISHMENT message. The SS performs ciphering mode setting and assignment procedures. The MS shall through-connect the appropriate bearer channel. Then, the call is cleared by the SS.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | | | Steps 1-19 of test case 26.9.2 are performed (the appropriate bearer channel is through connected in both directions in TCH) |
| 2 | SS | | The RF level of cell A is lowered. The SS waits at least 5 s. The SS stops transmission on the TCH/SACCH. |
| 3 | MS -> SS | CHANNEL REQUEST | this is sent on cell B. Establ. cause shall be "call re-establishment; TCH/F was in use,..." |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM REESTABLISHMENT REQUEST | note specific message contents |
| 6 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 8 | SS | | SS starts ciphering. |
| 9 | SS -> MS | ASSIGNMENT COMMAND | |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | |
| 11 | MS | | The appropriate bearer channel is through connected in both directions. |
| 12 | SS -> MS | DISCONNECT | with cause value "Normal" |
| 13 | MS -> SS | RELEASE | |
| 14 | SS -> MS | RELEASE COMPLETE | |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific message contents:

CM RE-ESTABLISHMENT REQUEST

| Information element | Value/remark |
|-------------------------------|---|
| Protocol discriminator | Mobility Management |
| Skip indicator | Encoded as zeroes |
| Message type | CM RE-ESTABLISHMENT REQUEST |
| Ciphering key sequence number | The CKSN which the MS was allocated in step 6 of the procedure of subclause 26.9.2. |
| Spare half octet | zero |
| Mobile station classmark 2 | |
| - ES_IND | as declared in the PICS/PIXIT |
| - RF Power capability | as declared in the PICS/PIXIT for band of operation |
| - Ciphering A5/1 | as declared in the PICS/PIXIT |
| Mobile identity | The TMSI that the MS is having initially |
| Location area identification | Corresponding the LAI of cell A |

26.8.2.2 Call Re-establishment/call present, re-establishment not allowed

26.8.2.2.1 Definition

This is to test a special case of a call re-establishment, in which it is not allowed for a MS to attempt re-establishment of a call. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.2.2.2 Conformance requirement

When a lower layer failure occurs while an MM-connection is active, if a cell allowing call re-establishment is not available, the MS shall release the MM-connection and shall not attempt call re-establishment.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.1.6 and 5.5.4.

26.8.2.2.3 Test purpose

The purpose of this test is to verify that the MS does not attempt call re-establishment when it is not allowed to take place because of the unavailability of a cell allowing call re-establishment.

26.8.2.2.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

The SS simulates cell A.

Cell A is not barred, the NCC of cell A is indicated as permitted in the PLMN permitted information element of SYSTEM INFORMATION TYPE 2 and 6 messages. The RE field of the RACH control parameters information element broadcast in messages SYSTEM INFORMATION TYPE 1, 2, 3 and 4 of cell A are set to "call reestablishment not allowed in the cell".

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Maximum duration of test

1 minute.

Test procedure

The MS is brought to active state by using procedure 26.9.2, "structured procedures, MS originated call, early assignment". The SS stops transmission on the TCH/SACCH. The MS shall not require re-establishment of the call.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|---------|---|
| 1 | | | Steps 1-19 of test case 26.9.2 are performed (the appropriate bearer channel is through connected in both directions in TCH) |
| 2 | SS 3 | MS | the SS stops transmission on the TCH/SACCH the MS shall not attempt re-establishment on cell A. This is checked for 30 s after the radio link failure. |

Specific message contents:

None.

26.8.2.3 Call Re-establishment/call under establishment, transmission stopped

26.8.2.3.1 Definition

This is to test a special case of a call re-establishment, in which it is not allowed for a MS to attempt re-establishment of a call, since the call has not been established yet. This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.

26.8.2.3.2 Conformance requirement

When a lower layer failure occurs while an MM-connection is active, if the state of the call control entity is not "active", the MS shall release the MM-connection and shall not attempt call re-establishment.

References

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 4.5.1.6 and 5.5.4.2.

26.8.2.3.3 Test purpose

The purpose of this test is to verify that the MS does not attempt call re-establishment when it is not allowed to take place because of the call control state.

26.8.2.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions

System Simulator:

The SS simulates cell A.

Cell A is not barred, the RACH control parameters information element sent in SYSTEM INFORMATION TYPE 1 to 4 messages of cell A specifies "call reestablishment allowed in the cell", the NCC of cell A is indicated as permitted in the PLMN permitted information element of SYSTEM INFORMATION TYPE 2 and 6 messages.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Maximum duration of test

1 minute.

Test procedure

The call control entity of the MS is brought to state U4, "call delivered" by using initial part of procedure 26.9.2, "structured procedures, MS originated call, early assignment". The SS stops transmission on the TCH/SACCH. The MS shall not require re-establishment of the call on cell A.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | | | the MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | |
| 11 | SS -> MS | CALL PROCEEDING | |
| 12 | SS -> MS | ASSIGNMENT COMMAND | |
| 13 | MS -> SS | ASSIGNMENT COMPLETE | |
| 14 | SS -> MS | ALERTING | |
| 15 | SS | | the SS stops transmission on the TCH/SACCH |
| 16 | MS | | the MS shall not attempt re-establishment on cell A. This is checked for 30 s after the radio link failure. |

Specific message contents:

None.

26.8.3 User to user signalling

26.8.3.1 Definition

The "user to user" information element is used to convey information between the mobile user and a remote ISDN user. This test is therefore applicable for any equipment supporting at least one mobile terminating circuit switched basic service.

NOTE: There is no test for an MS originating call including a "user-user" information element since it is not a mandatory MS feature.

26.8.3.2 Conformance requirement

The inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the MS.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.2, 9.3.7, 9.3.23.1 and 10.5.4.25.

26.8.3.3 Purpose of the test

The purpose of this test is to verify that inclusion of the "user-user" information element in either of the down link messages, SETUP or DISCONNECT causes no adverse effects on the operation of the MS.

26.8.3.4 Method of test

Specific PICS statements

-

PIXIT statements

-

Initial conditions.

System Simulator:

The SS simulates 1 cell, with default parameters.

Mobile Station:

The MS is in MM-state "idle updated", with a valid TMSI and CKSN.

Foreseen final state of the MS

The MS is in MM-state "idle updated", with a valid TMSI and CKSN.

Maximum duration of test

2 minutes.

Test procedure

The SS attempts to set up a mobile terminated call, with one of the supported circuit switched basic services which has been arbitrarily chosen, using one of the generic call set up procedures,(either speech or data) as specified in clause 10. The default SETUP message contents are modified to include the user-user Information Element. The MS shall not respond adversely to the inclusion of the user-user information element.

After 30 s the SS sends a DISCONNECT message, again the MS shall not respond adversely to the inclusion of the user-user information element, but shall continue to clear down the call normally.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | | | Generic Call Setup procedure defined in clauses 10.1 or 10.3, depending on choice of Bearer Capability. The SETUP message in either case contains the user-user IE, see Specific message contents. |
| 2 | | | The SS waits 30 s. |
| 3 | SS -> MS | DISCONNECT | Message contains the user-user IE, see Specific message contents |
| 4 | MS -> SS | RELEASE | As defined in subclause 26.8.4 |
| 5 | SS-> MS | RELEASE COMPLETE | As defined in subclause 26.8.4 |
| 6 | SS-> MS | CHANNEL RELEASE | As defined in subclause 26.8.4 |

Specific message contents:

SETUP

As default message contents as defined in the Generic Call setup procedures subclauses 10.1 or 10.3 except:

| Information Element | value/remark |
|---------------------|---|
| Bearer Capability | Bearer capability arbitrarily chosen from those supported by the Mobile Station under test. |
| user-user | |
| - length | Length of user-user contents (note) |
| - PD | IA5 characters (note) |
| - user-user | The following string coded in IA5 characters: "Call Setup" (note) |

DISCONNECT

As default message contents as defined in subclause 26.8.4, except:

| Information Element | value/remark |
|--|---|
| user-user - length - PD - user-user | Length of user-user contents (note) IA5 characters (note) The following string coded in IA5 characters: "Call Disconnect" (note) |
| NOTE: | The codings above are for example only. For the case of an MS which supports "user-user" signalling it may be necessary to add meaning to the data fields, see PICS/PIXIT statement(s). |

26.8.4 Default contents of message

ALERTING (mobile station to network direction)

No default requirements defined for this message.

ALERTING (network to mobile station direction)

| Information element | Value/remark |
|---------------------|--------------|
| Facility | Omitted |
| Progress indicator | Omitted |
| User-user | Omitted |

ASSIGNMENT COMMAND

| Information element | Value/remark |
|-----------------------------------|--|
| Description of the first channel | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Power Command | As in subclause 6.3 |
| Frequency list | Omitted |
| Cell channel description | Omitted |
| Mode of the first channel | appropriate for the bearer capability chosen for the test |
| Description of the second channel | Omitted |
| Mode of the second channel | Omitted |
| Mobile allocation | Omitted |
| Starting time | Omitted |
| Cipher mode setting | Omitted |

ASSIGNMENT COMPLETE

| Information element | Value/remark |
|---------------------|--------------|
| RR cause | not checked |

AUTHENTICATION REQUEST

| Information element | Value/remark |
|-------------------------------|--------------------------|
| Ciphering key sequence number | Arbitrary excluding 111B |
| Spare half octet | (spare bits) |
| Authentication parameter RAND | Arbitrary |

AUTHENTICATION RESPONSE

| Information element | Value/remark |
|-------------------------------|--------------|
| Authentication parameter SRES | not checked |

CALL CONFIRMED

No default requirements defined for this message.

CALL PROCEEDING

| Information element | Value/remark |
|---------------------|---|
| Repeat Indicator | Omitted |
| Bearer Capability 1 | Omitted if the SETUP message did not specify in the bearer capability 1 IE a connection element value "both, transparent preferred" or "both, non-transparent preferred". Otherwise included; in that case the connection element specifies the value that is appropriate for the selected basic service (either value "transparent" or value "non transparent (RLP)"), all other parameters are same as in the bearer capability 1 IE of the received SETUP message. |
| Bearer Capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |

CHANNEL MODE MODIFY

| Information element | Value/remark |
|---------------------|--|
| Channel description | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Channel mode | appropriate for the bearer capability chosen for the test |

CHANNEL MODE MODIFY ACKNOWLEDGE

| Information element | Value/remark |
|---------------------|--|
| Channel description | as sent by the SS in the corresponding CHANNEL MODE MODIFY message |
| Channel mode | as sent by the SS in the corresponding CHANNEL MODE MODIFY message |

CHANNEL RELEASE

| Information element | Value/remark |
|---------------------|--------------|
| RR cause | Normal event |

CHANNEL REQUEST

| Information element | Value/remark |
|---------------------|--|
| Establishment cause | If in response to paging, then "100"; if a mobile originating call, then "111" |
| Random reference | Arbitrary value of 5 bits length |

CIPHERING MODE COMMAND

| Information element | Value/remark |
|---|---------------------------------|
| Cipher mode setting algorithm identifier | indicates a supported algorithm |
| SC | Start ciphering |
| Cipher response CR | IMEI must not be included |

CIPHERING MODE COMPLETE

No default requirements defined for this message.

CM SERVICE ACCEPT

No default values defined for this message.

CM SERVICE REJECT

| Information element | Value/remark |
|---------------------|--|
| Reject cause | Service or option not available, unspecified |

CM SERVICE REQUEST

No default requirements defined for this message.

CONNECT (network to mobile station direction)

| Information element | Value/remark |
|----------------------|--------------|
| Facility | Omitted |
| Progress indicator | Omitted |
| Connected number | Omitted |
| Connected subaddress | Omitted |
| User-user | Omitted |

CONNECT (mobile station to network direction)

No default requirements defined for this message.

CONNECT ACKNOWLEDGE

No default requirements defined for this message.

DISCONNECT (network to mobile station direction)

| Information element | Value/remark |
|---------------------|-----------------|
| Cause | |
| Coding standard | GSM |
| Location | User |
| Cause value | Normal clearing |
| Facility | Omitted |
| Progress indicator | Omitted |
| User-user | Omitted |

DISCONNECT (mobile station to network direction)

| Information element | Value/remark |
|---------------------|--|
| Cause | Shall be present, contents not checked |
| Facility | Omitted |
| User-user | Omitted |
| SS version | Omitted |

HANDOVER ACCESS

No default requirements defined for this message.

HANDOVER COMMAND

| Information element | Value/remark |
|----------------------------------|--|
| Cell Description | a BCCH frequency, which is one of the neighbour cells |
| Description of the first channel | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Handover Reference | an arbitrary value |
| Power Command | as in 6.3 |
| Synchronization indication | Omitted |
| Frequency short list | Omitted |
| Frequency List | Omitted |
| Cell Channel Description | Omitted |
| Channel Mode | Omitted |
| Channel Description | Omitted |
| Channel Mode 2 | Omitted |
| Frequency Channel Sequence | Omitted |
| Mobile Allocation | Omitted |
| Starting Time | Omitted |
| Real time difference | Omitted |
| Timing advance | Omitted |
| Cipher Mode setting | Omitted |

HANDOVER FAILURE

No default requirements defined for this message.

IMMEDIATE ASSIGNMENT

| Information element | Value/remark |
|---------------------------|---|
| Page mode | Normal paging |
| Channel description | describes a valid SDCCH+SACCH in non-hopping mode |
| Request reference | |
| Random access information | As received from MS |
| T1', T2, T3 | Corresponding to frame number of the CHANNEL REQUEST |
| Timing advance | corresponding the timing difference between the MS and the SS |
| Mobile allocation | Empty (L=0) |
| Starting time | Omitted |

MODIFY

No default values defined for this message.

MODIFY COMPLETE

No default requirements defined for this message.

MODIFY REJECT

No default values defined for this message.

NOTIFY (network to mobile station direction)

| Information element | Value/remark |
|------------------------|--|
| Notification indicator | one of the valid values chosen arbitrarily |

PAGING REQUEST TYPE 1

| Information element | Value/remark |
|-------------------------------------|---------------------------------|
| L2 pseudo length | L2 pseudo length of the message |
| Page Mode | Normal Paging |
| Channels needed for Mobiles 1 and 2 | |
| channel (first) | any channel |
| channel (second) | any channel |
| Mobile identity 1 | TMSI of MS under test |
| Mobile identity 2 | Omitted |
| P1 rest octets | (spare octets) |

PAGING RESPONSE

No default requirements defined for this message.

PROGRESS

No default values defined for this message.

RELEASE (network to mobile station direction)

| Information element | Value/remark |
|---------------------|--------------|
| Cause | Omitted |
| Second cause | Omitted |
| Facility | Omitted |
| User-user | Omitted |

RELEASE (mobile station to network direction)

No default requirements defined for this message.

RELEASE COMPLETE (network to mobile station direction)

| Information element | Value/remark |
|---------------------|--------------|
| Cause | Omitted |
| Facility | Omitted |
| User-user | Omitted |

RELEASE COMPLETE (mobile station to network direction)

No default requirements defined for this message.

SETUP (mobile station to network direction)

| Information element | Value/remark |
|-----------------------------|---|
| BC Repeat indicator | Omitted |
| Bearer capability 1 | Appropriate for the basic service selected for the test |
| Bearer capability 2 | Omitted |
| Facility | Omitted |
| Calling party subaddress | Omitted |
| Called party BCD number | As entered |
| Called party subaddress | Omitted |
| LLC repeat indicator | Omitted |
| Low layer compatibility I | Appropriate for the basic service selected for the test |
| Low layer compatibility II | Omitted |
| HLC repeat indicator | Omitted |
| High layer compatibility i | Appropriate for the basic service selected for the test |
| High layer compatibility ii | Omitted |
| User-user | Omitted |
| SS version | Omitted |
| CLIR suppression | Omitted |
| CC Capabilities | present, shall indicate support for DTMF as per subclause 5.5.7 of 3GPP TS 04.08 / 3GPP TS 24.008 |

SETUP (network to mobile station direction)

| Information element | Value/remark |
|-----------------------------|--|
| BC repeat indicator | Omitted |
| Bearer capability 1 | Appropriate for the basic service selected for the test |
| Bearer capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |
| Signal | Any defined value as described for Signal IE in 3GPP TS 04.08 / 3GPP TS 24.008 |
| Calling party BCD number | Omitted |
| Calling party subaddress | Omitted |
| Called party BCD number | Omitted |
| Called party subaddress | Omitted |
| LLC repeat indicator | Omitted |
| Low layer compatibility I | Appropriate for the basic service selected for the test |
| Low layer compatibility II | Omitted |
| HLC repeat indicator | Omitted |
| High layer compatibility i | Appropriate for the basic service selected for the test |
| High layer compatibility ii | Omitted |
| User-user | Omitted |

START DTMF

No default requirements defined for this message.

START DTMF ACKNOWLEDGE

| Information element | Value/remark |
|---------------------|---|
| Keypad facility | corresponding to the DTMF digit indicated in the START DTMF message |

START DTMF REJECT

| Information element | Value/remark |
|---------------------|--|
| Cause | value "Resources unavailable, unspecified" |

STATUS

| Information element | Value/remark |
|---------------------|--|
| Cause | Value "Response to STATUS ENQUIRY" |
| Call state | Specified separately in each test case |
| Auxiliary states | Omitted |

STATUS ENQUIRY

No default values defined for this message, except that when this message is used to check that "all the transaction identifiers from 000 to 110" are in the null state, the TI flag shall take the value "1" in mobile originating call tests and shall take the value "0" in mobile terminating call tests.

STOP DTMF

No default requirements defined for this message.

STOP DTMF ACKNOWLEDGE

No default values defined for this message.

Unknown Message

| | |
|------------------------|-------------------------------|
| Protocol Discriminator | Call Control; Call Related SS |
| Transaction Identifier | same as in use in the test |
| Message Type | 0000 0100 |

26.9 Structured procedures

26.9.1 Structured procedures / general

The purpose of these tests is to verify that the MS performs certain elementary procedures of the RR, MM, and CC protocol correctly within a structured procedure. The term "structured procedure" is defined in 3GPP TS 04.08 / 3GPP TS 23.108, clause 7, where also examples of structured procedures are given.

The reason for this test purposes is twofold:

- The behaviour of the MS in an elementary procedure may depend on the preamble which precedes the elementary procedure.
- Structured procedures tested in this subclause are used in other parts of this Technical Specification as preambles to establish the initial conditions for other tests; correct behaviour of an implementation under test in a preamble is essential for the validity of a test.

Mobile originating and terminating calls are tested in cases of both early and late assignment of the traffic channel; in one of the cases call release initiated by the network is tested, in another one, call release initiated by the MS.

The feature Directed Retry is tested in both Mobile Originated and Mobile Terminated Call. The configuration of the assigned channels is described in table 26.9-1:

Table 26.9-1

| Directed Retry from | To | Call direction | Start Time | Sync. | Subclause | Exec. Counter |
|---------------------|-----------------|----------------|------------|-------|-----------|---------------|
| SDCCH/4 | TCH/F, cycl. FH | MOC | None | No | 26.9.7 | 1 |
| SDCCH/8, cycl. FH | TCH/H, rand. FH | MOC | None | No | 26.9.7 | 2 |
| SDCCH/4 | TCH/F, no FH | MTC | None | No | 26.9.8 | 1 |
| SDCCH/8, rand. FH | TCH/H, cycl. FH | MTC | 1.1 sec. | No | 26.9.8 | 2 |

The tests in this subclause only cover the successful outcome of elementary procedures (i.e. they do not deal with abnormal cases).

In this subclause, the emergency call service is tested for mobile stations that do not support the full rate speech version 2 in the following cases:

- emergency call initiated in the idle, updated state with authentication and ciphering, for speech full rate version 1 and if supported, speech half rate version 1;
- emergency call initiated in the idle, no IMSI state (hence without authentication and without ciphering), the network accepting the call, for either speech full rate version 1 or, provided it is supported, speech half rate version 1;
- emergency call initiated in the idle, no IMSI state (hence without authentication and without ciphering), the network rejecting the call, for either speech full rate version 1 or, provided it is supported, speech half rate version 1.

These tests on emergency calls are only applicable to an MS supporting speech.

For an MS supporting speech the test procedures in 26.9.2, 26.9.3, 26.9.4, 26.9.5, 26.9.7 and 26.9.8 are performed for speech (teleservice 11, telephony), once for speech full rate version 1 and, if supported, once for speech half rate version 1.

For an MS not supporting speech but supporting at least one teleservice, for each of the test procedures in subclauses 26.9.2, 26.9.3, 26.9.4, 26.9.5, 26.9.7 and 26.9.8 and each supported rate (full rate/half rate) a teleservice supported by the MS (see PICS/PIXIT statement) is chosen, and the test is performed corresponding to that teleservice (note that this teleservice is never a dual service).

In cases where a mobile originated call for the tested teleservice can be initiated both

- via the MMI; and
- via the R or S interface,

procedures 26.9.2 and 26.9.7 (m = 1) shall be performed when initiating the mobile originated call via the MMI and procedures 26.9.3 and 26.9.7 (m = 2) shall be performed when initiating the mobile originated call via an appropriate interface (R or S).

26.9.2 Structured procedures / MS originated call / early assignment

26.9.2.1 Conformance requirements

- 1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.
- 2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice that is supported by the MS, shall start to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.
- 3) Subsequently after establishment of an MM connection, the MS shall send a SETUP message with correct parameters.
- 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - attach the user connection to the radio path;
 - return a CONNECT ACKNOWLEDGE message.
- 5) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.
- 6) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

26.9.2.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.
- 2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.
- 4) To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCH, after having completed the traffic channel early assignment procedure by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.
- 5) To verify that subsequently the MS has attached the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- 6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.
- 7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

These test purposes are tested for all rates supported by the MS (full rate/half rate).

26.9.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements:

- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)
- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)

PIXIT statements:

- Way to indicate mobile originated alerting
- Way to display the called number

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

A teleservice is selected that is supported by the MS; if the MS supports speech version 1, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is made to initiate a call. The call is established with early assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS | | The "called number" is entered. |
| 2 | MS | | If supported, the MS must display the called number in the way defined in PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | MS -> SS | SETUP | |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ASSIGNMENT COMMAND | |
| 14 | MS -> SS | ASSIGNMENT COMPLETE | |
| 15 | SS -> MS | ALERTING | |
| 16 | MS | | Depending on the PIXIT, an alerting indication is given. |
| 17 | SS -> MS | CONNECT | |
| 18 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 19 | MS | | The appropriate bearer channel is through connected in both directions. |
| 20 | SS -> MS | DISCONNECT | |
| 21 | MS -> SS | RELEASE | |
| 22 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

None.

26.9.3 Structured procedures / MS originated call / late assignment

26.9.3.1 Conformance requirement

- 1) An MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS, shall start to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 2) Upon receipt of the ASSIGNMENT COMMAND message, the Mobile Station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause "normal event", to the network on the main DCCH.
- 3, 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - attach the user connection to the radio path;
 - return a CONNECT ACKNOWLEDGE message.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3.1 and 3.4.3.2.

Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.

26.9.3.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.
- 2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.
- 3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.
- 4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

These test purposes are tested for all rates supported by the MS (full rate/half rate).

26.9.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements:

- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1)
- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)

PIXIT statements:

- Way to indicate mobile originated alerting
- Way to display the called number

Foreseen Final State of the MS

The MS has a MO call in state U10, "active".

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

A teleservice is selected that is supported by the MS; if the MS supports speech version 1, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is made to initiate a call. The call is established with late assignment.

Maximum Duration of Test

30 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS | | The "called number" is entered. |
| 2 | MS | | |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | MS -> SS | SETUP | |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ALERTING | |
| 14 | MS | | Depending on the PIXIT, an alerting indication is given. |
| 15 | SS -> MS | ASSIGNMENT COMMAND | |
| 16 | MS -> SS | ASSIGNMENT COMPLETE | |
| 17 | SS -> MS | CONNECT | |
| 18 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 19 | MS | | The appropriate bearer channel is through connected in both directions. |

Specific Message Contents:

None.

26.9.4 Structured procedures / MS terminated call / early assignment

26.9.4.1 Conformance requirements

- 1) The MS shall acknowledge the SETUP message with a CALL CONFIRMED message, if compatibility checking was successful, the MS is not busy, and the user does not refuse the call.
- 2, 3) Upon receipt of the ASSIGNMENT COMMAND message the MS continues a mobile terminating call establishment with early establishment of the traffic channel
 - a) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and
 - b) if the MS supports immediate connect, by continuing the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, by sending an ALERTING message
- 4) An MS indicates acceptance of a MT call by sending CONNECT.
- 5)

For speech calls:

The mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

For data calls:

The mobile station shall attach the user connection when receiving the CONNECT ACKNOWLEDGE message from the network.

- 6) The MS initiates call clearing of an active call by sending a DISCONNECT message.
- 7) The MS in this phase of call release, upon receipt of a RELEASE message, shall return a RELEASE COMPLETE message.
- 8) Subsequently the MS, upon receipt of a CHANNEL RELEASE message, shall disconnect the main signalling link.

26.9.4.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having sent a PAGING RESPONSE message on the allocated SDCCH, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message not containing a signal information element, returns a CALL CONFIRMED message.
- 2) To verify that subsequently, the SS sending an ASSIGNMENT COMMAND message, the MS successfully continues a mobile terminating call establishment with early assignment of traffic channel:
 - a) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and

- b) by continuing the call establishment by either:
- sending a CONNECT messages and through connecting the TCH in both directions; or
 - sending an ALERTING message.
- 3) To verify that if after sending a CALL PROCEEDING message, the MS sends an ALERTING message during MTC establishment with early assignment, it generates an alerting indication.
- 4) To verify that if an ALERTING had been sent, subsequently, when the user accepts the call (possibly internal action as declared in PIXIT statement), the MS returns a CONNECT message.
- 5) To verify that the MS:
- if the call is a speech call: after sending the CONNECT message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) CONNECT message, the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
 - if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- 6) To verify that subsequently, the MS can initiate call clearing by sending a DISCONNECT message.
- 7) To verify that the MS in this phase of call release, upon receipt of a RELEASE message, returns a RELEASE COMPLETE message.
- 8) To verify that subsequently the MS, upon receipt of a CHANNEL RELEASE message, disconnects the main signalling link.

These test purposes are tested for all rates supported by the MS (full rate/half rate).

26.9.4.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements:

- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1).
- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)
- Immediate connect supported for all circuit switched basic services. (TSPC_AddInfo_ImmConn)

PIXIT statements:

- Way to indicate alerting.
- Way to make the MS accept an incoming call after alerting.

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

A teleservice is selected that is supported by the MS; if the MS supports speech version 1, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is paged and the resulting call is established. Having reached the active state, the MS is made to clear the call.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SETUP | Message does not contain the signal IE. |
| 11 | MS -> SS | CALL CONFIRMED | If the MS supports immediate connect then branch A applies. If the MS does not support immediate connect then branch B applies |
| A12 | MS -> SS | CONNECT | sent on the old channel |
| A13 | SS -> MS | ASSIGNMENT COMMAND | |
| A14 | MS -> SS | ASSIGNMENT COMPLETE | |
| B12 | SS -> MS | ASSIGNMENT COMMAND | |
| B13 | MS -> SS | ASSIGNMENT COMPLETE | sent on the new channel |
| B14 | MS -> SS | ALERTING | |
| B15 | MS | | An alerting indication as defined in a PIXIT statement is given by the MS |
| B16 | MS | | The MS is made to accept the call in the way described in a PIXIT statement |
| B17 | MS -> SS | CONNECT | |
| 18 | MS | | If the call is a speech call, the TCH shall be through connected in both directions. |
| 19 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | If the call is a data call, the TCH shall be through connected in both directions. |
| 21 | MS | | The MS is made to release the call. |
| 22 | MS -> SS | DISCONNECT | |
| 23 | SS -> MS | RELEASE | |
| 24 | MS -> SS | RELEASE COMPLETE | |
| 25 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

None.

26.9.5 Structured procedures / MS terminated call / late assignment

26.9.5.1 Conformance requirement

TP1, TP2: The MS shall acknowledge the SETUP message with a CALL CONFIRMED message, if compatibility checking was successful, the MS is not busy, and the user does not refuse the call. The MS on acceptance of the call sends a CONNECT, otherwise user alerting is initiated.

TP3: The MS indicates acceptance of a call by sending a CONNECT message.

TP4: ASSIGNMENT COMMAND is answered by ASSIGNMENT COMPLETE.

TP5: For speech calls:

The mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

For data calls:

The mobile station shall attach the user connection when receiving the CONNECT ACKNOWLEDGE message from the network.

Requirement reference:

Conformance requirements 1, 2, 3: 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.2.3.1, 5.2.2.3.2 and 5.2.2.5.

Conformance requirement 4: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.3.1.

Conformance requirement 5: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.2.9.

26.9.5.2 Test purpose

- 1) To verify that the MS in "Idle, Updated" state with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having established the main signalling link, after having sent a PAGING RESPONSE message, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message containing a signal information element, returns a CALL CONFIRMED message followed by:
 - an ALERTING message;
 - or a CONNECT message.
- 2) To verify that in the situation of test purpose 1, if the MS sends an ALERTING message, the MS generates an alerting indication in the way described in a PIXIT statement.
- 3) To verify that subsequently the MS, if it had not yet sent a CONNECT message, upon acceptance of the call, sends a CONNECT message.
- 4) To verify that subsequently after receipt of an ASSIGNMENT COMMAND, the MS sends an ASSIGNMENT COMPLETE message.

5) To verify that subsequently the MS:

- if the call is a speech call: after sending the ASSIGNMENT COMPLETE message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) ASSIGNMENT COMPLETE message, the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

These test purposes are tested for all rates supported by the MS (full rate/half rate).

26.9.5.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements:

- Speech supported for Full rate version 1 (GSM FR) (TSPC_AddInfo_Full_rate_version_1).
- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)
- Immediate connect supported for all circuit switched basic services. (TSPC_AddInfo_ImmConn)

PIXIT statements:

- Way to indicate alerting.
- Way to make the MS accept an incoming call after alerting.

Foreseen Final State of the MS

CC state U10-call active.

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

- A teleservice is selected that is supported by the MS; if the MS supports speech version 1, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.
- The MS is paged and a MT call is established with late assignment (after CONNECT).

Maximum Duration of Test

40 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SETUP | Message contains the signal IE. |
| 11 | MS -> SS | CALL CONFIRMED | |
| A12 | MS -> SS | CONNECT | |
| B12 | MS -> SS | ALERTING | |
| B13 | MS | | An alerting indication as defined in an PIXIT statement is given by the MS. |
| B14 | MS | | The MS is made to accept the call in the way described in a PIXIT statement. |
| B15 | MS -> SS | CONNECT | |
| 16 | SS -> MS | ASSIGNMENT COMMAND | |
| 17 | MS -> SS | ASSIGNMENT COMPLETE | |
| 18 | MS | | If the call is a speech call, the TCH shall be through connected in both directions. |
| 19 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | If the call is a data call, the MS shall through connect the TCH in both directions. |

Specific Message Contents:

None.

26.9.6 Structured procedures / emergency call

Emergency call establishment can be initiated by an MS whether location updating has been successful or not and whether a SIM is inserted into the MS or not; but only if the MS is equipped for speech.

If the procedures tested in this subclause are not correctly implemented in the MS, establishment, maintenance and clearing of connections might fail in the essential case of emergency calls.

26.9.6.1 Structured procedures / emergency call / idle updated

26.9.6.1.1 Structured procedures / emergency call / idle updated / preferred channel rate

26.9.6.1.1.1 Conformance requirement

- 1) For R97/98 MS: The MS in the "idle, updated" state, as after a successful location update, after the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in Mexico) has been entered by user, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").

For R99 MS: When a SIM/USIM containing stored emergency numbers is present, those numbers are identified as emergency numbers. As an optional requirement, the ME shall also identify 112 and 911 as emergency numbers irrespective of whether these are stored in the SIM/USIM. Any other emergency numbers stored in the ME shall be ignored.

When no emergency numbers are stored within the SIM the following numbers shall be stored in the ME for use as emergency numbers: 112, and 911.

When no emergency numbers are stored within the USIM the following numbers shall be stored in the ME for use as emergency numbers: 112, and 911.

- 2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct CKSN and TMSI , with CM Service Type "emergency call establishment".
- 3) Authentication and cipher mode setting shall be performed successfully.
- 4) After cipher mode setting acceptance by the network, the MS shall send an EMERGENCY SETUP message.
- 5), 6) The emergency call shall be correctly established. The assignment procedure shall be correctly performed.
- 7) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the TCH shall be through connected in both directions if an appropriate TCH is available.
- 8) The call shall be cleared correctly.

Requirement Reference:

For conformance requirement 1 and 2:

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1,
3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1 and 4.5.1.5,
3GPP TS 02.30 clause 4,
3GPP TS 22.101 clauses 8.

For conformance requirement 3:

3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.7,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.3.2.

For conformance requirement 4:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1.

For conformance requirement 5 and 6:

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.1,
3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3.

For conformance requirement 7:

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.6 and 5.1.3.

For conformance requirement 8:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.4.

26.9.6.1.1.2 Test purpose

- 1) To verify that an R97/R98 MS supporting speech in the MM state "idle, updated", when made to call the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in Mexico), sends a CHANNEL REQUEST message with establishment cause "emergency call".
To verify that an R99 MS supporting speech (or a R97/98 MS using the R99 Emergency Numbers) in the MM state "idle, updated", when made to call the number 112 or 911, sends a CHANNEL REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".
- 3) To verify that authentication and cipher mode setting are performed successfully.
- 4) To verify that after cipher mode setting acceptance by the SS, the MS sends an EMERGENCY SETUP message.
- 5) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, which, if the MS

supports both TCH/FS and TCH/HS, is at the preferred rate, the MS performs correctly that assignment procedure.

- 6) To verify subsequent correct performance of a connect procedure.
- 7) To verify that subsequently the MS has through connected the TCH in both directions.
- 8) To verify that the call is cleared correctly.

26.9.6.1.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Specific PICS statements:

- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)
- Use of R99 Emergency numbers (TSPC_R99_Emerg)

PIXIT statements:

- .

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The MS is made to initiate an emergency call. The call is established with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | MS | | The appropriate emergency call number is entered. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | MS -> SS | EMERGENCY SETUP | If half rate speech version 1 is supported, the message must contain one bearer capability IE indicating in the radio channel requirement field "dual rate/half rate preferred" or "dual rate/full rate preferred". If half rate speech version 1 is not supported, the message must either contain no bearer capability IE or contain one bearer capability IE indicating in the radio channel requirement field "full rate channel". |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ALERTING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | The rate of the channel is that one indicated by the EMERGENCY SETUP message, if that message did not offer a choice, and the rate is the preferred one else. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | CONNECT | |
| 17 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 18 | MS | | The TCH is through connected in both directions. |
| 19 | SS -> MS | DISCONNECT | |
| 20 | MS -> SS | RELEASE | |
| 21 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Note: According to the conformance requirements there is no need to execute the test case by dialling the number 08 for an R99 MS (or a R97/98 MS using the R99 Emergency numbers)

Specific Message Contents:

None.

26.9.6.1.2 Structured procedures / emergency call / idle updated, non-preferred channel rate

This test is identical to the test in subclause 26.9.6.1.1 except that in step 14 the assigned TCH has the non-preferred rate.

26.9.6.1.3 Structured procedures / emergency call / idle updated / EAB active

26.9.6.1.3.1 Conformance requirement

The preliminary access barring check shall indicate network access is barred if all of the following conditions are satisfied:

- the establishment cause for the request received from the MM sublayer is not "emergency call".
- the SYSTEM INFORMATION TYPE 21 message is broadcast in the cell and includes EAB information;
- the mobile station is a member of a subcategory of mobile stations targeted by the EAB information;
- the EAB Authorization Mask sent in the EAB information indicates the mobile station's access class is not authorized;

- the mobile station is not a member of any of the authorized special access classes (i.e. an Access Class in the range 11-15) permitted by the network;

An MS configured for NAS signalling low priority indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured to NAS signalling low priority" except for the following cases in which the MS shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the MS is performing an attach for emergency bearer services;
- the MS has a PDN connection for emergency bearer services established and is performing mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the MS is accessing the network with access class 11 – 15; or
- the MS is responding to paging.

Reference:

3GPP TS 44.018 subclause 3.3.1.4, 3GPP TS 24.008 subclause 1.8

26.9.6.1.3.2 Test purpose

To verify that the MS, configured for Extended Access class Barring can initiate an emergency call when EAB is being broadcast

To verify that the Low Access Priority indicator is set in the Service Request message

26.9.6.1.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

The SYSTEM INFORMATION TYPE 3 message indicates that the SYSTEM INFORMATION TYPE 21 is sent on the BCCH by setting the SYSTEM INFORMATION 21 Indicator in the SI3 Rest Octet IE.

The SYSTEM INFORMATION TYPE 21 is sent on the BCCH. The SI 21 Rest Octets information element is configured with: EAB Authorization Mask set to "xxxxxxxx1" and EAB Subcategory set to "00".

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN."

The MS is configured for "Extended Access Barring"

The MS belong to access class 0

Specific PICS statements:

-

PIXIT statements:

-

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The SS waits until all system information messages, including SYSTEM INFORMATION TYPE 21, is sent. The SI 21 Rest Octets information element is configured with: EAB Authorization Mask set to "xxxxxxxx1" and EAB Subcategory set to "00" in SYSTEM INFORMATION TYPE 21.

The MS is made to initiate an emergency call. The call is established with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | | | The SS waits until it has sent all system information messages |
| 2 | MS | | The appropriate emergency call number is entered. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". The Device properties IE indicates "NAS signalling low priority" |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | MS -> SS | EMERGENCY SETUP | |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ALERTING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | CONNECT | |
| 17 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 18 | MS | | The TCH is through connected in both directions. |
| 19 | SS -> MS | DISCONNECT | |
| 20 | MS -> SS | RELEASE | |
| 21 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

SYSTEM INFORMATION TYPE 3 broadcast in the cell:

Same as default content except

| Information Element | Value/remark |
|---------------------------------|---|
| SI 3 Rest Octets | |
| SYSTEM INFORMATION 21 Indicator | H (SYSTEM INFORMATION TYPE 21 message is available) |
| SI21_POSITION | 0 (SYSTEM INFORMATION TYPE 21 message is sent on BCCH Norm) |

SYSTEM INFORMATION TYPE 21 broadcast by Cell A initially and in steps 11 and 20:

Same as default content except

| Information Element | Value/remark |
|------------------------|---|
| SI 21 Rest Octets | |
| EAB Authorization Mask | 'xxxxxxxxx1' (MSs configured for EAB and a member of Access Class 0 are barred) |
| EAB Subcategory | '00' (applicable to all mobile stations configured for EAB) |

26.9.6.2 Structured procedures / emergency call / idle, no IMSI

26.9.6.2.1 Structured procedures / emergency call / idle, no IMSI / accept case

26.9.6.2.1.1 Conformance requirement

- 1) The MS in the "idle, updated" state, as after a successful location update, after the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in Mexico) has been entered by user, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
- 2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct IMEI and a non-available CKSN, with CM Service Type "emergency call establishment".
- 3) After cipher mode setting acceptance by the network, the MS shall send an EMERGENCY SETUP message.
- 4),5) The emergency call shall be correctly established. The assignment procedure shall be correctly performed.
- 6) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the TCH shall be through connected in both directions if an appropriate TCH is available.
- 7) The call shall be cleared correctly.

Requirement Reference:

For conformance requirement 1 and 2:

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1,
3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1 and 4.5.1.5,
3GPP TS 02.30 clause 4.

For conformance requirement 3:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1.

For conformance requirements 4 and 5:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1,
3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3.

For conformance requirement 6:

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.6 and 5.1.3.

For conformance requirement 7:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.4.

26.9.6.2.1.2 Test purpose

- 1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in Mexico), sends a CHANNEL REQUEST message with establishment cause "emergency call".

- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message in which the cipher key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency number establishment", and the mobile identity IE specifies the IMEI of the MS.
- 3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the MS sends an EMERGENCY SETUP message.
- 4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, which, if the MS supports both TCH/FS and TCH/HS, is at the preferred rate, the MS performs correctly that assignment procedure.
- 5) To verify subsequent correct performance of a connect procedure.
- 6) To verify that subsequently the MS has through connected the TCH in both directions.
- 7) To verify that the call is cleared correctly.

26.9.6.2.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Specific PICS statements:

- .

PIXIT statements:

- .

Foreseen Final State of the MS

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Test procedure

The MS is made to initiate an emergency call. The call is established without authentication, without ciphering, with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS | | |
| 3 | MS -> SS | CHANNEL REQUEST | The appropriate emergency call number is entered. Establishment cause is "emergency call". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". The mobile identity IE specifies the IMEI of the MS. The cipher key sequence number IE indicates "no key is available". |
| 4 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | EMERGENCY SETUP | |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ALERTING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | The rate of the channel is one indicated by the EMERGENCY SETUP message. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | CONNECT | |
| 17 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 18 | MS | | The TCH is through connected in both directions. |
| 19 | SS -> MS | DISCONNECT | |
| 20 | MS -> SS | RELEASE | |
| 21 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

None.

26.9.6.2.2 Structured procedures / emergency call / idle, no IMSI / reject case

26.9.6.2.2.1 Conformance requirement

- 1) The MS in the "idle, no IMSI" state (no SIM inserted), after the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in Mexico) has been entered, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
- 2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct IMEI and a non-available CKSN, with CM Service Type "emergency call establishment".
- 3) In the situation at the end of test purpose 2, when the MS receives a CM SERVICE REJECT message, it shall abandon the emergency call.

Requirement Reference:

For conformance requirement 1 and 2:

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1,
3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1 and 4.5.1.5,
3GPP TS 02.30 clause 4.

For conformance requirement 3:

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.7,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.5.1.1.

