

# Life Expectancy for Areas within Scotland

## 2012-2014

Published on 13 October 2015

---

A National Statistics publication for Scotland

National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs.

## Main Points

The main points in this report for 2012-2014 are:

### At birth

- Life expectancy in Scotland was 77.1 years for males and 81.1 years for females but with considerable variation between areas.
- Male and female life expectancy was highest in East Dunbartonshire Council. Male life expectancy was lowest in Glasgow City while female life expectancy was lowest in West Dunbartonshire Council. Males in East Dunbartonshire can expect to live for 80.7 years, 7.3 years longer than in Glasgow City (73.4 years). Females in East Dunbartonshire can expect to live for 83.9 years, 5.2 years longer than in West Dunbartonshire (78.7 years).
- The NHS Board area with the highest male life expectancy was Borders (79.3 years), with female life expectancy being highest in Orkney (82.8 years); the NHS Board area with the lowest male life expectancy was Greater Glasgow & Clyde (75.3 years), with female life expectancy also lowest in Greater Glasgow & Clyde at 80.0 years.
- Life expectancy at birth was highest for males in Remote Rural areas (79.5 years), where they can expect to live nearly 3.5 years longer than males in large urban areas, who have a life expectancy at birth of 76.0 years. Female life expectancy at birth was also highest in Remote Rural areas (82.7 years), 2.1 years more than in large urban areas, where it was lowest (80.6 years).

### Compared with UK and Europe

- Scottish males and females have the lowest life expectancy at birth in the United Kingdom (UK). Male life expectancy is 2.0 years lower than the UK average and female life expectancy is 1.7 years lower.
- In Scotland, males and females can expect to live shorter lives (by 2.3 years and 2.0 years respectively) than in England, where male and female life expectancy is the highest in the UK.
- Amongst European Union (EU 28) countries, Sweden's male life expectancy was among the highest (79.4 years), 2.3 years higher than in Scotland. Female life expectancy was highest in Spain (85.3 years), 4.2 years higher than in Scotland.
- Although male and female life expectancy continues to improve in Scotland, the gap between Scottish and English life expectancy for both males and females has widened since 1980-1982 by 0.3 years for both males and females.

### Changes over time

- Male and female life expectancy has continued to rise across Scotland.
- The biggest improvements in male life expectancy since 2002-2004 have been in Inverclyde Council (5.2 years) and Western Isles NHS Board area (4.6 years).
- The biggest improvements in female life expectancy since 2002-2004 have been in East Dunbartonshire Council, increasing by 3.5 years and Highland NHS Board area, increasing by 2.7 years.
- The gap between male and female life expectancy at birth in Scotland has decreased from 6.2 years in 1980-1982 to 4.0 years in 2012-2014. Male life expectancy has been increasing at a faster rate than for females since 2001-2003 closing the gap over this period

### **At age 65**

- Males in Scotland could expect to live for a further 17.4 years at age 65 and females a further 19.7 years.
- East Dunbartonshire Council had the highest male life expectancy at age 65 (19.2 years), 4.0 years higher than in Glasgow City, where it was lowest at 15.2 years. Female life expectancy at age 65 was also highest in East Dunbartonshire (21.5 years) and lowest in Glasgow City (18.1 years), a difference of 3.4 years.
- The NHS Board area with the highest male and female life expectancy at age 65 was Shetland (19.0 years and 21.2 years respectively). It was lowest for males in Greater Glasgow & Clyde (16.4 years) and for females in Lanarkshire (18.8 years).

## 1. Background

- 1.1 This paper summarises the National Records of Scotland's life expectancy figures for the years 2012-2014 for administrative areas within Scotland.
- 1.2 This paper reports on the 32 Council areas in Scotland, the 2014 NHS Board areas in existence from 1 April 2014 and the 34 Community Health Partnership areas (CHP). We have presented the 34 Community Health Partnership areas in this report. However they have ceased to exist, following recommendations in the [Public Bodies \(Joint Working\) \(Scotland\) Act 2014 \(asp 9\)](#). For the next publication we will look to produce life expectancy estimates for the new Health & Social Care Partnerships (HSCPs). Analysis of urban and rural areas, as defined by the Scottish Government's 6-fold Urban Rural classification version 2013-2014 is also included, along with comparisons between the estimates for 2012-2014 and those of previous three-year periods are also presented. The statistics use small area population estimates based on the new 2011 Census data zones. As the Scottish Index of Multiple Deprivation (SIMD) has not been updated for use with the new 2011 Census data zones, life expectancy estimates for this classification have not been updated. There is currently a review of the SIMD being carried out and more information can be found on the [Scottish Government](#) website. Further information on the geographical areas and classifications used in this publication can be found in [Section 7](#).
- 1.3 The estimates for 2012-2014, given in [Table 5](#), [Table 6](#), [Table 7](#), [Table 8](#), [Table 9](#) and [Table 10](#) have been ranked for ease of presentation. For council areas, this means that '1' is the area with the highest life expectancy and '32' the lowest. Similarly, NHS Board areas are ranked 1 to 14 and Community Health Partnerships are ranked 1 to 34.
- 1.4 Life expectancy at birth provides a useful summary measure of mortality rates actually experienced over a given period. It also provides an objective means of comparing trends in mortality over time, between areas of a country and with other countries. This is of use in monitoring and investigating health inequality issues across Scotland and in setting public health targets, particularly when used in conjunction with the Scottish Index of Multiple Deprivation (SIMD). The Scottish Government currently has a high level purpose target to match European population growth over a 10 year period, supported by increased healthy life expectancy at birth. Healthy life expectancy is derived by combining estimates of life expectancy with survey data on self-assessed health ([Section 7.3](#)). Life expectancy is also used to inform pensions policy, research and teaching.

## 2. Background methodology

### 2.1 Life expectancy at birth

- 2.1.1. The figures quoted in this publication are a three year average. They are produced by aggregating deaths and population data for the three year period. Three years of data are needed to provide large enough numbers to ensure that the figures published in this report are sufficiently robust.
- 2.1.2. In a change to previous editions of this publication, the life expectancy figures for Scotland and other UK nations used in the commentary are derived from [National Life Tables](#) produced by the Office for National Statistics (ONS). These definitive Scotland-level life expectancy estimates are also used in this publication when discussing Scotland in relation to other countries (e.g. in Section 3). The Scotland-level estimates used elsewhere within the publication are calculated on the same basis as the estimates for areas within Scotland, and should only be used as a comparator for the corresponding sub-Scotland-level figures.
- 2.1.3. The figures are all period life expectancies. Period life expectancies are calculated using age specific mortality rates for a given period. They do not make allowance for any actual or projected future changes in mortality after that period. This means that life expectancy at birth for a given time period and area is an estimate of the average number of years a new born baby would survive if he/she experienced the particular area's age specific mortality rates for that time period throughout his/her life. The figure reflects mortality among those living in the area in each period, rather than mortality among those born in each area. Life expectancy at birth is not simply the number of years a baby born in the area during the three year period is expected to live (although the term 'can expect to live' is used throughout this publication for ease of reading), both because death rates are likely to change in the future and because many of the newborns may live elsewhere for at least some part of their lives.
- 2.1.4. The abridged life tables in [Table 1](#), [Table 2](#), [Table 3](#) and [Table 4](#) are constructed from the estimated populations in 2012, 2013 and 2014 and the total number of deaths registered in these years. The column headed  $l_x$  shows the numbers who would survive to the exact age of  $x$  out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2012-2014. The column headed  $e_x^0$  shows the expectation of life – the average number of years of life left to persons aged exactly  $x$  who are subject to the 2012-2014 mortality probabilities from age  $x$  onwards. For example, in [Table 1](#), for Glasgow City, 76.2 per cent of the male population and 85.9 per cent of the female population could be expected to survive to age 65. In [Table 2](#), a male aged 65 in Fife NHS Board could be expected to live on average another 17.7 years, and a female aged 65 could be expected to live on average another 20.1 years.

