

Appendix S.4

Transit Analysis

A. INTRODUCTION

This appendix provides the technical memorandum which details the planning assumptions included in the methodology for analysis of subway station elements and on-street pedestrian elements, including sidewalks, corners, and intersection crosswalks. This appendix also includes the following technical backup documentation for the transit analyses:

1. Methodologies
2. Subway Line Haul Analysis (RTFM Results)
3. Subway Station Plans
4. Subway Station Element Analysis

Appendix S.4.1

Transit and Pedestrian Methodologies and Assumptions

1. Pedestrian Assignments

- **Ferry:** It was assumed that the 40th Street pedestrian passageway providing access through the Convention Center was used for the ferry-walk assignments. Ferry-walk trips were assigned from the Ferry Shuttle bus to/from development sites that are located further away from the Ferry Terminal.
- **Bus:** NYCT data were utilized to identify the peak load point of each bus route. Trip distribution was based on the 1990 Census Reverse Journey-to-Work origin-destination data. Bus-walk trips were traced along the intersection elements (sidewalks, corners, and crosswalks) from the bus stops to/from development sites.
- **Subway:** Pedestrian trips at the existing and proposed subway stations were assigned to entrances/exits based on the logical walking paths from the platforms to the proposed stairways, escalators, and elevators at the new stations to the street level and the proposed development sites. Trip generations at the existing and new subway station were calculated using the CEQR methodology. Results of the MTA's Regional Transit Forecasting Model (RTFM) were used to forecast transfer trips to and from the No. 7 line at the Times Square, Fifth Avenue and Grand Central stations. Subway assignments for the weekday evening and Sunday afternoon Special Event peak hours (e.g. assignments during non-traditional commuter hours) at these three transfer stations were forecasted based on the origin/destination data provided by the independent surveys of New York Jets season ticket holders and Convention Center attendees.
- **Auto:** The auto-walk pedestrian assignments were based on the off-street parking analysis. Auto-walk pedestrian trips assigned within the development site were not added to the pedestrian street network. Auto trips assigned to other parking facilities were traced from each development site to/from parking facilities based on the parking distribution/traffic assignment.
- **Taxi:** It was assumed that taxi trips would be dropped off at closest corner of the development sites. Therefore, taxi-walk trips were not added to the pedestrian street network.
- **Walk-Only:** Walk-Only trips were assigned to/from every block within ½ mile of each development site. Walk trips will be assigned to each block where potential trips would originate.

2. Existing Subway Stations

Herald Square - 34th Street Station and Sixth Avenue (B, D, F, N, Q, R, V, W)

For the 2025 proposed action, the majority of the subway trips generated for this station are from Site 45 – the current MSG site. Since this site is located between 31st and 33rd Streets west of the station, most of the trips were assigned to 32nd, 33rd, and 34th Street control areas (A25, N506, and N507) and stairways/escalators (HM300, H&M 307, E221, E222, E223, E224, S5AB/M5AB) west of Sixth Avenue/Broadway.

34th Street Station at Seventh Avenue (1, 2, 3, 9)

- For the 32nd Street access, stairway O14AB/O15AB located at northeast of Seventh Avenue and 32nd Street is the only access to the street level. Connection to Penn Station is provided at the southwest through the sub passage.
- Most of the subway trips generated by development sites 31, 34 and 45 were assigned to stairways P1, P2, and S1 at the 33rd Street access.
- For the 34th Street access, stairways S3/P5AB and S4/P6AB will be rebuilt and widened to 10 feet as part of a separate project. Stairway S3/P5AB would then be most likely used by Hudson Yard trips.

34th Street Station at Eighth Avenue (A, C, E)

It was assumed that riders of the southbound local train and express trains would most likely use street accesses located at the west side of the station. These subway station elements are: S2/P2AB and S4/P3 at the 33rd Street, S6/P5AB and S8/P7AB at 34th Street, and S10/P9 and S12/P11AB at 35th Street. Only riders of northbound local trains were assigned to use elements located on the east side of the station. These street stairs are: S1/P1 and S5/P4 at 33rd Street, S7/P6AB and S9/P8AB at 34th Street, S11/P10AB and S14/P12AB at 35th Street.