26.9.6.2.2.2 Test purpose

- 1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, (for GSM 900 and 1800 MS), or 911 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in USA

and Canada), or 08 (for GSM 710, GSM 750, T-GSM 810, GSM 850 and PCS 1 900 MS in Mexico) sends a CHANNEL REQUEST message with establishment cause "emergency call".

- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message in which the cipher key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency call establishment", and the mobile identity IE specifies the IMEI of the MS.
- 3) To verify that after receipt of a CM SERVICE REJECT message from the SS, the MS abandons the emergency call establishment.

26.9.6.2.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Specific PICS statements:

- .

PIXIT statements:

- .

Foreseen Final State of the MS

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Test procedure

The MS is made to initiate an emergency call. The call is established without authentication, without ciphering, with early assignment. The SS responds to the CM SERVICE REQUEST from the MS with a CM SERVICE REJECT message specifying in the reject cause IE the reject cause value "IMEI not accepted". The SS then verifies for during 5 s that the MS does not send a layer 3 message. Then the call is cleared by the SS. The SS verifies during 20 s after disconnection of the main signalling link that the MS does not initiate an RR connection establishment.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 1 | MS | | The appropriate call number is entered. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "emergency call". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". The mobile identity IE specifies the IMEI of the MS. The cipher key sequence number IE indicates "no key is available". |
| 4 | SS -> MS | CM SERVICE REJECT | the reject cause IE specifies reject cause value #5, "IMEI not accepted". |
| 5 | SS | | During 5 s, the SS verifies that the MS does not send L3 messages. |
| 6 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 7 | SS | | During 20 s, the SS verifies that the MS does not initiate an RR connection establishment. |

Specific Message Contents:

-

26.9.6a Structured Calls /eCall

eCall establishment can be initiated by a MS whether location updating has been successful or not, but only if the MS supports eCall capability and has a valid USIM provisioned for the eCall service.

If the procedures tested in this clause are not correctly implemented in the MS, establishment, maintenance or clearing of connections might fail in the essential case of eCall.

Note: eCall functionality has to be tested with Test USIM as defined in Annex 4a.

26.9.6a.1 eCall with USIM

26.9.6a.1.1 Void

26.9.6a.1.2 Test eCall using eCall capable MS with 'eCall only' subscription on USIM

26.9.6a.1.2.1 Conformance Requirement

The eCall inactivity procedure is applicable only to an eCall only mobile station (as determined by information configured in USIM).

[..]

While in eCALL INACTIVE state, the mobile station maintains awareness of a potential serving cell in a potential serving network but initiates no MM signalling with the network and ignores any paging requests.

The mobile station shall leave eCALL INACTIVE state only when one of the following events occur:

[..]

- if there is a CM request for a call to an HPLMN designated non-emergency MSISDN for the purpose of accessing test and terminal reconfiguration services: the mobile station attempts normal location updating. Once this is complete, further MM and CM procedures are used to establish the non-emergency call.

.

26.9.6a.1.2.2 Test purpose

1. Verify that the eCall only capable MS is capable of making a test eCall.

26.9.6a.1.2.3 Method of test

Initial conditions

The eCall only capable MS is equipped with eCall enabled USIM.

System Simulator

1 cell, default parameters, Ciphering Off

T3212 set to 12 Minutes. ATT flag set to 1 (IMSI ATTACH/DETACH shall be performed in the cell)

Mobile Station

The MS is equipped with a Test USIM containing default values except for those listed below.

| USIM field | Contents |
|-------------------|--|
| EF _{UST} | Service n°2 Fixed Dialling Numbers (FDN) and Service n°89 eCall Data available |
| EF _{FDN} | Display two FDNs, eCall Test Number (123456) and eCall reconfiguration number (345678) |
| EF _{EST} | Enabled Services Table |

Specific PICS statement(s)

-

Specific PIXIT Statement(s)

-

Test procedure

- a. MS is powered on. SS monitors to verify that MS does not attempt to register for a period of 120 seconds.
- b. MS is made to initiate a Test eCall in accordance with manufacturer's instructions . SS checks that MS performs registration before starting Test eCall.
- c. Having reached the active state, the call is cleared by the SS. SS monitors to verify that MS remains registered and send a periodic LAU message as T3212 timer is set to 12 minutes.

Maximum Duration of Test

20 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|---------|--|
| 1 | MS | | The MS is switched on. |
| 2 | SS | | The SS verifies for 120 sec that the MS does not send RACH or any other message. |

| | | | |
|----|----------|----------------------------|--|
| 3 | MS | | MS is made to initiate a Test eCall (The first number stored in the EF _{F_{DN}} field) |
| 4 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to Location updating. |
| 5 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | LOCATION UPDATING REQUEST | "Location Updating Type" = Normal location updating/IMSI Attach. |
| 7 | SS->MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 10 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 11 | SS -> MS | CHANNEL RELEASE | |
| 12 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to "originating call" |
| 13 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 14 | MS -> SS | CM SERVICE REQUEST | |
| 15 | SS -> MS | CM SERVICE ACCEPT | |
| 16 | MS -> SS | SETUP | Verify called number is the test eCall number. (The first number stored in the EF _{F_{DN}} field) |
| 17 | SS -> MS | CALL PROCEEDING | |
| 18 | SS -> MS | ALERTING | |
| 19 | MS | | Depending on the PIXIT, an alerting indication is given. |
| 20 | SS -> MS | ASSIGNMENT COMMAND | |
| 21 | MS -> SS | ASSIGNMENT COMPLETE | |
| 22 | SS -> MS | CONNECT | |
| 23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 24 | MS | | Traffic channel is kept active for at least 5 seconds. |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 29 | SS | | SS verifies that MS sends periodic Location Update Request after 12 minutes (5% margin is allowed). |

Specific Message Contents

None

26.9.6a.1.3 Manually initiated eCall using eCall capable MS with 'eCall only' subscription on USIM

26.9.6a.1.3.1 Conformance Requirement

1. When in state MM IDLE and service state eCALL INACTIVE, the mobile station shall:

- not perform periodic updating;
- not perform IMSI detach;
- reject any requests from CM entities for MM connections except for emergency calls and calls to a non-emergency MSISDN for test and terminal reconfiguration services;
- not perform normal location updating; and
- not respond to paging.

2. An eCall only mobile station (as determined by information configured in USIM), shall start timer T3242 if the return to MM IDLE state is subsequent to an emergency services call and shall start timer T3243 if the return to MM IDLE state is subsequent to a call to a non-emergency MSISDN for test and terminal reconfiguration services, as described in subclause 4.4.7

26.9.6a.1.4 Manually initiated eCall using eCall capable MS with eCall capable USIM

26.9.6a.1.4.1 Conformance Requirement

1. eCall and Normal call support

Requirement: Service n° 89 and Service n° 4 are "available".

Request: The ME performs the reading procedure with EFSDN.

If eCall and normal calls are supported, then the last two entries of EFSDN shall contain the eCall test number and the eCall reconfiguration number respectively. A terminal in eCall and normal mode performs the SDN related procedures.

2. TBD

Table 10.5.135d/3GPP TS 24.008: Service Category information element

| |
|--|
| <p>Emergency Service Category Value (octet 3) The meaning of the Emergency Category Value is derived from the following settings (see 3GPP TS 22.101 [8] clause 10):</p> <p>Bit 1 Police Bit 2 Ambulance Bit 3 Fire Brigade Bit 4 Marine Guard Bit 5 Mountain Rescue Bit 6 manually initiated eCall Bit 7 automatically initiated eCall Bit 8 is spare and set to "0"</p> <p>Mobile station may set one or more bits to "1" If more than one bit is set to "1", routing to a combined Emergency centre (e.g. ambulance and fire brigade in Japan) is required. If the MSC can not match the received service category to any of the emergency centres, it shall route the call to an operator defined default emergency centre.</p> <p>If no bit is set to "1", the MSC shall route the Emergency call to an operator defined default emergency centre. A mobile station initiating an eCall shall set either bit 6 or bit 7 to "1". The network may use the information indicated in bit 6 and bit 7 to route the manually or automatically initiated eCall to an operator defined emergency call centre.</p> |

26.9.6a.1.5 eCall Inactivity State after T3242 expires

26.9.6a.1.5.1 Conformance Requirement

1. When in state MM IDLE and service state eCALL INACTIVE, the mobile station shall:

- not perform periodic updating;
- not perform IMSI detach;
- reject any requests from CM entities for MM connections except for emergency calls and calls to a non-emergency MSISDN for test and terminal reconfiguration services;
- not perform normal location updating; and
- not respond to paging.

2. An eCall only mobile station (as determined by information configured in USIM), shall start timer T3242 if the return to MM IDLE state is subsequent to an emergency services call and shall start timer T3243 if the return to MM IDLE

state is subsequent to a call to a non-emergency MSISDN for test and terminal reconfiguration services, as described in subclause 4.4.7.

3. The mobile station shall leave eCALL INACTIVE state only when one of the following events occur:

- if the SIM or USIM is removed, the mobile station enters the NO IMSI state;
- if coverage is lost, the mobile station enters PLMN SEARCH state;
- if the mobile station is deactivated (e.g. powered off) by the user: the mobile station enters the NULL state;
- if there is a CM request for an emergency services call: the MS uses the MM and CM procedures to establish the emergency call; or
- if there is a CM request for a call to an HPLMN designated non-emergency MSISDN for the purpose of accessing test and terminal reconfiguration services: the mobile station attempts normal location updating. Once this is complete, further MM and CM procedures are used to establish the non-emergency call.

26.9.6a.1.5.2 Test purpose

Verify that the eCall capable mobile equipped with USIM subscription restricted to eCall only

1. Able to make eCall
2. Registers to the NW as an eCall is initiated.
3. Remains registered on the network for a duration of T3242 following completion of an eCall.
4. Detaches from network upon expiry of T3242.
5. Comes out of the eCall Inactive state when eCall is initiated (MS should register back to NW and then initiate eCall)

26.9.6a.1.5.3 Method of test

Initial conditions

The eCall capable MS is equipped with USIM subscription restricted to eCall only.

System Simulator

1 cell, default parameters, ciphering off

T3212 set to 252 Minutes. ATT flag set to 1 (IMSI ATTACH/DETACH shall be performed in the cell)

Mobile Station

The MS is equipped with a Test USIM containing default values except for those listed below.

| USIM field | Contents |
|-------------------|--|
| EF _{UST} | Service n°2 Fixed Dialling Numbers (FDN) and Service n°89 eCall Data available |
| EF _{FDN} | Display two FDNs, eCall Test Number (123456) and eCall reconfiguration number (345678) |
| EF _{EST} | Enabled Services Table |

Specific PICS statement(s)

-

Specific PIXIT statement(s)

-

Test procedure

- a) MS is powered on. SS monitors to verify that MS does not attempt to register for a period of 120 seconds.
- b) MS is made to initiate an eCall in accordance with manufacturer's instructions. SS checks that MS performs registration before starting an eCall.
- c) Having reached the active state, the call is cleared by the SS. SS monitors to verify that MS remains registered for the duration of T3242 and send LAU messages every 252 mins (as T3212 timer is set to 252 minutes).
- d) Upon expiry of timer T3242 the MS shall perform IMSI detach.
- e) MS is made to initiate an eCall. SS checks that MS performs registration before starting an eCall.
- f) Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

12 hours 20 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | The MS is switched on. |
| 2 | SS | | The SS verifies for 120 sec that the MS does not send RACH or any other message. |
| 3 | MS | | MS is made to initiate a manual eCall |
| 4 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to Location updating. |
| 5 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS ->SS | LOCATION UPDATING REQUEST | "Location Updating Type" = Normal location updating/IMSI Attach. |
| 7 | SS->MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 10 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 11 | SS -> MS | CHANNEL RELEASE | |
| 12 | MS -> SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause is emergency call establishment" |
| 13 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 14 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". |
| 15 | SS -> MS | CM SERVICE REQUEST | |
| 16 | MS -> SS | EMERGENCY SETUP | SS verifies that optional IE "Service category" should be present and bit 6 should be set to 1 and bit 7 should be set to 0. |
| 17 | SS -> MS | CALL PROCEEDING | |
| 18 | SS -> MS | ALERTING | |
| 19 | SS -> MS | ASSIGNMENT COMMAND | |

3GPP TS 24.008 subclauses 10.5.4.33

26.9.6a.1.6.2 Test purpose

Verify that the eCall capable mobile equipped with eCall and non eCall subscription on USIM

1. Performs LAU when Switched on
2. Able to make an Automatic eCall.
3. MS provides appropriate Service Category information to the network when Automatic eCall is initiated. (Bit 7 should be set to 1 and Bit 6 should be set to 0).

26.9.6a.1.6.3 Method of test

Initial conditions

The eCall capable MS is equipped with eCall and non eCall subscription on USIM.

System Simulator

1 cell, default parameters, ciphering off

ATT flag set to 1 (IMSI ATTACH/DETACH shall be performed in the cell)

Mobile Station

The MS is equipped with a Test USIM containing default values except for those listed below

| USIM field | Contents |
|-------------------|--|
| EF _{UST} | Service n°4 Service Dialling Numbers (SDN) and Service n°89 eCall Data available |
| EF _{SDN} | Display two SDNs, eCall Test Number (123456) and eCall reconfiguration number (345678) |
| EF _{EST} | Enabled Services Table |

Specific PICS statement(s)

-

Specific PIXIT statement(s)

-

Test procedure

- a) MS is powered on.
- b) SS checks that MS successfully performs LAU.
- c) MS is made to initiate an automatic eCall in accordance with manufacturer's instructions. SS verifies that MS provides appropriate Service Category information to the network. (Bit 7 should be set to 1 and Bit 6 should be set to 0).
- d) Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

5 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|--|
| 1 | MS | | The MS is switched on. |
| 2 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to Location updating within 60 sec. |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS ->SS | LOCATION UPDATING REQUEST | "Location Updating Type" = Normal Location Updating/IMSI attach. |
| 5 | SS->MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 8 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | MS is made to initiate an Automatic eCall |
| 11 | MS -> SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause is emergency call establishment" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | EMERGENCY SETUP | SS verifies that optional IE "Service category" should be present and bit 6 should be set to 0 and bit 7 should be set to 1. |
| 16 | SS -> MS | CALL PROCEEDING | |
| 17 | SS -> MS | ALERTING | |
| 18 | SS -> MS | ASSIGNMENT COMMAND | |
| 19 | MS -> SS | ASSIGNMENT COMPLETE | |
| 20 | SS -> MS | CONNECT | |
| 21 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 22 | MS | | Traffic channel is kept active for at least 5 seconds. |
| 23 | SS -> MS | DISCONNECT | |
| 24 | MS -> SS | RELEASE | |
| 25 | SS -> MS | RELEASE COMPLETE | |
| 26 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

26.9.6a.1.7 Reconfiguration eCall using eCall capable MS with 'eCall only' subscription on USIM

26.9.6a.1.7.1 Conformance Requirement

The eCall inactivity procedure is applicable only to an eCall only mobile station (as determined by information configured in USIM).

[..]

While in eCALL INACTIVE state, the mobile station maintains awareness of a potential serving cell in a potential serving network but initiates no MM signalling with the network and ignores any paging requests.

The mobile station shall leave eCALL INACTIVE state only when one of the following events occur:

[..]

- if there is a CM request for a call to an HPLMN designated non-emergency MSISDN for the purpose of accessing test and terminal reconfiguration services: the mobile station attempts normal location updating. Once this is complete, further MM and CM procedures are used to establish the non-emergency call.

Reference(s)

3GPP TS 24.008 subclauses 4.4.7

26.9.6a.1.7.2 Test purpose

1. Verify that the eCall capable MS is capable of making a reconfiguration eCall.

26.9.6a.1.7.3 Method of test

Initial conditions

The eCall capable MS is equipped with eCall only enabled USIM.

System Simulator

1 cell, default parameters, Ciphering Off

Mobile Station

The MS is equipped with a Test USIM containing default values except for those listed below.

| USIM field | Contents |
|-------------------|--|
| EF _{UST} | Service n°2 Fixed Dialling Numbers (FDN) and Service n°89 eCall Data available |
| EF _{FDN} | Display two FDNs, eCall Test Number (123456) and eCall reconfiguration number (345678) |
| EF _{EST} | Enabled Services Table |

Specific PICS statement(s)

-

Specific PIXIT Statement(s)

-

Test procedure

- a. MS is powered on. SS monitors to verify that MS does not attempt to register for a period of 120 seconds.
- b. MS is made to initiate a reconfiguration eCall in accordance with manufacturer's instructions . SS checks that MS performs registration before starting reconfiguration eCall.
- c. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

5 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|---------|--|
| 1 | MS | | The MS is switched on. |
| 2 | SS | | The SS verifies for 120 sec that the MS does not send RACH or any other message. |
| 3 | MS | | MS is made to initiate a reconfiguration eCall (The second number stored in the EF _{FDN} field) |

| | | | |
|----|----------|----------------------------|---|
| 4 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to Location updating. |
| 5 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | LOCATION UPDATING REQUEST | "Location Updating Type" = Normal location updating/IMSI Attach. |
| 7 | SS->MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 10 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 11 | SS -> MS | CHANNEL RELEASE | |
| 12 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to "originating call" |
| 13 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 14 | MS -> SS | CM SERVICE REQUEST | |
| 15 | SS->MS | CM SERVICE ACCEPT | |
| 16 | MS -> SS | SETUP | Verify called number is the reconfiguration eCall number. (The second number stored in the EF _F DN field) |
| 17 | SS -> MS | CALL PROCEEDING | |
| 18 | SS -> MS | ALERTING | |
| 19 | MS | | Depending on the PIXIT, an alerting indication is given. |
| 20 | SS -> MS | ASSIGNMENT COMMAND | |
| 21 | MS -> SS | ASSIGNMENT COMPLETE | |
| 22 | SS -> MS | CONNECT | |
| 23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 24 | MS | | Traffic channel is kept active for at least 5 seconds. |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

26.9.6a.1.8 eCall Inactivity State after T3243 expires

26.9.6a.1.8.1 Conformance Requirement

1. When in state MM IDLE and service state eCALL INACTIVE, the mobile station shall:

- not perform periodic updating;
- not perform IMSI detach;

- reject any requests from CM entities for MM connections except for emergency calls and calls to a non-emergency MSISDN for test and terminal reconfiguration services;
- not perform normal location updating; and
- not respond to paging.

2. An eCall only mobile station (as determined by information configured in USIM), shall start timer T3242 if the return to MM IDLE state is subsequent to an emergency services call and shall start timer T3243 if the return to MM IDLE state is subsequent to a call to a non-emergency MSISDN for test and terminal reconfiguration services, as described in subclause 4.4.7.

3. The mobile station shall leave eCALL INACTIVE state only when one of the following events occur:

- if the SIM or USIM is removed, the mobile station enters the NO IMSI state;
- if coverage is lost, the mobile station enters PLMN SEARCH state;
- if the mobile station is deactivated (e.g. powered off) by the user: the mobile station enters the NULL state;
- if there is a CM request for an emergency services call: the MS uses the MM and CM procedures to establish the emergency call; or
- if there is a CM request for a call to an HPLMN designated non-emergency MSISDN for the purpose of accessing test and terminal reconfiguration services: the mobile station attempts normal location updating. Once this is complete, further MM and CM procedures are used to establish the non-emergency call.

Reference(s)

3GPP TS 24.008 subclauses 4.2.2.9, 4.2.3, 4.4.7

26.9.6a.1.8.2 Test purpose

Verify that the eCall capable mobile equipped with USIM subscription restricted to eCall only

1. Able to make a test eCall.
2. Registers to the NW as a test eCall is initiated.
3. Remains registered on the network for a duration of T3243 following completion of a test eCall.
4. Detaches from network upon expiry of T3243.
5. Comes out of the eCall Inactive state when a test eCall is initiated (MS should register back to NW and then initiate test eCall).

26.9.6a.1.8.3 Method of test

Initial conditions

The eCall capable MS is equipped with USIM subscription restricted to eCall only.

System Simulator

1 cell, default parameters, ciphering off

T3212 set to 252 Minutes. ATT flag set to 1 (IMSI ATTACH/DETACH shall be performed in the cell)

Mobile Station

The MS is equipped with a Test USIM containing default values except for those listed below.

| USIM field | Contents |
|-------------------|--|
| EF _{UST} | Service n°2 Fixed Dialling Numbers (FDN) and Service n°89 eCall Data available |
| EF _{FDN} | Display two FDNs, eCall Test Number (123456) and eCall reconfiguration number (345678) |
| EF _{EST} | Enabled Services Table |

Specific PICS statement(s)

-

Specific PIXIT statement(s)

-

Test procedure

- MS is powered on. SS monitors to verify that MS does not attempt to register for a period of 120 seconds.
- MS is made to initiate a Test eCall in accordance with manufacturer's instructions. SS checks that MS performs registration before starting an Test eCall.
- Having reached the active state, the call is cleared by the SS. SS monitors to verify that MS remains registered for the duration of T3243 and send LAU messages every 252 mins (as T3212 timer is set to 252 minutes).
- Upon expiry of timer T3243 the MS shall perform IMSI detach.

Maximum Duration of Test

12 hours 20 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|------|-----------|----------------------------|---|
| 1 | MS | | The MS is switched on. |
| 2 | SS | | The SS verifies for 120 sec that the MS does not send RACH or any other message. |
| 3 | MS | | MS is made to initiate a Test eCall (The first number stored in the EF _{FDN} field) |
| 4 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to Location updating. |
| 5 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | LOCATION UPDATING REQUEST | "Location Updating Type" = Normal location updating/IMSI Attach. |
| 7 | SS->MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | LOCATION UPDATING ACCEPT | |
| 10 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 11 | SS -> MS | CHANNEL RELEASE | |
| 12 | MS->SS | CHANNEL REQUEST | The SS verifies that the MS sends RACH Request with "Establishment cause" set to "originating call" |
| 13 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 14 | MS -> SS | CM SERVICE REQUEST | |

| | | | |
|----|----------|------------------------|--|
| 15 | SS -> MS | CM SERVICE ACCEPT | |
| 16 | MS -> SS | SETUP | Verify called number is the Test eCall number. (The first number stored in the EF _{FDN} field) |
| 17 | SS -> MS | CALL PROCEEDING | |
| 18 | SS -> MS | ALERTING | |
| 19 | MS | | Depending on the PIXIT, an alerting indication is given. |
| 20 | SS -> MS | ASSIGNMENT COMMAND | |
| 21 | MS -> SS | ASSIGNMENT COMPLETE | |
| 22 | SS -> MS | CONNECT | |
| 23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 24 | MS | | Traffic channel is kept active for at least 5 seconds. |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 29 | SS | | SS verifies that MS sends periodic Location Update Request every 252 minutes (5% margin is allowed). |
| 30 | SS | IMSI DETACH INDICATION | SS verifies that MS performs IMSI detach after T3243 expires. (After 12 hours of completing step 28). 1% margin is allowed |

Specific Message Contents

26.9.7 Directed Retry / Mobile Originated Call

26.9.7.1 Conformance requirements

The MS shall correctly apply the Directed Retry procedure from SDCCH/8 (with frequency hopping) or SDCCH/4 to TCH/F or TCH/H with or without frequency hopping in the non-synchronized case during call establishment. The call control entity of the Mobile Station in the "mobile originating call proceeding" state shall, upon receipt of a CONNECT message, attach the appropriate user connection to the radio path and return a CONNECT ACKNOWLEDGE message to the SS.

References

3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.4,
3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1.6. and 9.1.15.

3GPP TS 04.13, subclause 5.2.6.2.

26.9.7.2 Test purpose

To test that, when the MS is ordered to perform a non-synchronized handover after the CALL PROCEED message, it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay. To test that the call control entity of the Mobile Station in the "mobile originating call proceeding" state, upon receipt of a CONNECT message, attaches the appropriate user connection to the radio path and returns a CONNECT ACKNOWLEDGE message to the SS.

26.9.7.3 Method of test

Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

Cell A has:

BCCH ARFCN = See the table below.

Cell Allocation = (See the table below.

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = See the table below.

Cell Allocation = See the table below.

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

| Band | Cell A | | Cell B | | Both Cells Format |

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter $M = 1$ a combined CCH/SDCCH is used.

For execution counter $M = 2$ a non-combined SDCCH is used.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)

PIXIT statements:

- Way to indicate mobile originated alerting.

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

This procedure is repeated for execution counter $M = 1..2$.

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is made to initiate a call on Cell A. After the SS has sent the CALL PROCEEDING message the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH (and optionally on the SACCH) to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 26.6-2 of subclause 26.6.5) access bursts, the

SS sends one PHYSICAL INFORMATION message with an arbitrarily chosen Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. After the successful handover procedure the SS sends the ALERTING message. The correct alerting indication shall be given to the user (only applicable if the MS supports this feature). The SS sends the CONNECT message indicating that the call has been answered. The appropriate bearer channel shall be through connected in both directions. The MS shall send then the CONNECT ACKNOWLEDGE message as the response on the CONNECT message. Having reached the active state, the call is cleared by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13. The value of "x" depends upon the target channel and is specified in the specific message contents section.

Maximum Duration of Test

2 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

The sequence is performed for execution counter M = 1..2 (unless a particular TCH is not supported).

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | ----- | ----- | A MO call is initiated on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | CM SERVICE REQUEST | CM Service Type = Mobile Originating Call Establishment. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | |
| 11 | SS -> MS | CALL PROCEEDING | |
| 12 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| 13 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. |
| 14 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| 15 | MS -> SS | SABM | Sent without information field. |
| 16 | SS -> MS | UA | |
| 17 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step 14. |
| 18 | SS -> MS | ALERTING | |
| 19 | MS | | Depending on the PIXIT, an alerting indication is given. |
| 20 | SS -> MS | CONNECT | |
| 21 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 22 | MS | | The appropriate bearer channel is through connected in both directions. |
| 23 | SS -> MS | DISCONNECT | |
| 24 | MS -> SS | RELEASE | |
| 25 | SS -> MS | RELEASE COMPLETE | |
| 26 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents For Mobiles Supporting Speech

M = 1:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|------------------------------|--------------|
| As default message contents. | |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | See the table below |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Synchronization Indication IE is not included | |
| Frequency list after time | |
| - Frequency List | Encode frequencies as per the table below. |
| Channel Mode IE | Speech (full rate version 1 or half rate version 1). |

Step 17: "x" = 500.

| HANDOVER COMMAND | | | |
|------------------|----------------------|---|---------------------|
| Band | Frequency Short List | | BCCH Carrier Number |
| | Format | ARFCNs | ARFCN |
| GSM 450 | Range 128 | 260, 262, 264, 266, 268, 270, 272, 276, 279, 281, 283, 285, 287, 289, 291 | 274 |

Specific Message Contents For Mobiles not Supporting Speech

The message contents shall be the same as for a Mobile Station supporting speech, except for:

For M = 1 (TCH/F):

HANDOVER COMMAND

| Information Element | value/remarks |
|-----------------------|---|
| Mode of first channel | Arbitrary from those supported (12, 6, 3.6 kbps). |

For M = 2 (TCH/H):

HANDOVER COMMAND

| Information Element | value/remarks |
|-----------------------|---|
| Mode of first channel | Arbitrary from those supported (6, 3.6 kbps). |

26.9.8 Directed Retry / Mobile Terminated Call

This test is applicable to all MS which support at least one MT circuit switched basic service.

26.9.8.1 Conformance requirements

The MS shall correctly apply the Directed Retry procedure from SDCCH/8 (with frequency hopping) or SDCCH/4 to TCH/F or TCH/H with or without frequency hopping in the non-synchronized case during call establishment. The call control entity of the Mobile Station in the "call delivered" state shall, if the MS supports immediate connect, continue the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, send an ALERTING message. The MS indicates acceptance of a MT call by sending CONNECT.

For speech calls the mobile station shall attach the user connection at latest when sending the CONNECT message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

For Data Calls the mobile station shall attach the user connection when receiving the CONNECT ACKNOWLEDGE message from the network.

3GPP TS 04.13, subclause 5.2.6.2.

26.9.8.2 Test purpose

To test that when the MS is ordered to perform a non-synchronized handover after the CALL CONFIRM message, it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay. To test that the call control entity of the Mobile Station in the "call delivered" state, if the MS supports immediate connect, continues the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, sends an ALERTING message. To test that the MS indicates acceptance of a MT call by sending CONNECT.

To test that for speech calls the mobile station attaches the user connection at latest when sending the CONNECT message, except if there is no compatible radio resource available at this time. To test that in this case the attachment is delayed until such a resource becomes available.

To test that for Data Calls the mobile station attaches the user connection when receiving the CONNECT ACKNOWLEDGE message from the network.

26.9.8.3 Method of test

Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

Cell A has:

BCCH ARFCN = See the table below.

Cell Allocation = See the table below.

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = See the table below.

Cell Allocation = See the table below.

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

| Band | Cell A | | Cell B | | Both Cells Format |
|-----------|---------------|---|---------------|--|----------------------|
| | BCCH ARFCN | Cell Allocation | BCCH ARFCN | Cell Allocation | |
| GSM 450 | 263 | 259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291 | 274 | 260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291 | Range 128 |

| PCS 1 900 | 647 | 634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744 | 664 | 639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744 | Range 512 |

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter $M = 1$ a combined CCH/SDCCH is used.

For execution counter $M = 2$ a non-combined SDCCH is used.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)
- Immediate connect supported for all circuit switched basic services. (TSPC_AddInfo_ImmConn)

PIXIT statements:

- Way to indicate alerting.
- Way to make the MS accept an incoming call after alerting.

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

This procedure is repeated for execution counter $M = 1..2$.

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is paged on Cell A. The MS responds to the PAGING REQUEST message and establishes a mobile terminated call on Cell A. If the MS supports immediate connect, it continues the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, it sends an ALERTING message. The MS indicates acceptance of a MT call by sending CONNECT.

After the MS has sent the CALL CONFIRMED message (if the MS supports immediate connect then the MS sends the CONNECT message after the CALL CONFIRMED message on the old channel) the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH (and optionally on the SACCH) to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 26.6-2 of subclause 26.6.5) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrarily chosen Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. After the successful handover procedure the MS sends the ALERTING message (if the MS runs the immediate connect procedure then the MS does not send an ALERTING message). The correct alerting indication shall be given to the user (only applicable if the MS supports the feature or if the MS is not using the immediate connect procedure). After the MS sent the CONNECT message the appropriate bearer channel shall be through connected in both directions. The SS sends then the CONNECT ACKNOWLEDGE message as the response on the CONNECT message. Having reached the active state, the call is cleared by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13. The value of " x " depends upon the target channel and is specified in the specific message contents section.

Maximum Duration of Test

2 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

The sequence is performed for execution counter $M = 1..2$ (unless a particular TCH is not supported).

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SETUP | |
| 11 | MS -> SS | CALL CONFIRMED | |
| | | | If the MS supports immediate connect then branch A applies. If the MS does not support immediate connect then branch B applies |
| A12 | MS -> SS | CONNECT | sent on the old channel |
| A13 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| A14 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. If the HANDOVER COMMAND includes a starting time IE then the first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| A15 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| A16 | MS -> SS | SABM | Sent without information field. |
| A17 | SS -> MS | UA | |
| A18 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step A15. |
| B12 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| B13 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. If the HANDOVER COMMAND includes a starting time IE then the first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| B14 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| B15 | MS -> SS | SABM | Sent without information field. |
| B16 | SS -> MS | UA | |
| B17 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step B14. |
| B18 | MS -> SS | ALERTING | |
| B19 | MS | | Gives an alerting indication as defined in a PIXIT statement is given by the MS |
| B20 | MS | | The MS is made to accept the call in the way described in a PIXIT statement |
| B21 | MS -> SS | CONNECT | |
| 22 | MS | | If the call is a speech call, the TCH shall be through connected in both directions. |
| 23 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 24 | MS | | If the call is a data call, the TCH shall be through connected in both directions. |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |

| | | | |
|----|----------|-----------------|---------------------------------------|
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
|----|----------|-----------------|---------------------------------------|

| - Hopping | Single RF Channel. |
| - ARFCN | Chosen arbitrarily from the Cell Allocation of Cell B, but not the BCCH carrier of Cell B. |
| Synchronization Indication IE not included. | |
| Mode of First Channel | Speech (full rate version 1 or half rate version 1). |

| Band | BCCH Carrier Number |
|-----------|---------------------|
| GSM 450 | 274 |
| GSM 480 | 321 |
| GSM 710 | 477 |
| GSM 750 | 477 |
| T-GSM 810 | 477 |
| GSM 850 | 167 |
| GSM 900 | 40 |
| DCS 1 800 | 764 |
| PCS 1 900 | 664 |

Step A18 / B17: "x" = 500.

M = 2:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: L2 pseudo length | See the table below |
| Channel Description | SDCCH/8 |
| - Channel Type | As default message contents. |
| - TDMA offset | Arbitrary value, but not zero. |
| - Timeslot number | Chosen arbitrarily. |
| - Training Sequence Code | RF hopping channel. |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Mobile Allocation. |
| - MAIO | Chosen arbitrarily from the set (1,2,..63). |
| - HSN | |
| Mobile Allocation | 3 octets. |
| - Length | Indicates only three frequencies, as per the table below |
| - Contents | |

| IMMEDIATE ASSIGNMENT | | |
|----------------------|-------------------|-------------------------------------|
| Band | Mobile Allocation | L2 pseudo length |
| GSM 450 | 281, 283, 285 | 14 octets (11 + contents of the MA) |
| GSM 480 | 328, 330, 332 | 14 octets (11 + contents of the MA) |
| GSM 710 | 500, 501, 502 | 14 octets (11 + contents of the MA) |
| GSM 750 | 500, 501, 502 | 14 octets (11 + contents of the MA) |
| T-GSM 810 | 500, 501, 502 | 14 octets (11 + contents of the MA) |
| GSM 850 | 200, 201, 202 | 14 octets (11 + contents of the MA) |
| GSM 900 | 73, 74, 75 | 14 octets (11 + contents of the MA) |
| DCS 1 800 | 773, 775, 779 | |
| PCS 1 900 | 673, 675, 679 | |

HANDOVER COMMAND

| Information Element | value/remarks |
|--------------------------------------|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | See the table below |
| Channel Description | |
| - Channel Type | TCH/H + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily, but not Zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Frequency List after time | |
| - Frequency List | Encode the frequencies as per the table below. |
| Synchronization Indication | |
| - Report Observed Time Difference | Shall not be included. |
| - Synchronization Indication | "Non synchronized". |
| - Normal Cell Indication | Ignore out of range timing advance. |
| Mode of First Channel | Speech (full rate version 1 or half rate version 1). |
| Starting Time | Indicates the frame number of cell B. that will occur approximately 1,1 seconds (238 frames have elapsed) after the HANDOVER COMMAND is sent by cell A. |

| HANDOVER COMMAND | | | |
|------------------|---------------------|--------------------------|--|
| Band | BCCH Carrier Number | Cell Channel Description | |
| | ARFCN | Format | ARFCNs |
| GSM 450 | 274 | Range 128 | 260, 262, 264, 266, 276, 279, 281, 283, 285, 287, 289, 291 |
| GSM 480 | 321 | Range 128 | 307, 309, 311, 313, 323, 326, 328, 330, 332, 334, 336, 338 |
| GSM 710 | 477 | Range 128 | 451, 455, 459, 461, 497, 498, 500, 501, 502, 503, 506, 508 |
| GSM 750 | 477 | Range 128 | 451, 455, 459, 461, 497, 498, 500, 501, 502, 503, 506, 508 |
| T-GSM 810 | 477 | Range 128 | 451, 455, 459, 461, 497, 498, 500, 501, 502, 503, 506, 508 |
| GSM 850 | 167 | Range 128 | 141, 145, 149, 151, 187, 193, 200, 201, 202, 203, 235, 241 |
| GSM 900 | 40 | Bitmap 0 | 14, 18, 22, 24, 60, 66, 73, 74, 75, 76, 108, 114 |
| DCS 1 800 | 764 | Range 512 | 749, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844 |
| PCS 1 900 | 664 | Range 512 | 649, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744 |

Step A18 / B17: "x" = 750.

Specific Message Contents For Mobiles not Supporting Speech

The message contents shall be the same as for a Mobile Station supporting speech, except for:

For M = 1 (TCH/F):

HANDOVER COMMAND

| Information Element | value/remarks |
|-----------------------|---|
| Mode of first channel | Arbitrary from those supported (12, 6, 3.6 kbps). |

For M = 2 (TCH/H):

HANDOVER COMMAND

| Information Element | value/remarks |
|-----------------------|---|
| Mode of first channel | Arbitrary from those supported (6, 3.6 kbps). |

26.9.9 Default contents of messages

ALERTING (mobile station to network direction)

| Information element | Value/remark |
|---------------------|--------------|
| Facility | Not checked |
| User-user | Not checked |
| SS version | Not checked |

ALERTING (network to mobile station direction)

| Information element | Value/remark |
|---------------------|--------------|
| Facility | Omitted |
| Progress indicator | Omitted |
| User-user | Omitted |

ASSIGNMENT COMMAND

| Information element | Value/remark |
|-----------------------------------|--|
| Description of the first channel | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Power Command | As in subclause 26.1.1 |
| Frequency list | Omitted |
| Cell channel description | Omitted |
| Mode of the first channel | appropriate for one bearer capability chosen for the test |
| Description of the second channel | Omitted |
| Mode of the second channel | Omitted |
| Mobile allocation | Omitted |
| Starting time | Omitted |
| Cipher mode setting | Omitted |

ASSIGNMENT COMPLETE

| Information element | Value/remark |
|---------------------|--------------|
| RR cause | normal event |

AUTHENTICATION REQUEST

| Information element | Value/remark |
|-------------------------------|--------------|
| Ciphering key sequence number | Arbitrary |
| Spare half octet | (spare bits) |
| Authentication parameter RAND | Arbitrary |

AUTHENTICATION RESPONSE

| Information element | Value/remark |
|-------------------------------|------------------------|
| Authentication parameter SRES | Correct for given SRES |

CALL CONFIRMED

| Information element | Value/remark |
|---------------------|--|
| Repeat indicator | Omitted |
| Bearer capability 1 | The <i>bearer capability 1</i> information element shall be included if and only if at least one of the following cases holds: <ul style="list-style-type: none"> - the mobile station wishes another bearer capability than that given by the <i>bearer capability 1</i> information element of the incoming SETUP message; - the <i>bearer capability 1</i> information element received in the SETUP message is accepted and the "radio channel requirement" of the Mobile Station is other than "full rate support only mobile station". - the <i>bearer capability 1</i> information element received in the SETUP message indicates speech and is accepted and the Mobile Station supports other speech versions than GSM full rate version 1/ half rate version 1. |
| Bearer capability 2 | Omitted |
| Cause | Omitted |
| CC Capabilities | may be present |

CALL PROCEEDING

| Information element | Value/remark |
|---------------------|---|
| Repeat Indicator | Omitted |
| Bearer Capability 1 | Omitted if the SETUP message did not specify in the bearer capability 1 IE a connection element value "both, transparent preferred" or "both, non-transparent preferred". Otherwise included; in that case the connection element specifies the value that is appropriate for the selected teleservice (either value "transparent" or value "non transparent (RLP)"), all other parameters are same as in the bearer capability 1 IE of the received SETUP message. |
| Bearer Capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |

CHANNEL RELEASE

| Information element | Value/remark |
|---------------------|--------------|
| RR cause | Normal event |

CHANNEL REQUEST

| Information element | Value/remark |
|---------------------|----------------------------------|
| Establishment cause | Answer to paging (100) |
| Random reference | Arbitrary value of 5 bits length |

CIPHERING MODE COMMAND

| Information element | Value/remark |
|----------------------|---------------------------------|
| Cipher mode setting | |
| algorithm identifier | indicates a supported algorithm |
| SC | Start ciphering |
| Cipher response | |
| CR | IMEI must not be included |

CIPHERING MODE COMPLETE

| Information element | Value/remark |
|---------------------------|--------------|
| Mobile equipment identity | Omitted |

CM SERVICE ACCEPT

| Information element | Value/remark |
|-----------------------|--------------|
| none but message head | |

CM SERVICE REQUEST

| Information element | Value/remark |
|-------------------------------|---|
| CM service type | Mobile originating call establishment or packet mode connection establishment |
| Ciphering key sequence number | CKSN of the MS |
| Mobile station classmark 2 | Not checked |
| Mobile identity | TMSI of MS |

CONNECT (network to mobile station direction)

| Information element | Value/remark |
|----------------------|--------------|
| Facility | Omitted |
| Progress indicator | Omitted |
| Connected number | Omitted |
| Connected subaddress | Omitted |
| User-user | Omitted |

CONNECT (mobile station to network direction)

| Information element | Value/remark |
|----------------------|--------------|
| Facility | Not checked |
| Connected subaddress | Not checked |
| User-user | Not checked |
| SS version | Not checked |

CONNECT ACKNOWLEDGE

| Information element | Value/remark |
|-----------------------|--------------|
| none but message head | |

DISCONNECT (network to mobile station direction)

| Information element | Value/remark |
|---------------------|-----------------|
| Cause | |
| Coding standard | GSM |
| Location | User |
| Cause value | Normal clearing |
| Facility | Omitted |
| Progress indicator | Omitted |
| User-user | Omitted |

DISCONNECT (mobile station to network direction)

| Information element | Value/remark |
|---------------------|-----------------|
| Cause | |
| Coding standard | GSM |
| Location | User |
| Cause value | Normal clearing |
| Facility | Not checked |
| User-user | Not checked |
| SS version | Not checked |

EMERGENCY SETUP

| Information element | Value/remark |
|---------------------|--|
| Bearer Capability | May be present or omitted. If present, it shall indicate speech, the appropriate speech version(s) and have the appropriate value of radio channel requirement field |

IMMEDIATE ASSIGNMENT

| Information element | Value/remark |
|---------------------------|--|
| Page mode | Normal paging |
| Channel description | describes a valid SDCCH+SACCH in non-hopping mode |
| Request reference | |
| Random access information | As received from MS |
| N51, N32, N26 | Corresponding to frame number of the CHANNEL REQUEST |
| Timing advance | Arbitrary |
| Mobile allocation | Empty (L=0) |
| Starting time | Omitted |

PAGING REQUEST TYPE 1

| Information element | Value/remark |
|-------------------------------------|---------------------------------|
| L2 pseudo length | L2 pseudo length of the message |
| Page Mode | Normal Paging |
| Channels needed for Mobiles 1 and 2 | |
| channel (first) | any channel |
| channel (second) | any channel |
| Mobile identity 1 | TMSI of MS under test |
| Mobile identity 2 | Omitted |
| P1 rest octets | (spare octets) |

PAGING RESPONSE

| Information element | Value/remark |
|-------------------------------|--|
| Ciphering key sequence number | Value assigned to MS in the initial conditions |
| Spare half octet | (spare bits) |
| Mobile station classmark 2 | Not checked |
| Mobile identity | specifies TMSI of MS |

RELEASE (network to mobile station direction)

| Information element | Value/remark |
|---------------------|--------------|
| Cause | Omitted |
| Second cause | Omitted |
| Facility | Omitted |
| User-user | Omitted |

RELEASE (mobile station to network direction)

| Information element | Value/remark |
|---------------------|--------------|
| Cause | Not checked |
| Second cause | Not checked |
| Facility | Not checked |
| User-user | Not checked |
| SS version | Not checked |

RELEASE COMPLETE (network to mobile station direction)

| Information element | Value/remark |
|---------------------|--------------|
| Cause | Omitted |
| Facility | Omitted |
| User-user | Omitted |

RELEASE COMPLETE (mobile station to network direction)

| Information element | Value/remark |
|---------------------|--------------|
| Cause | Not checked |
| Facility | Not checked |
| User-user | Not checked |
| SS version | Not checked |

SETUP (MS to SS)

| Information element | Value/remark |
|-----------------------------|---|
| BC Repeat indicator | Omitted |
| Bearer capability 1 | Appropriate for the teleservice selected for the test |
| Bearer capability 2 | Omitted |
| Facility | Not checked |
| Calling party subaddress | Not checked |
| Called party BCD number | As entered |
| Called party subaddress | Omitted |
| LLC repeat indicator | Omitted |
| Low layer compatibility I | Appropriate for teleservice selected for the test |
| Low layer compatibility II | Omitted |
| HLC repeat indicator | Omitted |
| High layer compatibility i | Appropriate for teleservice selected for the test |
| High layer compatibility ii | Omitted |
| User-user | Not checked |
| SS version | Not checked |
| CLIR suppression | Not checked |
| CC Capabilities | may be present |

SETUP (SS to MS)

| Information element | Value/remark |
|-----------------------------|---|
| BC repeat indicator | Omitted |
| Bearer capability 1 | Appropriate for teleservice selected for the test |
| Bearer capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |
| Signal | Omitted |
| Calling party BCD number | Omitted |
| Calling party subaddress | Omitted |
| Called party BCD number | Omitted |
| Called party subaddress | Omitted |
| LLC repeat indicator | Omitted |
| Low layer compatibility I | Appropriate for teleservice selected for the test |
| Low layer compatibility II | Omitted |
| HLC repeat indicator | Omitted |
| High layer compatibility i | Appropriate for the teleservice selected for the test |
| High layer compatibility ii | Omitted |
| User-user | Omitted |

26.10 E-GSM or R-GSM or ER-GSM signalling

26.10.1 E-GSM or R-GSM or ER-GSM signalling / general considerations

Subclause 26.10 only applies to E-GSM, R-GSM and ER-GSM mobile stations. The details of frequencies used in different test cases are listed below.