### 2.2 Accuracy of results

- 2.2.1. Life expectancy is an estimate which is subject to a margin of error. The accuracy of the results can be indicated by calculating a confidence interval within which the true underlying life expectancy would be expected to lie. In this publication, confidence intervals are set at the 95 per cent level, with the true underlying life expectancy being found within its upper and lower limits

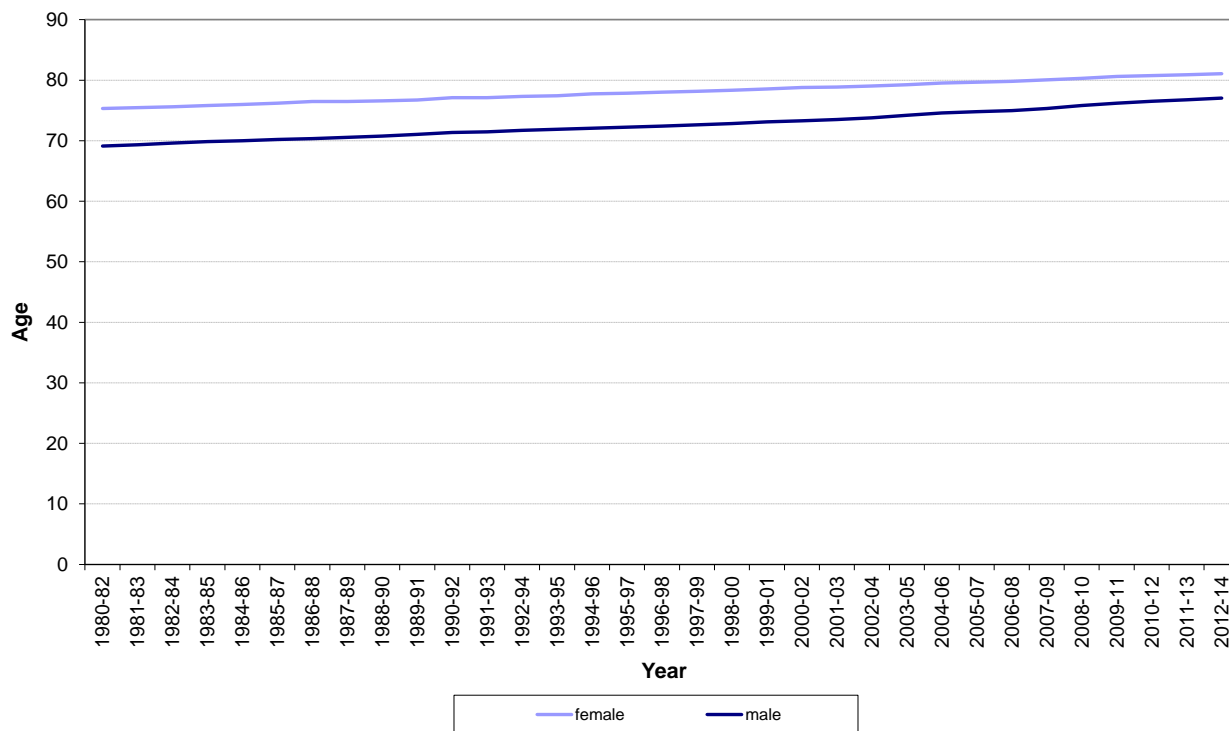

with 95 per cent probability. Life expectancy for an area can usually be said to be significantly different from another area if the 95 per cent confidence intervals do not overlap. Also, errors in the population estimates used for calculation purposes must be considered.

- 2.2.2. The 95 per cent confidence intervals for life expectancy at birth are illustrated in [Figure 3](#), [Figure 4](#), [Figure 5](#) and [Figure 6](#) for Council, NHS Board and Community Health Partnership areas within Scotland as well as for Urban/Rural classification.
- 2.2.3. There is no simple 'rule of thumb' for the size of confidence intervals, although it largely depends upon the size of the population: areas with small populations tend to have wider confidence intervals. It is also worth noting that life expectancy results in these areas can be affected by the random variation in the annual number of deaths. This means that estimated life expectancy can vary from year to year. For example, in [Table 5](#), [Table 6](#), [Table 7](#) and [Table 8](#), changes in rank may simply be due to random variation from year to year in the population and number of deaths (particularly in the smaller areas such as Orkney and Shetland) as opposed to a change in the long term trend life expectancy. Rankings are only significantly different if the confidence intervals do not overlap e.g. in [Figure 4](#), life expectancy at birth for females in Dumfries & Galloway is only significantly different from that of females in Ayrshire & Arran, Lanarkshire, Highland and Greater Glasgow & Clyde; all other NHS Boards have overlapping confidence intervals and therefore do not have significantly different female life expectancies.
- 2.2.4. A description of the methods used to calculate life expectancy for different geographical areas and other classifications within Scotland can be found in the [Life Expectancy for Scotland: Methodology Guide](#) on the NRS website.
- 2.2.5. More information about the methods used to calculate the standard errors and confidence intervals used in this report can be found in the Office for National Statistics publication, number 33 in the Government Statistical Service (GSS) Methodology Series. The report details the research undertaken by the Office for National Statistics (ONS) to compare methodologies for calculating life expectancy figures and confidence intervals. It can be found in the [GSS methodology series](#) section of the ONS website.

### 3. Life expectancy in Scotland, the UK and Europe

3.1 Figure 1 shows that the expectation of life at birth in Scotland has improved over the last 30 years, increasing from 69.1 years for males born in the period 1980-1982 to 77.1 years for those born in 2012-2014, an increase of 8.0 years. For females, life expectancy has increased from 75.3 years for those born in the period 1980-1982 to 81.1 years for those born in 2012-2014, an increase of 5.8 years.

**Figure 1: Life expectancy at birth, Scotland<sup>1</sup>, 1980-1982 to 2012-2014**

3.2 Figure 1 also shows that the gap between male and female life expectancy at birth has decreased from 6.2 years in 1980-1982 to 4.0 years in 2012-2014. Male life expectancy has been increasing at a faster rate than for females since 2001-2003.