42nd Street Station at Sixth Avenue (B, D, F, V, 7)

Similar to other stations, the Hudson Yard (HY) trips were assigned to elements that are west of the station: Stairways S4/M4/M5 and O6/O7/M9/M10 at 40th Street and stairways S9/M14/M15AB at 42nd Street.

Time Square Station (N, Q, R, S, W, 1, 2, 3, 7, 9)

HY subway trips were assigned to street stairways O1AB/O2, 12-A/12-B, 14-A/14-B at 40th Street, the new stairways at 41st Street, Stairways M9AB, O3ABC/O4ABC/M11ABC, and 2 stairways and two escalators without coding at 42nd Street.

This station would be a major transfer station for HY passengers transferring from the Broadway Line and Seventh Avenue Line (IRT) to the No. 7 Line. Access to the No. 7 Line train at the Time Square Station is provided by eight stairways (PL2, PL3, PL4, PL5, PL6AB, PL7AB, PL8AB, and PL9) go up to the lower mezzanine level and three escalators (E216, E217, and E218) go up to the upper mezzanine level. Stairway PL9 located at the east end of the platform is currently closed and will be permanently closed due to lightly use and safety reason. Stairways PL4 and PL6 were opened when subway counts were conducted in 2003, but are currently closed. Stairway PL6 will be replaced by an elevator.

Transfer to the Eighth Avenue Line and Port Authority Bus Terminal (PABT) is available via a passageway located west of the lower mezzanine level. HY trip transfer to/from the Eighth Avenue Line and the PABT were assigned to use stairways PL2, PL3, and PL3, which are located closer to the passageway. A majority of the IRT Transfer trips were assigned to stairways PL5, PL7AB, and PL8AB to the lower mezzanine to access stairways ML5 through ML12 access to the IRT platforms. The remaining of the Seventh Avenue Transfer trips and all Broadway Line transfer trips were assigned to the three escalators that go up to the upper mezzanine. From the upper mezzanine, passengers could use the stairways P3 through P10 to access to the IRT platforms.

42nd Street at Eighth Avenue (A, C, E)

The passageway connecting to the Seventh Avenue Line was analyzed in the Time Square Station. It was assumed that the PABT passageway would not be used by HY trips. HY trips were assigned to street stairs O-8/M1AB, S3/M3AB at 40th Street and S8/M9AB at 42nd Street.

Grand Central Station (GCT) (4, 5, 6, 7)

Transfer trips to/from the Lexington Avenue Line were assigned to stairways PL2, PL3, PL5, and PL6 on the No. 7 Line Platform and stairways U1 through U8 on the Lexington Avenue Line Platforms. Transfer to/from Metro-North were assigned to use escalators E207 and E209, which are closer to escalators (E255 and E256) and stairways (M6ABC/M7ABC) accessing to GCT upper concourse. Transfer trips to/from the Second Avenue Subway Line were assigned to stairways and escalators located at the east end of the platform: Stairway PL9AB, stairways (ML1 through ML5) and escalators (E203 and E204).

Fifth Avenue at 42nd Street Station (7)

Access to the No. 7 Line Platform is provided by six stairways located between the platform and mezzanine level: P1/P2, P3, P4, P5, P6, and P7. A passageway is located at the west end of the mezzanine level providing transfer to the Sixth Avenue Line. All projected incremental transfer trips between the Sixth Avenue Line and Flushing Line were added to this passageway. These transfer trips were also distributed mostly to stairways P6 and P7, located near to the passageway.