Table 26.1: Frequencies used for E-GSM or R-GSM or ER-GSM signalling tests

| Test Case | Frequencies used in the test case | |
|-------------|--|---|
| | E-GSM testing | R-GSM or ER-GSM testing |
| 26.10.2.1 | neighbour cell and serving cell: 0, 2, 26, 38, 990, 1003, 1005, 1020, | neighbour cell and serving cell: 0, 2, 26, 38, 960, 970, 990, 1020 |
| 26.10.2.2 | single RF: 1015, hopping RF's: 0, 80, 1005, 1010 | single RF: 972, hopping RF's: 0, 80, 958, 1010 |
| 26.10.2.3 | k=1 hopping RF's c=1: 1005, 1010, 1015 c=2: 73, 74, 75, 76, 77 c=3: 980, 981, 982, 983 c=4: 30, 40, 1010, 1015 c=5: 980, 991, 992, 993, 994, 1015 c=6: 20, 40, 66 k=2 hopping RF's c=1: 1005, 1010, 1015 c=2: 73, 74, 75, 76, 77 c=3: 980, 981, 982, 983 c=4: 0, 30, 40, 1010, 1015 c=5: 990, 991, 992, 993, 994 c=6: 20, 40, 66 | k=1 hopping RF's c=1: 964, 969, 972 c=2: 73, 76, 80, 85, 90 c=3: 956, 959, 976, 980 c=4: 30, 40, 969, 972, 990, 1020 c=5: 956, 960, 963, 966, 969, 972 c=6: 20, 40, 66 k=2 hopping RF's c=1: 964, 969, 972 c=2: 66, 73, 76, 79, 108 c=3: 960, 963, 978, 990 c=4: 0, 30, 40, 969, 972, 990, 1020 c=5: 962, 965, 968, 972 c=6: 20, 40, 66 |
| 26.10.2.4.1 | Target cell BCCH: 40 k=1 hopping RF's c=1: 1005, 1010, 1015 c=2: 73, 74, 75, 76, 77 c=3: 980, 981, 982, 983 c=4: 30, 40, 1010, 1015 c=5: 980, 991, 992, 993, 994, 1015 k=2 hopping RF's c=1: 1005, 1010, 1015 c=2: 73, 74, 75, 76, 77 c=3: 980, 981, 982, 983 c=4: 30, 40, 1010, 1015 c=5: 980, 991, 992, 993, 994, 1015 c=6: 10, 40, 66 k=3 hopping RF's c=1: 1005, 1010, 1015 c=2: 73, 74, 75, 76, 77 c=3: 980, 981, 982, 983 c=4: 30, 40, 1010, 1015 c=5: 990, 991, 992, 993, 994 c=6: 10, 40, 66 | Target cell BCCH: 965 k=1 hopping RF's c=1: 964, 969, 972 c=2: 73, 76, 79, 86, 97 c=3: 956, 960, 963, 970 c=4: 30, 40, 969, 972, 990, 1020 c=5: 956, 960, 964, 967, 970, 973 k=2 hopping RF's c=1: 964, 969, 972 c=2: 73, 76, 79, 86, 97 c=3: 956, 960, 963, 970 c=4: 30, 40, 969, 972, 990, 1020 c=5: 956, 960, 964, 967, 970, 973 c=6: 10, 40, 66 k=3 hopping RF's c=1: 964, 969, 972 c=2: 73, 76, 79, 108, 115 c=3: 960, 964, 969, 972 c=4: 30, 40, 969, 972, 990, 1020 c=5: 960, 963, 966, 969, 972 c=6: 10, 40, 66 |
| 26.10.2.4.2 | Original cell BCCH: 20 Target cell BCCH: 40 hopping RF's: 1005, 1010, 1015 | Original cell BCCH: 990 Target cell BCCH: 965 hopping RF's: 960, 970, 990 |
| 26.10.2.5 | hopping RF's c=1: 1005, 1010, 1015 c=2: 73, 74, 75, 76, 77 c=3: 980, 981, 982, 983 c=4: 30, 40, 1010, 1015 c=5: 990, 991, 992, 993, 994 c=6: 30, 50, 70 | hopping RF's c=1: 964, 969, 972 c=2: 73, 76, 79, 108, 114 c=3: 960, 964, 968, 972 c=4: 30, 40, 969, 972, 990, 1020 c=5: 960, 964, 967, 970, 972 c=6: 30, 50, 70 |

| Test Case | Frequencies used in the test case | |
|-----------|---|---|
| | E-GSM testing | R-GSM or ER-GSM testing |
| 26.10.3.1 | BCCH: 20 Immediate Assignment: 40 Assignment: 990 | BCCH: 20 Immediate Assignment: 40 Assignment: 965 |
| 26.10.3.2 | BCCH: 20 Immediate Assignment: 40 Assignment: 990 | BCCH: 20 Immediate Assignment: 40 Assignment: 965 |

Conformance requirements of clause 26 fully apply to any mobile station (P-GSM, E-GSM, R-GSM, ER-GSM or DCS) in the whole supported band of the mobile station.

Besides, as an E-GSM or R-GSM or ER-GSM mobile station shall support the P-GSM band, it shall pass successfully every test of clause 26 under the described GSM 900 conditions.

The purpose of this extra section is to test the different procedures which may be impacted when some channel uses E-GSM or R-GSM or ER-GSM frequency(ies).

26.10.2 E-GSM or R-GSM or ER-GSM signalling / RR

26.10.2.1 E-GSM or R-GSM or ER-GSM signalling / RR / Measurement

26.10.2.1.1 Conformance requirements

The MS shall continuously send MEASUREMENT REPORT messages on every SACCH blocks and the measurement valid indication shall be set to valid (0) within the second block at the latest. After 20 s the values in the MEASUREMENT REPORT message shall contain measurement results for the 6 th strongest cells belonging to the set of cells indicated either in SI5 and SI5bis messages or in SI5 and SI5ter messages.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.1.2 and 9.1.39,
3GPP TS 05.08 subclause 8.4.

26.10.2.1.2 Test purpose

To test that, when the SS gives information about neighbouring cells indicated either in SI5 and SI5bis messages or in SI5 and SI5ter messages, the MS reports appropriate results.

26.10.2.1.3 Method of test

Initial Conditions

System Simulator:

8 cells with the following settings:

E-GSM:

| Transmitter | Level | NCC | BCC | ARFCN | Cell Identity |
|---------------|-------|-----|-----|-------|---------------|
| Serving, S1 | -60 | 1 | 3 | 002 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 990 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 1005 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 000 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 026 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 1020 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 038 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 1003 | 0008H |

R-GSM or ER-GSM:

| Transmitter | Level | NCC | BCC | ARFCN | Cell Identity |
|---------------|-------|-----|-----|-------|---------------|
| Serving, S1 | -60 | 1 | 3 | 002 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 990 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 970 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 000 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 026 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 1020 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 038 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 960 | 0008H |

With the exception of the Cell Allocation, the rest of the parameters for all eight cells are the same as the default settings and default SYSTEM INFORMATION TYPE 1 to 4 message contents for cell A. The Cell Allocation for the serving cell is the same as the default setting for cell A. The Cell Allocations for the neighbour cells need have only one entry, consisting of the ARFCN of that cell's BCCH.

Mobile Station:

The MS is in the active state of a call (U10).

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)
- ER-GSM Band (TSPC_Type_ER_GSM_Band)

PIXIT statements:

Foreseen Final State of the MS

Active state of a call (U10).

Test Procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The test is performed for execution counter, c=1 to 9.

For c=1 to 6, the following procedure applies:

With the MS having a call in progress, the SS sends SYSTEM INFORMATION TYPE 5, 5bis and 6 on the SACCH. The MS shall send MEASUREMENT REPORTs back to the SS, and it shall be indicated in these that measurement results for the 6 strongest present carriers of the supported band have been obtained.

For c=7 to 9, the following procedure applies:

With the MS having a call in progress, the SS sends SYSTEM INFORMATION TYPE 5, 5ter and 6 on the SACCH. The MS shall send MEASUREMENT REPORTs back to the SS, and it shall be indicated in these that measurement results for the 6 strongest present carriers of the supported band have been obtained.

Maximum Duration of Test

8 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for execution counter, c= 1 to 9.

Since SYSTEM INFORMATION TYPE 5, SYSTEM INFORMATION TYPE 6 and MEASUREMENT REPORT are sent continuously, a table is not applicable in this test. The interval between 2 successive Layer 2 frames containing MEASUREMENT REPORTs shall not exceed one Layer 2 frame.

26.10.2.2 E-GSM or R-GSM or ER-GSM signalling / RR / Immediate assignment

26.10.2.2.1 Conformance requirement

Following a PAGING REQUEST message, the MS shall correctly set up an RR connection on a supported channel described in the IMMEDIATE ASSIGNMENT message, using some E-GSM or R-GSM or ER-GSM frequency.

Reference(s)

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1.2.

26.10.2.2.2 Test purpose

To verify that the MS can correctly set up a dedicated control channel when E-GSM or R-GSM or ER-GSM frequencies are used.

This tested for a SDCCH/8.

26.10.2.2.3 Method of test

Initial Conditions

System Simulator:

1 cell.

E-GSM:

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

SYSTEM INFORMATION type 1 message contains the following frequencies in the Cell Channel Description IE: 0, 30, 40, 66, 80, 1 005, 1 010, 1 015 (use range 1 024 to encode).

BCCH carrier number 1 015.

R-GSM or ER-GSM:

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

SYSTEM INFORMATION type 1 message contains the following frequencies in the Cell Channel Description IE: 0, 30, 40, 66, 80, 958, 1010, 972 (use range 1 024 to encode).

BCCH carrier number 972.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)
- ER-GSM Band (TSPC_Type_ER_GSM_Band)

PIXIT statements:

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

This test procedure is performed twice.

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST message the SS assigns an SDCCH channel using some E-GSM or R-GSM or ER-GSM frequencies. The MS shall go to the correct channel and send a PAGING RESPONSE message. Then the SS initiates RR-release by sending a CHANNEL RELEASE message.

Maximum Duration of Test

15 seconds.

Expected Sequence

The sequence is performed for execution counter k = 1 to 2.

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|--------------------------------------|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | cause "answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type: see below |
| 4 | MS -> SS | PAGING RESPONSE | Shall be sent on the correct channel |
| 5 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

E-GSM:

IMMEDIATE ASSIGNMENT

As default except:

| Information element | remark/value |
|--------------------------|---|
| Channel description | |
| - Channel Type | SDCCH/8 |
| - Timeslot number | arbitrary but not zero |
| - Training sequence code | arbitrary |
| - Hopping channel | k=1 Single RF k=2 RF hopping channel |
| - Channel Selector | k=1 ARFCN=1 015 k=2 MAIO = arbitrarily chosen HSN arbitrary chosen from the set (1,..63) |
| Mobile allocation | k=1 empty k=2 indicates the following frequencies (0, 80, 1 005, 1 010) |

R-GSM or ER-GSM:

IMMEDIATE ASSIGNMENT

As default except:

| Information element | remark/value |
|--------------------------|---|
| Channel description | |
| - Channel Type | SDCCH/8 |
| - Timeslot number | arbitrary but not zero |
| - Training sequence code | arbitrary |
| - Hopping channel | k=1 Single RF k=2 RF hopping channel |
| - Channel Selector | k=1 ARFCN=972 k=2 MAIO = arbitrarily chosen HSN arbitrary chosen from the set (1,..63) |
| Mobile allocation | k=1 empty k=2 indicates the following frequencies (0, 80, 958, 1010) |

26.10.2.3 E-GSM or R-GSM or ER-GSM signalling / RR / channel assignment procedure

26.10.2.3.1 Conformance requirements

1. Upon receipt of the ASSIGNMENT COMMAND message, the mobile station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the main signalling links).

2. The MS shall apply the hopping frequencies specified in ASSIGNMENT COMMAND message in the mobile allocation or frequency list or frequency short list at the time accessing the new channel.

References

3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.3 and 9.1.2.

26.10.2.3.2 Test purpose

1. To verify that upon receipt of an ASSIGNMENT COMMAND, the MS switches to the channel defined in the ASSIGNMENT COMMAND, establishes the link and sends an ASSIGNMENT COMPLETE message.
2. To verify that an MS, having received an ASSIGNMENT COMMAND, is able in case of frequency hopping to decode the mobile allocation and frequency list correctly and applies the specified frequencies.

26.10.2.3.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the "idle, updated" state with a TMSI allocated.

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)
- ER-GSM Band (TSPC_Type_ER_GSM_Band)
- TSPC_AddInfo_Full_rate_version_1

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The test procedure is performed 2 times.

The SS pages the MS and allocates an SDCCH. Then a channel is assigned with ASSIGNMENT COMMAND. Each time the MS shall switch to the assigned channel, establish the link and send an ASSIGNMENT COMPLETE message.

The SS initiates the channel release procedure.

Maximum Duration of Test

3 minutes.

Expected Sequence

The test sequence is performed for execution counter k=1 to 2.

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Timeslot Number = n. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents Timeslot Number = (n+1) mod 8 Sent on the correct channel after establishment of the main signalling link. Steps 5 and 6 are repeated cmax times, where cmax is the number of frequency formats allowed for each value of k. Use repetition counter c: See specific message content. |
| 6 | MS -> SS | ASSIGNMENT COMPLETE | |
| 7 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

| Cell Channel Description | for c=1, use range 128 to encode the following 13 frequencies: (960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972) for c=2, use range 256 to encode the following 13 frequencies (20, 40, 66, 73, 74, 75, 76, 77, 78, 79, 108, 114, 115) for c=3, use range 512 to encode the following 13 frequencies (960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 978, 990) for c=4, use range 1 024 to encode the following 10 frequencies (0, 30, 40, 66, 80, 964, 969, 972, 990, 1020) for c=5, use variable Bitmap to encode the following 13 frequencies (960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972) for c=6, use Bitmap 0 to encode the following 12 frequencies (20, 40, 66, 73, 74, 75, 76, 77, 78, 79, 108, 114) |
| For k = 2 | |
| Mobile Allocation | indicates the following the frequencies: for c=1 (964, 969, 972) for c=2 (66, 73, 76, 79, 108) for c=3 (960, 964, 978, 990) for c=4 (0, 30, 40, 969, 972, 990, 1020) for c=5 (962, 965, 968, 972) for c=6 (20, 40, 66) |
| Mode of the First channel | speech full rate version 1 for TCH/F except if speech is not supported: arbitrary from those supported |
| Starting Time | not included |

26.10.2.4 E-GSM or R-GSM or ER-GSM signalling / RR / Handover

26.10.2.4.1 E-GSM or R-GSM or ER-GSM signalling / RR / Handover / Successful handover

26.10.2.4.1.1 Conformance requirements

The MS shall correctly apply the handover procedure from a channel without frequency hopping in the primary band to a channel with frequency hopping using P-GSM and E-GSM or P-GSM and R-GSM or ER-GSM frequencies whatever the coding used for the frequency hopping description.

References

3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.4 and 9.1.15.

26.10.2.4.1.2 Test purpose

To check that the MS correctly performs a non-synchronized handover, from a non hopping primary band SDCCH to a hopping TCH or SDCCH using E-GSM or R-GSM or ER-GSM frequencies, whatever the coding used for the hopping sequence description and that it activates the new channel correctly.

This is tested in the following case:

E-GSM or R-GSM or ER-GSM signalling / Handover / successful / call under establishment / non-synchronized /:

- from SDCCH/8 to TCH/F if the MS supports a TCH;
- from SDCCH/8 to SDCCH/8 if not.

26.10.2.4.1.3 Method of test

Initial Conditions

System Simulator:

E-GSM:

2 cells A and B with same LAI, default parameters;

except for Cell A: the broadcasted Cell Channel Description in SYSTEM INFORMATION type 1 message contains the following frequencies: 20, 40, 66, 73, 74, 75, 76, 77, 78, 79, 108, 114 (encoded using Bit Map 0 format);

The broadcasted BCCH frequency list for Cell A in SYSTEM INFORMATION type 2 and 5 contains the following frequencies: 10, 20, 40, 80, 90, 100, 110 and 120 (encoded in Bit Map 0 format).

R-GSM or ER-GSM:

2 cells A and B with same LAI, default parameters;

except for Cell A: the broadcasted Cell Channel Description in SYSTEM INFORMATION type 1 message contains the following frequencies: 20, 40, 66, 73, 74, 75, 76, 77, 78, 79, 108, 114 (encoded using Bit Map 0 format);

Except for Cell B: the BCCH carrier number is 965.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)

- ER-GSM Band (TSPC_Type_ER_GSM_Band)
- TSPC_AddInfo_Full_rate_version_1

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The test procedure is performed 17 times.

A Mobile Originating Call is initiated on cell A. After the MS has sent the SETUP message (and before the last L2 frame carrying the SETUP message is acknowledged by the SS) the SS sends a HANOVER COMMAND message, ordering the MS to switch to cell B.

The MS shall then begin to send access bursts on the new channel, a TCH/F if supported (see PICS) or an SDCCH if not, to cell B.

The SS observes the access bursts. After receiving n access bursts, n being randomly drawn between 10 and 20 for the TCH case, 2 and 5 for the SDCCH (see table 26.6-2 of subclause 26.6.5), the SS sends one PHYSICAL INFORMATION message with a Timing Advance of 20 (see table 26.6-1 of subclause 26.6.5).

The MS shall activate the channel in sending and receiving mode. Then the MS shall establish a signalling link using the correct timing advance. The MS shall be ready to transmit a HANOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message but not before a UA frame has been sent by the SS. The MS shall then again send the SETUP message to the SS, using the same value in the N(SD) field. Finally the SS sends a CHANNEL RELEASE to end the test.

The term "ready to transmit" is specified in 3GPP TS 04.13. The value of "x" depends upon the target channel:

- case SDCCH/8 $x = 750$;
- case TCH/F $x = 500$.

Maximum Duration of Test

10 minutes.

Expected Sequence

The sequence is performed for execution counter k=1 to 3 and c=1 to 6 (excluding k=1 and c=6 as Format Bit Map 0 is not supported in the Frequency Short List IE).

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | ----- | ----- | A MO call is initiated on cell A |
| 2 | MS -> SS | CHANNEL REQUEST | Establish. Cause = "Originating call, NECI not set to 1 |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | see specific message contents |
| 4 | MS -> SS | CM SERVICE REQUEST | CM Service Type = Mobile Originating Call Establishment. |

26.10.2.4.2 E-GSM or R-GSM or ER-GSM signalling / RR / Handover / layer 1 failure

26.10.2.4.2.1 Conformance requirements

During a handover from a channel in the E-GSM or R-GSM or ER-GSM band to a channel in the P-GSM band, or the contrary, the MS shall correctly return to the old channel in the case of an handover failure caused by a layer 1 failure on the target cell.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.4.

26.10.2.4.2.2 Test purpose

To check that the MS correctly returns to the old channel in the case of a handover failure caused by a layer 1 failure on the target cell, even if the origin is in the P-GSM band and the target in the E-GSM or R-GSM or ER-GSM band.

26.10.2.4.2.3 Method of test

Initial Conditions

System Simulator:

E-GSM:

2 cells with same LAI, default parameters.

Cell A: The broadcasted BCCH frequency list for Cell A in SYSTEM INFORMATION type 2 and 5 contains the following frequencies: 10, 20, 40, 80, 90, 100, 110 and 120 (encoded in Bit Map 0 format).

The BCCH carrier number of Cell B is 40. (According to Table 26.1)

R-GSM or ER-GSM:

2 cells with same LAI, default parameters, except the BCCH carrier number of Cell A is 990, the BCCH carrier number of Cell B is 965.

Mobile Station:

E-GSM:

The MS is in the active state (U10) of a call on a P-GSM channel of cell A. power level = 10.

R-GSM or ER-GSM:

The MS is in the active state (U10) of a call on a E-GSM channel of cell A, power level = 10.

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)

- ER-GSM Band (TSPC_Type_ER_GSM_Band)
- TSPC_AddInfo_Full_rate_version_1

PIXIT statements:

-

Foreseen Final State of the MS

The active state (U10) of a mobile call (on cell A), used power level 10.

Test Procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The MS is in the active state (U10) of a call on a P-GSM channel (on an E-GSM channel for R-GSM or ER-GSM testing) of cell A (used power level 10). The SS sends a HANOVER COMMAND on the main DCCH. The MS shall begin to send access bursts at the commanded power level on the new DCCH (and optionally on SACCH) to cell B (power level 12). With the exception of normal BCCH signalling, the SS does not transmit anything on cell B (thus causing a time-out of T3124). The MS shall re-establish the old link on cell A and send a HANOVER FAILURE within 3 seconds from the transmission of HANOVER COMMAND, using the old power level.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|--|
| 1 | SS -> MS | HANOVER COMMAND | to an E-GSM or R-GSM or ER-GSM channel see specific message contents |
| 2 | MS -> SS | HANOVER ACCESS | Several messages are sent, all with correct Handover References. |
| 3 | MS -> SS | HANOVER FAILURE | Sent on old channel, RR cause value = "Abnormal release, unspecified", "Abnormal release, channel unacceptable", "Abnormal release, timer expired", "Abnormal release, no activity on the radio path" or "Protocol error unspecified". Layer 1 header has the same power level as the layer 1 header in step 1. Shall be sent within 3 seconds from the transmission of HANOVER COMMAND. |

26.10.2.5 E-GSM or R-GSM or ER-GSM signalling / RR / Frequency Redefinition

26.10.2.5.1 Conformance requirements

- 1) To verify that the MS, after receiving a FREQUENCY REDEFINITION message, correctly starts using the new frequencies, and hopping sequence when some E-GSM or R-GSM or ER-GSM frequencies are used.
- 2) The last received Cell Channel Description information element is used to decode the Mobile Allocation IE received on the FREQUENCY REDEFINITION message.

References

3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.5 and 9.1.13.

26.10.2.5.2 Test purpose

- 1) To verify that the MS, after receiving a FREQUENCY REDEFINITION message, starts using the new frequencies and hopping sequence when some E-GSM or R-GSM or ER-GSM frequencies are used.
- 2) To check that the last received Cell Channel Description information element is used to decode the Mobile Allocation IE received in the FREQUENCY REDEFINITION message.

26.10.2.5.3 Method of test

Initial conditions

System Simulator:

1 cell; default parameters.

Mobile Station:

The MS is in "idle, updated" state with TMSI allocated.

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)
- ER-GSM Band (TSPC_Type_ER_GSM_Band)
- TSPC_AddInfo_Full_rate_version_1

PIXIT statements:

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The test procedure is performed six times.

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST, the simulator assigns a TCH/F if supported otherwise a SDCCH/8. Then the SS sends to MS a FREQUENCY REDEFINITION. The MS shall then use the new frequencies/hopping sequence.

Maximum duration of test

3 minutes.

Expected sequence

The sequence is performed for execution counter c=1 to 6.

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE 1 | |
| 2 | MS->SS | CHANNEL REQUEST | |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | Hopping channel, Channel type = TCH/F if a TCH is supported otherwise, Channel type=SDCCH/8. |
| 4 | MS->SS | PAGING RESPONSE | Sent on the correct channel after establishment of the main signalling link |
| 5 | SS->MS | FREQUENCY REDEFINITION | See specific message contents. |
| 6 | ----- | ----- | The SS checks that the MS is transmitting on the correct frequencies. |
| 7 | SS->MS | CHANNEL RELEASE | The main signalling link is released. |

| Cell Channel Description | for c=1, use range 128 to encode the following 13 frequencies: (980, 981, 982, 983, 990, 991, 992, 993, 994, 1 000, 1 005, 1 010, 1 015) for c=2, use range 256 to encode the following 13 frequencies (20, 40, 66, 73, 74, 75, 76, 77, 78, 79, 108, 114, 115) for c=3, use range 512 to encode the following 13 frequencies (980, 981, 982, 983, 990, 991, 992, 993, 994, 1 000, 1 005, 1 010, 1 015) for c=4, use range 1 024 to encode the following 8 frequencies (0, 30, 40, 66, 80, 1 005, 1 010, 1 015) for c=5, use variable Bitmap to encode the following frequencies (980, 981, 982, 983, 990, 991, 992, 993, 994, 1 000, 1 005, 1 010, 1 015) for c=6, not present (the mobile station will use the last Cell Channel Description IE received, i.e. the one broadcast in the SYSTEM INFORMATION TYPE 1 message). |
| Mobile Allocation | indicates the following frequencies: for c=1 (1 005, 1 010, 1 015) for c=2 (73, 74, 75, 76, 77) for c=3 (980, 981, 982, 983) for c=4 (30, 40, 1 010, 1 015) for c=5 (990, 991, 992, 993, 994) for c=6 (30, 50, 70) |
| Starting time | indicates (current frame number + 100 frames) mod 42432 |

R-GSM or ER-GSM:

FREQUENCY REDEFINITION

| Information Element | Value/remark |
|--------------------------------------|--|
| As default message contents, except: | |
| Cell Description | |
| - BCCH carrier number | 40 |
| Channel Description | |
| - Channel type | Same as in IMMEDIATE ASSIGNMENT |
| - Timeslot number | Same as in IMMEDIATE ASSIGNMENT |
| - Training sequence code | Same as in IMMEDIATE ASSIGNMENT |
| - Hopping | RF hopping channel |
| - MAIO | arbitrary |
| - HSN | Same as in IMMEDIATE ASSIGNMENT |
| Cell Channel Description | for c=1, use range 128 to encode the following 13 frequencies: (960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972) for c=2, use range 256 to encode the following 13 frequencies (20, 40, 66, 73, 74, 75, 76, 77, 78, 79, 108, 114, 115) for c=3, use range 512 to encode the following 13 frequencies (960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972) for c=4, use range 1 024 to encode the following 10 frequencies (0, 30, 40, 66, 80, 964, 969, 972, 990, 1020) for c=5, use variable Bitmap to encode the following 13 frequencies (960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972) for c=6, not present (the mobile station will use the last Cell Channel Description IE received, i.e. the one broadcast in the SYSTEM INFORMATION TYPE 1 message). |
| Mobile Allocation | indicates the following frequencies: for c=1 (964, 969, 972) for c=2 (73, 76, 79, 108, 114) for c=3 (960, 964, 968, 972) for c=4 (30, 40, 969, 972, 990, 1020) for c=5 (960, 964, 967, 970, 972) for c=6 (30, 50, 70) |
| Starting time | indicates (current frame number + 100 frames) mod 42432 |

26.10.3 E-GSM or R-GSM or ER-GSM signalling / Structured procedure

26.10.3.1 E-GSM or R-GSM or ER-GSM signalling / Structured procedure / Mobile originated call

26.10.3.1.1 Conformance requirement

- 1) An MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS, shall start to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 2) Upon receipt of the ASSIGNMENT COMMAND message, the Mobile Station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause "normal event", to the network on the main DCCH.
- 3, 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

- attach the user connection to the radio path;
- return a CONNECT ACKNOWLEDGE message.

References

- Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1.
- Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3.1 and 3.4.3.2.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3.
- Conformance requirement 4: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.1.6.
- Conformance requirement 5: 3GPP TS 02.07.
- Conformance requirement 6: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1.1.6 and 5.1.3.

26.10.3.1.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.
- 2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.
- 3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.
- 4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

26.10.3.1.3 Method of test

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)
- ER-GSM Band (TSPC_Type_ER_GSM_Band)
- TSPC_AddInfo_Full_rate_version_1

PIXIT statements:

- Way to indicate mobile originated alerting.
- . Way to display the called number

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen Final State of the MS

The MS is in MM state "idle updated".

Test procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The following test is performed for one teleservice supported by the MS:

- A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.
- The MS is made to initiate a call. The call is established with late assignment. The release of the call is initiated by the MS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS | | The "called number" is entered |
| 3 | MS | | |
| 4 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 6 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ALERTING | |
| 15 | MS | | Depending on the PICS, an alerting indication is given. |
| 16 | SS -> MS | ASSIGNMENT COMMAND | |
| 17 | MS -> SS | ASSIGNMENT COMPLETE | |
| 18 | SS -> MS | CONNECT | |
| 19 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directions. |
| 21 | MS | | If the call is a data call, the TCH shall be through connected in both directions. |
| 22 | MS | | The MS is made to release the call. |
| 23 | MS -> SS | DISCONNECT | |
| 24 | SS -> MS | RELEASE | |
| 25 | MS -> SS | RELEASE COMPLETE | |
| 26 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

None.

26.10.3.2 E-GSM or R-GSM or ER-GSM signalling / Structured procedures / emergency call

Emergency call establishment can be initiated by an MS whether location updating has been successful or not and whether a SIM is inserted into the MS or not; but only if the MS is equipped for speech.

This subclause is only applicable to an MS supporting speech.

26.10.3.2.1 Conformance requirement

- 1) The MS in the "idle, updated" state, as after a successful location update, after the number 112 has been entered by user, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").
- 2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct IMEI and a non-available CKSN, with CM Service Type "emergency call establishment".
- 3) After cipher mode setting acceptance by the network, the MS shall send an EMERGENCY SETUP message.
- 4, 5) The emergency call shall be correctly established. The assignment procedure shall be correctly performed.
- 6) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the TCH shall be through connected in both directions if an appropriate TCH is available.
- 7) The call shall be cleared correctly.

Requirement Reference:

For conformance requirement 1 and 2:

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1;

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.2.1 and 4.5.1.5;

3GPP TS 02.30 clause 4.

For conformance requirement 3:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.2.

For conformance requirements 4 and 5:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1; and

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.3.

For conformance requirement 6:

3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1.1.6 and 5.1.3.

For conformance requirement 7:

3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.4.

26.10.3.2.2 Test purpose

- 1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".
- 3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the MS sends an EMERGENCY SETUP message.

- 4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure, the MS performs correctly that assignment procedure.
- 5) To verify subsequent correct performance of a connect procedure.
- 6) To verify that subsequently the MS has through connected the TCH in both directions.
- 7) To verify that the call is cleared correctly.

This is tested in the following case:

Structured procedures / emergency call / idle, no IMSI / accept case.

26.10.3.2.3 Method of test

Specific PICS statements:

- R-GSM Band (TSPC_Type_GSM_R_Band)
- ER-GSM Band (TSPC_Type_ER_GSM_Band)
- TSPC_AddInfo_Full_rate_version_1

PIXIT statements:

-

Initial Conditions

System Simulator:

1 cell, default parameters except:

See Table 26.1

Mobile Station:

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Foreseen Final State of the MS

The MS is in MM-state "idle, no IMSI", no SIM inserted.

Test procedure

If the MS is R-GSM or ER-GSM capable, then this test shall be performed using R-GSM or ER-GSM, otherwise this test shall be performed using E-GSM.

The MS is made to initiate an emergency call. The call is established without authentication, without ciphering, with early assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | MS | | |
| 2 | MS -> SS | CHANNEL REQUEST | The "called number" 112 is entered |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Establishment cause is "emergency call". |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". The mobile identity IE specifies the IMEI of the MS. The cipher key sequence number IE indicates "no key is available". The mobile station classmark IE is as specified by the manufacturer in a PICS/PIXIT statement. |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | EMERGENCY SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | The rate of the channel is one indicated by the EMERGENCY SETUP message. |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | |
| 12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 13 | MS | | The TCH is through connected in both directions. |
| 14 | SS -> MS | DISCONNECT | |
| 15 | MS -> SS | RELEASE | |
| 16 | SS -> MS | RELEASE COMPLETE | |
| 17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

None.

26.10.3.3 Default contents of messages

Same as in subclause 26.9.7 except for the following.

ASSIGNMENT COMMAND

E-GSM:

| Information element | Value/remark |
|-----------------------------------|---|
| Description of the first channel | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test ARFCN = 990 |
| Power Command | |
| - | Chosen arbitrarily but within the range supported by the MS. |
| Frequency list | Omitted |
| Cell channel description | Omitted |
| Mode of the first channel | appropriate for one bearer capability chosen for the test |
| Description of the second channel | Omitted |
| Mode of the second channel | Omitted |
| Mobile allocation | Omitted |
| Starting time | Omitted |
| Cipher mode setting | Omitted |

R-GSM or ER-GSM:

| Information element | Value/remark |
|-----------------------------------|---|
| Description of the first channel | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test ARFCN = 965 |
| Power Command - | Chosen arbitrarily but within the range supported by the MS. |
| Frequency list | Omitted |
| Cell channel description | Omitted |
| Mode of the first channel | appropriate for one bearer capability chosen for the test |
| Description of the second channel | Omitted |
| Mode of the second channel | Omitted |
| Mobile allocation | Omitted |
| Starting time | Omitted |
| Cipher mode setting | Omitted |

IMMEDIATE ASSIGNMENT

| Information element | Value/remark |
|---|---|
| Page mode | Normal paging |
| Channel description | describes a valid SDCCH+SACCH in non-hopping mode ARFCN = 40 |
| Request reference Random access information N51, N32, N26 | As received from MS Corresponding to frame number of the CHANNEL REQUEST |
| Timing advance | Arbitrary |
| Mobile allocation | Empty (L=0) |
| Starting time | Omitted |

26.10.4 E-GSM or R-GSM or ER-GSM signalling / Default message contents

Default SYSTEM INFORMATION:

| For subclause 26.10.3 | same as in 26.9.7 |

26.11 Multiband signalling

26.11.1 General considerations

This subclause applies only to Multiband mobile stations, as defined in 3GPP TS 02.06 subclause 3.2.1.

Conformance requirements of clause 26 fully apply to any Multiband MS in the whole supported band(s) of operation of the mobile station.

A Multiband mobile station has the functionality to perform handover, channel assignment, cell selection and re-selection between all its bands of operation within a PLMN.

A Multiband mobile station shall meet all requirements specified for each individual band. In addition it shall meet the extra functional requirements for multiband mobile stations.

The purpose of this subclause is to test these extra functional requirements for a multiband mobile station.

26.11.2 Multiband signalling / RR

26.11.2.1 Multiband signalling / RR / Immediate assignment procedure

To inform the multiband network of the MSs additional frequency and power capability, the multiband MS has to send a CLASSMARK CHANGE as soon as possible in a connection establishment.

26.11.2.1.1 Conformance requirement

Following a PAGING REQUEST message, the MS shall correctly set up an RR connection on a supported channel described in the IMMEDIATE ASSIGNMENT message. On the MS side, the procedure is terminated when the establishment of the main signalling link is confirmed. When the ES bit is set to 1 in the Classmark 1 or the Classmark 2 information element and the Early Sending Classmark Control bit is set to "high" in SI3 Rest Octets, then the MS shall send, on the first occasion, the CLASSMARK CHANGE message.

During a contention resolution procedure, if the last timeslot of the block containing a L2 UA frame occurs at time T, then the MS shall be ready to transmit the CLASSMARK CHANGE before T + 40 ms.

Reference(s)

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1.2 and 3.3.1.1.4.

3GPP TS 04.13 subclause 5.2.11.

3GPP TS 05.10 subclause 6.10.

26.11.2.1.2 Test purpose

To verify that the MS can correctly set up a dedicated control channel and that a multi band MS is able to perform early sending of CLASSMARK CHANGE.

To verify the performance requirement on early sending of the CLASSMARK CHANGE message.

26.11.2.1.3 Method of test

Initial Conditions

System Simulator:

For 450/900 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 263.

For 480/900 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 310.

For 450/1 800 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 263.

For 480/1 800 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 310.

For 900/1 800 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 20.

For 710/1 900 MS, 750/1 900 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 457.

For 850/1 900 MS:

1 cell.

CCCH-CONF is set to "1 basic physical channel used for CCCH not combined with SDCCHs".

BCCH carrier number 147.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The test is performed twice, first time in the lower band (BCCH carrier number 20, 263, 310, 457 or 147) and second time in the upper band (BCCH carrier number 20 or 590).

The System Simulator pages the MS and after the MS has responded with a CHANNEL REQUEST message the SS assigns an SDCCH. The MS shall go to the correct channel and send a PAGING RESPONSE message followed by a CLASSMARK CHANGE message. Then the SS initiates RR-release by sending a CHANNEL RELEASE message.

Before the procedure is repeated, the SS is reconfigured to transmit BCCH carrier in the upper band of operation (ARFCN 20 or 590).

Maximum Duration of Test

6 seconds per value of the execution timer and 1 min for reconfiguring the SS.