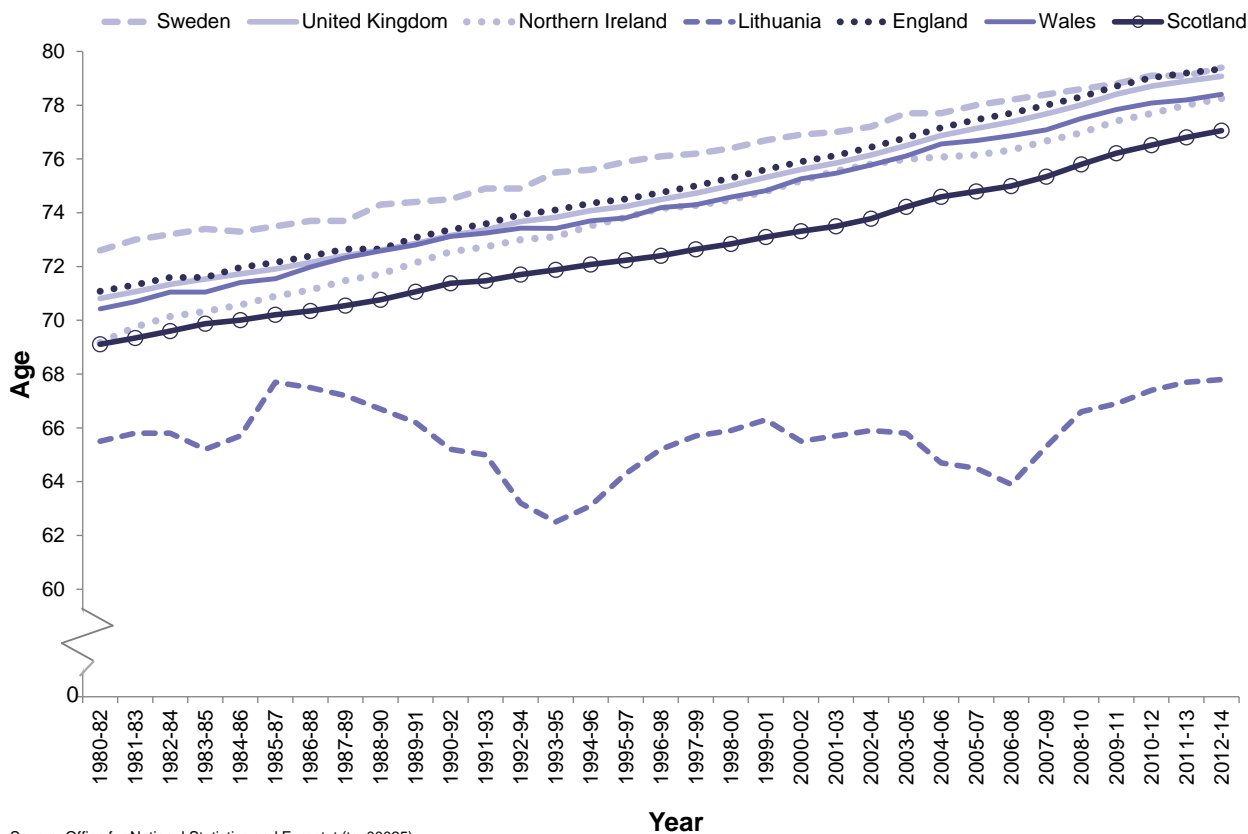

3.3 The improvement in life expectancy at birth for males and females in Scotland since 1980-1982 can be seen in [Figure 2a](#) (males) and [Figure 2b](#) (females). Comparisons are also given with life expectancy in the United Kingdom, countries within the UK and the countries that typically have the highest and lowest life expectancy in the European Union (EU) (Sweden and Lithuania for males and Spain and Romania for females).

3.4 Although male and female life expectancy continues to increase in Scotland, it is still below the UK average, which is 79.1 years for males and 82.8 years for females. The gap between UK and Scottish life expectancy is now wider than in 1980-1982, by 0.3 years for both males and females.

**Footnote**

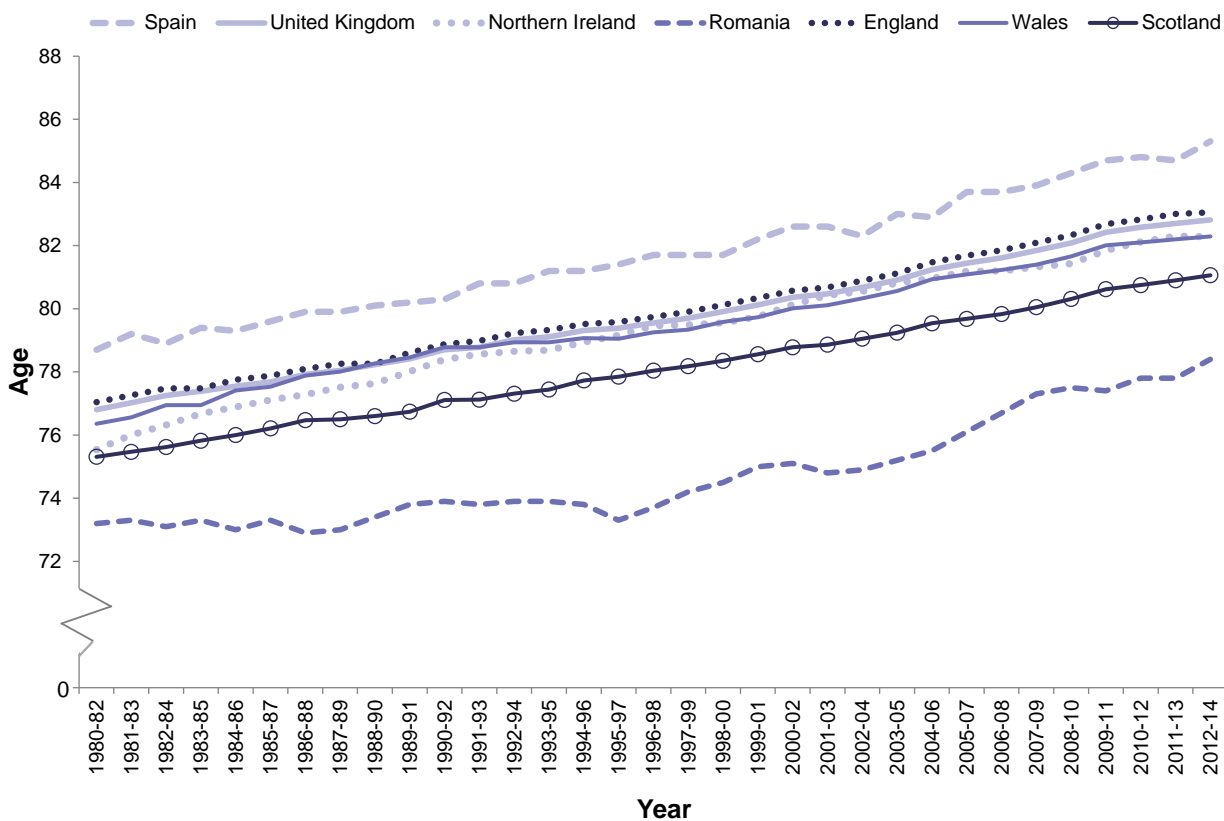

1) Life expectancy figures for Scotland and other UK constituent countries are taken from National Life Tables produced by Office for National Statistics (ONS) using complete life tables based on single years of age. All other figures in this publication are from abridged life tables based on grouped years. For more details go to [Section 7.1](#).

