## World Ocean Volumes

Ocean, oceanic region and sea volumes calculated using the Ice Surface version of ETOPO1.

|  | Area+ <br> (km2) | \% Ocean <br> Area | Volume (km3) | \% Ocean Volume | Avg. <br> Depth (m) | Max <br> Depth (m) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Ocean Boundaries

Ocean boundaries were modified from 'The Limits of Oceans and Seas' [IHO Special Publication 23, 1953] to include only major oceans and marginal seas and to include the Southern Ocean south of $60^{\circ} \mathrm{S}$.

Volumes were calculated for each ocean grid cell in ETOPO1 using Equation 1 to determine cell area, and Equation 2 to determine cell volume. Cell areas and volumes were then summed over each ocean or marginal sea.

## Equation 1

$d A=a 2 \cos (\varnothing)(1-e 2) d ø d l /(1-e 2 \sin 2 ø) 2$

## Equation 2

$d V=d A{ }^{*}$ depth

Location

- Latitude ( $\varnothing$ ) = latitude of cell's center (in radians) Unit of Latitude ( $\mathrm{d} \varnothing$ ) $=1$ arc-minute ( $2.908882 \times 10-4$ radians) Unit of Longitude (dl) $=1$ arc-minute ( $2.908882 \times 10-4$ radians)
- The WGS84 spheroid was used for values of Earth's radius and eccentricity:
- Equatorial radius $(\mathrm{a})=6378.137 \mathrm{~km}$ Eccentricity $(\mathrm{e})=0.08181919$