Expected Sequence

This sequence is performed for execution counter $k = 1$ to 2.

| Step | Direction | Message | Comments |
|------|-----------|------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type: SDCCH/8 |
| 4 | MS -> SS | SABM (PAGING RESPONSE) | Shall be sent on the correct channel |
| 5 | SS -> MS | UA (PAGING RESPONSE) | |
| 6 | MS -> SS | CLASSMARK CHANGE | Shall be ready to transmit (see 3GPP TS 05.10 subclause 06.10) within 40 ms after the completion of step 4. Shall indicate the MS frequency and power capabilities Note: In this case 'ready to transmit' shall result in the actual transmission of the Classmark Change 51 frames later ($51 * 4.62\text{ms} = 235.62\text{ms}$). Therefore receipt of the Classmark Change within 250ms of step 4 is required. |
| 7 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents

For 450/900 MS:

IMMEDIATE ASSIGNMENT

As default except:

| Information element | Value/remark |
|--------------------------|---------------------------------------|
| Channel description | |
| - Channel Type | SDCCH/8 |
| - Timeslot number | Arbitrary but not zero |
| - Training sequence code | Arbitrary |
| - Hopping channel | Single RF |
| - Channel selector | $k=1$; ARFCN 263 $k=2$; ARFCN 20 |
| Mobile Allocation | empty |

PAGING RESPONSE

| Information element | Value/remark |
|-------------------------------|--|
| Protocol Discriminator | RR management |
| Ciphering Key Sequence number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available |
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use $k=1$; GSM 450 power capability $k=2$; GSM 900 power capability |
| Mobile Identity | |
| - odd/even | Even |
| - Type of identity | TMSI |
| - Identity digits | TMSI previously allocated to MS |

CLASSMARK CHANGE

| Information element | Value/remark |
|--------------------------------------|--|
| Protocol Discriminator | RR management |
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use k=1; GSM 450 power capability k=2; GSM 900 power capability |
| Additional MS Classmark information | |
| - Band 1 (P-GSM) supported | According to PICS statement |
| - Band 2 (E-GSM) supported | According to PICS statement |
| - R-Band (R-GSM) supported | According to PICS statement |
| - ER-Band (ER-GSM) supported | According to PICS statement |
| - GSM 400 Band (GSM 450) supported | According to PICS statement |
| - GSM400 Associated radio capability | Corresponding to GSM 400 band |
| - Associated radio capability 1 | Corresponding to GSM 900 band |
| - R-Band Associated radio capability | Corresponding to R-GSM 900 band |

For 480/900 MS:

IMMEDIATE ASSIGNMENT

As default except:

| Information element | Value/remark |
|--------------------------|---------------------------------|
| Channel description | |
| - Channel Type | SDCCH/8 |
| - Timeslot number | Arbitrary but not zero |
| - Training sequence code | Arbitrary |
| - Hopping channel | Single RF |
| - Channel selector | k=1; ARFCN 310 k=2; ARFCN 20 |
| Mobile Allocation | empty |

PAGING RESPONSE

| Information element | Value/remark |
|-------------------------------|--|
| Protocol Discriminator | RR management |
| Ciphering Key Sequence number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available |
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use k=1; GSM 480 power capability k=2; GSM 900 power capability |
| Mobile Identity | |
| - odd/even | Even |
| - Type of identity | TMSI |
| - Identity digits | TMSI previously allocated to MS |

CLASSMARK CHANGE

| Information element | Value/remark |
|---------------------------------------|--|
| Protocol Discriminator | RR management |
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use k=1; GSM 480 power capability k=2; GSM 900 power capability |
| Additional MS Classmark information | |
| - Band 1 (P-GSM) supported | According to PICS statement |
| - Band 2 (E-GSM) supported | According to PICS statement |
| - R-Band (R-GSM) supported | According to PICS statement |
| - ER-Band (ER-GSM) supported | According to PICS statement |
| - GSM 400 Band (GSM 480) supported | According to PICS statement |
| - GSM 400 Associated radio capability | Corresponding to GSM 480 band |
| - Associated radio capability 1 | Corresponding to GSM 900 band |
| - R-Band Associated radio capability | Corresponding to R-GSM 900 band |

For 450/1 800 MS:

IMMEDIATE ASSIGNMENT

As default except:

| Information element | Value/remark |
|--------------------------|----------------------------------|
| Channel description | |
| - Channel Type | SDCCH/8 |
| - Timeslot number | Arbitrary but not zero |
| - Training sequence code | Arbitrary |
| - Hopping channel | Single RF |
| - Channel selector | k=1; ARFCN 263 k=2; ARFCN 590 |
| Mobile Allocation | empty |

PAGING RESPONSE

| Information element | Value/remark |
|-------------------------------|--|
| Protocol Discriminator | RR management |
| Ciphering Key Sequence number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available |

26.11.2.2 Multiband signalling / RR / Handover

This subclause applies to any multiband mobile stations.

The purpose of this extra section is to test the handover where the target cell uses frequencies outside the frequency band of the serving cell.

26.11.2.2.1 Multiband signalling / RR / Handover / successful / active call / non-synchronized

26.11.2.2.1.1 Conformance requirements

The MS shall correctly apply the handover procedure in the non-synchronized case when a call is in progress and when handover is performed from a TCH/F without frequency hopping in one band towards a TCH/F without frequency hopping in another band.

When the MS releases a TCH or SDCCH and returns to idle mode, it shall, as quickly as possible, camp on the BCCH carrier of the cell whose channel has just been released, ie the BCCH carrier indicated in the HANDOVER COMMAND.

A multi band mobile station shall not consider a HANDOVER COMMAND as invalid because it indicates target channel frequencies that are all in a different frequency band to that of the ARFCN in the Cell Description IE.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4 and 9.1.15.

3GPP TS 04.13 subclause 5.2.6.2.

3GPP TS 05.08 subclause 6.7.1.

26.11.2.2.1.2 Test purpose

To test that when the MS is ordered to make a non-synchronized handover it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly handles the Timing Advance IE in the PHYSICAL INFORMATION message. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay. To test that upon release of the TCH, the mobile camps on the BCCH carrier of the cell indicated in the HANDOVER COMMAND.

26.11.2.2.1.3 Method of test

Initial Conditions

For execution counter M =1, 2

System Simulator:

For 450/900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263

Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)

Cell B has:

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For 480/900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310

Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)

Cell B has:

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For 450/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263

Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)

Cell B has:

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For 480/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310

Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)

Cell B has:

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For 900/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

Cell B has:

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For 710/1 900 MS, 750/1 900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 457

Cell Allocation = (447, 454, 457, 463, 471, 479, 482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508)

Cell B has:

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 803, 804, 806)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For 850/1 900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 147

Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241)

Cell B has:

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 803, 804, 806)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

Mobile Station:

The MS is in the active state (U10) of a call on cell A. (for execution counter $M = 1$) and on cell B (for execution counter $M=2$).

For execution counter $M = 3$

System Simulator:

For 450/900 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263

Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

For 480/900 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310

Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

For 450/1 800 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263

Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

For 480/1 800 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310

Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

For 900/1 800 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

For 710/1 900 MS, 750/1 900 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 457

Cell Allocation = (447, 454, 457, 463, 471, 479, 482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 803, 804, 806)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

For 850/1 900 MS: 2 cells, A and B with different LAI, default parameters except:

Cell A has:

BCCH ARFCN = 147

Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241)

Cell B has:

LAI = 0003 H

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 803, 804, 806)

The frame numbers of cells A and B shall be the same. The timebase of cells A and B shall be such that the edges of their timeslots are coincident at the antenna connector. ie cells A and B shall be fully synchronised.

Mobile Station:

The MS is successfully registered in the LA of cell A and the MS is in the active state (U10) of a call on cell A.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen Final State of the MS

For execution counter M = 1:

The active state (U10) of a call on cell B.

For execution counter M = 2:

The active state (U10) of a call on cell A.

For execution counter M = 3:

The MM idle state on cell A.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND on the main DCCH. The MS shall begin to send access bursts on the new DCCH (and optionally on the SACCH) of the target cell. The SS observes the access bursts and after receiving n (n being randomly drawn between values according to table 26.6-2 of subclause 26.6.5) access bursts, the SS sends one PHYSICAL INFORMATION message with a Timing Advance as specified in table 26.6-1 of subclause 26.6.5. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANOVER COMPLETE message, before "x" ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13. The value of "x" depends upon the target channel and is specified in the specific message contents section.

For execution counter M = 3, the call is then released and then the SS sends a CHANNEL RELEASE message. It is then checked for 2 minutes that the MS does not access Cell B.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for an execution counter $M = 1, 2, 3$ for an MS which supports TCH/F.

Steps after step 7 are only performed for execution counter $M = 3$.

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 0 | MS -> SS | | The MS and SS are in the active state of a call on the channel described below. |
| 1 | SS -> MS | HANDOVER COMMAND | See Specific message contents |
| 2 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. |
| 3 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS messages. See specific message contents. |
| 4 | MS -> SS | SABM | Sent without information field |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANDOVER COMPLETE | The message shall be ready to be transmitted before "x" ms after the completion of step 3. |
| 7 | MS -> SS | | The MS and SS are in the active state of a call on the channel described below. |
| 8 | SS -> MS | RELEASE COMPLETE | steps 8-10 are only performed for execution counter $M = 3$. |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | SS | | The SS checks that for a period of 2 minutes, the MS does not access cell B. |

Specific Message Contents **For Mobiles Supporting Speech**

In case of 450/900 MS:

SYSTEM INFORMATION TYPE 5ter

| Information Element | Value/remark |
|--|---|
| Neighbour Cells Description 2 Multiband reporting For Cell A | 0 |
| - Format notation | Bit map 0 |
| - BA_IND | 0 |
| - BCCH Allocation ARFCN | ARFCN 3, 20, 29, 62, 84, 89, 99 and 119 |

For M = 1:

Step 0: The MS and SS are using a full rate TCH in non-hopping mode on cell A.

HANDOVER COMMAND

| Information Element | value/remarks |
|--------------------------------------|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 1 |
| - Base Station Colour Code | 5 |
| - BCCH Carrier Number | 20 |

26.11.2.2.2 Multiband signalling / RR / Handover / layer 1 failure

26.11.2.2.2.1 Conformance requirements

During a handover from a channel in the lower band to a channel in the upper band, or the contrary, the MS shall correctly return to the old channel in the case of an handover failure caused by a layer 1 failure on the target cell.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.4.4.

26.11.2.2.2.2 Test purpose

To check that the MS correctly returns to the old channel in the case of an handover failure caused by a layer 1 failure on the target cell, if the origin is in the lower band and the target is in the upper band or the contrary.

26.11.2.2.2.3 Method of test

Initial Conditions

System Simulator:

For 450/900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263.

Cell B has:

BCCH ARFCN = 20.

For 480/900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310.

Cell B has:

BCCH ARFCN = 20.

For 450/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263.

Cell B has:

BCCH ARFCN = 764.

For 480/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310.

Cell B has:

BCCH ARFCN = 764.

For 900/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 20.

Cell B has:

BCCH ARFCN = 764.

For 710/1 900 MS, 750/1 900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 457.

Cell B has:

BCCH ARFCN = 764.

For 850/1 900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 147.

Cell B has:

BCCH ARFCN = 764.

Mobile Station:

The MS is in the active state (U10) of a call on cell A. Used power level is the maximum supported by the MS in the band in use.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen Final State of the MS

The active state (U10) of a mobile call on cell A. Used power level is the maximum supported by the MS in the band in use.

Test Procedure

The MS is in the active state (U10) of a call on cell A. The SS sends a HANOVER COMMAND on the main DCCH. The MS shall begin to send access bursts on the new DCCH (and optionally on the SACCH) to cell B. With the exception of normal BCCH signalling, the SS does not transmit anything on cell B (thus causing a time-out of T3124). The MS shall re-establish the old link on cell A and send a HANOVER FAILURE within 3 seconds from the transmission of HANOVER COMMAND, using the old Power Control Level.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|--|
| 0 | SS | - | The SS records the old Power Control Level in the layer 1 header of the last SACCH message sent by the MS before step 1. |
| 1 | SS -> MS | HANOVER COMMAND | Channel description: non-hopping, full rate. Synchronisation Indication: non synchronised. |
| 2 | MS -> SS | HANOVER ACCESS | Several messages are sent, all with correct Handover References. |
| 3 | MS -> SS | HANOVER FAILURE | Sent on old channel, RR cause value ="Abnormal release, unspecified", "Abnormal release, channel unacceptable", "Abnormal release, timer expired", "Abnormal release, no activity on the radio path" or "Protocol error unspecified". Shall be sent within 3 seconds from the transmission of HANOVER COMMAND. |
| 4 | SS | - | The SS checks that the PowerControl Level reported in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM is the same as in step 0. |

Specific Message Contents

For 450/900 MS:

26.11.2.2.3 Multiband signalling / RR / Handover / Multiband BCCH / successful / active call / non synchronized

26.11.2.2.3.1 Conformance requirements

This test relates to cells supporting frequencies in GSM 400, GSM 710, GSM 750, GSM 850, GSM 900, DCS 1800 and PCS 1900 bands.

The MS shall correctly apply the handover procedure in the non synchronized case when a call is in progress and when handover is performed from a TCH/F without frequency hopping in one band towards a TCH/F either with frequency hopping or not in another band.

References

3GPP TS 04.13 subclause 5.2.6.2.

3GPP TS 05.08 subclause 6.7.1.

26.11.2.2.3.2 Test purpose

To test that when the MS is ordered to make a non synchronized handover it sends continuously access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly handles the Timing Advance IE in the PHYSICAL INFORMATION. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay.

26.11.2.2.3.3 Method of test

Initial Conditions

For execution counter M =1, 2.

System Simulator:

For 450/900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263

GSM 450 frequencies: 259, 263, 267, 271, 275, 279, 283, 291.

GSM 900 frequencies: 10, 20, 34, 45, 52, 66, 74, 114.

Cell B has:

BCCH ARFCN = 268

GSM 450 frequencies: 260, 261, 268, 277, 281, 287, 288, 289.

GSM 900 frequencies: 14, 17, 32, 59, 73, 76, 87, 108.

For 480/900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310

GSM 480 frequencies: 306, 310, 314, 318, 322, 326, 332, 338.

GSM 900 frequencies: 10, 20, 34, 45, 52, 66, 74, 114.

Cell B has:

BCCH ARFCN = 315

GSM 480 frequencies: 307, 308, 315, 324, 328, 334, 335, 336.

GSM 900 frequencies: 14, 17, 32, 59, 73, 76, 87, 108.

For 450/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 263

GSM 450 frequencies: 259, 263, 267, 271, 275, 279, 283, 291.

DCS 1 800 frequencies: 739, 746, 756, 761, 771, 782, 798, 832.

Cell B has:

BCCH ARFCN = 268

GSM 450 frequencies: 260, 261, 268, 277, 281, 287, 288, 289.

DCS 1 800 frequencies: 743, 749, 758, 764, 779, 791, 829, 844.

For 480/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 310

GSM 480 frequencies: 306, 310, 314, 318, 322, 326, 332, 338.

DCS 1 800 frequencies: 739, 746, 756, 761, 771, 782, 798, 832.

Cell B has:

BCCH ARFCN = 315

GSM 480 frequencies: 307, 308, 315, 324, 328, 334, 335, 336.

DCS 1 800 frequencies: 743, 749, 758, 764, 779, 791, 829, 844.

For 900/1 800 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 20

GSM 900 frequencies: 10, 20, 34, 45, 52, 66, 74, 114.

DCS 1 800 frequencies: 739, 746, 756, 761, 771, 782, 798, 832.

Cell B has:

BCCH ARFCN = 32

GSM 900 frequencies: 14, 17, 32, 59, 73, 76, 87, 108.

DCS 1 800 frequencies: 743, 749, 758, 764, 779, 791, 829, 844.

For 710/1 900 MS, 750/1 900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 457

GSM 710, GSM 750 frequencies: 447, 457, 471, 482, 489, 498, 501, 508.

PCS 1 900 frequencies: 739, 746, 756, 761, 771, 782, 798, 804.

Cell B has:

BCCH ARFCN = 469

GSM 710, GSM 750 frequencies: 451, 454, 469, 496, 500, 503, 505, 506.

PCS 1 900 frequencies: 743, 749, 758, 764, 779, 791, 803, 806.

For 850/1 900 MS: 2 cells, A and B with same LAI, default parameters except:

Cell A has:

BCCH ARFCN = 147

GSM 850 frequencies: 137, 147, 161, 172, 179, 193, 201, 241.

PCS 1 900 frequencies: 739, 746, 756, 761, 771, 782, 798, 804.

Cell B has:

BCCH ARFCN = 159

GSM 850 frequencies: 141, 144, 159, 186, 200, 203, 214, 235.

PCS 1 900 frequencies: 743, 749, 758, 764, 779, 791, 803, 806.

Mobile Station:

For execution counter $M = 1$, the MS is in the active state (U10) of a call on cell A, using a TCH in the lower band.

For execution counter $M = 2$, the MS is in the active state (U10) of a call on cell B, using a TCH in the upper band.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)

- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen Final State of the MS

For execution counter M = 1

The active state (U10) of a call with a TCH in the upper band on cell B.

For execution counter M = 2

The active state (U10) of a call in hopping mode in the upper band on cell A.

Test Procedure

The MS is in the active state (U10) of a call. The SS sends a HANOVER COMMAND on the main DCCH. The MS shall begin to send access bursts on the new DCCH (and optionally on the SACCH) of the target cell. The SS observes the access bursts and after receiving n (n being randomly drawn between values [10-20]) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrary Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANOVER COMPLETE message, before "x" ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13. The value of "x" depends upon the target channel and is specified in the specific message contents section.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for an execution counter M = 1 and 2 for an MS which supports TCH/F.

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 0 | MS -> SS | | M = 1, The MS and SS are using a full rate TCH in lower band, in non hopping mode on cell A. M=2, the MS and SS are using a full rate TCH in upper band, in non hopping mode on cell B. |
| 1 | SS -> MS | HANOVER COMMAND | See Specific message contents |
| 2 | MS -> SS | HANOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANOVER COMMAND. |
| 3 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANOVER ACCESS messages. See specific message contents. |
| 4 | MS -> SS | SABM | Sent without information field |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANOVER COMPLETE | The message shall be ready to be transmitted before "x" ms after the completion of step 3. |
| 7 | MS -> SS | | The MS and SS are in the active state of a call. |

For 450/900 MS:

SYSTEM INFORMATION TYPE 5

Step 6: x = 650 ms.

Step 7: The MS and SS are using a full rate TCH in hopping mode in the DCS band on cell A.

26.11.2.2.4 Multiband signalling / RR / Handover/ Multiband BCCH / Intracell Handover - Interband Assignment

In case of multi-band networks, an intracell change of channel can be requested by upper layers in order to change the channel type (Directed Retry from a channel belonging to one frequency band to a channel belonging to another frequency band), or it may be initiated by the RR-sublayer for an intra cell and inter-band handover for cells supporting GSM 400, GSM 710, GSM750, GSM 850, GSM 900 and DCS 1 800 frequencies. This change is performed using the channel assignment procedure.

26.11.2.2.4.1 Dedicated assignment / successful case

This test is only applicable to an MS supporting a TCH.

26.11.2.2.4.1.1 Conformance requirements

1. Upon receipt of the ASSIGNMENT COMMAND message, the mobile station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the main signalling links).
2. MM-messages and CM-messages using SAPI=0 sent from the mobile station to the network can be duplicated by the data link layer in the following case:
 - a channel change of dedicated channels is required (assignment or handover procedure) and the last layer 2 frame has not been acknowledged by the peer data link layer before the mobile station leaves the old channel;
 - in this case, the mobile station does not know whether the network has received the message correctly. Therefore, the mobile station has to send the message again after the new dedicated channel is established.
3. The MS shall establish the link with the power level specified in the ASSIGNMENT COMMAND message.
 - The MS shall confirm the power control level that it is currently employing in the uplink SACCH L1 header. The indicated value shall be the power control level actually used by the mobile for the last burst of the previous SACCH period.
4. The MS shall apply the hopping frequencies specified in ASSIGNMENT COMMAND message in the Mobile Allocation IE or the Frequency List IE at the time of accessing the new channel using the last received Cell Allocation.
5. After receipt of the ASSIGNMENT COMMAND the MS shall perform the assignment and return an ASSIGNMENT COMPLETE without undue delay.

26.11.2.2.4.2 Test purpose

1. To verify that upon receipt of an ASSIGNMENT COMMAND, the MS switches to the channel defined in the ASSIGNMENT COMMAND, establishes the link and sends an ASSIGNMENT COMPLETE message. This is tested for an MS supporting TCH in the special cases of a transition.

NOTE: in all cases the old and the new channel assigned belong to different frequency bands.

- 1.1 from non-hopping SDCCH in the lower band to hopping TCH/F in the upper band using a different timeslot;
 - 1.2 from hopping TCH/F in the upper band to non-hopping TCH/F in the lower band using a different timeslot;
 - 1.3 from non-hopping TCH/F in the lower band to hopping TCH/F in the upper band using a different timeslot.
 - 1.4 from hopping TCH/F in the upper band to hopping TCH/H in the lower band using a different timeslot; this test purpose is only applicable if the MS supports TCH/H;
 - 1.5 from hopping TCH/H in the lower band to non-hopping TCH/H in the upper band using a different timeslot; this test purpose is only applicable if the MS supports TCH/H;
 - 1.6 from non-hopping TCH/H in the upper band to hopping TCH/F in the lower band using a different timeslot; this test purpose is only applicable if the MS supports TCH/H.
2. To verify that an MS supporting TCH, having received an ASSIGNMENT COMMAND, is able in the case of frequency hopping to decode the Mobile Allocation and Frequency List IEs correctly and applies the specified frequencies using the correct Cell Allocation.

3. To verify that after receipt of the ASSIGNMENT COMMAND the MS returns an ASSIGNMENT COMPLETE without undue delay.

26.11.2.2.4.3 Method of test

Initial Conditions

System Simulator:

For 450/900 MS: 1 cell with GSM 450 and GSM 900 frequencies, using a BCCH in the GSM 450 band, default parameters except:

BCCH ARFCN =263.

System Information 1 Cell Allocation = 259, 263, 267, 271, 275, 279, 283, 291, 10, 20, 34, 45, 52, 66, 76, 114.

For 480/900 MS: 1 cell with GSM 480 and GSM 900 frequencies, using a BCCH in the GSM 480 band, default parameters except:

BCCH ARFCN =310.

System Information 1 Cell Allocation = 306, 310, 314, 318, 322, 326, 332, 338, 10, 20, 34, 45, 52, 66, 76, 114.

For 450/1 800 MS: 1 cell with GSM 450 and DCS 1 800 frequencies, using a BCCH in the GSM 450 band, default parameters except:

BCCH ARFCN =263.

System Information 1 Cell Allocation = 259, 263, 267, 271, 275, 279, 283, 291, 739, 746, 756, 761, 771, 782, 798, 832.

For 480/1 800 MS: 1 cell with GSM 480 and DCS 1 800 frequencies, using a BCCH in the GSM 480 band, default parameters except:

BCCH ARFCN =310.

System Information 1 Cell Allocation = 306, 310, 314, 318, 322, 326, 332, 338, 739, 746, 756, 761, 771, 782, 798, 832.

For 900/1 800 MS: 1 cell with GSM and DCS 1 800 frequencies, using a BCCH in the GSM band, default parameters except:

BCCH ARFCN =20.

System Information 1 Cell Allocation = 10, 20, 34, 45, 52, 66, 76, 114, 739, 746, 756, 761, 771, 782, 798, 832.

For 710/1 900 MS, 750/1 900 MS: 1 cell with GSM and PCS 1 900 frequencies, using a BCCH in the GSM band, default parameters except:

BCCH ARFCN =457.

System Information 1 Cell Allocation = 447, 457, 471, 482, 489, 498, 503, 508, 739, 746, 756, 761, 771, 782, 798, 804.

For 850/1 900 MS: 1 cell with GSM and PCS 1 900 frequencies, using a BCCH in the GSM band, default parameters except:

BCCH ARFCN =147.

System Information 1 Cell Allocation = 137, 147, 161, 172, 179, 193, 203, 241, 739, 746, 756, 761, 771, 782, 798, 804.

NOTE: Cell Allocation IE broadcasted in SYSTEM INFORMATION 1 shall be coded with a format so that frequencies belonging to both lower and upper frequency band can be included. Format Identifier of Cell Channel Description IE will thus be Range 1024.

Mobile Station:

The MS is in the "idle, updated" state with a TMSI allocated.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)
- at least one half rate service (TSPC_AddInfo_HalfRate)

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The SS pages the MS and allocates an SDCCH. Then three channels are assigned with ASSIGNMENT COMMANDs messages. Each time the MS shall switch to the assigned channel, establish the link and send an ASSIGNMENT COMPLETE message.

For an MS not supporting TCH/H, the SS initiates the channel release procedure and the test ends here. For an MS supporting TCH/H, the channel assignment procedure is performed another three times, with half rate channels involved, and again it is checked that the MS correctly completes the procedures, before the SS initiates the channel release procedure.

Maximum Duration of Test

60 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 6 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 5. |
| 7 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 8 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 7. |
| 9 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 9. |
| A | | | This test part is performed if the MS doesn't support TCH/H (see PICS) |
| A 11 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| B | | | This test part is performed if the MS supports TCH/H (see PICS). |
| B11 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| B12 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 11. |
| B13 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| B14 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 13. |
| B15 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| B16 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 15. |
| B17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

For 450/900 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|---|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 450 part of the list. |
|---|---|

Step 5

ASSIGNMENT COMMAND:

| | |
|---|--|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Channel Mode - Mode Mobile Allocation Starting Time | TCH/F (N+1) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not included Signalling Indicates only GSM 900 frequencies of the CA (broadcast on the BCCH). (10, 20, 45, 52, 66, 114) Not included |
|---|--|

Step 7

ASSIGNMENT COMMAND:

| | |
|---|--|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN Power Command - Power level Channel Mode Frequency list IE Cell Channel Description Mobile Allocation Starting Time | TCH/F (N+2) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 450 part of the list. Chosen arbitrarily but with a changed value. A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS Not Included Range 1024 format encodes: (271, 275, 279, 283, 291, 10, 20, 34, 45, 52, 66, 76, 114.). Not included Not included |
|---|--|

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where |
| - MAIO | N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63). |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate |
| Channel Mode | capabilities declared for the MS |
| Frequency list IE | Not Included |
| Mobile Allocation | Indicates GSM 900 frequencies (10, 45, 114). |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|--|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the |
| - MAIO | number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not included unless the Channel Mode allocated in step 9 |
| Channel Mode | is incompatible for a Half Rate Channel Type. |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (259, 263, 267, 271, 275, |
| Mobile Allocation | 279, 283, 291, 10, 20, 34, 45, 52, 66, 76, 114). |
| Starting Time | Indicates frequencies (259, 263, 267, 271, 275, 279, 283, |
| | 291). |
| | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|--|--|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | TCH/H (N+5) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the BCCH in the GSM 900 part of the list. |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | signalling |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | not included |

Step 15

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN | TCH/F Chosen arbitrarily (N+6) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM 450 frequencies in the Frequency List IE. Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Cell Channel Description | Not included |
| Frequency list IE | Use Range 128 to encode (259, 263, 267, 271, 275, 279, 283, 291). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

For 480/900 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|---|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 480 part of the list. |
|---|---|

Step 5

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+1) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not included |
| Frequency list IE | |
| Channel Mode | Signalling |
| - Mode | Indicates only GSM 900 frequencies of the CA (broadcast on the BCCH). |
| Mobile Allocation | (10, 20, 45, 52, 66, 114) |
| Starting Time | Not included |

Step 7

ASSIGNMENT COMMAND:

| | |
|--------------------------------|--|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+2) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the common BCCH in the GSM 480 part of the list. |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Range 1024 format encodes: (318, 322, 326, 332, 338, 10, 20, 34, 45, 52, 66, 76, 114.). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where |
| - MAIO | N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63). |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate |
| Channel Mode | capabilities declared for the MS |
| Frequency list IE | Not Included |
| Mobile Allocation | Indicates GSM 900 frequencies (10, 45, 114). |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|--|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the |
| - MAIO | number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not included unless the Channel Mode allocated in step 9 |
| Channel Mode | is incompatible for a Half Rate Channel Type. |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (306, 310, 314, 318, 322, |
| Mobile Allocation | 326, 332, 338, 10, 20, 34, 45, 52, 66, 76, 114.). |
| Starting Time | Indicates frequencies (306, 310, 314, 318, 322, 326, 332, |
| | 338). |
| | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|--|--|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | TCH/H (N+5) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the BCCH in the GSM 900 part of the list. |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | signalling |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | not included |

Step 15

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN | TCH/F Chosen arbitrarily (N+6) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM 480 frequencies in the Frequency List IE. Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Cell Channel Description | Not included |
| Frequency list IE | Uses Range 128 to encode (306, 310, 314, 318, 322, 326, 332, 338). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

For 450/1 800 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|---|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 450 part of the list. |
|---|---|

Step 5

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Channel Mode - Mode Mobile Allocation Starting Time | TCH/F (N+1) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not included Signalling Indicates only DCS 1 800 frequencies of the CA (broadcast on the BCCH). (739, 746, 761, 771, 782, 832) Not included |
|---|---|

Step 7

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN Power Command - Power level Channel Mode Frequency list IE Cell Channel Description Mobile Allocation Starting Time | TCH/F (N+2) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 450 part of the list. Chosen arbitrarily but with a changed value. A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS Not Included Range 1024 format encodes: (271, 275, 279, 283, 291, 739, 746, 756, 761, 771, 782, 798, 832.). Not included Not included |
|---|---|

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where |
| - MAIO | N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63). |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate |
| Channel Mode | capabilities declared for the MS |
| Frequency list IE | Not Included |
| Mobile Allocation | Indicates DCS frequencies (739, 761, 832). |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|--|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the |
| - MAIO | number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not included unless the Channel Mode allocated in step 9 |
| Channel Mode | is incompatible for a Half Rate Channel Type. |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (259, 263, 267, 271, 275, |
| Mobile Allocation | 279, 283, 291, 739, 746, 756, 761, 771, 782, 798, 832.). |
| Starting Time | Indicates frequencies (259, 263, 267, 271, 275, 279, 283, |
| | 291). |
| | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|--|--|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | TCH/H (N+5) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the BCCH in the DCS 1 800 part of the list. |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | signalling |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | not included |

Step 15

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN | TCH/F Chosen arbitrarily (N+6) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM 450 frequencies in the Frequency List IE. Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Cell Channel Description | Not included |
| Frequency list IE | Use Range 128 to encode (259, 263, 267, 271, 275, 279, 283, 291). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

For 480/1 800 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|---|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 480 part of the list. |
|---|---|

Step 5

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Channel Mode - Mode Mobile Allocation Starting Time | TCH/F (N+1) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not included Signalling Indicates only DCS 1 800 frequencies of the CA (broadcast on the BCCH). (739, 746, 761, 771, 782, 832) Not included |
|---|---|

Step 7

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN Power Command - Power level Channel Mode Frequency list IE Cell Channel Description Mobile Allocation Starting Time | TCH/F (N+2) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM 480 part of the list. Chosen arbitrarily but with a changed value. A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS Not Included Range 1024 format encodes: (318, 322, 326, 332, 338, 739, 746, 756, 761, 771, 782, 798, 832.). Not included Not included |
|---|---|

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63). |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Not Included |
| Mobile Allocation | Indicates DCS frequencies (739, 761, 832). |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not included unless the Channel Mode allocated in step 9 is incompatible for a Half Rate Channel Type. |
| Channel Mode | Not included |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (306, 310, 314, 318, 322, 326, 332, 338, 739, 746, 756, 761, 771, 782, 798, 832.). |
| Mobile Allocation | Indicates frequencies (306, 310, 314, 318, 322, 326, 332, 338). |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|---|--|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN Power Command - Power level Channel Mode Frequency list IE Cell Channel Description Mobile Allocation Starting Time | TCH/H (N+5) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the BCCH in the DCS 1 800 part of the list. Chosen arbitrarily but with a changed value. signalling Not included Not included Not included not included |
|---|--|

Step 15

ASSIGNMENT COMMAND:

| | |
|--|--|
| Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Channel Mode Cell Channel Description Frequency list IE Mobile Allocation Starting Time | TCH/F Chosen arbitrarily (N+6) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM 480 frequencies in the Frequency List IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS Not included Use Range 128 to encode (306, 310, 314, 318, 322, 326, 332, 338). Not included Not included |
|--|--|

For 900/1 800 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|---|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM part of the list. |
|---|---|

Step 5

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Channel Mode - Mode Mobile Allocation Starting Time | TCH/F (N+1) mod 8 Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not included Signalling Indicates only DCS 1 800 frequencies of the CA (broadcast on the BCCH). (739, 746, 761, 771, 782, 832) Not included |
|---|---|

Step 7

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN Power Command - Power level Channel Mode Frequency list IE Cell Channel Description Mobile Allocation Starting Time | TCH/F (N+2) mod 8 Chosen arbitrarily Single RF Channel chosen arbitrarily from CA of the common BCCH in the GSM part of the list. Chosen arbitrarily but with a changed value. A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS Not Included Range 1024 format encodes: (45, 52, 66, 76, 114, 739, 746, 756, 761, 771, 782, 798, 832.). Not included Not included |
|---|---|

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63). |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Not Included |
| Mobile Allocation | Indicates DCS frequencies (739, 761, 832). |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not included unless the Channel Mode allocated in step 9 is incompatible for a Half Rate Channel Type. |
| Channel Mode | Not included |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (10, 20, 34, 45, 52, 66, 76, 114, 739, 746, 756, 761, 771, 782, 798, 832.). |
| Mobile Allocation | Indicates frequencies (10, 20, 34, 45, 52, 66, 76, 114). |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+5) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the BCCH in the DCS 1 800 part of the list. |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | signalling |
| Channel Mode | Not included |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | not included |

Step 15

ASSIGNMENT COMMAND:

| | |
|--------------------------|--|
| Channel Description | TCH/F |
| - Channel Type | Chosen arbitrarily |
| TDMA offset | (N+6) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM frequencies in the Frequency List IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Channel Mode | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Cell Channel Description | Not included |
| Frequency list IE | Uses Bitmap 0 to indicate (10, 20, 34, 45, 52, 66, 76, 114). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

For 710/1 900 MS, 750/1 900 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|------------------------------------|--|
| As default message contents except | |
| Channel Description | SDCCH/8 |
| - Channel Type | Chosen arbitrarily |
| TDMA offset | N, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the common BCCH in the GSM part of the list. |
| - ARFCN | |

Step 5

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+1) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Frequency list IE | Not included |
| Channel Mode | |
| - Mode | Signalling |
| Mobile Allocation | Indicates only PCS 1 900 frequencies of the CA (broadcast on the BCCH). (739, 746, 761, 771, 782, 804) |
| Starting Time | Not included |

Step 7

ASSIGNMENT COMMAND:

| | |
|--------------------------------|--|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+2) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the common BCCH in the GSM part of the list. |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Range 1024 format encodes: (482, 489, 498, 503, 508, 739, 746, 756, 761, 771, 782, 798, 804). |
| Cell Channel Description | |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63). |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Indicates PCS frequencies (739, 761, 804). |
| Mobile Allocation | |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Channel Mode | Not included unless the Channel Mode allocated in step 9 is incompatible for a Half Rate Channel Type. |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (447, 457, 471, 482, 489, 498, 503, 508, 739, 746, 756, 761, 771, 782, 798, 804). |
| Mobile Allocation | Indicates frequencies (447, 457, 471, 482, 489, 498, 503, 508). |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+5) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the BCCH in the PCS 1 900 part of the list. |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Channel Mode | Signalling |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | not included |

Step 15

ASSIGNMENT COMMAND:

| | |
|--------------------------|--|
| Channel Description | TCH/F |
| - Channel Type | Chosen arbitrarily |
| TDMA offset | (N+6) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM frequencies in the Frequency List IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Channel Mode | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Cell Channel Description | Not included |
| Frequency list IE | Uses 128 range to indicate (447, 457, 471, 482, 489, 498, 503, 508). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

For 850/1 900 MS:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|------------------------------------|--|
| As default message contents except | |
| Channel Description | SDCCH/8 |
| - Channel Type | Chosen arbitrarily |
| TDMA offset | N, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the common BCCH in the GSM part of the list. |
| - ARFCN | |

Step 5

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+1) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Frequency list IE | Not included |
| Channel Mode | |
| - Mode | Signalling |
| Mobile Allocation | Indicates only PCS 1 900 frequencies of the CA (broadcast on the BCCH). (739, 746, 761, 771, 782, 804) |
| Starting Time | Not included |

Step 7

ASSIGNMENT COMMAND:

| | |
|--------------------------------|--|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+2) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the common BCCH in the GSM part of the list. |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Range 1024 format encodes: (172, 179, 193, 203, 241, 739, 746, 756, 761, 771, 782, 798, 804). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/F |
| - Channel Type and TDMA offset | (N+3) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF Hopping Channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63). |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Channel Mode | Not Included |
| Frequency list IE | Not Included |
| Mobile Allocation | Indicates PCS frequencies (739, 761, 804). |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+4) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Channel Mode | Not included unless the Channel Mode allocated in step 9 is incompatible for a Half Rate Channel Type. |
| Frequency list IE | Not included |
| Cell Channel Description | Range 1024 format encodes: (137, 147, 161, 172, 179, 193, 203, 241, 739, 746, 756, 761, 771, 782, 798, 804). |
| Mobile Allocation | Indicates frequencies (137, 147, 161, 172, 179, 193, 203, 241). |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND:

| | |
|--------------------------------|---|
| Channel Description | TCH/H |
| - Channel Type and TDMA offset | (N+5) mod 8 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | chosen arbitrarily from CA of the BCCH in the PCS 1 900 part of the list. |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Channel Mode | Signalling |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | not included |

Step 15

ASSIGNMENT COMMAND:

| | |
|--------------------------|--|
| Channel Description | |
| - Channel Type | TCH/F |
| TDMA offset | Chosen arbitrarily |
| - Timeslot Number | (N+6) mod 8 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of GSM frequencies in the Frequency List IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | A non-signalling mode arbitrarily selected from the full rate capabilities declared for the MS |
| Cell Channel Description | Not included |
| Frequency list IE | Uses 128 range to indicate (137, 147, 161, 172, 179, 193, 203, 241). |
| Mobile Allocation | Not included |
| Starting Time | Not included |

26.11.2.3 Multiband signalling / RR / Measurement reporting

This test applies to any multiband MSs supporting simultaneous multiband operation.

26.11.2.3.1 Conformance requirements

The MS shall continuously send MEASUREMENT REPORT messages on every SACCH blocks and the measurement valid indication shall be set to valid (0) within the second block at the latest. After 20 s the values in the MEASUREMENT REPORT message shall contain measurement results for up to the 6 strongest BCCH carriers among those with known and allowed NCC part of BSIC on which the mobile is asked to report. For a multi band MS the number of neighbour cells, for each frequency band supported, which shall be included is indicated by the parameter MULTIBAND_REPORTING.

References

3GPP TS 05.08 subclause 8.4.

26.11.2.3.2 Test purpose

To test that, when the SS gives information about neighbouring cells, the MS reports the appropriate results and correctly orders the BA list made from System Information 5 and System Information 5ter.

26.11.2.3.3 Method of test

Initial Conditions

System Simulator:

For 450/900 MS: 8 cells with the following settings:

| Transmitter | Level | NCC | BCC | ARFCN | Cell identity |
|---------------|-------|-----|-----|-------|---------------|
| Serving, S1 | -60 | 1 | 3 | 259 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 002 | 0002H |
| Neighbour, N2 | -79 | 1 | 7 | 261 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 263 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 088 | 0005H |

| Neighbour, N7 | -40 | 1 | 1 | 044 | 0008H |

For 710/1 900 MS, 750/1 900 MS: 8 cells with the following settings:

| Transmitter | Level | NCC | BCC | ARFCN | Cell Identity |
|---------------|-------|-----|-----|-------|---------------|
| Serving, S1 | -60 | 1 | 3 | 439 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 520 | 0002H |
| Neighbour, N2 | -79 | 1 | 7 | 451 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 457 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 780 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 469 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 805 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 481 | 0008H |

For 850/1 900 MS: 8 cells with the following settings:

| Transmitter | Level | NCC | BCC | ARFCN | Cell Identity |
|---------------|-------|-----|-----|-------|---------------|
| Serving, S1 | -60 | 1 | 3 | 129 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 520 | 0002H |
| Neighbour, N2 | -79 | 1 | 7 | 141 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 147 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 780 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 159 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 805 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 171 | 0008H |

With the exception of the Cell Allocation, the rest of the parameters for all eight cells are the same as the default settings and default SYSTEM INFORMATION TYPE 1, 2 and 4 message contents for cell A. The Cell Allocation for the serving cell is the same as the default setting for cell A. The Cell Allocations for the neighbour cells need have only one entry, consisting of the ARFCN of that cell's BCCH.

Mobile Station:

The MS is in the active state of a call (U10).

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen Final State of the MS

Active state of a call (U10).

Test Procedure

This test procedure is performed three times.

With the MS having a call in progress, the SS sends SYSTEM INFORMATION TYPE 5, 5ter & 6 on the SACCH. All 8 of the BCCHs "on air" are indicated in the BA. The MS shall send MEASUREMENT REPORTs back to the SS, and it shall be indicated in these that measurement results for the 6 strongest carriers, on which the mobile is asked to report (indicated by the parameter MULTIBAND_REPORTING), have been obtained.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for execution counter, k = 1, 2, 3.

Since SYSTEM INFORMATION TYPE 5, SYSTEM INFORMATION TYPE 5ter, SYSTEM INFORMATION TYPE 6 and MEASUREMENT REPORT are sent continuously, a table is not applicable in this test. The interval between 2 successive Layer 2 frames containing MEASUREMENT REPORTs shall not exceed one Layer 2 frame.

Specific Message Contents

For 450/900 MS:

SYSTEM INFORMATION TYPE 2ter:

| Information Element | value/remark |
|---|---|
| As defaults except: Neighbour Cells Description 2 Multiband Reporting | k=1, 3: Minimum 3 cells reported from each band supported excluding the frequency band of the serving cell. k=2: Normal reporting of six strongest cells, irrespective of the band used. |

SYSTEM INFORMATION TYPE 3:

| Information Element | value/remark |
|--|--|
| as default except: - SI 2ter indicator - Early Classmark Sending Control | SI 3 rest octets System Information 2ter is available Early Sending is explicitly accepted |

SYSTEM INFORMATION TYPE 5:

| Information Element | value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Message Type | Sys Info 5. |
| Neighbour Cells Description | |
| - Format Identifier | k=1, 2: Range 128 k=3: Bit map 0 |
| - BCCH Allocation Sequence | 1 |
| - BCCH Allocation ARFCN | k=1, 2: ARFCN 261, 263, 274, 278 k=3: ARFCN 2, 88, 114 |
| - EXT IND | Information Element carries the complete BA. |

SYSTEM INFORMATION TYPE 5ter:

| Information Element | value/remark |
|---------------------------------|--|
| Protocol Discriminator | RR management |
| Message Type | Sys Info 5ter. |
| - Neighbour Cells Description 2 | |
| - Multiband reporting | k=1, 3: Normal reporting of six strongest cells, irrespective of the band used k=2: Minimum 3 cells reported from each band supported excluding the frequency band of the serving cell. |
| - Format notation | Range 512 |
| - BA_IND | 1 |
| - BCCH Allocation ARFCN | k=1, 2: ARFCN 2, 88, 114 k=3: ARFCN 261, 263, 274, 278 |

26.11.3 Multiband signalling / MM

26.11.3.1 Multiband signalling / MM / Location updating

This procedure is used to register the MS in the network. If it is not performed correctly, no call can be established.