**Figure 2a: Life expectancy at birth in selected countries, 1980-1982 to 2012-2014, Males**

Source: Office for National Statistics and Eurostat (tps00025)

**Figure 2b: Life expectancy at birth in selected countries, 1980-1982 to 2012-2014, Females**

Source: Office for National Statistics and Eurostat (tps00025)

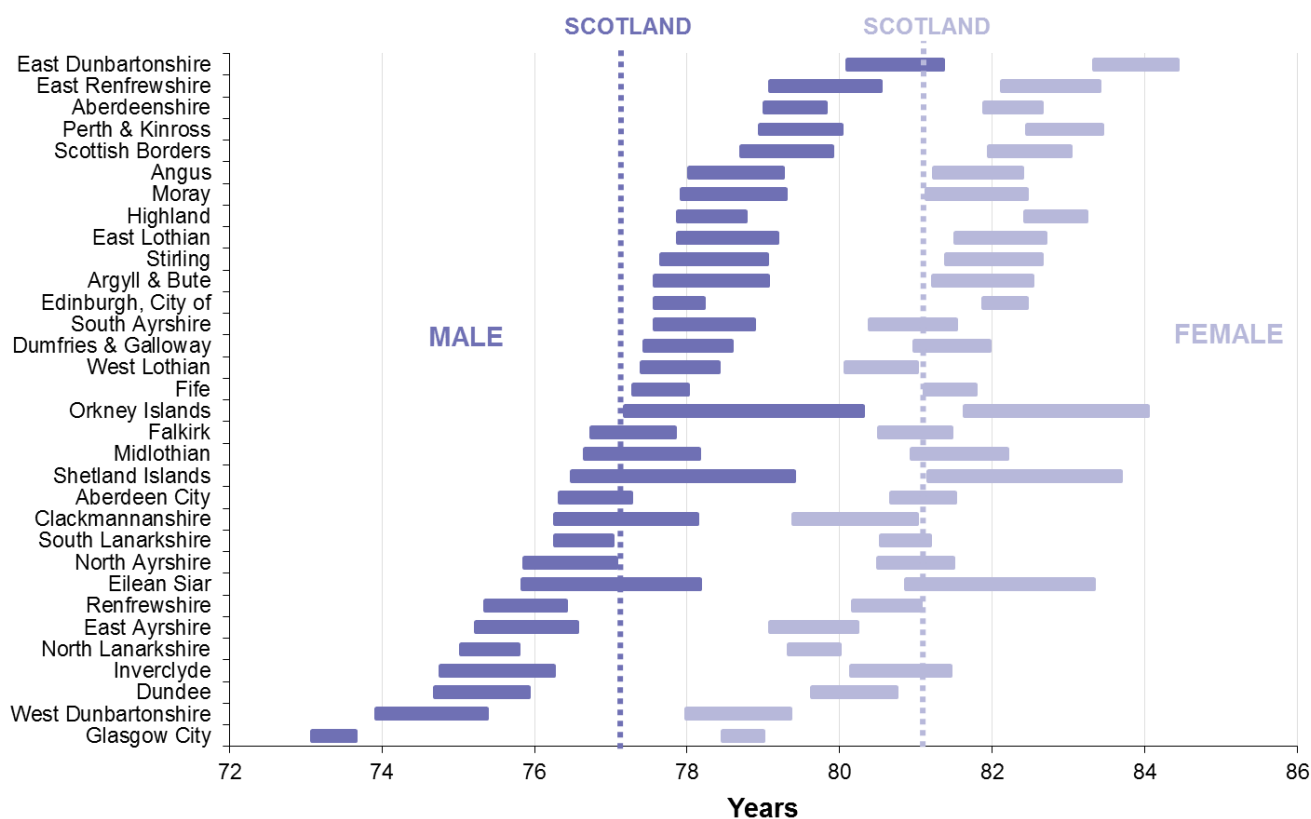

- 3.5 Life expectancy for males in Scotland has been consistently lower than that of males in England, Northern Ireland and Wales, although the gap has varied over time. Males in England, Wales and Northern Ireland can expect to live longer than those in Scotland by 2.3 years, 1.3 years and 1.2 years respectively. In comparison to 1980-1982, the gap with England has widened by 0.3 years, the gap with Wales has widened by 0.1 years and that with Northern Ireland has widened by 1.1 years.
- 3.6 The pattern is similar for female life expectancy in Scotland. Females in Scotland can expect to live 2.0 years fewer than females in England and 1.2 years fewer than females in both Wales and Northern Ireland. Over time, the gap has widened by 0.3 years compared with England, by 1.0 year compared with Northern Ireland and by 0.1 years compared with Wales.
- 3.7 Male life expectancy in Sweden at 79.4 years is among the highest in the EU's 28 member states, 2.3 years higher than in Scotland. In Lithuania, male life expectancy is 67.8 years, the lowest in the EU and 9.3 years lower than in Scotland. Since 1980-1982 Scotland's male life expectancy has improved, leading to widening the gap with Lithuania which has the lowest life expectancy. The gap with Sweden has narrowed since 1980-1982.
- 3.8 Spain has the highest female life expectancy in the EU at 85.3 years, 4.2 years higher than in Scotland. In Romania female life expectancy is 78.4 years, one of the lowest in the EU. Female life expectancy in Scotland has not improved as much as in Spain but has managed to surpass the improvement estimated for Romania. The gap in life expectancy between Spanish and Scottish women is 0.8 years wider in 2012-2014 than in 1980-1982 and the gap between Scottish and Romanian women is 0.6 years wider than in 1980-1982.

## 4. Life expectancy at birth, 2012-2014, geographical and other variations

### 4.1 Council areas

4.1.1 Table 1 shows life expectancy at birth and at five-year intervals in Scotland and council areas for 2012-2014. Table 5 and Table 6 show the life expectancy at birth and rank for council areas, along with comparisons with five and ten years ago. In Figure 3 life expectancy at birth in 2012-2014 is shown with the associated 95 per cent confidence intervals for each of the council areas. Life expectancy for an area can be said to be significantly different from another area if the 95 per cent confidence intervals do not overlap.

**Figure 3: Life expectancy at birth, 95% confidence intervals for council areas, 2012-2014 (Males and Females)**

**Note**  
Ordered by lowest male life expectancy to highest.

4.1.2 For males, the council area with the lowest life expectancy was Glasgow City (73.4 years) and the council area with the highest life expectancy was East Dunbartonshire (80.7 years), a difference of 7.3 years between highest and lowest.