Penn Station (Major entrances/accessible)

Existing pedestrian volumes were collected at five major street entrances and three subway passageways at Penn Station in 2003. Future No-Action pedestrian volumes were distributed to both the existing Penn Station entrances and new entrances at the Farley Building as part of the Penn Station Redevelopment Project. For the proposed action with MSG relocation, the current MSG site would be rebuilt as Site #45 in 2025 conditions. Current Penn Station accesses at 31st and 33rd Street on Eighth Avenue would be eliminated. Instead, an at-grade east-west walkway in the vicinity of 32nd Street would be provided between Seventh Avenue and Eighth Avenue, and between Eighth and Ninth Avenues. (See below for description for 32nd Street Walkway)

4. New Stations Access

Terminal Station – West 34th Street at Eleventh Avenue (2010 and 2025)

- 34th Street and Blvd Entrance (Main entrance - 2010 & 2025).
- 34th Street and Blvd Entrance (North Entrance - 2010 & 2025).
- Eleventh Ave and 36th Street Entrance (2025 ONLY).
- Upper Mezzanine Connection to Multi-Use Facility.
- Northern Connection to Convention Center.

Intermediate Station – West 41st Street at Tenth Avenue (2025 ONLY)

- 42nd Street Entrance (between Tenth Avenue & Dyer Avenue).
- Boulevard Bridge Entrance (at 40th & 41st Streets).
- Tenth Avenue Entrance (at 41st Street).

5. 32nd Street Walkway between Seventh and Ninth Avenues

- At-grade east-west walkway in the vicinity of 32nd Street between Seventh and Eighth Avenues and a north-south through block connection between 31st and 33rd Streets would be provided. Subway access would be from the existing locations and through the new public space in the center of Site 45.
- A though building east-west walkway on 32nd Street between Eighth and Ninth Avenues and north-south mid-block walkway between 31st and 33rd Street.
- With MGG relocation to the Ninth Avenue Site, there would be no continuous walkway between Ninth and Tenth Avenues. Pedestrians coming out from the Farley Building/Penn Station at Ninth Avenue would need to go around to either 31st Street or 33rd Street continuing their trip to Tenth Avenue.
- Between Tenth and Eleventh Avenues, pedestrians could access through the public space between 30th and 33rd Streets. Connection to the High Line could be accessed through the open public space east of the cultural facility.
- Two at-grade crosswalks on 32nd Street are recommended: one at Eighth Avenue and one at Ninth Avenue.

6. Hudson Yards Building Access

- For development sites along the new Midblock Boulevard, it was assumed that the main building entrances would be located on the Boulevard, with additional entrances on the avenues and/or side streets. The additional entrances on side streets would most likely be on the south side of the building and the truck bays and parking entrances would be on the north side of the building.
- For commercial buildings in the remainder of the project area, the main entrances would typically be located on the avenues.
- For residential buildings in the remainder of the project area, the main entrances would typically be located on the side streets.
- Retail trip assignments were based on the required retail frontages provided by NYCDCP as of August 7, 2003.

7. Multi-Use Facility Access

- Major street entrances for the Multi-Use Facility would be located on the north side (33rd Street) and south side (30th Street) above street level (accessed by ramps, steps, and/or escalators), and an entrance would be located on the east side facing Eleventh Avenue for use by fans with suite or club seats.
- High Line Connection access from 30th Street @ Site 1, Eleventh & 12th Avenues. In 2010, High Line connection is slightly different because Site #1 with open space would not be built yet.
- An underground pedestrian connection would also be provided between the Multi-Use Facility and the Convention Center below West 34th Street.
- Connection between the Multi-Use Facility and the Terminal Station under Eleventh Avenue.

8. Jacob Javits Convention Center Access

- Entrances on Eleventh Avenue, 34th Street, and 42nd Street.
- Through-block pedestrian passageway would be provided at West 40th Street between Eleventh and Twelfth Avenues with access through the Convention Center.
- Subway Connection would be provided below Eleventh Avenue south of 36th Street.

- 2010 subway assignments are slightly different than 2025 because Intermediate Station at West 41st Street and Tenth Avenue would not be built in 2010.

9. Regional Transit Forecasting Model (RTFM)

- RTFM Results were used for subway line haul analyses.
- RTFM Results were used to forecast subway station transfer trips to/from the No. 7 Line at Times Square, Fifth Avenue, and Grand Central stations.