26.11.3.1.1 Location updating / accepted

This test is applicable for any Multiband MSs supporting simultaneous multiband operation.

26.11.3.1.1.1 Conformance requirement

If the network accepts a location updating from the Mobile, the Mobile Station shall, after receiving a Location updating Accept message, store the received LAI, stop timer T3210, reset the attempt counter and set the update status in the SIM to updated.

A mobile station that makes use of System information 2ter (to choose correct cell for location updating), shall not ignore this message if it has a L2 pseudolength different from 18.

Reference(s)

3GPP TS 04.08 / 3GPP TS 24.008 subclause 4.4.4.6.

26.11.3.1 1.2 Test purpose

To test the behaviour of the MS if the network accepts the location updating of the MS, irrespective of frequency band used.

To test the behaviour of the MS if it receives a System information 2ter with L2pseudolength different from 18 .

26.11.3.1.1.3 Method of test

Initial conditions:

System Simulator:

Two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN and using frequencies from different frequency bands.

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has a valid TMSI, CKSN (CKSN1). It is "idle updated" on cell A.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen final state of the MS

The MS has a valid TMSI and CKSN. It is "idle, updated" on cell A.

Test Procedure

The MS is made to select cell B. A normal location updating is performed in cell B. The channel is released. The MS is made to select cell A. A normal location updating is performed in cell A.

The LOCATION UPDATING ACCEPT message contains neither IMSI nor TMSI.

Maximum duration of test

3 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------------|---|
| 1 | SS | | The RF level of cell A is lowered but kept suitable , and the RF level of cell B is set higher, in order that the MS can choose cell B as a better cell than cell A , if it correctly read the information broadcasted on the BCCH. The following message are received and sent on cell B . |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = a and "mobile identity" = TMSI. |
| 5 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |
| 6 | MS -> SS | CLASSMARK CHANGE | Indicating the frequency and power capability of the MS |
| 7 | SS -> MS | LOCATION UPDATING ACC | "Mobile identity" IE not included. |
| 8 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 9 | SS | | The RF level of cell B is lowered but kept suitable , and the RF level of cell A is set higher, in order that the MS can choose cell A as a better cell than cell B , if it correctly read the information broadcasted on the BCCH. The following message are received and sent on cell A . |
| 10 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 12 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = b and "mobile identity" = TMSI. |
| 13 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |
| 14 | MS -> SS | CLASSMARK CHANGE | Indicating the frequency and power capability of the MS |
| 15 | SS -> MS | LOCATION UPDATING ACC | "Mobile identity" IE not included |
| 16 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

Specific message contents:

SYSTEM INFORMATION 2TER of CELL B

| Information element | Value/remark |
|---------------------------------------|--------------|
| as default except: L2 pseudolength | = 0 |

LOCATION UPDATING REQUEST

| Information element | Value/remark |
|---|--|
| as default except: Mobile station Classmark 1 - ES IND - RF power capability | Controlled Early Classmark Sending option is implemented corresponding to frequency band used |

| | Corresponding to GSM 750 band |
| | Corresponding to GSM 850 band |
| | Corresponding to PCS 1 900 band |

NOTE: Due to shared radio frequency channel numbers between GSM 1800 and GSM 1900, the mobile should indicate support for either GSM 1800 band OR GSM 1900 band

26.11.3.1.2 Location updating / periodic

This test is applicable for any Multiband MSs supporting simultaneous multiband operation.

26.11.3.1.2.1 Conformance requirement

- 1) If the Mobile Station is in service state NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH or PLMN SEARCH-NORMAL SERVICE when the timer expires the location updating procedure is delayed until this service state is left.
- 2) The T3212 time-out value shall not be changed in the NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH and PLMN SEARCH-NORMAL SERVICE states.
- 3) If the selected cell is in the location area where the mobile station is registered and IMSI ATTACH is not required and timer T3212 has not expired, then the state is NORMAL SERVICE.

References

3GPP TS 04.08 / 3GPP TS 24.008 subclauses 4.4.2 and 4.2.1.1.

26.11.3.1.2.2 Test purpose

- 1) To check that if the PLU timer expires while the MS is out of coverage, the MS informs the network of its return to coverage, irrespective of frequency band used.
- 2) To check that the PLU timer is not disturbed by cells of forbidden PLMNs.
- 3) To check that if the PLU timer does not expire while out of coverage and if the mobile returns to the LA where it is updated, the mobile does not inform the network of its return to coverage.

26.11.3.1.2.3 Method of test

Initial conditions

System Simulator:

Two cells, A and B, belonging to the same location area but using different frequency bands.

Cell A is switched on and cell B is switched off.

T3212 is set to 12 minutes on cell A and cell B.

IMSI attach is allowed in both cells.

Mobile Station:

The MS has a valid TMSI. It is "idle updated" on cell A.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

-

Foreseen final state of the MS

The MS is "idle updated" on cell A.

Test procedure

The MS is deactivated. The MS is then activated and placed in automatic network selection mode. It performs IMSI attach. 1 minute after the end of the IMSI attach procedure, cell A is switched off. 8 minutes after the end of the IMSI attach procedure, cell B is switched on. The MS shall not location update on cell B before 11,75 minutes after the end of the IMSI attach procedure. The MS shall perform a periodic location update on cell B between 11,75 minutes and 12,25 minutes after the end of the IMSI attach procedure.

3 minutes after the end of the periodic location updating procedure, cell B is switched off. 14 minutes after the end of the periodic location updating procedure, cell A is switched on. The MS shall perform a location update on cell A before 17 minutes after the end of the periodic location updating procedure.

Maximum duration of test

35 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------------|--|
| 1 | MS | | The MS is activated in automatic network selection mode |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": IMSI attach |
| 5 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |
| 6 | MS -> SS | CLASSMARK CHANGE | Indicating the frequency and power capability of the MS |
| 7 | SS -> MS | LOCATION UPDATING ACC | |
| 8 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 9 | SS | | 1 minute after step 6, cell A is switched off |
| 10 | SS | | 8 minutes after step 6, cell B is switched on |
| 11 | MS -> SS | CHANNEL REQUEST | This message shall be sent on cell B by the MS between 11 minutes 45s and 12 minutes 15s after step 6. |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type": periodic updating |
| 14 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |
| 15 | MS -> SS | CLASSMARK CHANGE | Indicating the frequency and power capability of the MS |
| 16 | SS -> MS | LOCATION UPDATING ACC | |
| 17 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |
| 18 | SS | | 3 minutes after step 13, cell B is switched off |
| 19 | SS | | 14 minutes after step 13, cell A is switched on. |
| 20 | MS -> SS | CHANNEL REQUEST | This message shall be sent on cell A by the MS before 17 minutes after step 13. |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 22 | MS -> SS | LOCATION UPDATING REQUEST | "Location updating type" = periodic |
| 23 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |
| 24 | MS -> SS | CLASSMARK CHANGE | Indicating the frequency and power capability of the MS |
| 25 | SS -> MS | LOCATION UPDATING ACC | |
| 26 | SS -> MS | CHANNEL RELEASE | After the sending of this message, the SS waits for the disconnection of the main signalling link. |

NOTE: Due to shared radio frequency channel numbers between GSM 1800 and GSM 1900, the mobile should indicate support for either GSM 1800 band OR GSM 1900 band

26.11.4 Multiband signalling / CC

Reserved for future use.

26.11.5 Multiband signalling / Structured procedures

These tests applies only to multiband mobile stations.

26.11.5.1 Multiband signalling / Structured procedures / MS originated call / early assignment

26.11.5.1.1 Conformance requirements

- 1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.
- 2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice that is supported by the MS, shall start to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.
- 3) After the initial message the multiband MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after the Layer 2 UA message sent from the network. The CLASSMARK CHANGE message shall contain information elements Mobile Station Classmark 2 and Mobile Station Classmark 3.
- 4) Subsequently after establishment of an MM connection, the MS shall send a SETUP message with correct parameters.
- 5) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - attach the user connection to the radio path;
 - return a CONNECT ACKNOWLEDGE message.
- 6) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.

- 7) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

- Conformance requirement 5: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.
- Conformance requirement 6: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.4.4.
- Conformance requirement 7: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.13.1.

26.11.5.1.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.
- 2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 3) To verify that a multiband MS is able to send an early CLASSMARK CHANGE on the DCCH uplink.
- 4) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.
- 5) To verify that subsequently, after receipt of a CALL PROCEEDING message and of an HANOVER COMMAND message allocating an appropriate TCH in another band, after having completed the traffic channel early assignment procedure by replying with the HANOVER COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.

To verify that subsequently the MS has attached the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- 6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.
- 7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

26.11.5.1.3 Method of test

Initial Conditions

System Simulator:

For 450/900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 450 cell with default parameters.

Cell B is a GSM 900 cell with default parameters.

For 480/900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 480 cell with default parameters.

Cell B is a GSM 900 cell with default parameters.

For 450/1800 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 450 cell with default parameters.

Cell B is a DCS 1 800 cell with default parameters.

For 480/1800 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 480 cell with default parameters.

Cell B is a DCS 1 800 cell with default parameters.

For 900/1 800 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 900 cell with default parameters.

Cell B is a DCS 1 800 cell with default parameters.

For 710/1900 MS, 750/1900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 710 or GSM 750 cell with default parameters.

Cell B is a PCS 1 900 cell with default parameters.

For 850/1900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 850 cell with default parameters.

Cell B is a PCS 1 900 cell with default parameters.

Mobile Station:

The MS is in MM-state idle, updated on cell A with valid TMSI.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

- Way to indicate mobile originated alerting.
- Way to display the called number

Foreseen Final State of the MS

The MS is in MM-state idle, updated on cell B with valid TMSI.

Test procedure

The following test is performed for one teleservice supported by the MS:

- A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.
- The MS is made to initiate a call on any frequency band supported by the MS. The call is established with early assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | MS | | The "called number" is entered |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. Indicating early sending of CLASSMARK CHANGE |
| 5 | SS -> MS | UA (CM SERVICE REQUEST) | |
| 6 | MS -> SS | CLASSMARK CHANGE | Indicating the frequency and power capability of the MS |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | HANDOVER COMMAND | See specific message contents below. |
| 15 | MS -> SS | HANDOVER ACCESS | May or may not be sent. The sending of the HANDOVER ACCESS is optional as indicated in HANDOVER COMMAND. |
| | MS -> SS | HANDOVER ACCESS | |
| | MS -> SS | HANDOVER ACCESS | |
| | MS -> SS | HANDOVER ACCESS | Handover Reference is included in the HANDOVER COMMAND. |
| | | | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 16 | MS -> SS | SABM | Sent without information field |
| 17 | SS -> MS | UA | |
| 18 | MS -> SS | HANDOVER COMPLETE | |
| 19 | SS -> MS | ALERTING | |
| 20 | MS | | Depending on the PIXIT, an alerting indication is given |
| 21 | SS -> MS | CONNECT | |
| 22 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 23 | MS | | The appropriate bearer channel is through connected in both directions. |
| 24 | SS -> MS | DISCONNECT | |
| 25 | MS -> SS | RELEASE | |
| 26 | SS -> MS | RELEASE COMPLETE | |
| 27 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

For 450/900 MS:

CM SERVICE REQUEST

as default except:

| Information element | Value/remark |
|---|---|
| Mobile station Classmark 2 - ES IND - RF power capability | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |

CLASSMARK CHANGE

as default except:

| Information element | Value/remark |
|---|--|
| Protocol Discriminator | RR management |
| Mobile station Classmark 2 - ES IND - RF power capability | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |
| Additional MS Classmark information - Band 1 (P-GSM) supported - Band 2 (E-GSM) supported - R-Band (R-GSM) supported - ER-Band (ER-GSM) supported - GSM 400 Band supported - GSM 400 Associated radio capability - Associated radio capability 1 - R-Band Associated radio capability | According to PICS statement According to PICS statement According to PICS statement According to PICS statement According to PICS statement Corresponding to GSM 450 band Corresponding to GSM 900 band Corresponding to R-GSM 900 band |

HANDOVER COMMAND

| Information element | Value/remark |
|--|---|
| Protocol Discriminator | RR management |
| Cell Description - NCC - BCC - BCCH Carrier Number | 1 5 20 |
| Channel description - Channel type - Timeslot number - Training sequence code - Hopping - ARFCN | TCH/F + ACCH's Arbitrary value Chosen arbitrarily Single RF channel 50 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type - Power level - Access type control | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. Sending of HANDOVER ACCESS is optional pre-synchronized; ROT=0; NCI=0. |
| Synchronization Indication | same as in IMMEDIATE ASSIGNMENT |
| Timing Advance | appropriate for the selected bearer service |
| Mode of the First Channel | |

For 480/900 MS:

CM SERVICE REQUEST

as default except:

| Information element | Value/remark |
|---|--|
| Mobile station Classmark 2 - ES IND - RF power capability | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |

CLASSMARK CHANGE

as default except:

| Information element | Value/remark |

26.11.5.2 Structured procedures / MS terminated call / late assignment

26.11.5.2.1 Conformance requirement

- 1) After the initial message the multiband MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after Layer 2 UA message sent from the network.
- 2) The MS shall acknowledge the SETUP message with a CALL CONFIRMED message, if compatibility checking was successful, the MS is not busy, and the user does not refuse the call.
- 3) The MS on acceptance of the call sends a CONNECT, otherwise user alerting is initiated.

- 4) The MS indicates acceptance of a call by sending a CONNECT message.
- 5) HANDOVER COMMAND is answered by HANDOVER COMPLETE.
- 6) For speech calls:

The mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

For data calls:

The mobile station shall attach the user connection when receiving the CONNECT ACKNOWLEDGE message from the network.

Requirement reference:

| | |
|-----------------------------------|--|
| Conformance requirement 1: | 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.3.1.1.4. |
| Conformance requirements 2, 3, 4: | 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.2.3.1, 5.2.2.3.2 and 5.2.2.5. |
| Conformance requirement 5: | 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.4.3. |
| Conformance requirement 6: | 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.2.9. |

26.11.5.2.2 Test purpose

- 1) To verify that a multiband MS is able to send an early CLASSMARK CHANGE message on the DCCH uplink.
- 2) To verify that the MS in "Idle, Updated" state with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having established the main signalling link, after having sent a PAGING RESPONSE message, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message containing a signal information element, returns a CALL CONFIRMED message followed by:
 - an ALERTING message;
 - or a CONNECT message.
- 3) To verify that in the situation of test purpose 1, if the MS sends an ALERTING message, the MS generates an alerting indication in the way described in a PIXIT statement.
- 4) To verify that subsequently the MS, if it had not yet sent a CONNECT message, upon acceptance of the call, sends a CONNECT message.
- 5) To verify that subsequently after receipt of an HANDOVER COMMAND ALLOCATING A tch IN another band, the MS sends an HANDOVER COMPLETE message.
- 6) To verify that subsequently the MS:
 - if the call is a speech call: after sending the HANDOVER COMPLETE message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) HANDOVER COMPLETE message, the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH).
 - if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH).

26.11.5.2.3 Method of test

Initial Conditions

System Simulator:

For 450/900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 450 cell with default parameters.

Cell B is a GSM 900 cell with default parameters.

For 480/900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 480 cell with default parameters.

Cell B is a GSM 900 cell with default parameters.

For 450/1 800 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 450 cell with default parameters.

Cell B is a DCS 1 800 cell with default parameters.

For 480/1 800 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 480 cell with default parameters.

Cell B is a DCS 1 800 cell with default parameters.

For 900/1 800 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 900 cell with default parameters.

Cell B is a DCS 1 800 cell with default parameters.

For 710/1 900 MS, 750/1 900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 710 or GSM 750 cell with default parameters.

Cell B is a PCS 1 900 cell with default parameters.

For 850/1 900 MS:

2 cells, A and B, with same LAI.

Cell A is a GSM 850 cell with default parameters.

Cell B is a PCS 1 900 cell with default parameters.

Mobile Station:

The MS is in MM-state idle, updated on cell A with valid TMSI.

Specific PICS statements:

- GSM 450 Band (TSPC_Type_GSM_450_Band)
- Standard GSM Band (P-GSM) (TSPC_Type_GSM_P_Band)
- Extended GSM Band (E-GSM) (TSPC_Type_GSM_E_Band)
- GSM 480 Band (TSPC_Type_GSM_480_Band)
- DCS 1800 band (TSPC_Type_DCS_Band)
- GSM 750 band (TSPC_Type_GSM_750_Band)
- GSM 710 band (TSPC_Type_GSM_710_Band)

PIXIT statements:

- Way to indicate mobile originated alerting.
- Way to display the called number

Foreseen Final State of the MS

The MS is in MM-state idle, updated on cell B with valid TMSI.

Test procedure

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is paged on any frequency band supported by the MS and a MT call is established with late assignment (after CONNECT). The release of the call is initiated by the MS.

Maximum Duration of Test

40 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel Establishment cause indicates "answer to paging". Message is contained in SABM. Indicating the frequency and power capability of the MS SRES specifies correct value. SS starts deciphering after sending the message. Shall be sent enciphered. All following messages shall be sent enciphered. SS starts ciphering. Message contains the signal IE. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | UA (PAGING RESPONSE) | |
| 6 | MS -> SS | CLASSMARK CHANGE | |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESP | |
| 9 | SS -> MS | CIPHERING MODE COMMAND | |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | |
| 11 | SS | | |
| 12 | SS -> MS | SETUP | |
| 13 | MS -> SS | CALL CONFIRMED | |
| A14 | MS -> SS | CONNECT | |
| B14 | MS -> SS | ALERTING | An alerting indication as defined in an PIXIT statement is given by the MS. The MS is made to accept the call in the way described in a PIXIT statement. |
| B15 | MS | | |
| B16 | MS | | |
| B18 | MS -> SS | CONNECT | |
| 19 | SS -> MS | HANDOVER COMMAND | See specific message contents below. Handover Reference is included in the HANDOVER COMMAND. Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH Sent without information field If the call is a speech call, the TCH shall be through connected in both directions. If the call is a data call, the MS shall through connect the TCH in both directions The MS is made to release the call. The main signalling link is released. |
| 20 | MS -> SS | HANDOVER ACCESS | |
| 21 | MS -> SS | HANDOVER ACCESS | |
| 22 | MS -> SS | HANDOVER ACCESS | |
| 23 | MS -> SS | HANDOVER ACCESS | |
| 24 | MS -> SS | SABM | |
| 25 | SS -> MS | UA | |
| 26 | MS -> SS | HANDOVER COMPLETE | |
| 27 | MS | | |
| 28 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 29 | MS | | |
| 30 | MS | | |
| 31 | MS -> SS | DISCONNECT | |
| 32 | SS -> MS | RELEASE | |
| 33 | MS -> SS | RELEASE COMPLETE | |
| 34 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents:

For 450/900 MS:

PAGING RESPONSE

| Information element | Value/remark |
|---|--|
| Mobile station Classmark 2 - ES IND - RF power capability | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |

CLASSMARK CHANGE

| Information element | Value/remark |
|---------------------------------------|--|
| Protocol Discriminator | RR management |
| Mobile station Classmark | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |
| - ES IND | |
| - RF power capability | |
| Additional MS Classmark information | |
| - Band 1 (P-GSM) supported | According to PICS statement |
| - Band 2 (E-GSM) supported | According to PICS statement |
| - GSM 400 Band supported | According to PICS statement |
| - R-Band (R-GSM) supported | According to PICS statement |
| - ER-Band (ER-GSM) supported | According to PICS statement |
| - GSM 400 Associated radio capability | Corresponding to GSM 450 band |
| - Associated radio capability 1 | Corresponding to GSM 900 band |
| - R-Band Associated radio capability | Corresponding to R-GSM 900 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 20 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 50 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

For 480/900 MS:

PAGING RESPONSE

| Information element | Value/remark |
|----------------------------|--|
| Mobile station Classmark 2 | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |
| - ES IND | |
| - RF power capability | |

CLASSMARK CHANGE

| Information element | Value/remark |
|---------------------------------------|--|
| Protocol Discriminator | RR management |
| Mobile station Classmark | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |
| - ES IND | |
| - RF power capability | |
| Additional MS Classmark information | |
| - Band 1 (P-GSM) supported | According to PICS statement |
| - Band 2 (E-GSM) supported | According to PICS statement |
| - GSM 400 Band supported | According to PICS statement |
| - R-Band (R-GSM) supported | According to PICS statement |
| - ER-Band (ER-GSM) supported | According to PICS statement |
| - GSM 400 Associated radio capability | Corresponding to GSM 480 band |
| - Associated radio capability 1 | Corresponding to GSM 900 band |
| - R-Band Associated radio capability | Corresponding to R-GSM 900 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 20 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 50 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

For 450/1 800 MS:

PAGING RESPONSE

| Information element | Value/remark |
|----------------------------|--|
| Mobile station Classmark 2 | Shall indicate early autonomous sending of CLASSMARK CHANGE corresponding to the frequency band in use |
| - ES IND | |
| - RF power capability | |

CLASSMARK CHANGE

| Information element | Value/remark |
|---------------------------------------|---|
| Protocol Discriminator | RR management |
| Mobile station Classmark | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |
| Additional MS Classmark information | |
| - Band 3 (DCS 1 800) supported | According to PICS statement |
| - GSM 400 Band supported | According to PICS statement |
| - GSM 400 Associated radio capability | Corresponding to GSM 450 band |
| - Associated radio capability 2 | Corresponding to DCS 1 800 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 590 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 650 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

For 480/1 800 MS:

PAGING RESPONSE

| Information element | Value/remark |
|----------------------------|---|
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |

CLASSMARK CHANGE

| Information element | Value/remark |
|---------------------------------------|---|
| Protocol Discriminator | RR management |
| Mobile station Classmark | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |
| Additional MS Classmark information | |
| - Band 3 (DCS 1 800) supported | According to PICS statement |
| - GSM 400 Band supported | According to PICS statement |
| - GSM 400 Associated radio capability | Corresponding to GSM 480 band |
| - Associated radio capability 2 | Corresponding to DCS 1 800 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 590 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 650 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

For 900/1 800 MS:

PAGING RESPONSE

| Information element | Value/remark |
|----------------------------|---|
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |

CLASSMARK CHANGE

| Information element | Value/remark |
|--------------------------------------|---|
| Protocol Discriminator | RR management |
| Mobile station Classmark | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |
| Additional MS Classmark information | |
| - Band 1 (P-GSM) supported | According to PICS statement |
| - Band 2 (E-GSM) supported | According to PICS statement |
| - Band 3 (DCS 1 800) supported | According to PICS statement |
| - R-Band (R-GSM) supported | According to PICS statement |
| - ER-Band (ER-GSM) supported | According to PICS statement |
| - Associated radio capability 1 | Corresponding to GSM 900 band |
| - Associated radio capability 2 | Corresponding to DCS 1 800 band |
| - R-Band Associated radio capability | Corresponding to R-GSM 900 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 590 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 650 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

For 710/1 900 MS, 750/1 900 MS:

PAGING RESPONSE

| Information element | Value/remark |
|----------------------------|---|
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |

CLASSMARK CHANGE

| Information element | Value/remark |
|---|---|
| Protocol Discriminator | RR management |
| Mobile station Classmark | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |
| Additional MS Classmark information | |
| - GSM 710 Associated radio capability | Corresponding to GSM 710 band |
| - GSM 750 Associated radio capability | Corresponding to GSM 750 band |
| - PCS 1 900 Associated radio capability | Corresponding to PCS 1 900 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 590 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 650 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

For 850/1 900 MS:

PAGING RESPONSE

| Information element | Value/remark |
|----------------------------|---|
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |

CLASSMARK CHANGE

| Information element | Value/remark |
|---|---|
| Protocol Discriminator | RR management |
| Mobile station Classmark | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - RF power capability | corresponding to the frequency band in use |
| Additional MS Classmark information | |
| - GSM 850 Associated radio capability | Corresponding to GSM 850 band |
| - PCS 1 900 Associated radio capability | Corresponding to PCS 1 900 band |

HANDOVER COMMAND

| Information element | Value/remark |
|-----------------------------|---|
| Protocol Discriminator | RR management |
| Cell Description | |
| - NCC | 1 |
| - BCC | 5 |
| - BCCH Carrier Number | 590 |
| Channel description | |
| - Channel type | TCH/F + ACCH's |
| - Timeslot number | Arbitrary value |
| - Training sequence code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | 650 |
| Handover Reference | Chosen arbitrarily from the range (0,1...255) |
| Power Command & Access type | |
| - Power level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| - Access type control | Sending of HANDOVER ACCESS is mandatory. |
| Synchronization Indication | pre-synchronized; ROT=0; NCI=0. |
| Timing Advance | same as in IMMEDIATE ASSIGNMENT |
| Mode of the first channel | appropriate for the selected bearer service |

26.11.6 Multiband signalling / Default messages contents

Default SYSTEM INFORMATION

The following parameters shall be coded into the system information messages. Parameters shall be coded according to 3GPP TS 04.08 / 3GPP TS 44.018.

SYSTEM INFORMATION TYPE 2bis, SYSTEM INFORMATION TYPE 5bis, SYSTEM INFORMATION TYPE 7 and SYSTEM INFORMATION TYPE 8 messages are not used.

For 450/900 MS:

SYSTEM INFORMATION TYPE 1

| Information Element | Value/remark |
|--------------------------|-----------------------------|
| Cell channel description | |
| For Cell A | |
| - Format identifier | Range 128 |
| - Cell Allocation ARFCN | ARFCN 263, 267, 275 and 279 |
| For Cell B | |
| - Format identifier | Bit map 0 |
| - Cell Allocation ARFCN | ARFCN 20, 30, 50 and 70 |
| RACH control parameters | see below |
| SI1 rest octets | see below |

SYSTEM INFORMATION TYPE 2

| Information Element | Value/remark |
|----------------------------|---|
| BCCH Frequency list | |
| For Cell A | |
| - Format identifier | Range 128 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | ARFCN 261, 263, 282, 284, 287, 290, 293 |
| - EXT-IND | "The information element carries the complete BA" |
| For Cell B | |
| - Format identifier | Bit map 0 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | ARFCN 10, 20, 80, 90, 100, 110 and 120 |
| - EXT-IND | "This IE carries the complete BA" |
| NCC permitted | see below |
| RACH control parameters | see below |

SYSTEM INFORMATION TYPE 2ter

| Information Element | Value/remark |
|-------------------------------|---|
| Neighbour Cells Description 2 | 0 |
| Multiband reporting | |
| For Cell A | |
| - Format notation | Range 1024 |
| - BA_IND | 0 |
| - BCCH Allocation ARFCN | ARFCN 10, 20, 80, 90, 100, 110 and 120 |
| For Cell B | |
| - Format notation | Range 128 |
| - BA_IND | 0 |
| - BCCH Allocation ARFCN | ARFCN 261, 263, 282, 284, 287, 290, 293 |
| SI 2ter rest octets | see below |

SYSTEM INFORMATION TYPE 3

| Information Element | Value/remark |
|---------------------------------|--------------------------------------|
| Cell identity | see below |
| Location Area Identification | see below |
| Control Channel Description | see below |
| Cell options | see below |
| Cell selection parameters | see below |
| RACH control parameters | see below |
| SI3 rest octets | |
| SI 2ter Indicator | System Information 2ter is available |
| Early Sending Classmark Control | Early Sending is explicitly accepted |

SYSTEM INFORMATION TYPE 4

| Information Element | Value/remark |
|------------------------------|--------------|
| Location Area Identification | see below |
| Cell selection parameters | see below |
| RACH control parameters | see below |
| CBCH Channel Description | see below |
| CBCH Mobile Allocation | see below |
| SI4 rest octets | see below |

SYSTEM INFORMATION TYPE 5

| Information Element | Value/remark |
|----------------------------|---|
| BCCH Frequency list | |
| For Cell A | |
| - Format identifier | Range 128 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | ARFCN 261, 263, 282, 284, 287, 290, 293 |
| - EXT-IND | "The information element carries the complete BA" |
| For Cell B | |
| - Format identifier | Bit map 0 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | ARFCN 10, 20, 80, 90, 100, 110 and 120 |
| - EXT-IND | This IE carries the complete BA |

SYSTEM INFORMATION TYPE 5ter

| Information Element | Value/remark |
|-------------------------------|---|
| Neighbour Cells Description 2 | 0 |
| Multiband reporting | |
| For Cell A | |
| - Format notation | Range 1024 |
| - BA_IND | 0 |
| - BCCH Allocation ARFCN | ARFCN 10, 20, 80, 90, 100, 110 and 120 |
| For Cell B | |
| - Format notation | Range 128 |
| - BA_IND | 0 |
| - BCCH Allocation ARFCN | ARFCN 261, 263, 282, 284, 287, 290, 293 |

SYSTEM INFORMATION TYPE 6

| Information Element | Value/remark |
|------------------------------|--------------|
| Cell identity | see below |
| Location Area Identification | see below |
| Cell options | see below |
| NCC permitted | see below |

Common contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages.

| | |
|--|---|
| CBCH Channel Description | Not present |
| CBCH Mobile Allocation | Not present |
| Cell identity | |
| CI VALUE | 0001H for cell A, 0002H for cell B |

| SI 4 rest octets | Not used (all bits are set to spare) |

Default settings for cell A

| | |
|----------------------|-----------------------------|
| Downlink input level | 63 dBmicroVolt emf |
| Uplink output power | Minimum supported by the MS |
| Propagation profile | Static |
| BCCH/CCCH | ARFCN 263 |

Default settings for cell B

| | |
|----------------------|-----------------------------|
| Downlink input level | 53 dBmicroVolt emf |
| Uplink output power | Minimum supported by the MS |
| Propagation profile | Static |
| BCCH/CCCH | ARFCN 20 |

For 480/900 MS:

SYSTEM INFORMATION TYPE 1

| Information Element | Value/remark |
|--------------------------|--------------------------|
| Cell channel description | |
| For Cell A | |
| - Format identifier | Range 128 |
| - Cell Allocation ARFCN | ARFCN 310, 315, 322, 326 |
| For Cell B | |
| - Format identifier | Bit map 0 |
| - Cell Allocation ARFCN | ARFCN 20, 30, 50 and 70 |
| RACH control parameters | see below |
| SI1 rest octets | see below |

SYSTEM INFORMATION TYPE 2

| Information Element | Value/remark |
|----------------------------|---|
| BCCH Frequency list | |
| For Cell A | |
| - Format identifier | Range 128 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | ARFCN 308, 310, 329, 331, 334, 337, 340 |
| - EXT-IND | "The information element carries the complete BA" |
| For Cell B | |
| - Format identifier | Bit map 0 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | ARFCN 10, 20, 80, 90, 100, 110 and 120 |
| - EXT-IND | "This IE carries the complete BA" |
| NCC permitted | see below |
| RACH control parameters | see below |

SYSTEM INFORMATION TYPE 2ter

| Information Element | Value/remark |
|-------------------------------|---|

Default message contents for other messages

- For subclause 26.11.2 Refer to table 26.6
- For subclause 26.11.3 same as in subclause 26.7.
- For subclause 26.11.4 no tests yet defined.
- For subclause 26.11.5 same as in subclause 26.9.7.

26.12 Enhanced Full Rate signalling

This subclause only applies to MS supporting enhanced full rate speech.

As an EFR mobile station necessarily supports the speech full rate version 1 or both speech full rate version 1 and speech half rate version 1, conformance requirements of clause 26 fully apply to this mobile.

The purpose of this extra section is to test the different procedures which may be impacted when Enhanced full rate speech codec is used.

26.12.1 EFR signalling/ test of the channel mode modify procedure

NOTE: This test is derived from the tests in subclauses 26.6.7.1 and 26.6.7.2 respectively entitled "Test of the channel mode modify procedure / full rate" and "Test of the channel mode modify procedure / half rate".

26.12.1.1 Conformance requirement

The MS with a TCH/F allocated acknowledges a CHANNEL MODE MODIFY message by sending a CHANNEL MODE MODIFY ACKNOWLEDGE message specifying the new mode and by switching to this mode when this one is set to:

- speech full rate or half rate version 1.
- speech full rate or half rate version 2.
- any other mode declared supported by the mobile.

If the mobile station does not support the indicated mode, it shall retain the old mode and return the associated channel mode information in the CHANNEL MODE MODIFY ACKNOWLEDGE message.

References

3GPP TS 02.06, subclause 3.2.3.

3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.6.1.1 and 3.4.6.1.2.

26.12.1.2 Test purpose

To verify that the MS with a TCH/F allocated acknowledges a CHANNEL MODE MODIFY message by sending a CHANNEL MODE MODIFY ACKNOWLEDGE message specifying the new mode and by switching to this mode when this one is set to:

- speech full rate or half rate version 1.
- speech full rate or half rate version 2.

- any other mode declared supported by the mobile.

To verify that the MS, in an RR connected state, acknowledges a CHANNEL MODE MODIFY message by sending a CHANNEL MODE MODIFY ACKNOWLEDGE message specifying the old mode when the new mode is not declared as supported by the mobile

26.12.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated", with TMSI allocated.

Specific PICS statements:

- Speech supported for Full rate version 3 (TSPC_AddInfo_Full_rate_version_3)
- 2.4 k full rate data mode (TSPC__AddInfo_24DataF)
- 4.8 k full rate data mode. (TSPC__AddInfo_48DataF)
- 9.6 k full rate data mode. (TSPC__AddInfo_96Data)

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test procedure

A Mobile Terminated call is initiated, however following the CHANNEL REQUEST received from the Mobile Station, the SS sends an IMMEDIATE ASSIGNMENT to the MS commanding it to go to a TCH/F. This sets the Channel Mode automatically to "Signalling Only".

The SS then sends a series of CHANNEL MODE MODIFY messages to the MS. Each time it is checked that the MS responds with a CHANNEL MODE MODIFY ACKNOWLEDGE message specifying:

- the channel mode that has been specified in the CHANNEL MODE MODIFY message, if the MS supports that mode (this mode then becomes the "channel mode in use"). If necessary, the MS shall be correctly configured in order to accept this mode.
- the channel mode that was in use when the CHANNEL MODE MODIFY message has been received, if the MS does not support the channel mode specified in the CHANNEL MODE MODIFY message.

Maximum Duration of Test

50 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE 1 | Sent on correct paging subchannel Establishment cause indicates "answer to paging" Assignment to a non hopping TCH/F |

26.12.2 EFR signalling/ tests of handover

With the Handover procedure, it is possible to completely alter the channels allocated to a MS. This makes it possible in particular to switch a call in progress from one cell to another. The procedure is always initiated by the network and with the MS in a dedicated mode.

Subclause 26.12.2.1 contains generic test procedures to be used for executing successful Handover tests dealing with EFR mode.

It deals with EFR signalling in the Handover/successful/active call/non synchronised case.

Table 1 contains a summary of the different combinations of parameters which have to be tested, together with a reference to the appropriate generic test procedure. If a test uses a channel rate which the MS under test does not support, the test shall be skipped.

sv1 stands for speech full/half rate version 1.

sv2 stands for speech full/half rate version 2 (enhanced full rate).

Table 1

| From | To | Timing Adv. | Start Time | Syn ? | State of call | Subclause | Exec Counter |
|-------------------|-------------------|-------------|------------|-------|---------------|-----------|--------------|

26.12.2.1 EFR signalling / Handover / active call / successful case

NOTE: This test is derived from the one defined in subclause 26.6.5.1 "Handover/successful/active call/non-synchronized".

This test only applies for MS supporting full rate speech version 2 (enhanced full rate speech).

26.12.2.1.1 Conformance requirements

The MS shall correctly apply the handover procedure in the non-synchronized case when:

- a call is in progress; and
- handover is performed from a TCH/F with/without frequency hopping towards a TCH/F with/without frequency hopping; and
- the mode of either the current or the target channel is set to full rate speech version 2 (enhanced full rate speech).

The MS also supporting half rate shall correctly apply the handover procedure in the non-synchronized case when:

- a call is in progress; and
- a handover is performed between a TCH/H with/without frequency hopping and a TCH/F with/without frequency hopping; and
- the mode of the TCH/F is set to full rate speech version 2.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4 and 9.1.15.

3GPP TS 04.13 subclause 5.2.6.2.

26.12.2.1.2 Test purpose

To test that the MS shall correctly apply the handover procedure in the non-synchronized case when:

- a call is in progress; and
- handover is performed from a TCH/F with/without frequency hopping towards a TCH/F with/without frequency hopping; and
- the mode of either the current or the target channel is set to full rate speech version 2 (enhanced full rate speech).

To test that the MS also supporting half rate shall correctly apply the handover procedure in the non-synchronized case when:

- a call is in progress; and
- a handover is performed between a TCH/H with/without frequency hopping and a TCH/F with/without frequency hopping; and
- the mode of the TCH/F is set to full rate speech version 2.

26.12.2.1.3 Method of test

Initial Conditions

System Simulator:

- 2 cells, A and B with same LAI, default parameters except.

| PCS 1 900 | 647 | 634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744 | 664 | 639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744 | Range 256 |

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

Mobile Station:

The MS is in the active state (U10) of a call on cell A.

Specific PICS statements:

- Speech supported for Half rate version 1 (TSPC_AddInfo_Half_rate_version_1)

PIXIT statements:

-

Foreseen Final State of the MS

The active state (U10) of a call on cell A.

Test Procedure

This procedure is repeated for execution counter M = 1 to 15.

The MS is in the active state (U10) of a call. The SS sends a HANDOVER COMMAND on the main DCCH. The MS shall (at the time defined by the Starting Time information element, if included in the message) begin to send access

bursts on the new DCCH (and optionally on the SACCH) of the target cell. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 2 of subclause 26.12.2) access bursts, the SS sends one PHYSICAL INFORMATION message with a Timing Advance as specified in table 1 of subclause 26.12.2. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message, before 'x' MS after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS.

The term 'ready to transmit' is defined in 3GPP TS 04.13. The value of 'x' depends upon the target channel and is specified in the specific message contents section.

Maximum Duration of Test

10 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for an execution counter $M = 1, 2.. 9$ for an MS which supports enhanced full speech codec and only TCH/F .

This sequence is performed for an execution counter $M = 1, 2.. 15$ for an MS which supports enhanced full speech codec and TCH/F and H.

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 0 | MS -> SS | | The MS and SS are in the active state of a call on the channel described below. |
| 1 | SS -> MS | HANDOVER COMMAND | See Specific message contents |
| 2 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. If the HANDOVER COMMAND includes a starting time IE then the first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used) |
| 3 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS messages. See specific message contents. |
| 4 | MS -> SS | SABM | Sent without information field |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANDOVER COMPLETE | The message shall be ready to be transmitted before 'x' ms after the completion of step 3. |
| 7 | MS -> SS | | The MS and SS are in the active state of a call on the TCH described below. The SS checks that the TCH is through connected in the correct mode. |

Specific Message Contents

For $M = 1$:

Step 0: The MS and SS are using a full rate TCH with speech full rate version 2 and in non-hopping mode on cell A.

26.12.3 EFR Signalling / Structured procedures / MS originated call / late assignment

NOTE: this test is derived from the one defined in subclause 26.9.3 and entitled "Structured procedures / MS originated call / late assignment".

26.12.3.1 Conformance requirement

- 1) The MS shall indicate and include in the mobile originating SETUP for speech call all the speech versions that it supports.
- 2) Upon receipt of the ASSIGNMENT COMMAND message specifying either speech full rate version 1 or speech full rate version 2 or speech half rate version 1 (for an MS also supporting half rate), the Mobile Station starts a normal channel assignment procedure. It means that the MS initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause 'normal event', to the network on the main DCCH.
- 3, 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - attach the user connection to the radio path;
 - return a CONNECT ACKNOWLEDGE message.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 10.5.4.5 and 10.5.4.5.1, and 3GPP TS 02.06 subclause 3.2.3.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3.1 and 3.4.3.2.

Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.

26.12.3.2 Test purpose

- 1) To verify that the MS indicates and includes in the mobile originating SETUP for speech call all the speech versions that it supports.
- 2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating either speech full rate version 1 TCH or speech full rate version 2 TCH or speech half rate version 1 TCH (for an MS also supporting half rate version 1), the MS sends an ASSIGNMENT COMPLETE message.
- 3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.
- 4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

26.12.3.3 Method of test

Specific PICS statements:

- Speech supported for Half rate version 1 (TSPC_AddInfo_Half_rate_version_1)

PIXIT statements:

- Way to indicate mobile originated alerting.
- . Way to display the called number

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen Final State of the MS

The MS has a MO call in state U10, "active".

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

The MS is made to initiate a speech call. The call is established with late assignment.

Maximum Duration of Test

3 minutes.

Expected Sequence

This test is repeated for execution counter M = 1, 2 for an MS supporting full rate channels only.

This test is repeated for execution counter M = 1, 2, 3 for an MS supporting both half rate speech version 1 and full rate channels.

| Step | Direction | Message | Comments |
|------|-----------|----------------------|---|
| 1 | MS | | The "called number" is entered |
| 2 | MS | | |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 6 | SS -> MS | AUTHENTICATION REQ | |
| 7 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 8 | SS -> MS | CIPHER MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHER MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | MS -> SS | SETUP | MS shall indicate and include all the speech versions that it supports. |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ALERTING | |
| 14 | MS | | Depending on the PICS, an alerting indication is given. |
| 15 | SS -> MS | ASSIGNMENT COMMAND | |
| 16 | MS -> SS | ASSIGNMENT COMPLETE | |
| 17 | SS -> MS | CONNECT | |
| 18 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 19 | MS | | The appropriate bearer channel is through connected in both directions. |

Specific Message Contents:

For M = 1:

ASSIGNMENT COMMAND

See default message contents subclause 26.12.8.

SETUP

Same contents as subclause 26.12.8 but all the speech versions supported by the MS shall be indicated in octet_3a_etc(s).