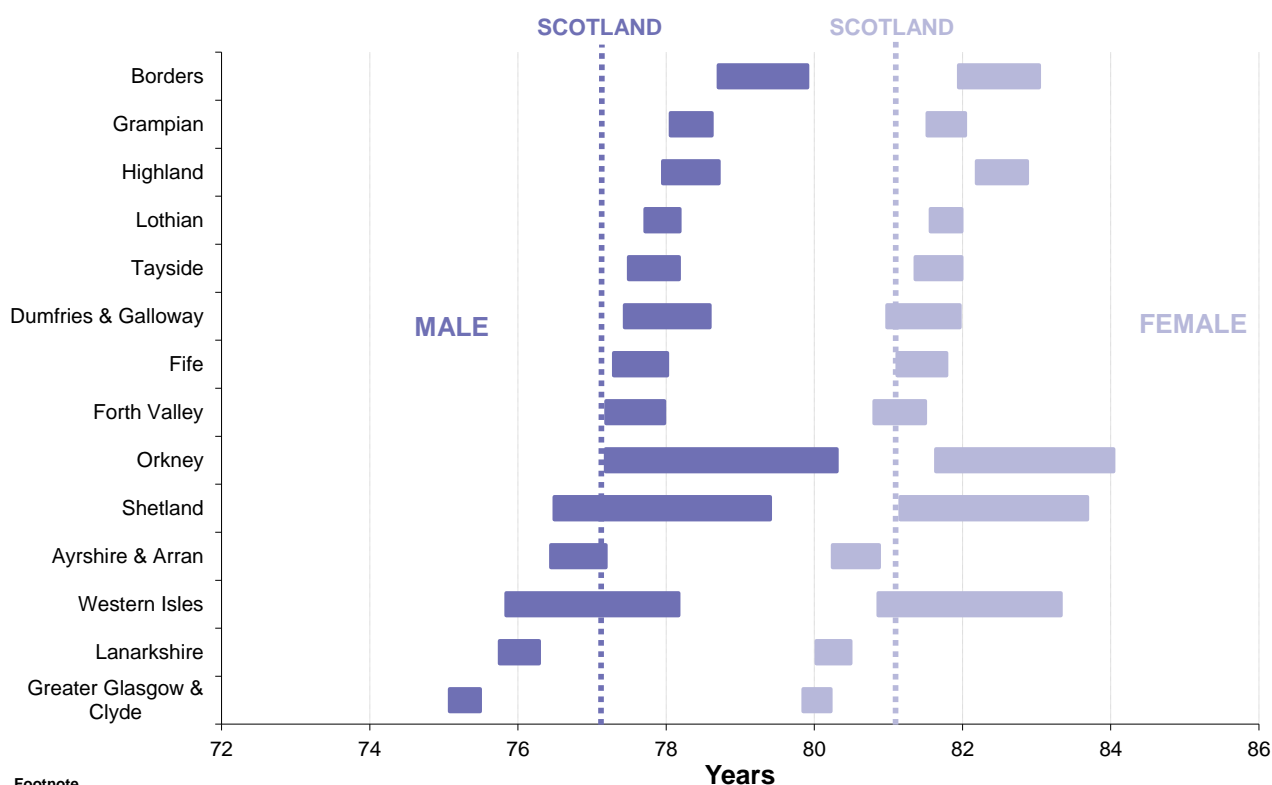

4.1.3. For females, West Dunbartonshire had the lowest life expectancy (78.7 years) and the highest life expectancy was in East Dunbartonshire (83.9 years), a difference of 5.2 years.

4.1.4. A new interactive visualisation is available on the [Scotland's Census](#) website comparing life expectancy at birth for council areas in Scotland.

## 4.2 NHS Board areas

4.2.1 Table 2 shows life expectancy at birth and five-year intervals in Scotland and for the new NHS 2014 Board areas for 2012-2014. Table 5 and Table 6 show the life expectancy at birth and rank for NHS Board areas, along with comparisons with five and ten years ago. Figure 4 shows life expectancy at birth in 2012-2014, along with 95 per cent confidence intervals for each of the NHS Board areas.

**Figure 4: Life expectancy at birth, 95% confidence intervals for NHS Board areas<sup>1</sup>, 2012-2014 (Males and Females)**

**Footnote**  
 1) 2014 NHS Board areas.  
 Ordered by lowest male life expectancy to highest.

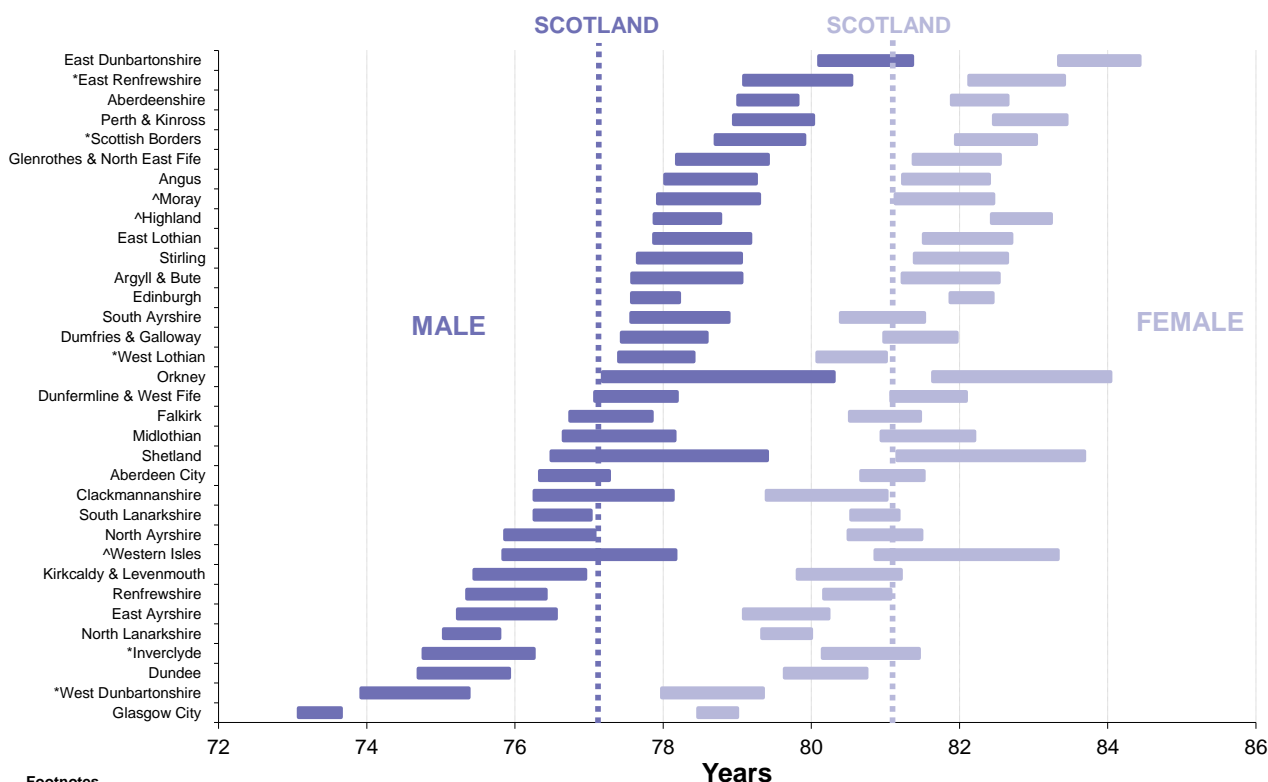

4.2.2 The NHS Board area with the highest life expectancy was Borders for males (79.3 years) and Orkney for females (82.8 years).

4.2.3 The Greater Glasgow & Clyde NHS Board area was the area with the lowest life expectancy for both males (75.3 years) and females (80.0 years), although the female figure for Greater Glasgow & Clyde is not significantly different from Lanarkshire and Ayrshire & Arran NHS Board areas.

### 4.3 Community Health Partnership areas

4.3.1. **Table 3** shows life expectancy at birth and five-year intervals in Scotland and Community Health Partnership (CHP) areas for 2012-2014. **Table 7** and **Table 8** show the life expectancy at birth and rank for CHP areas, along with comparisons with five and ten years ago. Figure 5 shows life expectancy at birth along with the 95 per cent confidence intervals for each CHP.

**Figure 5: Life expectancy at birth, 95% confidence intervals for Scottish Community Health Partnership areas, 2012-2014 (Males and Females)**

**Footnotes**  
 \*Known as a Community Health and Care Partnership.  
 ^Known as a Community Health and Social Care Partnership.  
 Ordered by lowest male life expectancy to highest.

4.3.2. The CHP with the highest male life expectancy at birth was East Dunbartonshire where males could expect to live for 80.7 years. This is 7.3 years longer than in Glasgow City, where male life expectancy was lowest at 73.4 years.

