Imported Goods Component

The Imported Goods Component of the Consumer Price Index registered an increase of 2.3 percent when compared to the previous month. This increase was mainly due to higher prices recorded for chicken leg quarter, raw sugar, mutton flap, biscuit and fuel (petrol, diesel and kerosene).

Local Goods Component

Decreased prices recorded for taro, fresh fish, Chinese cabbage, cucumber, tomato and taamu have resulted in the 0.4 percent decrease in the Local Good Component.

The 1.7 percent increase in the Housing, Water, Electricity, Gas and other Fuels index was a result of the higher prices recorded for electricity (kwh) and kerosene.

Higher prices recorded for fuel (petrol and diesel) and airline fare (Apia-Auckland-Apia) is reflected in the 1.0 percent increase in the Transport Index.

Clothing and Footwear Index

Technical Notes:

The Consumer Price (CPI) measures the rate of inflation for Samoa. It is designed to measure the change in prices for the goods and services purchased by households in Samoa. The CPI measures the change in prices by comparing the prices for a basket of goods and services at the collection period with the price for the same goods in a base period.

The basket of goods that is priced is based on the average expenditures of households as recorded in the Household Income and Expenditure Survey (HIES). The HIES survey identifies how much households spend on different items. The more households spend on an item on average, the more important it is to the price index, and the higher the weight in the index.

Monthly movements in the 'headline' CPI series can be volatile. This volatility reflects price changes in particular items that may be due, among other factors, to fluctuations in commodity markets and agricultural conditions, policy changes, or seasonal or infrequent price resetting.

Underlying inflation is a measure of inflation that excludes certain items that face volatile price movements. Underlying inflation eliminates products that can have temporary price shocks because these shocks can diverge from the overall trend of inflation and give a false measure of inflation.