For M = 2:

ASSIGNMENT COMMAND

same as for default message contents except:

| | |
|-------------------------------------|---|
| Mode of the first channel - Mode | speech full rate or half rate version 1 |
|-------------------------------------|---|

SETUP

Same contents as subclause 26.12.8 but all the speech versions supported by the MS shall be indicated in octet_3a_etc(s).

For M = 3:

ASSIGNMENT COMMAND

same as for default message contents except:

| | |
|--------------------------------------|---|
| Channel Description - TDMA offset | TCH/H+ACCHs |
| Mode of the first channel - Mode | speech full rate or half rate version 1 |

SETUP

same contents as subclause 26.12.8 but the supported speech versions and their preferred order indicated in octet_3a_etc(s) shall be as declared by the manufacturer.

26.12.4 Structured procedures / MS terminated call / I early assignment

NOTE: this test is derived from the one described in subclause 26.9.4 and entitled "Structured procedures / MS terminated call / early assignment".

26.12.4.1 Conformance requirement

- 1) In acceptance to a SETUP message indicating speech, the MS shall indicate and include in the CALL CONFIRMED message all the speech versions that it supports.
- 2) Upon receipt of the ASSIGNMENT COMMAND message specifying either speech full rate version 1 or speech full rate version 2 or speech half rate version 1 (for an MS also supporting half rate), the Mobile Station continues a mobile terminating call establishment with early assignment of traffic channel:
 - a) by replying to the ASSIGNMENT command with an ASSIGNMENT COMPLETE message; and
 - b) by continuing the call establishment by through connecting TCH in both directions if it supports immediate connect or by sending an ALERTING message otherwise.
- 3) For speech calls, the mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

References

- Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 10.5.4.5 and 10.5.4.5.1
3GPP TS 02.06 subclause 3.2.3.
- Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3.1 and 3.4.3.2.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.2.9.

26.12.4.2 Test purpose

- 1) To verify that, in acceptance to a SETUP message indicating speech, the MS indicates and includes in the CALL CONFIRMED message all the speech versions that it supports.
- 2) To verify that upon receipt of the ASSIGNMENT COMMAND message specifying either speech full rate version 1 or speech full rate version 2 or speech half rate version 1 (for an MS also supporting half rate speech version 1), the Mobile Station continues a mobile terminating call establishment with early assignment of traffic channel
 - a) by replying to the ASSIGNMENT command with an ASSIGNMENT COMPLETE message; and
 - b) by continuing the call establishment by through connecting TCH in both directions if it supports immediate connect or by sending an ALERTING message otherwise.

- 3) To verify that for speech calls, the mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

26.12.4.3 Method of test

Specific PICS statements:

- Speech supported for Half rate version 1 (TSPC_AddInfo_Half_rate_version_1)
- Immediate connect supported for all circuit switched basic services. (TSPC_AddInfo_ImmConn)

PIXIT statements:

- Way to indicate alerting.
- Way to make the MS accept an incoming call after alerting.

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen Final State of the MS

CC state U10-call active.

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

- A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.
- The MS is paged and the resulting call is established. Having reached the active state, the MS is made to clear the call.

Maximum Duration of Test

3 minutes.

Expected Sequence

This test is repeated for execution counter M = 1, 2 for an MS supporting full rate channels only.

This test is repeated for execution counter M = 1, 2, 3 for an MS supporting both half rate speech version 1 and full rate channels.

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel Message is contained in SABM. SRES specifies correct value. SS starts deciphering after sending the message. Shall be sent enciphered. All following messages shall be sent enciphered. SS starts ciphering. Message does not contain the signal IE. MS shall indicate and include all the speech versions that it supports. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS | | |
| 10 | SS -> MS | SETUP | |
| 11 | MS -> SS | CALL CONFIRMED | |
| | | | If the MS supports an Immediate connection then branch A applies. If the MS doesn't support an immediate connection then branch B applies. |
| A12 | MS -> SS | CONNECT | sent on the old channel |
| A13 | SS -> MS | ASSIGNMENT COMMAND | |
| A14 | MS -> SS | ASSIGNMENT COMPLETE | |
| B12 | SS -> MS | ASSIGNMENT COMMAND | Sent on the new channel. An alerting indication as defined in an PIXIT statement is given by the MS. The MS is made to accept the call in the way described in a PIXIT statement. |
| B13 | MS -> SS | ASSIGNMENT COMPLETE | |
| B14 | MS -> SS | ALERTING | |
| B15 | MS | | |
| B16 | MS | | |
| B17 | MS -> SS | CONNECT | |
| 18 | MS | | |
| 19 | SS -> MS | CONNECT ACKNOWLEDGE | the TCH shall be through connected in both directions. in the indicated mode. The MS is made to release the call. The main signalling link is released. |
| 20 | MS | | |
| 21 | MS -> SS | DISCONNECT | |
| 22 | SS -> MS | RELEASE | |
| 23 | MS -> SS | RELEASE COMPLETE | |
| 24 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents:

For M = 1:

ASSIGNMENT COMMAND

See default message contents subclause 26.12.8.

CALL CONFIRMED

Same contents as subclause 26.12.8 but all the speech versions supported by the MS shall be indicated in octet_3a_etc(s).

For M = 2 :

ASSIGNMENT COMMAND

Same as for default message contents except:

| | |
|-------------------------------------|---|
| Mode of the first channel - Mode | speech full rate or half rate version 1 |
|-------------------------------------|---|

CALL CONFIRMED

Same contents as subclause 26.12.8 but all the speech versions supported by the MS shall be indicated in octet_3a_etc(s).

For M = 3:

ASSIGNMENT COMMAND

Same as for default message contents except:

| | |
|---|--|
| Channel Description - TDMA offset Mode of the first channel - Mode | TCH/H+ACCHs speech full rate or half rate version 1 |
|---|--|

CALL CONFIRMED

Same contents as subclause 26.12.8 but all the speech versions supported by the MS shall be indicated in octet_3a_etc(s).

26.12.5 Structured procedures / emergency call

NOTE: This test is derived from the ones described in subclauses 26.9.6.1.1 and 26.9.6.1.2 and respectively entitled "Structured procedures / emergency call / idle updated, preferred channel rate " and "Structured procedures / emergency call / idle updated, non-preferred channel rate".

This test applies to mobiles supporting Enhanced Full Rate speech.

26.12.5.1 Conformance requirement

- 1) For R97/98 MS: The MS in the "idle, updated" state, as after a successful location update, after the number 112 (for GSM 900 and 1 DCS 800 MS), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850, PCS 1 900 MS in Mexico) has been entered by user, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").

For R99 MS: When a SIM/USIM containing stored emergency numbers is present, those numbers are identified as emergency numbers. As an optional requirement, the ME shall also identify 112 and 911 as emergency numbers irrespective of whether these are stored in the SIM/USIM. Any other emergency numbers stored in the ME shall be ignored.

When no emergency numbers are stored within the SIM the following numbers shall be stored in the ME for use as emergency numbers: 112, and 911.

When no emergency numbers are stored within the USIM the following numbers shall be stored in the ME for use as emergency numbers: 112, and 911.

- 2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct CKSN and TMSI , with CM Service Type "emergency call establishment".
- 3) Authentication and cipher mode setting shall be performed successfully.
- 4) After cipher mode setting acceptance by the network, the MS shall send an EMERGENCY SETUP message.
- 5) The EFR mobile station shall accept channel assignment to a TCH full rate speech version 1 or 2 and if it supports half rate, in addition it shall accept channel assignment to a TCH half rate speech version 1.
- 6) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the TCH shall be through connected in both directions if an appropriate TCH is available.
- 7) The call shall be cleared correctly.

Requirement Reference:

- For conformance requirement 1 and 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1,
3GPP TS 04.08 / 3GPP TS 24.008, subclauses 5.2.1 and 4.5.1.5,
3GPP TS 02.30, clause 4,,
3GPP TS 22.101 clause 8.
- For conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.7,
3GPP TS 04.08 / 3GPP TS 24.008, subclause 4.3.2.
- For conformance requirement 4: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1.
- For conformance requirement 5: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.1,
3GPP TS 04.08 / 3GPP TS 44.018, subclause 3.4.3,
3GPP TS 02.06, subclause 3.2.3.
- For conformance requirement 6: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.2.1.6.
- For conformance requirement 7: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.4.

26.12.5.2 Test purpose

- 1) To verify that an R97/98 MS supporting speech in the MM state "idle, updated", when made to call the number 112, (for GSM 900 and DCS 1800 MS), or 911 (for GSM 710, GSM 750, T_GSM 810, GSM 850 and PCS 1 900 MS in USA and Canada), or 08 (for GSM 710, GSM 750, T_GSM 810, GSM 850 and PCS 1 900 MS in Mexico) sends a CHANNEL REQUEST message with establishment cause "emergency call".

To verify that an R99 MS supporting speech in the MM state "idle, updated", when made to call the number 112 or 911, sends a CHANNEL REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".
- 3) To verify that authentication and cipher mode setting are performed successfully.
- 4) To verify that after cipher mode setting acceptance by the SS, the MS sends an EMERGENCY SETUP message.
- 5) To verify that the EFR mobile station shall both accept channel assignment to a TCH full rate speech versions 1 or 2 and if it supports half rate, in addition it shall accept channel assignment to a TCH half rate speech version 1.
- 6) To verify that subsequently the MS has through connected the TCH in both directions.
- 7) To verify that the call is cleared correctly.

26.12.5.3 Method of test

Specific PICS statements:

- Speech supported for Half rate version 1 (GSM HR) (TSPC_AddInfo_Half_rate_version_1)
- Use of R99 Emergency numbers (TSPC_R99_Emerg)

PIXIT statements:

- .

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The MS is made to initiate an emergency call. The call is established with late assignment. Having reached the active state, the call is cleared by the SS. This procedure is repeated so that the assignment is made with all the channel rates and speech versions supported by the mobile station.

Maximum Duration of Test

3 minutes

Expected Sequence

The expected sequence is executed for M = 1 and 2, for a full rate only mobile station which includes the bearer capability IE in the emergency setup message.

The expected sequence is executed for M = 1, 2 and 3, for a dual rate mobile station which includes the bearer capability IE in the emergency setup message.

The expected sequence is executed for M = 1, for a mobile which does not include the bearer capability IE in the emergency setup message.

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS | | The appropriate emergency number is entered |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | MS -> SS | EMERGENCY SETUP | If the bearer capability IE is including, it shall be checked that all the speech versions supported by the MS are present. |
| 12 | SS -> MS | CALL PROCEEDING | |
| 13 | SS -> MS | ALERTING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | CONNECT | |
| 17 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 18 | MS | | The TCH is through connected in both directions in the correct mode. |
| 19 | SS -> MS | DISCONNECT | |
| 20 | MS -> SS | RELEASE | |
| 21 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Note: According to the conformance requirements there is no need to execute the test case by dialling the number 08 for an R99 MS.

Specific Message Contents:

For M= 1

ASSIGNMENT COMMAND

same as for default message contents except:

| | |
|-------------------------------------|---|
| Mode of the first channel - Mode | Speech full rate or half rate version 1 |
|-------------------------------------|---|

For M= 2

ASSIGNMENT COMMAND

same as for default message contents.

For M= 3

ASSIGNMENT COMMAND

same as for default message contents except:

| | |
|---|--|
| Channel Description - TDMA offset Mode of the first channel - Mode | TCH/H+ACCHs Speech full rate or half rate version 1 |
|---|--|

26.12.6 EFR Signalling / Directed Retry / Mobile Originated Call

This test is derived from the one defined in subclause 26.9.7 and entitled "Directed Retry / MS originated call".

26.12.6.1 Conformance requirements

The MS shall correctly apply the Directed Retry procedure from SDCCH/8 (no frequency hopping) to TCH/EFR with frequency hopping in the non-synchronized case during call establishment. The call control entity of the Mobile Station in the "mobile originating call proceeding" state shall, upon receipt of a CONNECT message, attach the EFR speech connection to the radio path and return a CONNECT ACKNOWLEDGE message to the SS.

References

3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.4 and 9.1.15.

3GPP TS 04.08 / 3GPP TS 24.008 subclause 5.2.1.6.

3GPP TS 04.13, subclause 5.2.6.2.

26.12.6.2 Test purpose

To test that, when the MS is ordered to perform a non-synchronized handover after the CALL PROCEED message, it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay. To test that the call control entity of the Mobile Station in the "mobile originating call proceeding" state, upon receipt of a CONNECT message, attaches the EFR speech connection to the radio path and returns a CONNECT ACKNOWLEDGE message to the SS.

26.12.6.3 Method of test

Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

Cell A has:

BCCH ARFCN = See the table below.

Cell Allocation = Allocate as per the table below. PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = See the table below.

Cell Allocation = Allocate as per the table below.

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

| Band | Cell A | | Cell B | | Both Cells Format |
|-----------|---------------|--|---------------|---|----------------------|
| | BCCH ARFCN | Cell Allocation | BCCH ARFCN | Cell Allocation | |
| GSM 450 | 263 | 259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291 | 274 | 260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291 | Range 128 |

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

-

PIXIT statements:

- Way to indicate mobile originated alerting.
- Way to display the called number

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

The MS is made to initiate a speech call on Cell A. After the SS has sent the CALL PROCEEDING message the SS sends a HANOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH (and optionally on the SACCH) to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 26.6-2 of subclause 26.6.5) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrarily chosen Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. After the successful handover procedure the SS sends the ALERTING message. The correct alerting indication shall be given to the user (only applicable if the MS supports this feature). The SS sends the CONNECT message indicating that the call has been answered. The EFR speech channel shall be through connected in both directions. The MS shall send then the CONNECT ACKNOWLEDGE message as the response on the CONNECT message. Having reached the active state, the call is cleared by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13. The value of " x " depends upon the target channel and is specified in the specific message contents section.

Maximum Duration of Test

1 minute, including 30 s for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | ----- | ----- | A MO call is initiated on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | CM SERVICE REQUEST | CM Service Type = Mobile Originating Call Establishment. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | EFR speech |
| 11 | SS -> MS | CALL PROCEEDING | |
| 12 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| 13 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. |
| 14 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| 15 | MS -> SS | SABM | Sent without information field. |
| 16 | SS -> MS | UA | |
| 17 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step 14. |
| 18 | SS -> MS | ALERTING | |
| 19 | MS | | Depending on the PICS, an alerting indication is given. |
| 20 | SS -> MS | CONNECT | |
| 21 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 22 | MS | | The EFR speech channel is through connected in both directions. |
| 23 | SS -> MS | DISCONNECT | |
| 24 | MS -> SS | RELEASE | |
| 25 | SS -> MS | RELEASE COMPLETE | |
| 26 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|-------------------------------------|--|
| As default message contents except: | |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | As default message contents. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | Single RF Channel. |
| - ARFCN | Chosen arbitrarily from the Cell Allocation of Cell A. |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | See the table below. |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Synchronization Indication IE is not included | |
| Frequency list after time | |
| - Frequency List | Allocate frequencies as per the following table. |
| Channel Mode IE | Speech (full rate version 2 or half rate version 2). |

| HANDOVER COMMAND | | | |

Step 17: "x" = 500.

26.12.7 EFR Signalling / Directed Retry / Mobile Terminated Call

This test is applicable to all MS which support EFR speech.

NOTE: This test is derived from the one defined in subclause 26.9.8 and entitled "Directed Retry / MS originated call".

26.12.7.1 Conformance requirements

The MS shall correctly apply the Directed Retry procedure from SDCCH/8 with frequency hopping to TCH/EFR with frequency hopping and starting time in the non-synchronized case during call establishment. The call control entity of the Mobile Station in the "call delivered" state shall, if the MS supports immediate connect, continue the call establishment by through-connecting the EFR traffic channel in both directions, or if the MS does not support immediate connect, send an ALERTING message. The MS indicates acceptance of a MT call by sending CONNECT.

The mobile station shall attach the user connection at latest when sending the CONNECT message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

3GPP TS 04.13, subclause 5.2.6.2.

26.12.7.2 Test purpose

To test that when the MS is ordered to perform a non-synchronized handover after the CALL CONFIRM message, it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay. To test that the call control entity of the Mobile Station in the "call delivered" state, if the MS supports immediate connect, continues the call establishment by through-connecting the EFR traffic channel in both directions, or if the MS does not support immediate connect, sends an ALERTING message. To test that the MS indicates acceptance of a MT call by sending CONNECT.

To test that the mobile station attaches the user connection at latest when sending the CONNECT message, except if there is no compatible radio resource available at this time. To test that in this case the attachment is delayed until such a resource becomes available.

26.12.7.3 Method of test

Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

Cell A has:

BCCH ARFCN = See the table below

Cell Allocation = Allocate as per the table below.

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = See the table below..

Cell Allocation = Allocate as per the table below.

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

| Band | Cell A | | Cell B | | Both Cells Format |

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell. The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

- Immediate connect supported for all circuit switched basic services. (TSPC_AddInfo_ImmConn)

PIXIT statements:

- Way to indicate alerting.
- Way to make the MS accept an incoming call after alerting.

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

The MS is paged on Cell A. The MS responds to the PAGING REQUEST message and establishes a mobile terminated speech call on Cell A. If the MS supports immediate connect, it continues the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, it sends an ALERTING message. The MS indicates acceptance of a MT call by sending CONNECT.

After the MS has sent the CALL CONFIRMED message (if the MS supports immediate connect then the MS sends the CONNECT message after the CALL CONFIRMED message on the old channel) the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH (and optionally on the SACCH) to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 26.6-2 of subclause 26.6.5) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrarily chosen Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. After the successful handover procedure the MS sends the ALERTING message (if the MS runs the immediate connect procedure then the MS does not send an ALERTING message). The correct alerting indication shall be given to the user (only applicable if the MS supports the feature or if the MS is not using the immediate connect procedure). After the MS sent the CONNECT message the EFR speech channel shall be through connected in both directions. The SS sends then the CONNECT ACKNOWLEDGE message as the response on the CONNECT message. Having reached the active state, the call is cleared by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13. The value of " x " depends upon the target channel and is specified in the specific message contents section.

Maximum Duration of Test

1 minute, including 30 s for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SETUP | EFR speech. |
| 11 | MS -> SS | CALL CONFIRMED | |
| | | | If the MS supports immediate connect then branch A applies. If the MS does not support immediate connect then branch B applies |
| A12 | MS -> SS | CONNECT | sent on the old channel |
| A13 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| A14 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. The first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| A15 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| A16 | MS -> SS | SABM | Sent without information field. |
| A17 | SS -> MS | UA | |
| A18 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step A15. |
| B12 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| B13 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. The first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| B14 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| B15 | MS -> SS | SABM | Sent without information field. |
| B16 | SS -> MS | UA | |
| B17 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step B14. |
| B18 | MS -> SS | ALERTING | |
| B19 | MS | | Gives an alerting indication as defined in a PICS/PIXIT statement is given by the MS |
| B20 | MS | | The MS is made to accept the call in the way described in a PICS/PIXIT statement |
| B21 | MS -> SS | CONNECT | |
| 22 | MS | | The TCH/EFR channel shall be through connected in both directions. |
| 23 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 24 | SS -> MS | DISCONNECT | |
| 25 | MS -> SS | RELEASE | |
| 26 | SS -> MS | RELEASE COMPLETE | |
| 27 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

26.13 Multislot signalling

26.13.1 Multislot signalling / RR

26.13.1.1 Multislot signalling / RR / Measurement

26.13.1.1.1 Multislot signalling / RR / Measurement / symmetric

26.13.1.1.1.1 Conformance requirements

The MS shall continuously send MEASUREMENT REPORT messages, on every uplink HSCSD channel used, on every SACCH blocks and the measurement valid indication shall be set to valid (0) within the second block at the latest. After 20 s the values in the MEASUREMENT REPORT message shall contain measurement results for the 4 strongest BCCH carriers with known and allowed NCC part of BSIC.

26.13.1.1.1.2 Test purpose

- 1) To test that, when a combination of normal neighbours, and non-permitted NCCs is "on air", the MS reports only on normal neighbours and that in symmetric HSCSD configuration the neighbouring cell measurement reports are copied on every uplink HSCSD channel used.

26.13.1.1.1.3 Method of test

Initial Conditions

System Simulator:

For GSM 450 or GSM 480: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM 450) | ARFCN (GSM 480) | Cell Identity |
|---------------|-------|-----|------|--------------------|--------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 260 | 307 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 264 | 311 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 268 | 315 | 0003H |
| Neighbour, N3 | -75 | 2 | 1 | 272 | 319 | 0004H |
| Neighbour, N4 | -55 | 3 | 3 | 276 | 323 | 0005H |
| Neighbour, N5 | -50 | 4 | 5 | 280 | 327 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 284 | 331 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 288 | 335 | 0008H |

For GSM 900 or DCS 1 800: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM 900) | ARFCN (DCS 1 800) | Cell Identity |
|---------------|-------|-----|------|--------------------|----------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 002 | 514 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 008 | 530 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 014 | 602 | 0003H |
| Neighbour, N3 | -75 | 2 | 1 | 020 | 665 | 0004H |
| Neighbour, N4 | -55 | 3 | 3 | 026 | 762 | 0005H |
| Neighbour, N5 | -50 | 4 | 5 | 032 | 686 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 038 | 549 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 044 | 810 | 0008H |

For GSM 700 or GSM 850: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM 700) | ARFCN GSM 850) | Cell Identity |
|---------------|-------|-----|------|--------------------|-------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 439 | 129 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 445 | 135 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 451 | 141 | 0003H |
| Neighbour, N3 | -75 | 2 | 1 | 457 | 147 | 0004H |
| Neighbour, N4 | -55 | 3 | 3 | 463 | 153 | 0005H |
| Neighbour, N5 | -50 | 4 | 5 | 469 | 159 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 475 | 165 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 481 | 171 | 0008H |

With the exception of the Cell Allocation, the rest of the parameters for all eight cells are the same as the default settings and default SYSTEM INFORMATION TYPE 1 to 4 message contents for cell A. The Cell Allocation for the serving cell is the same as the default setting for cell A. The Cell Allocations for the neighbour cells need have only one entry, consisting of the ARFCN of that cell's BCCH.

Mobile Station:

The MS is in the active state of a service using symmetric multislots connection.

Specific PICS statements:

- Multislots class (TSPC_Type_Multislots_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

Active state of a service using symmetric multislots connection.

Test Procedure

This test procedure is repeated for all the symmetric multislots configurations MS supports.

With the MS having a multislots connection in progress, the SS sends SYSTEM INFORMATION TYPE 5 & 6 on the SACCH/M. All 7 of the BCCHs "on air" are indicated in the BA (N1 is excluded). The MS shall send MEASUREMENT REPORTs back to the SS on every uplink HSCSD channel, and it shall be indicated in these that measurement results for the 4 strongest carriers have been obtained.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

SYSTEM INFORMATION TYPE 5, SYSTEM INFORMATION TYPE 6 and MEASUREMENT REPORT are sent continuously, a table is not applicable in this test. The interval between 2 successive Layer 2 frames containing MEASUREMENT REPORTs shall not exceed one Layer 2 frame.

| Neighbour, N7 | -40 | 1 | 1 | 044 | 810 | 0008H |

For GSM 700 or GSM 850: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM 700) | ARFCN (GSM 850) | Cell Identity |
|---------------|-------|-----|------|--------------------|--------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 439 | 129 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 445 | 135 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 451 | 141 | 0003H |
| Neighbour, N3 | -75 | 2 | 1 | 457 | 147 | 0004H |
| Neighbour, N4 | -55 | 3 | 3 | 463 | 153 | 0005H |
| Neighbour, N5 | -50 | 4 | 5 | 469 | 159 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 475 | 165 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 481 | 171 | 0008H |

With the exception of the Cell Allocation, the rest of the parameters for all eight cells are the same as the default settings and default SYSTEM INFORMATION TYPE 1 to 4 message contents for cell A. The Cell Allocation for the serving cell is the same as the default setting for cell A. The Cell Allocations for the neighbour cells need have only one entry, consisting of the ARFCN of that cell's BCCH.

Mobile Station:

The MS is in the active state of a service using asymmetric multislot connection.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

Active state of a service using asymmetric multislot connection.

Test Procedure

This test procedure is performed twice.

MS having a multislot connection with maximum number of timeslots in the downlink and one slot in uplink direction in progress, the SS sends SYSTEM INFORMATION TYPE 5 & 6 (on the second iteration of the test two timeslots are used in the downlink and one in uplink direction the SS also sends SYSTEM INFORMATION TYPE 5bis) on the SACCH/M. All 7 of the BCCHs "on air" are indicated in the BA (N1 is excluded). The MS shall send MEASUREMENT REPORTs back to the SS on every uplink HSCSD channel, and it shall be indicated in these that measurement results for the 4 strongest carriers have been obtained.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

This sequence is performed for execution counter, $k = 1, 2$.

Since when $k = 1$, SYSTEM INFORMATION TYPE 5, SYSTEM INFORMATION TYPE 6 and MEASUREMENT REPORT (and when $k = 2$ an additional SYSTEM INFORMATION TYPE 5bis is included) are sent continuously, a table is not applicable in this test. The interval between 2 successive Layer 2 frames containing MEASUREMENT REPORTs shall not exceed one Layer 2 frame.

This message shall contain one report on each of N7, N6, S1 and N2.

NOTE 1: These actual values are not checked.

NOTE 2: The Measurement Valid Indication shall be set to valid within the second SACCH block at the latest.

26.13.1.1.3 Multislot signaling / RR / Measurement / asymmetric / change of the reported subchannel

26.13.1.1.3.1 Conformance requirements

The MS shall continuously send MEASUREMENT REPORT messages, on the main channel, reporting the worst subchannel. One of the other subchannels is made worse than the one originally reported one and the MEASUREMENT REPORTs sent on the main channel are based on the new worst subchannel.

References

3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.1.2 and 9.1.21.

3GPP TS 05.08 subclause 8.4.

26.13.1.1.3.2 Test purpose

- 1) To test that the MS shall report on the main SACCH: RXLEV_FULL and RXLEV_SUB from the main channel and the worst RXQUAL_FULL values and RXQUAL_SUB values from the main channel and the unidirectional channels.
- 2) To test that, when an another subchannel becomes the worst, MEASUREMENT REPORTs sent on the main channel are based on the new worst subchannel.

26.13.1.1.3.3 Method of test

Initial Conditions

System Simulator:

For GSM 450 or GSM 480: 1 cell with the following settings:

| Transmitter | Level | NCC | BCC | ARFCN (GSM 450) | ARFCN (GSM 480) | Cell Identity |
|-------------|-------|-----|-----|--------------------|--------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 260 | 307 | 0001H |

For GSM 900 or DCS 1 800: 1 cell with the following settings:

| Transmitter | Level | NCC | BCC | ARFCN (GSM 900) | ARFCN (DCS 1 800) | Cell Identity |
|-------------|-------|-----|-----|--------------------|----------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 002 | 514 | 0001H |

For GSM 700 or GSM 850: 1 cell with the following settings:

| Transmitter | Level | NCC | BCC | ARFCN (GSM 700) | ARFCN (GSM 850) | Cell Identity |
|-------------|-------|-----|-----|--------------------|--------------------|---------------|
| Serving, S1 | -60 | 1 | 3 | 439 | 129 | 0001H |

Mobile Station:

The MS is in the active state of a service using asymmetric multislot connection.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

Active state of a service using asymmetric multislot connection.

Test Procedure

MS having a multislot connection with maximum number of timeslots in the downlink and one slot in uplink direction in progress, the SS sends SYSTEM INFORMATION TYPE 5 & 6 on the SACCH/M. The MS shall send MEASUREMENT REPORTs back to the SS on the main channel based on the worst subchannel. The SS allows 2 seconds for the MS to get used to the RF conditions and then records the reported RXQUAL_FULL_SERVING_CELL and RXQUAL_SUB_SERVING_CELL values.

Then an arbitrarily chosen uni-directional subchannel is made the worst from the RX quality point of view by switching off the ciphering in the SS on this channel. The MS shall send MEASUREMENT REPORTs back to the SS on the main channel based on the new worst channel. The SS allows 2 seconds for the MS to get used to the new RF conditions and then records the reported RXQUAL_FULL_SERVING_CELL and RXQUAL_SUB_SERVING_CELL values.

The difference between the RXQUAL values recorded before and after the change in RX quality shall be greater than 3.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

Since SYSTEM INFORMATION TYPE 5, SYSTEM INFORMATION TYPE 6 and MEASUREMENT REPORT are sent continuously, a table is not applicable in this test. The interval between 2 successive Layer 2 frames containing MEASUREMENT REPORTs shall not exceed one Layer 2 frame.

NOTE 2: The Measurement Valid Indication shall be set to valid within the second SACCH block at the latest.

26.13.1.2 Multislot signalling / RR / Dedicated assignment

26.13.1.2.1 Multislot signalling / RR / Dedicated assignment / successful case

26.13.1.2.1.1 Conformance requirements

- 1) Upon receipt of the ASSIGNMENT COMMAND message, the mobile station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the main signalling links).

- 2) MM-messages and CM-messages using SAPI=0 sent from the mobile station to the network can be duplicated by the data link layer in the following case:
 - a channel change of dedicated channels is required (assignment or handover procedure) and the last layer 2 frame has not been acknowledged by the peer data link layer before the mobile station leaves the old channel;
 - in this case, the mobile station does not know whether the network has received the message correctly. Therefore, the mobile station has to send the message again after the new dedicated channel is established.
- 3) The MS shall establish the link with the power level specified in the ASSIGNMENT COMMAND message.

The MS shall confirm the power control level that it is currently employing in the uplink SACCH L1 header. The indicated value shall be the power control level actually used by the mobile for the last burst of the previous SACCH period.
- 4) The MS shall apply the hopping frequencies specified in ASSIGNMENT COMMAND message in the Mobile Allocation IE or the Frequency List IE at the time of accessing the new channel using the last received Cell Allocation.
- 5) After receipt of the ASSIGNMENT COMMAND the MS shall perform the assignment and return an ASSIGNMENT COMPLETE without undue delay.

References

- Conformance requirements 1), 4) 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3 and 9.1.2.
- Conformance requirements 2) 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.1.4.3.
- Conformance requirements 3) 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3 and 9.1.2; 3GPP TS 05.08, subclause 4.2.
- Conformance requirements 5) 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3 and 9.1.3, 3GPP TS 04.13 subclause 5.2.4.

26.13.1.2.1.2 Test purpose

- 1) To verify that upon receipt of an ASSIGNMENT COMMAND, the MS switches to the channel(s) defined in the ASSIGNMENT COMMAND, establishes the link and sends an ASSIGNMENT COMPLETE message. This is tested for an MS supporting TCH and multislot configuration in the special cases of a transition.
 - 1.1) from non-hopping SDCCH to hopping multislot configuration;
 - 1.2) from hopping multislot configuration to non-hopping multislot configuration;
 - 1.3) from non-hopping multislot configuration to hopping multislot configuration;
 - 1.4) from hopping symmetric multislot configuration to hopping asymmetric multislot configuration, resource upgrading used;
- NOTE: The step 1.5 is applicable to all MS that supports multislot configuration $T_x > 1$ and $\text{Sum} > 3$.
- 1.5) from hopping asymmetric multislot configuration to hopping symmetric multislot configuration;
 - 1.6) from hopping multislot configuration to non-hopping multislot configuration, resources downgrading to one TCH/F;
 - 1.7) from non-hopping multislot configuration with one TCH/F to non-hopping multislot configuration, resource upgrading used;
 - 1.8) from non-hopping multislot configuration to hopping multislot configuration, relocating all channels in multislot configuration call without changing the number of TCH/Fs allocated;
 - 1.9) from hopping multislot configuration to non-hopping multislot configuration, partially relocating the channels in multislot configuration call without changing the number of TCH/Fs allocated;

- 1.10) from non-hopping multislot configuration to hopping multislot configuration, resource downgrading to one TCH/F;
- 2) To verify that an MS supporting TCH and multislot configuration, having sent a MM- or CM message that was not acknowledged on L2 before the channel assignment procedure was initiated and before the MS has left the old channel, repeats that message after completion of the assignment procedure without incrementing N(SD). This is tested in the special case of MM message AUTHENTICATION RESPONSE.
- 3) To verify that an MS supporting TCH and multislot configuration, having received an ASSIGNMENT COMMAND, having sent an SABM frame to establish the main signalling link on the assigned main channel of the multislot configuration, reports the power level(s) specified in the ASSIGNMENT COMMAND message, in the uplink SACCH L1 header of the SACCH message sent in the SACCH period following the transmission of the SABM frame.
- 4) To verify that an MS supporting TCH and multislot configuration, having received an ASSIGNMENT COMMAND, is able in the case of frequency hopping to decode the Mobile Allocation and Frequency List IEs correctly and applies the specified frequencies using the correct Cell Allocation.
- 5) To verify that after receipt of the ASSIGNMENT COMMAND the MS returns an ASSIGNMENT COMPLETE without undue delay.

26.13.1.2.1.3 Method of test

Initial Conditions

System Simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets.

GSM 450:

- BCCH ARFCN =263.
- Throughout the test, the CA broadcast in System Information 1 is (259, 261, 263, 265, 267, 269, 271, 273, 275, 277).
- Note that the actual CA of the cell contains other frequencies.

GSM 480:

- BCCH ARFCN =310.
- Throughout the test, the CA broadcast in System Information 1 is (306, 308, 310, 312, 314, 316, 318, 320, 322, 324).
- Note that the actual CA of the cell contains other frequencies.

GSM 900:

- BCCH ARFCN =20.
- Throughout the test, the CA broadcast in System Information 1 is (10, 17, 20, 26, 34, 42, 45, 46, 52, 59).
- Note that the actual CA of the cell contains other frequencies.

DCS 1 800:

- BCCH ARFCN =747.
- Throughout the test, the CA broadcast in System Information 1 is (734, 741, 747, 754, 759, 766, 773, 775, 779, 782).
- Note that the actual CA of the cell contains other frequencies.

GSM 700:

- BCCH ARFCN =457.
- Throughout the test, the CA broadcast in System Information 1 is (447, 454, 457, 463, 471, 479, 482, 483, 489, 496).
- Note that the actual CA of the cell contains other frequencies.

GSM 850:

- BCCH ARFCN =147.
- Throughout the test, the CA broadcast in System Information 1 is (137, 144, 147, 153, 161, 169, 172, 173, 179, 186).
- Note that the actual CA of the cell contains other frequencies.

Mobile Station:

- The MS is in the "idle, updated" state with a TMSI allocated.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The SS pages the MS and allocates an SDCCH. Each time the MS shall switch to the assigned channel, establish the link and send an ASSIGNMENT COMPLETE message.

Then the SS sends an AUTHENTICATION REQUEST message. The MS shall answer with an AUTHENTICATION RESPONSE message, which is not acknowledged on L2 by the SS. Immediately after the AUTHENTICATION RESPONSE message is received, the SS sends an ASSIGNMENT COMMAND. The MS shall switch to the assigned channel, establish the link with the commanded power level and send as ASSIGNMENT COMPLETE message. Then MS shall repeat the AUTHENTICATION RESPONSE message, with the same N(SD) value.

Then the SS sends an ASSIGNMENT COMMAND, which includes a Starting Time IE. The MS shall react as specified above, but this shall be done at the time specified in Starting Time IE.

The SS initiates the channel release procedure and the main signalling link is released.

Maximum Duration of Test

30 s.

Expected Sequence

An MS supporting Multislot Class 1 need only perform steps 1..12, 21..24 and 30.

| Step | Direction | Message | Comments |
|--------------|--|-------------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 6 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 7 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 6. |
| 8 | SS | | The SS checks that the MS reports the requested power level in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM. |
| 9 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 9. |
| 11 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 11. |
| 13 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 14 | MS -> SS | ASSIGNMENT COMPLETE | |
| 15 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| (note) 16 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 15. |
| (note) 17 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 18 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 17. |
| 19 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 20 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 19. |
| 21 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 22 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 21. |
| 23 | SS -> MS | AUTHENTICATION REQUEST | |
| 24 | MS -> SS | AUTHENTICATION RESPONSE | This message is not L2 acknowledged by the SS. |
| 25 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 26 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be transmitted before 600 ms after the completion of step 25. |
| 27 | MS -> SS | AUTHENTICATION RESPONSE | N(SD) shall be the same as in step 24. |
| 28 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 29 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be transmitted at the specified Starting Time in step 28. |
| 30 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| NOTE: | This step is applicable to all MS that supports multislot configuration Tx > 1 and Sum > 3. Specific Message Contents. | | |

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|--|--|
| As default message contents except Channel Description <ul style="list-style-type: none"> - Channel Type <li style="padding-left: 20px;">TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
|--|--|

Step 6

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 <ul style="list-style-type: none"> - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command <ul style="list-style-type: none"> - Power level Frequency list IE Multislot allocation <ul style="list-style-type: none"> - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) Channel Mode <ul style="list-style-type: none"> - Mode Mobile Allocation Starting Time | 00000 A suitable value for multislot configuration, chosen arbitrarily Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not included Maximum number of timeslots supported by the MS Maximum number of timeslots supported by the MS after specifying Downlink timeslots Appropriate for the test Data, 12.0 kbit/s radio interface rate Indicates all of the CA (broadcast on the BCCH) except for the BCCH carrier. Not included |
|--|---|

Step 9

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10XXX (Maximum number of possible additional bidirectional TCH/Fs and SACCH/Ms subtracted by one, minimum being one) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Depending on Multislot class, Shall not have maximum number of timeslots. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink assignment |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (271, 273, 281, 283, 285, 287, 289, 291) |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 11XXX (Appropriate number of additional unidirectional TCH/FDs and SACCH/MDs or Additional bidirectional TCH/F and SACCH/M and additional unidirectional TCH/FD and SACCH/MD |
| - Timeslot Number | Number of downlink timeslots shall be more than in step 11) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (271, 273, 281, 283, 285, 287, 289, 291) |
| Starting Time | Not included |

Step 15

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation - Downlink assignment - Uplink assignment | Appropriate for the test. Must be more than one. Appropriate for the test, but as many as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (271, 273, 281, 283, 285, 287, 289, 291) |
| Starting Time | Not included |

Step 17

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 10000 (no additional timeslots) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping - ARFCN | Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping - ARFCN | Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) | Appropriate for the test, but more than one timeslot allocated and excluding timeslot 0.. Appropriate for the test according to MS Class described in Annex B 05.02. Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 10XXX (Same number of TCH/Fs and timeslot mapping as in step 19) |
| - Timeslot Number | Same as in step 19 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Frequency hopping |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (273, 281, 283) |
| Starting Time | Not included |

Step 25

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | Same as in step 19 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Multislot allocation - Downlink assignment | Indicate same timeslots as step 19. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 28

ASSIGNMENT COMMAND

| | |
|---|--|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Cell Channel Description Channel Mode - Mode Mobile Allocation Starting Time | 10000 (no additional timeslots) Same as in step 19 Chosen arbitrarily Frequency hopping Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not Included Not included Data, 12.0 kbit/s radio interface rate Indicate frequencies (273, 281, 283) Chosen arbitrarily |
|---|--|

GSM 450 end:

GSM 480 begin:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|--|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |

Step 6

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots supported by the MS |
| - Uplink assignment | Maximum number of timeslots supported by the MS after specifying Downlink timeslots |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates all of the CA (broadcast on the BCCH) except for the BCCH carrier. |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10XXX (Maximum number of possible additional bidirectional TCH/Fs and SACCH/Ms subtracted by one, minimum being one) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Depending on Multislot class, Shall not have maximum number of timeslots. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink assignment |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |

| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 11XXX (Appropriate number of additional unidirectional TCH/FDs and SACCH/MDs or Additional bidirectional TCH/F and SACCH/M and additional unidirectional TCH/FD and SACCH/MD) |
| - Timeslot Number | Number of downlink timeslots shall be more than in step 11) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (318, 320, 328, 330, 332, 334, 336, 338) |
| Starting Time | Not included |

Step 15

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Must be more than one. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (318, 320, 328, 330, 332, 334, 336, 338) |
| Starting Time | Not included |

Step 17

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10000 (no additional timeslots) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Multislot allocation | Appropriate for the test, but more than one timeslot allocated and excluding timeslot 0.. |
| - Downlink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 10XXX (Same number of TCH/Fs and timeslot mapping as in step 19) |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Frequency hopping |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Indicate frequencies (320, 328, 330) |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 25

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | |
| - Downlink assignment | Indicate same timeslots as step 19. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 28

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 10000 (no additional timeslots) |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Frequency hopping |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Not included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (320, 328, 330) |
| Starting Time | Chosen arbitrarily |

GSM 480 end:

GSM 900 begin:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|-------------------------------|
| As default message contents except Channel Description | |
| - Channel Type | SDCCH/8 |
| - TDMA offset | Chosen arbitrarily |
| - Timeslot Number | N, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |

Step 6

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots supported by the MS |
| - Uplink assignment | Maximum number of timeslots supported by the MS after specifying Downlink timeslots |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates all of the CA (broadcast on the BCCH) except for the BCCH carrier. |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND

| | |
|---|--|
| Channel Description 2 - Channel Type and TDMA offset | 10XXX (Maximum number of possible additional bidirectional TCH/Fs and SACCH/Ms subtracted by one, minimum being one) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation - Downlink assignment | Appropriate for the test. Depending on Multislot class, Shall not have maximum number of timeslots. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink assignment |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (45, 46, 73, 74, 75, 76, 108, 114) |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 11XXX (Appropriate number of additional unidirectional TCH/FDs and SACCH/MDs or Additional bidirectional TCH/F and SACCH/M and additional unidirectional TCH/FD and SACCH/MD |
| - Timeslot Number | Number of downlink timeslots shall be more than in step 11) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (45, 46, 73, 74, 75, 76, 108, 114) |
| Starting Time | Not included |