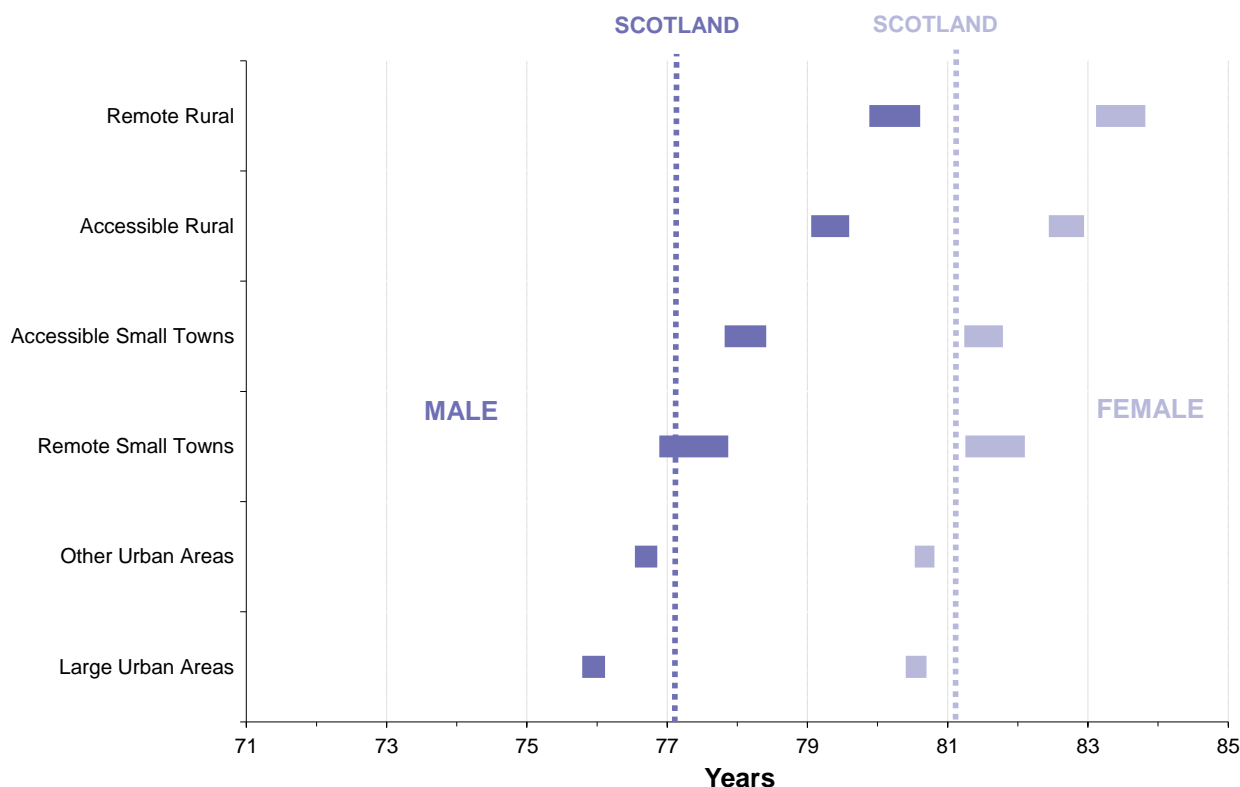

4.3.3. The CHP with the highest life expectancy at birth for females was also East Dunbartonshire, where females could expect to live for 83.9 years, 5.2 years longer than in West Dunbartonshire, the CHP with the lowest life expectancy (78.7 years).

4.3.4. The largest gap between male and female life expectancy at birth was in Glasgow City Community Health Partnership, where females (78.7 years) could expect to live 5.3 years longer than males (73.4 years).

## 4.4 Urban Rural 6-fold classification

4.4.1. [Table 4](#) shows life expectancy at birth and five-year intervals in Scotland for each area in the 2014 Urban/Rural 6-fold classification. Figure 6 shows life expectancy at birth along with 95 per cent confidence intervals for these areas.

**Figure 6: Life expectancy at birth, 95% confidence intervals for Urban/Rural classification, 2012-2014 (Males and Females)**

**Note**  
Ordered by lowest male life expectancy to highest.

4.4.2. Male life expectancy at birth is highest in Remote Rural areas at 79.5 years, 3.5 years longer than in Large Urban areas, where male life expectancy is the lowest (76.0 years).

4.4.3. The gap between highest and lowest female life expectancy at birth was not as wide. It was highest in Remote Rural areas (82.7 years) and lowest in Large Urban areas (80.6 years), a gap of 2.1 years.

4.4.4. The biggest gap between male and female life expectancy is in Large Urban areas and in Remote Small Towns. In both these areas, females can expect to live at least 4.3 years longer than males.

4.4.5. Males and females in Remote Rural areas, Accessible Rural areas, Remote Small Towns and Accessible Small Towns all have a higher life expectancy than the average figure for Scotland.

## 5. Life expectancy at birth, comparisons over time

### 5.1 Council areas

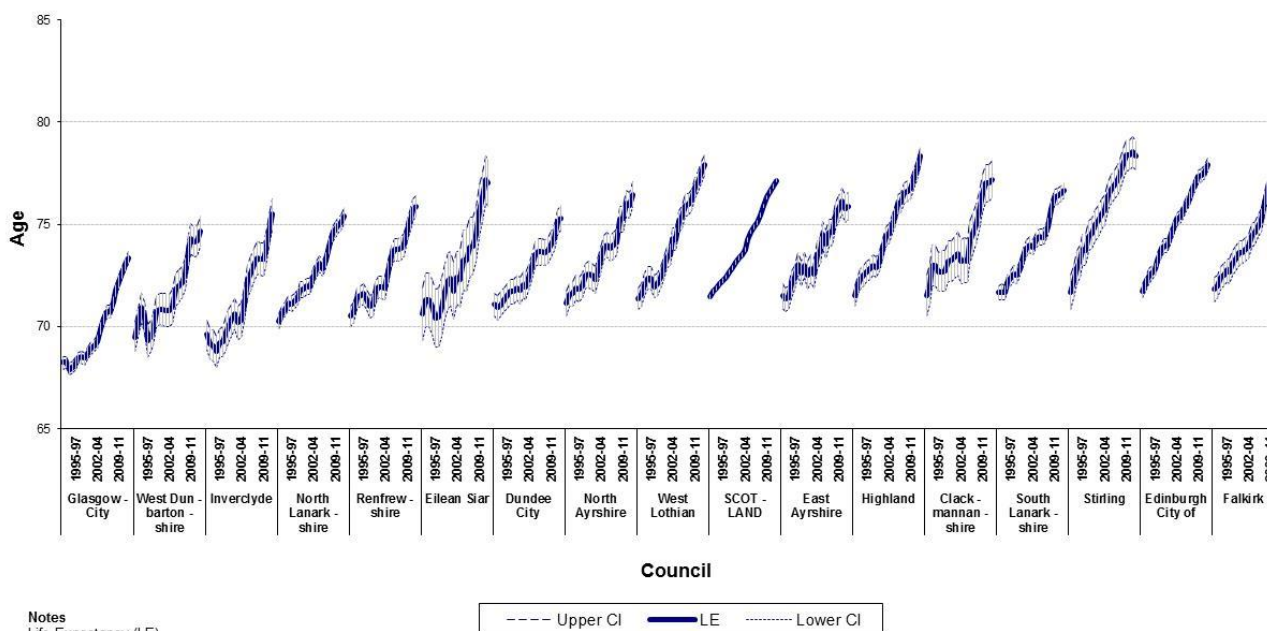

5.1.1. Figure 7 shows how male life expectancy within council areas has changed since 1991-1993, with council areas ordered from left to right by the lowest to highest life expectancy in 1991-1993.

5.1.2. Figure 8 shows how female life expectancy has also changed within council areas since 1991-1993, with council areas ordered from left to right by the lowest to highest life expectancy in 1991-1993.

5.1.3. Table 5 and Table 6 compare male and female life expectancies in 2012-2014 with those for 2002-2004 and 2007-2009 and give rankings for each area in the respective years. Comparisons made between these rankings should be treated with caution and do not imply differences in life expectancy.