Step 15

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Must be more than one. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (45, 46, 73, 74, 75, 76, 108, 114) |
| Starting Time | Not included |

Step 17

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 10000 (no additional timeslots) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping - ARFCN | Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping - ARFCN | Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation - Downlink assignment | Appropriate for the test, but more than one timeslot allocated and excluding timeslot 0.. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 10XXX (Same number of TCH/Fs and timeslot mapping as in step 19) |
| - Timeslot Number | Same as in step 19 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Frequency hopping |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (46, 73 74) |
| Starting Time | Not included |

Step 25

ASSIGNMENT COMMAND

| | |
|---|--|
| Channel Description 2 - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | Same as in step 19 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation - Downlink assignment | Indicate same timeslots as step 19. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 28

ASSIGNMENT COMMAND

| | |
|--|--|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN | 10000 (no additional timeslots) Same as in step 19 Chosen arbitrarily Frequency hopping Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Not included |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (46, 73 74) |
| Starting Time | Chosen arbitrarily |

GSM 900 end:

GSM 1800 begin:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|--|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
|---|--|

Step 6

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots supported by the MS |
| - Uplink assignment | Maximum number of timeslots supported by the MS after specifying Downlink timeslots |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates all of the CA (broadcast on the BCCH) except for the BCCH carrier. |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10XXX (Maximum number of possible additional bidirectional TCH/Fs and SACCH/Ms subtracted by one, minimum being one) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Depending on Multislot class, Shall not have maximum number of timeslots. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink assignment |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (773, 775, 779, 829, 832, 844) |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 11XXX (Appropriate number of additional unidirectional TCH/FDs and SACCH/MDs or Additional bidirectional TCH/F and SACCH/M and additional unidirectional TCH/FD and SACCH/MD |
| - Timeslot Number | Number of downlink timeslots shall be more than in step 11) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (773, 775, 779, 829, 832, 844) |
| Starting Time | Not included |

Step 15

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Must be more than one. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (773, 775, 779, 829, 832, 844) |
| Starting Time | Not included |

Step 17

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10000 (no additional timeslots) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Cell Channel Description | |
| Multislot allocation | Appropriate for the test, but more than one timeslot allocated and excluding timeslot 0. |
| - Downlink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 10XXX (Same number of TCH/Fs and timeslot mapping as in step 19) |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Frequency hopping |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Cell Channel Description | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Indicate frequencies (782, 791, 798) |
| Mobile Allocation | Not included |
| Starting Time | |

Step 25

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | |
| - Downlink assignment | Indicate same timeslots as step 19. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 28

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 10000 (no additional timeslots) |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Frequency hopping |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Not Included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (782, 791, 798) |
| Starting Time | Chosen arbitrarily |

GSM 1800 end:

GSM 700 begin:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|--|--|
| As default message contents except Channel Description <ul style="list-style-type: none"> - Channel Type <li style="padding-left: 20px;">TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |

Step 11

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Depending on Multislot class, Shall not have maximum number of timeslots. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink assignment |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (482, 483, 500, 501, 502, 503, 506, 508) |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset | 11XXX (Appropriate number of additional unidirectional TCH/FDs and SACCH/MDs or Additional bidirectional TCH/F and SACCH/M and additional unidirectional TCH/FD and SACCH/MD |
| - Timeslot Number | Number of downlink timeslots shall be more than in step 11) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (482, 483, 500, 501, 502, 503, 506, 508) |
| Starting Time | Not included |

Step 15

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation - Downlink assignment - Uplink assignment | Appropriate for the test. Must be more than one. Appropriate for the test, but as many as in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (482, 483, 500, 501, 502, 503, 506, 508) |
| Starting Time | Not included |

Step 17

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 10000 (no additional timeslots) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping - ARFCN | Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping - ARFCN | Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) | Appropriate for the test, but more than one timeslot allocated and excluding timeslot 0.. Appropriate for the test according to MS Class described in Annex B 05.02. Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10XXX (Same number of TCH/Fs and timeslot mapping as in step 19) |
| - Timeslot Number | Same as in step 19 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Frequency hopping |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (483, 500, 501) |
| Starting Time | Not included |

Step 25

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | Same as in step 19 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation | |
| - Downlink assignment | Indicate same timeslots as step 19. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 28

ASSIGNMENT COMMAND

| | |
|---|--|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Cell Channel Description Channel Mode - Mode Mobile Allocation Starting Time | 10000 (no additional timeslots) Same as in step 19 Chosen arbitrarily Frequency hopping Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not Included Not included Data, 12.0 kbit/s radio interface rate Indicate frequencies (483, 500, 501) Chosen arbitrarily |
|---|--|

GSM 700 end:

GSM 850 begin:

Step 3

IMMEDIATE ASSIGNMENT:

| | |
|---|--|
| As default message contents except Channel Description - Channel Type TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN | SDCCH/8 Chosen arbitrarily N, chosen arbitrarily Chosen arbitrarily Single RF Channel the ARFCN of the BCCH carrier |
|---|--|

Step 6

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots supported by the MS |
| - Uplink assignment | Maximum number of timeslots supported by the MS after specifying Downlink timeslots |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates all of the CA (broadcast on the BCCH) except for the BCCH carrier. |
| Starting Time | Not included |

Step 9

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10XXX (Maximum number of possible additional bidirectional TCH/Fs and SACCH/Ms subtracted by one, minimum being one) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 11

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Depending on Multislot class, Shall not have maximum number of timeslots. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink assignment |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (172, 173, 200, 201, 202, 203, 235, 241) |
| Starting Time | Not included |

Step 13

ASSIGNMENT COMMAND

| | |
|--------------------------------|--|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 11XXX (Appropriate number of additional unidirectional TCH/FDs and SACCH/MDs or Additional bidirectional TCH/F and SACCH/M and additional unidirectional TCH/FD and SACCH/MD) |
| - Timeslot Number | Number of downlink timeslots shall be more than in step 11) A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (172, 173, 200, 201, 202, 203, 235, 241) |
| Starting Time | Not included |

Step 15

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test. Must be more than one. |
| - Uplink assignment | Appropriate for the test, but as many as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicates frequencies (172, 173, 200, 201, 202, 203, 235, 241) |
| Starting Time | Not included |

Step 17

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 10000 (no additional timeslots) |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Cell Channel Description | |
| Multislot allocation | Appropriate for the test, but more than one timeslot allocated and excluding timeslot 0.. |
| - Downlink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 10XXX (Same number of TCH/Fs and timeslot mapping as in step 19) |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Frequency hopping |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Cell Channel Description | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Indicate frequencies (173, 200, 201) |
| Mobile Allocation | Not included |
| Starting Time | |

Step 25

ASSIGNMENT COMMAND

| | |
|----------------------------------|--|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF Channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Indicate same timeslots as step 19. |
| - Uplink assignment | Appropriate for the test according to MS Class described in Annex B 05.02. |
| - Channel set X (1= $X \leq 8$) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 28

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 10000 (no additional timeslots) |
| - Channel Type and TDMA offset | Same as in step 19 |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Frequency hopping |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Not included |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Indicate frequencies (173, 200, 201) |
| Starting Time | Chosen arbitrarily |

GSM 850 end:

26.13.1.2.2 Multislot signalling / RR / Dedicated assignment / failure / general case

26.13.1.2.2.1 Conformance requirements

On the mobile station side, if a lower layer failure happens on the new channel before the ASSIGNMENT COMPLETE message has been sent, the mobile station deactivates the new channels, reactivates the old channels, reconnects the TCHs if any and triggers the establishment of the main signalling link. It then sends an ASSIGNMENT FAILURE message, cause "protocol error unspecified" on the main DCCH and resumes the normal operation, as if no assignment attempt had occurred. The operational parameters (e.g. ciphering mode) when returning on the old channel are those applied before the procedure.

References

Conformance requirements: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3, 9.1.3 and 9.1.4.

26.13.1.2.2.2 Test purpose

- 1) To test that, when the MS fails to seize the new channel, the MS reactivates the old channel.
- 2) This is tested in the special cases of transition:
 - 2.1) from non-hopping SDCCH to hopping symmetric multislot configuration;
 - 2.2) from hopping asymmetric multislot configuration to non-hopping symmetric;
 - 2.3) from non hopping symmetric multislot configuration to non-hopping symmetric multislot configuration, resource upgrading used;
 - 2.4) from non-hopping asymmetric multislot configuration to non-hopping asymmetric multislot configuration, resource upgrading used;
 - 2.5) from hopping symmetric multislot configuration to hopping asymmetric multislot configuration, resource upgrading used;
 - 2.6) from hopping asymmetric multislot configuration to non-hopping multislot configuration, resources downgrading to one TCH/F.

26.13.1.2.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

The MS is "idle updated".

Test Procedure

A mobile terminated RR connection is established on an SDCCH. The following is repeated six times with different parameters:

The SS sends an ASSIGNMENT COMMAND message allocating a hopping/non-hopping symmetric/asymmetric multislot configuration with or without resource upgrading/downgrading, but does not activate the assigned channels. The MS shall try to activate the new channel (this is not verified) and shall then reactivate the old channel and trigger the establishment of the main signalling link on the old channel. Then the MS shall send an ASSIGNMENT FAILURE.

The SS initiates the channel release procedure and the test ends here.

Maximum Duration of Test

30 s.

Expected Sequence

An MS supporting Multislot Class 1 need only perform steps 1..7, 11..13 and 34.

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | Channel Type: SDCCH/4. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents below. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 6 | | | The MS re-establishes the signalling link on the old channel. |
| 7 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified". |
| 8 | SS | | The SS checks that the MS reports the old power level (prior to the Assignment command) in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM. |
| 9 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents below. |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | Assignment command is successfully performed. |
| 11 | SS -> MS | ASSIGNMENT COMMAND | Channel Type = TCH/F, non-hopping, symmetric multislot configuration. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 12 | | | The MS re-establishes the signalling link on the old channel. |
| 13 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified". |
| 14 | SS -> MS | ASSIGNMENT COMMAND | Assignment command to non-hopping, symmetric multislot configuration is successfully performed. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | ASSIGNMENT COMMAND | Channel Type = TCH/F, non-hopping, symmetric multislot configuration, resource upgrading used. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 17 | | | The MS re-establishes the signalling link on the old channel. |
| 18 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified". |
| 19 | SS -> MS | ASSIGNMENT COMMAND | Assignment command to non-hopping, asymmetric multislot configuration is successfully performed. |
| 20 | MS -> SS | ASSIGNMENT COMPLETE | |
| 21 | SS -> MS | ASSIGNMENT COMMAND | Channel Type = TCH/F, non-hopping, asymmetric multislot configuration, resource downgrading used. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 22 | | | The MS re-establishes the signalling link on the old channel. |
| 23 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified". |
| 24 | SS -> MS | ASSIGNMENT COMMAND | Assignment command to hopping, symmetric multislot configuration is successfully performed. |
| 25 | MS -> SS | ASSIGNMENT COMPLETE | |
| 26 | SS -> MS | ASSIGNMENT COMMAND | Channel Type = TCH/F, hopping, asymmetric multislot configuration, resource upgrading used. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 27 | | | The MS re-establishes the signalling link on the old channel. |
| 28 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified". |
| 29 | SS -> MS | ASSIGNMENT COMMAND | Assignment command to hopping, asymmetric multislot configuration is successfully performed. |
| 30 | MS -> SS | ASSIGNMENT COMPLETE | |
| 31 | SS -> MS | ASSIGNMENT COMMAND | Channel Type = TCH/F, non-hopping, multislot configuration, resources downgrading to one TCH/F. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 32 | | | The MS re-establishes the signalling link on the old channel. |
| 33 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = "protocol error unspecified". |
| 34 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

GSM 450 begin:

Step 5:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of symmetrical timeslots assigned. |
| - Downlink assignment | As many timeslots as downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1= X ≤8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Arbitrarily chosen from Cell channel description |
| Mobile Allocation | |
| Starting Time | Not included |

Step 9:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Less timeslots assigned than downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1= X ≤8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Arbitrarily chosen from Cell channel description |
| Mobile Allocation | |
| Starting Time | Not included |

Step 11:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of symmetrical timeslots supported by MS assigned. |
| - Downlink assignment | As many timeslots as in downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 14:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 16:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | More than one timeslot but less than maximum number of timeslots is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Less timeslots assigned than downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 24:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Chosen arbitrarily from the Cell channel description |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 26:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 29:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 31:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

GSM 450 end:

GSM 480 begin:

Step 5:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of symmetrical timeslots assigned. |
| - Downlink assignment | As many timeslots as downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Arbitrarily chosen from Cell channel description |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 9:

ASSIGNMENT COMMAND

| | |
|----------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than downlink direction. |
| - Channel set X (1= $X \leq 8$) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 11:

ASSIGNMENT COMMAND

| | |
|----------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of symmetrical timeslots supported by MS assigned. |
| - Uplink assignment | As many timeslots as in downlink direction. |
| - Channel set X (1= $X \leq 8$) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 14:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 16:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Multislot allocation | More than one timeslot but less than maximum number of timeslots is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Less timeslots assigned than downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 24:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 26:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 29:

ASSIGNMENT COMMAND

| | |
|----------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Less timeslots assigned than in downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1= $X \leq 8$) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 31:

ASSIGNMENT COMMAND

| | |
|----------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338) |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1= $X \leq 8$) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | |
| Mobile Allocation | Not included |
| Starting Time | Not included |

GSM 480 end:

GSM 900 begin:

Step 5:

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping | Chosen arbitrarily RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) | Maximum number of symmetrical timeslots assigned. As many timeslots as downlink direction. Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 9:

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping | Chosen arbitrarily RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) | Maximum number of timeslots that MS supports. Less timeslots assigned than downlink direction. Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 11:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | Maximum number of symmetrical timeslots supported by MS assigned. |
| - Downlink assignment | As many timeslots as in downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 14:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 16:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | More than one timeslot but less than maximum number of timeslots is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21:

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - ARFCN Power Command - Power level Frequency list IE Cell Channel Description Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) Channel Mode - Mode Mobile Allocation Starting Time | 00000 A suitable value for multislot configuration, chosen arbitrarily Chosen arbitrarily Single RF channel the ARFCN of the BCCH carrier Chosen arbitrarily but with a changed value. Not Included Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) Maximum number of timeslots that MS supports. Less timeslots assigned than downlink direction. Appropriate for the test Data, 12.0 kbit/s radio interface rate Not included Not included |
|--|---|

Step 24:

ASSIGNMENT COMMAND

| | |
|--|--|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number - Training Sequence Code - Hopping - MAIO - HSN Power Command - Power level Frequency list IE Cell Channel Description Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) Channel Mode - Mode Mobile Allocation Starting Time | 00000 A suitable value for multislot configuration, chosen arbitrarily Chosen arbitrarily RF hopping channel Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. Chosen arbitrarily from the set (1 to 63) Chosen arbitrarily but with a changed value. Not Included Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) Only one timeslot is assigned in downlink direction. Only one timeslot is assigned in uplink direction. Appropriate for the test Data, 12.0 kbit/s radio interface rate Chosen arbitrarily from the Cell channel description Not included |
|--|--|

Step 26:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 29:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |

| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 31:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Bit map zero encodes (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

GSM 900 end:

GSM 1800 begin:

Step 5:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of symmetrical timeslots assigned. |
| - Uplink assignment | As many timeslots as downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 9:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 11:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | |
| - Downlink assignment | Maximum number symmetrical of timeslots supported by MS assigned. |
| - Uplink assignment | As many timeslots as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 14:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 16:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19:

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation - Downlink assignment | More than one timeslot but less than maximum number of timeslots is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21:

ASSIGNMENT COMMAND

| | |
|--|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 24:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 26:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 29:

ASSIGNMENT COMMAND

| | |
|----------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - MAIO | Chosen arbitrarily from the set (1 to 63) |
| - HSN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Less timeslots assigned than in downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1= $X \leq 8$) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 31:

ASSIGNMENT COMMAND

| | |
|----------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | |
| Frequency list IE | Not Included |
| Cell Channel Description | Use Range 128 to encode (773, 775, 779, 782, 791, 798, 829, 832, 844) |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1= $X \leq 8$) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | |
| Mobile Allocation | Not included |
| Starting Time | Not included |

GSM 1800 end:

GSM 700 begin:

Step 5:

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping | Chosen arbitrarily RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) | Maximum number of symmetrical timeslots assigned. As many timeslots as downlink direction. Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 9:

ASSIGNMENT COMMAND

| | |
|---|---|
| Channel Description 2 - Channel Type and TDMA offset - Timeslot Number | 00000 A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code - Hopping | Chosen arbitrarily RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation - Downlink assignment - Uplink assignment - Channel set X (1=<X<=8) | Maximum number of timeslots that MS supports. Less timeslots assigned than downlink direction. Appropriate for the test |
| Channel Mode - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 11:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of symmetrical timeslots supported by MS assigned. |
| - Downlink assignment | As many timeslots as in downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 14:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 16:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Cell Channel Description | |
| Multislot allocation | More than one timeslot but less than maximum number of timeslots is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 24:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 26:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 29:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | RF hopping channel |
| - Hopping | |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 31:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

GSM 700 end:

GSM 850 begin:

Step 5:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of symmetrical timeslots assigned. |
| - Uplink assignment | As many timeslots as downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 9:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Arbitrarily chosen from Cell channel description |
| Starting Time | Not included |

Step 11:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of symmetrical timeslots supported by MS assigned. |
| - Uplink assignment | As many timeslots as in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 14:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Cell Channel Description | |
| Multislot allocation | Only one timeslot is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 16:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 19:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Cell Channel Description | |
| Multislot allocation | More than one timeslot but less than maximum number of timeslots is assigned in downlink direction. |
| - Downlink assignment | Only one timeslot is assigned in uplink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 21:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | 00000 |
| - Channel Type and TDMA offset | A suitable value for multislot configuration, chosen arbitrarily |
| - Timeslot Number | Chosen arbitrarily |
| - Training Sequence Code | Single RF channel |
| - Hopping | the ARFCN of the BCCH carrier |
| - ARFCN | |
| Power Command | Chosen arbitrarily but with a changed value. |
| - Power level | Not Included |
| Frequency list IE | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Cell Channel Description | |
| Multislot allocation | Maximum number of timeslots that MS supports. |
| - Downlink assignment | Less timeslots assigned than downlink direction. |
| - Uplink assignment | Appropriate for the test |
| - Channel set X (1=<X<=8) | |
| Channel Mode | Data, 12.0 kbit/s radio interface rate |
| - Mode | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |

Step 24:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 26:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1=<X<=8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 29:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Maximum number of timeslots that MS supports. |
| - Uplink assignment | Less timeslots assigned than in downlink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Chosen arbitrarily from the Cell channel description |
| Starting Time | Not included |

Step 31:

ASSIGNMENT COMMAND

| | |
|--------------------------------|---|
| Channel Description 2 | |
| - Channel Type and TDMA offset | 00000 |
| - Timeslot Number | A suitable value for multislot configuration, chosen arbitrarily |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not Included |
| Cell Channel Description | 128 range encodes (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Multislot allocation | |
| - Downlink assignment | Only one timeslot is assigned in downlink direction. |
| - Uplink assignment | Only one timeslot is assigned in uplink direction. |
| - Channel set X (1= X ≤8) | Appropriate for the test |
| Channel Mode | |
| - Mode | Data, 12.0 kbit/s radio interface rate |
| Mobile Allocation | Not included |
| Starting Time | Not included |

GSM 850 end:

26.13.1.3 Test of handover

With the Handover procedure, it is possible to completely alter the channels allocated to a MS. This makes it possible in particular to switch a call in progress from one cell to another. The procedure is always initiated by the network and with the MS in a dedicated mode.

Subclauses 26.13.1.3.1 to 26.13.1.3.5 contain test procedures to be used for executing successful Handover tests in multislot configuration. Table 26.13.1.3-1 contains a summary of the different combinations of parameters that have to be tested, together with a reference to the appropriate test procedure.

Table 26.13.1.3-1

| From | To | Timing Adv. | Start Time | Syn ? | State of call | Subclause | Exec Counter |
|---|---|-------------|------------|--------|---------------|-------------|--------------|
| Multislot configuration, MAX number of timeslots, no FH | Multislot configuration, MAX number of timeslots, FH | arbitrarily | none | no | U10 | 26.13.1.3.1 | 1 |
| Multislot configuration, MIN number of timeslots, no FH | Multislot configuration, MAX number of timeslots, no FH | arbitrarily | none | no | estab (note) | 26.13.1.3.2 | 1 |
| Multislot configuration, MAX number of timeslots, FH | Multislot configuration, MIN number of timeslots, no FH | arbitrarily | none | finely | U10 | 26.13.1.3.3 | 1 |
| Multislot configuration, FH | Multislot configuration, FH | arbitrarily | none | finely | estab (note) | 26.13.1.3.4 | 1 |
| Multislot configuration, MIN number of timeslots, FH | Multislot configuration, MAX number of timeslots, no FH | arbitrarily | none | pre | estab (note) | 26.13.1.3.5 | 1 |

NOTE: The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

26.13.1.3.1 Multislot signalling / RR / Handover / successful / active call / non-synchronized

26.13.1.3.1.1 Conformance requirements

- 1) The MS shall correctly apply the handover procedure in the non-synchronized case when a multislot connection is in progress and when handover is performed from a non-hopping multislot configuration towards a hopping multislot configuration.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4 and 9.1.15.
3GPP TS 04.13 subclause 5.2.6.2.

26.13.1.3.1.2 Test purpose

- 1) To test that when the MS is ordered to make a non-synchronized handover from non-hopping multislot configuration to hopping multislot configuration, it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS.
- 2) To test that the MS correctly handles the Timing Advance IE in the PHYSICAL INFORMATION message.
- 3) To test that the MS activates the new channels correctly and transmits the HANDOVER COMPLETE message without undue delay.

26.13.1.3.1.3 Method of test

Initial Conditions

System Simulator:

- 2 cells, A and B with same LAI, default parameters except:
- Early classmark sending enabled in SI3 rest octets

GSM 450:

Cell A has:

- BCCH ARFCN = 263

Cell B has:

- BCCH ARFCN = 274
- Cell Allocation = (260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291)
- The Cell Allocation of Cell B shall be coded using range 256 format.
- The frame numbers of cells A and B shall be different by 100.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 480:

Cell A has:

- BCCH ARFCN = 310

Cell B has:

- BCCH ARFCN = 321
- Cell Allocation = (307, 309, 311, 313, 315, 317, 319, 321, 323, 326, 328, 330, 332, 334, 336, 338)
- The Cell Allocation of Cell B shall be coded using range 256 format.
- The frame numbers of cells A and B shall be different by 100.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 900:

Cell A has:

- BCCH ARFCN = 20

Cell B has:

- BCCH ARFCN = 40
- Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114)
- The Cell Allocation of Cell B shall be coded using range 256 format.
- The frame numbers of cells A and B shall be different by 100.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

DCS 1 800:

Cell A has:

- BCCH ARFCN = 747

Cell B has:

- BCCH ARFCN = 764
- Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)
- The Cell Allocation of Cell B shall be coded using range 256 format.
- The frame numbers of cells A and B shall be different by 100.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 700:

Cell A has:

- BCCH ARFCN = 457

Cell B has:

- BCCH ARFCN = 477
- Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508)
- The Cell Allocation of Cell B shall be coded using range 256 format.
- The frame numbers of cells A and B shall be different by 100.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 850:

Cell A has:

- BCCH ARFCN = 147

Cell B has:

- BCCH ARFCN = 167
- Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241)
- The Cell Allocation of Cell B shall be coded using range 256 format.
- The frame numbers of cells A and B shall be different by 100.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

Mobile Station:

- The MS is in the active state (U10) of a service using a multislot connection on cell A.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

The active state (U10) of a multislot connection on cell B.

Test Procedure

The MS is in the active state (U10) of a multislot connection. The SS sends a HANDOVER COMMAND on the main DCCH. The MS shall begin to send access bursts on the new DCCH (and optionally on the SACCH) of the target cell. The SS observes the access bursts and after receiving 10-20 access bursts, the SS sends one PHYSICAL INFORMATION message with a Timing Advance arbitrarily selected. The MS shall activate the new channels that belongs to same multislot configuration. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message, before 500 ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------------|--|
| 0 | MS, SS | | The MS and SS are using a maximum multislot configuration according to the MS multislot class (highest class that MS supports) in non-hopping mode on cell A. |
| 1 | SS -> MS | HANDOVER COMMAND | See Specific message contents. |
| 2 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. |
| 3 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS messages. See specific message contents. |
| 4 | MS -> SS | SABM | Sent without information field. |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANDOVER COMPLETE | The message shall be ready to be transmitted before 500 ms after the completion of step 3. |
| 7 | MS, SS | | The MS and SS are using a maximum multislot configuration according to the MS multislot class (highest class that MS supports) in hopping mode on cell B and state U10 is reached. |

Specific Message Contents

GSM 450

HANDOVER COMMAND

| Information Element | value/remarks |
|--|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 1 |
| - Base Station Colour Code | 5 |
| - BCCH Carrier Number | 274 |
| Channel Description 2 | |
| - Channel Type | 00000 |
| - Timeslot number | A suitable value for multislot configuration, chosen arbitrarily. |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Synchronization Indication IE is not included. | |
| Channel Mode IE is not included. | |
| Description of a multislot configuration: | |
| - Downlink assignment | As many timeslots assigned as before HANDOVER COMMAND |
| - Uplink assignment | As many timeslots assigned as before HANDOVER COMMAND |
| - Channel set X (1=<x<=8) | Same as before HANDOVER COMMAND |
| Frequency List after time | |
| - Frequency List | Use Range 128 to encode the following 15 frequencies (260, 262, 264, 266, 268, 270, 272, 276, 279, 281, 283, 285, 287, 289, 291). |

PHYSICAL INFORMATION

| Information Element | value/remarks |
|--------------------------------------|--|
| As default message contents, except: | |
| Timing advance | Arbitrarily selected but different to default value. |

26.13.1.3.2 Multislot signalling / RR / Handover / successful / call under establishment / non synchronized / resource upgrading

26.13.1.3.2.1 Conformance requirements

- 1) The MS shall correctly apply the handover procedure from non-hopping multislot configuration to non-hopping multislot configuration in the non-synchronized case during call establishment.
- 2) The MS shall activate the new channels that belongs to same multislot configuration correctly, taking into account upgraded resources.
- 3) If during call establishment a Layer 3 MM or CC message just sent by the MS is not Layer 2 acknowledged before the channel change caused by the HANDOVER COMMAND message, the MS shall send the Layer 3 message to the new cell, using the same value in the N(SD) field, after the handover procedure.

References

Conformance requirements: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4 and 9.1.15.
3GPP TS 04.13 subclause 5.2.6.2

26.13.1.3.2.2 Test purpose

- 1) To test that when the MS is ordered to make a non-synchronized handover from non-hopping multislot configuration to a non-hopping multislot configuration, it continuously sends access bursts on the main DCCH (and optionally on the SACCH) until it receives a PHYSICAL INFORMATION message from the SS.
- 2) To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account.
- 3) To test that the MS activates the new channels that belongs to same multislot configuration correctly, taking into account upgraded resources and transmits the HANDOVER COMPLETE message without undue delay.
- 4) To test that MS correctly retransmits Layer 3 MM or CC messages, that were not acknowledged by Layer 2 before the Handover, after completion of the Handover.

26.13.1.3.2.3 Method of test

Initial Conditions

System Simulator:

- 2 cells, A and B with same LAI, default parameters except:
 - Early classmark sending enabled in SI3 rest octets

GSM 450:

Cell A has:

- BCCH ARFCN = 263
- PLMN colour code, NCC = as defaults.
- BS colour code, BCC = as defaults.
- PLMN_PERM = 00001010.

Cell B has:

- BCCH ARFCN = 274
- PLMN colour code, NCC = 3.
- BS colour code, BCC = 0.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 480:

Cell A has:

- BCCH ARFCN = 310
- PLMN colour code, NCC = as defaults.
- BS colour code, BCC = as defaults.
- PLMN_PERM = 00001010.

Cell B has:

- BCCH ARFCN = 321
- PLMN colour code, NCC = 3.
- BS colour code, BCC = 0.

- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 900:

Cell A has:

- BCCH ARFCN = 20
- PLMN colour code, NCC = as defaults.
- BS colour code, BCC = as defaults.
- PLMN_PERM = 00001010.

Cell B has:

- BCCH ARFCN = 40
- PLMN colour code, NCC = 3.
- BS colour code, BCC = 0.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

DCS 1 800:

Cell A has:

- BCCH ARFCN = 747
- PLMN colour code, NCC = as defaults.
- BS colour code, BCC = as defaults.
- PLMN_PERM = 00001010.

Cell B has:

- BCCH ARFCN = 764
- PLMN colour code, NCC = 3.
- BS colour code, BCC = 0.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 700:

Cell A has:

- BCCH ARFCN = 457
- PLMN colour code, NCC = as defaults.
- BS colour code, BCC = as defaults.
- PLMN_PERM = 00001010.

Cell B has:

- BCCH ARFCN = 477
- PLMN colour code, NCC = 3.
- BS colour code, BCC = 0.

- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM 850:

Cell A has:

- BCCH ARFCN = 147
- PLMN colour code, NCC = as defaults.
- BS colour code, BCC = as defaults.
- PLMN_PERM = 00001010.

Cell B has:

- BCCH ARFCN = 167
- PLMN colour code, NCC = 3.
- BS colour code, BCC = 0.
- The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

Mobile Station:

- The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A..

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

"idle, updated" with a TMSI allocated and camped on cell B.

Test Procedure

A Mobile Originating Call is initiated on Cell A. After the MS has sent the SETUP message (and before the last L2 frame carrying the SETUP message is acknowledged by the SS) the SS sends ASSIGNMENT COMMAND message to MS defining used multislot configuration. Multislot configuration with one TCH/F is allocated. MS responds with ASSIGNMENT COMPLETE message. Then the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH (and optionally on the SACCH) to cell B. The SS observes the access bursts and after receiving 10-20 access bursts, the SS sends one PHYSICAL INFORMATION message with a Timing Advance as specified in table 26.13.1.3-1 of subclause 26.13.1.3.6. The MS shall activate the channels that belongs to same multislot configuration correctly, taking into account upgraded resources. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message before 650 ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. The MS shall then again send the SETUP message to the SS, using the same value in the N(SD) field. Finally the SS sends a CHANNEL RELEASE to end the test.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | ----- | ----- | An MO call is initiated on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | Establ. Cause = "Originating call, NECI not set to 1 |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | CM Service Type = Mobile Originating Call Establishment. |
| 5 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | MS -> SS | SETUP | Last L2 frame not acknowledged by the SS. |
| 11 | SS -> MS | ASSIGNMENT COMMAND | Multislot configuration is sent to MS. Multislot configuration with one TCH/F is allocated. See specific message contents below. |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | |
| 13 | SS -> MS | HANDOVER COMMAND | See specific message contents. Resource upgrading. |
| 14 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH (and optionally on the SACCH) until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND |
| 15 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance as specified in table 26.13.1.3-1 of subclause 26.13.1.3.6. |
| 16 | MS -> SS | SABM | Sent without information field. |
| 17 | SS -> MS | UA | |
| 18 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before 650 ms after the completion of step 15. |
| 19 | MS -> SS | SETUP | Same N(SD) as in step 10. |
| 20 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

26.13.1.3.3 Multislot signalling / RR / Handover / successful / active call / finely synchronized / resource downgrading

26.13.1.3.3.1 Conformance requirements

- 1) The MS shall correctly apply the handover procedure from multislot configuration with frequency hopping to multislot configuration without frequency hopping in the finely synchronized case when a call is in progress. Resources are downgraded in handover procedure.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4, 9.1.14, 9.1.15 and 9.1.16.

26.13.1.3.3.2 Test purpose

- 1) To test that when the MS is ordered to make a finely synchronized handover to a synchronized cell from a hopping multislot configuration to a non-hopping multislot configuration, it sends 4 access bursts on the main DCCH (before completion, additional access bursts may also be sent on the SACCH) and then activates the channels correctly, taking into account power command, downgraded resources and correctly calculating the timing advance to use.
- 2) To test the MS activates the new channels that belongs to same multislot configuration correctly, taking into account downgraded resources and transmits the HANDOVER COMPLETE message without undue delay.

26.13.1.3.3.3 Method of test

Initial Conditions

System Simulator:

- 2 cells, A and B, with same LAI, default parameters, except:
 - Early classmark sending enabled in SI3 rest octets- The BCCH of cell A is sent k bit periods before the BCCH of cell B. The timing advance in cell A sent to the MS is y bit periods. k and y are selected such that $0 < (2k+y) \bmod 256 < 60$.

GSM 450:

- Cell B has BCCH ARFCN = 274.

GSM 480:

- Cell B has BCCH ARFCN = 321.

P-GSM 900:

- Cell B has BCCH ARFCN = 40.

DCS 1 800:

- Cell B has BCCH ARFCN = 764.

GSM 700:

- Cell B has BCCH ARFCN = 477.

GSM 850:

- Cell B has BCCH ARFCN = 167.

Mobile Station:

- The MS is in the active state (U10) of a service using a multislots connection (on cell A). The MS is using a power level P. Where P is a power level within the supported range of that type of MS.

Specific PICS statements:

- Multislots class (TSPC_Type_Multislots_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

The active state (U10) of a multislots connection (on cell B).

Test Procedure

The MS is in the active state (U10) of a multislots connection on cell A. Maximum number of channels supported by the MS in a HSCSD configuration, is allocated. The SS sends a HANOVER COMMAND on the main DCCH. In the case that the MS supports only 1 timeslot in uplink direction the HANOVER COMMAND'S Uplink assignment shall be one timeslot. The MS shall send 4 access bursts, in 4 successive slots on the new DCCH to cell B. Before completion, additional access bursts may also be sent on the SACCH. Then the MS shall establish a signalling link indicating the correct Timing Advance and power level and send a HANOVER COMPLETE message.

The MS shall be "ready to transmit" a HANOVER COMPLETE message before 650 ms after the end of the HANOVER COMMAND message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------|---|
| 0 | MS, SS | | The MS and SS are using a multislot configuration in hopping mode on cell A. Maximum number of channels supported by the MS in a HSCSD configuration, is allocated |
| 1 | SS -> MS | HANDOVER COMMAND | See Specific Message Contents. |
| 2 | MS -> SS | HANDOVER ACCESS | See specific message contents. Four messages. |
| 3 | MS -> SS | HANDOVER ACCESS | are transmitted to Cell B in 4 successive slots. |
| 4 | MS -> SS | HANDOVER ACCESS | on the new DCCH. |
| 5 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH |
| 6 | MS -> SS | SABM | Sent without information field. |
| 7 | SS -> MS | UA | |
| 8 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before 650 ms after the completion of step 1. |
| 9 | SS | | The header of the next uplink SACCH/M is examined and the Timing Advance and Power Level indications are examined. The correct timing advance shall be indicated. The power level indication shall indicate the power level used in the handover command. |
| 10 | MS, SS | | The MS and SS are using a multislot configuration in non-hopping mode on cell B |

26.13.1.3.4 Multislot signalling / RR / Handover / successful / call under establishment / finely synchronized / relocation of channels

26.13.1.3.4.1 Conformance requirements

- 1) The MS shall correctly apply the handover procedure from hopping, multislot configuration, finely synchronized case to hopping, multislot configuration, synchronized case during call establishment.
- 2) The MS shall not change number of channels in multislot configuration but the place of each channel is changed.
- 3) If during call establishment a Layer 3 MM or CC message just sent by the MS is not Layer 2 acknowledged before the channel change caused by the HANDOVER COMMAND message, the MS shall send the Layer 3 message to the new cell, using the same value in the N(SD) field, after the handover procedure.

References

Conformance requirements: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.4 and 9.1.15.
3GPP TS 04.13 subclause 5.2.6.2.

26.13.1.3.4.2 Test purpose

- 1) To test that when the MS is ordered to make a finely synchronized handover to a synchronized cell, it sends 4 access bursts on the main DCCH (before completion, additional access bursts may also be sent on the SACCH) and then activates the channel correctly, taking into account power command, new order of channels in multislot configuration and correctly calculating the timing advance to use. Handover is done from hopping multislot configuration to hopping multislot configuration, number of channels in multislot configuration is not changed but the place of each channel is changed.
- 2) To test that MS correctly retransmits Layer 3 MM or CC messages, that were not acknowledged by Layer 2 before the Handover, after completion of the Handover.
- 3) To verify the MS transmits the HANDOVER COMPLETE message without undue delay.

26.13.1.3.4.3 Method of test

Initial Conditions

System Simulator:

- 2 cells, A and B, with same LAI, default parameters, except:
 - Early classmark sending enabled in SI3 rest octets.
- The BCCH of cell A is sent k bit periods before the BCCH of cell B. The timing advance in cell A sent to the MS is y bit periods. k and y are selected such that $0 < (2k + y) \bmod 256 < 60$.
- The frame numbers of cells A and B shall be different by 100.

GSM 450:

Cell A has:

- BCCH ARFCN = 263.
- Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291).

Cell B has:

- BCCH ARFCN = 274.
- Cell Allocation = (260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291).

GSM 480:

Cell A has:

- BCCH ARFCN = 310.
- Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338).

Cell B has:

- BCCH ARFCN = 321.
- Cell Allocation = (307, 309, 311, 313, 315, 317, 319, 321, 323, 326, 328, 330, 332, 334, 336, 338).

GSM 900:

Cell A has:

- BCCH ARFCN = 20.
- Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114).

Cell B has:

- BCCH ARFCN = 40.
- Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114).

DCS 1 800:

Cell A has:

- BCCH ARFCN = 747.
- Cell Allocation = (734, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844).

Cell B has:

- BCCH ARFCN = 764.
- Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844).

GSM 700:

Cell A has:

- BCCH ARFCN = 457.
- Cell Allocation = (447, 454, 457, 463, 471, 479, 482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508).

Cell B has:

- BCCH ARFCN = 477.
- Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508).

GSM 850:

Cell A has:

- BCCH ARFCN = 147.
- Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241).

Cell B has:

- BCCH ARFCN = 167.
- Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241).

Mobile Station:

- The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

A Mobile Originating Call is initiated on cell A. After the MS has sent the SETUP message (and before the last L2 frame carrying the SETUP message is acknowledged by the SS) the SS sends ASSIGNMENT COMMAND message to MS defining used multislot configuration. MS responds with ASSIGNMENT COMPLETE message. Then the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. After the handover timeslots are relocated. Timeslots are also overlapped (this is described in specific message contents). The MS shall then send 4 access bursts, in successive slots on the new DCCH to cell B. Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH. Then the MS shall establish a signalling link indicating the correct timing advance and power level (number of channels in multislot configuration is not changed but the place of each channel is changed) and send a HANDOVER COMPLETE message. The MS shall be "ready to transmit" the HANDOVER COMPLETE message before 1500 ms after the end of the HANDOVER COMMAND message, but not before a UA frame has been sent by the SS. The MS shall then again send the SETUP message to the SS, using the same value in the N(SD) field. Finally the SS sends a CHANNEL RELEASE to end the test.

The term "ready to transmit" is defined in 3GPP TS 04.13.

Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | ----- | ----- | An MO call is initiated. |
| 2 | MS -> SS | CHANNEL REQUEST | Establish. Cause = "Originating call, NECI not set to 1" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See Specific Message contents. |
| 4 | MS -> SS | CM SERVICE REQUEST | CM Service Type = Mobile Originating Call Establishment. |
| 5 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | MS -> SS | SETUP | Last L2 frame not acknowledged by the SS. |
| 11 | SS -> MS | ASSIGNMENT COMMAND | Multislot configuration is sent to MS. See specific message contents below. |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | |
| 13 | MS -> SS | SETUP | Last L2 frame not acknowledged by the SS. Same N(SD) as in step 8. |
| 14 | SS -> MS | HANDOVER COMMAND | See Specific Message Contents below. |
| 15 | MS -> SS | HANDOVER ACCESS | |
| 16 | MS -> SS | HANDOVER ACCESS | |
| 17 | MS -> SS | HANDOVER ACCESS | See Specific message contents. |
| 18 | MS -> SS | HANDOVER ACCESS | Four messages are transmitted to cell B in 4 successive slots on the new DCCH. Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH. |
| 19 | MS -> SS | SABM | Sent without information field. |
| 20 | SS -> MS | UA | |
| 21 | MS -> SS | HANDOVER COMPLETE | The message shall be ready to be transmitted before 1500 ms after the completion of step 12. |
| 22 | SS | | The header of the next uplink SACCH/M is examined and the Timing Advance and Power Level indications are examined. The correct timing advance shall be indicated. The power level indication shall indicate the power level used in the handover command. |
| 23 | MS -> SS | SETUP | Same N(SD) as in step 8. |
| 24 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

DCS 1 800:

ASSIGNMENT COMMAND

| Information element | Value/remark |
|---|--|
| Channel description 2 | describes hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Power Command | As in subclause 26.1.1 |
| Frequency list | Omitted |
| Cell channel description | Omitted |
| Description of the multislot configuration | |
| - Uplink assignment | Appropriate for the test |
| - Downlink assignment | Appropriate for the test |
| - Channel set X ($1 \leq X \leq 8$) | Appropriate for the test |
| Mode of the channel set X ($1 \leq X \leq 8$) | Appropriate for the test |
| Description of the second channel | Omitted |
| Mode of the second channel | Omitted |
| Mobile allocation | Arbitrarily chosen from Cell channel description |
| Starting time | Omitted |
| Cipher mode setting | Omitted |

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|-------------------------------------|---|
| As default message contents except: | |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | Arbitrary value, but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Mobile Allocation. |
| - HSN | Chosen arbitrarily from the set. (1,2,..63). |
| Mobile Allocation | Indicates all of the CA of cell A except for the BCCH frequency. |

HANDOVER COMMAND

| Information Element | value/remark |
|--|---|
| As default message contents except: | |
| Cell Description | |
| - Network Colour Code | 1 |
| - Base Station Colour Code | 5 |
| - BCCH Carrier Number | 764 |
| Channel Description 2 | |
| - Channel Type | 00000 |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | A suitable value for multislot configuration, chosen arbitrarily. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Handover Reference | |
| - Value | Chosen arbitrarily from the range (0, 1..255). |
| Power command | |
| - Power Level | Arbitrarily chosen, but different to the one already in use and within the range supported by the MS. |
| Synchronization Indication | |
| - Report Observed Time Difference | Shall not be included. |
| - Synchronization Indication | "Synchronized". |
| - Normal Cell Indication | Ignore out of range timing advance. |
| Frequency List after time | |
| - Frequency List | Use Range 512 to encode the complete CA of Cell B. |
| Description of the multislot configuration | |
| - Downlink assignment | For Type 1 MS timeslots are shifted one position to right if timeslot 7 is not used. If timeslot 7 is used then timeslots are shifted one position to left. For type 2 MS timeslots are shifted one position to right taking into account rules of multislot capability described in 05.02 Annex B. |
| - Uplink assignment | For Type 1 MS timeslots are shifted one position to right if timeslot 7 is not used. If timeslot 7 is used then timeslots are shifted one position to left. For type 2 MS timeslots are shifted one position to right taking into account rules of multislot capability described in 05.02 Annex B. |
| - Channel set X (1=<X<=8) | Appropriate for the test. |

26.13.1.3.5 Multislot signalling / RR /Handover / successful / call under establishment / pre-synchronized / resource upgrading

If an MS does not implement the pre-synchronized handover procedure correctly then calls may fail.