5.1.4. Male life expectancy has risen in all council areas since 2002-2004, with the biggest increase of 7.4 per cent (5.2 years) being in Inverclyde. Female life expectancy has also increased in all council areas since 2002-2004. East Dunbartonshire Council saw the biggest rise in female life expectancy, increasing by 4.4 per cent (3.5 years).

**Figure 10: Life expectancy at birth in Scotland, 2000-2002 to 2012-2014, by NHS Board area<sup>1</sup>, Females**

**Footnote**  
 1) 2014 NHS Board areas.  
 Life Expectancy (LE).  
 Confidence Interval (CI).  
 Ordered from lowest to highest life expectancy in 2000-2002.

--- Upper CI    — LE    ..... Lower CI

- 5.2.2 [Table 5](#) and [Table 6](#) compare male and female life expectancies in 2012-2014 with those for 2002-2004 and 2007-2009 and give rankings for each area in the respective years. Comparisons made between these rankings are subject to the margin of error within the life expectancy estimates.
- 5.2.3 Male life expectancy has risen in all NHS Board areas since 2002-2004, with Western Isles showing the biggest improvement, increasing by 6.4 per cent (4.6 years). Although male life expectancy in Greater Glasgow & Clyde remained at the same ranking of 14, it was second in terms of improvement, having increased by 5.9 per cent (4.2 years) since 2002-2004.
- 5.2.4 Female life expectancy also increased in all areas. Highland NHS Board saw the biggest improvement, rising by 3.4 per cent (2.7 years).

## 6. Life expectancy at age 65, 2012-2014, geographical variations

### 6.1 Council areas

6.1.1. [Table 9](#) shows life expectancy at age 65 in Scotland for 2012-2014 for council areas along with their respective rankings.

6.1.2. Males aged 65 in East Dunbartonshire, the council area with the highest life expectancy at age 65 (19.2 years) could expect to live 4.0 years longer than those in Glasgow City, which had the lowest (15.2 years).

6.1.3. The gap between the council areas with the highest and lowest female life expectancy at age 65 is narrower than that for males of the same age. Females aged 65 in East Dunbartonshire could expect to live for a further 21.5 years, 3.4 years longer than those in Glasgow City, where life expectancy at age 65 is estimated to be 18.1 years.

### 6.2 NHS Board areas

6.2.1. [Table 9](#) shows life expectancy at age 65 in Scotland for 2012-2014 for 2014 NHS Board areas along with a ranking for each area.

6.2.2. Males in Shetland NHS Board area have the highest life expectancy at age 65 (19.0 years). The lowest estimate is in Greater Glasgow & Clyde, where males aged 65 can expect to live for a further 16.4 years.

6.2.3. Female life expectancy at age 65 is highest in Shetland NHS Board area (21.2 years) and lowest in Lanarkshire (18.8 years).

## 7. Further information

### 7.1 Life expectancy at birth

- 7.1.1. The Office for National Statistics (ONS) produces national life tables for the UK and constituent countries, which provide estimates of period life expectancy. Responsibility for the production of national life expectancy figures transferred to ONS from the Government Actuary's Department (GAD) on 31 January 2006.
- 7.1.2. Every now and then a set of graduated (smoothed) life tables for Scotland is published for some years. They are available for the years 1930-1932 to 2000-2002 (excluding 1940-1942) and are available from the [Office for National Statistics](#) and [National Records of Scotland](#) (NRS) websites.
- 7.1.3. Also available on the ONS website are ungraduated [National Life Tables](#) (formerly called interim life tables). These are produced annually for Scotland, based on data for a period of three consecutive calendar years.
- 7.1.4. The life expectancy at birth figures used in the text and Figures 1, 2a and 2b in the publication for Scotland and the UK constituent countries are from the national life tables produced by ONS. The estimates for Scotland in the tables that accompany this publication are those calculated on the same basis as those for areas within Scotland and are provided for comparison purposes. A detailed description of the standard methods and notation associated with the calculation of life expectancy by ONS is available in the [Guide to Calculating National Life Tables](#) section of their website.
- 7.1.5. Period life expectancies are worked out using the age-specific mortality rates for a given period (either a single year, or aggregated years) which make no allowance for any later actual or projected changes in future mortality. Cohort life expectancies are worked out using age-specific mortality rates which allow for known or projected changes in mortality in later years. Period and cohort life expectancies based on projected mortality rates from the 2012-based national population projections can be accessed from the [ONS website](#).
- 7.1.6. ONS published Scotland-level ungraduated national life tables for 2012-2014 on 23 September 2015. These figures are also available in the Life Expectancy pages of the NRS website, within the '[Life Expectancy at Scotland Level](#)' section.
- 7.1.7. Life expectancy figures used for international comparisons are taken from Table tps00025 of the [Eurostat](#) website. Further information on [mortality and life expectancy](#) can also be found on the Eurostat website.

### 7.2 Life expectancy for areas in Scotland

- 7.2.1. Previous NRS publications dedicated to life expectancy in administrative areas (Council and NHS Board) and special areas (Community Health Partnership, Urban/Rural and Deprivation) within Scotland can be found in the [Life Expectancy in Scottish Areas](#) (archives section) of the NRS website.

7.2.2. Earlier life expectancy tables for Scottish Council and NHS Board areas, back to 1981-1983 (in the form of abridged life tables) are available in the [Life Expectancy in Scottish Areas](#) (archive section) of the NRS website.

### 7.3 Healthy Life Expectancy

Healthy Life Expectancy (HLE) is defined as the number of years people can expect to live in good health. The difference between life expectancy and HLE indicates the length of time people can expect to spend in poor health. Information on HLE in Scotland was first published in 2004 by the Information Services Division (ISD) of the NHS in Scotland. Up to date information on the topic can be found on the Scottish Public Health Observatory ([ScotPHO](#)) website.

### 7.4 Other data available from the National Records of Scotland

Estimates of the resident population of Scotland are prepared by NRS each year. These are available by sex and single year of age for council and NHS Board areas, together with historical data. Information is also available on a wide range of related topics such as small area population estimates, population projections, migration estimates and data from the 2001 and earlier censuses. For further information please go to the [National Records of Scotland](#) website.

## 8. Notes and definitions

### 8.1 NHS Board areas

The composition of the NHS Board areas in terms of council areas is summarised in the table below. From 1 April 2014 the boundaries of NHS Board areas were aligned with council areas. The tables presented in this publication show information for the new NHS Board areas.

<b>NHS Board area</b>	<b>Council area</b>
<b>Ayrshire &amp; Arran</b>	East Ayrshire, North Ayrshire, South Ayrshire
<b>Borders</b>	Scottish Borders
<b>Dumfries &amp; Galloway</b>	Dumfries & Galloway
<b>Fife</b>	Fife
<b>Forth Valley</b>	Clackmannanshire, Falkirk, Stirling
<b>Grampian</b>	Aberdeen City, Aberdeenshire, Moray
<b>Greater Glasgow &amp; Clyde</b>	East Dunbartonshire, East Renfrewshire, Glasgow City, Inverclyde, Renfrewshire, West Dunbartonshire
<b>Highland</b>	Argyll & Bute, Highland
<b>Lanarkshire</b>	North Lanarkshire, South Lanarkshire
<b>Lothian</b>	East Lothian, City of Edinburgh, Midlothian, West Lothian
<b>Orkney</b>	Orkney Islands
<b>Shetland</b>	Shetland Islands
<b>Tayside</b>	Angus, Dundee City, Perth & Kinross
<b>Western Isles</b>	Eilean Siar

Life expectancy estimates for the old NHS Board areas are also available on the NRS website. From 2011-2013 only estimates for the new boundaries are published.

### 8.2 Community Health Partnerships

There are 34 Community Health Partnership (CHP) organisations in Scotland. CHPs are responsible for managing community health services and have developed existing links between community and hospital-based health services and local authority services such as social work, housing, leisure and education. Their principal aim is to improve the long-term health and wellbeing of communities and enhance the quality of health and social care services. In some areas the Partnerships are responsible for many local social care services and are therefore called Community Health and Care Partnerships (CHCPs) or Community Health and Social Care Partnerships (CHSCPs) and are run jointly by the NHS with local council partners. For ease of reading they are referred to as CHPs throughout the publication.

### 8.3 Urban and Rural areas

The urban-rural split used in this publication is the Scottish Government's 6-fold Urban Rural Classification version 2013-2014. The differences with the previous classifications stem from changes to either settlement populations or settlement boundaries. The definitions of urban and rural areas underlying the classification are unchanged. For more information can be found in [Scottish Government Urban Rural Classification 2013-2014](#) publication available on the Scottish Government website. The 6-fold classification distinguishes between urban, rural and remote

areas within Scotland. It is consistent with the Government's definition of rurality and includes the following categories:

1) Large Urban	Settlements of 125,000 people and over.
2) Other Urban	Settlements of 10,000 to 124,999 people.
3) Accessible Small Towns	Settlements of 3,000 to 9,999 people and within 30 minute drive of a settlement of 10,000 or more.
4) Remote Small Towns	Settlements of 3,000 to 9,999 people and with a drive time of over 30 minutes to a settlement of 10,000 or more.
5) Accessible Rural	Areas with a population of less than 3,000 people and within a 30 minute drive of a settlement of 10,000 or more.
6) Remote Rural	Areas with a population of less than 3,000 people and with a drive time of over 30 minutes to a settlement of 10,000 or more.

#### 8.4 Methodology and comparisons across the UK

The National Records of Scotland (NRS) website has a guide that describes the [methodology](#) used to produce the life expectancy statistics for Scotland. This methodology is similar to that used to produce life expectancy estimates in other UK constituent countries.

#### 8.5 Quality of administrative data sources

The National Records of Scotland (NRS) have published research papers assessing the quality of the administrative data sources that are used in the production of mid-year population estimates. Mid-year population estimates are an important input in calculating life expectancy estimates. For more information go to the [Research for the 2021 Census](#) section of the NRS website.

The quality of deaths data which are part of the inputs in computing life expectancy estimates is available on the [Vital Events section](#) of the NRS website.

We have recently become aware of errors mainly affecting the age distributions of the mid-year population estimates for 2002 to 2014. This is because of an issue with an input data set used in the calculation of the mid-year estimates, as well as minor unrelated processing errors. The errors have no effect on the total population of Scotland and the 2011 mid-year population estimates are not affected. The errors in the 2002 to 2010 population estimates are partly resolved by the retrospective revisions made to these estimates as a result of the 2011 Census.

Mid-year population estimates are an important input in calculating life expectancy estimates. These errors in the mid-year estimates may have a small effect on the life expectancy estimates, but the difference should be within the confidence intervals around the life expectancy estimates. The impact should be fairly small as life expectancy estimates are a three year average. Also we typically report on life expectancy at birth and 65 years, and the errors only have a small influence at these ages.

More details of the errors, their impact and how we reached the decision for the approach we are taking, is available in the [Population](#) section of the NRS website.

**Table 1: Abridged life table, by sex, age and Council area, Scotland, 2012-2014**

**Footnote**

1) Please note that the Scotland-level life expectancy estimate shown here is for use only as a comparator for the corresponding sub-Scotland-level figures. The definitive Scotland-level life expectancy estimate (based on national life tables) is published by the Office for National Statistics (ONS), which can be found in the [National Life Tables](#) section of the ONS website. This abridged life table is constructed from the estimated population in 2012, 2013 and 2014 and the total number of deaths registered in these years. The column headed  $l_x$  shows the numbers who would survive to the exact age of x out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2012-2014. Column  $e_x^o$  shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2012-2014 mortality probabilities from age x onwards.

**Footnotes**

1) 2014 NHS Board areas.

2) Please note that the Scotland-level life expectancy estimate shown here is for use only as a comparator for the corresponding sub-Scotland-level figures. The definitive life expectancy estimate (based on national life tables) is published by the Office for National Statistics (ONS), which can be found in the [National Life Tables](#) section of the ONS website.

This abridged life table is constructed from the estimated population in 2012, 2013 and 2014 and the total number of deaths registered in these years. The column headed  $l_x$  shows the numbers who would survive to the exact age of  $x$  out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2012-2014. Column  $e_x^o$  shows the expectation of life, that is, the average number of years of life left to persons aged exactly  $x$  who are subject to the 2012-2014 mortality probabilities from age  $x$  onwards.

**Footnote**

1) Please note that the Scotland-level life expectancy estimate shown here is for use only as a comparator for the corresponding sub-Scotland-level figures. The definitive Scotland-level life expectancy estimate (based on national life tables) is published by the Office for National Statistics (ONS), which can be found in the [National Life Tables](#) section of the ONS website.

This abridged life table is constructed from the estimated population in 2012, 2013 and 2014 and the total number of deaths registered in these years. The column headed  $l_x$  shows the numbers who would survive to the exact age of  $x$  out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2012-2014. Column  $e_x^o$  shows the expectation of life, that is, the average number of years of life left to persons aged exactly  $x$  who are subject to the 2012-2014 mortality probabilities from age  $x$  onwards.

3) Known as Community Health and Social Care Partnership.

## 9. Notes on statistical publications

### National Statistics

The United Kingdom Statistics Authority (UKSA) has designated these statistics as National Statistics, in line with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics (available on the [UKSA](#) website).

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods; and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

### Information on background and source data

Further details on data source(s), timeframe of data and timeliness, continuity of data, accuracy, etc can be found in the 'About this Publication' document that is published alongside this publication on the NRS website.

### National Records of Scotland

We, the National Records of Scotland, are a non-ministerial department of the devolved Scottish Administration. Our aim is to provide relevant and reliable information, analysis and advice that meets the needs of government, business and the people of Scotland. We do this as follows:

- Preserving the past – We look after Scotland's national archives so that they are available for current and future generations and we make available important information for family history.
- Recording the present – At our network of local offices, we register births, marriages, civil partnerships, deaths, divorces and adoptions in Scotland.
- Informing the future – We are responsible for the Census of Population in Scotland which we use, with other sources of information, to produce statistics on the population and households.

You can get other detailed statistics that we have produced from the [Statistics](#) section of our website. Scottish Census statistics are available on the [Scotland's Census](#) website.

We also provide information about [future publications](#) on our website. If you would like us to tell you about future statistical publications, you can register your interest on the Scottish Government [ScotStat website](#).

You can also follow us on twitter [@NatRecordsScot](#)

## Revisions and Corrections

We, the National Records of Scotland, also label any revisions and corrections that we have applied to any of our statistics. These revisions and corrections are clearly marked on the webpage of the publication as well on our revisions and corrections page available on the [NRS website](#).

## Enquiries and suggestions

Please contact our Customer Services if you need any further information.

Email: [statisticscustomerservices@nrscotland.gov.uk](mailto:statisticscustomerservices@nrscotland.gov.uk)

If you have comments or suggestions that would help us improve our standards of service, please contact:

Kirsty MacLachlan  
Senior Statistician  
National Records of Scotland