If an MS does not report the observed time difference between cells correctly then pseudo synchronized handovers might not be possible for any MS.

26.13.1.3.5.1 Conformance requirements

- 1) If during call establishment a Layer 3 MM or CC message just sent by the MS is not Layer 2 acknowledged before the channel change caused by the HANDOVER COMMAND message, the MS shall send the Layer 3 message to the new cell, using the same value in the N(SD) field, after the handover procedure.

- 2) When the Timing Advance information element is included in the HANDOVER COMMAND, the MS shall access the new cell with the timing advance included in the Timing Advance IE.
- 3) The MS shall be ready to transmit the HANDOVER COMPLETE message within 650 ms of the end of the HANDOVER COMMAND message.
- 4) When requested to do so in the HANDOVER COMMAND message, the MS shall return the Mobile Time Difference IE in the HANDOVER COMPLETE message indicating the sum of the observed time difference between the cells and the timing advance used on the old cell.

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.1.4.3 and 9.1.5.

Conformance requirement 2: 3GPP TS 05.10, subclause 6.6, 3GPP TS 04.08 subclause 9.1.16.

Conformance requirement 3: 3GPP TS 04.13, subclause 5.2.6.1.

Conformance requirement 4: 3GPP TS 04.08 / 3GPP TS 44.018, subclause 10.5.2.39.

26.13.1.3.5.2 Test purpose

- 1) To verify that when the MS is ordered to make a pre-synchronized handover from hopping multislot configuration to non-hopping multislot configuration, it sends 4 access bursts on the main DCCH (before completion, additional access bursts may also be sent on the SACCH) and then activates the channel correctly and correctly calculates the time to transmit.
- 2) To test that the MS activates the new channels that belong to same multislot configuration correctly, taking into account upgraded resources and transmits the HANDOVER COMPLETE message without undue delay.

26.13.1.3.5.3 Method of test

Initial Conditions

System Simulator:

- 2 cells, A and B, with same LAI, default parameters, except:
 - Early classmark sending enabled in SI3 rest octets.
- The BCCH of cell A is sent k bit periods before the BCCH of cell B.

Mobile Station:

- The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

Test Procedure

A Mobile Originating Call is initiated. The SS sends an IMMEDIATE ASSIGNMENT message allocating an SDCCH/4. The MS is commanded to use a timing advance of y bit periods on cell A. After the MS has sent the SETUP message (and before the last L2 frame carrying the SETUP message is acknowledged by the SS) the SS sends

ASSIGNMENT COMMAND message to MS specifying used multislot configuration. MS responds by sending ASSIGNMENT COMPLETE message to SS. Then the SS sends a HANDOVER COMMAND, ordering the MS to switch to cell B. The MS shall then send 4 access bursts, at the commanded power level, in 4 successive slots of the new DCCH to cell B. Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH. Then the MS shall establish a signalling link using the correct timing advance and send a HANDOVER COMPLETE message. The MS shall be ready to transmit the HANDOVER COMPLETE message before 650 ms after the end of the HANDOVER COMMAND message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in 3GPP TS 04.13.

The MS shall then again send the SETUP message to the SS, using the same value in the N(SD) field. Finally the SS sends a CHANNEL RELEASE to end the test.

Maximum Duration of Test

20 s.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|--|
| 1 | ----- | ----- | An MO call is initiated. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | to an SDCCH/4. |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> MS | CIPHERING MODE COMMAND | |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | |
| 10 | MS -> SS | SETUP | Last L2 frame not acknowledged by the SS. |
| 11 | SS -> MS | ASSIGNMENT COMMAND | Multislot configuration is sent to MS. Multislot configuration shall not have the maximum number of timeslots allocated. See specific message contents below. |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | |
| 13 | MS -> SS | SETUP | Last L2 frame not acknowledged by the SS. Same N(SD) as in step 10. |
| 14 | SS -> MS | HANDOVER COMMAND | See specific message contents below. |
| 15 | MS -> SS | HANDOVER ACCESS | Handover Reference as included in the |
| 16 | MS -> SS | HANDOVER ACCESS | HANDOVER COMMAND |
| 17 | MS -> SS | HANDOVER ACCESS | |
| 18 | MS -> SS | HANDOVER ACCESS | Before completion of the 4 access bursts on the new DCCH, additional access bursts may also be sent on the SACCH. |
| 19 | MS -> SS | SABM | Sent without information field. |
| 20 | SS -> MS | UA | |
| 21 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before 650 ms after the completion of step 14. Shall include the Mobile Time Difference IE with value $(2k+y) \bmod 2,097,152$ half bit periods. A tolerance of ± 2 half bit periods is allowed. |
| 22 | MS -> SS | SETUP | Same N(SD) as in step 10 |
| 23 | SS | - | The SS checks that the timing advance reported in the layer 1 header of the SACCH/M message that is sent in the first SACCH/M multiframe following the SABM is 9 bit periods. |
| 24 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

26.13.1.4 Multislot signalling / RR / Test of the channel mode modify procedure

26.13.1.4.1 Conformance requirements

- 1) When the MS has received the CHANNEL MODE MODIFY message, the mobile station changes the mode for the indicated channel and then replies by a CHANNEL MODE MODIFY ACKNOWLEDGE message indicating the new channel mode.
- 2) If the mobile station does not support the indicated mode, it shall retain the old mode and return the associated channel mode information in the CHANNEL MODE MODIFY ACKNOWLEDGE message.

References

Conformance requirement: 3GPP TS 04.08 / 3GPP TS 44.018, subclauses 3.4.6 and 9.1.5 and 9.1.6.

26.13.1.4.2 Test purpose

- 1) To verify that the MS, in an RR connected state, acknowledges a CHANNEL MODE MODIFY message by sending a CHANNEL MODE MODIFY ACKNOWLEDGEMENT message specifying and switching to the correct mode for the channels in a multislot configuration:
 - the new mode if that mode is supported;
 - the old mode if the new mode is not supported.
- 2) This shall be verified for all existing channel modes:
 - data 9,6 Kb/s:
 - data 4,8 Kb/s full rate:
 - data 14,4 Kb/s.

26.13.1.4.3 Method of test

Initial Conditions

System Simulator:

- 1 cells, default parameters except:
- Early classmark sending enabled in SI3 rest octets

Mobile Station:

- The MS is "idle updated", with TMSI allocated.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

supported radio interface rates: 12kbps, 6kbps, 3,6kbps

Foreseen final state of the MS

"Idle, updated " with TMSI allocated.

Test procedure

- 1) A Mobile Terminated multislot connection is initiated, however following the Channel Request received from the Mobile Station, the SS sends an Immediate Assignment to the MS commanding it to go to a TCH/F. This sets the Channel Mode automatically to "Signalling Only".
- 2) The SS then sends a series of CHANNEL MODE MODIFY messages to the MS. Each time it is checked that the MS responds with a CHANNEL MODE MODIFY ACKNOWLEDGE message specifying:
 - 2.1) the channel mode that has been specified in the CHANNEL MODE MODIFY message, if the MS supports that mode (this mode then becomes the "channel mode in use");
 - 2.2) the channel mode that was in use when the CHANNEL MODE MODIFY message has been received, if the MS does not support the channel mode specified in the CHANNEL MODE MODIFY message.

Maximum duration of test

3 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------------------------|--|
| 1 | SS->MS | PAGING REQUEST TYPE 1 | Sent on correct paging subchannel. |
| 2 | MS->SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | Assignment to a non hopping TCH/F. |
| 4 | MS->SS | PAGING RESPONSE | |
| 5 | MS->SS | CLASSMARK CHANGE | Multislot class |
| 6 | SS->MS | ASSIGNMENT COMMAND | Multislot configuration, Channel mode = 'signalling only' |
| 7 | MS->SS | ASSIGNMENT COMPLETE | |
| 8 | SS->MS | CHANNEL MODE MODIFY | See specific message contents |
| 9 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | See specific message contents |
| 10 | SS->MS | CHANNEL MODE MODIFY | See specific message contents |
| 11 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | See specific message contents |
| 12 | SS->MS | CHANNEL MODE MODIFY | See specific message contents |
| 13 | MS->SS | CHANNEL MODE MODIFY ACKNOWLEDGE | See specific message contents |
| 14 | SS->MS | CHANNEL RELEASE | The main signalling link is released |

Specific Message Contents

CHANNEL MODE MODIFY

| Information Element | value/remark |
|----------------------|---|
| Channel description | describes the already assigned dedicated channel. |
| Channel mode Mode | in step 8: data 9,6 Kb/s in step 10: data 4,8 Kb/s full rate in step 12: data 14,4 Kb/s |

CHANNEL MODE MODIFY ACKNOWLEDGE

| | |
|----------------------|---|
| Channel mode Mode | In step 9: if 9.6 Kb/s supported: data 9,6 Kb/s; otherwise: signalling only. in step 11: if 4.8 Kb/s supported: data 4,8 Kb/s full rate; otherwise: same as in step 9. in step 13: if 14.4 Kb/s supported: data 14,4 Kb/s full rate; otherwise: same as in step 11. |
|----------------------|---|

26.13.1.5 Multislot signalling / RR / Early classmark sending

26.13.1.5.1 Conformance requirement

- 1) MS uses Controlled Early Classmark Sending procedure when indicated in SYSTEM INFORMATION TYPE 3 (ES ind bit in SI 3 Rest Octets).
 - 1.1) If Controlled Early Classmark Sending is not allowed by network the MS does not send a CLASSMARK CHANGE message.
 - 1.2) If Controlled Early Classmark Sending is allowed by network the MS shall send its multislot class in Mobile Station Classmark 3 in a CLASSMARK CHANGE message.

Reference

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1.4 and 3.4.10.

26.13.1.5.2 Test purpose

- 1) To verify that the MS sends its multislot class in Mobile Station Classmark 3 using Controlled Early Classmark Sending procedure if allowed by network.
- 2) To verify that the MS does not perform Early Classmark Sending if it is not allowed.

26.13.1.5.3 Method of test

Initial conditions

Mobile Station:

- The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets

Specific PICS statements:

-

PIXIT statements:

-

Foreseen final state of the MS

MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The MS is made to initiate a multislot connection. In the first case Controlled Early Classmark Sending procedure is allowed by network, the MS performs Early Classmark sending. In the second case Controlled Early Classmark Sending procedure is not allowed by network, the MS does not send a CLASSMARK CHANGE message.

SS checks Controlled Early Classmark Change procedure from CLASSMARK CHANGE message. If Controlled Early Classmark Sending procedure is allowed by the network ES ind bit in SI 3 Resr Octets is set. If this bit is not set SS sends CHANNEL RELEASE and the main signalling link is released. If ES ind bit was set then the MS's multislot class is sent in Mobile Station Classmark 3 (octet 4) in the CLASSMARK CHANGE message.

Maximum duration of test

2 minutes.

Expected sequence

This test is executed with the following sequences in allowed and not allowed cases respectively.

After the first sequence Early classmark sending is disabled from SI3 rest octets.

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| | SS | | Controlled Early Classmark Sending procedure is allowed by the network. |
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is: answer to paging |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | MS -> SS | CLASSMARK CHANGE | SS checks that MS sent its multislot class in Mobile Station Classmark 3. |
| 7 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

| Step | Direction | Message | Comments |
|------|-----------|-----------------------|---|
| | SS | | Controlled Early Classmark Sending procedure is not allowed by the network. |
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is: answer to paging |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM |
| 5 | SS | | SS checks for 2 seconds that no CLASSMARK CHANGE message is sent by the MS. |
| 6 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

NOTE: Step 5: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 3.3.1.1.4.1 states that the MS shall send CLASSMARK CHANGE as early as possible. 2 seconds are chosen as a reasonable value to verify that the MS does not send a CLASSMARK CHANGE message.

26.13.1.6 Default contents of layer 3 messages for RR tests

26.13.1.6.1 Default contents of GSM 900 layer 3 messages for RR tests

This subclause contains the default values of GSM 900 L3 messages, which unless indicated otherwise in subclause 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 900 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | bit map 0. |
| - Cell Allocation ARFCN | Channels 20, 30, 50 and 70. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | bit map 0. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 10, 20, 40, 80, 90, 100, 110 and 120. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 20 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Bit map 0. Channel Number 10. |
|--|----------------------------------|

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value: 0002H.

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 10 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 30. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1= $X \leq 8$ | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |

| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.13.1.6.2 Default contents of DCS 1 800 layer 3 messages for RR tests

This subclause contains the default values of DCS 1 800 L3 messages, which unless indicated otherwise in subclause 26.6 shall be transmitted by the system simulator and which are required to be received from the DCS 1 800 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.
SYSTEM INFORMATION 5 bis is not sent as a default message. For those tests that require SYSTEM INFORMATION 5 bis see the specific message contents for that test.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 512. |
| - Cell Allocation ARFCN | Channel Numbers, 590, 650, 750 and 850. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set, 0 |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | MS shall not apply. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal. |
| - Mobile Network Code | 01 decimal. |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 512. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers, 520, 590, 600, 700, 764, 780, 810, 870. |
| - EXT-IND | This IE carries the complete BA. EXT-IND is 0. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not Allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|---|
| Downlink input level | 63 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class |
| Propagation profile | static. |
| BCCH/CCCH carrier number | ARFN 590. |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Range 512. Channel Number 520. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

| | |
|--|-------|
| Cell Identity - Cell Identity Value | 0002H |
|--|-------|

Default settings for cell B:

| | |
|--------------------------|---|
| Downlink input level | 53 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 520 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | Appropriate for the test |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode 1=<X<=8 | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description | Depending on test. |
| - Channel Type and TDMA offset | Same as in the CHANNEL MODE MODIFY message. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Single RF channel. |
| - Hopping | Band number 0. |
| - Frequency Band | Channel number 650. |
| - ARFCN | |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message:

| | |
|---------------------|--------------|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|------------------------|-----------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|----------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | |
| - RF Power Capability | See PICS/PIXIT. |
| - Frequency Capability | Set to 0. |
| Mobile Station Classmark 3 | For presence and contents see PICS/PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message:

| | |
|----------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 0X100100 |
| Other information elements | Not checked. |

Contents of CONFIGURATION CHANGE COMMAND message (SS to MS)

| | |
|-----------------------------|--------------------------|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110000 |
| Multislot allocation | Appropriate for the test |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1= $X \leq 8$ | Appropriate for the test |
| Channel mode 1= $X \leq 8$ | Appropriate for the test |

Contents of CONFIGURATION CHANGE ACKNOWLEDGE message (MS to SS)

| | |
|------------------------|----------------|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110001 |

Contents of CONFIGURATION CHANGE REJECT message (MS to SS)

| | |
|------------------------|----------------------------|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110011 |
| RR Cause | Protocol Error Unspecified |

Contents of CONNECT message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 |
| Message Type | 00000111 |
| All other information elements | Not present. |

Contents of CONNECT ACKNOWLEDGE message (MS to SS):

| | |
|------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|--------------------|--|
| Handover Reference | Equal to the value included in the Handover Command message. |
|--------------------|--|

Contents of HANDOVER COMMAND message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | |
| - Network Colour Code | 1 |
| - Base station Colour Code | Corresponding to target cell |
| - BCCH Carrier Number | Set to the BCCH carrier number of cell B. (one of 520, 590, 600, 700, 780, 810 or 870). |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Chosen arbitrarily by the test house from those supported on the target cell. |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| All other information elements | Not present. |

Contents of HANDOVER COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101100 |
| RR cause | Normal event. |
| Time difference | Not present. |

Contents of HANDOVER FAILURE message:

| | |
|------------------------|------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101000 |
| RR cause | Dependent on the test. |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 650; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 590. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 650; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 590. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| | |
|------------------------|--|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |

| Mobile identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|-------------------------------|--|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even. |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|------------------------|-----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.13.1.6.3 Default contents of GSM 450 layer 3 messages for RR tests

This subclause contains the default values of GSM 450 L3 messages, which unless indicated otherwise in subclause 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 450 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 128. |
| - Cell Allocation ARFCN | Channels 263, 267, 275 and 279. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |

| Neighbour Cells Description | |
| - Format identifier | Range 128. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 262, 263, 274, 282, 284, 287, 290 and 293. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 263 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Range 128. Channel Number 261. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value: 0002H.

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 261 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 267. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1= $X \leq 8$ | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |

| RR cause | Dependent on the test. |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 263. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 263. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.13.1.6.4 Default contents of GSM 480 layer 3 messages for RR tests

This subclause contains the default values of GSM 480 L3 messages, which unless indicated otherwise in subclause 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 480 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this subclause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 128 |
| - Cell Allocation ARFCN | Channels 310, 315, 322 and 326. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 128 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 308, 310, 321, 329, 331, 334, 337 and 340. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 310 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | Range 128 Channel Number 308. |
|--|----------------------------------|

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value: 0002H.

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 308 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 315. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1= $X \leq 8$ | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 310. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|--------------------------------|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 310. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|-------------------------------|--|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|------------------------|-----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.13.1.6.5 Default contents of GSM 700 layer 3 messages for RR tests

This subclause contains the default values of GSM 700 L3 messages, which unless indicated otherwise in subclause 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 700 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channels 457, 467, 470 and 475. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 447, 457, 477, 480, 499, 504, 507 and 510. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | Static. |
| BCCH/CCCH carrier number | 457 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 447. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value: 0002H.

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 447 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1= $X \leq 8$ | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 467. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |

Contents of SETUP message; (MS to SS):

| | |
|----------------------------|-------------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

26.13.1.6.6 Default contents of GSM 850 layer 3 messages for RR tests

This subclause contains the default values of GSM 850 L3 messages, which unless indicated otherwise in subclause 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 850 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|--------------------------------|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channels 147, 157, 177 and 197. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLK_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 137, 147, 167, 207, 217, 227, 237 and 247. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|--------------------------|--|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 147 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|--|-----------------------------------|
| Cell Channel Description - Format Identifier - Cell Allocation ARFCN | 128 range. Channel Number 137. |
|--|-----------------------------------|

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value: 0002H.

Default settings for cell B:

| | |
|--------------------------|--|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 137 |

Contents of ALERTING message (SS to MS):

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 157. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1= $X \leq 8$ | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|------------------------|--------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|-------------------------------|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|------------------------------|--------------|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|--------------------------------|-------------------------------|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|--------------------------------|---------------------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 157. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|--------------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 157. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message

| | |
|---------------------|--------------|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|------------------------|-----------------------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|------------------------|----------------|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|----------------------------|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | See PICS/PIXIT. |
| Mobile Station Classmark 3 | For presence and contents see PICS/PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|------------------------|----------------------|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message

26.13.2 Multislot signalling / CC

26.13.2.1 Multislot signalling / CC / In-call functions

26.13.2.1.1 Multislot signalling / CC / In-call functions / User initiated service level upgrade / successful

26.13.2.1.1.1 Definition

Multislot connection is established. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is successfully performed.

26.13.2.1.1.2 Conformance requirements

- 1) MS shall send MODIFY message to SS indicating that User initiated service level upgrade is initiated.
- 2) MS enters CC state 'Mobile originating modify (U26)' after sending MODIFY.
- 3) MS enters CC state 'Active (U10)' when MODIFY COMPLETE is received.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 9.3.13.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.5.1.

Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.5.2.

26.13.2.1.1.3 Test purpose

- 1) To verify that the procedure is initiated by the MS in the "active" state of a multislot connection. It sends a MODIFY message including the wanted value of the "maximum number of traffic channels" and/or the "wanted air interface" parameters; and enters the "mobile originating modify" state. Other parameters of the bearer capability given in MODIFY message and already negotiated and agreed during the establishment phase of the call, may not be changed.
- 2) To verify that upon receipt of the MODIFY COMPLETE message with bearer capability negotiated at call setup in the MS enters the "active" state.

26.13.2.1.1.4 Method of test

Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection.

System simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen final state of the MS

MS is in the active state of a service using a multislot connection.

Test procedure

MS is in the active state of a multislot connection. Multislot configuration with one TCH/F is allocated. User initiates User initiated service level upgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS. The MS enters 'mobile originating modify' state. This is verified by a status enquiry procedure.

MS receives MODIFY COMPLETE message from SS and enters the 'active' state. This is verified by a status enquiry procedure.

Maximum duration of test

3 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---|
| 1 | MS -> SS | MODIFY | User initiated service level upgrade is initiated. |
| 2 | MS | | MS enters the Mobile originating modify state |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U26 Mobile originated modify. |
| 5 | SS -> MS | MODIFY COMPLETE | |
| 6 | MS | | MS enters the active state |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U10 Active. |

Specific message contents

MODIFY

| Information element | Value/remark |
|------------------------------|---|
| Bearer capability | Maximum number of TCH/F's the MS is able to support and channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

26.13.2.1.2 Multislot signalling / CC / In-call functions / User initiated service level downgrade / successful

25.13.2.1.2.1 Definition

Multislot connection is established. Multislot configuration has the maximum number of timeslots supported by the MS. User initiated service level downgrade is successfully performed.

26.13.2.1.2.2 Conformance requirements

- 1) MS shall send MODIFY message to SS indicating that User initiated service level downgrade is initiated.
- 2) MS enters CC state 'Mobile originating modify (U26)' after sending MODIFY.
- 3) MS enters CC state 'Active (U10)' when MODIFY COMPLETE is received.

Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.5.2.

26.13.2.1.2.3 Test purpose

- 1) To verify that the procedure is initiated by the MS in the "active" state of a multislot connection. It sends a MODIFY message including the wanted value of the "maximum number of traffic channels" and/or the "wanted air interface" parameters; and enters the "mobile originating modify" state. Other parameters of the bearer capability given in MODIFY message and already negotiated and agreed during the establishment phase of the call, may not be changed.
- 2) To verify that upon receipt of the MODIFY COMPLETE message with bearer capability negotiated at call setup in the MS enters the "active" state.

26.13.2.1.2.4 Method of test

Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection. Multislot configuration has maximum number of timeslots supported by the MS.

System simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen final state of the MS

MS is in the active state of a service using a multislot connection.

Test procedure

MS in the active state of a multislot connection. Multislot configuration has maximum number of timeslots supported by the MS. User initiates User initiated service level downgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS. The MS enters 'mobile originating modify' state. This is verified by a status enquiry procedure. MS receives MODIFY COMPLETE message from SS and enters the active state. This is verified by a status enquiry procedure.

Maximum duration of test

3 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-----------------|---|
| 1 | MS -> SS | MODIFY | User initiated service level downgrade is initiated. |
| 2 | MS | | MS enters the Mobile originating modify state |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U26 Mobile originated modify. |
| 5 | SS -> MS | MODIFY COMPLETE | |
| 6 | MS | | MS enters the active state |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U10 Active. |

Specific message contents

MODIFY

| Information element | Value/remark |
|------------------------------|--|
| Bearer capability | One TCH/F is indicated and the channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

26.13.2.1.3 Multislot signalling / CC / In-call functions / User initiated service level upgrade / Time-out of timer T323

26.13.2.1.3.1 Definition

Multislot connection is established. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is requested. Timer T323 expires. Call is cleared.

26.13.2.1.3.2 Conformance requirements

- 1) MS shall send MODIFY message to SS indicating that User initiated service level upgrade is initiated.
- 2) After timer T323 has expired MS starts call clearing by sending DISCONNECT message.
- 3) After receipt of RELEASE message the MS sends RELEASE COMPLETE message and goes to idle updated state.

References

- Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 9.3.13.
- Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 9.3.7.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008, subclauses 9.3.18 and 5.4.4.2.2, 3GPP TS 04.08 / 3GPP TS 44.018, subclause 9.1.7.

26.13.2.1.3.3 Test purpose

- 1) To verify that upon expiration of T323 (accuracy $\pm 10\%$) the MS shall initiate the procedures for call clearing with cause #102 "recovery on timer expiry".

26.13.2.1.3.4 Method of test

Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection.

System simulator:

- 1 cell, default parameters

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

MS is in the active state of a multislot connection. Multislot configuration with one TCH/F is allocated. User initiates User initiated service level upgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS.

Timer T323 expires and MS starts call clearing procedure by sending DISCONNECT message to SS. After MS receives RELEASE message it sends RELEASE COMPLETE message. SS sends CHANNEL RELEASE message to MS and the main signalling link is released.

Maximum duration of test

3 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|------------------|--|
| 1 | MS -> SS | MODIFY | User initiated service level upgrade is initiated. |
| 2 | MS | | Timer T323 expires |
| 3 | MS -> SS | DISCONNECT | Cause = #102 "recovery on timer expiry" |
| 4 | SS -> MS | RELEASE | |
| 5 | MS -> SS | RELEASE COMPLETE | |
| 6 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

Specific message contents

MODIFY

| Information element | Value/remark |
|------------------------------|---|
| Bearer capability | Maximum number of TCH/F's the MS is able to support and channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

26.13.2.1.4 Multislot signalling / CC / In-call functions / User initiated service level upgrade / modify reject

26.13.2.1.4.1 Definition

Multislot connection is established. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is requested. SS responds to upgrade request by rejecting it. MS enters the active multislot connection state.

26.13.2.1.4.2 Conformance requirements

- 1) MS shall send MODIFY message to SS indicating that User initiated service level upgrade is initiated.
- 2) MS enters CC state 'Mobile originating modify (U26)' after sending MODIFY.
- 3) MS enters CC state 'Active (U10)' when MODIFY REJECT is received.

References

Conformance requirement 1: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 9.3.13.

Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.5.1.

Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 24.008, subclause 5.3.5.3.

26.13.2.1.4.3 Test purpose

- 1) To verify that upon receipt of the MODIFY REJECT message with the bearer capability negotiated at the call setup, the MS is continuously sending user information according to current call mode.

26.13.2.1.4.4 Method of test

Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection.

System simulator:

- 1 cell, default parameters

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

-

Foreseen final state of the MS

MS is in the active state of a service using a multislot connection.

Test procedure

MS is in the active state of a multislot connection. Multislot configuration with one TCH/F is allocated. Then user initiates User initiated service level upgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS. The MS enters 'mobile originating modify' state. This is verified by a status enquiry procedure. SS responds to MODIFY message by sending MODIFY REJECT message to MS. MS enters the active state. This is verified by a status enquiry procedure. Maximum duration of test

1 minute.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|----------------|---|
| 1 | MS -> SS | MODIFY | User initiated service level upgrade is initiated. |
| 2 | SS -> MS | STATUS ENQUIRY | Cause shall be 30# (response to enq.) and state U26 Mobile originated modify. |
| 3 | MS -> SS | STATUS | |
| 4 | SS -> MS | MODIFY REJECT | |
| 5 | MS | | Cause = #58 "bearer capability not presently available". MS enters in the active state of multislot call |
| 6 | SS -> MS | STATUS ENQUIRY | Cause shall be 30# (response to enq.) and state U10 Active. |
| 7 | MS -> SS | STATUS | |

Specific message contents

MODIFY

| Information element | Value/remark |
|------------------------------|---|
| Bearer capability | Maximum number of TCH/F's the MS is able to support and channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

26.13.2.1.5 Multislot signalling / CC / In call functions / contents of some of the messages

The following messages are used for testing in-call modification procedures, test cases 26.13.2.1.*, as default messages for those ones defined below. If any other values are defined in the expected sequence of the actual test cases, those values take precedence over the ones defined hereafter.

SETUP (MS to SS)

| Information element | Value/remark |
|--|---|
| BC Repeat indicator | Omitted |
| Bearer capability 1 | Appropriate for the teleservice/Bearer Service selected as an initial call mode |
| Bearer capability 2 | Omitted |
| Facility | Omitted |
| Calling party subaddress | Omitted |
| Called party BCD number | As entered |
| Called party subaddress | Omitted |
| LLC repeat indicator | Omitted |
| Low layer compatibility I | See note |
| Low layer compatibility II | Omitted |
| HLC repeat indicator | Omitted |
| High layer compatibility I | See note |
| High layer compatibility II | Omitted |
| User-user | Omitted |
| SS version | Omitted |
| CLIR suppression | Omitted |
| CC Capabilities | present, but contents not checked |
| NOTE: HLC/LLC may or may not be present. The contents of HLC/LLC are not verified. | |

CALL PROCEEDING

| Information element | Value/remark |
|---------------------|---|
| Repeat Indicator | Omitted |
| Bearer Capability 1 | 3GPP TS 04.08 / 3GPP TS 24.008 subclause 10.5.4.5 |
| Bearer Capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |

MODIFY

| Information element | Value/remark |
|------------------------------|---|
| Bearer capability | Appropriate for the selected test |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

MODIFY COMPLETE

| Information element | Value/remark |
|------------------------------|---|
| Bearer capability | Appropriate for the selected test |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

MODIFY REJECT

| Information element | Value/remark |
|--------------------------|---|
| Bearer capability | Appropriate for the selected test |
| Cause | #58 "bearer capability not presently available". |
| Low layer compatibility | Appropriate for the basic service selected for the test |
| High layer compatibility | Appropriate for the basic service selected for the test |

26.13.3 Multislot signalling / Structured procedures

26.13.3.1 Multislot signalling / Structured procedures / MS originated call / early assignment / HSCSD / non-transparent

26.13.3.1.1 Conformance requirements

- 1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.
- 2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS, starts to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.
- 3) Subsequently after establishment of a MM connection, after MS sends its multislot class in CLASSMARK CHANGE message, the MS shall send a SETUP message with correct parameters.
- 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - 4.1) attach the user connection to the radio path;
 - 4.2) return a CONNECT ACKNOWLEDGE message;

- 4.3) establish the RLP link.
- 5) User initiated service level upgrade is initiated by sending MODIFY message. After receipt of MODIFY COMPLETE message MS enters the active state.
- 6) After receipt of a CONFIGURATION CHANGE COMMAND message MS sends CONFIGURATION CHANGE ACKNOWLEDGE message.
- 7) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.
- 8) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

NOTE: Requirements 5 and 6 are only applicable to Multislot Class 2 and above.

Reference

- Conformance requirement 1: 3GPP TS 02.07.
- Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1, 9.1.8 and 9.1.18.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.10, 9.1.11 and 9.3.23.
- Conformance requirement 4: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 9.3.5 and 9.3.6, 3GPP TS 07.01 clause 8.
- Conformance requirement 5: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 9.3.13 and 9.3.14.
- Conformance requirement 6: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 9.1.12b and 9.1.12c.
- Conformance requirement 7: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 5.4.4.2.2, 9.3.7 and 9.3.18.
- Conformance requirement 8: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.7.

26.13.3.1.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.
- 2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after MS sends its multislot class in CLASSMARK CHANGE message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.
- 4) Multislot configuration with one TCH/F is allocated. To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCH, after having completed the early assignment procedure by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.
- 5) To verify that subsequently the MS has attached the user connection to the radio path. This is verified by checking that the MS establishes the RLP link correctly and sends and receives correct RLP frames in each data block.
- 6) To verify that subsequently upon user requests User initiated service level upgrade, the MS sends MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.

- 7) To verify that subsequently, after receipt of a CONFIGURATION CHANGE COMMAND, after MS sends CONFIGURATION CHANGE ACKNOWLEDGE, MS through connects all bi-directional channel(s) in multislot configuration in both directions and all uni-directional channels in downlink direction. Multislot configuration is upgraded from the simplest case up to the maximum number of channels supported by MS in the HSCSD configuration. This is verified by checking that the MS sends and receives correct RLP frames in each data block.
- 8) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.
- 9) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

NOTE: Items 6 and 7 are only applicable to Multislot Class 2 and above.

26.13.3.1.3 Method of test

Initial conditions

Mobile Station:

- The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

- Way to display the called number

Foreseen final state of the MS

MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The MS is made to initiate a HSCSD connection. The call is established with early assignment. MS enters the active state. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is successfully performed. The SS sends CONFIGURATION CHANGE COMMAND message to MS and it reply's with CONFIGURATION CHANGE ACKNOWLEDGE message. This is repeated from simplest case up to the maximum number of channels supported by the MS in the HSCSD configuration (this is performed within highest multislot class that the MS supports).

Maximum duration of test

7 minutes.

Expected Sequence

An MS supporting Multislot Class 1 need only perform steps 1..20 and 25..28.

| Step | Direction | Message | Comments |
|------|-----------|----------------------------------|--|
| 1 | MS | | The "called number" is entered |
| 2 | MS | | If supported, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Originating call and TCH/F is needed, or originating call and the network does not set NECI bit to 1" |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM |
| 6 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | Non-transparent connection |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation only one timeslot is allocated. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | ALERTING | |
| 17 | MS | | |
| 18 | SS -> MS | CONNECT | |
| 19 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directions. The RLP link establishment is initiated by the MS. |
| 21 | MS -> SS | MODIFY | User initiated service level upgrade is initiated |
| 22 | SS -> MS | MODIFY COMPLETE | |
| 23 | MS | | MS enters the active state |
| 24 | | | Next three steps are performed as many times as used multislot class has different channel combinations. Timeslot allocation starts from simplest case and is upgraded up to the maximum that MS multislot class supports, one step at the time (within highest multislot class that the MS supports). |
| 24A | SS -> MS | CONFIGURATION CHANGE COMMAND | Appropriate number of timeslots is selected. |
| 24B | MS -> SS | CONFIGURATION CHANGE ACKNOWLEDGE | |
| 24C | MS | | TCH(s) shall be through connected in both directions |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

26.13.3.2 Multislot signalling / Structured procedures / MS originated call / late assignment / HSCSD / non-transparent

26.13.3.2.1 Conformance requirements

- 1) An MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS, shall start to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 2) Subsequently after establishment of a MM connection, after MS sends its multislot class in CLASSMARK CHANGE message, the MS shall send a SETUP message with correct parameters.

- 3) Upon receipt of the ASSIGNMENT COMMAND message, the Mobile Station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause "normal event", to the network on the main DCCH.
- 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - 4.1) attach the user connection to the radio path;
 - 4.2) return a CONNECT ACKNOWLEDGE message;
 - 4.3) establish the RLP link.
- 5) MS sends User initiated service level upgrade with MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.
- 6) MS receives CONFIGURATION CHANGE COMMAND and answers to it by sending CONFIGURATION CHANGE ACKNOWLEDGE message.
- 7) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.
- 8) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

NOTE: Requirements 5 and 6 are only applicable to Multislot Class 2 and above.

Reference

- Conformance requirement 1: 3GPP TS 02.07,
3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1 and 9.1.8.
- Conformance requirement 2: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.11,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 9.3.23.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.4.3, 9.1.2 and 9.1.3.
- Conformance requirement 4: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 9.3.5 and 9.3.6,
3GPP TS 07.01 clause 8.
- Conformance requirement 5: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 9.3.13 and 9.3.14.
- Conformance requirement 6: 3GPP TS 04.08 / 3GPP TS 44.018 subclauses 9.1.12b and 9.1.12c.
- Conformance requirement 7: 3GPP TS 04.08 / 3GPP TS 24.008 subclauses 9.3.7, 9.3.18 and 5.4.4.2.2.
- Conformance requirement 8: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.7.

26.13.3.2.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.
- 2) Multislot configuration with one TCH/F is allocated. To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after MS sends its multislot class in CLASSMARK CHANGE message, after having successfully performed the authentication and cipher mode setting procedures, after having sent a SETUP message, after having received of a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.

- 3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.
- 4) To verify that subsequently the MS has attached the user connection to the radio path. This is verified by checking that the MS establishes the RLP link correctly and sends and receives correct RLP frames in each data block.
- 5) To verify that subsequently upon user requests User initiated service level upgrade, the MS sends MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.
- 6) To verify that subsequently, after receipt of a CONFIGURATION CHANGE COMMAND, after MS sends CONFIGURATION CHANGE ACKNOWLEDGE, MS through connects all bi-directional channel(s) in multislot configuration in both directions and all uni-directional channels in downlink direction. Multislot configuration is upgraded from the simplest case up to the maximum number of channels supported by MS in the HSCSD configuration. This is verified by checking that the MS sends and receives correct RLP frames in each data block.
- 7) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.
- 8) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

NOTE: Items 5 and 6 are only applicable to Multislot Class 2 and above.

26.13.3.2.3 Method of test

Initial conditions

Mobile Station:

- The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

- Way to display the called number

Foreseen final state of the MS

MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The MS is made to initiate a HSCSD connection. The call is established with late assignment. MS enters the active state. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is successfully performed. The SS sends CONFIGURATION CHANGE COMMAND message to MS and it reply's with CONFIGURATION CHANGE ACKNOWLEDGE message. This is done from simplest case up to the maximum number of channels supported by the MS in the HSCSD configuration (this is performed within highest multislot class that MS supports).

Maximum duration of test

7 minutes.

Expected Sequence

An MS supporting Multislot Class 1 need only perform steps 1..20 and 25..28.

| Step | Direction | Message | Comments |
|------|-----------|----------------------------------|--|
| 1 | MS | | The "called number" is entered |
| 2 | MS | | If supported, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Originating call and TCH/F is needed, or originating call and the network does not set NECI bit to 1" |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM |
| 6 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | Non-transparent connection |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ALERTING | |
| 15 | MS | | |
| 16 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation only one timeslot is allocated. |
| 17 | MS -> SS | ASSIGNMENT COMPLETE | |
| 18 | SS -> MS | CONNECT | |
| 19 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directions. The RLP link establishment is initiated by the MS. |
| 21 | MS -> SS | MODIFY | User initiated service level upgrade is initiated |
| 22 | SS -> MS | MODIFY COMPLETE | |
| 23 | MS | | MS enter the active state |
| 24 | | | Next three steps are performed as many times as used multislot class has different channel combinations. Timeslot allocation starts from simplest case and is upgraded up to the maximum that MS multislot class supports, one step at the time (within highest multislot class that the MS supports). |
| 24A | SS -> MS | CONFIGURATION CHANGE COMMAND | Appropriate number of timeslots is selected. |
| 24B | MS -> SS | CONFIGURATION CHANGE ACKNOWLEDGE | |
| 24C | MS | | TCH(s) shall be through connected in both directions |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

26.13.3.3 Multislot signalling / Structured procedures / MS originated call / early assignment / HSCSD / Transparent

26.13.3.3.1 Conformance requirement

- 1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.
- 2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS, starts to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.
- 3) Subsequently after establishment of a MM connection, after MS sends its multislot class in CLASSMARK CHANGE message, the MS shall send a SETUP message with correct parameters.

- 4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:
 - 4.1) attach the user connection to the radio path;
 - 4.2) return a CONNECT ACKNOWLEDGE message.
 - 4.3) establish the TDS link.
- 5) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.
- 6) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

Reference

- Conformance requirement 1: 3GPP TS 02.07.
- Conformance requirement 2: 3GPP TS 02.07,
3GPP TS 04.08 / 3GPP TS 44.018 subclauses 3.3.1.1 and 9.1.8.
- Conformance requirement 3: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.11,
3GPP TS 04.08 / 3GPP TS 24.008 subclause 9.3.23.

- Conformance requirement 6: 3GPP TS 04.08 / 3GPP TS 44.018 subclause 9.1.7.

26.13.3.3.2 Test purpose

- 1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.
- 2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.
- 3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after MS sends its multislot class in CLASSMARK CHANGE message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.
- 4) Multislot configuration with maximum number of channels supported by MS in a HSCSD configuration, is allocated. To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCHs, after having completed the early assignment procedure for all traffic channel in multislot configuration by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.
- 5) To verify that subsequently the MS has attached the user connection to the radio path. This is verified by checking that the MS synchronises correctly to the TCHs and sends and receives correct data frames in each data block.
- 6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceeds to release the call with RELEASE.
- 7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

26.13.3.3.3 Method of test

Initial conditions

Mobile Station:

- The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
 - Early classmark sending enabled in SI3 rest octets.

Specific PICS statements:

- Multislot class (TSPC_Type_Multislot_ClassX)

PIXIT statements:

- Way to display the called number

Foreseen final state of the MS

MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The MS is made to initiate a HSCSD connection. Maximum number of channels supported by the MS in a HSCSD configuration, is allocated. The call is established with early assignment. Having reached the active state, the call is cleared by the SS.

Maximum duration of test

7 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|------|-----------|-------------------------|---|
| 1 | MS | | The "called number" is entered |
| 2 | MS | | If supported, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Originating call and TCH/F is needed, or originating call and the network does not set NECI bit to 1" |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM |
| 6 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | Transparent connection |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation maximum number of timeslots, that MS supports, is allocated. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
